Response: We disagree that the ASC Procedure Volume measure creates an incentive for providers to perform non-indicated procedures. The ASC Procedure Volume measure tracks the top five procedures performed in the outpatient setting using CPT codes. The procedures posted by volume change yearly; thus, we do not believe the volume measure would lead to potential misuse through ''perverse incentives'' for providers to perform non-indicated procedures to increase procedural volume. Furthermore, when this measure was previously included in the ASCQR Program measure set, we did not identify significant changes in reported volume information that would indicate this measure engendered ''perverse incentives'' for facilities to perform non-indicated procedures simply to increase reported numbers of procedures.

Comment: One commenter did not support our proposal to re-adopt with modification the ASC Procedure Volume measure because they stated that volume data would be confusing to Medicare patients. Commenters noted that such data are limited in value due to lack of context related to clinical appropriateness of the procedure for each specific patient and the risk profile for the volume of patients. Commenters added that the measure does not provide context related to overall procedural outcomes.

Response: We disagree with the commenter's assertion that volume data would be confusing to Medicare patients. As we explained in the CY 2024 OPPS/ASC proposed rule (88 FR 49812), we intended to publish the measure's results to the *data.cms.gov* website, or other CMS website, which is designed to be a consumer-friendly portal for quality information on Medicare providers, if the proposal was adopted in future rulemaking. We interpret commenters' concern about the clinical appropriateness of the procedure for each specific patient to indicate concern that the ASC Procedure Volume measure's calculation may appear to be inflated by medically unnecessary procedures. We disagree with this opinion. We believe the ASC Procedure Volume measure provides fundamental information to patients about the frequency with which procedure is performed in a given facility. We do not believe that this information is harmful for patients, and we believe strongly that equipping patients with as much meaningful information as possible about their care builds a stronger health care system. We also do not agree that the measure lacks risk profile context for ASCs as ASCs typically do not perform procedures in higher risk patients. As we stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49811), volume metrics serve as an indicator of which facilities have experience with certain outpatient procedures, likely leading to higher quality outcomes, and assist consumers in making informed decisions about where they receive care. We do agree that other dimensions of quality are also important to patients' outcomes in the

hospital outpatient department, but we believe that data submitted for the ASC Procedure Volume measure provide transparency into volume as a dimension of quality, which may be informative to patients. The ASC Procedure Volume measure is intended to be one of many metrics for determining care. Although we are not re-adopting the ASC Procedure Volume measure at this time, we continue to believe there is significant evidence linking volume to quality of care, and that volume metrics serve as an indicator of which facilities have experience with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care. Based on comments received, we intend to reassess the measure's methodology and reconsider how the data may be publicly displayed in the most meaningful manner for consumers.

Comment: One commenter raised concern over many services and diagnoses distributed over large groups of procedure or diagnostic codes, so even if a facility regularly performs a service, a volume measure may incorrectly identify it as having little to no experience if no single code exceeds a minimum threshold. Another commenter also stated that CMS already has access to these data through claims.

Response: Responding to commenter concerns over the distribution of services over large groups of procedural codes, our method does group some procedural codes within specific procedure categories to account for services being distributed over groups of procedures.[596] We reiterate that the proposal is not being finalized for CY 2024. We will further consider this concern in future rulemaking.

We acknowledge that we can determine facility volumes for procedures performed using Medicare FFS claims. However, as we note in section XV.B.5.a(1) of this final rule with comment period, the specifications for the ASC Procedure Volume measure include reporting data for non-Medicare patients. Relying solely on the use of Medicare FFS claims data to simplify reporting would limit the measure to only this payer, which will not fully account for the volume of procedures performed at a given ASC.

Comment: One commenter expressed confusion related to the number of procedure categories, as they have varied since the measure's initial implementation.

Response: The categories chosen for the proposed ASC Facility Volume measure were informed and updated through CY 2022 ASC Claims with Surgical CPT codes. Since this measure's initial adoption, the number of categories varied annually depending on updated code data. This measure collected data ranging from six to eight procedural categories while incorporated in the ASCQR Program. During this measure's initial adoption in the ASCQR Program in CY 2012, there were six finalized categories (76 FR 74509). During the measure's time in the ASCQR Program, there were predominately seven or eight categories annually. To collect the most meaningful data for this measure, we proposed to collect the top five procedures within each chosen category. We reiterate that these top five procedures would be assessed and updated annually as needed to ensure data collection of most accurate and frequently performed procedures. We will continue to examine these data on an ongoing basis and will consider adjusting the measure specifications as needed.

Comment: One commenter noted the importance of lower-volume sites in providing services to underserved populations, such as Black, Hispanic, and rural patients. One commenter noted that, because ASCs are specialized facilities, there would be a lot of ''0'' data entries for procedure categories that are not applicable.

Response: We recognize that lower-volume sites provide services to patients, including historically underserved populations. We will consider the importance of lower volume sites for historically underserved populations if we re-propose this measure in the future.

We acknowledge commenter's concerns over the data completeness of the ASC Procedure Volume measure. The categories and the top five procedures in each category would be assessed and updated annually as needed to ensure data collection of the most frequently performed procedures. We will continue to examine these data on an ongoing basis and adjust the measure specifications as needed.

Comment: Many commenters provided recommendations in response to our proposal to re-adopt with modification the ASC Procedure Volume measure. A few commenters recommended adopting this measure as voluntary. One commenter recommended that CMS develop a volume measure focusing on procedures transitioning from the inpatient to the outpatient setting to replace this measure. Another commenter recommended the development of complementary measures of patient outcomes to pair with the ASC Procedure Volume measure to provide a complete picture of quality in the care setting. One commenter recommended not limiting the reporting to the 5 most frequently occurring procedures per clinical category. One commenter recommended only confidential-level feedback rather than publicly reporting these data and tying it to payment. Another commenter recommended that the top 5 frequently performed procedure categories are specific to each ASC, rather than national trends, to provide a more accurate picture of the specific facility's procedure volume. Additionally, another commenter suggested that CMS instead focus on outcome measures.

Response: We thank commenters for providing these recommendations for this measure. We agree that refining measure specifications to benefit both patients and providers is important. We will consider these recommendations in future rulemaking. We would like to clarify that the ASCQR Program is a pay-for-reporting program and not a value-based payment program.

Comment: One commenter requested clarification on whether the top 5 most frequently performed procedures are based on national data or if they are specific to each ASC.

Response: The top five most frequently performed procedures are based on national data. We will continue to refine the best approach for determining most frequently performed procedures.

After consideration of the public comments we received, we are not finalizing our proposal to re-adopt with modification the ASC Procedure Volume measure beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. We are not finalizing this measure at this time, as we would like to conduct analysis that includes FFS and Medicare Advantage data when evaluating categories and most frequently performed procedures. Based on comments received, we intend to reassess the measure's methodology and reconsider how the data may be publicly displayed.

[596] ASC Specifications Manual version 1.0b. Available at: *https://qualitynet.cms.gov/asc/specifications-manuals#tab6.*

We continue to believe there is significant evidence linking volume to quality of care, and that volume metrics serve as an indicator of which facilities have experience with certain outpatient procedures and assist consumers in making informed decisions about where they receive care. We also refer readers to the discussion of a similar proposal for the same measure as used in the Hospital OQR Program in section XIV.B.3.a of this final rule with comment period.

b. Adoption of the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM) Beginning With Voluntary CYs 2025 and 2026 Reporting Periods Followed by Mandatory Reporting Beginning With the CY 2027 Reporting Period/CY 2030 Payment Determination

(1) Background

In the FY 2023 IPPS/LTCH PPS final rule with comment period (87 FR 49246 through 49257), we adopted the THA/TKA PRO–PM in the Hospital Inpatient Quality Reporting (IQR) Program beginning with voluntary reporting periods in CYs 2025 and 2026,[597] followed by mandatory reporting for eligible elective procedures occurring July 1, 2024, through June 30, 2025, for the FY 2028 payment determination. In the CY 2024 OPPS/ASC proposed rule (88 FR 49813 through 49818), we proposed the adoption of the THA/TKA PRO–PM into the ASCQR Program using the same specifications as finalized for the hospital-level measure adopted into the Hospital IQR Program (87 FR 49246 through 49257) with modifications to include procedures performed in the ASC setting.

Approximately six million adults aged 65 or older suffer from osteoarthritis in the United States.[598] In 2013, there were approximately 568,000 hospitalizations billed to Medicare for osteoarthritis.[599] Hip and knee osteoarthritis is one of the leading causes of disability among non-institutionalized adults,[600] [601] and roughly 80 percent of patients with osteoarthritis have some limitation in mobility.[602] [603] Elective THA and TKA are most commonly performed for degenerative joint disease or osteoarthritis, which affects more than 30 million Americans.[604] THA and TKA offer the potential for significant improvement in quality of life by decreasing pain and improving function in a majority of patients, without resulting in a high risk of complications or death.[605] [606] [607] However, not all patients experience benefit from these procedures.[608] Many patients note that their pre-operative expectations for functional improvement have not been met.[609] [610] [611] [612] In addition, clinical practice variation has been well documented in the United States,[613] [614] [615] [616] [617] readmission and complication rates vary across hospitals,[618] [619] and international experience documents wide hospital-level variation in patient-reported outcome measure results following THA and TKA.[620]

Due to the absence of recently conducted, large scale and uniformly collected patient-reported outcome (PRO) data available from patients undergoing elective primary THA/TKA, we established an incentivized,

[597] In the CY 2024 OPPS/ASC proposed rule (88 FR 49813 and 49814), we stated these reporting periods as FY. The IQR voluntary reporting periods for the THA/TKA PRO–PM are October 23, 2022, through June 30, 2023, for 2025 voluntary reporting and April 2, 2023, through June 30, 2024, for 2026 voluntary reporting.

voluntary PRO data collection opportunity within the Comprehensive Care for Joint Replacement (CJR) model to support measure development.[621] Elective THA/TKAs are important, effective procedures performed on a broad population, and the patient outcomes for these procedures (such as pain, mobility, and quality of life) can be measured in a scientifically sound way,[622] [623] are influenced by a range of improvements in care,[624] and demonstrate hospital-level variation even after patient case mix adjustment.[625] [626] Further, THA/TKA procedures are specifically intended to improve function and reduce pain, making PROs a meaningful outcome metric to assess.[627]

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86146), we announced that THA and TKA procedures were removed from the IPO list and added to the ASC covered procedures list (CPL). As a result, the volume of THA and TKA procedures for Medicare beneficiaries aged 65 years and older have been increasing in outpatient settings, including ASCs.

We analyzed Part B Medicare FFS claims data for the number of ASC facility claims with THA/TKA procedures during CYs 2020, 2021, and 2022 (Table 138). Though we acknowledge that currently the total number of ASCs performing these procedures, and the number of procedures being performed in ASCs, is relatively low and there is wide variation in number of procedures performed in those ASCs, the number of procedures performed in the ASC setting has steadily grown.

BILLING CODE 4120–01–P

BILLING CODE 4120–01–C

In the CY 2022 OPPS/ASC proposed rule (86 FR 42276 and 42277), we requested comment on the potential future adoption of the THA/TKA PRO–PM into the ASCQR Program. We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63896 through 63898) for a complete summary of feedback from interested parties.

Many commenters supported inclusion of the THA/TKA PRO–PM in the ASCQR Program as procedures move from inpatient to outpatient settings. Commenters noted it was important to monitor quality outcomes and publicly report results. Additionally, commenters stated that the measure is aligned with patient values, being presented in a manner that is easy to understand.

Other commenters did not support expansion of the measure to the ASCQR Program, and expressed concern with data collection burden, patient survey fatigue, and reporting thresholds. In response, we stated that while we recognize that PRO–PMs require providers to integrate data collection into clinical workflows, this integration provides opportunity for PROs to inform clinical decision-making and benefits

patients by engaging them in discussions about potential outcomes. Furthermore, we did not expect this measure to contribute to survey fatigue as the PRO instruments used to calculate pre- and post-operative scores for this THA/TKA PRO–PM were carefully selected, with extensive interested party input, to be low burden for patients. (88 FR 49816) [628] [629]

In the CY 2024 OPPS/ASC proposed rule (88 FR 49816), we proposed to adopt the THA/TKA PRO–PM into the ASCQR Program beginning with two voluntary reporting periods, followed by mandatory reporting. The first voluntary reporting period would begin with the CY 2025 reporting period for eligible elective outpatient procedures between January 1, 2025, through December 31, 2025, and the second voluntary reporting period would begin with the CY 2026 reporting period for eligible outpatient procedures between January 1, 2026, through December 31, 2026. Mandatory reporting would begin with the CY 2027 reporting period/CY 2030 payment determination for eligible elective outpatient procedures occurring January 1, 2027, through December 31, 2027, impacting the CY 2030 payment determination and subsequent years. Because the proposed measure required collection of data during the 3-month pre-operative period and the greater than 1-year post-operative period, there would be a delay between when the elective THA/TKA procedures actually occur, when the results would be reported under the ASCQR Program, and when payment determinations occur. Therefore, we proposed a 3-year gap between the reporting period and the payment determination year (for example, CY 2027 reporting period for the CY 2030 payment determination) for the ASCQR Program. We refer readers to section XV.B.5.b.(2)(a) of this final rule with comment period for more information on the reporting requirements.

(2) Overview of Measure

(a) Data Collection, Submission, Reporting and Measure Specifications

This measure reports the facility-level risk-standardized improvement rate (RSIR) in PROs following elective primary THA/TKA for Medicare FFS beneficiaries aged 65 years and older who were enrolled in Medicare FFS Part A and B for the 12 months prior to the date of the procedure and in Medicare FFS Part A and B during the procedure. The measure includes only elective primary outpatient THA/TKA procedures (patients with fractures and revisions are not included) performed at ASCs and does not include any inpatient procedures. The measure excludes patients with staged procedures (multiple elective primary THA or TKA procedures performed on the same patient during distinct encounters) that occur during the measurement period and excludes discontinued procedures (that is, procedures that were started but not completed).[630]

Substantial clinical improvement is measured by achieving a pre-defined improvement in score on one of the two validated joint-specific PRO instruments measuring hip or knee pain and functioning: (1) The Hip dysfunction and Osteoarthritis Outcome Score for Joint Replacement (HOOS, JR) for completion by THA recipients; or (2) the Knee injury and Osteoarthritis Outcome Score for Joint Replacement (KOOS, JR) for completion by TKA recipients. Improvement is measured from the pre-operative assessment (data collected 90 to 0 days before surgery) to the post-operative assessment (data collected 300 to 425 days following surgery). Improvement scores are risk-adjusted to account for differences in patient case-mix. The measure, if adopted into the ASCQR Program as proposed, would account for potential non-response bias in measure scores through inverse probability weighting based on likelihood of response.

We refer readers to the FY 2023 IPPS/LTCH PPS final rule with comment period (87 FR 49246 through 49257) for more information on the development of the hospital-level THA/TKA PRO–PM, including background on the measure and a complete summary of measure specifications, data sources, and measure calculation.

For additional details regarding the measure specifications, we also refer readers to the Hip and Knee Arthroplasty Patient-Reported Outcomes file, available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.*

(i) Data Sources

The THA/TKA PRO–PM uses four sources of data for the calculation of the measure: (1) PRO data; (2) claims data; (3) Medicare enrollment and beneficiary data; and (4) U.S. Census Bureau survey data. As described in section XV.B.5.b.(1) of this final rule with comment period, the measure uses PRO data directly reported by the patient regarding their health, quality of life, or functional status associated with their health care or treatment. This patient reported-data are collected by facilities pre-operatively and post-operatively, and limited patient-level risk factor data are collected with PRO data and identified in claims as detailed in this section of the final rule.[631] The measure includes PRO data collected with the two joint-specific PRO instruments described in this section of the final rule—the HOOS, JR for completion by THA recipients and the KOOS, JR for completion by TKA recipients—from which scores are used to assess substantial clinical improvement. For risk-adjustment by pre-operative mental health score, ASCs would submit one of two additional PRO instruments: (1) the Patient-Reported Outcomes Measurement Information System (PROMIS)-Global Mental Health subscale; or (2) the Veterans RAND 12-Item Health Survey (VR–12) Mental Health subscale. The risk model also includes a one-question patient-reported assessment of health literacy—the Single Item Literacy Screener questionnaire.

Furthermore, the following data would be collected for identification of the measure cohort, for risk-adjustment purposes, and for the statistical approach to potential non-response bias. ASC facility claims data would be used to identify eligible elective primary outpatient THA/TKA procedures for the measure cohort to which submitted PRO data can be matched, and to identify additional variables for risk-adjustment and in the statistical approach to account for response bias, including patient demographics and clinical co-morbidities up to 12 months prior to surgery. The Medicare Enrollment Database (EDB) identifies Medicare FFS enrollment and patient-identified race, and the Master Beneficiary Summary File allows for determination of Medicare and Medicaid dual eligibility

enrollment status. Demographic information from the U.S. Census Bureau's American Community Survey allows for derivation of the Agency for Healthcare Research and Quality (AHRQ) Socioeconomic Status (SES) Index score. Race, dual eligibility, and AHRQ SES Index score are used in the statistical approach to account for potential non-response bias in the outcome calculation. We refer readers to section XV.B.5.b.(2)(iii) of this final rule with comment period for further details regarding the variables required for data collection and submission.

(ii) Measure Calculation

The ASC facility-level THA/TKA PRO–PM result would be calculated by aggregating all patient-level results across the facility. This measure would be calculated and presented as a RSIR, producing a performance measure per facility which accounts for patient case-mix, addresses potential non-response bias, and represents a measure of quality of care following elective primary outpatient THA/TKA. Response rates for PRO data would be calculated as the percentage of elective primary ASC THA or TKA procedures for which complete and matched pre-operative and post-operative PRO data have been submitted divided by the total number of eligible THA or TKA procedures performed at each facility.

(iii) Data Submission and Reporting

In response to feedback received from interested parties in the request for comments (RFCs) on this measure in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25591 through 25592) (as summarized in the FY 2022 IPPS/LTCH PPS final rule with comment period (86 FR 45408 through 45414)) and the CY 2022 OPPS/ASC proposed rule (86 FR 42251 and 42252), and as discussed in the Hospital IQR Program in the FY 2023 IPPS/LTCH PPS final rule with comment period (87 FR 49246 through 49257), we proposed in the CY 2024 OPPS/ASC proposed rule (88 FR 49817) to adopt the THA/TKA PRO–PM in the ASCQR Program utilizing flexible data submission approaches.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49817), we proposed that ASCs would submit the following variables collected pre-operatively between 90 and zero days prior to the THA/TKA procedure for each patient: Medicare provider number; Medicare health insurance claim (HIC) number/Medicare beneficiary identifier (MBI); date of birth; date of procedure; date of PRO data collection; procedure type; mode of collection; person completing the survey; facility admission date; patient-reported outcome measure version; PROMIS Global (mental health subscale items) or VR–12 (mental health subscale items); HOOS, JR (for THA patients); KOOS, JR (for TKA patients); Single-Item Health Literacy Screening (SILS2) questionnaire; BMI or weight (kg)/height (cm); chronic (≥90 day) narcotic use; total painful joint count (patient reported in non-operative lower extremity joint); and quantified spinal pain (patient-reported back pain, Oswestry index question.[632] [633])

Under the proposal, ASCs would also submit the following variables collected post-operatively between 300 and 425 days following the THA/TKA procedure for each patient: Medicare provider number; Medicare HIC number/MBI; date of birth; procedure date; date of PRO data collection; procedure type; mode of collection; person completing the survey; facility admission date; KOOS, JR (TKA patients); and HOOS, JR (THA patients). The data submission period for the THA/TKA PRO–PM would also serve as the review and correction period, and there would be no opportunity to correct the data following the submission deadline.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49817), following the two voluntary reporting periods, we proposed that mandatory reporting of the THA/TKA PRO–PM would begin with the CY 2027 reporting period/CY 2030 payment determination. Under the proposal, for each voluntary and subsequent mandatory reporting period, we would collect data on the THA/TKA PRO–PM in accordance with Health Insurance Portability and Accountability Act of 1996 (HIPAA), Privacy and Security Rules (45 CFR parts 160 and 164, subparts A, C, and E), and other applicable law.

(b) Review by Measure Applications Partnership (MAP)

We included the THA/TKA PRO–PM measure for the ASCQR Program in the publicly available ''2022 Measures Under Consideration List.'' (MUC2022–026).[634] The MAP Coordinating Committee supported the measure, as referenced in the MAP's 2022–2023 Final Recommendations report to HHS and CMS.[635]

The MAP members noted that, while a similar version of this measure has been adopted for use in the Hospital IQR Program, a measure that assesses PROs among THA/TKA patients in ASCs for the ASCQR Program does not currently exist. The MAP highlighted the key strategy for the ASCQR Program is to ensure that procedures done in any type of facility have equivalent quality. As such, the MAP members agreed that quality measures regarding procedures in hospital settings should be incorporated into the ASCQR Program, to the extent feasible and appropriate, so that consumers can compare quality of a specific procedure across different facility types, including ASCs.[636]

In addition, the MAP members stated that the goal of the THA/TKA PRO–PM is to capture the full spectrum of care to incentivize collaboration and shared responsibility for improving patient health and reducing the burden of their disease. They agreed that this measure aligns with the goal of patient-centered approaches to health care quality improvement and addresses the high priority areas of patient and family engagement, communication, and care coordination for the ASCQR Program.[637]

(c) Measure Endorsement

The CBE endorsed the hospital-level version of the THA/TKA PRO–PM (CBE #3559) in November 2020.[638] We note that the ASCQR Program version of the THA/TKA PRO–PM currently uses the same specifications as the CBE endorsed hospital-level THA/TKA PRO–PM with modifications that allow for the capture of procedures performed in for the ASC setting. We intend to seek CBE endorsement for the ASCQR Program's version of the THA/TKA PRO–PM in a future measure endorsement cycle.

We have noted in previous rulemaking (76 FR 74494) the requirement that measures reflect consensus among affected parties can be achieved in other ways aside from CBE endorsement, including through the measure development process, through broad acceptance, use of the measure(s), and through public comment. In the CY 2024 OPPS/ASC proposed rule (88 FR 49818), we proposed this measure without CBE-endorsement based upon strong MAP and public support

[632] Fairbank JC & Pynsent PB (2000). The Oswestry Disability Index. *Spine.* 25(22), 2940–52 *https://journals.lww.com/spinejournal/Abstract/2000/11150/The_Oswestry_Disability_Index.17.aspx.*

[633] The Oswestry Disability Index is in the public domain and available for all hospitals to use.

[638] Centers for Medicaid & Medicare Services. Hospital-Level, Risk-Standardized Improvement Rate in Patient-Reported Outcomes Following Elective Primary Total Hip and/or Total Knee Arthroplasty (THA/TKA). Available at: *https://cmit.cms.gov/cmit/#/FamilyView?familyId=1618.*

combined with the importance of the measure for Medicare beneficiaries. In addition, there are two existing, CBE-endorsed versions of this measure, one at the clinician-group level (CBE #3639) and one for the hospital-level (CBE #3559). We expect that the measure will perform similarly in the ASC setting, and we intend on submitting the measure for CBE endorsement following data collection during voluntary reporting.

We refer readers to section XV.D.1.d of this final rule with comment period for a discussion on the THA/TKA PRO–PM form, manner, and timing submission requirements.

We invited public comment on the proposal.

Comment: Some commenters supported the adoption of the THA/TKA PRO–PM in the ASCQR Program, noting that the measure will support patients in their choice of a provider and allow comparisons of the quality of care among ASCs.

Response: We thank commenters for their support of the THA/TKA PRO–PM for the ASCQR Program.

Comment: One commenter strongly supported the adoption of the THA/TKA PRO–PM in the ASCQR Program; however, the commenter recommended a shorter timeframe to track patient-reported outcomes following THA/TKA procedures to better identify patients recovering faster, provide a more meaningful guide of the procedure's success, and help to differentiate performance among various implant systems and rehab protocols. The commenter also recommended posting post-operative functional improvements on Medicare's website once sufficient data has been collected so that patients can act as informed consumers of care. The commenter encouraged development of other THA/TKA claims-based outcome measures with a shorter-term post-operative time frame such as one-year mortality and revision rates.

Response: We thank the commenter for their support and recommendations and agree with the importance of measuring patient-reported outcomes for elective primary THA and TKA procedures, particularly to measure functional improvement following the applicable surgical procedure.

We appreciate the commenter's recommendation for a shorter timeframe to track patient-reported outcomes following THA/TKA procedures; however, a longer timeframe has been adopted for capture of full recovery from both THA and TKA and alignment with the typically scheduled one-year post-surgery appointments so that the collection of the post-operative data would not require an additional appointment. Clinical experts strongly advocated for the 300–425-day post-operative data collection window to better align with clinical practice and increase PRO data collection.

We also appreciate the commenter's suggestions to develop other claims-based joint arthroplasty measures and publicly post post-operative functional improvements.

Comment: Several commenters expressed concern about the burden for ASCs associated with the THA/TKA PRO–PM if it is finalized for adoption into the ASCQR Program. Commenters stated that the financial, resource, and labor costs required to collect, track, and submit data for this measure would burden facilities and lead to reporting penalties, which small, rural, and medically underserved facilities cannot afford. One commenter noted that EHRs are not integrated with patient portals in a manner that allow facilities to collect patient-reported information and that many facilities exist in areas where patient portal use is unreliable, requiring infrastructure investments and adding manual burden to extrapolate data. This commenter urged CMS to move the measure from facilities to providers or consider making it optional. One commenter noted that burden to ASCs could detract from the ability to dedicate necessary resources to patient care and safety.

Response: We acknowledge that collecting patient-reported outcome measures (PROM) data may involve more burden and initial implementation resources compared to some other types of quality measures, and that some facilities may lack the necessary infrastructure to collect data on this measure. However, we believe the benefit of collecting direct functional improvement information from the patients outweighs the burden. We believe that measuring patient-reported outcomes is an important aspect of patient-centered healthcare and continue to emphasize, as highlighted in our Meaningful Measures 2.0 Framework, that the patient voice should be prioritized across healthcare systems and providers.[639] While PRO–PMs require providers to integrate data collection into clinical workflows, this integration provides an important opportunity for patient-reported outcomes to inform clinical decision-making and benefit patients by engaging them in discussions about potential outcomes. To allow more time for initial implementation, we are extending the voluntary reporting period by an additional year and delaying implementation of mandatory reporting by one year. We believe that the additional year of voluntary reporting and delaying mandatory reporting will allow more time for ASCs to integrate data collection into their clinical workflows, allow time for CMS to monitor implementation progress with regards to data collection burden, as well as time for rulemaking should any improvements for mandatory reporting need to be made. Additionally, to provide more flexibility, we are not requiring ASCs to collect data in a standardized way. ASCs may use a variety of data collection, storage, and submission approaches, and we encourage ASCs to use processes best suited to them. We will monitor data collection burden during the voluntary reporting period and carefully consider public comments to advance patient-centered measurement with as little burden as possible to both providers and patients.

Additionally, implementation of this measure in the ASC setting has been recommended by interested parties, as summarized in the FY 2023 IPPS/LTCH PPS final rule with comment period (87 FR 49254), and supported by interested parties, as summarized in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63897).

We thank commenters for their feedback on moving this measure to other programs and settings. We also agree that there is value in measurement at the clinician-level; however, this measure is designed as a facility-level measure and helps to capture the quality of care provided during a patient's stay in the ASC setting. Any proposal to implement the measure in other CMS programs would be announced through future rulemaking.

Comment: We received mixed comments with respect to the proposed mandatory reporting timelines. One commenter suggested CMS reconsider the proposed timeline for the THA/TKA PRO–PM measure, possibly delaying the timeline by an additional year, and reconsidering the number of risk variables required for the proposed measure. However, another commenter recommended to move up mandatory reporting, to begin sooner than we proposed. A few commenters noted that the proposal to begin voluntary reporting in CY 2025 does not consider the beginning of mandatory reporting for the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS

[639] Centers for Medicare & Medicaid Services. Meaningful Measures Framework. Available at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.*

CAHPS) survey and therefore, requested delaying the voluntary reporting for the ASCQR Program's THA/TKA PRO–PM to allow the preparatory work required for reporting of the THA/TKA PRO–PM measure. One commenter noted that the extensive data collection required by the measure would rarely be used to guide patient care decisions and suggested that CMS consider an incremental approach to the number of data elements used for the proposed measure or reconsider the number of risk variables required to allow ASCs to implement the survey instruments, required for data collection, in a way that would distribute the burden over a longer period of time.

Response: We have considered the commenters' recommendation regarding voluntary and mandatory reporting timelines for this measure and, as discussed below, we are finalizing the THA/TKA PRO–PM for the ASCQR Program with modification to extend the voluntary reporting period by an additional year, for a total of three years, and, in turn, delay implementation of the mandatory reporting period by one year. We are finalizing the phased implementation approach for adoption and implementation of this measure into the ASCQR Program, with voluntary reporting periods in CY 2025, CY 2026, and CY 2027 followed by mandatory reporting beginning with the CY 2028 reporting period for the CY 2031 payment determination. We believe this implementation approach balances the need to allow ASCs sufficient time to make the necessary enhancements to their clinical workflow to successfully report this measure with the need to make this information public for patient use. We will carefully consider feedback received during voluntary reporting to inform improvements that may be made for mandatory reporting. We also refer readers to section IX.X.10.k. of this final rule with comment period, where we discuss in more detail the form, manner, and timing of reporting the THA/TKA PRO–PM.

Comment: One commenter did not support the proposed adoption of the THA/TKA PRO–PM into the ASCQR Program and expressed concerns regarding the measure specifications, supporting materials guidelines, and volume of data collection. The commenter noted that the supporting guidelines do not make it clear that patients undergoing THA and TKA procedures must be enrolled in Medicare Parts A and B for at least 12 months prior to the procedures and on the day of the procedure in order to be included in the measure calculation. The commenter also noted that the post-operative PRO collection timeframe does not align with that of the American Joint Replacement Registry which is 270–425 days and that one of the measure exclusions criteria includes patients who die within 300 days of their procedure, which does not align with the postoperative data collection period of 300 to 425 days. In addition, the commenter stated that the Veterans Rand (VR)-12 questionnaire is not readily available and suggests CMS provide the questionnaire if this is an option for patient mental health data collection. The commenter also suggested clearer guidelines on how data elements are defined, specifically noting that the Use of Chronic Narcotics data element is not sufficiently defined leaving it open to interpretation. In addition, the commenter suggested that the Total Painful Joint Count data element is not a total painful joint count, but rather an assessment of whether the patient has pain in the non-operative hip or knee and requires rewording to avoid confusion and to reflect the data to be collected. A few commenters expressed concern over the volume of data ASCs would be required to collect and submit to report this measure. A commenter noted the limited availability of PRO data collection modalities, and stated that, under Federal regulation, ASCs may only act as the site for outpatient surgery and may not provide pre-operative services or post-operative follow-up care after patient discharge, thus limiting the options for PRO data collection or requiring significant additional resources to get patient data from other providers and/or their contractors. The commenter further noted that, given the lack of alignment between the proposed ASC THA/TKA PRO–PM and other THA/TKA related quality measures clinicians can report on, reliance on other providers for PRO data collection may not be appropriate.

Response: We acknowledge the commenter's concerns with the ASC THA/TKA PRO–PM measure specifications and supporting materials guidelines. We note that the Data Collection, Submission, Reporting and Measure Specifications section in this rule and in the methodology report, available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology,* clearly state that the THA/TKA PRO–PM reports the facility-level risk-standardized improvement rate (RSIR) in PROs following elective primary THA/TKA for Medicare FFS beneficiaries aged 65 years and older who were enrolled in Medicare FFS Part A and B for the 12 months prior to the date of the procedure and in Medicare FFS Part B during the procedure.

In developing the THA/TKA PRO–PM, the measure developer reviewed registry data capture to inform the post-operative assessment window (initially 270 to 365 days) for capture of full recovery from both THA and TKA and alignment with the typically scheduled one-year post-surgery appointments, so that the collection of the post-operative data collection would not require an additional appointment. Following several years of PRO data collection through the CJR Model, clinical experts expressed concern that the initial 365-day upper limit missed patients who were scheduled or rescheduled for this one-year follow-up beyond 365 days, and they strongly advocated for shifting the post-operative data collection window to better align with clinical practice and increase PRO data collection. For additional details we refer readers to the Patient-Reported Outcomes (PROs) Following Elective Primary Total Hip and/or Total Knee Arthroplasty: Hospital-Level Performance Measure—Measure Methodology Report, available in Hip and Knee Arthroplasty Patient-Reported Outcomes folder at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology*.

The PRO instruments and PROMs such as the Veterans Rand 12-Item Health Survey (VR–12) PROM and the Patient-Reported Outcomes Measurement Information Systems (PROMIS)-Global were carefully considered, with extensive interested party input, including clinicians, to be low burden. ASCs can use either of the two PROMs (VR–12 or PROMIS-Global) to assess general aspects of health and well-being following elective primary THA/TKA. PROMs are available in both free and cost versions.

We thank the commenter on the feedback to provide clearer guidelines regarding reporting the ''Use of Chronic Narcotics'' and labelling of ''Total Painful Joint Count'' data elements. We will conduct further review of the guidance materials.

While we acknowledge the large volume of data required to calculate and risk-adjust measure scores for the proposed ASC THA/TKA PRO–PM, we highlight that the measure as proposed notes registries as an acceptable form of data collection for the measure (88 FR 49813 through 49818) ASCs can utilize registries to reduce data collection

burden. In addition, this measure allows ASCs to use a variety of data collection, storage, and submission approaches to ensure flexibility and reduce burden, and we encourage ASCs to use processes best suited to their care setting and patient populations. We note that while we are not requiring ASCs to collect data in a standardized way, we are standardizing the specific data elements that need to be collected and reported. Further, we believe that clinicians, providers, and facilities should determine practices that avoid duplication across care settings. We will evaluate data collection burden associated with the THA/TKA PRO–PM to inform future changes to measure specifications or reporting processes improvements.

With respect to the concern raised about ASCs' limited PRO data collection opportunities and modalities, we highlight that collecting outcome data after the procedure does not amount to providing post-operative services or care. ASCs will be obtaining data that reflect patients' outcomes after a service that was provided by the ASC. The longer post-operative window for this measure reflects the time course of recovery and benefits the ASCs by providing sufficient recovery time to be reflected in the PRO responses.

Comment: A few commenters expressed concerns about the data submission requirements and reporting thresholds. One commenter did not support the proposed adoption of the THA/TKA PRO–PM into the ASCQR Program because, for data submissions occurring after May 15, 2026, ASCs would be required to submit both pre-operative data for THA/TKAs performed the prior year and post-operative data for THA/TKAs performed two years prior. The commenter suggested that having a single data submission deadline for pre-operative and post-operative measure data for THA/TKA procedures performed in a single calendar year would be less burdensome and more efficient. A few commenters expressed concern regarding the requirement to submit complete and matching pre-operative and post-operative PRO data for at least 45 percent of their eligible elective primary THA/TKA procedures. The commenter noted that while the 45 percent threshold proposed for this measure in the ASCQR Program is slightly less than the 50 percent threshold set for the Hospital IQR and proposed in the Hospital OQR Programs, it is still too high. The commenter cited difficulty with meeting the reporting threshold and also noted that ASCs are currently not collecting on all the PRO measures and would need additional time to prepare to meet this requirement. One commenter noted that data completeness requirement should not fall solely on the ASCs, and neither should the facility be financially penalized for it. The commenter noted that, because ASCs do not know in advance which patients would respond completely or would respond at all, ASCs will have to collect pre-operative data on all their THA/TKA patients. The commenter suggested that CMS select a more reasonable data completeness standard supported by results from the 2019 OAS CAHPS mode experiment [640] and redefine the reporting threshold to include both complete and incomplete responses, since it reflects the facility's attempt to meet requirements for the measure.

Response: We acknowledge commenters' concerns regarding submission of both pre-operative data for the second voluntary reporting period and post-operative data for the first voluntary period by the same data submission. We decided to stagger data submission to reduce burden for ASCs holding onto their pre-operative data for two years, ensure alignment between the pre-operative and post-operative data, and potentially reduce gaming. We will monitor and evaluate the proposed approach during the voluntary reporting period.

Given that THA and TKA procedures were removed from the Inpatient Only Procedures (IPO) list and added to the ASC covered procedures list (CPL), we expect that the volume of THA and TKA procedures will continue to increase in ASCs, and that significant numbers of Medicare beneficiaries will potentially undergo these procedures in the outpatient setting in future years, including ASCs. We selected the 45 percent reporting threshold after considering numerous factors and the experience of CJR Model participants. The proposed reporting threshold for adoption of the measure into the ASCQR Program is based on average response rates for both pre-operative and post-operative surveys collected by participating hospitals in the CJR Model. We note that the proposed reporting threshold for the THA/TKA PRO–PM is lower than that currently used in the CJR Model (45 percent versus 85 percent). Additionally, ASCs are not held to reporting thresholds until mandatory reporting; therefore, we believe ASCs will have time to develop their data collection and reporting processes.[641]

Regarding data completeness requirements, we acknowledge that ASCs would not know in advance which patients would respond completely or would respond at all; however, the original measure in the Hospital IQR Program, and specified for the ASCQR Program, was developed with extensive input from patients, who indicated strong support for a PRO–PM following elective primary THA and TKA. However, we will continue to consider the appropriate pre-operative and post-operative matched survey response rate, data completeness, and reporting thresholds. We will carefully consider feedback received during voluntary reporting to inform improvements that may be made for mandatory reporting.

Comment: One commenter did not support the proposed adoption of the THA/TKA PRO–PM into the ASCQR Program because ASCs will be required to collect and submit incomplete or no patient PRO data to adjust for nonresponse bias in the measure methodology. The commenter noted that since the measure methodology report stated that nonresponse bias weighting did not have a significant impact on the measure outcome, ASCs should not be required to devote resources to submit these PRO responses. A few commenters expressed concern that CMS has underestimated the cost burden to collect PRO data given that ASCs may not have access to an Electronic Health Record (EHR) system, and those that do use EHR technology will spend more than 20 minutes a year to collect PRO data.

Response: We thank the commenter for their concerns about incomplete and missing PRO data. While encouraged, we do not require ASCs to submit incomplete data as that is left to the ASCs discretion. Submitting data (complete or not) during voluntary reporting offers several advantages. These include gaining familiarity with the data submission process, receiving feedback on the cases that were submitted, and potential inclusion in the measure through non-response weights. While we acknowledge the challenge of colleting PRO data, we note that submitting incomplete data should not add additional burden to the ASC. Furthermore, although we agree that during measure development, inverse probability weighting (IPW) for nonresponse bias did not have a substantial impact, we anticipate that

[640] *https://oascahps.org/General-Information/Mode-Experiment.*

[641] *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC9485540/.*

this may be a concern as more ASCs participate in reporting. Therefore, we retained this widely accepted statistical approach in the final measure methodology. The adjustment itself will be done during measure calculation and adds no additional computational burden to the ASC.[642]

We also acknowledge commenters' concerns with the burden to collect PRO data given that some ASCs may have limited or no access to EHR systems. We acknowledge that the Title XIII of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5, February 17, 2009), which sets forth the Health Information Technology for Economic and Clinical Health (HITECH) Act, did not offer ASCs financial incentives for EHR adoption like it did for hospitals, thus did not facilitate the proliferation of adoption and utilization of EHRs in ASCs. However, we clarify that this measure, as proposed, provides flexibility for the manner in which ASCs collect, store, and submit data. The modes of PRO data collection could include completion of the pre-operative surveys using electronic devices (such as an iPad or tablet), pen and paper, mail, telephone, or through a patient portal. Post-operative PRO data collection modes are similar to pre-operative modes. We encourage ASCs to use processes best suited to them. We also note that qualified data collection registries are an acceptable form of data collection for the measure and can be utilized to reduce data collection burden for ASCs. This data submission approach is consistent with interested party input received by the measure developer during measure development and comments as summarized in the FY 2022 IPPS/LTCH PPS final rule with comment period (86 FR 45411 through 45414), which recommended that CMS provide multiple options for data submission mechanisms to ensure flexibility.

Comment: Many commenters expressed concern over the technological, operational, resource and financial burden to obtain post-operative data 300 to 425 days. A few commenters expressed concern that ASCs would not have the benefit of collecting post-operative PRO data during a follow-up visit, which would be expected to negatively impact data completeness and overall response rates.

Response: We acknowledge that while PROMs and PRO–PMs may involve more burden and initial implementation resources compared to some other types of quality measures, we believe the benefit of collecting direct functional improvement information from the patients outweighs the burden. We are carefully considering public comments and are seeking to advance patient-centered measurement with as little burden as possible to both providers and patients.

We will review these recommendations to inform ongoing measure evaluation.

After considering the comments received, we are finalizing adoption of the THA/TKA PRO–PM into the ASCQR Program. However, in response to concerns raised by commenters, we are extending the voluntary reporting period by an additional year and delaying implementation of mandatory reporting by one year, such that voluntary reporting would begin with the CY 2025 reporting period and continue through the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period for CY 2031 payment determination. We believe that the additional year of voluntary reporting would allow time for CMS to monitor implementation progress with regards to data collection burden and response rates, as well as time for rulemaking should any improvements for mandatory reporting need to be made.

6. ASCQR Program Quality Measure Set

a. Summary of Finalized ASCQR Program Quality Measure Set for the CY 2024 Reporting Period/CY 2026 Payment Determination

We refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 72120 and 72121) for the previously finalized ASCQR Program measure set for the CY 2024 reporting period/CY 2026 payment determination.

Table 139 below summarizes the finalized ASCQR Program measures for the CY 2024 reporting period/CY 2026 payment determination.

[642] *https://www.ncbi.nlm.nih.gov/pmc/articles/PMC4257477/pdf/nihms578341.pdf.*

TABLE 139: FINALIZED ASCQR PROGRAM MEASURE SET FOR THE CY 2024 REPORTING PERIOD/CY 2026 PAYMENT DETERMINATION

ASC #	CBE #	Measure Name
ASC-1	0263†	Patient Burn
ASC-2	0266†	Patient Fall
ASC-3	0267†	Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant
ASC-4	0265†	All-Cause Hospital Transfer/Admission
ASC-9	0658	Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients**
ASC-11	1536†	Cataracts Visual Function (Previously referred to as Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery)*
ASC-12	2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy
ASC-13	None	Normothermia Outcome
ASC-14	None	Unplanned Anterior Vitrectomy
ASC-17	3470	Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures
ASC-18	3366	Hospital Visits after Urology Ambulatory Surgical Center Procedures
ASC-19	3357	Facility-Level 7-Day Hospital Visits after General Surgery Procedures Performed at Ambulatory Surgical Centers
ASC-20	None	COVID–19 Vaccination Coverage Among Health Care Personnel**

† CBE endorsement was removed.

* In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72118 through 72120), we finalized to keep data collection and submission voluntary for this measure for the CY 2025 reporting period and subsequent years. In this final rule, we are finalizing our proposal to standardize the surveys offered to patients pre- and post-surgery beginning with the CY 2024 reporting period/CY 2026 payment determination.

** In this final rule, we are finalizing our proposal to modify the Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients and COVID–19 Vaccination Coverage Among HCP measures that begin with the CY 2024 reporting period/CY 2026 payment determination.

b. Summary of Finalized ASCQR Program Quality Measure Set for the CY 2025 Reporting Period/CY 2027 Payment Determination and Subsequent Years

Table 140 summarizes the finalized ASCQR Program measures for the CY 2025 reporting period/CY 2027 payment determination.

TABLE 140: FINALIZED ASCQR PROGRAM MEASURE SET FOR THE CY 2025 REPORTING PERIOD/CY 2027 PAYMENT DETERMINATION

ASC #	CBE #	Measure Name
ASC-1	0263†	Patient Burn
ASC-2	0266†	Patient Fall
ASC-3	0267†	Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant
ASC-4	0265†	All-Cause Hospital Transfer/Admission
ASC-7	None	ASC Procedure Volume (Previously referred to as ASC Facility Volume on Selected ASC Surgical Procedures)**
ASC-9	0658	Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients
ASC-11	1536†	Cataracts Visual Function (Previously referred to as Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery)*
ASC-12	2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy
ASC-13	None	Normothermia Outcome
ASC-14	None	Unplanned Anterior Vitrectomy
ASC-15a	None	The Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) - About Facilities and Staff
ASC-15b	None	OAS CAHPS - Communication About Procedure
ASC-15c	None	OAS CAHPS - Preparation for Discharge and Recovery
ASC-15d	None	OAS CAHPS - Overall Rating of Facility
ASC-15e	None	OAS CAHPS - Recommendation of Facility
ASC-17	3470	Hospital Visits after Orthopedic Ambulatory Surgical Center Procedures
ASC-18	3366	Hospital Visits after Urology Ambulatory Surgical Center Procedures
ASC-19	3357	Facility-Level 7-Day Hospital Visits after General Surgery Procedures Performed at Ambulatory Surgical Centers
ASC-20	None	COVID–19 Vaccination Coverage Among Health Care Personnel
ASC-21	3636	Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM)***

† CBE endorsement was removed.
* In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72118 through 72120), we finalized to keep data collection and submission voluntary for this measure for the CY 2025 reporting period and subsequent years.
** In this final rule, we are not finalizing our proposal to re-adopt the ASC Procedure Volume measure as a voluntary measure beginning with the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination.
*** In this final rule, we are finalizing our proposal to adopt Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM) as a voluntary measure beginning with the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period/CY 2031 payment determination.

7. Maintenance of Technical Specifications for Quality Measures

We maintain technical specifications for previously adopted ASCQR Program measures. These specifications are updated as we modify the ASCQR Program measure-set. The manuals that contain specifications for the previously adopted measures can be found on the CMS website (currently at: *https://qualitynet.cms.gov/asc/specifications-manuals*).[643] Our policy on maintenance of technical specifications for the ASCQR Program are codified in our regulations at § 416.325. In the CY 2024 OPPS/ASC proposed rule (88 FR 49819), we proposed to amend our measure maintenance regulation at § 416.325(c) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

[643] Qualitynet Home. (n.d.). Retrieved March 21, 2023, from *https://qualitynet.cms.gov/asc/specifications-manuals.*

8. Public Reporting of ASCQR Program Data

We refer readers to the CYs 2012, 2016, 2017, and 2018 OPPS/ASC final rules (76 FR 74514 through 74515; 80 FR 70531 through 70533; 81 FR 79819 and 79820; and 82 FR 59455 through 59470, respectively) for detailed discussion of our policies regarding the public reporting of ASCQR Program data, which are codified in our regulations at § 416.315 (80 FR 70533).

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

C. Administrative Requirements

1. Requirements Regarding Data Submission

We refer readers to § 416.310(c)(1)(i) for our current policies regarding submission of data via our online data submission tool, including security official and system registration requirements. In the CY 2024 OPPS/ASC proposed rule (88 FR 49820), we proposed to amend our collection and submission regulation at § 416.310(c)(1)(i) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

2. Requirements Regarding Program Participation

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75133 through 75135) for a complete discussion of the participation status requirements beginning with the CY 2014 payment determination. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70533 and 70534), we codified these requirements regarding participation status for the ASCQR Program in our regulations at § 416.305. In the CY 2024 OPPS/ASC proposed rule (88 FR 49820), we proposed to amend our withdrawal regulation at § 416.305(b)(1) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

D. Form, Manner, and Timing of Data Submitted for the ASCQR Program

Previously finalized quality measures and information collections discussed in this section were approved by the Office of Management and Budget (OMB) under control number 0938–1270 (expiration date August 31, 2025). An updated PRA package reflecting the updated information collection requirements related to the proposals set forth in this section of the final rule with comment period will be submitted for approval under the same OMB control number.

1. Data Collection and Submission

a. Background

We previously codified our existing policies regarding data collection and submission under the ASCQR Program in our regulations at § 416.310.

b. Requirements for Claims-Based Measures

(1) Requirements Regarding Data Processing and Collection Periods for Claims-Based Measures Using Quality Data Codes (QDCs)

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75135) for a complete summary of the data processing and collection periods for the claims-based measures using QDCs beginning with the CY 2012 reporting period/CY 2014 payment determination. In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70534), we codified the requirements regarding data processing and collection periods for claims-based measures using QDCs for the ASCQR Program in our regulations at § 416.310(a)(1) and (2). We note that the previously finalized data processing and collection period requirements will apply to any future claims-based measures using QDCs adopted in the ASCQR Program.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

(2) Minimum Threshold, Minimum Case Volume, and Data Completeness for Claims-Based Measures Using QDCs

We refer readers to the CY 2018 OPPS/ASC final rule with comment period (82 FR 59472) (and the previous rulemakings cited therein), as well as our regulations at §§ 416.310(a)(3) and 416.305(c) for our policies about minimum threshold, minimum case volume, and data completeness for claims-based measures using QDCs. We also refer readers to section XVI.D.1.b of the CY 2022 OPPS/ASC final rule with comment period (86 FR 63904 and 63905), where we finalized that our policies for minimum threshold, minimum case volume, and data completeness requirements apply to any future claims-based-measures using QDCs adopted in the ASCQR Program.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

(3) Requirements Regarding Data Processing and Collection Periods for Non-QDC Based, Claims-Based Measure Data

We refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 59136 through 59138) for a complete summary of the data processing and collection requirements for the non-QDC based, claims-based measures. We codified the requirements regarding data processing and collection periods for non-QDC, claims-based measures for the ASCQR Program in our regulations at § 416.310(b). We note that these requirements for non-QDC, claims-based measures apply to the following previously adopted measures:

- Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy; and
- Facility-Level 7-Day Hospital Visits after General Surgery Procedures Performed at Ambulatory Surgical Centers (CBE #3357).

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

c. Requirements for Data Submitted Via an Online Data Submission Tool

(1) Requirements for Data Submitted Via a CMS Online Data Submission Tool

We refer readers to the CY 2018 OPPS/ASC final rule with comment period (82 FR 59473) (and the previous rulemakings cited therein) and our regulations at § 416.310(c)(1) for our requirements regarding data submitted via a CMS online data submission tool. We are currently using the HQR System (formerly referred to as the QualityNet Secure Portal) [644] to host our CMS online data submission tool, available by securely logging in at: *https://hqr.cms.gov/hqrng/login.* We note that, in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59473), we finalized expanded submission via the CMS online tool to also allow for batch data submission and made

[644] The HQR System was previously referred to as the QualityNet Secure Portal.

corresponding changes at § 416.310(c)(1)(i).

The following previously finalized measures require data to be submitted via a CMS online data submission tool beginning with the CY 2019 reporting period/CY 2021 payment determination:

- Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients;
- Cataracts Visual Function measure (Previously referred to as Cataracts: Improvement in Patients' Visual Function within 90 Days Following Cataract Surgery);
- Normothermia Outcome; and
- Unplanned Anterior Vitrectomy.

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63883 through 63885), we finalized our proposal to require and resume data collection beginning with the CY 2023 reporting period/CY 2025 payment determination for the following four measures:

- Patient Burn;
- Patient Fall;
- Wrong Site, Wrong Side, Wrong Patient, Wrong Procedure, Wrong Implant; and
- All-Cause Hospital Transfer/Admission.

Measure data for these measures must be submitted via the HQR System.

Other than the proposal to amend § 416.310(c)(1)(i) and (d)(1) discussed in sections XV.C.1 and XV.D.1.h., respectively, of this final rule with comment period, we did not propose any changes to these policies.

(a) Data Submission and Reporting Requirements for the ASC Procedure Volume Measure

As discussed in section XV.B.5.a of this final rule with comment period, we are not finalizing our proposal to re-adopt the ASC Procedure Volume measure (with modification), with voluntary reporting beginning with the CY 2025 reporting period followed by mandatory reporting beginning with CY 2026 reporting period/CY 2028 payment determination. We also proposed that ASCs would submit these data to CMS through the HQR System during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the CY 2025 reporting period, the data submission period would be January 1, 2026 to May 15, 2026, covering the performance period of January 1, 2025 to December 31, 2025.

Under this requirement, we proposed that we would collect and publicly display data surrounding the top five most frequently performed procedures among ASCs in each of the following eight categories: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, and Skin.[645] We proposed that we would assess and update the top five procedures in each category annually as needed. ASCs would submit aggregate-level data through the CMS web-based tool (currently the HQR system). Data received through the HQR system website will then be publicly displayed on the *data.cms.gov* website, or other CMS website, following our 30-day preview period of submitted data.

We refer readers to our regulation at § 416.315 for our codified policies regarding public reporting of data under the ASCQR Program, as well as our existing policies regarding data collection and submission under the ASCQR Program in our regulations at § 416.310.

We invited public comment on the proposal.

We did not receive public comments on the form, manner, and timing for the ASC Procedure Volume measure. However, as previously discussed, we are not finalizing our proposal to re-adopt with modification the ASC Facility Volume Data on Selected ASC Surgical measure beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination.

(b) Data Submission and Reporting Requirements for the Cataracts Visual Function Measure

In section XV.B.4.b of this final rule with comment period, we finalized our proposal to modify the Cataracts Visual Function measure by standardizing acceptable survey instruments, beginning with the CY 2024 reporting period, which will limit the allowable survey instruments to those listed below:

- The National Eye Institute Visual Function Questionnaire-25 (NEI VFQ–25)
- The Visual Functioning Patient Questionnaire (VF–14)
- The Visual Functioning Index Patient Questionnaire (VF–8R)

ASCs will submit these data to CMS during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the CY 2024 reporting period, the data submission period would be January 1, 2025, to May 15, 2025, covering the performance period of January 1, 2024, to December 31, 2024. Specifically, for data collection, ASCs will submit aggregate-level data through the HQR System. We previously codified our existing policies regarding data collection and submission under the ASCQR Program in our regulations at § 416.310.

We invited public comment on the proposal.

We refer readers to section XV.B.4.b of this final rule with comment period regarding our discussion of the Cataracts Visual Function measure, including summaries of the comments we received on our proposal and our responses thereto. We did not receive public comments on the form, manner, and timing for the Cataracts Visual Function measure; as such, we are finalizing our proposal to begin collection of the modified Cataracts Visual Function measure beginning with the voluntary CY 2024 reporting period and subsequent years.

(2) Requirements for Data Submitted Via a Non-CMS Online Data Submission Tool

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75139 and 75140) and the CY 2015 OPPS/ASC final rule with comment period (79 FR 66985 and 66986) for our requirements regarding data submitted via a non-CMS online data submission tool (specifically, the CDC's National Health Safety Network [NHSN]). We codified our existing policies regarding the data collection periods for measures involving online data submission and the deadline for data submission via a non-CMS online data submission tool in our regulations at § 416.310(c)(2). While we did not finalize any changes to those policies in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63875 through 63883), we did finalize policies specific to the COVID–19 Vaccination Coverage Among HCP measure, for which data will be submitted via the CDC NHSN.

In section XV.B.4.a of this final rule with comment period, we discuss the modification of the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination. The requirements for measure data submitted via the CDC NHSN website would remain as previously finalized.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

[645] Ambulatory Surgical Center Specifications Manuals. Available at: *https://qualitynet.cms.gov/asc/specifications-manuals#tab6.*

d. Data Submission and Reporting Requirements for Patient-Reported Outcome-Based Performance Measures (PRO–PMs)

In section XV.B.5.b of this final rule with comment period, we finalized our proposal to adopt the THA/TKA PRO–PM into the ASCQR Program measure set. In this section of the final rule, we are finalizing our proposal of the reporting and submission requirements for PRO–PM measures as a new type of measure to the ASCQR Program.

(1) Submission of PRO–PM Data

(a) Data Submission Generally

We believe that ASCs should have the choice of selecting from multiple submission approaches, in line with input received by the measure developer during measure development and comments as summarized in the FY 2022 IPPS/LTCH PPS final rule with comment period (86 FR 45411 through 45414), which recommended that we provide multiple options for data submission mechanisms to ensure flexibility.

In section XV.B.5.b of the CY 2024 OPPS/ASC proposed rule (88 FR 49813 through 49818), we proposed to adopt the THA/TKA PRO–PM into the ASCQR Program beginning with voluntary CYs 2025 and 2026 reporting periods and mandatory reporting period beginning with the CY 2027/CY 2030 payment determination. We proposed that both ASCs and vendors would use the HQR System for data submission for the THA/TKA PRO–PM, which would enable us to incorporate this new requirement into the infrastructure we have developed and use to collect other quality data. We would provide ASCs with additional detailed information and instructions for submitting data using the HQR System through CMS' existing websites, and through outreach, or both.

We invited public comment on the proposals.

We did not receive any comments on the proposal and therefore, are finalizing the proposal as proposed.

We also refer readers to section XV.B.5.b of this final rule with comment period regarding our discussion of the Adoption of the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM), including summaries of the comments we received on our proposal and our responses thereto. After considering commenters' recommendations regarding voluntary and mandatory reporting timelines received in section XV.B.5.b of this final rule with comment period, we are extending the voluntary reporting period by an additional year and delaying implementation of mandatory reporting by one year. We believe that the additional year of voluntary reporting would allow time for CMS to monitor implementation progress with regards to data collection burden and response rates, as well as time for rulemaking should any improvements for mandatory reporting need to be made. We are finalizing our proposal to begin voluntary reporting with the CY 2025 reporting period and continue through the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period for CY 2031 payment determination.

(2) Data Submission Reporting Requirements

(a) Data Submission Requirements for Measures Submitted via a Web-Based Tool

We refer readers to the QualityNet website available at: *https://qualitynet.cms.gov* for a discussion of the requirements for measure data submitted via the HQR System (formerly referred to as the QualityNet Secure Portal) for the CY 2017 payment determination and subsequent years. The HQR System is safeguarded in accordance with the HIPAA Privacy and Security Rules to protect submitted patient information. See 45 CFR parts 160 and 164, subparts A, C, and E, for more information regarding the HIPAA Privacy and Security Rules.

(b) Voluntary Reporting Requirements for the Proposed THA/TKA PRO–PM

In the CY 2024 OPPS/ASC proposed rule (88 FR 49821), for ASCs participating in voluntary reporting for the THA/TKA PRO–PM, we proposed that ASCs submit pre-operative PRO data, as well as matching post-operative PRO data, for at least 45 percent of their eligible elective primary THA/TKA procedures.

For the THA/TKA PRO–PM, we proposed that the first voluntary reporting period for the CY 2025 reporting period would include pre-operative PRO data collection from 90 to 0 days before the procedure (for eligible elective THA/TKA procedures performed from January 1, 2025, through December 31, 2025) and post-operative PRO data collection from 300 to 425 days after the procedure. Therefore, during this first voluntary reporting period for CY 2025, ASCs would submit pre-operative data by May 15, 2026, and post-operative data by May 15, 2027, and we intend to provide ASCs with their results in confidential feedback reports in CY 2028. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or executive order would be extended to the first day thereafter. After the initial submission of pre-operative data for the first voluntary period, ASCs would submit both pre-operative and post-operative data by the same day, but for different time periods. For example, ASCs would need to submit: (1) post-operative data for the first voluntary reporting period (for procedures performed between January 1, 2025, and December 31, 2025); and (2) pre-operative data for the second voluntary reporting (for procedures performed between January 1, 2026, and December 31, 2026) of the THA/TKA PRO–PM by May 15, 2027.

For the THA/TKA PRO–PM, we proposed that the second voluntary reporting period for the CY 2026 reporting period would include pre-operative PRO data collection from 90 to 0 days before the procedure (for eligible elective THA/TKA procedures performed from January 1, 2026, through December 31, 2026) and post-operative PRO data collection from 300 to 425 days after the procedure. ASCs would submit pre-operative data by May 15, 2027, and post-operative data by May 15, 2028, and we intend to provide ASCs with their results in confidential feedback reports in CY 2029. ASCs that voluntarily submit data for this measure would receive confidential feedback reports that detail submission results from the reporting period. Results of voluntary reporting would not be made publicly available. If feasible, we would calculate and provide each participating ASC with their RSIR as part of the confidential feedback reports. This would provide each ASC with an indication of their performance relative to the other facilities that participate in the voluntary reporting period.

While we did not propose to publicly report the data we receive during the voluntary reporting periods for the THA/TKA PRO–PM facility-level RSIR, we proposed to publicly report which ASCs choose to participate in voluntary reporting and/or the percent of pre-operative data submitted by participating ASCs for the first voluntary reporting period, and their percent of pre-operative and post-operative matched PRO data submitted for subsequent voluntary reporting

periods. For example, if out of 100 eligible procedures a facility submits 45 pre-operative cases that match to post-operative cases, then we would report that facilities submitted 45 percent of matched pre-operative and post-operative PRO surveys during voluntary reporting.

We refer readers to Table 141 for an overview of the proposed performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the voluntary reporting periods for THA/TKA PRO–PM.

TABLE 141: PROPOSED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO-PM VOLUNTARY REPORTING

Reporting Cycle	Performance Period	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission	Confidential Reporting
Voluntary Reporting CY 2025	January 1, 2025-December 31, 2025	October 3, 2024-December 31, 2025	May 15, 2026	October 28, 2025-March 1, 2027	May 15, 2027*	CY 2028**
Voluntary Reporting CY 2026	January 1, 2026-December 31, 2026	October 3, 2025-December 31, 2026	May 15, 2027*	October 28, 2026-February 29, 2028	May 15, 2028	CY 2029**

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or executive order would be extended to the first day thereafter.

**Public reporting of information on facility participation in the voluntary reporting periods would occur in CY 2028 for the CYs 2025 and 2026 reporting periods.

We refer readers to section XV.B.5.b of this final rule with comment period regarding our discussion of the Adoption of the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM), including summaries of the comments we received on our proposal and our responses thereto. After considering commenters' recommendations regarding voluntary and mandatory reporting timelines received in section XV.B.5.b of this final rule with comment period, we are extending the voluntary reporting period by an additional year and delaying implementation of mandatory reporting by one year. We believe that the additional year of voluntary reporting would allow time for CMS to monitor implementation progress with regards to data collection burden and response rates, as well as time for rulemaking should any improvements for mandatory reporting need to be made.

We are finalizing our proposal to begin voluntary reporting with the CY 2025 reporting period and continue through the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period for CY 2031 payment determination and refer readers to Table 142 for an overview of the finalized performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the voluntary reporting periods for THA/TKA PRO–PM.

TABLE 142: FINALIZED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO–PM VOLUNTARY REPORTING

Reporting Cycle	**THA/TKA Procedures Performed**	**Pre-Procedure Data Collection (0 to 90 days before the procedure)**	**Pre-Procedure Data Submission Date ***	**Post-Procedure Data Collection (300 to 425 days after the procedure)**	**Post-Procedure Data Submission ***	Preview/ Public Reporting**
Voluntary Reporting CY 2025	January 1, 2025-December 31, 2025	October 3, 2024-December 31, 2025	May 15, 2026	October 28, 2025-March 1, 2027	May 15, 2027*	CY 2028
Voluntary Reporting CY 2026	January 1, 2026-December 31, 2026	October 3, 2025-December 31, 2026	May 15, 2027	October 28, 2026-February 29, 2028	May 15, 2028	CY 2029
Voluntary Reporting CY 2027	January 1, 2027-December 31, 2027	October 3, 2026-December 31, 2027	May 15, 2028	October 28, 2027-February 28, 2029	May 15, 2029	CY 2030

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive Order would be extended to the first day thereafter.

**Public reporting of information on facility participation in the voluntary reporting periods would occur in CY 2028 for the CY 2025 reporting period, CY 2029 for the CY 2026 reporting period, and CY 2030 for the CY 2027 reporting period.

(c) Mandatory Reporting

Following the two voluntary reporting periods, we proposed that mandatory reporting of the THA/TKA PRO–PM would begin with reporting PRO data for eligible elective THA/TKA procedures from January 1, 2027, through December 31, 2027 (the CY 2027 performance period), impacting the CY 2030 payment determination. This initial mandatory reporting would include pre-operative PRO data collection from 90 days preceding the applicable performance period and from 300 to 425 days after the performance period. For example, pre-operative data from October 3, 2026, through December 31, 2027 (for eligible elective primary THA/TKA procedures from January 1, 2027, through December 31, 2027) and post-operative PRO data collection from October 28, 2027, to February 28, 2029. Pre-operative data submission would occur by May 15, 2028, and post-operative data submission in May 15, 2029.

In the CY 2024 OPPS/ASC proposed rule, we noted that we intend to provide ASCs with their results in CY 2030 before publicly reporting results on the Compare tool hosted by HHS, currently available at *https://www.medicare.gov/care-compare,* or its successor website. We would provide confidential feedback reports during the voluntary period which would include the RSIR as well as other results that support understanding of their performance prior to public reporting. For this first mandatory reporting period, facilities that fail to meet the reporting requirements would receive a reduction of their ASC annual fee schedule update in the CY 2030 payment determination. ASCs would be required to submit 45 percent of eligible, complete pre-operative data with matching eligible, complete post-operative data as a minimum amount of data for mandatory reporting in the ASCQR Program.

We refer readers to Table 143 for an overview of the proposed performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the first mandatory reporting period.

TABLE 143: PROPOSED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO-PM FOR MANDATORY REPORTING

Reporting Cycle	Performance Period	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission	Confidential Reporting
Mandatory Reporting CY 2027	January 1, 2027-December 31, 2027	October 3, 2026-December 31, 2027	May 15, 2028	October 28, 2027-February 28, 2029	May 15, 2029	CY 2030*

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or executive order would be extended to the first day thereafter.

*Public reporting of information on facility results in the mandatory reporting period would occur in CY 2030 for CY 2027 reporting period/CY 2030 payment determination.

We refer readers to section XV.B.5.b of this final rule with comment period regarding our discussion of the Adoption of the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM), including summaries of the comments we received on our proposal and our responses thereto.

We invited comment on these proposals.

After considering commenter's recommendation regarding voluntary and mandatory reporting timelines received in section XV.B.5.b of this final rule with comment period, we are extending the voluntary reporting period by an additional year and delaying implementation of mandatory reporting by one year. We believe that the additional year of voluntary reporting would allow time for CMS to monitor implementation progress with regards to data collection burden and response rates, as well as time for rulemaking should any improvements for mandatory reporting need to be made. We are finalizing our proposal to begin voluntary reporting with the CY 2025 reporting period and continue through the CY 2027 reporting period followed by mandatory reporting beginning with the CY 2028 reporting period for CY 2031 payment determination.

Following the voluntary reporting periods, we are finalizing that mandatory reporting of the THA/TKA PRO–PM would begin with reporting PRO data for eligible elective THA/TKA procedures from January 1, 2028, through December 31, 2028 (the CY 2028 performance period), impacting the CY 2031 payment determination. This initial mandatory reporting would include pre-operative PRO data collection from 90 days preceding the applicable performance period and from 300 to 425 days after the performance period. For example, pre-operative data from October 3, 2027, through December 31, 2028 (for eligible elective primary THA/TKA procedures from January 1, 2028, through December 31, 2028) and post-operative PRO data collection from October 27, 2028, to March 1, 2030. Pre-operative data submission would occur by May 15, 2029, and post-operative data submission would occur by May 15, 2030.

We refer readers to Table 144 for an overview of the finalized performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the mandatory reporting periods for THA/TKA PRO–PM.

TABLE 144: FINALIZED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO–PM FOR MANDATORY REPORTING

Reporting Cycle	THA/TKA Procedures Performed	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date *	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission *	Preview and Public Reporting
Mandatory Reporting CY 2028	January 1, 2028- December 31, 2028	October 3, 2027- December 31, 2028	May 15, 2029	October 27, 2028- March 1, 2030	May 15, 2030	2031**

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive order would be extended to the first day thereafter.

**Public reporting of information on facility results in the Mandatory Reporting periods would occur in CY 2031 for CY 2028 reporting period/CY2031 payment determination.

e. ASCQR Program Data Submission Deadlines

We refer readers to the CY 2021 OPPS/ASC final rule (85 FR 86191) for a detailed discussion of our data submission deadlines policy, which we codified in our regulations at § 416.310(f).

We did not propose any changes to this policy in the CY 2024 OPPS/ASC proposed rule.

f. Review and Corrections Period for Measure Data Submitted to the ASCQR Program

Review and Corrections Period for Data Submitted via a CMS Online Data Submission Tool

We refer readers to the CY 2021 OPPS/ASC final rule (85 FR 86191 and 86192) for a detailed discussion of our review and corrections period policy, which we codified in our regulations at § 416.310(c)(1)(iii).

We did not propose any changes to this policy in the CY 2024 OPPS/ASC proposed rule.

g. ASCQR Program Reconsideration Procedures

We refer readers to the CY 2016 OPPS/ASC final rule (82 FR 59475) (and the previous rulemakings cited therein) and § 416.330 for the ASCQR Program's reconsideration policy.

We did not propose any changes to this policy in the CY 2024 OPPS/ASC proposed rule.

h. Extraordinary Circumstances Exception (ECE) Process

We refer readers to the CY 2018 OPPS/ASC final rule (82 FR 59474 through 59475) (and the previous rulemakings cited therein) and § 416.310(d) for the ASCQR Program's extraordinary circumstance exceptions (ECE) request policy. In the CY 2024 OPPS/ASC proposed rule (88 FR 49824), we proposed to amend our exception policy codified at § 416.310(d)(1) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website'', and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

E. Payment Reduction for ASCs That Fail To Meet the ASCQR Program Requirements

1. Statutory Background

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74492 and 74493) for a detailed discussion of the statutory background regarding payment reductions for ASCs that fail to meet the ASCQR Program requirements.

2. Policy Regarding Reduction to the ASC Payment Rates for ASCs That Fail To Meet the ASCQR Program Requirements for a Payment Determination Year

The national unadjusted payment rates for many services paid under the ASC payment system are equal to the product of the ASC conversion factor and the scaled relative payment weight for the APC to which the service is assigned. For CY 2024, the ASC conversion factor is equal to the conversion factor calculated for the previous year updated by the productivity-adjusted hospital market basket update factor. The productivity adjustment is set forth in section 1833(i)(2)(D)(v) of the Act. The productivity-adjusted hospital market basket update is the annual update for the ASC payment system for a 5-year period (CY 2019 through CY 2023). Under the ASCQR Program, in accordance with section 1833(i)(7)(A) of the Act and as discussed in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68499), any annual increase in certain payment rates under the ASC payment system shall be reduced by 2.0 percentage points for ASCs that fail to meet the reporting requirements of the ASCQR Program. This reduction applied beginning with the CY 2014 payment rates (77 FR 68500). For a complete discussion of the calculation of the ASC conversion factor and our finalized proposal to update the ASC payment rates using the inpatient hospital market basket update for CYs 2019 through 2023, we refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 59073 through 59080).

In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68499 and 68500), in order to implement the requirement to reduce the annual update for ASCs that fail to meet the ASCQR Program requirements, we finalized the following policies: (1) to calculate a full update conversion factor and an ASCQR Program reduced update

conversion factor; (2) to calculate reduced national unadjusted payment rates using the ASCQR Program reduced update conversion factor that would apply to ASCs that fail to meet their quality reporting requirements for that calendar year payment determination; and (3) that application of the 2.0 percentage point reduction to the annual update may result in the update to the ASC payment system being less than zero prior to the application of the productivity adjustment. The ASC conversion factor is used to calculate the ASC payment rate for services with the following payment indicators (listed in Addenda AA and BB to the proposed rule, which are available via the internet on the CMS website): ''A2,'' ''G2,'' ''P2,'' ''R2'' and ''Z2,'' as well as the service portion of device-intensive procedures identified by ''J8'' (77 FR 68500). We finalized our proposal that payment for all services assigned the payment indicators listed above would be subject to the reduction of the national unadjusted payment rates for applicable ASCs using the ASCQR Program reduced update conversion factor (77 FR 68500).

The conversion factor is not used to calculate the ASC payment rates for separately payable services that are assigned status indicators other than payment indicators ''A2,'' ''G2,'' ''J8,'' ''P2,'' ''R2'' and ''Z2.'' These services include separately payable drugs and biologicals, pass-through devices that are contractor-priced, brachytherapy sources that are paid based on the OPPS payment rates, and certain office-based procedures, radiology services and diagnostic tests where payment is based on the PFS nonfacility PE RVU-based amount, and a few other specific services that receive cost-based payment (77 FR 68500). As a result, we also finalized our proposal that the ASC payment rates for these services would not be reduced for failure to meet the ASCQR Program requirements because the payment rates for these services are not calculated using the ASC conversion factor and, therefore, are not affected by reductions to the annual update (77 FR 68500).

Office-based surgical procedures (generally those performed more than 50 percent of the time in physicians' offices) and separately paid radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents) are paid at the lesser of the PFS nonfacility PE RVU-based amounts or the amount calculated under the standard ASC ratesetting methodology. Similarly, in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66933 and 66934), we finalized our proposal that payment for certain diagnostic test codes within the medical range of CPT codes for which separate payment is allowed under the OPPS will be at the lower of the PFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the standard ASC ratesetting methodology when provided integral to covered ASC surgical procedures. In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the standard ASC ratesetting methodology for this type of comparison would use the ASC conversion factor that has been calculated using the full ASC update adjusted for productivity. This is necessary so that the resulting ASC payment indicator, based on the comparison, assigned to these procedures or services is consistent for each HCPCS code, regardless of whether payment is based on the full update conversion factor or the reduced update conversion factor.

For ASCs that receive the reduced ASC payment for failure to meet the ASCQR Program requirements, we have noted our belief that it is both equitable and appropriate that a reduction in the payment for a service should result in proportionately reduced coinsurance liability for beneficiaries (77 FR 68500). Therefore, in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68500), we finalized our proposal that the Medicare beneficiary's national unadjusted coinsurance for a service to which a reduced national unadjusted payment rate applies will be based on the reduced national unadjusted payment rate.

In the CY 2013 OPPS/ASC final rule with comment period, we finalized our proposal that all other applicable adjustments to the ASC national unadjusted payment rates would apply in those cases when the annual update is reduced for ASCs that fail to meet the requirements of the ASCQR Program (77 FR 68500). For example, the following standard adjustments would apply to the reduced national unadjusted payment rates: the wage index adjustment; the multiple procedure adjustment; the interrupted procedure adjustment; and the adjustment for devices furnished with full or partial credit or without cost (77 FR 68500). We believe that these adjustments continue to be equally applicable to payment for ASCs that do not meet the ASCQR Program requirements (77 FR 68500).

In the CY 2015 through CY 2023 OPPS/ASC final rules with comment period, we did not make any other changes to these policies. We proposed the continuation of these policies for the CY 2024 reporting period.

We did not receive any public comments on our proposal. We are finalizing the continuation of these policies for CY 2024.

XVI. Requirements for the Rural Emergency Hospital Quality Reporting (REHQR) Program

A. Background

1. Overview

The Rural Emergency Hospital Quality Reporting (REHQR) Program's overarching goals are to improve the quality of care provided to Medicare beneficiaries, facilitate public transparency, ensure accountability, and safeguard the accessibility of hospitals in rural settings. We refer readers to section XVI of the CY 2023 Hospital Outpatient Prospective Payment System (OPPS)/Medicare Ambulatory Surgical Center Payment System (ASC) final rule (87 FR 72136 through 72150) for an overview of the REHQR Program.

2. Statutory and Regulatory History of Quality Reporting for REHs

Congress established Rural Emergency Hospitals (REHs) as a new Medicare provider type in the Consolidated Appropriations Act (CAA), 2021. Section 125 of Division CC of the CAA, 2021 added section 1861(kkk) to the Social Security Act (the Act). This section defines an REH as a facility that was, as of December 27, 2020: (1) a critical access hospital (CAH); or (2)(i) a subsection (d) hospital with not more than 50 beds located in a county (or equivalent unit of local government) in a rural area,[646] or (ii) a subsection (d) hospital with not more than 50 beds that was treated as being in a rural area.[647] [648] Among other requirements, an REH must apply for enrollment in the Medicare program, provide emergency department (ED) services and observation care, and not provide any acute care inpatient services (other than post-hospital extended care services furnished in a distinct part unit licensed as a skilled nursing facility).[649] [650] At the election of the REH, it can also provide certain services furnished on an outpatient basis.[651]

[646] As defined in section 1886(d)(2)(D) of the Act.

[647] Pursuant to section 1886(d)(8)(E) of the Act.

[648] As set out under section 1861(kkk)(3) of the Act.

[649] 42 CFR part 485, subpart E (§§ 485.500 through 485.546).

[650] Qualification requirements for REHs are set out under section 1861(kkk)(2) of the Act.

[651] *See* section 1861(kkk)(1)(A)(ii) of the Act.

3. Codification of the Statutory Authority of the REHQR Program

In the CY 2024 OPPS/ASC proposed rule (88 FR 49825 and 49826), we proposed to codify the statutory authority for the REHQR Program at 42 CFR 419.95 by adding paragraph (a), ''Statutory authority.'' Section 1861(kkk)(7)(A) of the Act authorizes the Secretary to implement a quality reporting program requiring REHs to submit data on measures in accordance with the Secretary's requirements in section 1861(kkk)(7). Section 1861(kkk)(7)(B)(ii) requires REHs to submit quality measure data to the Secretary ''in a form and manner, and at a time, specified by the Secretary.'' The Act does not require the Secretary to provide incentives for submitting this data under the REHQR Program, nor does it require the Secretary to impose penalties for failing to comply with this requirement under the REHQR Program.

We invited public comment on the proposal. We did not receive any comments on the proposal and are finalizing our proposal to codify the statutory authority of the REHQR Program at § 419.95(a).

B. REHQR Program Quality Measures

1. Considerations in the Selection of REHQR Program Quality Measures

As we stated in the CY 2023 OPPS/ASC final rule, we seek to adopt a concise set of important, impactful, reliable, accurate, and clinically relevant measures for REHs that would inform consumer decision-making regarding care and drive further quality improvement efforts in the REH setting (87 FR 72137). As we considered potential measures for the REHQR Program, we prioritized measures that had undergone previous consensus-based entity (CBE) [652] review for the hospital outpatient department (HOPD) setting that reflect important areas of service for REHs while adhering to the CMS National Quality Strategy goals,[653] Strategic Plan,[654] Meaningful Measures 2.0 initiatives,[655] and the Department of Health and Human Services' (HHS) Strategic Plan.[656] When identifying potential measures for the REHQR Program, we focused on the considerations of service and patient volume, care accountability and quality, rurality and care setting relevance, and health equity.

We note that under section 1861(kkk)(7)(C)(i) of the Act, unless the exception of subclause (ii) applies, a measure selected for the REHQR Program must have been endorsed by the entity with a contract under section 1890(a) of the Act, also known as the CBE. The CBE is a voluntary, consensus-based, standard-setting organization with a diverse representation of consumer, purchaser, provider, academic, clinical, and other health care stakeholder organizations. The CBE was established to standardize healthcare quality measurement and reporting through its consensus development processes. In general, we prefer to adopt measures that have been endorsed by the CBE identified by the Secretary; however, due to lack of an endorsed measure for a given setting, procedure, or other aspect of care, the requirement that measures reflect consensus among affected parties can be achieved in other ways, including input from the measure development process, through broad acceptance, use of the measure(s) in other programs, and through public comment. More specifically, section 1861(kkk)(7)(C)(ii) provides an exception to CBE-endorsement, which is that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49826), we proposed to adopt four measures for the REHQR Program measure set—(1) Abdomen Computed Tomography (CT)—Use of Contrast Material; (2) Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients; (3) Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy; and (4) Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery—which are measures currently adopted in the Hospital Outpatient Quality Reporting (OQR) Program. We recognize REHs will be smaller hospitals that will likely have limited resources compared with larger hospitals in metropolitan areas.[657] As discussed in the CY 2024 OPPS/ASC proposed rule, for the REHQR Program, we intend to seek balance between the costs associated with reporting data and the benefits of ensuring safety and quality of care through measurement and public reporting. Because REHs will consist of hospitals formerly operating as either CAHs or subsection (d) hospitals, we assessed whether these facilities have successfully reported the REHQR Program measures within the context of the Hospital OQR Program with sufficient volume to meet CMS case number thresholds for data to be publicly reported, though we note that CAHs report data voluntarily. More specifically, we considered reporting rates and measure performance for CAHs and subsection (d) hospitals that are eligible to convert to REHs and also analyzed data for other subsection (d) hospitals that are not eligible for conversion to permit comparisons of these providers' ability to report these data in sufficient numbers to permit public reporting and to view comparative performance. Table 145 includes the results of this analysis.

BILLING CODE 4120–01–P

[652] In previous years, we referred to the consensus-based entity by corporate name. We have updated this language to refer to the consensus-based entity more generally.

TABLE 145: REPORTING RESULTS AND MEASURE PERFORMANCE FOR HOSPITALS PUBLICLY REPORTING REHQR PROGRAM MEASURES

Abdomen Computed Tomography (CT) - Use of Contrast Material*					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total)	1,060 (77.9%)	151 (75.5%)	146 (48.7%)	500 (89.9%)	2,060 (93.8%)
Mean (CT studies)	6.3	7.5	7.4	6.4	6.0
10th Percentile	1.7	2.4	0.6	1.7	1.4
25th Percentile	2.9	4.2	2.2	3.2	3
Median	5	6.5	4.7	5.35	5.1
75th Percentile	7.8	10.1	8.1	8.15	7.9
90th Percentile	12.1	14	12.7	11.7	11

*Ratio of CT abdomen studies that are performed both with and without contrast of all CT abdomen studies performed. Lower scores indicate better performance.

Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients – Overall Rate*					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total)	1,126 (82.7%)	163 (81.5%)	173 (57.7%)	507 (91.2%)	2 ,081 (94.7%)
Mean (minutes)	125.9	130.0	142.5	156.7	193.6
10th Percentile	91	99	97	111	138
25th Percentile	106	109	113	130	160
Median	123	130	137	153	188
75th Percentile	142	148	169	179	219
90th Percentile	164	159	197	204	254

*Rate is time in minutes from ED arrival to ED departure for patients discharged from the ED. Lower values indicate better performance. This measure is stratified by four category types of patients.

Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients - Reported Measure, Excluding Psychiatric/Mental Health and Transfer Patients*					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total)	1,124 (82.6%)	163 (81.5%)	173 (57.7%)	507 (91.2%)	2,078 (94.6%)
Mean (minutes)	118.5	122.6	137.0	150.6	188.0
10th Percentile	86	94	92	106	133
25th Percentile	100	104	110	125	155
Median	116	122	132	148	183
75th Percentile	134	140	159	172	214
90th Percentile	153	153	191	199	248

*Rate is time in minutes from ED arrival to ED departure for patients discharged from the ED. Lower values indicate better performance. This measure is stratified by four category types of patients.

Median Time from ED Arrival to ED Departure for Discharged ED Patients - Psychiatric/Mental Health Patients*					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total)	703 (51.7%)	128 (64.0%)	87 (29.0%)	419 (75.4%)	1,869 (85.1%)
Mean (minutes)	213.1	208.6	265.9	267.8	340.9
10th Percentile	118	119	120	142	174
25th Percentile	148	143.5	169	181	226
Median	190	187.5	230	232	294
75th Percentile	243	237	312	315	395
90th Percentile	333	330	444	406	552

*Rate is time in minutes from ED arrival to ED departure for patients discharged from the ED. Lower values indicate better performance. This measure is stratified by four category types of patients.

Median Time from ED Arrival to ED Departure for Discharged ED Patients - Transfer Patients*					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total Eligible)	934 (68.6%)	145 (72.5%)	119 (39.7%)	384 (69.1%)	681 (31.0%)
Mean (minutes)	259.4	300.6	321.7	315.2	366.3
10th Percentile	162	186	201	210	236
25th Percentile	194	214	249	247	276
Median	242	256	300	299.5	341
75th Percentile	301	311	376	360.5	422
90th Percentile	385	387	486	439	519

*Rate is time in minutes from ED arrival to ED departure for patients discharged from the ED. Lower values indicate better performance. This measure is stratified by four category types of patients.

Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery* Excluding Eye Surgery and Routine Colonoscopy					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total)	182 (13.4%)	78 (39.0%)	184 (61.3%)	403 (72.5%)	1,939 (88.3%)
Mean (ratio of predicted to expected visits)	1.006	1.024	0.988	1.016	1.010
10th Percentile	0.9	0.9	0.8	0.9	0.8
25th Percentile	0.9	1	0.9	0.9	0.9
Median	1	1	1	1	1
75th Percentile	1	1.1	1.1	1.1	1.1
90th Percentile	1.1	1.2	1.2	1.2	1.2

*Ratio of "predicted" unplanned hospital visits to the number of "expected" unplanned hospital visits. Lower scores indicate better performance.

Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy Rate*					
Statistic	**Critical Access Hospitals**	**Subsection (d) hospitals with ≤ 50 beds Rural Only**	**Subsection (d) hospitals with ≤ 50 beds Urban Only**	**Subsection (d) hospitals with 51 -100 beds**	**Subsection (d) hospitals with >100 beds**
Total Number of Hospitals	1,361	200	300	556	2,197
Number Reporting (% of Total)	609 (44.7%)	131 (65.5%)	131 (43.7%)	465 (83.6%)	1,945 (88.5%)
Mean (visits)	14.3	14.4	14.3	14.3	14.2
10th Percentile	13.6	13.4	13.2	13	12.7
25th Percentile	13.8	13.8	13.7	13.6	13.4
Median	14.2	14.2	14.2	14.2	14.1
75th Percentile	14.6	15	14.8	14.9	14.9
90th Percentile	15.1	15.6	15.6	15.7	15.7

*Rate is the number of unplanned hospital visits after colonoscopy (per 1,000 colonoscopies). Lower scores indicate better performance.

Data sources: Program Resource System (PRS) accessed January 10, 2023, Care Compare data updated each January 2018-2023, and CMS Providers of Services File (PSF) - Hospital & Non-Hospital Facilities Q3 2022.
Includes all data submitted for all CAHs and subsection (d) hospitals open as of December 27, 2020.
Hospitals are considered eligible to report in Care Compare if they have a Medicare accept date prior to the latest measure end date and are open as of the PRS accessed date. March 31, 2022, is the measure end date for Hospital OQR Program measures for public reporting in the January 2023 Care Compare refresh.
Hospitals are considered reporting Hospital OQR Program measures if they have a score published on Care Compare. Requirements for publication include that aggregated case numbers reported be greater than or equal to 10. The published data value must not be "Not Available".
Rural/urban location is identified by the CMS PSF - Hospital & Non-Hospital Facilities Q3 2022. Rural/urban location is based on Core Based Statistical Area (CBSA), which indicates whether the county is defined as urban or rural to limit the analysis to areas currently viewed as rural.
Hospital bed size is the number of total Medicare certified beds listed in PRS.

BILLING CODE 4120–01–C

Based on our analysis of these data, current to the January 2023 refresh of Care Compare, we note that a relatively high percentage of the hospitals eligible to convert to REH status have reported aggregated measure data that meet the requirements for disclosure per CMS privacy policy[658] for the measures we proposed for the REHQR Program. For example, in comparing solely the averages for the Abdomen Computed Tomography (CT)—Use of Contrast Material measure, a significant majority of CAHs (77.9 percent) and rural subsection (d) hospitals with 50 or fewer beds (75.5 percent) have data publicly reported. In addition, for the Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy measure, rural subsection (d) hospitals with 50 or fewer beds were more often able to have data publicly reported than urban subsection (d) hospitals with 50 or fewer beds (65.5 percent versus 43.7 percent), which indicates that this measure could be useful for small rural hospitals that convert to REHs. For this latter measure, while the mean values are similar across categories of hospitals, the results show that there are outlier hospitals with higher levels of hospital events following outpatient colonoscopies than expected, which provides potentially valuable information when discerning individual hospital performance.

While it is not possible to identify the exact group of hospitals that will choose to convert to REH status, our analysis indicates that the services targeted by the REHQR measures are relevant for hospitals that may participate in the REHQR Program as these hospitals are currently providing the services assessed by the selected measures with case volumes sufficient to meet thresholds to allow public reporting of the collected data.[659]

2. Retention of Measures Previously Adopted Into the REHQR Program

a. Background

For purposes of our quality reporting programs, we retain measures from previously adopted measure sets for subsequent years unless otherwise specified; for example, see the Hospital OQR (42 CFR 419.46(i)(1)) and Ambulatory Surgical Center Quality Reporting (ASCQR) Programs (§ 416.320(a)). As this approach establishes regularity and predictability for participating providers and suppliers, we seek to align the REHQR Program with this policy.

[658] CMS Policy for Privacy Act Implementation & Breach Notification, July 23, 2007, Document Number: CMS–CIO–POL–PRIV01–01, p 4. Statistical, aggregate or summarized information created as a result of analysis conducted using identifiable CMS data obtained under CMS-approved projects/studies may only be disclosed if the data are not individual-specific and the data are aggregated to a level where no data cells contain 10 or fewer individuals.

[659] CMS does not report measures publicly unless measures are the result of an analysis of more than 10 cases. See CMS Policy for Privacy Act Implementation & Breach Notification, July 23, 2007, Document Number: CMS–CIO–POL–PRIV01–01, p 4.

b. Adoption and Codification of a Measure Retention Policy for the REHQR Program

In the CY 2024 OPPS/ASC proposed rule (88 FR 49831), we proposed that, once adopted into the REHQR Program measure set, each measure would be retained for use, except when they are removed, suspended, or replaced under our policies for measure removal, suspension, or replacement, discussed below in sections XVI.B.3.a and XVI.B.3.b of this final rule with comment period. We also proposed to codify this policy at § 419.95 by adding paragraph (e), ''Retention and removal of quality measures under the REHQR Program.'' In paragraph (e)(1), we proposed that quality measures would be adopted into the REHQR Program measure set until such time that such measures are removed, suspended, or replaced, as set forth at paragraphs (e)(2) and (3) of the section.

We invited public comment on these proposals.

Comment: One commenter expressed broad support of CMS' proposals to support REHQRs' efforts to collect data, report quality measures, and improve performance, including CMS' proposal to adopt a measure retention policy for the REHQR Program, in alignment with the Hospital OQR and ASCQR Programs.

Response: We thank the commenter for their support.

After consideration of the public comments we received, we are finalizing adoption of the measure retention policy as proposed for the REHQR Program and to codify this policy at § 419.95(e)(1).

3. Removal of Quality Measures From the REHQR Program Measure Set

a. Adoption and Codification of an Immediate Removal Policy for Adopted REHQR Program Measures

When there is reason to believe that the continued collection of a measure as currently specified raises potential patient safety concerns, we believe it would be appropriate for us to take immediate action to remove the measure from the REHQR Program outside of rulemaking. Therefore, in the CY 2024 OPPS/ASC proposed rule (88 FR 49831), we proposed to adopt an immediate measure removal policy that would allow us to promptly remove such a measure and notify REHs and the public of the decision to remove the measure through standard hospital communication channels, including, but not limited to, REHQR Program-specific listservs and REHQR Program guidance currently housed on a CMS website (such as QualityNet). We also proposed to confirm the removal of the measure in the next appropriate rulemaking, typically an OPPS rulemaking cycle. We note that the Hospital OQR Program previously finalized a similar policy (74 FR 60634 through 60635).

We proposed to codify this policy at § 419.95 by adding paragraph (e)(2), ''Immediate measure removal.'' In paragraph (e)(2), we proposed that in cases where CMS believes that the continued use of a quality measure as specified raises patient safety concerns, CMS would immediately remove the measure from the REHQR Program, promptly notify REHs and the public of the removal of the measure and the reasons for its removal, and confirm the removal of the measure in the next appropriate rulemaking.

We invited public comment on these proposals.

Comment: One commenter did not support our proposal to adopt a policy to immediately remove a measure in cases where CMS believes that the continued use of the measure as specified raises patient safety concerns. The commenter stated that this policy would enable CMS to remove REHQR Program measures without going through the rulemaking process, which the commenter believed would thus strip consumers of their voice in this decision-making, diminish transparency, and send the wrong message about the importance of quality and safety at REHs. The commenter also felt that the circumstances triggering immediate removal of a measure under the proposed measure removal policy (''the continued collection of a measure as currently specified raises potential patient safety concerns'') should be held to public scrutiny through rulemaking.

Response: We believe that we should take immediate action to discontinue the use of quality measures when clinical evidence suggests that continued collection of the data may result in harm to patients. Under such circumstances, we may not be able to wait until the annual rulemaking cycle or until we have had the opportunity to obtain input from the public to remove the measure because of the necessity to not encourage potentially harmful practices which may result from the continued collection of the measure. However, we agree with the commenter that seeking public input on the removal of the measure increases the public's voice in decision-making and increases transparency. Therefore, we are finalizing a policy in which we would suspend the measure's use until the removal can be accomplished through the standard rulemaking process.

After consideration of the public comment we received regarding reducing consumer voice in decision-making and diminishing transparency, we are finalizing a modified version of the proposed immediate measure removal policy. When the collection of the measure as currently specified raises potential patient safety concerns, instead of immediately removing the measure, we will suspend the measure's use until the removal can be proposed and finalized through rulemaking. We will notify REHs and the public of the decision to suspend the measure through standard hospital communication channels, including, but not limited to, REHQR Program-specific listservs and REHQR Program guidance currently housed on a CMS website (such as QualityNet). We will then address any such suspension and propose any permanent action regarding such suspended measure in the next appropriate rulemaking cycle. We are codifying this policy at § 419.95(e)(2).

b. Adoption and Codification of a Measure Removal Factors Policy

The Hospital OQR and ASCQR Programs use similar sets of factors for determining whether to remove measures. For more detail on the measure removal factors in those programs, we refer readers to §§ 419.46(i)(3)(i) and 416.320(c)(2), respectively. Generally, we prefer to use similar removal factors across the quality reporting programs for consistency and alignment. Therefore, in the CY 2024 OPPS/ASC proposed rule (88 FR 49831), we proposed to adopt a similar set of removal factors for the REHQR Program.

Specifically, we proposed to adopt the following eight factors to determine conditions for measure removal from the REHQR Program:

- Factor 1. Measure performance among REHs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (''topped-out'' measures).
- Factor 2. Performance or improvement on a measure does not result in better patient outcomes.
- Factor 3. A measure does not align with current clinical guidelines or practice.
- Factor 4. The availability of a more broadly applicable (across settings, populations, or conditions) measure for the topic.
- Factor 5. The availability of a measure that is more proximal in time to desired patient outcomes for the particular topic.

- Factor 6. The availability of a measure that is more strongly associated with desired patient outcomes for the particular topic.
- Factor 7. Collection or public reporting of a measure leads to negative unintended consequences other than patient harm.
- Factor 8. The costs associated with a measure outweigh the benefit of its continued use in the program.

In addition, for Measure Removal Factor 1, we proposed that a measure for the REHQR Program would be deemed topped-out by determining: (1) when the difference between the 75th and 90th percentiles for an REH's measure is within two times the standard error of all measure data reported for all REHs, and (2) when the measure's truncated coefficient of variation (TCOV) is less than or equal to 0.1.

We proposed to codify these policies at § 419.95 by adding paragraph (e)(3), ''Measure removal, suspension, or replacement through the rulemaking process.'' In paragraph (e)(3), we proposed that unless a measure raises specific safety concerns as set forth in paragraph (e)(2) of the section, we would use rulemaking to remove, suspend, or replace quality measures in the REHQR Program. We also proposed to adopt the eight removal factors discussed previously by codifying them at paragraph (e)(3)(i), in alignment with other quality reporting programs (74 FR 60634 and 60635, 77 FR 68472, and 83 FR 59082). Additionally, we proposed to adopt the criteria to determine topped-out measures discussed previously at paragraph (e)(3)(ii). Similar to the Hospital OQR Program (79 FR 66941 and 66942), we proposed to assess the benefits of removing a measure from the REHQR Program on a case-by-case basis at paragraph (e)(3)(iii). An REHQR Program measure would not be removed solely based on meeting any specific factor.

We invited public comment on these proposals.

Comment: One commenter did not support CMS' proposal to adopt measure removal factors to consider when determining whether to remove REHQR Program measures. The commenter specifically did not agree with the ''topped-out criteria'' under Measure Removal Factor 1 because some measures included in CMS quality reporting programs quantify ''never events.'' The commenter stated that comparing performance between the 75th and 90th percentiles does not adequately consider variation between higher and lower performing hospitals in these cases. The commenter further stated that many of CMS' quality measures only include patients covered by Medicare FFS and exclude the large population of Medicare Advantage beneficiaries, which makes the determination of whether a measure is topped out incomplete and inaccurate.

Response: We thank the commenter for this feedback. We acknowledge that our topped-out policy does not lend itself well to measures of rare adverse events also known as ''never events.'' We do consider these types of measures important, especially with regard to patient safety measures. As discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49831), the benefits of removing a measure from the REHQR Program would be assessed on a case-by-case basis. Under this case-by-case approach, a measure would not be removed solely on the basis of meeting any specific factor (88 FR 49831).

We also agree that across our quality programs, many measures currently are specified for only Medicare FFS beneficiary information. As recommended by the commenter, we seek to include Medicare Advantage as well as other payer information in our measures.

However, we believe that for many measures, when performance is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made, the measures would not provide useful information to Medicare beneficiaries or the public about the quality of care. For this reason, we believe that topped-out status is an important consideration when assessing whether to remove a measure from the REHQR Program.

Comment: One commenter recommended that CMS consider an additional measure removal factor based on whether a substantial number of REHs have reported aggregated measure data in sufficient numbers to permit public reporting. The commenter stated that if most REHs do not have a sufficient number of cases for a specific measure, such a measure should be removed from the REHQR Program because it would not be providing meaningful insight regarding REH quality performance. Another commenter requested that CMS adopt a new Factor 1 that explicitly states that CMS' measure removal policy is centered on the best interests of Medicare beneficiaries and the public. This commenter also requested that CMS provide more details on the costs and benefits of a measure that we would consider under Factor 8, noting that there is a cost to beneficiaries of not having access to insights as a result of a measure removal.

Response: We thank the commenters for their recommendations and appreciate the articulation of these important considerations in relation to measure removal under the REHQR Program. We believe that the concerns raised by the commenters are addressed by other REHQR Program policies and other measure removal factors. For example, with regard to the concern regarding low volume, as discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49830), CMS does not report measures publicly unless it achieves sufficient case volumes to allow for public reporting of the collected data. We further note that, as discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49827 through 49830), many CAHs and small, rural subsection (d) hospitals—hospitals which are eligible to convert to REH status—had sufficient measure data to be publicly reported on the Care Compare website for the four measures we are finalizing in section XVI.D of this final rule with comment period.

We also do not believe that an additional measure removal factor explicitly stating that CMS' measure removal policy is centered on the best interests of beneficiaries and the public is necessary because we do consider the benefits of retaining a measure to patients, beneficiaries, and the public as part of our consideration under Factor 8: The costs associated with a measure outweigh the benefit of its continued use in the program. We agree with the commenter that access to information regarding the quality of care provided at a specific REH is a benefit to retaining a measure and that loss of this information is a cost. When we determine that a measure's costs outweigh the benefits of retaining that measure, we provide additional details on the costs and benefits that we have considered in our proposal to remove that measure through rulemaking. Moreover, as discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49831), similarly to the Hospital OQR Program, our assessment would be made on a case-by-case basis, and a measure would not be removed solely on the basis of meeting any single factor.

After consideration of the public comments we received, we are finalizing our proposal to adopt the measure removal factors and related policies as proposed and to codify these policies at § 419.95(e)(3).

4. Modifications to Previously Adopted Measures

a. Background

It is important for measures adopted for the REHQR Program to remain up-to-date. We believe the way to achieve this is to have in place a sub-regulatory process to incorporate non-substantive updates to measure specifications to facilitate the incorporation of scientific advances and updates to measure specifications in as timely a manner as possible.

b. Adoption and Codification of a Sub-Regulatory Measure Modification Policy

In the CY 2024 OPPS/ASC proposed rule (88 FR 49831 and 49832), we proposed a policy under which we would use a sub-regulatory process to make non-substantive updates to measures adopted for the REHQR Program. Examples of non-substantive changes to measures might include updated diagnoses or procedure codes. With respect to what constitutes substantive versus non-substantive changes, we expect to make this determination on a case-by-case basis.

We proposed that when there is an update to an REHQR Program measure that we believe does not substantially change the nature of the measure, we would use a sub-regulatory process to incorporate those updates to the measure specifications that we apply to the program. We stated that we would develop a specifications manual that will provide the complete and current technical specifications and abstraction information for quality measures used in the REHQR Program. We would revise the specifications manual to clearly identify any updates and would provide sufficient lead time for REHs to implement the revisions where changes to the data collection systems would be necessary. We would also provide notification of the measure specification updates on a CMS website (such as the QualityNet website). We noted that this policy for the REHQR Program aligns with the policies under the Hospital OQR Program (73 FR 68766 and 68767) and ASCQR Program (§ 416.325) that allow measures to be refined through a sub-regulatory process.

We proposed to codify this policy at § 419.95(d), ''Technical specifications and measure maintenance under the REHQR Program.'' In paragraph (d)(2), we proposed that REHQR Program specifications would be updated based on whether the change is considered substantive or non-substantive, as determined by CMS. In paragraph (d)(2)(ii), we proposed that if CMS determines that a change to a measure previously adopted in the REHQR Program is non-substantive, CMS would use a sub-regulatory process to revise the specifications manual as discussed previously.

Changes that we determine to be substantive would be those in which the changes are so significant that the measure is no longer the same measure. In paragraph (d)(2)(i), we proposed that we would use rulemaking to adopt substantive updates to measures previously adopted under the REHQR Program. We believe that this adequately balances the need to incorporate updates to the REHQR Program measures in the most expeditious manner possible to maintain relevancy, reliability, and accuracy of data collection while also preserving the public's ability to comment on updates that significantly change a measure.

We invited public comment on these proposals.

Comment: One commenter expressed broad support of CMS' proposals to support REHQR Program efforts to collect data, report quality measures, and improve performance, including CMS' proposals to adopt policies related to modification of previously adopted measures under the REHQR Program, in alignment with the Hospital OQR and ASCQR Programs.

Response: We thank the commenter for their support.

Comment: One commenter expressed concern with the use of a sub-regulatory process in certain circumstances, including within the context of a new program where transparency and the opportunity to comment on proposals is so essential.

Response: We appreciate the commenter's feedback and agree that transparency and opportunity to comment on proposals is essential, particularly within the context of a new program. We note that as discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49831 and 49832), we would use the sub-regulatory process to make non-substantive updates to measures previously adopted into the REHQR Program. We also noted that non-substantive changes to measures might include updated diagnoses or procedure codes. In contrast, changes that we determine to be substantive would be those in which the changes are so significant that the measure is no longer the same measure, and we proposed that we would utilize rulemaking to adopt substantive updates to measures previously adopted by the REHQR Program. We also note that we use the sub-regulatory process to address urgent issues, such as patient safety, as discussed later in section XVI.B.3.a, as well as in other quality reporting programs (for example, §§ 412.140(g)(2), 412.164(c)(3)(iii), 412.24(d)(3)(iii), 416.320(b), and 419.46(i)(2), 84 FR 42382 fn. 318, and 84 FR 42404 fn. 328). We believe this policy adequately balances the need to incorporate updates to REHQR Program measures in the most expeditious manner possible to maintain relevancy, reliability, and accuracy of data collection while also preserving the public's ability to comment on updates that significantly change a measure.

After consideration of the public comments we received, we are finalizing our proposals related to a sub-regulatory measure modification policy and to codify this policy at § 419.95(d)(2).

c. Development and Maintenance of Technical Specifications for Quality Measures

We intend to maintain technical specifications for adopted REHQR Program measures. We note that the measures proposed for the REHQR Program have been previously adopted by the Hospital OQR Program. To simplify and streamline participation in the REHQR Program, in the CY 2024 OPPS/ASC proposed rule (88 FR 49832), we proposed to adopt a policy for maintaining the measure specifications of REHQR Program measures that aligns with the Hospital OQR Program's policy (83 FR 59104 and 59105).

We proposed that, whenever we modify the REHQR Program measures and measure sets, we would also update the specifications manual for the REHQR Program. The manuals containing specifications for previously adopted measures can be found on the QualityNet website at: *https://qualitynet.cms.gov/outpatient/specifications-manuals.* At paragraph (d)(1) of § 419.95, we proposed to update the specifications manual for REHQR Program measures at least every 12 months beginning with CY 2024.

We invited public comment on the proposal.

We did not receive any comments specific to the proposal and therefore are finalizing our proposal related to the development and maintenance of technical specifications for quality measures and to codify this policy at § 419.95(d)(1) as proposed. We also refer readers to section XVI.B.2 of this final rule with comment period where we summarize the broad support we received for our proposals related to modifications to previously adopted measures.

5. New Measures for the REHQR Program Measure Set

In the CY 2024 OPPS/ASC proposed rule (88 FR 49832 through 49839), we proposed to adopt four measures into the REHQR Program measure set beginning CY 2024: (1) Abdomen Computed Tomography (CT)—Use of Contrast Material measure; (2) Median Time from ED Arrival to ED Departure for Discharged ED Patients measure; (3) Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy measure; and (4) Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure. Three of these measures would be calculated from Medicare Fee-For-Service (FFS) claims and enrollment information. The fourth is a chart-abstracted measure. We noted that many hospitals that are eligible to convert to REH status would already have established resources and experience with submitting these four measures as part of the Hospital OQR Program as previously discussed.

We received comments about the initial measure set for the REHQR Program and CMS' future approach to developing the REHQR Program measure set.

Comment: Several commenters supported the initial REHQR Program measure set. One commenter expressed support for analyzing measures that REH-eligible facilities have reported on to ensure that REHs will be able to successfully participate in this program. Another commenter stated that these measures adequately balance quality reporting burden with ensuring safety and quality of care.

Response: We thank commenters for their support. We agree that it is important to analyze measures that REH-eligible facilities have reported on to ensure successful participation. As demonstrated in Table 146, most of the 16 hospitals that have successfully converted to REH status thus far reported data for the four REHQR Program measures in sufficient case volumes for these data to be public reported and some hospitals reported data for each of the measures being finalized in this rulemaking.[660] We also agree with the need to balance reporting burden with quality of care and safety. Three of the four measures in the initial set for the REHQR Program are based fully on claims, thus not requiring additional data collection burden while representing patient safety and adverse outcome measures. The fourth measure is chart-abstracted, but it is a measure that hospitals that are eligible to convert to REH status are likely to have experience with as it is a long-standing measure under the Hospital OQR Program.

Comment: Several commenters recommended adding measures to the REHQR Program measure set slowly to account for the newness of the program and the lack of certainty regarding what services REHs will provide.

Response: We agree that measures should be added slowly to the REHQR Program measure set to account for newness of the program and uncertainty regarding what services REHs will provide. However, we believe that the measures selected for the initial measure set reflect services that REHs will continue to provide at levels that will enable at least some REHs to publicly report data. We will take commenters' feedback into consideration when deciding how and when to introduce additional measures into the REHQR Program.

Comment: One commenter expressed concern that the REHQR Program measure set as outlined in this rule does not provide the public with sufficient information on the quality of care provided in REHs. The commenter also recommended identifying measure gaps to expand the measure set. The commenter stated that CMS could readily fill two measurement gaps they had identified by implementing two existing measures related to avoidable morbidity and mortality as well four ED measures used in the Hospital OQR Program. These measures are: (1) Severe Sepsis and Septic Shock: Management Bundle measure (SEP–1); (2) Door to Diagnostic Evaluation by a Qualified Medical Professional (OP–20); (3) Fibrinolytic Therapy Received Within 30 Minutes of ED arrival (OP–2); (4) Median Time to Transfer to Another Facility for Acute Coronary Intervention-Reporting Rate (OP–3); (5) Median Time from ED Arrival to ED Departure for Discharged ED Patients (OP–18); and (6) Left Without Being Seen (OP–22).

Response: Regarding the commenter's concern regarding measurement gaps, we acknowledge that the initial REHQR Program with the four measures outlined in this rule serves as a starter set for initial program implementation, while also being sensitive to provider burden. We also believe that the selected measures reflect a core area of REH services (ED services) plus selected outpatient services (imaging and surgical) that sufficiently account for small case volume, and note that the set allows most hospitals that have converted to REH status thus far to have had some data publicly reported. Although the number of facilities converting to REH status is in flux and the services provided may shift, Table R–B2 depicts performance data for REHs that publicly reported data for the four measures we are finalizing in this rule, among the 16 hospitals that have converted to REH status based on data from the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) as of October 13, 2023. As further discussed in section XVI.B.5, these four measures are: (1) Abdomen Computed Tomography (CT)—Use of Contrast Material measure; (2) Median Time from ED Arrival to ED Departure for Discharged ED Patients measure; (3) Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy measure; and (4) Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure.

[660] The data provided in Table 146, discussed in section XVI.B.5 below are from the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) as of October 13, 2023.

TABLE R-B2 Care Compare Data on Hospitals that have Converted to REH status for the Four Measures Being Adopted in the REHQR Program in the CY 2024 OPPS/ASC Final Rule

Measure	Number of REHs Reporting	Mean	Median	Minimum	Maximum
Abdomen Computed Tomography (CT) - Use of Contrast Material*	11	8.6	9.6	4.2	13.6
Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients - Overall Rate**	14	113.1	109.5	68	178
Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients - Reported Measure, Excluding Psychiatric/Mental Health and Transfer Patients**	14	107.2	103	70	155
Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients - Psychiatric/Mental Health Patients**	11	228.9	155	114	548
Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients - Transfer Patients**	9	276.9	284	194	390
Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy Rate***	5	14.7	14.7	13.6	15.7
Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery**** Excluding Eye Surgery and Routine Colonoscopy	2	1.1	1.05	0.9	1.2

* Ratio of CT abdomen studies that are performed both with and without contrast of all CT abdomen studies performed. Lower scores indicate better performance.

** Rate is time in minutes from ED arrival to ED departure for patients discharged from the ED. Lower values indicate better performance. This measure is stratified by four category types of patients.

*** Rate is the number of unplanned hospital visits after colonoscopy (per 1,000 colonoscopies). Lower scores indicate better performance.

**** Ratio of "predicted" unplanned hospital visits to the number of "expected" unplanned hospital visits. Lower scores indicate better performance.

Source: Data from Medicare Provider Enrollment, Chain, and Ownership System (PECOS) as of October 13, 2023.

We also appreciate the commenter's suggested measures for the REHQR Program measure set and will take this feedback into consideration. We note that one of the ED measures suggested by the commenter, the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure, was proposed for the REHQR Program in the CY 2024 OPPS/ASC proposed rule (88 FR 49834 and 49835) and is being finalized for adoption for the REHQR Program measure set in this final rule, as discussed in section XVI.B.5.b of this final rule with comment period.

Comment: One commenter stated that REHs are likely to be small facilities with limited staff and recommended limiting the use of chart-abstracted measures and creating accommodations to minimize the burden of reporting these measures.

Response: As discussed below in section XVI. B.5.b of this final rule with comment period, we are finalizing one chart-abstracted measure, the Median Time for Discharged ED Patients measure. While we understand that reporting this measure is associated with some burden, as discussed in section XXIV.D of this final rule with comment period, we believe that hospitals that convert to REH status

from being a subsection (d) hospital or CAH will have experience with this measure and likely have existing processes in place to collect and submit data for this measure. In addition, as ED services are statutorily mandated to be provided by REHs, we believe this measure is especially suited for the program. We will, however, take the commenter's feedback into consideration as we continue to evaluate all elements of the REHQR Program.

a. Adoption of the Abdomen Computed Tomography (CT)—Use of Contrast Material Measure Beginning With the CY 2024 Reporting Period

(1) Background

A CT study performed with and without contrast increases the radiation dose to patients,[661] exposing them to the potential harmful side effects of the contrast material itself[662] and it is often unnecessary.[663] In the past, reports showed deviations from clinically appropriate American College of Radiology contrast practices for abdominal/pelvic CTs nationally.[664] A 2020 study using CMS Care Compare data determined that hospitals are now conducting fewer duplicate abdomen CTs (that is, less often performing CTs twice, once with and once without contrast). These improvements are more pronounced among hospitals that formerly conducted the most duplicate abdomen CTs. The reduction in duplicate abdomen CTs observed in the 2020 study may indicate that the Abdomen Computed Tomography (CT)—Use of Contrast Material (Abdomen CT) measure has been effective in identifying performance gaps among some hospitals. Thus, collecting data on this measure may have been effective in reducing duplicate abdomen CTs and lowering related patient risks.[665] However, the same 2020 study found that duplicate abdomen CTs continue to occur.

As discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49832 through 49834), we believe that the Abdomen CT measure is relevant for REH quality reporting. Although analysis of Care Compare data indicate the practice of duplicate scans continues among hospitals both large and small, and in both rural and urban settings, rural hospitals during the study period accounted for nearly half of those cases.[666] We note that this measure is also part of the Hospital OQR Program's measure set (adopted in the CY 2009 OPPS/ASC final rule (73 FR 68766)).

(2) Measure Overview

This measure provides the percentage of CT abdomen and abdominopelvic studies performed with and without contrast out of all CT abdomen studies performed (those without contrast, those with contrast, and those with both).

Section 1890A(a)(2) of the Act outlines the pre-rulemaking process established under section 1890A of the Act, which requires the Secretary to make available to the public by December 1 of each year a list of quality and efficiency measures under consideration. The Abdomen CT measure was on the 2022 Measures Under Consideration (MUC) list,[667] and the Measure Applications Partnership (MAP) Hospital Workgroup provided conditional support for this measure to be included in rulemaking for the REHQR Program. The MAP provides an annual review of the MUC list, and presents CMS with its recommendations in its Final Recommendations.[668] In its February 1, 2023 Final Recommendations, the MAP noted that the measure addresses a critical priority of patient safety in rural hospitals for the REHQR Program.[669] In the Final Recommendations, the MAP noted that the Health Equity Advisory Group expressed the importance of the measure and its potential to advance health equity, and the Rural Health Advisory Group discussed the measure in detail and cited no concerns with regard to rural health. The MAP conditionally supported the measure for rulemaking, pending testing indicating the measure is reliable and valid, and receiving CBE endorsement.[670]

Although section 1861(kkk)(7)(C)(i) of the Act requires that measures specified by the Secretary for use in the REHQR Program be endorsed by the entity with a contract under section 1890(a) of the Act, section 1861(kkk)(7)(C)(ii) of the Act states that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. The Abdomen CT measure is not CBE endorsed and we were unable to identify any other CBE-endorsed measures on this topic; therefore, we believe the exception in section 1861(kkk)(7)(C)(ii) of the Act applies for this measure. Also, we believe the measure has received sufficient support from consensus organizations, given the conditional support for the measure by the MAP Hospital Workgroup,[671] favorable comments received by the Health Equity Advisory Group,[672] and lack of objection by the Rural Health Advisory Group.[673]

We proposed to adopt the Abdomen CT measure into the REHQR Program measure set beginning with the CY 2024 reporting period. By addressing the critical priority area of patient safety in rural hospitals, collecting data on this measure seeks to ensure that CT abdomen imaging in rural communities adheres to evidence-based clinical guidelines. Inclusion of this measure aligns with the CMS National Quality Strategy goals of embedding quality into

the care journey, as well as the goal of promoting safety,[674] and is aligned with the priorities we identified for our Meaningful Measures 2.0 initiative, including using only high-value quality measures that impact key quality domains and aligning measures across our programs.[675]

(3) Data Sources

This measure addresses excessive radiation exposure from improper outpatient imaging procedures in Medicare beneficiaries. It would be calculated using Medicare FFS final action claims and enrollment data for hospital services paid through the OPPS for abdomen CT studies performed in the REH setting. Data from the hospital outpatient file is used to determine beneficiary inclusion (for example, in the case of REHs, a CT abdomen study performed at an REH) and exclusion (that is, diagnoses of adrenal mass, hematuria, infections of the kidney, jaundice, liver lesion (mass or neoplasm), malignant neoplasm of the bladder, malignant neoplasm of the pancreas, diseases of the urinary system, pancreatic disorders, non-traumatic aortic disease, and unspecified disorders of the kidney or ureter).[676]

(4) Measure Calculation

This measure calculates the percentage of CT abdomen and abdominopelvic studies that are performed with and without contrast out of all CT abdomen studies performed (those with contrast, those without contrast, and those with both). The measure would be calculated based on a 12-month window of claims data. From this patient cohort, the numerator contains patients who had a combined CT abdomen study (that is, a CT abdomen study without contrast followed by a CT abdomen study with contrast, documented using the CT Abdomen With and Without Contrast CPT code). For this measure, lower scores indicate less usage of CT scanning as scans with and without contrast are typically not medically necessary, which means a high-performing hospital reports a value nearer to zero, whereas facilities that may be performing too many combined CT abdomen studies score closer to 100 percent.[677]

(5) Cohort

This measure would apply to Medicare beneficiaries enrolled in original, Medicare FFS who underwent an abdomen or abdominopelvic CT study with or without contrast performed at an REH. This measure does not include Medicare managed care beneficiaries, non-Medicare patients, or beneficiaries who were admitted to the hospital as inpatients. A beneficiary can be included in the measure's initial patient population multiple times because each abdomen or abdominopelvic CT (without contrast, with contrast, or both with and without contrast) performed at an REH during the data collection period is counted once in the measure's denominator.

This claims-based imaging measure is not risk-adjusted; instead, Medicare FFS beneficiaries who have a clinical diagnosis of one or more conditions for which imaging with and without contrast is considered appropriate are excluded from the measure.[678] Thus, this measure does not include beneficiaries with the following conditions: adrenal mass, hematuria, infections of the kidney, jaundice, liver lesion (mass or neoplasm), malignant neoplasm of the bladder, malignant neoplasm of the pancreas, diseases of the urinary system, pancreatic disorders, non-traumatic aortic disease, and unspecified disorders of the kidney or ureter.[679]

We invited public comment on the proposal.

Comment: Several commenters supported adoption of the Abdomen CT—Use of Contrast Material measure.

Response: We thank commenters for their support.

Comment: Some commenters expressed concern regarding measure specifications for the Abdomen CT measure, including that it uses denominator exclusions as opposed to risk-adjustment and that it does not account for clinical reasons that providers may perform duplicate abdomen CTs.

Response: We recognize that using risk-adjustment as opposed to denominator exclusions would also account for the possibility that patients with some conditions are more likely to receive clinically appropriate duplicate abdominal CT scans. However, we believe that reporting the measure with the same specifications as adopted in the Hospital OQR Program, which underwent an extensive development process prior to implementation in the Hospital OQR Program, including soliciting broad interested party input and which many REH-eligible hospitals have historically reported on, will ensure alignment and comparability across programs, and preserve provider and consumer measure familiarity.

Comment: Several commenters expressed concern that this measure has not been endorsed by the CBE for this setting and that it is insufficiently tested to show that there is a performance gap and that the measure is valid and reliable. One of these commenters, however, also observed that rural hospitals do appear to be outliers on the Abdomen CT measure and therefore the measure may be appropriate for the REHQR Program if adequately tested.

Response: Under section 1861(kkk)(7)(C)(i) of the Act, a measure selected for use in the REHQR Program must have been endorsed or adopted by the entity with a contract under section 1890(a) of the Act, also known as the CBE. However, section 1861(kkk)(7)(C)(ii) states that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the CBE, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. Further, while we prefer to adopt CBE-endorsed measures, it may not be feasible or practicable, such as when a CBE-endorsed measure does not exist. We reviewed measures endorsed by consensus organizations and were unable to identify any other measures on this topic endorsed or adopted by a consensus organization, and therefore, we believe the exception in section 1861(kkk)(7)(C)(ii) of the Act applies.

As we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49833), this measure has been used in Hospital OQR Program for many years involving many

participating facilities, some of which are eligible to convert to REHs. Through both the MAP and rulemaking processes regarding this measure, we believe it has received sufficient support from consensus organizations. We also believe that, because facilities eligible to convert to REH status have been reporting this measure under the Hospital OQR Program, these facilities are meaningfully similar to HOPDs and therefore the testing that was completed for the HOPD setting is applicable to this setting.

In addition, we note that this measure underwent an extensive development process prior to adoption in the Hospital OQR Program which included a development process involving testing for reliability and validity. We believe that, because facilities eligible to convert to REH status have been reporting this measure under the Hospital OQR Program, these facilities are meaningfully similar to HOPDs and therefore the testing is applicable to this setting.

In response to commenters' concerns regarding demonstrating a performance gap, we refer readers to the CY 2024 OPPS/ASC proposed rule (88 FR 49832) where we noted that a 2020 study using CMS Care Compare data found that duplicate abdomen CTs continue to occur. Although the study found that the practice of duplicate scans continues with some hospitals large and small in both rural and urban settings, rural hospitals during the study period accounted for nearly half of those cases.[680]

Comment: One commenter expressed concern that duplicate abdominal CT with and without contrast is already performed at a very low frequency and therefore this measure would not provide useful data.

Response: While we acknowledge that identifiable adverse events related to conducting CT with and without contrast are rare, we believe this measure is important, impactful, and clinically relevant, and can help compare between care settings. Conducting duplicate CT scans both with and without contrast increases the radiation dose to patients, and the potential harmful side effects associated with increased exposure to radiation are well-documented and understood. We also note that duplicative procedures represent deviations from clinically appropriate American College of Radiology contrast practices for abdominal/pelvic CTs.

In addition, as depicted in Table R–B1 in section XVI.B.1 of this final rule with comment period, a significant majority of CAHs (77.9 percent) and rural subsection (d) hospitals with 50 or fewer beds (75.5 percent) reported on this measure in sufficient numbers to be publicly reported. Furthermore, the use of this measure in the Hospital OQR Program has been correlated with reductions in the frequency of duplicate abdominal CTs (that is, the use of this measure encourages providers to reduce the frequency of performing CTs twice, once with and once without contrast), indicating that the use of this measure has been effective in improving the safety of clinical and diagnostic medicine.[681] Moreover, as we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49832), studies have found that facilities with outlier values on this measure (that is, facilities that perform an unusually large number of duplicate abdominal CT scans) are overrepresented in rural settings.[682]

Comment: One commenter recommended that CMS evaluate how to appropriately publicly report this measure so that the public understands the measure results.

Response: We agree that providing information to help the public understand a measure's importance is necessary when publicly reporting a measure. We note that in publicly reporting this measure for the Hospital OQR Program, we include information stating that lower percentages are better and have information on Care Compare explaining the risks of ''double scans.'' We believe that this public reporting of information enables public understanding of the measure results. We intend to provide such explanatory information when publicly reporting this measure for the REHQR Program, consistent with our current approach in the Hospital OQR Program.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Abdomen Computed Tomography (CT)—Use of Contrast Material Measure, beginning with the CY 2024 reporting period as proposed.

b. Adoption of the Median Time From Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients Measure Beginning With the CY 2024 Reporting Period

(1) Background

Care provided in the ED will be a focus of REH services and we seek measures that assess the quality of care in this setting. Improving ED throughput times is important for alleviating overcrowding and reducing wait times.[683] Crowding has led to a number of potentially avoidable problems in EDs, including ambulance diversion, prolonged patient waiting times, and potentially poor patient outcomes due to delays, such as in the administration of medication.[684]

As discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49834), the Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients (the Median Time for Discharged ED Patients measure) was adopted for reporting in the Hospital OQR Program beginning with the CY 2013 payment determination (75 FR 72086).

(2) Measure Overview

The Median Time for Discharged ED Patients measure is a chart-abstracted measure that evaluates the time between the arrival to and departure from the ED, also known as ED throughput time. As described in the measure specifications and Measure Information Form (MIF),[685] [686] measure data are stratified for four separate calculations: (1) the Overall Rate is calculated as the overall rate; (2) the Reported Measure calculates data for all patients excluding psychiatric/mental health patients and transfer patients; (3) Psychiatric/Mental Health calculates data for psychiatric/mental health patients; and (4) Transfers calculates data for transfer patients.

Although section 1861(kkk)(7)(c)(i) of the Act requires that measures specified by the Secretary for use in CMS hospital

quality programs be endorsed by the entity with a contract under section 1890(a) of the Act, section 1861(kkk)(7)(C)(ii) of the Act states that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary. This measure is not CBE-endorsed. We reviewed CBE-endorsed measures and were unable to identify any other CBE-endorsed measures on this topic; therefore, we believe the exception in section 1861(kkk)(7)(C)(ii) of the Act applies for this measure.

The Median Time for Discharged ED Patients measure was included in the 2022 MUC list.[687] In its February 1, 2023 Final Recommendations, the MAP stated their belief that changes in wait times may not directly influence mortality or patient outcomes and had concerns that transfer times may be delayed due to weather and transport safety issues that are out of a facility's control. The Rural Health Advisory Group expressed similar concerns regarding the impact on transport times of issues beyond a facility's control, such as weather, local facility transport modalities, and distance; but also noted that transfer time for trauma patients is especially important. The Health Equity Advisory Group, however, emphasized the importance of the measure and its potential to advance health equity. Ultimately, the MAP did not provide support for this measure for the REHQR Program.[688]

As we stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49834), we recognize the concerns expressed in the MAP Final Recommendation. However, we believe that ED throughput times have significant impact on patients. Prolonged waiting times, especially the door-to-doctor time component, are associated with worse patient experience in patients discharged from the ED.[689] Studies demonstrate that higher patient satisfaction is associated with patient outcomes, including decreased mortality[690] and lower readmission rates.[691]

We acknowledge that transfer times may be delayed due to weather and transport safety issues that are out of a hospitals control. However, we believe that some factors such as building transfer relationships and process improvements can be addressed by hospitals to improve ED throughput times. Further, this information could be useful to Medicare beneficiaries and other interested parties toward assessing care provided and the care environment of a hospital. If we implement this measure, we are supporting CMS National Quality Strategy goals, including embedding quality into the care journey (for example, by addressing quality throughout, subsequently addressing the patient experience); promoting safety (for example, by minimizing associated negative patient outcomes, such as delayed administration of treatment); and increasing alignment (given that this measure is used in other quality programs).[692] Alignment of measures across CMS Federal programs is also an objective of the Meaningful Measures 2.0 initiative.[693]

This measure also promotes the Meaningful Measures goal of driving outcome improvement through public reporting, given that CMS predicts that data for this measure will be reported in sufficient numbers to permit public reporting (see Table R–B1 in section XVI.B.1 of this final rule with comment period). Care Compare data current to January 2023 show that many CAHs and subsection (d) hospitals with fewer than 50 beds reported sufficient data for this measure under the Hospital OQR Program to be publicly reported for all of these strata, indicating that hospitals eligible to convert to REH status would be able to report data for this measure to a level sufficient for public reporting. Discussion of publicly reporting these data can be found in section XVI.B.8.c of this final rule with comment period. Thus, in the CY 2024 OPPS/ASC proposed rule (88 FR 49834 and 49835), we proposed to adopt this measure in the REHQR Program beginning with the CY 2024 reporting period.

(3) Data Sources

The measure would be calculated using chart-abstracted data on a rolling quarterly basis and would be publicly reported in aggregate for one calendar year. Sources of the relevant data may include claims forms, electronic health care data, electronic health records (EHRs), or paper records. Data elements necessary for the calculation of the measure include arrival time, discharge code, Evaluation and Management (E/M) code, ED departure date, ED departure time, ICD–10–CM principal diagnosis code, and outpatient encounter date.

(4) Measure Calculation

The measure calculates the median time (in minutes) from ED arrival to time of departure from the ED for discharged patients. Reducing the time patients remain in the ED can improve access to treatment and increase quality of care.[694] [695] Improvement is noted as a decrease in the median value. The included population is any ED patient who completes an ED discharge process. This process measure is not risk-adjusted or risk-stratified.[696] However, the measure is stratified by certain subgroups of patients, as described in the next section.

(5) Cohort

The Median Time for Discharged ED Patients measure is calculated in stratified subsections for certain types of patients: (1) All Patients Excluding Psychiatric/Mental Health and

[696] CMIT. Median time from ED Arrival to ED Departure for Discharged ED patients. Available at *https://cmit.cms.gov/cmit/#/MeasureView?variantId=695&sectionNumber=1.* Last accessed April 4, 2023.

Transferred Patients; (2) Psychiatric/Mental Health Patients; (3) Transfer Patients; and (4) All Patients. All strata of the measure exclude patients who expired in the ED, left against medical advice, or whose discharge was not documented or unable to be determined.[697]

We invited public comment on the proposal.

Comment: Several commenters supported adoption of the ED throughput measure. One of these commenters stated that measuring ED throughput would improve patient outcomes. Another commenter stated that this measure will track whether REHs have the capacity and staff to treat their patients appropriately.

Response: We thank commenters for their support.

Comment: Several commenters did not support the ED throughput measure because this measure does not account for factors beyond the REH's control.

Response: We understand the commenters' concern that there are many factors outside of an REH's control that could affect ED throughput; however, we believe that many hospitals face such concerns and that that timely care is a critical aspect of quality of care, directly impacting patient outcomes, particularly for an ED episode of care. Therefore, the public reporting of these data can help patients and their caregivers identify which facilities are performing better than others despite potential challenges, and drive quality improvement efforts. Additionally, we believe that having a consistent ED throughput measure across REHs and HOPDs will allow consumers to compare across programs, especially for vulnerable populations in need of transfer to more appropriate care settings.

Comment: Some commenters did not support this measure because of concerns that REHs will have low patient volumes and that including four strata within the measure may lead to statistically unreliable rates.

Response: We note the commenters' concern applies to all measures and providers, and that CMS does not report measures publicly unless it achieves sufficient case volumes to allow for public reporting of the collected data. We further note that, as discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49827 through 49829), many CAHs and small, rural subsection (d) hospitals—hospitals which are eligible to convert to REH status—had sufficient measure data to be publicly reported for this measure, including by strata. We acknowledge that having four strata will create lower volumes within each stratum but reiterate that we will only publicly report measure results with sufficient case volumes, both to protect patient privacy and to ensure that data are statistically reliable. As shown in Table 146 in section XVI.B.5, many of the 16 hospitals that have converted to REH status as of October 13, 2023, had data in sufficient volumes to be publishable for all four strata.[698]

Comment: Several commenters expressed the belief that this measure does not represent the quality of care provided by REHs. Some of these commenters observed that measure results are not directly tied to patient outcomes. One commenter stated that the measure does not have appropriate risk-adjustment to reflect quality of care. Another commenter stated that while this measure is appropriate in crowded urban EDs, it is not clinically appropriate in rural EDs.

Response: We appreciate commenters' feedback. Regarding commenters' concerns regarding the significance of this measure within the setting of REHs, we note that per section 1861(kkk)(1), ED services are required REH services and are thus a focus of care provided at REHs. Furthermore, as discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49834), we believe that ED wait times have significant impact on patients. Prolonged waiting times are associated with worse patient experience in patients discharged from the ED.[699] Studies demonstrate that higher patient satisfaction is associated with improved patient outcomes, including decreased mortality[700] and lower readmission rates.[701] Regarding urban versus rural difference, we note that small rural hospitals including the subset that have converted to REH status tend to have times on par or lower (better performance) than large urban hospitals. We therefore believe ED measures are of paramount importance to the REHQR Program measure set.

We recognize that using risk-adjustment would account for potentially higher ED throughput times for patients who require more extensive ED services. However, as specified, the measure provides metrics for the case mix each hospital experiences, thus providing Medicare beneficiaries and other interested parties valuable information on hospital performance. In addition, the measure is stratified for four separate calculations: (1) the Overall Rate is calculated as the overall rate; (2) the Reported Measure calculates data for all patients excluding psychiatric/mental health patients and transfer patients; (3) Psychiatric/Mental Health calculates data for psychiatric/mental health patients; and (4) Transfers calculates data for transfer patients. This stratification accounts for significant variables affecting ED throughput time.

Comment: One commenter did not support this measure due to the high reporting burden. Another commenter stated that because reporting this measure under the Hospital OQR Program is currently voluntary, only hospitals with sufficient resources report this measure and under-resourced hospitals will be disadvantaged if reporting is required.

Response: We thank the commenter for their feedback. Regarding the comment about the voluntary nature of reporting this measure under the Hospital OQR Program, we wish to clarify that under the Hospital OQR Program, reporting of this measure by subsection (d) hospitals, including small, rural subsection (d) hospitals, is mandatory in order to avoid a payment penalty, whereas data submission and public reporting of this measure are voluntary for CAHs. We also wish to clarify that under the REHQR Program, data submission and public reporting of this measure, as with all REHQR Program measures, would be mandatory. We further note that many subsection (d) hospitals and CAHs established on or before December 27, 2020, that are eligible for REH conversion are currently reporting outpatient quality data under the Hospital OQR Program and have publicly available data (87 FR 72137).

While we understand that reporting this measure is associated with some burden, as discussed in section XXIV.D of this final rule with comment period,

Available at *https://www.ahajournals.org/doi/10.1161/CIRCOUTCOMES.109.900597?url_ver=Z39.88-2003&rfr_id=ori:rid:crossref.org&rfr_dat=cr_pub%20%200pubmed.*

[701] Boulding W, Glickman SW, Manary MP, Schulman KA, Staelin R. Relationship between patient satisfaction with inpatient care and hospital readmission within 30 days. *Am J Manag Care.* 2011;17:41–8. Available at *https://www.ajmc.com/view/ajmc_11jan_boulding_41to48.*

we believe the benefits outweigh the burden, as ED services are statutorily mandated to be provided by REHs; as a focus of care provided at REHs, we believe ED measures are of paramount importance to the REHQR Program measure set. In addition, as depicted in Table R–B1 in section XVI.B.1 of this final rule with comment period, a significant majority of CAHs (82.6 percent) and rural subsection (d) hospitals with 50 or fewer beds (81.5 percent) reported on the reported measure stratum of this measure in sufficient numbers to be publicly reported, indicating the measure is not overly burdensome.

Comment: One commenter did not support this measure because of concerns that this measure may have unintentional consequences such as leading to premature ED discharge for the most vulnerable patients.

Response: We appreciate the commenter's concern; however, we respectfully disagree with the commenter that reporting this measure would incentivize REHs to prematurely discharge patients, particularly their most vulnerable patients, from the ED. Rather, we remain confident that REHs will continue to provide quality care and submit data as part of their commitment to the patient experience and ongoing quality improvement efforts, as evidenced by the fact that many hospitals which are eligible to convert to REH status have been reporting on this measure through the Hospital OQR Program for many years.

Comment: One commenter stated that this measure is unnecessary because REHs cannot exceed an annual average length of stay of 24 hours per patient, which incentivizes reducing ED wait times.

Response: Given the variation in wait times between zero to 24 hours, we believe patients will be interested in knowing the ED throughput times, even if they average less than 24 hours. Moreover, we believe quality reporting is an important for transparency as well as for driving improvement in care separate from any statutory requirement related to an annual mean patient length of stay.

Comment: Several commenters recommended alternative measures that they believe would better reflect the quality of care provided by REHs. One commenter suggested measuring time from ED arrival to being seen by a clinician instead of time from ED arrival to ED departure for discharged patients stratified by patients seen during standard working hours versus nights or weekends. Another commenter recommended the Medicare Beneficiary Quality Improvement Project (MBQIP) Emergency Department Transfer Communication measure. Finally, one commenter noted that CMS cited studies linking patient satisfaction to improved patient outcomes and stated that the ED CAHPS measure [702] would be a better indicator of patient satisfaction.

Response: We thank commenters for their feedback and will take these recommendations into future consideration as we continue to evaluate all elements of the REHQR Program to ensure a relevant and meaningful measure set.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure, beginning with the CY 2024 reporting period as proposed.

c. Adoption of the Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy Measure Beginning With the CY 2024 Reporting Period

(1) Background

Colonoscopies are one of the most frequently performed procedures in the outpatient setting in the United States,[703] with more than 16 million procedures performed each year.[704] Colonoscopies are associated with a range of well-described and potentially preventable adverse events that can lead to hospital visits, repeat procedures, or surgical intervention for treatment, including colonic perforation, gastrointestinal (GI) bleeding, and abdominal pain.[705] While hospital visits are generally unexpected after an outpatient colonoscopy, the literature indicates that the majority of such visits occurring later than seven days post-procedure are more likely to be unrelated to the procedure,[706] and may be complicated by patient comorbidities and high risk factors.[707]

As noted in Table R–B1 with Hospital OQR Program data current to January 2023, the average rate of reported unplanned hospital visits per 1,000 colonoscopies at CAHs and rural subsection (d) hospitals eligible for REH conversion are 14.3 (1.43 percent) and 14.4 (1.44 percent), respectively. These average rates are in line with those of small, urban subsection (d) hospitals, and larger, rural hospitals subsection (d) with 50 or more beds (that is, with categories of subsection (d) hospitals that are not eligible for REH conversion). Hospitals in these categories that are in the top 10th percentile in terms of numbers of cases (that is, unplanned hospital visits within 7 days of an outpatient colonoscopy) reported, however, do appear to perform differently. In this percentile, hospitals eligible for REH conversion do not perform as well as those that are not eligible for REH conversion. REH-eligible hospitals with these larger caseloads have a higher rate of unplanned hospital visits per 1,000 colonoscopies than non-REH eligible hospitals.

The Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy (the 7-Day Hospital Visit Rate After Outpatient Colonoscopy) measure was adopted for reporting in the Hospital OQR Program, first with a dry run (that is, confidential reports containing measure results were made available for hospitals to review, provide feedback, and become familiar with the measure methodology in advance of public reporting and impact on payment determinations), and then fully implemented beginning with the CY 2018 payment determination (79 FR 66948 through 66955).

(2) Measure Overview

The 7-Day Hospital Visit Rate After Outpatient Colonoscopy measure was on the 2022 MUC list.[708] In its February 1, 2023 Final Recommendations, the MAP considered and supported it for

rulemaking for the REHQR Program given that a previous version of this measure specified for colonoscopies performed in ambulatory surgical centers (ASCs) and HOPDs received endorsement from the CBE (CBE #2539) in 2014 and 2020, and that this measure is currently in use in the ASCQR and Hospital OQR Programs.[709]

As evidenced in Table R–B1, many CAHs and small, rural subsection (d) hospitals—hospitals which are eligible to convert to REH status—performed a sufficient number of colonoscopies and had sufficient measure data for this measure to be publicly reported on the Care Compare website. Using data current to January 2023 for the Hospital OQR Program, out of those eligible to report data, 65.5 percent (131) of small, rural subsection (d) hospitals and 44.7 percent (609) of CAHs eligible to convert to REHs reported for this measure.

We believe this could be an important measure for those REHs that elect to provide outpatient services and for patients seeking information regarding complications following this procedure. Inclusion of this measure in the REHQR Program would also promote goals of the CMS National Quality Strategy, including embedding quality into the care journey; advancing health equity within and across settings; and increasing alignment of performance metrics, programs, policy, and payment across CMS.[710] Inclusion would also advance goals of the Meaningful Measures 2.0 initiative, including by empowering consumers to make good health care choices by providing public transparency; and by leveraging quality measures to promote health equity and close gaps in care.[711] Therefore, in the CY 2024 OPPS/ASC proposed rule (88 FR 49835 through 49837), we proposed to include the 7-Day Hospital Visit Rate After Outpatient Colonoscopy measure in the REHQR Program beginning with the CY 2024 reporting period.

(3) Data Sources

This outcome measure is calculated using Medicare FFS claims and enrollment data, estimating a facility-level rate of risk-standardized, all-cause, unplanned hospital visits within 7 days of an outpatient colonoscopy among Medicare FFS patients aged 65 years and older.[712] In alignment with the reporting period for this measure as used in the Hospital OQR Program, we proposed the initial reporting period to be a three-year period beginning with patient encounters from January 1, 2024 through December 31, 2026 with annual updates on a rolling basis.[713]

(4) Measure Calculation

The measure defines the outcome as any (one or more) unplanned hospital visits within 7 days of an outpatient colonoscopy procedure.[714] For this measure, a hospital visit includes any ED visit, observation stay, or unplanned inpatient admission to any short-term, acute care facility.[715] [716] The measure score is the ratio of predicted hospital visits (numerator) over the expected hospital visits (denominator) multiplied by the national observed rate. The numerator is the number of predicted (meaning adjusted actual) hospital visits, which is the number of unplanned hospital visits the facility is predicted to have within 7 days of colonoscopy, and it accounts for the observed unplanned hospital visit rate, the number of colonoscopies performed at the facility, and the facility's case mix. The denominator is the number of expected hospital visits, which is the number of unplanned hospital visits the facility is expected to have based on the facility's case mix. It is the sum of all patients' expected probabilities of a hospital visit, given their risk factors and the risk of readmission at an average facility. The national observed rate is the national unadjusted number of patients who had a hospital visit post-colonoscopy among all patients who had a colonoscopy.[717] Additional methodology details and information obtained from public comments for measure development are available at: *http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.html* under ''Hospital Outpatient Colonoscopy.''

We note that the measure calculation is comparable to the Hospital OQR Program version of the measure, as set out in the CY 2015 OPPS/ASC final rule (79 FR 66948 through 66955).

(5) Cohort

The measure denominator includes Medicare FFS patients with paid, final action claims for typical colonoscopies. The denominator excludes patients undergoing concomitant high-risk upper GI endoscopy because this is a more extensive procedure that places these patients at a higher risk for hospital visits than patients undergoing a typical colonoscopy, as well as patients with a history of inflammatory bowel disease (IBD) or diverticulitis in the year preceding the colonoscopy because we likely could not fully characterize and adjust for their pre-procedure risk of needing a post-procedure hospital visit or identify whether these admissions are planned or unplanned. The measure also excludes procedures for patients who lack continuous enrollment in Medicare FFS Parts A and B in the month after the procedure to ensure all patients have complete data available for outcome assessment. For further discussion of the cohort for the 7-Day Hospital Visit Rate After Outpatient Colonoscopy measure, please see ''2022 Measure Updates and Specifications Report: Hospital Outpatient Quality Reporting Program,'' available at: *https://qualitynet.cms.gov/outpatient/measures/surgery/methodology.*

(6) Risk Adjustment

The statistical risk-adjustment model includes 15 clinically relevant risk-adjustment variables that are strongly associated with risk of hospital visits within seven days following colonoscopy. Additional methodology details and information for measure

development are available at: *https://qualitynet.cms.gov/outpatient/measures/surgery/methodology.*

We invited public comment on the proposal.

Comment: Several commenters supported adoption of the Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy measure. One of these commenters stated that assessing hospital visits within seven days would ensure the visitation rate is proximal to the procedure while promoting a robust enough volume to support valid measurement. Another commenter stated that this measure will help ensure REHs provide services of comparable quality to other settings.

Response: We thank commenters for their support.

Comment: Some commenters stated that if REHs perform a sufficient number of colonoscopies to generate adequate volume to calculate performance, the measure would be appropriate for use in the REHQR Program, and they would not oppose its adoption; however, other commenters did not support adoption of the measure due to their uncertainty as to whether the measure would yield enough volume to be statistically valid or relevant. One commenter stated that CAHs in their state averaged less than 50 colonoscopies on an annual basis during FY 2022. The commenter further stated that the tiered framework approach to measure reporting based on the scope of services provided by an REH, as discussed in section XVI.B.7.c. of this final rule with comment period, would be particularly relevant for this measure.

Response: We note that minimum case numbers for statistical reliability purposes apply for calculation of the measure for public reporting purposes. In addition, as we state in section XVI.B.1 of this final rule with comment period, while it is not possible to identify the exact group of hospitals that will choose to convert to REH status, our analysis indicates that the services targeted by the REHQR measures are relevant for hospitals that may participate in the REHQR Program as these hospitals are currently providing the services assessed by the selected measures, including the Facility 7-day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy measure, some with case volumes sufficient to meet thresholds to allow public reporting of the collected data. This is evidenced by data publicly reported by the initial 16 hospitals that have converted to REH status as of October 13, 2023.[718] We reiterate that we will only publicly report measure results with sufficient case volumes, both to protect patient privacy and to ensure that data are statistically reliable.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Facility 7-day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy measure, beginning with the CY 2024 reporting period, as proposed.

d. Adoption of the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery Measure Beginning With the CY 2024 Reporting Period

(1) Background

Most surgical procedures in the United States are performed in outpatient settings; there are approximately 23 million such procedures performed annually.[719] Same-day surgery offers significant patient benefits as compared with inpatient surgery, including shorter waiting times, avoidance of hospitalizations, and rapid return home.[720] Furthermore, as same-day surgery costs are significantly less than an equivalent inpatient surgery, there is a significant cost saving opportunity to the health system.[721] With the ongoing shift towards outpatient surgery, assessing the quality of surgical care provided by hospitals has become increasingly important. Patients undergoing same-day surgery may require subsequent unplanned hospital visits for a broad range of reasons. While most outpatient surgery is safe, there are well-described and potentially preventable adverse events that occur after outpatient surgery, such as uncontrolled pain, urinary retention, infection, bleeding, and venous thromboembolism, which can result in unplanned hospital visits.[722] Similarly, direct admissions after surgery that are primarily caused by non-clinical patient considerations (for example, lack of transport home upon discharge) or facility logistical issues (for example delayed start of surgery) are common causes of unplanned yet preventable hospital admissions following same-day surgery.[723] Hospital utilization following same-day surgery is an important and accepted patient-centered outcome reported in the literature. As evidenced by one study, ''national estimates of hospital visit rates following surgery vary from 0.5 to 9.0 percent based on the type of surgery, outcome measured (admissions alone or admissions and ED visits), and timeframe for measurement after surgery,'' [724] suggesting variation in surgical and discharge care quality. However, providers (hospitals and surgeons) are often unaware of their patients' hospital visits after surgery because patients often present to the ED or to different hospitals.[725] This risk-standardized measure provides the opportunity for providers to improve the quality of care and to lower the rate of preventable adverse events that occur after outpatient surgery.

The Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery (the 7-Day Hospital Visit Rate After Outpatient Surgery) measure was adopted for reporting in the Hospital OQR Program beginning with the CY 2020 payment determination (81 FR 79771).

(2) Measure Overview

The 7-Day Hospital Visit Rate After Outpatient Surgery measure would make unplanned patient hospital visits (ED visits, observation stays, or unplanned inpatient admissions) after surgery more visible to providers and patients through publicly reporting scores. It could also encourage providers to engage in quality improvement activities to reduce these visits by providing feedback to hospitals and providers. This measure meets the National Quality Strategy goals of embedding quality into the care journey

[718] The data provided in Table 146, discussed in section XVI.B.5 are from the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) as of October 13, 2023.

and promoting safety.[726] We expect that the measure would promote improvement in patient care over time.

The 7-Day Hospital Visit Rate After Outpatient Surgery measure was on the 2022 MUC list.[727] The Rural Health Advisory Group members did not have any rural health concerns about the measure. We believe that the proposed measure reflects consensus among the affected parties as public comment received during the MAP and measure development processes was in agreement with the MAP's conclusions on the measure. The MAP recommended the measure for rulemaking.[728]

We believe it is important to reduce adverse patient outcomes associated with preparation for surgery, the procedure itself, and follow-up care. Therefore, in the CY 2024 OPPS/ASC proposed rule (88 FR 49837 through 49839), we proposed to include the 7-Day Hospital Visit Rate After Outpatient Surgery measure in the REHQR Program beginning with the CY 2024 reporting period.

(3) Data Sources

The 7-Day Hospital Visit Rate After Outpatient Surgery measure is calculated from Part A and Part B Medicare administrative claims data for Medicare FFS beneficiaries with an outpatient same-day surgical procedure excluding eye surgeries and colonoscopies (except colonoscopy with biopsy). Colonoscopies are excluded from this measure as these procedures are examined separately on their own. The exclusion of eye procedures is discussed below. The performance period for the measure is one year (that is, the measure calculation includes eligible outpatient same-day surgeries occurring within a 1-year timeframe),[729] and we proposed the first reporting period in the REHQR Program would begin with the CY 2024 reporting period. We also considered increasing the data collection time-period, to account for low volume, to two or three years.

(4) Measure Calculation

The measure outcome would include unplanned hospital visits within seven days after a surgery performed at an REH that are: (1) an inpatient admission at a separate hospital that can admit patients; or (2) an ED visit or observation stay at the REH or other hospital occurring after discharge. If more than one unplanned hospital visit occurs, only the first hospital visit within the outcome timeframe is counted in the outcome.

The facility-level measure score is a ratio of the predicted to expected number of post-surgical hospital visits among the hospital's patients. The numerator of the ratio is the number of hospital visits predicted for the hospital's patients accounting for its observed rate, the number of surgeries performed at the hospital, the case-mix, and the surgical procedure mix. The denominator of the ratio is the expected number of hospital visits given the hospital's case-mix and surgical procedure mix. A ratio of less than one indicates the hospital's patients have fewer post-surgical visits than expected compared to hospitals with similar surgical procedures and patients; and a ratio of greater than one indicates the hospital's patients were estimated as having more visits than expected.

To ensure the accuracy of the algorithm for attributing claims data and the comprehensive capture of hospital surgeries potentially affected by the CMS 3-day payment window policy,[730] we identify physician claims for same-day surgeries in hospital settings from the Medicare Part B Standard Analytical Files (SAF) with inpatient admissions that occur within three days after these surgeries that lack a corresponding hospital facility claim. Under the 3-day payment window policy, all outpatient diagnostic services furnished to a Medicare beneficiary by a hospital (or an entity wholly owned or operated by the hospital), on the date of a beneficiary's admission or during the three days immediately preceding the date of a beneficiary's inpatient hospital admission, must be included on the Part A bill for the beneficiary's inpatient stay at the hospital. Hospitals must include the following information on the claim for a beneficiary's inpatient stay: (1) the diagnoses; (2) procedures; and (3) charges for all outpatient diagnostic services and admission-related outpatient non-diagnostic services that are furnished to the beneficiary during the 3-day payment window.[731] A surgery identified as affected by this policy would be attributed to the appropriate hospital facility using the facility provider identification from the inpatient claim.[732]

(5) Cohort

The measure includes Medicare FFS patients aged 65 years and older undergoing same-day, outpatient surgery in REHs, excluding eye surgeries and colonoscopies, but including colonoscopy with biopsy. ''Same-day surgeries'' are substantive surgeries and procedures listed on Medicare's list of covered ASC procedures excluding eye surgeries and colonoscopies (except colonoscopy with biopsy).[733] This list was developed for Medicare to identify surgeries that can be safely performed as same-day surgeries and do not typically require an overnight stay. Surgeries on the ASC list of covered procedures do not involve or require major or prolonged invasion of body cavities, extensive blood loss, major blood vessels, or care that is either emergent or life-threatening.

Although Medicare developed this list of surgeries for ASCs, we use it more broadly for this measure for two reasons. First, it aligns with our target cohort of surgeries that have low to moderate risk profile and are safe to be performed as same-day surgeries. By only including surgeries on this list in the measure, we effectively do not include surgeries performed at hospitals that typically require an overnight stay which are more complex, higher risk surgeries. Second, we use this list of surgeries because it is annually reviewed and updated by CMS and includes a transparent public comment submission and review process for

addition or removal of procedures codes. To view the ASC covered procedures list for 2023, we refer readers to the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Regulations-and-Notices.* On that page, readers may select ''CMS–1772–FC'' from the list of regulations. The ASC Addenda are contained in a zipped folder entitled ''Addendum AA, BB, DD1, DD2, and EE.'' Addendum AA includes the relevant list of covered surgeries.

For further discussion of the cohort for this measure, please see ''2022 Measure Updates and Specifications Report: Hospital Outpatient Quality Reporting Program,'' available at *https://qualitynet.cms.gov/outpatient/measures/surgery/methodology.*

As noted previously, the cohort for this measure excludes eye surgeries. Eye surgery is performed in high volume and is generally perceived as being ''low risk.'' However, studies have indicated non-insignificant levels of hospital visits following cataract surgery. One study reported 0.3 percent of patients as having an inpatient admission within seven days following cataract surgery [734] and another study showing a 1.77 percent of patients with ED visits within 30 days following cataract surgery.[735] The measure cohort also excludes procedures for patients who lack continuous enrollment in Medicare FFS Parts A and B in the seven days after the procedure to ensure all patients have complete data available for outcome assessment.

(6) Risk Adjustment

The statistical risk-adjustment model includes 25 clinically relevant risk-adjustment variables that are strongly associated with risk of hospital visits within seven days following outpatient surgery.[736] The measure risk-adjusts for surgical procedure complexity using two variables. First, it adjusts for surgical procedure complexity using the Work Relative Value Units (RVUs).[737] Work RVUs are assigned to each CPT procedure code and approximate procedure complexity by incorporating elements of physician time and effort. Second, it classifies each surgery into an anatomical body system group using the Agency for Healthcare Research and Quality (AHRQ) Clinical Classification System (CCS),[738] to account for organ-specific differences in risk and complications, which are not adequately captured by the Work RVU alone.

We invited public comment on the proposal.

Comment: Several commenters supported the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure. One commenter stated that this measure will ensure REHs provide quality services and provide information for consumers to use when selecting a provider.

Response: We thank commenters for their support

Comment: Several commenters expressed concern that REHs will not have sufficient surgical volumes to allow reporting of the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure. One of these commenters stated that the tiered framework approach to measure reporting based on the scope of services provided by an REH, as discussed in section XVI.B.7.c. of this final rule with comment period, would be particularly relevant for this measure.

Response: We note that the commenters' concern regarding low volumes applies to all measures and providers, and that CMS does not report measures publicly unless it achieves sufficient case volumes to allow for public reporting of the collected data. In addition, as we state in section XVI.B.1 of this final rule with comment period, while it is not possible to identify the exact group of hospitals that will choose to convert to REH status, our analysis indicates that the services targeted by the REHQR measures are relevant for hospitals that may participate in the REHQR Program as these hospitals are currently providing the services assessed by the selected measures with case volumes sufficient to meet thresholds to allow public reporting of the collected data. We reiterate that we will only publicly report measure results with sufficient case volumes, both to protect patient privacy and to ensure that data are statistically reliable. We agree that the tiered framework approach to measure reporting based on the scope of services provided by an REH could be particularly relevant for this measure and refer readers to section XVI.B.7.c. of this final rule with comment period for further discussion.

After consideration of the public comments we received, we are finalizing our proposal to adopt the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure, beginning with the CY 2024 reporting period as proposed.

6. Summary of Finalized REHQR Program Measure Set Beginning With the CY 2024 Reporting Period

CBE #	Measure Name
None	Abdomen CT (long name: Abdomen Computed Tomography (CT) – Use of Contrast Material)
None	Median Time for ED Discharged Patients (formerly Median Time from ED Arrival to ED Departure for Discharged ED Patients)
2539	7-Day Hospital Visit Rate After Outpatient Colonoscopy (formerly Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy*)
2687	7-Day Hospital Visit Rate After Outpatient Surgery (long name Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery)

*Reporting period for this measure is a three-year period, beginning CYs 2024-2026.

7. REHQR Program Measures and Topics for Future Consideration

a. Electronic Clinical Quality Measures (eCQMs) for Reporting Quality Data Under the REHQR Program

In the CY 2024 OPPS/ASC proposed rule (88 FR 49840 and 49841), we requested comment on the use of electronic clinical quality measures (eCQMs) for reporting quality data under the REHQR Program. eCQMs are measures specified in a standard electronic format that use data electronically extracted from EHRs and/or health information technology systems to measure the quality of health care provided. Through electronic reporting, hospitals have leveraged EHRs to capture, calculate, and electronically submit quality data instead of manually chart-abstracting and submitting to CMS. Adoption of certain eCQMs into the REHQR Program could address high priority areas as stated in our Meaningful Measures Framework, including the transition to digital quality measures and the adoption of high-quality measures that improve patient outcomes and safety.[739]

We acknowledged in the request for comment that technological, monetary, and staffing barriers may present challenges to eCQM adoption and use in some REHs. Although some REH staff may have had experience reporting eCQMs in the Hospital Inpatient Quality Reporting (IQR), Hospital OQR, or Medicare Promoting Interoperability (PI) Programs during the time-period when their REHs were organized as CAHs or subsection (d) hospitals, we acknowledge that challenges will remain. We see evidence of these challenges when analyzing eCQM reporting under the Medicare PI Program for eligible hospitals and CAHs. Tables 148 and 149 compare urban and rural hospital eCQM reporting, as defined by census area, with respect to the Medicare PI Program for the CY 2021 reporting period. Most hospitals of all bed sizes successfully reported eCQMs, but eCQM submission compliance percentages for smaller hospitals and rural hospitals were slightly lower than for larger or urban hospitals.

BILLING CODE 4150–28–C

We believe that certain eCQMs, if adopted into the REHQR Program, could provide insightful quality measure data for monitoring REHs and potentially lower provider burden. For example, the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography in Adults eCQM (the Excessive Radiation eCQM) could be adopted into the REHQR Program to improve patient outcomes and patient safety. This eCQM provides a standardized method for monitoring the performance of diagnostic CT to discourage unnecessarily high radiation doses while preserving image quality. The measure is expressed as a percentage of eligible CT scans that are out-of-range based on having either excessive radiation dose or inadequate image quality, relative to evidence-based thresholds based on the clinical indication for the exam.[740] This measure is not risk-adjusted. The purpose of this measure is to reduce unintentional harm to patients and provide REHs with a reliable method to assess harm reduction efforts and modify their improvement efforts. We are finalizing adoption of the Excessive Radiation eCQM for the Hospital OQR Program in this final rule. We refer readers to section XIV.B.3.c of this final rule with comment period for a discussion of this measure in the Hospital OQR Program.

We also refer readers to section XIV of the CY 2022 OPPS/ASC proposed rule (86 FR 42232 through 42237) where we requested information on potential actions and priority areas that would enable the continued transformation of our quality measurement enterprise toward greater digital capture of data and use of the Fast Healthcare Interoperability Resources (FHIR) standard. This will be taken into consideration in future years when deciding how and when to introduce eCQMs to the REHQR Program.

We invited public comment on the use of eCQMs in the REHQR Program, any specific eCQM measures that we should consider for inclusion in the REHQR Program measure-set, including the Excessive Radiation eCQM, and any considerations or criteria we should use in identifying eCQM measures to propose for future inclusion.

Comment: Several commenters agreed that eCQMs could reduce reporting burden by eliminating the need to manually abstract data from medical charts and multiple other sources but did not support implementation of eCQMs in the REHQR Program based on concerns with operational feasibility. Many commenters expressed concerns with implementing eCQMs because small, rural hospitals often lack the resources to implement expensive EHR systems, including the human resources to operate and support them. One commenter noted that REHs may also be located in areas with limited broadband internet access. Another commenter stated that CAHs in their state reported

[740] Centers for Medicare & Medicaid Services. Pre-Rulemaking MUC Lists and MAP Reports. The Measures Management System. Available at: *https://mmshub.cms.gov/measure-lifecycle/measure-implementation/pre-rulemaking/lists-and-reports.*

significant costs and vendor-related delays to modify their current systems in order to allow for reporting of eCQMs, including every time a new eCQM is added to a CMS program.

Some commenters who did not support implementation of eCQMs in the REHQR Program noted existing challenges with data collection and interoperability. A few commenters reported that several eCQMs that have been reviewed by a CBE or already proposed for use in CMS programs often use fields that do not always appear universally across all EHRs and may require time-consuming workarounds that negate the automation inherent to eCQMs. One commenter noted that not all measure definitions lend themselves to an eCQM data collection. The commenter also expressed concern with evolving technology standards, such as the variation in FHIR versions.

Another commenter who opposed the potential future use of eCQMs in the REHQR Program stated their belief that their introduction would be shortsighted, burdensome, and fail to recognize the increasing drive towards digital quality measures (dQMs). The commenter stated their belief that through efforts to improve health information exchange and extra data for quality measurement, eCQMs will continue to require significant resources to build. The commenter recommended that CMS should instead invest its efforts towards the future development of dQMs.

One commenter expressed support for the potential future use of eCQMs in the REHQR Program. This commenter also provided recommendations for CMS' identification and development of eCQMs, including aligning measures for a given concept (for example, patient safety) across applicable settings (for example, REHs and HOPDs) and focusing on outcome and patient-reported measures. The commenter also suggested that CMS use the recommendations of a recent Office of Inspector General (OIG) report as a guide in the identification and development of eCQMs around medication errors.[741]

A few commenters suggested that prior to adopting eCQMs for the REHQR Program, CMS should explore their feasibility with participating providers, with one commenter recommending program incentives for REHs to partner with vendors in pilot programs and models.

A few commenters recommended that CMS should consider adding eCQMs as optional measures initially. One of these commenters further suggested a stair-step approach to implementation, first incentivizing milestones along the way and, at an appropriate point in the timeline, introducing a negative incentive to promote long-term adherence.

To help REHs and all hospitals with successful eCQM reporting, the same commenter also recommended slowing down the implementation of and updates to new standards in health care interoperability to allow all parties, including CMS' technology, to catch up and align as an industry. The commenter also suggested that CMS standardize reporting requirements across all quality reporting programs, which would enable utilization of software and quality measures across all care settings, allow for better continuity of care, and minimize the chances for some providers and/or care settings to be left behind.

Response: We thank commenters for their feedback and will take it into consideration as we continue to evaluate all elements of the REHQR Program.

b. Care Coordination Measures

In the CY 2024 OPPS/ASC proposed rule (88 FR 49841), we requested comment on adding measures to the REHQR Program measure-set that are relevant to the coordination of care between REHs and other kinds of healthcare providers. REHs encounter challenges in coordinating care that are specific to rural settings. Geographically isolated areas typically have fewer health care settings and providers, and experience difficulties related to workforce shortages, transportation issues, and lack of information technology capabilities, such as the availability of broadband networks.[742] Other challenges relate to shifting workforce availability (for example, issues related to the availability of traveling nurses or independent healthcare providers) and limited access to specialists, diagnostic equipment, and other resources.[743] However, REHs are required to have in effect a transfer agreement with a level I or level II trauma center,[744] such that patients that present at an REH with needs for longer-term inpatient care may receive that care. REHs must, therefore, address issues related to the coordination of care for transferred patients.

We have sought to identify measures relevant to care coordination in rural settings that are also important, impactful, reliable, accurate, and clinically relevant. In the CY 2023 OPPS/ASC final rule, we provided responses to the comments received on our request for information on additional topics for quality measures appropriate for the REH setting (87 FR 72146 through 72149). Many of these comments addressed the provision of telehealth, an issue that impacts care coordination (87 FR 72146 and 72147). The CBE provided additional information on this topic in 2021, when they identified a list of 324 measures relevant to the provision of telehealth.[745] We believe that a number of these measures are directly related to the coordination of care, such as measures CBE #0006 Care Coordination, CBE #0097 Medication Reconciliation Post-Discharge, and CBE #0326 Advance Care Plan.[746] The current Medicare Beneficiary Quality Improvement Project (MBQIP) measures also include several ''care transitions'' measures that may be relevant to the coordination of care for REHs. Relevant MBQIP measures include Emergency Department Transfer Communication (on which we invited public comment in the CY 2022 OPPS/ASC proposed rule, at 86 FR 42285 through 42289), Discharge Planning, and Medication Reconciliation.[747]

We invited public comment on the use of care coordination measures in the REHQR Program, including telehealth measures, any specific measures that we should consider for inclusion in the REHQR Program measure-set regarding care coordination, and any considerations or criteria we should use in determining which, if any, coordination of care measures to propose for future inclusion.

Comment: Several commenters expressed support for care coordination measures for the REHQR Program. Some of these commenters recommended a

cautious approach to measure adoption because REHs are small and some measures are burdensome to report.

Several commenters recommended adoption of measures that assess appropriate use of telehealth and other remote monitoring services for the REH setting. One of these commenters stated that such a measure would be appropriate in the future, but that it is currently premature because telehealth services are not required for REHs. One of these commenters stated that anesthesiology telehealth supervision services increase costs without improving quality, and also urged CMS not to create unintended barriers to the use of Certified Registered Nurse Anesthetists (CRNAs) in rural and rural emergency settings through the use of telehealth services. Another commenter recommended that CMS' strategy for REHs should address the need for using advanced technology, such as telehealth, remote patient monitoring (RPM), and other communications-based technology services, as well as Software as a Medical Device (SaMD), in improving rural maternal and infant care.

Several commenters recommended specific care coordination measures for future adoption in the REHQR Program. These measures are Medication Reconciliation Post Discharge (CBE #0097) and the Medicare Beneficiary Quality Improvement Project (MBQIP) Emergency Department Transfer Communication (EDTC) measure. Some commenters recommended types of measures that should be considered. These commenters specifically recommended a focus on patient safety measures, patient reported outcome measures, and patient experience measures.

Response: We thank commenters for their feedback and will take it into consideration as we continue to evaluate all elements of the REHQR Program.

c. Tiered Approach Framework

In the CY 2024 OPPS/ASC proposed rule (88 FR 49841 and 49842), we requested comment on a tiered approach to quality measure reporting. We referred readers to section XVII of the CY 2022 OPPS/ASC proposed rule, where we included a request for information (RFI) on REHs (86 FR 42285 through 42289) and received comments from more than 50 commenters in response, including one suggestion to implement a multi-tiered approach for quality measures and reporting requirements to incentivize REH reporting.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49841 and 49842), we explained that within such a tiered framework, Tier 1 could encompass a set of measures that would be required for all REHs and would focus on measures applicable for the required ED and observation services at REHs. Tier 2 could apply only to REHs that choose to provide additional outpatient services; the measures in that set would be related to the optional services provided.

In this final rule with comment period, we are adopting the following measures into the REHQR Program measure set: (1) Abdomen CT measure, (2) Median Time for Discharged ED Patients measure, (3) 7-Day Hospital Visit Rate After Outpatient Colonoscopy measure, and (4) 7-Day Hospital Visit Rate After Outpatient Surgery measure. Two of these measures are related to services that REHs must provide to participate in the Medicare program. The other two measures are related to services that could be furnished on an outpatient basis at the election of the REH.[748] To fit into an example scenario of a tiered approach, Tier 1 could include the measures related to required services, which are the diagnostic, claims-based Abdomen CT measure, and the chart-abstracted Median Time for Discharged ED Patients measure. Tier 2 could consist of the measures related to services the REH may elect to provide, which are the claims-based 7-Day Hospital Visit Rate After Outpatient Colonoscopy and 7-Day Hospital Visit Rate After Outpatient Surgery measures.

The aforementioned tiered measures were only examples for the purposes of the request for comment to further discussion of this concept for the REHQR Program.

Such reporting could be phased-in; for example, as suggested by the commenter, all REHs could report the Tier 1 quality measures beginning at a designated time after their REH status began, and all REHs providing additional services would begin to submit Tier 2 data at a designated time after such services begin under the new REH status.

We invited public comment on the implementation of a tiered quality measure approach in the REHQR Program, considerations in designing the structure of a tiered framework, the number of measures in each tier, and considerations for designating measures for tiers of such a framework.

Comment: Several commenters expressed support for a tiered or menu-like approach to measures because the scope of REH services is still uncertain, and this approach would thus allow REHs to focus on reporting measures applicable to the services they offer. One commenter anticipated that the scope of services will likely vary based on location and seasonality. One commenter recommended adopting this approach cautiously because the REH designation is still new.

One commenter did not support a tiered measurement strategy because this could signal to patients that they do not deserve information related to the quality of care provided by REHs in their area.

Response: We thank commenters for their feedback and will take it into consideration as we continue to evaluate all elements of the REHQR Program.

8. Display of Quality Measure Data Publicly

a. Public Reporting of Quality Data Generally

Pursuant to the CAA, 2021, the Secretary shall establish procedures to make quality measure data submitted by REHs available to the public on a CMS website.[749] Such procedures shall ensure that the REH has the opportunity to review, and submit corrections for, the data that is to be made public with respect to the REH prior to such data being made public.[750] In the CY 2024 OPPS/ASC proposed rule (88 FR 49842), we proposed to align our approach to the public display of measures with that of the Hospital OQR and ASCQR Programs. For detail on the public display of measures in the Hospital OQR and ASCQR Programs, we refer readers OPPS/ASC final rules of CY 2009 (73 FR 68777 through 67779), CY 2014 (78 FR 75092), and CY 2017 (81 FR 79791).

We proposed to make publicly reported data under the REHQR Program available to the public both on our Care Compare website and in downloadable data files found at *https://data.cms.gov.* We discussed our intent to display these data publicly for any consumer or other member of the public beginning with measure data submitted relevant to services provided in CY 2024. To the extent possible, in order to publicly display these data, we would use the same information systems, business processes, and other infrastructure that we use to display data for the Hospital OQR and Hospital IQR Programs. We described our belief

[748] See section 1861(kkk)(1) of the Act.

[749] CAA, 2021, at section 125(a)(1)(B) of Division CC, adding section 1861(kkk)(7)(D) of the Act.

[750] CAA, 2021, at section 125(a)(1)(B) of Division CC, adding section 1861(kkk)(7)(D) of the Act.

that alignment of public reporting processes and policies with other quality reporting programs would ease the understanding of such processes and policies for REHs.

Specifically, we proposed that participating REHs would be granted the opportunity to review their data before the information is published during a 30-day review and corrections period (the preview process). Similar to the Hospital OQR and Hospital IQR Programs, we would announce the timeframes for the preview period starting with the measure data submitted relevant to services provided in CY 2024 on a CMS-designated website, such as QualityNet, or on applicable listservs. We generally strive to display hospital quality measures data on the designated website as soon as possible after measure data have been submitted to CMS. However, if there are unresolved display issues or pending design considerations, we may make the data available on other, non-interactive, CMS-designated websites. This preview process would align with that of the Hospital OQR Program (81 FR 79791).

We proposed to codify this policy at § 419.95 by adding paragraph (f), ''Public reporting of data under the REHQR Program.'' In paragraph (f), we proposed that data that an REH submits for the REHQR Program would be made publicly available by a CMS Certification Number (CCN) on a CMS website in an easily understandable format after providing the REH an opportunity to review the data to be made public.

We invited public comment on the proposal.

Comment: One commenter supported our proposals related to public reporting of quality data generally under the REHQR Program. The commenter also expressed particular support for our proposal to provide a 30-day preview process in alignment with the Hospital OQR and ASCQR Programs.

Response: We thank the commenter for their support.

Comment: One commenter did not support publicly reporting performance in the REHQR Program consistent with reporting in the Hospital OQR and ASCQR Programs because of the perception that data are difficult for the public to interpret. As an example, the commenter stated that whether higher values are better or worse is not specified for each measure. Additionally, the commenter did not support reporting by CCN because the commenter believes that this obscures the individual performance of a given facility delivering the care, which the commenter believes is misleading and unhelpful to patients. The commenter encouraged CMS to work with the Office of the National Coordinator for Health Information Technology's (ONC) to utilize ONC's HTI–1 version 4 (v4), which the commenter stated could provide consistent identification of healthcare facilities by physical locations and facilitate public reporting of quality data at the facility level.

Response: We appreciate the commenter's concern regarding reporting the data in a way that is meaningful for patients. We note that we provide educational materials on the Care Compare website and in the program's Specifications Manual, both of which include information about why a measure is important and provide information about whether higher or lower percentages are better for most measures, including those being adopted for the REHQR Program. We continually evaluate our patient education materials to improve the clarity and usefulness of the data we provide and believe that publicly reporting these data helps patients to make informed decisions about their care.

Regarding the commenter's preference for reporting data at the facility level as opposed to at the CCN level, we believe that consistent reporting across quality reporting facilitates meaningful comparison; however, we will consider taking into consideration alternative data reporting levels based on program needs and evidence of validity and reliability of such a change.

We clarify that ONC, on behalf of the Secretary and under the authority provided in section 3004 of the Public Health Service Act, proposed the adoption of United States Core Data for Interoperability (USCDI) version 3 (v3) in the ''Health Data, Technology, and Interoperability: Certification Program Updates, Algorithm Transparency, and Information Sharing'' proposed rule (HTI–1 proposed rule).[751] USCDI v4 was recently published in July 2023 and re-published with errata in October 2023.[752] USCDI v4, includes facility information, including facility identifier, type, and name, however, USCDI v4 has not yet been proposed for adoption through rulemaking nor is it in widespread use. We will continue to coordinate with ONC as to when adoption and implementation of USCDI v4 may occur and its suitability for use for the public reporting of quality data.

Comment: A few commenters encouraged CMS to delay public reporting by at least one or 2 years to allow time for the data to be reviewed for accuracy and assure that the measures appropriately reflect REH quality.

Response: We note that the four measures being adopted by the REHQR Program have been incorporated in the Hospital OQR Program and all hospitals eligible to convert to REH status, except for CAHs, have been required to participate in the Hospital OQR Program. Furthermore, many CAHs have voluntarily reported these measures in the Hospital OQR Program (88 FR 49827 through 49830). Therefore, we believe most hospitals participating in the REHQR Program will have already had data on these measures publicly reported. We believe immediate reporting under the REHQR Program will allow continuity of data and provide patients with meaningful information to make informed decisions about care. We note that there is some delay due to data collection time periods for the measures in the initial REHQR Program measure set, which will allow some time for REHs to settle into their new provider role. Each of these initial measures will also be calculated once the completion of the relevant data collection period is met. The three claims-based measures are collected on a rolling annual basis thereafter; the chart-abstracted measure will be collected quarterly.

b. Public Reporting of REHQR Program Claims-Based Measures

In the CY 2024 OPPS/ASC proposed rule (88 FR 49842), we proposed to make measure scores for the claims-based measures proposed for the REHQR Program measure set publicly available beginning with measure data submitted relevant to services provided in CY 2024. As discussed previously in section XVI.B.5 of this final rule with comment period, we are finalizing the adoption of the following three claims-based measures into the REHQR Program measure set: (1) Abdomen CT measure, (2) 7-Day Hospital Visit Rate After Outpatient Colonoscopy measure, and (3) 7-Day Hospital Visit Rate After Outpatient Surgery measure.

As explained in the CY 2024 OPPS/ASC proposed rule (88 FR 49842), public reporting measure data for a claims-based measure would not begin until completion of a data collection period specific to that claims-based measure, provided sufficient case

[751] 88 FR 23750 (April 18, 2023); *https://www.federalregister.gov/d/2023-07229/p-164.*

[752] *https://www.healthit.gov/isa/sites/isa/files/2023-10/USCDI-Version-4-October-2023-Errata-Final.pdf.*

volumes are achieved.[753] [754] For example, for the 7-Day Hospital Visit Rate After Outpatient Colonoscopy measure, the data collection period is three years; public reporting would begin after completion of an initial three-year data collection period, or CY 2027, provided the hospital had sufficient case volumes. We plan to provide additional detail on the timeline of publicly reporting this data in future rulemaking.

As we described in the CY 2024 OPPS/ASC proposed rule (88 FR 49842) and in section XVI.B.8.a. of this final rule with comment period, we proposed that the display of these data would rely on the same business processes and resources that are currently in use for the Hospital OQR and Hospital IQR Programs. The data would be available to the public both on our Care Compare website and in downloadable data files found at *https://data.cms.gov*. Data associated with these three claims-based measures would be updated annually.

We invited public comment on the proposal.

Comment: One commenter expressed broad support of CMS' proposals to support REHs' efforts to collect data, report quality measures, and improve performance, including CMS' proposal to publicly report claims-based measures under the REHQR Program.

Response: We thank the commenter for their support.

c. Public Reporting of the Median Time from ED Arrival to ED Departure for Discharged ED Patients Measure

In the Hospital OQR Program, only data for two out of the four strata of the Median Time for Discharged ED Patients measure are reported publicly. Measure data for the Median Time for Discharged ED Patients—Reported Rate is currently publicly displayed on the Care Compare website and in the downloadable data found at *https://data.cms.gov* for the Hospital OQR Program. In addition, measure data for the Median Time for Discharged ED Patients—Psychiatric/Mental Health Patients is publicly displayed in downloadable data files, in order to address a behavioral health gap in the publicly reported Hospital OQR Program measure set.[755]

While data for the Median Time for Discharged ED Patients—Transfer Patients measure stratification is not currently reported publicly for hospitals participating in the Hospital OQR Program, we believe publicly reporting measure data for this stratum for REHs is imperative to allow for the identification of REH ED throughput performance gaps for patients requiring higher levels of specialized care above what an REH is able to provide. Likewise, data for the Median Time for Discharged Patients—Overall Rate measure stratification are not currently reported publicly for hospitals participating in the Hospital OQR Program. However, we believe publicly reporting measure data for this stratum for REHs participating in the REHQR Program is important to provide an account of all patients seen in the REH's ED that have a discharge code, beyond identifying specific performance in certain patient populations as reflected by the other strata calculated for this measure. We note that the Median Time for Discharged ED Patients measure is of particular importance for the REHQR Program because care provided in EDs will be a focus of REH services; as such, we seek to provide transparency in publicly reporting of all the strata calculated for this measure. For a more detailed discussion of the Median Time for Discharged ED Patients measure for the REHQR Program measure set, please refer to section XVI.B.5.b of this final rule with comment period.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49842 and 49843), we proposed to make publicly available data received from REHs to calculate the following measure strata for the Median Time for Discharged ED Patients measure: (1) Overall Rate; (2) Reported Measure; (3) Psychiatric/Mental Health Patients; and (4) Transfer Patients. We intend to display these data publicly beginning with the first quarter of measure data submitted relevant to services provided in CY 2024 in which case thresholds are met. We plan to provide additional detail on the timeline of publicly reporting these data through CMS websites or communications, and in future rulemaking. As discussed previously, display of these data would rely on the same business processes and resources that are currently in use for the Hospital OQR and Hospital IQR Programs.

We invited public comment on these proposals.

Comment: Several commenters did not support public reporting of the transfer patients stratum because the Hospital OQR program does not report this stratum.

Response: We appreciate the commenters' recommendation to align public reporting between the Hospital OQR Program and the REHQR Program. We note that in section XIV.B.6 of this final rule with comment period, we are finalizing public reporting of the transfer patients stratum in the Hospital OQR Program. Therefore, if CMS finalizes public reporting of this stratum in the REHQR Program as proposed, this policy will align across these two programs.

Comment: One commenter did not support publicly reporting these data because of concerns that low volumes will lead to unreliable data. This commenter observed that stratifying the data into four strata will lead to smaller volumes and therefore less reliable data.

Response: We thank the commenters for their feedback but note that this concern applies to all measures, and that CMS does not report measures publicly unless sufficient case volumes to allow for public reporting of the collected data are achieved. This measure has clinical importance, and even if case rates are too small for public reporting, the collection of this measure can drive hospital improvement efforts and improve timely access to care. In addition, as we state in section XVI.B.1 of this final rule with comment period, while it is not possible to identify the exact group of hospitals that will choose to convert to REH status, our analysis indicates that the services targeted by the REHQR measures are relevant for hospitals that may participate in the REHQR Program as these hospitals are currently providing the services assessed by the selected measures with case volumes sufficient to meet thresholds to allow public reporting of the collected data. We reiterate that we will only publicly report measure results with sufficient case volumes, both to protect patient privacy and to ensure that data are statistically reliable. We believe that reporting all four strata provides meaningful information regarding the care provided by addressing the various outcomes of seeking ED care which a patient may experience.

Comment: Several commenters did not support reporting these data because the measure could be affected by factors outside of the REH's control. These commenters expressed that reporting these data could affect perceptions of

[753] CMS does not report measures publicly unless measures are the result of an analysis of more than 10 cases.

[754] CMS Policy for Privacy Act Implementation & Breach Notification, July 23, 2007, Document Number: CMS–CIO–POL–PRIV01–01, p 4. Statistical, aggregate or summarized information created as a result of analysis conducted using identifiable CMS data obtained under CMS-approved projects/studies may only be disclosed if the data are not individual-specific and the data are aggregated to a level where no data cells contain 10 or fewer individuals.

[755] CMS adopted a policy to publicly report measure data for the Median Time for Discharged ED Patients—Psychiatric/Mental Health Patients in the CY 2018 OPPS/ASC final rule (82 FR 59437).

REHs and patient willingness to seek care at REHs with high throughput times.

Response: We understand the commenters' concern regarding factors outside of an REH's control that could affect ED throughput and thus the perception of the hospital; however, we believe that many hospitals face such concerns and that timeliness of care is critical aspect of quality of care, directly impacting patient outcomes, particularly for an ED episode of care. While we understand concerns that transport times may be delayed due to circumstances beyond a facility's control, such as weather, local facility transport modalities, and distance, we also note that transfer time for trauma patients is especially important, that these circumstances are not unknown or new challenges, and that REHs are statutorily required to have in effect a transfer agreement with a higher level trauma center, such that patients that present with needs for longer-term inpatient care may receive that care, particularly in a timely manner. Further, an examination of Care Compare data for hospitals that have converted to REH status shows transfer times that are more timely or on par with larger or urban hospitals. Therefore, the public reporting of these data can help patients and their caregivers identify which facilities are performing better than others despite potential challenges, and drive quality improvement efforts. Additionally, we believe that having a consistent ED throughput measure across REHs and HOPDs will allow consumers to compare across programs, especially for vulnerable populations in need of transfer to more appropriate care settings.

C. Administrative Requirements

1. Codification of Administrative Requirements

Section 1861(kkk)(7)(B)(i) of the Act provides that, with respect to each year beginning with 2023, or each year beginning on or after the date that is one year after one or more measures are first specified under section 1861(kkk)(7)(C) of the Act, an REH shall submit data to the Secretary in accordance with section 1861(kkk)(7)(B)(ii). Clause (ii) states that, with respect to each such year, an REH shall submit to the Secretary data on quality measures in a form and manner, and at a time, specified by the Secretary for purposes of section 1861(kkk)(7)(B) of the Act.

We finalized foundational administrative requirements for REHs participating in the REHQR Program in the CY 2023 OPPS/ASC final rule (87 FR 71752, 72149, and 72150). In that rule, we require REHs must (1) register on a CMS website before beginning to report data; and (2) identify and register a security official as part of that registration process. We also require REHs to submit data on all quality measures to CMS. In the CY 2024 OPPS/ASC proposed rule (88 FR 49843), we proposed to codify the participation requirements in the REHQR Program at § 419.95(b), ''Participation in the REHQR Program.''

We noted in the CY 2024 OPPS/ASC proposed rule that we intend to propose additional administrative requirements as appropriate for the REHQR Program in subsequent rulemaking.

We invited public comment on these proposals. We did not receive any comments on the proposal and are finalizing our proposal to codify the participation requirements in the REHQR Program at § 419.95(b) with one correction to fix a typographical error, in which ''paragraph (c)'' was inadvertently referred to as ''paragraph (d).''

D. Form, Manner, and Timing of Data Submitted for the REHQR Program

1. Alignment and Codification of Submission of REHQR Program Data

We refer readers to the CYs 2014, 2016, and 2018 OPPS/ASC final rules (78 FR 75110 and 75111; 80 FR 70519 and 70520; and 82 FR 59439, respectively) where we finalized our policies for clinical data submission for the Hospital OQR Program. We codified these submission requirements at § 419.46(d). In the CY 2024 OPPS/ASC proposed rule (88 FR 49843), we proposed to align the policies regarding submission of program data for the REHQR Program with those from the Hospital OQR Program.

We also proposed to codify this policy at § 419.95 by adding paragraph (c), ''Submission of REHQR Program data.'' In paragraph (c)(1), we would require that REHs that participate in the REHQR Program must submit to CMS data on measures selected under section 1861(kkk)(7)(C) of the Act in a form and manner, and at a time specified by CMS. REHs sharing the same CCN must combine data collection and submission across their multiple campuses for all clinical measures for public reporting purposes. In paragraph (c)(2), we proposed that submission deadlines by measure and by data type be posted on a CMS website. We proposed that all deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or executive order would be extended to the first day thereafter which is not a Saturday, Sunday, or legal holiday or any other day all or part of which is declared to be a nonwork day for Federal employees by statute or executive order.

We invited public comments on these proposals.

Comment: One commenter expressed broad support of CMS' proposals to support REHQRs' efforts to collect data, report quality measures, and improve performance, including CMS' proposals related to the form, manner and timing of data submission, to include: (1) our proposal to align the policies regarding submission of REHQR Program data with those of the Hospital OQR Program and to codify such policies at § 419.95(c); (2) our proposed data submission requirements for chart-abstracted measures beginning with the CY 2024 reporting period; (3) our proposed claims-based measure data requirements beginning with the CY 2024 reporting period; (4) our proposal to adopt a review and corrections period for measure data submitted to the REHQR Program and to codify this policy at § 419.95(c)(3); and (5) our proposal to adopt an Extraordinary Circumstances Exceptions (ECE) process for the REHQR Program and to codify this policy at § 419.95(g).

Response: We thank the commenter for their support.

After consideration of the public comments we received, we are finalizing our proposal to align the policies regarding submission of REHQR Program data with those of the Hospital OQR Program and to codify such policies at § 419.95(c).

2. Requirements for Chart-Abstracted Measures Where Patient-Level Data Are Submitted Directly to CMS Beginning With the CY 2024 Reporting Period

As discussed in section XVI.B.5.b of this final rule with comment period, we are finalizing our proposal to adopt one initial chart-abstracted measure for the CY 2024 reporting period and for subsequent years: Median Time for Discharged ED Patients. Measure data for this measure would be submitted via the HQR System (formerly referred to as the QualityNet Secure Portal). In the CY 2024 OPPS/ASC proposed rule (88 FR 49843), we explained that in developing proposed data submission requirements for this measure, we also considered proposing that REHs submit data for this measure on an annual rather than quarterly basis to help reduce burden for REHs participating in the REHQR Program. However, we noted that REHs

would have been reporting this measure on a quarterly basis under the Hospital OQR Program and would thus be acclimated to this reporting frequency. Therefore, to enhance alignment with this program, we proposed the same data submission frequency (a quarterly basis). We refer readers to the CY 2015 OPPS/ASC and CY 2023 OPPS/ASC final rules for a discussion of our previously finalized policies regarding submissions deadlines for chart-abstracted measures for the Hospital OQR Program (79 FR 66964; 87 FR 72110 through 72112).

Beginning with the CY 2024 reporting period, the applicable patient encounter quarters for chart-abstracted data and their corresponding data submission deadlines would be as follows in Table 150.

TABLE 150: CY 2024 Reporting Period and Subsequent Years*

Patient Encounter Quarter	Clinical Data Submission Deadline
Q1 2024 (January 1 – March 31)	08/01/2024
Q2 2024 (April 1 – June 30)	11/01/2024
Q3 2024 (July 1 – September 30)	02/01/2025
Q4 2024 (October 1 – December 31)	05/01/2025

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a nonwork day for Federal employees by statute or executive order would be extended to the first day thereafter.

We proposed to adopt these dates as quarterly deadlines for submitting chart-abstracted measure data for the REHQR Program.

We invited public comment on the proposal.

Response: We refer readers to previous section XVI.D.1 where we summarize the broad support we received for CMS' proposals related to the form, manner and timing of data submission.

After consideration of the public comments we received, we are finalizing our proposed data submission requirements for chart-abstracted measures beginning with the CY 2024 reporting period.

3. Claims-Based Measure Data Requirements Beginning With the CY 2024 Reporting Period

As discussed in section XVI.B.5 of this final rule with comment period, we are finalizing our proposal to adopt three initial claims-based measures for the CY 2024 reporting period and for subsequent years: (1) Abdomen CT; (2) 7-Day Hospital Visit Rate After Outpatient Colonoscopy; and (3) 7-Day Hospital Visit Rate After Outpatient Surgery. In the CY 2024 OPPS/ASC proposed rule (88 FR 49844), for calculating these and future claims-based measures, we proposed to use Medicare claims data for services with encounter dates on or after January 1, 2024.

We invited public comment on the proposal.

Response: We refer readers to previous section XVI.D.1 where we summarize the broad support we received for CMS' proposals related to the form, manner and timing of data submission.

After consideration of the public comments we received, we are finalizing our proposed claims-based measure data requirements beginning with the CY 2024 reporting period.

4. Adoption and Codification of a Review and Corrections Period for Measure Data Submitted to the REHQR Program

In the event that an REH submits data for a measure, such as the chart-abstracted Median Time for Discharged ED Patients measure we are finalizing in section XVI.B.5.b of this final rule with comment period, and later discovers or suspects the data provided were not accurate, it may need to submit corrected data. To address this need, in the CY 2024 OPPS/ASC proposed rule (88 FR 49844), we proposed to adopt the same policies currently in place for the Hospital OQR Program. Under the Hospital OQR Program, hospitals submit chart-abstracted data to CMS on a quarterly basis. These data are typically due approximately four months after the quarter has ended. We refer readers to the CY 2015 OPPS/ASC final rule for a discussion of our previously finalized policies regarding submissions deadlines for chart-abstracted measures for the Hospital OQR Program (79 FR 66964).

Hospitals are encouraged to submit data early in the submission schedule so that they can identify errors and resubmit data before submission deadlines. Hospitals can continue to review, correct, and change these data up until the close of each submission deadline. For example, under the Hospital OQR Program, we finalized a 4-month period as the review and corrections period for chart-abstracted data (79 FR 66964). During this review and corrections period, hospitals can enter, review, and correct data submitted directly to CMS. However, after the submission deadline, hospitals would not be allowed to change these data. Under the Hospital OQR Program, we generally provide rates to hospitals for the measures that have been submitted for chart-abstracted, patient-level data 24 to 48 hours following the submission deadline.

We proposed to adopt this same policy under which an REH may review and submit corrections to measure data, and that for chart-abstracted measure data, an REH may review and submit corrections to measure data submitted for a period of four months after the reporting quarter has ended. We also proposed to codify this policy at § 419.95 by adding paragraph (c)(3), ''Review and corrections period.'' In paragraph (c)(3), we proposed that REHs would have a review and corrections period for all quality data submitted, which runs concurrently with the data submission period, when they would be able to enter, review, and correct data submitted prior to the submission deadline. In addition, we proposed that after the submission deadline, these data cannot be changed.

We invited public comment on these proposals.

Response: We refer readers to previous section XVI.D.1 where we summarize the broad support we received for CMS' proposals related to the form, manner and timing of data submission.

After consideration of the public comments we received, we are

finalizing our proposal to adopt a review and corrections period for measure data submitted to the REHQR Program and to codify this policy at § 419.95(c)(3).

5. Adoption of an Extraordinary Circumstances Exceptions (ECE) Process

In our experience, there have been times when facilities have been unable to submit information to meet program requirements due to extraordinary circumstances that are not within their control. It is our goal not to penalize such entities for such circumstances and we do not want to unduly increase their burden during these times. In the CY 2024 OPPS/ASC proposed rule (88 FR 49844 and 49845), we proposed an Extraordinary Circumstances Exceptions (ECE) process for REHs to request and for CMS to grant extensions or waivers with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the REH. Under this process, CMS may grant an exception to one or more data submission deadlines and requirements in the event of extraordinary circumstances beyond the control of the REH, such as when an act of nature affects an entire region or locale or a systemic problem with one of CMS' data collection systems directly or indirectly affects data submission. Because we do not anticipate that such systemic errors will happen often, we do not anticipate granting exceptions on this basis frequently.

We proposed that CMS may grant an exception to one or more data submission deadlines and requirements upon request by an REH, pursuant to specific requirements for submission of such a request described below. In addition, we proposed that CMS may grant exceptions at its own discretion, without an accompanying request from an affected REH, when CMS determines that an extraordinary circumstance has occurred.

For an REH to request consideration of an exception to the requirement to submit quality data or medical record documentation for one or more quarters, the REH would follow specific requirements for submission of an ECE request form available on a CMS website. We note that the following information must appear on the request form: the REH's CCN; the REH's name; the REH's chief executive officer (CEO) or other REH-designated personnel contact information, including name, email address, telephone number, and mailing address (must include a physical address, a post office box address is not acceptable); REH's reason for requesting an exception; evidence of the impact of the extraordinary circumstances, including but not limited to photographs, newspaper and other media articles; and a date when the REH believes it would again be able to submit REHQR Program data and/or medical record documentation; and a justification for the proposed date.

We proposed the request form must be signed by the REH's designated contact, whether or not that individual is the CEO. A request form would be required to be submitted within 90 days of the date that the extraordinary circumstance occurred. Following receipt of such a request, CMS would provide an email acknowledgement using the contact information provided in the request notifying the designated contact that the REH's request has been received and following CMS' decision, CMS would notify the REH using the same contact information. We proposed in the case where CMS grants exceptions to REHs that have not requested them because we determine that an extraordinary circumstance has occurred in a region or locale, we would communicate this decision to REHs and vendors through routine communication channels, including but not limited to emails and notices on a CMS website.

We also proposed to codify these policies at § 419.95 by adding paragraph (g), ''Exception.'' In paragraphs (g)(1) and (2), we proposed that we may grant, upon the request of the REH or at our discretion, an exception to one or more data submission deadlines and requirements in the event of extraordinary circumstances beyond the control of the REH.

We invited public comment on these proposals.

Response: We refer readers to previous section XVI.D.1 where we summarize the broad support we received for CMS' proposals related to the form, manner and timing of data submission.

After consideration of the public comments we received, we are finalizing our proposal to adopt an Extraordinary Circumstances Exceptions (ECE) process for the REHQR Program and to codify this policy at § 419.95(g).

XVII. Changes to Community Mental Health Center (CMHC) Conditions of Participation (CoPs)

A. Background and Statutory Authority

The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328) was signed into law on December 29, 2022. Section 4124 of division FF of this legislation established coverage of intensive outpatient program (IOP) services in CMHC. Section 4124 of the CAA, 2023 extends Medicare coverage and payment of IOP services furnished by a CMHC beginning January 1, 2024, allowing coverage of IOP services to be furnished by CMHCs at section 1832(a)(2)(J) of the Act. Additionally, the CAA, 2023 revised section 1861(ff) of the Act to define IOP services while also amending the definition of partial hospitalization program (PHP) services. The statutory definitions provide distinctions between the two programs for Medicare purposes.

In order to implement division FF, section 4124 of the CAA, 2023, we proposed to modify the requirements for CMHC participation in Medicare to include standards for IOP services throughout the CoPs. Section 1861(ff)(3)(B)(iv) of the Act authorizes the Secretary to establish the requirements that a CMHC must meet to participate in the Medicare Program, and these CoPs are set forth in regulations at 42 CFR part 485, subpart J.

Division FF, section 4121 of the CAA, 2023, establishes a new Medicare benefit category for marriage and family therapist (MFT) services and mental health counselor (MHC) services. Thus, we also proposed to add personnel qualifications for MFTs and update the existing personnel qualifications for MHCs in the CMHC CoPs.

B. Summary of the CMHC Proposed Provisions, Public Comments and Responses to Comments

On July 31, 2023, the CY 2024 OPPS/ASC proposed rule (88 FR 49552) was published in the **Federal Register**. This section of this final rule with comment period sets out changes to the CMHC CoPs as required in section 4124 of Division FF of the CAA 2023. In response to the proposed CMHC CoP policies, we received 23 public comments. Commenters included health associations and residential and outpatient substance use disorder treatment facilities. In this section, we provide a summary of our proposed provisions, a summary of the public comments received, our responses to the public comments, and the policies we are finalizing for CMHCs.

1. General Comments

Comment: We received one comment that supported the various technical changes to codify the coverage of IOP services in CMHCs. However, this commenter noted that CMHCs do not provide screening or treatment for eating disorders.

Response: We appreciate the feedback from the commenter. While the CoPs do not explicitly address every mental

health service provided by CMHCs, we note that practitioners working in CMHCs may provide these services for the screening and treatment of eating disorders as part of individual counseling under part B if they so choose.

2. Section 485.900 Basis and Scope

We proposed to revise the basis and scope of part 485, subpart J, at § 485.900 to add the definition of IOP services to the standard in which the current definition of ''partial hospitalization services'' is located. In this standard, we also proposed to reference the statutory provision at section 1861(ff) enacted by Congress in division FF, section 4124 of the CAA, 2023. Section 1832(a)(2)(J) of the Act specifies payment of benefits covered under Medicare for CMHCs and section 1866(e)(2) of the Act specifies the provider agreement requirements for CMHCs with respect to providing PHP and IOP services. The addition of IOP services to the list of Medicare services covered when provided by a CMHC would assist in ensuring the continuum of coverage of outpatient behavioral health services under the Medicare program. Medicare coverage of IOP services in CMHCs may help address barriers to access to behavioral health care, which may also address inequities in behavioral health care and services. In order to implement division FF, section 4124 of the CAA, 2023, we proposed to modify the CMHC CoPs at § 485.900(a)(1) through (3). These modifications would allow CMHCs to receive payments for IOP services under Medicare Part B, establish requirements for the provision of IOP services in CMHCs, provide IOP services to clients, and include IOP services in the Medicare provider agreement.

Comment: We received several comments in support of the proposals at § 485.900. Commenters expressed support for the inclusion of IOP services as it aligns with the broader health care industry's shift towards recognizing and treating mental health with the same importance as physical health. Commenters also supported IOP services furnished by CMHCs as it increases access to behavioral health care.

Response: We thank and appreciate the commenters support of these proposals.

After consideration of public comments on these provisions, we are finalizing them as proposed at § 485.900. The inclusion of IOP services in a CMHC would assist in ensuring the continuum of coverage of outpatient behavioral health services under the Medicare program and may help address barriers to access to behavioral health care. We believe that this action strengthens our response to the need for increased access to behavioral health services.

3. Section 485.904 Personnel Qualifications

Section 1861(ff)(2) of the Act lists the items and services partial hospitalization programs must be able to provide to meet the needs of clients and the staff needed to provide such items and services. For example, section 1861(ff)(2)(A) of the Act states a physician, psychologist, or other mental health professional to the extent authorized under State law may furnish individual and group therapy. The programs providing PHP services must be able to meet the needs of each client under their care.

As stated above, section 4121 of division FF of the CAA, 2023, established a new Medicare benefit category for MFT and MHC services in section 1861(lll) of the Act, including a definition for MFTs and MHCs in sections 1861(lll)(2) and 1861(lll)(4) of the Act, respectively. To support the health and safety of CMHC clients and to promote consistency and clarity of CMHC personnel qualifications we proposed at § 485.904(b), ''Standard: Personnel qualifications for certain disciplines,'' to align the personnel qualifications for MFTs and MHCs with the requirements set out in the CAA, 2023. We proposed to implement the statutory definitions for MFTs and MHCs in the CY 2024 Physician Fee Schedule proposed payment rule (88 FR 52262); the final rule implementing these definitions published in the **Federal Register** of November 16, 2023 (FR Doc. 2023–24184). We proposed to add a new requirement at § 485.904(b)(12), cross-referencing the definition of an MFT at § 410.53 and we proposed to modify the MHC personnel requirement at § 485.904(b)(5) by cross-referencing the definition of an MHC at § 410.54.

Comment: Several commenters shared their support for the inclusion of MFTs and MHCs in the personnel requirements and believe these practitioners will provide vital clinical resources to support PHP and IOP services. One commenter stated that adding MFTs and MHCs to the personnel requirements could help address the workforce shortages in underserved communities, and potentially increase the availability of mental health services at CMHCs. Another commenter expressed their support for the proposed provision stating that many MFTs and MHCs already work in a variety of community mental health settings.

Response: We thank these commenters for their support of these new proposals.

After consideration of public comments on this provision, we are finalizing these provisions at § 485.904(b) as proposed. The inclusion of the definition of MFT and modification of the definition of MHC to promote consistency and clarity of the CMHC personnel qualification of these providers.

4. Section 485.914 Admission, Initial Evaluation, Comprehensive Assessment, and Discharge or Transfer of the Client

We proposed to add ''intensive outpatient services'' to existing references for ''partial hospitalization services'' at § 485.914, which establish CMHC requirements for admission, initial evaluation, comprehensive assessment, and discharge or transfer of the client in accordance with sections 1835(a)(2)(F) and 1861(ff) of the Act. These CoPs identify general areas that would be included in a client assessment and the timeframes for completing the assessments to help the CMHC ensure it is identifying the needs in all areas in a timely fashion.

At § 485.914(a)(2), we proposed to revise the paragraph by referencing IOP requirements the CMHC must meet at proposed § 485.918(g). This standard for IOP is discussed later in section XVII.A.5 of this final rule with comment period. At § 485.914(d), we proposed to add a reference to IOP services. This standard requires that the CMHC update each client's comprehensive assessment through the CMHC interdisciplinary treatment team, in consultation with the client's primary health care provider (if any), when changes in the client's status, responses to treatment, or goal achievement have occurred and in accordance with current standards of practice.

This update includes information on the client's progress toward desired outcomes, a reassessment of the client's response to care and therapies, and the client's goals. The CMHC interdisciplinary treatment team uses assessment information to guide necessary reviews and/or changes to the client's active treatment plan.[756]

Comment: Several commenters suggested that the IOP comprehensive assessment be updated no less frequently than every 60 days. The commenter noted the comprehensive

[756] *https://www.reginfo.gov/public/do/PRAOMBHISTORY?ombControlNumber=0938-1245#.*

assessment for IOP should be updated less frequently than for PHP, which would be consistent with the recertification requirements for IOP at 60 days and PHP at 30 days.

Response: We appreciate the commenters suggestions to coordinate the time frames for the update of the comprehensive assessment and the recertification of IOP to both occur at 60 days. We note that we did not propose any modifications to the comprehensive assessment time frame. We believe that for both PHP and IOP, a 60-day time frame between assessments would not support the most current changes in the client's behavioral health needs and could potentially put the client's health and safety at risk. We note that clients with ongoing behavioral health needs may be subject to frequent and/or rapid changes in status, thereby affecting the type and frequency of services that are updated in the client's active treatment plan and furnished by the CMHC.

After consideration of public comments on this provision, we are finalizing the provisions at § 485.914(d) as proposed. The inclusion of IOP in the ''update of the comprehensive assessment'' standard will support our responsibility to protect clients' health and safety by ensuring all CMHC clients receive care based on their most current assessed needs.

5. Section 485.916 Treatment Team, Person-Centered Active Treatment Plan, and Coordination of Services

We proposed to modify language at § 485.916(d) to incorporate IOP programs into requirements for active treatment plans in CMHCs and proposed to include a specific cross-reference to the proposed requirement for payment of IOP services at § 424.24(d), which is discussed in section VIII.B.3 of this final rule with comment period. The proposal reflected existing requirements in § 485.916(d) that CMHCs meet partial hospitalization program requirements specified under § 424.24(e). Review and update of the CMHC client's person-centered active treatment plan plays an integral role in guaranteeing the provision of care and services offered by the CMHC.

The active treatment plan must be updated with current information from the client's comprehensive assessment and information concerning the client's progress toward achieving outcomes and goals specified in the active treatment plan. The active treatment plan is reviewed at specified intervals but no less frequently than every 30 calendar days. The revised active treatment plan must include information from the client's initial evaluation and comprehensive assessments, the client's progress toward outcomes and goals specified in the active treatment plan, and changes in the client's goals. As noted above, the CMHC must meet PHP requirements specified under § 424.24(e). As such, we proposed to include IOP service requirements the CMHC must meet as specified under § 424.24(d), as applicable, if such services are included in the active treatment plan.

Comment: We received several comments requesting we revise the CoPs at § 485.916(a)(1) and (3). Specifically, at § 485.916(a)(1) commenters asked that MFTs and MHCs be added to the members that can lead the interdisciplinary team. In addition, commenters asked that MFTs and MHCs be identified as interdisciplinary team members at § 485.916(a)(3). Commenters stated that including MFTs and MHCs will clarify that these practitioners may lead and be members of the CMHC interdisciplinary teams.

Response: We appreciate the commenter's suggestions to add MFTs and MHCs to the list of practitioners who may lead and be a member of the interdisciplinary team. We agree with the commenter's suggestion to add MFTs and MHCs to the list of practitioners who may lead an interdisciplinary team and have modified the language at § 485.916(a)(1). We believe making this revision can increase flexibility for the CMHC and allow diversity in team leadership. However, we do not agree with the suggestion to add MFTs or MHCs under § 485.916(a)(3), the standard describing who may be included in the interdisciplinary team. The items and services set out in paragraph (a)(3) follow the clinical providers set forth in 1861(ff)(2) of the Act, and MFTs and MHCs are not specifically listed. We believe that MFTs and MHCs fall under paragraph (a)(3)(vi) (other licensed mental health professionals, as necessary). The current language in this requirement allows CMHCs the flexibility to utilize appropriate counselors, including MFTs and MHCs, who may serve on the client's interdisciplinary team.

Final action: After consideration of public comments on this provision, we are finalizing the provisions at § 485.916(d) as proposed. Additionally, we are finalizing language at § 485.916(a)(1) to include MFTs or MHCs as professionals who can lead the CMHC interdisciplinary team.

6. Section 485.918 Organization, Governance, Administration of Services, Partial Hospitalization Services

The CoP at § 485.918 establishes requirements for CMHC organization, governance, administration of services, and partial hospitalization services. We proposed to modify the section heading at § 485.918 by adding ''intensive outpatient services,'' such that the new section heading will be ''Organization, governance, administration of services, partial hospitalization services, and intensive outpatient services.''

At § 485.918(b), ''Standard: Provision of services,'' specifies a comprehensive list of services that a CMHC would be required to provide; this provision would implement section 1861(ff)(3) of the Act. We proposed to add IOP services to the requirement at § 485.918(b)(1)(iii) for the provision of services. These proposed changes would recognize IOP services, along with day treatment and PHP, as services that can be provided by a CMHC, other than in an individual's home or an inpatient or residential setting or psychosocial rehabilitation services.

We proposed to redesignate the current requirements at § 485.918(g) to § 485.918(h) and add a new standard for IOP services at § 485.918(g). This new requirement would specify the additional requirements a CMHC providing IOP services must meet based on the proposed requirements at §§ 410.2, 410.44, 410.111, and 424.24(d). See sections VIII.B.2 and VIII.C.2 of this final rule with comment period for a discussion of these additional requirements.

Comment: One commenter suggested that the coverage of IOP services by Medicare be extended beyond CMHCs to include any licensed Medicare provider. They also stated that Medicare coverage should extend the full continuum of care for mental health and substance use disorder treatment across all services.

Response: We recognize that access to behavioral health services is an important need for Medicare beneficiaries. Starting January 1, 2024, Medicare will cover IOP services furnished in hospitals, CMHCs, RHCs, and FQHCs. In addition, CMS is finalizing coverage of IOP services furnished at Opioid Treatment Programs (OTPs) for the treatment of Opioid Use Disorder using the existing statutory authority at section 1861(jjj)(1)(F) and 1834(w) of the Act. The statute sets forth covered services for all provider types, and at this time only these providers may furnish IOP services.

Comment: We received several comments requesting that we revise the CoPs at § 485.918(b)(1)(vi) to specifically list MFTs similarly to the other practitioners who may lawfully provide psychotherapy services in a CMHC.

Response: Section 485.918(b)(1) requires CMHCs to provide a set of services. These services align with the requirements in section 1861(ff)(2)(A) of the Act. Additionally, § 485.918(b)(1)(vi) requires a CMHC to provide individual and group psychotherapy utilizing a psychiatrist, psychologist, or other licensed mental health counselor, to the extent authorized under State law. This requirement aligns with the items and services outlined in the statute, and MFTs or MHCs are not specifically listed. However, we note that MFTs and MHCs would be included in this provision under ''other licensed mental health counselor, to the extent authorized under State law.''

After consideration of public comments on this provision, we are finalizing the changes to § 485.918 as proposed. The inclusion of IOP throughout this provision promotes consistency and clarity of IOP services in a CMHC.

6. Request for Information Regarding the Impact of the Proposed IOP Requirements on CMHC Populations and Meeting the 40 Percent Requirement

In the CY 2024 OPPS/ASC proposed rule (88 FR 49847), we stated our interest in better understanding the impact of providing IOP services on the requirement that CMHCs provide at least 40 percent of their items and services to individuals who are not eligible for benefits under title XVIII of the Act, as specified at § 485.918(b)(1)(v) [757] and section 1861(ff)(3)(B)(iii) of the Act. Under this requirement, CMHCs must submit a self-attestation certification statement upon initial application to enroll in Medicare, and as a part of revalidation, including any off-cycle revalidation, noting the CMHC's compliance with this requirement. Medicare enrollment will be denied or revoked in instances in which the CMHC fails to provide the certification statement as required. We solicited public comment on how the provision of IOP services may impact the populations CMHCs serve as well as the potential impact on meeting the 40 percent requirement.

Comment: Many commenters requested clarification on the CMS interpretive guidance (IG) addressing the 40 percent requirement. Specifically, commenters asked CMS to clarify that the percentage of services furnished to non-Medicare-eligible persons is determined based on all clients who received care at CMHCs, not based solely on the provision of services coinciding with the PHP and IOP services that Medicare-certified CMHCs may provide.

Response: Thank you for the suggestion to update the CMHC Interpretive Guidance. The Medicare State Operations Manual (SOM), Appendix F (CMHC Interpretive Guidance) is identical to our regulations at § 485.918(b)(1)(v) without change, and states that the 40 percent is measured by the *total* number of CMHC clients treated by the CMHC for whom services are not paid for by Medicare, divided by the total number of clients treated by the CMHC for each 12-month period of enrollment.[758] This computation is done with respect to the whole behavioral health service array furnished by the Medicare-certified CMHC and not only those who receive PHP/IOP or similar services covered by another payor. We acknowledge that the interpretive guidance mirrors the regulation text and does not expand on the regulation. However, at this time we do not believe the interpretive guidance for this requirement must be updated.

Comment: Several commenters requested that CMS monitor concerns relating to the provision of services by Medicare-enrolled CMHCs to dual-eligible beneficiaries. Specifically, commenters encouraged CMS to monitor and require state Medicaid agencies to monitor the challenges faced by CMHCs obtaining secondary payment from state Medicaid agencies for PHP and IOP services.

Response: We appreciate the commenters concerns and suggestions regarding CMS monitoring for issues related to obtaining secondary payment from State Medicaid Agencies. However, note that this is outside the scope of this final rule with comment period. We agree this is an important issue and will share this information with the appropriate CMS component for their review.

Comment: We received many comments regarding the impact of the standard at § 485.918(b)(1)(v), requiring CMHCs provide at least 40 percent of its items and services to individuals who are not eligible for benefits under title XVIII of the Act. The commenters believe that because Medicare will cover a wider range of outpatient behavioral health services via PHP and IOP, it may encourage more community behavioral health providers to enroll as Medicare-certified CMHCs. The commenters also stated that the inclusion of IOP services and the potential growth in the number of Medicare-certified CMHCs providing care would help make these services more broadly available to the Medicare population. One commenter believes that the total number of clients served would only slightly increase when Medicare covers IOP services in CMHCs. The commenter also stated that for those community behavioral health entities enrolling as a CMHCs Medicare provider, furnishing IOP services would be an opportunity to provide more intensive services to Medicare clients who require them and a step towards aligning the benefits covered under State Medicaid programs. One commenter stated that many clients will likely be directly admitted into the IOP program, as their IOP program already admits clients from other insurance companies. This commenter also stated that generally, half of their PHP clients step down to the IOP level of care, and that they currently admit clients to the IOP level of care who are receiving office-based therapy. This commenter does not expect the 40 percent requirement to be an issue when adding the Medicare IOP service level to their services.

Response: We appreciate the feedback we received regarding the 40 percent rule. We will continue to consider this further.

XVIII. Updates to Requirements for Hospitals To Make Public a List of Their Standard Charges

A. Introduction and Overview

1. Statutory Basis and Background

Section 1001 of the Patient Protection and Affordable Care Act (Pub. L. 111–148), as amended by section 10101 of the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), amended Title XXVII of the Public Health Service Act (the PHS Act), in part, by adding a new section 2718(e). Section 2718 of the PHS Act, titled ''Bringing Down the Cost of Health Care Coverage,'' requires each hospital operating within the United States (U.S.) for each year to establish and update and make public a list of the hospital's standard charges for items and services provided by the hospital, including for diagnosis-related groups established under section 1886(d)(4) of the Social Security Act (the Act).

[757] *https://www.reginfo.gov/public/do/PRAOMBHISTORY?ombControlNumber=0938-1245#.*

[758] *https://www.cms.gov/files/document/som107apfcmhc.pdf.*

Section 2718(b)(3) of the PHS Act requires the Secretary of the Department of Health and Human Services (Secretary) to promulgate regulations to enforce the provisions of section 2718 of the PHS Act, and, in so doing, the Secretary may provide for appropriate penalties.

In a final rule dated November 2019 (84 FR 65524) (herein referred to as the CY 2020 HPT final rule), we adopted requirements for hospitals to make public their standard charges in two ways: (1) as a comprehensive machine-readable file (MRF); [759] and (2) in a consumer-friendly format. We codified these requirements at 45 CFR part 180. We also explained our belief that these two different methods of making hospital standard charges public are necessary to ensure that such data are available to consumers of healthcare where and when they are needed, including through data aggregation methods (for example, via integration into price transparency tools, electronic health records (EHRs), and consumer apps), and direct availability to healthcare consumers searching for hospital-specific charge information. Additionally, we believe such data can be used specifically by employers, researchers, and policy officials, and other members of the public to drive competition and help bring more value to healthcare.

Subsequently, in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63941), we strengthened the hospital price transparency (HPT) enforcement scheme in order to improve compliance rates and made other updates to the requirements. Specifically, we (1) increased the penalty amount for noncompliance through the use of a scaling factor based on hospital bed count; (2) deemed state forensic hospitals that meet certain requirements to be in compliance with the requirements of 45 CFR part 180, and (3) prohibited certain conduct that we concluded were barriers to accessing the standard charge information, specifically including prohibiting hospitals from coding their MRF in a fashion that made it inaccessible to automated searches and direct downloads.

In both of those final rules, we stated that our policies requiring public release of hospital standard charge information are a necessary and important first step in ensuring transparency in prices of healthcare services for consumers. We also recognize that the release of hospital standard charge information is not itself sufficient to achieve our ultimate price transparency goals. The regulations are, therefore, designed to begin to address some of the barriers that limit price transparency, with a goal of increasing competition among healthcare providers to bring down costs. Competition in the healthcare industry benefits consumers because it helps contain costs, improve quality, expand choice, and encourage innovation.[760]

2. General Comments

Comment: All commenters, including, for example, hospitals and hospital associations, IT developers, researchers, employers, payers, healthcare consumers, and consumer advocates, expressed general support for transparency in healthcare pricing. Many expressed appreciation that CMS has made healthcare price transparency a priority, including CMS' commitment to continual refinement of the regulatory requirements across all its price transparency initiatives, including Hospital Price Transparency (HPT), Transparency in Coverage (TIC), and the No Surprises Act (NSA). Commenters explained that patients, plan sponsors, and employers need easily understandable cost and quality information to encourage the use of high-value care options, citing the financial stress caused by medical bills and the need to effectively manage healthcare expenses. Many commenters expressed the view that price transparency efforts are integral in supporting a transition to value-based care. One commenter stated their belief that the societal benefit of pricing disclosure would be substantial as transparency enables comparison shopping and competitive dynamics to contain prices and noted that, as hospitals and insurers continue to invest resources and effort to build the technology and administrative infrastructure for pricing disclosure the incremental burden of compliance would steadily diminish.

Response: We appreciate the overwhelming support for CMS price transparency initiatives, which include HPT, TIC, and the NSA. We agree with commenters who believe that price transparency can stimulate provider competition, empower healthcare consumers, and result in lower healthcare costs. We agree that transparency in healthcare pricing is integral to supporting a transition to value-based care. We further agree that transparency in healthcare pricing is a societal benefit that can facilitate competition and comparison shopping to lower healthcare costs, and that the burden on providers and payers should decrease over time.

Comment: Many commenters were generally supportive of the statutory requirement for hospitals to disclose their standard charges, noting that such transparency stimulates provider competition to lower health care costs and can also benefit healthcare consumers by providing them with more accurate information and choice in their care. One commenter specifically recognized HPT data disclosure as a necessary first step in achieving these goals and encouraged CMS to take bolder steps to lower costs and make healthcare more affordable by increasing transparency of healthcare information with employers, researchers, and policymakers as the primary audience. Other commenters continue to express opposition to the requirement for disclosing hospital standard charges, stating that more regulation is not the answer and that payers, not providers, should be responsible for disclosing pricing information to the public. One commenter characterized hospital standard charge information as 'extraneous' and expressed concern that their disclosure may cause patients to delay care as they seek to understand the information.

Response: We agree that disclosure of hospital standard charges represents a critical first step for stimulating provider competition and facilitating consumer shopping to lower health care costs. We continue to disagree that making standard charges public would deter patients from seeking necessary care. Rather, as we explained in the CY 2020 HPT final rule, we believe that disclosure of this information, once presented in a consumer-friendly manner, allows consumers to include price considerations in their treatment plan for elective procedures, which may result in their selecting the most appropriate setting for their care and increased patient satisfaction (84 FR 65541).

Comment: One commenter expressed the belief that CMS does not have authority and discretion to require price transparency disclosure, including negotiated rates. Hospitals and patient advocates alike indicated that hospital standard charges fail to provide patients with individualized cost of care information, such as an individual's out-of-pocket costs or 'guaranteed, real

[759] We have previously generally described the machine-readable file (MRF) as a single digital file that is in a machine-readable format (as defined at 45 CFR 180.20), and we are finalizing the proposal to codify that definition in our regulations.

[760] *https://www.justice.gov/atr/health-care#:~:text=Competition%20in%20the%20healthcare%20industry,and%20to%20prevent%20anticompetitive%20conduct.*

prices in dollars.' One commenter requested that CMS require hospitals to make public their standard charges ''in dollars and cents'' and asserted that anything less would ''violate the intent of the regulation.'' Hospital commenters expressed concern that display of hospital standard charges serves only to lead to scrutiny of hospital operations and have generated ''unfounded ire'' and been used as ''a sounding board for special interest groups'' and allowed third-party payers to ''lowball payment proposals,'' thereby harming competition. One hospital commenter observed that, instead of providing directly actionable information to patients, the current requirements are more useful for academic studies, health care finance professionals and insurance companies, which use the data to compare rates among peers.

Response: The HPT regulation implements sections 2718(b)(3) and (e) of the PHS Act and represents a significant first step toward increasing competition through transparency of hospital standard charges. As we stated in the CY 2020 HPT final rule, we believe there is a direct connection between transparency in hospital standard charge information and having more affordable healthcare and lower healthcare coverage costs. We believe healthcare markets could work more efficiently and provide consumers with higher-value healthcare if we promote policies that encourage choice and competition. As we have stated on numerous occasions, we believe that transparency in healthcare pricing is critical to enabling patients to become active consumers so that they can lead the drive towards value. (84 FR 65526) As we stated in the CY 2020 HPT final rule, we continue to encourage hospitals to provide consumers with cost information in a consumer-friendly manner.

To be clear, as upheld by the courts, we have authority to require hospitals to disclose payer-specific negotiated charges. We continue to believe that disclosure of hospital standard charges, including payer-specific negotiated charges, is critical for driving competition and are pleased that the intended users of this information, including payers, [761] researchers,[762] providers, employers,[763] [764] [765] policy officials, innovators,[766] industry experts,[767] and other members of the public are actively using the information to develop consumer-friendly displays, compare rates, drive efficiencies and lower costs.

As we explained in the CY 2020 HPT final rule, each of the standard charges were chosen specifically because they are relevant to a specific group of consumers, including the rate negotiated between a hospital and third-party payer which is a critical component for determining an individual's out-of-pocket obligations. Thus, we finalized a requirement for hospitals to disclose the rate they have negotiated with third party payers (a standard charge called the 'payer-specific negotiated charge' defined at 45 CFR 180.20). As explained in more detail in XVIII.B.3.b of this final rule with comment period, hospitals establish their payer-specific negotiated charges in various ways which may result in the display of a payer-specific negotiated charge in dollars or as an algorithm, depending on what payer-specific negotiated charge meets the definition of a 'standard charge'. In the CY 2020 HPT final rule, we concluded that ''requiring hospitals to post on the internet a machine-readable file containing a list of all standard charges for all items and services would be a good first step for driving transparency in healthcare pricing because the access to such data would allow integration into price transparency tools or into EHR systems for use at the point of care or otherwise where and when the information is necessary to help inform patients.'' Thus, while the data contained in a MRF is critical for driving competition and directly beneficial for patients, the MRF format is designed to be used by machines for further processing of the data and is not tailored for direct use by individual patients. In short, MRF formats are not consumer friendly.

In recognition of this, we finalized a requirement in the CY 2020 HPT final rule for hospitals to make public a subset of standard charges for some frequently provided hospital services in a form and manner that we believed would be more directly available to individual patients and consumer friendly. Specifically, we finalized a requirement for hospitals to make public some standard charges for common services for which healthcare consumers may have the opportunity to shop, in a consumer-friendly manner, or, alternatively, offer an online price estimator tool that ''[a]llows healthcare consumers to, at the time they use the tool, obtain an estimate of the amount they will be obligated to pay the hospital for the shoppable service.'' (45 CFR 180.60) Since finalizing these policies, additional Federal price transparency initiatives that rely on other authorities that more directly empower consumers with pricing information have been, or are in the process of being, implemented. Specifically, since publication of the CY 2020 HPT final rule in 2019, the TIC rule (85 FR 72158, finalized in 2020) and the NSA (enacted as part of the Consolidation Appropriations Act of 2021) have been promulgated or enacted. Information about these additional Federal price transparency authorities can be found in the Request for Information in the CY 2024 OPPS/ASC PPS proposed rule (88 FR 49552).

We acknowledge and agree with commenters that, although critical for determining an individual's out-of-pocket obligation, hospital standard charges do not represent either an individual's out-of-pocket obligation or a ''real, guaranteed price.'' However, we note that individualized estimates in dollars may be obtained directly, in many circumstances, from providers and payers through other Federal price transparency efforts such as those implementing the NSA and TIC requirements. As such, we strongly encourage individual consumers to avail themselves of hospital and payer price estimator and comparison tools, and to seek out 'good faith estimates' from hospitals which, in order to comply with separate requirements implementing the NSA, may provide up-front pricing that can be used to dispute final charges that are substantially in excess of the up-front

[767] Smith, C., et al. Hospital Price Transparency Data: Case Studies for How to Use It. Milliman. May 3, 2022. Available at: *https://us.milliman.com/en/insight/hospital-price-transparency-data-case-studies-for-how-to-use-it.*

amounts.[768] Additionally, as we stated in the CY 2020 HPT final rule, we continue to encourage hospitals to provide consumers with cost information in a consumer-friendly manner.

Furthermore, we understand the desire for individual patients to access hospital prices in dollars and cents. We believe that the policies we are finalizing in this final rule with comment period are consistent with our authority under section 2718(e) of the PHS Act and will greatly improve the transparency of payer-negotiated rates, including whether the standard charges should be interpreted by the user as a dollar amount, or if the standard charges are based on a percentage or algorithm. We discuss in XVIII.B.3.b.(2) of this final rule with comment period a new requirement to include an estimated allowed amount (referred to as the 'consumer-friendly expected allowed amount' in the CY 2024 OPPS/ASC proposed rule) which is designed to provide contextual information to the payer-specific negotiated charge when it can only be expressed as a percentage or algorithm.

Additionally, we welcome the scrutiny and discussion related to healthcare financing, which we believe are important for driving needed cost efficiencies in the healthcare marketplace, putting patients first, and ultimately empowering patients and their clinicians to make value-based decisions. We will continue to educate interested parties about CMS price transparency initiatives in general and the intent and limitations of the hospital price transparency regulations for consumers in particular.

In summary, we continue to affirm that the HPT regulations requiring hospitals to make public standard charges are a necessary and important first step for driving competition and in ensuring transparency in healthcare prices for the public, but that, while foundational, the release of hospital standard charge information is not sufficient by itself to achieve our ultimate goals for price transparency for driving competition in the marketplace or for consumer shopping. Additional barriers must be overcome to promote healthcare market efficiencies and for individual patients to identify appropriate sites of care for needed services, determine out-of-pocket costs in advance, and utilize indicators of quality of care to make value-based decisions. We believe authorities granted to CMS through, for example, TIC and the NSA are specifically designed to address some of the additional barriers for individual patients. As such, we strongly encourage individual consumers to avail themselves of hospital and payer price estimator and comparison tools, and to seek out 'good faith estimates' from hospitals which, in order to comply with separate requirements implementing the NSA, may provide up-front pricing that can be used to dispute final charges that are substantially in excess of the up-front amounts.[769]

Comment: Several commenters made comments related to the overall direction of the proposed policies as a whole. Many commenters, for example, generally supported the proposals, stating they agreed the proposals would strengthen price transparency through data standardization and additional enforcement tools, although one commenter stated their belief that some proposals would ''substantially weaken and rollback existing law'' without specifying a particular law.

Several commenters expressed concern related to the additional burden imposed on hospitals by the proposed requirements, and the short timeline for implementation. At least one commenter requested that CMS hold off on any new HPT requirements until such time as other price transparency initiatives, such as the NSA, are fully implemented. Additionally, the commenter noted that Congress is currently considering multiple pieces of legislation that would, if implemented, affect price transparency activities, and that CMS should await the outcome of all current legislative proposals before either proposing or finalizing any additional changes to HPT regulations.

Response: We appreciate the support we received from many commenters for the proposals, which we believe will strengthen HPT through standardization of hospital MRFs and expansion of enforcement tools. Additionally, we believe the benefits of these proposals to the public outweigh the burden on hospitals. However, after consideration of the comments, we are finalizing a phased implementation timeline (as described in XVIII.B.3.c of this final rule with comment period) for hospitals to implement the changes that we are finalizing in this final rule with comment period. We do not believe we should pause our efforts to improve the HPT regulations while we await implementation of companion price transparency initiatives, such as the NSA, because we believe the HPT requirements we proposed to modify are complementary to those efforts. We did, however, seek comment on alignment related to the consumer-friendly display requirements at § 180.60 that we may consider in future rulemaking. Although we are aware of various legislative efforts that may, at some point in the future, affect hospital price transparency, we do not view that potential possibility as a reason to put on hold our efforts to strengthen the current HPT regulations.

3. Summary of Final Policies

In this final rule with comment period, we are finalizing our proposals to revise several of our HPT requirements in order to improve our monitoring and enforcement capabilities by improving access to, and the usability of, hospital standard charge information; reducing the compliance burden on hospitals by providing CMS templates and technical guidance for display of hospital standard charge information; aligning, where feasible, certain HPT requirements and processes with requirements and processes we have implemented in the TIC initiative; and making other modifications to our monitoring and enforcement capabilities that will, among other things, increase its transparency to the public. Specifically, we are finalizing: (1) definitions of several terms; (2) a requirement that hospitals make a good faith effort to ensure standard charge information is true, accurate, and complete, and to include a statement affirming this in the MRF; (3) new data elements that hospitals must include in their MRFs, as well a requirement that hospitals encode standard charge information in a CMS template layout; (4) a phased implementation timeline applicable to the new requirements we are finalizing in this final rule with comment period; (5) a requirement that hospitals to include a .txt file in the root folder that includes a direct link to the MRF and a link in the footer on its website that links directly to the publicly available web page that hosts the link to the MRF; and (6) improvements to our enforcement process by updating our methods to assess hospital compliance, requiring hospitals to acknowledge receipt of warning notices, working with health system officials to address noncompliance issues in one or more hospitals that are part of a health system, and publicizing more information about CMS enforcement

[768] *https://www.cms.gov/files/document/nosurpriseactfactsheet-whats-good-faith-estimate508c.pdf.*

[769] *https://www.cms.gov/files/document/nosurpriseactfactsheet-whats-good-faith-estimate508c.pdf.*

activities related to individual hospital compliance.

Specifically, and as discussed in more detail below, we are finalizing that the effective date of the changes to the hospital price transparency regulations at 45 CFR part 180 will be January 1, 2024. However, the regulation text will specify later dates by which hospitals must be in compliance with some of these new requirements, and we will begin enforcing those requirements on those specified dates.

B. New Requirements for Making Public Hospital Standard Charges Under 45 CFR 180.50

In the CY 2020 HPT final rule, we finalized, at 45 CFR 180.50, specific requirements with which hospitals must comply for the purpose of making public a single comprehensive list of standard charges for the items and services they provide, including requirements that govern the format, data elements, location and access to the list, as well as the frequency by which they must update the list.

In this section, for the reasons discussed below, we proposed to substantially modify § 180.50(a) through (d) of our regulations, which govern some of the requirements for how hospitals must make public their standard charges for all items and services they provide. Specifically, we proposed to (1) define several new terms; (2) require hospitals to affirm the accuracy and completeness of the standard charges displayed in the MRF; (3) require hospitals to display additional data elements in their list of standard charges; (4) require display of standard charge information using a CMS template; and (5) adopt new requirements to improve automated access to the machine-readable file.

1. New Definitions

We proposed to add the following definitions to § 180.20:

- ''CMS template'' is a CSV format or JSON schema that CMS makes available for purposes of compliance with the requirements of § 180.40(a).
- ''Consumer-friendly expected allowed amount'' is the average dollar amount that the hospital estimates it will be paid by a third party payer for an item or service.
- ''Encode'' is entering data items into the fields of the CMS template.
- ''Machine-readable file'' is a single digital file that is in a machine-readable format.

We also proposed several technical and conforming revisions to ensure consistency of the use of these terms across the HPT regulations. Specifically, we proposed to replace references to ''the file'' and ''the digital file'' in § 180.50(d)(4) through (5) with the proposed defined term ''machine-readable file.'' We also proposed to make revisions to references to the ''file'' in the introductory text of § 180.50(c) and at § 180.50(e), which we addressed in the CY 2024 OPPS/ASC proposed rule as a part of other proposed changes.

We received a few comments on our proposed definitions.

Comment: One commenter recommended that the term ''consumer-friendly expected allowed amount'' be modified to reflect an emphasis on using patient claims to calculate an average dollar amount, and to permit grouping at the service package level. One commenter objected to defining a 'consumer-friendly expected allowed amount' as an 'average,' stating that a 'consumer-friendly expected allowed amount' should instead be the expected dollar amount to be charged to the healthcare consumer. A few commenters suggested alternative names, indicating that, as proposed, the term is cumbersome, using extra verbiage that is unnecessary, and could be misleading to consumers. These commenters suggested renaming the term ''estimated average price'' or ''average historical allowed amount'', or a revision to the definition to indicate that the amount is the average amount received by the hospital in the past, rather than suggesting it is the amount the hospital expects to receive in the future.

Response: We thank the commenters for their detailed comments on the proposed definition. Because the comments related to the definition itself are inextricably intertwined with the proposal to add the consumer-friendly ''expected allowed amount'' as a new data element and the method of its calculation, we will address them in more detail in XVIII.B.3.b.(2) of this final rule with comment period. For reasons described there, we decline to revise the definition to be more prescriptive regarding the underlying data hospitals use to establish this data element or to revise it to indicate that it is representative of the dollar amount a hospital would charge to an individual patient. We note that the definition of ''items and services'' is inclusive of service packages, thus we do not believe the definition requires the suggested modification for that reason. We agree that the term ''consumer-friendly expected allowed amount'' is cumbersome and could generate confusion for individuals about the limitations of this allowed amount as an estimate, rather than a cost guarantee. We are therefore revising the definition to reflect that the amount is based on the average amount the hospital has historically received from the payer, rather than an average amount the hospital expects to receive from the payer. Additionally, we will revise the term to ''estimated allowed amount'' in response to comments indicating that this data point, while necessary to contextualize the standard charges established by the hospital, is not particularly consumer-friendly.

Comment: One commenter stated that the definition of ''encode'' is technically imprecise. The commenter indicated that rather than meaning 'to enter' information into a template, the term means taking information and converting it to a particular form or specification.

Response: We thank the commenter for raising this concern and agree that the definition of ''encode'' could be more precise. According to the Oxford Advanced American Dictionary, to ''encode something'' in a computing context means ''to change information into a form that can be processed by a computer.'' [770] This definition captures the policy goal underlying the standardization requirements we are finalizing in this final rule with comment period, which is that the MRF display standard charge information that the hospital has converted into the form and manner we specify in § 180.50(c). We will therefore finalize that the term ''encode'' means ''to convert hospital standard charge information into a machine-readable format that complies with § 180.50(c)(2).''

Comment: We received one comment on each of our proposed definitions of ''machine-readable file'' and ''CMS template.'' One commenter indicated that the term ''machine-readable file'' is circular because ''machine-readable'' appears in both the term and its definition. Another commenter suggested improving the definition of ''CMS template'' to indicate that existing hospital files would need to transition from already established CSV files into a new mandated format.

Response: We appreciate the opportunity to clarify the definitions of ''machine-readable file'' and ''CMS template.'' We do not believe the definition of ''machine-readable file'' is circular because it refers to the defined term ''machine-readable format'' which

[770] *https://www.oxfordlearnersdictionaries.com/us/definition/american_english/encode#:~:text=encode%20something%20(computing)%20to%20change,be%20processed%20by%20a%20computer.*

also appears in 45 CFR 180.20. Regarding the definition of ''CMS template,'' we clarify that in order to comply with § 180.40(a), CMS is finalizing a requirement at § 180.50(c)(2) that would require hospitals to conform to the CMS template layout, data specifications, and data dictionary for purposes of making public their standard charge information. A detailed discussion of this requirement is found in XVIII.B.3.c of this final rule with comment period in which we discuss the CSV formats and JSON schema from which hospitals may choose. We believe the regulatory expectation for hospitals to conform to a CMS template layout is clear and therefore decline to revise the definition of ''CMS template.''

Comment: One commenter suggested we revise the definition of ''negotiated rate'' to refer to both simple fee schedule dollar amounts as well as the proposed consumer-friendly ''expected allowed amount.''

Response: We believe the commenter was referring to the defined term ''payer-specific negotiated charge'' because the regulations at 45 CFR 180.20 do not include a definition for ''negotiated rate'' and we did not propose to add a definition of this term in the CY 2024 OPPS/ASC proposed rule. The term ''payer-specific negotiated charge'' is defined at 45 CFR 180.20 as ''the charge that a hospital has negotiated with a third party payer for an item or service'' and it is also referenced in the definition of ''standard charge'' as being one type of standard charge. As explained both in this section and in more detail in section XVIII.B.3.b.(2)(b) of this final rule with comment period, we are finalizing the definition of ''estimated allowed amount'' as the average dollar amount that the hospital has historically received from a third party payer for an item or service. The estimated allowed amount would not meet the definition of a standard charge because estimates and averages do not meet the definition of a 'payer-specific negotiated charge,'

Final action: After consideration of comments, we are finalizing the following definitions at § 180.20:

- ''CMS template'' is a CSV format or JSON schema that CMS makes available for purposes of compliance with the requirements of § 180.40(a).
- ''Encode'' is converting hospital standard charge information into a machine-readable format that complies with § 180.50(c)(2).
- ''Estimated allowed amount'' is the average dollar amount that the hospital has historically received from a third party payer for an item or service.
- ''Machine-readable file'' is a single digital file that is in a machine-readable format.

Additionally, we are finalizing as proposed several technical and conforming revisions to ensure consistency of the use of these terms across the regulation. Specifically, we are finalizing our proposal to replace references to ''the file'' and ''the digital file'' in § 180.50(d)(4) through (5) with the newly defined term ''machine-readable file.''

2. Requirement That Hospitals Affirm the Accuracy and Completeness of Their Standard Charge Information Displayed in the MRF

We stated in the CY 2024 OPPS/ASC proposed rule that since we implemented the HPT regulations, we have received questions from the public regarding the accuracy and completeness of the standard charge information displayed by hospitals. Similar questions have also arisen in the course of our enforcement activities. Although section 2718(e) of the PHS Act requires hospitals to make public each standard charge the hospital has established, a hospital may not have established certain types of standard charges defined by the regulation. For example, under our current regulations, a hospital that has not established any discounted cash prices for any item or service would not have any discounted cash prices to display in its MRF. Depending on the type of MRF format chosen by the hospital, the file may contain 'blanks' without explanation. Although a hospital that chooses to leave the discounted cash price field blank under this scenario would (with respect to this element) be in compliance with our regulations, a user of the MRF count not be certain whether the hospital had not established such charges, or, instead, had not complied with the requirement to disclose them in the MRF. Although many hospitals include explanatory information on the web page associated with the MRF or within the MRF itself (for example, in a CSV format, inserting 'N/A' in blank cells or adding an explanatory note), they currently do so on a voluntary basis.

We indicated in the CY 2024 OPPS/ASC proposed rule that we believe that requiring the hospital to affirm the accuracy and completeness of its MRF would lessen the potential for public confusion as to whether the MRF is accurate and complete by clarifying that blank cells left in some formats (such as CSV which can be opened in a human-readable format) are intentional. Specifically, an affirmation would streamline our assessments of hospital compliance by removing ambiguity surrounding blank cells and the overall accuracy and completeness of a hospital's MRF. We therefore proposed to require that each hospital affirm directly in its MRF (using a CMS template, which we proposed in more detail at XVIII.B.2 of the CY 2024 OPPS/ASC proposed rule) that it has included all applicable standard charge information in its MRF as of the date in the MRF. We indicated our belief that requiring the hospital to add this affirmation directly in its MRF would make it clear to the public that the affirmation relates directly to that MRF and would mitigate the potential for confusion if we only required that the affirmation appear on a website that links to the hospital's MRF, especially if that website also links to other hospital MRFs.

We therefore proposed to add new paragraph (a)(3) at § 180.50 to require that, in its MRF, each hospital add a statement affirming, to the best of its knowledge and belief, that the hospital has included all applicable standard charge information in its MRF, in accordance with the requirements of § 180.50, and that the information displayed is true, accurate, and complete as of the date indicated in the file.

We sought comment on the proposal.

Comment: Several commenters supported or strongly supported the proposal to require hospitals to include an affirmation of the accuracy and completeness of standard charge information in the MRF because the statement in the MRF would provide assurance to users of the files that the data contained within them are accurate and complete to the best of the hospital's knowledge and belief. These commenters further agreed that including this statement in the MRF is better than requiring an affirmation to reside at a location separate from the file. One commenter requested clarification as to whether the affirmation would be made by the hospital at the organizational level, as opposed to being made personally by an individual hospital official, while another recommended that CMS require a senior hospital official to make the affirmation.

One commenter indicated their belief that it would be impossible for hospitals to make such an attestation when CMS has the sole authority to determine hospital compliance and argued that ''CMS does not mandate attestation for other CMS requirements, apart from equity, which has recently been introduced.''

Response: We appreciate the support for our proposal. We clarify that we are only requiring the hospital as an organization to make the affirmation.

Although we acknowledge that HPT enforcement is CMS' role, the law puts the responsibility on hospitals to establish and make public complete and accurate standard charge information. Additionally, there are many instances in which CMS requires regulated entities to make statements of accuracy and completeness, for example: Qualifying Medicare Advantage Organizations are required to attest that they are meaningful EHR users (42 CFR 495.210) and are required by CMS to certify as to the accuracy and completeness of its requests for payment from CMS (42 CFR 422.504(l)); Accountable Care Organizations in the Medicare Shared Savings Program must attest that certain information submitted to Medicare is true, accurate, and complete (42 CFR 425.302); Merit-based Incentive Payment System (MIPS) eligible clinicians must certify that the data and information they submit to CMS for the purposes of MIPS is true, accurate, and complete (42 CFR 414.1390); and Entities that contract with the State under a separate child health program must certify the accuracy, completeness, and truthfulness of information in contracts and proposals, including information on subcontractors, and other related documents, as specified by the State (42 CFR 457.945), finally, a hospital CFO or Administrator must certify that the information submitted to CMS in its annual cost report is true, correct, and complete, to the best of their knowledge and belief.[771]

Comment: A few commenters questioned why such an affirmation would be necessary because they indicated they are already putting forth good faith efforts to ensure MRF data are accurate and complete by virtue of posting the information. Others welcomed this additional requirement stating they viewed it as an opportunity to communicate to the public their good faith effort to comply.

A few interested parties commented on the intent or purpose of the affirmation, stating the affirmation should be used as an additional layer for enforcement and oversight, rather than using it to streamline enforcement, or that it be paired with continued strong enforcement. Other commenters viewed the proposed affirmation the hospital would make as part of the MRF as duplicative of the proposal to require a certification of completeness and accuracy by a hospital executive as part of the enforcement process (as discussed in XVIII.C.1 of this final rule with comment period).

Response: As we stated in the CY 2024 OPPS/ASC proposed rule, we believe an affirmation in the hospital's MRF will lessen public confusion related to the completeness of the data in the file and also improve CMS' ability to assess both the completeness and accuracy of the MRF, and that by improving assessment of compliance, CMS will improve its enforcement capabilities. We believe that a requirement that the hospital affirm the completeness and accuracy of the MRF is not duplicative of a requirement that an authorized hospital official certify the accuracy and completeness of the MRF if asked by CMS as part of the enforcement process (as discussed in XVIII.C.1 of this final rule with comment period) because the two requirements serve different purposes. The general affirmation statement within the MRF will provide some assurance to the public and to CMS that the hospital has made a good faith effort to ensure the data displayed is true, accurate, and complete, while a certification would be signed by an authorized hospital executive as part of a specific enforcement effort by CMS. Thus, we do not believe that requiring this policy would in any way erode our strong enforcement to which we are committed. If there is evidence to suggest a hospital has not made a good faith effort to make public its standard charge information accurately and completely, the public is invited to submit a complaint to CMS through its website so that CMS can conduct a comprehensive compliance review.

Comment: Several commenters requested that CMS delay the affirmation requirement, if we elected to finalize it, until hospitals have had adequate time to familiarize themselves with the new format and adapt their data accordingly. One commenter recommended that CMS add sample language to the CMS template.

A few commenters suggested additions or alternatives that were not proposed, including that CMS should: concurrently increase penalties or that CMS should require the statement to apply to both the machine-readable file and the consumer-friendly disclosures of the 300 shoppable services.

Response: We appreciate the suggestion for sample language and will finalize a modification to the proposal such that the hospital would be required in its MRF to affirm, rather than to include an affirmation statement, that the hospital, to the best of its knowledge and belief, has included all applicable standard charge information in accordance with the requirements of this section, and that the information displayed is true, accurate, and complete as of the date indicated in the machine-readable file. Specifically, we will include affirmation language in the MRF template which will read: ''To the best of its knowledge and belief, this hospital has included all applicable standard charge information in accordance with the requirements of 45 CFR 180.50, and the information encoded in this machine-readable file is true, accurate, and complete as of the date indicated in this file.'' To reduce hospital burden and maximize machine readability, we will require the hospital to encode either ''true'' or ''false'' as a valid value, where a value of ''false'' will generate a deficiency. Because, as described in XVIII.B.3.c of this final rule with comment period, hospitals will be required to adopt a CMS template format beginning July 1, 2024, this requirement to affirm the accuracy and completeness of the data would also be required beginning July 1, 2024. However, nothing in this final rule with comment period would preclude hospitals from voluntarily adding an affirmation statement to their existing MRFs immediately, and we encourage hospitals to do so.

Finally, we appreciate the additional suggestions offered by commenters, such as concurrently increasing penalties for noncompliance and extending the requirement for an affirmation apply to the hospital's consumer-friendly display. Because these policies were not proposed, we decline at this time to finalize them. However, we will evaluate the need for such changes in the future as we continue to evaluate hospital compliance and consider alignment with the consumer-friendly requirements under the TIC regulations and the NSA.

Comment: Several commenters opposed the proposal to require hospitals to affirm the completeness and accuracy of the standard charge information in the MRF because they believed that doing so would be ''operationally unfeasible'' because the complexity of the data would render it nearly impossible to validate or validate without mistakes. These commenters explained their belief that the inclusion of such an affirmation in the MRF would shift focus away from acknowledging good faith compliance efforts and instead mandate perfection, which could have legal implications.

[771] *https://www.cms.gov/files/document/medicare-cost-reporting-e-filing-system-user-manual.pdf.*

These commenters recommended that CMS provide a ''safe harbor policy'' for hospitals that make a good faith effort, which they believed would ensure reasonable accuracy without imposing undue burdens on hospitals or penalizing them for unintentional and minor data inconsistencies.

By contrast, some supporters of the proposal recommended that such an affirmation be used as an additional layer for enforcement rather than to just streamline the enforcement process. These commenters indicated their belief that the proposal should be strengthened by removing the statement ''to the best of the hospital's knowledge and belief'' and deeming such affirmations as ''material to payment,'' thereby incorporating potential liability under the False Claims Act (FCA) for hospitals that knowingly violate the rule and falsely attest to the accuracy and completeness of the file.

Response: We appreciate the public's need for assurance that the standard charge information contained in the MRFs are true, accurate, and complete, which is why we proposed that hospitals include an affirmation statement in the MRF. We believe inclusion of an affirmation statement by the hospital would serve to reassure the public, including CMS, that the hospital has made a good faith effort to present its standard charge information accurately and completely. As such, we disagree that it is operationally 'unfeasible' for a hospital to be accountable for the information they display publicly and to provide such an assurance to the public.

However, we also disagree with commenters that an affirmation would (or should) serve to establish a guarantee of perfection, because even with a good faith effort, mistakes may be made as hospitals encode potentially hundreds of thousands of data points, many of which, at least initially, may need to be encoded manually. Moreover, the standard charge information contained in the hospital MRF is not updated in real time, rather, in accordance with statute and 45 CFR 180.50(e), hospitals must update their files not less than annually. The FCA is outside the scope of this final rule with comment period.

We decline the commenters' recommendation to establish a ''safe harbor'' and finalize the requirement that hospitals include an affirmation of completeness and accuracy in the MRF, but we also finalize a requirement at § 180.50(a)(3)(i) that, effective January 1, 2024, hospitals make a 'good faith effort' to ensure the standard charge information displayed in the MRF is true, accurate, and complete. This additional language will emphasize our expectation of a good faith effort on the part of the hospital, and we disagree that such an expectation, and the ability to streamline CMS' assessment of hospital MRFs as a result, would diminish CMS' ability to enforce hospital standard charge information display requirements. To the contrary, we believe that requiring a hospital affirmation will impress upon hospitals their obligation to ensure the data they display is true, accurate, and complete, to the best of their knowledge and belief. Such an affirmation will not preclude CMS from taking enforcement action against a hospital that posts verifiably inaccurate or incomplete information, nor will it prevent CMS from requesting a certification from an authorized hospital executive as part of the enforcement process (addressed in more detail at XVIII.C.1 of this final rule with comment period).

Comment: A few commenters objected specifically to affirming the 'completeness' of the file, stating that this could be a challenge if the hospital cannot obtain reimbursement information from the insurance company. Others suggested that an affirmative indicator encoded in the file would go further in signaling the file's 'completeness.'

Response: We believe hospitals should have access to the documents and contracts that they signed with third party payers when they established their payer-specific negotiated charges, as well as records of the reimbursement received, and therefore these data should be available to them for encoding into the MRF. We decline to require indicators of non-applicability to be included in MRFs because we believe that would create additional burden for hospitals, and because they would be unnecessary by virtue of the affirmation statement.

Final action: After considering public comments, we are finalizing the proposal with modification. We finalize as proposed a requirement at § 180.50(a)(3)(ii) that, beginning July 1, 2024, the hospital must affirm in its MRF that, to the best of its knowledge and belief, the hospital has included all applicable standard charge information in its MRF, in accordance with the requirements of § 180.50, and that the information encoded is true, accurate, and complete as of the date indicated in the MRF. We also are finalizing a new general requirement at new § 180.50(a)(3)(i) that, beginning January 1, 2024, each hospital must make a good faith effort to ensure that the standard charge information encoded in the MRF is true, accurate, and complete as of the date indicated in the MRF.

3. Improving the Standardization of Hospital Machine-Readable File (MRF) Formats and Data Elements

In this section, we proposed to revise several requirements at § 180.50(b) and (c). We also proposed to adopt technical edits to other sections of the HPT regulations that are related to the revisions for alignment, conformity, and clarity.

a. Background

In the CY 2020 HPT final rule, we expressed our concern that lack of uniformity in the way that hospitals display their standard charges leaves the public unable to meaningfully use, understand, and compare standard charge information across hospitals (84 FR 65556). We stated that we agreed with commenters that standardization in some form is important to ensure high utility for users of hospital standard charge information, and we finalized an initial set of rules for making public all standard charges in an MRF at § 180.50. Section 180.50(a)(1) of our regulations states that a hospital must establish, update, and make public a list of all standard charges for all items and services online in the form and manner specified in that section, and § 180.50(a)(2) states that each hospital location operating under a single hospital license (or approval) that has a different set of standard charges than the other location(s) operating under the same hospital license (or approval) must separately make public the standard charges applicable to that location. If a hospital location operating under a single hospital license or approval shares the same set of standard charges as another hospital location operating under the same license or approval, then both hospital locations may post the same MRF. In other words, in the interest of burden reduction, hospital locations may share a file so long as the standard charge information displayed in the file are applicable to the indicated locations.

Section 180.50(b) of our regulations describes the required data elements that must be included, as applicable, in the hospital's MRF, which are the following:

- A description of each item or service provided by the hospital.
- The corresponding gross charge that applies to each individual item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.
- The corresponding payer-specific negotiated charge that applies to each

item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting. Each payer-specific negotiated charge must be clearly associated with the name of the third party payer and plan.

- The corresponding de-identified minimum negotiated charge that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.
- The corresponding de-identified maximum negotiated charge that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.
- The corresponding discounted cash price that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.
- Any code used by the hospital for purposes of accounting or billing for the item or service, including, but not limited to, the CPT code, HCPCS code, DRG, NDC, or other common payer identifier.

When we finalized this set of standardized data elements, we stated our belief that they would help ensure that the public could compare standard charges for similar or the same items and services provided by different hospitals. Commenters had provided many additional suggestions for how to standardize the standard charge information displayed by hospitals, but we declined at the time to be more prescriptive in our approach. Instead, we indicated that we might revisit the requirements in future rulemaking should we find it necessary to make improvements in the display of and access to hospital standard charge information.

At § 180.50(c), the regulation specifies that the required (but ''as applicable'') data elements must be published in a single digital file that is in a machine-readable format. The term ''machine-readable format'' is defined at § 180.20 to mean a digital representation of data or information in a file that can be imported or read into a computer system for further processing.

Since we first implemented the regulation in January 2021, feedback in reports developed and made public by interested parties, particularly from IT specialists, researchers, employers, and others, indicates that more standardization of the files (including a specified template and standardization of additional contextual data elements) may be necessary to improve the public's use and understanding of, and ability to make comparisons among, hospital standard charge information.[772] [773] [774] [775] [776] In particular, IT specialists have indicated that the current flexibilities and lack of encoding specifications hinder the machine-readability of the data in the files, presenting a barrier to the intended use of the data. Additionally, hospitals have asked us for more specificity on how they should publicly display their standard charge information, with an emphasis on how they should explain and display their payer-specific negotiated charges. Some hospitals have suggested that a template developed by CMS could be useful to improve hospital compliance and reduce hospital burden. Further, the flexibilities that the current regulation permit insofar as the format of hospital standard charge information, and the very limited set of data elements required to be displayed under § 180.50, have presented an enforcement challenge. For example, because hospitals are permitted to display their information using a wide variety of file formats and data encoding practices, we must manually, via time and resource-intensive processes, review the information in the files to assess whether the information is consistent with the data element requirements at § 180.50(b). Some hospitals rename data elements, include additional data elements, or exclude, without explanation, data elements that are not applicable, which can make it difficult to assess whether the information contained in the file is accurate and complete. This, in turn, slows compliance reviews and often requires us to engage in one-on-one discussions with hospitals. We therefore came to believe that requiring more specificity in formatting and encoding the MRFs, as well as increasing the number of required corresponding data elements that hospitals must provide, would not only create efficiencies for public users of the MRFs and our efforts to enforce the requirements, but also improve the meaningfulness of the hospital's standard charges.

As a result, in the CY 2022 OPPS/ASC proposed rule (86 FR 42321), we sought comment on improving standardization of the data disclosed by hospitals in the MRF. In response, many commenters urged CMS to create a standard template for hospitals to use for posting their MRF, noting that such standardization could ease operational burdens, improve the public's (including employers and researchers) ability to make price comparisons across hospitals, and better enable third party data aggregation services to develop user-friendly patient tools for displaying this information. Some commenters recommended that CMS work with providers and vendors to better understand the benefits of a standard template. Some hospitals also urged CMS to be more prescriptive, requesting that CMS standardize the MRF format and contents and provide additional clarification on how hospitals should indicate that they have not established all five types of standard charges for a particular listed item or service.

We requested that the HHS Health Federally Funded Research and Development Center (FFRDC) [777] more fully explore the feasibility of these commenters' recommendations and identify technical specifications and categories of information (referred to as ''data elements'') that we could consider proposing in future rulemaking to improve the usability and meaningfulness of the standard charges display. The FFRDC convened a technical expert panel (TEP) and used the TEP members' advice to make informed recommendations to CMS in the summer of 2022.[778] The TEP was comprised of both MRF developers, (specifically, hospitals representatives of large and small acute and specialty care hospitals), and primary users of MRF data, (specifically, researchers and IT innovators). The TEP members discussed the challenges and complexities of displaying, in a meaningful way, all hospital standard charges in an MRF. The TEP members noted that increasing standardization of the MRF and the number of required data elements may improve the public's ability to make price comparisons across hospitals. TEP members indicated their

belief that public display of hospital standard charge information is an important step toward price transparency for hospital items and services but cautioned that hospitals use different methods to establish standard charges for items and services, resulting in charge/item and charge/service combinations that are often unique to that hospital. Therefore, some direct comparisons of hospital standard charges may continue to be a challenge if such comparisons are made under the assumption that hospitals always use the same methods to establish their standard charges and that the same charge/item and charge/service combinations are consistent across hospitals. As such, attempting to use hospital standard charges in isolation, without additional contextual information, can result in erroneous conclusions and comparisons. The members went on to discuss the potential benefits to both hospitals and the public if CMS required hospitals to display standard charge information that better described or contextualized their standard charges, including standard charge information related to complex contracting arrangements between hospitals and third party payers. The TEP also weighed the benefits with the potential burden hospitals would incur to display those new data elements and encode data in a more specified way.

First, the TEP members discussed what general machine-readable format(s) would be best suited to display hospital standard charges. The TEP members indicated that the ideal formats would be those that are non-proprietary, as they are widely and freely available to the MRF developers (the hospitals) and users (for example, IT developers and researchers). The TEP members then considered different types of non-proprietary formats, and first considered whether a single non-proprietary format, such as JSON, should be recommended because of its ability to represent hierarchical relationships better than tabular non-proprietary formats, such as CSV. JSON's use of a hierarchical format could be beneficial because it would eliminate the need to leave data fields, sometimes numerous, blank if the hospital has no applicable corresponding information. However, TEP members noted that existing hospital systems often produce files in CSV, and that smaller, less-resourced, hospitals often lack the in-house capacity to develop and manage a JSON file. The TEP members therefore suggested that hospitals have a choice of JSON and CSV formats. The TEP members also discussed the specific technical layout of a CSV file, including a:

- ''tall'' format, with separate payer and plan data elements that provide the benefit of static header naming with less opportunity for standardization error and that is similar to existing output files that many hospitals are using to build their MRFs; and
- ''wide'' format, with variable payer-specific negotiated charge data elements that incorporate the payer and plan name into a single column header; this may reduce the file size because many data elements would not need to be repeated as frequently.

Ultimately, the FFRDC, as informed by TEP members, recommended to CMS that CMS provide hospitals with an option to use one of three layouts representing two types of machine-readable formats for displaying their standard charge information in an MRFs: (1) JSON schema (plain format), (2) CSV (''tall'' format), or (3) CSV (''wide'' format). TEP members indicated that this choice would balance the need for greater standardization for automated machine use of the files, while providing a hospital some flexibility to select the least burdensome format and layout to incorporate into its current MRF development process.

The TEP also discussed the data elements, or categories of standard charge information, that they believed should be included in the MRF, with a goal of improving the public's understanding and use of hospital standard charges. These discussions focused on the challenges of displaying payer-specific negotiated charges, given the variety of ways that hospitals establish this type of standard charge, and data elements that would be necessary to help the public understand them. TEP members discussed several types of commercial contracting methodologies commonly used by hospitals to establish their payer-specific negotiated charges, including: fee schedule, case rate, per diem, percentage of total billed (or gross) charges, and others. Ultimately, the TEP agreed on the following data elements to improve the meaningfulness and facilitate automated aggregation of hospital standard charges: (1) general information such as file version and date of most recent update of the file; (2) hospital-specific information (such as hospital name and location, license number, financial aid policy); (3) data elements corresponding to the types of standard charges defined by the HPT regulation (that is, the gross charge, payer-specific negotiated charges by payer and plan, discounted cash price, and minimum and maximum de-identified negotiated rates) and, for payer-specific negotiated charges, the type of contracting methodology and whether the payer-specific negotiated charge established by the hospital is being expressed as a dollar amount versus an algorithm or percentage; and (4) data elements that enhance understanding of the item or service to which the standard charge applies, such as a general description of the item/service, billing class (for example, whether the standard charge is billed as a facility or professional service), the hospital setting in which the item or service is provided (for example, the inpatient or outpatient setting), drug-specific information such as the drug unit and type of measurement (such as number of milligrams), and information related to corresponding codes (such as common billing codes, revenue center codes, modifiers). TEP participants also suggested including an open field that a hospital could use, as needed, to provide additional contextual information should it believe the template's data elements are insufficient to ensure a user's understanding of a standard charge displayed in the file.

The TEP members discussed a number of other data elements,[779] but concluded that the burden on hospitals to gather and display such information would outweigh their benefit to users, or that it would be infeasible to include such information in an MRF. As such, the FFRDC did not recommend that CMS adopt them.

The FFRDC presented its findings and recommendations to CMS in the fall of 2022. After considering them, we announced in November of 2022 the availability of several 'sample formats,' that may be found on the HPT

[779] Those data elements included: 'Billing Code Version' which would be the version of a code set used by providers and payers; 'Unit of Measurement' which would be used for items and services other than drugs; 'Place of Service Code' used by Medicare to indicate where in a hospital a service would be provided; 'Insurance Plan ID' such as a Health Insurance Oversight System (HIOS) identifier779 or employer identification number (EIN) of the payer; 'Contract Expiration Date' to indicate how long a contract would be in place; 'Bundled Codes' which would indicate all individualized items and services that comprised a payer-specific negotiated rate or discounted cash price; 'Covered Services' which would indicate all the codes for services covered under a capitation arrangement; and a 'Payment Learning & Action Network' field which would indicate whether the hospital's commercial contract met criteria for different types of value-based arrangements as defined by the Learning & Action Network's Alternative Payment Model Framework (*https://innovation.cms.gov/innovation-models/health-care-payment-learning-and-action-networ*).

website,[780] that hospitals could voluntarily use to make public their standard charge information in an MRF. At the same time, we developed and made available a supplemental data dictionary that provides technical instructions to hospitals on how to conform to the sample formats and encode standard charge information. The sample formats and data dictionary can be found on the HPT website: *https://www.cms.gov/hospital-price-transparency/resources.* We encouraged commenters to review the sample templates and data dictionary to inform their comments on these proposals. Additionally, we hosted a webinar [781] to educate interested parties about the voluntary sample formats. In the webinar, we highlighted differences between the voluntary sample formats and the CMS templates as proposed and encouraged interested parties to adopt one of the sample formats and submit comments on the proposals through the **Federal Register** by the indicated due date.

Comment: Many commenters supported improving standardization of the hospital's MRFs, stating that such standardization is crucial for researchers and policymakers to access and analyze the data, and for the development of consumer facing tools used to display prices. Commenters agreed that such standardization would also serve to support CMS' enforcement efforts.

A few commenters expressed strong opposition to the proposals for standardization, stating their belief that the proposals are 'extreme' and would make hospital standard charge information 'unusable' for patients and too complex and burdensome for hospitals to complete.

Response: We appreciate the support for improving standardization of the hospital's MRF and agree that greater standardization will benefit public use of hospital standard charge information, including for promoting competition and developing consumer-facing healthcare pricing tools. We also agree that standardization will further strengthen and support CMS assessment and enforcement efforts by streamlining its processes through, for example, automation. We disagree that the proposals related to standardization are 'extreme' or would be too complex and burdensome for hospitals to complete. To the contrary, efforts were undertaken by the FFRDC to develop recommendations for standardization that reflected feedback from small and large hospitals with a goal of balancing the need to improve the clarity and context of hospital standard charges with the burden of the data collection effort. We therefore believe the proposals for improving standardization represent a balanced approach and that hospitals will be able to achieve compliance. We do not agree with the premise that hospital standard charge information must be directly usable for patients, and we continue to believe that the hospital's standard charges are a necessary and important first step in ensuring transparency in healthcare prices. As explained in the CY2024 OPPS/ASC proposed rule, we believe that standardization in display, as finalized in this rule, will help provide both hospitals and the public with some assurance of hospital compliance with 45 CFR 180.50 and facilitate more meaningful use of these data by the public. We continue to believe this is the case because we believe standardization will promote a common understanding of the data displayed in the file, thus mitigating misunderstandings of both hospitals and the public about hospital standard charges that are required for display under this regulation.

b. Requirement That Hospitals Encode All Data Items for Additional Data Elements in Their MRF

(1) Encoding, as Applicable, All Data Items in the MRF

Currently, the introductory text at § 180.50(b) states that a hospital must include all of the data elements (as specified in the paragraph) in its list of standard charges, ''as applicable.'' We proposed to revise the introductory text for clarity to indicate that each hospital must encode, as applicable, all standard charge information corresponding to each required data element in its MRF.

That proposed revision would differentiate the standard charge information, or data values, that must be encoded in the MRF from the ''data elements,'' or categories of data as the basis for the CMS template. The term ''data element'' is currently used at § 180.50(b) in both ways, which, at the time we implemented the regulations, seemed appropriate because of the wide latitude of flexibility we were giving hospitals to display their standard charges. However, now that we have proposed to require hospitals to display complete standard charge information for an expanded set of data elements and to be much more prescriptive in how such data is encoded, we indicated that we believe that adopting more precise terminology will make the display requirements easier to understand.

In making the proposal, we indicated our belief that this revision was necessary in light of our other proposals to be more prescriptive in the form and manner in which hospitals display their standard charge information and would clarify that the term ''data element'' refers to a required category of data items encoded in the MRF, and not the standard charge information itself.

Under our proposal, we stated that the term ''as applicable'' would no longer refer to data elements and instead would qualify the standard charge information that the hospital encodes in the MRF. Hospitals would thus be required to encode their MRF with all applicable standard charge information that corresponds to each of the required data elements. We noted that the phrase ''as applicable'' does not mean that encoding standard charge information that corresponds to a required data element is ''optional.'' Rather, if a hospital has established standard charge information for a required data element at proposed new § 180.50(b)(1) through (4), the hospital would be required to display that information accurately and completely, in its MRF.

Final action: We did not receive any specific comments related to the proposal. We are finalizing a technical revision to redesignate the policies finalized in this final rule with comment period related to required data elements under new § 180.50(b)(2). We are therefore finalizing a revision to the introductory text at § 180.50(b)(2) for clarity to indicate that unless otherwise specified in § 180.50(b)(2), beginning July 1, 2024, each hospital must encode, as applicable, all standard charge information corresponding to each required data element in its MRF. Additionally, as discussed in XVIII.B.2 of this final rule with comment period, we are finalizing a related requirement that each hospital make a good faith effort to ensure that the standard charge information encoded in the MRF is true, accurate, and complete as of the date indicated in the MRF.

(2) Revising and Expanding the Required Data Elements

At new § 180.50(b)(1) through (4), we proposed to revise and expand the required data elements which describe the categories of information the hospital must encode in its MRF. We proposed to include most of the data elements suggested by the TEP and recommended by the FFRDC in its

[780] *https://www.cms.gov/hospital-price-transparency/resources.*

[781] The sample format webinar slides and recording can be found on the CMS website: *https://www.cms.gov/hospital-price-transparency/resources.*

report to CMS,[782] and noted that many of the proposed data elements are incorporated in the CMS 'sample formats' currently available for voluntary use by hospitals on CMS' HPT website.[783]

We proposed to require hospitals to encode all applicable standard charge information for an expanded set of data elements in their MRF, noting our belief that they would improve the public's ability to better understand, and, therefore, more meaningfully use hospital standard charges. We stated that we believed this expanded set of data elements will make hospital standard charges more understandable and comparable across hospitals. We decided to make these proposals after considering: the feedback discussed above; our experience with enforcing the current HPT requirements; the FFRDC recommendations as informed by their TEP; and our evolving understanding of how hospitals establish payer-specific negotiated charges with third party payers.

We indicated that we agree with the feedback we have received from various interested parties, the FFRDC recommendations, and publicly available reports that the machine-readable data needs to be contextualized and more precisely encoded to improve the public's ability to understand and use hospital standard charges. We stated that we believed that this could largely be accomplished by requiring hospitals to conform to a CMS template layout and encode all applicable standard charge information in a consistent form and manner specified by CMS.

Comment: Several commenters expressed general support for revising and expanding data elements indicating that inclusion of some of the additional data elements will help with the identification and utilization of the standard charge information. One commenter objected to including any data element that was not also recommended by the FFRDC. Another suggested that any new data elements should be gradually incorporated into the file over time, enabling hospitals to create and encode the information accurately.

By contrast, several commenters objected to including any new data element, including recasting existing required information as separate data elements (such as whether an item or service is provided in the inpatient or outpatient setting), stating that CMS should require hospitals to adopt a standardized format for only the existing required data elements as they are currently described. Several commenters indicated their belief that including additional data could render the files inaccessible to most of the public due to size and present a burden for hospitals because they would have to manually collect and encode the data.

A few commenters renewed their concerns that no data element, let alone additional data elements, would achieve the aims of hospital price transparency and provide information to individual patients related to out-of-pocket costs, nor would they be able to fit every hospital's contracting approaches, including contracting approaches related to value-based purchasing contracts.

Response: We appreciate the support for the proposal and agree with commenters that including some additional data elements will help with the identification and utilization of the hospital's standard charge information. For example, (as discussed in section XVIII.B.3.(2) of this final rule with comment) we are finalizing a policy for hospitals to include an estimated allowed amount in order to bring context to a payer-specific negotiated charge when such a charge can only be expressed as a percentage or algorithm, rather than a standard dollar amount. In the CY 2020 HPT final rule, and for the reasons we discussed there, we defined and finalized payer-specific negotiated rates as a type of standard charge that, in accordance with the law, a hospital must make public, and continue to affirm that such standard charges are fundamental for determining an individual's out-of-pocket costs. For reasons discussed in the CY 2024 OPPS/ASC proposed rule, we believe that expanding the data elements will provide needed context to hospital standard charges. Although these requirements may increase the file size, we believe these changes will ultimately make the data in the MRF more readily available to the public because it will be easier to be machine read and interpreted/summarized in order to facilitate consumer-friendly displays. We appreciate the additional burden on hospitals. Responses to these comments can be found in the economic analysis at section XXVI of this final rule with comment period. Additionally, we are modifying the timeline for implementation (in section XVIII.B.3.c of this final rule with comment period) to provide hospitals more time to fully comply.

We agree with commenters who pointed out that hospital contracting approaches are varied and challenging for the public to understand, including for individual patients. Because of this, as indicated in the CY 2024 OPPS/ASC proposed rule, we believe the expansion of data elements is necessary and will add clarity to the contracting approaches the hospital has employed in the process of establishing its standard charges, and, in particular, its payer-specific negotiated charges. We further agree that not all payment arrangements negotiated by hospitals and third party payers, such as value-based payments, will necessarily result in the establishment of a standard charge for a specific item or service provided by a hospital or be easily encoded in a MRF. For example, a hospital may have agreed to receive a 'per member per month' payment from the payer for each member of the payer's plan which remains the same amount, regardless of the number or types of hospital items and services provided during a month. Although we believe such negotiated charges can play a role in driving competition, they can be difficult for a hospital to encode in its MRF and even more difficult to those who seek to use hospital pricing data to assess or estimate individual costs or to compare across hospitals for particular items or services. We therefore reiterate that the intended use of the data in the MRFs is to drive competition because competition in the healthcare industry benefits consumers by helping to contain costs, improve quality, expand choice, and encourage innovation,[784] including innovations for using hospital standard charges to facilitate consumer shopping. Further, in order to assist hospitals and improve standardization, we will keep these various contracting methodologies in mind as we develop technical guidance and examples for including them in the MRF.

Comment: A few commenters supported requiring data elements that are currently included in the voluntary sample templates as a result of the recommendations made by the FFRDC TEP, but that we did not propose to require. For example, a few commenters recommended requiring hospitals to include their financial aid policy in the MRF, indicating that doing so would be helpful for researchers studying prices, medical debt, and predatory billing practices, and enable patients to access

[782] MITRE, Hospital Price Transparency Machine-Readable File Technical Expert Panel Report and MITRE Recommendations to the Centers for Medicare & Medicaid Services, November 2022. *https://mitre.box.com/v/MITRE-MRF-TEP.*

[784] *https://www.justice.gov/atr/healthcare#:~:text=Competition%20in%20the%20healthcare%20industry,and%20to%20prevent%20anticompetitive%20conduct.*

hospital financial aid policies as they examine the MRF's pricing data. One commenter suggested that CMS should go further and require hospitals to display their financial aid or charity care policy on a hospital website.

Several other commenters expressed disappointment that CMS did not propose to include ''billing class'' as a required data element. Commenters explained that knowing the ''billing class'' is necessary to distinguish between facility and professional standard charges because there are many instances where hospitals display the same item or service (with the same description and billing code) but have different standard charges. These commenters noted that the current hospital price transparency regulation requires hospitals to disclose their standard charges for all items and services, including those provided by employed physicians and nonphysician practitioners.

Response: We appreciate the additional suggestions for data elements. Although we decline at this time to require hospitals to encode these additional data elements because we did not propose them, we will not prohibit hospitals from including them in the CMS template. To aid standardization of the ''billing class'' and ''financial aid policy'' should hospitals wish to voluntarily include these data, CMS will include recommended technical instructions in the CMS templates and data dictionary located in a CMS GitHub repository. We will continue to consider whether these additional data elements would improve the meaningfulness of hospital standard charge information and may revisit them for inclusion in future rulemaking.

(a) Requirement To Encode General Data Elements

We proposed in new § 180.50(b)(1) that hospitals would be required to encode standard charge information for each of the following ''general'' data elements: Hospital name(s), license number, and location name(s) and address(es) under the single hospital license to which the list of standard charges apply.

Under the proposal, a hospital would be required to include the location to which its list of standard charges applies within the MRF itself, instead of simply on its website, as is currently required at 45 CFR 180.50(d). We stated our belief that this change is necessary because we have found that a single public website may host several hospitals' files and identify each hospital location in text on the web page. Because the hospital location is currently not listed on the file itself, the hospital information sometimes becomes disassociated from the file as it is further processed, making it difficult for end users of the data to connect standard charge information to a particular hospital, hospital location, or address. This is a result we did not intend when we finalized the initial display requirements in the CY 2020 HPT final rule. We stated we believed that requiring hospitals to encode standard charge information for these data elements directly in the MRF would permit the public, including end users creating various aggregation tools, to connect the standard charge information in the file to a particular hospital's site of care as they seek to make the information more actionable. Additionally, we noted that the current requirement at § 180.50(a)(2) indicates that each hospital location operating under a single hospital license (or approval) that has a different set of standard charges than the other location(s) operating under the same hospital license (or approval) must separately make public the standard charges applicable to that location. However, there is no current requirement for a hospital to indicate under what license the hospital is operating, making enforcement of this requirement challenging. We explained that by including the license number of the hospital in the file, CMS would better be able to validate and ensure that hospitals are complying with the requirements because CMS would be able to directly connect the hospital name, license, and MRF.

- The file version and date of the most recent update to the standard charge information in the MRF.

We proposed that hospitals indicate in their MRF the file version that corresponds to the CMS template that the hospital is using to display the standard charge information. File version information is necessary to provide certainty to users of the file (including CMS for purposes of automating review of MRFs) that they have coded to the correct format for processing the data. We further noted that hospitals are currently required at § 180.50(e) to update, at least once annually, the standard charge information in the MRF and to clearly indicate the date that the standard charge information was most recently updated. Hospitals also currently have the flexibility to indicate the updated date in the file itself or otherwise in a manner that is clearly associated with the file. We noted that such flexibility would be eliminated with the proposal because, if finalized, we would require the date of last update to be indicated in the file itself. We therefore proposed to make a necessary corresponding revision to § 180.50(e) to remove the sentence ''The hospital must clearly indicate the date that the standard charge data was most recently updated, either within the file itself or otherwise clearly associated with the file.'' Requiring a hospital to include the date of the last update in the file itself is necessary for a machine to be able to automatically validate that the standard charge information in the file has been updated by the hospital at least once annually, as is required under section 2718(e) of the PHS Act and 45 CFR 180.50(e). Moreover, by placing the date of the most recent update within the MRF, we stated that file users would be assured that the file they are using is the most recently available. Finally, we indicated that nothing in the proposal would prohibit a hospital from continuing to also indicate the date of the last update on its website in addition to indicating the date of the last update within its MRF.

Comment: Most commenters expressed broad support for requiring hospitals to encode general information including the hospital name(s), license number, and location name(s) and address(es) under the single hospital license to which the list of standard charges apply, as well as the file version and most recent date of update. These commenters indicated that the additional hospital information would ensure that users of the file can match MRFs found on hospital websites to specific hospital locations where items and services are provided for the standard charges indicated in the file. Additionally, commenters expressed appreciation for including the file version and date of last update as necessary to code to the correct schema and ensure the use of the most recent data posted by the hospital.

By contrast, a few commenters specifically objected to the proposed requirement to include hospital address(es) as a new data element. These commenters indicated their belief that the proposal would impose burdensome requirements to list every address at which the hospital furnishes items or services, including each hospital outpatient department that uses the same standard charges. One commenter went on to explain that they interpreted the CY 2024 OPPS/ASC proposed rule's intent to move current hospital location information under paragraph (d)(2) into the data encoded in the machine-readable file but not to require the addition of new name and address information for every hospital

outpatient department, which could represent hundreds of locations.

Response: We appreciate the broad support expressed by commenters for hospitals to include general information about the hospital and file. We agree this information is necessary to ensure hospital compliance with requirements at § 180.50(a)(2), (d)(2), and (e) and improve the data's clarity and use for the public. Under § 180.50(a)(2), each hospital location operating under a single hospital license (or approval) that has a different set of standard charges than the other location(s) operating under the same hospital license (or approval) must separately make public the standard charges applicable to that location. Under § 180.50(d), hospitals must ensure that the standard charge information in the MRF is ''clearly identified with the hospital location with which the standard charge information is associated.'' As we explained in the CY 2020 HPT final rule, we believed it would be sufficient for a hospital to post a single file of standard charges for a single campus location, if the file includes charges for all items and services offered at the single campus location. In cases where such off-campus and affiliated sites operate under the same license (or approval) as a main location but have different standard charges or offer different items and services, these locations would separately make public the standard charges for such locations (84 FR 65564). Therefore, hospitals will be required to include both the geographic location of the hospital (for example, ''123 Main Street, Baltimore, MD'') as well as the location name of the campus (for example, Smithville Campus), in addition to the hospital license under which the location operates. As we indicated in the CY 2024 OPPS/ASC proposed rule, we believe that requiring hospitals to encode standard charge information for ''these data elements'' (referring to the hospital name(s), license number, and location name(s) and address(es)) directly in the MRF would permit the public, including end users creating various aggregation tools, to connect the standard charge information in the file to a particular hospital's site of care as they seek to make the information more actionable. Additionally, we believe that including location information (including the address(es)) in the MRF will ensure hospital compliance with the requirements of § 180.50(a)(2). However, we agree with commenters that if the hospital has established a single set of standard charges for all inpatient and outpatient departments across many different locations, it could be cumbersome to list all their location names and addresses in a single MRF. To reduce burden, we will therefore finalize a modification to the requirement. Specifically, we will require that hospitals encode the name(s) and address(es) of each hospital inpatient location and each standalone emergency department in the MRF. While strongly encouraged, it will not be required to encode all outpatient locations. We note, however, that even though we are making this practical accommodation, hospitals must still include all standard charge information in the MRF, including standard charge information for outpatient locations not encoded for this data element. In other words, this accommodation should not be interpreted to mean that hospitals need not include the standard charges that apply to outpatient locations that operate under the single hospital license but whose location names and addresses are not required to be encoded. We believe this change will reduce burden and make the requirement technically feasible for even very large health systems that have a single set of standard charges across many inpatient and outpatient locations.

Comment: A few commenters made suggestions for additional general data elements. One commenter recommended requiring hospitals to encode their CMS Certification Number (CCN) in the MRF, stating their belief that most hospitals have CCNs and they are more universal than state license numbers. One commenter requested guidance for how a state-owned hospital, for which some states may not issue a license number, should encode licensure information in the MRF.

Response: At this time, we decline to require hospitals to include their CCN in the MRF because this data point is unrelated to the requirements of § 180.50. As discussed above, as finalized, hospitals would be required to encode standard charge information for all data elements, as applicable. Therefore, if a hospital does not have a hospital license number, the field would be left blank because there would be no applicable information to encode.

Final action: After considering public comments, we are making a technical revision to finalize required data elements under new § 180.50(b)(2), and finalizing as proposed new § 180.50(b)(2)(i) that will require a hospital to encode standard charge information for each of the following ''general'' data elements:

- Hospital name(s), license number, and location name(s) and address(es) under the single hospital license to which the list of standard charges apply. Location name(s) and address(es) must include, at minimum, all inpatient facilities and stand-alone emergency departments.
- The version number of the CMS template and the date of the most recent update to the standard charge information in the machine-readable file.

We believe these data elements will improve CMS' assessment of hospital compliance with the requirements of § 180.50 and will improve the public's ability to effectively use the data by encoding to the correct format and correlating the standard charge information displayed in the file with the correct hospital and its location(s).

(b) Required Data Elements Related to Types of Standard Charges

First, we proposed, at proposed new § 180.50(b)(2), to consolidate into a single data element the standard charges (that is, the gross charge, payer-specific negotiated charge, de-identified minimum and maximum negotiated charge, and discounted cash price) that were currently listed as required data elements at § 180.50(b)(2) through (6). We noted that this revision would remove the phrase ''that applies to each individual item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting'' from each of the individually referenced type of standard charge at § 180.50(b)(2) through (6). We stated that this concept, however, would be retained and incorporated (as addressed in more detail below) as a separate data element (''setting'') and used to contextualize hospital items and services at new § 180.50(b)(3).

Comment: One commenter indicated that proposing consolidation of the types of standard charges into a single data element would be 'redundant' because hospitals are already required to make them public. Another expressed concern about consolidating the five types of standard charges into a ''single'' data element.

Response: We agree that hospitals are already required to make public in their MRFs the five types of standard charges identified as separate data elements at § 180.50(b)(2) through (6). Consolidating these data elements into a single data element and referring to the defined term ''standard charges'' reorganizes the regulatory text but does not change the requirements. In other words, we will continue to require hospitals to make public their standard charges for each of the five types of standard charges separately. We are therefore finalizing this as proposed.

Comment: One commenter specifically objected to separating out the ''setting'' as a separate data element due to burden.

Response: This comment is addressed in detail in section XVIII.B.3.b.(2)(c) of this final rule with comment period. For reasons discussed there, we are finalizing ''setting'' as a separate data element.

Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). We are thus finalizing as proposed the consolidation of existing § 180.50(b)(2) through (6) into a single requirement at new § 180.50(b)(2)(ii). We are also finalizing, as proposed, to establish ''setting'' as a separate data element; specifically, whether the item or service is provided in connection with an inpatient admission or an outpatient department visit.

Second, we noted that, under the proposal, we would continue to require that the payer-specific negotiated charges be displayed by name of the third-party payer and plan(s), each indicated as a separate data element (for example, ''payer name'' and ''plan name''). However, as a result of our acquiring a better understanding of hospital and commercial payer contracting, we proposed that hospitals may indicate plan(s) as categories (such as ''all PPO plans'') when the established payer-specific negotiated charges are applicable to each plan in the indicated category. We stated that this modification was necessary because we have learned that many hospital contracts are designed to negotiate the same rates across a grouping of payer plans, and not always on a plan-by-plan basis. For example, some hospitals have contracts stipulating that the payer-specific negotiated charges they establish with third party payers are for ''all plans'' offered by the third party payer, without specifying plan names. Similarly, a hospital's contract with a payer may set forth the payer-specific negotiated charges for ''all PPO plans'' or ''all managed care plans'' without listing specific plan names. As a result, hospitals would be required to indicate payer-specific negotiated charges that apply to ''Payer A'' for ''all PPO plans,'' for example, rather than having to research and insert repetitious standard charge information for each named PPO plan offered by Payer A. We indicated that we believed this modification was necessary to ensure hospitals are not penalized for displaying information that is consistent with their contracting practices. Moreover, we stated that this practice could improve access to the MRF by avoiding repetition of standard charge information that would unnecessarily increase file size. Additionally, because we proposed to require hospitals to encode standard charge information in an MRF that conforms to a CMS template layout, the use of such template would ensure that the payer-specific negotiated charges remain 'clearly associated' with the name of each payer and plan. Accordingly, we proposed to remove the phrase 'clearly associated' from the regulatory text as a separate and distinct requirement in relationship to the data elements. Finally, we are aware of interested parties' recommendations that the payer and plan be indicated in the MRF using some uniform, nationally applicable set of abbreviations. To the extent that a uniform nationally applicable set of abbreviations is available, we sought comment on a publicly available data source(s) that we could consider as we develop the technical instructions.

Comment: Several commenters expressed support and appreciation for allowing hospitals to indicate plan(s) as categories (such as ''all PPO plans'') when the established payer-specific negotiated charges are applicable to each plan in the indicated category, noting that this is a reasonable accommodation. A few commenters noted that they had a single contract with a payer that may tie to multiple plans, but that the hospital did not know the plan names assigned by the payer for all of the multiple plans. The commenters indicated that payers don't seem to have these data readily available for providers upon request. Overall, commenters agreed the proposed policy was practical and aligned with the realities of commercial contracting. Commenters agreed it would create efficiencies and reduce file size. One commenter indicated that contracts with payers will oftentimes indicate a line of coverage (such as ''Medicare Advantage'' or ''Commercial'' or ''Work Comp'') instead of a plan category (such as PPO, HMO, etc) and sought clarification on whether this situation would also be covered under the proposed exception. One commenter requested that CMS consider allowing hospitals to aggregate this information into groups of payors with similar contracting terms (that is, 102 percent of Medicare rates). This commenter explained that under the proposal, specific payors could be specified in a ''notes'' field of the template and stated this practice could further improve access to the MRF by avoiding repetition of standard charge information that would unnecessarily increase the file size of the MRF.

A few commenters appeared to misunderstand that we were not proposing to change the existing requirement that hospitals must clearly associate the payer-specific negotiated charges with the payer and plan. These commenters expressed concern that a requirement to list standard charges by payer and plan would be burdensome and make MRFs unwieldy, recommending that CMS take steps to protect hospital and payer names to prevent discernment of individual contracts. One commenter expressed concern that in the absence of specific plan names, users of the file may have some difficulty discovering exactly what plan or plans are included in contracting categories. Another commenter stated that the rationale discussed in the CY 2024 OPPS/ASC proposed rule for removing the phrase ''clearly associated'' was confusing because, under the proposal to allow general plan categories to be indicated, specific plan names may not always be associated with the standard charges going forward.

Response: We appreciate the support for the proposal and agree that providing hospitals with a method to address situations in which they do not know the specific plan names will serve to align this policy with contracting practicalities, support efficiencies, and avoid access challenges due to file size. We clarify that this policy would extend to plans included in a 'line of coverage' so long as the established payer-specific negotiated charges are applicable to each plan in the indicated category. We further clarify that this policy would be consistent with current CMS guidance.

We emphasize that we *did not* propose to revise the existing requirement that hospitals clearly associate the payer-specific negotiated charges with the payer and plan. Instead, we proposed to carve out an exception such that, in instances where the hospital, within the contract with the third-party payer, has negotiated the same payer-specific charges for a category of plans, the hospital may indicate the category of plans rather than the specific name(s) of the plans.

Comment: A few commenters supported specifications that would standardize the name of payers and plans in the MRF. Some commenters recommended that CMS require hospitals to encode, in a standardized way, the names of payers and plans. Although a few commenters stated their belief that standard payer and plan names exist, others supported our belief that there is no nationally recognized

source of such information. One commenter suggested that CMS revive the National Plan Identifier.

A few commenters supported the development of specifications for categories of plans. One commenter suggested that CMS allow hospitals to define their own categories but also require them to provide a key that lists out each of the plans included in the groups. Another commenter suggested CMS create a separate data element for plan category and include this in the CMS template. One commenter suggested using the Unified Rate Review Public Use Files to describe types of plans as a starting point.

Response: We appreciate the suggestion for standardizing valid values for plan categories and we will take this into consideration as the data dictionary specifications are developed, although we note that the current data dictionary specifications for plan name are not prescriptive. We appreciate the suggestion to require, if hospitals use a plan category, that they must also provide a companion key with plan names. However, as explained in the CY 2024 OPPS/ASC proposed rule and by commenters, we understand that some hospital contracts are nonspecific and hospitals may not have the information with which to populate a key. We also appreciate the suggestion for an additional data element and may consider this in future rulemaking. We further appreciate the response to our request for comment related to a national standard. We are also unaware of a national standard for plan names, with the exception of the National Plan Identifier, which rulemaking HHS rescinded (*see* Administrative Simplification: Rescinding the Adoption of the Standard Unique Health Plan Identifier and Other Entity Identifier (84 FR 57621)).[785]

Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). After taking comments into consideration, we are finalizing a requirement at § 180.50(b)(2)(ii)(A) that, for payer-specific negotiated charges, the payer and plan would be required as separate data elements. Further, we are finalizing as proposed that plan(s) may be indicated as categories (such as ''all PPO plans'') when the established payer-specific negotiated charges are applicable to each plan in the indicated category. We believe this exception is necessary to ensure that hospitals are not penalized for displaying information that is consistent with their contracting practices. Moreover, we believe that this practice could improve access to MRF data by avoiding repetition of standard charge information that would unnecessarily increase file size.

Third, we proposed to require that hospitals indicate the contracting method they used to establish the payer-specific negotiated charge. TEP members indicated that including the contracting method within the MRF would bring necessary context to the payer-specific negotiated charges established by the hospital. For example, a hospital may have established a payer-specific negotiated charge as a 'base rate' for a service package.[786] Without knowing that, a file user might assume that the listed payer-specific negotiated charge included every charge applicable to the provision of the item or service when, in fact, a 'base rate' charge likely would include non-standard adjustments and other added charges. Additionally, including this data element would align with the data element in the TIC template. We sought comment on contracting types that we should consider as allowed values in the CMS template, should this data element be finalized.

Comment: Several commenters, including some hospitals and consumer advocates, expressed strong support for including the contract method used to establish the payer-specific negotiated charge. These commenters indicated that including this data element would aid in the public's understanding of the payer-specific negotiated charge established by the hospital. Several commenters provided suggestions and recommendations for valid values in response to our request on contracting types that should be considered. One commenter indicated they expected to encounter unique technical questions related to their contracting methodologies and expressed a desire to work with CMS on guidance. One commenter suggested that CMS should routinely revisit the list of contracting arrangements and modify it as needed based on feedback from hospitals.

Response: We appreciate the support for the proposal and the additional suggestions for valid values. We welcome the opportunity to work with hospitals to establish technical specifications for unique methods hospitals use to establish their standard charges. We agree with commenters that including this data element will bring needed context to the payer-specific negotiated charges the hospital has established. As we continue to gain experience with hospital use of the CMS Template, we will periodically review and update the technical instructions to ensure suitability of the valid values for hospitals to encode applicable standard charge information.

Comment: Several commenters opposed the proposal, citing the burden this data element would impose on hospitals that don't already have this information encoded in existing systems, stating that this would require manual effort to encode the data into the file on a line-by-line basis. One commenter recommended allowing hospitals to provide high level information instead; for example, a given field could read: ''percent of charge with the exception of radiology and laboratory services carve outs paid at fee schedules'' as opposed to individual charge lines for each payor. Another commenter expressed concern that the technical specifications may not be broad enough to accommodate all types of contracting methodologies and recommended CMS allow hospitals to encode ''other.''

A few commenters raised concerns that divulging the contracting method could hamper future negotiations with payers. For example, one hospital stated that a simple description of general contracting methodologies would fail to account for factors that drive some hospital costs higher than others. One commenter indicated that insights into the method(s) used by hospitals to establish their negotiated rates could potentially undermine a hospital's negotiation strategy, as competitors might gain insights into a specific hospital's tactics.

Response: We agree that new data elements may increase burden for some hospitals and have taken this into consideration as we developed the economic analysis at section XXVI of this final rule with comment period. We continue to believe that the benefits of these data and the standardization of them outweigh the burden on hospitals. Additionally, after consideration of the comments, we are finalizing a phased implementation timeline (as described in XVIII.B.3.c of this final rule with comment period) for hospitals to implement the changes that we are finalizing in this final rule with comment period. We appreciate the implementation suggestions for streamlining the requirement and will take them into consideration as we develop the technical instructions. We note that the currently available sample formats and corresponding data dictionary include an ''other'' option. A primary goal of price transparency is to increase competition, and we do not

[785] *www.govinfo.gov/content/pkg/FR-2019-10-28/pdf/2019-23507.pdf.*

[786] For additional discussion, please see the CY 2020 HPT final rule, 84 FR 65534.

believe that this data element will hamper hospital negotiations. As proposed, this data element will provide contextual information related to the hospital's payer-specific negotiated charges. However, we will finalize a clarifying revision to the name of this data element and refer to it as ''standard charge methodology.'' If a hospital believes its standard charges are not reflective of other important aspects of the methods used by the hospital to establish them, nothing in this final rule with comment period would preclude the hospital from offering additional context and information to the public in its MRF, so long as the MRF conforms to the formatting requirements required at § 180.50(c)(2).

Comment: One commenter sought clarification on whether CMS' intention was to add ''standard charge or negotiated rate information,'' stating their view that adding more fields to the MRF that align with a contracted payment methodology and not the chargemaster will create more confusion among end users of the data. This commenter further cautioned that negotiated rate information is ''meaningless'' for consumers. Another asserted that contracting information does not reside in hospital chargemasters and could therefore not be displayed as one-to-one matches for individual items and services as listed in chargemasters. Others questioned the value of the information to users of the file, stated that it would create confusion for patients, or that the data would only be useful to app developers. A few commenters expressed concern that, although knowing the method used to establish the payer-specific negotiated charge may increase its context, it would not completely resolve the public's ability to make meaningful comparisons across hospitals.

Response: We are uncertain of the clarification sought by the commenter. In the CY 2020 HPT final rule, we finalized five types of standard charges, including the gross charge (as found in a hospital's chargemaster) and payer-specific negotiated charge, which is defined § 180.20 as the charge that a hospital has negotiated with a third party payer for an item or service. Moreover, as explained in the CY 2020 HPT final rule, such payer-specific negotiated charges often do not reside in the hospital's chargemaster. We also do not agree that negotiated rate information is ''meaningless'' for consumers. We believe that competition in the healthcare industry benefits consumers because it helps contain costs, improve quality, expand choice, and encourage innovation [787] and refer the commenters to a fulsome discussion of the utility of such rates for consumers in the CY 2020 HPT final rule at 84 FR 65537. We agree with commenters that including an indication of the method used by the hospital to establish its standard charges will increase context for payer-specific negotiated charges, but it will not resolve every barrier for price comparisons for every type of contracting methodology.

Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). After taking comments into consideration, we are finalizing the establishment of a new data element at § 180.50(b)(2)(ii)(B). Specifically, for payer-specific negotiated charges, hospital will be required to encode the type of method it used to establish the standard charge. Going forward, we will refer to this data element as ''standard charge methodology.''

Fourth, we proposed to require that hospitals indicate whether the payer-specific standard charge listed should be interpreted by the user as a dollar amount, percentage, or, if the standard charge is based on an algorithm, the algorithm that determines the dollar amount for the item or service. We indicated our belief that specifying whether the number indicated as the standard charge should be interpreted as a dollar figure or percentage would ensure that the data is machine-readable and would minimize confusion about the value inserted into a particular standard charge column. Further, we stated that knowledge of the algorithm for a standard charge that can only be expressed as an algorithm is necessary for consumer-friendly tools to estimate in dollars an individual's payer-specific negotiated charge. Similar to the existing technical instructions for the sample templates, we indicated that CMS would provide technical instructions for hospitals to display standard charges expressed in dollars, percentages, and algorithms in order to ensure consistency and machine-readability.

Comment: Several commenters supported the proposal to require hospitals to indicate the standard algorithm that a hospital has established, stating that such information is necessary for the public to understand how a charge would be determined for an individual's care, including for use by third parties such as employers, researchers, and pricing tool developers to develop more accurate individualized out-of-pocket pricing estimates. These commenters expressed optimism about the positive effects of the proposal for encouraging competition and enhancing the ability to create accurate out-of-pocket estimates in consumer-friendly pricing tools. For example, one commenter theorized that display of hospital payer-specific negotiated charges as either a standard dollar amount or as an algorithm would afford consumers the opportunity to make a choice regarding whether they want to go to a hospital that has established its standard charges in dollars, even if the price might be higher at that hospital, over a hospital that establishes its standard charges based on an algorithm, even if its estimated allowed amount in dollars might be lower. This commenter went on to suggest that the policy ''pushes the industry even further towards simplification, standardization, and overall predictability among business and consumer healthcare transactions'' and expressed hope that, in the future, ''cost certainty will win out over ambiguous algorithms.'' By contrast, another commenter expressed concern that requiring disclosure of algorithms would become ''more commonplace as hospitals seek to avoid providing guaranteed up-front pricing to consumers'', presumably, as a result of hospitals choosing to more frequently establish their standard charges as algorithms. Another commenter noted that requiring ''hospitals and health plans to only disclose how they do business and not forcing them to change how they do business'' appropriately balances the ''need to provide pricing information to patients without undermining the development of new payment models.'' Other commenters expressed concern that such information would only be useful to competitors or to insurers who would seek to drive down hospital reimbursement.

Response: We appreciate commenters' support of the proposal. We agree with commenters that greater transparency in hospital standard charges, and payer-specific negotiated charges in particular, is necessary to minimize confusion about the data hospitals are currently displaying in MRFs. Further, we agree with commenters that knowledge of the algorithms used by hospitals for establishing payer-specific negotiated charges is necessary for consumer-friendly tools to estimate (in dollars) an individual's payer-specific negotiated charge and subsequent out-of-pocket cost obligations. We also agree with commenters who are optimistic about the potential for positive effects of

[787] *https://www.justice.gov/atr/health-care.*

understanding whether the payer-specific negotiated charge has been established by the hospital as a dollar amount, percentage, or algorithm, specifically, that it may drive a desire for contracting simplicity and patient-centric healthcare financing. We believe that such simplicity would benefit both consumers and hospitals by promoting consumer shopping and reducing hospital administrative costs. Finally, we agree with commenters that this regulation is designed to tell hospitals how to make public their standard charges and does not tell hospitals how to establish their standard charges. The goal of the disclosure is to increase price transparency to drive competition and reduce healthcare costs. As we stated in the CY 2020 HPT final rule, we continue to encourage hospitals to provide consumers with cost information in a consumer-friendly manner.

Comment: One commenter noted that all payer-specific negotiated charges are established via algorithm such that none could be displayed as a standard dollar amount. By contrast, another commenter insisted that ''hospitals know the prices in dollars'' because ''that's how they charge'' and that formulas, percentages or referenced prices, or algorithms are used by hospitals to make prices harder to access. Yet another indicated hospital standard charges can be a hybrid or combination of both standard dollar amount and algorithm, noting, for example, that some algorithms allow for the identification of a standard ''base rate'' in dollars, which are then modified further, depending on additional terms and conditions, such as ''outlier'' payments or stop loss protections, within the hospital's contract with the payer. The commenter concluded there is no need for hospitals to display their payer-specific negotiated charges as a percentage or algorithm and instead urged CMS to require hospitals to display their payer-specific negotiated charge in ''dollars and cents.'' A few commenters requested that CMS clarify that the hospital would continue to be required to express standard charges in dollars to the extent it is possible and only indicate the algorithm or estimated allowed amount (discussed in more detail below) at the point at which the rate becomes truly individualized. Commenters indicated that the file specifications should ensure clarity about whether the standard charge is presented as a standard dollar amount, percentage, or algorithm.

Response: Based on our experience, we understand that hospitals establish payer-specific negotiated charges in many ways, ranging from basic fee schedules (in which dollar amounts for specific items and services are known) to grouper methodologies (in which a base rate in dollars has been established but may then be modified depending on other factors like transfers or outliers), to ''percent of billed charges'' schemes (in which the dollar amount varies from person to person). We therefore disagree that all hospital payer-specific negotiated charges can only be expressed as an algorithm. For the same reason, we disagree that all hospitals can produce a payer-specific negotiated charge in dollars that meets the definition of a 'standard charge.' Finally, we believe that section 2718(e) of the PHS Act directs the Secretary to tell hospitals how to display their standard charges, not how to establish them or that they must establish them.

We clarify that allowing hospitals to display a payer-specific negotiated charge as a standard algorithm is appropriate to the extent a standard algorithm is the manner in which hospitals establish their standard charges with third party payers. Hospitals are required to display the standard charges as they are established, such that, if the hospital established a standard charge as a dollar amount, the hospital would display the standard charge as a dollar amount. If the hospital has established a standard charge as a percentage or algorithm such that a standard dollar amount is not available, then the hospital would display the standard charge as a percentage or algorithm. Using the examples discussed earlier, we anticipate that most if not all payer-specific negotiated charges will fall into one of three categories, depending on how a hospital has established them: (1) standard dollar amount, (2) standard algorithm or percentage, or (3) hybrid where a standard dollar amount can be identified but the final allowed amount is dependent on additional variables. An example of where we would expect to see a standard charge in dollars would be standard charges established under a fee schedule or where an identifiable dollar amount has been established for an item or service (for example, a per diem rate, a gross charge for an itemized item or service, or a cash discounted price for a service package). An example of a where we would expect to see a standard charge expressed as an algorithm would be when a hospital has negotiated a reimbursement for defined service packages (for example, hip replacement or colonoscopy) that are based on differential percentages of total billed (gross) charges (for example, 50 percent of total billed charges for hip replacement and 75 percent of total billed charges for colonoscopy). A hybrid would be a situation in which the hospital has established both a standard charge in dollars and there are additional variables that would modify the negotiated rate for a particular item or service. For example, a hospital may have established a payer-specific negotiated charge under the MS–DRG methodology where an adjusted base rate in dollars has been established for each DRG code, but the adjusted base rate may be further modified due to certain variable factors (such as outlier cases or transfers). In general, we recommend that each hospital, as a starting point, inspect their contracts with each third-party payer to identify all standard charges established as dollar amounts. Next, the hospital should populate, by payer and plan, the MRF with those standard charges in dollars and describe the item or service associated with each of the standard charges (along with any relevant billing or accounting codes). After that has been done, the hospital should identify whether the standard charge (in dollars) is subject to modification and what factors or variables (for example, algorithm) might cause the standard charge to change, and indicate those as instructed by the data dictionary for the particular format selected. If the hospital's payer-specific negotiated charge is based on an algorithm within which no standard dollar amount can be determined, then the hospital should specify what percentage or algorithm determines the dollar amount for the item or service. As discussed in more detail in the next section, we are finalizing, a requirement for hospitals to display an estimated allowed amount which would provide needed context, in dollars, for instances in which the hospital's standard charge can only be expressed as a percentage or algorithm for a specified payer's plan. The CMS data dictionary will provide examples and technical instructions for displaying this information in a standardized manner.

Comment: A few commenters opposed the proposal, stating that algorithms are not consumer friendly and could make price comparisons among hospitals challenging for individual patients. A few commenters noted that algorithms are complex, burdensome for hospitals to produce, and potentially the source of new access issues to the files due to their expanded size. Additionally, these commenters indicated that algorithms do not provide

consumers the out-of-pocket dollar amounts they want and would be challenging for users of the file to understand without a third party to interpret.

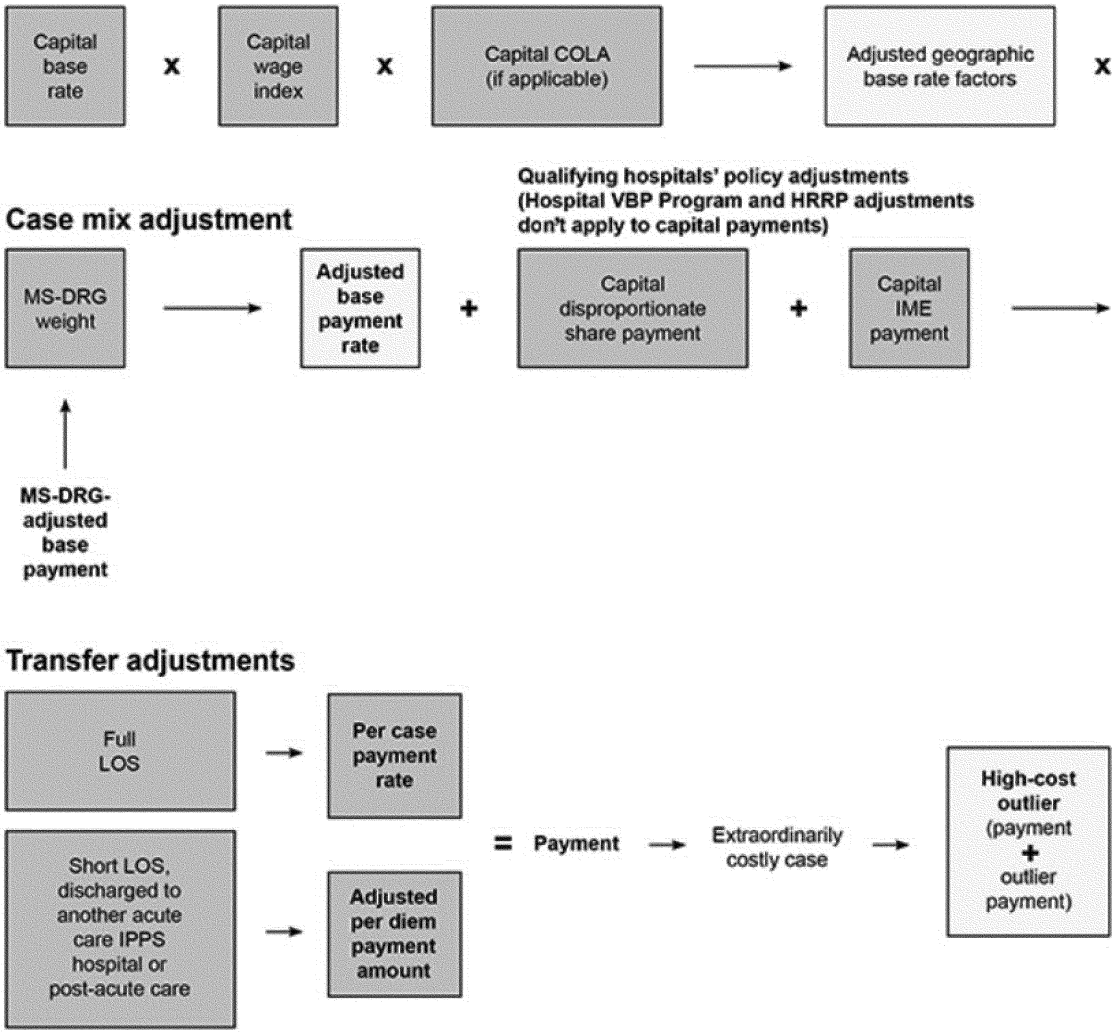
A few commenters provided additional implementation suggestions. At least one commenter supported posting actual algorithms and formulas used to establish the payer-specific negotiated charge. One commenter suggested requiring the hospital to produce a separate formula sheet with the algorithms it uses to establish payer-specific negotiated charges in order to limit the file size. Another commenter recommended that instead of trying to insert a complex algorithm into an MRF field, CMS should permit hospitals to insert a high-level description of the algorithm and the reasons a modification could be made to the amount indicated, or factors that are accounted for when calculating the charge that would apply to the individual. Yet another commenter suggested that instead of inserting detailed algorithms into the MRF, hospitals should be allowed to insert a footnote to indicate that the estimated allowed amount presented in the file is built from an algorithm.

Response: We agree with commenters that having to display a detailed algorithm within an MRF would be unwieldy and burdensome. Although we believe that a detailed algorithm would provide more precision and understanding of the individual's payer-specific negotiated charge, at this time, in the interest of reducing burden and complexity of files, we will allow hospitals provide a description of the algorithm that includes any conditions that may alter the total reimbursement, rather than attempting to insert the detailed algorithm itself in the MRF. For example, if a payer-specific standard charge is negotiated using a common ''hybrid'' algorithm, such as the MS–DRG, then a hospital would indicate the adjusted base rate (in dollars) plus either a high-level description (''MS–DRG'') or a link to the formula used to determine the payer-specific negotiated charge for an individual rather than inserting the algorithm formula itself (see Figure A). Alternatively, since the corresponding code type would already indicate that the standard charge was established under the MS–DRG system, the hospital could indicate that the adjusted base rate indicated (in dollars) may be further adjusted for transfers and outliers.

We appreciate the practical implementation suggestions offered by commenters. In order to assist hospitals in meeting the requirement, we will provide a CMS template and specifications for encoding hospital standard charges as a dollar amount, percentage, or algorithm in a way that will allow file users to readily distinguish between them. Additionally, although we agree that a detailed algorithm would provide more precision and understanding of what the individual's payer-specific negotiated charge might be, at this time, in the interest of reducing burden and complexity of files, we will allow hospitals provide a description of the algorithm, rather than attempting to insert the specific algorithm itself in the MRF. We are therefore finalizing that if the standard charge is based on a percentage or algorithm, the MRF must also describe (instead of specify) what percentage or algorithm determines the dollar amount for the item or service. By describing, rather than specifying, what percentage or algorithm determines the dollar amount for the item or service, we believe this will balance the need for exact information versus MRF complexity, hospital burden, and the limitations of data processing. However, given how critical the allowed amount is for estimating an allowed amount (and therefore individual out-of-pocket costs), we believe that more precision in understanding how the dollar amount is determined by the hospital and payer is better. We will therefore continue to consider this issue and may revisit it in future rulemaking.[788]

[788] *https://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNProducts/html/images/OP.jpg.*

Figure A: MS-DRG algorithm[788]



Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). After reviewing comments, we are finalizing a new requirement at § 180.50(b)(2)(ii)(C) whereby, with respect to payer-specific negotiated charges, the hospital will be required to indicate in its MRF whether the standard charge indicated should be interpreted by the user as a dollar amount, or if the standard charge is based on a percentage or algorithm. Additionally, if the standard charge is based on a percentage or algorithm, the MRF must also describe the percentage or algorithm that determines the dollar amount for the item or service. Descriptions for algorithms could include, for example, a link to the algorithm used, a descriptor of a commonly understood algorithm, or a list of factors that would be used to determining the individualized or variable allowed amount in dollars.

Fifth, we proposed a consumer-friendly data element called the 'expected allowed amount' that we would require a hospital to display in situations where the payer-specific negotiated charge cannot be expressed as a dollar figure. As finalized in the CY 2020 HPT final rule, the definition of a standard charge is the 'regular rate' established by the hospital for items and services provided to a 'specific group of paying patients.' In other words, the standard charge displayed in the MRF represents the exact rate that applies to all individuals in the group, for example, all individuals covered by a particular payer and plan. This amount is generally considered to be analogous to the 'allowed amount' that is established in the contract the hospital has with the third-party payer, and that appears in a patient's explanation of benefits. This is the maximum payment the plan will pay for a covered health care service, and may also be called ''eligible expense,'' ''payment allowance,'' or ''negotiated rate.'' [789] A portion of this allowed amount is reimbursed to the hospital by the third-party payer, while the hospital bills the consumer for the remainder, which is described as the 'out-of-pocket' amount. As we explained in the CY 2020 HPT final rule, knowledge of the rate the insurer has negotiated with the hospital on the consumer's behalf is essential for helping consumers determine their out-of-pocket cost estimates in advance. However, while essential, the standard charge information is not sufficient because the individual must obtain additional information from his or her third-party payer related to the circumstances of their particular insurance plan (for example, what portion of the payer-specific negotiated

[789] *https://www.cms.gov/files/document/nosurpriseactfactsheet-health-insurance-terms-you-should-know508c.pdf.*

charges would be paid by the plan and other plan dependencies such as the patient's co-insurance obligations or where the patient has not satisfied their deductible for the year).

Since implementation of the HPT regulation, hospitals have become more transparent about how they establish their payer-specific negotiated charges. Based on our experience in enforcing the requirements of the regulation, we have learned that most commercial contracting methods result in a hospital's ability to identify and display as a dollar figure the payer-specific negotiated charges they have established with third party payers. For example, a negotiated rate is established as a dollar amount for an item or service or service package (that is, the 'base rate'), or is established as a percent discount off the gross charge for each item or service provided, or as a percentage of the Medicare rate which can be translated and displayed by the hospital as a standard dollar amount.

At other times, however, hospitals and payers establish the payer-specific negotiated charge by agreeing to an algorithm that will determine the dollar value of the allowed amount on a case-by-case basis after a pre-defined service package has been provided. This means that the standard charge that applies to the group of patients in a particular payer's plan can only prospectively be expressed as an algorithm, because the resulting allowed amount in dollars will be individualized on a case-by-case basis for a pre-defined service package, and thus cannot be known in advance or displayed as a rate that applies to each member of the group.

For example: Patients X and Y are under the same payer's plan. They both go to a hospital for the same procedure. The hospital submits a claim to the payer for the total gross charges associated with itemized items and services provided to each patient. The payer analyzes the claims and assigns the same DRG code. The gross charges (that is, the charges billed on the claim to the payer) for each itemized item and service provided by the hospital for Patient X's procedure total $1500, while Patient Y's gross charges for each itemized item and service provided by the hospital total $2000. The hospital and payer have negotiated a payer-specific negotiated charge that is calculated as an amount equal to 50 percent off the total gross (or billed) charges for the procedure identified by the DRG code. The resulting charge (in dollars) for Patient X would be $750 while resulting charge (in dollars) for Patient Y would be $1000. In this example, the payer-specific negotiated charge (as an algorithm) is the same for each patient in the payer's plan for the procedure, but it is possible that each patient covered under this payer's plan would have a different resulting charge, in dollars, for the same procedure. In other words, in this example, there is no single dollar amount that would be appropriate for the hospital to post in its MRF as the payer-specific negotiated charge. Instead, the only payer-specific negotiated charge that applies to the group is the algorithm used to calculate the individualized dollar amount (in this example, the algorithm would be ''50 percent of the total gross charges'' that are billed on the claim for the procedure).

The reality of commercial healthcare contracting practices highlights a tension that sometimes exists between a hospital's establishment of a 'standard charge' that applies to a group of paying patients and the desire for individuals within the group to know and understand the specific cost of their individualized care in dollars for specific hospital items or services. Currently, this tension is largely mitigated by price estimator tools that typically display 'estimated' dollar amounts that are based on past claims and, when available, knowledge of the contracting arrangements to predict, often with very high accuracy,[790] the most likely or expected allowed amount that will apply to an individual. When combined with the individual's insurance information, the individual's out-of-pocket can be determined and displayed. Therefore, as an alternative to leaving a 'blank' or 'N/A' in the MRF when no standard dollar amount is available, we have allowed hospitals to make public the standard algorithm that applies to the group. The publication of the algorithm makes it possible for a user of the file (such as a price estimator tool developer) to use that algorithm in conjunction with educated assumptions about the items or services likely to be utilized by a given patient for a given procedure, along with their corresponding gross charges, to estimate an allowed amount in dollars for the individual. This amount can be further personalized by including insurance information (such as the copay, co-insurance, or deductible) to determine the individual's estimated out-of-pocket dollar amount.

While we continue to support efforts via other methods, such as price estimator tools, for providing consumer-friendly and personalized out-of-pocket information, we have heard from interested parties that, when a hospital has negotiated a standard charge that can only be expressed as an algorithm, some estimate displayed in dollars within the MRF may be useful, particularly for making comparisons across hospitals. For example, an estimate displayed in dollars would permit users to make price comparisons across hospitals when, with respect to the same procedure and payer/plan, one hospital has established a payer-specific negotiated charge as an algorithm and a second as a dollar amount. We therefore considered whether and what data element could be required in the MRF to provide additional needed context for a payer-specific negotiated charge that is expressed as an algorithm.

We proposed that when a hospital has established a payer-specific negotiated charge that can only be expressed as a percentage or algorithm, it must display alongside that percentage or algorithm a consumer-friendly 'expected allowed amount' in dollars for that payer/plan for that particular item or service. The 'expected allowed amount' would be the amount, on average, that the hospital estimates it will be paid for the item or service based on the contract with the third party payer. We expressed our understanding that hospitals often have such information already calculated and available as part of their revenue cycle management systems to provide a back-end check on their reimbursement from the third-party payer, so we did not expect that the inclusion of such data in the MRF would represent a large burden. We indicated that the consumer-friendly 'expected allowed amount' was likely to represent reimbursement for an average patient, rather than an exact amount, since, for a payer-specific negotiated charge based on an algorithm, the amount in dollars is known with certainty only after the patient has been discharged. As such, we said that it was an estimate of the average amount that the hospital expects to receive for the item or service across all group members but not the final exact amount in dollars that would actually apply to each group member. Even so, we stated we believed this information would provide context to the public that is necessary to compare payer-specific negotiated charges across hospitals and a valuable benchmark against which price estimator tools can use to develop and estimate an individual's personalized out-of-pocket costs. We proposed to add this consumer-friendly 'expected allowed

[790] Stults, et al. Assessment of Accuracy and Usability of a Fee Estimator for Ambulatory Care in an Integrated Health Care Delivery Network. JAMA Network Open. 2019;2(12):e1917445.

amount' to the list of required data elements at § 180.50(b)(2).

Comment: Several commenters expressed strong support for a data element that would provide an estimated dollar amount when the hospital can only express their standard charge as an algorithm. These commenters asserted that this information must be paired with knowledge of the algorithm itself in order to facilitate comparisons between hospitals and would be useful to consumers. By contrast, other commenters objected to the inclusion of an estimated amount in dollars on the basis that such a dollar amount would not be consumer-friendly and would not be useful for comparing across hospitals. As a result, these commenters indicated that it would be a burdensome 'waste of time and money' to require hospitals to calculate and display estimated dollar amounts and that such amounts may generate consumer confusion and generate additional controversy over hospital charges. A few commenters noted that estimates are not 'guaranteed' prices.

A few commenters recommended that should we finalize the proposal, then we should not also require hospitals to have to display algorithms. A few commenters indicated that hospitals have 'allowed amounts' in their systems while others said they did not, or that they did but it was different than what was proposed for display.

Response: We appreciate the support for expressing an estimated dollar amount when the hospital has established a payer-specific negotiated charge for an item or service that can only be expressed as a percentage or algorithm. We agree that this information, when paired with the algorithm, will promote greater transparency of hospital standard charges that can be useful to users of the MRF data; however, they are averages and therefore would not represent 'guaranteed' prices because they would not apply to an individual, nor would they necessarily represent the amount an individual would pay for an item or service. We note, however, that under the NSA, individual patients may obtain a good faith estimate from a hospital, which can be used by the patient to dispute final charges that are substantially in excess of the up-front amounts.[791] Additionally, in accordance with 45 CFR 180.60 a hospital may elect to offer a price estimator tool in order to meet requirements for a consumer-friendly display. In accordance with 45 CFR 180.60(a)(2)(ii), the price estimator tool must allow ''healthcare consumers to, at the time they use the tool, obtain an estimate of the amount they will be obligated to pay the hospital for the shoppable service.'' As we stated in the CY 2020 HPT final rule, we continue to encourage hospitals to provide consumers with cost information in a consumer-friendly manner.

Comment: A few commenters expressed misunderstandings or requested clarifications about the proposal. For example, one commenter appeared to believe that the hospital would be required to create an estimate across all standard charges for a defined set of services or service packages such that it would take into account average billed amounts (for example, gross charges), discounted cash prices, and all negotiated rates. Other commenters indicated that such an amount could not be calculated on the basis of an ''individual line item within the chargemaster.'' A few commenters sought clarification on whether this average amount was intended to be prospective or whether it would represent a retrospective calculation based on the amount received by the hospital for past services (for example, an historical allowed amount).

Response: We clarify that, as proposed, a hospital would only be required to calculate an estimated allowed amount, in dollars, when the hospital has established a payer-specific negotiated charge that can only be expressed as a percentage or an algorithm. This algorithm or percentage is based on the contract the hospital has with a particular payer for a particular plan, and the estimated allowed amount would be the average reimbursement in dollars that it has received from the payer in the past, that is, what some might call an 'historical allowed amount.' This estimated allowed amount is therefore not prospective and is also not based on the hospital's chargemaster or claims submitted to the payer which, as we understand it, contains only gross charges for itemized items and services. Because the ''expected allowed amount'' data element is meant to provide an estimate of what the algorithm produces in dollars, across the group of people covered by a particular payer's plan, we clarify that such an amount should reflect the amount the hospital expects to be reimbursed for the item or service (or service package), on average. To avoid confusion, we will modify the definition to refer to the average amount 'historically received' (rather than 'expects to be paid', and also rename the data element ''estimated allowed amount.''

Comment: We received few comments on the proposed definition of ''consumer-friendly expected allowed amount.'' One commenter agreed with the additional definitions and recommended that the definition of ''consumer-friendly expected allowed amount'' be modified to read ''the average dollar amount that the hospital estimates it will be paid by a third-party payer for patient claims that include items, services or service packages,'' arguing this would emphasize using patient claims due to their belief that patient claims data are the only ''level'' where hospitals would calculate or store such data. This commenter further indicated their belief that it would be important to emphasize the term ''service package'' in order to provide consistency with the definition of ''standard charge'' and permit appropriate disclosure of claim-driven values which would be grouped at the service package level. By contrast, another commenter objected to defining a 'consumer-friendly expected allowed amount' as an 'average,' stating that a 'consumer-friendly expected allowed amount' should instead be the expected maximum dollar amount to be charged to the consumer, and that hospitals be prohibited from charging a patient more than that amount. Several commenters requested more detailed information on the methodology and data source a hospital should use to calculate the estimated average allowed amount in dollars. A few commenters suggested that using 835 remittance files would be the simplest method. One commenter suggested that hospital claims data should be used exclusively.

Response: For the reasons discussed in more detail above, we are finalizing a new data element, the consumer-friendly ''estimated allowed amount'' to reflect an estimated dollar value when a standard charge (such as a payer-specific negotiated charge) can only be expressed as an algorithm. As we understand it, hospitals submit claims to payers that include gross charges for the items and services furnished to an individual, along with various additional information (such as a diagnosis code) that may be necessary for the hospital to receive the negotiated rate (or ''allowed amount'') from the payer. Sometimes the allowed amount (for example, the dollar amount reimbursed to the hospital) is static (a payer-specific negotiated charge represented as a dollar amount) and sometimes the allowed amount is variable (a payer-specific negotiated represented as an algorithm). Because

[791] *https://www.cms.gov/files/document/nosurpriseactfactsheet-whats-good-faith-estimate508c.pdf.*

the estimated allowed amount data element is meant to provide an estimate of what the algorithm produces in dollars, across the group of people covered by a particular payer's plan, we clarify that such an amount should reflect the amount the hospital has historically received from the payer for the item or service (or service package). Thus, we decline to revise the definition in such a way that it might suggest that hospitals should calculate and display the average total gross charges on the claims submitted to the payer, rather than calculating and displaying the average negotiated or allowed amount that is received by the hospital, because the total gross charges are not representative of the rate negotiated between the hospital and payer. However, nothing in the hospital price transparency regulation would preclude a hospital from voluntarily including such information in the MRF in addition to including the ''estimated allowed amount.'' Moreover, we believe hospitals should retain flexibility, in the interest of reducing burden, to determine the best data source for calculating the estimated allowed amount. We therefore decline at this time to be prescriptive. However, we agree that using information from the EDI 835 electronic remittance advice (ERA) transaction, the electronic transaction that provides claim payment information, including any adjustments made to the claim, such as denials, reductions, or increases in payment, would appear to meet this requirement as the data in the 835 form is used by hospitals to track and analyze their claims and reimbursement patterns.

We agree that display of a maximum allowed amount could provide some clarity of the maximum amount that a consumer might be obligated to pay (once the consumer calculates their own potential out-of-pocket obligation based on the displayed maximum allowed amount). For example, if the maximum allowed amount for an item or service (including a service package) was displayed as $1500 and a person covered under that particular payer/plan has a 20 percent coinsurance and has not yet met their deductible (if applicable to their insurance plan) then the individual would have a very high probability of not being obligated to pay more than $300 for the indicated item or service. However, because a calculated maximum derived from past remittances or other data sources may include other costs, such as costs incurred for outlier cases, we believe the display of the maximum amount could be skewed to the point where it would not present as much useful information to the public as an average estimated allowed amount. Additionally, because the estimated allowed amount may be established based on past remittances, any calculated maximum for an algorithm that does not have an upward bound would be, by definition, not guaranteed. Moreover, we do not believe we have authority to prohibit hospitals from charging a patient more than the estimated amount. We note, however, that under the NSA, patients may obtain a good faith estimate from a hospital, which can be used by the patient to dispute final charges that are substantially in excess of the up-front amounts.[792]

Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). We are finalizing the requirement at § 180.50(b)(2)(ii)(C) that, beginning January 1, 2025, if the standard charge is based on a percentage or algorithm, the MRF must also specify the estimated allowed amount for that item or service.

(c) Required Data Elements Related to Hospital Items and Services

At new § 180.50(b)(3), we proposed that hospitals be required to provide standard charge information for additional data elements. We indicated that these data would describe hospital items and services that correspond to the standard charges established by the hospital as follows:

- Recasting as a separate data element, but otherwise without change, the presently required description of the item or service and whether the standard charge is for an item or service provided in connection with an inpatient admission or an outpatient department visit.
- If a standard charge has been established for a drug, we proposed that the hospital would be required to indicate the drug unit and type of measurement as separate data elements. We stated that we have seen hospital MRFs in which the drug unit and type of measurement are either not specified or are included in the same field as the description of the item or service. In the first case, when the drug unit and type of measurement is not specified, the user of the file has no basis for understanding the standard charge that the hospital has established. In other words, the description is not sufficient for the user to understand what quantity of the item or service the user would receive at the indicated standard charge amount. In the second case, when the drug unit and type of measurement are included in the same field as the description of the drug, the information is not easily machine-readable because computers are unable to parse the description if expressed as a 'string' of characters that are unique and undefined. We noted that under the proposal, if the hospital has established a standard charge for a drug, the hospital would be required to encode the file with a description of the drug, including the applicable drug unit and type of measurement as a separate and distinct data element from the description. For example, if a hospital establishes a gross charge of $2 for an item or service it describes as 'aspirin 81mg chewable tablet—each,' the hospital would be required to input data for each of the required separate data elements, which would look something like this in the MRF, based on the current technical specifications in the data dictionary that accompanies the currently available sample templates: gross charge: 2; description: aspirin 81mg chewable tablet; unit of measurement: 1; type of measurement: UN.[793] This indicates to the public that the standard charge established by the hospital for this item or service is $2.00 for a single tablet of a drug described as 'aspirin 81mg chewable tablet.'

We stated that we are aware that hospitals may at times establish standard charges for units of items and services other than drugs. While we would encourage hospitals to be transparent about such information in the MRF, we only proposed to add data elements for the unit and type of measurement of drugs because the codes (such as HCPCS codes) for non-pharmaceutical items and services typically include instructions or additional descriptions that clarify the unit and type of measurement for the indicated item or service, but the codes (typically National Drug Codes (NDC)) used for pharmaceutical agents do not, and we did not believe it was necessary to burden the hospital with a requirement to publicly disclose information that is already available to the users of the file. Additionally, the TEP members discussed this issue and concluded that drugs are a unique class of items and service when it comes to a user's ability to clearly understand how hospitals are representing their standard charges. TEP members

[792] *https://www.cms.gov/files/document/nosurpriseactfactsheet-whats-good-faith-estimate508c.pdf.*

[793] Where ''UN'' in the sample format data dictionary (found here: *https://www.cms.gov/hospital-price-transparency/resources*) stands for ''unit'' which, in this example, comes in the form of a tablet.

speculated that such challenges may arise because hospitals establish and display their standard charges for drugs using different methodologies. For example, it is often unclear in the hospital's MRF whether the payer-specific negotiated charge for a drug is based on the billing unit for the NDC associated with the drug or the billing unit associated with the drug's HCPCS code.

Based on our own experience in reviewing MRFs, we agreed with the TEP members that more prescriptive requirements are necessary when it comes to display of standard charges for drugs and believe that requiring the drug unit and type of measurement as separate data elements would facilitate machine-readability and ensure clarity for the users of these files. We also agreed with the TEP members that the proposal may introduce a burden on some hospitals that are already including such information in the description but would have to separate it for display in the CMS template. Because of this potential burden, we considered an alternative approach by which we would require the drug unit and type of measurement to be included in the description or encoded as separate data elements. This alternative would ensure availability of the data to users of the MRF, albeit in a way that would not be optimized for machine-readability. However, in this case we stated we believed the burden on hospitals was outweighed by the need for improvements in data machine-readability, and therefore proposed to require hospitals to report this information as separate data elements. We noted that nothing would preclude the hospital from also including the information in its description of the drug. We sought comment on the proposal and the alternative we considered but we did not propose.

Comment: We received a few comments on our proposed revision to retain the ''description'' and ''setting'' information but requiring them to be encoded as two separate data elements. A few commenters expressed support for the separation of these data elements, stating they are necessary to provide context and improve the machine-readability of the MRF. A few other commenters objected to the separation, stating that this information is not currently encoded in hospital systems and would be a burden to encode manually for each item or service. One commenter suggested that CMS technical instructions allow hospitals to designate a standard charge as being applicable to the inpatient setting, outpatient setting, or both settings.

Response: We appreciate the support for the proposal. We agree that separation of a data element that distinguishes between the inpatient versus the outpatient setting is necessary to improve the meaningfulness of the standard charge. Although we recognize that encoding the ''setting'' data element, at least initially, may increase the burden for some hospitals, we believe that this data element is necessary to contextualize the standard charge established by the hospital and will improve the meaningfulness and usability of the data. Thus, we believe the benefit of including this data element will outweigh the initial burden for hospitals to collect and encode it. However, in light of comments, as discussed at section XVIII.B.3.c of this final rule with comment period, we are implementing a phased implementation timeline with respect to the requirements we are finalizing in this final rule with comment period, which will provide hospitals additional time to collect and encode the data completely and accurately. The valid values currently indicated by the data dictionary for the voluntary sample formats include ''inpatient'', ''outpatient'' and ''both'' and we do not intend to change these technical instructions in the data dictionary for the required CMS templates.

Comment: We received many comments about the proposal to require drug unit and type of measurement as separate data elements, and to separate them from the description of the item or service. Several commenters supported the addition of the drug unit and drug type of measurement as separate data elements. One commenter indicated that the addition of drug prices in the MRF would be crucial to give patients a comprehensive understanding of their cost of care, given that dosage and quantity factor heavily into pricing. Moreover, commenters believe that drug reporting poses a number of unique challenges compared to other types of charges (for example, room and board, operating room time), given dosage and quantity factor heavily into pricing. One commenter sought clarification as to whether the unit and measurement of a drug is the equivalent of a 'dose'.

By contrast, several hospitals expressed opposition, citing concerns related to administrative burden. For example, a few commenters indicated that standard charges for drugs can change frequently which would then require the hospital to frequently update the MRF. Others indicated that some hospitals maintain separate drug files and that merging payer data with drug and supply data would be burdensome, or that the information is already included in the description and separating the information in the MRF would take time. These commenters suggested that the user of the file should be responsible for parsing out the information. Others indicated, without further explanation, that they believed these data elements would be confusing for end users. Regarding the timing of implementation, one commenter specifically noted that CMS postponed the requirement for payers to including drug information in the TIC files. Several commenters recommended that, given such data is often not already in hospital systems in a format conducive to automatic inclusion in an MRF, CMS either make this data element optional or delay implementation of the data element.

Response: We appreciate commenters' support for the proposal. We agree that more prescriptive requirements are necessary when it comes to display of standard charges for drugs and believe that requiring the drug unit and type of measurement as separate data elements will facilitate machine-readability and ensure clarity for the users of these files. The drug unit and type of measurement are intended to bring context to the standard charge a hospital has established for the drug, which typically (but may not always be) expressed as a dose, leveraging HCPCS or NDC dosing descriptions. We recognize that hospital charges for drugs may vary throughout the course of a year, however, hospitals are only required to update MRFs at least once annually. Although we recognize these data elements may increase burden for some hospitals, in this case we believe the burden on hospitals is outweighed by the need for improvements in data machine-readability, and in bringing clarity and context for the standard charges hospitals have established for drugs and therefore we are finalizing this requirement. These data are not the same as the data required under the TIC regulation, which CMS postponed pending further rulemaking.[794] However, we are swayed by those who indicate that these data elements may require additional time to encode. Therefore, as discussed at section XVIII.B.3.c of this final rule with comment period, we are implementing a phased implementation timeline with respect to the requirements we are finalizing in this final rule with

[794] *https://www.cms.gov/CCIIO/Resources/Fact-Sheets-and-FAQs/Downloads/FAQs-Part-49.pdf.*

comment period, which will provide hospitals with additional time to encode the standard charge information accurately and completely.

Comment: A few commenters made recommendations related to technical instructions, for example, a commenter suggested that the valid values specified in the data dictionary align with those that are considered 'industry standard', and one requested CMS allow valid values for units of measures beyond the four (GR (gram), ME (milligram), ML (milliliter), and UN (unit)) that are currently found in the data dictionary for the voluntary sample formats. One commenter requested that CMS provide an example for how to encode standard charge information for drugs when the charges are based on an algorithm (such as the average wholesale price or actual acquisition cost of the drug) rather than a ''hardcoded'' amount. The commenter suggested that such charges could be represented as an average dollar amount or as a ''null'' value.

Response: We appreciate the suggestions related to technical instructions and will consider them as we develop the data dictionary and other technical guidance. The current valid values reflect industry standards, specifically, we are adopting both the NDC standards (which include UN (unit), ML (milliliter), GR (gram), F2 (International Unit), ME (milligram)) and the NCPDP standards (which include ''EA'' (each), ''ML'' (milliliter), and ''GM'' (gram)), however if there are additional industry standards that are not reflected or that are needed to ensure each hospital is able to maximally contextualize the standard charge information for drugs, then we would consider adding them for inclusion. Such an inclusion would serve to expand hospital flexibility. We note that, in accordance with the discussion related to display of hospital standard charges that can only be expressed as an algorithm (in section XVIII.B.3.b.(2)(a) in this final rule with comment), if a hospital has established a standard charge that can only be expressed as a percentage or algorithm, then the hospital must describe the algorithm and calculate and display an estimated allowed amount in dollars.

Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). After considering comments, we are finalizing as proposed new § 180.50(b)(2)(iii) that, in its MRF, a hospital must encode a description of the item or service that corresponds to the standard charge established by the hospital, including:

- general description of the item or service (at new § 180.50(b)(2)(iii)(A));
- whether the item or service is provided in connection with an inpatient admission or an outpatient department visit (at new § 180.50(b)(2)(iii)(B)); and
- beginning January 1, 2025, for drugs, the drug unit and type of measurement (at new § 180.50(b)(2)(iii)(C)).

We note that we are making a technical correction to insert the word ''the'' which was inadvertently dropped from the phrase ''standard charge established by [the] hospital, including:'' As discussed at section XVIII.B.3.c of this final rule with comment period, we are implementing a phased implementation timeline with respect to the requirements we are finalizing in this final rule with comment period, which will provide hospitals with additional time to collect and accurately encode the standard charge information.

(d) Required Data Elements Related to Item or Service Billing

At new § 180.50(b)(2)(iv), we proposed to specify data elements related to item or service billing. We indicated that we believed data elements related to item or service billing were necessary because the standard charges that a hospital establishes are often dependent on the way an item or service is billed. As such, we stated we believed that including billing information may improve the public's understanding of the standard charge that has been established for the item or service. In specifying these data elements, we noted we would retain, without modification, the current requirement that the MRF include any code used by the hospital for purposes of accounting or billing for the item or service (the example of such codes would be removed from the reg text as unnecessary). We proposed to add a requirement that the hospital specify any relevant modifier(s) needed to describe the established standard charge, and the code type(s) (for example, whether the code is based on HCPCS, CPT, APC, DRG, NDC, revenue center, or other type of code). As discussed by the TEP members, there are instances where a hospital has established different standard charges for the same item or service description, depending on additional factors such as modifiers or revenue centers that are not included in the file. As such, TEP members agreed that some distinction to ensure meaningfulness of the standard charge would be helpful to users of the file and impose minimal hospital burden. Based on our experience in reviewing MRFs, we have also seen such instances and believe that requirements to include applicable codes that include modifiers and revenue center codes would help make necessary distinctions when multiple standard charges have been established for the same items or services. We stated that separating the code itself (for example, the numbers of the code) from the code type (for example, ''HCPCS'') would directly improve machine-readability.

Comment: Most commenters recognized that billing codes can be critical for contextualizing the standard charges a hospital has established. Several commenters indicated that, more often than not, combinations of billing codes and modifiers (including place of service) are necessary to describe the possible standard charge amounts. A few commenters requested that CMS require hospitals to use only nationally recognized code types so that users of the standard charge information can more readily compare 'apples to apples', for example, they requested that CMS mandate hospitals solely use CPT or HCPCS codes to contextualize the standard charges the hospital has established. One commenter requested clarification on whether the intent of including billing codes was to limit codes to only those that are included in a hospital chargemaster, or whether it was to try to describe every scenario that might result in a different negotiated rate under a third party payer contract, noting that managed care contracts can differentiate rates based on age, ICD–10 codes, birth weight, what day of the week a service was performed on, what other CPT codes are billed with it, and other factors.

Response: We agree that billing codes bring necessary context to the standard charges established by hospitals. We additionally agree that more than one code may be necessary to establish that context (for example, a HCPCS code plus a revenue center code may be needed for describing a gross charge). For this reason, the current data dictionary used for the voluntary sample formats allows hospitals to repeat code and code type data elements as many times as is necessary to define an established standard charge. We would retain this instruction in the data dictionary for the CMS templates. Although we agree with commenters that comparing prices across hospitals would be easier for users of MRFs if all hospitals were to establish their standard charges against a nationally recognized set of billing codes, not all

hospitals do so. We therefore do not believe it would be in the public's best interest to limit the types of codes hospitals can use to describe the standard charges they establish because it may increase the ''N/As''. Additionally, we agree that gross charges that are established by the hospital for itemized items and services are often associated with CPT and HCPCS codes in the hospital's chargemaster, whereas it may be more appropriate to contextualize the payer-specific negotiated charges that hospitals have established with third party payers with DRGs, APCs, or other types of payer codes. We further recognize that payer-specific negotiated charges may depend on a variety of factors, which may make it challenging to display as a single dollar amount. In such cases (as discussed in more detail in section XVIII.B.3.b.(2)(b) of this final rule with comment), a hospital may have established payer-specific negotiated charges that can only be expressed as an algorithm. When this occurs, as finalized in this final rule with comment period, the hospital will be required to describe the algorithm that applies and calculate and encode an estimated allowed amount.

Comment: A few commenters expressed strong concern related to the removal of the examples of types of codes a hospital might use to describe an item or service for which the hospital has established a standard charge. These commenters characterized the change as ''a step backwards'' and a ''serious weakening'' of the current rule, explaining that the omission of the language might be mistaken by some hospitals to mean that they need only include ''any'' single code. Additionally, commenters indicated their belief that removing the examples of code types would permit hospitals to use only proprietary codes, preventing consumers from making comparisons across files. One commenter stated that hospitals must be required to provide all codes, including nationally recognized codes such as CPT, HCPCS, DRG, or NDC, to ensure the public's ability to compare across hospital files. Another commenter expressed concern that some organizations bundle complex treatment plans under unique ''house codes'' and unbundling these treatments would be difficult and time-consuming.

Response: We disagree that removing examples of codes that hospitals may use to describe items and services for which the hospital has established a standard charge weakens the requirement. That requirement, which we did not propose to change, requires that hospitals include in their MRFs ''[a]ny code used by the hospital for purposes of accounting or billing for the item or service'' which included, and would continue to include, local or proprietary codes. However, in light of concerns raised by commenters, we will not finalize our proposal to remove from current § 180.50(b)(7) the examples of codes hospitals may use to describe the standard charge established by the hospital. We will, however, revise the text so that it requires the hospital to encode ''[a]ny code(s) used by the hospital'', which will emphasize that more than one code may be necessary to contextualize the standard charge established by the hospital and provide the technical ability for hospitals to associate more than one code and code type with a standard charge. We clarify that the retention of the examples has no effect on the requirement that, to the extent a hospital uses one or more codes to bill/account for items and services for which the hospital has established a standard charge, the hospital must indicate these in its MRF. Common types of codes used by hospitals include such nationally recognized codes as CPT, DRG, HCPCS, NDC, and other code types such as revenue center codes, place of service codes, modifiers, or ''local'' codes. The data dictionary specifications will ensure these and other code types are included in the list of valid values (similar to the data dictionary currently available for the voluntary sample formats). We note that there may be times that a hospital has established a standard charge for an item or service for which there is no nationally recognized code type, for example, as one commenter pointed out, for complex treatment plans. In such cases, the hospital's only option may be to indicate the internal or local code established by the hospital or payer to describe the item or service. By allowing for these types of circumstances, we believe this will avoid situations in which there is no code or code type associated with a standard charge, which could have the unintended consequence of increasing the number of blanks and raising public concern or confusion. However, if a standard charge established by the hospital can be contextualized using either a common billing code or a local code, then the hospital must either display both codes or must preferentially display a common billing code in order to maximize the meaningfulness and comparability of the MRF data for the public.

Comment: Several commenters expressed support for the inclusion of modifiers whenever they are applicable, even though they may increase the size of MRFs. These commenters indicated that modifiers are critical to accurately specify standard charges and necessary to help compare prices across hospital files, and that the benefit to the public outweighs the larger file size. Commenters explained their belief that lack of modifiers in some cases had resulted in many different standard charges being posted for one procedure type, with no explanation of what accounts for the differences.

By contrast, a few commenters opposed the proposal to add modifiers as a separate data element, indicating that the file size would increase dramatically due to the ''endless number of permutations'' of coding combinations. One commenter indicated that because modifiers are typically added manually at the time of billing, they would not be known in advance and are unnecessary because they are patient-specific and non-standard. Another noted that modifiers are often not included in a hospital's chargemaster. Others stated that modifiers are not consumer friendly and that including modifiers in the MRF would confuse consumers even more than CPT and DRG codes already do, and that individual patients should seek out personalized estimates from payers or from price estimator tools. Others objected to the proposal on the basis of burden and stated that if CMS were to require modifiers as a separate data element, then hospitals would need significant lead time to adopt the changes.

Response: We appreciate commenters' support for the proposal to continue to require hospitals to include coding information, including modifiers as necessary, in the MRF. We agree that including modifiers and revenue center codes are useful for making distinctions between different hospital standard charges that have the same item/service description. Thus, we believe that requirement to include any applicable code(s) that include modifiers and revenue center codes will help distinguish cases where multiple standard charges have been established for the same items or services. A revenue center code may contextualize a standard charge for a procedure when the standard charge amount varies depending on where in the hospital the procedure was provided. For example, the gross charge for a certain procedure may be different when that procedure is performed in a general inpatient setting compared to when the procedure is performed in the ICU. Similarly, a modifier may contextualize a standard charge for a procedure, but when the

standard charge amount varies based on factors specific to the procedure. For example, a hospital may have established a payer-specific negotiated charge ($X) with a third party payer for a procedure and a higher payer-specific negotiated charge (150 percent × $X) when the procedure is performed bilaterally. We agree that hospitals may have to collect modifier information from sources other than the hospital's chargemaster in order to contextualize their standard charges (particularly payer-specific negotiated charges). To the extent that a hospital has established a payer-specific negotiated charge that is dependent on a modifier (or revenue center code, or any other code), we are finalizing that the hospital must include it in the MRF. Although including modifiers increases MRF complexity, the data are essential for consumers to understand costs of care prior to receiving a hospital item or service through, for example, the data's use in building consumer-friendly displays tools such as online price estimators. As such, we continue to encourage individual patients to seek out personalized estimates from providers (including hospitals) and payers through other Federal price transparency efforts such as TIC and the NSA. We also will continue to require hospitals to provide consumers with pricing information in a consumer-friendly manner, in accordance with hospital price transparency's consumer-friendly requirements at 45 CFR 180.60.

Comment: A few commenters requested clarification of the proposal to require hospitals to encode modifiers as a separate data element and wondered if the agency was intending for hospitals to list modifiers for billing purposes that affect reimbursement. These commenters recommended that CMS specify that hospitals only need to include combinations of procedures and modifiers that represent a distinct service and result in a separate reimbursement rate. Others noted that many modifiers do not change the payer-specific negotiated charge established between the hospital and third party payer and sought clarification as to whether CMS would require such modifiers to be included in the MRFs. Another commenter suggested that modifiers would be 'out of scope' because they are appended to patient claims at the end of a hospital visit and are not known in advance.

Response: As proposed, hospitals would be required to include modifiers only when they are necessary to provide the additional context needed for the standard charges the hospital has established. We agree it is unnecessary to include modifiers that do not impact or change the standard charges established by the hospital. Given that modifiers are often necessary for hospitals to make public the standard charges established by the hospital, we disagree that modifiers are 'out of scope'.

However, in order to reduce burden, we are finalizing modifiers as a separate data element. We clarify that in doing so, a hospital would not be required to encode all combinations of codes, including modifiers, for each standard charge established. Instead, the hospital would be required to separately encode the modifiers and indicate what effect the modifier would have on the standard charge established by the hospital when used in combination with a procedure or service. For example, a hospital's contract with a third party payer may indicate that when the service(s) provided by the hospital are greater than that usually required for the listed procedure, the hospital may identify this by adding modifier '22' to the usual procedure number and the payer will increase the allowed amount for the procedure by 125 percent of the 5-digit procedure code 'allowable'.[795] To reduce burden, the hospital would encode the standard charge associated with each 5-digit code, as they have been established, and then separately encode each modifier that may change the standard charge by including a description of the modifier and the way it modifies the standard charge.

Final action: We are making a technical revision to finalize required data elements under new § 180.50(b)(2). As a result of comments, we are finalizing a requirement at § 180.50(b)(2)(iv) coding information as a required data element, including: Any code(s) used by the hospital for purposes of accounting or billing for the item or service at new § 180.50(b)(2)(iv)(A); and corresponding code type(s) at new § 180.50(b)(2)(iv)(B). Such code types may include, but are not limited to, the Current Procedural Terminology (CPT) code, the Healthcare Common Procedure Coding System (HCPCS) code, the Diagnosis Related Group (DRG), the National Drug Code (NDC), Revenue Center Codes (RCC), or other common payer identifier. Additionally, at new § 180.50(b)(2)(iv)(C), beginning January 1, 2025, the hospital must encode any modifier(s) that may change the standard charge that corresponds to a hospital item or service, including a description of the modifier and how it would change the standard charge.

(e) Response To Request for Comment and Summary of Finalized Required Data Elements

We sought comment on these proposed revisions to § 180.50(b). Specifically, we sought comment on whether we should consider additional data elements to ensure the public's understanding and ability to meaningfully use the standard charge information as displayed in hospital MRFs. In particular, we sought comment from hospitals related to display of payer-specific negotiated charges and solicited specific examples of complex contracting methodologies so that we can provide specific recommendations and technical instructions on display of standard charges resulting from such methodologies in the CMS template.

Comment: We received several suggestions for additional data elements such as ''type'' of gross charge that would indicate ''any specialty pricing schedules'' maintained by the hospital, for example, special lab, imaging, or clinic prices, ''Average Standard Gross Charge'' found on claims, the ''realization rate'' from payers which would take into consideration claim/benefit denials from payers, and others. We also received a few specific examples of complex contracting methodologies.

Response: We thank the commenters for the additional data element suggestions that we may consider in future rulemaking. We note that nothing would preclude a hospital from voluntarily including additional data elements in its MRF, and we may develop recommended specifications for optional data elements in the data dictionary. We also thank commenters for providing examples of complex contracting methodologies, which will be helpful for developing specific recommendations and technical instructions on the display of standard charges resulting from them.

Final action: We are finalizing as proposed the modifications to § 180.50(b), which we believe are necessary to improve hospitals' ability to display their standard charges in a more specific, clear, and standardized way. We believe the final policies will increase the meaningfulness of the standard charge information and heighten the public's ability to understand and more efficiently aggregate and use the data. Further, as described above, we believe these final

[795] One example of how American Medical Association (AMA) modifiers can effect hospital payer-specific negotiated charges can be found here: *https://www.aapc.com/codes/webroot/upload/general_pages_docs/document/09-14_10_Modifiers.pdf.*

policies will improve and streamline CMS' ability to enforce the HPT requirements. In so doing, we are making a technical revision to existing § 180.50(b), specifically, redesignating the introductory paragraph as (b)(1) and renumbering paragraphs (b)(1) through (7) as paragraphs (b)(1)(i) through (vii). Additionally, the existing introductory paragraph is revised to apply to dates prior to July 1, 2024. The policies finalized in this final rule with comment period for newly required data elements are added under new § 180.50(b)(2). Table 151A summarizes the implementation timeline for encoding required data elements in a CMS template.

c. Formatting Requirements for Display of Standard Charge Information Using a CMS Template and Implementation Timeline

We proposed to require each hospital to conform to the CMS template layout, data specifications, data dictionary, and to meet any other specifications related to the encoding of the hospital's standard charge information in its MRF. We made these proposals in order to improve automated aggregation of the standard charge information in the hospital's MRFs. Additionally, we stated that we believed these proposals would streamline our enforcement capabilities.

While most hospitals are ensuring that the data they display appears in a machine-readable format (such as JSON or CSV), as required under the current regulation, many are not taking as much care to display the data that encodes the file in a way that improves machine-readability to facilitate automated aggregation of standard charge information. Even when individual hospitals make an effort to optimize the machine-readability of the data they include in the MRF, the lack of standardization in the MRF format data encoding limits the ability of users to aggregate MRF data in an automated way. This is because the format of the data encoded in the MRF is unknown to the user and therefore cannot be coded by them for further processing. This lack of standardization in format presents a barrier to the intended use of the MRFs as expressed in the CY 2020 HPT final rule—that is, for enhancing the public's ability to use the data in, for example, consumer price estimator tools and in EHRs at the point of care for value-based referrals, or to aggregate and use the data to increase competition.

As indicated throughout the CY 2020 HPT final rule, we believed the flexibility that we initially afforded to hospitals was necessary to ensure that ''each hospital operating in the United States'' could implement the law and regulatory requirements. Now that hospitals have experience in making their standard charges public in an MRF and we have a better understanding of how hospitals establish their standard charges, we stated that we believe our data formatting requirements can be made more prescriptive to enhance the public's ability to use the hospital standard charge information to its fullest potential. These evolutionary changes may serve to decrease hospital burden.

To accomplish this, we proposed to revise the introductory text at § 180.50(c) to require that each hospital must conform to the CMS template layout, data specifications, and data dictionary when making public the standard charge information required under paragraph (b).

We proposed to make at least one CMS template available to hospitals, and hospitals would be required to conform to its layout and comply with technical instructions (located in the template, corresponding data dictionary, and other technical guidance) to be published on a CMS website (such as the HPT website or CMS GitHub). A hospital's failure to display its standard charge information in the form and manner specified by CMS could lead to a compliance action. We indicated that the CMS template and accompanying technical specifications would describe the form and manner in which the hospital must organize, arrange, and encode its standard charge information for the required data elements in its MRF.

For purposes of this requirement, we proposed to make available a CMS template in CSV and JSON formats. Additionally, we proposed to make available three different layouts. We indicated that the three layouts would be similar to the three 'sample formats' that are currently available on the HPT website.[796] The three sample layout are: (1) JSON schema (plain format), (2) CSV (''wide'' format), and (3) CSV (''tall'' format). Although we considered proposing to require hospitals to display their standard charge information using only the JSON format, we concluded that some flexibility remains necessary given the variability in hospital sophistication and technical expertise, and the fact that these two proposed non-proprietary formats (CSV and JSON) appear to be the most frequently used by hospitals for displaying standard charges. We sought comment on this issue, and on whether we should instead require use of a single format (such as JSON).

Further, we noted that technical guidance, to which the hospital must conform for purposes of encoding the standard charge information, would be made available through, for example, a data dictionary and within the CMS template. The data dictionary would be similar to the data dictionary that CMS has developed for the 'sample templates,'[797] but would be updated to include any new policies that we finalize in this final rule with comment period. We indicated our belief that this technical instruction would ensure consistent implementation and machine-readability of hospital MRFs across all hospitals. For example, CMS would provide guidance on how to conform to the CMS template layout and encode the data items for the required data elements; that guidance would also consist of the set of rules for the header and attribute naming and rules for allowed values for encoding standard charge information, including the data type (for example, enum, numeric, alphanumeric), data format (for example, string, float), and, in some cases, specific (''enum'') valid values (for example, ''inpatient,'' ''outpatient,'' ''both''). The data dictionary could also include a section on 'how to use the data dictionary' which would provide educational information about the encoding instructions for those with low technology expertise. We stated that we believed that providing such direction via separate technical instructions was reasonable because such direction does not rise to the meaningful substance that is subject to notice-and-comment rulemaking, and it would enable CMS to update such technical specifications to keep pace with and respond to technical developments and inquiries.

We stated that hospitals that did not conform to the CMS template layout, data specifications, and data dictionary would be determined to be noncompliant with 42 CFR 180.50(c) and could be subject to a compliance action. In addition to providing a data dictionary, to further aid hospitals, we considered whether we should develop an MRF validator tool, similar to the validator tool provided by TIC on the CMS GitHub website.[798] The validator tool could be used by hospitals as a check for compliance with the formatting requirements of § 180.50(c), thereby providing some additional

[796] *https://www.cms.gov/hospital-price-transparency/resources.*

[797] *https://www.cms.gov/hospital-price-transparency/resources.*

[798] *https://github.com/CMSgov/price-transparency-guide-validator.*

technical instruction and assurance that the formatting requirements have been met prior to posting the MRF online. We sought comment on whether hospitals would find a validator tool helpful and, if so, what technical specifications such a validator ought to assess.

Additionally, we continued to encourage hospitals to provide any additional information they deem necessary to further explain or contextualize their standard charges, and indicated that we would provide technical instructions and specifications for hospitals to do so. For example, the data dictionary could include one or more optional data elements for inserting additional explanatory notes (similar to the ''additional generic notes'' data element included in the sample formats data dictionary), and could also permit hospitals to add other optional data elements such as 'average reimbursement amounts' derived from past claims, LAN designations, quality information, or the hospital's financial aid policy, or any other categories of information the hospital wishes to convey to the public related to hospital's standard charges.

Consistent with our proposal that hospitals must use a CSV or JSON format, we proposed to remove the examples of specific types of machine-readable formats from the definition of ''machine-readable format'' at § 180.20. Similarly, we proposed a technical edit to the naming convention at § 180.50(d)(5) to remove ''[json|xml|csv]'' and in its place add ''[json|csv].''

We stated that if the proposals related to these formatting requirements were finalized, CMS would provide additional technical instructions for how a hospital should indicate non-applicability, when necessary. As explained more fully in section XVIII.B.3.b of the CY 2024 OPPS/ASC proposed rule, we proposed to apply the term 'as applicable' to the standard charge information that the hospital encodes in the MRF, and not to the data elements themselves. We continued to recognize that a hospital may have no applicable standard charge information to encode in some fields within a CMS template (this is particularly true for CSV formats, which can be opened in a human-readable spreadsheet format that forces column/row cross relationships between data elements which are not always applicable). We therefore reiterated that the absence of encoded information does not necessarily mean that the MRF is incomplete. To illustrate using a specific example, a hospital may have established a gross charge for operating room time described as 'OR time, first 15 minutes' but may not have established any payer-specific negotiated charges that correspond to the same item or service. If the hospital has chosen to use the CMS CSV ''wide'' template (which can also be opened and viewed as a human-readable spreadsheet), a person may see that the cell at the intersection of the column 'gross charge' and row of 'OR time, first 15 minutes' would be encoded with the applicable standard charge amount but the cell at the intersection of any payer and plan's 'payer-specific negotiated charge' column(s) and the row of 'OR time, first 15 minutes' would be empty. In this example, the absence of encoded data would be a result of non-applicability, not non-compliance, because the hospital has not established a standard charge with the payers for a 15-minute increment of OR time.

We cautioned users of the files who choose to view MRFs in human-readable formats from concluding that a hospital is noncompliant solely based on blanks or the hospital's use of ''N/A'' (or other indicator(s) specified by CMS in prior guidance). To help mitigate ongoing misunderstandings by users of hospital MRF data, we noted that CMS intends to continue to educate the public on the standard charge information displayed by hospitals and proper interpretation of the information they contain. Additionally, as discussed in the CY 2024 OPPS/ASC proposed rule, we proposed that hospitals include an affirmation of accuracy and completeness within the CMS template (see proposal in section XVIII.B.2.b of the CY 2024 OPPS/ASC proposed rule), which we believed would provide some assurance to users of hospital MRFs that the data is accurate and complete to the best of the hospital's knowledge and belief. We stated that such an affirmation may also mitigate the need for a hospital to insert any indicator of non-applicability into its MRF. We therefore did not propose to require insertion of such an indicator, however, we sought comment on this issue. We sought comment on whether an indicator of non-applicability is necessary, whether such an indicator should be required or just be recommended, and how CMS can best educate the public on the nature of standard charge information display, and, in particular, the potential for non-applicability in certain MRF formats.

Comment: Many commenters, including hospitals, IT developers, and consumer advocates expressed broad support and appreciation for the proposals for requiring hospitals to conform to a standard CMS template layout and encode their data in a standardized way. Commenters indicated that such standardization is both critical and urgent and would support both macroeconomics (business-to-business competition) as well as microeconomic (consumer) applications. Others indicated their belief that such standardization benefits both users (the public) and producers (hospitals) of the files. Others agreed that the proposal has the potential to facilitate standardization and add clarity for hospitals in meeting requirements and would remove administrative burden from hospitals, particularly for urban or well-resourced hospitals.

Some commenters expressed understanding and appreciation of CMS' willingness to address issues raised by hospitals related to the current format but had concerns with the proposed formatting requirements. Specifically, a few hospitals expressed concern related to additional burden the new requirements would place on hospital staff to adopt a CMS template layout and the short timeline for implementation. One commenter urged CMS to consider retaining flexibility to accommodate diverse hospital contracting methodologies to mitigate implementation challenges and burden while enhancing transparency and standardization. One commenter indicated their belief that rural hospitals would likely see little benefit from using a CMS template because they would still need staff and resources to understand how to meet the new requirements.

Response: We appreciate the general support for requiring hospitals to conform to a standard CMS template layout and encode its data in a standardized way. We believe this policy will improve hospital standard charge information use and ease hospital administrative burden for complying with the requirements. Additionally, we believe that use of a standardized format will improve the public's understanding of the standard charges hospitals have established. We recognize that hospitals have diverse contracting methodologies and believe the CMS template layouts and technical specifications retain sufficient flexibility.

Comment: Several commenters offered specific support for the proposal to allow hospitals to choose between a JSON schema and two CSV templates, stating that this policy would allow hospitals some flexibility to choose a method appropriate for them and align with varying levels of expertise. A few, however, disagreed with permitting hospitals to use JSON indicating that this format is more difficult for

consumers, researchers, and employers to use, and urged CMS to require hospitals to use only a CSV format to ensure the hospital's standard charge information would be easily accessed by both machines and humans alike. These commenters suggested that hospitals might use JSON to circumvent the regulatory requirements. A few commenters expressed support for requiring hospitals to make their standard charge information public in a spreadsheet format (such as Microsoft Excel). These commenters explained that requiring hospitals to encode their standard charge information in a human-readable spreadsheet format would make the information more accessible to consumers of the data. One commenter indicated their belief that the voluntary sample JSON schema currently available is 'flat' and inefficient and provides no advantage over the CSV formats.

Other commenters indicated that different organizations have taken different approaches for making public their standard charge information, and that switching formats now would be very costly. Another requested that CMS provide more description and specific examples of both formats in the final rule and/or as later guidance. One commenter expressed interest in using a validator tool, indicating their belief it would increase compliance with formatting requirements.

Response: We appreciate the comments related to specific formats and CMS templates. We agree that hospitals should have some choice, given varying levels of expertise and formats that are widely used by hospitals to date. The JSON schema was developed for those hospitals that wish to take advantage of a format that is more efficient in disclosing the structured data elements and allows for hospitals to represent their data in a hierarchical structure which can reduce the file sizes significantly. Additionally, the JSON schema is intended to reduce burden for hospitals that have already expressed a preference for making public their standard charge information in a JSON schema. Further, there are free, open source JSON viewers available online for noncommercial use. By contrast, the CSV template was developed for those hospitals that are already using this format or who may not be comfortable encoding data in a JSON schema. CSV is a nonproprietary and common flat-file format that uses commas as a delimiter between values and is easily downloadable into a variety of spreadsheet software packages and applications, including Excel, Access, R, Python, Tableau, and others. The flexibility of this format to be opened by many different applications provides an advantage over requiring hospitals to adopt a single application that may be proprietary or not accessible to all members of the public. This practice is consistent with the Federal Government's general open source principles for data access which provides that: data should be made available in convenient, modifiable, and open formats that can be retrieved, downloaded, indexed, and searched; formats should be machine-readable (that is, data are reasonably structured to allow automated processing); open data structures do not discriminate against any person or group of persons and should be made available to the widest range of users for the widest range of purposes, often by providing the data in multiple formats for consumption; and, to the extent permitted by law, formats should be non-proprietary, publicly available, and no restrictions should be placed upon their use.[799]

For these reasons, we decline to limit options to a single format at this time, or to require hospitals to make public their standard charge information in a human-readable format, however, we will continue to monitor and may revisit this policy in the future.

We also appreciate comments from consumers and consumer advocates and will consider them in the future rulemaking that addresses the consumer-friendly display requirements at § 180.60. We note that we provided detailed examples of both the CSV formats and JSON schema, as well as the technical directions found in the data dictionary. These are currently offered to hospitals on a voluntary basis and can be viewed on the HPT website. We intend to timely update these resources to align with the policies finalized in this final rule with comment period. Finally, we appreciate the input on the value a validator may bring for hospitals that are developing their MRFs and will consider making one available.

Comment: A few commenters commented on the use of an indicator when there is no applicable standard charge information to encode. One commenter suggested specific technical specifications and suggested that the process of manually adding indicators would aid in the hospital validation of the file. One stated that requiring hospitals to insert indicators, rather than leaving blanks, would complicate hospital validation efforts and add to the administrative burden. A few commenters questioned the need for such identifiers and suggested there should be no situations in which there is no applicable data.

Response: We appreciate the input on use of indicators. As described in the CY 2024 OPPS/ASC proposed rule, we believe that there are situations in which there is no applicable standard charge information to encode. We also indicated our belief that if we require a hospital to include a statement affirming the accuracy and completeness of the data it has encoded in the file, then the hospital would not have to fill in 'blanks' because the affirmation would signal the blanks are intentional and not missing data. In order to reduce hospital burden, we will not require encoding of an indicator at this time. We may revisit this policy in future rulemaking.

Finally, we proposed a 60-day enforcement grace period for adoption and conformation to the new CMS template layout and encoding of standard charge information of the newly proposed data elements. To be clear, we stated that the grace period would apply solely with respect to enforcement actions based on the new CMS template display requirements at revised § 180.50(b) and (c); it would in no way affect already-initiated compliance actions or actions for noncompliance with other requirements under 45 CFR part 180 as they are currently being implemented. Additionally, we stated that the grace period would not apply to other proposals which would become effective and enforced on January 1, 2024. We stated we understood that some hospitals may have already adopted the sample format that CMS made available in November 2022, however, we proposed to implement an enforcement grace period to accommodate hospitals that have adopted formats that vary significantly from the sample format. We sought comment on the proposal. In particular, we sought comment on whether and why an enforcement grace period should or should not be applied.

Comment: We received many comments related to the effective date of the proposed requirements. Nearly all of those who commented on the effective date indicated their belief that the proposed timeline is aggressive and it would be unreasonable to require hospitals to adopt the proposed CMS template and encode new data elements into it by the March 1, 2024 enforcement date, although one commenter applauded CMS for its dedication to urgency.

The primary reason for requests in a delay was the need to collect and encode data for newly proposed data

[799] *https://resources.data.gov/PoD/principles/.*

elements, as well as the need to ensure the data presented are accurate and complete. One commenter noted that when TIC was finalized, CMS provided payers an extended timeline for implementation and expressed their belief that it would be unfair if CMS failed to do so for providers. Another indicated that the proposed timeline would be especially challenging for smaller hospitals. A few commenters indicated that their vendors would not begin making any changes to accommodate the new formats and data requirements until CMS finalizes the rules. Others expressed concern related to the timing of planned annual updates and indicated it would be burdensome for a hospital to have to produce two files in a single 12-month period.

Commenters recommended alternative dates for enforcement that they considered to be more reasonable. These alternative dates ranged from as early as April 1, 2024, to 18 or 24 months after any finalized changes. Some commenters suggested CMS permit hospitals to adopt the new format on a rolling basis to align with the hospital's planned annual update, while others suggested a phased-in approach, noting that some new data elements may take additional time to collect and encode accurately and completely, at least initially. Commenters noted that the delay would not be harmful to patients because individuals seeking estimates for healthcare services could continue to use already established price estimator tools, patient portals, and existing machine-readable files.

Additionally, commenters requested that CMS use the time between finalization and enforcement to provide assistance to providers as they seek to comply, for example, hosting nationwide calls with provider technical teams to work through their formatting issues.

Response: We believe that hospitals should adopt a CMS template layout and encode the required data elements as soon as possible to improve public use of hospital standard charge information. However, in light of the comments and as explained below, we are finalizing a phased implementation schedule for the new requirements that we are finalizing in this final rule with comment period. We believe that this step-wise approach will provide hospitals sufficient time to implement all of the new requirements accurately and completely, which we believe will enhance transparency overall. We do not believe it is necessary to mirror the timeline for implementation with the timeline CMS provided to payers under TIC because the requirements are different and at this time, hospitals are already collecting and displaying many of the required data elements in a machine-readable format.

Finally, we thank commenters for their suggestions regarding education and outreach activities and will consider how best to engage hospitals as they seek to meet the requirements established in this final rule with comment period.

Final action: We are finalizing as proposed the revision to the formatting requirements at § 180.50(c). In so doing, we are making a technical revision to existing § 180.50(c), specifically, redesignating the introductory paragraph as paragraph (c)(1) and revising the paragraph to apply to dates prior to July 1, 2024. At new § 180.50(c)(2), we will require that, beginning July 1, 2024, the hospital's machine-readable file must conform to a CMS template layout, data specifications, and data dictionary for purposes of making public the standard charge information required under paragraph (b)(2) of this section. CMS will update the existing sample formats (CSV ''tall'', CSV ''wide'', and JSON schema) and data dictionary found on the CMS website to align with the new regulatory requirements.

In response to comments regarding our proposed 60-day enforcement grace period with respect to adoption of a CMS template format and encoding new data elements, we are not finalizing that proposal. We agree with commenters that the encoding already required data elements in a standardized format is an adjustment and that the new data elements we are finalizing may initially take hospitals some time to collect and encode in a CMS template layout completely and accurately. We believe that complete and accurately encoding standard charge information in a CMS template will improve CMS' ability to assess hospital compliance and take necessary enforcement action for hospitals that are determined to be out of compliance. We are therefore finalizing a phased implementation timeline with respect to the changes we are finalizing in this final rule with comment period. Specifically, we are finalizing that the effective date of all of the changes to the hospital price transparency regulations at 45 CFR part 180 will be January 1, 2024. However, the regulation text will specify later dates by which hospitals must be in compliance with some of these new requirements, and we will begin enforcing hospital compliance with those new requirements on the applicable later compliance date. The date by which hospitals must comply with each of the new requirements in section XVIII.B of this final rule with comment period are described in Tables 151A and 151B.

Table 151A describes the implementation timeline for adoption of a CMS template layout and encoding of the required data elements. The implementation date for all other requirements referenced in section XVIII.B of this final rule with comment period are indicated in Table 151B.

4. Requirements to Improve the Access to Hospital MRFs

Currently, the HPT regulations at § 180.50(d) describe our requirements for the location and accessibility of the hospital's MRF. Specifically, the regulations require a hospital to select a publicly available website for purposes of making public its standard charges (§ 180.50(d)(1)) and displaying the standard charge information in a prominent manner and clearly identified with the hospital location with which the standard charge information is associated (§ 180.50(d)(2)). Additionally, at § 180.50(d)(3), the hospital must ensure that the standard charge information is easily accessible, without barriers, including, but not limited to, ensuring the information is accessible: free of charge; without having to establish a user account or password; without having to submit personal identifying information (PII); and to automated searches and direct file downloads through a link posted on a publicly available website. At § 180.50(d)(4), the digital file and the standard charge information contained within that file must be digitally searchable and, at § 180.50(d)(5), the file must use a naming convention specified by CMS.

As we explained in the CY 2020 HPT final rule, because of the flexibility we allowed to hospitals to choose the internet location, we recognized and expected that there would be some variability in how hospitals would choose to publicly display their MRFs and how quickly the file could be found by the public. However, we indicated our belief that standardizing a file name or website location information could provide consumers with a standard pathway to find the information and would provide some uniformity, making it easier for potential software to review information on each website. We expressed our belief that specific requirements for file naming conventions and locations for posting on websites could also facilitate the monitoring and enforcement of the requirements.

We believe our current policies are sufficient for purposes of manual searches, but may not be sufficient for automated searches. As we noted in the CY 2022 OPPS/ASC proposed rule, in our experience, many publicly available web pages that hospitals select to host the MRF (or a link to the MRF) are discoverable using simple manual internet searches (using key words such as the hospital name plus 'standard charges,' 'price,' or 'machine-readable file') or, for example, by navigating to the hospital's home page and clicking and searching through pages related to patient billing and financing. However, despite the requirement for the MRF and the standard charge information contained in that file to be digitally searchable and the required naming convention, various MRF users, including IT developers and technology innovators, continue to express concerns that they can't efficiently, via automated techniques, aggregate the files. We therefore indicated our belief that these challenges should be addressed because we believe that ensuring that the MRFs and their data contents are easily accessible, including by members of the public who develop tools that improve the public's overall understanding and ability to use the information in meaningful ways, aligns with the MRFs' intended use. As we indicated in the CY 2020 HPT final rule, we believe that ''[b]y ensuring accessibility to all hospital standard charge data for all items and services, these data will be available for use by the public in price transparency tools, to be integrated into EHRs for purposes of clinical decision-making and referrals, or to be used by researchers and policy officials to help bring more value to healthcare.''

As a result, we considered methods that would specifically improve the automated accessibility of MRFs. Thus, at proposed new § 180.50(d)(6), we proposed to require that a hospital ensure that the public website it chooses to host the MRF establishes and maintains automated access to the MRF in two specific ways.

First, we proposed, at new § 180.50(d)(6)(i), that the hospital ensure the public website includes a .txt file in the root folder that includes a standardized set of fields including the hospital location name that corresponds to the MRF, the source page URL that hosts the MRF, a direct link to the MRF (the MRF URL), and hospital point of contact information. We stated that CMS would make available the technical specifications for implementing this file in technical instructions and could also consider creating a simple .txt generator tool to assist non-technical hospital personnel in generating a .txt file as well as plain-language instructions for complying with the requirement to post a .txt file to the root folder of the public website.

In considering the proposed approach to automating access to hospital MRFs, we identified several benefits, including: a standardized text file at a consistent location (for example, the root folder of the website) would provide automated tools a direct link to the MRF as opposed to the current approach of having to locate the correct web page within the website; technical experts suggest this is a relatively simple, low burden method that could be applied by maintainers of any public website that hosts the MRF; and information included in the .txt file could include information necessary to validate the contents of the file, for example, by including hospital point-of-contact information. We also considered potential drawbacks of this approach, including that any standardization of this nature is subject to errors in formatting which could negate the benefit to automated access and generate a compliance action. We believe the benefits outweigh the drawbacks for having a hospital ensure that the public website it chooses to host the MRF includes a .txt file in the root folder that includes a direct link to

the MRF to establish and maintain automated access.

Second, we proposed, at new § 180.50(d)(6)(ii), that the hospital ensure the public website includes a link in the footer on its website, including but not limited to the homepage, that is labeled ''Hospital Price Transparency'' and links directly to the publicly available web page that hosts the link to the MRF. We proposed this requirement because we believe the addition of standardized hyperlinks in the footer of hospital websites would aid in the automation of MRF data retrieval by creating a predictable navigation path to internal web pages that describe the HPT program and providing direct links to the MRF location. Once a human or web crawler arrives at the web page on which the MRF is located, it would be able to identify the specific location of the file(s) containing the pricing data. We believe that by making this information more easily accessible to automated searches and data aggregation, it would help third parties develop tools that further assist the public in understanding this information and capturing it in a meaningful way for making informed health care decisions. Moreover, we believe this requirement would be simple for hospitals to understand and implement, due to the website footer being a common place for hospitals to link to other information. In addition, using a standardized label for the link in the footer may make the location of the MRFs more visible to individual consumers manually searching for such files.

We sought comment on the proposed approach to improving accessibility of MRFs to automated searches. We particularly sought comment on whether there: may be better or more efficient ways of improving access to MRFs or the direct links to the MRFs; are additional benefits or challenges that we should alternatively consider; might be any challenges for automation tools to find MRFs when they are hosted by a publicly available website other than a website hosted by the hospital, and ways that would make those automated searches more easily accessible; and, might be any challenges for hospitals to meet the proposed requirements when the publicly available website hosting the MRF is not under direct control of the hospital. We also sought comment on whether the proposals to require use of a footer and .txt file are complementary to, or duplicative of, the requirements at § 180.50(d)(4) and (5), which, respectively, require that the digital file and standard charge information contained in that file must be digitally searchable; and that the file must use the naming convention specified by CMS at § 180.50(d)(5). We also sought comment on whether there is a better or more efficient standardized label for the link in the footer on the website, including but not limited to the homepage, that links directly to the publicly available website that hosts the link to the MRF.

Comment: Several commenters expressed general support for the proposals to improve automated accessibility of hospital MRFs, noting these proposals will aid in the automation of MRF data retrieval, enhance transparency, make the MRFs more visible to individual consumers, and reduce the effort of aggregating the data. One commenter, while supportive of these proposals, requested that CMS delay enforcement to July 1, 2024, to give hospitals sufficient time to operationalize the changes, while another commenter did not see substantial technical difficulty with implementing either the .txt file or including a link in the footer. One commenter indicated that they did not believe the naming convention would be useful for identifying the location of the MRF, but that the .txt file would help. One commenter suggested adding the file date of the naming convention. Another commenter agreed with CMS that the data should be accessible but believed the proposed requirement for a link in the footer should be optional.

Response: We appreciate the support for this policy and agree that including both a .txt file in the root folder and a link in the footer with a standardized label that links directly to the web page that hosts the link to the MRF will aid in the automated accessibility of MRFs and ultimately enhance transparency. We disagree with the commenter who believes the proposal for a link in the footer should be optional. We believe the addition of standardized hyperlinks in the footer of hospital websites would aid in the automation of MRF data retrieval by creating a predictable navigation path to internal web pages that describe the HPT program and providing direct links to the MRF location. We believe that by making this information more easily accessible to automated searches and data aggregation, it would help third parties develop tools that further assist the public in understanding this information and capturing it in a meaningful way for making informed health care decisions. Further, we agree with the commenter who stated that implementation of these proposals would not pose substantial technical difficulty. We believe that the benefit of automating the identification of the MRF location would outweigh the minimal burden to maintainers of the public web page that hosts the MRF. Therefore, we believe it is important for hospitals to include the .txt file and link in the footer as soon as possible.

Comment: Several commenters opposed the proposals to improve automated accessibility of hospital MRFs, stating they did not believe the proposed changes would improve consumer friendliness or accessibility, expressing concern over not having flexibility in placement of the footer link and saying it would detract from other pertinent hospital information, and finding the proposals to be unnecessarily technical and excessive. A few commenters found the .txt file to be duplicative, stating the proposed MRF template fields would contain hospital location information. One commenter stated that websites do not have root folders, but instead have URLs, and that this would be an issue with the .txt file. One commenter appeared to object to the .txt file requirement stating that anyone using a .txt file could also find the file through the footer link. One commenter noted that the proposal to include a link in the footer would not satisfy at least one State requirement to have the link be immediately visible on the homepage without scrolling. One commenter found the proposal to include a link in the footer to be burdensome, citing a situation where the hospital website hosts an MRF for more than one hospital location and the link bringing the user to a page with multiple links to the various MRFs. By contrast, one commenter recommended the .txt file and footer link be extended to support multiple MRFs and transparency web pages on a website.

A few commenters recommended various alternative approaches, including placing the link to the MRF directly on the hospital's homepage, having CMS maintain a repository of MRF links, and having CMS ingest, host, and directly make available the data required under the regulations. One commenter sought clarification on whether CMS intends for the footer link to appear on every single web page on the hospital's website. One commenter suggested limiting the text of the footer label to ''Price Transparency'' instead of ''Hospital Price Transparency.''

Response: We appreciate the commenters' concerns and recommendations. We disagree that the proposed changes would not improve consumer friendliness or accessibility. We believe that standardizing website location information could provide

consumers with a standard pathway to find the information and would provide some uniformity, making it easier for potential software to review information on each website. We remain committed to ensuring that the MRFs and their data contents are easily 1467cessible, and do not believe that offering flexibility on placement of the proposed footer link anywhere on a hospitals' homepage would achieve a predictable navigation path to internal web pages because link placement could vary from one hospital website to another. We believe the addition of standardized hyperlinks in the footer of hospital websites would aid in the automation of MRF data retrieval by creating a predictable navigation path to internal web pages that describe the HPT program and providing direct links to the MRF location. We further note that nothing would preclude a hospital from additionally providing such a link elsewhere on its homepage if the hospital believes it would be necessary for other reasons.

Despite the requirement for the MRF and the standard charge information contained in that file to be digitally searchable and use the required naming convention, various MRF users, including IT developers and technology innovators, continue to express concerns that they can't efficiently, via automated techniques, aggregate the files. We believe these challenges should be addressed because we believe that ensuring that the MRFs and their data contents are easily accessible, including by members of the public who develop tools that improve the public's overall understanding and ability to use the information in meaningful ways, aligns with the MRFs' intended use.

We appreciate the concern of not detracting from other pertinent information on a hospital's website. Due to the website footer being a common place for hospitals to link to other information, we believe this requirement would be simple for hospitals to understand and implement without taking away from other information on a hospital's website.

We do not agree that the .txt file is duplicative because it's a separate file with different information that serves the purpose of helping machines automatically locate the hospital's MRF. We appreciate the comment noting websites have URLs. We use 'root folder' here to refer to the base URL of the website. We also appreciate the comment noting that the MRF can be found via the footer link and recommending the .txt file requirement be deleted. We believe the .txt file is necessary to help streamline the automation of MRF data retrieval. Having the .txt file would achieve having a predictable URL that could be used to successfully aggregate the files.

We understand the concern regarding potential inconsistency with recently enacted state legislation. While developing this rule, we attempted to balance the States' interests in regulating hospitals with the need to ensure access to uniform hospital pricing data. We further note that nothing would preclude a hospital from additionally providing such a link elsewhere on its homepage if the hospital believes it would be necessary for other reasons.

We appreciate one commenter's concern that the proposal to include a link in the footer would be burdensome. We believe having a footer link to a page with multiple links to the various MRFs would help consolidate and aggregate the information, provide consumers with a standard pathway to find the information, provide some uniformity, and ensure that the MRFs and their data contents are easily accessible. In other words, we believe the burden of providing a link in the footer is outweighed by the benefits to the public. Further, we agree with the commenter who stated that the .txt file and footer link be extended to support multiple MRFs and transparency web pages on a website. The .txt file can have the ability to support multiple MRFs and a footer link can go to a page that contains links to multiple MRFs.

We appreciate the various alternative approaches commenters recommended and may take them into consideration in future rulemaking. We appreciate the commenter seeking clarification on the footer link placement. At minimum, the link in the footer must by on the homepage. We agree with the commenter who suggested limiting the text of the footer label to ''Price Transparency'' instead of ''Hospital Price Transparency.''

Final action: At new § 180.50(d)(6)(i), we are finalizing as proposed the requirement that the hospital ensure the public website includes a .txt file in the root folder that includes a standardized set of fields including the hospital location name that corresponds to the MRF, the source page URL that hosts the MRF, a direct link to the MRF (the MRF URL), and hospital point of contact information. At new § 180.50(d)(6)(ii), we are finalizing the requirement that the hospital ensure the public website includes a link includen the footer on its website, including but not limited to the homepage, that is labeled ''Price Transparency'' (instead of ''Hospital Price Transparency'') and links directly to the publicly available web page that hosts the link to the MRF.

C. Requirements To Improve and Enhance Enforcement

Section 2718(b)(3) of the PHS Act requires the Secretary to promulgate regulations to enforce the provisions of section 2718 of the PHS Act, and, in so doing, the Secretary may provide for appropriate penalties. Our current monitoring and enforcement scheme is codified in our regulations at 45 CFR part 180, subpart C.

Section 180.70(a) states that CMS may monitor and assess hospital compliance with section 2718(e) of the PHS Act via methods including, but not limited to, evaluating complaints made by individuals or entities to CMS, reviewing individuals' or entities' analysis of noncompliance, and auditing hospitals' websites. Should CMS conclude that a hospital is noncompliant with one or more of the requirements to make public standard charges, CMS may take any of the following actions described at § 180.70(b), which generally, but not necessarily, will occur in the following order:

- Provide a written warning notice to the hospital of the specific violation(s).
- Request a corrective action plan (CAP) from the hospital if its noncompliance constitutes a material violation of one or more requirements.
- Impose a CMP on the hospital and publicize the penalty on a CMS website if the hospital fails to respond to CMS' request to submit a CAP or comply with the requirements of a corrective action plan.

To better understand hospitals' HPT compliance and the impact of our implementation efforts, CMS conducted website assessments in 2021 and in 2022. CMS evaluated fourteen criteria for the MRF, and either eleven criteria for the shoppable services display or two criteria for the price estimator tool, depending upon which the hospital chose to offer. In the first 2 years of program implementation, our website assessments demonstrated a substantial increase in hospitals meeting website assessment criteria, increasing from 27 percent to 70 percent between 2021 and 2022.[800] Of the remainder of the 30 percent that failed to meet the criteria, 3 percent fully failed to meet website assessment criteria and 27 percent partially met website assessment criteria. Although these website assessments were not formal

[800] *https://www.healthaffairs.org/content/forefront/hospital-price-transparency-progress-and-commitment-achieving-its-potential.*

compliance reviews (which often require additional information from the hospital to make a final determination of compliance), we believe this demonstrates that hospitals are making improvements to come into compliance and that the increase is largely attributable to the increase in compliance penalties that went into effect in CY 2022, and our significant education, monitoring, and enforcement activities. We remain committed to ensuring compliance with our requirements and taking enforcement actions in areas of noncompliance.

Recently, we announced updates to our enforcement process [801] that are intended to increase the rates of HPT compliance. In this section, we made proposals that would further improve the efficiency, timeliness, and transparency of the compliance process.

Comment: We received several comments related to CMS' general approach to enforcement and the proposals to improve monitoring, assessing, and enforcing the requirements of §§ 180.40, 180.50, and 180.60.

Some commenters expressed appreciation for the general enforcement approach taken by CMS, including CMS' previous work to advance hospital price transparency by increasing the penalties for noncompliance with the transparency requirements and using its enforcement power to work with hospitals and, when necessary, issue warnings, require CAPs, and impose civil monetary penalties on noncompliant hospitals.

One commenter expressed concern related to external reports of high noncompliance rates while a few commenters believed that CMS should refute third-party assessment of HPT compliance. These commenters agreed that only a formal CMS assessment can determine a hospital's compliance with the HPT requirements, and thanked CMS for performing and publishing its own assessment of hospital compliance.

Some commenters expressed support for the proposals to improve CMS enforcement capabilities, and urged CMS to go further by, for example, increasing and promptly assessing penalties.

Response: We thank commenters for their support. We are committed to the monitoring and assessment of hospitals' compliance with the HPT requirements and enforcement of those requirements. We believe that our current compliance actions, culminating in a CMP for those hospitals which CMS determines are out of compliance and that either fail to respond to CMS' request to submit a CAP or comply with the requirements of a CAP, are the appropriate way to address hospital noncompliance with the HPT regulations because the process ensures hospitals have an opportunity to come into compliance before CMS assesses a CMP. We agree that only CMS can make a determination as to a hospital's compliance with the HPT requirements.

Comment: A few commenters were generally opposed to the proposed regulatory changes. One commenter stated the changes would cause hospitals to effectively redo their compliance approach, and instead encouraged CMS to offer incentives to hospitals should the agency aim to promote standardization. One commenter recommended that CMS recognize hospitals making a good faith effort to be in compliance with regulations.

Response: We appreciate the commenters' concerns and recommendations. We remain committed to enforcing the HPT regulations, and do not believe that offering incentives would achieve the goal of compliance. We expect hospitals to fully comply with the HPT regulations.

1. Requirements for Improving Assessment of Hospital Compliance

At § 180.70(a), we finalized a process for monitoring hospital compliance with section 2718(e) of the PHS Act by which we may use monitoring efforts including, but not limited to, evaluating complaints made by individuals or entities to CMS', reviewing individuals' or entities' analysis of noncompliance, and auditing hospitals' websites. The regulation text at § 180.70(a)(2) indicates that such methods are also used to 'assess' hospital compliance; however, we have found these methods to be more appropriate for monitoring, and not as appropriate or sufficient for assessing hospital compliance.

For example, a review of an MRF (such as is performed in a typical website assessment) may reveal some obvious deficiencies which can trigger a compliance action. Similarly, a complaint made by the public may be helpful in identifying an allegedly noncompliant hospital. While we appreciate and continue to encourage submission of complaints, there are many nuances and complexities associated with the way hospitals establish standard charges that can lead to questions related to, in particular, the accuracy and completeness of the standard charge information that is included in a hospital's MRF. By way of example, if a hospital's MRF does not include any 'discounted cash prices,' it can be difficult to determine whether the hospital is noncompliant with the requirement to disclose established discounted cash prices or whether the hospital has simply not established such charges and therefore has nothing to make public. Often, a hospital will preempt questions by making statements on its website or in the file to indicate when there is no applicable standard charges data to share with the public. But when such a public statement is absent, we find that it may be necessary for us to contact the hospital to assess or determine whether the hospital is complying with the requirements of the regulation. In short, we have found it is necessary to employ methods beyond a simple audit of a hospital's website to definitively assess hospital compliance. We believe this distinction between monitoring and assessment activities is necessary because while monitoring activities can be used (by anyone, including CMS) to evaluate alleged noncompliance, only a formal CMS assessment can determine a hospital's compliance with the HPT requirements. We indicated our expectation that many of these issues would be resolved by finalizing the proposed improvements to standardizing display of hospital standard charges (as discussed in section XVIII.B.3 of this final rule with comment period). However, we noted that there could still be times when CMS would need additional information from the hospital to assess compliance.

We therefore proposed to amend § 180.70(a)(2) to add activities that CMS may use to monitor and assess for compliance. Specifically, we proposed:

- To revise § 180.70(a)(2)(iii) to indicate that CMS may conduct a comprehensive compliance review of a hospital's standard charge information posted on a publicly available website. We stated that we believed the proposal was necessary to clarify the methods we may use to determine a hospital's compliance with HPT requirements.
- At new § 180.70(a)(2)(iv), requiring an authorized hospital official to submit to CMS a certification to the accuracy and completeness of the standard charge information posted in the MRF at any stage of the monitoring, assessment, or compliance phase. We also proposed, at new § 180.50(a)(3), that the hospital affirm within the MRF the accuracy and completeness of the standard charge information. However, we indicated that we believed that this additional authority to require a formal certification by an authorized official

[801] *https://www.cms.gov/newsroom/fact-sheets/hospital-price-transparency-enforcement-updates.*

would be necessary because CMS may need a formal certification to resolve any specific questions related to the standard charges displayed and the items and services for which the hospital has established a standard charge, which might not be answered by the proposed affirmation statement in § 180.50(a)(3). For example, a formal certification may be necessary if a complainant alleges that specific standard charges displayed in the hospital's MRF are incomplete or inaccurate, or if certain items and services were provided by the hospital but are not displayed in the MRF with corresponding standard charges. Formal certification would provide assurance to CMS that the information within the MRF has been verified by the authorized official and was valid.

- At new § 180.70(a)(2)(v), requiring submission to CMS of additional documentation as may be necessary to assess hospital compliance. Such documentation may include contracting documentation to validate the standard charges the hospital displays, and verification of the hospital's licensure status or license number, in the event that information was not provided in the MRF. We stated that we believed that the proposal was necessary to enable CMS to adequately evaluate the hospital's publicly posted information to be able to assess compliance.

Further, we proposed two technical revisions. First, we proposed a technical revision to the heading at § 180.70(a) so that it would read ''Monitoring and assessment.'' Second, we proposed to amend § 180.90 by revising paragraph (b)(2)(ii)(C) to remove the phrase ''resulting from monitoring activities'' and adding in its place the phrase ''resulting from monitoring and assessment activities.''

Comment: Several commenters supported CMS' overall efforts to enhance assessment of noncompliance and its focus on improving enforcement.

Response: We thank commenters for their support.

Comment: Several commenters encouraged CMS to focus and commit to ''enforcement, not simply assessment.'' Similarly, a few commenters asserted that ''real enforcement'' is necessary, not just assessment, and that stringent enforcement is necessary to encourage hospital compliance with the law. A few commenters asked CMS to clarify that the proposed assessment and enforcement measures would supplement, not replace, the enforcement mechanisms currently in place, with one commenter encouraging CMS to say the proposals would supplement enforcement measures by strengthening CMS' capacity to assess compliance and respond to verified cases of noncompliance with enforcement actions. This commenter added that the need for clarification arises from the addition of ''assessment'' in § 180.70(a), and failure to use the word ''enforcement'' throughout this section in the CY 2024 OPPS/ASC proposed rule and recommended revised regulation text. A few commenters stated that any enhanced assessment capability must be paired with corresponding robust enforcement authority to engender compliance.

A few commenters disagreed with the proposed technical revision to the regulatory text change to ''monitoring and assessment,'' and strongly encouraged CMS to use consistent and strong language throughout the regulation and recommended CMS use the word ''enforcement'' to send a strong message to hospitals about the seriousness of enforcement activities.

Response: We appreciate the commenters' concerns and recommendations. CMS is committed to strong enforcement of the HPT regulation. We clarify that the proposed assessment and enforcement measures would not replace, but instead would supplement and enhance, existing enforcement mechanisms. Of note, we did not propose to remove the word ''Enforcement'' from § 180.70, but instead proposed to add the word ''Assessment'' in addition to ''Monitoring'' to § 180.70(a). Monitoring and assessment are activities that must occur prior to an enforcement action. Once CMS has determined (by way of its monitoring and assessment activities) that a hospital is out of compliance, the enforcement procedures continue to be addressed in § 180.70(b) under the actions to address hospital noncompliance.

Therefore, we will finalize the use of the word ''assessment'' and decline to replace this word with ''enforcement,'' given that ''enforcement'' is still included within the regulation text and that in order to complete enforcement activities, we must first complete assessment activities.

Comment: We received some comments related to the proposal to revise § 180.70(a)(2)(iii) to indicate that CMS may conduct a comprehensive compliance review of a hospita''s standard charge information posted on a publicly available website.

A few commenters provided general support for the proposal. One commenter supported additional monitoring and assessment capabilities for CMS in overseeing compliance.

One commenter questioned the scope and timing of a ''comprehensive compliance review'' and suggested that the criteria for a comprehensive compliance review be established and included in the CY 2024 OPPS/ASC proposed rule language before finalized so hospitals can have an opportunity to understand and provide appropriate comment. One commenter requested that CMS regularly release information about how compliance is monitored and assessed, such as the factors examined when compliance reviews are pursued.

Response: We appreciate the commenters' support, concerns, and recommendations. We remain committed to enforcement of the HPT regulation, and we take compliance with the regulation seriously. We believe revising § 180.70(a)(2)(iii) to indicate that CMS may conduct a comprehensive compliance review of a hospita''s standard charge information posted on a publicly available website (in addition to CMS audit which is included at § 180.70(a)(2)(iii) and would be retained) is necessary to clarify and align with the process we have established to determine a hospital's compliance with HPT requirements. This change does not alter our enforcement process, but instead merely clarifies the terminology we use in our current processes, and therefore does not diminish our enforcement capabilities. We will continue to evaluate complaints made by individuals or entities, review individuals' or entities' analysis of noncompliance, and audit hospitals' websites. We clarify that we will continue to comprehensively review hospitals' compliance with all the criteria required in 45 CFR 180.40, 180.50, and 180.60 in order to assess noncompliance and enforce those requirements, including any new criteria added as a result of this final rule with comment period. Additionally, in accordance with the regulation, once we make a determination of noncompliance we will continue to follow our established enforcement process, by which we may take one or more enforcement actions indicated in 45 CFR 180.70(b) such as providing a written warning notice to the hospital of the specific violation(s), requesting a CAP from the hospital if its noncompliance constitutes a material violation of one or more requirements, and imposing a CMP on the hospital if it remains noncompliant.

Comment: We received many comments related to our proposal to add § 180.70(a)(2)(iv) requiring submission of certification by an authorized hospital official as to the accuracy and

completeness of the data in the machine-readable file. Several commenters supported a hospital executive attesting to the accuracy of a hospital's data. One commenter requested that a ''top hospital executive'' sign an attestation assuring that the prices are complete and accurate, stating that this is the case for Medicare reimbursement reports. One commenter provided suggested regulation text to implement its suggestions. One commenter supported the proposal because certification of the accuracy and completeness of the standard charges will encourage hospitals to keep this information as up to date as possible, which will benefit the consumer.

A few commenters suggested that CMS require senior officers from the hospital to make such attestations and encouraged CMS to deem such attestations as material to payment from the Federal Government to incorporate potential liability under the False Claims Act (''FCA'') for hospitals that knowingly violate the rule and falsely attest to the accuracy and completeness of their files. Similarly, one commenter recommended that CMS take actionable steps allowing for applicable individuals to be held accountable for the pricing information provided.

Response: We thank commenters for their support. We indicated in the CY 2024 OPPS/ASC proposed rule that additional authority to require a formal certification by an authorized official would be necessary because we may need a formal certification to resolve any specific questions related to the standard charges displayed and the items and services for which the hospital has established a standard charge. This authority, and the authority requiring submission of additional documentation as may be necessary to assess hospital compliance, bolsters our ability to conduct a full compliance review and is in addition to the hospital's affirmation of the completeness and accuracy of the data. We do not agree that formal certification by an authorized official is required in every case.

We thank commenters for their suggestion to pursue noncompliance with the HPT regulations under the FCA; however, the FCA is outside the scope of this rule, and we believe that our current compliance regimen, as bolstered by the proposals that we finalize here, is the appropriate way to address hospital noncompliance with the HPT regulations. In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63941, 63945), we increased the amount of civil monetary penalty to which a hospital could be subject to a minimum total penalty of $109,500 and a maximum total penalty of $2,007,500, per year. Additionally, we note that in addition to the compliance updates we are finalizing in this final rule with comment period, we are engaged in continued efforts to ensure that every hospital complies with the hospital price transparency requirements such as: requiring CAP completion deadlines; imposing CMPs earlier and automatically; and streamlining the compliance process.

Comment: Several commenters disagreed with the proposal to require an authorized hospital official to submit to CMS a certification to the accuracy and completeness of the standard charge information posted in the MRF. One commenter believed, given the complexity of the file development, no single person could certify all the contents of the MRF, and that the proposal could introduce personal liability. This commenter believes that the request for a primary point of contact for questions contained in the acknowledgement of warning notices language is reasonable and should address this issue. Another commenter stated that it would be unreasonable to require a single hospital official to certify the accuracy and completeness of the file with the magnitude of data it contains, and that any certifications should be limited to a targeted and narrow subset of data that can reasonably be reviewed by the hospital official.

Several commenters felt the proposal was duplicative of the requirements to affirm the accuracy of the MRF within the file itself. A few commenters expressed concern that the requirement would impose excessive burden on providers or create difficulty for hospitals that are part of a health system where MRFs are developed at the system level. One commenter believed that there is not much value in CMS receiving this submission, and that, instead, CMS should consider providers setting forth a good faith effort to be in compliance. One commenter questioned whether the formal certification is necessary because the expectation is that all information posted by a given hospital is in fact accurate and expressed concern about whether a hospital could actually certify completeness if a blank cell is required.

Response: We appreciate the commenters' concerns and recommendations. However, we note that a certification by an authorized official is standard practice in various CMS processes, for example, in such areas as Medicare provider-based attestation and the submission of Medicare cost reports. We also believe it is not unreasonable to expect that an authorized official could certify the contents of the MRF, as the standard charge information displayed is expected to be true, accurate, and complete as of the date indicated in the file. As previously stated, formal certification would provide assurance that the information within the MRF has been verified by the authorized official and is valid. The designation of a primary point of contact does not in itself assure accuracy or completeness of an MRF, and therefore does not address the need for a formal certification.

Further, we do not believe the affirmation statement in the MRF and a formal certification by an authorized official of the hospital are duplicative. The primary purpose of the affirmation statement in the MRF is to alert the public that the hospital has made a good faith effort to ensure the data included in the MRF is true, accurate, and complete, to the best of the hospital's knowledge and belief, as of the date indicated in the file. There may, however, be a need to resolve specific questions related to the standard charges displayed, which might not be answered by the proposed affirmation statement. For example, a formal certification may be necessary to validate information that has no independent source of verification.

By contrast to the affirmation statement that would be included in a hospital's MRF, the intent of the certification is use by CMS during the enforcement process, for example, to aid in assessing whether a hospital has corrected the deficiencies noted in a warning notice or in a request for a CAP. As such, a certification as part of CMS' enforcement process, signed by an authorized official of the hospital, serves a different purpose than the affirmation the hospital will be required to include in the MRF, as discussed in section XVIII.B.2. of this final rule with comment period.

We also anticipate that although this formal certification, signed by an authorized official of the hospital, may be requested at any stage of the monitoring, assessment, or compliance phases, it will not be required in all cases. Instead, it will be a method to monitor and assess hospital compliance as part of the enforcement process and will be submitted only upon CMS' request. The formal certification is not required to be posted publicly by the hospital. Therefore, we will finalize this provision as proposed.

Comment: Several commenters disagreed with the proposal to require

submission of additional documentation as may be necessary to make a determination of hospital compliance. One commenter cited hospital burden to comply and offered a detailed alternative process to validate transparency files using ''exploratory conversations.'' A few commenters believed that ''courts have long held that certain contracting information—especially negotiated rate data—is commercially sensitive information that is shielded from disclosure by numerous legal protections'' and cited court cases in support of this assertion. One commenter believed that the proposal would create a far more burdensome audit and review process and would shift monitoring and assessment to data validation. One commenter urged that if the proposal is finalized, that the contracts are designated as confidential commercial information that is exempt from disclosure under the Freedom of Information Act (FOIA).

A few commenters believed that requiring hospitals to share a broad array of additional information would be burdensome. A few commenters suggested that since CMS has already established transparency standards for payers, these could serve as a validation mechanism by cross-referencing the data. One commenter stated that because CMS is requiring a hospital to attest to the accuracy and completeness of its MRF, such additional contracting documentation is unnecessary. One commenter believed that there is not much value in the additional documentation requirement and that, instead, CMS should consider providers setting forth a good faith effort to be in compliance.

A few commenters requested clarification on this requirement. Specifically, one commenter requested CMS to clarify that the requirement is based on a request from CMS during monitoring and enforcement activities, and additional documents are not required to be included in the MRF, while the other commenter expressed concern that the language is overly broad and asked for greater specificity and clarity.

Response: We appreciate the commenters' concerns and recommendations. We believe that the ability to require hospitals to submit supporting source documents may be necessary, as part of the CMS enforcement process, to ensure compliance in some, but not all, cases. We clarify that we anticipate requiring submission of documentation to validate the standard charge information the hospital has included in its MRF, on a case by case basis, thus reducing burden. The documents themselves are not required to be included in the MRF. For example, if there is concern about the completeness and accuracy of payer-specific negotiated charges included in a hospital's MRF, CMS may use externally available information, such as the MRFs displayed by payers as a result of the TIC requirements, to monitor for hospital compliance; however, these data are not source data and may also contain errors. Accordingly, to make a determination of compliance, source data, such as data specified in a contract between a hospital and a third party payer, may be necessary to validate payer-specific negotiated charge information posted in the hospital's MRF. In this example, if CMS needs to make a determination regarding the accuracy or completeness of a hospital's data, this provision would require the hospital to submit documentation to demonstrate that the data encoded in the MRF is in fact accurate and complete. The hospital would determine the type of source data that would provide sufficient evidence needed for us to determine compliance, which may be the contract between the hospital and payer. Thus, we clarify that we are not explicitly requiring hospitals to submit any or all of their contracts to CMS for review. However, in response to an enforcement action, a hospital would need to supply sufficient source documentation so as to satisfy CMS that the hospital has met the regulatory requirements. As such, depending on the specific type of standard charge information that needs verification, the hospital might determine a contract is the appropriate source documentation. Further, a contract is only one type of source documentation that a hospital might choose to submit in response to a request from CMS in; it is not the only type of source documentation that the hospital may submit.

Additionally, we are not aware of any protections specific to hospital contracts being shielded from disclosure to a government agency for the purposes of determining compliance with regulatory requirements, and the case law cited by commenters did not go to that premise. We also note that hospitals are already required to display and disclose the payer-specific data. *See American Hospital Association* v. *Azar,* 468 F. Supp. 3d. (D.D.C. 2020), aff'd by *American Hospital Association* v. *Azar,* 983 F.3d 528 (D.C. Cir. 2020). We note that any documentation that is submitted by the hospital to CMS would be evaluated in accordance with the regulations at 45 CFR part 5, which addresses the FOIA provisions, prior to release in the event of a FOIA request.

We anticipate that any additional documentation requested will be limited to addressing specific evidence of noncompliance with one or more HPT requirements. For these reasons, we will finalize this provision as proposed.

Final action: After considering public comments, we are finalizing as proposed a revision to § 180.70(a)(2) to add activities that CMS may use to monitor and assess for compliance. Specifically, we will revise § 180.70(a)(2)(iii) to indicate that CMS may conduct a comprehensive compliance review of a hospital's standard charge information posted on a publicly available website, in addition to the use of audits which will be retained. We believe the proposal is necessary to clarify the methods we may use to determine a hospital's compliance with HPT requirements. At new § 180.70(a)(2)(iv), we will require, upon our request, an authorized hospital official to submit to CMS a certification to the accuracy and completeness of the standard charge information posted in the MRF. At new § 180.70(a)(2)(v), we will require submission to us, upon our request, additional documentation as may be necessary to make a determination of hospital compliance.

We are also finalizing as proposed a technical revision to the heading at § 180.70(a) so that it would read ''Monitoring and assessment.'' We are finalizing as proposed § 180.90 by revising paragraph (b)(2)(ii)(C) to remove the phrase ''resulting from monitoring activities'' and adding in its place the phrase ''resulting from monitoring and assessment activities.''

2. Requiring Hospital Acknowledgement of Receipt of Warning Notice

Since the HPT regulations first became effective in January 2021 through September 2023, we have issued approximately 989 warning notices to hospitals. Though we send the compliance actions by tracked mail, a few hospitals have reported they did not receive the compliance action notifications. This causes delays in resolution of the deficiencies and in some cases resulted in additional compliance actions (for example, a request for a CAP) from CMS. Requiring that a hospital respond to CMS upon receipt of a warning notice will confirm receipt to CMS and hopefully prompt hospital personnel to appropriately route the warning notice and initiate prompt action to resolve the

deficiencies specified in the warning notice.

We make clear that hospitals' internal process challenges do *not* (and in enforcement proceedings will not) excuse a hospital's HPT noncompliance. But knowledge of this concern caused CMS to consider modifications to the compliance process for purposes of streamlining compliance activities and avoiding unnecessary re-reviews when a hospital has taken no action in response to a warning notice. Additionally, receiving confirmation of receipt directly from individuals at the organization responsible for resolving the deficiencies would streamline our enforcement by providing an appropriate compliance contact earlier in the enforcement process. We therefore proposed at § 180.70(b)(1) that CMS will require that a hospital submit an acknowledgement of receipt of the warning notice in the form and manner, and by the deadline, specified in the notice of violation issued by CMS to the hospital. As part of the confirmation of receipt, we may request contact information from the hospital to streamline further communications.

Comment: Several commenters supported the proposal. A few commenters suggested that the primary contact on the CMS–855A be copied as they are already an intermediary between CMS and the hospital and could help ensure the communication reached the appropriate individuals in a timely manner. One commenter recommended that CMS require that the acknowledgement include contact information for a primary compliance officer at the hospital to streamline further communication. One commenter requested that the form, manner, and deadline for acknowledgement of receipt should be set as part of this rule. One commenter requested that CMS be detailed and explicit in its communication as to what the notice of deficiency is specifically for. One commenter requested that CMS allow hospitals to designate, or confirm, the appropriate hospital point of contact to receive communications from CMS.

CMS received no comments opposed to the proposal.

Response: We thank commenters for their support and suggestions. We intend to delineate the form, manner, and deadline for acknowledgement of receipt within the notice of violation issued to the hospital. We note that currently the hospital CEO may appoint a designee if he/she will not be the official representative communicating with CMS regarding the HPT program. We will continue to allow hospitals to designate the appropriate hospital point of contact.

Final action: After considering public comments, we are finalizing as proposed § 180.70(b)(1), that CMS will require that a hospital submit an acknowledgement of receipt of the warning notice in the form and manner, and by the deadline, specified in the notice of violation issued by CMS to the hospital.

3. Updated Actions To Address Noncompliance Within Hospital Systems

Section 2718(e) of the PHS Act and the HPT regulations apply to 'each hospital' operating in the U.S. As such, when CMS determines that a hospital is out of compliance with the regulations, CMS takes a compliance action against the individual hospital. Many hospitals, however, are part of a broader health system where common management officials have some degree of oversight and management over multiple hospitals. For example, some health systems have centralized administrative activities that establish standard charges for all the hospitals in the system, or that are responsible for ensuring compliance with Federal requirements. Under our current regulation, as explained in more detail in section XVIII.C.4 of the CY 2024 OPPS/ASC proposed rule, we have authority to disclose information about CMS compliance activity only when CMS issues a CMP, at which time CMS posts the CMP notice on its website. We indicated that we believed that amending the regulation to provide CMS with express authority to notify health system officials of a compliance action that CMS has taken against one or more hospitals within their system, and working directly with them, where appropriate, to educate health system leadership and aid them in bringing all hospitals in the system into compliance, could aid in streamlining hospital compliance and our enforcement process.

Therefore, we proposed to add new § 180.70(c) to state that, in the event CMS takes an action to address hospital noncompliance (as specified in paragraph (b)) and the hospital is determined by CMS to be part of a health system, CMS may notify the health system leadership of the action and may work with hospital system leadership to address similar deficiencies for hospitals across the health system. In determining whether a hospital is part of a health system and health system contact information, we anticipate using data from sources including, but not limited to, internal CMS systems such as the Medicare Provider Enrollment, Chain, and Ownership System (PECOS) or the Chronic Conditions Data Warehouse (CCW). For example, PECOS may be used to identify relationships among organizations including ownership or enrollment associations.[802]

We stated that we believed that notifying health system officials of a compliance action taken against one of the hospitals in the system and working with health system officials and (where different) the hospital's officials to help the hospital to come into compliance would have several benefits. First, it could serve to ensure full and consistent compliance across all hospitals in the health system. Second, we stated we believed the ability to work directly with health system officials, in addition to working with the noncompliant hospital, could reduce the need for compliance actions against other health system hospitals because the health system could more quickly and efficiently implement system-wide changes. For example, in one case multiple hospitals designated the same hospital system official as the point of contact to work with CMS. This allowed the hospital official to effectively correct violations cited across multiple locations and resulted in system-wide changes.

We sought comment on the proposal, including on whether there are additional data sources that CMS could access for purposes of identifying health system affiliation and leadership contact information.

Comment: Several commenters supported the proposal to address noncompliance within hospital systems. Several commenters showed their support for CMS' efforts to streamline hospital compliance and enforcement processes and indicated their belief that the proposal may seamlessly address noncompliance, improve delivery of communications, reduce administrative burden, and provide potential educational engagement and collaboration opportunities. One commenter supported the collaborative nature of the proposal but noted that it may be difficult for a health system to promptly implement a hospital-level corrective action plan with a system-wide change.

One commenter supported the proposal but suggested that CMS work

[802] Cohen GR, Jones DJ, Heeringa J, Barrett K, Furukawa MF, Miller D, Mutti A, Reschovsky JD, Machta R, Shortell SM, Fraze T, Rich E. Leveraging Diverse Data Sources to Identify and Describe U.S. Health Care Delivery Systems. EGEMS (Wash DC). 2017 Dec 15;5(3):9. Doi: 10.5334/egems.200. PMID: 29881758; PMCID: PMC5983023.

with individual hospitals to determine the correct personnel at each location. Further, they requested that CMS offer hospitals an opportunity to regularly update contact information in order to address any notices of noncompliance timely.

One commenter indicated they supported the proposal but would not support using the CMS–855A form that CMS currently uses to gather contact information, instead advocating for less administratively burdensome methods. By contrast, a few commenters recommended that all official communications be sent to PECOS authorized officials and delegated officials, or the hospital contact listed on the provider's CMS–855A form. Another commenter requested the ability to designate official contacts ahead of any compliance activities.

Response: We thank commenters for their support in alerting hospital system leadership when CMS has determined that one or more of the hospitals within the system is noncompliant. As explained in the CY 2024 OPPS/ASC proposed rule, once CMS determines that a hospital is out of compliance with the regulation, it takes a compliance action against an individual hospital. However, we have found that many hospitals are part of a larger health system. We believe the ability notify hospitals within a system and work with these health system officials may allow for consistent and efficient compliance across all hospitals in the health system. We also believe this could reduce instances of noncompliance among hospitals within a health system as they may be positioned to implement more informed system-wide changes. With that, we appreciate the commenter expressing it may be difficult for a health system to promptly implement a hospital-level corrective action plan with a system-wide change. However, we note that the proposal does not require hospitals to implement system-wide changes.

We agree with the commenters that addressing compliance with health systems may streamline hospital compliance and enforcement, improve delivery of communications, reduce administrative burden, and provide potential educational engagement and collaboration opportunities. Additionally, we appreciate the commenters who provided feedback on data sources that CMS may access for purposes of identifying health system affiliation and leadership contact information.

Final action: After consideration of the public comments we received, we are finalizing as proposed § 180.70(c) to state that, in the event CMS takes an action to address hospital noncompliance (as specified in paragraph (b)) and the hospital is determined by CMS to be part of a health system, CMS may notify health system leadership of the action and may work with health system leadership to address similar deficiencies for hospitals across the health system.

We believe these policies will aid in advancing hospital compliance and our enforcement process.

4. Publicizing Compliance Actions and Outcomes

In the CY 2020 HPT final rule, we sought comment related to publicizing complaints and posting results of CMS assessments of hospitals' HPT compliance, including on the most effective way for CMS to publicize information regarding hospitals that fail to comply. Some commenters recommended publicizing noncompliant hospitals, while one commenter expressed the belief that publicizing noncompliance even after imposition of a CMP would amount to ''public shaming,'' which the commenter believed would not be of benefit. We considered these comments and ultimately finalized a policy at § 180.90(e)(1) that, should CMS issue a CMP to a hospital it determines is noncompliant, CMS would post the notice of imposition of the CMP on a CMS website.

In finalizing this policy, we explained that we believed that publicizing a hospital's noncompliance prior to imposing a CMP, for example, could be an effective tool to raise public awareness of, for example, incomplete hospital data, and could encourage hospitals to promptly remedy its violation(s) to avoid being publicly identified as noncompliant. However, we declined at the time to finalize publicizing information beyond publicizing the notice of imposition of a CMP. We indicated that we would consider revisiting through future rulemaking the timing for, and approach by, which CMS publicizes its determination of a hospital's noncompliance with the requirements to make public standard charges.

As of September 2023, CMS had issued approximately 989 warning notices and 631 requests for CAPs since the initial regulation went into effect in January 2021. Approximately 346 hospitals were determined by CMS after a comprehensive compliance review to not require any compliance action and approximately 738 hospitals received a closure notice from CMS after having addressed deficiencies indicated in a prior warning notice or a request for a CAP following an initial comprehensive compliance review. At the time of the publication of the CY 2024 OPPS/ASC proposed rule, we had imposed CMPs on four hospitals and publicized those CMP impositions on our website.[803]

We explained that CMS routinely receives inquiries from the public, including state hospital associations, related to its compliance activities, asking, among other things, whether CMS has reviewed certain hospitals in certain states or other geographic locations. Given this significant public interest, we considered whether publicizing more information about CMS compliance activities and hospital-specific actions would be useful. We reviewed other Federal programs that make public compliance actions for various programs, such as HHS/HRSA's 340B Drug Pricing Program which publicly posts audit results that include the name of the entity and state, audit findings, sanction, and corrective action status,[804] CMS' Part C and D results related to the Medicare Advantage and Prescription Drug Plan program audits[805] and compliance actions,[806] and the FDA which provides the public access to an online, searchable dashboard of compliance actions, including warning letters.[807]

We indicated our belief that such information could improve the public's understanding and transparency of CMS' enforcement process by allowing interested parties to view compliance actions and determinations made by CMS. We further stated that making public compliance information may reduce repetitive complaints to CMS about hospital compliance issues and provide a central source of information for inquirers, including the media and state officials, who have expressed interest in this issue. Additionally, making these enforcement actions transparent may increase the likelihood that hospitals will more quickly come into compliance due to public scrutiny.

As a result, we proposed at § 180.70(d) that CMS may publicize on its website information related to CMS' assessment of a hospital's compliance, any compliance actions taken against a hospital, the status of such compliance

[803] *https://www.cms.gov/hospital-price-transparency/enforcement-actions.*

[804] *https://www.hrsa.gov/opa/program-integrity/fy-22-audit-results.*

[805] *https://www.cms.gov/medicare/compliance-and-audits/part-c-and-part-d-compliance-and-audits/programaudits.*

[806] *https://www.cms.gov/Medicare/Compliance-and-Audits/Part-C-and-Part-D-Compliance-and-Audits/PartCandPartDComplianceActions.*

[807] *https://datadashboard.fda.gov/ora/cd/complianceactions.htm.*

action(s), and the outcome of such compliance action(s). Additionally, we proposed at § 180.70(d) that CMS may publicize on its website information related to notifications that CMS may send to health system leadership, if proposals discussed in section XVIII.C.3 of the CY 2024 OPPS/ASC proposed rule were finalized. We indicated that should CMS decide to publicize this information on its website, it would apply uniformly to all hospitals. We further noted that, similar to other such assessments, the information we would make public would only be relevant as of the date indicated and should not be taken to suggest any ongoing state of compliance or noncompliance.

Comment: A few commenters supported the proposal to publicize information related to CMS' assessment of a hospital's compliance, compliance actions taken against a hospital, and the status and outcome of such compliance actions. A few commenters also supported CMS' proposal to create and publicize compliance information to help refute inaccurately reported third-party information. Taking it further, one commenter provided strong support for the proposal and shared their belief that CMS publicize when assessments of compliance are started, in progress, and completed. Another commenter requested that CMS provide a proactive notification of compliance in situations where CMS conducted a compliance assessment and confirmed no instances of noncompliance.

One commenter supported the proposal and recommended that CMS set up a regular cadence under which they assess hospital compliance and publicize the information associated with the status and outcome of such compliance actions. One commenter suggested that CMS consider delaying its enforcement for the first effective year of the CY 2024 OPPS/ASC proposed rule so hospitals and CMS can collaborate without a publication of noncompliance. Another commenter supported the proposal but requested CMS' commitment to note when an entity fixes its issues and moves into compliance in a timely manner to avoid public scrutiny.

Response: We appreciate the comments regarding the proposal to allow CMS the ability to publicize on its website information related to CMS' assessment of a hospital's compliance, any compliance actions taken against a hospital, the status of such compliance actions, and the outcomes of such compliance actions. We believe that publishing these actions may be an effective tool to raise public awareness and encourage hospitals to more quickly remedy any determinations of noncompliance to avoid public scrutiny. We also appreciate commenters who provided CMS with recommendations for displaying such information or suggestions for what we may include in our publication, or when CMS may post these actions.

Comment: One commenter supported CMS' efforts to be more transparent about how the agency assesses hospitals for compliance and list hospitals that have had compliance actions taken against them, while another commenter believed that may be helpful in encouraging improved compliance by hospitals, and yet another believed it will raise public awareness and encourage timely remediation of hospital violations.

A few commenters noted the proposal has the potential to reduce the collaboration between hospitals and CMS in resolving any assessment of noncompliance which may be remedied by a hospital conferring with CMS prior to a publication of a compliance action taken against them. Additionally, a few commenters recommended a process to be used to engage hospitals outside of a compliance action when CMS has questions about the file.

Response: We agree with the commenters that the proposal will assist in providing more transparency into CMS enforcement activities and, in addition to the requirements we are finalizing related to standardization in section XVIII.B.3. in this final rule with comment period, the criteria used for assessing hospitals for compliance. We believe the proposal will minimize frequent and often repetitive complaints made to CMS regarding a hospital's ongoing compliance status. Moreover, we believe the proposal allows for the public to view compliance determinations made by CMS on an ad hoc basis, increasing awareness and access to information previously not provided.

As noted by a commenter, there have been many productive conversations between hospitals and CMS during the compliance process that have involved education on both sides. CMS intends to continue conversations with hospitals, providing clarity and assistance when possible. Further, we intend to broaden our scope of engagement by working with health systems as proposed in § 180.70(c).

Comment: Regarding notification to health system leadership, one commenter suggested that CMS consider allowing publication of the responses of [health system] leadership to a compliance action if hospitals wish to have such responses published. Another commenter did not support publicly posting collaborative conversations between health system leaders and CMS. One commenter suggested publishing when a hospital utilized any CMS developed validation tool.

Response: As discussed in more detail in section XVIII.C.3 of this final rule with comment, we believe that the ability to work with health system leadership will benefit CMS in ensuring that hospitals across large health systems comply with the HPT requirements. As finalized, we intend to work with health system leadership on a collaborative and voluntary basis. Therefore, at this time, we decline to post communications received from health system leadership as they are not part of the formal compliance process and posting this information could have a chilling effect on the willingness of health system leadership to voluntarily work with CMS.

Similarly, we do not intend to publish details regarding a hospital's use of a CMS developed validation tool. The validator tool is intended as an aid to be used voluntarily by hospitals as they are developing their MRF which may help them format their standard charge information in accordance with the required technical specifications (finalized at new § 180.50(c)(2)); it is not intended as enforcement tool or as a tool to assess overall compliance with the HPT requirements at 45 CFR part 180. As such, as we want to encourage hospitals to use the validator tool to aid them while they are in the process of developing their MRFs, and not create any unintended chilling effect by tracking hospital use of the validator tool for enforcement purposes.

Comment: Several commenters did not support publicizing CMS assessments, compliance actions, and outcomes because hospitals that quickly come into compliance may receive negative public attention, and the information publicized could be misleading or misconstrued.

A few commenters also opposed publicizing CMS assessments, compliance actions, and outcomes as it may unfairly stigmatize hospitals that make a good-faith effort to comply, but, due to limited resources and capabilities, may require additional time to become fully compliant.

A few commenters urged CMS to make it clear that hospitals are not deemed noncompliant when under review. Another commenter requested that CMS refrain from publishing enforcement actions while hospitals work towards complying with the rule's requirements.

Comment: Several commenters expressed their belief that publishing this information may beget unjustified or negative feedback or unfairly stigmatize a hospital that is working to come into compliance.

Response: In contrast, we believe that publishing this information may work to bring hospitals into compliance more quickly to avoid public scrutiny. A few commenters concurred with CMS' belief. We believe that such information could improve the public's understanding and transparency of CMS' enforcement process by allowing interested parties to view compliance actions and determinations made by CMS.

Comment: One commenter voiced concern about a hospital being mistakenly listed as noncompliant and requested that CMS publicly retract assessments of noncompliance that have been incorrectly published. The same commenter suggested a delay of publication until CMS has taken steps to correct the contact information needed for the letters of noncompliance. One commenter acknowledged CMS' need to release this information and suggested data fields be released with corresponding disclaimer language. Another commenter believed that CMS does not publicize detailed information for any other types of enforcement and that HPT should be treated similarly. A few commenters suggested that CMS only publicize outcomes of compliance activities such as closure notices or CMPs to avoid unintended consequences or confusion and cautioned against publicizing information before compliance activities have closed. Another commenter requested that when a hospital receives a request for a CAP that is posted publicly in accordance with the proposal, that CMS removes the hospital as soon as they have satisfied the conditions of the CAP. Commenters expressed concern about CMS' publishing data preemptively and making unsubstantiated determinations of noncompliance, suggesting a warning notice is not a true compliance action. A few other commenters reiterated that CMS is the arbiter of compliance.

Response: We note that § 180.70(a) states that CMS may monitor and assess hospital compliance with section 2718(e) of the PHS Act and, should CMS conclude that a hospital is noncompliant with one or more of the requirements to make public standard charges, may take actions described at § 180.70(b) that include issuing a written warning notice. We believe the proposal may provide a single source of truth for hospitals, interested parties, or other inquirers.

We note that there are other Federal programs that make public compliance actions for various programs, including CMS' Part C and D results related to the Medicare Advantage and Prescription Drug Plan program audits [808] and compliance actions.[809]

We believe that making public compliance information may reduce repetitive complaints to CMS about hospital compliance issues and provide a central source of information.

However, we appreciate the commenters' concerns and recommendations, and we will continue to monitor and assess the impact of the proposal.

Final action: After consideration of the public comments we received, we are finalizing as proposed at § 180.70(d), that CMS may publicize on its website information related to the following:

(1) CMS' assessment of a hospital's compliance.

(2) Any compliance action taken against a hospital, the status of such compliance action, or the outcome of such compliance action.

(3) Notifications sent to health system leadership.

We believe that such information will improve the public's understanding of CMS' enforcement process by allowing interested parties to view compliance actions and determinations made by CMS, increasing transparency. We further believe that making public compliance information may reduce repetitive complaints to CMS regarding a hospital's compliance assessment. Further, making these enforcement actions transparent may increase the likelihood that hospitals will more quickly come into compliance due to public scrutiny.

D. Comments on CMS' Request for Information Related to Consumer-Friendly Displays and Alignment With Transparency in Coverage and No Surprises Act (NSA)

In the CY 2024 OPPS/ASC proposed rule, we included a Request for Information (RFI) related to consumer-friendly displays and alignment with TIC and the NSA. We received approximately 71 timely pieces of correspondence that were submitted in response to the RFI questions. We thank all interested parties for their comments and will take them into consideration in the future.

XIX. Changes to the Inpatient Prospective Payment System Medicare Code Editor

As discussed in the FY 2024 Inpatient Prospective Payment System (IPPS)/Long-Term Care Hospital (LTCH) Prospective Payment System (PPS) proposed rule (88 FR 26752), the Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into a Medicare Severity Diagnosis Related Group (MS–DRG). If any of the MCE claim edits are triggered, the claim is returned to the provider to correct any issues related to the coded claims data and resubmit the claim for processing by the MAC.

After patient information is screened through the MCE and further development of the claim is conducted, the cases are classified into the appropriate MS–DRG by the Medicare GROUPER software program. The GROUPER program was developed as a means of classifying each case into an MS–DRG. The GROUPER software used under the LTCH PPS is the same GROUPER software program used under the IPPS and therefore, also utilizes the MCE to identify cases that require further review before assignment into a Medicare Severity Long-Term Care Diagnosis Related Group (MS–LTC–DRG) can be made.

As discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 48874), we made available the FY 2023 ICD–10 MCE Version 40 manual file. The manual contains the definitions of the Medicare code edits, including a description of each coding edit with the corresponding diagnosis and procedure code edit lists. The link to this MCE manual file, along with the link to the mainframe and computer software for the MCE Version 40 (and ICD–10 MS–DRGs) are posted on the CMS website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/acuteinpatientpps/ms-drg-classifications-and-software.* The MCE manual is currently comprised of two chapters: *Chapter 1: Edit code lists* provides a listing of each edit, an explanation of each edit, and as applicable, the diagnosis and/or procedure codes for each edit, and

[808] *https://www.cms.gov/medicare/compliance-and-audits/part-c-and-part-d-compliance-and-audits/programaudits.*

[809] *https://www.cms.gov/Medicare/Compliance-and-Audits/Part-C-and-Part-D-Compliance-and-Audits/PartCandPartDComplianceActions.*

Chapter 2: Code list changes summarizes the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software.

As discussed in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26758) and prior rulemaking, as we continue to evaluate the purpose and function of the MCE with respect to ICD–10, we encourage public input for future discussion, including with respect to whether there are concerns with the current edits, including specific edits or language that should be removed or revised, edits that should be combined, or new edits that should be added to assist in detecting errors or inaccuracies in the coded data. We note that historically, CMS has typically addressed the addition or deletion of MCE edits in its annual IPPS rulemakings, as well as the addition or deletion of ICD–10 diagnosis and procedure codes for the applicable MCE edit code lists effective October 1, consistent with the October 1 updates to the ICD–10 code set. We also note that currently, any changes applicable to the MCE edit code list in connection with the April 1 updates to the ICD–10 code set are made available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

As we have continued to evaluate the purpose and function of the MCE with respect to ICD–10, we recognize a need to further examine the operability of the MCE software program, including the current list of edits and the definitions of those edits. We have also considered the operation of the MCE as compared to the claims editing programs used for other Medicare payment systems, including how those edits are defined and applied, as well as how they are updated and maintained. For example, the Outpatient Prospective Payment System (OPPS) ''Integrated'' Outpatient Code Editor (I/OCE) is a software program that combines editing logic with an ambulatory payment classification (APC) assignment program. Similar to the IPPS MCE, the I/OCE edits the claims data to identify errors and ensure accuracy of submitted data. The I/OCE also serves additional claims editing functions as compared to the IPPS MCE. CMS makes updates to the I/OCE through quarterly releases with effective dates of January 1, April 1, July 1, and October 1 of each year. The updates reflect modifications to the program logic, such as additions and deletions of the ICD–10–CM diagnosis codes and Healthcare Common Procedure Coding System (HCPCS) codes; adding, removing or revising APCs; activating and deactivating edits; and other related actions. Changes and updates to the I/OCE are announced through quarterly I/OCE Change Requests (CRs) that are posted to the CMS website for MACs and public download at: *https://www.cms.gov/Medicare/Coding/OutpatientCodeEdit/OCEQtrReleaseSpecs.* The public may submit any questions or concerns related to the I/OCE through the CMS website at: *https://www.cms.gov/Medicare/Coding/OutpatientCodeEdit/ContactUs.*

Similar to the claims editing programs used for the OPPS and other Medicare payment systems, the claims edits under the MCE serve the operational function of identifying cases that require further review before classification into an MS–DRG. As previously discussed, if an edit is triggered, the claim is returned to the provider to correct any issues related to the coded claims data and to resubmit the claim for processing. Accordingly, consistent with the process that is used for updates to the I/OCE and other Medicare claims editing systems, we proposed to address any future revisions to the MCE, including any additions or deletions of claims edits, as well as the addition or deletion of ICD–10 diagnosis and procedure codes to the applicable MCE edit code lists, outside of the annual IPPS rulemakings. As discussed in the CY 2024 OPPS/ASC proposed rule, we stated that we anticipate generally announcing any such changes or updates to the MCE as part of our instructions issued to the MACs in connection with the April 1 and October 1 ICD–10 code updates.

Under our current process, we announce updates to the MCE in connection with the April 1 and October 1 ICD–10 code updates, as applicable. For example, as discussed in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26767), we issued Change Request (CR) 13034, Transmittal 11746, titled ''April 2023 Update to the Medicare Severity—Diagnosis Related Group (MS–DRG) Grouper and Medicare Code Editor (MCE) Version 40.1 for the International Classification of Diseases, Tenth Revision (ICD–10) Diagnosis Codes for Collection of Health-Related Social Needs (HRSNs) and New ICD–10 Procedure Coding System (PCS) Codes'', on December 15, 2022 (available on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Transmittals/Transmittals/r11746cp*), regarding the release of an updated version of the ICD–10 MS–DRG GROUPER and Medicare Code Editor software, Version 40.1, effective with discharges on and after April 1, 2023, reflecting the new diagnosis and procedure codes. We noted in the CR that the updated software, along with the updated ICD–10 MS–DRG V40.1 Definitions Manual and the Definitions of Medicare Code Edits V40.1 manual is available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.* We issued similar instructions with respect to the October 1, 2022 updates to the MCE and related materials, including the release of the updated Version 40 ICD–10 MS–DRG GROUPER and Medicare Code Editor software, effective with discharges on and after October 1, 2022, available at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/MS-DRG-Classifications-and-Software.*

We stated in the proposed rule that under our proposed approach, we would continue to issue instructions to the MACs in connection with any April 1 or October 1 updates to the IPPS MCE, including the effective date for the appropriate version of the MCE software program and the Definitions of Medicare Code Edits manual, and where these resources may be found on the CMS website. We also stated we would be interested in feedback as to whether it would also be helpful to list the specific MCE updates in the CR, including any additions or deletions of diagnosis or procedure codes or any addition or deletion of particular MCE edits. As previously noted, Chapter 2 of the MCE manual currently identifies the changes in the edit code lists (for example, additions and deletions) from the prior release of the MCE software. In the CY 2024 OPPS/ASC proposed rule, we stated that beginning with the FY 2025 rulemaking, we would no longer address the addition or deletion of MCE edits or the addition or deletion of ICD–10 diagnosis and procedure codes for the applicable MCE edit code lists in the annual IPPS rulemakings.

We noted that under this revised approach, we would also continue to welcome input from the public on the current edits, including input from providers and other users on how the MCE may currently be utilized in their respective workflow processes, as well as feedback on users' experience with the MCE, to inform any future revisions to the MCE.

We invited public comments on our proposal to remove discussion of the MCE from the annual IPPS rulemakings, beginning with the FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the MACs, as previously described.

Comment: A few commenters stated that the opportunity for public comment on proposed changes to the MCE has historically been addressed through IPPS rulemaking. According to the commenters, there are important topics that may warrant additional consideration that hospital coding, clinical, and revenue cycle professionals need to ensure awareness of ahead of implementation to allow opportunity for comment. The commenters strongly recommended that CMS not finalize any changes related to the MCE and suggested the agency include the proposal in the upcoming FY 2025 IPPS/LTCH PPS proposed rulemaking, to help ensure that the appropriate IPPS audience has ample opportunity to review and provide comment.

A commenter specifically urged CMS to maintain discussion of the MCE in IPPS rulemaking. The commenter stated that the annual rulemaking process provides a more formal and publicly visible opportunity to provide comments to CMS on MCE manual changes, including any concerns with current edits, including specific edits or language recommended for removal or revision, edits that could be combined, or new edits to be added, and further stated that discussion of the MCE through multiple MACs would be a more de-centralized and fragmented process, particularly with multiple MACs involved, each of which may have varying processes for interpreting and implementing the MCE manual edits. According to the commenter, hospital systems would have to provide multiple submissions across various MACs and responses from the MACs may be inconsistent, leading to further fragmentation and confusion across hospitals and other providers. The commenter stated their belief that the more systematic annual regulatory process, with opportunity for notice and public comment, will assist in promoting a more seamless process for seeking and responding to public comment while minimizing confusion about MCE edits.

Another commenter expressed its appreciation that CMS indicated it would continue to welcome input from the public on the current MCE edits under the proposed revised approach, however the commenter urged CMS to establish a process that allows the public to continue to provide input on MCE changes if these changes are no longer going to be addressed through IPPS rulemaking. In addition, in response to our request for feedback as to whether it would also be helpful to list the specific MCE updates in a CR, the commenter recommended specific MCE updates be listed in the CR if the revised approach for addressing MCE revisions is adopted.

Response: We appreciate the commenters' feedback. We agree that historically, CMS has typically addressed the addition or deletion of MCE edits in its annual IPPS rulemakings, as well as the addition or deletion of ICD–10 diagnosis and procedure codes for the applicable MCE edit code lists effective October 1. However, we also note that, as discussed in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58764), we historically have not listed the changes we have made to the MCE as a result of the new and modified codes approved after the annual spring ICD–10 Coordination and Maintenance Committee meeting, as these changes are approved too late in the rulemaking schedule for inclusion in the proposed rule. Furthermore, although our MCE policies have been described in our proposed and final rules, we have not provided the detail of each new or modified diagnosis and procedure code edit in the final rule. However, we make available the finalized Definitions of Medicare Code Edits (MCE) file and would continue to do so.

In response to comments recommending that CMS instead include the proposal in the upcoming FY 2025 IPPS/LTCH PPS proposed rulemaking to help ensure that the appropriate IPPS audience has ample opportunity to review and provide comment, we note that in the FY 2024 IPPS/LTCH PPS final rule (88 FR 58764 and 58765) we specifically referred readers to the discussion of the MCE proposal that was included in the CY 2024 OPPS/ASC proposed rule (88 FR 49552). We further believe that parties interested in Medicare payment for IPPS hospitals would regularly review the annual OPPS/ASC proposed rule and note that the proposal was specifically identified in the title to the CY 2024 OPPS/ASC proposed rule, which included ''Proposed Changes to the Inpatient Prospective Payment System Medicare Code Editor'' (88 FR 49552). Accordingly, we believe that the public, including the appropriate IPPS audience, had ample opportunity to review and provide comment on the proposal.

In response to the commenter who expressed concern that discussion of the MCE through multiple MACs would be a more de-centralized and fragmented process, as discussed in the proposed rule and previously in this final rule, we anticipate generally announcing any such changes or updates to the MCE as part of our instructions issued to the MACs in connection with the April 1 and October 1 ICD–10 code updates, as we currently do. This process would be similar to that currently used for changes and updates to the I/OCE that are announced through quarterly I/OCE Change Requests (CRs) that are posted to the CMS website for MACs and public download. We note that CMS maintains a network of MACs to serve as the primary operational contact between the Medicare FFS program and the health care providers enrolled in the program. We refer the reader to the CMS website at: *https://www.cms.gov/medicare/coding-billing/medicare-administrative-contractors-macs/whats-mac* for additional information on the role of the MACs. We also note that currently, there are MACs that provide information on their respective websites to inform providers when CRs have been published and to also provide additional information that may be helpful for providers with respect to the I/OCE and the MCE. For example, Noridian Healthcare Solutions, LLC at *https://med.noridianmedicare.com/web/jea/topics/claim-submission/ioce-mce#mce* and Palmetto GBA at *https://www.palmettogba.com/palmetto/jma.nsf/M/SearchSiteAdd?Open&term=Medicare%20Code%20Editor&fz=true.* We believe that the definition of each edit, as reflected in the Definitions of Medicare Code Edits manual, provides sufficient information on the intent of the edit. We also note that the Grouper software that is made publicly available via the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/ms-drg-classifications-and-software* in connection with the Definitions of Medicare Code Edits manual, reflects updates made to the MCE and that process is not changing.

In response to the commenter who urged CMS to establish a process that allows the public the opportunity to continue to provide input on MCE changes, we believe it is important to provide the public with opportunities to provide feedback on the MCE edits and, as discussed in the proposed rule, would continue to welcome public input. The public may submit any questions, comments, concerns, or recommendations regarding the MCE to the CMS mailbox at *MSDRGClassificationChange@cms.hhs.gov* for our review and consideration. We will also consider the recommendation to list specific MCE updates in a CR.

In summary, we believe that the proposal will allow for consistency in making updates and modifications to

claims edits under the MCE and other Medicare claims editing systems.

Final action: For the reasons discussed, and after consideration of the public comments we received, we are finalizing the proposal to remove discussion of the MCE from the annual IPPS rulemakings, beginning with FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the MACs. We will also continue to analyze data on the current edits to determine utility and whether any edits should be modified or removed from the FFS claims processing systems in the future.

XX. Technical Edits for REH Conditions of Participation and Critical Access Hospital (CAH) CoP Updates

On November 23, 2022, we published a final rule for the Rural Emergency Hospital health and safety standards (or the Conditions of Participation), which was included in the ''Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs; Organ Acquisition; Rural Emergency Hospitals: Payment Policies, Conditions of Participation, Provider Enrollment, Physician Self-Referral; New Service Category for Hospital Outpatient Department Prior Authorization Process; Overall Hospital Quality Star Rating; COVID–19'' final rule with comment period (87 FR 71748). In that rule, we finalized a designation and certification process for Rural Emergency Hospitals at 42 CFR 485.506. In section XVIII.A.2 of the final rule, entitled ''Statutory Authority and Establishment of Rural Emergency Hospitals as a Medicare Provider Type,'' (87 FR 72160) we noted that in order to become an REH, section 1861(kkk)(3) of the Act requires that the facility, on the date of enactment of the CAA, 2021 (December 27, 2020), was a CAH or a rural hospital with not more than 50 beds. For the purpose of REH designation, section 1861(kkk)(3)(B) defines rural hospital as a subsection (d) hospital (as defined in section 1886(d)(1)(B) with not more than 50 beds located in a county (or equivalent unit of local government) in a rural area (as defined in section 1886(d)(2)(D) of the Act)), or treated as being located in a rural area pursuant to section 1886(d)(8)(E) of the Act. (87 FR 72161).

We reiterated these requirements in the discussion of the Designation and Certification of REHs (§ 485.506) and finalized the regulatory text for the requirement at 42 CFR 485.506; however, we inadvertently cited the incorrect statutory references in one paragraph of the preamble. We proposed to correct these statutory citations from ''1881(d)(2)(D)'' to ''1886(d)(2)(D)'' and from ''1881(d)(1)(B)'' to ''1886(d)(1)(B)'' at § 485.506(b) and (c) (87 FR 72294).

We did not receive any public comments on our proposal and therefore, we are finalizing our proposal.

XXI. Rural Emergency Hospitals (REHs): Payment for Rural Emergency Hospitals (REHs)

A. Background on Rural Emergency Hospitals (REHs)

The Consolidated Appropriations Act (CAA), 2021 (Pub. L. 116–260), was signed into law on December 27, 2020. In this legislation, Congress established Rural Emergency Hospitals (REHs), a new rural Medicare provider type, to help maintain access to rural outpatient hospital services and prevent rural hospital closures. These providers furnish emergency department and observation care, and other specified outpatient medical and health services, if elected by the REH, that do not exceed an annual per patient average of 24 hours. Hospitals are eligible to convert to REHs if they were CAHs or rural hospitals with not more than 50 beds participating in Medicare as of the date of enactment of the CAA. For more information on the statutory authority for and the regulations implementing this new Medicare provider type, please refer to the CY 2023 OPPS/ASC final rule with comment period (87 FR 72160 through 72161).

B. REH Payment Methodology

Pursuant to section 1834(x)(1) of the Act and CMS's implementing regulations at 42 CFR 419.91 and 419.92(a)(1), payment for REH services is defined in terms of the amount of payment ''that would otherwise apply under section 1833(t),'' for covered outpatient department (OPD) services, increased by 5 percent. As discussed in the CY 2023 OPPS/ASC final rule with comment period, CMS interprets ''rural emergency hospital services,'' as defined by section 1861(kkk)(1) of the Act, to include the scope of covered OPD services as defined in 1833(t)(1)(B) of the Act (excluding 1833(t)(1)(B)(ii) of the Act) (87 FR 72162). In the CY 2023 OPPS/ASC final rule with comment period, CMS also finalized regulations at 42 CFR 419.92(c) which address payment for services furnished by an REH that fall outside the scope of the covered OPD services under section 1833(t)(1)(B) of the Act. In addition, pursuant to section 1834(x)(2) of the Act, CMS codified at § 419.92(b) that REHs will be paid an additional monthly facility payment, which was calculated for CY 2023 pursuant to the methodology described in the CY 2023 OPPS/ASC final rule with comment period and will be updated in subsequent years by the hospital market basket percentage increase as described in section 1886(b)(3)(B)(iii) of the Act.

C. Background on the IHS Outpatient All-Inclusive Rate (AIR) for Tribal and IHS Hospitals

For many years, tribal and IHS hospitals have been paid for hospital outpatient services furnished to Medicare beneficiaries based upon an outpatient per visit rate (the All-Inclusive Rate or ''AIR''), which is published annually by the IHS in the **Federal Register**. For additional information about the annual all-inclusive rates that IHS sets for inpatient and outpatient medical care provided by IHS facilities, please refer to IHS's CY 2023 Reimbursement Rate Notice which appeared in the **Federal Register** on February 27, 2023 (88 FR 12387).

In the CY 2002 OPPS final rule, CMS explicitly excluded IHS hospitals from the OPPS (66 FR 59893) and codified that exclusion at § 419.20(b)(4), explaining that these facilities would continue to be paid under the separately established rate (the AIR) that is published annually in the **Federal Register**.

D. Paying Indian Health Service (IHS) and Tribal Hospitals That Convert to an REH Under the AIR

While some tribal and IHS hospitals have expressed interest in converting to an REH, they have expressed significant reservations about doing so due to having to transition from their existing payment methodology under the AIR to the REH payment methodology. As discussed above, in accordance with § 419.20(b)(4) and CMS's longstanding policy, tribal and IHS hospitals are excluded from payment under the OPPS and instead are paid for hospital outpatient services under the AIR. In contrast, payment for REH services is defined in section 1834(x)(1) of the Act and under § 419.92(a)(1) as ''the amount of payment that would otherwise apply under section 1833(t) of the Act for the equivalent covered OPD service.'' Because there is no amount that would otherwise apply under section 1833(t) of the Act for hospital outpatient services furnished by tribal and IHS hospitals (because these hospitals have always been excluded from the OPPS for payment for hospital outpatient services), such services, when furnished by IHS or tribally operated REHs

(hereinafter referred to as ''IHS–REHs''), do not fall within the scope of ''REH services''. Under § 419.92(c), ''a service furnished by an REH that does not meet the definition of an REH service under § 419.91 is paid for under the payment system applicable to the service, provided the requirements for payment under that system are met.'' Consequently, we proposed that IHS–REHs be paid for hospital outpatient services under the same rate (the applicable AIR that is established and published annually by the IHS) that would otherwise apply if these services were performed by an IHS or tribal hospital, consistent with the requirements of § 419.92(c). Under the proposal, the AIR would serve as payment for services furnished by IHS–REHs as part of an outpatient hospital encounter in the same manner as the AIR currently applies to IHS operated hospitals. Accordingly, to the extent that IHS hospitals are currently compensated via the AIR, rather than other Medicare payment mechanisms, for services other than hospital outpatient services that are furnished as part of an outpatient hospital encounter, we proposed that an IHS–REH would also be paid via the AIR when furnishing such services as part of an outpatient hospital encounter. Further, we note that existing beneficiary coinsurance policies applicable to such services under the AIR would remain unchanged by our proposal.

We proposed that IHS–REHs would receive the REH monthly facility payment consistent with how this payment is made to REHs that are not tribal or IHS facilities. CMS pays the monthly facility payment, pursuant to section 1834(x)(2) of the Act, as a separate payment to the REH that is not tied to specific services. Likewise, there is nothing in the statute and CMS's implementing regulations (§ 419.92(b)) that would preclude REHs, including tribal or IHS–REHs, from receiving this payment, even if they are paid under a separate payment framework for hospital outpatient services provided to beneficiaries (87 FR 72167 through 72181). Therefore, we proposed that IHS–REHs would receive the monthly facility payment, consistent with § 419.92(b).

We also believe that for IHS–REHs it would be most efficient from a claims processing perspective for the IHS–REHs to process their claims separately from other REHs. Therefore, we proposed to update the OPPS claims processing logic to include an IHS–REH specific payment flag, which an IHS–REH provider would utilize to indicate that the provider is an IHS–REH and should be paid the AIR.

Allowing tribal and IHS hospitals to continue receiving payment for hospital outpatient services through the AIR would remove several barriers to these hospitals converting to REHs. The proposal would provide tribal and IHS hospitals that convert to REHs greater predictability by allowing these facilities to continue to be paid via a familiar payment mechanism (the AIR), that will enable payment at the same rate that these hospitals are currently paid for outpatient hospital encounters. The proposal would also reduce the administrative burden for tribal and IHS hospitals to convert to an REH since they would already be familiar with reporting services and receiving payment using the AIR and would not need to invest in new software and additional staff training to receive payment for individual REH services at the REH payment rate. The continued use of the AIR would also make it easier for tribal and IHS providers that convert to an REH, but later determine it was the wrong decision for their facility, to convert back to a CAH or an inpatient hospital. Finally, CMS anticipates that the proposal would enable an increased number of rural tribal and IHS hospitals to attain an REH designation in a manner that would allow them to maintain their outpatient services, which may have a positive impact on health equity for Native Americans and people adversely affected by persistent poverty or inequality by facilitating access to health care in rural tribal communities.

We proposed to add a new paragraph (d) to § 419.92 to codify that, beginning in CY 2024, IHS and tribally operated REHs, as defined in a proposed new paragraph (e) in § 419.92 as discussed below, will be paid under the outpatient hospital AIR that is established and published annually by the IHS instead of being paid the rates for REH services described in § 419.92(a)(1).

We also proposed to amend § 419.93(a)(2), relating to services furnished by an off-campus provider-based department of an REH, to add a reference to the proposed new provision at § 419.92(d) for purposes of payment for services furnished by off-campus provider-based departments of IHS and tribally operated REHs.

Finally, we proposed to establish a definition for IHS or tribally operated REHs, to identify the REHs that will be eligible to receive payment under the proposed new policy in § 419.92(d). Accordingly, we proposed to add paragraph (e) to § 419.92 to codify that for purposes of § 419.92, an IHS or tribally operated REH means an REH, as defined in § 485.502, that is operated by the IHS or by a tribe or tribal organization with funding authorized by Title I or III of the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638).

Comment: Two commenters requested a technical change to the proposed regulation text in § 419.92(e) to state that ''. . . an Indian Health Service (IHS) or tribal REH is an REH, as defined in 42 CFR 485.502 of this chapter, that is operated by the IHS or by a tribe or tribal organization with funding authorized by Title I or V of the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638)'' instead of by Title I or III of the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638).

Response: We agree with the commenters that the correct statutory reference for the funding authorization described in this context is to Titles I and V of the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638), and so we will be adopting this correction when finalizing § 419.92(f) as part of this final rule with comment period. Consistent with the commenters' suggested technical change to the proposed regulation text, we are also updating the term ''Indian Health Service (IHS) or tribally operated REH'' to ''Indian Health Service (IHS) or tribal REH'' in the regulation text at § 419.92(e) and (f) that we are finalizing as part of this final rule with comment period. As previously discussed, CMS proposed to allow Indian Health Service (IHS) or tribal facilities that become REHs to continue to receive the AIR in order to build on the longstanding policy and allow for continuity for eligible IHS and tribal hospitals that currently receive the AIR, and who might be interested in converting to the REH provider type. Providers that currently receive the outpatient AIR in the OPPS context are referred to as ''IHS or tribal hospitals,'' and thus for clarity and consistency we are finalizing § 419.92(e) and (f) with updated language that refers to ''Indian Health Service (IHS) or tribal REHs.''

Comment: One commenter asked that IHS and tribal REHs have the option to choose whether they can receive payment for services performed by an IHS–REH through either the AIR or the standard REH service payment methodology of paying the OPPS rate for a service plus an additional 5 percent payment.

Response: We thank the commenter but respectfully disagree with the suggestion to give IHS–REHs the option

to choose between whether their facility will receive payment for services provided through the AIR or the standard REH service payment methodology. As stated earlier in this section and in the CY 2024 OPPS/ASC proposed rule, CMS's proposal that IHS and tribal facilities that become REHs be paid for hospital outpatient services via the AIR, rather than the standard REH services payment methodology, is based on CMS's longstanding policy, in accordance with § 419.20(b)(4), that IHS and tribal facilities are excluded from payment under the OPPS and instead are paid for hospital outpatient services under the AIR. Section 1834(x)(1) of the Act and § 419.92(a)(1) define payment for REH services as ''the amount of payment that would otherwise apply under section 1833(t) of the Act for the equivalent covered OPD service.'' Because there is no amount that would otherwise apply under section 1833(t) of the Act for hospital outpatient services furnished by tribal and IHS hospitals, such services, when furnished by IHS or tribal REHs do not fall within the scope of REH services. Based on this, CMS has proposed that hospital outpatient services furnished by IHS or tribal REHs be paid via the AIR consistent with § 419.92(c), which provides that ''a service furnished by an REH that does not meet the definition of an REH service under § 419.91 is paid for under the payment system applicable to the service, provided the requirements for payment under that system are met.'' However, because paying IHS–REHs for hospital outpatient services under an alternative payment mechanism (the AIR) would be premised on hospital outpatient services furnished IHS–REHs not meeting the definition of ''REH services,'' it would be contradictory to also allow IHS–REHs the option of being paid under the standard payment mechanism for ''REH services'' when furnishing those same services.

Comment: Multiple commenters supported our proposals to allow IHS–REHs to receive service payments through the AIR instead of through the standard REH service payment methodology of the OPPS rate for a service plus an additional 5 percent payment.

Response: We thank the commenters for their support of our proposals.

After consideration of the public comments we received, and for the reasons discussed above and in the proposed rule, we are finalizing our proposals to allow IHS and tribal hospitals that become REHs to receive payment for services using the IHS outpatient hospital AIR with two minor modifications. First, we are correcting the statutory reference to the Indian Self Determination and Education Act (Pub. L. 93–638) which appears in § 419.92(f). Second, we are updating the term ''Indian Health Service (IHS) or tribally operated REH'' to be ''Indian Health Service (IHS) or tribal REH'' in § 419.92(e) and (f).

E. Exclusion of REHs From the OPPS

Hospitals that are excluded from payment under the OPPS are specified under § 419.20(b) of the regulations. Because, as described above, REHs are paid outside of the OPPS, we intended to revise § 419.20(b) during the CY 2023 rulemaking cycle to exclude REHs from payment under the OPPS. However, this intended revision was inadvertently omitted. Consequently, we proposed to codify the exclusion of REHs from the OPPS by adding new paragraph (b)(5) to § 419.20.

Comment: One commenter expressed their support for the corrections to the REH statutory references.

Response: We appreciate the support of the commenter.

After consideration of the public comments we received, we are implementing our proposal without modification.

XXII. Request for Public Comments on Potential Payment Under the IPPS and OPPS for Establishing and Maintaining Access to Essential Medicines

A. Overview

On January 26, 2021, President Biden issued Executive Order (E.O.) 14001, ''A Sustainable Public Health Supply Chain'' (86 FR 7219), which launched a whole-of-government effort to strengthen the resilience of medical supply chains, especially for pharmaceuticals and simple medical devices. This effort was bolstered subsequently by E.O.s 14005, 14017, and 14081 (86 FR 7475, 11849, and 25711, respectively). In June 2021, as tasked in E.O. 14017 on ''America's Supply Chains,'' the Department of Health and Human Services released a review of pharmaceuticals and active pharmaceutical ingredients, analyzing risks in these supply chains and recommending solutions to increase their reliability.[810] In July 2022, as tasked in E.O. 14001, the Biden–Harris Administration also released the *National Strategy for a Resilient Public Health Supply Chain,* which laid out a roadmap to support reliable access to products for public health in the future, including through prevention and mitigation of medical product shortages.[811]

Over the last few years, shortages for critical medical products have persisted and continued to increase.[812] For pharmaceuticals, even before the COVID–19 pandemic, nearly two-thirds of hospitals reported more than 20 drug shortages at any one time—from antibiotics used to treat severe bacterial infections to crash cart drugs necessary to stabilize and resuscitate critically ill adults.[813] The frequency and severity of these supply disruptions has only been exacerbated over the last few years.

Recent data supports that hospitals are estimated to spend more than 8.6 million personnel hours and $360 million per year to address drug shortages, which will likely further result in treatment delays and denials, changes in treatment regimens, medication errors,[814] [815] [816] as well as higher rates of hospital-acquired infections and in-hospital mortality.[817] [818] The additional time, labor, and resources required to navigate drug shortages also increase health care costs.[819]

Hospitals' procurement preferences directly influence upstream intermediary and manufacturer behavior and can be leveraged to help foster a more resilient supply chain for lifesaving drugs and biologicals. With respect to shortages, supply chain resiliency includes having sufficient inventory that can be leveraged in the event of a supply disruption or demand increase—as opposed to ''just-in-time'' inventory-management efficiency that can leave supply chains vulnerable to shortage.[820] [821] This concept is especially true for essential medicines, which generally comprise of products that are medically necessary to have available at all times in an amount adequate to serve patient needs and in the appropriate dosage forms. A resilient supply can also include essential medicines from multiple manufacturers, including the availability of domestic pharmaceutical manufacturing capacity, to diversify the sourcing of essential medicines. We believe it is necessary to support practices that can curtail pharmaceutical shortages of essential medicines and promote resiliency in order to safeguard and improve the care hospitals are able to provide to beneficiaries.

As discussed below in sections XXII.B, XXII.C, and XXII.D of this final rule with comment period, we sought comment on separate payment under the IPPS, and potentially the OPPS, for establishing and maintaining access to a buffer stock of essential medicines to foster a more reliable, resilient supply of these medicines. We provide an overview of comments received and next steps in sections XXII.E and XXII.F of this final rule with comment period.

B. Establishing and Maintaining a Buffer Stock of Essential Medicines

The report *Essential Medicines Supply Chain and Manufacturing Resilience Assessment,* as developed by the U.S. Department of Health and Human Services (HHS) Office of the Assistant Secretary for Preparedness and Response (ASPR) prioritized 86 essential medicines (hereinafter referred to as, the ''essential medicines'') identified as either critical for minimum patient care in acute settings or important for acute care or important for acute care of respiratory illnesses/conditions, with no comparable alternative available.[822] [823] When hospitals have insufficient supply of these essential medicines, such as during a shortage, care for Medicare beneficiaries can be negatively impacted. To mitigate negative care outcomes in the event of insufficient supply, hospitals can adopt procurement strategies that foster a consistent, safe, stable, and resilient supply of these essential medicines. Such procurement strategies can include provisions to maintain or otherwise provide for extra stock of product (for example, either to maintain or to hold directly at the hospital, arrange contractually for a distributor to hold, or arrange contractually with a wholesaler for a manufacturer to hold), which can act as a buffer in the event of an unexpected increase in product use or disruption to supply. We expect that the resources required to establish and maintain access to a minimal ''buffer stock'' of essential medicines, such as a 3-month supply, will generally be greater than the resources required to establish and maintain access to these medicines through alternative means that are more susceptible to supply chain disruptions (for example, through so-called ''just-in-time'' inventory practices). Given these additional resource costs, we stated in the CY 2024 OPPS/ASC proposed rule we were considering separate payment under the IPPS and the OPPS for the costs of establishing and maintaining access to a buffer stock of essential medicines.

For the IPPS, we indicated that the Secretary could potentially make this separate payment for the additional resource costs of establishing and maintaining access to a buffer stock of essential medicines under section 1886(d)(5)(I) of the Act, which authorizes the Secretary to provide by regulation for such other exceptions and adjustments to the payment amounts under section 1886(d) of the Act as the Secretary deems appropriate.

For the OPPS, we indicated that the Secretary could potentially make this separate payment for the additional resource costs under section 1833(t)(2)(E) of the Act. Section 1833(t)(2)(E) of the Act provides that the Secretary shall establish, in a budget neutral manner, other adjustments (in addition to outlier and transitional pass-through payments and payments for non-opioid treatments for pain relief) necessary to ensure equitable payments, such as adjustments for certain classes of hospitals.

Additionally, we stated that sustaining sources of domestically sourced medical supplies can also help support continued availability in the event of public health emergencies and other disruptions.[824] [825] We indicated this concept was consistent with our current policy for domestic National Institute for Occupational Safety and Health (NIOSH) approved surgical N95 respirators (87 FR 72037). Hospitals, as major purchasers and users in the U.S. of essential medicines, can support the existence of domestic sources by sourcing domestically made essential medicines. However, we indicated that we expect that domestically manufactured essential medicines may be more expensive than those sourced from some other countries that may have lower manufacturing costs.[826] Given these additional resource costs, we took into account the increased costs to establish and maintain access to a buffer stock of domestically manufactured essential medicines when developing the potential payment policy discussed in the CY 2024 OPPS/ASC proposed rule.

In addition to essential medicines, we indicated that we may consider expanding a potential Medicare payment policy in future years to include critical medical devices once the HHS Critical Medical Device List (CMDL) becomes available. In accordance with implementation of Executive Order 14001 on a Sustainable Public Health Supply Chain, the FDA is leading an effort to develop this list of recommended medical devices that are critical to have on hand, at all times for patients, healthcare workers, and the U.S. public because of their clinical need. We stated that HHS' list was expected to be available by the end of 2023.

C. Potential Separate Payment Under IPPS and OPPS for Establishing and Maintaining Access to a Buffer Stock of Essential Medicines

Currently, payment for the resources required to establish and maintain access to medically reasonable and necessary drugs and biologicals is generally part of the IPPS or OPPS payment. As noted in section XXII.B of the CY 2024 OPPS/ASC proposed rule, we expect that the resources required to establish and maintain access to a buffer stock of essential medicines will generally be greater than the resources required to establish and maintain access to these medicines without such a buffer stock. Additionally, the resources required to establish and maintain access to a buffer stock of domestically manufactured essential medicines may generally be greater than the resources required to establish and maintain access to a buffer stock of these medicines from non-domestic sources. Given the policy goals we discussed in sections XXII.A and XXII.B of the CY 2024 OPPS/ASC proposed rule, we stated we believe it may be appropriate to pay separately for the additional resource costs associated with establishing and maintaining access, including through contractual arrangement, to a buffer stock of essential medicines. We indicated that these potential separate payments would be in addition to payment for the essential medicines themselves, whether that payment is bundled with other items or services or the essential medicines are separately paid, and would help account for the additional resource costs associated with establishing and maintaining access, including through contractual arrangements, to a buffer stock of these essential medicines.

We noted it is challenging to quantify these additional resource costs precisely based on currently available information. As noted in section XXII.B of the CY 2024 OPPS/ASC proposed rule, hospitals could establish and maintain access to a buffer stock in a variety of ways, including, but not limited to, through contractual arrangements with distributors and wholesalers. Given the current challenge in precisely quantifying these additional resource costs, we indicated in the CY 2024 OPPS/ASC proposed rule that CMS could initially base the IPPS payment on the IPPS shares of the additional reasonable costs of a hospital to establish and maintain access to its buffer stock. The use of IPPS shares in this payment adjustment would be consistent with the use of these shares for the payment adjustment for domestic NIOSH approved surgical N95 respirators (87 FR 72037). These costs, which could include costs to hold essential medicines directly at the hospital, arrange contractually for a distributor to hold, or arrange contractually with a wholesaler for a manufacturer to hold, could be reported to CMS by a hospital in aggregate on its cost report. These costs would not include the costs of the essential medicine itself. This reported information, along with existing information already collected on the cost report, could be used to calculate a Medicare payment for the estimated cost, specific to each hospital, incurred to establish and maintain access to its buffer stock of these essential medicines. In accordance with the principles of reasonable cost as set forth in section 1861(v)(1)(A) of the Act and in 42 CFR 413.1 and 413.9, we indicated that Medicare could make a lump-sum payment for Medicare's share of these additional inpatient costs at cost report settlement.

In the CY 2024 OPPS/ASC proposed rule, we indicated these payments for the IPPS shares of establishing and maintaining access to a buffer stock of essential medicines could be provided biweekly as interim lump-sum payments to the hospital and would be reconciled at cost report settlement. A provider could make a request for these biweekly interim lump sum payments for an applicable cost reporting period, as provided under 42 CFR 413.64 (Payments to providers: Specific rules) and 412.116(c) (Special interim payments for certain costs). These payment amounts would be determined by the Medicare Administrative Contractor (MAC), consistent with existing policies and procedures. In general, interim payments are determined by estimating the reimbursable amount for the year using Medicare principles of cost reimbursement and dividing it into 26 equal biweekly payments. The estimated amount is based on the most current cost data available, which will be reviewed and, if necessary, adjusted at least twice during the reporting period. (See CMS Pub 15–1 2405.2 for additional information.) The MACs could determine the interim lump-sum payments based on the data the hospital may provide that reflects the information that could be included on a supplemental cost reporting form. (In the CY 2024 OPPS/ASC proposed rule we indicated that CMS would separately seek comment through the PRA process on a potential supplemental cost reporting form that could be used for this purpose.) In future years, the MACs could determine the interim biweekly lump-sum payments utilizing information from the prior year's cost report, which may be adjusted based on the most current data available. This would be consistent with the current policies for medical education costs, and bad debts for uncollectible deductibles and coinsurance paid on interim biweekly basis as noted in CMS Pub 15–1 2405.2. It is also consistent with the payment adjustment for domestically sourced NIOSH approved surgical N95 respirators (87 FR 72037).

We sought comment on separate payment under IPPS for the IPPS share of the reasonable costs of establishing and maintaining access to a 3-month buffer stock of one or more essential medicine(s). We indicated that essential medicines for a potential IPPS separate payment would be the 86 essential medicines prioritized in the report *Essential Medicines Supply Chain and Manufacturing Resilience Assessment.* We indicated that an adjustment under OPPS could be considered for future years. We sought comment on all aspects of this potential payment policy.

We indicated that to reflect any such separate payment under the IPPS, we were considering amending our regulations at 42 CFR 412.1 by revising paragraph (a)(1)(iv) to read as follows: ''Additional payments are made for outlier cases, bad debts, indirect medical education costs, for serving a disproportionate share of low-income patients, for the additional resource costs of domestic National Institute for Occupational Safety and Health approved surgical N95 respirators, and for the additional resource costs of establishing and maintaining access to a buffer stock of essential medicines.''

We stated that we were also considering amending our regulations, and sought comment on these potential revisions, at 42 CFR 412.2 by adding paragraph (f)(11) to read as follows: ''A payment adjustment for the additional resource costs of establishing and maintaining access to a buffer stock of essential medicines as specified in § 412.113.''

We stated that we were also considering amending our regulations, and sought comment on these potential revisions at § 412.113 by adding a paragraph (g) providing that additional resource costs of establishing and maintaining access to a buffer stock of essential medicines:

- Essential medicines are the 86 medicines prioritized in the report *Essential Medicines Supply Chain and Manufacturing Resilience Assessment*

developed by the U.S. Department of Health and Human Services Office of the Assistant Secretary for Preparedness and Response and published in May of 2022. A buffer stock of essential medicines for a hospital is a 3-month supply of one or more essential medicines;

- The additional resource costs of establishing and maintaining access to a buffer stock of essential medicines for a hospital are the additional resource costs incurred by the hospital to directly hold a buffer stock of essential medicines for its patients, or arrange contractually for such a buffer stock to be held for use by the hospital for its patients. The additional resource costs of establishing and maintaining access to a buffer stock of essential medicines does not include the resource costs of the essential medicines themselves;
- For cost reporting periods beginning on or after January 1, 2024, a payment adjustment to a hospital for the additional resource costs of establishing and maintaining access to a buffer stock of essential medicines is made as described in § 412.113(g)(4); and
- The payment adjustment is based on the reasonable cost incurred by the hospital for establishing and maintaining access to a buffer stock of essential medicines during the cost reporting period.

D. Comment Solicitation on Additional Considerations

In addition to the potential payment policy described in section XXII.C of the CY 2024 OPPS/ASC proposed rule, we sought comment on additional considerations in section XXII.D of the CY 2024 OPPS/ASC proposed rule. These additional considerations are summarized below, but we refer the public to section XXII. D of the CY 2024 OPPS/ASC proposed rule for the complete discussion. We sought comment on the following:

- How effective the potential payment policy would be at improving the resiliency of the supply chain for essential medicines and the care delivery system.
- A number of issues related to establishing and maintaining access to a buffer stock of more expensive domestically manufactured essential medicines compared to non-domestically manufactured ones.
- The list of essential medicines, including expanding the list to include essential medicines used in the treatment of cancer.
- Whether a 3-month supply is the appropriate amount of supply for the buffer stock or whether an alternative duration should be used.
- The resources involved in establishing and maintaining access to a buffer stock of essential medicines.
- Current practices regarding buffer stocks, including the use of contractual arrangements.
- The unique circumstances of safety net hospitals or other types of hospitals.
- Flexibilities that should exist for implementing buffer stock practices.
- The immediate impacts on the supply of essential medicines that could be expected upon implementation of the potential policy, including what steps, if any, would need to be taken to mitigate risks of possible demand-driven shortages as a result of implementation of such a policy.
- A separate payment adjustment to more acutely address supply issues that emerge specific to a pandemic or other public health emergency.
- Essential medicines that are currently in shortage, and thus potentially not appropriate for arranging to have buffer stock.
- A number of issues related to critical medical devices.

E. Overview of Comments Received

All commenters acknowledged the importance of addressing domestic drug shortages and medical supply chain disruptions. Many thanked HHS for drawing attention to the issue and considering actions aimed at reducing the many negative repercussions to hospitals and patients caused by drug shortages. However, there was a lack of consensus among commenters about a potential Medicare payment policy. As described further below, CMS is not finalizing any changes at this time, but intends to propose future policy addressing aspects of hospital practices with respect to pharmaceutical supply, including in future payment rules and through Conditions of Participation.

Some commenters, including a limited number of pharmaceutical manufacturers, some smaller hospital associations, hospital pharmacist and other health care provider associations and hospital systems were supportive of the potential separate payment. Some of these commenters stated that a potential payment could foster a more resilient and reliable supply of essential medicines, and would help hospitals mitigate negative impacts to drug supply and patient care during emergencies. Some of these commenters suggested that CMS clarify whether hospitals could—or should—arrange for these buffer stocks to be maintained by other parties ''upstream,'' such as manufacturers and wholesalers, rather than maintain buffer stocks themselves as individual hospitals. Some of these commenters noted the importance of implementing a policy in a way that mitigates potential for demand-driven shortages.

The majority of commenters, including MedPAC, stated they did not support the specific potential payment policy as described and discussed in the request for comment. Most hospitals, hospital associations, pharmaceutical manufacturers, academic researchers, and patient organizations who commented were concerned that design changes would be necessary to avoid exacerbating existing drug shortages or causing demand-driven shortages. Some commenters were concerned about a potential policy inducing hoarding behaviors and fragmenting the available stock of the 86 essential medicines. Several commenters suggested that CMS phase in (for example, by region or length of time covered by the buffer stock) or stagger implementation of any potential policy over time to mitigate the risk of demand shocks (including impacts to care settings outside of hospitals), remove drugs from the essential medicines list if they are currently in shortage, and, to help inform policy approaches, first work with hospitals and manufacturers to better understand current practices and patterns. Commenters stated we should either implement flexibilities for drugs in shortage or at risk of shortage or exclude them from eligibility under any potential policy.

Commenters were generally supportive of a 3-month length of time for the buffer stock, with some advocating a smaller stock to maximize adoption of the policy. Others advocated for a 6-month buffer stock, either initially or transitioning to that length, to better improve supply chain resiliency. Several commenters stated that no length of time was uniformly appropriate for all the 86 essential medicines, suggesting that HHS tailor the size of the buffer stock to each drug.

Some commenters raised equity concerns regarding the impact of this policy on small, rural providers and safety net hospitals. They indicated that these providers tend to have less surplus funding on hand and may not be able to afford the upfront costs of establishing a buffer stock of one or more of the 86 essential medicines. Commenters stated that if only large, urban hospitals can afford to opt into the policy and thereby fragment the existing supply of essential medicines, rural and safety net hospitals may experience reduced access to these essential medicines. Because the cost of the medicines themselves would not be included under the potential payment

policy as described, commenters suggested that CMS provide incentive payments or direct financial support to hospitals unable to opt into the policy due to financial obstacles. Several commenters expressed concern that such a policy may exclusively benefit large urban hospitals, as they claimed only these hospitals could afford the upfront costs of establishing a buffer stock. Commenters indicated that hospital participation in such policy as described in the comment solicitation should be voluntary.

We received many comments about the appropriate list of essential medicines considered for inclusion in a potential policy. Many commenters agreed with the use of the 86 essential medicines prioritized in the report *Essential Medicines Supply Chain and Manufacturing Resilience Assessment* (also referred to as ''ASPR's list'' by commenters). Other commenters proposed other lists, including the list FDA was directed to issue under E.O. 13944 (referred to as the ''FDA list'' by many commenters), the World Health Organization's Essential Medicines List, Vizient's Essential Medications For High-Quality Patient Care, a list of drugs developed by the National Association of EMS Physicians, and a Pediatric Drug List. Many commenters stated the E.O. 13944 list is more inclusive (including blood products) than ASPR's list and some stated that health care workers are most familiar with it. Several commenters suggested creating a new list organized by disease states, such that any medication approved for treating a given disease on the list would be approved for inclusion under the policy. Other commenters suggested that CMS convene a panel of experts to create a tailored list, stating that some critical medicines are missing from the existing ASPR list and some medicines on the list are unnecessary to include (for example, oral olanzapine). Other commenters proposed the expansion of existing lists or creation of new lists of essential medicines for the outpatient setting including outpatient cancer care and physicians' offices. Commenters stated that an expanded list would enable the program to adapt quickly to changes in manufacturing supply and demand and address the specific needs of individual hospitals.

Several commenters expressed interest in a broader policy targeting effective quality management practices among pharmaceutical manufacturers, which they stated remains the leading driver of supply-driven drug shortages, and requested that HHS adopt policies to address this issue. Some advised instituting payment incentives for, or limiting eligibility to, those providers that contracted with manufacturers with strong quality management maturity practices when establishing their respective buffer stock of one or more of the 86 essential medicines. Another commenter stated that, to reduce reliance on companies likely to have quality failures, drugs from manufacturers with a recent history of FDA warning letters should be excluded. Other commenters suggested that CMS focus higher payments on the purchase of domestically made essential medicines. Some commenters stated that an operational definition of domestic would be difficult for the essential medicines, and suggested that CMS consider definitions of domestic other than the definition noted in the CY 2024 OPPS/ASC proposed rule.

Many commenters were concerned about the added administrative burden associated with tracking and calculating the additional costs associated with establishing and maintaining a buffer stock of essential medicines, either directly or through contractual arrangements with pharmaceutical intermediaries or manufacturers. They stated that the administrative burden of collecting and reporting this information through a supplemental cost reporting worksheet would be sufficiently costly or onerous to prevent hospitals from seeking separate payment. Some commenters expressed concern about the administrative complexity of directly maintaining a buffer stock of essential medicines if they wished to do so rather than maintaining the buffer stock through a contract with a pharmaceutical manufacturer or distributor. These commenters stated concerns about having adequate storage space and inventory management capability for 3 months of product. Commenters stated that such hospitals would likely have to maintain separate records for buffer stock essential medicines, depending on the scope of the policy, as well as potentially for domestically versus non-domestically manufactured medicines within those buffer stocks. One commenter suggested episodically surveying hospitals on their storage costs and making payment based on a national average (excluding outliers) so providers are not subject to as many reporting requirements.

Several commenters expressed concern that providers may not receive separate payment for the IPPS share of establishing and maintaining a buffer stock upon audit. For example, as indicated earlier, in accordance with the principles of reasonable cost as set forth in section 1861(v)(1)(A) of the Act and in 42 CFR 413.1 and 413.9, Medicare could make a lump-sum payment for Medicare's share of the additional inpatient costs at cost report settlement. As with other separate Medicare payments based on reasonable costs, an audit of the cost report submitted by the hospital might determine the costs submitted by the hospital not to be reasonable. Some commenters stated this may make providers hesitant or unwilling to opt into a potential essential medicines policy.

F. Next Steps

We appreciate the broad consensus regarding the need to curtail pharmaceutical shortages of essential medicines and promote resiliency in order to safeguard and improve the care hospitals are able to provide to beneficiaries. We agree with commenters that a multifaceted approach is likely necessary. As part of our initial efforts, we intend to propose new Conditions of Participation in forthcoming notice and comment rulemaking addressing hospital processes for pharmaceutical supply. Although in this final rule with comment period we are not adopting a policy regarding payment under the IPPS or OPPS for establishing and maintaining access to essential medicines, in response to the comments received, we continue to seek feedback from interested parties on ways to address the additional costs hospitals face to address pharmaceutical shortages and prepare for future emergencies. We will consider this feedback in future payment policy. We look forward to continuing to engage with the public on this critical issue in future rulemaking.

XXIII. Files Available to the Public Via the Internet

The Addenda to the OPPS/ASC proposed rules and final rules with comment period are published and available via the internet on the CMS website. In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59154), for CY 2019, we changed the format of the OPPS Addenda A, B, and C by adding a column titled ''Copayment Capped at the Inpatient Deductible of $1,364.00'' where we flag, through use of an asterisk, those items and services with a copayment that is equal to or greater than the inpatient hospital deductible amount for any given year (the copayment amount for a procedure performed in a year cannot exceed the amount of the inpatient hospital deductible established under section 1813(b) of the Act for that year). In the CY 2022 OPPS/ASC final rule

with comment period (85 FR 86266), we updated the format of the OPPS Addenda A, B, and C by adding a column titled ''Drug Pass-Through Expiration during Calendar Year'' where we flagged, through the use of an asterisk, each drug for which pass-through payment was expiring during the calendar year on a date other than December 31. For CY 2024 and subsequent years, we proposed to retain these columns that are updated to reflect the drug codes for which pass-through payment is expiring in the applicable year.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72250) for CY 2023, we changed the format of the OPPS Addenda A, B, and C by adding a column titled ''Drug Pass-Through Expiration during Calendar Year'' to include devices, so that the column reads: ''Drug and Device Pass-Through Expiration during Calendar Year'' where we flagged, through the use of an asterisk, each drug and device for which pass-through payment was expiring during the calendar year on a date other than December 31. For CY 2024 and subsequent years, we proposed to retain these columns that are updated to reflect the devices for which pass-through payment is expiring in the applicable year.

In addition, we proposed to delete the column titled ''Copayment Capped at the Inpatient Deductible'' and instead to add a new column for ''Adjusted Beneficiary Copayment'' to identify any copayment adjustment due to either the inpatient deductible amount copayment cap or the inflation-adjusted copayment of a Part B rebatable drug per section 1833(t)(8)(F) and section 1833(i)(9) of the Act, as added by section 11101 of the Inflation Reduction Act (IRA). We also proposed to add another column for notes. We proposed that the ''Note'' column would contain multiple messages including, but not limited to, inflation-adjusted copayment of a Part B rebatable drug, the copayment for a code capped at the inpatient deductible, or 8 percent of the reference product add-on applied for a biosimilar.

For CY 2024, we did not receive any public comments and are finalizing our proposal to update the addenda format by deleting the column titled ''Copayment Capped at the Inpatient Deductible'' and instead to add two new columns for ''Adjusted Beneficiary Copayment'' and ''Note.''

In addition, for CY 2024, we are updating the format of the OPPS Addenda A, B, and C by adding another column for ''IRA Coinsurance Percentage'' to identify the percentage for the inflation-adjusted copayment of a Part B rebatable drug per section 1833(t)(8)(F) and section 1833(i)(9) of the Act, as added by section 11101 of the Inflation Reduction Act (IRA). To view the Addenda to this final rule pertaining to CY 2024 payments under the OPPS, we refer readers to the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices;* select ''CMS–1786–FC'' from the list of regulations. All OPPS Addenda to this final rule with comment period are contained in the zipped folder titled ''2024 NFRM OPPS Addenda'' in the related links section at the bottom of the page. To view the Addenda to this CY 2024 OPPS/ASC final rule with comment period pertaining to CY 2024 payments under the ASC payment system, we refer readers to the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-regulations-and-notices;* select ''CMS–1786–FC'' from the list of regulations. The ASC Addenda to the CY 2024 OPPS/ASC proposed rule are contained in a zipped folder titled ''2024 NFRM Addendum AA, BB, DD1, DD2, EE, and FF''.

XXIV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs):

A. ICRs Related to Proposed Intensive Outpatient Physician Certification Requirements

As discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49702), we proposed to codify the content of certification and plan of treatment requirements for intensive outpatient services at § 424.24(d). Specifically, we proposed to mirror the PHP content of certification and plan of care treatment requirements at § 424.24(e), with the following exceptions: require the content of certification to include documentation that the individual requires such services for a minimum of 9 hours per week (with no requirement for a need for inpatient psychiatric care if the IOP services were not provided).

We stated that the proposed ICRs at § 424.24(d) are subject to the Act. However, we stated that we believe the burden associated with these ICRs are exempt, as defined by 5 CFR 1320.3(b)(2), because the time, effort, and financial resources necessary to comply with these requirements would be incurred by persons in the normal course of their activities. We stated that we believe the record keeping requirements described in section VIII.B.3 of the CY2024 OPPS/ASC proposed rule are a usual and customary part of physicians' activities in developing the plan of treatment for existing patients in intensive outpatient programs, and that the requirements are similar to existing ICRs under Medicare for partial hospitalization patients.

We did not receive any comments on the burden estimate in the CY 2024 OPP/ASC proposed rule.

B. ICRs Related to the Hospital OQR Program

1. Background

The Hospital Outpatient Quality Reporting (OQR) Program is generally aligned with the CMS quality reporting program for hospital inpatient services known as the Hospital Inpatient Quality Reporting (IQR) Program. We refer readers to the CY 2011 through CY 2023 OPPS/ASC final rules (75 FR 72111 through 72114; 76 FR 74549 through 74554; 77 FR 68527 through 68532; 78 FR 75170 through 75172; 79 FR 67012 through 67015; 80 FR 70580 through 70582; 81 FR 79862 and 79863; 82 FR 59476 through 59479; 83 FR 59155 and 59156; 84 FR 61468 through 61469; 85 FR 86266 through 86267; 86 FR 63961 through 63968, and 87 FR 72250 through 72252, respectively) for detailed discussions of the previously finalized Hospital OQR Program ICRs.

The ICRs associated with the Hospital OQR Program are currently approved

under OMB control number 0938–1109, which expires on February 28, 2025. In the CY 2023 OPPS/ASC final rule, our burden estimates were based on an assumption that approximately 3,350 hospitals would report data to the Hospital OQR Program. For this final rule, based on data from the CY 2023 Hospital OQR Program payment determination, which supports this assumption, we will continue to estimate that 3,350 hospitals will report data to the Hospital OQR Program, unless otherwise noted. While the exact number of hospitals required to submit data annually may vary, we use this estimate to be consistent with previous rules and for ease of calculation across reporting periods.

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 52617), we finalized a policy to utilize the median hourly wage rate for Medical Records and Health Information Technicians, in accordance with the Bureau of Labor Statistics (BLS), to calculate our burden estimates for the Hospital OQR Program. We note that since the CY 2023 OPPS/ASC final rule with comment period, BLS removed this labor category and added a new labor category titled ''Medical Records Specialists.'' While the most recent data from the BLS reflects a median hourly wage of $24.56 per hour for all medical records specialists, $26.06 is the hourly mean wage for ''general medical and surgical hospitals,'' [827] which is an industry within medical records specialists. We believe the industry of ''general medical and surgical hospitals'' is more specific to our settings for use in our calculations than other industries that fall under medical records specialists, such as ''office of physicians'' or ''nursing care facilities.'' We have finalized a policy to calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage (82 FR 52617). This is necessarily a rough adjustment, both because fringe benefits and overhead costs can vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($26.06 × 2 = $52.12) to estimate the total cost is a reasonably accurate estimation method and allows for a conservative estimate of hourly costs.

In section XIV.B.2 of this final rule with comment period, we finalized our proposals to modify three previously adopted measures: (1) the COVID–19 Vaccination Coverage Among Healthcare Personnel measure, beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure survey instrument usage, beginning with the voluntary CY 2024 reporting period; and (3) the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure, beginning with the CY 2024 reporting period/CY 2026 payment determination. We finalized with modification, our proposals to adopt two new measures: (1) Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting, with voluntary reporting beginning with the CY 2025 reporting period followed by mandatory reporting beginning one year later than proposed with the CY 2028 reporting period/CY 2031 payment determination; and (2) the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) electronic clinical quality measure (eCQM), with voluntary reporting beginning with the CY 2025 reporting period followed by mandatory reporting beginning one year later than proposed with the CY 2027 reporting period/CY 2029 payment determination.

We did not finalize our proposals to: (1) remove the Left Without Being Seen measure; or (2) re-adopt the Hospital Outpatient Volume on Selected Outpatient Surgical Procedures measure with modification.

2. Information Collection Burden To Modify the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

In the CY 2022 OPPS/ASC final rule with comment period, we finalized adoption of the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure for the Hospital OQR Program (87 FR 71748 through 72310). In section XIV.B.2.a of this final rule with comment period, we finalized our proposal to modify the COVID–19 Vaccination Coverage Among HCP measure to utilize the term ''up to date'' in the HCP vaccination definition and update the numerator to specify the timeframes within which an HCP is considered up to date with recommended COVID–19 vaccines, including booster doses, beginning with the CY 2024 reporting period/CY 2026 payment determination for the Hospital OQR Program. We previously discussed information collection burden associated with this measure in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63962).

We do not believe that the use of the term ''up to date'' or the update to the numerator will impact information collection or reporting burden because the modification changes neither the amount of data being submitted to CMS nor the frequency of data submission. Additionally, because we did not finalize any updates to the form, manner, and timing of data submission for this measure, we do not anticipate any increase in burden associated with this policy. The modified COVID–19 Vaccination Coverage Among HCP measure will continue to be calculated using data submitted to the CDC under a separate OMB control number (0920–1317; expiration date January 31, 2024). However, the CDC currently has a PRA waiver for the collection and reporting of vaccination data under section 321 of the National Childhood Vaccine Injury Act of 1986 (enacted on November 14, 1986) (NCVIA) (Pub. L. 99–660).

3. Information Collection Burden To Modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure Survey Instrument Use Beginning With the CY 2024 Reporting Period

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75102 through 75104), we finalized the adoption of the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery beginning with the CY 2016 payment determination; this measure currently is voluntary. In section XIV.B.2.b of this final rule with comment period, we finalized our proposal to limit the survey instruments that can be used to administer this measure to three assessment tools: NEI VFQ–25, VF–14, and VF–8R, beginning with the CY 2024 reporting period.

Because the three assessment tools being finalized are currently allowable for collecting data for this measure, we do not believe limiting use to these three surveys would result in a change in burden. As a result, we did not propose any changes in burden per response associated with this policy to finalize. Additionally, as currently stated in the Hospital OQR Program Specifications Manual, the maximum annual sample case size for chart abstraction for this measure is 63 cases

[827] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed on March 6, 2023. Available at: *https://www.bls.gov/oes/current/oes292072.htm.*

for hospitals with an outpatient population size of between 0 and 900 and 96 cases for hospitals with an outpatient population size of greater than 900.[828] We did not propose an increase in the required sample size for chart abstraction; therefore we do not believe there is any increase in burden associated with this policy.

4. Information Collection Burden To Modify the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients Measure Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

In the CY 2014 OPPS/ASC final rule with comment period, we finalized the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure (78 FR 75101 and 75102). In section XIV.B.2.c of this final rule with comment period, we finalized our proposal to amend the measure denominator language by removing the phrase ''aged 50 years'' and adding in its place the phrase ''aged 45 years.''

As currently stated in the Hospital OQR Program Specifications Manual, the maximum annual sample case size for chart abstraction for this measure is 63 cases for hospitals with an outpatient population size of between 0 and 900 and 96 cases for hospitals with an outpatient population size of greater than 900. We did not propose an increase in the required sample size for chart abstraction; therefore, we do not believe there is any increase in burden associated with this policy.

5. Information Collection Burden To Adopt the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting With Voluntary Reporting Beginning With the CY 2025 Reporting Period Followed by Mandatory Reporting Beginning With the CY 2028 Reporting Period/CY 2031 Payment Determination

In section XIV.B.3.b of this final rule with comment period, we finalized our proposal to adopt the THA/TKA PRO–PM with voluntary reporting beginning with the CY 2025 reporting period, followed by mandatory reporting beginning one year later than proposed with the CY 2028 reporting period/CY 2031 payment determination. This measure was previously adopted for the Hospital IQR Program in the FY 2023 IPPS/LTCH PPS final rule with an estimated burden of 7.25 minutes (0.120833 hours) per patient to complete both the pre-operative and post-operative surveys and 10 minutes (0.167 hours) per hospital per response to collect and submit the measure data via the Hospital Quality Reporting (HQR) system (87 FR 49386 and 49387). We believe the estimated burden for both patient surveys and data submission would be the same for the Hospital OQR Program.

The THA/TKA PRO–PM uses four sources of data for the calculation of the measure: (1) patient-reported outcome (PRO) data; (2) claims data; (3) Medicare enrollment and beneficiary data; and (4) U.S. Census Bureau survey data. We estimate no additional burden associated with claims data, Medicare enrollment and beneficiary data, and U.S. Census Bureau survey data as these data are already collected via other mechanisms such as Medicare enrollment forms, CMS Form 1500, and U.S. Census Informational Questionnaires. While we did not propose to require how hospitals collect PRO data for this measure, hospitals collecting PRO data would have multiple options for when and how they would collect these data so they can best determine the mode and timing of collection that works best for their patient population.

The possible patient touchpoints for pre-operative PRO data collection include the doctor's office, pre-surgical steps such as education classes, or medical evaluations that can occur in an office or at the hospital. The modes of PRO data collection can include completion of the pre-operative surveys using electronic devices (such as an iPad or tablet), pen and paper, mail, telephone, or through a patient portal. Post-operative PRO data collection modes are similar to pre-operative modes. The possible patient touchpoints for post-operative data collection can occur before the follow-up appointment, at the doctor's office, or after the follow-up appointment. The potential modes of PRO data collection for post-operative data are the same as for pre-operative data. If the patient does not or cannot attend a follow-up appointment, the modes of collection can include completion of the post-operative survey using email, mail, telephone, or through a patient portal. Similar to other surveys, like the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) survey, we believe the use of multiple modes would maximize response rates as it allows for different patient preferences.

For the THA/TKA PRO–PM data, hospitals would be able to submit data during three voluntary periods. The first voluntary reporting period would begin in CY 2025 for eligible procedures occurring between January 1, 2025, through December 31, 2025; the second voluntary reporting period would begin in CY 2026 for eligible procedures occurring between January 1, 2026, through December 31, 2026; and the third voluntary reporting period would begin in CY 2027 for eligible procedures occurring between January 1, 2027, through December 31, 2027. Voluntary reporting would be followed by mandatory reporting beginning with the CY 2028 reporting period for eligible elective procedures occurring between January 1, 2028, and December 31, 2028, impacting the CY 2031 payment determination. Hospitals would need to submit data twice (pre-operative data and post-operative data).

For the purposes of calculating burden, similar to assumptions used for the Hospital IQR Program in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49386 and 49387), we estimate that during the voluntary periods, 50 percent of hospitals that perform at least one THA/TKA procedure would submit data for 50 percent of THA/TKA patients. For purposes of calculating burden, we estimate that, during the mandatory period, hospitals would submit for 100 percent of patients. While we finalized the requirement that hospitals submit, at minimum, 50 percent of eligible, complete pre-operative data with matching eligible, complete post-operative data, we are conservative in our estimate for the mandatory period in case hospitals exceed this threshold.

To estimate the cost burden for patients completing the surveys for this finalized measure, we refer to the ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices,'' as it identifies the approach for valuing time when individuals undertake activities on their own time.[829] Therefore, we estimate that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of $20.71/hour. To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of $998, divided by 40 hours to calculate an hourly pre-tax wage rate of $24.95/hour. This rate is adjusted downwards by an estimate of the effective tax rate for median income

[828] *https://qualitynet.cms.gov/files/63c8361058e56000179b310e?filename=OQR_v16.0a_SpecsManual_011723.pdf.*

[829] *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework.*

households of about 17 percent, resulting in the post-tax hourly wage rate of $20.71/hour. Unlike our State and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

For burden estimating purposes for this measure, we assume that most hospitals would likely undertake PRO data collection through a screening tool incorporated into their electronic health record (EHR) or other patient intake process. We estimate that approximately 526,793 THA/TKA procedures occur in the outpatient setting each year, and that many patients could complete both the pre-operative and post-operative questionnaires. However, from our experience with using this measure in the Comprehensive Joint Replacement model, we are also aware that not all patients who complete the pre-operative questionnaire would complete the post-operative questionnaire. For the CYs 2025, 2026, and 2027 reporting periods, we assume 131,698 patients would complete the survey (526,793 patients × 0.50 × 0.50 of hospitals) for a total of 15,914 hours annually (131,698 respondents × 0.120833 hours) at a cost of $329,579 (15,914 hours × $20.71) across all hospitals. Beginning with mandatory reporting in the CY 2028 reporting period, we estimate a total of 63,654 hours (526,793 patients × 0.120833 hours) at a cost of $1,318,274 (63,654 hours × $20.71) across all hospitals.

Regarding hospitals' burden related to submitting data for this finalized measure, which would be reported via the HQR System, we estimate a burden of 10 minutes per response. Hospitals would submit data associated with pre-operative surveys by March 31 of the CY following the CY in which the eligible procedures took place and would submit data associated with post-operative surveys by March 31 of the CY following the CY in which pre-operative data was submitted. Therefore, for the initial voluntary reporting period for eligible procedures occurring in CY 2025, pre-operative survey data submission would occur in the first quarter of the CY 2026 reporting period and post-operative survey data submission would occur in the first quarter of the CY 2027 reporting period. For each reporting period, we estimate that each hospital would spend 20 minutes (0.33 hours) annually (10 minutes × 2 surveys) to collect and submit the data. For the CY 2026 reporting period, we estimate a burden for all participating hospitals of 279.2 hours (0.167 hours × 3,350 hospitals × 50 percent) at a cost of $14,552 (279.2 hours × $52.12). For the CYs 2027 and 2028 reporting periods, we estimate a burden for all participating hospitals of 558.3 hours (0.33 hours × 3,350 hospitals × 50 percent) at a cost of $29,099 (558.3 hours × $52.12). For the CY 2029 reporting period, we estimate a burden for all participating hospitals of 837.5 hours [(0.167 hours × 3,350 hospitals × 50 percent) + (0.167 hours x 3,350 hospitals)] at a cost of $43,651 (837.5 hours × $52.12). For the CY 2030 reporting period and subsequent years, we estimate a total of 1,116.7 hours (0.33 hours × 3,350 hospitals) at a cost of $58,202 (1,116.7 hours × $52.12).

With respect to any costs/burdens unrelated to data submission, we refer readers to section XXVI.C.3.b ''Regulatory Impact Analysis'' of this final rule with comment period.

6. Information Collection Burden To Adopt the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) eCQM, With Voluntary Reporting Beginning With the CY 2025 Reporting Period, Followed by Mandatory Reporting Beginning With the CY 2027 Reporting Period/CY 2029 Payment Determination

In section XIV.B.3.c of this final rule with comment period, we finalized our proposal to adopt the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults (Hospital Level—Outpatient) eCQM, with voluntary reporting beginning with the CY 2025 reporting period, followed by mandatory reporting beginning one year later than proposed with the CY 2027 reporting period/CY 2029 payment determination. For the CYs 2025 and 2026 voluntary reporting periods, hospitals would be able to voluntarily report the measure for one or more quarters during the year. For subsequent years, as described in section XIV.E.6.b of this final rule with comment period, we finalized our proposal to gradually increase the number of quarters of data hospitals would be required to report on the measure starting with two self-selected quarters for the CY 2027 reporting period/CY 2029 payment determination, and all four quarters for the CY 2028 reporting period/CY 2030 payment determination.

For the voluntary reporting periods in CYs 2025 and 2026, we estimate 20 percent of hospitals would voluntarily report one quarter of data for the measure with 100 percent of hospitals reporting the measure as finalized to be required in subsequent years. Similar to the ST-elevation myocardial infarction (STEMI) eCQM for which adoption was finalized in the CY 2022 OPPS/ASC final rule with comment period for the Hospital OQR Program, we assume a Medical Records Specialist would require 10 minutes to submit the data required per quarter for each hospital (86 FR 63962 through 63963). For the CYs 2025 and 2026 voluntary reporting periods, we estimate an annual burden for all participating hospitals of 111.7 hours (3,350 hospitals × 20 percent × 0.1667 hours × 1 quarter) at a cost of $5,822 (111.7 hours × $52.12). For the CY 2027 reporting period/CY 2029 payment determination, we estimate the annual burden for all participating hospitals to be 1,116.7 hours (3,350 hospitals × .1667 hours × 2 quarters) at a cost of $58,202 (1,116.7 hours × $52.12). For the CY 2028 reporting period/CY 2030 payment determination, we estimate the annual burden for all participating hospitals to be 2,233.3 hours (3,350 hospitals × .1667 hours × 4 quarters) at a cost of $116,400 (2,233.3 hours × $52.12).

For the Excessive Radiation eCQM, hospitals would also be required to log in through the measure developer's secure portal and run the Alara Imaging Software for CMS Measure Compliance inside the firewall. The software runs automatically to create the three intermediate data elements needed for the measure. Once the software finishes creating these intermediate variables, hospitals can either: (1) send the data to a hospital's EHR for reporting; (2) send the data to another vendor for reporting; or (3) have the measure developer submit the data on behalf of and at the behest of hospitals to CMS. No manual data entry is required. Similar to our assumptions for the Hospital IQR Program in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59313), we estimate that each hospital would spend approximately 15 minutes (0.25 hours) annually to conduct these activities prior to data submission. For the CYs 2025 and 2026 voluntary reporting periods, we estimate a per reporting period burden of 167.5 hours (0.25 hours × 670 hospitals) at a cost of $8,730 (167.5 hours × $52.12/hour). Beginning with the CY 2027 mandatory reporting period, we estimate a total annual burden of 837.5 hours (0.25 hours × 3,350 hospitals) at a cost of $43,651 (837.5 hours × $52.12/hour).

7. Summary of Information Collection Burden Estimates for the Hospital OQR Program

In summary, under OMB control number 0938–1109 (expiration date February 28, 2025), we estimate that the finalized proposals in this final rule

with comment period will result in an increase of 67,842 hours at a cost of $1,536,526 for 3,350 OPPS hospitals across a 6-year period from the CY 2025 reporting period/CY 2027 payment determination through the CY 2030 reporting period/CY 2032 payment determination. The following Tables 152 through 157 summarize the total burden changes for each respective CY payment determination compared to our currently approved information collection burden estimates (the table for the CY 2032 payment determination reflects the cumulative burden changes). We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1109.

BILLING CODE 4150–28–P

TABLE 152: SUMMARY OF HOSPITAL OQR PROGRAM INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2025 REPORTING PERIOD/CY 2027 PAYMENT DETERMINATION

BILLING CODE 4150–28–C

C. ICRs Related to the ASCQR Program

1. Background

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74554), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53672), and the CY 2013 through CY 2023 OPPS/ASC final rules with comment period (77 FR 68532 and 68533; 78 FR 75172 through 75174; 79 FR 67015 and 67016; 80 FR 70582 through 70584; 81 FR 79863 through 79865; 82 FR 59479 through 59481; 83 FR 59156 and 59157; 84 FR 61469; 85 FR 86267; 86 FR 63968 through 63971; and 87 FR 72252 and 72253 respectively) for detailed discussions of the ASCQR Program ICRs we have previously finalized. The ICRs associated with the ASCQR Program for the CY 2014 through CY 2027 payment determinations are currently approved under OMB control number 0938–1270, which expires on August 31, 2025.

While the most recent data from the BLS reflects a median hourly wage of $24.56 per hour for medical records specialists generally, $26.06 is the hourly mean wage for medical records specialists in ''general medical and surgical hospitals,'' [830] which we believe is more specific to our settings for use in our calculations than a position that may be found in other settings, such as ''office of physicians'' or ''nursing care facilities.'' We have finalized a policy to calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage (81 FR 79863 and 79864). This is necessarily a rough adjustment, both because fringe benefits and overhead costs can vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($26.06 × 2 = $52.12) to estimate the total cost is a reasonably accurate estimation method and allows for a conservative estimate of hourly costs.

Based on the most recent analysis of the CY 2023 payment determination data, we found that, of the 5,375 ambulatory surgical centers (ASCs) that were actively billing Medicare, 3,733 were required to participate in the ASCQR Program and met all reporting requirements, whereas 194 did not. Of the 1,448 ASCs not required to participate in the program, 687 ASCs

[830] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed on March 6, 2023. Available at: *https://www.bls.gov/oes/current/oes292072.htm.*

did so. In addition, 195 Hospitals Without Walls have returned to active ASC billing and will be eligible to participate toward CY 2024 payment determinations. On this basis, we estimate that 4,809 ASCs (3,733 + 194 + 687 + 195) will submit data for the ASCQR Program for the CY 2026 payment determination unless otherwise noted. We note that this estimate is a decrease of 248 ASCs from our estimate of 5,057 provided in the CY 2024 OPPS/ASC proposed rule (88 FR 49881) due to results from more recent data analysis regarding numbers of eligible ASCs. In section XV.B.4 of this final rule with comment period, we finalized our proposals to modify three previously adopted measures: (1) the COVID–19 Vaccination Coverage Among Healthcare Personnel measure, beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure survey instrument usage, beginning with the voluntary CY 2024 reporting period; and (3) Endoscopy/ Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure, beginning with the CY 2024 reporting period/CY 2026 payment determination. We also finalized with modification, our proposal to adopt the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting, with voluntary reporting beginning with the CY 2025 reporting period, followed by mandatory reporting beginning 1 year later than proposed with the CY 2028 reporting period/CY 2031 payment determination.

We are not finalizing our proposal to re-adopt with modification the ASC Facility Volume on Selected ASC Surgical Procedures measure.

2. Information Collection Burden To Modify the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) Measure Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

In the CY 2022 OPPS/ASC final rule with comment period, we finalized adoption of the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure for the ASCQR Program (86 FR 63875 through 63883). In section XV.B.4.a of this final rule with comment period, we finalized our proposal to modify the COVID–19 Vaccination Coverage Among HCP measure to utilize the term ''up to date'' in the HCP vaccination definition and update the numerator to specify the time frames within which an HCP is considered up to date with recommended COVID–19 vaccines, including booster doses, beginning with the CY 2024 reporting period/CY 2026 payment determination for the ASCQR Program. We previously discussed information collection burden associated with this measure in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63969).

We do not believe that the use of the term ''up to date'' or the update to the numerator will impact information collection or reporting burden because the modification changes neither the amount of data being submitted to CMS nor the frequency of data submission. Additionally, because we did not propose any updates to the form, manner, and timing of data submission for this measure, we do not anticipate any increase in burden associated with this policy. Furthermore, the modified COVID–19 Vaccination Coverage Among HCP measure will continue to be calculated using data submitted to the CDC under a separate OMB control number (0920–1317; expiration date January 31, 2024). However, the CDC currently has a PRA waiver for the collection and reporting of vaccination data under section 321 of the National Childhood Vaccine Injury Act of 1986 (enacted on November 14, 1986) (NCVIA).[831]

3. Information Collection Burden To Modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure Survey Instrument Use Beginning With the CY 2024 Reporting Period

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75126 and 75127), we finalized the adoption of the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure beginning with the CY 2016 payment determination. In section XV.B.4.b of this final rule with comment period, we finalized our proposal to limit the survey instruments that can be used to administer this measure to three assessment tools: NEI VFQ–25, VF–14, and VF–8R, beginning with the CY 2024 reporting period.

Because the three assessment tools being finalized are currently allowable for administering this measure, we do not believe limiting use to these three surveys will result in a change in burden. As a result, we did not propose any changes in burden per response associated with this policy. Additionally, as currently stated in the ASCQR Program Specifications Manual, the maximum annual sample case size for chart abstraction for this measure is 63 cases for ASCs with an outpatient population size of between 0 and 900 and 96 cases for ASCs with an outpatient population size of greater than 900.[832] We did not propose an increase in the required sample size for chart abstraction; therefore we do not believe there is any increase in burden associated with this policy.

4. Information Collection Burden To Modify the Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients Measure, Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

In the CY 2014 OPPS/ASC final rule with comment period, we finalized the Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure (78 FR 75127 through 75128). In section XV.B.4.c of this final rule comment period, we finalized our proposal to amend the measure denominator language by removing the phrase ''aged 50 years'' and adding in its place the phrase ''aged 45 years.''

As currently stated in the ASCQR Program Specifications Manual, the maximum annual sample case size for chart abstraction for this measure is 63 cases for ASCs with an outpatient population size of between 0 and 900 and 96 cases for ASCs with an outpatient population size of greater than 900. We did not propose an increase in the required sample size for chart abstraction; therefore, we do not believe there is any increase in burden associated with this policy.

5. Information Collection Burden To Adopt the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting, With Voluntary Reporting Beginning With the CY 2025 Reporting Period Followed by Mandatory Reporting Beginning With the CY 2028 Reporting Period/CY 2031 Payment Determination

In section XV.B.5.b of this final rule with comment period, we finalized our proposal to adopt the THA/TKA PRO–PM, with voluntary reporting beginning with the CY 2025 reporting period,

[831] Public Law 99–660.

[832] *https://qualitynet.cms.gov/files/62900933404aa300169072f1?filename=12.0_ASC_Full_Specs_Mnl.pdf.*

followed by mandatory reporting beginning one year later than proposed with the CY 2028 reporting period/CY 2031 payment determination. This measure was previously adopted for the Hospital IQR Program in the FY 2023 IPPS/LTCH PPS final rule with an estimated burden of 7.25 minutes (0.120833 hours) per patient to complete both the pre-operative and post-operative surveys and 10 minutes (0.167 hours) per hospital per response to collect and submit the measure data via the HQR system (87 FR 49386 through 49387). We believe the estimated burden for both patient surveys and data submission will be the same for the ASCQR Program.

The THA/TKA PRO–PM uses four sources of data for the calculation of the measure: (1) patient-reported outcome (PRO) data; (2) claims data; (3) Medicare enrollment and beneficiary data; and (4) U.S. Census Bureau survey data. We estimate no additional burden associated with claims data, Medicare enrollment and beneficiary data, and U.S. Census Bureau survey data as these data are already collected via other mechanisms such as Medicare enrollment forms, CMS Form 1500, and U.S. Census Informational Questionnaires. While we did not propose to require how ASCs collect PRO data for this measure, ASCs collecting PRO data will have multiple options for when and how they will collect these PRO data so they can best determine the mode and timing of collection that works best for their patient population.

The possible patient touchpoints for pre-operative PRO data collection include the doctor's office, pre-surgical steps such as education classes, or medical evaluations that can occur in an office or at the ASC. The modes of PRO data collection can include completion of the pre-operative surveys using electronic devices (such as an iPad or tablet), pen and paper, mail, telephone, or through a patient portal. Post-operative PRO data collection modes are similar to pre-operative modes. The possible patient touchpoints for post-operative data collection can occur before the follow-up appointment, at the doctor's office, or after the follow-up appointment. The potential modes of PRO data collection for post-operative data are the same as for pre-operative data. If the patient does not or cannot attend a follow-up appointment, the modes of collection can include completion of the post-operative survey using email, mail, telephone, or through a patient portal.

Similar to other surveys like the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) survey, we believe the use of multiple modes will maximize response rates as it allows for different patient preferences. For the THA/TKA PRO–PM data, ASCs will be able to submit data during three voluntary periods. The first voluntary reporting period will begin in CY 2025 for eligible procedures occurring between January 1, 2025, through December 31, 2025; the second voluntary reporting period will begin with CY 2026 for eligible procedures occurring between January 1, 2026, through December 31, 2026; and the third voluntary reporting period will begin with CY 2027 for eligible procedures occurring between January 1, 2027, through December 31, 2027. Voluntary reporting will be followed by mandatory reporting beginning with the CY 2028 reporting period for eligible elective procedures occurring between January 1, 2028, and December 31, 2028, impacting the CY 2031 payment determination.

Whether participating in the voluntary reporting periods or during subsequent mandatory reporting, ASCs will need to submit data twice (pre-operative data and post-operative data). For the purposes of calculating burden. Specifically, we estimate that, during the voluntary periods, 50 percent of ASCs that perform at least one THA/TKA procedure will submit data and will do so for 50 percent of THA/TKA patients. For purposes of calculating burden for the mandatory period, we estimate that ASCs will submit for 100 percent of patients. While we finalized to require ASCs to submit, at minimum, 50 percent of eligible, complete pre-operative data with matching eligible, complete post-operative data, we are conservative in our estimate for the mandatory period in case ASCs exceed this threshold.

To estimate the cost burden for patients completing the surveys for this measure, we believe that the cost for beneficiaries undertaking administrative and other tasks on their own time is a post-tax wage of $20.71/hour. We base this estimate on the ''Valuing Time in U.S. Department of Health and Human Services Regulatory Impact Analyses: Conceptual Framework and Best Practices,'' which identifies the approach for valuing time when individuals undertake activities on their own time.[833] To derive the costs for beneficiaries, a measurement of the usual weekly earnings of wage and salary workers of $998, divided by 40 hours to calculate an hourly pre-tax wage rate of $24.95/hour. This rate is adjusted downwards by an estimate of the effective tax rate for median income households of about 17 percent, resulting in the post-tax hourly wage rate of $20.71/hour. Unlike our state and private sector wage adjustments, we are not adjusting beneficiary wages for fringe benefits and other indirect costs since the individuals' activities, if any, would occur outside the scope of their employment.

To estimate the burden of information collection for patients completing surveys for this measure, we assume that most ASCs will likely undertake PRO data collection through a screening tool incorporated into their electronic health record (EHR) or other patient intake process. We utilized recently analyzed Medicare claims information, which was unavailable for the CY 2024 OPPS/ASC proposed rule, to estimate the number of ASCs performing these procedures. We believe this data is more appropriate as ASCs specialize and these procedures are recently added to the ASC covered procedures list. We found that there were 2,381 THA/TKA ASC claims in CY 2022 with an average of 58 Medicare claims per ASC for 41 ASCs. Thus, we estimate that approximately 58 THA/TKA procedures will occur in each ASC each year, and that many patients could complete both the pre-operative and post-operative questionnaires. However, from our experience with using this measure in the Comprehensive Joint Replacement model, we are also aware that not all patients who complete the pre-operative questionnaire will complete the post-operative questionnaire. For the voluntary CYs 2025, 2026, and 2027 reporting periods, we assume 609 patients will complete the survey (58 patients × 0.50 × 21 ASCs) for a total of 74 hours annually (609 respondents × 0.120833 hours) at a cost of $1,524 (74 hours × $20.71) across all ASCs that perform these procedures. Beginning with mandatory reporting in the CY 2028 reporting period/CY 2031 payment determination, we estimate a total of 288 hours (2,381 patients × 0.120833 hours) at a cost of $5,958 (288 hours × $20.71) across all ASCs performing these procedures.

Regarding ASCs' burden related to submitting data for this measure, which will be reported via the HQR System, we estimate a burden of 10 minutes per response. ASCs will submit data associated with pre-operative surveys by March 31 of the CY following the CY in which the eligible procedures took place and will submit data associated with

[833] *https://aspe.hhs.gov/reports/valuing-time-us-department-health-human-services-regulatory-impact-analyses-conceptual-framework.*

post-operative surveys by March 31 of the CY following the CY in which pre-operative data was submitted. Therefore, for the first voluntary reporting period for eligible procedures occurring in CY 2025, pre-operative survey data submission will occur in the first quarter of the CY 2026 reporting period and post-operative survey data submission will occur in the first quarter of the CY 2027 reporting period. For each of the three voluntary reporting periods, we estimate that each ASC will spend 20 minutes (0.33 hours) annually (10 minutes × 2 surveys) to collect and submit the data. For the CY 2026 reporting period, we estimate a burden for all participating ASCs of 4 hours (0.167 hours × 21 ASCs) at a cost of $182 (4 hours × $52.12). For the CYs 2027 and 2028 reporting periods, we estimate a burden for all participating ASCs of 7 hours (0.33 hours × 21 ASCs) at a cost of $365 (7 hours × $52.12). For the CY 2029 reporting period, we estimate a burden for all participating ASCs of 10 hours [(0.167 hours × 21 ASCs) + (0.167 hours x 41 ASCs)] at a cost of $539 (10 hours × $52.12). For the CY 2030 reporting period and subsequent years, we estimate a total of 14 hours (0.33 hours × 41 ASCs) at a cost of $712 (14 hours × $52.12).

With respect to any costs or burdens unrelated to data submission, we refer readers to section XXVI.C.4.b ''Regulatory Impact Analysis'' of this final rule with comment period.

6. Summary of Information Collection Burden Estimates for the ASCQR Program.

In summary, under OMB control number 0938–1270 (expiration date August 31, 2025), we estimate that the finalized proposals in this final rule with comment period will result in an increase of 302 hours at a cost of $6,670 for 4,089 ASCs across a 6-year period from the CY 2025 reporting period/CY 2027 payment determination through the CY 2030 reporting period/CY 2032 payment determination. The following Tables 158 through 163 summarize the total burden changes for each respective CY payment determination compared to our currently approved information collection burden estimates (the table for the CY 2030 payment determination reflects the cumulative burden changes). We will submit the revised information collection estimates to OMB for approval under OMB control number 0938–1270.[834]

D. ICRs Related to the REHQR Program

1. Background

In section XVI of this final rule with comment period, we discuss the requirements for the Rural Emergency Hospital Quality Reporting (REHQR) Program. In this final rule with comment period, we finalized the adoption of four new measures, beginning with the CY 2024 reporting period: (1) the Abdomen Computed Tomography (CT)—Use of Contrast Material measure; (2) the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure; (3) the Facility7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy measure; and (4) the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure. As we are establishing the REHQR Program in this final rule with comment period, the ICRs associated with the REHQR Program will be submitted for OMB approval under a new OMB control number.

While the most recent data from the BLS reflects a median hourly wage of $24.56 per hour for all medical records specialists, $26.06 is the hourly mean wage for medical records specialists in ''general medical and surgical hospitals.'' [835] We believe specialists in ''general medical and surgical hospitals'' is more specific to our settings for use in our calculations than a position that may be found in other medical record specialist settings, such as ''office of physicians'' or ''nursing care facilities.'' We are finalizing to calculate the cost of overhead, including fringe benefits, at 100 percent of the mean hourly wage similar to the policy previously finalized in the CY 2018 OPPS/ASC final rule with comment period for the Hospital OQR Program (82 FR 52617). This is necessarily a rough adjustment, both because fringe benefits and overhead costs can vary significantly from employer-to-employer and because methods of estimating these costs vary widely from study-to-study. Nonetheless, we believe that doubling the hourly wage rate ($26.06 × 2 = $52.12) to estimate the total cost is a reasonably accurate estimation method and allows for a conservative estimate of hourly costs.

[835] U.S. Bureau of Labor Statistics. Occupational Outlook Handbook, Medical Records Specialists. Accessed on March 6, 2023. Available at: *https://www.bls.gov/oes/current/oes292072.htm.*

Based on our analysis of CAHs and subsection (d) hospitals currently participating in the Hospital OQR Program with 50 beds or less, we have estimated 746 hospitals could transition to REH status assuming that all eligible hospitals in states which have passed or amended necessary legislation enabling transition to occur as of March 2023 choose to do so. We will revise this estimate in future rules when updated data are available.

2. Information Collection Burden To Adopt Three Claims-Based Measures Beginning With the CY 2024 Reporting Period

In sections XVI.B.5.a, XVI.B.5.c, and XVI.B.5.d of this final rule with comment period, we finalized the adoption of the following claims-based measures beginning with the CY 2024 reporting period: (1) the Abdomen Computed Tomography (CT)—Use of Contrast Material measure; (2) the Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy measure; and (3) the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure. Because these measures are calculated using data that are already

reported to the Medicare program for payment purposes, adopting these measures does not result in additional burden for REHs in the REHQR Program.

3. Information Collection Burden To Adopt the Median Time From ED Arrival to ED Departure for Discharged ED Patients Measure Beginning With the CY 2024 Reporting Period

In section XVI.B.5.b of this final rule with comment period, we finalized the adoption of the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure beginning with the CY 2024 reporting period. This chart-abstracted measure was previously adopted as part of the Hospital OQR Program in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72086). Similar to reporting of this measure to the Hospital OQR Program as currently approved under OMB control number 0938–1109 (expiration date February 28, 2025), we estimate that chart-abstracted measures where patient-level data are submitted directly to CMS will take 2.9 minutes, or 0.049 hours. Further, based on sample size requirements for the measure in the Hospital OQR Program, we assume that each REH will similarly abstract and submit data from 63 cases per quarter, for a total of 252 cases per year.[836] We therefore estimate that it will take approximately 12.2 hours (0.049 hours × 252 cases) at a cost of approximately $636 per hospital (12.2 hours × $52.12/hour) to collect and report data for this measure. Therefore, for all participating REHs, we estimate an annual chart-abstraction burden of 9,101 hours (12.2 hours per REH × 746 REHs) at a cost of $474,344 per measure (9,101 hours × $52.12/hour).

4. Summary of Information Collection Burden Estimates for the REHQR Program

In summary, we estimate that the finalized policies in this final rule will result in an initial burden of 9,101 hours at a cost of $474,344 for 746 REHs annually beginning with the CY 2024 reporting period, as reflected in Table 164. We will submit these information collection estimates to OMB for approval as part of a new information collection request.

With respect to any costs/burdens unrelated to data submission, we refer readers to section XXVI.C.5.a of this final rule with comment period.

TABLE 164: SUMMARY OF REHQR PROGRAM INFORMATION COLLECTION BURDEN CHANGE FOR THE CY 2024 REPORTING PERIOD

	Annual Recordkeeping and Reporting Requirements for the CY 2024 Reporting Period							
Activity	**Estimated time per record (minutes)**	**Number reporting quarters per year**	**Number of REHs reporting**	**Average number records per REH per quarter**	**Annual burden (hours) per REH**	**Finalized annual burden (hours) across REHs**	**Previously finalized annual burden (hours) across REHs**	**Net difference in annual burden hours**
Adoption of Median Time from ED Arrival to ED Departure for Discharged ED Patients Measure	2.9	1	746	252	12.2	9,101	0	+9,101
	Total Change in Information Collection Burden Hours: +9,101							
	Total Cost Estimate: Updated Hourly Wage ($52.12) x Change in Burden Hours (9,101) = **$474,344**							

E. ICRs Related to Conditions of Participation (CoPs): Admission, Initial Evaluation, Comprehensive Assessment, and Discharge or Transfer of the Client (§ 485.914)

To implement Division FF, section 4124 of the CAA 2023, we proposed to modify the regulation text at § 485.914(a)(2) to include a cross-reference to § 485.918(g), which are additional requirements CMHCs must meet when assessing and admitting clients into the IOP program. At present, § 485.914(a)(2) solely pertains to PHP services with reference to § 485.918(f), which provides distinct criteria for clients evaluated and accepted for PHP services. We believe the burdens associated with these requirements are usual and customary business practice under 5 CFR 1320.3(b)(2). As such, the burden associated with these requirements is exempt from PRA; therefore, we did not seek PRA approval for any information collection or recordkeeping activities that may be

[836] *https://qualitynet.cms.gov/files/63c8361058e56000179b310e?filename=OQR_v16.0a_SpecsManual_011723.pdf.*

conducted in connection with the proposed revisions to § 485.914(a)(2).

We also proposed to revise § 485.914(d)(2), which sets forth standards for updating a PHP client's comprehensive assessment no less frequently than every 30 days. We proposed to add ''and IOP services,'' which requires the PHP and IOP client's interdisciplinary treatment team to update the assessment no less frequently than every 30 days. We believe that the burden associated with these requirements is the time required to update the comprehensive assessment and that this documentation is usual and customary business practice under 5 CFR 1320.3(b)(2). Therefore, we did not seek PRA approval for any information collection or recordkeeping activities that may be conducted in connection with the proposed revisions to § 485.914(d)(2). We did not receive any public comments on our proposal and therefore, we are finalizing our proposal to add IOP services to the requirement at § 485.914.

F. ICRs Related to Conditions of Participation (CoPs): Treatment Team, Person-Centered Active Treatment Plan, and Coordination of Services (§ 485.916)

We proposed to modify § 485.916(d), which sets forth requirements for reviewing the person-centered active treatment plan. Currently, the interdisciplinary team is required to review, revise, and document the active treatment plan as frequently as the client's condition requires, but no less frequently than every 30 calendar days. A revised active treatment plan must include information from the client's updated comprehensive assessment and must document the client's progress toward the outcomes specified in the active treatment plan. CMHCs must also meet PHP program requirements specified under § 424.24(e) if such services are included in the active treatment plan. As Division FF, section 4124 of the CAA 2023 included coverage of IOP services for CMHCs, we believe it is necessary to add IOP services to this requirement and reference the specific IOP program requirements being proposed in section VIII.C.2 at § 424.24(d) of the CY 2024 OPPS/ASC proposed rule. We proposed to cross-reference additional requirements specified under § 424.24(d) if a client's active treatment plan includes IOP services. The 2013 CMHC CoP final rule (78 FR 64603) included a burden for § 485.916(d) and is collected under OMB control number 0938–1245. The proposed revision to this requirement does not affect the burden. Therefore, we did not propose to seek PRA approval for any information collection or recordkeeping activities that may be conducted in connection with the proposed revisions to § 485.916(d).

Comment: We received several comments requesting we revise the CoPs at § 485.916(a)(1) and (3) to specifically identify MFTs and MHCs as potential members of the CMHC interdisciplinary team. Comments stated that including MFTs and MHCs will clarify that these practitioners may lawfully take their place on the CMHC interdisciplinary teams.

Response: We agree with the commenters suggestions and have modified the language at § 485.916(a)(1) to include the MFT or MHC as providers who can lead the CMHC interdisciplinary team. We believe that the burden associated with adding MFT and MHC to the list of practitioners who can lead the CMHC interdisciplinary team is usual and customary business practice under 5 CFR 1320.3(b)(2). Therefore, we do not propose seeking PRA approval for any information collection or recordkeeping activities that may be conducted in connection with the proposed revisions to § 485.914(d)(2).

After consideration of the public comments we received, we have modified the language at § 485.916(a)(1) to include the MFT or MHC as practitioners who can lead the CMHC interdisciplinary team. This requirement allows CMHCs the flexibility to utilize appropriate counselors that may serve on the client's interdisciplinary team.

G. ICRs Related to Conditions of Participation (CoPs): Organization, Governance, Administration of Services, Partial Hospitalization Services (§ 485.918)

To implement Division FF, section 4124 of the CAA, 2023, which extended coverage of IOP services for CMHCs, we proposed to revise the title of § 485.918 to include IOP services. The overall goal of this section is to ensure that the management structure is organized and accountable for the services furnished. We proposed to add ''and intensive outpatient services'' to the end of the section heading.

The requirement at § 485.918(b), ''Standard: Provision of services'' specifies a comprehensive list of services that a CMHC must furnish. This list of services that CMHCs provide corresponds directly to the statutory requirements in section 1861(ff)(3) of the Act. We proposed to add ''and intensive outpatient services'' to § 485.918(b)(1)(iii), which states where specific services cannot be furnished, such as other than in an individual's home or an inpatient or residential setting, or psychosocial rehabilitation services. We believe that adding IOP services to § 485.918(b)(1)(iii) is a usual and customary business practice under 5 CFR 1320.3(b)(2). Therefore, we did not seek PRA approval for any information collection or recordkeeping activities that may be conducted in connection with the proposed revisions to § 485.918(b)(1)(iii).

We proposed to add a new standard at § 485.918(g), ''Standard: Intensive outpatient services'', which will require all IOP services to meet all applicable requirements of 42 CFR parts 410 and 424. We also believe adding the IOP services requirement in the new requirement at § 485.918(g) is a usual and customary business practice under 5 CFR 1320.3(b)(2). Therefore, we did not seek PRA approval for any information collection or recordkeeping activities that may be conducted in connection with the proposed revisions to § 485.918(g).

We did not receive any public comments on our proposal, therefore, we are finalizing our proposal to add IOP services to the requirements at § 485.918.

H. ICRs Related to Hospital Price Transparency

In a final rule published in November 2019 (84 FR 65524) (herein referred to as the CY 2020 HPT final rule), we adopted requirements for hospitals to make public their standard charges in two ways: (1) as a comprehensive machine-readable file (MRF); and (2) in a consumer-friendly format. We codified these requirements at new 45 CFR 180.50 and 180.60, respectively.

The existing information collection requirement and the associated burden were finalized in the CY 2020 HPT final rule and are currently approved under OMB control number 0938–1369, which expires on December 31, 2023. We originally estimated the number of hospitals to be 6,002. We finalized an initial one-time burden 150 hours and cost of $11,898.60 per hospital, resulting in a total national burden of 900,300 hours (150 hours × 6,002 hospitals) and $71,415,397 ($11,898.60 × 6,002 hospitals) to build processes and make required system updates to make their standard charge data publicly available: (1) as a comprehensive machine-readable file and (2) in a consumer-friendly format. Additionally, we estimated an on-going annual burden of 46 hours per hospital with a cost of $3,610.88 per hospital, resulting in a

total national burden of 276,092 hours (46 hours × 6,002 hospitals) and total cost of $21,672,502 ($3,610.88 × 6,002 hospitals), to make required annual updates to the hospital's standard charge data information. For a detailed discussion of the cost estimates for the requirements related to hospitals making their standard charge data publicly available, we refer readers to our discussion in the collection of information section in the CY 2020 HPT final rule (84 FR 65591 through 65596).

In section XVIII of the CY 2024 OPPS/ASC proposed rule (88 FR 49890 through 49892), we proposed to revise regulations at 45 CFR 180.50 related to making public hospital standard charges in an MRF. First, we proposed to add data elements to be included in the hospital's MRF and to require hospitals to conform to a CMS template layout. Second, to enhance automated access to the MRF, we proposed that hospitals include a .txt file in the root folder of the public website it selects to host its MRF in the form and manner specified by CMS that includes a standardized set of fields, and a link in the footer on its website that is labeled ''Hospital Price Transparency'' and links directly to the publicly available web page that hosts the link to the MRF. We believed these proposed revisions would result in an increased collection burden to hospitals, both an initial one-time burden and an on-going annual cost.

Additionally, as explained in the CY2024 OPPS/ASC proposed rule, we increased the number of hospitals we believe to be subject to these requirements from 6,002 to 7,098, which, in turn, increased the estimated national burden. The reason for this increase is because in the CY 2020 HPT final rule (84 FR 65591), we relied on data from the American Hospital Association (AHA).[837] For the collection of information estimate in the CY2024 OPPS/ASC proposed rule we used updated hospital numbers based on the publicly available dataset from the Homeland Infrastructure Foundation-Level Data (HIFLD) [838] hospital dataset. The HIFLD dataset compiles a directory of hospital facilities based on data acquired directly from state hospital licensure information and Federal sources and validates this data annually. Thus, we stated our belief that the HIFLD dataset is more comprehensive than the AHA Directory. To estimate the number of hospitals subject to these requirements in the CY 2024 OPPS/ASC proposed rule, we leveraged the HIFLD hospital dataset to identify 8,013 total hospitals. We then subtracted out 379 hospitals HIFLD identified as ''closed'' as well as hospitals that are deemed under the regulation to have met requirements (see 45 CFR 180.30) which included 339 federally owned non-military and military hospitals, and 197 State, local, and district run forensic hospitals. We therefore estimated that the CY 2024 OPPS/ASC proposed rule would apply to 7,098 hospitals operating within the U.S that meet the HPT regulation's definition of ''hospital'' at 45 CFR 180.20. Finally, we estimated the hourly cost for each labor category used in this analysis by referencing Bureau of Labor Statistics report on Occupational Employment and Wages (May 2022).[839] We included labor categories for General and Operations Managers, Business Operations Specialists, and Network and Computer Systems Administrators. We did not include a Lawyer labor category in the CY 2024 OPPS/ASC proposed rule.

We indicated in the CY 2024 OPPS/ASC proposed rule that we believed hospitals would incur an initial one-time cost to update their processes and systems to (1) identify and collect the standard charge information represented by the newly proposed data elements, and (2) to conform the standard charge information for both the existing and newly proposed data elements in the proposed CMS template layout. To implement these requirements, we estimated that it would take, on average, 1 hour (at a cost of $118.14 per hour) for a General and Operations Manager (BLS 11–1021) to review and determine proposed compliance requirements. We estimated it will take a Business Operations Specialist (BLS 13–1000), on average, 10 hours (at a cost of $80.08 per hour) to develop and update the necessary processes and procedures and develop the requirements to implement the proposed CMS template. Once the existing systems have been identified and requirements developed, we estimated that a network and computer system administrator (BLS 15–1244) would spend, on average, 20 hours (at a cost of $93.42 per hour), to make updates to existing systems to conform to the proposed CMS template layout and post it to the internet, including developing and posting the proposed .txt file in the root folder of the public web page it selects to host its MRF in the form and manner specified by CMS that includes a standardized set of fields specified by the proposed rule. Therefore, we proposed the total burden estimate for the first year to be 31 hours (1 hours + 10 hours + 20 hours) per hospital with a cost of $2,787.34 ($118.14 + $800.80 + $1,868.40) per hospital. The initial one-time national burden was calculated to be $19,784,539.32 dollars ($2,787.34 per hospital × 7,098 hospitals).

In addition to the initial one-time cost to implement the proposals, we proposed to increase the ongoing annual burden estimate to take into account the increase in data elements the hospital must collect and encode in the MRF. Specifically, we estimated an increased ongoing amount of time for a business operations specialist, from 32 hours to 40 hours per hospital, to identify and gather required additional data elements on an annual basis. This increase acknowledged that some hospitals may not update their systems in the first year to maintain and abstract newly required data elements in an automated way to facilitate future annual updates to the MRF, thus we expected a subset of hospitals would continue to spend time annually to gather and manually encode their standard charge information. Therefore, we proposed an estimated ongoing annual national burden of 383,292 hours (54 hours × 7,098 hospitals) and an ongoing annual national cost of $32,370,571 dollars ($4,560.52 per respondent × 7,098 hospitals), which represents a $10,698,069 ($32,370,571 − $21,672,502) increase over our previous estimated national annual burden for subsequent years.

We received the following comments related to our burden estimates, which we have summarized below.

Comment: Several commenters expressed concern that CMS underestimated the cost to comply with HPT requirements and noted that price transparency activities are complex, expensive, and burdensome for hospitals, although a few noted that standardization of the data would help hospitals comply with the regulation. Commenters noted that hospitals have already dedicated significant resources toward complying with the machine-readable file requirements, with hospitals reporting that they are spending thousands of dollars and significant labor resources to implement

[837] American Hospital Association. Fast Facts on U.S. Hospitals, 2019. Available at: *https://www.aha.org/statistics/fast-facts-us-hospitals.* The AHA listed 6,210 total hospitals operating in the US. To arrive at 6,002 hospitals, we subtracted the 208 federally owned or operated hospitals.

[838] Homeland Infrastructure Foundation-Level Data hospital dataset accessed on May 3, 2023, located at *https://hifld-geoplatform.opendata.arcgis.com/datasets/hospitals/data.*

[839] U.S. Bureau of Labor Statistics, May 2022 national Occupational Employment and Wage Estimates United States, Occupational Employment and Wage Statistics. Accessed at *https://www.bls.gov/oes/tables.htm.*

these requirements, asserting their belief that these costs were not benefitting patients.

A few commenters provided more detailed information on costs incurred by hospitals for implementation. One commenter believed that our estimates do not fully account for attorney time, financial specialists, and meetings between contracting, billing, finance, legal, and technical teams. Another commenter noted they invest several thousand hours of staff full time equivalents (FTEs) annually in its 40-hospital system. Several commenters noted that member hospitals reported spending $15,000–25,000 per hospital on vendors to build the initial machine-readable files, and $10,000–20,000 to maintain the files and update them annually. These commenters noted that a hospital system producing its own file, without vendor help, reported spending 1,600 hours annually, across 23 individuals, to produce their machine-readable files. Another commenter stated that converting to a new CMS template with payer-specific notes would require seven full-time employees with the appropriate level of payer contracting expertise.

Finally, commenters noted that requiring a rapid change in format may increase their expenses when the hospital uses a third-party vendor to make their data public, noting that vendors would not likely begin work until the policies are finalized. Commenters stated that detailed guidance would be required to properly ensure that the new standard format is implemented consistently across hospitals and to avoid excessive updates to the guidance in the future.

Response: We appreciate commenters' concerns and that hospitals have different operational and administrative systems that impact projected burden for implementation of the CMS standard template and encoding of new data elements. To address this variability, CMS is allowing hospitals to choose which CMS template format they will use, providing hospitals some flexibility to select the least burdensome format and layout to incorporate into their current MRF development process. CMS expects that, nearly 3 years after the implementation of the initial rule, most hospitals have well developed automated processes in place that they leverage to minimize the burden associated with making hospital standard charge information public in their current MRFs.

We agree with commenters that standardization may help streamline hospital efforts. As noted in section XVIII.B.3 of this final rule with comment period we relied on recommendations from the FFRDC that convened a TEP to discuss the potential benefits to both hospitals and the public if CMS required hospitals to display standard charge information that better described or contextualized their standard charges. The TEP also weighed the benefits with the potential burden hospitals would incur to display those new data elements and encode data in a more specified way and recommended the use of a standard template. Additionally, as discussed in more detail in the economic analysis (section XXVI of this final rule with comment period), we continue to believe that increased competition benefits consumers, and that this benefit outweighs the burden imposed by these requirements.

Moreover, in order to reduce burden, we are finalizing a phased implementation timeline applicable to the new requirements we are finalizing in this final rule. Specifically, and as discussed in more detail in section XVIII.B.3.c of this final rule with comment, we are finalizing that the effective date of the changes to the hospital price transparency regulations at 45 CFR part 180 will be January 1, 2024. However, the regulation text will specify later dates by which hospitals must be in compliance with some of these new requirements, and we will begin enforcing those requirements on those specified dates. In response to comments, we will increase the initial one-time burden to take into account an additional labor category (lawyer) and increase increasing number of total hours.

Finally, we are developing detailed technical specifications and guidance, in the form of a data dictionary and other resources, that will be available to assist hospitals in correctly formatting the standard charge information into a standardized CMS template layout. The policies CMS is finalizing closely approximate the voluntary sample formats and technical guidance found on our HPT website which CMS has made available in November 2022. Thus, we estimate that hospitals that have already voluntarily adopted this format and collected and encoded the additional data elements would incur little additional burden.

To summarize, we are swayed by commenters that the proposal to increase the number of data elements will result in an increased initial one-time expense for hospitals to collect and encode in the CMS template. We are therefore increasing the initial one-time burden estimate to more closely approximate commenter's estimates, to the extent they were expressed as a 'per hospital' amount and not a 'per health system' amount. We are also finalizing our estimate of ongoing annual costs as proposed, which approximates the per hospital amount provided by commenters.

After consideration of the comments, and based on the policies we are finalizing in this final rule, we now estimate it will take, on average, 5 hours (at a cost of $157.48 per hour) for a Lawyer (BLS 23–1011) to review the rule. We estimate it will take, on average, 5 hours (at a cost of $118.14 per hour) for a General and Operations Manager (BLS 11–1021) to review and determine proposed compliance requirements. We estimate it will take a Business Operations Specialist (BLS 13–1000), on average, 80 hours (at a cost of $80.08 per hour) to develop and update the necessary processes and procedures and develop the requirements to implement a CMS template layout. Once the existing systems have been identified and requirements developed, we estimate that a network and computer system administrator (BLS 15–1244) would spend, on average, 30 hours (at a cost of $93.42 per hour), to make updates to existing systems to conform to a CMS template layout and post it to the internet, including developing and posting the .txt file in the root folder of the public web page it selects to host its MRF in the form and manner specified by CMS that includes a standardized set of fields specified by this final rule with comment period. Occupation titles and wage rates included in the final estimate are in Table 165.

TABLE 165: OCCUPATION TITLES AND WAGE RATES

Occupational Title	Occupation code	Mean hourly wage ($/hr)	Fringe benefit ($/hr)	Adjusted hourly wage ($/hr)
Lawyer	BLS 23-1011	$78.74	$78.74	$157.48
General and Operations Managers	BLS 11-1021	$59.07	$59.07	$118.14
Business Operations Specialists	BLS 13-1000	$40.04	$40.04	$80.08
Network and Computer Systems Administrators	LS 15-1244	$46.71	$46.71	$93.42

The total initial one-time burden estimate for the first year is now estimated to be 120 hours (5 hours + 5 hours + 80 hours + 30 hours) per hospital with a cost of $10,587.10 ($787.40 + $590.70 + $6,406.40 + $2,802.60) per hospital. The initial one-time national burden is calculated to be $75,147,235.80 dollars ($10,587.10 per hospital × 7,098 hospitals) (See Table 166.)

TABLE 166: SUMMARY OF INFORMATION OF COLLECTION BURDENS FOR THE FIRST YEAR

Regulation section	OMB control no.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Total labor cost of reporting ($)
§ 180.50	0938-1369	7,098	7,098	120	851,760	$75,147,235.80

Additionally, we are finalizing an estimated ongoing annual national burden of 383,292 hours (54 hours × 7,098 hospitals) and an annual national cost of $32,370,571 dollars ($4,560.52 per respondent × 7,098 hospitals), which represents a $10,698,069 ($32,370,571 − $21,672,502) increase over our previous estimated ongoing national annual burden for subsequent years (See Table 167.)

TABLE 167: SUMMARY OF INFORMATION OF COLLECTION BURDENS FOR SUBSEQUENT YEARS

Regulation section	OMB control no.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Total labor cost of reporting ($)
§ 180	0938-1369	7,098	7,098	54	383,292	$32,370,571

The new information collection requirements, as well as the initial one-time cost estimates and updated ongoing annual burden estimates discussed in this section will be submitted for OMB review and approval for OMB control number is 0938–1369.

XXV. Response to Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and time specified in the **DATES** section of this preamble; and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

XXVI. Economic Analyses

A. Statement of Need

This final rule with comment period is necessary to make updates to the Medicare hospital OPPS rates. It is also necessary to make changes to the payment policies and rates for outpatient services furnished by hospitals and CMHCs in CY 2024. We are required under section 1833(t)(3)(C)(ii) of the Act to update

annually the OPPS conversion factor used to determine the payment rates for APCs. We also are required under section 1833(t)(9)(A) of the Act to review, not less often than annually, and revise the groups, the relative payment weights, and the wage and other adjustments described in section 1833(t)(2) of the Act. We must review the clinical integrity of payment groups and relative payment weights at least annually. We are revising the APC relative payment weights using claims data for services furnished on and after January 1, 2022, through and including December 31, 2022, and processed through June 30, 2023, and updated HCRIS cost report information, as discussed in section X.F of this final rule with comment period.

This final rule with comment period is also necessary to make updates to the ASC payment rates for CY 2024, enabling CMS to make changes to payment policies and payment rates for covered surgical procedures and covered ancillary services that are performed in ASCs in CY 2024. Because ASC payment rates are based on the OPPS relative payment weights for most of the procedures performed in ASCs, the ASC payment rates are updated annually to reflect annual changes to the OPPS relative payment weights. In addition, we are required under section 1833(i)(1) of the Act to review and update the list of surgical procedures that can be performed in an ASC, not less frequently than every 2 years.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59075 through 59079), we finalized a policy to update the ASC payment system rates using the hospital market basket update instead of the CPI–U for CY 2019 through 2023. In this CY 2024 OPPS/ASC final rule with comment period, we are finalizing a policy to extend the 5-year interim period by an additional 2 years, through CY 2024 and CY 2025, to enable us to more accurately analyze whether the application of the hospital market basket update to the ASC payment system resulted in a migration of services from the hospital setting to the ASC setting. Further discussion of this final policy can be found in section XIII.G.2.b of this final rule with comment period.

B. Overall Impact of Provisions of This Final Rule With Comment Period

We have examined the impacts of this rule, as required by Executive Order 12866, as amended, on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), Executive Order 14094, entitled ''Modernizing Regulatory Review'' (April 6, 2023), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995, Pub. L. 104–4), and Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866, as amended, and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 14094, titled ''Modernizing Regulatory Review'' (hereinafter the Modernizing E.O.), amends section 3(f) of Executive Order 12866 (Regulatory Planning and Review). The amended section 3(f) of Executive Order 12866 defines a ''significant regulatory action'' as an action that is likely to result in a rule: (1) having an annual effect on the economy of $200 million or more in any 1 year (adjusted every 3 years by the Administrator of the Office of Information and Regulatory Affairs (OIRA) for changes in gross domestic product), or adversely effect in a material way the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, territorial, or tribal governments or communities; (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raise legal or policy issues for which centralized review would meaningfully further the President's priorities or the principles set forth in this Executive order, as specifically authorized in a timely manner by the Administrator of OIRA in each case. A regulatory impact analysis (RIA) must be prepared for major rules with significant regulatory action/s and/or with significant effects as per section 3(f)(1) ($200 million or more in any 1 year). Based on our estimates, OMB's Office of Information and Regulatory Affairs has determined this rulemaking is significant per section 3(f)(1) as measured by the $200 million or more in any 1 year, and hence also a major rule under Subtitle E of the Small Business Regulatory Enforcement Fairness Act of 1996 (also known as the Congressional Review Act). Accordingly, we have prepared a Regulatory Impact Analysis that to the best of our ability presents the costs and benefits of the rulemaking. Therefore, OMB has reviewed this final rule with comment period, and the Departments have provided the following assessment of their impact.

We estimate that the total increase in Federal Government expenditures under the OPPS for CY 2024, compared to CY 2023, due to the changes to the OPPS in this final rule with comment period, will be approximately $2.2 billion. Taking into account our estimated changes in enrollment, utilization, and case-mix for CY 2024, we estimate that the OPPS expenditures, including beneficiary cost-sharing, for CY 2024 will be approximately $88.9 billion, which is approximately $6.0 billion higher than estimated OPPS expenditures in CY 2023. Table 168 of this final rule with comment period displays the distributional impact of the CY 2024 changes in OPPS payment to various groups of hospitals and for CMHCs.

We note that under our final CY 2024 policy, drugs and biologicals are generally paid at ASP plus 6 percent, WAC plus 6 percent, or 95 percent of AWP, as applicable. The impacts on hospital rates as a result of this final policy are reflected in the discussion of the estimated effects of this final rule with comment period.

We estimate that the final update to the conversion factor and other budget neutrality adjustments will increase total OPPS payments by 3.1 percent in CY 2024. The final changes to the APC relative payment weights, the final changes to the wage indexes, the final continuation of a payment adjustment for rural SCHs, including EACHs, and the final payment adjustment for cancer hospitals would not increase total OPPS payments because these changes to the OPPS are budget neutral. However, these updates would change the distribution of payments within the budget neutral system. We estimate that the total change in payments between CY 2023 and CY 2024, considering all budget-neutral payment adjustments, changes in estimated total outlier payments, the application of the frontier State wage adjustment, in addition to the application of the OPD fee schedule increase factor after all adjustments required by sections 1833(t)(3)(F), 1833(t)(3)(G), and 1833(t)(17) of the Act will increase total estimated OPPS payments by 3.2 percent.

We estimate the total increase (from changes to the ASC provisions in this final rule with comment period, as well

as from enrollment, utilization, and case-mix changes) in Medicare expenditures (not including beneficiary cost-sharing) under the ASC payment system for CY 2024 compared to CY 2023, to be approximately $207 million. Tables 169 and 170 of this final rule with comment period display the redistributive impact of the CY 2024 changes regarding ASC payments, grouped by specialty area and then grouped by procedures with the greatest ASC expenditures, respectively.

C. Detailed Economic Analyses

1. Estimated Effects of OPPS Changes in This Final Rule

a. Limitations of Our Analysis

The distributional impacts presented here are the projected effects of the final CY 2024 policy changes on various hospital groups. We post our hospital-specific estimated payments for CY 2024 on the CMS website with the other supporting documentation for this final rule with comment period. To view the hospital-specific estimates, we refer readers to the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.* On the website, select ''Regulations and Notices'' from the left side of the page and then select ''CMS–1786–FC'' from the list of regulations and notices. The hospital-specific file layout and the hospital-specific file are listed with the other supporting documentation for this final rule with comment period. We show hospital-specific data only for hospitals whose claims were used for modeling the impacts shown in Table 168 of this final rule with comment period. We do not show hospital-specific impacts for hospitals whose claims we were unable to use. We refer readers to section II.A of this final rule with comment period for a discussion of the hospitals whose claims we do not use for ratesetting or impact purposes.

We estimate the effects of the individual policy changes by estimating payments per service, while holding all other payment policies constant. We use the best data available but do not attempt to predict behavioral responses to our policy changes in order to isolate the effects associated with specific policies or updates, but any policy that changes payment could have a behavioral response. In addition, we have not made any adjustments for future changes in variables, such as service volume, service-mix, or number of encounters.

b. Estimated Effects of OPPS Changes on Hospitals

Table 168 shows the estimated impact of this final rule on hospitals. Historically, the first line of the impact table, which estimates the change in payments to all facilities, has always included cancer and children's hospitals, which are held harmless to their pre-Balanced Budget Act (BBA) amount. We also include CMHCs in the first line that includes all providers. We include a second line for all hospitals, excluding permanently held harmless hospitals and CMHCs. We present separate impacts for CMHCs in Table 168, and we discuss them separately below, because CMHCs have historically been paid only for partial hospitalization services under the OPPS and are a different provider type from hospitals. In CY 2024, we are finalizing paying CMHCs for partial hospitalization services under APCs 5853 (Partial Hospitalization (three services per day) for CMHCs) and 5854 (Partial Hospitalization (four or more services per day) for CMHCs) and to pay hospitals for partial hospitalization services under APCs 5863 (Partial Hospitalization (three services per day) for hospital-based PHPs) and 5864 (Partial Hospitalization (four or more services per day) for hospital-based PHPs). In addition, we are finalizing payment for four Intensive Outpatient Program (IOP) APCs, two for each provider type, including an APC for three services per day and an APC for four or more services per day. The estimated increase in the total payments made under the OPPS is determined largely by the increase to the conversion factor under the statutory methodology. The distributional impacts presented do not include assumptions about changes in volume and service-mix. The conversion factor is updated annually by the OPD fee schedule increase factor, as discussed in detail in section II.B of this final rule.

Section 1833(t)(3)(C)(iv) of the Act provides that the OPD fee schedule increase factor is equal to the market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act, which we refer to as the IPPS market basket percentage increase. The final IPPS market basket percentage increase applicable to the OPD fee schedule for CY 2024 is 3.3 percent. Section 1833(t)(3)(F)(i) of the Act reduces that 3.3 percent by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act, which is 0.2 percentage point for CY 2024 (which is also the productivity adjustment for FY 2024 in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59035)), resulting in the final CY 2024 OPD fee schedule increase factor of 3.1 percent. We are using the OPD fee schedule increase factor of 3.1 percent in the calculation of the final CY 2024 OPPS conversion factor. Section 10324 of the Affordable Care Act, as amended by HCERA, further authorized additional expenditures outside budget neutrality for hospitals in certain frontier States that have a wage index less than 1.0000. The amounts attributable to this frontier State wage index adjustment are incorporated in the estimates in Table 168 of this final rule with comment period.

To illustrate the impact of the CY 2024 changes, our analysis begins with a baseline simulation model that uses the CY 2023 relative payment weights, the FY 2023 final IPPS wage indexes that include reclassifications, and the final CY 2023 conversion factor. Table 168 shows the estimated redistribution of the increase or decrease in payments for CY 2024 over CY 2023 payments to hospitals and CMHCs as a result of the following factors: the impact of the APC reconfiguration and recalibration changes between CY 2023 and CY 2024 (Column 2); the wage indexes and the provider adjustments (Column 3); the combined impact of all of the changes described in the preceding columns plus the 3.1 percent OPD fee schedule increase factor update to the conversion factor (Column 4); the estimated impact taking into account all payments for CY 2024 relative to all payments for CY 2023, including the impact of changes in estimated outlier payments and changes to the pass-through payment estimate (Column 5).

We did not model an explicit budget neutrality adjustment for the rural adjustment for SCHs because we proposed to maintain the current adjustment percentage for CY 2024. Because the final updates to the conversion factor (including the update of the OPD fee schedule increase factor), the estimated cost of the rural adjustment, and the estimated cost of projected pass-through payment for CY 2024 are applied uniformly across services, observed redistributions of payments in the impact table for hospitals largely depend on the mix of services furnished by a hospital (for example, how the APCs for the hospital's most frequently furnished services would change), and the impact of the wage index changes on the hospital. However, total payments made under this system and the extent to which this final rule would redistribute money during implementation also will depend on changes in volume, practice

patterns, and the mix of services billed between CY 2023 and CY 2024 by various groups of hospitals, which CMS cannot forecast.

Overall, we estimate that the final rates for CY 2024 will increase Medicare OPPS payments by an estimated 3.2 percent. Removing payments to cancer and children's hospitals because their payments are held harmless to the pre-OPPS ratio between payment and cost and removing payments to CMHCs results in an estimated 3.3 percent increase in Medicare payments to all other hospitals. These estimated payments will not significantly impact other providers.

Column 1: Total Number of Hospitals

The first line in Column 1 in Table 168 shows the total number of facilities (3,611), including designated cancer and children's hospitals and CMHCs, for which we were able to use CY 2022 hospital outpatient and CMHC claims data to model CY 2023 and CY 2024 payments, by classes of hospitals, for CMHCs and for dedicated cancer hospitals. We excluded all hospitals and CMHCs for which we could not plausibly estimate CY 2023 or CY 2024 payment and entities that are not paid under the OPPS. The latter entities include CAHs, all-inclusive hospitals, and hospitals located in Guam, the U.S. Virgin Islands, Northern Mariana Islands, American Samoa, and the State of Maryland. This process is discussed in greater detail in section II.A of this final rule with comment period. At this time, we are unable to calculate a DSH variable for hospitals that are not also paid under the IPPS because DSH payments are only made to hospitals paid under the IPPS. Hospitals for which we do not have a DSH variable are grouped separately and generally include freestanding psychiatric hospitals, rehabilitation hospitals, and long-term care hospitals. We show the total number of OPPS hospitals (3,511), excluding the hold harmless cancer and children's hospitals and CMHCs, on the second line of the table. We excluded cancer and children's hospitals because section 1833(t)(7)(D) of the Act permanently holds harmless cancer hospitals and children's hospitals to their ''pre-BBA amount'' as specified under the terms of the statute, and therefore, we removed them from our impact analyses. We show the isolated impact on the 32 CMHCs at the bottom of the impact table (Table 168) and discuss that impact separately below.

Column 2: APC Recalibration—All Changes

Column 2 shows the estimated effect of APC recalibration. Column 2 also reflects any changes in multiple procedure discount patterns or conditional packaging that occur as a result of the changes in the relative magnitude of payment weights. As a result of APC recalibration, we estimate that urban hospitals will experience a 0.0 increase, with the impact ranging from a decrease of 0.4 percent to an increase of 0.5, depending on the number of beds. Rural hospitals will experience an estimated increase of 0.3 overall. Major teaching hospitals will experience an estimated decrease of 0.5 percent.

Column 3: Wage Indexes and the Effect of the Provider Adjustments

Column 3 demonstrates the combined budget neutral impact of the APC recalibration, the updates for the wage indexes with the FY 2024 IPPS post-reclassification wage indexes, the rural adjustment, the frontier adjustment, and the cancer hospital payment adjustment. We modeled the independent effect of the budget neutrality adjustments and the OPD fee schedule increase factor by using the relative payment weights and wage indexes for each year and using a CY 2023 conversion factor that included the OPD fee schedule increase and a budget neutrality adjustment for differences in wage indexes.

Column 3 reflects the independent effects of the updated wage indexes, including the application of budget neutrality for the rural floor policy on a nationwide basis, as well as the final CY 2024 changes in wage index policy, discussed in section II.C of this final rule. We did not model a budget neutrality adjustment for the rural adjustment for SCHs because we are continuing the rural payment adjustment of 7.1 percent to rural SCHs for CY 2024, as described in section II.E of this final rule. We modeled a budget neutrality adjustment for the final cancer hospital payment adjustment because the final payment-to-cost ratio target for the cancer hospital payment adjustment in CY 2024 is 0.88, which is different from the 0.89 PCR target for the CY 2023 OPPS/ASC final rule with comment period (87 FR 71788). We note that, in accordance with section 16002 of the 21st Century Cures Act, we are applying a budget neutrality factor calculated as if the cancer hospital adjustment target payment-to-cost ratio was 0.89, not the 0.88 target payment-to-cost ratio we are finalizing in section II.F of this final rule.

We modeled the independent effect of updating the wage indexes by varying only the wage indexes, holding APC relative payment weights, service-mix, and the rural adjustment constant and using the CY 2024 scaled weights and a CY 2023 conversion factor that included a budget neutrality adjustment for the effect of the changes to the wage indexes between CY 2023 and CY 2024.

Column 4: All Budget Neutrality Changes Combined With the Market Basket Update

Column 4 demonstrates the combined impact of all the final changes previously described and the update to the conversion factor of 3.1 percent. Overall, these changes will increase payments to urban hospitals by 3.2 percent and to rural hospitals by 4.6 percent. Rural sole community hospitals will receive an estimated increase of 4.8 percent while other rural hospitals would receive an estimated increase of 4.3 percent.

Column 5: All Changes for CY 2024

Column 5 depicts the full impact of the final CY 2024 policies on each hospital group by including the effect of all changes for CY 2024 and comparing them to all estimated payments in CY 2023. Column 5 shows the combined budget neutral effects of Columns 2 and 3; the OPD fee schedule increase; the impact of estimated OPPS outlier payments, as discussed in section II.G of this final rule; the change in the Hospital OQR Program payment reduction for the small number of hospitals in our impact model that failed to meet the reporting requirements (discussed in section XIV of this final rule with comment period); and other final adjustments to the CY 2024 OPPS payments.

Of those hospitals that failed to meet the Hospital OQR Program reporting requirements for the full CY 2023 update (and assumed, for modeling purposes, to be the same number for CY 2023), we included 56 hospitals in our model because they had both CY 2022 claims data and recent cost report data. We estimate that the cumulative effect of all changes for CY 2024 would increase payments to all facilities by 3.2 percent for CY 2023. We modeled the independent effect of all changes in Column 5 using the final relative payment weights for CY 2023 and the final relative payment weights for CY 2024. We used the final conversion factor for CY 2023 of $85.585 and the final CY 2024 conversion factor of $87.382 discussed in section II.B of this final rule with comment period.

Column 5 contains simulated outlier payments for each year. We used the 1-year charge inflation factor used in the FY 2024 IPPS/LTCH PPS final rule (87 FR 49427) of 5.8 percent (1.05755) to increase charges on the CY 2022 claims, and we used the overall CCR in the April 2023 Outpatient Provider-Specific File (OPSF) to estimate outlier payments for CY 2023. Using the CY 2022 claims and a 5.8 percent charge inflation factor, we currently estimate that outlier payments for CY 2024, using a multiple threshold of 1.75 and a fixed-dollar threshold of $7,750, would be approximately 0.83 percent of total payments. The estimated current outlier payments of 0.83 percent are incorporated in the comparison in Column 5. We used the same set of claims and a charge inflation factor of 11.9 percent (1.11904) and the CCRs in the July 2023 OPSF, with an adjustment of 0.990843 (88 FR 59353), to reflect relative changes in cost and charge inflation between CY 2022 and CY 2024, to model the final CY 2024 outliers at 1.0 percent of estimated total payments using a multiple threshold of 1.75 and a fixed dollar threshold of $7,750. The charge inflation and CCR inflation factors are discussed in detail in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59348 through 59354).

Overall, we estimate that facilities will experience an increase of 3.2 percent under this final rule with comment period in CY 2024 relative to total spending in CY 2023. This projected increase (shown in Column 5) of Table 168 of this final rule with comment period reflects the final 2.8 percent OPD fee schedule increase factor, added by the difference in estimated outlier payments between CY 2023 (0.78 percent) and CY 2024 (1.0 percent), minus 0.11 percent for the change in the pass-through payment estimate between CY 2023 and CY 2024. We estimate that the combined effect of all changes for CY 2024 will increase payments to urban hospitals by 3.2 percent. Overall, we estimate that rural hospitals will experience a 4.2 percent increase as a result of the combined effects of all the changes for CY 2024.

Among hospitals, by teaching status, we estimate that the impacts resulting from the combined effects of all changes will include an increase of 2.4 percent for major teaching hospitals and an increase of 3.9 percent for nonteaching hospitals. Minor teaching hospitals will experience an estimated increase of 3.5 percent.

In our analysis, we also have categorized hospitals by type of ownership. Based on this analysis, we estimate that voluntary hospitals would experience an increase of 3.2 percent, proprietary hospitals will experience an increase of 4.6 percent, and governmental hospitals will experience an increase of 2.8 percent.

c. Estimated Effects of OPPS Changes on CMHCs

The last line of Table 168 demonstrates the isolated impact on CMHCs, which historically have only furnished partial hospitalization services under the OPPS. As discussed in section VIII.D of this CY 2024 OPPS/ASC final rule, we are finalizing the proposal for CY 2024 to pay CMHCs under APC 5853 (Partial Hospitalization (3 services per day) for CMHCs) for PHP days with three or fewer services, and APC 5854 (Partial Hospitalization (four or more services per day) for CMHCs) for days with four or more services. We modeled the impact of this APC policy assuming CMHCs will continue to provide the same PHP care as seen in the CY 2022 claims used for ratesetting in this final rule. We did not exclude days with one or two services from our modeling for CY 2024, because our final policy will pay the per diem rate for APC 5853 for such days beginning in CY 2024. As a result of the final PHP APC changes for CMHCs, we estimate that CMHCs will experience a 9.2 percent increase in CY 2024 payments relative to their CY 2023 payments (shown in Column 5). For a detailed discussion of our final PHP policies, please see section VIII of this final rule with comment period.

Column 3 shows the estimated impact of adopting the final FY 2024 wage index values, which result in an estimated change of 0 percent to CMHCs. Column 4 shows that combining the OPD fee schedule increase factor, along with the final changes in APC policy for CY 2024 and the final FY 2024 wage index updates, will result in an estimated increase of 10 percent.

Lastly, we note that as discussed in section VIII of this final rule with comment period, we are finalizing the proposal to establish payment for intensive outpatient services furnished by CMHCs under APCs 5851 (Intensive Outpatient (3 services per day) for CMHCs) and 5852 (Intensive Outpatient (4 or more services per day) for CMHCs). Payment estimates for APCs 5851 and 5852 are not reflected in Table 168 but are discussed in section XXI.C.1.i of this final rule with comment period.

Column (1) shows total hospitals and/or CMHCs.

Column (2) includes all final CY 2024 OPPS policies and compares those to the CY 2023 OPPS.

		(1)	(2)	(3)	(4)	(5)
		Number of Hospitals	**APC Recalibration (all changes)**	**New Wage Index and Provider Adjustments**	**All Budget Neutral Changes (combined cols 2 & 3) with Market Basket Update**	**All Changes**
Column (3) shows the budget neutral impact of updating the wage index by applying the final FY 2024 hospital inpatient wage index. The final rural SCH adjustment would continue our current policy of 7.1 percent, so the budget neutrality factor is 1. The final budget neutrality adjustment for the cancer hospital adjustment is 1.0005 because the final CY 2024 target payment-to-cost ratio is less than the CY 2023 PCR target.						
Column (4) shows the impact of all budget neutrality adjustments and the addition of the final 3.1 percent OPD fee schedule update factor (3.3 percent reduced by 0.2 percentage points for the productivity adjustment).						
Column (5) shows the additional adjustments to the conversion factor resulting from a change in the pass-through estimate and adding estimated outlier payments. Note that previous years included the frontier adjustment in this column, but we have the frontier adjustment to Column 3 in this table.						
These 3,611 providers include children and cancer hospitals, which are held harmless to pre-BBA amounts, and CMHCs. ** Complete DSH numbers are not available for providers that are not paid under IPPS, including rehabilitation, psychiatric, and long-term care hospitals.						

BILLING CODE 4150–28–C

d. Estimated Effect of OPPS Changes on Beneficiaries

For services for which the beneficiary pays a copayment of 20 percent of the payment rate, the beneficiary's payment would increase for services for which the OPPS payments will rise and will decrease for services for which the OPPS payments will fall. For further discussion of the calculation of the national unadjusted copayments and minimum unadjusted copayments, we refer readers to section II.H of this final rule. In all cases, section 1833(t)(8)(C)(i) of the Act limits beneficiary liability for copayment for a procedure performed in a year to the hospital inpatient deductible for the applicable year.

We estimate that the aggregate beneficiary coinsurance percentage would be approximately 18.0 percent for all services paid under the OPPS in CY 2024. The estimated aggregate beneficiary coinsurance reflects general system adjustments, including the final CY 2024 comprehensive APC payment policy discussed in section II.A.2.b of this final rule. We note that the individual payments, and therefore copayments, associated with services may differ based on the setting in which they are furnished. However, at the aggregate system level, we do not currently observe significant impact on beneficiary coinsurance as a result of those policies.

e. Estimated Effects of OPPS Changes on Other Providers

The relative payment weights and payment amounts established under the OPPS affect the payments made to ASCs, as discussed in section XIII of this final rule. Hospitals, CMHCs, and ASCs would be affected by the changes in this final rule. Additionally, as discussed in section VIII of this final rule with comment period, we are establishing payment for IOP furnished by RHCs, FQHCs, and OTPs. These providers of IOP are not paid under the OPPS and are not included in the impact analysis shown in Table 100; however, the final payment amount for OPPS APC 5861 will affect payments to these providers. We discuss estimated effects of final IOP policies in section XXI.C.1.i of this final rule with comment period.

f. Estimated Effects of OPPS Changes on the Medicare and Medicaid Programs

The effect of the update on the Medicare program is expected to be an increase of $2.1 billion in program payments for OPPS services furnished in CY 2024. The effect on the Medicaid program is expected to be limited to copayments that Medicaid may make on behalf of Medicaid recipients who are also Medicare beneficiaries. We estimate that the changes in this final rule with comment period will increase these Medicaid beneficiary payments by approximately $135 million in CY 2024. Currently, there are approximately 10 million dual-eligible beneficiaries, which represent approximately 30 percent of Medicare Part B fee-for-service beneficiaries. The impact on Medicaid was determined by taking 30 percent of the beneficiary cost-sharing impact. The national average split of Medicaid payments is 57 percent Federal payments and 43 percent State payments. Therefore, for the estimated $135 million Medicaid increase, approximately $75 million would be from the Federal government and $60 million will be from State governments.

g. Alternative OPPS Policies Considered

Alternatives to the OPPS changes we proposed and the reasons for our selected alternatives are discussed throughout this final rule with comment period.

• Alternatives Considered for the Claims Data used in OPPS and ASC Ratesetting due to the PHE.

We refer readers to section X.F of this final rule with comment period for a discussion of our final policy of returning to the standard update process of using updated cost report data for OPPS ratesetting. In that section, we discussed our consideration of issues regarding data updates, and in particular the selection of cost report data used, which would include some cost report data including the timeframe of the PHE. We note that were we to continue using cost report data from prior to the PHE it would potentially not be reflective of more updated cost and charging patterns. In this final rule, as discussed in section X.F. of this final rule with comment period, we are finalizing our policy of resuming our regular cost report update process for CY 2024 OPPS ratesetting.

We note that these policy considerations also have ASC implications since the relative weights for certain surgical procedures performed in the ASC setting are developed based on the OPPS relative weights and claims data.

h. Health Equity Comment Solicitation

Advancing health equity is the first pillar of the CMS 2022 Strategic Framework.[840] To gain insight into how OPPS and ASC policies could affect health equity, we are considering adding elements to our impact analysis that would detail how OPPS and ASC policies impact particular beneficiary populations. Beneficiary populations that have been disadvantaged or underserved by the healthcare system may include patients with the following characteristics, among others: members of racial and ethnic minorities; members of federally recognized Tribes; people with disabilities; members of the lesbian, gay, bisexual, transgender, and queer (LGBTQ+) community; individuals with limited English proficiency; members of rural communities; and persons otherwise adversely affected by persistent poverty or inequality.

We sought comment from interested parties about how we might structure an impact analysis that addresses how OPPS and ASC changes may impact beneficiaries of different groups. We currently present OPPS impacts by provider type, rural versus urban area, geographic region, teaching status, and ownership type. We stated that we were interested in what health equity questions we can examine within these existing categories to better understand the heath equity impact of our policies. We also welcomed suggestions about adding new categories or measures of health equity in our impact analyses, such as using the area deprivation index (ADI) as a proxy for disparities related to geographic variation. Additionally, we sought comment on ways to continue building an OPPS health equity framework that allows us to develop policies that enhance health equity under our existing statutory authority.

Comment: Commenters were supportive of CMS efforts to incorporate health equity elements into future impact analyses and provided other recommendations for policies to promote health equity using the OPPS. Suggestions included: engaging with interested parties or beneficiaries to identify instances where payment policy negatively impacts beneficiary care and to determine which health equity elements should be included in impact analyses; adding elements that address policy impacts on social drivers of health, racial and ethnically minoritized groups, the LGBTQIA+ community, those living with disabilities, and other underserved populations; using of health equity accreditation programs or the NCQA health equity framework to examine whether payment adjustments worsen health disparities or produce unintended results; conducting research to better understand how beneficiaries are made aware of outpatient services and whether this leads to disparities in accessing outpatient services; assessing whether utilization by geographic areas is skewed by socioeconomic circumstances or inequities that pose barriers to beneficiaries accessing and utilizing services; outlining specific health equity goals for providers; adopting the ONC HIT certification requirements as a model for embedding health equity in all components of data measurement; adopting payment policies that recognize the unique role of essential hospitals in promoting health equity; considering hospital performance and the proportion of vulnerable populations served by the hospitals in any health equity framework; and continuing efforts to advance interoperable data systems that collect health equity data.

Response: We appreciate the input from commenters. We will take these suggestions into consideration for future rulemaking.

i. Effects of IOP Policies on Hospitals, CMHCs, FQHCs, RHCs, and OTPs

As discussed in section VIII of this CY 2024 OPPS/ASC final rule with comment period, we are establishing payment for intensive outpatient services furnished by hospitals, CMHCs, FQHCs, and RHCs under a new IOP benefit. We are also finalizing our proposal to establish payment for intensive outpatient services provided by OTPs under the existing OTP benefit. Estimates of the payment impacts for IOP furnished by hospitals are included in Table 168 of this final rule with comment period, based on utilization in the CY 2022 claims for days that we believe would likely be billed as IOP beginning in CY 2024. Specifically, we modeled non-PHP days furnished by hospitals with 3 and 4 or more services from Table 98 of this final rule with comment period and at least one service from the list of primary services shown in Table 99 of this final rule with comment period.

Because CMHCs are currently only permitted to bill for partial hospitalization services, we are unable to model payments for IOP APCs 5851 and 5852 based on utilization from CY 2022 claims. Therefore, the payment impacts for IOP furnished by CMHCs are not included in Table 168. However, we anticipate there would be an increase in utilization for CMHCs beginning in CY 2024. We simulated potential utilization for IOP APCs 5851 and 5852 based on estimates of the volume of such services that we expect would be provided beginning in CY 2024. We calculated the number of non-PHP 3-service and 4 or more service days in the hospital setting and compared this to the number of PHP 3-service and 4 or more service days in the hospital setting. We applied the same ratio of non-PHP to PHP days to estimate anticipated IOP claims in the CMHC setting for CY 2024. We believe this is appropriate, because as discussed in section VIII.C of this final rule with comment period, IOP and PHP days will consist of the same services and use the same HCPCS codes. Therefore, for public awareness, we are including projections about potential IOP utilization for CMHCs using claims with a comparable number and type of services, which we believe is the best available estimate of IOP utilization in the future. Based on this methodology, we estimate that CMHCs would provide approximately 52,608 IOP days with

[840] Available at: *https://www.cms.gov/files/document/2022-cms-strategic-framework.pdf.*

three services and approximately 18,034 IOP days with four or more services. These projections correspond to an estimated $9.4 million in additional payments to CMHCs for the provision of intensive outpatient services. This represents an increase of roughly 165 percent relative to current CMHC payments for partial hospitalization services. We solicited comment on our assumptions and the methodology used to derive this estimate.

In section VIII.F.4 of this final rule with comment period, we discuss the special payment rules for FQHCs and RHCs to furnish intensive outpatient services as mandated by sections 4124(c)(1) and (c)(2) of the CAA, 2023. For both FQHCs and RHCs, we are finalizing that the IOP payment rate will be based on the per diem payment amount determined for APC 5861 (Intensive Outpatient (3 services per day) for hospital-based IOPs). However, for IOP services furnished in FQHCs, the payment amount will be based on the lesser of a FQHC's actual charges or the rate determined for APC 5861. Additionally, we are finalizing that grandfathered tribal FQHCs will continue to have their payment based on the outpatient per visit rate when furnishing IOP services. That is, payment is based on the lesser of a grandfathered tribal FQHC's actual charges or the outpatient per visit rate.

FQHCs and RHCs currently bill for mental health services. Beginning January 1, 2024, these settings will be able to bill for certain mental health services determined to be IOP services that they were not able to furnish previously, for example group therapy. We anticipate there would be utilization of IOP services for both RHCs and FQHCs in CY 2024; however, since this is a new program for both settings, we are unable to project what that utilization would be or the associated Medicare expenditures. FQHCs and RHCs typically furnish primary care services therefore we believe that it may take time for these settings to build the internal framework needed to initiate and foster an IOP. With regard to RHCs, we note the statutory provision which defines the term ''rural health clinic'' in section 1861(aa)(2)(K)(iv) of the Act, states that a RHC is not a facility which is primarily for the care and treatment of mental diseases. We believe this provision could cause low utilization of IOP services until RHCs can determine what they can or cannot furnish. Therefore, we believe extending payment coverage for IOP services in FQHCs and RHCs is unlikely to have a significant impact on overall Medicare spending.

As discussed in section VIII.G of this final rule with comment period, for CY 2024 and subsequent years, we are finalizing to establish a weekly add-on code for IOP services furnished by OTPs for the treatment of opioid use disorder (OUD) and to revise the definition of OUD treatment services to include IOP services. In accordance with our methodology for other add-on adjustments to the bundled payment for OUD treatment services, we are finalizing to apply an annual update based on the Medicare Economic Index (MEI) described in § 414.30, and apply a geographic adjustment based on the Geographic Adjustment Factor (GAF) described in § 414.26. We are finalizing to allow OTPs to bill a new HCPCS code (G0137) for IOP services based on a minimum of at least nine IOP services furnished to eligible patients per week, which results in a payment rate of $778.20.

We estimate that these finalized policies to allow OTPs to bill for IOP services beginning in CY 2024 will result in a negligible cost increase, that is, the overall estimated impact of this final policy is increased spending of less than $5 million. In our analysis, we evaluated mental health services furnished to beneficiaries receiving care at OTPs, including for levels of care and types of services that are not currently reflected in the OTP benefit. Approximately 557 OTPs offer IOP services nationwide according to the National Substance Use and Mental Health Services Survey in 2021.[841] However, our analysis of claims data from Medicare beneficiaries receiving care under the OTP benefit from CY 2020–2022 indicated a small number of beneficiaries actually receive intensive care services equivalent to 9 hours or more a week to meet the minimum threshold for IOP services. Specifically, 85 percent of Medicare beneficiaries received only medications for OUD with basic counseling and no other mental health care, and thus did not likely utilize a higher level of care required for IOP services. For the remaining 15 percent of Medicare beneficiaries, approximately 0.5–0.7 percent received a higher acuity of care likely to meet the minimum 9 hours or more of services under IOPs. The estimated total annual cost per Medicare beneficiary with an OUD receiving IOP services at an OTP would be approximately $40,466, however, this estimate assumes that a beneficiary would require this level of care every week of the calendar year, which we do not believe would be likely. Therefore, extending coverage for IOP services in OTP settings is unlikely to have a significant impact on overall Medicare spending.

2. Estimated Effects of CY 2024 ASC Payment System Changes

Most ASC payment rates are calculated by multiplying the ASC conversion factor by the ASC relative payment weight. As discussed fully in section XIII of this final rule with comment period, we are setting the CY 2024 ASC relative payment weights by scaling the final CY 2024 OPPS relative payment weights by the final CY 2024 ASC scalar of 0.8881. The estimated effects of the updated relative payment weights on payment rates are varied and are reflected in the estimated payments displayed in Tables 169 and 170.

Beginning in CY 2011, section 3401 of the Affordable Care Act requires that the annual update to the ASC payment system after application of any quality reporting reduction be reduced by a productivity adjustment. In CY 2019, we adopted a policy for the annual update to the ASC payment system to be the hospital market basket update for CY 2019 through CY 2023. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (as projected by the Secretary for the 10-year period, ending with the applicable fiscal year, year, cost reporting period, or other annual period). For ASCs that fail to meet their quality reporting requirements, the CY 2024 payment determinations will be based on the application of a 2.0 percentage point reduction to the annual update factor, which is the hospital market basket update for CY 2024. We calculated the final CY 2024 ASC conversion factor by adjusting the CY 2023 ASC conversion factor by 1.0010 to account for changes in the pre-floor and pre-reclassified hospital wage indexes between CY 2023 and CY 2024 and by applying the CY 2024 productivity-adjusted hospital market basket update factor of 3.1 percent (which is equal to the final inpatient hospital market basket percentage increase of 3.3 percent reduced by a productivity adjustment of 0.2 percentage point). The final CY 2024 ASC conversion factor is $53.514 for

ASCs that successfully meet the quality reporting requirements.

a. Limitations of Our Analysis

Presented here are the projected effects of the final changes for CY 2024 on Medicare payment to ASCs. A key limitation of our analysis is our inability to predict changes in ASC service-mix between CY 2022 and CY 2024 with precision. We believe the net effect on Medicare expenditures resulting from the final CY 2024 changes will be small in the aggregate for all ASCs. However, such changes may have differential effects across surgical specialty groups, as ASCs continue to adjust to the payment rates based on the policies of the revised ASC payment system. We are unable to accurately project such changes at a disaggregated level. Clearly, individual ASCs would experience changes in payment that differ from the aggregated estimated impacts presented below.

b. Estimated Effects of ASC Payment System Policies on ASCs

Some ASCs are multispecialty facilities that perform a wide range of surgical procedures from excision of lesions to hernia repair to cataract extraction; others focus on a single specialty and perform only a limited range of surgical procedures, such as eye, digestive system, or orthopedic procedures. The combined effect of the final update to the CY 2024 payments on an individual ASC will depend on a number of factors, including, but not limited to, the mix of services the ASC provides, the volume of specific services provided by the ASC, the percentage of its patients who are Medicare beneficiaries, and the extent to which an ASC provides different services in the coming year. The following discussion includes tables that display estimates of the impact of the final CY 2024 updates to the ASC payment system on Medicare payments to ASCs, assuming the same mix of services, as reflected in our CY 2022 claims data. Table 169 depicts the estimated aggregate percent change in payment by surgical specialty or ancillary items and services group by comparing estimated CY 2023 payments to estimated CY 2024 payments, and Table 170 shows a comparison of estimated CY 2023 payments to estimated CY 2024 payments for procedures that we estimate would receive the most Medicare payment in CY 2023.

In Table 169, we have aggregated the surgical HCPCS codes by specialty group, grouped all HCPCS codes for covered ancillary items and services into a single group, and then estimated the effect on aggregated payment for surgical specialty and ancillary items and services groups. The groups are sorted for display in descending order by estimated Medicare program payment to ASCs. The following is an explanation of the information presented in Table 169.

- Column 1—Surgical Specialty or Ancillary Items and Services Group indicates the surgical specialty into which ASC procedures are grouped and the ancillary items and services group, which includes all HCPCS codes for covered ancillary items and services. To group surgical procedures by surgical specialty, we used the CPT code range definitions and Level II HCPCS codes and Category III CPT codes, as appropriate, to account for all surgical procedures to which the Medicare program payments are attributed.
- Column 2—Estimated CY 2023 ASC Payments were calculated using CY 2022 ASC utilization data (the most recent full year of ASC utilization) and CY 2023 ASC payment rates. The surgical specialty groups are displayed in descending order based on estimated CY 2023 ASC payments.
- Column 3—Estimated CY 2024 Percent Change is the aggregate percentage increase or decrease in Medicare program payment to ASCs for each surgical specialty or ancillary items and services group that is attributable to final updates to ASC payment rates for CY 2024 compared to CY 2023.

As shown in Table 169, for the six specialty groups that account for the most ASC utilization and spending, we estimate that the final update to ASC payment rates for CY 2024 will result in a 8 percent increase in aggregate payment amounts for eye and ocular adnexa procedures, an 11 percent decrease in aggregate payment amounts for nervous system procedures, 1 percent increase in aggregate payment amounts for musculoskeletal system procedures, a 9 percent increase in aggregate payment amounts for digestive system procedures, a 4 percent increase in aggregate payment amounts for cardiovascular system procedures, and a 8 percent increase in aggregate payment amounts for genitourinary system procedures. We note that these changes can be a result of different factors, including updated data, payment weight changes, and changes in policy. In general, spending in each of these categories of services is increasing due to the 3.1 percent payment rate update. After the payment rate update is accounted for, aggregate payment increases or decreases for a category of services can be higher or lower than a 3.1 percent increase, depending on if payment weights in the OPPS APCs that correspond to the applicable services increased or decreased or if the most recent data show an increase or a decrease in the volume of services performed in an ASC for a category. For example, we estimate a 8 percent increase in aggregate eye and ocular adnexa procedure payments. The increase in payment rates for eye and ocular andexa procedures is a result of increased OPPS relative weights as a result of the APC restructuring to the Intraocular APC family and an offsetting increase in the ASC weight scalar to account for an expected decrease in ASC expenditures from other surgical specialties. These changes are further increased by the 3.1 percent ASC rate update for these procedures. Conversely, we estimate an 11 percent decrease in nervous system procedures related to the American Medical Association's RVU Update Committee (RUC) estimated shift in utilization from an existing high-cost neurostimulator procedure (CPT code 63685) to a new, lower-cost neurostimulator procedure (CPT code 64596) for CY 2024. For estimated changes for selected procedures, we refer readers to Table 169 provided later in this section.

TABLE 169: ESTIMATED IMPACT OF THE FINAL CY 2024 UPDATE TO THE ASC PAYMENT SYSTEM ON AGGREGATE CY 2023 MEDICARE PROGRAM PAYMENTS BY SURGICAL SPECIALTY OR ANCILLARY ITEMS AND SERVICES GROUP

Surgical Specialty Group (1)	Estimated CY 2023 ASC Payments (in Millions) (2)	Estimated CY 2024 Percent Change (3)
Total	$6,309	**3**
Eye	$1,880	**8**
Nervous System	$1,274	**-11**
Musculoskeletal	$1,188	**1**
Gastrointestinal	$937	**9**
Cardiovascular	$310	**4**
Genitourinary	$225	**8**

Table 170 shows the estimated impact of the updates to the revised ASC payment system on aggregate ASC payments for selected surgical procedures during CY 2024. The table displays 30 of the procedures receiving the greatest estimated CY 2023 aggregate Medicare payments to ASCs. The HCPCS codes are sorted in descending order by estimated CY 2023 program payment.

- Column 1—CPT/HCPCS code.
- Column 2—Short Descriptor of the HCPCS code.
- Column 3—Estimated CY 2023 ASC Payments were calculated using CY 2022 ASC utilization (the most recent full year of ASC utilization) and the CY 2023 ASC payment rates.

The estimated CY 2023 payments are expressed in millions of dollars.

- Column 4—Estimated CY 2024 Percent Change reflects the percent differences between the estimated ASC payment for CY 2023 and the estimated payment for CY 2024 based on the final update.

c. Estimated Effects of ASC Payment System Policies on Beneficiaries

We estimate that the CY 2024 update to the ASC payment system will be generally positive (that is, result in lower cost-sharing) for beneficiaries with respect to the new procedures to be designated as office-based for CY 2024. First, other than certain preventive services where coinsurance and the Part B deductible is waived to comply with sections 1833(a)(1) and (b) of the Act, the ASC coinsurance rate for all procedures is 20 percent. This contrasts with procedures performed in HOPDs under the OPPS, where the beneficiary is responsible for copayments that range from 20 percent to 40 percent of the procedure payment (other than for certain preventive services), although the majority of HOPD procedures have a 20-percent copayment. Second, in almost all cases, the ASC payment rates under the ASC payment system are lower than payment rates for the same procedures under the OPPS. Therefore, the beneficiary coinsurance amount under the ASC payment system will almost always be less than the OPPS copayment amount for the same services. (The only exceptions will be if the ASC coinsurance amount exceeds the hospital inpatient deductible since the statute requires that OPPS copayment amounts not exceed the hospital inpatient deductible. Therefore, in limited circumstances, the ASC coinsurance amount may exceed the hospital inpatient deductible and, therefore, the OPPS copayment amount for similar services.) Beneficiary coinsurance for services migrating from physicians' offices to ASCs may decrease or increase under the ASC payment system, depending on the particular service and the relative payment amounts under the MPFS compared to the ASC. While the ASC payment system bases most of its payment rates on hospital cost data used to set OPPS relative payment weights, services that are performed a majority of the time in a physician office are generally paid the lesser of the ASC amount according to the standard ASC ratesetting methodology or at the nonfacility practice expense-based amount payable under the PFS. For those additional procedures that we finalized to designate as office-based in CY 2024, the beneficiary coinsurance amount under the ASC payment system

generally will be no greater than the beneficiary coinsurance under the PFS because the coinsurance under both payment systems generally is 20 percent (except for certain preventive services where the coinsurance is waived under both payment systems).

Accounting Statements and Tables for OPPS and ASC Payment System

As required by OMB Circular A–4 (available on the Office of Management and Budget website at: *https://www.whitehouse.gov/sites/whitehouse.gov/files/omb/assets/OMB/circulars/a004/a-4.html*), we have prepared accounting statements to illustrate the impacts of the OPPS and ASC changes in this final rule with comment period. The first accounting statement, Table 171, illustrates the classification of expenditures for the CY 2024 estimated hospital OPPS incurred benefit impacts associated with the final CY 2024 OPD fee schedule increase. The second accounting statement, Table 172, illustrates the classification of expenditures associated with the 3.1 percent CY 2024 update to the ASC payment system, based on the provisions of this final rule with comment period and the baseline spending estimates for ASCs. Both tables classify most estimated impacts as transfers. Table 173 displays the annual estimated impact of hospital price transparency.

TABLE 171: ACCOUNTING STATEMENT: CY 2024 ESTIMATED HOSPITAL OPPS TRANSFERS FROM CY 2023 TO CY 2024 ASSOCIATED WITH THE CY 2024 HOSPITAL OUTPATIENT OPD FEE SCHEDULE INCREASE

Category	Transfers
Annualized Monetized Transfers	$2,110 million
From Whom to Whom	Federal Government to outpatient hospitals and other providers who receive payment under the hospital OPPS

TABLE 172: ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS FROM CY 2023 TO CY 2024 AS A RESULT OF THE FINAL CY 2024 UPDATED TO THE ASC PAYMENT SYSTEM

Category	Transfers
Annualized Monetized Transfers	$170 million
From Whom to Whom	Federal Government to Medicare Providers and Suppliers
Total	$170 million

TABLE 173: ESTIMATED COSTS IN CY 2024 FOR HOSPITAL PRICE TRANSPARENCY

CATEGORY	Costs
Burden	$75.147million
Regulatory Familiarization	$3.715 million*

* Regulatory familiarization costs occur upfront only.

3. Effects of Changes in Requirements for the Hospital Outpatient Quality Reporting (OQR) Program

a. Background

We refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 72278 through 72279) for the previously estimated effects of changes to the Hospital OQR Program for the CY 2025 payment determination. Of the 3,097 hospitals that met eligibility requirements for the CY 2023 payment determination for the Hospital OQR Program, we determined that 77 hospitals did not meet the requirements to receive the full annual Outpatient Department (OPD) fee schedule increase factor.

b. Impact of CY 2024 OPPS/ASC Final Rule Policies

We do not anticipate that the Hospital OQR Program policies will significantly impact the number of hospitals that will receive payment reductions. In this final rule with comment period, we are finalizing to: (1) modify the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure, beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure beginning with the voluntary CY 2024 reporting period; (3) modify the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure, beginning with the CY 2024 reporting period/CY 2026 payment determination.

We are finalizing with modification our proposal to adopt the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or

Total Knee Arthroplasty (TKA) in the HOPD Setting (THA/TKA PRO–PM) with voluntary reporting beginning with the CY 2025 reporting period and mandatory reporting beginning one year later than proposed with the CY 2028 reporting period/CY 2031 payment determination.

We are finalizing with modification our proposal to adopt the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) electronic clinical quality measure (eCQM) with voluntary reporting beginning with the CY 2025 voluntary reporting period and mandatory reporting beginning 1 year later than proposed with the CY 2027 reporting period/CY 2029 payment determination.

We are not finalizing our proposals to: (1) re-adopt with modification the Hospital Outpatient Volume Data on Selected Outpatient Surgical Procedures measure; and (2) remove the Left Without Being Seen measure.

We refer readers to section XXIV.B of this final rule with comment period entitled ''Collection of Information'' for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the Hospital OQR Program where we state that for purposes of burden estimation, 3,350 hospitals will be considered and Table 157 where we estimate a total information collection burden increase for 3,350 OPPS hospitals of 67,842 hours at a cost of $1,536,526 annually associated with our finalized policies for the CYs 2030 reporting period/CY 2032 payment determination and subsequent years, compared to our currently approved information collection burden estimates.

In section XIV.B.2.a of this final rule with comment period, we finalized our proposal to modify the COVID–19 Vaccination Coverage Among HCP measure to utilize the term ''up to date'' in the HCP vaccination definition and update the numerator to specify the time frames within which an HCP is considered up to date with recommended COVID–19 vaccines, including booster doses. Although we anticipate this modification may require some hospitals to update information technology (IT) systems or workflow related to maintaining accurate vaccination records for HCP, we assume most hospitals are currently recording all necessary information for HCP such that this modification would not require additional information to be collected. Therefore, the financial impact of any required updates would be minimal. Finally, we do not estimate any changes to the effects previously discussed in the CY 2022 OPPS/ASC final rule with comment period for the Hospital OQR Program (86 FR 63984).

In section XIV.B.2.b of this final rule with comment period, we finalized our proposal to modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure by limiting the survey instrument that can be used to administer this measure to three assessment tools: National Eye Institute Visual Function Questionnaire (NEI VFQ–25), Visual Function Index (VF–14), and VF–8R. These surveys were found to have fewer noted limitations, present the lowest administrative burden, and achieve adequate validity and reliability compared to other surveys. We understand some hospitals may be currently using one of the other surveys which would no longer be allowable for collecting data for this measure, however, we believe any costs associated with modifying clinical practices would be negligible as these surveys are all publicly available at no additional cost and are comparable survey instruments in form and manner for data collection and measure calculation to other surveys used for this measure.

In section XIV.B.3.b of this final rule with comment period, we finalized with modification our proposal to adopt the THA/TKA PRO–PM. We assume the effects on outpatient hospitals would be similar to the effects previously discussed in the FY 2023 IPPS/LTCH PPS final rule for the inpatient hospital setting under the Hospital Inpatient Quality Reporting (IQR) Program (87 FR 49492). For hospitals that would not already be collecting these data for the Hospital IQR Program, there would be some non-recurring costs associated with changes in workflow and IT systems to collect the data for the Hospital OQR Program. The extent of these costs is difficult to quantify as different hospitals may utilize different modes of data collection (such as paper-based, electronically patient-directed, or clinician-facilitated). While we assume the majority of hospitals would report data for this measure directly to CMS via the CMS-designated information system (currently, the Hospital Quality Reporting (HQR) system), we assume some hospitals may elect to submit measure data using a third-party vendor, for which there are associated costs. To determine an estimate of third-party vendor costs, we looked at the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) measure (OMB control number 0938–098; expiration date September 30, 2024), which used an estimate of approximately $4,000 per hospital to account for these costs. This per hospital cost estimate originates from this Paperwork Reduction Act analysis performed for 2012, therefore, to account for inflation (assuming end of CY 2012 to January CY 2023), we adjust the price using the Bureau of Labor Statistics Consumer Price Index and estimate an updated cost of approximately $5,212 ($4,000 × 130.3 percent).[842]

In section XIV.B.3.c of this final rule with comment period, we finalized with modification our proposal to adopt the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic CT in Adults (Hospital Level—Outpatient) eCQM. Similar to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63837 through 63840), we believe that costs associated with adoption of eCQMs are multifaceted and include not only the burden associated with reporting but also the costs associated with implementing and maintaining program requirements, such as maintaining measure specifications in hospitals' electronic health record (EHR) systems for the eCQMs used in the Hospital OQR Program (83 FR 41771). For the Excessive Radiation eCQM, hospitals will be required to create a secure account through the measure developer's website and link their EHR and PACS data to the Alara Imaging Software for CMS Measure Compliance. Similar to our assumptions for the Hospital IQR Program in the FY 2024 IPPS/lTCH PPS final rule (88 FR 59431), we estimate this one-time activity will require no more than 1 hour to complete and therefore estimate a total of 3,350 hours (1 hour × 3,350 hospitals) at a cost of $174,602 (3,350 hours × $52.12) for all OPPS hospitals.

Regarding the remaining finalized proposals, we do not believe any of these policies would result in any additional economic impact beyond those discussed in section XXIV ''Collection of Information'' of this final rule with comment period.

4. Effects of Requirements for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program

a. Background

In section XV of this final rule with comment period, we discuss our finalized policies affecting the ASCQR Program. Based on the most recent

[842] U.S. Bureau of Labor Statistics. Historical CPI–U data. Accessed on March 9, 2023. Available at: *https://www.bls.gov/cpi/tables/supplemental-files/historical-cpi-u-202301.pdf.*

analysis of the CY 2023 payment determination data, we found that, of the 5,375 ambulatory surgical centers (ASCs) that were actively billing Medicare, 3,733 were required to participate in the ASCQR Program and met all reporting requirements, whereas 194 did not. Of the 1,448 ASCs not required to participate in the program, 687 ASCs did so. In addition, 195 Hospitals Without Walls have returned to active ASC billing and will be eligible to participate toward CY 2024 payment determinations. On this basis, we estimate that 4,809 ASCs (3,733 + 194 + 687 + 195) will submit data for the ASCQR Program for the CY 2026 payment determination unless otherwise noted. We note that this estimate is a decrease of 248 ASCs from our estimate of 5,057 provided in the CY 2024 OPPS/ASC proposed rule (88 FR 49881) due to results from more recent data analysis regarding numbers of eligible ASCs.

b. Impact of CY 2024 OPPS/ASC Finalized Policies

In this final rule with comment period, we are finalizing our proposals to: (1) modify the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure, beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure beginning with the voluntary CY 2024 reporting period; and (3) modify the Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure, beginning with the CY 2024 reporting period/CY 2026 payment determination.

We are finalizing with modification our proposal to adopt the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKAPRO–PM) with voluntary reporting beginning with the CY 2025 reporting period through the CY 2027 reporting period followed by mandatory reporting beginning one year later than proposed with the CY 2028 reporting period/CY 2031 payment determination.

We are not finalizing our proposal to re-adopt with modification the ASC Facility Volume Data on Selected ASC Surgical Procedures measure.

We refer readers to section XXIV.C of this final rule with comment period (addressing information collection requirements) for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the ASCQR Program and Table 163 where we estimate a total information collection burden increase for 4,089 ACSs of 302 hours at a cost of $6,670 annually associated with our finalized policies and updated burden estimates for the CY 2030 reporting period/CY 2032 payment determination and subsequent years, compared to our currently approved information collection burden estimates. We note that our burden estimate has been updated from the CY 2024 OPPS/ASC proposed rule (88 FR 49906) due to the previously discussed decrease in our estimate of ASCs submitting data for the CY 2026 payment determination as well as the decision not to finalize our proposal to re-adopt with modification the ASC Facility Volume on Selected ASC Surgical Procedures measure.

In section XV.B.4.a of this final rule with comment period, we finalized our proposal to modify the COVID–19 Vaccination Coverage Among HCP measure to utilize the term ''up to date'' in the HCP vaccination definition and update the numerator to specify the time frames within which an HCP is considered up to date with recommended COVID–19 vaccines, including booster doses. Although we anticipate this modification may require some facilities to update information technology (IT) systems or workflow related to maintaining accurate vaccination records for HCP, we assume most facilities are currently recording all necessary information for HCP such that this modification will not require additional information to be collected and, therefore, the financial impact of any required updates will be minimal. Finally, we do not estimate any changes to the effects previously discussed in the CY 2022 OPPS/ASC final rule with comment period for the ASCQR Program (86 FR 63985).

In section XV.B.4.b of this final rule with comment period, we finalized our proposal to modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure by limiting the survey instrument that can be used to administer this measure to three assessment tools: NEI VFQ–25, VF–14, and VF–8R. These surveys were found to have fewer noted limitations, present the lowest administrative burden, and achieve adequate validity and reliability compared to other surveys. We understand some ASCs may be currently using one of the other surveys which will no longer be allowable for collecting data for this measure, however, we believe any costs associated with modifying clinical practices will be negligible as these surveys are all publicly available at no additional cost and are comparable survey instruments in form and manner for data collection and measure calculation to other surveys used for this measure.

In section XV.B.5.b of this final rule with comment period, we finalized with modification the adoption of the THA/TKA PRO–PM. We assume the effects on ASCs will be similar to those previously finalized for the inpatient hospital setting under the Hospital IQR Program as discussed in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49492). For ASCs that are not currently collecting these data, there will be some non-recurring costs associated with changes in workflow and information systems to collect the data. The extent of these costs is difficult to quantify as different ASCs may utilize different modes of data collection (such as paper-based, electronically patient-directed, or clinician-facilitated). While we assume the majority of ASCs will report data for this measure directly to CMS via the CMS-designated information system (currently, the HQR System), we also assume some ASCs may elect to submit measure data via a third-party vendor, for which there are associated costs. To determine an estimate of third-party vendor costs, we looked at the HCAHPS measure (OMB control number 0938–0981; expiration date September 30, 2024), which used an estimate of approximately $4,000 per hospital to account for these costs. This estimate originates from 2012, therefore, to account for inflation (assuming end of CY 2012 to January CY 2023), we adjust the price using the Bureau of Labor Statistics Consumer Price Index and estimate an updated cost of approximately $5,212 ($4,000 × 130.3 percent).[843]

Regarding the remaining proposals finalized, we do not believe any of these finalized proposals would result in any additional economic impact beyond those discussed in section XXIV of this final rule with comment period, if adopted.

5. Effects of Requirements for the Rural Emergency Hospital Quality Reporting (REHQR) Program

a. Background

In section XVI of this final rule with comment period, we discuss our

[843] U.S. Bureau of Labor Statistics. Historical CPI–U data. Accessed on March 9, 2023. Available at: *https://www.bls.gov/cpi/tables/supplemental-files/historical-cpi-u-202301.pdf.*

finalized policies affecting the Rural Emergency Hospital Quality Reporting (REHQR) Program. We are finalizing the adoption of four new measures, beginning with the CY 2024 reporting period: (1) the Abdomen Computed Tomography (CT)—Use of Contrast Material measure; (2) the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure; (3) the Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy measure; and (4) the Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery measure.

We refer readers to section XXIV.D of this final rule with comment period for a detailed discussion of the calculations estimating the changes to the information collection burden for submitting data to the REHQR Program and Table 164 where we estimate a total information collection burden for 746 REHs of 9,101 hours at a cost of $474,344 annually associated with our finalized policies for the CY 2024 reporting period and subsequent years. Regarding the remaining policies we are finalizing, we do not believe any of these policies will result in any additional economic impact beyond those discussed in section XXIV of this final rule with comment period.

b. Impact of CY 2024 OPPS/ASC Finalized REHQR Program Policies

For CY 2024, we have determined there are 1,716 CAHs and rural subsection (d) hospitals with 50 or fewer beds that are eligible to convert to become an REH in the nation based on current available data. Based on our analysis of CAHs and subsection (d) hospitals participating in the Hospital OQR Program with 50 beds or less, we have estimated 746 hospitals could transition to REH status assuming that all eligible hospitals in states which have passed or amended necessary legislation enabling transition to occur as of March 2023 choose to do so. We use this number of REHs for our impact analyses knowing that more jurisdictions will pass or amend necessary legislation enabling transitions, acknowledging that the number of conversions could be less than or significantly greater than this estimate with time noting that as of October 13, 2023, 16 hospitals had converted to REH status.

As hospitals eligible to convert to REH status have been eligible to report quality measures under the Hospital OQR Program and most of these hospitals have been reporting, we do not believe any of our administrative policies will result in additional impact on these hospitals.

6. Estimated Effects of Changes to the CMHC CoPs

a. Impacts Related to Conditions of Participation: Admission, Initial Evaluation, Comprehensive Assessment, and Discharge or Transfer of the Client (§ 485.914)

Under the Medicare Program, in accordance with section 4124 of division FF of the CAA. 2023, we proposed conforming regulations text changes to establish coverage for Intensive Outpatient Services (IOP) in CMHC at § 485.914 ''Admission, initial evaluation, comprehensive assessment, and discharge or transfer of the client''. At § 485.914(a), we require that for clients who are assessed and admitted to receive partial hospitalization services, the CMHC must also meet separate requirements specified in § 485.918(f). In § 418.918(d)(2), we proposed to add IOP services to the update of the assessment no less frequently than every 30 days. We do not expect any increase in burden for this modification, nor do we expect the changes for this provision will cause any appreciable expense or anticipated savings. Therefore, we do not believe this standard would impose any additional regulatory burden.

b. Impacts Related to Conditions of Participation: Treatment Team, Person-Centered Active Treatment Plan, and Coordination of Services (§ 485.916)

We received several comments requesting that we revise the CoPs at § 485.916(a)(1) and (3) to specifically identify MFTs and MHCs as potential members of the CMHC interdisciplinary team. We have modified the language at § 485.916(a)(1) to include the MFT or MHC as providers who can lead the CMHC interdisciplinary team. The standard at § 485.916(d) requires the active treatment plan to be updated with current information from the client's comprehensive assessment and information concerning the client's progress toward achieving outcomes and goals specified in the active treatment plan. With the addition of IOP services to CMHCs, we proposed to add IOP into this requirement and to reference the specific IOP program requirements being proposed (at § 424.24(d)) in section VIII.B.2 of this final rule with comment period. We do not expect any increase in burden for these modifications, nor do we expect the changes for this provision will cause any appreciable expense or anticipated savings. Therefore, we do not believe this standard would impose any additional regulatory burden.

7. Impacts Related to Conditions of Participation: Organization, Governance, Administration of Services, Partial Hospitalization Services (§ 485.918)

The requirement at § 485.918(b) Standard: Provision of services, specifies a comprehensive list of services that a CMHC is required to furnish. This list of services that CMHCs provide corresponds directly to the Statutory requirements in (section 1861(ff)(3) of the Act). We proposed to modify the title at § 485.918, by adding intensive outpatient services after partial hospitalization services. In addition, we proposed to add IOP to the requirement at § 485.918(b)(1)(iii) for the provision of services. This change will recognize IOP, along with day treatment and PHP, as services that can be provided by a CMHC, other than in an individual's home or in an inpatient or residential setting, or psychosocial rehabilitation services.

Lastly, we proposed to add a new standard for IOP services at § 485.918(g). This requirement specifies the additional requirements a CMHC providing IOP services must meet under proposed requirements at §§ 410.2, 410.44, 410.111, and 424.24(d). We believe that modifying the title of this CoP to include IOP services, as well as adding IOP services to § 485.918(b)(1)(iii) and the new standard at § 485.918(g) will not increase the burden for this modification. In addition, we do not expect the changes to this provision will cause any appreciable amount of expense or anticipated savings, and we do not believe this standard would impose any additional regulatory burden.

8. Effects of Requirements Relating to Hospital Price Transparency

a. Background

Since the hospital price transparency regulation's (at 45 CFR part 180) effective date on January 1, 2021, hospitals have been required to make their standard charges available to the public.

As discussed in section XVIII of the CY 2024 OPPS/ASC proposed rule (88 FR 49847 through 49864), we proposed a number of changes to the hospital price transparency regulations at 45 CFR part 180 to accelerate automated aggregation of hospital standard charge information, improve the public's ability to meaningfully understand and use the data, and support and streamline CMS compliance efforts.

Specifically, we are finalizing: (1) definitions of several terms; (2) a requirement that hospitals make a good faith effort to ensure standard charge information is true, accurate, and complete, and to include a statement affirming this in the MRF; (3) new data elements that hospitals must include in their MRFs, as well a requirement that hospitals encode standard charge information in a CMS template layout; (4) a phased implementation timeline applicable to the new requirements we are finalizing in this final rule with comment period; (5) a requirement that hospitals to include a .txt file in the root folder that includes a direct link to the MRF and a link in the footer on its website that links directly to the publicly available web page that hosts the link to the MRF; and (6) improvements to our enforcement process by updating our methods to assess hospital compliance, requiring hospitals to acknowledge receipt of warning notices, working with health system officials to address noncompliance issues in one or more hospitals that are part of a health system, and publicizing more information about CMS enforcement activities related to individual hospital compliance.

b. Overall Estimated Burden on Hospitals Due to Hospital Price Transparency Requirements

The hospital price transparency policies are estimated to increase burden on hospitals (as defined at 45 CFR 180.20), as detailed in section XXIV, including a one-time cost and a modest increase in recurring costs. We believe that the benefits to the public, some of which are noted above, justify this regulatory action.

To analyze the costs of this requirement, we used a baseline that assumes the existing requirements (adopted in the CY 2020 HPT final rule and the CY 2022 OPPS/ASC final rule with comment period and codified at 45 CFR part 180) remain in place over the time horizon of this RIA. That is, the retrospective analysis and revised cost estimates for recurring administrative burden contained in section XXIV inform our baseline scenario of no further regulatory action.

As detailed in section XXIV of this final rule with comment period, commenters generally expressed concern that the cost to comply with new HPT requirements was underestimated in the proposed rule. Accordingly, we have revised our burden estimates in the section XXIV of this final rule with comment period, as well as the assumptions used in this RIA to establish a range of quantifiable effects that accounts for uncertainty. We now estimate a one-time cost for this requirement of approximately $10,587.10 per hospital, or $75,147,236 ($10,587.10 × 7,098) for all hospitals combined. This is an increase of $7,800.10 per hospital, or $55,362,696.80 for all hospitals combined compared to the cost estimates in the CY 2024 OPPS/ASC proposed rule. To estimate upper and lower bounds of potential burden, we assume hospitals may be sorted into three subsets. First, we note that the proposed MRF templates have been available since November 2022 and a number of hospitals may be already voluntarily meeting nearly all of the proposed requirements. Moreover, some hospitals may have robust information systems in which the information we are finalizing is readily available. As a result, a subset of these hospitals may only need to review this regulation to ensure that all finalized requirements are being met, which represents our low estimate. A second group of hospitals may have adopted automated processes to allow for automated processing of the data that is currently required for display, but would have to collect and encode the newly finalized data elements for the first time; for these hospitals we assume the full collection and implementation cost estimated above. A third subset of hospitals are assumed not to have adopted an automated process to collect and display the currently required data elements and would not do so for the data elements finalized in this final rule. As such, these hospitals would be making more time-consuming manual updates each year to comply with the new HPT requirements. The marginal annual burden on these hospitals would be limited to the difference in burden under this regulation compared to the existing requirements; we assume the marginal annual burden to be 20 percent of the initial implementation cost. For the low estimate we assume hospitals are distributed 10, 70, and 20 percent across the three subsets described above, respectively, and for the high estimate we assume hospitals are distributed 0, 50, and 50 percent across the three subsets. Finally, to account for uncertainty inherent in these types of estimates of administrative costs, we further adjusted our high estimate upward by 50 percent, and our low estimate downward by 50 percent. These cost range estimates are displayed in Table 174.

TABLE 174: COST RANGE ESTIMATES FOR FIRST YEAR

	Hospitals	Mean Cost / Hospital	Total Cost Burden
Primary Estimate	7,098	$10,587	$75,147,236
High Estimate	7,098	$15,881	$112,720,854
Low Estimate	7,098	$4,833	$34,305,344

In the CY 2020 HPT final rule, we estimated an on-going annual burden of 46 hours per hospital with a cost of $3,610.88 per hospital, resulting in a total national burden of 276,092 hours and total cost of $21,672,502 (in 2019 dollars). We estimated in the CY 2024 OPPS/ASC proposed rule that the requirements would increase hospital annual burden by 8 hours per year (88 FR 49892). This would result in increasing the total national annual burden to 383,292 hours (54 hours × 7,098 hospitals) and an annual national cost of $32,370,571 dollars ($4,560.52

per respondent × 7,098 hospitals). This represents a $10,698,069 ($32,370,571 − $21,672,502) increase over our previously estimated national annual burden for subsequent years.

c. Benefits of Final Policies

Although we cannot quantify the benefits of including additional data elements and encoding such data in a CMS template layout, we believe standardization requirements will help streamline the hospital's development and public's consumption of the MRF data, making it more actionable for consumers, employers, third party tool developers, and researchers.

(1) Benefits to Hospitals

We believe that requiring a standardized CMS template will assist hospitals with implementing the hospital price transparency regulation, create administrative efficiencies, and improve compliance rates, thereby supporting the overarching goal of increasing healthcare pricing competition and lowering costs. As discussed in section XXIV of this final rule with comment period, hospitals have sought clarification on how to display their standard charges, particularly payer-specific negotiated charges established by the hospital, and they have indicated that having access to a CMS-developed template could be useful for improving hospital compliance with the HPT regulation.[844] As we noted in section XXIV ''Collection of Information'' of this final rule with comment period, in response to the CY 2022 OPPS/ASC proposed rule request for information, hospitals urged CMS to be more prescriptive, requesting that CMS standardize the MRF format and contents. Additionally, researchers and experts suggest that a clear standard format would better support hospital compliance with the regulation.[845] [846] [847] [848] This sentiment was echoed in a Congressional hearing, when witnesses favored a standard template for MRF data, as a means, to support more hospitals complying with the regulation.[849]

(2) Benefits to Other Interested Parties

As discussed in the CY 2020 HPT final rule (84 FR 65538), we believe public access to hospital standard charge information is useful to the public, including patients who need to obtain items and services from a hospital, consumers of healthcare who wish to view hospital prices prior to selecting a hospital, clinicians who use the data at the point of care when making referrals, employers searching for lower cost options for healthcare coverage, and other users of the data who may develop consumer-friendly price transparency tools or perform analyses to drive value-based policy-development. Since the establishment of the HPT regulation, interested parties have reported success in using the data to realize savings. These interested parties come from various parts of the healthcare industry and range from individuals to large organizations. Individual consumers of healthcare have accessed the pricing data to shop for care and save money, and they have created tutorials to teach others how to use this information to achieve similar results.[850] Employers have used the data to reconsider their employee healthcare plans and renegotiate hospital contracts.[851] [852] [853] Innovators have identified and aggregated the data allowing consumers of healthcare to more easily make meaningful comparisons.[854] Insurers have evaluated data, identified hospitals that are cost outliers, and successfully renegotiated their contracts.[855] Researchers [856] and industry experts [857] continue to expose potential savings by publishing on the variation in negotiated charges and discounted cash prices for the same items and services both within and across hospitals. Taken together, such actions can motivate hospitals to compete on prices. Furthermore, as interested parties continue to identify new sources of value in this pricing data, the full potential is likely beyond what we previously imagined.

Numerous peer-reviewed academic studies have used the MRF data to conduct price analyses.[858] [859] [860] [861] Additionally, journalists and news outlets are now commonly conducting their own price analyses and research with HPT data obtained either directly from the hospital MRF or vendor price estimator tools. For example, some have compared prices of common medical procedures like childbirth, or hip and

knee replacements among hospitals within specific regions.[862] [863] However, lack of standardization has hampered these efforts; across these publications, authors routinely state that some price comparisons may not be fully accurate due to lack of specificity and standardization of the available hospital MRF data.

Feedback from interested parties, particularly from IT specialists, researchers, employers, and others who seek to use the standard charge information that hospitals are now required to make public, has indicated that increased standardization, including an increase in data elements that provide context for the standard charges established by hospitals, may be necessary to improve the public's understanding of the standard charges established by hospitals and the public's ability to make comparisons of standard charges from one hospital to the next.[864] [865] As discussed by industry experts, standardization will require all hospitals to provide this ''much-needed'' context in their machine-readable files, thereby enhancing innovators' ability to develop tools to help consumers of healthcare effectively compare prices.[866] Patient advocates echo the need for standardization.[867] Beyond providing additional context, a required template and data elements improves the quality and usefulness of MRF data available to consumers of the data, including researchers, innovators, employers, and payers. Studies suggest that standardization would improve the accuracy of price comparisons, the quality and usefulness of MRF data, and perhaps reduce wide variations in hospital prices.[868] [869] In the CY 2020 OPPS/ASC final rule, we cited literature regarding consumer engagement with existing price transparency interventions demonstrating that disclosing price information positively impacts consumers of healthcare by allowing them to compare prices for common procedures and shift their demand towards lower-priced options (84 FR 65600). Similarly, studies have indicated that, as these MRF analyses are becoming more widespread, consumers are able to make better use of the pricing information. Standardization would likely remove many of the existing barriers to allow innovators to create more useful data products for consumers of healthcare and reduce some of the uncertainty that currently exists about how hospitals establish standard charges for the items and services they provide.[870]

d. Consideration of Increased Burden to Hospitals Due to Hospital Price Transparency Requirements

(1) MRF Standardization and Accessibility of Hospital MRFs

Many hospitals have expressed concern over two major hurdles in implementing the HPT rule requirements: administrative burden [871] and cost,[872] [873] and we acknowledge that requiring additional data elements and use of a CMS template would impose an additional one-time burden on hospitals. However, for the reasons discussed in this rule and the CY 2024 OPPS proposed rule (88 FR 49847 through 49864), we believe that transparency is necessary to improve healthcare value, and that the proposals related to MRF standardization would assist hospitals in implementing the HPT regulations and assist numerous interested parties by creating clearer, more accurate data for purposes of price comparison and data analysis that can then be used to drive down healthcare costs. We believe these benefits justify the additional burden to hospitals. We continue to believe that improved hospital compliance with the required disclosure of this pricing information would allow providers, hospitals, insurers, employers, and patients to begin to engage each other and better utilize market forces to address the high cost of healthcare in a more widespread fashion. In addition, we continue to believe, as we noted in the CY 2020 HPT final rule (84 FR 65528), that there is a direct connection between transparency in hospital standard charge information and having more affordable healthcare and lower healthcare costs.

In the CY 2020 HPT final rule, we finalized requirements for MRF location and accessibility (45 CFR 180.50(d)). We prioritized accessibility because we want to be sure hospital standard charge information can be available for automated use by the public for creating price transparency tools, to be integrated into EHRs for purposes of clinical decision-making and referrals, or to be used by researchers and policy officials to help bring more value to healthcare (45 FR 65555). Despite the requirement for the MRF and the standard charge information contained in that file to be digitally searchable and the required naming convention, users of the MRF information, such as IT developers and innovators, continue to express concerns related to challenges in efficiently aggregating the files in an automated way.[874] [875] Some innovators and researchers noted the difficulty in locating hospital MRFs because they are posted on obscure website locations or with links redirecting to vendor

websites.[876] [877] We believe that ensuring the MRFs and the data contents are easily accessible to automation aligns with the intended use of the MRFs and their content. Therefore, to increase access to the MRFs, we are finalizing the requirement for hospitals to post a .txt file to the root folder of the public website. To reduce burden on hospitals, CMS intends to provide both plain language instruction and develop a .txt generator to support the proposed requirement.

As we noted in the preamble, there would be several benefits to requiring a hospital to post a .txt file to the root folder of the public website. This requirement would allow for automated tools to directly link to the MRF, as opposed to the manual location of the correct web page within the website and may make the location of the MRFs more visible to individual consumers who are manually searching for such files. We believe that the benefit of automating the identification of the MRF location would outweigh the minimal burden to maintainers of the public web page that hosts the MRF. Feedback received during public comment confirmed the burden on hospitals to post a .txt file to the root folder of a public website is minimal.

Comment: Several commenters expressed concern about the financial and administrative burden for hospitals to comply with adopting the new required hospital price transparency template and encoding additional data elements. These commenters indicated that the addition of new data elements would not be feasible within the proposed timeframe. Moreover, these commenters indicated that encoding new data, at least initially, would be a manual process for hospitals that don't already have such data formatted as separate data elements in their systems. Others noted that the desired data is not simply available from a single data source or always maintained by the chargemaster or billing vendor, often requiring a manual review and calculations for services and procedures, requiring extensive reprogramming and file manipulation to populate this information. Several commenters noted that while some hospitals may already be using the current optional CMS provided template for their MRFs, many are not, and all facilities will have to make at least some operational changes to encode the new data elements. While several commenters noted appreciation for CMS's willingness to address issues with the current format raised by hospitals and other stakeholders, they also noted the tremendous increase in cost and workforce burden. Several commenters indicated that the burden from the CY 2024 OPPS/ASC proposed rule will far outweigh the utility of this information for patients.

Response: We believe the benefits of standardization to innovators, researchers and other entities utilizing the MRFs to promote competition (through, for example, creating consumer-friendly price comparison tools) and reduce healthcare costs outweigh the operational challenges faced by hospitals. We believe standardization helps streamline the development and consumption of the MRF data, making it more actionable for employers, third party tool developers, and researchers. Researchers and experts suggest that a clear standard format would better support hospital compliance with the regulation.[878] [879] [880] [881] Additional studies have also suggested that standardization would improve the accuracy of price comparisons, the quality and usefulness of MRF data, and perhaps reduce wide variations in hospital prices.[882] [883] In response to commenters' concerns about additional burden we are finalizing an approach to phase in the implementation of the new requirements we are finalizing in this final rule with comment period. Specifically, we are finalizing that the effective date of all of the changes to the hospital price transparency regulations at 45 CFR part 180 will be January 1, 2024. However, the regulation text will specify later dates by which hospitals must be in compliance with some of these new requirements, and we will begin enforcing hospital compliance with those new requirements on the applicable later compliance date. The date by which hospitals must comply with each of the new requirements is described in Table 151A and 151B in section XVIII.B.3.c of this final rule with comment period. Finally, in response to comments, we are also increasing the estimate as discussed above.

Comment: A few commenters noted that the HPT regulations have prompted an entirely new industry of vendors and consultants eager to help hospitals comply at great expense creating financial hardship. A few commenters also noted that rural and CAH facilities will suffer further burden since they already struggle with dedicating staff and resources to complying with existing HPT regulations.

Response: As indicated in section XXIV.H of this final rule with comment period, we note that hospitals have different operational and administrative systems that impact projected burden for implementation of the CMS standard template and encoding of new data elements. To address this variability, CMS is allowing hospitals a choice of CMS template format and layout they will use, providing hospitals some flexibility to select the least burdensome format and layout to incorporate into their current MRF development process. CMS expects that most hospitals have automated processes in place to minimize the burden associated with developing their current MRFs. Furthermore, as indicated in sections XVIII.B.3.c. and XXIV.H. of this final rule with comment period (above), we have taken the burden associated with adopting the CMS standard template and encoding the new data elements into account, and we are finalizing additional time for hospitals to implement the changes to their MRFs and have revised our burden estimates.

(2) Improvements in CMS Enforcement of Hospital Price Transparency

We received several comments regarding the potential burden associated with the proposals to improve and enhance enforcement. We

have summarized those comments and responded to them in section XVIII.C of this final rule with comment period. We do not believe that our compliance activities represent a burden to hospitals because we expect hospitals to comply with the requirements of 45 CFR part 180. We therefore have not included any costs estimates related to CMS enforcement activities.

e. Limitations of our Analysis

It would be difficult for us to conduct a detailed quantitative analysis, given the lack of studies at the national level, on the regulatory impact of making price transparency information publicly available. Additionally, implementation of the requirements is relatively new, so the impacts may not yet be realized. We also note that several other price transparency initiatives have been implemented, or are in the process of being implemented, that may make a definitive and specific analysis challenging. Since we cannot produce a detailed quantitative analysis, we have developed a qualitative discussion for this regulatory impact analysis, drawing from examples of experiences of the use of public price transparency data that has been released publicly. We have taken an approach that assesses the potential directional impact of these new requirements (that is, increasing versus decreasing health care costs, increasing, or decreasing likelihood of certain market behaviors) rather than attempting more specific estimates due to the lack of empirical data. We believe there are many benefits with this regulation, particularly to speed the ability of users of the machine-readable files to identify, ingest, analyze and draw more meaningful comparisons of the hospital standard charge data and ultimately for consumers who will be able to benefit from cost savings through employer-payer negotiations, or through direct access to hospital cost comparison data developed by innovators and researchers, allowing the ability to shop for the best value.

f. Alternatives Considered

We considered a number of alternative approaches including reducing or increasing the number of data elements or limiting the CMS template to a single format (for example, JSON).

The requirement of additional data elements is necessary to provide context to hospital standard charges and represents nearly the entire cost in our burden estimate. Thus, reducing the number of data elements would reduce hospital burden and the cost associated with gathering the data necessary to display while increasing the number of proposed data elements would increase hospital burden and the cost associated with gathering data for display. The additional required data elements are based on the FFRDC recommendations which took into consideration technical expert input (including input from hospital experts). These technical experts indicated that the data elements currently included in the sample formats found on the CMS website were necessary for providing context to hospital standard charges. They also indicated that the data elements we included in the sample formats strike a balance between burden on the hospital and benefit to the public. The alternative proposal we considered was to limit hospital choice of format for the MRF to JSON, which we concluded would be expected to increase hospital burden for hospitals that lack technical expertise, as discussed in XVIII of this final rule with comment period.

We therefore have not finalized any alternatives because we determined that the alternatives would either limit the usefulness of hospital standard charge information or increase burden for hospitals without any additional benefit to for users of MRF standard charge information.

D. Regulatory Review Cost Estimation

If regulations impose administrative costs on private entities, such as the time needed to read and interpret this final rule, we should estimate the cost associated with regulatory review. Due to the uncertainty involved with accurately quantifying the number of entities that will review the rule, we assume that the total number of unique commenters on this year's proposed rule will be the number of reviewers of this final rule with comment period. We acknowledge that this assumption may understate or overstate the costs of reviewing this final rule with comment period. It is possible that not all commenters reviewed this year's rule in detail, and it is also possible that some reviewers chose not to comment on the proposed rule. For these reasons we thought that the number of past commenters would be a fair estimate of the number of reviewers of this rule.

We welcomed any public comments on the approach in estimating the number of entities that would review the proposed rule. We did not receive any public comments specific to our solicitation. We also recognize that different types of entities are in many cases affected by mutually exclusive sections of the proposed rule, and therefore for the purposes of our estimate we assume that each reviewer reads approximately 50 percent of the rule. We sought public comments on this assumption. We did not receive any public comments specific to our solicitation.

Using the wage information from the BLS for medical and health service managers (Code 11–9111), we estimate that the cost of reviewing this rule is $123.06 per hour, including overhead and fringe benefits *https://www.bls.gov/oes/current/oes_nat.htm.* Assuming an average reading speed, we estimate that it would take approximately 8 hours for the staff to review half of this final rule with comment period. For each entity that reviews the rule, the estimated cost is $984.48 (8 hours × $123.06). Therefore, we estimate that the total cost of reviewing this regulation is $3,715,428 ($984.48 × 3,774).

E. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities, if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that, many hospitals are considered small businesses either by the Small Business Administration's size standards with total revenues of $47.0 million or less in any single year or by the hospital's not-for-profit status. Most ASCs (NAICS code 621493 with a $19 million threshold) and most CMHCs (NAICS code 621498 with a $25.5 million threshold) are considered small businesses with total revenues of $16.5 million or less in any single year. For details, we refer readers to the Small Business Administration's ''Table of Size Standards'' at *https://www.sba.gov/document/support-table-size-standards.*

Individuals and States are not included in the definition of a small entity. As its measure of significant economic impact on a substantial number of small entities, HHS uses a change in revenue of more than 3 to 5 percent. We believe that this threshold will be reached by the requirements in this final rule with comment period. Therefore, the Secretary has certified that this final rule with comment period will have a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of

a metropolitan statistical area and has 100 or fewer beds. We estimate that this final rule with comment period will increase payments to small rural hospitals by approximately 5 percent; therefore, it should have a negligible impact on approximately 554 small rural hospitals. We note that the estimated payment impact for any category of small entity will depend on both the services that they provide as well as the payment policies and/or payment systems that may apply to them. Therefore, the most applicable estimated impact may be based on the specialty, provider type, or payment system.

The analysis above, together with the remainder of this preamble, provides a regulatory flexibility analysis and a regulatory impact analysis.

F. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2023, that threshold is approximately $177 million. This final rule with comment period will not impose a mandate that will result in the expenditure by State, local, and Tribal governments, in the aggregate, or by the private sector, of more than $177 million in any 1 year.

G. Federalism

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts state law, or otherwise has federalism implications. We have examined the OPPS and ASC provisions included in this final rule with comment period in accordance with Executive Order 13132, Federalism, and have determined that they will not have a substantial direct effect on State, local, or Tribal governments, preempt State law, or otherwise have a federalism implication. As reflected in Table 168 of this final rule with comment period, we estimate that OPPS payments to governmental hospitals (including State and local governmental hospitals) would increase by 2.8 percent under this final rule with comment period. While we do not know the number of ASCs or CMHCs with government ownership, we anticipate that it is small. The analyses we have provided in this section of this final rule with comment period, in conjunction with the remainder of this document, demonstrate that this final rule with comment period is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act.

This final rule with comment period will affect payments to a substantial number of small rural hospitals and a small number of rural ASCs, as well as other classes of hospitals, CMHCs, and ASCs, and some effects may be significant. However, as noted in section XXIII of this final rule with comment period, this rule should not have a significant effect on small rural hospitals.

H. Conclusion

The changes we are finalizing in this final rule with comment period will affect all classes of hospitals paid under the OPPS as well as both CMHCs and ASCs. We estimate that most classes of hospitals paid under the OPPS will experience a modest increase or a minimal decrease in payment for services furnished under the OPPS in CY 2024. Table 168 demonstrates the estimated distributional impact of the OPPS budget neutrality requirements that will result in a 3.2 percent increase in payments for all services paid under the OPPS in CY 2024, after considering all of the changes to APC reconfiguration and recalibration, as well as the OPD fee schedule increase factor, wage index changes, including the frontier State wage index adjustment, and estimated payment for outliers, changes to the pass-through payment estimate, and changes to outlier payments. However, some classes of providers that are paid under the OPPS would experience more significant gains or losses in OPPS payments in CY 2024.

The updates we are making to the ASC payment system for CY 2024 will affect each of the approximately 6,000 ASCs currently approved for participation in the Medicare program. The effect on an individual ASC will depend on its mix of patients, the proportion of the ASC's patients who are Medicare beneficiaries, the degree to which the payments for the procedures offered by the ASC are changed under the ASC payment system, and the extent to which the ASC provides a different set of procedures in the coming year than in previous years. Table 169 demonstrates the estimated distributional impact among ASC surgical specialties of the productivity-adjusted hospital market basket update factor of 3.1 percent for CY 2024.

I. Congressional Review

This final rule with comment period is subject to the Congressional Review Act provisions of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 *et seq.*) and has been transmitted to the Congress and the Comptroller General for review.

Chiquita Brooks-LaSure, Administrator of the Centers for Medicare & Medicaid Services, approved this document on October 27, 2023.

Health facilities, Medicare, Reporting and recordkeeping requirements.

45 CFR Part 180

Hospitals, Reporting and recordkeeping requirements.

42 CFR Chapter IV

For the reasons set forth in the preamble, the Centers for Medicare and Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

■ 1. The authority citation for part 405 continues to read as follows:

Authority: 42 U.S.C. 263a, 405(a), 1302, 1320b–12, 1395x, 1395y(a), 1395ff, 1395hh, 1395kk, 1395rr, and 1395ww(k).

■ 2. Section 405.2400 is amended by adding paragraph (d) to read as follows:

§ 405.2400 Basis.

* * * * *

(d) Section 1834(y)—Payment for certain services furnished by rural health clinics.

■ 3. Section 405.2401 is amended in paragraph (b) by adding the definition of ''Intensive outpatient services'' in alphabetical order to read as follows:

§ 405.2401 Scope and definitions.

* * * * *

(b) * * *

Intensive outpatient services means a distinct and organized intensive ambulatory treatment program that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting and that furnishes the services as described in § 410.44 of this chapter.

* * * * *

■ 4. Section 405.2410 is amended by adding paragraph (c) to read as follows:

§ 405.2410 Application of Part B deductible and coinsurance.

* * * * *

(c) *Application of deductible and coinsurance for RHCs and FQHCs paid on the basis of the special payment rule described under § 405.2462(j).* (1) For RHCs, a coinsurance amount that does not exceed 20 percent of the payment determined under § 405.2462(j)(1); or

(2) For FQHCs, a coinsurance amount that does not exceed 20 percent of the payment determined under § 405.2462(j)(2).

■ 5. Section 405.2411 is amended by adding paragraph (a)(7) to read as follows:

§ 405.2411 Scope of benefits.

(a) * * *

(7) Intensive outpatient services when provided in accordance with section 1861(ff)(4) of the Act and § 410.44 of this chapter.

* * * * *

■ 6. Section 405.2446 is amended by adding paragraph (b)(10) to read as follows:

§ 405.2446 Scope of services.

* * * * *

(b) * * *

(10) Intensive outpatient services when provided in accordance with section 1861(ff)(4) of the Act and § 410.44 of this chapter.

* * * * *

■ 7. Section 405.2462 is amended by adding paragraph (j) to read as follows:

§ 405.2462 Payment for RHC and FQHC services.

* * * * *

(j) *Payment amount for intensive outpatient services.* An RHC is paid the payment rate determined under § 419.21(a) of this chapter for services described under § 410.44 of this chapter. There are no adjustments to this rate.

(1) If the deductible has been fully met by the beneficiary prior to the RHC service, Medicare pays eighty (80) percent of the payment amount determined under paragraph (j)(1) of this section.

(2) If the deductible has not been fully met by the beneficiary prior to the RHC service, Medicare pays eighty (80) percent of the difference between the remaining deductible and the payment amount determined under paragraph (j)(1) of this section; or

(3) If the deductible has not been fully met by the beneficiary prior to the RHC service, no payment is made to the RHC if the deductible is equal to or exceeds the payment amount determined under paragraph (j)(1) of this section.

(4) FQHCs are paid the payment rate determined under § 419.21(a) of this chapter for services described under § 410.44 of this chapter. There are no adjustments to this rate, except that grandfathered tribal FQHCs are paid pursuant to paragraph (j)(4)(ii) of this section.

(i) Medicare pays eighty (80) percent of the lesser of the FQHC's actual charge or the payment rate determined under paragraph (j)(2) of this section; or

(ii) Medicare pays eighty (80) percent of the lesser of a grandfathered tribal FQHC's actual charge or the amount described under paragraphs (f)(2) and (3) of this section.

(iii) No deductible is applicable to FQHC services.

■ 8. Section 405.2463 is amended by revising paragraphs (c)(1)(ii) and (iii) and (c)(4)(ii) to read as follows:

§ 405.2463 What constitutes a visit.

* * * * *

(c) * * *

(1) * * *

(ii) Has a medical visit and a mental health visit or intensive outpatient services on the same day; or

(iii) Has an initial preventive physical exam visit and a separate medical, mental health, or intensive outpatient services visit on the same day.

* * * * *

(4) * * *

(ii) Has a medical visit and a mental health visit or intensive outpatient services on the same day.

■ 9. Section 405.2464 is amended by adding paragraph (f) to read as follows:

§ 405.2464 Payment rate.

* * * * *

(f) *Payment for intensive outpatient services.* Payment to RHCs and FQHCs is at the rate determined under § 405.2462(j).

■ 10. Section 405.2468 is amended by adding paragraph (g) to read as follows:

§ 405.2468 Allowable costs.

* * * * *

(g) *Intensive outpatient services.* (1) For RHCs, costs associated with intensive outpatient services are not used to determine the amount of payment for RHC services under the methodology for all-inclusive rates under section 1833(a)(3) of the Act as described in § 405.2464(a).

(2) For FQHCs, costs associated with intensive outpatient services are not used to determine the amount of payment for FQHC services under the prospective payment system under section 1834(o)(2)(B) of the Act as described in § 405.2464(b).

■ 11. Section 405.2469 is amended by:

■ a. Revising paragraphs (a)(1) and (2);

■ b. Adding paragraph (a)(3);

■ c. Removing the period at the end of paragraph (b)(3) and adding ''; or'' in its place; and

■ d. Adding paragraph (b)(4).

The revisions and additions read as follows:

§ 405.2469 FQHC supplemental payments.

(a) * * *

(1) The PPS rate if the FQHC is authorized to bill under the PPS;

(2) The Medicare outpatient per visit rate as set annually by the Indian Health Service for grandfathered tribal FQHCs; or

(3) The payment rate as determined in § 405.2462(j).

(b) * * *

(4) Payments received by the FQHC from the MA plan as determined on a per visit basis and the payment rate as determined in § 405.2462(j), less any amount the FQHC may charge as described in section 1857(e)(3)(B) of the Act.

* * * * *

PART 410—SUPPLEMENTARY MEDICAL INSURANCE (SMI) BENEFITS

■ 12. The authority citation for part 410 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395m, 1395hh, 1395rr, and 1395ddd.

■ 13. Section 410.2 is amended by—
■ a. In the definition of ''Community mental health center (CMHC)'', revising paragraph (3);
■ b. Adding the definition ''Intensive outpatient services'' in alphabetical order; and
■ c. Revising the definition for ''Participating''.

The revisions and addition read as follows:

§ 410.2 Definitions.

* * * * *

Community mental health center (CMHC) * * *

(3) Provides day treatment or other partial hospitalization services or intensive outpatient services, or psychosocial rehabilitation services;

* * * * *

Intensive outpatient services mean a distinct and organized intensive ambulatory treatment program that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting and furnishes the services as described in § 410.44. Intensive outpatient services are not required to be provided in lieu of inpatient hospitalization.

* * * * *

Participating refers to a hospital, critical access hospital (CAH), skilled nursing facility (SNF), home health agencies (HHA), comprehensive outpatient rehabilitation facility (CORF), or hospice that has in effect an agreement to participate in Medicare; or a clinic, rehabilitation agency, or public health agency that has a provider agreement to participate in Medicare but only for purposes of providing outpatient physical therapy, occupational therapy, or speech pathology services; or a CMHC that has in effect a similar agreement but only for purposes of providing partial hospitalization services and intensive outpatient services, and nonparticipating refers to a hospital, CAH, SNF, HHA, CORF, hospice, clinic, rehabilitation agency, public health agency, or CMHC that does not have in effect a provider agreement to participate in Medicare.

* * * * *

■ 14. Section 410.3 is amended by revising paragraph (a)(2) to reads as follows:

§ 410.3 Scope of benefits.

(a) * * *

(2) Services furnished by ambulatory surgical centers (ASCs), HHAs, CORFs, and partial hospitalization services and intensive outpatient services provided by CMHCs.

* * * * *

■ 15. Section 410.10 is amended by revising paragraph (c) to read as follows:

§ 410.10 Medical and other health services: Included services.

* * * * *

(c) Services and supplies, including partial hospitalization services and intensive outpatient services, that are incident to physician services and are furnished to outpatients by or under arrangements made by a hospital or a CAH.

* * * * *

■ 16. Section 410.27 is amended by revising paragraphs (a)(1)(iv)(B)(*1*), (a)(2), (e) introductory text, and (g) to read as follows:

§ 410.27 Therapeutic outpatient hospital or CAH services and supplies incident to a physician's or nonphysician practitioner's service: Conditions.

(a) * * *

(1) * * *

(iv) * * *

(B) * * *

(*1*) For purposes of this section, direct supervision means that the physician or nonphysician practitioner must be immediately available to furnish assistance and direction throughout the performance of the procedure. It does not mean that the physician or nonphysician practitioner must be present in the room when the procedure is performed. For pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services, direct supervision must be furnished as specified in §§ 410.47 and 410.49, respectively. Through December 31, 2024, the presence of the physician or nonphysician practitioner for the purpose of the supervision of pulmonary rehabilitation, cardiac rehabilitation, and intensive cardiac rehabilitation services includes virtual presence through audio/video real-time communications technology (excluding audio-only); and

* * * * *

(2) In the case of partial hospitalization services or intensive outpatient services, also meet the conditions of paragraph (e) of this section.

* * * * *

(e) Medicare Part B pays for partial hospitalization services and intensive outpatient services if they are—

* * * * *

(g) For purposes of this section, *nonphysician practitioner* means a clinical psychologist, licensed clinical social worker, marriage and family therapist, mental health counselor, physician assistant, nurse practitioner, clinical nurse specialist, or certified nurse-midwife.

■ 17. Section 410.28 is amended by revising paragraph (e)(2)(iii) to read as follows:

§ 410.28 Hospital or CAH diagnostic services furnished to outpatients: Conditions.

* * * * *

(e) * * *

(2) * * *

(iii) Through December 31, 2024, the presence of the physician or nonphysician practitioner under paragraphs (e)(2)(i) and (ii) of this section includes virtual presence through audio/video real-time communications technology (excluding audio-only).

* * * * *

■ 18. Section 410.43 is amended by revising paragraphs (a)(4)(i) and (iii) and (c)(5) to read as follows:

§ 410.43 Partial hospitalization services: Conditions and exclusions.

(a) * * *

(4) * * *

(i) Individual and group therapy with physicians or psychologists or other mental health professionals (including substance use disorder professionals) to the extent authorized under State law.

* * * * *

(iii) Services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients (including patients with substance use disorder).

* * * * *

(c) * * *

(5) Have a mental health or substance use disorder diagnosis;

* * * * *

■ 19. Section 410.44 is added to read as follows:

§ 410.44 Intensive outpatient services: Conditions and exclusions.

(a) Intensive outpatient services are services that—

(1) Are reasonable and necessary for the diagnosis or active treatment of the individual's condition;

(2) Are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization;

(3) Are furnished in accordance with a physician certification and plan of care as specified under § 424.24(d) of this chapter; and

(4) Include any of the following:

(i) Individual and group therapy with physicians or psychologists or other mental health professionals (including substance use disorder professionals) to the extent authorized under State law.

(ii) Occupational therapy requiring the skills of a qualified occupational therapist, provided by an occupational therapist, or under appropriate supervision of a qualified occupational therapist by an occupational therapy assistant as specified in part 484 of this chapter.

(iii) Services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients (including patients with substance use disorder).

(iv) Drugs and biologicals furnished for therapeutic purposes, subject to the limitations specified in § 410.29.

(v) Individualized activity therapies that are not primarily recreational or diversionary.

(vi) Family counseling, the primary purpose of which is treatment of the individual's condition.

(vii) Patient training and education, to the extent the training and educational activities are closely and clearly related to the individual's care and treatment.

(viii) Diagnostic services.

(b) The following services are separately covered and not paid as intensive outpatient services:

(1) Physician services that meet the requirements of § 415.102(a) of this chapter for payment on a fee schedule basis.

(2) Physician assistant services, as defined in section 1861(s)(2)(K)(i) of the Act.

(3) Nurse practitioner and clinical nurse specialist services, as defined in section 1861(s)(2)(K)(ii) of the Act.

(4) Qualified psychologist services, as defined in section 1861(ii) of the Act.

(5) Services furnished to SNF residents as defined in § 411.15(p) of this chapter.

(c) Intensive outpatient programs are intended for patients who—

(1) Require a minimum of 9 hours per week of therapeutic services as evidenced in their plan of care;

(2) Are likely to benefit from a coordinated program of services and require more than isolated sessions of outpatient treatment;

(3) Do not require 24-hour care;

(4) Have an adequate support system while not actively engaged in the program;

(5) Have a mental health or substance use disorder diagnosis;

(6) Are not judged to be dangerous to self or others; and

(7) Have the cognitive and emotional ability to participate in the active treatment process and can tolerate the intensity of the intensive outpatient program.

■ 20. Section 410.67 is amended by—

■ a. In paragraph (b), in the definition of ''Opioid use disorder treatment service,'' adding paragraph (ix);

■ b. Adding paragraph (c)(5);

■ d. Revising paragraph (d)(3);

■ e. Adding (d)(4)(i)(F); and

■ f. Revising paragraphs (d)(4)(ii) and (iii).

The revisions and additions read as follows:

§ 410.67 Medicare coverage and payment of Opioid use disorder treatment services furnished by Opioid treatment programs.

* * * * *

(b) * * *

Opioid use disorder treatment service * * *

(ix) Opioid treatment program (OTP) intensive outpatient services, which means one or more services specified in § 410.44(a)(4) when furnished by an OTP as part of a distinct and organized intensive ambulatory treatment program for the treatment of opioid use disorder (OUD) and that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting. OTP intensive outpatient services are reasonable and necessary for the diagnosis or active treatment of the individual's condition; are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization; and are furnished in accordance with a physician or non-physician practitioner (as defined in section 1842(b)(18)(C) of the Act) certification and plan of care, as permitted by State law and scope of practice requirements, in which a physician or non-physician practitioner must certify that the individual has a need for a minimum of nine hours of services per week and requires a higher level of care intensity compared to other non-intensive outpatient OTP services. OTP intensive outpatient services do not include FDA-approved opioid agonist or antagonist medications for the treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose, or toxicology testing.

* * * * *

(c) * * *

(5) OTPs that provide OTP intensive outpatient services must meet the requirements set forth in § 424.24(d)(1) through (3) of this chapter related to content of certification, plan of treatment, and recertification for the purposes of furnishing OTP intensive outpatient services, except that the recertification required under § 424.24(d)(3)(ii) of this chapter may occur any time during an episode of care and any reference to a physician requirement in § 424.24(d)(1) through (3) may also be performed by a non-physician practitioner (as defined in section 1842(b)(18)(C) of the Act, as permitted by state law and scope of practice requirements.

(d) * * *

(3) At least one OUD treatment service described in paragraphs (i) through (v) of the definition of *opioid use disorder treatment service* in paragraph (b) of this section must be furnished to bill for the bundled payment for an episode of care.

(4) * * *

(i) * * *

(F) For OTP intensive outpatient services, an adjustment will be made when at least nine OTP intensive outpatient services described in paragraph (ix) of the definition of *opioid use disorder treatment service* in paragraph (b) of this section are furnished in a week. This adjustment will be based on the per diem payment rate for intensive outpatient services at hospital-based programs defined at § 410.44(c) and multiplied by a factor of three for a weekly payment adjustment.

(ii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments, and OTP intensive outpatient services, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be geographically adjusted using the geographic adjustment factor described in § 414.26 of this chapter. For purposes of this adjustment, OUD treatment services that are furnished via an OTP mobile unit will be treated as if they were furnished at the physical location of the OTP registered with the Drug Enforcement Administration (DEA) and certified by SAMHSA.

(iii) The payment amounts for the non-drug component of the bundled payment for an episode of care, the adjustments for counseling or therapy, intake activities, periodic assessments and OTP intensive outpatient services, and the non-drug component of the adjustment for take-home supplies of opioid antagonist medications will be updated annually using the Medicare Economic Index described in § 405.504(d) of this chapter.

* * * * *

■ 21. Revise the heading to subpart E to read as follows:

Subpart E—Community Mental Health Centers (CMHCs) Providing Partial Hospitalization Services and Intensive Outpatient Services

■ 22. Section 410.111 is added to read as follows:

§ 410.111 Requirements for coverage of intensive outpatient services in CMHCs.

Medicare part B covers intensive outpatient services furnished by or under arrangements made by a CMHC if they are provided by a CMHC as defined in § 410.2 that has in effect a provider agreement under part 489 of this chapter and if the services are—

(a) Prescribed by a physician and furnished under the general supervision of a physician;

(b) Subject to certification by a physician in accordance with § 424.24(d)(1) of this chapter; and

(c) Furnished under a plan of treatment that meets the requirements of § 424.24(d)(2) of this chapter.

■ 23. Section 410.150 is amended by revising paragraph (b)(13) to read as follows:

§ 410.150 To whom payment is made.

* * * * *

(b) * * *

(13) To a community mental health center (CMHC) on the individual's behalf, for partial hospitalization services or intensive outpatient services furnished by the CMHC (or by others under arrangements made with them by the CMHC).

* * * * *

■ 24. Section 410.155 is amended by revising paragraph (b)(2)(iii) to read as follows:

§ 410.155 Outpatient mental health treatment limitation.

* * * * *

(b) * * *

(2) * * *

(iii) Partial hospitalization services or intensive outpatient services not directly provided by a physician.

* * * * *

■ 25. Section 410.173 is added to read as follows:

§ 410.173 Payment for intensive outpatient services in CMHCs: Conditions.

Medicare Part B pays for intensive outpatient services furnished in a CMHC on behalf of an individual only if the following conditions are met:

(a) The CMHC files a written request for payment on the CMS form 1450 and in the manner prescribed by CMS; and

(b) The services are furnished in accordance with the requirements described in § 410.111.

PART 416—AMBULATORY SURGICAL SERVICES

■ 26. The authority citation for part 416 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 27. Section 416.171 is amended by revising paragraphs (a)(2)(iii), (iv), (vi), and (vii) and (a)(2)(viii)(B) and (C) to read as follows:

§ 416.171 Determination of payment rates for ASC services.

(a) * * *

(2) * * *

(iii) For CY 2019 through CY 2025, the update is the hospital inpatient market basket percentage increase applicable under section 1886(b)(3)(B)(iii) of the Act.

(iv) For CY 2026 and subsequent years, the update is the Consumer Price Index for All Urban Consumers (U.S. city average) as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved.

* * * * *

(vi) For CY 2019 through CY 2025, the hospital inpatient market basket update determined under paragraph (a)(2)(iii) of this section is reduced by 2.0 percentage points for an ASC that fails to meet the standards for reporting of ASC quality measures as established by the Secretary for the corresponding calendar year.

(vii) For CY 2026 and subsequent years, the Consumer Price Index for All Urban Consumers update determined under paragraph (a)(2)(iv) of this section is reduced by 2.0 percentage points for an ASC that fails to meet the standards for reporting of ASC quality measures as established by the Secretary for the corresponding calendar year.

(viii) * * *

(B) For CY 2019 through CY 2025, the hospital inpatient market basket update determined under paragraph (a)(2)(iii) of this section, after application of any reduction under paragraph (a)(2)(vi) of this section, is reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

(C) For CY 2026 and subsequent years, the Consumer Price Index for All Urban Consumers determined under paragraph (a)(2)(iv) of this section, after application of any reduction under paragraph (a)(2)(vii) of this section, is reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act.

* * * * *

■ 28. Section 416.172 is amended by revising paragraph (d) to read as follows:

§ 416.172 Adjustments to national payment rates.

* * * * *

(d) *Deductibles and coinsurance.* Part B deductible and coinsurance amounts apply as specified in §§ 410.152(a) and (i)(2) and 489.30(b)(6) of this chapter.

* * * * *

■ 29. Section 416.305 is amended by revising paragraph (b)(1) to read as follows:

§ 416.305 Participation and withdrawal requirements under the ASCQR Program.

* * * * *

(b) * * *

(1) An ASC may withdraw from the ASCQR Program by submitting to CMS a withdrawal of participation form that can be found in the secure portion of the CMS-designated information system.

* * * * *

■ 30. Section 416.310 is amended by revising paragraphs (c)(1)(i) and (d)(1) to read as follows:

§ 416.310 Data collection and submission requirements under the ASCQR Program.

* * * * *

(c) * * *

(1) * * *

(i) *CMS-designated information system account for web-based measures.* ASCs, and any agents submitting data on an ASC's behalf, must maintain an account for the CMS-designated information system in order to submit quality measure data to the CMS-designated information system for all web-based measures submitted via a CMS online data submission tool. A security official is necessary to set up such an account for the CMS-designated information system for the purpose of submitting this information.

* * * * *

(d) * * *

(1) *Upon request of the ASC.* Specific requirements for submission of a request for an exception are available on the CMS website.

* * * * *

■ 31. Section 416.320 is amended by revising paragraph (b) to read as follows:

§ 416.320 Retention and removal of quality measures under the ASCQR Program.

* * * * *

(b) *Immediate measure removal.* In cases where CMS believes that the continued use of a measure as specified raises patient safety concerns, CMS will immediately remove a quality measure from the ASCQR Program and will

promptly notify ASCs and the public of the removal of the measure and the reasons for its removal through the ASCQR Program ListServ and the ASCQR Program CMS website. CMS will confirm the removal of the measure for patient safety concerns in the next ASCQR Program rulemaking.

* * * * *

■ 32. Section 416.325 is amended by revising paragraph (c) to read as follows:

§ 416.325 Measure maintenance under the ASCQR Program.

* * * * *

(c) *Non-substantive changes.* If CMS determines that a change to a measure previously adopted in the ASCQR Program is non-substantive, CMS will use a sub-regulatory process to revise the ASCQR Program Specifications Manual so that it clearly identifies the changes to that measure and provide links to where additional information on the changes can be found. When a measure undergoes sub-regulatory maintenance, CMS will provide notification of the measure specification update on the CMS website and in the ASCQR Program Specifications Manual, and will provide sufficient lead time for ASCs to implement the revisions where changes to the data collection systems would be necessary.

PART 419—PROSPECTIVE PAYMENT SYSTEMS FOR HOSPITAL OUTPATIENT DEPARTMENT SERVICES

■ 33. The authority citation for part 419 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395l(t), and 1395hh.

■ 34. Section 419.20 is amended by adding paragraph (b)(5) to read as follows:

§ 419.20 Hospitals subject to the hospital outpatient prospective payment system.

* * * * *

(b) * * *

(5) A rural emergency hospital (REH).

■ 35. Section 419.21 is amended by revising paragraph (c) for read as follows:

§ 419.21 Hospital services subject to the outpatient prospective payment system.

* * * * *

(c) Partial hospitalization services and intensive outpatient services furnished by community mental health centers (CMHCs).

* * * * *

■ 36. Section 419.22 is amended by adding paragraphs (w) and (x) to read as follows:

§ 419.22 Hospital services excluded from payment under the hospital outpatient prospective payment system.

* * * * *

(w) Services of marriage and family therapists, as defined in section 1861(lll)(1) of the Act.

(x) Services of mental health counselors, as defined in section 1861(lll)(3) of the Act.

■ 37. Section 419.41 is amended by adding paragraphs (d) through (g) to read as follows:

§ 419.41 Calculation of national beneficiary copayment amounts and national Medicare program payment amounts.

* * * * *

(d) Notwithstanding paragraphs (a) through (c) of this section, for a drug or biological for which payment is not packaged into a payment for a covered outpatient department (OPD) service (or group of services) and is not a rebatable drug (as defined in section 1847A(i)(2)(A) of the Act), to calculate the program payment and copayment amounts CMS does the following:

(1) Determines the payment rate for the drug or biological for the quarter established under the methodology described by section 1842(o), section 1847A, or section 1847B of the Act, as the case may be, as calculated and adjusted by the Secretary as necessary for purposes of paragraph (14) of section 1833(t) of the Act.

(2) Subtracts from the amount determined under paragraph (d)(1) of this section the amount of the applicable Part B deductible provided under § 410.160 of this chapter.

(3) Multiples the amount determined under paragraph (d)(1) of this section (less any applicable deductible under paragraph (d)(2) of this section) by 20 percent. This is the beneficiary's copayment amount for the drug or biological.

(4) Subtracts the amount determined under paragraph (d)(3) of this section from the amount determined under paragraph (d)(1) of this section (less any applicable deductible determined under paragraph (d)(2) of this section). This amount is the preliminary program amount.

(5) Adds to the preliminary program amount determined under paragraph (d)(4) of this section the amount by which the copayment amount would have exceeded the inpatient hospital deductible for that year. This amount is the final Medicare program payment amount.

(e) In the case of a rebatable drug (as defined in section 1847A(i)(2)(A) of the Act), except if such drug does not have a copayment amount as a result of application of section 1833(t)(8)(E) of the Act, for which payment is not packaged into payment for a covered OPD service (or group of services) furnished on or after April 1, 2023, and the payment for such drug under the outpatient prospective payment system (OPPS) is the same as the amount for a calendar quarter under section 1847A(i)(3)(A)(ii)(I) of the Act, in lieu of the calculation of the copayment amount and the Medicare program payment amount otherwise applicable under paragraph (d) of this section (other than application of the limitation described in paragraph (c)(4)(i) of this section), the copayment and Medicare program payment amounts determined under §§ 410.152(m) and 489.30(b)(6) of this chapter shall apply.

(f) In the case of a qualifying biosimilar biological product (as defined in § 414.902 of this chapter) that is furnished during the applicable five-year period (as defined in § 414.902 of this chapter) for such product, the payment amount for such product with respect to such period is the amount determined in § 414.904(j)(2) of this chapter.

(g) For dates of service on or after July 1, 2024, the payment amount for a biosimilar biological product (as defined in § 414.902 of this chapter) during the initial period is the amount determined in § 414.904(e)(4)(ii) of this chapter.

■ 38. Section 419.46 is amended by revising the section heading and paragraphs (b), (c), (d)(2), (e)(1), (g)(1), and (i)(2) to read as follows:

§ 419.46 Requirements under the Hospital Outpatient Quality Reporting (OQR) Program.

* * * * *

(b) *Participation in the Hospital OQR Program.* To participate in the Hospital OQR Program, a hospital as defined in section 1886(d)(1)(B) of the Act and is paid under the OPPS must—

(1) Register on the CMS-designated information system before beginning to report data;

(2) Identify and register a CMS-designated information system security official as part of the registration process under paragraph (b)(1) of this section; and

(3) Submit at least one data element.

(c) *Withdrawal from the Hospital OQR Program.* A participating hospital may withdraw from the Hospital OQR Program by submitting to CMS a withdrawal form that can be found in the secure portion of the CMS-designated information system. The hospital may withdraw any time up to and including August 31 of the year

prior to the affected annual payment updates. A withdrawn hospital will not be able to later sign up to participate in that payment update, is subject to a reduced annual payment update as specified under paragraph (i) of this section and is required to renew participation as specified in paragraph (b) of this section in order to participate in any future year of the Hospital OQR Program.

(d) * * *

(2) *Submission deadlines.* Submission deadlines by measure and by data type are posted on the CMS website. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-work day for Federal employees by statute or Executive order are extended to the first day thereafter which is not a Saturday, Sunday, or legal holiday or any other day all or part of which is declared to be a non-work day for Federal employees by statute or Executive order.

* * * * *

(e) * * *

(1) *Upon request by the hospital.* Specific requirements for submission of a request for an exception are available on the CMS website.

* * * * *

(g) * * *

(1) A hospital may request reconsideration of a decision by CMS that the hospital has not met the requirements of the Hospital OQR Program in paragraph (b) of this section for a particular calendar year. Except as provided in paragraph (e) of this section, a hospital must submit a reconsideration request to CMS via the CMS-designated information system, no later than March 17, or if March 17 falls on a nonwork day, on the first day after March 17 which is not a nonwork day as defined in paragraph (d)(2) of this section, of the affected payment year as determined using the date the request was mailed or submitted to CMS.

* * * * *

(i) * * *

(2) *Immediate measure removal.* For cases in which CMS believes that the continued use of a measure as specified raises patient safety concerns, CMS will immediately remove a quality measure from the Hospital OQR Program and will promptly notify hospitals and the public of the removal of the measure and the reasons for its removal through the Hospital OQR Program ListServ and the CMS website.

* * * * *

■ 39. Section 419.92 is amended by adding paragraphs (e) and (f) to read as follows:

§ 419.92 Payment to rural emergency hospitals.

* * * * *

(e) *Payment for Indian Health Service (IHS) or tribal REHs.* An IHS or tribal REH, as defined in paragraph (f) of this section will be paid under the outpatient hospital All-Inclusive Rate that is established and published annually by the IHS rather than the rates for REH services described in paragraph (a)(1) of this section.

(f) *IHS or tribal REHs.* An IHS or tribal REH is an REH, as defined in § 485.502 of this chapter, that is operated by the IHS or by a tribe or tribal organization with funding authorized by Title I or V of the Indian Self-Determination and Education Assistance Act (Pub. L. 93–638).

■ 40. Section 419.93 is amended by revising paragraph (a)(2) to read as follows:

§ 419.93 Payment for an off-campus provider-based department of a rural emergency hospital.

(a) * * *

(2) Services that do not meet the definition of REH services under § 419.91 that are furnished by an off-campus provider-based department of an REH are paid as described under § 419.92(c) or, if applicable, § 419.92(e).

* * * * *

■ 41. Section 419.95 is added to read as follows:

§ 419.95 Requirements under the Rural Emergency Hospital Quality Reporting (REHQR) Program.

(a) *Statutory authority.* Section 1861(kkk)(7) of the Social Security Act authorizes the Secretary to implement a quality reporting program requiring Rural Emergency Hospitals (REHs) to submit data on measures in accordance with the Secretary's requirements in this part.

(b) *Participation in the REHQR Program.* To participate in the REHQR Program, an REH as defined in section 1861(kkk)(2) of the Act must—

(1) Register on a CMS website before beginning to report data;

(2) Identify and register a security official as part of the registration process under paragraph (b)(1) of this section; and

(3) Submit data on all quality measures to CMS as specified under paragraph (c) of this section.

(c) *Submission of REHQR Program data*—(1) *General rule.* REHs that participate in the REHQR Program must submit to CMS data on measures selected under section 1861(kkk)(7)(C) of the Act in a form and manner and at a time specified by CMS. REHs sharing the same CMS Certification Number (CCN) must combine data collection and submission across their multiple campuses for all clinical measures for public reporting purposes.

(2) *Submission deadlines.* Submission deadlines by measure and by data type are posted on a CMS website. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-work day for Federal employees by statute or Executive order are extended to the first day thereafter which is not a Saturday, Sunday, or legal holiday or any other day all or part of which is declared to be a non-work day for Federal employees by statute or Executive order.

(3) *Review and corrections period.* For all quality data submitted, REHs will have a review and corrections period, which runs concurrently with the data submission period. During this timeframe, REHs can enter, review, and correct data submitted. However, after the submission deadline, these data cannot be changed.

(d) *Technical specifications and measure maintenance under the REHQR Program.* (1) CMS will update the specifications manual for measures in the REHQR Program at least every 12 months.

(2) CMS follows different procedures to update the measure specifications of a measure previously adopted under the REHQR Program based on whether the change is substantive or non-substantive. CMS will determine what constitutes a substantive versus a non-substantive change to a measure's specifications.

(i) *Substantive changes.* CMS will use rulemaking to adopt substantive updates to measures in the REHQR Program.

(ii) *Non-substantive changes.* If CMS determines that a change to a measure previously adopted in the REHQR Program is non-substantive, CMS will use a sub-regulatory process to revise the specifications manual for the REHQR Program so that it clearly identifies the change to that measure and provide links to where additional information on the change can be found. When a measure undergoes sub-regulatory maintenance, CMS will provide notification of the measure specification update on a designated website and in the specifications manual and will provide sufficient lead time for REHs to implement the revisions where changes to the data collection systems would be necessary.

(e) *Retention and removal of quality measures under the REHQR Program*—(1) *General rule for the retention of quality measures.* Quality measures

adopted for the REHQR Program measure set are retained for use, except when they are removed, suspended, or replaced as set forth in paragraphs (e)(2) and (3) of this section.

(2) *Immediate measure suspension from reporting.* In cases where CMS believes that the collection and reporting activities related to a quality measure as specified raises patient safety concerns, CMS will immediately suspend the measure from the REHQR Program and will promptly notify REHs and the public of the suspension of the measure. CMS will address the suspension and propose any permanent action regarding the measure in the next appropriate rulemaking cycle.

(3) *Measure removal, suspension, or replacement through the rulemaking process.* Unless a measure raises specific safety concerns as set forth in paragraph (e)(2) of this section, CMS will use rulemaking to remove, suspend, or replace quality measures in the REHQR Program.

(i) *Factors for consideration for removal of quality measures.* CMS will weigh whether to remove measures based on the following factors:

(A) *Factor 1.* Measure performance among REHs is so high and unvarying that meaningful distinctions and improvements in performance can no longer be made (''topped-out'' measures);

(B) *Factor 2.* Performance or improvement on a measure does not result in better patient outcomes;

(C) *Factor 3.* A measure does not align with current clinical guidelines or practice;

(D) *Factor 4.* The availability of a more broadly applicable (across settings, populations, or conditions) measure for the topic;

(E) *Factor 5.* The availability of a measure that is more proximal in time to desired patient outcomes for the particular topic;

(F) *Factor 6.* The availability of a measure that is more strongly associated with desired patient outcomes for the particular topic;

(G) *Factor 7.* Collection or public reporting of a measure leads to negative unintended consequences other than patient harm; and

(H) *Factor 8.* The costs associated with a measure outweigh the benefit of its continued use in the program.

(ii) *Criteria to determine topped-out measures.* For the purposes of the REHQR Program, a measure is considered to be topped-out under paragraph (e)(3)(i)(A) of this section when it meets both of the following criteria:

(A) Statistically indistinguishable performance at the 75th and 90th percentiles (defined as when the difference between the 75th and 90th percentiles for an REH's measure is within two times the standard error of the full data set); and

(B) A truncated coefficient of variation less than or equal to 0.10.

(iii) *Application of measure removal factors.* The benefits of removing a measure from the REHQR Program will be assessed on a case-by-case basis. Under this case-by-case approach, a measure will not be removed solely on the basis of meeting any specific factor.

(f) *Public reporting of data under the REHQR Program.* Data that an REH submits for the REHQR Program will be made publicly available on a CMS website in an easily understandable format after providing the REH an opportunity to review the data to be made public. CMS will publicly display REH data by the CCN when data are submitted under the CCNs.

(g) *Exception.* CMS may grant an exception to one or more data submission deadlines and requirements in the event of extraordinary circumstances beyond the control of the hospital, such as when an act of nature affects an entire region or locale or a systemic problem with one of CMS' data collection systems directly or indirectly affects data submission. CMS may grant an exception as follows:

(1) *Upon request by the REH.* Specific requirements for submission of a request for an exception are available on a CMS website.

(2) *At the discretion of CMS.* CMS may grant exceptions to REHs that have not requested them when CMS determines that an extraordinary circumstance has occurred.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 42. The authority citation for part 424 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 43. Section 424.24 is amended by—
■ a. Revising paragraphs (b);
■ b. Adding paragraph (d); and
■ c. Revising paragraph (e)(1)(i).

The revisions and addition read as follows:

§ 424.24 Requirements for medical and other health services furnished by providers under Medicare Part B.

* * * * *

(b) *General rule.* Medicare Part B pays for medical and other health services furnished by providers (and not exempted under paragraph (a) of this section) only if a physician certifies the content specified in paragraph (c)(1) or (4), (d)(1), or (e)(1) of this section, as appropriate.

* * * * *

(d) *Intensive outpatient services: Content of certification and plan of treatment requirements—*

(1) *Content of certification.* (i) The individual requires such services for a minimum of 9 hours per week.

(ii) The services are or were furnished while the individual was under the care of a physician.

(iii) The services were furnished under a written plan of treatment that meets the requirements of paragraph (d)(2) of this section.

(2) *Plan of treatment requirements.* (i) The plan is an individualized plan that is established and is periodically reviewed by a physician in consultation with appropriate staff participating in the program, and that sets forth—

(A) The physician's diagnosis;

(B) The type, amount, duration, and frequency of the services; and

(C) The treatment goals under the plan.

(ii) The physician determines the frequency and duration of the services taking into account accepted norms of medical practice and a reasonable expectation of improvement in the patient's condition.

(3) *Recertification requirements*—(i) *Signature.* The physician recertification must be signed by a physician who is treating the patient and has knowledge of the patient's response to treatment.

(ii) *Timing.* Recertifications are required at intervals established by the provider, but no less frequently than every 60 days.

(iii) *Content.* The recertification must specify that the patient continues to require at least 9 hours of intensive outpatient services and describe the following:

(A) The patient's response to the therapeutic interventions provided by the intensive outpatient program.

(B) The patient's psychiatric symptoms that continue to place the patient at risk of relapse or hospitalization.

(C) Treatment goals for coordination of services to facilitate discharge from the intensive outpatient program.

(e) * * *

(1) * * *

(i) The individual requires such services for a minimum of 20 hours per week and would require inpatient psychiatric care if the partial hospitalization services were not provided.

* * * * *

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 44. The authority citation for part 485 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395(hh).

■ 45. Section 485.506 is amended by revising paragraphs (b) and (c) to read as follows:

§ 485.506 Designation and certification of REHs.

* * * * *

(b) A hospital as defined in section 1886(d)(1)(B) of the Act with not more than 50 beds located in a county (or equivalent unit of local government) that is considered rural (as defined in section 1886(d)(2)(D) of the Act); or

(c) A hospital as defined in section 1886(d)(1)(B) of the Act with not more than 50 beds that was treated as being located in a rural area that has had an active reclassification from urban to rural status as specified in § 412.103 of this chapter as of December 27, 2020.

■ 46. Section 485.900 is amended by revising paragraphs (a)(1) through (3) to read as follows:

§ 485.900 Basis and scope.

(a) * * *

(1) Section 1832(a)(2)(J) of the Act specifies that payments may be made under Medicare Part B for partial hospitalization services and intensive outpatient services furnished by a community mental health center (CMHC) as described in section 1861(ff)(3)(B) of the Act.

(2) Section 1861(ff) of the Act describes the items and services that are covered under Medicare Part B as ''partial hospitalization services'' and ''intensive outpatient services'' and the conditions under which the items and services must be provided. In addition, section 1861(ff) of the Act specifies that the entities authorized to provide partial hospitalization services and intensive outpatient services under Medicare Part B include CMHCs and defines that term.

(3) Section 1866(e)(2) of the Act specifies that a provider of services for purposes of provider agreement requirements includes a CMHC as defined in section 1861(ff)(3)(B) of the Act, but only with respect to providing partial hospitalization services and intensive outpatient services.

* * * * *

■ 47. Section 485.904 is amended by revising paragraph (b)(5) and adding paragraph (b)(12) to read as follows:

§ 485.904 Condition of participation: Personnel qualifications.

* * * * *

(b) * * *

(5) *Mental health counselor.* An individual who meets the applicable education, training, and other requirements of § 410.54 of this chapter.

* * * * *

(12) *Marriage and family therapist.* An individual who meets the applicable education, training, and other requirements of § 410.53 of this chapter

■ 48. Section 485.914 is amended by revising paragraphs (a)(2) and (d)(2) to read as follows:

§ 485.914 Condition of participation: Admission, initial evaluation, comprehensive assessment, and discharge or transfer of the client.

* * * * *

(a) * * *

(2) For clients assessed and admitted to receive partial hospitalization services and intensive outpatient services, the CMHC must also meet separate requirements as specified in § 485.918(f) and (g), as applicable.

* * * * *

(d) * * *

(2) For clients that receive partial hospitalization program (PHP) or intensive outpatient (IOP) services, the assessment must be updated no less frequently than every 30 days.

* * * * *

■ 49. Section 485.916 is amended by revising paragraphs (a)(1) and (d) to read as follows:

§ 485.916 Condition of participation: Treatment team, person-centered active treatment plan, and coordination of services.

* * * * *

(a) * * *

(1) An interdisciplinary treatment team, led by a physician, nurse practitioner (NP), physician assistant (PA), clinical nurse specialist (CNS), clinical psychologist, clinical social worker, marriage and family therapist (MFT), or mental health counselor (MHC), must provide the care and services offered by the CMHC.

* * * * *

(d) *Standard: Review of the person-centered active treatment plan.* The CMHC interdisciplinary treatment team must review, revise, and document the individualized active treatment plan as frequently as the client's condition requires, but no less frequently than every 30-calendar day. A revised active treatment plan must include information from the client's initial evaluation and comprehensive assessments, the client's progress toward outcomes and goals specified in the active treatment plan, and changes in the client's goals. The CMHC must also meet partial hospitalization program requirements specified under § 424.24(e) of this chapter or intensive outpatient service requirements as specified under § 424.24(d) of this chapter, as applicable, if such services are included in the active treatment plan.

* * * * *

■ 50. Section 485.918 is amended by:

■ a. Revising the section heading and paragraph (b)(1)(iii);

■ b. Redesignating paragraph (g) as paragraph (h); and

■ c. Adding new paragraph (g).

The revisions and addition read as follows:

§ 485.918 Condition of participation: Organization, governance, administration of services, partial hospitalization services, and intensive outpatient services.

* * * * *

(b) * * *

(1) * * *

(iii) Provides day treatment, partial hospitalization services, or intensive outpatient services, other than in an individual's home or in an inpatient or residential setting, or psychosocial rehabilitation services.

* * * * *

(g) *Standard: Intensive outpatient services.* A CMHC providing intensive outpatient services must—

(1) Provide services as defined in § 410.2 of this chapter.

(2) Provide the services and meet the requirements specified in § 410.44 of this chapter.

(3) Meet the requirements for coverage as described in § 410.111 of this chapter.

(4) Meet the content of certification and plan of treatment requirements as described in § 424.24(d) of this chapter.

* * * * *

PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES

■ 51. The authority citation for part 488 continues to read as follows:

Authority: 42 U.S.C. 1302 and 1395hh.

■ 52. Section 488.2 is amended by revising the entry in table 1 for ''1832(a)(2)(J)'' to read as follows:

§ 488.2 Statutory basis.

* * * * *

TABLE 1 TO § 488.2

Section	Subject
* * * * * * *	
1832(a)(2)(J)	Requirements for partial hospitalization services and intensive outpatient services provided by CMHCs.
* * * * * * *	

PART 489—PROVIDER AGREEMENTS AND SUPPLIER APPROVAL

■ 53. The authority citation for part 489 continues to read as follows:

Authority: 42 U.S.C. 1302, 1395i–3, 1395x, 1395aa(m), 1395cc, 1395ff, and 1395hh.

■ 54. Section 489.2 is amended by revising paragraph (c)(2) to read as follows:

§ 489.2 Scope of part.

* * * * *

(c) * * *

(2) CMHCs may enter into provider agreements only to furnish partial hospitalization services and intensive outpatient services.

* * * * *

45 CFR Subtitle A

For the reasons set forth in the preamble, the Department of Health and Human Services amends 45 CFR part 180 as set forth below:

PART 180—HOSPITAL PRICE TRANSPARENCY

■ 55. The authority citation for part 180 continues to read as follows:

Authority: 42 U.S.C. 300gg–18, 42 U.S.C. 1302.

■ 56. Section 180.20 is amended by—

■ a. Adding definitions for ''CMS template'', ''Encode'', ''Estimated allowed amount'', and ''Machine-readable file'' in alphabetical order.

■ b. In the definition of ''Machine-readable format'', removing the second sentence.

The additions read as follows:

§ 180.20 Definitions.

* * * * *

CMS template means a CSV format or JSON schema that CMS makes available for purposes of compliance with § 180.40(a).

* * * * *

Encode means to convert hospital standard charge information into a machine-readable format that complies with § 180.50(c)(2).

Estimated allowed amount means the average dollar amount that the hospital has historically received from a third party payer for an item or service.

* * * * *

Machine-readable file means a single digital file that is in a machine-readable format.

* * * * *

■ 57. Section 180.50 is amended by—

■ a. Adding paragraph (a)(3);

■ b. Revising paragraphs (b) and (c);

■ c. In paragraph (d)(4), removing the phrase ''The digital file and standard charge information contained in that file must be'' and adding in its place the phrase ''The machine-readable file and standard charge information contained in that machine-readable file must be'';

■ d. In paragraph (d)(5):

■ i. Removing the phrase ''The file must'' and adding in its place the phrase ''The machine-readable file must''; and

■ ii. Removing the phrase ''[json|xml|csv]'' and adding in its place the phrase ''[json|csv]'';

■ e. Adding paragraph (d)(6); and

■ f. In paragraph (e), removing the second sentence.

The revisions and additions read as follows:

§ 180.50 Requirements for making public hospital standard charges for all items and services.

(a) * * *

(3) Each hospital must:

(i) Beginning January 1, 2024, make a good faith effort to ensure that the standard charge information encoded in the machine-readable file is true, accurate, and complete as of the date indicated in the machine-readable file; and

(ii) Beginning July 1, 2024, affirm in its machine-readable file that, to the best of its knowledge and belief, the hospital has included all applicable standard charge information in accordance with the requirements of this section, and that the information encoded is true, accurate, and complete as of the date indicated in the machine-readable file.

(b) *Required data elements.* (1) Prior to July 1, 2024, a hospital must include all of the following corresponding data elements in its list of standard charges, as applicable:

(i) Description of each item or service provided by the hospital.

(ii) Gross charge that applies to each individual item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.

(iii) Payer-specific negotiated charge that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting. Each payer-specific negotiated charge must be clearly associated with the name of the third party payer and plan.

(iv) De-identified minimum negotiated charge that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.

(v) De-identified maximum negotiated charge that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.

(vi) Discounted cash price that applies to each item or service when provided in, as applicable, the hospital inpatient setting and outpatient department setting.

(vii) Any code used by the hospital for purposes of accounting or billing for the item or service, including, but not limited to, the Current Procedural Terminology (CPT) code, the Healthcare Common Procedure Coding System (HCPCS) code, the Diagnosis Related Group (DRG), the National Drug Code (NDC), or other common payer identifier.

(2) Unless otherwise specified in this paragraph (b)(2), beginning July 1, 2024, each hospital must encode in its machine-readable file all standard charge information, as applicable, for each of the following required data elements:

(i) General data elements, including:

(A) Hospital name, license number, and location name(s) and address(es) under the single hospital license to which the list of standard charges applies. Location name(s) and address(es) must include, at minimum, all inpatient facilities and stand-alone emergency departments; and

(B) The version number of the CMS template and the date of most recent update to the standard charge

information in the machine-readable file.

(ii) Each type of standard charge as defined at § 180.20 (gross charge, discounted cash price, payer-specific negotiated charge, de-identified minimum negotiated charge, and de-identified maximum negotiated charge) and, for payer-specific negotiated charges, the following additional data elements:

(A) Payer and plan names; plan(s) may be indicated as categories (such as ''all PPO plans'') when the established payer-specific negotiated charges are applicable to each plan in the indicated category;

(B) Method used to establish the standard charge; and

(C) Whether the standard charge indicated should be interpreted by the user as a dollar amount, or if the standard charge is based on a percentage or algorithm. If the standard charge is based on a percentage or algorithm, the machine-readable file (MRF) must also describe the percentage or algorithm that determines the dollar amount for the item or service, and, beginning January 1, 2025, calculate and encode an estimated allowed amount in dollars for that item or service.

(iii) A description of the item or service that corresponds to the standard charge established by the hospital, including:

(A) A general description of the item or service;

(B) Whether the item or service is provided in connection with an inpatient admission or an outpatient department visit; and

(C) Beginning January 1, 2025, for drugs, the drug unit and type of measurement.

(iv) Coding information, including:

(A) Any code(s) used by the hospital for purposes of accounting or billing for the item or service;

(B) Corresponding code type(s). Such code types may include, but are not limited to, the CPT code, the HCPCS code, the DRG, the NDC, Revenue Center Codes (RCC), or other common payer identifier; and

(C) Beginning January 1, 2025, any modifier(s) that may change the standard charge that corresponds to a hospital item or service, including a description of the modifier and how it changes the standard charge.

(c) *Format.* (1) Prior to July 1, 2024, the information described in paragraph (b)(1) of this section must be published in a single digital file that is in a machine-readable format.

(2) Beginning July 1, 2024, the hospital's machine-readable file must conform to a CMS template layout, data specifications, and data dictionary for purposes of making public the standard charge information required under paragraph (b)(2) of this section.

(d) * * *

(6) Beginning January 1, 2024, the hospital must ensure that the public website it selects to host its machine-readable file establishes and maintains, in the form and manner specified by CMS:

(i) A .txt file in the root folder that includes:

(A) The hospital location name that corresponds to the machine-readable file;

(B) The source page URL that hosts the machine-readable file;

(C) A direct link to the machine-readable file (the machine-readable file URL); and

(D) Hospital point of contact information.

(ii) A link in the footer on its website, including but not limited to the homepage, that is labeled ''Price Transparency'' and links directly to the publicly available web page that hosts the link to the machine-readable file.

* * * * *

■ 58. Section 180.70 is amended by:

■ a. Revising paragraphs (a) heading and (a)(2)(iii).

■ b. Adding paragraphs (a)(2)(iv) and (v).

■ c. Revising paragraph (b)(1).

■ d. Adding paragraphs (c) and (d).

The additions and revisions read as follows:

§ 180.70 Monitoring and enforcement.

(a) *Monitoring and assessment.* * * *

(2) * * *

(iii) CMS audit and comprehensive review.

(iv) Requiring submission of certification by an authorized hospital official as to the accuracy and completeness of the standard charge information in the machine-readable file.

(v) Requiring submission of additional documentation as may be necessary to make a determination of hospital compliance.

(b) * * *

(1) Provide a written warning notice to the hospital of the specific violation(s). CMS will require that a hospital submit an acknowledgement of receipt of the warning notice in the form and manner, and by the deadline, specified in the notice of violation issued by CMS to the hospital.

* * * * *

(c) *Actions to address noncompliance of hospitals in health systems.* In the event CMS takes an action to address hospital noncompliance (as specified in paragraph (b) of this section) and the hospital is determined by CMS to be part of a health system, CMS may notify health system leadership of the action and may work with health system leadership to address similar deficiencies for hospitals across the health system.

(d) *Publicizing assessments, compliance actions, and outcomes.* CMS may publicize on its website information related to the following:

(1) CMS' assessment of a hospital's compliance.

(2) Any compliance action taken against a hospital, the status of such compliance action, or the outcome of such compliance action.

(3) Notifications sent to health system leadership.

§ 180.90 [Amended]

■ 59. Section 180.90 is amend in paragraph (b)(2)(ii)(C) by removing the phrase ''resulting from monitoring activities'' and adding in its place the phrase ''resulting from monitoring and assessment activities''.

Xavier Becerra,

Secretary, Department of Health and Human Services.

No. 224 November 22, 2023

Part III

Department of the Treasury

Internal Revenue Service

26 CFR Part 1
Definition of Energy Property and Rules Applicable to the Energy Credit; Proposed Rule

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[REG–132569–17]

RIN 1545–BO40

Definition of Energy Property and Rules Applicable to the Energy Credit

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice of proposed rulemaking, public hearing, and partial withdrawal of notice of proposed rulemaking.

SUMMARY: This document contains proposed regulations that would amend the regulations relating to the energy credit for the taxable year in which eligible energy property is placed in service. This document also withdraws and reproposes, for additional clarity, portions of previously proposed regulations regarding the increased energy credit amount available if prevailing wage and registered apprenticeship requirements are met. In connection with the Inflation Reduction Act of 2022, the proposed regulations would: update the types of energy property eligible for the energy credit, including additional types of energy property added by that law; clarify the application of new credit transfer rules to the energy credit recapture rules applicable to failures to satisfy the prevailing wage requirements, including notification requirements for eligible taxpayers; and include qualified interconnection costs in the basis of some lower-output energy properties. The proposed regulations would also provide additional requirements and rules generally applicable to energy property, such as rules regarding: functionally interdependent components; property that is an integral part of an energy property; application of an ''80/20 Rule'' to retrofitted energy property; dual use property; separate ownership of components of an energy property; property that could be eligible for multiple Federal income tax credits; and the election to treat qualified facilities eligible for the renewable electricity production credit instead as property eligible for the energy credit. The proposed regulations would impact taxpayers who invest in energy property eligible for the energy credit.

DATES: Written or electronic comments must be received by January 22, 2024. A public hearing on these proposed regulations is scheduled to be held on February 20, 2024, at 10 a.m. ET. Requests to speak and outlines of topics to be discussed at the public hearing must be received by January 22, 2024. If no outlines are received by January 22, 2024, the public hearing will be cancelled. Requests to attend the public hearing must be received by 5 p.m. on February 15, 2024. The public hearing will be made accessible to people with disabilities. Requests for special assistance during the hearing must be received by 5 p.m. on February 14, 2024.

ADDRESSES: Commenters are strongly encouraged to submit public comments electronically. Submit electronic submissions via the Federal eRulemaking Portal at *www.regulations.gov* (indicate IRS and REG–132569–17) by following the online instructions for submitting comments. Once submitted to the Federal eRulemaking Portal, comments cannot be edited or withdrawn. The Department of Treasury (Treasury Department) and the IRS will publish for public availability any comments submitted, whether electronically or on paper, to the IRS's public docket.

Send paper submissions to: CC:PA:LPD:PR (REG–132569–17), Room 5203, Internal Revenue Service, P.O. Box 7604, Ben Franklin Station, Washington, DC 20044.

FOR FURTHER INFORMATION CONTACT: Concerning the proposed regulations, Office of Associate Chief Counsel (Passthroughs & Special Industries) at (202) 317–6853 (not a toll-free number); concerning submissions of comments or the public hearing, Vivian Hayes, (202) 317–6901 (not toll-free number) or by email to *publichearings@irs.gov* (preferred).

SUPPLEMENTARY INFORMATION:

Background

This notice of proposed rulemaking consists of several proposed amendments to the existing Income Tax Regulations (26 CFR part 1) under section 48 of the Internal Revenue Code (Code) addressing the energy credit determined under section 48 (section 48 credit) for purposes of sections 38 and 46 of the Code (proposed regulations). This notice of proposed rulemaking also withdraws and reproposes portions of another notice of proposed rulemaking (REG–100908–23) proposing regulations under section 48 that were published in the **Federal Register** (88 FR 60018) on August 30, 2023. This notice of proposed rulemaking would also propose additional regulations under section 6418 of the Code to supplement a notice of proposed rulemaking (REG–101610–23) published in the **Federal Register** (88 FR 40496) on June 21, 2023.

Section 38 allows certain business credits against the Federal income tax imposed by chapter 1 of the Code (chapter 1). Among the credits allowed by section 38 are the investment credit determined under section 46, which includes the energy credit determined under section 48. See sections 38(b)(1) and 46(2). Section 48(a)(1) generally provides that the energy credit for any taxable year is the energy percentage of the basis of each energy property placed in service during such taxable year. For most types of energy property, eligibility for the section 48 credit and, in some cases, the amount of the section 48 credit for which energy property is eligible, are dependent upon meeting certain deadlines for beginning construction of the energy property and for placing the energy property in service.

Section 48 was originally enacted by section 2 of the Revenue Act of 1962, Public Law 87–834, (76 Stat. 960, 963) to spur economic growth by encouraging investments in various capital projects across many industries including energy, transportation, and communications. Section 48 has been amended many times since its enactment, most recently by section 13102 of Public Law 117–169, 136 Stat. 1818 (August 16, 2022), commonly known as the Inflation Reduction Act of 2022 (IRA). The IRA amended section 48 in several ways, including by making additional types of energy property eligible for the section 48 credit, providing a special rule to allow certain lower-output energy properties to include qualified interconnection costs in the basis of associated energy property, and providing an increased credit amount for energy projects that satisfy prevailing wage and apprenticeship requirements, a domestic content bonus credit amount, and an increase in credit rate for energy communities.

The current Income Tax Regulations at § 1.48–9, which provide definitions and eligibility rules for determining whether property is energy property eligible for the section 48 credit, were published on January 23, 1981 (T.D. 7765, 46 FR 7287). Those regulations were amended on July 21, 1987 (T.D. 8147, 52 FR 27336), to provide rules for dual use property, but have not been updated since 1987, before many of the current types of energy property became eligible for the section 48 credit.

Prior to proposing amendments to the existing regulations under section 48, the Treasury Department and the IRS have twice requested comments on issues to be addressed. On October 26, 2015, the Treasury Department and the

IRS published Notice 2015–70, 2015–43 I.R.B. 604, to request comments regarding statutory updates to section 48 preceding those made by the IRA. On October 24, 2022, in response to the passage of the IRA, the Treasury Department and the IRS published Notice 2022–49, 2022–43 I.R.B. 321, to request general as well as specific comments on issues arising under section 48, among other sections, that were amended or added by the IRA. After consideration of comments submitted in response to Notice 2015–70 and Notice 2022–49, and after consultation with the Department of Energy, the Treasury Department and the IRS propose the revisions to the existing regulations under section 48 contained in this notice of proposed rulemaking.

On August 30, 2023, the Treasury Department and the IRS published in the **Federal Register** (88 FR 60018) a notice of proposed rulemaking (REG–100908–23) proposing rules regarding the increased credit amount available for taxpayers satisfying prevailing wage and registered apprenticeship requirements established by the IRA (August Proposed Regulations). The August Proposed Regulations provided rules addressing the recapture under section 48(a)(10)(C) of increased credit amounts from only initially satisfying the prevailing wage requirements under section 48(a)(10)(A) and (B). Comments were requested and a public hearing has been scheduled for November 21, 2023. This notice of proposed rulemaking withdraws certain portions of the August Proposed Regulations and reproposes regulations that would provide additional guidance on the prevailing wage and apprenticeship requirements under section 48, including the statutory exception for energy projects with a maximum output of less than one megawatt (MW) and the recapture rules under section 48(a)(10)(C) related to the prevailing wage requirements.

Although this notice of proposed rulemaking withdraws certain portions of the August Proposed Regulations, the Explanation of Provisions section in the preamble to the August Proposed Regulations generally remains relevant. Therefore, to the extent not inconsistent with the Summary of Comments and Explanation of Provisions section of this preamble, the Explanation of Provisions section of the August Proposed Regulations is incorporated by reference in this notice of proposed rulemaking. This notice of proposed rulemaking does not address written comments that were submitted in response to the regulations proposed in the August Proposed Regulations. Any comments received in response to this notice of proposed rulemaking, including comments on the reproposed regulations, will be addressed in the Treasury Decision adopting these regulations as final regulations. This notice of proposed rulemaking does not extend the comment period or affect the scheduled hearing for the August Proposed Regulations.

On June 21, 2023, the Treasury Department and the IRS published in the **Federal Register** (88 FR 40496) a notice of proposed rulemaking (REG–101610–23) proposing rules concerning the election under section 6418 of the Code established by the IRA to transfer certain Federal income tax credits, including the section 48 credit (June Proposed Regulations). The June Proposed Regulations provided proposed rules addressing notification requirements and the impact of credit recapture rules under sections 50(a), 49(b), and 45Q(f)(4) of the Code in proposed § 1.6418–5. Comments were requested and a public hearing on the June Proposed Regulations was held on August 23, 2023. This document amends those June Proposed Regulations to add guidance to proposed § 1.6418–5 that describes the recapture rules relating to failing to satisfy the prevailing wage and apprenticeship requirements under section 48(a)(10) and (11), including the statutory exception for energy projects with a maximum output of less than 1 MW in section 48(a)(9)(B)(i), and the recapture rules under section 48(a)(10)(C) related to the prevailing wage requirements. This notice of proposed rulemaking does not address written comments that were submitted in response to the regulations proposed in the June Proposed Regulations. Any comments received in response to this notice of proposed rulemaking, including the amendments to the June Proposed Regulations, will be addressed in the Treasury Decision adopting these regulations as final regulations. This notice of proposed rulemaking does not otherwise extend the comment period for the June Proposed Regulations.

Summary of Comments and Explanation of Provisions

I. Requirements for Energy Property

For purposes of the section 48 credit, energy property consists of all the components of property that meet the statutory requirements for an energy property as defined by section 48. Components of an energy property are those that would be included in a unit of energy property because they are functionally interdependent (as described in proposed § 1.48–9(f)(2)(ii)) as well as property owned by the same taxpayer that is an integral part of such energy property (as described in proposed § 1.48–9(f)(3)). Additionally, components of property must not be a type of property specifically excluded from energy property (as described in proposed § 1.48–9(d)).

Section 48(a)(3)(B)–(D) provides general requirements for all types of energy property. Section 48(a)(3)(B)(i) defines energy property as property that is constructed, reconstructed, or erected by the taxpayer. Alternatively, section 48(a)(3)(B)(ii) provides that energy property can also include property which the taxpayer acquires if the original use of such property commences with the taxpayer. Section 48(a)(3)(C) provides that to be eligible as energy property, depreciation (or amortization in lieu of depreciation) must be allowable for the property. Section 48(a)(3)(D) provides that to be eligible as energy property, the property must also meet any performance and quality standards that have been prescribed by the Secretary of the Treasury or her delegate (Secretary), after consultation with the Secretary of Energy, and are in effect at the time of the taxpayer's acquisition of the property. Under section 48(a)(3), energy property does not include property that is part of a qualified facility the production from which is allowed a renewable electricity production credit determined under section 45 (section 45 credit) for the taxable year or any prior taxable year. Lastly, where section 48 provides dates by which construction of energy property must begin or when energy property must be placed in service, such energy property must meet those deadlines to be eligible for the section 48 credit at specified energy percentages. Proposed § 1.48–9(a) would provide this general overview of the definition of energy property.

A. Definitions Related to Requirements for Energy Property

Before 1990, section 48 defined the term ''section 38 property'' to include, among other types of property, energy property eligible for the section 48 credit. The Revenue Reconciliation Act of 1990, Public Law 101–508, 104 Stat. 1388 (November 5, 1990) removed the term ''section 38 property'' in amending section 48. However, section 48 is one of the credits that comprise the investment credit for any taxable year determined under section 46, which is included in section 38(b)(1) and remains subject to the general business credit rules under section 38. As a result, rules

related to ''section 38 property'' remain generally applicable to the section 48 credit. The Treasury Department and the IRS published regulations under §§ 1.48–1 and 1.48–2 to provide guidance with respect to section 38 property. Section 1.48–1 was last substantially revised on October 11, 1988 (T.D. 8233, 53 FR 39592) and § 1.48–2 was last revised on June 28, 1985 (T.D. 8031, 50 FR 26698). Although subsequent amendments to section 48 have made some of the rules provided by these regulations inapplicable, those rules continue to provide useful definitions, some of which § 1.48–9 of these proposed regulations (proposed § 1.48–9) would adopt.

1. Construction, Reconstruction, or Erection of Energy Property

Section 48(a)(3)(B)(i) defines energy property as property that is constructed, reconstructed, or erected by the taxpayer. Existing § 1.48–2(b)(1) provides that property is considered as constructed, reconstructed, or erected by the taxpayer if the work is performed for the taxpayer in accordance with the taxpayer's specifications. Proposed § 1.48–9(b)(1) would largely adopt the definition of the term ''constructed, reconstructed, or erected'' from existing § 1.48–2(b)(1) while modifying it to address energy property.

2. Acquisition and Original Use of Energy Property

Section 48(a)(3)(B)(ii) provides that energy property includes property that is acquired by the taxpayer if the original use of such property commences with the taxpayer. Existing § 1.48–2(b)(6) provides that property is deemed to be acquired when reduced to physical possession or control by the taxpayer. Proposed § 1.48–9(b)(2) would adopt the concepts from existing § 1.48–2(b)(6), and provide additional clarification that the term ''acquisition of energy property'' means a transaction by which a taxpayer obtains rights and obligations with respect to energy property, including title to the energy property under the law of the jurisdiction in which the energy property is placed in service, unless the property is possessed or controlled by the taxpayer as a lessee, and physical possession or control of the energy property. In addition, existing § 1.48–2(b)(7) defines the term ''original use'' as the first use to which the property is put, whether or not such use corresponds to the use of such property by the taxpayer. Proposed § 1.48–9(b)(3) largely would adopt the § 1.48–2(b)(7) definition of original use while modifying it to address energy property.

3. Depreciation Allowable

Section 48(a)(3)(C) requires that energy property be property with respect to which depreciation (or amortization in lieu of depreciation) is allowable, and existing § 1.48–1(b) explains when depreciation is allowable with respect to section 38 property. Specifically, § 1.48–1(b) provides that a deduction for depreciation is allowable if the property is of a character subject to the allowance for depreciation under section 167 of the Code and the basis (or cost) of the property is recovered through a method of depreciation, including, for example, the unit of production method and the retirement method as well as methods of depreciation that measure the life of the property in terms of years. Proposed § 1.48–9(b)(4)(i) generally would adopt the § 1.48–1(b) rule for determining whether depreciation is ''allowable'' under section 48, with certain modifications to update the described methods of depreciation and to make the definition specific to energy property as defined in section 48. Proposed § 1.48–9(b)(4)(i) would also clarify that the 100-percent additional first year depreciation provided by section 168(k) of the Code is considered a method of depreciation.

In addition, existing § 1.48–1(b)(3) provides language describing when depreciation is not allowable to the taxpayer for purposes of defining section 38 property. Section 1.48–1(b)(3) provides that if the cost of property is not recovered through a method of depreciation but through a deduction of the full cost in one taxable year, for purposes of § 1.48–1(b)(1) a deduction for depreciation with respect to such property is not allowable to the taxpayer. However, if an adjustment with respect to the income tax return for such taxable year requires the cost of such property to be recovered through a method of depreciation, a deduction for depreciation will be considered as allowable to the taxpayer.

Proposed § 1.48–9(b)(4)(ii) generally would adopt this rule from § 1.48–1(b)(3) to determine when depreciation is not allowable, with certain modifications to update the described methods of depreciation and to make the definition specific to energy property as defined in section 48. Proposed § 1.48–9(b)(4) would provide that if the basis or cost of energy property is not recovered through a method of depreciation but through a deduction of the full cost in one taxable year, a deduction for depreciation with respect to such property is not allowable to the taxpayer.

However, proposed § 1.48–9(b)(4)(i) would provide that if an IRS adjustment with respect to an income tax return or information return for such taxable year requires the basis or cost of such property to be recovered using a method of depreciation, including any additional first year depreciation deduction provision in the Code, a deduction for depreciation will be considered as allowable to the taxpayer.

4. Performance and Quality Standards for Energy Property

Section 48(a)(3)(D) provides that energy property is property that meets the performance and quality standards (if any) that have been prescribed by the Secretary by regulations (after consultation with the Secretary of Energy), and are in effect at the time of the acquisition of the property. Existing § 1.48–9(m)(1) provides that ''energy property must meet quality and performance standards, if any, that have been prescribed by the Secretary (after consultation with the Secretary of Energy) and are in effect at the time of acquisition.'' Proposed § 1.48–9(c)(2) would adopt this rule for performance and quality standards for energy property from § 1.48–9(m)(1).

After consultation with the Department of Energy, proposed § 1.48–9(c)(2)(ii) would provide special rules for performance and quality standards with respect to both small wind and electrochromic glass property. These clarifications are needed to ensure that the intended energy production or savings occurs.

a. Performance and Quality Standards for Small Wind Energy Property

Proposed § 1.48–9(c)(2)(ii)(A) would provide that small wind energy property must meet the performance and quality standards in effect at the time of acquisition of the small wind turbine set forth in one of the following: the American Wind Energy Association Small Wind Turbine Performance and Safety Standard 9.1–2009, or subsequent revisions (AWEA); International Electrotechnical Commission 61400–1, 61400–2, 61400–11, 61400–12, or subsequent revisions (IEC); or the ANSI/ACP 101–1–2021, the Small Wind Turbine Standard, or subsequent revisions (ACP). Proposed § 1.48–9(c)(2)(ii)(A) would also provide that certification requirements applicable to such performance and quality standards for small wind energy property are provided in guidance published in the Internal Revenue Bulletin, such as Notice 2015–4, 2015–5 I.R.B. 407, and

its successor, Notice 2015–51, 2015–31 I.R.B. 133.

b. Performance and Quality Standards for Electrochromic Glass Property

As described in part I.C.2.b of this Summary of Comments and Explanation of Provisions, electrochromic glass is incorporated into either an electrochromic window or secondary glazing product. Accordingly windows, including secondary glazings, that incorporate electrochromic glass are electrochromic glass property for purposes of the section 48 credit. Proposed § 1.48–9(c)(2)(ii)(B) would also adopt the requirement that windows that incorporate electrochromic glass must be rated in accordance with the National Fenestration Rating Council (NFRC) and would provide that secondary glazing systems must be rated in accordance with the Attachments Energy Rating Council (AERC) Rating and Certification Process, or subsequent revisions.

c. Time of Acquisition

Existing § 1.48–9(m)(2) provides that the time of acquisition for purposes of applying quality and performance standards for energy property is either (i) the date the taxpayer enters into a binding contract to acquire the property; or (ii) for property constructed, reconstructed, or erected by the taxpayer, the earlier of the date that the taxpayer begins construction, reconstruction, or erection of the property, or the date the taxpayer and another person enter into a binding contract requiring the other person to construct, reconstruct, or erect property and place the property in service for an agreed upon use. Proposed § 1.48–9(c)(2)(iii) would adopt the rule for the ''time of acquisition'' from § 1.48–9(m)(2) only for purposes of applying the performance and quality standards for energy property.

d. Binding Contract

Section 1.168(k)–2(b)(5)(iii)(A) provides the following definition of a binding contract in the context of the acquisition of qualified property for the allowance of additional first year depreciation under section 168(k) of the Code:

> A contract is binding only if it is enforceable under State law against the taxpayer or a predecessor, and does not limit damages to a specified amount (for example, by use of a liquidated damages provision). For this purpose, a contractual provision that limits damages to an amount equal to at least five percent of the total contract price will not be treated as limiting damages to a specified amount.

Proposed § 1.48–9(c)(2)(iv) would adopt this definition of the term ''binding contract'' from § 1.168(k)–2(b)(5)(iii)(A) for purposes of applying the performance and quality standards for energy property.

5. Placed in Service

Section 48(a) provides that the energy credit for any taxable year is the energy percentage of the basis of each energy property placed in service during such taxable year. As part of the regulations under section 46 for the investment credit, § 1.46–3(d)(1) provides general rules for determining when a taxpayer has placed a property in service for the section 48 credit. Property is considered placed in service in the earlier of the taxable year in which, under the taxpayer's depreciation practice, the period for depreciation with respect to such property begins; or the taxable year in which the property is placed in a condition or state of readiness and availability for a specifically assigned function, whether in a trade or business, in the production of income, in a tax-exempt activity, or in a personal activity.

Proposed § 1.48–9(b)(5) largely would adopt the general rules from § 1.46–3(d)(1) for determining whether a taxpayer has placed an energy property in service with certain modifications. As discussed previously, to be eligible for the section 48 credit, energy property must be property with respect to which depreciation (or amortization in lieu of depreciation) is allowable. Further, one requirement for determining if depreciation is allowable with respect to energy property is that the basis or cost of such energy property is recovered using a method of depreciation. Accordingly, proposed § 1.48–9(b)(5)(i) clarifies that the taxable year in which energy property is placed in service would be the earlier of the taxable year in which the period for depreciation of such property begins, or the taxable year in which the energy property is placed in a condition or state of readiness and availability for a specifically assigned function in either a trade or business or in the production of income.

In addition, section 50(b)(3) of the Code provides that tax-exempt organizations cannot determine an investment tax credit, including the section 48 credit, unless the property is used predominantly in an unrelated trade or business, so the proposed regulations do not include a rule applicable to tax-exempt use. However, section 6417(d)(2) of the Code provides that an applicable entity (as defined in section 6417(d)(1), and including a tax-exempt organization) making an elective payment election under section 6417 can determine an applicable credit (defined in section 6417(b), and including the section 48 credit) without regard to section 50(b)(3), by treating any property with respect to which the section 48 credit is determined as used in a trade or business of the applicable entity. (See the rules of proposed § 1.6417–2(c)(2) contained in the notice of proposed rulemaking (REG–101607–23) published in the **Federal Register** (88 FR 40528) on June 21, 2023.) Thus, if the rules under section 6417(d)(2) apply, the general rule adopted in proposed § 1.48–9(b)(5)(i) would apply to determine when the energy property is placed in service by an applicable entity.

Section 1.46–3(d)(3) provides that notwithstanding the provisions of § 1.46–3(d)(1), property with respect to which an election is made under § 1.48–4 to treat the lessee as having purchased such property is considered placed in service by the lessor in the taxable year in which possession is transferred to such lessee. Proposed § 1.48–9(b)(5)(ii) would adopt the special rule from § 1.46–3(d)(3) for determining when a leased property has been placed in service.

B. Property Excluded From Energy Property

Section 48(a)(5) generally provides an election to treat certain types of qualified facilities as defined in section 45(d), referred to as a ''qualified investment credit facility,'' as energy property for purposes of section 48. However, section 48(a)(5)(B) provides that no section 45 credit is allowed for any taxable year with respect to any qualified investment credit facility. Section 48(a)(5)(C) provides, in part, that the term ''qualified investment credit facility'' means any qualified facility with respect to which no section 45 credit has been allowed for which the taxpayer makes an irrevocable election. Accordingly, proposed § 1.48–9(d) would exclude from energy property any property that is part of a qualified facility with respect to which a section 45 credit is allowed for any taxable year, including any prior taxable year.

The Treasury Department and the IRS understand that energy storage technologies eligible for the section 48 credit are often co-located with qualified facilities eligible for the section 45 credit and may share power conditioning and transfer equipment. In consideration of this practice, the proposed rules would provide that power conditioning and transfer equipment that is shared by a qualified

facility (as defined in section 45(d)) and an energy property may be treated as an integral part of the section 48 energy property. Such shared property is not considered part of a qualified facility and, therefore, the sharing of such property will not impact the ability of a taxpayer to claim the section 48 credit for the energy property or the section 45 credit for the qualified facility. The Treasury Department and the IRS request comments regarding whether additional guidance is needed on this rule.

C. Types of Energy Property

Proposed § 1.48–9(e) would expand upon the definitions of energy property provided in existing § 1.48–9 to account for new technologies that were added by amendments to section 48, including by section 13102 of the IRA. Generally, the definitions of the types of energy property provided in the proposed regulations do not provide specific beginning of construction or placed in service deadlines. Taxpayers should refer to the current statutory language of section 48 for specific requirements applicable to each type of energy property with respect to any particular taxable year. The following definitions in proposed § 1.48–9(e) for the different types of energy properties were developed by the Treasury Department and the IRS in consultation with the Department of Energy.

1. Solar Energy Property

Section 48(a)(3)(A)(i) provides that energy property includes solar energy property and defines solar energy property as any property that is equipment that uses solar energy to generate electricity, to heat or cool (or provide hot water for use in) a structure, or to provide solar process heat, excepting property used to generate energy for the purposes of heating a swimming pool.

Existing § 1.48–9(d)(1) defines solar energy property as including equipment and materials (and parts related to the functioning of such equipment) that use solar energy directly to (i) generate electricity, (ii) heat or cool a building or structure, or (iii) provide hot water for use within a building or structure. Further, existing § 1.48–9(d)(3), in part, defines solar electric generation equipment as equipment that uses solar energy to generate electricity through a process that involves the transformation of sunlight into electricity through the use of such devices as solar cells or other collectors.

In response to Notice 2015–70, commenters requested that the Treasury Department and the IRS provide guidance regarding specific components that may be considered solar energy property, including in photovoltaic (PV) systems (including concentrated PV systems), non-PV concentrated solar power systems (passive solar), solar process, and thermal systems. Several commenters requested that the regulations explicitly list certain types of technologies as solar energy property, such as integrated thermoplastic roofing and racking systems. Other commenters requested that the regulations simply define solar energy property to include common components such as controllers to manage use of solar energy, mounting structures, energy storage technology, power conditioning equipment, and step-up transformers.

Proposed § 1.48–9(e)(1)(i) would depart from the existing definition of solar energy property at § 1.48–9(d)(1) by adopting a modified version of the current statutory definition, which provides that solar energy property is equipment that uses solar energy to generate electricity, to heat or cool a structure, or to provide solar process heat, and parts related to the functioning of such equipment. Proposed § 1.48–9(e)(1)(ii) would define the term ''solar electric generation equipment'' as equipment that converts sunlight into electricity through the use of devices such as solar cells or other collectors, while adopting the current statutory exclusion for any property used to generate energy for the purposes of heating a swimming pool. The proposed regulations would eliminate the exclusion for passive solar in existing § 1.48–9(d)(2) because section 48 does not distinguish between passive and active solar energy systems. Finally, the proposed regulations would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of solar energy property.

Existing § 1.48–9(d)(7) provides that solar energy property does not include equipment that uses solar energy to generate steam at high temperatures for use in industrial or commercial processes (solar process heat). This definition conflicts with section 48(a)(3)(A)(i). Accordingly, the proposed regulations would adopt the statutory language by explicitly including solar process heat within the definition of the term ''solar energy property.'' After consultation with the Department of Energy, proposed § 1.48–9(e)(1)(iii) would define ''solar process heat equipment'' as equipment that uses solar energy to generate heat for use in industrial or commercial processes.

2. Fiber-Optic Solar Energy Property and Electrochromic Glass Property

a. Fiber-Optic Solar Energy Property

Section 48(a)(3)(A)(ii) provides that energy property includes equipment that uses solar energy to illuminate the inside of a structure using fiber-optic distributed sunlight. The Treasury Department and the IRS received no comments in response to Notice 2022–49 regarding fiber-optic solar energy property. Accordingly, proposed § 1.48–9(e)(2)(i) would adopt the statutory definition of fiber-optic solar energy property. Additionally, the proposed regulations would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of fiber-optic solar energy property.

b. Electrochromic Glass Property

Section 48(a)(3)(A)(ii) was modified by the IRA to add electrochromic glass property as a type of energy property. That provision defines electrochromic glass property as equipment that uses electricity to change its light transmittance properties in order to heat or cool a structure. The Treasury Department and IRS consulted with the Department of Energy to determine the types of property eligible as electrochromic glass property. Accordingly, § 1.48–9(e)(2)(ii) would provide that there are only two types of electrochromic glass property: (i) electrochromic glass incorporated into a full window that is installed directly into a building or (ii) electrochromic glass incorporated into a secondary window (known as secondary glazing) that is installed on top of an existing window. For each type of electrochromic glass property, there is a separate control package consisting of electronics, power supply, sensors, and software necessary to control the operations of the electrochromic glass property. Thus, electrochromic glass property is not only comprised of electrochromic glass but also the relevant window or secondary glazing property that incorporates the electrochromic glass property. Therefore, in addition to the electronic controls package that includes the power electronics, sensors, wires, and software systems, the electrochromic window or secondary glazing also includes the electrochromic glass coating and the balance of window and installation components including glass, flashing, framing, and sealants, as applicable, to the type of electrochromic glass property.

In response to Notice 2022–49, several commenters provided input on the definition of electrochromic glass property. Several commenters requested a narrow definition. Other commenters suggested adopting a broader definition of electrochromic glass property. One commenter stated that interpretations of the terms ''electrochromic glass'' or ''dynamic glass'' should be expanded to include any material or technology that meets or exceeds the performance criteria for such components established by the most recent Energy Star or International Energy Conservation Code (IECC) standards in effect at the time such component is placed in service.

In response to the comments and after consultation with the Department of Energy, the proposed regulations would clarify the definition of electrochromic glass property. Proposed § 1.48–9(e)(2)(ii) would adopt the statutory definition of electrochromic glass property while providing that light transmittance properties include both visible light and near infrared light. Additionally, as mentioned previously, proposed § 1.48–9(c)(2)(ii)(B) would adopt the performance and quality standards that new electrochromic windows must be rated in accordance with the NFRC and secondary glazing systems must be rated in accordance with the AERC Rating and Certification Process, or subsequent revisions. The application of these performance and quality standards are needed to ensure that the intended energy savings occurs from the installation of electrochromic glass property.

The Treasury Department and the IRS received comments requesting guidance concerning the eligible components of electrochromic glass property. Similar to the other energy properties, the proposed regulations would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of electrochromic glass property. This approach provides a technology-neutral way to determine what is considered included in the energy property that is broad enough to encompass technological changes. In the case of electrochromic glass property, for example, an electrochromic glass system includes the full controls package, the electrochromic glass coating, and the balance of window and installation components including glass, flashing, framing, and sealants.

3. Geothermal Energy Property

Section 48(a)(3)(A)(iii) provides that energy property includes geothermal property, and defines geothermal property as equipment used to produce, distribute, or use energy derived from a geothermal deposit (within the meaning of section 613(e)(2) of the Code), but only, in the case of electricity generated by geothermal power, up to (but not including) the electrical transmission stage.

Existing § 1.48–9(c)(10)(i) defines ''geothermal equipment'' as equipment that produces, distributes, or uses energy derived from a geothermal deposit. Existing § 1.48–9(c)(10) generally provides that geothermal property includes production and distribution equipment. Proposed § 1.48–9(e)(3)(i) would adopt this definitional framework by providing that geothermal energy property is equipment used to produce, distribute, or use energy derived from a geothermal deposit (within the meaning of section 613(e)(2)), and includes production equipment (as defined in proposed § 1.48–9(e)(3)(ii)) and distribution equipment (as defined in proposed § 1.48–9(e)(3)(iii)).

Proposed § 1.48–9(e)(3)(ii) would adopt a modified definition of production equipment from existing § 1.48–9(c)(10)(ii) in three respects. First, proposed § 1.48–9(e)(3)(ii) would provide, in part, that production equipment includes equipment necessary to bring geothermal energy from the subterranean deposit to the surface. Second, while existing § 1.48–9(c)(10)(ii) provides that reinjection wells required for production may qualify as production equipment, proposed § 1.48–9(e)(3)(ii) would expand the types of wells that may qualify as production equipment to production, injection, and monitoring wells. Third, proposed § 1.48–9(e)(3)(ii) would also include the electricity generating equipment as production equipment for those projects that convert geothermal energy to electricity.

Proposed § 1.48–9(e)(3)(iii) would adopt a modified definition of distribution equipment from existing § 1.48–9(c)(10)(iii). The existing regulations provide that distribution equipment includes components of a heating system, such as pipes and ductwork that distribute the energy derived from the geothermal deposit within a building. Proposed § 1.48–9(e)(3)(iii) would also add components of a building's heating or cooling system as distribution equipment. The proposed regulations would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of geothermal energy property.

In response to Notice 2015–70, one commenter requested that the regulations be modified to include as credit eligible costs incurred to drill failed or non-producing wells, and in some scenarios, for the margin or contingency that a subsidiary contractor requires to be paid to perform under an engineering, procurement, and construction (EPC) contract. While the proposed regulation would expand the types of wells that may be considered production equipment, it would not specifically include costs incurred to drill failed or non-producing wells. In many cases costs incurred to drill failed or non-producing geothermal wells are already recoverable through intangible drilling costs under § 1.612–5. It is also unclear whether the margin or contingency that a subsidiary contractor requires to be paid to perform under an EPC contract can be recovered by a taxpayer. However, if such costs are recoverable, such recovery would likely occur through capitalizing the costs to the underlying mineral interest and claiming depletion deductions under section 613(e). Therefore, the Treasury Department and the IRS have determined that these costs cannot be included in the basis of the geothermal energy property for purposes of calculating the section 48 credit.

4. Qualified Fuel Cell Property

Section 48(a)(3)(A)(iv) provides that energy property includes qualified fuel cell property. As modified by the IRA, section 48(c)(1) defines ''qualified fuel cell property'' as a fuel cell power plant that has a nameplate capacity of at least 0.5 kilowatt (kW) (1 kW in the case of a fuel cell power plant with a linear generator assembly) of electricity using an electrochemical process or electromechanical process and an electricity-only generation efficiency greater than 30 percent. Electricity-only generation efficiency may be calculated by dividing the heat rate of the fuel cell (for example, kilowatt-hours (kWh) electricity produced per kilogram (kg) of fuel consumed) by the higher heating value of the fuel (for example, kWh per kg). Section 48(c)(1)(C) defines the term ''fuel cell power plant'' as an integrated system comprised of a fuel cell stack assembly, or linear generator assembly, and associated balance of plant components that converts a fuel into electricity using electrochemical or electromechanical means.

The Treasury Department and the IRS received few comments regarding qualified fuel cell property in response to Notice 2022–49. As discussed, the

proposed regulations are intended to provide a technology-neutral way to determine what is included in energy property that is broad enough to encompass technological changes and do not include rules for a particular type of product. As a result, proposed § 1.48–9(e)(4) would adopt the statutory definition of qualified fuel cell property. The proposed regulations would also apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of qualified fuel property.

5. Qualified Microturbine Property

Section 48(a)(3)(A)(iv) provides that energy property includes qualified microturbine property. Section 48(c)(2) defines ''qualified microturbine property'' as a stationary microturbine power plant that has a nameplate capacity of less than 2,000 kW and an electricity-only generation efficiency of not less than 26 percent at International Standard Organization conditions. Section 48(c)(2)(C) provides that a ''stationary microturbine power plant'' is an integrated system comprised of a gas turbine engine, a combustor, a recuperator or regenerator, a generator or alternator, and associated balance of plant components that convert a fuel into electricity and thermal energy. A stationary microturbine power plant also includes all secondary components located between the existing infrastructure for fuel delivery and the existing infrastructure for power distribution, including equipment and controls for meeting relevant power standards, such as voltage, frequency, and power factors.

The Treasury Department and the IRS received no comments regarding qualified microturbine property in response to the request for comment published in Notice 2022–49. Therefore, proposed § 1.48–9(e)(5) would adopt the statutory definition of qualified microturbine property. The proposed regulations would also apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of qualified microturbine property.

6. Combined Heat and Power System Property

Section 48(a)(3)(A)(v) includes combined heat and power system (CHP) property as a type of energy property. Section 48(c)(3)(A) defines CHP property as property comprising a system that uses the same energy source for the simultaneous or sequential generation of electrical power, mechanical shaft power, or both, in combination with the generation of steam or other forms of useful thermal energy (including heating and cooling applications). Section 48(c)(3)(A) further provides, in part, that a CHP property must produce at least 20 percent of its total useful energy in the form of thermal energy that is not used to produce electrical or mechanical power (or combination thereof), and at least 20 percent of its total useful energy in the form of electrical or mechanical power (or combination thereof), and that the energy efficiency percentage of the system must exceed 60 percent.

Section 48(c)(3)(B) provides that the credit for CHP property is reduced to the extent that a CHP property has an electrical or mechanical capacity in excess of applicable limits. Subject to the exception for CHP property that uses closed or open-loop biomass as feedstock, CHP property with capacity in excess of the applicable capacity limit (15 MW or a mechanical capacity of more than 20,000 horsepower or an equivalent combination of electrical and mechanical energy capacities) is eligible for only a fraction of the otherwise allowable section 48 credit. The fraction is equal to the applicable capacity limit divided by the capacity of the CHP property. However, CHP property with a capacity in excess of 50 MW or a mechanical energy capacity in excess of 67,000 horsepower or an equivalent combination of electrical and mechanical energy capacities does not qualify for the section 48 credit.

Section 48(c)(3)(C) provides that the energy efficiency percentage of a CHP property is the fraction (1) the numerator of which is the total useful electrical, thermal, and mechanical power produced by the system at normal operating rates, and expected to be consumed in its normal application, and (2) the denominator of which is the lower heating value of the fuel sources for the system. The energy efficiency percentage and the percentages under section 48(c)(3)(A)(ii) are determined on a British thermal unit (Btu) basis. Section 48(c)(3)(C)(iii) specifically provides that the term ''combined heat and power system property'' does not include property used to transport the energy source to the facility or to distribute energy produced by the facility.

Additionally, section 48(c)(3)(D) provides that a CHP property with a fuel source that is at least 90 percent from closed or open-loop biomass that would otherwise qualify for the section 48 credit but for the failure to meet the efficiency standard is eligible for a credit reduced in proportion to the degree to which the system fails to meet the efficiency standard. For example, a system that would otherwise be required to meet the 60-percent efficiency standard, but which only achieves 30-percent efficiency, would be permitted to claim a credit equal to one-half of the otherwise allowable credit (that is, a five percent credit).

In response to Notice 2015–70, several commenters requested that the definition of CHP property be modified by relaxing certain requirements. Specifically, commenters requested that the definition of CHP property be modified by eliminating or reducing the requirement that a facility produce at least 20 percent of its total useful energy in the form of electrical or mechanical power (or combination thereof). This modification would allow waste heat to power (WHP) property, which uses waste heat from industrial processes to generate electricity, to qualify as CHP property despite its inability to meet certain statutory requirements. Since the comments to Notice 2015–70 were received, Congress amended section 48 by adding waste energy recovery property (WERP) as a type of energy property in the Consolidated Appropriations Act, 2021, Public Law 116–260, 134 Stat. 1182 (Dec. 27, 2020). Additional information on requirements for WERP is provided in part I.C.9 of this Summary of Comments and Explanation of Provisions.

Proposed § 1.48–9(e)(6)(i) would adopt a simplified version of the statutory definition of CHP property. Additionally, proposed § 1.48–9(e)(6)(ii) would provide that CHP property does not include property used to transport the energy source to the generating facility or to distribute energy produced by the facility. The proposed regulations would also apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of CHP property.

7. Qualified Small Wind Energy Property

Section 48(a)(3)(A)(vi) provides that energy property includes qualified small wind energy property. Section 48(c)(4) defines qualified small wind energy property as property using a qualifying small wind turbine (which has a nameplate capacity of not more than 100 kW) to generate electricity. The Treasury Department and the IRS received no comments regarding qualified small wind energy property in response to Notice 2015–70.

Accordingly, proposed § 1.48–9(e)(7) would adopt the statutory definition of qualified small wind energy property. The proposed regulations would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of qualified small wind energy property.

8. Geothermal Heat Pump Equipment

Section 48(a)(3)(A)(vii) provides that energy property includes geothermal heat pump equipment. The statute provides, in part, that geothermal heat pump equipment is equipment that uses the ground or ground water as a thermal energy source to heat a structure or as a thermal energy sink to cool a structure. The Treasury Department and the IRS received no comments regarding geothermal heat pump equipment in response to Notice 2015–70. As a result, proposed § 1.48–9(e)(8) would adopt the statutory definition of qualified geothermal heat pump equipment while providing the modification that in addition to the ground and ground water, other underground working fluids may be used as a thermal energy source or as a thermal energy sink. The proposed regulations would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of geothermal heat pump equipment.

Additionally, while section 48(a)(3)(A)(vii) does not specify energy distribution equipment and components of a building's heating and/or cooling system as components of geothermal heat pump equipment, such equipment may be integral to the function of the geothermal heat pump equipment, to heat or cool a structure. Thus, energy distribution equipment may be considered geothermal heat pump equipment. See section I.E.3. of this preamble for a discussion of an integral part of energy property.

9. Waste Energy Recovery Property (WERP)

Section 48(a)(3)(A)(viii) provides that energy property includes WERP. Section 48(c)(5)(A) defines WERP as property (with a capacity not in excess of 50 MW) that generates electricity solely from heat from buildings or equipment if the primary purpose of such building or equipment is not the generation of electricity. Additionally, section 48(c)(5)(C) prevents taxpayers from claiming a double benefit by providing that any property that could be treated as WERP (determined without regard to section 48(c)(5)), which is part of a CHP property is not treated as WERP for purposes of section 48 unless the taxpayer elects not to treat such system as a CHP property for purposes of section 48.

Proposed § 1.48–9(e)(9), would adopt the statutory definition of WERP. The proposed regulations would also apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of WERP. Additionally, after consultation with the Department of Energy, proposed § 1.48–9(e)(9) would provide examples of buildings or equipment the primary purpose of which is not the generation of electricity including, but not limited to, manufacturing plants, medical care facilities, facilities on college campuses, pipeline compressor stations, and associated equipment.

10. Energy Storage Technology

Section 48(a)(3)(A)(ix) was added by the IRA to provide that energy property includes energy storage technology. Section 48(c)(6)(A)(i) defines energy storage technology to mean property (other than property primarily used in the transportation of goods or individuals and not for the production of electricity) that receives, stores, and delivers energy for conversion to electricity (or, in the case of hydrogen, that stores energy), and has a nameplate capacity of not less than 5 kWh. Section 48(c)(6)(A)(ii) provides that thermal energy storage property is also energy storage technology.

Section 48(c)(6)(B) provides a rule for modifications of energy storage technology. In the case of any property that either was placed in service before August 16, 2022, and would be described in section 48(c)(6)(A)(i), except that such property has a capacity of less than 5 kWh and is modified in a manner that such property (after such modification) has a nameplate capacity of not less than 5 kWh, or is energy storage technology (as described in section 48(c)(6)(A)(i)) and is modified in a manner that such property (after such modification) has an increase in nameplate capacity of not less than 5 kWh, such property is treated as energy storage technology (as described in section 48(c)(6)(A)(i)) except that the basis of any existing property prior to such modification is not taken into account for purposes of section 48.

Section 48(c)(6)(C) defines thermal energy storage property, for purposes of section 48(c)(6) as property comprising a system that: is directly connected to a heating, ventilation, or air conditioning system; removes heat from, or adds heat to, a storage medium for subsequent use; and provides energy for the heating or cooling of the interior of a residential or commercial building. Section 48(c)(6)(C)(ii) provides that thermal energy storage property does not include a swimming pool, a combined heat and power system property, or a building or its structural components.

The Treasury Department and the IRS received comments addressing energy storage technologies in response to Notice 2022–49. Some comments discussed the definition of energy storage technology and how broadly energy storage technology should be interpreted in the regulations. For example, a commenter requested that guidance define energy storage broadly based on its characteristics and capabilities, rather than using a technology-based definition that could unintentionally exclude developing technologies. Some commenters requested that the definition of energy storage technology focus more on capability and less on a particular technology. Other commenters requested confirmation that certain specific technologies would be included within the definition of energy storage technology and that the definition be based on the underlying definition for the technology provided in section 48(c)(6), as opposed to the specific functionalities of the energy storage technology. After consideration of these comments, proposed § 1.48–9(e)(10) would adopt the statutory definition of energy storage technology.

Commenters also provided input on hydrogen storage, including a variety of recommendations on what the definition of hydrogen storage property should include. For example, one commenter suggested that ''energy storage technology'' with respect to hydrogen storage includes all equipment, facilities, storage receptacles, dedicated vehicles and vessels used to compress, liquify, store, and distribute hydrogen and hydrogen carriers, such as ammonia, methanol, and other forms of hydrogen carriers. Another commenter requested that regulations include a broad list of components of energy storage technologies including the storage receptacle itself and all pressure vessels, piping, valves, and tanks among many other components. This commenter also suggested that property that facilitates use of ammonia, methanol and other hydrogen carriers be included as hydrogen energy storage technology. Another commenter noted that the regulations should provide specific use limitations for stored hydrogen such as

for use solely in energy-related activities.

Section 48(c)(6)(A) already defines energy storage technology (including hydrogen storage) and thermal energy storage property based on the general functions of the relevant energy storage technology. Hydrogen energy storage property must store hydrogen that is solely used for the production of energy and not for the production of end products, such as fertilizer. For example, this would include, but is not limited to, hydrogen used to produce heat, to generate electricity, or to be used in a fuel cell vehicle. The type of hydrogen storage medium (for example, physical based or material based), is not limited. Proposed § 1.48–9(e)(10)(iv) therefore would adopt that rule. The Treasury Department and the IRS request comments on alternative approaches to assessing limitations on the use of hydrogen energy storage property, including whether additional clarification is needed regarding the production of energy from hydrogen, and what type of documentation would be needed to demonstrate that a hydrogen energy storage property was used to store hydrogen solely used for the production of energy.

Proposed § 1.48–9(e)(10) would apply the functional interdependence test as described in part I.D.2 of this Summary of Comments and Explanation of Provisions to determine whether components are included as part of an energy storage technology. This approach provides a technology-neutral way to determine what is considered energy storage technology and is broad enough to encompass technological changes. The proposed regulations would, however, provide additional guidance in the form of a non-exclusive list of examples of different types of energy storage technologies. The list is non-exclusive because it would be impossible to list all the types of technologies that could qualify currently, and the Treasury Department and the IRS acknowledge the importance of leaving the language broad to allow future technological advances in energy storage technologies to qualify.

Additionally, rechargeable electrochemical batteries of all types meet the functional definition by receiving energy in the form of electricity, storing electro-chemical energy, and producing electricity. A commenter requested that re-used or ''second life'' batteries should be considered ''new energy property.'' Generally, used property cannot be considered ''new property'' for purposes of the 80/20 Rule, which is described in part III.A. of this Summary of Comments and Explanation of Provisions. However, proposed § 1.48–9(e)(10)(v) would provide that recycled components may be used to meet the modification rule for energy storage technology. The Treasury Department and the IRS request comments on whether ''second life'' batteries should be considered new components for purposes of the 80/20 Rule. Additionally, the Treasury Department and the IRS request comment on what types of components may be used to modify an existing energy storage technology, and whether there are any challenges with recycled components being used to meet the modification rule.

Energy storage technology excludes property primarily used in the transportation of goods or individuals and not for the production of electricity under section 48(c)(6)(A)(i). The Treasury Department and the IRS understand that this exclusion, at a minimum, would apply to batteries and other energy storage technology that are incorporated into or otherwise physically integrated within motor vehicles and other modes of transportation of goods or individuals and from which an electric motor of such vehicle or other mode of transportation draws electricity for propulsion. The Treasury Department and the IRS do not intend that this exclusion apply to batteries and other energy storage technology that may be used to charge or recharge such vehicles or other modes of transportation, if the batteries and other energy storage technologies are physically separate from such vehicles or other modes of transportation. The Treasury Department and the IRS request comments as to how the exclusion for property primarily used in the transportation of goods or individuals and not for the production of electricity should be defined and the specific types of property that may be covered or not covered by this exclusion.

Although the list of examples of energy storage technologies that proposed § 1.48–9(e)(10) would provide is nonexclusive, and therefore many other technologies that are not addressed would meet these functional definitions, there are some examples that do not meet the functional definition. For example, some technologies are marketed as ''virtual batteries,'' which are aggregations of controllable electricity demand providing similar electrical grid services to an electrical grid battery. Such ''virtual batteries'' receive energy in the form of electricity, but they do not store it for later discharge as electricity. The function of ''virtual batteries'' is to shift demand to different points in time. Because such demand shifting is not a storage activity for purposes of section 48(c)(6), this technology is not an energy storage technology. There are other technologies for which the determination of whether they meet the statutory requirements of section 48(c)(6) is less clear. The Treasury Department and the IRS request comments on whether these other types of technologies should be considered energy storage technologies.

11. Qualified Biogas Property

Section 48(a)(3)(A)(x) was added by the IRA to provide that energy property includes qualified biogas property. Section 48(c)(7)(A) defines qualified biogas property as property comprising a system that converts biomass (as defined in section 45K(c)(3), as in effect on the date of enactment of section 48(a)(3)(A) (August 16, 2022)) into a gas that consists of not less than 52 percent methane by volume, or is concentrated by such system into a gas that consists of not less than 52 percent methane, and captures such gas for sale or productive use, and not for disposal via combustion. Section 48(c)(7)(B) provides that qualified biogas property includes any property that is part of such system that cleans or conditions such gas.

In response to Notice 2022–49, the Treasury Department and the IRS received several comments regarding qualified biogas property. Many commenters supported adopting a broad definition of qualified biogas property to include all the related technologies that commenters stated could be utilized in qualified biogas property. After consideration of these comments, proposed § 1.48–9(e)(11) would adopt the statutory definition of qualified biogas property.

Additionally, at least one commenter stated that when gas is being upgraded and injected into a pipeline, upgrading equipment is necessary to condition the gas into the appropriate mixture for injection into the pipeline and should be part of the qualified biogas property. In the commenter's view, the eligibility of this upgrading equipment hinges on the meaning of the phrase ''captures such gas for sale or productive use.'' The commenter asserted that the statute should encompass such conversion of biogas to a more portable product such as a compressed or liquified gas. Therefore, the commenter asserted that upgrading equipment be included in a qualified biogas property because it captures such biogas for sale or

productive use and includes any property that is part of such qualified biogas property that cleans or conditions such gas.

After consideration of these comments, proposed § 1.48–9(e)(11) would provide that components of property are considered qualified biogas property if they are functionally interdependent, that is, if the placing in service of each component is dependent upon the placing in service of each of the other components in order to perform the intended function of the qualified biogas property as described in proposed § 1.48–9(e)(11)(i). This approach would provide a technology-neutral way to determine what is considered included in a qualified biogas property and is broad enough to encompass technological changes. Additionally, proposed § 1.48–9(e)(11)(i) provides examples of functionally interdependent components of the qualified biogas property including, but not limited to, a waste feedstock collection system, a landfill gas collection system, mixing or pumping equipment, and an anaerobic digester.

Regarding the upgrading equipment that is necessary to condition biogas into the appropriate mixture for injection into the pipeline, this equipment is not functionally interdependent with the qualified biogas property that converts biomass into a gas containing not less than 52 percent methane and captures such gas for sale or productive use as specified in the statute. While this upgrading equipment makes the injection of biogas into a pipeline possible, such upgrading equipment is not necessary to satisfy the statutory requirements that the biogas converted from biomass contain not less than 52 percent methane, and that it be captured for sale or productive use. In support of including upgrading equipment necessary to prepare the biogas for injection into the pipeline, commenters point to the statutory language that qualified biogas property includes any property that is part of such system that *cleans or conditions such gas.* However, unlike upgrading equipment that is necessary for injection of the biogas into the pipeline, cleaning and conditioning equipment is part of the necessary process to convert biomass into gas that is not less than 52 percent methane and capture gas for sale or productive use. Therefore, proposed § 1.48–9(e)(11)(i) would clarify that upgrading equipment is not a functionally interdependent component of qualified biogas property. The Treasury Department and the IRS request comments regarding what types of components may be included within the definition of cleaning and conditioning property provided in the definition of qualified biogas property in section 48(c)(7)(B).

One commenter had recommendations about the application of the requirement in section 48(c)(7)(A)(ii) that a qualified biogas property captures such gas for sale or productive use, and not for disposal via combustion. This commenter noted that some properties that produce electricity from gas using a combustion process, may flare waste or tail gas, including during commissioning or maintenance periods. The commenter recommended a *de minimis* exception so that sale or use of gas in this manner will not prevent a property that produced such gas from being a qualified biogas property. The Treasury Department and the IRS request additional comments on whether such an exception is necessary and what should be considered *de minimis* for this purpose.

Lastly, several comments addressed the methane requirements in the statutory definition by commenting on how and when methane content should be measured and whether methane monitoring is required. After consideration and coordination with the Department of Energy, the proposed regulations would adopt a rule addressing the production point at which methane content must be measured. Proposed § 1.48–9(e)(11)(ii) would provide that the methane requirements described in section 48(c)(7)(A)(i)(I) and section 48(c)(7)(A)(i)(II) are measured at the point at which gas exits the biogas production system (which may include an anerobic digester, landfill gas collectors, or thermal gasification equipment) of a qualified biogas property. This is the point at which a taxpayer generally must determine whether it will convert the biogas to fuel for sale or use it directly to generate heat or fuel an electricity generation unit.

12. Microgrid Controllers

Section 48(a)(3)(A)(xi) was added by the IRA to provide that energy property includes microgrid controllers. Section 48(c)(8)(A) defines a microgrid controller as equipment that is part of a qualified microgrid and designed and used to monitor and control the energy resources and loads on such microgrid. Section 48(c)(8)(B) defines a qualified microgrid as an electrical system that includes equipment that is capable of generating not less than 4 kW and not greater than 20 MW of electricity; is capable of operating in connection with the electrical grid and as a single controllable entity with respect to such electrical grid, and independently (and disconnected) from such electrical grid; and is not part of a bulk-power system (as defined in section 215 of the Federal Power Act (16 U.S.C. 824o)).

In response to Notice 2022–49, the Treasury Department and the IRS received several comments requesting clarification on the definition of microgrid controllers, with some commenters suggesting a broad interpretation and others suggesting a narrow interpretation. Additionally, several commenters identified certain components that should be included as part of an eligible microgrid controller.

Several commenters asserted that the focus of the microgrid controller definition should be on capability and not the availability of an interconnection with the utility grid. In response to these comments, proposed § 1.48–9(e)(12)(ii) would clarify that an eligible microgrid includes an electrical system that is capable of operating in connection with the larger electrical grid whether or not the microgrid is physically connected to the electrical grid. For example, a microgrid located in a remote area that does not have a larger electrical grid to which it can physically connect can still be a qualified microgrid.

After consideration of these comments, proposed § 1.48–9(e)(12)(i) would adopt the statutory definition of a microgrid controller. The Treasury Department and the IRS request comments on whether the rules for functionally interdependent property provided in proposed § 1.48–9(f)(2)(ii) would be sufficient to determine the components that should be included as part of a microgrid controller, or whether another test is needed due to the specific role of microgrid controllers and their components.

13. Other Property Included in Section 48

Because future legislation may add additional types of energy property to section 48, proposed § 1.48–9(e)(13) would provide that any other property specified by section 48 as energy property is treated as energy property for purposes of these proposed regulations. The general rules and requirements applicable to energy property provided in these proposed regulations would also apply to such property.

D. Definition of Energy Property and Scope of Included Components

Since shortly after the enactment of section 48, energy property eligible for the section 48 credit has been

interpreted by the Treasury Department and the IRS to include, in addition to energy generation property, costs related to components such as power conditioning equipment, transfer equipment, and parts related to the functioning of that equipment.

On November 9, 1978, the Energy Tax Act of 1978, amended section 48 by adding a new subsection (then section 48(l)) to define ''energy property.'' Public Law 95–816, 92 Stat. 2174. On January 23, 1981, the Treasury Department and the IRS promulgated T.D. 7765 to provide additional guidance regarding the definition of energy property. 46 FR 7287–01. The preamble to T.D. 7765 states that ''[i]n response to comments, the definition of solar energy property was expanded to make it clear that it includes storage devices, power conditioning equipment, transfer equipment, and property solely related to the functioning of those items. However, such equipment does not include transmission equipment.''

The preamble to T.D. 7765 also provides that ''[a] number of comments cited specific legislative history to the effect that wind energy property includes 'transfer equipment.' '' The preamble to T.D. 7765 defines ''transfer equipment'' as including equipment that permits the aggregation of electricity generated by several windmills and equipment that alters voltage in order to permit transfer to a transmission line. The preamble to T.D. 7765 concludes that transfer equipment is specifically added to the definition of wind energy property, however, transfer equipment does not include transmission lines.

Existing § 1.48–9(d)(3) defines ''solar energy property'' as equipment that uses solar energy to generate electricity, and includes storage devices, power conditioning equipment, transfer equipment, and parts solely related to the functioning of those items. This section also provides that solar energy property used to generate electricity includes only equipment up to (but not including) the stage that transmits or uses electricity.

Existing § 1.48–9(e) defines ''wind energy property'' as consisting of a windmill, wind-driven generator, storage devices, power conditioning equipment, transfer equipment, and parts solely related to the functioning of those items. Section 48(a)(3) no longer includes wind energy property as a type of energy property. However, qualified wind facilities (including qualified offshore wind facilities) may be qualified investment credit facilities that a taxpayer may elect to treat as energy property if they meet all the requirements provided in section 48(a)(5).

While not specifically addressed in section 48, Internal Revenue Bulletin guidance interpreting section 48 has provided that functionally interdependent components, are considered components of energy property eligible for the section 48 credit. In Notice 2018–59, 2018–28 I.R.B. 196, the Treasury Department and the IRS clarified what components are considered part of an energy property. Section 7.01(1) of Notice 2018–59 states that an energy property generally includes all components of property that are functionally interdependent (unless such equipment is an addition or modification to an energy property). Notice 2018–59 provides that components of property are functionally interdependent if the placing in service of each component is dependent upon the placing in service of each of the other components in order to generate electricity. Further, Notice 2018–59 relies upon the rationale provided in Revenue Ruling 94–31, 1994–1 C.B. 16, to provide that functionally interdependent components of property that can be operated and metered together and can begin producing electricity separately from other components of property within a larger energy project will be considered an energy property.

In the context of defining ''section 38 property,'' § 1.48–1(d)(4) provides that ''section 38 property'' is ''used as an integral part of one of the specified activities if it is used directly in the activity and is essential to the completeness of the activity.'' Section 1.48–1(d)(4) also provides that ''[p]roperty shall be considered used as an integral part of one of the specified activities if so used either by the owner of the property or by the lessee of the property.'' Notice 2018–59 incorporates the concept of integral property from § 1.48–1(d) to provide that certain property that is an integral part of an energy property is included in energy property for purposes of the section 48 credit. While Notice 2018–59 explained that property that is ''functionally interdependent'' to the generation of electricity was treated as a unit of energy property, it also provided that certain other property that was integral to the production of electricity are included in determining what costs to include in the basis of energy property and the date on which construction began. Section 7.02(1) of Notice 2018–59 includes an example illustrating that, while a transmission tower located at a site where energy property is located is not energy property because transmission is not an integral part of the activity performed by the energy property, a custom-designed transformer that steps up the voltage of electricity produced at an energy property to the voltage needed for transmission is power conditioning equipment, which is an integral part of the activity performed. In addition, section 7.02(2) of Notice 2018–59 explains that onsite roads used to operate and maintain the energy property are integral to the production of electricity, but not roads used primarily to access the site or primarily for employee or visitor vehicles. Similarly, sections 7.02(3) and (4) of Notice 2018–59 explain that fences are not integral to the production of electricity nor are buildings, unless the building is essentially an item of machinery or equipment, or a structure that houses property that is integral to the activity of an energy property if the use of the structure is so closely related to the use of the housed energy property that the structure clearly can be expected to be replaced when the energy property it initially houses is replaced.

In response to a request for comments regarding the definition and scope of energy property in Notice 2015–70, several commenters requested that the regulations provide a specific list of eligible components and define each type of component. Commenters specifically requested that the regulations provide definitions for conversion equipment, power conditioning equipment, transfer equipment, and other property commonly used in conjunction with energy property. Further, some commenters requested that the regulations include safety equipment such as electrical panels, rapid shut-down equipment, and utility disconnection equipment as eligible components when used in conjunction with energy property. Conversely, several commenters recommended that the regulations not provide a technical definition or list of components because innovations in energy property may require that such a definition would need to be continually updated.

Commenters requested that the regulations be clarified to include as energy property all components located *before* the point at which voltage of the electricity is increased to the voltage of the transmission line, referred to as the ''separation point,'' such as step-up transformers, dead end structures, switches, switch gear buildings, voltage regulators, and hardware and software used to monitor, operate, and protect such property. Additionally, one commenter requested that the

regulations be clarified to include as energy property all components located beyond the separation point, such as switches, circuit breakers, lighting or surge arrestors, and metering equipment, if the use of such components is primarily related to the functioning or protection of components located at or before the separation point.

One challenge in providing definitions of what components to include in energy property is in determining what components are common to all energy property, without limiting or constraining future technological advances. To avoid limiting future energy technologies, the Treasury Department and the IRS consulted with the Department of Energy and determined that the best option is to adopt a function-oriented approach to describe the types of components that are considered energy property. Accordingly, proposed § 1.48–9(f) would adopt the concepts of functional interdependence and property that is an integral part of an energy property as provided in Internal Revenue Bulletin guidance issued previously by the Treasury Department and the IRS.

1. Unit of Energy Property

Proposed § 1.48–9(f)(2)(i) would provide that a unit of energy property consists of all functionally interdependent components of property (as defined in proposed § 1.48–9(f)(2)(ii)) owned by the taxpayer that are operated together and that can operate apart from other energy properties within a larger energy project (as defined in proposed § 1.48–13(d) and discussed in part II.C of this Summary of Comments and Explanation of Provisions).

2. Functional Interdependence

Proposed § 1.48–9(f)(2)(ii) would provide that components of property are functionally interdependent if the placing in service of each component is dependent upon the placing in service of each of the other components in order to generate or to store electricity, thermal energy, or hydrogen, or otherwise perform its intended function as provided in section 48(c) and as described in proposed § 1.48–9(e). Energy property, with certain exceptions, includes all components necessary to generate or store electricity or thermal energy for transmission, distribution, or use up to (but not including) the stage that transmits, distributes, or uses electricity or thermal energy. In the case of qualified biogas property, microgrid controllers, electrochromic glass property, and fiber-optic solar energy property, components of such energy property are functionally interdependent if the placing in service of each component is dependent upon the placing in service of each of the other components in order to perform the intended function of the energy property as provided by section 48(c) and as described in proposed § 1.48–9(e). Additionally, energy property generally would not include equipment that is an addition or modification to an existing energy property unless the rules regarding retrofitted energy property described in proposed § 1.48–14(a) and part III.A. of this Summary of Comments and Explanation of Provisions apply.

3. Integral Part of an Energy Property

Proposed § 1.48–9(f)(3)(i) would provide that property owned by a taxpayer that is an integral part of an energy property owned by that same taxpayer is energy property. To be part of an energy property, such property must be used directly in the intended function of the energy property as provided by section 48(c) and as described in § 1.48–9(e) and be essential to the completeness of the intended function. Proposed § 1.48–9(f)(3)(ii) would describe power conditioning equipment and transfer equipment, and would provide that such components, and parts related to the functioning of those components, are energy property when they meet the definition of integral part provided in § 1.48–9(f)(3)(i).

Many commenters requested clarification on the eligible components of an offshore wind facility. Proposed § 1.48–9(f)(5)(iii) would provide an example that applies the integral part rule to include power conditioning and transfer equipment as part of a qualified offshore wind facility but excludes transmission and distribution equipment from being part of the qualified offshore wind facility. This example is consistent with the view of the Joint Committee on Taxation in the *General Explanation of Tax Legislation Enacted in the 116th Congress,* JCS 1–22 (February 2022). According to that document, ''[q]ualified offshore wind facilities are qualified wind facilities . . . and include property owned by the taxpayer necessary to condition electricity for use on the electrical grid such as subsea cables and voltage transformers.'' *Id.* at 498.

Furthermore, consistent with Notice 2018–59, proposed § 1.48–9(f)(3)(iii) would provide as further examples of integral property onsite roads that are used for equipment to operate and maintain the energy property. Section 1.48–9(f)(3)(iii) would also clarify that roads primarily for access to the site, or roads used primarily for employee or visitor vehicles, are not integral parts of an energy property. Proposed § 1.48–9(f)(3)(iv) and (v) would also provide that fences and buildings (also referred to as structures) are generally not integral parts of an energy property because they are not integral to the activity of the energy property. However, a building may be an integral part of a unit of energy property if it is essentially an item of machinery or equipment, or a structure that houses property that is integral to the activity of an energy property, if the use of the structure is so closely related to the use of the housed energy property that the structure clearly can be expected to be replaced when the energy property it initially houses is replaced. The Treasury Department and the IRS request comments on whether additional types of property meet the requirements provided in proposed § 1.48–9(f)(3) and could be considered an integral part of an energy property.

4. Location of Energy Property

Section 48 and the existing regulations thereunder are silent regarding the credit eligibility of components of an energy property located in different locations. However, the Treasury Department and the IRS have provided analogous guidance regarding the credit eligibility of offsite components for the residential energy efficient property tax credit under section 25D of the Code (section 25D credit).

In Notice 2013–70, 2013–47 I.R.B. 528, the Treasury Department and the IRS provided guidance addressing the eligibility for the section 25D credit for offsite components of solar electric property. Specifically, Q&A #25 of Notice 2013–70 addressed the issue of whether a taxpayer that installs solar panels as part of solar electric property other than directly on the taxpayer's home may claim the section 25D credit. Q&A #25 concluded that the taxpayer would be able to claim the section 25D credit because the solar electric property expenditure was made for property that, consistent with the requirements of the section 25D credit, uses solar energy to generate electricity for use in a dwelling unit that is used as a residence by the taxpayer. The fact that the solar panels were not directly located on the taxpayer's home did not change the analysis or the eligibility of the taxpayer's expenditure for purposes of the section 25D credit.

Similarly, Q&A #26 of Notice 2013–70 addressed a scenario in which a taxpayer purchases solar panels that are

placed on an offsite solar array (community solar project) and connected to the local public utility's electrical grid that supplies electricity to the taxpayer's residence. The taxpayer enters into a direct contractual arrangement with the utility to allow the taxpayer to provide electricity to the electrical grid using a net metering system that measures the amount of electricity produced by the taxpayer's solar panels and transmitted to the electrical grid and the amount of electricity used by the taxpayer's residence and drawn from the electrical grid. The contract states that the taxpayer owns the electricity transmitted by the solar panels to the electrical grid until drawn from the electrical grid at his residence. Q&A #26 determined that offsite solar panels under this type of contractual arrangement with a utility that supplies electricity to the taxpayer's residence also meet the definition of a solar electric property expenditure eligible to claim the section 25D credit. In response to Notice 2015–70, many commenters referenced Notice 2013–70 when requesting that existing § 1.48–9 be modified to allow components of energy property to be situated in different locations without affecting the eligibility of the energy property for the section 48 credit.

After consideration of the comments received, the Treasury Department and the IRS have determined that if property is a functionally interdependent part of an energy property (as defined in § 1.48–9(f)(2)(ii)), or an integral part of an energy property (as defined in § 1.48–9(f)(3)(i)), such property is part of an energy property regardless of where it is located. Proposed § 1.48–9(f)(4) would adopt this position.

5. Property Excluded From Energy Property

Proposed § 1.48–9(d)(2) would also clarify that certain types of intangible property, such as power purchase agreements, renewable energy certificates, goodwill, and going concern value, are not energy property because they are not functionally interdependent with other components of an energy property as defined in proposed § 1.48–9(f)(2)(ii) and are not an integral part of an energy property as defined in proposed § 1.48–9(f)(3)(i).

II. Rules Relating to the Increased Credit Amount for Prevailing Wages and Apprenticeships

The IRA amended several sections of the Code including section 48 to provide increased credit amounts for taxpayers who satisfy certain requirements, including an increased credit amount for satisfying prevailing wage and apprenticeship (PWA) requirements. This same increased credit amount is also generally available under certain sections of the Code including section 48 with respect to energy projects with a maximum net output of less than one megawatt (One-Megawatt Exception). Additionally, this same increased credit amount is available under certain sections of the Code including section 48 if beginning of installation or beginning of construction (BOC) occurs before January 29, 2023 (BOC Exception).

The Treasury Department and the IRS issued proposed § 1.48–13 as part of the August Proposed Regulations to provide guidance concerning the increased credit amount available for taxpayers satisfying the PWA requirements. This notice of proposed rulemaking withdraws § 1.48–13 as proposed in the August Proposed Regulations and reproposes in a new § 1.48–13 (proposed § 1.48–13) the substance of the withdrawn rules with minor changes and additional rules with respect to the increased credit amount available for taxpayers under section 48(a)(9).

Proposed § 1.48–13 would provide special rules affecting the basis of energy property that include: (i) the definition of an energy project for purposes of the PWA requirements as well as other delineated purposes discussed in part II.C of this Summary of Comments and Explanation of Provisions and (ii) guidance concerning the One-Megawatt Exception discussed in part II.D of this Summary of Comments and Explanation of Provisions. These proposed regulations also provide guidance on the recapture rules under section 48(a)(10)(C) applicable to failures to satisfy the PWA requirements.

A. General Rules

For properties placed in service after December 31, 2022, the section 48 credit is generally six percent of the basis of energy property described in section 48(a)(2)(A)(i) and two percent of the basis of energy property described in section 48(a)(2)(A)(ii). If a taxpayer satisfies the PWA requirements, the One-Megawatt Exception, or the BOC Exception, then the section 48 credit for the basis of each energy property placed in service during the taxable year is multiplied by five.

To satisfy the prevailing wage requirements under section 48(a)(10)(A) and (B) (Prevailing Wage Requirements), a taxpayer must ensure that any laborers and mechanics employed by the taxpayer or any contractor or subcontractor in: (i) the construction of any energy project, and (ii) the alteration or repair of that energy project (for the five-year period beginning on the date such project is originally placed in service), are paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which that energy project is located as most recently determined by the Secretary of Labor, in accordance with subchapter IV of chapter 31 of title 40, United States Code (Davis-Bacon Act). Section 48(a)(10)(B) provides that rules similar to the rules of section 45(b)(7)(B) apply for purposes of the correction and penalty related to the failure to satisfy the Prevailing Wage Requirements.

Section 48(a)(10)(C) provides a recapture rule applicable to failures to satisfy the Prevailing Wage Requirements with respect to alterations or repairs that occur during the five-year period after the energy project is placed in service (section 48(a)(10)(C) recapture). Specifically, section 48(a)(10)(C) instructs the Secretary, by regulations or other guidance, to provide for recapturing the benefit of any increase in the credit allowed by the Prevailing Wage Requirements with respect to failures to satisfy the Prevailing Wage Requirements during the five-year period after the energy project is placed in service. Section 48(a)(10)(C) clarifies that the failures during the five-year period remain subject to the correction and penalty provisions in section 45(b)(7)(B) (as referenced in section 48(a)(10)(B)) and provides that the period and percentage of the credit that is recaptured is determined under rules similar to the rules in section 50(a). Subject to the section 48(a)(10)(C) recapture (including the correction and penalty provisions in section 45(b)(7)(B)), the taxpayer is deemed at the time the energy project is placed in service to satisfy the Prevailing Wage Requirements for alterations or repairs for the five-year period beginning after such project is originally placed in service. Section 48(a)(11) provides that rules similar to the rules of section 45(b)(8) apply for purposes of the apprenticeship requirements.

The August Proposed Regulations provided guidance for taxpayers claiming an increased credit amount under section 48(a)(9)(A)(i) with respect to an energy project that satisfies the PWA requirements, the One-Megawatt Exception, or the BOC Exception. The August Proposed Regulations provided that to satisfy the PWA requirements, the energy project must meet the

Prevailing Wage Requirements of section 48(a)(10)(A) and proposed § 1.45–7(b)–(d), the apprenticeship requirements of section 45(b)(8) and proposed § 1.45–8, and the recordkeeping and reporting requirements of proposed § 1.45–12. In addition, under the August Proposed Regulations, to satisfy the Prevailing Wage Requirements with respect to section 48(a)(10)(A)(ii), a taxpayer also would be required to ensure that any laborer and mechanic employed by the taxpayer or any contractor or subcontractor in the construction of any energy project, as well any alteration or repair of an energy project in the five-year period beginning on the date a project is placed in service, are paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which the energy project is located in accordance with the Davis-Bacon Act. The August Proposed Regulations also provided that the increased credit amount was subject to section 48(a)(10)(C) recapture for any project that failed to satisfy the Prevailing Wage Requirements in proposed § 1.45–7 with respect to an alteration or repair of such project for the five-year period beginning on the date such project is originally placed in service (but that does not cease to be investment credit property within the meaning of section 50(a) of the Code).

B. Section 48(a)(10)(C) Recapture Rules

The Treasury Department and the IRS have determined that additional guidance on the section 48(a)(10)(C) recapture rules is necessary. Proposed § 1.48–13 would provide additional guidance on the section 48(a)(10)(C) recapture rules related to the Prevailing Wage Requirements. The proposed regulations also provide other minor technical corrections to the August Proposed Regulations.

In addition to largely restating the general rules in the August Proposed Regulations, proposed § 1.48–13 would clarify that a taxpayer that has claimed an increased credit amount under section 48(a)(9)(A)(i) and 48(a)(9)(B)(iii) but failed to satisfy the Prevailing Wage Requirements set forth in proposed § 1.45–7(b)–(d) with respect to any period during the five-year period beginning on the date a project is placed in service is subject to section 48(a)(10)(C) recapture of a portion (up to 100 percent) of the increased credit amount. Proposed § 1.48–13 would also clarify that the failure to satisfy the Prevailing Wage Requirements in proposed § 1.45–7(b)–(d) with respect to any period during the five-year period beginning on the date a project is placed in service remains subject to the correction and penalty provisions in proposed § 1.45–7(c)(1).

Section 48(a)(10)(C) requires that the recapture period and percentage of such recapture be determined under rules similar to the rules of section 50(a). Consistent with that requirement, proposed § 1.48–13 would also clarify that the five-year recapture period under section 48(a)(10)(C) would begin on the day an energy project is placed in service and end on the day that is five full years after the placed-in-service date. Proposed § 1.48–13 would also provide that each 365-day period (366-day period in case of a leap year) within the recapture period is a separate recapture year. The proposed regulations would provide that the recapture amount is determined consistent with the percentages set forth in section 50(a) based on the year in which the section 48(a)(10)(C) recapture event is determined to have occurred.

The Treasury Department and the IRS understand that the five-year recapture period is unlikely to align with a taxpayer's taxable year. The proposed regulations would provide that whether a section 48(a)(10)(C) recapture event has occurred is determined at the close of taxable year that begins or ends within the five-year recapture period. In addition to the reporting and recordkeeping requirements contained in proposed § 1.45–12, the proposed regulations would provide for an annual information reporting requirement that verifies compliance with the Prevailing Wage Requirements following the close of each recapture year consistent with the forms and instructions prescribed by the IRS. The IRS anticipates that the annual compliance reporting obligation will be made at the time the taxpayer files its income tax or other annual return following the close of each recapture year.

Under proposed § 1.48–13, if the increased credit amount is subject to section 48(a)(10)(C) recapture, then the increase in tax under chapter 1 for the recapture of the increased credit amount would be assessed with respect to the taxable year in which the section 48(a)(10)(C) recapture event occurred. The proposed regulations also clarify that a taxpayer whose increased credit amount is subject to section 48(a)(10)(C) recapture may still be entitled to the base amount of the energy credit under section 48(a) if they meet the requirements to claim the credit. Additionally, the proposed regulations clarify the application of the transferability rules under section 6418 to a section 48(a)(10)(C) recapture event and include a proposed addition to § 1.6418–5 confirming the notification requirements for an eligible taxpayer and that a transferee taxpayer is responsible for any amount of tax increase under section 48(a)(10)(C).

C. Definition of Energy Project

Under section 48(a)(9)(A)(ii), an energy project is a project consisting of one or more energy properties that are part of a single project. Proposed § 1.48–13(d) would provide a definition of ''energy project'' for purposes of the increased credit amount for the PWA requirements (provided by section 48(a)(9)), the domestic content bonus credit amount (provided by section 48(a)(12)), and the increase in credit rate for energy communities (provided in section 48(a)(14)). For these purposes, the term *energy project* means one or more energy properties that are operated as part of a single project. Section 45 qualified facilities that are co-located with section 48 energy property will not be considered part of an energy project (unless they elect under section 48(a)(5) to be treated as energy property). Multiple energy properties would be treated as one energy project, if at any point during the construction of the multiple energy properties, they are owned by a single taxpayer (subject to the related taxpayer rule discussed later in this part) and any two or more of the following factors (also set forth in section 7.01(2)(a) of Notice 2018–59 as factors indicating that multiple energy properties are operated as part of a single project) are present:

1. The energy properties are constructed on contiguous pieces of land;
2. The energy properties are described in a common power purchase, thermal energy, or other off-take agreement or agreements;
3. The energy properties have a common intertie;
4. The energy properties share a common substation, or thermal energy off-take point;
5. The energy properties are described in one or more common environmental or other regulatory permits;
6. The energy properties are constructed pursuant to a single master construction contract; or
7. The construction of the energy properties are financed pursuant to the same loan agreement.

Under proposed § 1.48–13(d)(2), related taxpayers would be treated as one taxpayer in determining whether multiple energy properties are treated as an energy project. Related taxpayers would be defined as members of a group of trades or businesses that are under

common control (as defined in § 1.52–1(b)).

Proposed § 1.48–13(d)(3) would also provide that if multiple energy properties are treated as a single project for beginning of construction purposes with respect to the section 48 credit, the multiple energy properties would also be treated as one energy project for purposes of the PWA requirements, the domestic content bonus credit amount, and the increase in section 48 credit rate for energy communities. This rule would apply to an energy project for which construction begins after the date final regulations are published in the **Federal Register**.

D. One-Megawatt Exception

Section 48(a)(9)(B)(i) and § 1.48–13 of the August Proposed Regulations would provide that the increased credit amount is also available under section 48 with respect to energy projects with a maximum net output of less than 1 MW of electrical (as measured in alternating current) or thermal energy. The August Proposed Regulations do not address how to determine the maximum net output of a project.

The Department of Energy has advised the Treasury Department and the IRS that for energy projects that generate electricity, the determination of an energy project's nameplate capacity will provide the necessary guidance to determine the maximum electrical generating output in MWs of electrical (as measured in alternating current) or thermal energy that the unit is capable of producing on a steady state basis and during continuous operation under standard conditions. Proposed § 1.48–13(e) would thus provide a rule for the determination of nameplate capacity as expressed in MWs of electrical (as measured in alternating current) or thermal energy. Because electrochromic glass property, fiber-optic solar, and microgrid controllers do not generate electricity or thermal energy, these energy properties are not eligible for the One-Megawatt Exception. The Treasury Department and the IRS request comments on whether other methods of measurement may allow these energy properties to use the One-Megawatt Exception.

Under proposed § 1.48–13(e)(1), the nameplate capacity for an electrical generating unit would mean the maximum electrical generating output in MWs that the unit is capable of producing on a steady-state basis and during continuous operation under standard conditions, as measured by the manufacturer and consistent with the definition provided in 40 CFR 96.202. Where applicable, those rules provide that the International Standard Organization (ISO) conditions are used to measure the maximum electrical generating output.

Proposed § 1.48–13(e)(2) through (4) would provide rules for energy storage technologies. Generally, electrical energy storage property would look to the storage device's nameplate capacity in MWs under proposed § 1.48–13(e)(2). As with energy properties that generate electricity, nameplate capacity for an electrical energy storage property would mean the maximum electrical generating output in MWs that the unit is capable of producing on a steady state basis and during continuous operation under standard conditions, as measured by the manufacturer and consistent with the definition provided in 40 CFR 96.202.

Proposed § 1.48–13(e)(3) would provide that for thermal energy storage property, taxpayers must use the equivalent value of 3.4 million British Thermal Units per hour (mmBtu/hour) for heating and 284 tons for cooling to determine whether the thermal energy storage property satisfies the One-Megawatt Exception (Btu per hour/3,412,140 = MW). The Treasury Department and the IRS request comments on whether these tests are suitable or whether another test should apply for measuring the One-Megawatt Exception for thermal energy storage property.

Proposed § 1.48–13(e)(4) would provide that for hydrogen energy storage property, 1 MW is equivalent to 3.4 mmBtu/hour, and using the higher heating value of hydrogen, this can be converted to 10,500 scf per hour. Therefore, proposed § 1.48–13(e)(4) would provide that for a hydrogen energy storage property to satisfy the One-Megawatt Exception, an eligible hydrogen producing, or hydrogen storage energy property must be designed to have a maximum net output of less than 3.4 mmBtu/hour of hydrogen or equivalently 10,500 scf per hour of hydrogen.

Proposed § 1.48–13(e)(3) through (5) would provide that to apply the One-Megawatt Exception to energy projects that produce thermal energy or fuels, taxpayers must use the equivalent value of 3.4 million British thermal units (mmBtus) per hour (Btu per hour/3,412,140 = MW). For certain technologies that produce fuels, such as qualified biogas property (proposed § 1.48–13(e)(5)), hydrogen energy storage property (proposed § 1.48–13(e)(4)), and specified hydrogen production facilities (as defined in section 48(a)(15)(C)) (proposed § 1.48–13(e)(4)), taxpayers may use equivalent maximum fuel volume flows in standard cubic feet (scf) per hour to assess the One-Megawatt Exception. Taxpayers can use equivalent volume flows using the default high heat value conversion factors found in *Table C–1 to Subpart C of Part 98, Title 40 of the Greenhouse Gas Reporting Rule* promulgated by the Environmental Protection Agency. Otherwise, taxpayers may calculate their own equivalent volumetric flow if the heat content of the gas is known.

For property generating thermal energy, proposed § 1.48–13(e)(3) would provide that the equivalents for 1 MW that should be used are 3.4 mmBtu/hour for heating and equivalently 284 tons for cooling should be used to determine whether the energy property satisfies the One-Megawatt Exception. Proposed § 1.48–13(e)(3) would also specify that for projects delivering thermal energy to a building or buildings, the One-Megawatt Exception can be assessed as either the aggregate maximum thermal output of all individual heating or cooling elements within the building or buildings or as the maximum thermal output that the entire project is capable of delivering to a building or buildings at any given moment.

III. Rules Applicable to Energy Property

A. Retrofitted Energy Property (80/20 Rule)

The Treasury Department and the IRS have published several pieces of Internal Revenue Bulletin guidance regarding the eligibility of retrofitted equipment added to qualified facilities and energy property for purposes of the section 45 and 48 credits. In Notice 2016–31, 2016–23 I.R.B. 1025, the Treasury Department and the IRS considered the application of the Five Percent Safe Harbor provided in section 5.01 of Notice 2013–29, 2013–20 I.R.B. 1085, to retrofitted qualified facilities for purposes of applying the beginning of construction requirement to the section 45 credit. Section 6.01 of Notice 2016–31 cites to Revenue Ruling 94–31 and Notice 2008–60, 2008–2 C.B. 178, for the concept that a qualified facility may qualify as originally placed in service even though it contains some used property, provided the fair market value of the used property is not more than 20 percent of the qualified facility's total value (that is, the cost of the new property plus the value of the used property). This concept has become known as the ''80/20 Rule.''

Similarly, Notice 2018–59 addressed the application of the 80/20 Rule to retrofitted energy property for purposes

of the applying the beginning of construction rules to the section 48 credit. Section 7.05(1) of Notice 2018–59 provides that retrofitted energy property may qualify as originally placed in service even though it contains some used components of property, provided it satisfies the 80/20 Rule. Further, this section of the notice provided that, for purposes of the 80/20 Rule, the cost of the new energy property includes all properly capitalized costs of the new energy property.

In response to requests for comment in Notice 2015–70 and Notice 2022–49, several commenters requested that the regulations address the applicability of the 80/20 Rule to energy property for purposes of the section 48 credit. After consideration of the comments, proposed § 1.48–14(a) would apply the 80/20 Rule to energy property for purposes of the section 48 credit.

B. Dual Use Property

Existing § 1.48–9 includes a dual use equipment rule (Dual Use Rule). The preamble to T.D. 8147 notes that the regulations prior to amendment by T.D. 8147 required that equipment must use only energy from a single qualifying source (solar energy property, wind energy property, or geothermal equipment) to qualify as energy property. In changing from a single source rule to the Dual Use Rule, the preamble to T.D. 8147 explained that the Treasury Department and the IRS reconsidered the legislative history of the investment tax credit and determined that, ''while Congress did not intend that property that does not use qualified energy be eligible for the business energy credit as solar, wind, or geothermal property, Congress also did not intend to adopt an all or nothing rule for dual use solar, wind, or geothermal energy property.''

Accordingly, the Dual Use Rule in existing § 1.48–9 provides that a solar energy property, wind energy property, and geothermal equipment are eligible for the section 48 credit to the extent of the property's basis or cost allocable to its annual use of energy from a qualified source, provided the use of energy from ''non-qualifying'' sources does not exceed 25 percent of the total energy input of the property during an annual measuring period. Notably, the Dual Use Rule provided in § 1.48–9 also precludes an energy property from receiving and aggregating energy from a combination of qualifying sources (solar energy property, wind energy property, and geothermal equipment). Because the Dual Use Rule requires that a solar energy property, wind energy property, or geothermal equipment must use a minimum of 75 percent of energy from a qualified source during an annual measuring period to qualify for a section 48 credit. This rule became known as the ''75-percent Cliff.''

The Dual Use Rule provided in existing § 1.48–9 also provides that, if in the first annual measuring period, the applicable percentage (based on usage from a qualifying source) is between 75 percent and 100 percent, only a proportionate amount of the eligible basis of the energy property should be taken into account in computing the amount of the section 48 credit. If less than 75 percent of the energy used is from qualifying sources, then the eligible basis is zero, and the property is not eligible for the section 48 credit.

1. Alternatives to the 75-Percent Cliff

In response to Notice 2015–70, many commenters requested that the regulations be modified to reduce the Dual Use Rule's current 75-percent Cliff to a 50-percent Cliff. Commenters cited as support for this proposal the statutory language of section 25D(d)(1), which allows for full credit eligibility if a solar water heating property receives at least 50 percent of its energy inputs from the sun. Applying this premise to the investment tax credit under section 48 would allow an energy property to be eligible for 100 percent of the section 48 credit if it receives at least 50 percent of its energy input from a qualifying source but would render the energy property ineligible for the section 48 credit if less than 50 percent of its energy input is from a qualifying source. Commenters asserted that a 50-percent Cliff would be more equitable than the 75-percent Cliff.

Several commenters also recommended that the regulations be modified to provide that if greater than 50 percent of energy received by an energy property is from a qualifying source that the energy property is eligible for a full section 48 credit. Conversely, if the energy property receives less than 50 percent of its energy input from a qualifying source, the qualifying basis of the energy property is reduced incrementally for the annual measuring period. Importantly, this rule would reduce the credit but not disqualify the energy property entirely from credit eligibility. The benefit of adopting this rule is that it would eliminate the ''all or nothing'' dynamic of the current 75-percent Cliff and, as a result, would provide certainty that an energy property will remain credit eligible. The main obstacle to adopting this rule is that it would be expensive for taxpayers to measure with great accuracy the relative amounts of energy input from different qualifying sources.

Many commenters suggested changing the Dual Use Rule to a ''Primary Use Rule'' modeled on the ''Primary Use'' Test for asset class depreciation determinations, changes in use, and for asset disposition purposes. According to commenters, this approach is popular because the Primary Use Test could be performed at the same time (on the placed in service date) and manner in which the taxpayer determines the primary use of the asset for depreciation purposes. The challenge of this approach is that it also depends upon taxpayers correctly using the depreciation asset class determination procedures and reporting any changes in primary use to the IRS for recapture. Moreover, the scope of the Primary Use Test seems inappropriate for the section 48 credit because the Primary Use Test merely serves to determine how the property is depreciated rather than whether the property can be depreciated. Applying this test to determine credit eligibility may increase, beyond what was intended, the credit available to a taxpayer.

After consideration of the comments, the Treasury Department and the IRS have determined it would be most consistent with statutory intent to reduce the applicable threshold of the Dual Use Rule to 50 percent resulting in the adoption of a 50-percent Cliff. Therefore, proposed § 1.48–14(b)(2)(i) would require an energy property to derive a minimum of 50 percent of energy from a qualifying source during an annual measuring period. Similar to the operation of the 75-percent Cliff in existing § 1.48–9, if the energy used from qualifying sources is between 50 percent and 100 percent, only a proportionate amount of the eligible basis of the energy property will be taken into account in computing the amount of the section 48 credit. If less than 50 percent of the energy used is from qualifying sources, then the eligible basis is zero, and the property is not eligible for the section 48 credit. The Treasury Department and the IRS recognize that the Dual Use Rule is no longer relevant to determining the eligibility of energy storage technology placed in service after December 31, 2022, because the IRA added energy storage technology as an energy property effective for property placed in service after December 31, 2022. However, the Dual Use Rule may still have other applications under section 48. The Treasury Department and the IRS request comments on the application of the Dual Use Rule to

section 48 after its amendment by the IRA.

2. Aggregation of Energy Inputs

While T.D. 8147 significantly amended existing § 1.48–9 to permit 25 percent of energy used by energy property from non-qualifying sources, it did not allow the aggregation of energy from multiple energy properties to be treated as energy from qualifying sources for purposes of the Dual Use Rule.

In response to Notice 2015–70, several commenters requested a revised rule to permit taxpayers to calculate credit basis by aggregating all inputs from qualifying sources that would otherwise individually qualify for the section 48 credit (all types of energy property and any qualified facilities for which an election is made to claim the section 48 credit as a ''qualified investment credit facility'' under section 48(a)(5)). After consideration of the comments received, proposed § 1.48–14(b)(2)(ii) would revise the Dual Use Rule to permit the aggregation of energy inputs from more than one energy property.

3. Measurement Period

Existing § 1.48–9(c)(10)(iv) and (d)(6) provides that an annual measuring period is the period during which the portion of dual use property's basis or cost allocable to use of energy from a qualified source is measured. An annual measuring period for an item of dual use property is defined as the 365-day period beginning with the day it is placed in service or a 365-day period beginning the day after the last day of the immediately preceding annual measuring period.

In response to Notice 2015–70, several commenters requested that the regulations provide a clarification of the annual measurement rules applicable to dual use property. Several of these commenters' concerns were tied to energy storage technology. Because the IRA now includes energy storage technology as eligible property, many of these specific concerns may have been eliminated. However, the proposed regulations would still address these concerns by adopting these annual measurement rules for application to the Dual Use Rule. Accordingly, a taxpayer may claim the section 48 credit when it places an energy property in service, and all relevant time periods, including depreciation and recapture, begin on that date. After consideration of the comments, proposed § 1.48–14(b)(2)(iii) would provide that an annual measuring period for an item of dual use property is any period of 365 consecutive days (366 days in a leap year) beginning with the day the dual use property is placed in service.

4. Dual Use Property and Microgrid Controllers

Certain equipment is necessary for a microgrid controller to perform its functions, but such equipment may also have been required to be installed even without the presence of a microgrid. An example is a communications system (for example, a local ethernet network or a commercial wireless network). A microgrid controller must be connected to a communications system to operate properly. Such a communications system could be considered part of the microgrid controller itself. However, the communications system could also be used for other purposes and may not be dedicated to the microgrid system. The Dual Use Rule would be inapplicable in this scenario because the scenario does not involve the use of energy derived from both a qualifying source and from sources other than a qualifying source (non-qualifying source). The Treasury Department and the IRS request comments on whether a rule is needed to address this situation for microgrid controllers or other potentially similar situations for which the Dual Use Rule would not apply.

C. Energy Property That Could Be Eligible for Multiple Credits

Section 48 and the existing regulations thereunder are silent regarding the eligibility of components of energy property for multiple credits. However, in Notice 2013–70, the Treasury Department and the IRS considered the ability of a single taxpayer to claim section 25D and section 48 credits for different uses of the same energy property. In Q&A #27 of Notice 2013–70, a taxpayer purchased and installed solar electric property to generate electricity for the taxpayer's residence. The taxpayer also expected the solar electric property to generate excess electricity that would be sold to a utility. Q&A #27 determined that the taxpayer may not claim the section 25D credit for the full amount of the solar electric property expenditure because the property not only generates electricity for use in the taxpayer's residence, but it also generates electricity for sale by the taxpayer. As a result, the taxpayer may only claim the section 25D credit for the portion of the solar electric property expenditure that relates to the electricity generated for use in the taxpayer's home. However, the taxpayer may be able to claim the section 48 credit for a portion of the solar electric property expenditure if the requirements of section 48 are satisfied. Notice 2013–70 did not separately analyze whether the taxpayer had met the requirements to claim the section 48 credit.

Several commenters requested a modification of the regulations to allow section 48 credit eligibility in scenarios involving different taxpayers that claim different credits related to different components of an energy property. This may also occur in situations in which different taxpayers own components of energy property as discussed in part III.E.1 of this Summary of Comments and Explanation of Provisions. After consideration of these comments, proposed § 1.48–14(c)(1) would provide that the same energy property may be eligible for both the section 48 credit and another credit subject to certain limitations that proposed § 1.48–14(c)(2) would provide.

D. Incremental Cost

Existing guidance under section 48 provides that only the incremental cost of energy property is included in the eligible basis for purposes of determining the section 48 credit. Existing § 1.48–9(k) defines incremental cost as the excess of the total cost of equipment over the amount that would have been expended for the equipment if the equipment were not used for a qualifying purpose related to the section 48 credit. The existing regulations provide as an example, a scenario in which energy property costing $100 performs a pollution control function as well as a non-qualifying function. The example states that it would cost $60 solely to perform the non-qualifying function, thus the incremental cost to the energy property would be $40.

The Treasury Department and the IRS received no comments regarding the incremental cost rule in response to Notice 2015–70. Thus, proposed § 1.48–14(d)(1) would continue to apply this incremental cost approach and would provide that only the incremental cost of energy property is included in the eligible basis of the energy property for purposes of computing the section 48 credit.

E. Special Rules Concerning Ownership

1. Separate Ownership of Energy Property

Section 48 and the existing regulations thereunder are silent regarding whether the components of an energy property can be owned by multiple taxpayers. In Revenue Ruling 78–268, 1978–2 C.B. 10, the Treasury Department and the IRS addressed a situation involving four owners that shared a common tenancy in an electric

generating facility: two investor-owned utilities, a tax-exempt cooperative, and a tax-exempt municipality-owned utility. The specific issue raised in this Revenue Ruling was whether ownership by the tax-exempt entities disqualified the entire electric generating facility from the investment tax credit. Former section 48(a)(4) effectively stated that property owned by a tax-exempt entity could not be investment tax credit property. Revenue Ruling 78–268 concluded that the two investor-owned utilities were eligible for the investment tax credit despite the fact that the electric generating facility was not credit-eligible property in the hands of the tax-exempt entities. This revenue ruling has been interpreted to stand for the proposition that fractional interests in common tenancies should be treated as separate assets for Federal income tax purposes.

Several commenters requested the adoption of a rule that separate parties that own an interest in energy property are eligible for the section 48 credit to the extent of their fractional ownership interests. Further, these commenters also requested the adoption of a rule that, if components of energy property are owned by separate taxpayers, each taxpayer would be eligible for the section 48 credit to the extent of their cost basis in the components of energy property that they own. These commenters cite Revenue Ruling 78–268 as support for the proposition that fractional interests in common tenancies should be treated as separate assets for Federal income tax purposes.

Many commenters requested that the regulations address situations involving energy property with multiple owners, such as solar condos and community solar facilities. These commenters requested that the regulations be clarified to state that shared ownership does not affect the credit eligibility of an energy property, regardless of the ownership structure. To support this position, several commenters cite to section 25C(e)(1) (redesignated as section 25C(f)(1) of the Code by the IRA) and section 25D(e)(5) that treat a tenant-stockholder (as defined in section 216 of the Code) in a cooperative housing corporation (as defined in section 216) as making his or her proportionate share (as defined in section 216(b)(3)) of any expenditures of such corporation. Similarly, sections 25C(f)(1) and 25D(e)(6) treat an individual member of a condominium management association as having made the individual's proportionate share of any expenditures of such association. As a result, a tenant-stockholder in a cooperative or a member of a condominium association may claim a section 25C or 25D credit for their proportional share of the expenditure of the cooperative or condominium association for credit eligible property.

Several commenters expressed concerns about credit eligibility and the ownership of offshore wind property. For example, a group of commenters requested confirmation that certain transfer and power conditioning equipment necessary to deploy offshore wind is eligible for a section 48 credit, but also that the transfer and power conditioning equipment is eligible for section 48 even if owned by a separate entity from the entity that owns the offshore wind turbines or if the transfer and power conditioning equipment is shared between multiple offshore wind facilities as part of a shared transmission solution.

The Treasury Department and the IRS have determined that a taxpayer that owns an energy property is eligible for the section 48 credit only to the extent of the taxpayer's eligible basis in the energy property. In the case of multiple parties that hold ownership shares in an energy property, each party is eligible for the section 48 credit to the extent of the party's fractional ownership interest. Proposed § 1.48–14(e)(2) would adopt this position. Proposed § 1.48–14(e)(4) also would provide examples illustrating the treatment of multiple owners of an energy property.

As described in part I.D.3 of this Summary of Comments and Explanation of Provisions with regard to qualified offshore wind property, functionally interdependent components do not include power conditioning and transfer equipment such as subsea cables and voltage transformers necessary to condition electricity for use on the electrical grid. However, the power conditioning and transfer equipment are integral parts of the qualified offshore wind property, and thus, are energy property. In contrast, transmission and distribution equipment are not functionally interdependent components of an energy property nor are they an integral part of an energy property. If the taxpayer owns both the unit of energy property and at least a portion of the related power conditioning and transfer equipment, that taxpayer would be able to calculate the section 48 credit on the eligible basis of the energy property, including the taxpayer's basis in the integral power conditioning and transfer equipment. In the case of multiple parties that hold ownership shares in an energy property, each party is eligible for the section 48 credit to the extent of its fractional ownership interest. If power conditioning and transfer equipment owned by one taxpayer is an integral part of an energy property owned by an unrelated taxpayer, the taxpayer that owns the power conditioning and transfer equipment would not be eligible for the section 48 credit but the taxpayer that owns the energy property would be eligible for the section 48 credit.

For example, if Taxpayer A owns only power conditioning and transfer equipment that is an integral part of an energy property owned by unrelated Taxpayer B, Taxpayer A would not be eligible for the section 48 credit. However, this would not prevent Taxpayer B from claiming a section 48 credit on the basis of the energy property that it owns. In addition, if unrelated taxpayers Taxpayer A and Taxpayer B jointly own power conditioning and transfer equipment that is an integral part of a qualified offshore wind facility, but only Taxpayer B owns the unit of energy property (that is, the qualified offshore wind facility), only Taxpayer B may claim the section 48 credit. The amount of Taxpayer B's section 48 credit is calculated by taking into account both Taxpayer B's share of the basis in the power conditioning and transfer equipment and Taxpayer B's basis in the unit of energy property (that is, Taxpayer B's basis in qualified offshore wind facility).

2. Related Taxpayers

Section 48 does not define the term ''related taxpayers.'' This term was defined in existing § 1.48–9(q)(10)(i) in the context of qualified intercity buses. This provision states that related taxpayers are treated as one taxpayer in determining the increase in operating capacity of qualifying intercity buses and in determining the qualified investment in qualified intercity buses for the energy credit. Existing § 1.48–9(q)(10)(i) also provides that related taxpayers are members of a group of trades or businesses that are under common control (as defined in § 1.52–1(b)). The Treasury Department and the IRS received no comments regarding the related taxpayer rule in response to Notice 2015–70. As a result, proposed § 1.48–14(e)(3) would incorporate the rule provided in the existing regulations.

F. Coordination With Other Code Provisions

1. Election To Treat Qualified Facilities as Energy Property

Section 48(a)(5) allows a taxpayer that owns a qualified facility (as defined in

section 45(d)) to elect to claim the section 48 credit in lieu of the section 45 credit. Section 48(a)(5)(A) provides that if the taxpayer makes an election, the qualified facility will be treated as part of a qualified investment credit facility, and therefore deemed energy property eligible for a section 48 credit. A qualified investment credit facility is defined in section 48(a)(5)(C) as a qualified facility described in section 45(d)(1)–(4), (6), (7), (9), or (11), with respect to which no credit has been allowed under section 45, and for which the taxpayer makes an irrevocable election to claim the section 48 credit in lieu of any section 45 credit. Qualified facilities for which a taxpayer is eligible to make an election under section 48(a)(5) include wind, closed- and open-loop biomass, geothermal, solar, landfill gas, trash, hydropower, marine and hydrokinetic facilities.

Only with respect to a qualified investment credit facility, section 48(a)(5)(D) defines ''qualified property'' as tangible personal property or other tangible property (not including a building or its structural components), but only if such property is used as an integral part of the qualified investment credit facility; with respect to which depreciation (or amortization in lieu of depreciation) is allowable; that is constructed, reconstructed, erected, or acquired by the taxpayer; and the original use of the property commences with the taxpayer.

Notice 2009–52, 2009–25 I.R.B. 1094, provides taxpayers with procedures to make an election under section 48(a)(5). Proposed § 1.48–14(f)(6) would adopt the procedures in Notice 2009–52 and, as a result, Notice 2009–52 will be obsoleted upon the publication of the final regulations in the **Federal Register**.

a. Interaction of Section 45 Credit Requirements With Section 48 Credit

In response to Notice 2015–70, several commenters requested that the regulations address whether and to what extent the definition of ''qualified investment credit facility'' provided in section 48(a)(5)(C) makes the rules that generally apply for determining a taxpayer's section 45 credit applicable to qualified facilities for which the taxpayer makes an election. Additionally, Notice 2022–49 requested comments on whether guidance is needed to determine whether a qualified investment credit facility that elects to claim the section 48 credit in lieu of the section 45 credit is subject to all of the requirements of section 45, including the requirement that electricity generated by the qualified investment credit facility be sold to an unrelated person, and what factors the Treasury Department and the IRS should consider regarding such guidance. Several commenters responded and generally were not supportive of imposing the requirements of section 45 on a qualified investment credit facility that elects to claim the section 48 credit in lieu of the section 45 credit. One commenter pointed out, for example, that section 48 only cross-references specific provisions of section 45(d) and not all of section 45(d) nor all of section 45. This commenter noted that because section 48 is an investment tax credit rather than a production tax credit, the rationale for requiring sales of energy from a qualified investment credit facility to unrelated persons is inapplicable.

Section 45(a) sets forth the amount of the production tax credit for a taxable year. It does not determine whether a facility is a ''qualified facility'' (that definition is set forth in section 45(d)). Section 45(a) specifies the amount of the credit for a qualified facility by formula (0.3 cents (increased credit amount under section 45(a)(6) if the requirements of 45(a)(6)(B) are met) multiplied by the kWh of electricity generated and sold to an unrelated person. This statutory structure appears to make the requirement that electricity be sold to an unrelated person relevant only for determining the amount of the section 45 tax credit, not eligibility for the section 48 tax credit. Therefore, after consideration of these comments, the Treasury Department and the IRS have determined that the requirements of section 45 are not imposed on a qualified investment credit facility that elects to claim the section 48 credit in lieu of the section 45 credit. Proposed § 1.48–14(f)(1) would adopt this position.

b. Time and Manner of Making Election

Section 2 of Notice 2009–52 provides that, to make the election with respect to a qualified facility, a taxpayer must claim the energy credit on a completed Form 3468, *Investment Credit,* and file such form with the taxpayer's income tax return for the year in which the property is placed in service. The taxpayer must make a separate election for each qualified facility that is to be treated as a qualified investment credit facility. Proposed § 1.48–14(f)(6)(i) would adopt this procedure with some modifications. If any taxpayer owning an interest in a qualified investment credit facility makes an election under section 48(a)(5), that election would be binding on all taxpayers that directly or indirectly own an interest in the facility.

Additionally, proposed § 1.48–14(f)(6)(ii) would provide a similar special rule for partnerships and S corporations, which would require that the election be made at the entity level and is binding on all ultimate credit claimants (as defined in § 1.50–1(b)(3)(ii)) who must claim the credit in proportion to their respective qualified investment in the energy property. The credit is claimed on each claimant's completed Form 3468, or any successor form(s), and filed with a timely filed (including extensions) return for the taxable year in which the partnership or S corporation makes the election.

2. Coordination Between Section 42 and 48 Credits

Section 50(c)(3)(A) provides the general rule that a taxpayer's basis in an energy property is reduced by 50 percent of the amount of a section 48 credit determined with respect to the taxpayer's investment in the energy property. Section 13102(i) of the IRA amended section 50(c) to provide an exception to that rule for property placed in service after December 31, 2022. As a result, a taxpayer that has claimed a section 48 credit with respect to its basis in an energy property is not required to reduce its basis in the energy property when determining eligible basis for purposes of calculating a low-income housing credit under section 42 of the Code (section 42 credit). Accordingly, the basis of energy property may be used to determine a section 48 credit and may also be included in eligible basis when determining a section 42 credit.

G. Rules for Certain Lower-Output Energy Properties To Include Qualified Interconnection Costs in the Basis of Associated Energy Property

Section 13102(j) of the IRA added section 48(a)(8)(A) to the Code, which provides that, for purposes of determining the section 48 credit with respect to energy property (as defined in section 48(a)(3)) that has a maximum net output of not greater than 5 MW (as measured in alternating current) (Five-Megawatt Limitation), a taxpayer may include amounts paid or incurred by the taxpayer for qualified interconnection property in connection with the installation of the energy property to provide for the transmission or distribution of the electricity produced or stored by such energy property. Additionally, these costs must be properly chargeable to the capital account of the taxpayer.

Section 48(a)(8)(B) defines ''qualified interconnection property'' to mean, with respect to an energy project that is not

a microgrid controller, any tangible property that is part of an addition, modification, or upgrade to a transmission or distribution system that is required at or beyond the point at which the energy project interconnects to such transmission or distribution system in order to accommodate such interconnection; either that is constructed, reconstructed, or erected by the taxpayer, or for which the cost with respect to the construction, reconstruction, or erection of such property is paid or incurred by such taxpayer; and the original use of which, pursuant to an interconnection agreement, commences with a utility.

Section 48(a)(8)(C) defines an ''interconnection agreement'' as an agreement with a utility for the purposes of interconnecting the energy property owned by such taxpayer to the transmission or distribution system of such utility.

Section 48(a)(8)(D) defines the term ''utility'' for purposes of section 48(a)(8) as the owner or operator of an electrical transmission or distribution system that is subject to the regulatory authority of a State or political subdivision thereof, any agency or instrumentality of the United States, a public service or public utility commission or other similar body of any State or political subdivision thereof, or the governing or ratemaking body of an electric cooperative.

Section 48(a)(8)(E) provides a special rule for interconnection property. In the case of expenses paid or incurred for interconnection property, amounts otherwise chargeable to capital account with respect to such expenses must be reduced under rules similar to the rules of section 50(c).

1. Qualified Interconnection Property

Notice 2022–49 requested comments on several aspects of the treatment of qualified interconnection property, specifically the types of eligible costs, the required documentation, and the Five-Megawatt Limitation.

Qualified interconnection property costs arise from installation of tangible property that is part of an addition, modification, or upgrade to a transmission or distribution system at or beyond the point of interconnection. Energy property includes all functionally interdependent property owned by the taxpayer. Additionally, property owned by the taxpayer that is an integral part of such energy property is energy property. This may include power conditioning equipment owned by the taxpayer and used to condition electricity into a form suitable for use or transmission. However, qualified interconnection property, which is most similar in function to transmission and distribution property, is neither property that is a functionally interdependent component of an energy property nor an integral part of an energy property. Therefore, qualified interconnection property is not energy property. Accordingly, proposed § 1.48–14(g)(2) would clarify that qualified interconnection property is not taken into account in determining whether an energy property satisfies the requirements for the domestic content bonus credit amount referenced in section 48(a)(12)(B) and the increase in credit rate for energy communities provided in section 48(a)(14).

Consistent with section 48(a)(8)(A), however, proposed § 1.48–14(g) would clarify that, in connection with the installation by a taxpayer of energy property (as defined in section 48(a)(3)) that has a maximum net output of not greater than 5 MW (as measured in alternating current), amounts paid or incurred by the taxpayer for qualified interconnection property that is required to accommodate the interconnection are included in the basis of a related energy property. Additionally, proposed § 1.48–14(g)(3) would provide that the maximum net output of an energy property is measured only by nameplate generating capacity of the unit of energy property (or, in the case of energy storage technology, the nameplate capacity of such energy storage technology) at the time the energy property is placed in service.

2. Costs Included in Basis of Related Energy Property

Proposed § 1.48–14(g)(1) would provide that only amounts paid or incurred by a taxpayer for property that is constructed, reconstructed, or erected by the taxpayer, or for which the cost with respect to the construction, reconstruction, or erection of such property is paid or incurred by such taxpayer, will be included in the basis of a related energy property. A taxpayer that is reimbursed for these costs may not include such reimbursed costs in the amount paid or incurred by the taxpayer for qualified interconnection property. Proposed § 1.48–14(g)(6) would adopt this rule. In the case of a utility reimbursing a taxpayer for costs the taxpayer pays or incurs for qualified interconnection property, the utility should provide the taxpayer with information regarding such costs by the date on which the project is placed in service.

The Treasury Department and the IRS are aware of common situations where a taxpayer could ultimately receive a payment, credit, or service from another entity, including a utility, related to the costs the taxpayer pays or incurs for qualified interconnection property. For example, one taxpayer may place in service energy property and make payments to a utility with respect to qualified interconnection property involving the addition, modification, or upgrade to the utility's transmission system related to such energy property. Subsequently, a different taxpayer may, at a later date, place in service energy property and make payments to the same utility related to the same additions, modifications, or upgrades to the utility's transmission system that were made in response to the first taxpayer's interconnection. The utility may pay, credit, or provide services to the first taxpayer in an amount related to the costs paid by the second taxpayer. The likely amount or timing of any such payment, credit, or service would not be known at the time the first taxpayer interconnects to the utility's transmission system.

The Treasury and the IRS request comment on whether such payment, credit, or service received by the first taxpayer, as the result of subsequent payments made to a utility by other parties, should be treated as a reimbursement to the first taxpayer and impact the amount of the costs of qualified interconnection property that the first taxpayer may include in its basis for purposes of the section 48 credit. The Treasury and the IRS also request comment on whether the costs paid by the second taxpayer should be treated as amounts paid or incurred for qualified interconnection property in connection with the installation of the second taxpayer's energy property. The Treasury and IRS request comment on industry practices relevant to the determination of costs paid or incurred for qualified interconnection property, including the accounting treatment of costs paid or incurred for qualified interconnection property. The Treasury and the IRS also request comment on whether any clarifications are needed regarding the tax treatment of amounts paid or incurred for qualified interconnection property, including reimbursement of costs paid or incurred by a taxpayer for qualified interconnection costs.

In section 3.02(1)(b)(ii) of Notice 2022–49, the Treasury Department and the IRS requested comments concerning what type of documentation, in addition to interconnection agreements and cost certification reports, is readily available for a taxpayer to demonstrate that they have paid or incurred interconnection costs. Taxpayers must retain

documentation in compliance with section 6001 of the Code. The proposed regulations do not provide any specific type of required documentation, and any documentation that satisfies section 6001 will suffice to substantiate that a taxpayer has paid or incurred qualified interconnection costs. Commenters to Notice 2022–49 provided feedback on the documentation that taxpayers may use to substantiate costs paid or incurred for qualified interconnection property.

Qualified interconnection property is either constructed, reconstructed, or erected by the taxpayer, or the taxpayer pays or incurs the cost with respect to the construction, reconstruction, or erection of such property; and the original use of which, pursuant to an interconnection agreement, commences with a utility. Therefore, in some cases, taxpayers will have the necessary information and documentation on these costs. In other cases, the taxpayers will need to receive this information from the utility, which, the Treasury Department and the IRS understand, will be a common scenario. For situations in which property is constructed, reconstructed, or erected by a party other than the taxpayer, final information with conclusive details such as a true-up report with the actual costs, final invoices, proof of payment or reimbursement, and permission to operate documentation or any other final project accounting documentation should be maintained. Other examples of cost documentation records include, but are not limited to, the interconnection agreement, interconnection study, signed customer contracts, and cost certification reports.

3. Five-Megawatt Limitation

Under section 48(a)(8)(A), energy property includes amounts paid or incurred by the taxpayer for qualified interconnection property in connection with the installation of energy property only if it has a maximum net output of not greater than 5 MW (as measured in alternating current). The addition of amounts paid or incurred by the taxpayer for qualified interconnection property in section 48(a)(8)(A) is tied to the installation of ''energy property.'' The statute clearly ties the 5 MW limitation to the energy property; therefore, as long as an energy property is 5 MW or less, the statute is satisfied. Additionally, measurement at the level of the energy property provides certainty for taxpayers and the IRS because it is measured by the energy property's maximum net output when it is placed in service. Therefore, proposed § 1.48–14(g)(3) would provide that the Five-Megawatt Limitation must be measured at the level of the energy property. Proposed § 1.48–14(g)(7) also would provide examples illustrating the application of this rule.

In accordance with proposed § 1.48–14(g)(3), if an energy project comprised of multiple energy properties has a combined nameplate capacity in excess of 5 MW, each of the energy properties would nonetheless be eligible to include amounts paid or incurred by the taxpayer for qualified interconnection property if each energy property satisfies the Five-Megawatt Limitation. The Treasury Department and the IRS request comments regarding the application of the Five-Megawatt Limitation to a single energy property, including whether the definition of an energy property is sufficiently clear for this purpose. In addition, the Treasury Department and the IRS request comments regarding the circumstances under which multiple energy properties each with a nameplate capacity of less than 5 MW would utilize common power conditioning equipment for economic or regulatory reasons and/or common interconnection agreements, or would instead utilize separate power conditioning equipment and/or interconnection agreements.

4. Non-Application to Certain Types of Energy Properties

The definition of qualified interconnection property specifically excludes interconnection property installed with respect to an energy project that is a microgrid controller. Additionally, taxpayers may not include the costs of qualified interconnection property in the basis of electrochromic glass property and fiber optic solar energy property because these types of energy property do not require additions, modifications, or upgrades to a transmission or distribution system. Similarly, in the case of energy properties that generate thermal energy, such as certain geothermal property and qualified biogas property, this provision is inapplicable.

Effect on Other Documents

Notice 2009–52 will be obsoleted upon publication of the final regulations in the **Federal Register**. Notice 2009–52, in relevant part, provides procedures for taxpayers to make an irrevocable election under section 48(a)(5) to treat qualified property that is part of a qualified investment credit facility as energy property eligible for a section 48 credit in lieu of a section 45 credit.

Proposed Applicability Dates

Except for the provisions of proposed §§ 1.48–13 and 1.6418–5(f), these regulations generally are proposed to apply with respect to property that is placed in service after December 31, 2022, and during a taxable year beginning after the date final regulations are published in the **Federal Register**. Proposed § 1.6418–5(f) is proposed to apply to taxable years ending on or after the date final regulations are published in the **Federal Register**. A taxpayer may rely on proposed §§ 1.48–9, 1.48–14, and 1.6418–5(f) with respect to property that is placed in service after December 31, 2022, and during a taxable year beginning on or before the date final regulations are published in the **Federal Register**, provided the taxpayer and all related persons (within the meaning of sections 267(b) and 707(b) of the Code) apply proposed §§ 1.48–9 and 1.48–14 in their entirety and in a consistent manner.

Proposed § 1.48–13 is proposed to apply to projects placed in service in taxable years ending after the date final regulations are published in the **Federal Register**, and the construction of which begins after the date final regulations are published in the **Federal Register**. However, proposed § 1.48–13(d) is proposed to apply to energy projects the construction of which begins after November 22, 2023. Taxpayers may rely on § 1.48–13 with respect to construction of a property or project beginning on or after January 29, 2023, and on or before the date these regulations are published as final regulations in the **Federal Register**, provided, that beginning after the date that is 60 days after August 29, 2023, taxpayers follow proposed § 1.48–13 in its entirety and in a consistent manner.

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) (PRA) requires that a Federal agency obtain the approval of Office of Management and Budget (OMB) before collecting information from the public, whether such collection of information is

mandatory, voluntary, or required to obtain or retain a benefit. A Federal agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid control number.

The collections of information in these proposed regulations contain reporting and recordkeeping requirements that are required to verify the eligibility of the property for the credit. These collections of information would generally be used by the IRS for tax compliance purposes and by taxpayers to facilitate proper reporting and compliance.

The reporting requirement mentioned within this proposed regulations with respect to section 48 are in proposed § 1.48–14(f)(6), which provides the time and manner for a taxpayer to make a section 48(a)(5)(C) an election to have qualified investment credit facility property that was placed in service after December 31, 2008, treated as a qualified investment credit facility for purposes of claiming the section 48 credit. These requirements are considered general tax records under § 1.6001–1.

A taxpayer must make a section 48(a)(5)(C) election on a completed Form 3468 (Investment Credit) (or successor forms, or pursuant to instructions and other guidance) with the taxpayer's timely filed return (including extensions) for the taxable year in which the energy property is placed in service. The taxpayer must make a separate section 48(a)(5)(C) election for each qualified facility that is to be treated as a qualified investment credit facility. These collections are included in Notice 2009–52, 2009–1 C.B. 1094, which is already approved under OMB Control Number 1545–2145 for all filers. Also, the election selection is included on, Form 3468, which is already approved in OMB Control Numbers 1545–0155 for trust and estate filers, 1545–0074 for individual filers, and 1545–0123 for business filers. This proposed regulation is not changing the collection requirements already approved by OMB.

These proposed regulations would also include reporting requirements, in addition to the general reporting requirements set forth in in § 1.45–12 of the August Proposed Regulations, for taxpayers that claim an increased credit amount under section 48(a)(9)(B)(iii). These proposed regulations would require taxpayers to verify compliance with the Prevailing Wage Requirements by providing information that includes the aggregate information detailed in § 1.45–12 of the August Proposed Regulations during the five-year recapture period after an energy project is placed in service. The Secretary may issue forms and instructions in future guidance for the purpose of meeting these reporting requirements. As set forth in the preamble to the August Proposed Regulations, these reporting requirements will be covered under OMB control numbers 1545–0074 for individuals/sole proprietors and 1545–0123 for business entities. The IRS has solicited public comments on these requirements and the associated burdens for trusts and estates and has sought OMB approval under a new OMB control number (1545–NEW) for trust and estate filers. This proposed regulation is not changing or creating new collection requirements not already approved by, or will be approved by, OMB for the § 1.45–12.

These proposed regulations also describe recapture procedures as detailed in proposed § 1.6418–5. The reporting of a section 48(a)(10)(C) recapture event will still be required to be reported using Form 4255, *Recapture of Investment Credit.* This form is approved under OMB control numbers 1545–0074 for individuals, 1545–0123 for business entities, and 1545–0166 for trust and estate filers. The proposed regulation is not changing or creating new collection requirements not already approved by OMB.

III. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) (RFA) imposes certain requirements with respect to Federal rules that are subject to the notice and comment requirements of section 553(b) of the Administrative Procedure Act (5 U.S.C. 551 *et seq.*) and that are likely to have a significant economic impact on a substantial number of small entities. Unless an agency determines that a proposal is not likely to have a significant economic impact on a substantial number of small entities, section 603 of the RFA requires the agency to present an initial regulatory flexibility analysis (IRFA) of the proposed rule.

The Treasury Department and the IRS have not determined whether the proposed rule, when finalized, will likely have a significant economic impact on a substantial number of small entities. This determination requires further study. However, because there is a possibility of significant economic impact on a substantial number of small entities, an IRFA is provided in these proposed regulations. The Treasury Department and the IRS invite comments on both the number of entities affected and the economic impact on small entities.

Pursuant to section 7805(f), this notice of proposed rulemaking has been submitted to the Chief Counsel of Advocacy of the Small Business Administration for comment on its impact on small business.

A. Need for and Objectives of the Rule

The proposed regulations will provide greater clarity to taxpayers for purposes of claiming the section 48 credit for energy property. The proposed rule is expected to encourage taxpayers to invest in developing new energy properties, including qualified facilities otherwise eligible for the section 45 credit for which a taxpayer makes a section 48(a)(5)(C) election. Thus, the Treasury Department and the IRS intend and expect that the proposed rule will deliver benefits across the economy that will beneficially impact various industries.

B. Affected Small Entities

The Small Business Administration estimated in its 2018 Small Business Profile that 99.9 percent of United States businesses meet its definition of a small business. The applicability of these proposed regulations does not depend on the size of the business, as defined by the Small Business Administration. As described more fully in the preamble to these proposed regulations and in this IRFA, these rules may affect a variety of different businesses across several different industries.

The section 48 credit incentivizes the development of energy property. Because the potential credit claimants can vary widely, it is difficult to estimate at this time the impact of these proposed regulations, if any, on small businesses.

The Treasury Department and the IRS expect to receive more information on the impact on small businesses through comments on this proposed rule and again when taxpayers start to claim the section 48 credit using the guidance and procedures provided in these proposed regulations.

C. Impact of the Rule

The proposed regulations will allow taxpayers to plan investments and transactions based on the ability to claim the section 48 credit. The increased use of the section 48 credit will incentivize the development of technologies for energy generation and storage. The use of the section 48 credit may also lead to additional investment in electrical grid infrastructure to transport electricity.

Because the statutory changes that are reflected in the proposed rules have already been accounted for by Form 3468, the recordkeeping and reporting requirements should not increase for taxpayers that already claim the section 48 credit. The Form 3468 already provides the procedures for taxpayers to make a section 48(a)(5)(C) election. To make the election, a taxpayer must claim the energy credit with respect to a qualified investment credit facility property on a completed Form 3468 (Investment Credit) (or successor forms, or pursuant to instructions and other guidance) and file such form with the taxpayer's timely filed return (including extensions) for the taxable year in which the property is placed in service. Although the Treasury Department and the IRS do not have sufficient data to precisely determine the likely extent of the increased costs of compliance, the estimated burden of complying with the recordkeeping and reporting requirements are described in the Paperwork Reduction Act section of the preamble.

D. Duplicative, Overlapping, or Conflicting Federal Rules

The proposed rule would not duplicate, overlap, or conflict with any relevant Federal rules. As discussed above, the proposed rule would merely provide procedures and definitions to allow taxpayers to claim the section 48 credit.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandate Reform Act of 1995 (UMRA) requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of $100 million (updated annually for inflation). These proposed regulations do not include any Federal mandate that may result in expenditures by State, local, or Tribal governments or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. These proposed regulations do not have federalism implications and do not impose substantial, direct compliance costs on State and local governments or preempt State law within the meaning of the Executive order.

VI. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175 (Consultation and Coordination With Indian Tribal Governments) prohibits an agency from publishing any rule that has Tribal implications if the rule either imposes substantial, direct compliance costs on Indian Tribal governments, and is not required by statute, or preempts Tribal law, unless the agency meets the consultation and funding requirements of section 5 of the Executive order. This proposed rule does not have substantial direct effects on one or more Federally recognized Indian Tribes and does not impose substantial direct compliance costs on Indian Tribal governments within the meaning of the Executive order.

Statement of Availability of IRS Documents

IRS notices and other guidance cited in this preamble are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *https://www.irs.gov.*

Comments and Public Hearing

Before these proposed amendments to the regulations are adopted as final regulations, consideration will be given to any comments regarding the notice of proposed rulemaking and partial withdrawal of notice of proposed rulemaking that are submitted timely to the IRS in the preamble under the **ADDRESSES** section. The Treasury Department and the IRS request comments on all aspects of the proposed regulations. All comments submitted will be made available at *http://www.regulations.gov* or upon request for public inspection and copying.

A public hearing has been scheduled for February 20, 2024, at 10 a.m. ET, in the Auditorium at the Internal Revenue Building, 1111 Constitution Ave. NW, Washington, DC. Because of access restrictions, visitors will not be admitted beyond the immediate entrance area more than 30 minutes before the hearing starts. Participants may alternatively attend the public hearing by telephone.

The rules of 26 CFR 601.601(a)(3) apply to the public hearing. Persons who wish to present oral comments at the public hearing must submit an outline of the topics to be discussed and the time to be devoted to each topic by January 22, 2024. A period of 10 minutes will be allotted to each person for making comments. An agenda showing the scheduling of the speakers will be prepared after the deadline for receiving outlines has passed. Copies of the agenda will be available free of charge at the public hearing. If no outline of the topics to be discussed at the public hearing is received by January 22, 2024, the public hearing will be cancelled. If the public hearing is cancelled, a notice of cancellation of the public hearing will be published in the **Federal Register**.

Individuals who want to testify in person at the public hearing must send an email to *publichearings@irs.gov* to have your name added to the building access list. The subject line of the email must contain the regulation number REG–132569–17 and the language TESTIFY In Person. For example, the subject line may say: Request to TESTIFY In Person at Hearing for regulation number REG–132569–17.

Individuals who want to testify by telephone at the public hearing must send an email to *publichearings@irs.gov* to receive the telephone number and access code for the hearing. The subject line of the email must contain the regulation number REG–132569–17 and the language TESTIFY Telephonically. For example, the subject line may say: Request to TESTIFY Telephonically at Hearing for REG–132569–17.

Individuals who want to attend the public hearing in person without testifying must also send an email to *publichearings@irs.gov* to have your name added to the building access list. The subject line of the email must contain the regulation number REG–132569–17 and the language ATTEND In Person. For example, the subject line may say: Request to ATTEND Hearing in Person for REG–132569–17. Requests to attend the public hearing must be received by 5:00 p.m. on February 15, 2024.

Hearings will be made accessible to people with disabilities. To request special assistance during a hearing please contact the Publications and Regulations Branch of the Office of Associate Chief Counsel (Procedure and Administration) by sending an email to *publichearings@irs.gov* (preferred) or by telephone at (202) 317–6901 (not a toll-free number) by at least 5:00 p.m. on February 14, 2024.

Drafting Information

The principal authors of these proposed rules are Martha M. Garcia

and Boris Kukso of the Office of Associate Chief Counsel (Passthroughs & Special Industries). However, other personnel from the Treasury Department and the IRS participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Partial Withdrawal of Notice of Proposed Rulemaking

Under the authority of 26 U.S.C. 7805, proposed § 1.48–13 contained in the notice of proposed rulemaking (REG–100908–23) that was published in the **Federal Register** on August 30, 2023 (88 FR 60018), is withdrawn.

Proposed Amendments to the Regulations

Accordingly, the Treasury Department and the IRS propose to amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by:
■ a. Revising the entry for § 1.48–9; and
■ b. Adding entries in numerical order for §§ 1.48–13, 1.48–14, and 1.6418–5.

The revision and additions read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Section 1.48–9 also issued under 26 U.S.C. 48(a)(3)(D)(i) and (16). * * *

Section 1.48–13 also issued under 26 U.S.C. 48(a)(10)(C) and (16). * * *

Section 1.48–14 also issued under 26 U.S.C. 48(a)(16). * * *

* * * * *

Section 1.6418–5 also issued under 26 U.S.C. 48(a)(10)(C) and 6418(g) and (h).

* * * * *

■ **Par. 2.** Revise § 1.48–9 to read as follows:

§ 1.48–9 Definition of energy property.

(a) *In general.* For purposes of the energy credit determined under section 48 of the Internal Revenue Code (Code), the term *energy property* means property that, taking into account the definition of the term *unit of energy property* (defined in paragraph (f)(2)(i) of this section) and of other terms defined in paragraph (b) and other provisions of this section, meets the requirements of paragraph (c) of this section and is of a type of energy property set forth in paragraph (e) of this section. Paragraph (d) of this section provides rules for property excluded from energy property. Paragraph (f) of this section provides rules for components included in an energy property. Paragraph (g) of this section provides the applicability date for this section.

(b) *Definitions related to requirements for energy property.* For purposes of section 48 of the Code, this section, §§ 1.48–13 and 1.48–14, and any provision of the Code or this chapter that expressly refers to any of the foregoing, the following definitions apply:

(1) *Construction, reconstruction, or erection of energy property.* The term *construction, reconstruction, or erection of energy property* means work performed to construct, reconstruct, or erect energy property either by the taxpayer or for the taxpayer in accordance with the taxpayer's specifications.

(2) *Acquisition of energy property.* The term *acquisition of energy property* means a transaction by which a taxpayer obtains rights and obligations with respect to energy property, including—

(i) Title to the energy property under the law of the jurisdiction in which the energy property is placed in service, unless the property is possessed or controlled by the taxpayer as a lessee, and

(ii) Physical possession or control of the energy property.

(3) *Original use of energy property*—(i) *In general.* The term *original use of energy property* means the first use to which a unit of energy property is put, whether or not such use is by the taxpayer.

(ii) *Retrofitted units of energy property.* A retrofitted unit of energy property acquired by the taxpayer will not be treated as being put to original use by the taxpayer unless the rules in § 1.48–14(a) regarding retrofitted energy property (80/20 Rule) or paragraph (e)(10)(v) of this section regarding modifications of certain energy storage technology apply. The question of whether a unit of energy property meets the 80/20 Rule or is modified (as described in paragraph (e)(10)(v) of this section) is a facts and circumstances determination.

(4) *Allowable*—(i) *In general.* For purposes of applying paragraph (c)(1)(ii) of this section, depreciation (or amortization in lieu of depreciation) is *allowable* with respect to energy property if such property is of a character subject to the allowance for depreciation under section 167 of the Code and the basis or cost of such property is recovered using a method of depreciation (for example, the straight line method), which includes any additional first year depreciation deduction method of depreciation (for example, under section 168(k) of the Code). Further, if an Internal Revenue Service adjustment with respect to the Federal income tax or information return for such taxable year requires the basis or cost of such energy property to be recovered using a method of depreciation, depreciation is allowable to the taxpayer with respect to energy property.

(ii) *Exclusions from allowable.* For purposes of paragraph (b)(4)(i) of this section, depreciation is not allowable with respect to energy property if the basis or cost of such property is not recovered through a method of depreciation but, instead, such basis or cost is recovered through a deduction of the full basis or cost of the energy property in one taxable year (for example, under section 179 of the Code).

(5) *Placed in service*—(i) *In general.* Energy property is considered placed in service in the earlier of:

(A) The taxable year in which, under the taxpayer's depreciation practice, the period for depreciation with respect to such energy property begins; or

(B) The taxable year in which the energy property is placed in a condition or state of readiness and availability for a specifically assigned function, whether in a trade or business or in the production of income. Energy property in a condition or state of readiness and availability for a specifically assigned function includes, but is not limited to, components that are acquired and set aside during the taxable year for use as replacements for a particular energy property (or energy properties) in order to avoid operational time loss and equipment that is acquired for a specifically assigned function and is operational but is undergoing testing to eliminate any defects. However, components acquired to be used in the construction of an energy property will not be considered in a condition or state of readiness and availability for a specifically assigned function.

(ii) *Energy property subject to § 1.48–4 election to treat lessee as purchaser.* Notwithstanding paragraph (b)(5)(i) of this section, energy property with respect to which an election is made under § 1.48–4 to treat the lessee as having purchased such energy property is considered placed in service by the lessor in the taxable year in which possession is transferred to such lessee.

(6) *Unit of energy property.* The term *unit of energy property* is defined in paragraph (f)(2)(i) of this section. No provision of this section or § 1.48–13 or § 1.48–14 uses the term *unit* in respect of energy property with any meaning other than that provided in paragraph (f)(2)(i) of this section.

(7) *Claim.* With respect to a section 48 credit determined with respect to energy property of a taxpayer, the term *claim* means filing a completing Form 3468, *Investment Credit,* or any successor form(s), with the taxpayer's timely filed (including extensions) Federal income tax return for the taxable year in which the energy property is placed in service, and includes the making of an election under section 6417 or 6418 of the Code and corresponding regulations with respect to such section 48 credit and made on the taxpayer's Federal income tax return or annual information return.

(c) *Requirements for energy property*—(1) *In general.* Energy property must satisfy each of the requirements of paragraphs (c)(1)(i) through (v) of this section:

(i) The taxpayer constructs, reconstructs, or erects the property, or, if the original use of the property commences with the taxpayer, acquires the property;

(ii) Depreciation (or amortization in lieu of depreciation) is allowable with respect to the property;

(iii) The property meets the performance and quality standards as provided in paragraph (c)(2) of this section;

(iv) The construction of the property begins before the date provided in section 48 of the Code (if any such date is provided); and

(v) The property is placed in service by the taxpayer by the date provided in section 48 (if any such date is provided).

(2) *Performance and quality standards*—(i) *In general.* Energy property must meet performance and quality standards, if any, which have been prescribed by the Secretary of the Treasury or her delegate (after consultation with the Secretary of Energy) and are in effect at the time of acquisition of the energy property.

(ii) *Special rules for performance and quality standards*—(A) *Small wind energy property.* Small wind energy property must meet the performance and quality standards in effect at the time of acquisition of the small wind turbine set forth in the American Wind Energy Association Small Wind Turbine Performance and Safety Standard 9.1–2009, or subsequent revisions (AWEA); International Electrotechnical Commission 61400–1, 61400–2, 61400–11, 61400–12, or subsequent revisions (IEC); or the ANSI/ACP 101–1–2021, the Small Wind Turbine Standard, or subsequent revisions (ACP). The certification requirements applicable to such performance and quality standards are provided in guidance published in the Internal Revenue Bulletin. *See* § 601.601 of this chapter.

(B) *Electrochromic glass property.* To be eligible for the section 48 credit, electrochromic windows must be rated in accordance with the National Fenestration Rating Council (NFRC) and secondary glazing systems must be rated in accordance with the Attachments Energy Rating Council (AERC) Rating and Certification Process, or subsequent revisions. *See* paragraph (e)(2)(ii) of this section for the definition of electrochromic glass property.

(iii) *Time of acquisition.* For purposes of applying performance and quality standards, the time of acquisition is the date the taxpayer enters into a binding contract (as defined in paragraph (c)(2)(iv) of this section) to acquire the property, or, in the case of property constructed, reconstructed, or erected by the taxpayer, the earlier of the date that—

(A) The taxpayer begins construction, reconstruction, or erection of the property, or

(B) The taxpayer and another person enter into a binding contract (as defined in paragraph (c)(2)(iv) of this section) requiring the other person to construct, reconstruct, or erect property and to place the property in service for an agreed upon use.

(iv) *Binding contract.* For purposes of this paragraph (c)(2), a contract is binding only if it is enforceable under State law against the taxpayer or a predecessor and does not limit damages to a specified amount (for example, by use of a liquidated damages provision). For this purpose, a contractual provision that limits damages to an amount equal to at least five percent of the total contract price will not be treated as limiting damages to a specified amount. For additional guidance regarding the definition of a binding contract, see § 1.168(k)–2(b)(5)(iii)(A).

(d) *Property that is not energy property*—(1) *Interaction with section 45.* Energy property does not include any property that is part of a qualified facility the production from which is allowed as a credit determined under section 45 of the Code (section 45 credit) for the taxable year or any prior taxable year. However, see paragraph (f)(3) of this section for rules regarding property that is an integral part of an energy property that is also used by a qualified facility. *See* § 1.48–14(f)(1) for rules regarding making an election under section 48(a)(5) of the Code to treat a qualified facility as an energy property.

(2) *Other property.* Energy property also does not include power purchase agreements, goodwill, going concern value, or renewable energy certificates.

(e) *Types of energy property.* The types of energy property eligible for a section 48 credit are:

(1) *Solar energy property*—(i) *In general. Solar energy property* is equipment that uses solar energy to generate electricity, to heat or cool (or provide hot water for use in) a structure, or to provide solar process heat, excepting property used to generate energy for the purposes of heating a swimming pool. Solar energy property includes solar electric generation equipment (as defined in paragraph (e)(1)(ii) of this section), solar process heat equipment (as defined in paragraph (e)(1)(iii) of this section), and equipment that uses solar energy to heat or cool a structure or provide hot water for use in a structure, and parts related to the functioning of all such equipment.

(ii) *Solar electric generation equipment. Solar electric generation equipment* is equipment that converts sunlight into electricity through the use of devices such as solar cells or other collectors.

(iii) *Solar process heat equipment. Solar process heat equipment* is equipment that uses solar energy to generate steam at high temperatures for use in industrial or commercial processes.

(2) *Fiber-optic solar energy property and electrochromic glass property*—(i) *Fiber-optic solar energy property. Fiber-optic solar energy property* is equipment that uses solar energy to illuminate the inside of a structure using fiber-optic distributed sunlight.

(ii) *Electrochromic glass property. Electrochromic glass energy property* uses electricity to change its light transmittance properties (both visible and near infrared light) in order to heat or cool a structure. For purposes of section 48, windows, including secondary windows (also referred to as secondary glazings), that incorporate electrochromic glass are treated as electrochromic glass property.

(3) *Geothermal energy property*—(i) *In general. Geothermal energy property* is equipment used to produce, distribute, or use energy derived from a geothermal deposit (within the meaning of section 613(e)(2) of the Code), but only, in the case of electricity generated by geothermal power, up to (but not including) the electrical transmission stage. Geothermal equipment includes production equipment (as defined in paragraph (e)(3)(ii) of this section) and distribution equipment (as defined in paragraph (e)(3)(iii) of this section).

(ii) *Production equipment.* For purposes of paragraph (e)(3)(i) of this section, *production equipment* is equipment necessary to bring

geothermal energy from the subterranean deposit to the surface, including well-head and downhole equipment (such as screening or slotting liners, tubing, downhole pumps, and associated equipment). Production, injection, and monitoring wells required for production of the geothermal deposit qualify as production equipment. If geothermal energy is used to generate electricity, production equipment also includes the property necessary to produce electricity. Production equipment does not include equipment used for exploration and development of geothermal deposits.

(iii) *Distribution equipment.* For purposes of paragraph (e)(3)(i) of this section, *distribution equipment* is equipment that transports geothermal energy from a geothermal deposit to the site of ultimate use. If geothermal energy is used to generate electricity, distribution equipment includes equipment that transports geothermal fluids between the geothermal deposit and the power plant. Distribution equipment also includes components of a building's heating and/or cooling system, such as pipes and ductwork that distribute within a building the energy derived from the geothermal deposit.

(4) *Qualified fuel cell property. Qualified fuel cell property* is a fuel cell power plant that has a nameplate capacity of at least 0.5 kilowatts (kW) (1 kW in the case of a fuel cell power plant with a linear generator assembly) of electricity using an electrochemical or electromechanical process, and an electricity-only generation efficiency greater than 30 percent. For this purpose, electricity-only generation efficiency may be calculated by dividing the heat rate of the fuel cell (for example, kilowatt-hours (kWh) electricity produced per kilogram (kg) of fuel consumed) by the higher heating value of the fuel (for example, kWh per kg). A fuel cell power plant is an integrated system comprised of a fuel cell stack assembly, or linear generator assembly, and associated balance of plant components that converts a fuel into electricity using electrochemical or electromechanical means. A linear generator assembly does not include any assembly that contains rotating parts.

(5) *Qualified microturbine property. Qualified microturbine property* is a stationary microturbine power plant that has a nameplate capacity of less than 2,000 kW and an electricity-only generation efficiency of not less than 26 percent at International Standard Organization conditions. A stationary microturbine power plant is an integrated system comprised of a gas turbine engine, a combustor, a recuperator or regenerator, a generator or alternator, and associated balance of plant components that converts a fuel into electricity and thermal energy. A stationary microturbine power plant also includes all secondary components located between the existing infrastructure for fuel delivery and the existing infrastructure for power distribution, including equipment and controls for meeting relevant power standards, such as voltage, frequency, and power factors.

(6) *Combined heat and power system (CHP) property*—(i) *In general. CHP property* is property comprising a system that uses the same energy source for the simultaneous or sequential generation of electrical power, mechanical shaft power, or both, in combination with the generation of steam or other forms of useful thermal energy (including heating and cooling applications). CHP property must produce at least 20 percent of its total useful energy in the form of thermal energy that is not used to produce electrical or mechanical power (or combination thereof), and at least 20 percent of its total useful energy in the form of electrical or mechanical power (or combination thereof). The energy efficiency percentage of CHP property must exceed 60 percent (except in the case of CHP systems that use biomass within the meaning of section 45 of the Code). CHP property does not include any property comprising a system if such system has a capacity in excess of 50 MW or a mechanical energy capacity in excess of 67,000 horsepower or an equivalent combination of electrical and mechanical energy capacities.

(ii) *Components excluded.* CHP property does not include property used to transport the energy source to the generating facility or to distribute energy produced by the facility.

(7) *Qualified small wind energy property.* Qualified small wind energy property is property that uses a qualifying small wind turbine to generate electricity. A qualifying small wind turbine means a wind turbine that has a nameplate capacity of not more than 100 kW.

(8) *Geothermal heat pump equipment.* Geothermal heat pump equipment is equipment that uses the ground, ground water, or other underground fluids as a thermal energy source to heat a structure or as a thermal energy sink to cool a structure.

(9) *Waste energy recovery property (WERP)*—(i) *In general.* WERP is property that generates electricity solely from heat from buildings or equipment if the primary purpose of such building or equipment is not the generation of electricity. Examples of buildings or equipment the primary purpose of which is not the generation of electricity include, but are not limited to, manufacturing plants, medical care facilities, facilities on college campuses, pipeline compressor stations, and associated equipment. WERP does not include any property that has a capacity in excess of 50 MW.

(ii) *Coordination with CHP property.* Any WERP that is part of a system that is a CHP property is not treated as WERP for purposes of section 48 of the Code unless the taxpayer elects to not treat such system as a CHP property for purposes of section 48.

(10) *Energy storage technology*—(i) *In general.* Energy storage technology includes electrical energy storage property described in paragraph (e)(10)(ii) of this section, thermal energy storage property described in paragraph (e)(10)(iii) of this section, and hydrogen energy storage property described in paragraph (e)(10)(iv) of this section.

(ii) *Electrical energy storage property.* Electrical energy storage property is property (other than property primarily used in the transportation of goods or individuals and not for the production of electricity) that receives, stores, and delivers energy for conversion to electricity, and has a nameplate capacity of not less than 5 kWh. For example, subject to the exclusion for property primarily used in the transportation of goods or individuals, electrical energy storage property includes but is not limited to rechargeable electrochemical batteries of all types (such as lithium ion, vanadium flow, sodium sulfur, and lead-acid); ultracapacitors; physical storage such as pumped storage hydropower, compressed air storage, flywheels; and reversible fuel cells.

(iii) *Thermal energy storage property.* Thermal energy storage property is property comprising a system that is directly connected to a heating, ventilation, or air conditioning (HVAC) system; removes heat from, or adds heat to, a storage medium for subsequent use; and provides energy for the heating or cooling of the interior of a residential or commercial building. Thermal energy storage property includes equipment and materials, and parts related to the functioning of such equipment, to store thermal energy for later use to heat or cool, or to provide hot water for use in heating a residential or commercial building. It does not include a swimming pool, CHP property, or a building or its structural components. For example, thermal energy storage includes, but is not limited to, thermal ice storage systems that use electricity to run a refrigeration cycle to produce ice

that is later connected to the HVAC system as an exchange medium for air conditioning the building, heat pump systems that store thermal energy in an underground tank or borehole field to be extracted for later use for heating and/or cooling, and electric furnaces that use electricity to heat bricks to high temperatures and later use this stored energy to heat a building through the HVAC system.

(iv) *Hydrogen energy storage property.* Hydrogen energy storage property is property (other than property primarily used in the transportation of goods or individuals and not for the production of electricity) that stores hydrogen and has a nameplate capacity of not less than 5 kWh, equivalent to 0.127 kg of hydrogen or 52.7 standard cubic feet (scf) of hydrogen. Hydrogen energy storage property must store hydrogen that is solely used as energy and not for other purposes such as for the production of end products such as fertilizer. For example, hydrogen energy storage property includes, but is not limited to, a hydrogen compressor and associated storage tank and an underground storage facility and associated compressors.

(v) *Modifications of energy storage energy property.* With respect to electrical energy storage property and hydrogen energy storage property placed in service after December 31, 2022, energy storage technology that is modified as set forth in this paragraph (e)(10)(v) is treated as electrical energy storage property described in paragraph (e)(10)(ii) of this section or hydrogen energy storage property described in paragraph (e)(10)(iv) of this section, except that the basis of any existing property prior to such modification is not taken into account for purposes of this section and section 48. This paragraph (e)(10)(v) applies to any electrical energy storage property and hydrogen energy storage property that either:

(A) Was placed in service before August 16, 2022, and would be described in section 48(c)(6)(A)(i) of the Code, except that such property had a capacity of less than 5 kWh and is modified in a manner that such property (after such modification) has a nameplate capacity (after such modification) of not less than 5 kWh; or

(B) Is described in section 48(c)(6)(A)(i) of the Code and is modified in a manner that such property (after such modification) has an increase in nameplate capacity of not less than 5 kWh.

(11) *Qualified biogas property*—(i) *In general.* Qualified biogas property is property comprising a system that converts biomass (as defined in section 45K(c)(3) of the Code, as in effect on August 16, 2022) into a gas that consists of not less than 52 percent methane by volume (tested at the point described in paragraph (e)(11)(ii) of this section), or is concentrated by such system into a gas that consists of not less than 52 percent methane (tested at the point described in paragraph (e)(11)(ii) of this section), and captures such gas for sale or productive use and not for disposal via combustion. Qualified biogas property also includes any property that is part of such system that cleans or conditions such gas. For example, qualified biogas property includes, but is not limited to, a waste feedstock collection system, a landfill gas collection system, mixing or pumping equipment, and an anaerobic digester. However, gas upgrading equipment necessary to concentrate the gas into the appropriate mixture for injection into a pipeline through removal of other gases such as carbon dioxide, nitrogen, or oxygen is not included in qualified biogas property.

(ii) *Methane content requirement.* The methane content requirement described in section 48(c)(7)(A)(i) of the Code and paragraph (e)(11)(i) of this section is measured at the point at which gas exits the biogas production system, which may include an anerobic digester, landfill gas collection system, or thermal gasification equipment. This is the point at which a taxpayer generally must determine whether it will convert the biogas to fuel for sale or use it directly to generate heat or to fuel an electricity generation unit.

(12) *Microgrid controllers*—(i) *In general.* A microgrid controller is equipment that is part of a qualified microgrid and is designed and used to monitor and control the energy resources and loads on such microgrid. A qualified microgrid is an electrical system that includes equipment that is capable of generating not less than 4 kW and not greater than 20 MW of electricity; is capable of operating in connection with the electrical grid and as a single controllable entity with respect to such electrical grid, and independently (and disconnected) from such electrical grid; and is not part of a bulk-power system (as defined in section 215 of the Federal Power Act (16 U.S.C. 824o)).

(ii) *Capable of operating in connection with the electrical grid.* For purposes of this paragraph, a qualified microgrid includes an electrical system that is capable of operating in connection with the larger electrical grid, regardless of whether a connection to the larger electrical grid exists.

(13) *Other property included in section 48.* Any other property specified by section 48 as energy property is energy property for purposes of this section and §§ 1.48–13 and § 1.48–14.

(f) *Property included in energy property*—(1) *In general.* An energy property includes a unit of energy property (as defined in paragraph (f)(2)(i) of this section) that meets the requirements of paragraph (c) of this section, that is not excluded from energy property as provided in paragraph (d) of this section, and is of a type of energy property included in paragraph (e) of this section. Property owned by the taxpayer that is an integral part of an energy property (as defined in paragraph (f)(3) of this section) is treated as energy property. Energy property does not include any electrical transmission equipment, such as transmission lines and towers, or any equipment beyond the electrical transmission stage. Energy property also generally does not include equipment that is an addition or modification to an existing energy property. However, see § 1.48–14(a) for rules regarding retrofitted energy property (80/20 Rule) and paragraph (e)(10)(v) of this section for rules regarding modifications of certain types of energy storage technology.

(2) *Unit of energy property*—(i) *Definition.* The term *unit of energy property* means all functionally interdependent components of property (as defined in paragraph (f)(2)(ii) of this section) owned by the taxpayer that are operated together and that can operate apart from other energy properties within a larger energy project (as defined in § 1.48–13(d)). For rooftop solar energy property, all components of property that are installed on a single rooftop are considered a single unit of energy property. *See* § 1.48–13(d) for rules regarding when multiple energy properties will be treated as an energy project for certain purposes.

(ii) *Functionally interdependent*—(A) *In general.* Except as provided in paragraph (f)(3)(ii)(B) of this section, with respect to components of a unit of energy property, the term *functionally interdependent* means that the placing in service of each component is dependent upon the placing in service of each of the other components in order to generate or store electricity, thermal energy, or hydrogen as provided by section 48(c) of the Code and as described in paragraph (e) of this section.

(B) *Components of certain energy property.* In the case of solar process heat equipment, fiber-optic solar energy property, electrochromic glass property,

geothermal heat pump equipment, qualified biogas property, and microgrid controllers, with respect to components of such property, the term *functionally interdependent* means that the placing in service of each component is dependent upon the placing in service of each of the other components in order to perform the intended function of the energy property as provided by section 48(c) of the Code and as described in paragraph (e) of this section.

(3) *Integral part*—(i) *In general.* For purposes of the section 48 credit, property owned by a taxpayer is an integral part of an energy property owned by the same taxpayer if it is used directly in the intended function of the energy property as provided by section 48(c) of the Code and as described in paragraph (e) of this section and is essential to the completeness of the intended function. Property that is an integral part of an energy property is energy property. A taxpayer may not claim the section 48 credit for any property that is an integral part of the taxpayer's energy property that is not owned by the taxpayer. Multiple energy properties (whether owned by one or more taxpayers) may include shared property that may be considered an integral part of each energy property so long as the cost basis for the shared property is properly allocated to each energy property. The total cost basis of such shared property divided among the energy properties may not exceed 100 percent of the cost of such shared property. In addition, property that is shared by a qualified facility (as defined in section 45(d) of the Code) and an energy property that is an integral part of the energy property will not be considered property that is not energy property under paragraph (d) of this section.

(ii) *Power conditioning and transfer equipment.* Property that is an integral part of energy property includes power conditioning equipment and transfer equipment used to perform the intended function of the energy property as provided by section 48(c) and as described in paragraph (e) of this section. Power conditioning equipment includes, but is not limited to, transformers, inverters, and converters, which modify the characteristics of electricity or thermal energy into a form suitable for use or transmission or distribution. Parts related to the functioning or protection of power conditioning equipment are also treated as power conditioning equipment and include, but are not limited to, switches, circuit breakers, arrestors, and hardware and software used to monitor, operate, and protect power conditioning equipment. Transfer equipment includes equipment that permits the aggregation of energy generated by components of energy properties and equipment that alters voltage in order to permit transfer to a transmission or distribution line. Transfer equipment does not include transmission or distribution lines. Examples of transfer equipment include, but are not limited to, wires, cables, and combiner boxes that conduct electricity. Parts related to the functioning or protection of transfer equipment are also treated as transfer equipment and may include items such as current transformers used for metering, electrical interrupters (such as circuit breakers, fuses, and other switches), and hardware and software used to monitor, operate, and protect transfer equipment. Power conditioning equipment and transfer equipment that are integral to an energy property may be integral to another energy property or used by a qualified facility (as defined in section 45(d) of the Code), so long as the total cost basis of the integral property is properly allocated across the energy property and qualified facility that share such property.

(iii) *Roads.* Roads that are an integral part of an energy property are integral to the activity performed by the energy property such as onsite roads that are used for equipment to operate and maintain the energy property. Roads primarily for access to the site, or roads used primarily for employee or visitor vehicles, are not integral to the activity performed by an energy property.

(iv) *Fences.* Fencing is not an integral part of an energy property because it is not integral to the activity performed by the energy property.

(v) *Buildings.* Generally, buildings are not integral parts of an energy property because they are not integral to the activity of the energy property. However, the following structures are not treated as buildings for this purpose:

(A) A structure that is essentially an item of machinery or equipment; and

(B) A structure that houses property that is integral to the activity of an energy property if the use of the structure is so closely related to the use of the housed energy property that the structure clearly can be expected to be replaced when the energy property it initially houses is replaced.

(4) *Location of energy property.* Any property that meets the requirements of paragraphs (f)(2) and (3) of this section is part of an energy property regardless of where such property is located.

(5) *Examples.* This paragraph provides examples illustrating property included in energy property.

(i) *Example 1. Solar energy property.* X constructs a solar energy property (Property) comprised of 500 separate solar panels. The solar panels are connected by wires, cables, and combiner boxes. Generated electricity is conditioned for subsequent use through an inverter and eventually carried to a substation that houses a transformer where the electricity is stepped up to electrical grid voltage before being transmitted to the electrical grid through an intertie. All components of the Property, up to and including the transformer are either functionally interdependent components of the Property or are integral parts of the Property. Therefore, the Property is an energy property for purposes of the section 48 credit. When X places the Property in service, the cost of the components up to and including the transformer is included in the basis of the Property for purposes of computing the section 48 credit.

(ii) *Example 2. Co-located energy properties.* Assume the same facts as in Example 1, except that Y constructs a wind energy property (Wind Property) near X's solar energy property (Solar Property). X's Solar Property and Y's Wind Property each connect to a substation that houses a transformer where the electricity is stepped up to electrical grid voltage before being transmitted to the electrical grid through the intertie. X and Y each pay 50% of the cost of the transformer and related power conditioning equipment housed therein. X's Solar Property and Y's Wind Property are separate energy properties. When X and Y place their respective energy properties in service, the cost of the components up to and including 50% of the cost of the transformer and related power conditioning equipment is included in X's and Y's basis in their respective energy properties for purposes of computing the section 48 credit.

(iii) *Example 3. Qualified offshore wind facility.* Z constructs a qualified offshore wind facility (Offshore Wind Facility) comprised of 150 turbines for which Z makes a valid election under section 48(a)(5) of the Code to claim the section 48 credit in lieu of the section 45 credit. The alternating current electricity generated by the individual wind turbines will be carried by inter-array cables to an offshore substation where a transformer will step up the voltage of the electricity and a converter will convert it to direct current so it may be transported by subsea export cables to an onshore substation adjacent to the point of interconnection with the electrical grid. When the electricity reaches the onshore substation, it will

flow into another converter where it will be converted back to alternating current, and then through a transformer and associated switchgear where it will be converted to electrical grid voltage and where the Offshore Wind Facility can be electrically isolated from the grid. The electricity will then pass through an intertie that will take the electricity from the substation to the point of interconnection with the electrical grid. All components of the Offshore Wind Facility, up to and including the transformer and switchgear housed in the onshore substation, are either functionally interdependent components of an energy property or integral parts of an energy property. Therefore, the Offshore Wind Facility is an energy property, and when Z places the Offshore Wind Facility in service, the cost of the components up to and including the transformer and switchgear housed in the onshore substation are included in the basis of the Offshore Wind Facility for purposes of computing the section 48 credit.

(iv) *Example 4. Co-located energy property and qualified facility.* X constructs a wind facility (Wind Facility) that is co-located with an energy storage technology (Energy Storage). The Wind Facility and Energy Storage share power conditioning and transfer equipment. X assigns 50% of the cost of the shared power conditioning and transfer equipment to the Wind Facility and 50% of the cost to the Energy Storage. The power conditioning and transfer equipment are integral parts of the Energy Storage, and are therefore, considered energy property. Therefore, X will include 50% of the cost of the power conditioning and transfer equipment when determining the section 48 credit for the Energy Storage. Because the shared power conditioning and transfer equipment are not considered part of the Wind Facility, if the Wind Facility otherwise satisfies the requirements of the section 45 credit, X can claim the section 45 credit for the Wind Facility.

(g) *Applicability date.* This section applies with respect to property placed in service after December 31, 2022, and during a taxable year beginning after [DATE OF PUBLICATION OF FINAL RULE].

■ **Par. 3.** Section 1.48–13 is added to read as follows:

§ 1.48–13 Rules relating to the increased credit amount for prevailing wage and apprenticeship.

(a) *In general.* If a qualified energy project satisfies the requirements in paragraph (b) of this section, the amount of the energy credit determined under section 48(a) of the Internal Revenue Code (Code), after the application of sections 48(a)(1) through (8), and 48(a)(15), is equal to the credit determined under section 48(a) (section 48 credit) multiplied by five.

(b) *Requirements.* A qualified energy project satisfies the requirements of this paragraph (b) if it is one of the following—

(1) A project with a maximum net output of less than one megawatt (MW) of electrical (as measured in alternating current) or thermal energy determined based on the nameplate capacity as provided in paragraph (e) of this section (One-Megawatt Exception);

(2) A project the construction of which began prior to January 29, 2023; or

(3) A project that meets the prevailing wage requirements of section 48(a)(10)(A) of the Code, § 1.45–7(b)–(d), and paragraph (c) of this section, the apprenticeship requirements of section 45(b)(8) of the Code and § 1.45–8, and the recordkeeping and reporting requirements of § 1.45–12.

(c) *Special rule applicable to general prevailing wage requirements*—(1) *In general.* In addition to satisfying the prevailing wage requirements under § 1.45–7(b) through (d), a taxpayer must ensure that any laborers and mechanics employed (within the meaning of § 1.45–7) by the taxpayer or any contractor or subcontractor in the construction of such energy project, and for the five-year period beginning on the date such project is placed in service, the alteration or repair of such project, are paid wages at rates not less than the prevailing rates for construction, alteration, or repair of a similar character in the locality in which such project is located as most recently determined by the Secretary of Labor, in accordance with 40 U.S.C. chapter 31, subchapter IV. Subject to section 48(a)(10)(C) of the Code and this paragraph (c), for purposes of determining the increased credit amount under section 48(a)(9)(B)(iii) of the Code, the taxpayer is deemed to satisfy the prevailing wage requirements of section 48(a)(10)(A)(ii) of the Code at the time such project is placed in service.

(2) *Exception.* For purposes of satisfying the prevailing wage requirements of paragraph (b)(3) of this section, § 1.45–7(a) does not apply.

(3) *Recapture*—(i) *In general.* The increased credit amount under paragraph (b)(3) of this section is subject to recapture for any project that does not satisfy the prevailing wage requirements in § 1.45–7(b) through (d) and paragraph (c)(1) of this section for any period with respect to an alteration or repair of such project during the five-year period beginning on the date such project is originally placed in service (five-year recapture period) (but that does not cease to be investment credit property within the meaning of section 50(a) of the Code).

(ii) *Recapture event*—(A) *In general.* Any failure to satisfy the prevailing wage requirements in § 1.45–7(b) through (d) and paragraph (c)(1) of this section for any period with respect to the alteration or repair of any project during the five-year recapture period is a recapture event. Any failure to satisfy the prevailing wage requirements in § 1.45–7(b) through (d) and paragraph (c)(1) of this section for any period remain subject to the correction and penalty provisions in § 1.45–7(c), including the waiver provisions in § 1.45–7(c)(6). Subject to § 1.45–7(c)(5) and (6), if the correction and penalty payments described in § 1.45–7(c) are not made by the taxpayer on or before the date that is 180 days after the date of a final determination by the IRS (as defined in § 1.45–7(c)(4)(ii)), the cure provision in § 1.45–7(c) does not apply and the increased credit amount is subject to recapture.

(B) *Yearly determination.* A determination of whether a recapture event has occurred under paragraph (c)(3)(ii) of this section must be made for each taxable year (or portion thereof) occurring within the five-year recapture period, beginning with the taxable year ending after the date the energy project is placed in service. Thus, for each taxable year beginning or ending within the five-year recapture period, the taxpayer must determine whether the prevailing wage requirements of section 48(a)(10)(A) of the Code, § 1.45–7(b)–(d), and paragraph (c)(1) of this section are satisfied for the recapture year(s) occurring during each taxable year.

(C) *Carrybacks and carryforward adjusted.* In the case of any recapture event described in paragraph (c)(3)(ii)(A) of this section, the carrybacks and carryforwards under section 39 must be adjusted by reason of such recapture event.

(iii) *Correction and penalty payments not required if taxpayer is subject to recapture under section 48(a)(10)(C) of the Code.* If the IRS determines that a taxpayer that claimed the increased credit amount under section 48(a)(9)(B)(iii) of the Code or transferred a specified credit portion under section 6418 of the Code that includes the increased credit amount under section 48(a)(9)(B)(iii) failed to satisfy the prevailing wage requirements in § 1.45–

7(b) through (d) and paragraph (c)(1) of this section for any period with respect to the alteration or repair of any project during the five-year recapture period and the taxpayer does not make the correction and penalty payments provided in § 1.45–7(c), then no penalty is assessed under § 1.45–7, and the increased credit amount is subject to recapture. Taxpayers whose increased credit amount is subject to recapture under this section may still be entitled to the base amount of the energy credit under section 48(a) of the Code if such taxpayers meet the requirements to claim the credit.

(4) *Recapture amount*—(i) *In general.* If a recapture event has occurred as described in paragraph (c)(3)(ii) of this section and the taxpayer fails to make the correction and penalty payments described in § 1.45–7(c)(1) within 180 days after the date of a final determination by the IRS, the tax under chapter 1 of the Code for the taxable year in which the recapture event occurs is increased by the applicable recapture percentage multiplied by the increased credit amount that was claimed by the taxpayer under paragraph (b)(3) of this section.

(ii) *Applicable recapture percentage.* If the recapture event occurs:

(A) Within one full year after the property is placed in service, the recapture percentage is 100;

(B) Within one full year after the close of the period described in paragraph (c)(4)(ii)(A) of this section, the recapture percentage is 80;

(C) Within one full year after the close of the period described in paragraph (c)(4)(ii)(B) of this section, the recapture percentage is 60;

(D) Within one full year after the close of the period described in paragraph (c)(4)(ii)(C) of this section, the recapture percentage is 40;

(E) Within one full year after the close of the period described in paragraph (c)(4)(ii)(D) of this section, the recapture percentage is 20.

(5) *Recapture period.* The five-year recapture period begins on the date the project is placed in service and ends on the date that is five full years after the placed-in-service date. Each 365-day period (366-day period in case of a leap year) within the five-year recapture period is a separate recapture year for recapture purposes.

(6) *Increase in tax for recapture.* The increase in tax under chapter 1 of the Code for the recapture of an increased credit amount claimed under paragraph (b)(3) occurs in the year of the recapture event.

(7) *Annual prevailing wage compliance report.* In addition to the general reporting requirements in § 1.45–12, a taxpayer that has claimed an increased credit amount under paragraph (b)(3) of this section or transferred a specified credit portion under section 6418 of the Code that includes an increased credit amount under paragraph (b)(3) of this section is required to provide to the IRS, information on the payment of prevailing wages with respect to any alteration or repair of the project during the recapture period at the time and in the form and manner prescribed in IRS forms or instructions or in publications or guidance published in the Internal Revenue Bulletin. *See* § 601.601 of this chapter.

(8) *Transferred specified credit portions.* In the case of a transferred specified credit portion under section 6418, to which recapture of an increased credit amount under this paragraph (c) applies, the eligible taxpayer is required to notify the transferee taxpayer of the recapture event in accordance with the provisions of § 1.6418–5(f)(2) and the transferee taxpayer is responsible for any amount of increase in tax under section 48(a)(10)(C) of the Code and this paragraph (c) in accordance with the provisions of § 1.6418–5(f)(3).

(9) *Coordination with recapture rules under section 50(a).* If any increased credit amount was recaptured with respect to investment credit property in a prior year under section 48(a)(10)(C) of the Code and this paragraph (c), then, such increased credit amount is not included in determining the aggregate decrease in the credits allowed under section 38 of the Code for all prior taxable years which would have resulted solely from reducing to zero the credit determined under subparts D and E of part IV of subchapter A of chapter 1 of the Code (that is, sections 38–50 of the Code) with respect to the property.

(d) *Energy project defined*—(1) *In general.* For purposes of the increased credit amount provided by section 48(a)(9) of the Code and paragraphs (b) and (c) of this section, the domestic content bonus credit amount provided by section 48(a)(12) of the Code, and the increase in credit rate for energy communities provided in section 48(a)(14) of the Code, the term *energy project* means one or more energy properties (multiple energy properties) that are operated as part of a single energy project. Multiple energy properties will be treated as one energy project if, at any point during the construction of the multiple energy properties, they are owned by a single taxpayer (subject to the related taxpayer rule provided in paragraph (d)(2) of this section) and any two or more of the following factors are present:

(i) The energy properties are constructed on contiguous pieces of land;

(ii) The energy properties are described in a common power purchase, thermal energy, or other off-take agreement or agreements;

(iii) The energy properties have a common intertie;

(iv) The energy properties share a common substation, or thermal energy off-take point;

(v) The energy properties are described in one or more common environmental or other regulatory permits;

(vi) The energy properties are constructed pursuant to a single master construction contract; or

(vii) The construction of the energy properties are financed pursuant to the same loan agreement.

(2) *Related taxpayers*—(i) *Definition.* For purposes of this section, the term *related taxpayers* means members of a group of trades or businesses that are under common control (as defined in § 1.52–1(b)).

(ii) *Related taxpayer rule.* For purposes of this section, related taxpayers are treated as one taxpayer in determining whether multiple energy properties are treated as an energy project with respect to which a section 48 credit may be determined.

(3) *Consistent treatment as an energy project.* If multiple energy properties are treated as a single energy project for beginning of construction purposes with respect to the section 48 credit, the multiple energy properties will also be treated as a single energy project for purposes of the prevailing wage and apprenticeship requirements, the domestic content bonus credit amount, and the increase in section 48 credit rate for energy communities.

(e) *Nameplate capacity for purposes of the One-Megawatt Exception.* For purposes of paragraph (b)(1) of this section, the determination of whether an energy project has a maximum net output of less than 1 MW of electrical (as measured in alternating current) or thermal energy is determined based on the nameplate capacity. Where applicable, taxpayers should use the International Standard Organization (ISO) conditions to measure the maximum electrical generating output or usable energy capacity of an energy project. Paragraphs (e)(1) through (5) of this section provide rules for applying the One-Megawatt Exception (as provided in paragraph (b)(1) of this section) to different types of energy properties. Because electrochromic glass

property (as defined in § 1.48–9(e)(2)(ii)), fiber-optic solar energy property (as defined in § 1.48–9(e)(2)(i)), and microgrid controllers (as defined in § 1.48–9(e)(12)) do not generate electricity or thermal energy, these energy properties are not eligible for the One-Megawatt Exception.

(1) *Electrical generating energy property.* In the case of an electrical generating energy property, the maximum electrical generating output in MW that the unit of energy property is capable of producing on a steady state basis and during continuous operation under standard conditions, as measured by the manufacturer and consistent with the definition of nameplate capacity provided in 40 CFR 96.202.

(2) *Electrical energy storage property.* In the case of electrical energy storage property (as defined in § 1.48–9(e)(10)(ii)), the storage device's maximum net output.

(3) *Thermal energy storage property and other property generating thermal energy.* In the case of thermal energy storage property (as defined in § 1.48–9(e)(10)(iii)) and other energy property that generates thermal energy for productive use (for example, direct geothermal use, geothermal heat pumps, solar process heating), a taxpayer must use the equivalent of 3.4 million British Thermal Units per hour (mmBtu/hour) for heating and 284 tons for cooling can be used to determine if the thermal storage property satisfies the One-Megawatt Exception (Btu per hour/3,412,140 = MW). For projects delivering thermal energy to a building or buildings, this can be assessed as either the aggregate maximum thermal output of all individual heating or cooling elements within the building or buildings, or as the maximum thermal output that the entire project is capable of delivering to a building or buildings at any given moment.

(4) *Hydrogen energy storage property and specified clean hydrogen production facilities.* A hydrogen energy storage property (as defined in § 1.48–9(e)(10)(iv)) or a specified clean hydrogen production facility (as defined in section 48(a)(15)(C) of the Code) must have a maximum net output of less than 3.4 mmBtu/hour of hydrogen or equivalently 10,500 standard cubic feet (scf) per hour of hydrogen to satisfy the One-Megawatt Exception.

(5) *Qualified biogas property.* In the case of qualified biogas property, 3.4 mmBtu/hour can be used as equivalent to the One-Megawatt Exception. Taxpayers may convert the maximum net output of 3.4 mmBtu/hour into an equivalent maximum net volume flow in scf per hour using the appropriate high heat value conversion factors found in the EPA GHGRR at table C–1 to subpart C of part 98 (40 CFR part 98). Otherwise, taxpayers may calculate their own equivalent volumetric flow if the heat content of the gas is known.

(f) *Applicability date*—(1) *In general.* Except as provided in paragraph (f)(2) of this section, this section applies to projects placed in service in taxable years ending on or after the date final regulations are published in the **Federal Register**, and the construction of which begins after the date final regulations are published in the **Federal Register**.

(2) *Exception.* Paragraph (d) of this section applies to energy projects the construction of which begins after November 22, 2023.

■ **Par. 4.** Section 1.48–14 is added to read as follows:

§ 1.48–14 Rules applicable to energy property.

(a) *Retrofitted energy property*—(1) *In general.* For purposes of section 48(a)(3)(B)(ii), (a)(5)(D)(iv), and (a)(8)(B)(iii) of the Internal Revenue Code (Code), a retrofitted energy property may be originally placed in service even though it contains some used components of the unit of energy property only if the fair market value of the used components of the unit of energy property is not more than 20 percent of the total value of the unit of energy property taking into account the cost of the new components of property plus the value of the used components of the unit of energy property (80/20 Rule). Only expenditures paid or incurred that relate to the new components of the unit of energy property are taken into account for purposes of computing the energy credit determined under section 48 (section 48 credit) with respect to the unit of energy property. The cost of new components of the unit of energy property includes all costs properly included in the depreciable basis of the new components. If the taxpayer satisfies the 80/20 Rule with regard to the unit of energy property and the taxpayer pays or incurs new costs for property that is an integral part of the energy property (as defined in § 1.48–9(f)(3)(i)), the taxpayer may include the new costs paid or incurred for property that is an integral part of the energy property (as defined in § 1.48–9(f)(3)(i)) in the basis of the energy property for purpose of the section 48 energy credit. Further, in the case of an energy project (as defined in § 1.48–13(d)), the 80/20 Rule is applied to each unit of energy property comprising an energy project.

(2) *Excluded costs.* Costs incurred for new components of property added to used components of a unit of energy property may not be taken into account for purposes of the section 48 credit unless the taxpayer satisfies the 80/20 Rule (as provided in paragraph (a)(1) of this section) by placing into service a unit of energy property for which the fair market value of the used components of property is not more than 20 percent of the total value of the unit of energy property taking into account the cost of the new components of property plus the value of the used components of property.

(3) *Examples.* This paragraph (a)(3) provides examples illustrating the provisions of this paragraph (a):

(i) *Example 1. Retrofitted solar energy property that satisfies the 80/20 Rule.* Z owns an existing solar energy property for which the section 48 credit has been claimed and the recapture period for the section 48 credit has elapsed. Z replaces used components of the solar energy property with new components of property at a cost of $1.4 million. The retrofitted solar energy property constitutes a unit of energy property. The fair market value of the remaining original components of the retrofitted solar energy property is $100,000, which is not more than 20% of the retrofitted solar energy property's total value of $1.5 million (the cost of the new components ($1.4 million) + the value of the remaining original components ($100,000)). The value of the old components of the retrofitted solar energy property is $100,000/$1.5 million (7% of the value of total value of the retrofitted solar energy property), thus the retrofitted solar energy property will be considered newly placed in service for purposes of section 48, and Z will be able to claim a section 48 credit based on the cost of the new components ($1.4 million).

(ii) *Example 2. Capital improvements to an existing energy property that do not satisfy the 80/20 Rule.* X owns an existing unit of energy property for which the section 48 credit has been claimed and the recapture period for the section 48 credit has elapsed. The fair market value of the unit of energy property is $1 million. During the tax year, X makes capital improvements to the unit of energy property. The expenditures for such capital improvements total $300,000. X may not claim a section 48 credit for the $300,000 spent on capital improvements during the tax year because the capital improvements did not satisfy the 80/20 Rule.

(b) *Dual use property*—(1) *Definition.* For purposes of section 48, the term *dual use property* means property that uses energy derived from both a

qualifying source (that is, from an energy property defined in § 1.48–9(a) (including a qualified facility for which an election has been made as provided by paragraph (f)(1) of this section)) and from a non-qualifying source (that is, sources other than an energy property defined in § 1.48–9(a) (including a qualified facility for which an election has been made as provided by paragraph (f)(1) of this section)).

(2) *Qualification as energy property*—(i) *In general.* If dual use property meets each of the requirements of this paragraph (b), it will qualify as energy property if its use of energy from non-qualifying sources does not exceed 50 percent of its total energy input (as determined under the rules of paragraph (b)(2)(ii) of this section) during an annual measuring period (as defined in paragraph (b)(2)(iii) of this section). If the energy used from qualifying sources is between 50 percent and 100 percent, only a proportionate amount of the eligible basis of the energy property will be taken into account in computing the amount of the section 48 credit (for example, if 80 percent of the energy used by a dual use property is from qualifying sources, 80 percent of the basis of the dual use property will be taken into account in computing the amount of the section 48 credit).

(ii) *Aggregation of energy inputs.* The measurement of energy use required for purposes of paragraph (b)(2)(i) of this section may be made by comparing, on the basis of British thermal units (Btus), energy input to dual use property from all qualifying sources with energy input from all non-qualifying sources. The Commissioner may also accept any other method that accurately establishes the relative annual use of energy derived from all qualifying sources and of energy input from all non-qualifying sources by dual use property.

(iii) *Annual measuring period.* For purposes of paragraph (b)(2)(i) of this section, the term *annual measuring period* means with respect to an item of dual use property the 365-day period (366-day period in case of a leap year) beginning with the day the dual use property is placed in service or a 365-day period (366-day period in case of a leap year) beginning the day after the last day of the immediately preceding annual measuring period.

(iv) *Recapture.* If, for a taxable year (within the recapture period specified in section 50(a) of the Code) subsequent to the taxable year that a dual use property was placed in service, the equipment's use of energy from all qualifying sources is reduced below 50 percent of its total energy input (as determined under the rules of paragraph (b)(2)(i) of this section), then recapture of the section 48 credit is required under section 50(a).

(c) *Energy property eligible for multiple Federal income tax credits*—(1) *In general.* For purposes of this section, the basis of energy property may be eligible for calculating both the section 48 credit and another Federal income tax credit, subject to the limitation provided in paragraph (c)(2) of this section.

(2) *Limitation.* A taxpayer that owns energy property that is eligible for both the section 48 credit and another Federal income tax credit is eligible for the section 48 credit only to the extent the other Federal income tax credit was not claimed with respect to the taxpayer's eligible basis in the energy property. Except as provided in paragraph (f)(2) of this section, in no event may a taxpayer claim both a section 48 credit and another Federal income tax credit with respect to the same eligible basis in an energy property. See paragraph (e) of this section for special rules regarding ownership of energy property.

(d) *Incremental cost*—(1) *In general.* For purposes of this section, only the incremental cost of energy property is included in the eligible basis of the energy property. The term *incremental cost* means the excess of the total cost of energy property over the amount that would have been expended for the energy property if the energy property were not used for a qualifying purpose.

(2) *Example.* A installs solar energy property above the surface of an existing roof of a building that A owns. The solar energy property uses bifacial panels that convert to energy the light that strikes both the front and back of the panels if installed over a highly reflective surface that is affixed to a roof (reflective roof). The cost of the reflective roof is $15,000 whereas the cost of a standard roof for the building would be $10,000. The reflective roof does not include the portions of the existing roof that will be replaced, and any features of the roof not directly related to establishing, improving, and maintaining the efficiency of the reflective roof. Accordingly, the reflective roof, if installed in connection with the solar energy property, constitutes energy property under section 48. The incremental cost of the reflective roof is $5,000, and that amount is A's eligible basis in the solar energy property for purposes of the section 48 credit.

(e) *Special rules concerning ownership*—(1) *Eligible basis.* For purposes of this section, a taxpayer that owns an energy property is eligible for the section 48 credit only to the extent of the taxpayer's eligible basis in the energy property. In the case of multiple taxpayers holding direct ownership in an energy property, each taxpayer determines its eligible basis based on its fractional ownership interest in the energy property.

(2) *Multiple owners.* A taxpayer must directly own at least a fractional interest in the entire unit of energy property for a section 48 credit to be determined with respect to such taxpayer's interest. No section 48 credit may be determined with respect to a taxpayer's ownership of one or more separate components of an energy property if the components do not constitute a unit of energy property. However, the use of property owned by one taxpayer that is an integral part of an energy property owned by a second taxpayer will not prevent a section 48 credit from being determined with respect to the second taxpayer's energy property.

(3) *Related taxpayers*—(i) *Definition.* For purposes of this section, the term *related taxpayers* means members of a group of trades or businesses that are under common control (as defined in § 1.52–1(b)).

(ii) *Related taxpayer rule.* For purposes of this section, related taxpayers are treated as one taxpayer in determining whether a taxpayer has made an investment in an energy property with respect to which a section 48 credit may be determined.

(4) *Examples.* The following examples illustrate the rules in this paragraph (e). In each example, X and Y are unrelated taxpayers.

(i) *Example 1. Fractional ownership required to satisfy section 48.* X and Y own fractional ownership interests in a geothermal heat pump equipment that is a unit of energy property. Because X and Y each own a fractional ownership interest in a unit of energy property, a section 48 credit may be determined with respect to X's and Y's fractional ownership interests in the unit of energy property.

(ii) *Example 2. Ownership of separate components.* X and Y own separate components of a geothermal heat pump equipment, which taken together is a unit of energy property. X owns the coils in the ground and Y owns the heat pump. No section 48 credit may be determined with respect to either X or Y because each owns a separate component of energy property that does not constitute a unit of energy property as defined in § 1.48–9(f)(2).

(iii) *Example 3. Shared ownership of property that is an integral part of separate energy properties.* X owns a wind energy property that is a unit of energy property and Y owns a solar energy property that is a unit of energy

property that are co-located. Both X's wind energy property and Y's solar energy property connect to a substation that houses a step-up transformer where the electricity is stepped up to electrical grid voltage before being transmitted to the electrical grid through an intertie. X and Y each own a 50% fractional ownership interest in the step-up transformer. The step-up transformer is an integral part of both the wind energy property and the solar energy property (as defined in § 1.48–9(f)(3)(i). As a result, X and Y may both compute a section 48 credit for their respective energy properties by including 50% of the costs of the step-up transformer.

(iv) *Example 4. Separate ownership of property that is an integral part of separate energy property.* X owns a wind energy property that is a unit of energy property and property that is an integral part of the wind energy property, specifically a transformer where the electricity is stepped up to electrical grid voltage before being transmitted to the electrical grid through an intertie. Y owns a solar energy property that is a unit of energy property that connects to X's transformer. Because Y does not hold an ownership interest in the transformer, Y may compute its section 48 credit for its solar energy property but it will not include any costs relating to the transformer.

(f) *Coordination with other Code provisions.* Paragraphs (f)(1) through (7) of this section provide rules applicable to the election under section 48(a)(5)(C) to treat certain facilities as energy property eligible for a section 48 credit in lieu of a renewable electricity production credit under section 45 of the Code (section 45 credit). Paragraph (f)(8) of this section provides a coordination rule for property with respect to which both a section 48 credit and a low-income housing credit under section 42 of the Code (section 42 credit) may be determined.

(1) *Election to treat qualified facilities as energy property.* If a taxpayer makes an election under section 48(a)(5)(C) of the Code (pursuant to the requirements in paragraph (f)(6) of this section) to treat qualified property (as defined in paragraph (f)(2) of this section) that is part of a qualified investment credit facility (as defined in paragraph (f)(4) of this section) as energy property with respect to which a section 48 credit may be determined, such property will be treated as energy property for purposes of section 48. No section 45 credit may be determined with respect to any such qualified investment credit facility and the requirements of section 45 are not imposed on a qualified investment credit facility. No credit under sections 45Q or 45V of the Code may be determined with respect to either any carbon capture equipment included in a qualified investment credit facility or any specified clean hydrogen production facility.

(2) *Qualified property.* For purposes of this paragraph (f), the term *qualified property* means property that meets each of the requirements of paragraphs (f)(2)(i) through (iii) of this section:

(i) The property is tangible personal property (as defined in paragraph (f)(3)(i) of this section) or other tangible property (not including a building or its structural components) (as defined in paragraph (f)(3)(ii) of this section), but only if such other tangible property is used as an integral part (as defined paragraph (f)(3)(iii) of this section) of the qualified investment credit facility (as defined in paragraph (f)(4) of this section).

(ii) Depreciation (or amortization in lieu of depreciation) is allowable (as defined in § 1.48–9(b)(4)) with respect to the property.

(iii) The taxpayer constructs, reconstructs, or erects the property (as defined in § 1.48–9(b)(1)) or acquires the property (as defined in § 1.48–9(b)(2)) if the original use of the property (as defined in § 1.48–9(b)(3)) commences with the taxpayer.

(3) *Definitions related to requirements for qualified property.* For purposes of section 48 of the Code and this paragraph (f), the definitions of this paragraph (f)(3) apply:

(i) *Tangible personal property.* The term *tangible personal property* means any tangible property except land and improvements thereto, such as buildings or other inherently permanent structures (including items that are structural components of such buildings or structures). Tangible personal property includes all property (other than structural components) that is contained in or attached to a building. Further, all property that is in the nature of machinery (other than structural components of a building or other inherently permanent structure) is considered tangible personal property even though located outside a building. Local law is not controlling for purposes of determining whether property is or is not tangible property or tangible personal property. Thus, tangible property may be personal property for purposes of the energy credit even though under local law the property is considered to be a fixture and therefore real property.

(ii) *Other tangible property.* The term *other tangible property* means tangible property other than tangible personal property (not including a building and its structural components), that is used as an integral part of furnishing electrical energy by a person engaged in a trade or business of furnishing any such service.

(iii) *Integral part*—(A) *In general.* Property owned by a taxpayer is an integral part of a qualified investment credit facility owned by the same taxpayer if it is used directly in the intended function of the qualified investment credit facility and is essential to the completeness of the intended function of the qualified investment credit facility. A taxpayer may not claim the section 48 credit for any property that is an integral part of the taxpayer's qualified investment credit facility that is not owned by the taxpayer.

(B) *Power conditioning and transfer equipment.* Property that is an integral part of a qualified investment credit facility includes power conditioning equipment and transfer equipment used to perform the intended function of the qualified investment credit facility. Power conditioning equipment includes, but is not limited to, transformers, inverters, and converters, which modify the characteristics of electricity or thermal energy into a form suitable for use or transmission or distribution. Parts related to the functioning or protection of power conditioning equipment are also treated as power conditioning equipment and include, but are not limited to, switches, circuit breakers, arrestors, and hardware and software used to monitor, operate, and protect power conditioning equipment. Transfer equipment includes equipment that permits the aggregation of energy generated by components of energy properties and equipment that alters voltage in order to permit transfer to a transmission or distribution line. Transfer equipment does not include transmission or distribution lines. Examples of transfer equipment include, but are not limited to, wires, cables, and combiner boxes that conduct electricity. Parts related to the functioning or protection of transfer equipment are also treated as transfer equipment and may include items such as current transformers used for metering, electrical interrupters (such as circuit breakers, fuses, and other switches), and hardware and software used to monitor, operate, and protect transfer equipment.

(C) *Roads.* Roads that are an integral part of a qualified investment credit facility are integral to the activity performed by the qualified investment credit facility; these include onsite roads that are used for equipment to

operate and maintain the qualified investment credit facility. Roads primarily for access to the site, or roads used primarily for employee or visitor vehicles, are not integral to the activity performed by a qualified investment credit facility.

(D) *Fences.* Fencing is not an integral part of an energy property because it is not integral to the activity performed by the energy property.

(E) *Buildings.* Generally, buildings are not integral parts of a qualified investment credit facility because they are not integral to the activity of the qualified investment credit facility. However, the following structures are not treated as buildings for this purpose:

(*1*) A structure that is essentially an item of machinery or equipment.

(*2*) A structure that houses property that is integral to the activity of a qualified investment credit facility if the use of the structure is so closely related to the use of the housed qualified investment credit facility that the structure clearly can be expected to be replaced when the qualified investment credit facility it initially houses is replaced.

(4) *Qualified investment credit facility.* The term *qualified investment credit facility* means any facility—

(i) That is a qualified facility (within the meaning of section 45) described in section 45(d)(1) through (4), (6), (7), (9) or (11) of the Code;

(ii) That meets the placed in service and beginning of construction requirements (if any) provided in section 48 of the Code;

(iii) With respect to which no credit has been allowed under section 45 of the Code; and

(iv) For which the taxpayer makes an irrevocable election under section 48(a)(5) of the Code and paragraph (f)(1) of this section.

(5) *Intangibles excluded.* Intangible property is not qualified property for purposes of section 48(a)(5)(D) of the Code and paragraph (f) of this section.

(6) *Time and manner of making election*—(i) *In general.* To make an election under section 48(a)(5) of the Code and paragraph (f)(1) of this section to treat a qualified facility as a qualified investment credit facility, a taxpayer must claim the section 48 credit with respect to such qualified investment credit facility on a completed Form 3468, *Investment Credit,* or any successor form(s), and file such form with the taxpayer's timely filed (including extensions) Federal income tax return for the taxable year in which the qualified investment credit facility is placed in service. The taxpayer must also attach a statement to its Form 3468, or any successor forms(s), filed with its timely filed Federal income tax return (including extensions) that includes all of the information required by the instructions to Form 3468, or any successor form(s) for each qualified investment credit facility subject to an election under section 48(a)(5) and paragraph (f)(1) of this section. A separate election must be made for each qualified facility that meets the requirements provided in paragraph (f)(2) of this section to be treated as a qualified investment credit facility. If any taxpayer owning an interest in a qualified facility makes an election with respect to such qualified facility, that election is binding on all taxpayers that directly or indirectly own an interest in the qualified facility.

(ii) *Special rule for partnerships and S corporations.* In the case of a qualified facility owned by a partnership or an S corporation, the election under paragraph (f)(1) of this section is made by the partnership or S corporation and is binding on all ultimate section 48 credit claimants (as defined in § 1.50–1(b)(3)(ii)). The partnership or S corporation must file a Form 3468, or any successor forms(s), with its timely filed partnership or S corporation return (including extensions) with respect to Federal income tax for the taxable year in which the qualified investment credit facility is placed in service to indicate that it is making the election and attach a statement that includes all of the information required by the instructions to Form 3468, or any successor form(s) for each qualified facility subject to the election. The ultimate credit claimants must claim the section 48 credit on a completed Form 3468, or any successor form(s), and file such form with a timely filed (including extensions) Federal income tax return for the taxable year that ends with or within the taxable year in which the partnership or S corporation made the election. The partnership or S corporation making the election must provide the ultimate credit claimants with the necessary information to complete Form 3468, or any successor form(s), to claim the energy credit.

(7) *Election irrevocable.* The election under section 48(a)(5) of the Code and paragraph (f)(1) of this section to treat a qualified facility as an energy property is irrevocable.

(8) *Coordination rule for sections 42 and 48 credits.* As provided under section 50(c)(3)(C) of the Code, in the case of a taxpayer determining eligible basis for purposes of calculating a section 42 credit, a taxpayer is not required to reduce its basis in an energy property by the amount of the section 48 credit determined with respect to the property. The basis of an energy property may be used to determine a section 48 credit and may also be included in eligible basis when determining a section 42 credit. See paragraph (e) of this section for special rules regarding ownership of energy property.

(g) *Rules for certain lower-output energy properties to include qualified interconnection costs in the basis of associated energy property*—(1) *In general.* For purposes of determining the section 48 credit, energy property includes amounts paid or incurred by the taxpayer for qualified interconnection property (as defined in paragraph (g)(2) of this section), in connection with the installation of energy property (as defined in § 1.48–9(a)) that has a maximum net output of not greater than 5 MW (as measured in alternating current) (as described in paragraph (g)(3) of this section). The qualified interconnection property must provide for the transmission or distribution of the electricity produced or stored by such energy property and must be properly chargeable to the capital account of the taxpayer as reduced by paragraph (g)(6) of this section.

(2) *Qualified interconnection property.* The term *qualified interconnection property* means, with respect to an energy project that is not a microgrid controller, any tangible property that is part of an addition, modification, or upgrade to a transmission or distribution system that is required at or beyond the point at which the energy project interconnects to such transmission or distribution system in order to accommodate such interconnection; is either constructed, reconstructed, or erected by the taxpayer, (as defined in § 1.48–9(b)(1)), or for which the cost with respect to the construction, reconstruction, or erection of such property is paid or incurred by such taxpayer; and the original use (as defined in § 1.48–9(b)(3)), of which, pursuant to an interconnection agreement (as defined in paragraph (g)(4) of this section), commences with a utility (as defined in paragraph (g)(5) of this section). Qualified interconnection property is not part of an energy property. As a result, qualified interconnection property is not taken into account in determining whether an energy property satisfies the requirements for the domestic content bonus credit amount referenced in section 48(a)(12) of the Code and the increase in credit rate for energy communities provided in section 48(a)(14) of the Code.

(3) *Five-Megawatt Limitation*—(i) *In general.* The Five-Megawatt Limitation is measured at the level of the energy property in accordance with section 48(a)(8)(A) of the Code. The maximum net output of an energy property is measured only by nameplate generating capacity of the unit of energy property at the time the energy property is placed in service.

(ii) *Nameplate capacity for purposes of the Five-Megawatt Limitation.* The determination of whether an energy property has a maximum net output of not greater than 5 MW (as measured in alternating current) is based on the nameplate capacity for purposes of paragraph (g)(1) of this section. Where applicable, taxpayers should use the International Standard Organization (ISO) conditions to measure the maximum electrical generating output or usable energy capacity of an energy property. Paragraphs (g)(3)(i)(A) and (B) of this section, provide rules for applying the Five-Megawatt Limitation (as provided in paragraph (g)(1) of this section) to electrical generating energy property and electrical energy storage property, respectively.

(A) *Electrical generating energy property.* In the case of an electrical generating energy property, the maximum electrical generating output in MW that the unit of energy property is capable of producing on a steady state basis and during continuous operation under standard conditions, as measured by the manufacturer and consistent with the definition of nameplate capacity provided in 40 CFR 96.202.

(B) *Electrical energy storage property.* In the case of electrical energy storage property (as defined in § 1.48–9(e)(10)(ii)), the storage device's maximum net output is its nameplate capacity.

(4) *Interconnection agreement.* The term *interconnection agreement* means an agreement with a utility for the purposes of interconnecting the energy property owned by such taxpayer to the transmission or distribution system of the utility.

(5) *Utility.* For purposes of section 48(a)(8) of the Code and this paragraph (g), the term *utility* means the owner or operator of an electrical transmission or distribution system that is subject to the regulatory authority of a State or political subdivision thereof, any agency or instrumentality of the United States, a public service or public utility commission or other similar body of any State or political subdivision thereof, or the governing or ratemaking body of an electric cooperative.

(6) *Reduction to amounts chargeable to capital account.* In the case of expenses paid or incurred for qualified interconnection property as defined in paragraph (g)(2) of this section, amounts otherwise chargeable to capital account with respect to such expenses must be reduced under rules similar to the rules of section 50(c) of the Code. In addition, the taxpayer must pay or incur the interconnection property costs; therefore, any reimbursement, including by a utility, must be accounted for by reducing taxpayers' expenditure when determining eligible costs.

(7) *Examples.* This subparagraph provides examples illustrating the application of the Five-Megawatt Limitation provided in this paragraph (g).

(i) *Example 1. Application of Five-Megawatt Limitation to an interconnection agreement for energy properties owned by separate taxpayers.* X places in service a solar energy property (Solar Property) with a maximum net output of 5 MW (as measured in alternating current). Y places in service a qualified wind facility (Wind Facility), for which Y has made a valid election under section 48(a)(5) of the Code to elect the section 48 credit in lieu of the section 45 credit, with a maximum net output of 5 MW (as measured in alternating current). The Solar Property and the Wind Facility are separate units of energy property installed on contiguous pieces of land and connect to the grid through a common intertie. As part of the development of the Solar Property and Wind Facility, interconnection costs are required by the utility to modify and upgrade the transmission system at or beyond the common intertie to the utility's transmission system to accommodate such interconnection. X and Y are party to the same interconnection agreement with the utility that allows for a maximum output of 10 MW (as measured in alternating current). The interconnection agreement provides the total cost of the qualified interconnection property. X and Y may include the costs paid or incurred by X and Y, respectively, for qualified interconnection property subject to the terms of the interconnection agreement, when calculating their respective section 48 credits for the Solar Property and the Wind Facility because each has a maximum net output of not greater than 5 MW.

(ii) *Example 2. Application of Five-Megawatt Limitation to an interconnection agreement for a single energy property.* X develops three solar energy properties located in close proximity. The three solar energy properties are not considered an energy project pursuant to the definition in § 1.48–13(d). Each of the solar energy properties is a unit of energy property and has a maximum net output of 4 MW (as measured in alternating current). Electricity that is suitable for use or transmission (and is not further conditioned) from the three solar energy properties feeds into a single gen-tie line and a common intertie. X is party to a separate interconnection agreement with the utility for each solar energy property and each interconnection agreement allows for a maximum output of 4 MW (as measured in alternating current). X may include the costs it paid or incurred for qualified interconnection property for each solar energy property when calculating its section 48 credit for each of the three solar energy properties, subject to the terms of each interconnection agreement, because each of the solar energy properties has a maximum net output of not greater than 5 MW.

(iii) *Example 3. Application of Five-Megawatt Limitation to a single interconnection agreement for multiple energy properties.* The facts are the same as Example 2, except that X is party to one interconnection agreement with the utility with respect to the three solar energy properties and the interconnection agreement allows for a maximum output of 12 MW (as measured in alternating current). With respect to each of the three solar energy properties, X may include the costs it paid or incurred for qualified interconnection property for each solar energy property when calculating its section 48 credit for each of the three solar energy properties, subject to the terms of the interconnection agreement, because each of the solar energy properties has a maximum net output of not greater than 5 MW.

(iv) *Example 4. Application of Five-Megawatt Limitation to an Energy Project.* The facts are the same as Example 3, except that the three solar energy properties are also subject to a common power purchase agreement and as a result, are considered an energy project (as defined in § 1.48–13(d)). With respect to each of the three solar energy properties, X may include the costs it paid or incurred for qualified interconnection property when calculating its section 48 credit for each of the three solar energy properties, subject to the terms of the interconnection agreement, because each of the solar energy properties has a maximum net output of no greater than 5 MW.

(h) *Cross references.* (1) For rules regarding the coordination of the section

42 credit and section 48 credit, see section 50(c)(3) of the Code.

(2) For rules regarding the denial of double benefit for qualified biogas property, see section 45(e) of the Code.

(3) To determine applicable recapture rules, see section 50(a) of the Code.

(4) For rules regarding the credit eligibility of property used outside the United States, see section 50(b)(1) of the Code.

(5) For rules regarding the credit eligibility of property used by certain tax-exempt organizations, see section 50(b)(3) of the Code. See section 6417(d)(2) of the Code for an exception to this rule in the case of an applicable entity making an elective payment election.

(6) For application of the normalization rules to the section 48 credit when taken by certain regulated companies, including rules regarding the election not to apply the normalization rules to energy storage technology (as defined in section 48(c)(6) of the Code), see section 50(d)(2) of the Code.

(i) *Applicability date.* This section applies with respect to property placed in service after December 31, 2022, and during a taxable year beginning after [DATE OF PUBLICATION OF FINAL RULE].

■ **Par. 5.** Section 1.6418–5, as proposed to be added at 88 FR 40496, June 21, 2023, is amended by:

■ 1. Redesignating paragraphs (f) through (h) as paragraphs (g) through (i).

■ 2. Adding new paragraph (f).

The addition reads as follows:

§ 1.6418–5 Special rules.

* * * * *

(f) *Notification and impact of recapture under section 48(a)(10)(C) of the Code*—(1) *In general.* In the case of any election under § 1.6418–2 or § 1.6418–3 with respect to any specified credit portion described in § 1.6418–1(c)(2)(iii), if, during any taxable year, there is recapture under section 48(a)(10)(C) of the Code and § 1.48–13(c)(3) of any increased credit amount under section 48(a)(9)(B)(iii) before the close of the recapture period (as described in § 1.48–13(c)(3)(E)), such eligible taxpayer and the transferee taxpayer must follow the notification process in paragraph (f)(2) of this section with recapture impacting the transferee taxpayer as described in paragraph (f)(3) of this section.

(2) *Notification requirements.* The notification requirements for the eligible taxpayer are the same as for an eligible taxpayer that must report a recapture event as described in paragraph (d)(2)(i) of this section, except that the recapture amount that must be computed is defined in § 1.48–13(c)(3)(D).

(3) *Impact of recapture.* The transferee taxpayer is responsible for any amount of tax increase under section 48(a)(10)(C) of the Code and § 1.48–13(c)(3) upon the occurrence of a recapture event under § 1.48–13(c)(3)(B).

(4) *Applicability date.* This section applies to taxable years ending on or after [DATE OF PUBLICATION OF FINAL RULE].
