FEDERAL REGISTER

Vol. 88 Wednesday,

No. 224 November 22, 2023

Pages 81337–82224

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 88 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Presidential Documents

Title 3—

The President

Proclamation 10675 of November 17, 2023

National Family Week, 2023

By the President of the United States of America

A Proclamation

My father always said that family is the beginning, the middle, and the end. Family is everything. During National Family Week, we celebrate the love, support, and resilience of the tens of millions of American families that make our Nation strong and keep the American Dream alive.

For too long, too many families in this country have lived with the prospect of an uncertain future. Too many parents have lain awake at night staring at the ceiling, wondering how they will make rent, send their kids to college, retire, or pay for medication. Too many have had to move far away from their hometowns to earn a living. I ran for President to change all that—to finally rebuild a strong middle class and grow our economy from the middle out and bottom up, giving hardworking families across the country a little more breathing room.

The historic legislation that we have since enacted is delivering, investing in American families and in America's future. The American Rescue Plan kept millions of families in their homes, food on the table, and folks on the job through the pandemic. Thanks to the Bipartisan Infrastructure Law, over 40,000 projects are currently underway to rebuild our Nation's roads, bridges, and ports, expand access to clean drinking water, and connect every home to high-speed internet. We are also working to revitalize American manufacturing—we have helped create nearly 800,000 manufacturing jobs, and through the CHIPS and Science Act, we are making historic investments across the country. The Inflation Reduction Act has made health care coverage cheaper for nearly 15 million Americans—it is set to cap out-of-pocket prescription drug costs for seniors on Medicare at $2,000 per year, and it has already slashed their insulin costs to $35 per month from as much as $400, helping families pay their monthly bills. Through the PACT Act, we are helping veterans who were exposed to toxic materials while serving get the health care and benefits that they and their families deserve. I am fighting hard to protect children and families from the scourge of gun violence—last year, I signed our Nation's most significant gun safety law in nearly 30 years, strengthening background checks, increasing the effective use of red flag laws, and expanding access to mental health services. I am fighting to ensure that all families have equal rights and dignity. That is why I was so proud to sign the Respect for Marriage Act into law, protecting the right to marriage for same-sex and interracial couples. I also signed an Executive Order that calls for the most comprehensive set of executive actions of any administration in history to increase high-quality child care, long-term care, and support for caregivers, ensuring that families have access to the support they need.

We have more to do to keep building on all of this progress, to make sure that every family in America has an equal shot at a better life of dignity and respect. During National Family Week, we celebrate the importance of spending time with loved ones, both the families that we are born into and the families that we create throughout our lives. Families are an essential part of the glue that holds our Nation together across generations, and we will never stop investing in their dreams.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim November 19 through November 25, 2023, as National Family Week. I invite States, communities, and individuals to join together in observing this week with appropriate ceremonies and activities to honor our Nation's families.

IN WITNESS WHEREOF, I have hereunto set my hand this seventeenth day of November, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

Presidential Documents

Proclamation 10676 of November 17, 2023

National Child's Day, 2023

By the President of the United States of America

A Proclamation

Our Nation's children are the kite strings that keep our national ambitions aloft—they are the dreamers and doers, who will determine the course of our future. From an early age, young people lead the way by volunteering in their communities, modeling compassion and tolerance, and pushing us to address the critical issues of our time like climate change and gun violence. This generation of young people is the most gifted, tolerant, talented, and educated in American history. They are the reason I am so optimistic about the future. On National Child's Day, we recommit to ensuring that every child has the resources and opportunities they need to reach their full potential.

That is why my Administration has invested billions of dollars in America's schools. These funds are putting more teachers in our classrooms, supporting tutoring programs, financing building renovations, replacing lead pipes, and more. Our Bipartisan Infrastructure Law is expanding access to reliable high-speed internet so every student can log on at any time, regardless of their zip code.

We are also prioritizing the health and safety of our children. By expanding the Child Tax Credit, my Administration cut the child poverty rate nearly in half, and I continue to call on the Congress to reinstate this expansion because no child should grow up in poverty. We are also working to lower the cost of health care and expand access to affordable, nutritious meals for millions of families. My Administration released a national strategy to end hunger and reduce diet-related diseases in America by 2030—including advancing a pathway to provide free, healthy school meals for all children. New vaccines are rolling out that protect children against COVID–19, RSV, and the flu, which you can learn more about at www.vaccines.gov. We are also supporting LGBTQI+ children and families by safeguarding access to health care and preventing harmful so-called ''conversion therapy.'' Further, we are working with State child welfare agencies to make sure LGBTQI+ youth are placed in safe and loving homes. To curb the epidemic of gun violence in America—now the leading cause of death of children in the United States—I was proud to sign into law the most significant gun safety legislation in nearly 30 years. This law will save children's lives, but we cannot stop until we finally pass an assault weapons ban.

Mental health is just as important as physical health, which is why I am addressing the youth mental health crisis head-on. My Administration has advanced measures to increase the number of school psychologists and counselors available to our kids and to make it easier for schools to use Medicaid to deliver mental health care, including services under the Individuals with Disabilities Education Act. We also proposed a rule that would require insurers to finally cover mental health care just as they do physical care. Further, we must do more to make the internet a safe place for children. I have called on the Congress to limit the personal data that tech companies collect, ban targeted advertising directed at minors, and strengthen protections that safeguard children's health and safety online.

Finally, all this progress means little if our children do not inherit a healthy planet. That is why I fought so hard to pass the Inflation Reduction Act, a landmark bill that contains the largest investment to tackle climate change in history. The Act will help our children breathe cleaner air and drink cleaner water. It is also creating the jobs of the future so our kids can graduate into a strong clean energy economy.

Every child deserves the opportunity to thrive because when they dream big, our whole Nation is opened to new possibilities. The children of today are the global leaders of tomorrow. That is why this National Child's Day, we recommit to fulfilling the promise of America for every child and building a future worthy of their dreams.

NOW, THEREFORE, I, JOSEPH R. BIDEN JR., President of the United States of America, by virtue of the authority vested in me by the Constitution and the laws of the United States, do hereby proclaim November 20, 2023, as National Child's Day. I call upon all government officials, educators, volunteers, and all the people of the United States of America to observe this day with appropriate programs, ceremonies, and activities.

IN WITNESS WHEREOF, I have hereunto set my hand this seventeenth day of November, in the year of our Lord two thousand twenty-three, and of the Independence of the United States of America the two hundred and forty-eighth.

Rules and Regulations

Federal Register
Vol. 88, No. 224
Wednesday, November 22, 2023

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents.

DEPARTMENT OF HOMELAND SECURITY

8 CFR Part 214

[CIS No. 2764–24]

RIN 1615–AC89

Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers; Correction

AGENCY: U.S. Citizenship and Immigration Services (USCIS), Department of Homeland Security (DHS), and Employment and Training Administration and Wage and Hour Division, U.S. Department of Labor (DOL).

ACTION: Temporary rule; correction and correcting amendment.

SUMMARY: On November 17, 2023, the Department of Homeland Security and Department of Labor jointly published a temporary rule titled ''Exercise of Time-Limited Authority to Increase the Numerical Limitation for FY 2024 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers.'' The temporary rule contains errors that this document corrects.

DATES: Effective November 20, 2023, and applicable beginning November 17, 2023.

FOR FURTHER INFORMATION CONTACT: Charles L. Nimick, Chief, Business and Foreign Workers Division, Office of Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 5900 Capital Gateway Drive, Camp Springs, MD 20746; telephone 240–721–3000 (this is not a toll-free number).

SUPPLEMENTARY INFORMATION: This document corrects two errors contained in the *Exercise of Time-Limited Authority to Increase the Numerical Limitation for FY 2024 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers* temporary final rule published at 88 FR 80394 (Nov. 17, 2023). Specifically, it corrects two incorrect citations published on p. 80457 in 8 CFR 214.2(h)(6)(xiv)(C)(*1*) by removing each instance of ''(h)(6)(xiv)(A)(*1*)(*a*)'' and replacing it each with ''(h)(6)(xiv)(A)(*1*)(*i*)''.

List of Subject in 8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange program, Employment, Foreign officials, Health professions, Reporting and recordkeeping requirements, Students.

Accordingly, 8 CFR part 214 is corrected by making the following correcting amendment:

PART 214—NONIMMIGRANT CLASSES

■ 1. The authority citation for part 214 continues to read as follows:

Authority: 6 U.S.C. 202, 236; 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1221, 1281, 1282, 1301–1305, 1357, and 1372; sec. 643, Pub. L. 104–208, 110 Stat. 3009–708; Pub. L. 106–386, 114 Stat. 1477–1480; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note and 1931 note, respectively; 48 U.S.C. 1806; 8 CFR part 2; Pub. L. 115–218, 132 Stat. 1547 (48 U.S.C. 1806).

■ 2. In 214.2, revise the paragraph (h)(6)(xiv)(C)(*1*) heading and introductory text to read as follows:

§ 214.2 Special requirements for admission, extension, and maintenance of status.

Christina E. McDonald,

Federal Register Liaison, U.S. Department of Homeland Security.

[FR Doc. 2023–25951 Filed 11–20–23; 4:15 pm]

BILLING CODE 9111–97–P

DEFENSE NUCLEAR FACILITIES SAFETY BOARD

10 CFR Part 1710

[Docket No. DNFSB–2023–02]

RIN 3155–AA02

Federal Employee Salary Offset Procedures for the Collection of a Debt Owed to the Federal Government

AGENCY: Defense Nuclear Facilities Safety Board.

ACTION: Final rule.

SUMMARY: This final rule adopts, without change, an interim final rule with a request for comments published in the **Federal Register** on September 19, 2023. The interim final rule created regulations governing the collection of debts owed to the Defense Nuclear Facilities Safety Board (DNFSB) and to the United States by Federal employees.

DATES: Effective November 22, 2023.

FOR FURTHER INFORMATION CONTACT: Patricia A. Hargrave, Associate General Counsel, Defense Nuclear Facilities Safety Board, 625 Indiana Avenue NW, Suite 700, Washington, DC 20004–2901, (202) 694–7000.

SUPPLEMENTARY INFORMATION: On September 19, 2023, (88 FR 64353), the Board published an interim final rule with a request for comments. This rule, which became effective October 19, 2023, implemented the debt collection procedures provided under section 5 of the Debt Collection Act (DCA), as amended, codified at 5 U.S.C. 5514. The DCA authorizes the Federal Government to collect debts by offset from the salaries of Federal employees without the employee's consent, provided that the employee is properly notified and given the opportunity to exercise certain administrative rights.

The Board determined that the regulations were interpretative because they merely implemented a definitive

statutory scheme and the requirements contained in regulations promulgated by OPM, codified in 5 CFR part 550, subpart K. Accordingly, no notice of proposed rulemaking was required pursuant to 5 U.S.C. 553(b)(A). In addition, because this rule related to agency management and personnel, no notice of proposed rulemaking was required pursuant to 5 U.S.C. 553(a)(2). The Board, however, noted that it would consider any public comments, but no comments were received. This is confirmation that the interim rule published September 19, 2023, at 88 FR 64353, is adopted as final without change.

Dated: November 13, 2023.

Joyce Connery,

Chair.

BILLING CODE 3670–01–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA–2023–1804; Project Identifier MCAI–2023–00675–T; Amendment 39–22596; AD 2023–22–12]

RIN 2120–AA64

Airworthiness Directives; Dassault Aviation Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: The FAA is superseding Airworthiness Directive (AD) 2023–04–18, which applied to all Dassault Aviation Model FALCON 2000 airplanes. AD 2023–04–18 required revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. This AD continues to require certain actions in AD 2023–04–18 and requires revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations as specified in a European Union Aviation Safety Agency (EASA) AD, which is incorporated by reference. The FAA is issuing this AD to address the unsafe condition on these products.

DATES: This AD is effective December 27, 2023.

The Director of the Federal Register approved the incorporation by reference of a certain publication listed in this AD as of December 27, 2023.

The Director of the Federal Register approved the incorporation by reference of a certain other publication listed in this AD as of April 18, 2023 (88 FR 15607, March 14, 2023).

ADDRESSES:

AD Docket: You may examine the AD docket at *regulations.gov* under Docket No. FAA–2023–1804; or in person at Docket Operations between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this final rule, the mandatory continuing airworthiness information (MCAI), any comments received, and other information. The address for Docket Operations is U.S. Department of Transportation, Docket Operations, M–30, West Building Ground Floor, Room W12–140, 1200 New Jersey Avenue SE, Washington, DC 20590.

Material Incorporated by Reference:

- For material incorporated by reference in this AD, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find this material on the EASA website at *ad.easa.europa.eu.*
- You may view this material at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195. It is also available in the AD docket at *regulations.gov* under Docket No. FAA–2023–1804.

FOR FURTHER INFORMATION CONTACT: Tom Rodriguez, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3226; email *tom.rodriguez@faa.gov.*

SUPPLEMENTARY INFORMATION:

Background

The FAA issued a notice of proposed rulemaking (NPRM) to amend 14 CFR part 39 to supersede AD 2023–04–18, Amendment 39–22365 (88 FR 15607, March 14, 2023) (AD 2023–04–18). AD 2023–04–18 applied to all Dassault Aviation Model FALCON 2000 airplanes. AD 2023–04–18 required revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations. The FAA issued AD 2023–04–18 to address reduced controllability of the airplane. AD 2023–04–18 specified that accomplishing the revision required by that AD terminates certain requirements of AD 2010–26–05, Amendment 39–16544 (75 FR 79952, December 21, 2010) (AD 2010–26–05) for Model FALCON 2000 airplanes only. This AD therefore continues to allow that terminating action.

The NPRM published in the **Federal Register** on August 30, 2023 (88 FR 59815). The NPRM was prompted by AD 2023–0099, dated May 11, 2023, issued by EASA, which is the Technical Agent for the Member States of the European Union (EASA AD 2023–0099) (also referred to as the MCAI). The MCAI states that new or more restrictive airworthiness limitations have been developed.

In the NPRM, the FAA proposed to continue to require certain actions in AD 2023–04–18 and to require revising the existing maintenance or inspection program, as applicable, to incorporate new or more restrictive airworthiness limitations, as specified in EASA AD 2023–0099. The FAA is issuing this AD to address reduced controllability of the airplane.

You may examine the MCAI in the AD docket at *regulations.gov* under Docket No. FAA–2023–1804.

Discussion of Final Airworthiness Directive

Comments

The FAA received no comments on the NPRM or on the determination of the cost to the public.

Conclusion

This product has been approved by the aviation authority of another country and is approved for operation in the United States. Pursuant to the FAA's bilateral agreement with this State of Design Authority, it has notified the FAA of the unsafe condition described in the MCAI referenced above. The FAA reviewed the relevant data and determined that air safety requires adopting this AD as proposed. Accordingly, the FAA is issuing this AD to address the unsafe condition on this product. Except for minor editorial changes, this AD is adopted as proposed in the NPRM. None of the changes will increase the economic burden on any operator.

Related Service Information Under 1 CFR Part 51

EASA AD 2023–0099 specifies new or more restrictive airworthiness limitations for airplane structures and safe life limits.

This AD also requires EASA AD 2022–0135, dated July 6, 2022, which the Director of the Federal Register approved for incorporation by reference as of April 18, 2023 (88 FR 15607, March 14, 2023).

This material is reasonably available because the interested parties have access to it through their normal course of business or by the means identified in the **ADDRESSES** section.

Costs of Compliance

The FAA estimates that this AD affects 168 airplanes of U.S. registry. The FAA estimates the following costs to comply with this AD:

The FAA estimates the total cost per operator for the retained actions from AD 2021–03–11 to be $7,650 (90 work-hours × $85 per work-hour).

The FAA has determined that revising the existing maintenance or inspection program takes an average of 90 work-hours per operator, although the agency recognizes that this number may vary from operator to operator. Since operators incorporate maintenance or inspection program changes for their affected fleet(s), the FAA has determined that a per-operator estimate is more accurate than a per-airplane estimate.

The FAA estimates the total cost per operator for the new actions to be $7,650 (90 work-hours × $85 per work-hour).

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency's authority.

The FAA is issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: General requirements. Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

This AD will not have federalism implications under Executive Order 13132. This AD will not have a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify that this AD:

(1) Is not a ''significant regulatory action'' under Executive Order 12866,

(2) Will not affect intrastate aviation in Alaska, and

(3) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA amends 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

■ 1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

■ 2. The FAA amends § 39.13 by:

■ a. Removing Airworthiness Directive (AD) 2023–04–18, Amendment 39–22365 (88 FR 15607, March 14, 2023); and

■ b. Adding the following new AD:

2023–22–12 Dassault Aviation: Amendment 39–22596; Docket No. FAA–2023–1804; Project Identifier MCAI–2023–00675–T.

(a) Effective Date

This airworthiness directive (AD) is effective December 27, 2023.

(b) Affected ADs

(1) This AD replaces AD 2023–04–18, Amendment 39–22365 (88 FR 15607, March 14, 2023) (AD 2023–04–18).

(2) This AD affects AD 2010–26–05, Amendment 39–16544 (75 FR 79952, December 21, 2010) (AD 2010–26–05).

(c) Applicability

This AD applies to all Dassault Aviation Model FALCON 2000 airplanes, certificated in any category.

(d) Subject

Air Transport Association (ATA) of America Code 05, Time Limits/Maintenance Checks.

(e) Unsafe Condition

This AD was prompted by a determination that new or more restrictive airworthiness limitations are necessary. The FAA is issuing this AD to address reduced controllability of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Retained Revision of the Existing Maintenance or Inspection Program, With No Changes

This paragraph restates the requirements of paragraph (j) of AD 2023–04–18, with no changes. Except as specified in paragraph (h) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, European Union Aviation Safety Agency (EASA) AD 2022–0135, dated July 6, 2022 (EASA AD 2022–0135). Accomplishing the revision of the existing maintenance or inspection program required by paragraph (j) of this AD terminates the requirements of this paragraph.

(h) Retained Exceptions to EASA AD 2022–0135, With No Changes

This paragraph restates the exceptions specified in paragraph (k) of AD 2023–04–18, with no changes.

(1) The requirements specified in paragraphs (1) and (2) of EASA AD 2022–0135 do not apply to this AD.

(2) Paragraph (3) of EASA AD 2022–0135 specifies revising ''the approved AMP'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after April 18, 2023 (the effective date of AD 2023–04–18).

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2022–0135 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2022–0135, or within 90 days after April 18, 2023 (the effective date of AD 2023–04–18), whichever occurs later.

(4) The provisions specified in paragraphs (4) and (5) of EASA AD 2022–0135 do not apply to this AD.

(5) The ''Remarks'' section of EASA AD 2022–0135 does not apply to this AD.

(i) Retained No Alternative Actions or Intervals With a New Exception

This paragraph restates the requirements of paragraph (l) of AD 2023–04–18, with a new exception. Except as required by paragraph (j) of this AD, after the existing maintenance or inspection program has been revised as required by paragraph (g) of this AD, no alternative actions (*e.g.,* inspections) or intervals may be used unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2022–0135.

(j) New Maintenance or Inspection Program Revision

Except as specified in paragraph (k) of this AD: Comply with all required actions and compliance times specified in, and in accordance with, EASA AD 2023–0099, dated May 11, 2023 (EASA AD 2023–0099). Accomplishing the maintenance or inspection program revision required by this paragraph terminates the requirements of paragraph (g) of this AD.

(k) Exceptions to EASA AD 2023–0099

(1) This AD does not adopt the requirements specified in paragraphs (1) and (2) of EASA AD 2023–0099.

(2) Paragraph (3) of EASA AD 2023–0099 specifies revising ''the approved AMP [aircraft maintenance program]'' within 12 months after its effective date, but this AD requires revising the existing maintenance or inspection program, as applicable, within 90 days after the effective date of this AD.

(3) The initial compliance time for doing the tasks specified in paragraph (3) of EASA AD 2023–0099 is at the applicable ''limitations'' and ''associated thresholds'' as incorporated by the requirements of paragraph (3) of EASA AD 2023–0099, or within 90 days after the effective date of this AD, whichever occurs later.

(4) This AD does not adopt the provisions specified in paragraphs (4) and (5) of EASA AD 2023–0099.

(5) This AD does not adopt the ''Remarks'' section of EASA AD 2023–0099.

(l) New Provisions for Alternative Actions and Intervals

After the existing maintenance or inspection program has been revised as required by paragraph (j) of this AD, no alternative actions (*e.g.,* inspections), and intervals are allowed unless they are approved as specified in the provisions of the ''Ref. Publications'' section of EASA AD 2023–0099.

(m) Terminating Action for Certain Requirements in AD 2010–26–05

Accomplishing the actions required by paragraphs (g) or (j) of this AD terminates the requirements of paragraph (g) of AD 2010–26–05 for Model FALCON 2000 airplanes only.

(n) Additional AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, International Validation Branch, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or responsible Flight Standards Office, as appropriate. If sending information directly to the International Validation Branch, send it to the attention of the person identified in paragraph (o) of this AD. Information may be emailed to: *9-AVS-AIR-730-AMOC@faa.gov.* Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the responsible Flight Standards Office.

(2) *Contacting the Manufacturer:* For any requirement in this AD to obtain instructions from a manufacturer, the instructions must be accomplished using a method approved by the Manager, International Validation Branch, FAA; or EASA; or Dassault Aviation's EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(o) Additional Information

For more information about this AD, contact Tom Rodriguez, Aviation Safety Engineer, FAA, 1600 Stewart Avenue, Suite 410, Westbury, NY 11590; telephone 206–231–3226; email *tom.rodriguez@faa.gov.*

(p) Material Incorporated by Reference

(1) The Director of the Federal Register approved the incorporation by reference (IBR) of the service information listed in this paragraph under 5 U.S.C. 552(a) and 1 CFR part 51.

(2) You must use this service information as applicable to do the actions required by this AD, unless this AD specifies otherwise.

(3) The following service information was approved for IBR on December 27, 2023.

(i) European Union Aviation Safety Agency (EASA) AD 2023–0099, dated May 11, 2023.

(ii) [Reserved]

(4) The following service information was approved for IBR on April 18, 2023 (88 FR 15607, March 14, 2023).

(i) European Union Aviation Safety Agency (EASA) AD 2022–0135, dated July 6, 2022.

(ii) [Reserved]

(5) For EASA ADs 2023–0099 and 2022–0135, contact EASA, Konrad-Adenauer-Ufer 3, 50668 Cologne, Germany; telephone +49 221 8999 000; email *ADs@easa.europa.eu;* website *easa.europa.eu.* You may find these EASA ADs on the EASA website at *ad.easa.europa.eu.*

(6) You may view this service information at the FAA, Airworthiness Products Section, Operational Safety Branch, 2200 South 216th St., Des Moines, WA. For information on the availability of this material at the FAA, call 206–231–3195.

(7) You may view this material at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, visit *www.archives.gov/federal-register/cfr/ibr-locations* or email *fr.inspection@nara.gov.*

Issued on November 16, 2023.

Ross Landes,

Deputy Director for Regulatory Operations, Compliance & Airworthiness Division, Aircraft Certification Service.

[FR Doc. 2023–25832 Filed 11–21–23; 8:45 am]

BILLING CODE 4910–13–P

NATIONAL LABOR RELATIONS BOARD

29 CFR Part 103

RIN 3142–AA21

Standard for Determining Joint Employer Status

AGENCY: National Labor Relations Board.

ACTION: Final rule; delay of effective date.

SUMMARY: On October 27, 2023, the National Labor Relations Board (Board) published a final rule rescinding and replacing its rule regarding the standard for determining joint employer status under the National Labor Relations Act. The Board hereby amends that rule to change the effective date from December 26, 2023, to February 26, 2024. The purpose of this amendment is to facilitate the resolution of the legal challenges with respect to the rule.

DATES: The effective date of the final rule amending 29 CFR part 103 published at 88 FR 73946, October 27, 2023, is delayed from December 26, 2023, to February 26, 2024.

FOR FURTHER INFORMATION CONTACT: Roxanne L. Rothschild, Executive Secretary, National Labor Relations Board, 1015 Half St. SE, Washington, DC 20570–0001, (202) 273–1940 (this is not a toll-free number) or 1–844–762–NLRB (6572) (this is a toll-free number). Hearing impaired callers who wish to speak to an NLRB representative should contact T-Mobile Relay Conference Captioning by visiting its website at *https://www.tmobileaccess.com/federal* and submitting a form asking its Communications Assistant to call our toll free number at 1–844–762–NLRB (6572).

SUPPLEMENTARY INFORMATION: On October 27, 2023, the National Labor Relations Board published a final rule rescinding and replacing the final rule entitled ''Joint Employer Status Under the National Labor Relations Act,'' which was published on February 26, 2020, and took effect on April 27, 2020. The final rule establishes a new standard for determining whether two employers, as defined in the Act, are joint employers of particular employees within the meaning of the Act. The Board believes that this rule will more explicitly ground the joint-employer standard in established common-law agency principles and provide guidance to parties covered by the Act regarding their rights and responsibilities when more than one statutory employer possesses the authority to control or exercises the power to control particular employees' essential terms and conditions of employment. Under the final rule, an entity may be considered a joint employer of another employer's employees if the two share or codetermine the employees' essential terms and conditions of employment.

On November 6, 2023, a petition for review of the final rule was filed in the United States Court of Appeals for the District of Columbia Circuit. *Service Employees International Union* v. *NLRB,* No. 23–1309 (D.C. Cir.). Then, on November 19, 2023, a challenge to the final rule was filed in the U.S. District Court for the Eastern District of Texas. *Chamber of Commerce of the United States of America, et. al* v. *NLRB,* No. 6:23–cv–00553 (E.D. Tex.). The Board has determined that postponing the effective date of the rule would facilitate the resolution of the legal challenges that have been filed with respect to the

rule. 5 U.S.C. 705. Accordingly, the Board has decided to change the effective date of the rule from December 26, 2023 to February 26, 2024.

Dated: November 17, 2023.

Roxanne L. Rothschild,

Executive Secretary.

BILLING CODE 7545–01–P

DEPARTMENT OF THE TREASURY

Office of the Secretary

31 CFR Part 1

RIN 1506–AB63

Privacy Act of 1974; Exemptions

AGENCY: Financial Crimes Enforcement Network (FinCEN), Treasury.

ACTION: Final rule.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, as amended, Treasury is issuing a final rule, exempting a new system of records, entitled ''FinCEN .004—Beneficial Ownership Information System,'' from certain provisions of the Privacy Act. The Beneficial Ownership Information (BOI) System is being established to implement the beneficial ownership information reporting and access requirements set out in the Corporate Transparency Act (CTA), which was enacted on January 1, 2021, as part of the Anti-Money Laundering Act of 2020. The exemptions are intended to increase the value of the system for law enforcement purposes and to comply with the CTA's prohibitions against unauthorized disclosure of certain information.

DATES: This rule is effective January 1, 2024.

FOR FURTHER INFORMATION CONTACT: For questions about this document and privacy issues, contact: Ryan Law, Deputy Assistant Secretary for Privacy, Transparency, and Records at U.S. Department of the Treasury, 1500 Pennsylvania Avenue NW, Washington, DC 20220; telephone: (202) 622–5710.

SUPPLEMENTARY INFORMATION:

Background

On September 14, 2023, Treasury published a notice of proposed rulemaking (the ''NPRM'') in the **Federal Register**, 88 FR 63039, proposing to exempt a system of records, FinCEN .004—Beneficial Ownership Information System (the ''BOI System''), from provisions of the Privacy Act. Pursuant to the CTA, starting on January 1, 2024, FinCEN will use the BOI System to maintain BOI submitted to FinCEN by certain corporations, limited liability companies, and other entities created in or registered to do business in the United States (''reporting companies''). BOI includes identifying information associated with the reporting companies themselves, their beneficial owners, and their company applicants. The BOI System will also maintain information about individuals who apply to FinCEN for FinCEN identifiers, which beneficial owners and company applicants will be able to use in lieu of the information required to be reported about them by reporting companies.[1] Information provided to FinCEN to obtain a FinCEN identifier will be disclosed to authorized recipients for authorized purposes in the same way and to the same extent as BOI. The CTA authorizes FinCEN to disclose BOI to five categories of authorized recipients that include foreign and domestic law enforcement agencies, but do *not* include beneficial owners, company applicants, or individuals who have obtained FinCEN identifiers.

The Privacy Act contains certain requirements regarding the maintenance and disclosure of a system of records. Those requirements may differ from, or conflict with, the comprehensive requirements for maintaining and disclosing BOI specified in the CTA. In any case where the CTA conflicts with the Privacy Act, FinCEN believes that the more detailed, specific provisions of the CTA supersede any contrary provisions in the Privacy Act. Nevertheless, to the extent certain provisions of the Privacy Act were to apply, and without conceding that they do, Treasury is publishing this final rule pursuant to 5 U.S.C. 552a(j) and (k), to exempt the BOI System from those provisions.

Under 5 U.S.C. 552a(j)(2), the head of a Federal agency may promulgate rules to exempt a system of records from certain provisions of 5 U.S.C. 552a if the system of records is maintained by an agency or component thereof that performs as its principal function any activity pertaining to the enforcement of criminal laws, including police efforts to prevent, control, or reduce crime or to apprehend criminals, and the activities of prosecutors, courts, correctional, probation, pardon, or parole authorities and which consists of (a) information compiled for the purpose of identifying individual criminal offenders and alleged offenders and consisting only of identifying data and notations of arrests, the nature and disposition of criminal charges, sentencing, confinement, release, and parole and probation status; (b) information compiled for the purpose of a criminal investigation, including reports of informants and investigators, and associated with an identifiable individual; or (c) reports identifiable to an individual compiled at any stage of the process of enforcement of the criminal laws from arrest or indictment through release from supervision.

Under 5 U.S.C. 552a(k)(2), the head of a Federal agency may promulgate rules to exempt a system of records from certain provisions of 5 U.S.C. 552a if the system of records is ''investigatory material compiled for law enforcement purposes, other than material within the scope of subsection (j)(2) of this section.''

The reasons for exempting the BOI System from sections (c)(3), (c)(4), (d)(1), (d)(2), (d)(3), (d)(4), (e)(1), (e)(2), (e)(4)(G), (e)(4)(H), (e)(5), (e)(8), (f), and (g) of the Privacy Act are as follows:

(1) 5 U.S.C. 552a(d)(1), (e)(4)(H) and (f)(2), (f)(3), and (f)(5) grant individuals access to records containing information about them. An exemption from these provisions is appropriate because the CTA prohibits FinCEN from disclosing BOI except to five categories of authorized recipients;[2] these categories do not include beneficial owners, company applicants, or individuals who have obtained FinCEN identifiers. Because individuals who are the subject of the records in the BOI System are not included in any of those categories, the application of 5 U.S.C. 552a(d)(1), (e)(4)(H) and (f)(2), (f)(3), and (f)(5) to the BOI System would contravene the CTA's disclosure restrictions.

(2) 5 U.S.C. 552a(e)(4)(G) and (f)(1) enable individuals to inquire whether a system of records contains records about them. An exemption from these provisions is appropriate because allowing individuals involved in illegal activity to learn that FinCEN has information concerning those individuals that could lead to them being identified for investigation could undercut the CTA mandate that the BOI System be ''highly useful'' to law enforcement agencies. For instance, such notice could prompt individuals engaged in illegal activity to: (a) take steps to avoid detection; (b) begin, continue, or resume illegal conduct upon learning that they are not identified in the system of records; or (c)

[1] Reporting companies will not use the FinCEN identifier application to request a FinCEN identifier but instead will request a FinCEN identifier when they submit a BOI report.

[2] 31 U.S.C. 5337(c)(2).

destroy evidence needed to prove the violation.

(3) 5 U.S.C. 552a(d)(2), (d)(3) and (d)(4), (e)(4)(H), and (f)(4) permit individuals to request amendment of a record pertaining to them and require the agency either to amend the record or note the disputed portion of the record and, if the agency refuses to amend the record, to provide a copy of the individual's statement of disagreement with the agency's refusal, to persons or other agencies to whom the record is thereafter disclosed. Because these provisions depend on individuals having access to their records, and since this rule exempts the BOI System from the provisions of 5 U.S.C. 552a relating to access to records for the reasons set forth above, these provisions do not apply to the BOI System. Furthermore, an exemption from this requirement is appropriate because allowing individuals to amend certain records that pertain to them would conflict with the mechanism for reporting beneficial ownership information provided for in the CTA.

(4) 5 U.S.C. 552a(c)(4) requires an agency to inform any person or other agency about any correction or notation of dispute that the agency made in accordance with 5 U.S.C. 552a(d) to any record that the agency disclosed to the person or agency, if an accounting of the disclosure was made. Because this provision depends on individuals having access to and an opportunity to request amendment of records pertaining to them, and because this rule exempts the BOI System from the provisions of 5 U.S.C. 552a relating to access to and amendment of records for the reasons set forth above, this provision does not apply to the BOI System.

(5) 5 U.S.C. 552a(c)(3) requires an agency to make the accounting of any disclosures of records required by 5 U.S.C. 552a(c)(1) available to the individual named in the record upon his or her request. The accounting must state the date, nature, and purpose of each disclosure of the record and the name and address of the recipient. Applying this provision would impair the effective use of information collected in the BOI System. Making an accounting of disclosures available to the subject of an investigation would alert them that another agency is investigating their criminal activities and could reveal the geographic location of the other agency's investigation, the nature and purpose of that investigation, and the dates on which that investigation was active. Violators possessing such knowledge would be able to take measures to avoid detection or apprehension by: (a) altering their operations; (b) transferring their criminal activities to other geographical areas, legal entities, or ostensible beneficial owners; or (c) destroying or concealing evidence that would form the basis for arrest. Moreover, providing an accounting to the subjects of investigations would alert them to the fact that FinCEN has information relevant to their criminal activities. Access to such information, together with other available information, could reveal the operation of the information-gathering and analysis systems of FinCEN and other BOI System users, and permit violators to take steps to avoid detection or apprehension.

(6) 5 U.S.C. 552a(e)(1) requires an agency to maintain in its records only such information about an individual as is relevant and necessary to accomplish a purpose of the agency required to be accomplished by statute or Executive order. Maintenance of information, as defined in 5 U.S.C. 552a(a)(3), includes the collection and dissemination of information. An exemption from this provision is therefore appropriate because its application would require FinCEN to make determinations at the time of collection about the relevance and necessity of collected information. Speculative determinations about the relevance and necessity of collected information could negatively impact the quality of information available to law enforcement in future investigations, which would undermine the mandate in the CTA that the BOI System be ''highly useful'' to law enforcement.

(7) 5 U.S.C. 552a(e)(2) requires an agency to collect information to the greatest extent practicable directly from the subject individual when the information may result in adverse determinations about an individual's rights, benefits, and privileges under Federal programs. If such a program exists, an exemption to this provision is appropriate because applying it to the BOI System would contravene the requirement in the CTA that FinCEN collect BOI from reporting companies.

(8) 5 U.S.C. 552a(e)(5) requires an agency to maintain all records it uses in making any determination about any individual with such accuracy, relevance, timeliness, and completeness as is reasonably necessary to assure fairness to the individual in the determination. Because 5 U.S.C. 552a(a)(3) defines ''maintain'' as including ''collect'' and ''disseminate,'' applying this provision to the BOI System would hinder timely dissemination of BOI, and by extension hinder law enforcement efforts dependent upon such information. Information in the BOI System is filed by reporting companies and individual FinCEN identifier applicants, and it is not possible at the time of collection to determine whether the information in such records is accurate, relevant, timely, and complete.

(9) 5 U.S.C. 552a(e)(8) requires an agency to make reasonable efforts to serve notice on an individual when the agency makes any record on the individual available to any person under compulsory legal process when such process becomes a matter of public record. Exemption from this requirement is appropriate because applying the requirement to the BOI System could reveal to the subject of a law enforcement investigation or action that a law enforcement agency used BOI in the investigation or action, thereby revealing the agency's investigative techniques and procedures.

(10) 5 U.S.C. 552a(g) provides an individual with civil remedies when: (a) an agency wrongfully refuses to amend a record or to review a request for amendment; (b) an agency wrongfully refuses to grant access to a record; (c) any determination relating to an individual is based on records that are not accurate, relevant, timely and complete; and (d) an agency fails to comply with any other provision of 5 U.S.C. 552a so as to adversely affect the individual. The BOI System is exempt from this provision to the extent that the civil remedies relate to the provisions of 5 U.S.C. 552a from which the prior paragraphs of this section exempt the BOI System. Exemption from this provision is appropriate because there should be no civil remedies for failure to comply with provisions from which the BOI System is exempt. Exemption from this provision will also protect FinCEN from baseless civil court actions that might hamper its ability to collate, analyze, and disseminate data.

Any information from a system of records for which an exemption is claimed under 5 U.S.C. 552a(j)(2) or (k)(2) which is also included in another system of records retains the same exempt status such information has in the system of records for which such exemption is claimed.

Public Comments

Treasury received two comments on the NPRM. The first expressed support for the proposed rule, noting its ''import[ance] for protecting an individual's privacy, while also increasing the value of the [BOI System] for law enforcement purposes.''

The second addresses the proposal to exempt the BOI System from the requirements of 5 U.S.C. 552a(c)(3) and

suggests a potential alternative approach. As explained above, that provision of the Privacy Act requires an agency to make the accounting of any disclosures of records required by 5 U.S.C. 552a(c)(1) available to the individual named in the record upon his or her request. The comment's author argues that fully exempting the BOI System from these requirements ''would make the [] audit trail required by the CTA meaningless'' and that ''[a]llowing for an accounting of disclosures to be made to the public would help ensure that the right to privacy would not be violated through unauthorized disclosures.'' The commenter suggests that the BOI System should be only partially exempt from 5 U.S.C. 552a(c)(3) and that FinCEN should establish procedures under 5 U.S.C. 552a(f)(2) that would make accountings of disclosures available to requesters after some specified amount of time has passed (the commenter proposes one year).

FinCEN carefully considered this comment, particularly the commenter's claim that exempting the BOI System from the requirements of 5 U.S.C. 552a(c)(3) would make the system's audit trails meaningless. FinCEN interpreted this comment as asserting that BOI System audit trails would constitute ''accountings of disclosures'' that would only be meaningful if individuals about whom the system contains records have access to them. However, FinCEN disagrees with this view.

In its ''Sense of Congress,'' the CTA directs the Secretary of the Treasury to ''take all steps, including regular auditing, to ensure that government authorities accessing beneficial ownership information do so only for authorized purposes consistent with [the CTA] . . . .'' [3] Accordingly, FinCEN will use the BOI System's audit trails to identify potential instances of improper access to BOI by authorized system users. The audit trails will also support other aspects of the CTA compliance and enforcement regime, including the imposition of penalties, which will further help to ensure that BOI is accessed and used appropriately.

Separately, for the reasons set out in the NPRM and reiterated above regarding the potential adverse impact on law enforcement investigations, Treasury declines to adopt the suggestion to make accountings of disclosures available to requesters after a specified period of time. Law enforcement investigations may span years and share common individuals of interest with concurrent investigations of equally varying durations. Revealing information about BOI disclosures to the subjects of those disclosures—even after a seemingly lengthy delay—could put those activities at risk of disruption and jeopardize the effective use of the BOI System for law enforcement purposes. Furthermore, a delay in making an accounting of disclosures available would not address the concern that such access could reveal information about the operation of the information-gathering and analysis systems utilized by FinCEN and other BOI System users. The resulting effect would be to postpone, rather than prevent, foreseeable harms to the law enforcement activities that Congress intended the BOI System to support. Such a result would contradict the purpose of the CTA and, therefore, Treasury will adopt the rule as proposed.

Regulatory Analysis

This rule is not a ''significant regulatory action'' under Executive Order 12866, as amended.

Pursuant to the requirements of the Regulatory Flexibility Act (RFA), 5 U.S.C. 601 *et seq.,* it is hereby certified that this rule will not have a significant economic impact on a substantial number of small entities. The rule, issued under sections (j)(2) and (k)(2) of the Privacy Act, exempts certain information maintained by Treasury in the above-referenced systems of records from certain provisions of the Privacy Act. Small entities, as defined in the RFA, are not provided rights under the Privacy Act and are outside the scope of this regulation.

In accordance with the provisions of the Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.,* FinCEN has determined that this rule will not impose new recordkeeping, reporting, or other types of information collection requirements.

Lists of Subjects in 31 CFR Part 1

Privacy.

For the reasons stated in the preamble, part 1 of title 31 of the Code of Federal Regulations is amended as follows:

PART 1—DISCLOSURE OF RECORDS

■ 1. The authority citation for part 1 continues to read as follows:

Authority: 5 U.S.C. 301, 552, 552a, 553; 31 U.S.C. 301, 321; 31 U.S.C. 3717.

■ 2. Amend § 1.36 by adding, in alphanumeric order, an entry for ''FinCEN .004'' in table 7 to paragraph (c)(1)(vii) and table 17 to paragraph (g)(1)(ix) to read as follows:

§ 1.36 Systems exempt in whole or in part from provisions of the Privacy Act and this part.

* * * * *

BILLING CODE 4810–02–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2023–0848]

RIN 1625–AA87

Security Zone; Nantucket Memorial Airport and Abrams Point, Nantucket, MA

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing two 500-yard temporary security zones for all navigable waters adjacent to the Nantucket Memorial Airport and Straight Wharf as well as a 1,000-yard temporary security zone for all navigable waters adjacent to Abrams Point, Nantucket, Massachusetts. These security zones are needed to protect the persons under the protection of the United States Secret Service (USSS). Entry of vessels or persons into these zones is prohibited unless specifically authorized by the Captain of the Port Sector Southeastern New England or a designated representative.

DATES: This rule is effective from November 21, 2023, through 11:59 p.m. on November 26, 2023.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov*, type USCG–2023–0848 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email MST2 Christopher Matthews, Sector Southeastern New England, U.S. Coast Guard; telephone 401–435–2348, email *Christopher.S.Matthews@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Sector Southeastern New England
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The United States Secret Service (USSS) requested that the Coast Guard establish two 500-yard temporary security zones for all navigable waters adjacent to the Nantucket Memorial Airport and Straight Wharf as well as a 1,000-yard temporary security zone for all navigable waters adjacent to Abrams Point, Nantucket, Massachusetts. The purpose of the temporary security zone is to facilitate the security and safety of the persons under USSS protection.

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the Coast Guard did not receive information regarding this event in time to publish NPRM and seek comments before the subject visit. Publishing an NPRM and delaying the effective date would be impracticable and contrary to the public interest as it would inhibit the Coast Guard's ability to fulfill its statutory missions and jeopardize the safety of the persons under USSS protection during the visit.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying the effective date of this rule would be impracticable and contrary to the public interest because immediate action is needed to ensure the safety of the person under USSS protection during the visit.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70051 and 70124. The USSS requested that the Coast Guard establish two 500-yard temporary security zones for all navigable waters adjacent to the Nantucket Memorial Airport and Straight Wharf as well as a 1,000-yard temporary security zone for all navigable waters adjacent to Abrams Point, Nantucket, Massachusetts. The purpose of the temporary security zone is to facilitate the security and safety of the persons under USSS protection during their visit to the area. As a result, in consultation with the USSS, the Captain of the Port Sector Southeastern New England (COTP) has determined that the security zones are necessary to provide security for the persons under USSS protection.

IV. Discussion of the Rule

This rule establishes two 500-yard security zones for all navigable waters adjacent to the Nantucket Memorial Airport and Straight Wharf as well as a 1,000-yard temporary security zone for all navigable waters adjacent to Abrams Point, Nantucket, Massachusetts. No vessel or person will be permitted to enter the security zones from 12:01 a.m. on November 21, 2023, through 11:59 p.m. on November 26, 2023. Entry into these security zones is prohibited unless specifically authorized by the COTP or their designated representative. A designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of the U.S. Coast Guard Sector Southeastern New England.

Requests for entry will be considered and reviewed on a case-by-case basis. The COTP may be contacted by telephone at 508–457–3211 or can be reached by VHF–FM channel 16. Persons and vessels permitted to enter these security zones must transit at their slowest safe speed and comply with all lawful directions issued by the COTP or their designated representative.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, duration, and time-of-year of the security zones. These security zones will impact small, designated areas off Nantucket, Massachusetts for approximately six days during a time of year when vessel traffic is normally low. To alleviate the effects of this rule on the public, the COTP may elect to temporary suspend enforcement of these security zones. Moreover, the Coast Guard will issue Broadcast Notice to Mariners via VHF-FM marine channel 16 about the zones, and the rule allows vessels to seek permission to enter the zones.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the security zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves three security zones from November 21, 2023, through November 26, 2023, that will prohibit entry within 500 yards of Nantucket Memorial Airport and Straight Wharf as well as 1,000 yards of Abrams point, Nantucket, Massachusetts. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5;

Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Add § 165.T01–0848 to read as follows:

§ 165.T01–0848 Security Zone; Nantucket Memorial Airport, Abrams Point and Straight Wharf, Nantucket, MA.

(a) *Location.* The following areas are security zones: All navigable waters 500 yards from Nantucket Memorial Airport and Straight Wharf as well as 1,000 yards from Abrams Point, Nantucket, Massachusetts.

(b) *Regulations.* (1) Under the general security zone regulations in subpart D of this part, you may not enter the security zone described in paragraph (a) of this section unless authorized by the Captain of the Port Sector Southeastern New England (COTP) or the COTP's designated representative. Designated representative is a commissioned, warrant, or petty officer of the U.S. Coast Guard assigned to units under the operational control of U.S. Coast Guard Sector Southeastern New England.

(2) Vessels requiring entry into the security zones must request permission from the COTP or a designated representative. To seek entry into the security zones, contact the COTP or the COTP's representative by telephone at 508–457–3211 or on VHF–FM channel 16.

(3) Persons and vessels permitted to enter the security zones must transit at their slowest safe speed and comply with all lawful directions issued by the COTP or the designated representative.

(c) *Enforcement period.* This section will be enforced from 12:01 a.m. on November 21, 2023, through 11:59 p.m. on November 26, 2023. To alleviate the effects of this section on the public, the COTP may elect to temporarily suspend enforcement of the security zones.

Clinton J. Prindle,

Captain, U.S. Coast Guard, Captain of the Port Sector Southeastern New England.

[FR Doc. 2023–25956 Filed 11–21–23; 8:45 am]

BILLING CODE 9110–04–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 23–286; RM–11960; DA 23–1054; FR ID 184696]

Television Broadcasting Services Winnemucca, Nevada

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Video Division, Media Bureau (Bureau), has before it a Notice of Proposed Rulemaking issued in response to a Petition for Rulemaking filed by Gray Television Licensee, LLC (Petitioner or Gray), the licensee of unbuilt television station KWNV(DT) (KWNV or Station), channel 7, Winnemucca, Nevada (Winnemucca). The Petitioner has requested the substitution of UHF channel 16 for VHF channel 7 in the Table of TV Allotments. The Petitioner filed comments in support of the petition, as required by the Commission's rules (rules), reaffirming its commitment to apply for channel 16.

DATES: Effective November 22, 2023.

FOR FURTHER INFORMATION CONTACT: Joyce Bernstein, Media Bureau, at (202) 418–1647 or *Joyce.Bernstein@fcc.gov.*

SUPPLEMENTARY INFORMATION: The proposed rule was published at 88 FR 59836 on August 30, 2023. The Petitioner filed comments in support of the petition reaffirming its commitment to apply for channel 16. No other comments were received.

The Bureau believes the public interest would be served by substituting channel 16 for channel 7 at Winnemucca. In support of its channel substitution request, Gray states that building out its new station on a UHF channel will avoid well-documented issues with indoor digital VHF reception. Gray observes that the Commission has recognized the deleterious effects manmade noise has on the reception of VHF channel signals, and the large variability in the performance of indoor antennas receiving UHF and VHF signals, with the substantial majority poorly receiving high-VHF channel signals compared to UHF channel signals. We also find that the proposal complies with all relevant technical requirements for amendment of the Table of TV Allotments, including the interference protection requirements of section 73.616 of the rules, and the proposed channel 16 facility will provide full principal community coverage to Winnemucca. In addition, proposed channel 16 noise limited service contour (NLSC) almost entirely encompasses the authorized channel 7 NLSC, and Gray does not propose a change in transmitter location. We also note that no viewers will lose any existing service because as a permittee, Gray has not commenced operations in Winnemucca.

As proposed, channel 16 can be substituted for channel 7 at Winnemucca in compliance with the principal community coverage requirements of section 73.625(a) of the rules, at coordinates 41°00′31.0″ N and 117°46′13.0″ W. In addition, we find that this channel change meets the technical requirements set forth in sections 73.616 and 73.623 of the rules. We also conclude that good cause exists to make this channel change effective immediately upon publication in the **Federal Register**, pursuant to section 553(d)(3) of the Administrative Procedure Act. An expedited effective date is necessary in this case to ensure that KWNV can operate with improved service to its viewers as quickly as possible.

This is a synopsis of the Commission's *Report and Order,* MB Docket No. 23–286; RM–11960; DA 23–1054, adopted November 7, 2023, and released November 7, 2023. The full text of this document is available for download at *https://www.fcc.gov/edocs.* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

This document does not contain information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any proposed information collection burden ''for small business concerns with fewer than 25 employees,'' pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4). Provisions of the Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, do not apply to this proceeding.

The Commission will send a copy of this *Report and Order* in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Part 73

Television.

Federal Communications Commission.

Thomas Horan,

Chief of Staff, Media Bureau.

Final Rule

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 73 as follows:

PART 73—RADIO BROADCAST SERVICE

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 155, 301, 303, 307, 309, 310, 334, 336, 339.

■ 2. In § 73.622 (j), amend the Table of TV Allotments under Nevada by revising the entry for Winnemucca to read as follows:

§ 73.622 Digital television table of allotments.

* * * * *

(j) * * *

Community	Channel No.
* * * * *	
Nevada

50 CFR Part 223

[Docket No. 231116–0271; RTID 0648–XR131]

Endangered and Threatened Wildlife and Plants; Technical Correction for the Giant Manta Ray

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Direct final rule.

SUMMARY: We, NMFS, announce the revised taxonomy of *Manta birostris* (giant manta ray) under the Endangered Species Act of 1973, as amended (ESA). We are revising the Enumeration of threatened marine and anadromous species for the giant manta ray to reflect the scientifically accepted taxonomy and nomenclature of this species. We revise the scientific name of the species to *Mobula birostris.* The changes to the taxonomic classification and nomenclature do not affect the species' listing status under the ESA or any protections and requirements arising from its listing.

DATES: This rule is effective January 22, 2024 without further action, unless significant adverse comment is received by December 22, 2023. If significant adverse comments are received, the NMFS will publish a timely withdrawal of the rule in the **Federal Register**.

ADDRESSES: You may submit comments on this document, identified by NOAA–NMFS–2023–0141, by the following method:

• *Electronic Submission:* Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to *https://www.regulations.gov* and enter NOAA–NMFS–2023–0141 in the Search box. Click on the ''Comment'' icon, complete the required fields, and enter or attach your comments.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on *https://www.regulations.gov* without change. All personal identifying information (*e.g.,* name, address, *etc.*), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter ''N/A'' in the required fields if you wish to remain anonymous).

FOR FURTHER INFORMATION CONTACT: Maggie Miller, NMFS, Office of Protected Resources, (301) 427–8457.

SUPPLEMENTARY INFORMATION:

Purpose of This Rule

The purpose of our direct final rule is to notify the public that we are revising the Enumeration of threatened marine and anadromous species (50 CFR 223.102(e)) to reflect the scientifically accepted taxonomy and nomenclature of one fish species, the giant manta ray, listed under section 4 of the ESA (16 U.S.C. 1531 *et seq.*). The change reflects the most recently accepted scientific name in accordance with 50 CFR 223.102(b).

We are publishing this rule as a direct final rule because this is a noncontroversial action that reflects decisions already taken in the scientific community, such that prior notice and an opportunity to comment is unnecessary. This rule does not change the listing status of the species under the ESA and does not alter any protections afforded the species or any other legal requirements arising from the species' listing under the ESA. This change should be undertaken in as timely a manner as possible. This rule will be effective, as published in this document on the effective date specified in **DATES**, unless we receive significant adverse comments on or before the comment due date specified in **DATES**. Significant adverse comments are comments that provide strong scientific justification as to why the taxonomic and nomenclature changes to the Enumeration of the listed entity should not be adopted or why the rule should be changed. Please include sufficient scientific information with your comments that will allow us to verify the basis for any significant adverse comments.

If we receive significant adverse comments, we will publish a notice in the **Federal Register** withdrawing this rule before the effective date, and we will engage in notice and comment rulemaking under the applicable requirements of the Administrative Procedure Act to promulgate these changes to 50 CFR 223.102(e).

Background

Under 50 CFR 223.102(b), we use the most recently accepted scientific name of any species that we have determined to be threatened under the ESA. The ESA likewise requires that listing decisions be based solely on the best scientific and commercial data available (see 16 U.S.C. 1533(b)(1)(A)). Using the best available scientific information, our direct final rule documents a taxonomic change (scientific name) to the giant manta ray. This change is supported by a study published in a peer-reviewed journal as well as acceptance by scientists and a number of national and international renowned organizations. We revise the scientific name of the giant manta ray listed under section 4 of the ESA (16 U.S.C. 1531 *et seq.*) as follows: *Mobula birostris.* We make this change to the Enumeration of threatened marine and anadromous species (50 CFR 223.102(e)) to reflect the most recently accepted scientific name in accordance with 50 CFR 223.102(b).

Taxonomy Classification

Mobula Birostris

The scientific name change to *Mobula birostris* (giant manta ray) from *Manta birostris* is supported by genetic and morphological evidence (White *et al.* 2018). White *et al.* (2018) used molecular data from giant manta ray muscle tissues in Indonesia and the Philippines to describe the relationship of this species to ten other mobulid rays. Results from the phylogenetic analysis identified giant manta rays, as well as reef manta rays (previously *Manta alfredi*), to be nested within the genus *Mobula,* forming a sister relationship with *Mobula mobular* (White *et al.* 2018). Prior to this comprehensive genetic analysis, both manta rays were considered to be under a separate genus, *Manta,* as they both had a distinct morphological character—a terminal mouth. The other mobulid rays, under the genus *Mobula,* all had subterminal

mouths. However, the mitochondrial genome and nuclear exon data show the inclusion of *Manta* under the genus *Mobula,* suggesting the terminal mouth is a derived character within *Mobula* (White *et al.* 2018). Additionally, White *et al.* (2018) point out that another morphological character, the spiracle position relative to the plane of the disc, is dorsal for the manta rays but also for the sister species, *Mobula mobular,* whereas the remaining smaller Mobula species have it located ventrally. As such, this morphological distinction also supports the finding of the genetic analysis that *M. birostris* forms a clade with *M. mobular.* Based on this study, many scientists have accepted the taxonomic change for giant manta rays and used the updated taxonomy in recent research publications (*e.g.,* Cabral *et al.* 2023; Carpenter *et al.* 2023; Garzon *et al.* 2023; Rambahiniarison *et al.* 2023). Additionally, many national and international organizations have adopted the taxonomy, including the American Fisheries Society, Eshmeyer's Catalog of Fishes, FishBase, the International Union for Conservation of Nature, the Food and Agriculture Organization of the United Nations, and the Convention on International Trade in Endangered Species of Wild Fauna and Flora.

NMFS, therefore, recognizes the taxonomic change and is making technical revisions to 50 CFR 223.102(e) to reflect the most recently accepted scientific name based on the best available scientific information about the listed species. Once the changes to 50 CFR 224.102(3) take effect, the taxonomic change will be incorporated into all new NMFS publications pertaining to the species. This species will continue to be listed as threatened and is subject to the same protections as existed prior to these changes. No other aspect of the entry for this species in 50 CFR 223.102(e) will change as a result of this rule.

Required Determinations

The Assistant Administrator for Fisheries finds that good cause exists to waive the requirement for prior notice and opportunity for public comment, pursuant to 5 U.S.C. 553(b)(B). Such procedures would be unnecessary as the taxonomic change made in this rule is technical and reflects decisions already taken in the scientific community. This rule does not change the listing status of the giant manta ray under the ESA, and therefore does not alter the legal protections afforded to the species or any other requirements arising from its listing under the ESA or add any new requirements.

This action is not subject to review under Executive Order (E.O.) 12866. Because a general notice of proposed rulemaking is not required, the analytical requirements of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.,* are inapplicable.

This final rule does not contain policies with federalism implications under E.O. 13132. Policies that have federalism implications refers to regulations, legislative comments or proposed legislation, and other policy statements or actions that have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. This final rule does not have federalism implications; therefore, the agency did not follow the additional consultation procedures outlined in E.O. 13132.

This rule does not contain any collections of information that require approval by the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). This rule will not impose recordkeeping or reporting requirements on State or local governments, individuals, businesses, or organizations.

E.O. 12898 requires that Federal actions address environmental justice in the decision-making process. In particular, the environmental effects of the actions should not have a disproportionate effect on minority and low-income communities. This rule is not expected to have a disproportionate effect on minority populations or low-income populations.

This final rule makes a taxonomic change relative to a previous listing determination under the ESA to reflect the most recently accepted scientific name based on the best available scientific information about the species' taxonomy and nomenclature. NMFS has concluded that the National Environmental Policy Act (NEPA) does not apply to ESA listing actions, and we conclude that NEPA does not apply to this correction to the identification of the listed species to reflect the best available scientific information (see NOAA Administrative Order 216–6A and the Companion Manual for NOAA Administrative Order 216–6A, regarding Policy and Procedures for Compliance with the National Environmental Policy Act and Related Authorities).

50 CFR Part 622

[Docket No. 231101–0256; RTID 0648–XD532]

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; Re-Opening of Commercial Fishery for Golden Tilefish in the South Atlantic

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; re-opening.

SUMMARY: NMFS announces the re-opening of the commercial sector for golden tilefish in the exclusive economic zone (EEZ) of the South Atlantic. The 2023 commercial annual catch limits (ACLs) for the hook-and-line and longline components have recently increased through a separate rule. Therefore, NMFS re-opens the hook-and-line and longline components of the commercial sector for golden tilefish in the South Atlantic EEZ to allow the commercial ACL to be caught while increasing the corresponding benefit to the Nation with respect to providing food production.

DATES: This temporary rule is effective from December 7, 2023, through December 31, 2023.

FOR FURTHER INFORMATION CONTACT: Mary Vara, NMFS Southeast Regional Office, telephone: 727–824–5305, email: *mary.vara@noaa.gov.*

SUPPLEMENTARY INFORMATION: The snapper-grouper fishery of the South Atlantic includes golden tilefish and is managed under the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region (FMP). The FMP was prepared by the South Atlantic Fishery Management Council (Council) and NMFS. The FMP is implemented by NMFS under the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) by regulations at 50 CFR part 622. All weights described in this temporary rule are in gutted weight.

The commercial sector for golden tilefish is composed of the hook-and-line and longline components, each with individual catch limits. Under the commercial accountability measures (AMs) for golden tilefish at 50 CFR 622.193(a)(1)(i) and (ii), NMFS is required to close each commercial component for golden tilefish when the applicable commercial quota specified under 50 CFR 622.190(a)(2)(ii) or (iii) is reached or is projected to be reached through a notification in the **Federal Register**. Earlier in the 2023 fishing year, NMFS determined separately that the commercial component quotas for golden tilefish in the South Atlantic were reached, and closed the hook-and-line component on October 31 (88 FR 74066, October 30, 2023) and closed the longline component on April 7 (88 FR 20079, April 5, 2023) for the rest of 2023 as required by the commercial AMs [50 CFR 622.193(a)(1)(i) and (ii)].

Also earlier in the 2023 fishing year, NMFS determined that the golden tilefish recreational sector reached its ACL, and NMFS closed the sector as required by the recreational AMs for the rest of 2023 (50 CFR 622.193(a)(2)(i); 88 FR 45369, July 17, 2023).

On November 7, 2023, NMFS published the final rule to implement Amendment 52 to the FMP, and that final rule is effective on December 7, 2023 (88 FR 76696). Among other management measures, Amendment 52 and the final rule increased the total ACL for golden tilefish in the South Atlantic EEZ. For the 2023 fishing year, the total ACL is 435,000 lb (197,313 kg).

The total ACL is divided between the commercial and recreational sectors, and the commercial ACL for golden tilefish is allocated 25 percent to the hook-and-line component and 75 percent to the longline component. The final rule to implement Amendment 52 increased the component ACLs, which are equivalent to the component quotas, based on the higher commercial ACL. In the 2023 fishing year, the hook-and-line component quota is 105,161 lb (47,700 kg) and the longline component quota is 315,484 lb (143,101 kg).

The final rule for Amendment 52 also increased the recreational ACL for golden tilefish to 2,559 fish for the 2023 fishing year. However, the most recent recreational landings data of South Atlantic golden tilefish indicate that the recently increased recreational ACL for 2023 has already been reached. Therefore, NMFS will not reopen the recreational harvest of golden tilefish in the South Atlantic during the 2023 fishing year.

In accordance with 50 CFR 622.8(c), NMFS re-opens the commercial hook-and-line and longline components for golden tilefish on December 7, 2023. The commercial components will remain open through the rest of the 2023 fishing year ending on December 31, 2023, to allow for the commercial ACL to be reached. NMFS has determined that this re-opening will allow for an additional opportunity to commercially harvest the increased hook-and-line and longline component quotas for golden tilefish in 2023 while also increasing the corresponding benefit to the Nation with respect to providing food production.

Classification

NMFS issues this action pursuant to section 305(d) of the Magnuson-Stevens Act. This action is required by 50 CFR 622.8(c), issued pursuant to section 304(b), and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment is unnecessary and contrary to the public interest. Such procedures are unnecessary and contrary to public interest because the regulations associated with the increased harvest levels and reopening of golden tilefish commercial components have already been subject to notice and public comment, and all that remains is to notify the public of the commercial reopening.

For the reasons stated earlier, the Assistant Administrator for Fisheries also finds good cause to waive the 30-day delay in the effectiveness of this action under 5 U.S.C. 553(d)(3).

Authority: 16 U.S.C. 1801 *et seq.*

Dated: November 17, 2023.

Kelly Denit,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

50 CFR Part 660

[Docket No. 231115–0269]

RIN 0648–BM29

Fisheries Off West Coast States; West Coast Groundfish Electronic Monitoring Program; Service Provider Revisions

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final rule revises regulations governing the use of electronic monitoring (EM) in the Pacific Coast groundfish trawl fishery. This rulemaking modifies deadlines in Federal regulations for EM service providers to process EM data and submit vessel logbooks to NMFS. This action is intended to support the overarching goal of continually monitoring the Groundfish Trawl Rationalization Program for compliance with existing regulations in an economical and flexible manner while meeting the goals and objectives of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; MSA), the Pacific Coast Groundfish Fishery Management Plan, and other applicable laws. This rulemaking also makes minor administrative changes to EM and other groundfish regulations to clarify the regulations, correct terminology, correct web addresses, and remove obsolete administrative requirements. Some aspects of this action remove duplicative requirements for mail notifications or mail-based record-keeping and reporting, which are also undertaken electronically. During the COVID–19 pandemic, many administrative notifications and reporting requirements were moved to electronic methods; this action revises the regulations to be consistent with current practice.

DATES: Effective December 22, 2023.

ADDRESSES: This rule is accessible via the Office of the Federal Register website at *https://www.federalregister.gov/.* Background information and analytical documents (Analysis) are available at the NMFS West Coast Region website at *https://www.fisheries.noaa.gov/region/west-coast* and at the Pacific Fishery Management Council's website at *https://www.pcouncil.org.*

Electronic Access

This final rule is accessible at the Office of the Federal Register website at *https://www.federalregister.gov.* Background information and analytical documents (Analysis) are available at the NMFS West Coast Region website at: *https://www.fisheries.noaa.gov/region/west-coast-groundfish.html* and at the Pacific Fishery Management Council's website at *https://www.pcouncil.org.*

SUPPLEMENTARY INFORMATION:

Authority for Action

NMFS and the Pacific Fishery Management Council (Council) manage the groundfish fisheries in the exclusive economic zone seaward of California, Oregon, and Washington under the Pacific Coast Groundfish Fishery Management Plan (FMP). The Council prepared the FMP under the authority of the MSA (16 U.S.C. 1801 *et seq.*). Regulations governing U.S. fisheries and implementing the FMP appear at 50 CFR part 660.

Background

This action revises regulations governing the Pacific Coast groundfish trawl fishery. The groundfish trawl fishery is managed under a catch share program called the Trawl Rationalization Program, which was implemented through Amendment 20 to the FMP in January 2011. The Program consists of an individual fishing quota (IFQ) program for the shorebased trawl fleet (including whiting and non-whiting sectors), and cooperatives for the at-sea mothership (MS) and catcher/processor (C/P) trawl fleets (whiting only). As part of the Program, Amendment 20 implemented requirements for 100 percent monitoring at-sea and dockside in order to ensure accountability for all landings and discards of allocated species. Catcher processors and motherships are required to carry two observers at all times, depending on the length of the vessel, and catcher vessels are required to carry one observer, including while in port until all fish are offloaded. In addition, first receivers, which are processors that are licensed to receive IFQ landings, are required to have catch monitors to monitor 100 percent of IFQ offloads. Vessel owners and first receivers are responsible for obtaining and funding catch share observers and catch monitors as a necessary condition of their participation in the program.

Amendment 20 also authorized the use of EM as an alternative to human observers to meet the at-sea monitoring requirement, but deferred to a future regulatory amendment to specify the details of any EM program. EM uses cameras and associated sensors to passively record and monitor fishing activities. The video can be reviewed by an analyst onshore at a later time to collect catch and effort information. EM has the potential to reduce monitoring costs because it does not require deploying a person on the vessel and the logistical and travel expenses that generates. Note that the proposed rule for this action (88 FR 48180; July 26, 2023) stated that Amendment 18 to the FMP authorized the use of EM in the groundfish fishery. While Amendment 18 did authorize the use of EM in general in the fishery, Amendment 20 created the requirement for 100 percent coverage in the trawl fishery and authorized the use of EM to meet that specific requirement, which is being modified by this final rule.

The Council developed and implemented an EM program for shorebased whiting, bottom trawl, and fixed gear vessels, and at-sea whiting catcher vessels in the Trawl Program through two regulatory amendments in 2019 (84 FR 31146; June 28, 2019) and 2022 (87 FR 59705; October 3, 2022). Two additional rulemakings in 2020 (85 FR 74613; November 23, 2020) and 2021 (86 FR 55525; October 6, 2021) delayed the beginning of the EM program to provide time to refine its requirements and prepare for implementation. Vessels will be able to use EM under the regulatory program in place of observers beginning January 1, 2024. A more detailed discussion of the development of the EM program, including the use of exempted fishing permits (EFPs) in an experimental fishery, is described in the proposed rule for this action and in the prior regulatory amendments and is not repeated here.

In preparation for the January 1 start of the program, the Council developed modifications to reporting deadlines and clarifications to the regulations for EM service providers to improve the efficiency and cost effectiveness of the program, which were published in a proposed rule July 26, 2023 (88 FR 48180). Further details on the development of this action can be found in the proposed rule and are not repeated here. Public comments were accepted on the proposed rule from July 26 through August 25, 2023. No public comments were received.

Through this final rule, NMFS is approving and implementing the Council's proposed revisions to the EM

regulations. NMFS has determined that the regulations are consistent with the goals and objectives of the Pacific Coast Groundfish FMP and the requirements of the MSA and other applicable law. This determination is based on NMFS' review of the administrative record, including the Council's record. After considering the required statutory factors and the goals and objectives of the Pacific Coast Groundfish FMP, NMFS has determined that the Council's recommended measures further the EM program's goals and objectives to provide for an alternative method of meeting the monitoring requirements of the Trawl Rationalization Program that reduces the costs and operational burden of these requirements, while ensuring the best scientific information available for conservation and management. Through this rule, NMFS is also approving some minor clarifications to other groundfish regulations.

Final Measures

This section summarizes the measures contained in this final rule. To implement these measures NMFS revises the regulations in §§ 660.18, 660.25, 660.60, 660.140, 660.150, 660.160, and 660.603 to improve the effectiveness of the groundfish EM program and to correct and clarify other groundfish regulations.

1. EM Program Revisions

Discard Logbook Processing Deadline

Through this final rule, NMFS is extending the deadline for EM service providers to process and submit logbook data to NMFS from 2 business days to 7 business days (§ 660.603(m)(5)). In the EM program, vessel operators will record discards in their logbooks that will be used to debit discards of IFQ species from their vessel accounts. Vessel operators are required to submit copies of their logbooks to their contracted EM service provider within 24 hours of the end of an EM trip. EM service providers must then enter, quality check, and submit data from the logbooks to NMFS. NMFS uses the logbook data to initially debit the vessel's account for discards of IFQ species. Once video from the trip is reviewed, the logbook discard estimates may be replaced in the vessel's account with an EM discard estimate if the difference between the two estimates falls outside established performance standards.

The 2-day deadline implemented in the original 2019 EM rule was based on logbook processing timelines achieved in the experimental EM fishery, which has been ongoing since 2015. Since that time, however, increased participation in the EFP has increased the volume of logbooks that must be processed and contributed to an increase in processing times. During the busiest times of the year, the EFP's video review provider, the Pacific States Marine Fisheries Commission (PSMFC), has reported that it can take up to 7 days after a trip to process the logbook. As EM participation levels are expected to remain constant or even grow in 2024 and beyond, the Council became concerned that the 2-day processing deadline was unrealistic for EM service providers to meet during the busiest times of the year. An EM service provider could hire additional staff to ensure it could handle the increased workload, but that would likely increase the costs of the EM program and could make it a less cost-effective alternative to observers, inconsistent with the goals of the EM program as stated in the original EM regulatory amendment (84 FR 31146). Therefore, the Council recommended, and NMFS approves, extending the deadline for EM service providers to process logbooks after an EM trip, to provide operational flexibility to EM service providers and to improve the cost effectiveness of the EM program, consistent with the goals of the EM program and the Pacific Coast Groundfish FMP. Extending the logbook processing deadline also furthers the objectives of the EM program to reduce the logistical burden and adverse economic impacts of the 100 percent at-sea monitoring requirements on these vessels and their communities, consistent with National Standard 8 of the MSA.

Extending the logbook processing deadline would delay the time for vessel accounts to be updated with initial discard estimates from 3 days after a trip (1 day for the EM provider to receive the logbook and 2 days to process it) to 8 days after a trip (1 day to receive the logbook and 7 days to process it), which could increase the risk of a vessel going into deficit if it continues fishing without accurate balances for IFQ quota pounds. However, vessel operators would retain copies of their logbooks that they could use to monitor their IFQ balances until accounts are updated with the logbook data. A processing timeline of approximately 1 week is also consistent with the timeline that human observer discard data posts to vessel accounts. Therefore, extending the logbook processing deadline maintains sufficient timeliness of information on discards of IFQ species for management decisions, while minimizing the costs of data collection requirements, consistent with National Standards 2 and 7 of the MSA.

EM Data Processing Deadlines

Through this final rule, NMFS is extending the deadline for EM service providers to process EM data and submit reports to vessel operators and NMFS from 3 weeks to 60 days after receipt of the hard drive (§§ 660.603(m)(4)–(5)). Following an EM trip, vessel operators are required to submit the hard drive containing the video imagery and sensor data to their contracted EM service provider for processing (generally within 72 hours of trip end). The EM service provider is responsible for reviewing and quality checking the imagery and sensor data and reporting its findings to NMFS. NMFS uses the summary data reported by the EM service provider to validate and, where appropriate, replace logbook discard estimates in vessel accounts, and to monitor compliance by vessel operators with the regulations. The EM service provider also provides feedback to the vessel operator on performance of the EM system and the crew from the trip based on review of the video.

As with other EM program requirements, the 3-week deadline for EM data processing and reporting was based on the data processing timelines observed in the experimental EM fishery. As participation levels have increased, processing times have increased and raised concerns that EM service providers may not be able to meet the original 3-week deadline in regulation during peak fishing seasons. EM service providers could hire additional staff to ensure that they could meet the 3-week processing deadline during peak fishing times, but this would likely increase the cost of EM and could reduce the cost effectiveness of the program as an alternative to human observers. Maintaining a year-round staff level that could meet the 3-week deadline at peak fishing times would also result in an overcapacity of reviewers at slower times of year. On the other hand, it is not a position that can easily be filled on a temporary or seasonal basis. Video reviewers require specialized training and experience in species identification, fishing operations, and regulations to interpret what they see on video and many EM service providers try to recruit former fisheries observers to ensure the best data quality. In addition, PSMFC noted during development of this action that they already struggle to recruit qualified reviewers in the current competitive employment market and seasonal

positions would be even less appealing to job seekers.

In light of these concerns, the Council considered two alternate deadlines for EM data processing of 60 days and 90 days, based on timelines observed in the experimental fishery since 2015 and feedback from EM service providers. In general, extending the deadline for processing and reporting of EM data would delay the availability of this information to NMFS and vessel operators. NMFS relies on reports from EM service providers to validate logbook-reported discards that were used to debit vessel accounts in the interim and ensure accurate IFQ account balances. Vessel operators in turn use updated vessel account balances to determine if they have sufficient quota pounds to cover additional fishing trips. Vessel operators are responsible for ensuring they have sufficient quota to cover any landings and discards of IFQ species and may not fish if their account is in deficit. Vessel operators may purchase additional quota to cover any deficit, including for a brief period after the end of the fishing year, and resume fishing when their account is in good standing, or carryover a deficit (up to 10 percent) to the following year if they cease fishing. Therefore, timely updates of vessel account balances are important for ensuring that fishermen have the most accurate information for their fishing operations and to prevent deficits. Less timely updates to vessel accounts could mean more fishing trips taken on provisional information and increased risk of unexpected deficits.

On an individual level, vessel owners could mitigate their risk of incurring a deficit by keeping a larger balance for IFQ species that they are concerned about, or by taking more time between trips. A vessel owner could weigh the trade-off between the likelihood of a deficit, the cost of carrying a larger balance (in terms of the cost of quota that must be purchased or lost revenue from a quota sale forgone), the lost revenue from postponing a trip to wait for EM data to be finalized, and determine the best option for their own business. A vessel owner could also reduce the risk of a surprise deficit by ensuring their captain's logbook discard estimates meet the performance standards and will not be replaced by EM data. A vessel owner could also choose not to participate in the EM program and instead opt for a human observer if they want timelier final discard information. Thus, even with an extended deadline, vessel operators have a suite of options to maximize fishing activity while avoiding exceeding available quota.

NMFS and the Council also rely on accurate vessel account balances to control fishing mortality in the trawl fishery to prevent overages of the overall trawl sector allocations and Annual Catch Limits (ACLs). However, extending the EM data processing deadline is unlikely to increase the risk of an overage for most species because most groundfish IFQ species are under-attained. The species at greatest risk would be those with small allocations or high attainment, such as yelloweye rockfish or sablefish north of 40°10′N latitude, respectively. Vessels try to avoid catching species with small allocations altogether because of their correspondingly small individual allocations. Even if one vessel were to exceed its individual allocation, it is unlikely many other vessels would and so uncaught pounds of the species could be found elsewhere in the trawl fishery or other sectors to cover the overage without exceeding the ACL. In addition, since the implementation of total accountability for all discards in the Trawl Program, the trawl fishery has become highly selective, with discards accounting for a small portion of total catch. Therefore, increased variability in discard estimates from EM vessels, which is an even smaller portion of total trawl discards, would be unlikely to pose a problem at the sector or ACL level.

NMFS and vessel operators also use the feedback from the video review to ensure that EM systems are meeting performance standards and that vessel crews are complying with catch handling instructions, EM system care responsibilities, and other regulations. While hard drives are waiting to be reviewed, EM vessels are still taking new fishing trips and a delay in review of the EM data could mean that compliance or performance issues are not identified and corrected in a timely manner, leading to reduced data quality. However, the EM program regulations include a number of safeguards to reduce the likelihood that an EM system malfunction or compliance issue will occur or, if it does occur, go undetected to the extent that it would substantively impact overall data quality.

For example, most vessels in the EM program participated in the experimental EM fishery and their crews are experienced in the catch handling, EM system care responsibilities, and other program requirements. In addition, all captains are required to attend an orientation session hosted by NMFS on EM program requirements and must undergo a briefing with their EM provider's staff on the EM system and proper catch handling onboard their vessel before obtaining their EM Authorization. Vessel operators are also required to run a test before each trip to ensure that the EM system is working properly and, if an issue affecting EM data collection (referred to as a ''critical'' malfunction) is identified, may not fish until it is resolved. These measures reduce the likelihood of a critical malfunction, crew error, or other issue occurring that will impact data collection and affect discard estimates.

There are other measures in place to disincentivize intentional tampering with the EM system to hide illegal discard events or other compliance issues. If a critical malfunction occurs at sea, such as the system losing power or a critical camera view going out, the vessel must stop fishing and attempt to resolve the issue. If they cannot resolve the issue, they must end their trip and return to port. This creates a strong incentive to maintain the EM system in good working order and against intentional tampering, even if there is a delay in detection from delayed video processing.

Finally, violation of any of the EM program's requirements, intentional or otherwise, could result in monetary fines through enforcement action and even expulsion from the EM program, whether detected 1 month or 3 months after the trip. In this way, a participant would be unlikely to jeopardize the cost savings and other benefits they derive from using EM by not complying with the EM program requirements even under an extended EM data processing deadline.

The Council weighed all these trade-offs between data timeliness and cost, and determined that a 60-day deadline for processing and reporting of EM data was the right balance between the need for timely data for management and cost effectiveness of EM. The Council considered but rejected a 90-day deadline, because it would be too long of a delay in availability of data and in updating vessel accounts. NMFS approves the Council's recommendation for extending the deadline for EM service providers to process EM data after an EM trip to provide operational flexibility to EM service providers and to improve the cost effectiveness of the EM program, consistent with the goals of the EM program, the Pacific Coast Groundfish FMP, and the MSA. Extending the EM data processing deadline also furthers the objectives of the EM program to reduce the logistical burden and adverse economic impacts of the 100-percent at-sea monitoring

requirements on these vessels and their communities, consistent with National Standard 8 of the MSA. As discussed above, extending the EM processing deadline maintains sufficient timeliness of information on discards of IFQ species for management decisions, while minimizing the costs of data collection requirements, consistent with National Standards 2 and 7 of the MSA.

Revise EM Discard Data Method Language

NMFS is clarifying and simplifying the current EM regulations by removing the paragraph at § 660.603(m)(1) that reads: ''The EM service provider must process vessels' EM data and logbooks according to a prescribed coverage level or sampling scheme, as specified by NMFS in consultation with the Council, and determine an estimate of discards for each trip using standardized estimation methods specified by NMFS. NMFS will maintain manuals for EM and logbook data processing protocols on its website.'' This information is already stated in the introductory paragraph at § 660.603(m) and at § 660.603(m)(5). The Council recommended a change to the language at § 660.603(m)(1) because it was concerned that the existing language implies a requirement for all EM service providers to process EM data using the same methods and methods prescribed by NMFS, which was not the intent of the EM program. Rather, the regulations establish the responsibilities of the EM service provider (to process the EM data and report findings to NMFS) and the standards they must meet (the purpose of the EM program as defined § 660.600(b)), but leave flexibility for EM service providers to design different methods to conduct the data processing and reporting in the way that best suits their business. EM service providers must detail their methods in their permit application which allows NMFS to review them and ensure they meet the program standards. Paragraphs §§ 660.603(m) and 660.603(m)(5) accurately reflect this intent. Removing paragraph § 660.603(m)(1) prevents any confusion with the requirement and has no substantive effect on the operation of the EM program. Therefore, NMFS has approved this administrative change to improve the clarity and effectiveness of the EM regulations, consistent with the Pacific Coast Groundfish FMP and the MSA.

2. Administrative Revisions

This final rule makes some minor administrative, non-substantive revisions to the Pacific Coast groundfish fishery regulations to correct terminology, correct web addresses, and remove some obsolete administrative requirements. Pursuant to Secretarial authority under MSA section 305(d), this part of the action is necessary to carry out the Pacific Coast Groundfish FMP and implementing regulations at 50 CFR 660.

NMFS revised the regulations throughout part 660 to correct misspellings and update web addresses and terminology. In many places in the regulations governing the Pacific Coast groundfish fisheries, the term 'cooperative' is abbreviated to 'coop', rather than 'co-op'. This final rule corrects the abbreviation throughout this Part. This final rule also corrects obsolete web addresses and outdated references to the NMFS 'Northwest Region', which, as of 2013, is now the West Coast Region.

NMFS revised the regulations governing the limited entry trawl fishery at §§ 660.140, 660.150, and 660.160 to remove the requirement for NMFS to mail paper reminders to fishery participants to renew their quota share permits, vessel accounts, and first receiver site licenses. During the COVID–19 global pandemic, NMFS transitioned these reminders to an electronic format. This final rule revises the regulations to be consistent with current practice.

In this final rule, NMFS revised regulations §§ 660.18(d)(1), 660.140, 660.150, and 660.160 governing the issuance of various trawl fishery permits to remove the requirement for NMFS to issue an Initial Agency Determination (IAD) for both approvals and disapprovals of applications. The purpose of an IAD is to notify the applicant of the agency's decision, its rationale, and the applicant's appeal rights. Since an applicant has no reason to appeal an approval of their application, it is unnecessary to issue an IAD for a permit approval. Rather, the permit itself services as notification of the application approval. In addition, the permit decisions for which NMFS is revising the IAD requirement involve little agency discretion that would require explanation in an IAD. Unlike initial qualification decisions in which approval of an application may also involve calculation of an allocation that an approved applicant may wish to dispute, for the permit decisions addressed in this rule NMFS must issue a permit to any applicant that meets the eligibility criteria. Removing the requirement for NMFS to issue an IAD for approvals of these types of permits reduces paperwork for both NMFS and the applicants. IADs would still be issued for all permit denials.

Through this final rule, NMFS also revised the regulations at § 660.113(c)(4) and (d)(4) to remove the requirement for MS and C/P cooperatives to submit cease-fishing reports to NMFS at the end of their fishing seasons. Cease-fishing reports were used by NMFS to safely reapportion uncaught allocation between the MS and C/P sectors to be used by the sector still fishing without putting the other sector at risk of an overage. Amendment 21–4 to the FMP (42 FR 68799, December 17, 2019) removed the allocations of non-whiting groundfish species made as part of Amendment 21 to the FMP (75 FR 60867, October 1, 2010) and instead created set-asides for these stocks in the at-sea sectors (the MS and C/P cooperatives). Without non-whiting groundfish allocations, cease-fishing reports are obsolete and should have been removed with other reapportionment procedures by Amendment 21–4. This rule corrects that error.

Classification

NMFS is issuing this rule pursuant to section 304(b)(1)(A) and 305(d) of the Magnuson-Stevens Act, which provides specific authority and procedure for implementing this action. See 16 U.S.C. 1854(b)(1)(A), 1855(d). The majority of this rulemaking is promulgated pursuant to section 304(b)(1)(A); the Council recommended this action at its March 2023 meeting. This rulemaking also includes minor regulatory changes promulgated pursuant to section 305(d). This action is necessary to improve comprehensibility of the regulations by updating and revising outdated regulations.

The NMFS Assistant Administrator has determined this final rule is consistent with the FMP, other provisions of the Magnuson-Stevens Act, and other applicable law.

This final rule has been determined to be not significant for the purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

This final rule revises existing requirements for the collection of information approved under the

Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). The proposed rule would extend EM service provider submission deadlines for: (1) Vessel operator feedback: 60 days from the date of receipt of EM data for processing from the vessel operator; (2) EM summary and data compliance reports: 60 days from the date of receipt of EM data for processing from the vessel operator; and (3) Logbook data: submit logbook data to NMFS within 7 days of receipt from vessel operators.

Extending the submission deadlines is not expected to increase the public reporting burden for the information collection. The current collection of information requirements would continue to apply under the existing OMB Control Number 0648–0785: West Coast Region Groundfish Trawl Fishery Electronic Monitoring Program.

Fisheries, Fishing, and Indian Fisheries.

Dated: November 16, 2023.

Samuel D. Rauch, III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 660 as follows:

PART 660—FISHERIES OFF WEST COAST STATES

■ 1. The authority citation for part 660 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.;* 16 U.S.C. 773 *et seq.;* and 16 U.S.C. 7001 *et seq.*

■ 2. Amend part 660 by:

■ a. Removing the word ''coop'' and adding in its place the word ''co-op'' wherever it appears; and

■ b. Removing the word ''Coop'' and adding in its place the word ''Co-op'' wherever it appears.

■ 3. Amend § 660.18 by revising paragraph (d)(1) to read as follows:

§ 660.18 Observer and catch monitor provider permits and endorsements.

* * * * *

(d) * * *

(1) *Initial administrative determination.* For all complete applications, NMFS will issue an IAD if it disapproves the application. An approved application will result in issuance of the permit. If disapproved, the IAD will provide the reasons for this determination. If the applicant does not appeal the IAD within 30 calendar days, the IAD becomes the final decision of the Regional Administrator acting on behalf of the Secretary of Commerce.

* * * * *

■ 4. Amend § 660.25 by:

■ a. Revising paragraph (b)(3)(iv)(C)(*2*) and (b)(4)(ix); and

■ b. Removing the phrase ''National Marine Fisheries Service, Northwest Region'' and adding in its place the phrase ''NMFS West Coast Region'' in paragraph (g)(3)(ii).

The revisions read as follows:

§ 660.25 Permits.

* * * * *

(b) * * *

(3) * * *

(iv) * * *

(C) * * *

(*2*) *Application and issuance process for an ownership limitation exemption.* The SFD will make the qualifying criteria and application instructions available online at *https://www.fisheries.noaa.gov/region/west-coast.* A vessel owner who believes that they may qualify for the ownership limitation exemption must submit evidence with their application showing how their vessel has met the qualifying criteria described at paragraph (b)(3)(iv)(C)(*1*) of this section. The vessel owner must also submit a Sablefish Permit Ownership Limitation Exemption Identification of Ownership Interest form that includes disclosure of percentage of ownership in the vessel and disclosure of individual shareholders in any entity. Paragraph (i) of this section sets out the relevant evidentiary standards and burden of proof. Applications may be submitted at any time to NMFS at: NMFS West Coast Region, Sustainable Fisheries Division, ATTN: Fisheries Permit Office—Sablefish Ownership Limitation Exemption, 7600 Sand Point Way NE, Seattle, WA 98115. After receipt of a complete application, the SFD will issue an IAD in writing to the applicant determining whether the applicant qualifies for the exemption. If an applicant chooses to file an appeal of the IAD, the applicant must follow the appeals process outlined at paragraph (g) of this section and, for the timing of the appeals, at paragraph (g)(4)(ii) of this section.

* * * * *

(4) * * *

(ix) *Application forms available.* Application forms for a change in vessel registration, permit owner, or vessel owner are available at: NMFS West Coast Region, Sustainable Fisheries Division, ATTN: Fisheries Permit Office, 7600 Sand Point Way NE, Seattle, WA 98115; or *https://www.fisheries.noaa.gov/region/west-coast.* Contents of the application, and required supporting documentation, are also specified in the application form. Only complete applications will be processed.

* * * * *

■ 5. Amend § 660.60 by revising paragraph (d)(2) to read as follows:

§ 660.60 Specifications and management measures.

* * * * *

(d) * * *

(2) Automatic actions are effective when actual notice is sent by NMFS identifying the effective time and date. Actual notice to fishers and processors will be by email, internet (*https://www.fisheries.noaa.gov/region/west-coast*), phone, letter, or press release. Allocation reapportionments will be followed by publication in the **Federal Register**, in which public comment will be sought for a reasonable period of time thereafter.

* * * * *

§ 660.113 [Amended]

■ 6. Amend § 660.113 by removing and reserving paragraphs (c)(4) and (d)(4).

■ 7. Amend § 660.140 by:

■ a. Revising paragraphs (d)(2)(iii)(A) and (d)(3)(i)(B);

■ b. Removing ''*http://www.nwr.noaa.gov/Groundfish-Halibut/Groundfish-Permits/index.cfm*'' and adding ''*https://www.fisheries.noaa.gov/region/west-coast*'' in its place in paragraph (d)(8)(v)(B);

■ c. Removing the phrase ''NMFS, Northwest Region'' and adding in its place the phrase ''NMFS West Coast Region'' in paragraph (d)(8)(vii)(B); and

■ d. Revising paragraphs (e)(2)(ii), (e)(3)(i)(B), (f)(3) introductory text, (f)(4), and (f)(6)(i).

The revisions read as follows:

§ 660.140 Shorebased IFQ Program.

* * * * *

(d) * * *

(2) * * *

(iii) * * *

(A) *Initial administrative determination.* For all complete applications, NMFS will issue an IAD if it disapproves the application. If approved, the QS permit serves as the IAD. If disapproved, the IAD will provide the reasons for this determination. If the applicant does not appeal the IAD within 30 calendar days, the IAD becomes the final decision of the Regional Administrator acting on behalf of the Secretary of Commerce.

* * * * *

(3) * * *

(i) * * *

(B) Notification to renew QS permits will be sent by SFD by September 15 each year to the QS permit owner's most recent email address in the SFD record. The QS permit owner shall provide SFD with notice of any email address change within 15 days of the change.

* * * * *

(e) * * *

(2) * * *

(ii) *Registration.* A vessel account must be registered with the NMFS SFD Permits Office. A vessel account may be established at any time during the year. An eligible vessel owner must submit a request in writing to NMFS to establish a vessel account. The request must include the vessel name; USCG vessel registration number (as given on USCG Form 1270) or state registration number, if no USCG documentation; all vessel owner names (as given on USCG Form 1270, or on state registration, as applicable); and business contact information, including: Address, phone number, fax number, and email. Requests for a vessel account must also include the following information: A complete economic data collection form as required under § 660.113(b), (c) and (d), and a complete Trawl Identification of Ownership Interest Form as required under paragraph (e)(4)(ii) of this section. The request for a vessel account will be considered incomplete until the required information is submitted. Any change specified at paragraph (e)(3)(ii) of this section, including a change in the legal name of the vessel owner(s), will require the new owner to register with NMFS for a vessel account. A participant must have access to a computer with internet access and must set up online access to their vessel account to participate. NMFS will provide vessel account owners instructions to set up online access to their vessel account. NMFS will use the vessel account to send messages to vessel owners in the Shorebased IFQ Program; it is important for vessel owners to monitor their online vessel account and all associated messages.

* * * * *

(3) * * *

(i) * * *

(B) Notification to renew vessel accounts will be issued by SFD by September 15 each year to the vessel account owner's most recent email address in the SFD record. The vessel account owner shall provide SFD with notice of any email address change within 15 days of the change.

* * * * *

(f) * * *

(3) *Application process.* Persons interested in being licensed as an IFQ first receiver for a specific physical location must submit a complete application for a first receiver site license through the web form submission available at *https://www.noaa.gov/fisheries.* First receiver site license holders may request a paper application by contacting SFD. NMFS will only consider complete applications for approval. A complete application includes:

* * * * *

(4) *Initial administrative determination.* For all complete applications, NMFS will issue an IAD if the application is disapproved. The IAD will provide the reasons for this determination. NMFS will not reissue a first receiver site license until the required cost recovery program fees, as specified at § 660.115, have been paid. The IAD, appeals, and final decision process for the cost recovery program is specified at § 660.115(d)(3)(ii).

* * * * *

(6) * * *

(i) First receiver site license applications will be accessible through an online application on or about February 1 each year.

* * * * *

■ 8. Amend § 660.150 by:

■ a. Revising paragraph (d)(2).

■ b. Removing ''*http://www.nwr.noaa.gov/Groundfish-Halibut/Groundfish-Permits/index.cfm*'' adding ''*https://www.fisheries.noaa.gov/region/west-coast*'' in its place in paragraph (g)(6)(iv)(B); and

■ c. Removing the phrase ''NMFS, Northwest Region'' and adding in its place the phrase ''NMFS West Coast Region'' in paragraph (g)(6)(vi)(B).

The revision reads as follows:

§ 660.150 Mothership (MS) Co-op Program.

* * * * *

(d) * * *

(2) *Initial administrative determination.* For all complete applications, NMFS will issue an IAD if the application is disapproved. An approved application will result in issuance of the permit. If disapproved, the IAD will provide the reasons for this determination. The IAD for a MS co-op permit follows the same requirement as specified for limited entry permits at § 660.25(g)(4)(ii); if the applicant does not appeal the IAD within the 30 calendar days, the IAD becomes the final decision of the Regional Administrator acting on behalf of the Secretary of Commerce.

* * * * *

■ 9. Amend § 660.160 by:

■ a. Removing ''NMFS NWR'' and adding ''NMFS WCR'' in its place in paragraph (d)(1)(iii);

■ b. Removing ''*http://www.nwr.noaa.gov*'' and adding *https://www.fisheries.noaa.gov/region/west-coast* in its place in paragraph (d)(1)(iii); and

■ c. Revising paragraph (d)(2).

The revision reads as follows:

§ 660.160 Catcher/processor (C/P) Co-op Program.

* * * * *

(d) * * *

(2) *Initial administrative determination.* For all complete applications, NMFS will issue an IAD if the application is disapproved. An approved application will result in issuance of the permit. If disapproved, the IAD will provide the reasons for this determination. The IAD for a C/P co-op permit follows the same requirement as specified for limited entry permits at § 660.25(g)(4)(ii), if the applicant does not appeal the IAD within the 30 calendar days, the IAD becomes the final decision of the Regional Administrator acting on behalf of the Secretary of Commerce.

* * * * *

■ 10. Amend § 660.603 by removing and reserving paragraph (m)(1) and revising paragraphs (m)(4) introductory text and (m)(5).

The revisions read as follows:

§ 660.603 Electronic monitoring provider permits and responsibilities.

* * * * *

(m) * * *

(4) The EM service provider must communicate with vessel operators and NMFS to coordinate data service needs, resolve specific program issues, and provide feedback on program operations. No later than 60 days from the date of receipt of EM data for processing from the vessel operator, the EM service provider must provide feedback to vessel representatives, field services staff, and NMFS regarding:

* * * * *

(5) *Submission of data and reports.* On behalf of vessels with which it has a contract (see § 660.604(k)), the EM service provider must submit to NMFS logbook data, EM summary reports, including discard estimates, fishing activity information, and meta data (*e.g.,* image quality, reviewer name), and incident reports of compliance issues according to a NMFS-accepted EM Service Plan, which is required under paragraph (b)(1)(vii) of this section, and as described in the EM Program Manual or other written and oral instructions provided by the EM program, such that

the EM program achieves its purpose as defined at § 660.600(b). Logbook data must be submitted to NMFS within 7 business days of receipt from the vessel operator. EM summary reports must be submitted within 60 days of the date the EM data was received by the EM service provider from the vessel operator. If NMFS determines that the information does not meet these standards, NMFS may require the EM service provider to correct and resubmit the datasets and reports.

* * * * *

Notices

Federal Register
Vol. 88, No. 224
Wednesday, November 22, 2023

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Proposed New Recreation Fee Site

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice.

SUMMARY: The San Bernardino National Forest is proposing to establish a new recreation fee site. Recreation fee revenues collected at the new recreation fee site would be used for operation, maintenance, and improvement of the site. An analysis of nearby recreation fee sites with similar amenities shows the recreation fee that would be charged at the new recreation fee site is reasonable and typical of similar recreation fee sites in the area.

DATES: If approved, the new recreation fee would be implemented no earlier than six months following the publication of this notice in the **Federal Register**.

ADDRESSES: San Bernardino National Forest, 602 South Tippecanoe Avenue, San Bernardino, California 92408.

FOR FURTHER INFORMATION CONTACT: Jonar Rodrigo, Recreation Fee Program Manager—Southern Zone, 909–382–2622 or *jonar.rodrigo@usda.gov*.

SUPPLEMENTARY INFORMATION: The Federal Lands Recreation Enhancement Act (16 U.S.C. 6803(b)) requires the Forest Service to publish a six-month advance notice in the **Federal Register** of establishment of new recreation fee sites. In accordance with Forest Service Handbook 2309.13, chapter 30, the Forest Service will publish the proposed new recreation fee site in local newspapers and other local publications for public comment. Most of the new recreation fee revenues would be spent where they are collected to enhance the visitor experience at the new recreation fee site.

A standard amenity recreation fee of $5 per day per vehicle would be charged at Big Pine Flat Off-Highway Vehicle Staging Area. The Adventure Pass and the America the Beautiful—the National Parks and Federal Recreational Lands Pass would be honored at this standard amenity recreation fee site.

Expenditures from recreation fee revenues collected at the new recreation fee site would enhance recreation opportunities, improve customer service, and address maintenance needs. Once public involvement is complete, the new fee will be reviewed by a Recreation Resource Advisory Committee prior to a final decision and implementation.

Dated: November 17, 2023.

Jacqueline Emanuel,

Associate Deputy Chief, National Forest System.

BILLING CODE 3411–15–P

DEPARTMENT OF AGRICULTURE

Forest Service

Proposed New Recreation Fee Sites

AGENCY: Forest Service, Agriculture (USDA).

ACTION: Notice.

SUMMARY: The National Forests in North Carolina are proposing to establish several new recreation fee sites. Recreation fee revenues collected at the new recreation fee sites would be used for operation, maintenance, and improvement of the sites. An analysis of nearby recreation fee sites with similar amenities shows the recreation fees that would be charged at the new recreation fee sites are reasonable and typical of similar recreation fee sites in the area.

DATES: If approved, the new recreation fees would be implemented no earlier than six months following the publication of this notice in the **Federal Register**.

ADDRESSES: Recreation Fee Proposals, National Forests in North Carolina, 160A Zillicoa Street, Asheville, NC 28801.

FOR FURTHER INFORMATION CONTACT: Logan Free, Recreation Fee Coordinator, 828–257–4256 or *SM.FS.NFsNCfees@usda.gov.*

SUPPLEMENTARY INFORMATION: The Federal Lands Recreation Enhancement Act (16 U.S.C. 6803(b)) requires the Forest Service to publish a six-month advance notice in the **Federal Register** of establishment of new recreation fee sites. In accordance with Forest Service Handbook 2309.13, chapter 30, the Forest Service will publish the proposed new recreation fee sites in local newspapers and other local publications for public comment. Most of the new recreation fee revenues would be spent where they are collected to enhance the visitor experience at the new recreation fee sites.

An expanded amenity recreation fee of $50 per night for groups up to 50 people would be charged for the Yates Place Camp Group Campground. A standard amenity recreation fee of $5 per day per vehicle would be charged at Cedar Point Day and Flanners Beach developed recreation sites. The America the Beautiful—the National Parks and Federal Recreational Lands Pass would be honored at these standard amenity recreation fee sites. A special recreation permit fee of $5 per rider per day or a $30 annual pass is proposed for the Jackrabbit, Wood Run, and Pisgah Complex Trail Systems.

Expenditures from recreation fee revenues collected at the new recreation fee sites would enhance recreation opportunities, improve customer service, and address maintenance needs. Once public involvement is complete, the new recreation fees will be reviewed by a Recreation Resource Advisory Committee prior to a final decision and implementation. Reservations for group campgrounds could be made online at *www.recreation.gov* or by calling 877–444–6777. Reservations would cost $8.00 per reservation.

Dated: November 17, 2023.

Jacqueline Emanuel,

Associate Deputy Chief, National Forest System.

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Washington Advisory Committee Advisory Committee; Cancellation

AGENCY: Commission on Civil Rights.

ACTION: Notice; cancellation of virtual business meeting.

The Commission on Civil Rights published a notice in the **Federal Register** concerning a virtual business meeting of the Washington Advisory Committee. The meeting scheduled for Tuesday, December 5, 2023, at 11 a.m. Pacific time is cancelled. The notice is in the **Federal Register** of Monday, August 14, 2023, in FR Doc. 2023–17298 in the first, second, and third columns of page 55008.

FOR FURTHER INFORMATION CONTACT: Brooke Peery, *bpeery@usccr.gov,* (202) 701–1376.

Dated: November 17, 2023.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Tennessee Advisory Committee

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission), and the Federal Advisory Committee Act (FACA) that a meeting of the Tennessee Advisory Committee to the Commission will convene by Zoom on Wednesday, November 29, 2023, at 3:30 p.m. (CT). The purpose of the meeting is to discuss their draft report on Voting Rights in the state.

DATES: The meeting will take place on Wednesday, November 29, 2023, at 3:30 p.m. (CST).

Registration Link (Audio/Visual): *https://www.zoomgov.com/j/1609784727?pwd=bkhjVWlYa2c4Y0ZmZkx1Uk9SOEJodz09*

Telephone (Audio Only): Dial (833) 568–8864 USA Toll Free; Access Code: 160 978 4727

FOR FURTHER INFORMATION CONTACT: Victoria Moreno at *vmoreno@usccr.gov* or by phone at 434–515–0204.

SUPPLEMENTARY INFORMATION: This meeting is available to the public through the Zoom link above. If joining only via phone, callers can expect to incur charges for calls they initiate over wireless lines, and the Commission will not refund any incurred charges. Individuals who are deaf, deafblind and hard of hearing may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the call-in number found through registering at the web link provided above for the meeting.

Members of the public are entitled to make comments during the open period at the end of the meeting. Members of the public may also submit written comments; the comments must be received in the Regional Programs Unit within 30 days following the respective meeting. Written comments may be emailed to Victoria Moreno at *vmoreno@usccr.gov.* All written comments received will be available to the public.

Persons who desire additional information may contact the Regional Programs Unit at (202) 809–9618. Records and documents discussed during the meeting will be available for public viewing as they become available at the *www.facadatabase.gov.* Persons interested in the work of this advisory committee are advised to go to the Commission's website, *www.usccr.gov,* or to contact the Regional Programs Unit at the above phone number or email address.

Agenda: Wednesday, November 29, 2023, at 1:30 p.m. (CT)

1. Welcome & Roll Call
2. Chair's Comments
3. Discussion on Report
4. Next Steps
5. Public Comment
6. Adjourn

Dated: November 17, 2023.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

COMMISSION ON CIVIL RIGHTS

Notice of Public Meeting of the Nebraska Advisory Committee to the U.S. Commission on Civil Rights

AGENCY: Commission on Civil Rights.

ACTION: Announcement of meeting.

SUMMARY: Notice is hereby given, pursuant to the provisions of the rules and regulations of the U.S. Commission on Civil Rights (Commission) and the Federal Advisory Committee Act that the Nebraska Advisory Committee (Committee) to the U.S. Commission on Civil Rights will hold a planning meeting via web conference. The purpose of the meeting will be to discuss their project on to the Effects of the COVID–19 Pandemic on K–12 Education in the state.

DATES: Tuesday, December 12, 2023 at 12:00 p.m. Central Time.

ADDRESSES: The meeting will be held via Zoom.

December 12th Planning Meeting: Registration Link (Audio/Visual): https://www.zoomgov.com/j/1609471833?pwd=VXpXMExxMTd0cGtKZFpUYUpNUmFZUT09.

Join by Phone (Audio Only): 1–833–435–1820 USA Toll Free; Meeting ID: 160 947 1833.

FOR FURTHER INFORMATION CONTACT: Victoria Moreno, DFO, at *vmoreno@usccr.gov* or by phone at 434–515–0204.

SUPPLEMENTARY INFORMATION: Members of the public may listen to the discussions through the above call-in numbers (audio only) or online registration links (audio/visual). An open comment period at each meeting will be provided to allow members of the public to make a statement as time allows. Callers can expect to incur regular charges for calls they initiate over wireless lines, according to their wireless plan. The Commission will not refund any incurred charges. Callers will incur no charge for calls they initiate over land-line connections to the toll-free telephone number. Individuals who are deaf, deafblind, and/or hard of hearing may also follow the proceedings by first calling the Federal Relay Service at 1–800–877–8339 and providing the Service with the conference call number and meeting ID number.

Members of the public are entitled to submit written comments; the comments must be received in the regional office within 30 days following the meetings. Written comments may be emailed to Victoria at *vmoreno@usccr.gov.*

Records generated from this meeting may be inspected and reproduced at the Regional Programs Unit Office, as they become available, both before and after the meetings. Records of the meetings will be available via *www.facadatabase.gov* under the Commission on Civil Rights, Nebraska Advisory Committee link. Persons interested in the work of this Committee are directed to the Commission's website, *http://www.usccr.gov,* or may contact the Regional Programs Unit at the above email or street address.

Agenda

I. Welcome and Roll Call
II. Chair's Comments
III. Committee Business
IV. Public Comment
V. Adjournment

Dated: November 17, 2023.

David Mussatt,

Supervisory Chief, Regional Programs Unit.

BILLING CODE P

DEPARTMENT OF COMMERCE

Foreign-Trade Zones Board

[B–59–2023]

Foreign-Trade Zone (FTZ) 84, Notification of Proposed Production Activity; KMP USA LLC; (Automotive Parts); Katy, Texas

KMP USA LLC submitted a notification of proposed production activity to the FTZ Board (the Board) for its facility in Katy, Texas within FTZ 84. The notification conforming to the requirements of the Board's regulations (15 CFR 400.22) was received on November 13, 2023.

Pursuant to 15 CFR 400.14(b), FTZ production activity would be limited to the specific foreign-status material(s)/component(s) and specific finished product(s) described in the submitted notification (summarized below) and subsequently authorized by the Board. The benefits that may stem from conducting production activity under FTZ procedures are explained in the background section of the Board's website—accessible via *www.trade.gov/ftz.*

The proposed finished products include: camshaft bushing kits; camshaft kits; connecting rods (con rod) and main bearings kits; con rod bearings kits; con rod bolt kits; crankshaft kits; crankshaft thrust washers kits; cylinder head assemblies; cylinder head bolt kits; cylinder liner and seal kits; engine filter kits; engine overhaul gasket kits; engine long block assemblies; engine oil pump kits; engine overhaul kits; engine piston and liner kits; engine sensor kits; engine short block assemblies; engine valve collet kits; engine valve kits; engine valve seal kits; engine valvetrain kits; excavator bucket pin and bushing kits; expansion plug kits; fuel injector seal kits; fuel line kits; fuel solenoid kits; hydraulic cylinder seal kits; engine brake gasket kits; engine valve guide kits; main bearing kits; piston kits; piston kit and connecting rod assemblies; piston pin and retainer kits; piston ring sets; spindle repair kits; transmission oil pump kits; turbocharger gasket kits; V-belt sets; water pump kits; and, water pump repair kits (duty rate ranges from duty-free to 5.8%).

The proposed foreign-status materials and components include: balancer shafts (cast iron); ball bearings (steel); bolts, studs or screws (steel); copper and aluminum bushings for balance shaft, camshafts (piece or set), connecting rods, crankshafts, equipment arm or bucket links, front cover or accessory drives, hydraulic cylinder rod ends and, spindles; camshafts (cast iron and steel); steel circlips; clutch alignment tools (plastic); clutch assemblies (aluminum and steel); clutch plates (aluminum, fiber and, steel); clutch release levers (copper and steel); clutch tension springs (copper and steel); coil solenoids (cast iron and steel); connecting rods (steel); half, pair or, set of connecting rod bearings (standard, undersize or oversize) (copper and aluminum); connecting rod end slipper bearing kits (copper, aluminum); pressure plate and cover assemblies (aluminum and steel); crankshafts (cast iron and steel); cylinder blocks (cast iron); bare or assembled cylinder heads (cast iron and steel); cylinder head injector sleeves (brass, copper and, steel); engine block cylinder liners (cast iron and steel); engine mounted air compressor cylinder liners (cast iron and steel); cylinder liner seals (rubber and plastic); cylinder liner shims (brass and steel); dowel pins (steel); dowel pin alignment inserts, dowel rings (steel); air, fuel, oil and, water engine filters (plastic, aluminum and, steel); engine oil cooler cores (aluminum, cast iron, copper and, steel); engine oil pumps (aluminum, cast iron and, steel); engine overhaul gasket kit; engine piston: body, crown, pins, skirts and, rings (compression, oil control or set) (aluminum, cast iron and, steel); engine push rods (steel); engine pressure and temperature sensors (plastic and brass); engine intake or exhaust valves (steel); engine valve crossheads (cast iron); engine intake or exhaust valve guides (steel); engine valve lash caps (steel); engine valve lock half: collet or keepers (steel); engine valve rotators (steel); engine intake or exhaust valve seals (plastic and steel); engine intake or exhaust valve seats (steel); inner or lower engine intake or exhaust valve springs (steel); upper or lower engine valve spring retainers (steel); engine water pumps, impeller, shafts and spacers (aluminum, cast iron, plastic and, steel); exhaust manifold sleeves (steel); expansion plugs (steel); fuel lines (aluminum and steel); fuel priming pumps, mechanical engine transfer pumps (aluminum, cast iron, steel and, plastic); gaskets for accessory drives, blower end plates, brake and cam follower housings, cylinder heads, drain plugs, engine mounted compressors, exhaust manifold, flanges, front covers, fuel pumps, injector sleeves, oil cooler covers, oil coolers, oil pans, oil pick up tubes, oil pumps, pre-combustion chambers, rear covers, rear housing rope seals, turbocharger oil drains, turbochargers, valve covers, and water pumps made from paper, rubber, steel, copper and, graphite; gear (balancer, camshaft, crankshaft, idler pump drive) (steel); grease fittings (aluminum and steel); rubber hoses; hour meter gauges (aluminum, plastic, glass and, steel); hydraulic cylinder seals (back up rings, buffer rings, dust seals, packing, piston rings, rings) (rubber and plastic); hydraulic cylinder wear rings (plastic); aluminum and steel hose clips; liquid gasket makers (plastic); steel lockwire; standard, undersize or oversize main bearings (aluminum, copper); water pump mechanical seals (steel and plastic); steel needle roller bearings; steel and plastic nuts; front or rear crankshaft/cover oil seals (steel, rubber and, plastic); rubber and plastic O-rings; equipment arm, cylinder rod or bucket link steel pins; engine mounted air compressor piston assemblies (aluminum, cast iron and, steel); piston cooling nozzles (steel, plastic and, cast iron); pre-combustion chambers (steel); engine oil cooler housing pressure relief plungers (steel and plastic); socket, ball or adjuster rocker arm inserts (steel and plastic); rocker arm rollers, pins and, supports (cast iron, brass and steel); intake or exhaust rocker levers (cast iron and steel); rocker lever shafts (cast iron, steel); steel roller bearings; rubber and plastic seals; engine block and cylinder head steel spacer plates; camshaft follower tappets (steel, brass and, cast iron); thermostat engine coolant regulator (aluminum, brass and, steel); standard, undersize or oversize thrust bearings (aluminum, copper and steel); crankshaft thrust blocks (brass and steel); steel thrust plates; standard, undersize or oversize thrust washers (aluminum, copper and, steel); transmission oil pumps (aluminum, cast iron and, steel); turbochargers (aluminum, cast iron, steel and, plastic); universal joint assemblies (cast iron and steel); engine mounted air compressor unloader valve caps and bodies (aluminum and cast iron); single or set rubber V-belts; aluminum and steel valves (part of engine mounted air compressor); steel and brass washers; water temperature gauges (aluminum, plastic, glass and, steel); steel wear plates (part of engine mounted air compressor); steel wear sleeves; and, steel woodruff keys (duty rate ranges from duty-free to 9%). The request indicates that certain materials/components are subject to duties under section 301 of the Trade Act of 1974 (section 301), depending on the country of origin. The applicable section 301 decisions require subject merchandise to be admitted to FTZs in privileged foreign status (19 CFR 146.41).

Public comment is invited from interested parties. Submissions shall be addressed to the Board's Executive Secretary and sent to: *ftz@trade.gov.* The closing period for their receipt is January 2, 2024.

A copy of the notification will be available for public inspection in the ''Online FTZ Information System'' section of the Board's website.

For further information, contact Christopher Wedderburn at *Chris.Wedderburn@trade.gov.*

Dated: November 17, 2023.

Elizabeth Whiteman,

Executive Secretary.

BILLING CODE 3510–DS–P

DEPARTMENT OF COMMERCE

Bureau of Industry and Security

In the Matter of: Samantha Coronado, Inmate Number: 83982–509, FMC Carswell, Federal Medical Center, P.O. Box 27137, Fort Worth, TX 76127; Order Denying Export Privileges

On June 23, 2022, in the U.S. District Court for the Southern District of Texas, Samantha Coronado (''Coronado'') was convicted of violating 18 U.S.C. 554(a). Specifically, Coronado was convicted of smuggling 730 rounds of CBC .50 caliber ammunition from the United States to Mexico. As a result of her conviction, the Court sentenced Coronado to 46 months of confinement, three years of supervised release and a $100 assessment.

Pursuant to section 1760(e) of the Export Control Reform Act (''ECRA''),[1] the export privileges of any person who has been convicted of certain offenses, including, but not limited to, 18 U.S.C. 554, may be denied for a period of up to ten (10) years from the date of his/her conviction. 50 U.S.C. 4819(e). In addition, any Bureau of Industry and Security (''BIS'') licenses or other authorizations issued under ECRA, in which the person had an interest at the time of the conviction, may be revoked. *Id.*

BIS received notice of Coronado's conviction for violating 18 U.S.C. 554. As provided in Section 766.25 of the Export Administration Regulations (''EAR'' or the ''Regulations''), BIS provided notice and opportunity for Coronado to make a written submission to BIS. 15 CFR 766.25.[2] BIS has not received a written submission from Coronado.

Based upon my review of the record and consultations with BIS's Office of Exporter Services, including its Director, and the facts available to BIS, I have decided to deny Coronado's export privileges under the Regulations for a period of seven years from the date of Coronado's conviction. The Office of Exporter Services has also decided to revoke any BIS-issued licenses in which Coronado had an interest at the time of her conviction.[3]

Accordingly, it is hereby *Ordered:*

First, from the date of this Order until June 23, 2029, Samantha Coronado, with a last known address of Inmate Number: 83982–509, FMC Carswell, Federal Medical Center, P.O. Box 27137, Fort Worth, TX 76127, and when acting for or on her behalf, her successors, assigns, employees, agents or representatives (''the Denied Person''), may not directly or indirectly participate in any way in any transaction involving any commodity, software or technology (hereinafter collectively referred to as ''item'') exported or to be exported from the United States that is subject to the Regulations, including, but not limited to:

A. Applying for, obtaining, or using any license, license exception, or export control document;

B. Carrying on negotiations concerning, or ordering, buying, receiving, using, selling, delivering, storing, disposing of, forwarding, transporting, financing, or otherwise servicing in any way, any transaction involving any item exported or to be exported from the United States that is subject to the Regulations, or engaging in any other activity subject to the Regulations; or

C. Benefitting in any way from any transaction involving any item exported or to be exported from the United States that is subject to the Regulations, or from any other activity subject to the Regulations.

Second, no person may, directly or indirectly, do any of the following:

A. Export, reexport, or transfer (in-country) to or on behalf of the Denied Person any item subject to the Regulations;

B. Take any action that facilitates the acquisition or attempted acquisition by the Denied Person of the ownership, possession, or control of any item subject to the Regulations that has been or will be exported from the United States, including financing or other support activities related to a transaction whereby the Denied Person acquires or attempts to acquire such ownership, possession or control;

C. Take any action to acquire from or to facilitate the acquisition or attempted acquisition from the Denied Person of any item subject to the Regulations that has been exported from the United States;

D. Obtain from the Denied Person in the United States any item subject to the Regulations with knowledge or reason to know that the item will be, or is intended to be, exported from the United States; or

E. Engage in any transaction to service any item subject to the Regulations that has been or will be exported from the United States and which is owned, possessed or controlled by the Denied Person, or service any item, of whatever origin, that is owned, possessed or controlled by the Denied Person if such service involves the use of any item subject to the Regulations that has been or will be exported from the United States. For purposes of this paragraph, servicing means installation, maintenance, repair, modification or testing.

Third, pursuant to section 1760(e) of ECRA and sections 766.23 and 766.25 of the Regulations, any other person, firm, corporation, or business organization related to Coronado by ownership, control, position of responsibility, affiliation, or other connection in the conduct of trade or business may also be made subject to the provisions of this Order in order to prevent evasion of this Order.

Fourth, in accordance with part 756 of the Regulations, Coronado may file an appeal of this Order with the Under Secretary of Commerce for Industry and Security. The appeal must be filed within 45 days from the date of this Order and must comply with the provisions of part 756 of the Regulations.

Fifth, a copy of this Order shall be delivered to Coronado and shall be published in the **Federal Register**.

Sixth, this Order is effective immediately and shall remain in effect until June 23, 2029.

John Sonderman,

Director, Office of Export Enforcement.

[FR Doc. 2023–25838 Filed 11–21–23; 8:45 am]

BILLING CODE 3510–DT–P

[1] ECRA was enacted on August 13, 2018, as part of the John S. McCain National Defense Authorization Act for Fiscal Year 2019, and as amended is codified at 50 U.S.C. 4801–4852.

[2] The Regulations are currently codified in the Code of Federal Regulations at 15 CFR parts 730–774 (2022).

[3] The Director, Office of Export Enforcement, is the authorizing official for issuance of denial orders pursuant to amendments to the Regulations (85 *FR* 73411, November 18, 2020).

Certain Frozen Warmwater Shrimp From India: Rescission of Antidumping Duty Administrative Review; 2022–2023, in Part

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: On April 11, 2023, the U.S. Department of Commerce (Commerce) initiated an administrative review of the antidumping duty (AD) order on certain frozen warmwater shrimp (shrimp) from India for the period of review (POR), February 1, 2022, through January 31, 2023, for 269 companies. Because all interested parties timely withdrew their requests for administrative review for certain companies, we are rescinding this administrative review with respect to those companies. For a list of the companies for which we are rescinding this review, *see* Appendix I to this notice. For a list of the companies for which the review is continuing, *see* Appendix II to this notice.

DATES: Applicable November 22, 2023.

FOR FURTHER INFORMATION CONTACT: Terre Keaton Stefanova, AD/CVD Operations, Office IX, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–1280.

SUPPLEMENTARY INFORMATION:

Background

On February 2, 2023, Commerce published in the **Federal Register** a notice of opportunity to request an administrative review of the AD order on shrimp from India for the POR, February 1, 2022, through January 31, 2023.[1] In February 2022, Commerce received timely requests, in accordance with section 751(a) of the Tariff Act of 1930, as amended (the Act), to conduct an administrative review of this AD order from the Ad Hoc Shrimp Trade Action Committee (the petitioner),[2] the American Shrimp Processors Association (ASPA),[3] and certain individual companies.[4] Based on these requests, on April 11, 2023, in accordance with section 751(a) of the Act, Commerce published in the **Federal Register** a notice of initiation listing 269 companies for which Commerce received timely requests for review.[5]

In July 2023, all interested parties timely withdrew their requests for an administrative review of certain companies.[6] These companies are listed in Appendix I.

Partial Rescission

Pursuant to 19 CFR 351.213(d)(1), Commerce will rescind an administrative review, in whole or in part, if a party who requested the review withdraws the request within 90 days of the date of publication of notice of initiation of the requested review. As noted above, certain parties withdrew their requests for review by the 90-day deadline. Accordingly, we are rescinding this administrative review with respect to the companies listed in Appendix I.

Assessment

Commerce will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries. Antidumping duties shall be assessed at rates equal to the cash deposit of estimated antidumping duties required at the time of entry, or withdrawal from warehouse, for consumption, in accordance with 19 CFR 351.212(c)(1)(i). Commerce intends to issue appropriate assessment instructions to CBP no earlier than 35 days after publication of this notice in the **Federal Register**.

Notification to Importers

This notice serves as a reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

Notification Regarding Administrative Protective Orders

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305. Timely written notification of the return/destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and terms of an APO is a violation which is subject to sanction.

Notification to Interested Parties

This notice is issued and published in accordance with section 751(a)(1) of the Act and 19 CFR 351.213(d)(4).

Dated: November 15, 2023.

James Maeder,

Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations.

Certain Cold-Drawn Mechanical Tubing of Carbon and Alloy Steel From India: Final Results of Antidumping Duty Administrative Review; 2021–2022

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

SUMMARY: The U.S. Department of Commerce (Commerce) determines that Goodluck India Limited (Goodluck) and Tube Products of India, Ltd., a unit of Tube Investments of India Limited (collectively, TII), made sales of subject merchandise in the United States at prices below normal value during the period of review (POR) June 1, 2021, through May 31, 2022.

DATES: Applicable November 22, 2023.

FOR FURTHER INFORMATION CONTACT: Alexis Cherry or Samantha Kinney, AD/CVD Operations, Office VIII, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 1401 Constitution Avenue NW, Washington, DC 20230; telephone: (202) 482–0607 or (202) 482–5305, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 7, 2023, Commerce published the preliminary results of the 2021–2022 administrative review of the antidumping duty order on certain cold-drawn mechanical tubing of carbon and alloy steel (cold-drawn mechanical tubing) from India, covering two producers/exporters, Goodluck and TII.[1] For the events that occurred since Commerce published the *Preliminary Results, see* the Issues and Decision Memorandum.[2] Commerce conducted this review in accordance with section 751(a)(1)(B) of the Tariff Act of 1930, as amended (the Act).

Scope of the Order [3]

The merchandise subject to the *Order* is cold-drawn mechanical tubing from India. The product is currently classified under the Harmonized Tariff Schedule of the United States (HTSUS) subheadings: 7304.31.3000, 7304.31.6050, 7304.51.1000, 7304.51.5005, 7304.51.5060, 7306.30.5015, 7306.30.5020, and 7306.50.5030. Subject merchandise may also enter under 7306.30.1000 and 7306.50.1000. The HTSUS subheadings above are provided for convenience and customs purposes only. The written description of the scope of the *Order* is dispositive. A full description of the scope of the *Order* is contained in the Issues and Decision Memorandum.

Analysis of Comments Received

All issues raised by parties in the case and rebuttal briefs are addressed in the Issues and Decision Memorandum. A list of the issues addressed in the Issues and Decision Memorandum is included in the appendix to this notice. The Issues and Decision Memorandum is a public document and is on file electronically via Enforcement and Compliance's Antidumping and Countervailing Duty Centralized Electronic Service System (ACCESS). ACCESS is available to registered users at *https://access.trade.gov.* In addition, a complete version of the Issues and Decision Memorandum can be accessed directly at *https://access.trade/gov/public/FRNoticesListLayout.aspx.*

Changes Since the Preliminary Results

Based on our analysis of the comments received and our verification findings, Commerce made certain revisions to the margin calculations for Goodluck and TII. The Issues and Decision Memorandum contains descriptions of these revisions.

Final Results of Review

We determine that the following estimated weighted-average dumping margins exists for the period June 1, 2021, through May 31, 2022:

[1] *See Certain Cold-Drawn Mechanical Tubing of Carbon and Alloy Steel from India: Preliminary Results of Antidumping Duty Administrative Review; 2021–2022,* 88 FR 43295 (July 7, 2023) (*Preliminary Results*), and accompanying Preliminary Decision Memorandum.

[2] *See* Memorandum, ''Issues and Decision Memorandum for the Final Results of Antidumping Duty Administrative Review of Certain Cold-Drawn Mechanical Tubing of Carbon and Alloy Steel from India; 2021–2022,'' dated concurrently with, and hereby adopted by, this notice (Issues and Decision Memorandum).

[3] *See Certain Cold-Drawn Mechanical Tubing of Carbon and Alloy Steel from the People's Republic of China, the Federal Republic of Germany, India, Italy, the Republic of Korea, and Switzerland: Antidumping Duty Orders; and Amended Final Determinations of Sales at Less Than Fair Value for the People's Republic of China and Switzerland,* 83 FR 26962 (June 11, 2018) (*Order*).

Producer/exporter	Weighted-average dumping; margin (percent)
Goodluck India Limited[4]	0.61
Tube Products of India, Ltd., a unit of Tube Investments of India Limited	4.14

Disclosure

We intend to disclose the calculations performed within five days of the date of publication of this notice to parties in this proceeding, in accordance with 19 CFR 351.224(b).

Assessment Rates

Commerce has determined, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries in accordance with section 751(a)(2)(C) of the Act and 19 CFR 351.212(b). Commerce intends to issue assessment instructions to CBP no earlier than 35 days after the date of publication of the final results of this review in the **Federal Register**. If a timely summons is filed at the U.S. Court of International Trade, the assessment instructions will direct CBP not to liquidate relevant entries until the time for parties to file a request for a statutory injunction has expired (*i.e.,* within 90 days of publication).

Pursuant to 19 CFR 351.212(b)(1), where the respondent reported the entered value of its U.S. sales, we calculated importer-specific *ad valorem* duty assessment rates based on the ratio of the total amount of dumping calculated for the examined sales to the total entered value of the sales for which entered value was reported. Where the respondent did not report entered value, we calculated importer-specific per-unit duty assessment rates based on the ratio of the total amount of antidumping duties calculated for the examined sales to the total quantity of those sales. Where an importer-specific assessment rate is *de minimis* (*i.e.,* less than 0.5 percent), the entries by that importer will be liquidated without regard to antidumping duties. To determine whether an importer-specific per-unit duty assessment rate is *de minimis,* we calculated an estimated entered value.

Consistent with Commerce's clarification of its assessment practice, for entries of subject merchandise during the POR produced by Goodluck or TII for which they did not know the merchandise was destined for the United States, we will instruct CBP to liquidate unreviewed entries at the all-others rate if there is no rate for the intermediate company(ies) involved in the transaction.[5]

Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of cold-drawn mechanical tubing from India entered, or withdrawn from warehouse, for consumption on or after the date of publication of the final results as provided by section 751(a)(2) of the Act: (1) the cash deposit rate for Goodluck and TII will be equal to the weighted-average dumping margin established for each company in the final results of the review; (2) for merchandise exported by producers or exporters not covered in this review but covered in a prior completed segment of the proceeding, the cash deposit rate will continue to be the company-specific rate published in the completed segment for the most recent period; (3) if the exporter is not a firm covered in this review or the original less-than-fair-value (LTFV) investigation, but the producer is, then the cash deposit rate will be the rate established in the completed segment for the most recent period for the producer of the merchandise; (4) the cash deposit rate for all other producers or exporters will continue to be 5.87 percent, the all-others rate established in the LTFV investigation in this proceeding.[6] These cash deposit requirements, when imposed, shall remain in effect until further notice.

Notification to Importers

This notice serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping and/or countervailing duties prior to liquidation of the relevant entries during this POR. Failure to comply with this requirement could result in Commerce's presumption that reimbursement of antidumping and/or countervailing duties occurred and the subsequent assessment of double antidumping duties, and/or an increase in the amount of antidumping duties by the amount of the countervailing duties.

Administrative Protective Order

This notice also serves as a reminder to parties subject to an administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3), which continues to govern business proprietary information in this segment of the proceeding. Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and terms of an APO is a violation subject to sanction.

Notification to Interested Parties

We are issuing and publishing these results of administrative review in accordance with sections 751(a)(1) and 777(i) of the Act, and 19 CFR 351.221(b)(5).

Dated: November 16, 2023.

Abdelali Elouaradia,

Deputy Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XD552]

Marine Mammals; File No. 27514

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; receipt of application.

SUMMARY: Notice is hereby given that Heather E. Liwanag, Ph.D., California Polytechnic State University, 1 Grand Avenue, San Luis Obispo, CA 93407–0401, has applied in due form for a permit to conduct research on northern elephant seals (*Mirounga angustirostris*) in California.

DATES: Written comments must be received on or before December 22, 2023.

ADDRESSES: The application and related documents are available for review by selecting ''Records Open for Public Comment'' from the ''Features'' box on the Applications and Permits for Protected Species (APPS) home page,

https://apps.nmfs.noaa.gov, and then selecting File No. 27514 from the list of available applications. These documents are also available upon written request via email to *NMFS.Pr1Comments@noaa.gov.*

Written comments on this application should be submitted via email to *NMFS.Pr1Comments@noaa.gov.* Please include File No. 27514 in the subject line of the email comment.

Those individuals requesting a public hearing should submit a written request via email to *NMFS.Pr1Comments@noaa.gov.* The request should set forth the specific reasons why a hearing on this application would be appropriate.

FOR FURTHER INFORMATION CONTACT: Jennifer Skidmore or Shasta McClenahan, Ph.D., (301) 427–8401.

SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), the regulations governing the taking and importing of marine mammals (50 CFR part 216), and the Fur Seal Act of 1966, as amended (16 U.S.C. 1151 *et seq.*).

The applicant requests a 5 year permit to study northern elephant seals in California including Piedras Blancas, Gorda, Vandenberg Air Force Base, and the Channel Islands. Research would be conducted year-round on all age classes and both sexes, with increased frequency and effort during the breeding season (December–April). Research will include behavioral observations, acoustics recordings and playbacks, marking, unmanned aircraft systems, capture, measurements, instrumentation, ultrasound, and sampling (blood, scat, urine, swabs, fur, vibrissae) for health monitoring and research. Two unintentional mortality takes are requested per year not to exceed five over the duration of the permit. In addition, salvage, import, export, and receipt of pinniped parts (any species) is requested for scientific research. The following species may also be unintentionally harassed during research: California sea lions (*Zalophus californianus*), harbor seals (*Phoca vitulina*), and northern fur seals (*Callorhinus ursinus*). See the take table for complete numbers of animals requested by species, life stage, and procedure.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: November 16, 2023.

Julia M. Harrison,

Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service.

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Papahānaumokuākea Marine National Monument Permit Application and Reports for Permits

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on August 28, 2023 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Oceanic & Atmospheric Administration (NOAA), Commerce.

Title: Papahānaumokuākea Marine National Monument Permit Application and Reports for Permits.

OMB Control Number: 0648–0548.

Form Number(s): None.

Type of Request: Regular submission, extension of a current information collection.

Number of Respondents: 411.

Average Hours per Response: Conservation and Management and Education (''general'' permits), 5 hours; Special Ocean Use permits, 10 hours; Native Hawaiian Practices permits, 8 hours; Recreation permits, 6 hours; permit modification requests and final reports, 10 hours; and annual reports, 5 hours.

Total Annual Burden Hours: 1,343.

Needs and Uses: This request is for an extension of a currently approved information collection. The National Oceanic and Atmospheric Administration (NOAA) Office of National Marine Sanctuaries (ONMS) is sponsoring the information collection as described herein. ONMS manages national marine sanctuaries pursuant to the purposes and policies of the National Marine Sanctuaries Act (NMSA, 16 U.S.C. 1431 *et seq.*). President Bush established the Papahānaumokuākea Marine National Monument (Monument) through Presidential Proclamation 8031 (Proclamation) dated June 15, 2006, (71 FR 36443, June 26, 2006) under the authority of the Antiquities Act (Act) (54 U.S.C. 320301). The Proclamation reserves all lands and interests in lands owned or controlled by the Government of the United States in the Northwestern Hawaiian Islands (NWHI), including emergent and submerged lands and waters, out to a distance of approximately 50 nautical miles (nmi) (93 km) from the islands. The boundaries of the Monument as described in Presidential Proclamation 8031 are 100 miles (160 km) wide and extend approximately 1200 miles (1931 km) around coral islands, seamounts, banks, and shoals. The area includes the Northwestern Hawaiian Islands Coral Reef Ecosystem Reserve, the Midway Atoll National Wildlife Refuge, the Hawaiian Islands National Wildlife Refuge, and the Battle of Midway National Memorial.

The Proclamation includes restrictions and prohibitions regarding activities in the Monument consistent with the authority provided by the Act. The Proclamation prohibits access to the Monument except when passing through the Monument without interruption or as allowed via permit. Vessels passing through the Monument without interruption are required to notify NOAA and the U.S. Fish and Wildlife Service upon entering into and leaving the Monument. Pursuant to the Proclamation, individuals wishing to access the Monument to conduct certain regulated activities must first apply for and be granted a permit. Applicants must also certify compliance with certain vessel monitoring system requirements.

The information submitted in permit applications will, in general, be used at the time the application is submitted to make a final decision on the application. Some of the information may also be used subsequent to the initial decision making to inform management actions or decision making. For example, a survey of a

project location by one permit applicant may be used by the agency in the future to respond to a vessel grounding in the same area in addition to facilitating the agency's decision on that application. Information submitted in a report will be used to periodically assess the permittee's compliance with permit terms and conditions and to assist in evaluating the appropriateness of the permitted activity.

Affected Public: Individuals, non-profit institutions; Federal, State, local, government, Native Hawaiian organizations; business or other for-profit organizations.

Frequency: On occasion. Permittees are required to submit a summary report due 30 days after the expiration of their permit; and an annual report due by December 31st for each year their permit is active.

Respondent's Obligation: Required to Obtain or Retain Benefits.

Legal Authority: 54 U.S.C. 320301 *et seq.;* 16 U.S.C. 1801 *et seq.;* 16 U.S.C. 742f, 16 U.S.C. 742l; 16 U.S.C. 1431 *et seq.*

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0648–0548.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

BILLING CODE 3510–NK–P

DEPARTMENT OF DEFENSE

Department of the Army

Advisory Committee on Arlington National Cemetery Meeting Notice

AGENCY: Department of the Army, DoD.

ACTION: Notice of open committee meeting.

SUMMARY: The Department of the Army is publishing this notice to announce the following meeting of the Advisory Committee on Arlington National Cemetery (ACANC). This meeting is open to the public. For more information, please visit: *https://www.arlingtoncemetery.mil/About/Advisory-Committee-on-Arlington-National-Cemetery/ACANC-Meetings.*

DATES: The ACANC will meet on Thursday, December 7, 2023, from 1:00 p.m. to 4:00 p.m. Eastern Time in the Multipurpose Room of the Welcome Center at Arlington National Cemetery, Arlington, Virginia 22211.

FOR FURTHER INFORMATION CONTACT: Ms. Renea Yates, Designated Federal Official (DFO) for the ACANC, or Mr. Matthew Davis, Alternate Designated Federal Official (ADFO) for the ACANC, Arlington National Cemetery (ANC), Arlington, VA 22211; by email at *matthew.r.davis.civ@army.mil;* or by phone at 1–877–907–8585.

SUPPLEMENTARY INFORMATION: This meeting is being held under the provisions of the Federal Advisory Committee Act (FACA; 5 U.S.C. 10), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b), and 41 CFR 102–3.150.

Purpose of the Meeting: The ACANC provides independent advice and recommendations to the Secretary of the Army independent advice and recommendations on matters related to ANC, including, but not limited to, cemetery administration, the erection of memorials at the cemetery, and master planning for the cemetery. The Secretary of the Army may act on the Committee's advice and recommendations.

Agenda: The Committee will receive a year-in-review briefing regarding ANC, review a road-designation proposal based on the congressional mandate to implement all Naming Commission recommendations, and review a commemorative works proposal for the Protestant and Catholic Chaplains Monuments in the context of Public Law 117–81, Section 584.

Public's Accessibility to the Meeting: Pursuant to FACA and 41 CFR 102–3.140 through 102–3.165, this meeting is open to the public.

Procedures for Attendance and Public Comment: To attend this meeting, contact Mr. Matthew Davis, the ADFO. (See the information listed in the **FOR FURTHER INFORMATION CONTACT** section; email is preferred.) Individuals will be asked to submit their full name, organization, email address, and phone number to attend. Public attendance will be via physical presence.

For additional information about public access procedures, contact Mr. Matthew Davis, the ADFO. (See the information listed in the **FOR FURTHER INFORMATION CONTACT** section; email is preferred.)

Written Comments and Statements: Pursuant to 5 U.S.C. 1009(a)(3), 41 CFR 102–3.105(j), and 41 CFR 102–3.140, the public or interested organizations may submit written comments or statements to the ACANC either in response to the stated agenda of the open meeting or regarding the ACANC's mission in general. Written comments or statements should be submitted to Mr. Matthew Davis, the ADFO. (See the information listed in the **FOR FURTHER INFORMATION CONTACT** section; email is preferred.) Each page of the comment or statement must include the author's name, title or affiliation, address, and daytime phone number. Written comments or statements being submitted in response to the agenda set forth in this notice must be received by the ADFO at least seven business days prior to the meeting to be considered by the ACANC. Written comments or statements received after this date may not be provided to the ACANC until its next meeting. The DFO will review all timely written comments or statements with the ACANC Chairperson and will ensure such comments or statements are provided to all ACANC members before the meeting.

Pursuant to 41 CFR 102–3.140d, the ACANC is not obligated to allow any member of the public to speak or otherwise address the ACANC during the meeting. Members of the public may be permitted to make verbal comments during these meetings and if allowed, verbal comments may only be made at the time and in the manner described below. If a member of the public is interested in making a verbal comment at the open meeting, the individual must submit a request to the ADFO with a brief statement of the subject matter to be addressed by the comment. (See the information listed in the **FOR FURTHER INFORMATION CONTACT** section; email is preferred.) The request must be submitted to the ADFO at least three business days before the meeting. The ADFO will log each request in the order received. In consultation with the Chairperson(s), the DFO will determine whether the subject matter of each comment is relevant to the ACANC mission and/or to the agenda of this public meeting. Members of the public who asked to make a verbal comment and whose comments are deemed relevant under the process described above will be invited to speak in the order in which the ADFO received their request. The appropriate Chairperson(s)

may allot a specific amount of time for verbal comments.

James W. Satterwhite, Jr.,

Army Federal Register Liaison Officer.

BILLING CODE 3711–02–P

DEPARTMENT OF DEFENSE

Department of the Army

[Docket ID: USA–2023–HQ–0011]

Submission for OMB Review; Comment Request

AGENCY: Department of the Army, Department of Defense (DoD).

ACTION: 30-Day information collection notice.

SUMMARY: The DoD has submitted to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act.

DATES: Consideration will be given to all comments received by December 22, 2023.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Angela Duncan, 571–372–7574, *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: ArmyFit Program Azimuth Check Survey; OMB Control Number: 0702–AFIT.

Type of Request: New.

Number of Respondents: 500,000.

Responses per Respondent: 1.

Annual Responses: 500,000.

Average Burden per Response: 15 minutes.

Annual Burden Hours: 125,000.

Needs and Uses: This collection supports the mission of the Army Resiliency Directorate (ARD), HQDA G–1, to improve the readiness of the force and quality of life for the soldiers. ARD owns the Army Fitness Platform (ArmyFit). ArmyFit hosts the Global Assessment Tool (GAT), which is an assessment promoting self-development through its user feedback and enables the creation of a customized ArmyFit profile that directs individuals to tailored self-development and training resources for soldiers, their families, and Army civilians. The Family GAT is a self-appraisal survey for assessing an individual's fitness in dimensions of strength: physical, emotional, social, spiritual, and family. It is a tool for building resilience. The survey is taken by all Soldiers and offered to family members, Department of the Army Civilians, and contractors.

Affected Public: Individuals or households.

Frequency: On occasion.

Respondent's Obligation: Voluntary.

OMB Desk Officer: Ms. Jasmeet Seehra.

You may also submit comments and recommendations, identified by Docket ID number and title, by the following method:

- *Federal eRulemaking Portal: http://www.regulations.gov.* Follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name, Docket ID number, and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

DoD Clearance Officer: Ms. Angela Duncan.

Requests for copies of the information collection proposal should be sent to Ms. Duncan at *whs.mc-alex.esd.mbx.dd-dod-information-collections@mail.mil.*

Dated: November 16, 2023.

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2023–OS–0115]

Proposed Collection; Comment Request

AGENCY: National Defense University (NDU), Chairman of the Joint Chiefs of Staff (CJCS), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the NDU announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to National Defense University, 300 5th Avenue SW, Building 62, Washington, DC 20319, ATTN: LTC Ann Summers, or call (202) 685–3323.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: NDU Foreign Delegation Visit Request; OMB Control Number 0704–0600.

Needs and Uses: Foreign delegation visits help to conduct analysis for regional and DoD academic accreditations, create reports for University leadership to aid in the development of effective curricula, and facilitate academic completion requirements. The foreign visit request form is primarily used to collect

information on visiting delegations for protocol purposes and to ensure proper logistic support for the visiting delegation. The respondents in our collection are generally Foreign Nationals visiting the NDU to meet with NDU leadership. The collection instrument is a PDF document sent over email. Respondents access the PDF directly and return via email. Once the document is returned, the information is used to create a customized visit for the delegation and informs a read ahead document for NDU leadership. Information and electronic records are maintained in the NDU Enterprise Information System (NEIS), the NDU network. The NDU NEIS encompasses all hardware and software utilized to support the academic and business information hosted in university-owned systems.

Affected Public: Individuals or households.

Annual Burden Hours: 45.

Number of Respondents: 45.

Responses per Respondent: 1.

Annual Responses: 45.

Average Burden per Response: 1 hour.

Frequency: On occasion.

Dated: November 14, 2023.

Aaron T. Siegel,

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2023–HA–0116]

Proposed Collection; Comment Request

AGENCY: Office of the Assistant Secretary of Defense for Health Affairs (OASD(HA)), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Defense Health Agency (DHA) announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Defense Health Agency, 7700 Arlington Blvd., Falls Church, VA 22042, Amanda Grifka, 703–681–1771.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: TRICARE Inpatient Satisfaction Survey (TRISS); OMB Control Number: 0720–TRSS.

Needs and Uses: The DHA administers the TRICARE TRISS survey to understand perceptions of inpatient care among Military Health System (MHS) users. The survey instrument adheres to the methodological and analytical protocols and questionnaire items mandated by the industry standard Hospital Consumer Assessment of Healthcare Providers and Systems protocol. Developed by the Centers for Medicare and Medicaid Services and the Agency for Healthcare Research and Quality, the program provides valid and reliable self-reported experience ratings of inpatient experiences.

As a result, the TRISS program allows objective and meaningful comparisons between hospitals, in areas that are important to consumers. Results are published online, and the public can view them at *https://www.medicare.gov/care-compare/.* But perhaps most significantly, the comparative scores and findings can be used by MHS leadership to improve care as well as by beneficiaries to make informed choices. TRISS is designed to provide actionable performance feedback to improve overall quality of health care. The main goals of the TRISS are to:

- Provide comparable data on the patient's perspective on care that allows objective and meaningful comparisons between hospitals on domains that are important to beneficiaries.
- Establish a uniform measure of user satisfaction with received healthcare services.
- Public reporting of the survey results is designed to create incentives for Military Treatment Facilities (MTFs) to improve their quality of care.

The study population consists of military personnel, their family members, and eligible retirees and their family members with a recent overnight hospitalization. The survey is administered to patients after a recent discharge from either a MTF or a civilian hospital to gather information about their experience of the care they received. Data are reported quarterly to track trends over time.

Affected Public: Individuals or households.

Annual Burden Hours: 12,720.

Number of Respondents: 63,600.

Responses per Respondent: 1.

Annual Responses: 63,600.

Average Burden per Response: 12 minutes.

Frequency: On occasion.

Dated: November 14, 2023.

AGENCY: Department of the Navy (DON), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the DON announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of the DON Information Management Control Officer, 2000 Navy Pentagon, Rm. 4E563, Washington, DC 20350, ATTN: Ms. Sonya Martin, or call 703–614–7585.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Naval Officers as Employees Survey; OMB Control Number: 0703–SDSU.

Needs and Uses: The proposed survey is sponsored by the Navy Chief of Information and originates out of the Navy's primary civilian public relations graduate education program at San Diego State University, where the Navy details public affairs officers annually in order to earn a master's degree. This study will explore the possible relationship between the Navy's digital communication subsidies, employee-organization relationships (EOR), and diversity, equity, inclusion, and belongingness (DEIB) in the officer ranks. Additionally, findings from this research may advance the Navy's understanding of how to use digital communication to improve DEIB and EOR in the officer corps. Only adults (those aged 18 years or older) are eligible to participate in the study. To get at this population, the researcher will study naval officers assigned to different types of units (*e.g.,* surface ships, aviation, submarines, special warfare, etc.) as they represent the key demographic desired for this study. Potential respondents will be recruited with the assistance of public affairs officers at type commands (TYCOMs) and fleets of these units. TYCOMs and fleets perform administrative, personnel, and operational training functions for a ''type'' of weapon system.

This study will employ a mixed-mode for collection of surveys, utilizing both an online survey hosted by Qualtrics and a paper-based survey method for when online completion of the survey is not ideal. Respondents will have an option to return the survey anonymously via mail. Data received from this survey will assist public relations researchers by gaining an understanding of EOR and DEIB in Naval officers from traditionally marginalized communities as well as advance employee-organization relationship theory.

Affected Public: Individuals or households.

Annual Burden Hours: 150.

Number of Respondents: 500.

Responses per Respondent: 1.

Annual Responses: 500.

Average Burden per Response: 18 minutes.

Frequency: Once.

Dated: November 14, 2023.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Proposed Collection; Comment Request

AGENCY: Department of the Navy (DON), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Navy Installations Command announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24 Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this FR document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Office of the DON Information Management Control Officer, 2000 Navy Pentagon, Rm. 4E563, Washington, DC 20350, Ms. Barbara Figueroa or call 703–614–7885.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Law Enforcement Officers Safety Act (LEOSA) Credential Program; SECNAV Form 5580/1; OMB Control Number: 0703–0067.

Needs and Uses: DON and the U.S. Marine Corps are requesting Office of Management and Budget (OMB) approval of the information collection to verify and validate eligibility of separated and retired DON law enforcement officers to ship, transport, possess or receive Government-issued or private firearms or ammunition. This will also verify and validate eligibility of separated, and retired DON law enforcement officers to receive DON endorsed law enforcement credentials, to include LEOSA credentials.

Affected Public: Individuals or households.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Challenges of Operational Environments Study; OMB Control Number: 0703–COPE.

Needs and Uses: The Challenges of Operational Environments Study is a longitudinal study that will assess stressors associated with different operational environments and their effect on mental and behavioral health. Because the operational environment of the Commands involved will change over time, the survey that is being submitted for approval has been designed to adapt similarly. The base survey will remain the same at every time point, while separate modules will be added according to a pre-determined phases (*i.e.,* maintenance period, sea trials, homeport shift, deployment, and post-deployment). Because the crew of the ships will change over time and participation is voluntary, some respondents may complete the survey at multiple time points, whereas others may complete it just once.

Affected Public: Individuals or households.

Annual Burden Hours: 4,167.

Number of Respondents: 5,000.

Responses per Respondent: 2.

Annual Responses: 10,000.

Average Burden per Response: 25 minutes.

Frequency: On occasion.

Dated: November 14, 2023.

Proposed Collection; Comment Request

AGENCY: Marine Junior Reserve Officer's Training Corps (MCJROTC), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the MCJROTC announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this FR document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to Headquarters Marine Corps Records, Reports, Directives, and Forms Management section, 3000 Marine Corps, Pentagon Rm 2B253, Mr. Mark Kazzi, (571) 256–8883.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Individual MCJROTC Instructor Evaluation Summary; NAVMC 10942; OMB Control Number: 0712–0004.

Needs and Uses: The information collection requirement is necessary to provide a written record of the overall performance of duty of MCJROTC instructors who are responsible for implementing the MCJROTC curriculum. The individual MCJROTC Instructor Evaluation Summary is completed by principles to evaluate the effectiveness of individual MCJROTC instructors. The form is further used as a performance related counseling tool and as a record of service performance to document performance and growth of individual MCJROTC instructors. Evaluating the performance of instructors is essential in ensuring that they provide quality training.

Affected Public: Individuals or households.

AGENCY: Department of the Navy (DON), Department of Defense (DoD).

ACTION: 60-Day information collection notice.

SUMMARY: In compliance with the *Paperwork Reduction Act of 1995,* the Department of the Navy's Office of Military Awards announces a proposed public information collection and seeks public comment on the provisions thereof. Comments are invited on: whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the agency's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology.

DATES: Consideration will be given to all comments received by January 22, 2024.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.

Mail: Department of Defense, Office of the Assistant to the Secretary of Defense for Privacy, Civil Liberties, and Transparency, Regulatory Directorate, 4800 Mark Center Drive, Mailbox #24, Suite 08D09, Alexandria, VA 22350–1700.

Instructions: All submissions received must include the agency name, docket number and title for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the internet at *http://www.regulations.gov* as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: To request more information on this proposed information collection or to obtain a copy of the proposal and associated collection instruments, please write to DON Information Management Control Office, 2000 Navy Pentagon, Washington, DC 20350, ATTN: Mrs. Sonya Martin or call 703–614–7585.

SUPPLEMENTARY INFORMATION:

Title; Associated Form; and OMB Number: Navy Personal Awards Form; OPNAV 1650/3; OMB Control Number: 0703–NPAF.

Needs and Uses: The purpose of DON military awards is to provide deserving members of the Naval Service recognition for qualifying acts of valor or non-combat heroism, for exceptionally meritorious achievement or service, and for arduous or otherwise special service. Nominations for Personal Military Decorations are submitted on the OPNAV 1650/3 for Service Members (active duty, retired, and veterans), Foreign Military, and Midshipmen. An award nomination package must include an Award Recommendation form, Summary of Action narrative justification, and a proposed citation. For all awards for heroism, combat or non-combat, notarized statements by at least two eyewitnesses must be included. Midshipmen in the Naval Reserve Officer Training (NROTC) are generally eligible for military awards only when serving under orders on active duty. As an exception to the general policy, when not on active duty NROTC midshipmen are eligible for Personal Military Decorations for acts of non-combat heroism on the same basis as inactive members of the Navy Reserve. If a decoration is approved, the referral Member of Congress (MoC) will be informed and the Navy or Marine Corps will make arrangements for an appropriate presentation ceremony. If the nomination, or request for upgrade, is disapproved, the MoC will be informed and provided the reason(s) for disapproval. The authority to complete this collection effort is given by SECNAVINST 1650.1J, DON Military Awards Policy; DoD Instruction 1348.33, DoD Military Decorations and Awards; and 10 U.S.C., Armed Forces.

Affected Public: Individuals or households.

Annual Burden Hours: 23.

Number of Respondents: 30.

Responses per Respondent: 1.

Annual Responses: 30.

Average Burden per Response: 45 minutes.

Frequency: On occasion.

Dated: November 14, 2023.

Aaron T. Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF EDUCATION

[Docket No.: ED–2023–SCC–0197]

Agency Information Collection Activities; Submission to the Office of Management and Budget for Review and Approval; Comment Request; Early Childhood Longitudinal Study, Kindergarten Class of 2023–24 (ECLS–K:2024) Kindergarten and First-Grade National Data Collection and Transfer School Recruitment

AGENCY: National Center for Education Statistics (NCES), Department of Education (ED).

ACTION: Notice.

SUMMARY: In accordance with the Paperwork Reduction Act (PRA) of 1995, the Department is proposing a revision of a currently approved information collection request (ICR).

DATES: Interested persons are invited to submit comments on or before December 22, 2023.

ADDRESSES: Written comments and recommendations for proposed information collection requests should be submitted within 30 days of publication of this notice. Click on this link *www.reginfo.gov/public/do/PRAMain* to access the site. Find this information collection request (ICR) by selecting ''Department of Education'' under ''Currently Under Review,'' then check the ''Only Show ICR for Public Comment'' checkbox. *Reginfo.gov* provides two links to view documents related to this information collection request. Information collection forms and instructions may be found by clicking on the ''View Information Collection (IC) List'' link. Supporting statements and other supporting documentation may be found by clicking on the ''View Supporting Statement and Other Documents'' link.

FOR FURTHER INFORMATION CONTACT: For specific questions related to collection activities, please contact Carrie Clarady, (202) 245–6347.

SUPPLEMENTARY INFORMATION: The Department is especially interested in public comment addressing the following issues: (1) is this collection necessary to the proper functions of the Department; (2) will this information be processed and used in a timely manner; (3) is the estimate of burden accurate; (4) how might the Department enhance the quality, utility, and clarity of the information to be collected; and (5) how might the Department minimize the burden of this collection on the respondents, including through the use of information technology. Please note that written comments received in response to this notice will be considered public records.

Title of Collection: Early Childhood Longitudinal Study, Kindergarten Class of 2023–24 (ECLS–K:2024) Kindergarten and First-Grade National Data Collection and Transfer School Recruitment.

OMB Control Number: 1850–0750.

Type of Review: Revision of a currently approved ICR.

Respondents/Affected Public: Individuals or households.

Total Estimated Number of Annual Responses: 157,586.

Total Estimated Number of Annual Burden Hours: 83,612.

Abstract: The Early Childhood Longitudinal Study (ECLS) program, conducted by the National Center for Education Statistics (NCES) within the Institute of Education Sciences (IES) of the U.S. Department of Education (ED), draws together information from multiple sources to provide rich, descriptive data on child development, early learning, and school progress. The ECLS program studies deliver national data on children's status at birth and at various points thereafter; children's transitions to nonparental care, early care and education programs, and school; and children's experiences and growth through the elementary grades. The Early Childhood Longitudinal Study, Kindergarten Class of 2023–24 (ECLS–K:2024) is the fourth cohort in the series of early childhood

longitudinal studies. The study will advance research in child development and early learning by providing a detailed and comprehensive source of current information on children's early learning and development, transitions into kindergarten and beyond, and progress through school. The ECLS–K:2024 will provide data about the population of children who will be kindergartners in the 2023–24 school year. The ECLS–K:2024 will focus on children's early school experiences continuing through the fifth grade, and will include collection of data from children, parents, teachers, and school administrators.

The request to conduct the first three national data collection rounds for the ECLS–K:2024 was approved on April 7, 2023 (OMB# 1850–0750 v.26). The ECLS–K:2024 fall kindergarten data collection will be conducted from August until December 2023, followed by the spring (March–July 2024) kindergarten round, and the spring (March–July 2025) first-grade round. Each of these rounds of data collection will involve advance school contacts, for example to conduct student sampling activities, collect teacher and school information, and locate families whose children may have moved schools. Future OMB packages will be submitted for the third-and fifth-grade field test (to be conducted in March–July 2026), as well as for the national spring (March–July 2027) third-grade round and the spring (March–July 2029) fifth-grade round.

This current revision request (accompanied by 30 days of public comment) is to update study respondent materials, web and paper surveys, and website designs that will be used in the kindergarten and first-grade data collection activities. Many of the revisions in this package were made based on analyses of the fall 2022 field test data (OMB# 1850–0750 v.25), which informed changes to the design of the surveys and child assessment. Other changes occurred after further discussion on operational procedures. Revisions to the study instruments (and to some extent, the respondent materials and websites) are largely limited to changes to the spring kindergarten materials; an additional revision request will be submitted to OMB for revisions to the spring first-grade materials as additional discussions on design and operational procedures continue. National data collection work completed to date will also inform these future revisions.

The requested changes do not affect the approved total cost to the federal government for conducting this study, but they do result in a small reduction to respondent burden.

Dated: November 17, 2023.

Stephanie Valentine,

PRA Coordinator, Strategic Collections and Clearance, Governance and Strategy Division, Office of Chief Data Officer, Office of Planning, Evaluation and Policy Development.

[FR Doc. 2023–25799 Filed 11–21–23; 8:45 am]

BILLING CODE 4000–01–P

ELECTION ASSISTANCE COMMISSION

Help America Vote College Program Service Day Mini-Grant Program

AGENCY: Election Assistance Commission (EAC).

ACTION: Notice of funding opportunity.

SUMMARY: Through this Notice, EAC is announcing the fiscal year (FY) 2023 Help America Vote College Program (HAVCP) Service Day Mini-Grant Program (Mini-Grant) Notice of Funding Opportunity (NOFO).

DATES: Proposals must be submitted no later than 11:59 p.m. eastern time on Monday, December 18, 2023.

ADDRESSES: Proposals must be submitted to *HAVCP@eac.gov.*

FOR FURTHER INFORMATION CONTACT: Election Assistance Commission Office of Grants Management, Risa Garza, (202) 740–1483, or at *HAVCP@eac.gov.*

SUPPLEMENTARY INFORMATION:

A. Program Description

Assistance Listing Number: 90.400.

Funding Opportunity Number: EAC–23–002.

Funding Opportunity Title: Help America Vote College Program Service Day Mini-Grant Program.

1. Purpose of the Program. The Help America Vote College Program (HAVCP) was established in 2004, and through fiscal year 2009, distributed over $2.3 million to colleges and non-profits to recruit, train and support students serving as poll workers on Election Day. In 2023, the EAC introduced the HAVCP Service Day Mini-Grant (Mini-Grant) Program. The information in this NOFO is specific to the Service Day Mini-Grant Program. The Mini-Grant Program is designed to stimulate community action on college campuses and increase the visibility of the EAC's National Poll Worker Recruitment Day and Help America Vote Day. In 2023, the EAC will make an additional $1 million available for the Help America Vote College Program with $50,000 to $150,000 set aside for the Service Day Mini-Grant Program.

The purpose of this grant program is to: (1) Encourage students enrolled at institutions of higher education (including community colleges) to assist State and local governments in the administration of elections by serving as nonpartisan poll workers or assistants; (2) Encourage college students to become cognizant of the elections process and civic education, and to assist in the administration of elections in their community; and (3) Encourage state and local governments to use the services of the students participating in the program.

College Student means any individual enrolled either on a part-time or full-time basis in any undergraduate, graduate, or professional college accredited by an agency recognized by the U.S. Department of Education in the United States.

2. Statutory and Regulatory Authority. The U.S. Election Assistance Commission (EAC) anticipates the availability of $1 million dollars in discretionary grant funding, enacted in the 2023 Consolidated Appropriations Act (Pub. L. No: 117–328), to support the Help America Vote College Program (HAVCP) authorized in the Help America Vote Act of 2002 (HAVA), Public Law 107–252, Title V, Help America Vote College Program. Awards will be administered by the EAC.

3. Performance Measurement. HAVCP Service Day Mini-Grant Program awardees will be required to report on the total number of college student participants served through the funded Service Day activities. The number of students served could include college student participants interacting with staff/volunteers tabling, attending a presentation or roundtable, or engaging through digital (*i.e.,* social media, website), print (*i.e.,* college newspaper), and/or audio platforms (*i.e.,* radio show, podcast).

B. Federal Award Information

Service Day Program

Funding Instrument: Discretionary Mini-Grant.

Award Minimum: $3,000.

Award Maximum: $10,000.

Grant Period: 12 Months.

Anticipated Funding Available: $50,000-$150,000.

1. Funding Type. Funding will be provided in the form of a discretionary grant. EAC will authorize the Treasury Department to disburse funding identified in the agreement through the Payment Management System (PMS) to the applicant as an advance to be drawdown as expenses arise. Per 2 CFR 200, the timing and amount of advance

payments must be as close as is administratively feasible to the actual disbursements by the non-Federal entity for direct program or project costs and the proportionate share of any allowable indirect costs. The non-Federal entity must make timely payment to contractors in accordance with the contract provisions. Grantees will be able to request payments as often as practical for their program. Cash and in-kind match expenditures require the same documentation as Federal funds under 2 CFR 200. Grantees must request a drawdown of funds for incurred costs using the electronic Payment Management System (PMS). Prior to initial drawdown of funds, all Grantees must have secured online access to Payment Management System.

C. Eligibility Information

1. Eligible Applicants. EAC encourages applicants to forge robust partnerships to implement the grant and to sustain activities beyond the grant period of performance. The recommended partners for the HAVCP are institutions of higher education as defined in Section 101(a) of the Higher Education Act of 1965 (20 U.S.C. 1001); Nonprofit Organizations; Community and Technical Colleges and Systems; Historically Black Colleges and Universities (HBCUs); Hispanic-Serving Institutions (HSIs); Tribal Colleges and Universities (TCUs); State and Local Election Offices; and Other Minority Serving Institutions Program (MSIs) as designated by the Higher Education Act's Title III and V funding.

Priority Consideration. All selection criteria and application quality being equal, EAC will give priority consideration to projects from institutions and organizations that engage historically underrepresented groups, as defined by the Federal Government (See Appendix C), as poll workers. For the HAVCP Service Day Mini-Grant Program, the EAC will provide further priority consideration to applicants who have historically not been recipients of EAC funding. The EAC is interested in using the Mini-Grant opportunity to engage new organizations in supporting and improving the administration of elections. The HAVCP Service Day Mini-Grant Program will also provide priority consideration for organizations serving individuals or groups in an area of persistent poverty and/or historically disadvantaged community and for organizations serving individuals or groups in a rural area. The EAC is interested in using the Mini-Grant opportunity to engage organizations in locations where barriers to participation in the election process are frequently higher.

2. Cost Sharing or Matching. At the time of award, applicants must demonstrate either cash and/or in-kind contributions on-hand and/or commitments, or a combination thereof, to meet the required 10 percent match, based on the amount of Federal grant funds requested. Match must be met by the project end period.

EAC encourages applicants to leverage additional resources beyond the required match to supplement grant activities. Both matching and leveraged resources can come from a variety of sources, including, but not limited to the private sector (*e.g.,* businesses or industry associations); the philanthropic community (*e.g.,* foundations); and the non-profit sector (*e.g.,* community organizations or education and training institutions). Non-Federal, public-sector funds (*e.g.,* from States or local governments) may be used for matching funds, if necessary. Federal funds from other Federal agencies are not a permissible source of match, unless specifically authorized by the award pursuant to 2 CFR 200.306. Applicants may consult with EAC on sources of match to determine permissibility.

Grantees may recover indirect costs under this grant up to 10 percent of the total Federal share of the grant. If an applicant has an approved Federal indirect cost rate higher than 10 percent, the remainder of the indirect costs can be used as a matching contribution.

3. Other Requirements/Limitations. Applicants may not use any part of an award from the EAC to fund religious instruction, worship or proselytizing, voter registration, get out the vote (GOTV) drives, or other political activities that could be construed as lobbying. Project funds must be used for tasks and activities carried out without partisan bias and without promoting any political point of view regarding any election issue or candidates.

Applications that propose voter registration or GOTV efforts will be considered non-responsive and will not be eligible for funding under this announcement.

Any organization described in Section 501(c)(4) of the Internal Revenue Code of 1986, 26 U.S.C. 501(c)(4) that engages in lobbying activities is not eligible to apply.

The applicant nor its principals cannot be presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any Federal department or agency. Federal regulations prohibit supplanting of funds, such as replacing routine and/or existing state or local expenditures with the use of Federal grant funds and/or using Federal grant funds for cost of activities that constitute general expenses required to carry out the overall responsibilities of state or local government.

D. Application and Submission Information

1. Address to Request Application Package. The FY 2023 HAVCP Application Kit, copies of necessary forms and samples, and the program regulations are available at *https://www.eac.gov/grants/help-america-vote-college-program.*

Application information is also available at *https://www.grants.gov/.*

2. Content and Form of Application Submission. The deadline for receipt of applications will be Monday, December 18, 2023. Please submit an email stating your intent to apply to *HAVCP@eac.gov.* This Notice of Intent is not required but helps EAC better plan the review of applications.

The fully completed HAVCP Service Day Mini-Grant Application Form must be submitted, as a word document or pdf, by email to *HAVCP@eac.gov* with the header ''HAVCP Service Day Mini-Grant Program Application—[ORGANIZATION NAME]'' before the application submission deadline. The electronic submission of your application must be made by an official representative of your institution who is authorized to request funding on behalf of the applicant organization.

3. Unique Entity Identifier and System for Award Management (SAM).

(a) At the time of application, each applicant must have an active registration in the System for Award Management (SAM) before submitting its application in accordance with 2 CFR part 25, Universal Identifier and System for Award Management. To register in SAM, entities will be required to obtain and create a Unique Entity Identifier (UEI). Instructions for obtaining the UEI are available at *https://sam.gov/content/entity-registration.*

(b) Each applicant must maintain an active SAM registration, with current, accurate, and complete information, at all times during which it has an active Federal award or an application under consideration by a Federal awarding agency.

(c) Each applicant must ensure they complete the Financial Assistance General Representations and Certifications in SAM.

(d) Applicants must provide a valid UEI in its application, unless

determined exempt under 2 CFR 25.110, Exceptions.

(e) The Agency will not make an award until the applicant has complied with all SAM requirements including providing the UEI. If an applicant has not fully complied with the requirements by the time the Agency is ready to make an award, the Agency may determine that the applicant is not qualified to receive a Federal award and use that determination as a basis for making a Federal award to another applicant.

4. Submission Dates and Times. The deadline for receipt of applications will be Monday, December 18, 2023. Please submit an email stating your intent to apply to *HAVCP@eac.gov.* This Notice of Intent is not required but helps EAC better plan the review of applications.

The fully completed HAVCP Service Day Mini-Grant Application Form must be submitted by email to *HAVCP@eac.gov* with the header ''HAVCP Service Day Mini-Grant Program Application—[ORGANIZATION NAME]'' before the application submission deadline. The electronic submission of your application must be made by an official representative of your institution who is authorized to request funding on behalf of the applicant organization.

Applications received after the deadline date and time are considered late applications and, absent extreme circumstances to be determined by the EAC, will not be reviewed. The EAC will notify each late applicant that the application will not be considered in the current competition. The EAC will only consider a request to submit an application after the deadline when the applicant can document that a technical issue with a government system prevented application submission prior to the application deadline. If an applicant misses a deadline due to unforeseen technical issues with a government system, the applicant may request a waiver to submit an application after the deadline to *HAVCP@eac.gov.* However, the waiver request will not be considered unless it includes a timestamp or other data point indicating the issue occurred prior to the application submission deadline.

5. Intergovernmental Review. Executive Order 12372, ''Intergovernmental Review of Federal Programs,'' is not required for this program.

6. Funding Restrictions. Applications must be for eligible purposes described in this Notice.

7. Other Submission Requirements. Applications must be submitted by email to *HAVCP@eac.gov* with the header ''HAVCP Service Day Mini-Grant Program Application—[ORGANIZATION NAME]'' by the deadline posted on *Grants.gov.* The electronic submission of your application must be made by an official representative of your institution who is authorized to request funding on behalf of the applicant organization. To request an accessible, hard copy of the application, please contact the EAC at *HAVCP@eac.gov.* EAC will not accept requests for a waiver of electronic submission requirements during the preview period. Such requests may only be submitted once the NOFO has been published on *Grants.gov.*

Interested applicants should submit an email to *HAVCP@eac.gov* stating your organization's intent to apply. This notice of intent is not required but helps us better plan the review of applications.

E. Application Review Information

1. Criteria. All complete and eligible applications will be evaluated and scored based on the criteria outlined in this section.

The review and selection process are intended to produce a diversified set of high-quality programs that represent the priorities described in this Notice. The determinations made by the EAC may be different from what the applicant self-determined upon submission of its application. The stages of the review and selection process follow:

The EAC will conduct an initial Compliance and Eligibility Review to determine if an application meets the eligibility requirements published in this Notice and advances to the next stage of the review process.

An application is compliant if the applicant:

- is an eligible organization,
- submitted an application by the submission deadline, and
- requested Federal funds in the range provided by the Notice.

Reviewing for eligibility is intended to ensure that only applications eligible for award are further reviewed. However, determinations of eligibility can take place at any point during the application review and selection process. Applicants that are determined to be ineligible will not receive an award.

2. Review and Selection Process. The EAC will assess the applications based on the Organizational Characteristics, Program Design/Strategy, and Budget selection criteria using the scoring rubric below. The EAC will also consider the priorities and strategic considerations detailed in this Notice. All staff reviewing applications will be screened for conflicts of interest. Final funding decisions will be made by the Election Assistance Commission.

HAVCP Scoring Criteria

Total Points Available: 30.

Each application is scored by three staff members. Average scores and priority points are used to present recommendations to the Election Assistance Commission Executive Director and Commissioners.

Organizational Characteristics (Possible Points: 20)

History of EAC Funding

Possible points	Criteria
10	Organization has not received past funding directly from EAC.
0	Organization has received past funding directly from EAC.

Area of Persistent Poverty and/or Historically Disadvantaged Community

Possible points	Criteria
5	Organization serves population(s) in an area of persistent poverty and/or historically disadvantaged community.
0	Organization does not serve population(s) in an area of persistent poverty and/or historically disadvantaged community.

Rural Area

Possible points	Criteria
5	Organization serves population(s) in a rural area.
0	Organization does not serve population(s) in a rural area.

Program Design and Strategy (Possible Points: 5)

Successful applications will address the following elements of Program Design and Strategy:

- A sound and relevant program that meets the unique needs of the communities served;
- A clear description of how the proposed activities will encourage college students to assist state and local governments in the administration of elections by serving as nonpartisan poll workers or assistants and encourage jurisdictions to utilize these efforts; and,
- The number of targeted college students, including how this number was calculated.

Possible points	Criteria
5	Application narrative clearly and completely addresses all requested components.
3	Application narrative clearly and completely addresses most of the requested components.
0	Application narrative is unclear and/or does not address critical application components.

Budget/Cost Effectiveness (Possible Points: 5)

Successful applications will address the following elements of Budget and cost effectiveness:

- Costs are clearly justified based on the proposed activities and project scope;
- Budget and budget narrative are accurate and complete (See Appendix C); and,
- Cost sharing is clearly and accurately identified.

Possible points	Criteria
5	Budget clearly and completely addresses all requested components.
3	Budget clearly and completely addresses most of the requested components.
0	Budget is unclear and/or does not address critical application components.

Priority Consideration. All selection criteria and application quality being equal, EAC will give priority consideration to projects from institutions and organizations that engage historically underrepresented groups, as defined by the Federal Government, as poll workers.

(a) The term ''equity'' means the consistent and systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities that have been denied such treatment, such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality.

(b) The term ''underserved communities'' refers to populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life, as exemplified by the list in the preceding definition of ''equity.''

For the HAVCP Service Day Mini-Grant Program, the EAC will provide further priority consideration to applicants who have historically not been recipients of EAC funding. The EAC is interested in using the Mini-Grant opportunity to engage new organizations in supporting and improving the administration of elections. The HAVCP Service Day Mini-Grant Program will also provide priority consideration for organizations serving populations in an area of persistent poverty and/or historically disadvantaged community and for organizations located in a rural area. The EAC is interested in using the Mini-Grant opportunity to engage organizations serving locations where barriers to participation in the election process are frequently higher.

3. Applicant Clarification. The EAC may ask applicants for clarifying information during the Clarification Stage of the review process. An Operational and Financial Management Survey will also be requested at this time. The EAC staff will use this information to make funding recommendations. A request for clarification does not guarantee an award. Applicants may be recommended for funding even if they are not asked for clarifying information. An applicant's failure to respond to a request for clarification adequately and in a timely manner may result in the removal of its application from consideration.

4. Pre-Award Risk Assessment. The EAC staff will assess the risks posed by applicants to determine an applicant's ability to manage Federal funds. This assessment is in addition to the Compliance and Eligibility Review and the Application Review. Results from this assessment will inform funding decisions. If the EAC determines that an award will be made to an applicant with assessed risks, special conditions that correspond to the degree of assessed risk may be applied to the award. Additionally, if the EAC concludes that the reasons for applicants having poor risk assessment are not likely to be mitigated, those applications may not be selected for funding.

F. Federal Award Notices

Applicants will be notified in writing of the status of their application:

(a) Eligible and selected for funding;

(b) Eligible bur offered less than requested;

(c) Eligible but not selected for funding; or

(d) Ineligible for the award.

Applicants who are awarded funding will receive a Notice of Grant Award from the EAC with award terms and conditions as well as other grant documents. The Notice will inform grantees of the effective date for grant activities and disbursement.

1. Funding Type. Funding will be provided in the form of a discretionary grant. EAC will authorize the Treasury Department to disburse funding identified in the agreement through the Payment Management System (PMS) to the applicant as an advance to be drawdown as expenses arise. Per 2 CFR 200, the timing and amount of advance payments must be as close as is administratively feasible to the actual disbursements by the non-Federal entity for direct program or project costs and the proportionate share of any allowable indirect costs. The non-Federal entity must make timely payment to contractors in accordance with the contract provisions. Grantees will be able to request payments as often as practical for their program. Cash and in-kind match expenditures require the same documentation as Federal funds under 2 CFR 200. Grantees must request a drawdown of funds for incurred costs using the electronic Payment Management System (PMS). Prior to initial drawdown of funds, all Grantees must have secured online access to Payment Management System.

2. EAC Terms and Conditions. All awards made under this Notice will be subject to the EAC's General Terms and Conditions and the Program-Specific Terms and Conditions for the program (where applicable). These Terms and Conditions contain detailed, mandatory compliance and reporting requirements. The full Terms and Conditions may be viewed on the EAC website here: *https://www.eac.gov/grants/help-america-vote-college-program.*

3. Reporting. Recipients are required to provide one final Federal financial report (FFR) and one final progress report (PR) submitted by email to *HAVCP@eac.gov.* Final reports are cumulative over the entire award period and consistent with close-out requirements. The final reports are due 120 days after the performance period ends. All reports must be accurate, complete, and submitted on time.

The Federal financial report required will be the modified version of the Standard Form 425 (SF–425) used by the EAC for other Federal awards. The progress report required will consist of a short narrative, listing of the actual number of college students served, and images demonstrating the Service Day

activities undertaken with Federal and non-Federal matching funds.

Once the grant is awarded, recipients will be expected to have in place data collection and data management policies, processes, and practices that provide assurance that they are reporting high quality performance measure data. Failure to submit accurate, complete, and timely required reports may affect the recipient's ability to secure future EAC funding.

For general questions about this announcement, please contact the EAC Office of Grants Management at *HAVCP@eac.gov* or 202–734–0639. The program website also provides up to date contact information at *https://www.eac.gov/grants/help-america-vote-college-program.*

H. Other Information

1. Paperwork Reduction Act. In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the information collection requirements associated with the programs, as covered in this Notice, have been approved by the Office of Management and Budget (OMB) under OMB Control Number 3265–0025. Public burden reporting for this collection of information is estimated to average 5 hours per response for individuals completing all parts of this form, including time for reviewing instructions, searching existing data sources, gathering, and maintaining the data needed, and completing and reviewing the collection of information. You are not required to answer these questions unless this number is displayed. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, U.S. Election Assistance Commission, 633 3rd Street NW, Suite 200, Washington, DC 20001.

2. Federal Funding Accountability and Transparency Act. All applicants, in accordance with 2 CFR part 25, must be registered in SAM and have a UEI number as stated in Section D.3. of this Notice. All recipients of Federal financial assistance are required to report information about first-tier sub-awards and executive total compensation in accordance with 2 CFR part 170, Reporting subaward and executive compensation information.

3. Issuance of Federal Awards. The Election Assistance Commission is not obligated to make any Federal awards as a result of this announcement.

4. EAC Terms and Conditions. All awards made under this Notice will be subject to the EAC's General Terms and Conditions and the Program-Specific Terms and Conditions for the program (where applicable). These Terms and Conditions contain detailed, mandatory compliance and reporting requirements.

5. Effects of Nondisclosure. The information requested is voluntary; however, to be a recipient of this grant program, disclosure of personal or sensitive information is required to receive Federal benefits.

6. Use of Material. To ensure that materials generated with HAVA funding are available to the public and readily accessible to recipients and non-recipients, the EAC reserves a royalty-free, nonexclusive, and irrevocable right to obtain, use, modify, reproduce, publish, or disseminate publications and materials produced under the award, including data, and to authorize others to do so (2 CFR 200.315).

7. Uniform Guidance. All awards made under this Notice will be subject to the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance), in 2 CFR part 200.

8. Federal Funding Accountability and Transparency Act. Grant recipients will be required to report at *www.FSRS.gov* on all subawards over $30,000 and may be required to report on executive compensation for recipients and subrecipients. Recipients must have the necessary systems in place to collect and report this information. See 2 CFR part 170 for more information and to determine how these requirements apply.

Camden Kelliher,

Deputy General Counsel, U.S. Election Assistance Commission.

[FR Doc. 2023–25817 Filed 11–21–23; 8:45 am]

BILLING CODE 4810–71–P

ELECTION ASSISTANCE COMMISSION

Help America Vote College Program

AGENCY: Election Assistance Commission.

ACTION: Notice of funding opportunity.

SUMMARY: Through this Notice, EAC is announcing the fiscal year (FY) 2023 Help America Vote College Program (HAVCP) Notice of Funding Opportunity (NOFO).

DATES: Proposals must be submitted no later than 11:59 p.m. eastern time on Monday, December 18, 2023.

ADDRESSES: Proposals must be submitted to *https://www.Grants.gov.*

FOR FURTHER INFORMATION CONTACT: Election Assistance Commission Office of Grants Management, Risa Garza, (202) 740–1483, or at *HAVCP@eac.gov.*

A. Program Description

Assistance Listing Number: 90.400.

Funding Opportunity Number: EAC–23–001.

Funding Opportunity Title: Help America Vote College Program Poll Worker Grant Program.

1. Purpose of the Program. The Help America Vote College Program (HAVCP) was established in 2004, and through fiscal year 2009, distributed over $2.3 million to colleges and non-profits to recruit, train and support students serving as poll workers on Election Day.

The purpose of this grant program is to: (1) Encourage students enrolled at institutions of higher education (including community colleges) to assist State and local governments in the administration of elections by serving as nonpartisan poll workers or assistants; (2) Encourage college students to become cognizant of the elections process and civic education, and to assist in the administration of elections in their community; and (3) Encourage state and local governments to use the services of the students participating in the program.

College Student means any individual enrolled either on a part-time or full-time basis in any undergraduate, graduate, or professional college accredited by an agency recognized by the U.S. Department of Education in the United States.

2. Statutory and Regulatory Authority. The U.S. Election Assistance Commission (EAC) anticipates the availability of $1 million dollars in discretionary grant funding, enacted in the 2023 Consolidated Appropriations Act (Pub. L. No: 117–328), to support the Help America Vote College Program (HAVCP) authorized in the Help America Vote Act of 2002 (HAVA), Public Law 107–252, Title V, Help America Vote College Program. Awards will be administered by the EAC.

3. Performance Measurements. Grant recipients will be required to report on one to three performance measures, one required universal measure and one to two optional measures selected by the applicant. Every recipient must report on the number of college students served. Selected performance measures should accurately reflect grant recipients' accomplishments, improve EAC's ability to report on the impact of its grant programs, and standardize measures across programs where appropriate.

Applicants must provide specific details about the procedures for tracking performance outcome measures and other participant data, such as demographic information and training

provided, and describe staffing, technology, computer applications, and other resources already available to accomplish this task. Applicants should also provide a specific plan for procuring the resources needed to meet this requirement if the resources are not already possessed by or accessible to the applicant.

Applicants are encouraged to align their goals with specific activities. Sample activities may include project administration and ramp-up; partnership engagement, outreach, and recruitment; enrollment and training; poll-worker placement; and follow-up with students to track outcomes.

For planning purposes, the applicant should identify key deliverables and the timeframe for achieving each deliverable, including any milestones to indicate the progression of activities. The applicant should also provide the name of the lead or supporting institution engaged in each activity or producing each deliverable, including any partner organizations.

B. Federal Award Information

Poll-Worker Program

Funding Instrument: Discretionary.

Award Minimum: $45,000.

Award Maximum: $100,000.

Grant Period: 2 Years.

Anticipated Funding Available: $850,000.

1. Funding Type. Funding will be provided in the form of a discretionary grant. EAC will authorize the Treasury Department to disburse funding identified in the agreement through the Payment Management System (PMS) to the applicant as an advance to be drawdown as expenses arise. Per 2 CFR 200, the timing and amount of advance payments must be as close as is administratively feasible to the actual disbursements by the non-federal entity for direct program or project costs and the proportionate share of any allowable indirect costs. The non-federal entity must make timely payment to contractors in accordance with the contract provisions. Grantees will be able to request payments as often as practical for their program. Cash and in-kind match expenditures require the same documentation as federal funds under 2 CFR 200. Grantees must request a drawdown of funds for incurred costs using the electronic Payment Management System (PMS). Prior to initial drawdown of funds, all Grantees must have secured online access to Payment Management System and EAC's grants management software.

C. Eligibility Information

1. Eligible Applicants. EAC encourages applicants to forge robust partnerships to implement the grant and to sustain activities beyond the grant period of performance. The recommended partners for the HAVCP are institutions of higher education as defined in section 101(a) of the Higher Education Act of 1965 (20 U.S.C. 1001); Nonprofit Organizations; Community and Technical Colleges and Systems; Historically Black Colleges and Universities (HBCUs); Hispanic-Serving Institutions (HSIs); Tribal Colleges and Universities (TCUs); State and Local Election Offices; and Other Minority Serving Institutions Program (MSIs) as designated by the Higher Education Act's Title III and V funding.

Priority Consideration. All selection criteria and application quality being equal, EAC will give priority consideration to projects from institutions and organizations that engage historically underrepresented groups, as defined by the federal government as poll workers.

2. Cost Sharing or Matching. At the time of award, applicants must demonstrate either cash and/or in-kind and on-hand and/or commitments, or a combination thereof, to meet the required 10 percent match, based on the amount of federal grant funds requested. Match must be met by the project end period.

EAC encourages applicants to leverage additional resources beyond the required match to supplement grant activities. Both matching and leveraged resources can come from a variety of sources, including, but not limited to the private sector (*e.g.,* businesses or industry associations); the philanthropic community (*e.g.,* foundations); and the non-profit sector (*e.g.,* community organizations or education and training institutions). Non-federal, public-sector funds (*e.g.,* from States or local governments) may be used for matching funds, if necessary. Federal funds from other federal agencies are not a permissible source of match, unless specifically authorized by the award pursuant to 2 CFR 200.306. Applicants may consult with EAC on sources of match to determine permissibility.

3. Other Requirements/Limitations. Applicants may not use any part of an award from the EAC to fund religious instruction, worship or proselytizing, voter registration, get out the vote (GOTV) drives, or other political activities that could be construed as lobbying. Project funds must be used for tasks and activities carried out without partisan bias and without promoting any political point of view regarding any election issue or candidates.

Applications that propose voter registration or GOTV efforts will be considered non-responsive and will not be eligible for funding under this announcement.

Grantees may recover indirect costs under this grant up to 10 percent of the total federal share of the grant. If an applicant has an approved federal indirect cost rate higher than 10 percent, the remainder of the indirect costs can be used as a matching contribution.

Any organization described in section 501(c)(4) of the Internal Revenue Code of 1986, 26 U.S.C. 501(c)(4) that engages in lobbying activities is not eligible to apply.

The applicant nor its principals cannot be presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participation in this transaction by any federal department or agency. Federal regulations prohibit supplanting of funds, such as replacing routine and/or existing state or local expenditures with the use of federal grant funds and/or using federal grant funds for cost of activities that constitute general expenses required to carry out the overall responsibilities of state or local government.

D. Application and Submission Information

1. Address to Request Application Package. The FY 2023 HAVCP Application Kit, copies of necessary forms and samples, and the program regulations are available at *https://www.eac.gov/grants/help-america-vote-college-program.*

Application information is also available at *https://www.grants.gov/.*

2. Content and Form of Application Submission. The deadline for receipt of applications is 11:59 p.m. Eastern Time on Monday, December 18, 2023. Please submit an email stating your intent to apply to *HAVCP@eac.gov.* This notice of intent is not required but helps EAC better plan the review of applications.

Submit the following application components as uploads to the *Grants.gov* Attachments Form:

- HAVCP Application—Fillable form including Project Narrative and Budget Narrative
- Budget Worksheet
- Indirect Cost Rate Agreement (if applicable)

EAC urges applicants to create accounts and submit their *Grants.gov* submissions prior to the due date with sufficient time to correct any errors and resubmit by the submission deadline if a rejection notification is received.

To be considered timely, the full application must be submitted in *Grants.gov* by the application deadline. Failure to begin the SAM.gov or *Grants.gov* registration process in sufficient time (*i.e.,* waiting until the date identified in this solicitation) is not an acceptable reason for late submission. EAC uses *Grants.gov* to submit and receive applications. Applicants must ensure successful submission no later than 11:59 p.m. Eastern Time on Monday, December 18, 2023. *Grants.gov* will subsequently validate the application. The process can be complicated and time-consuming. You are strongly advised to initiate the process as soon as possible and to plan for time to resolve technical problems. Note that validation does not mean that your application has been accepted as complete or has been accepted for review by the agency. Rather, *Grants.gov* verifies only the submission of certain parts of an application.

3. Unique Entity Identifier and System for Award Management (SAM). (a) At the time of application, each applicant must have an active registration in the System for Award Management (SAM) before submitting its application in accordance with 2 CFR part 25, Universal Identifier and System for Award Management. To register in SAM, entities will be required to obtain and create a Unique Entity Identifier (UEI). Instructions for obtaining the UEI are available at *https://sam.gov/content/entity-registration.*

(b) Each applicant must maintain an active SAM registration, with current, accurate, and complete information, at all times during which it has an active federal award or an application under consideration by a federal awarding agency.

(c) Each applicant must ensure they complete the Financial Assistance General Representations and Certifications in SAM.

(d) Applicants must provide a valid UEI in its application, unless determined exempt under 2 CFR 25.110, Exceptions.

(e) The Agency will not make an award until the applicant has complied with all SAM requirements including providing the UEI. If an applicant has not fully complied with the requirements by the time the Agency is ready to make an award, the Agency may determine that the applicant is not qualified to receive a federal award and use that determination as a basis for making a federal award to another applicant.

4. Submission Dates and Times. The deadline for receipt of applications is 11:59 p.m. Eastern Time on Monday, December 18, 2023. Please submit an email stating your intent to apply to *HAVCP@eac.gov.* This notice of intent is not required but helps EAC better plan the review of applications.

See Section (2) *Content and Form of Application Submission* for detailed submission requirements.

5. Intergovernmental Review. Executive Order 12372, ''Intergovernmental Review of Federal Programs,'' is not required for this program.

6. Funding Restrictions. Applications must be for eligible purposes described in this Notice.

7. Other Submission Requirements. Applications must be submitted electronically at *Grants.gov*. To request an accessible, hard copy of the application, please contact the EAC at *HAVCP@eac.gov.*

Interested applicants should submit an email by *HAVCP@eac.gov* stating your organization's intent to apply. This notice of intent is not required but helps us better plan the review of applications.

E. Application Review Information

1. Criteria. All complete and eligible applications will be evaluated and scored based on the criteria outlined in this section.

The review and selection process are intended to produce a diversified set of high-quality programs that represent the priorities described in this Notice. The determinations made by the EAC may be different from what the applicant self-determined upon submission of its application. The stages of the review and selection process follow:

The EAC will conduct an initial Compliance and Eligibility Review to determine if an application meets the eligibility requirements published in this Notice and advances to the next stage of the review process.

An application is compliant if the applicant:

- is an eligible organization,
- submitted an application by the submission deadline, and
- requested federal funds in the range provided by the Notice.

Reviewing for eligibility is intended to ensure that only applications eligible for award are further reviewed. However, determinations of eligibility can take place at any point during the application review and selection process. Applicants that are determined to be ineligible will not receive an award.

2. Review and Selection Process. The EAC will assess the applications based on the Program Design/Strategy, Organizational Capability, and Budget selection criteria using the scoring rubric below. The EAC will also consider the priorities and strategic considerations detailed in this Notice. All staff reviewing applications will be screened for conflicts of interest. Final funding decisions will be made by the Election Assistance Commission.

HAVCP Scoring Criteria

Total Points Available: 100.

Each application is scored by three staff members. Average scores and priority points are used to present recommendations to the Election Assistance Commission Executive Director and Commissioners.

Program Design and Strategy (Possible Points: 50)

Successful applications will address the following elements of program design and strategy:

- A sound and relevant program that meets the unique needs of the communities served;
- A clear description of the tools used to measure program outcomes and how data will be collected and used to modify and improve strategies, products, and services;
- The applicant's approach and expertise in using innovative solutions to implement new or expand existing efforts to increase the number of college poll workers, including efforts focused on recruiting historically underrepresented individuals as poll workers;
- The extent to which the proposed program considers information found in EAC's Guidebook for Recruiting College Poll Workers; and
- The scope of the project, including the number of targeted college poll workers.

Possible points	Criteria
41–50	Clearly and completely addresses all 5 criteria.
31–40	Addresses 4 out of 5 criteria and/or missing some elements of clarity or completeness.
21–30	Addresses 3 out of 5 criteria and/or missing some elements of clarity or completeness.
11–20	Addresses 2 out of 5 criteria and/or is confusing or incomplete.
0–10	Meets 0–1 out of the 5 required criteria and missing significant descriptions and clarity.

Organizational Capacity (Possible Points: 35)

Successful applications will address the following elements of organizational capacity:

- Demonstrated relationships/partnerships with relevant state and local entities needed to make the project successful;
- Ability to manage a federal grant as evidenced by previous federal grants experience or similar size and complexity grant;
- Experience with managing volunteer recruitment efforts including experience working with historically underrepresented groups, as defined by the federal government, within the college student body, as appropriate for the proposed program model; and
- Experience of the organization and staff as evidenced by brief staff biographies and other past organizational programs.

Possible points	Criteria
25–35	Clearly and completely meets all 4 criteria.
17–24	Addresses 3 out of 4 criteria and/or some areas of experience are weak or missing information.
9–16	Addresses 2 out of 4 criteria and/or is confusing or incomplete. Lacking significant partnerships and experience.
0–8	Meets 0–1 out of the 4 required criteria and does not have the experience or partnerships necessary to manage a federal grant program.

Budget/Cost Effectiveness (Possible Points: 15)

Successful applications will address the following elements of budget and cost effectiveness:

- Costs are clearly justified based on the proposed activities and project scope;
- Budget and budget narrative are accurate and complete (See Appendix C); and
- Cost sharing is clearly and accurately identified.

Possible points	Criteria
11–15	Clearly and completely meets all 3 criteria.
6–10	Addresses 2 out of 3 criteria and/or contains some calculation errors.
0–5	Addresses 1 out of 3 criteria and/or is confusing or incomplete.

Priority Consideration. All selection criteria and application quality being equal, EAC will give priority consideration to projects from institutions and organizations that engage historically underrepresented groups, as defined by the federal government, as poll workers.

(a) The term ''equity'' means the consistent and systematic fair, just, and impartial treatment of all individuals, including individuals who belong to underserved communities that have been denied such treatment, such as Black, Latino, and Indigenous and Native American persons, Asian Americans and Pacific Islanders and other persons of color; members of religious minorities; lesbian, gay, bisexual, transgender, and queer (LGBTQ+) persons; persons with disabilities; persons who live in rural areas; and persons otherwise adversely affected by persistent poverty or inequality.

(b) The term ''underserved communities'' refers to populations sharing a particular characteristic, as well as geographic communities, that have been systematically denied a full opportunity to participate in aspects of economic, social, and civic life, as exemplified by the list in the preceding definition of ''equity.'' Source

3. Applicant Clarification. The EAC may ask applicants for clarifying information during the Clarification Stage of the review process. An Operational and Financial Management Survey will also be requested at this time. The EAC staff will use this information to make funding recommendations. A request for clarification does not guarantee an award. Applicants may be recommended for funding even if they are not asked for clarifying information. An applicant's failure to respond to a request for clarification adequately and in a timely manner may result in the removal of its application from consideration.

4. Pre-Award Risk Assessment. The EAC staff will assess the risks posed by applicants to determine an applicant's ability to manage federal funds. This assessment is in addition to the Compliance and Eligibility Review and the Application Review. Results from this assessment will inform funding decisions. If the EAC determines that an award will be made to an applicant with assessed risks, special conditions that correspond to the degree of assessed risk may be applied to the award. Additionally, if the EAC concludes that the reasons for applicants having poor risk assessment are not likely to be mitigated, those applications may not be selected for funding.

F. Federal Award Notices

Applicants will be notified in writing of the status of their application:

(a) Eligible and selected for funding;

(b) Eligible bur offered less than requested;

(c) Eligible but not selected for funding; or

(d) Ineligible for the award.

Applicants who are awarded funding will receive a Notice of Grant Award from the EAC with award terms and conditions as well as other grant documents. The Notice will inform grantees of the effective date for grant activities and disbursement.

1. Funding Type. Funding will be provided in the form of a discretionary grant. EAC will authorize the Treasury Department to disburse funding identified in the agreement through the Payment Management System (PMS) to the applicant as an advance to be drawdown as expenses arise. Per 2 CFR 200, the timing and amount of advance payments must be as close as is administratively feasible to the actual disbursements by the non-federal entity for direct program or project costs and the proportionate share of any allowable indirect costs. The non-federal entity must make timely payment to contractors in accordance with the contract provisions. Grantees will be able to request payments as often as practical for their program. Cash and in-kind match expenditures require the same documentation as federal funds under 2 CFR 200. Grantees must request a drawdown of funds for incurred costs using the electronic Payment Management System (PMS). Prior to initial drawdown of funds, all Grantees must have secured online access to Payment Management System and EAC's grants management software.

2. Administrative and National Policy Requirements. EAC Terms and Conditions. All awards made under this Notice will be subject to the EAC's General Terms and Conditions and the Program-Specific Terms and Conditions for the program (where applicable). These Terms and Conditions contain detailed, mandatory compliance and reporting requirements. The full Terms and Conditions may be viewed on the EAC website here: *https://www.eac.gov/grants/help-america-vote-college-program.*

3. Reporting. Recipients are required to provide federal financial reports (FFR) and progress reports (PR) semi-annually through EAC's web-based grants management system. All reports must be accurate, complete, and submitted on time.

In addition, at the end of the award period, recipients must submit final

financial and progress reports that are cumulative over the entire award period and consistent with close-out requirements. The final reports are due 120 days after the performance period ends.

Once the grant is awarded, recipients will be expected to have in place data collection and data management policies, processes, and practices that provide assurance they are reporting high quality performance measure data. Failure to submit accurate, complete, and timely required reports may affect the recipient's ability to secure future EAC funding.

G. Federal Awarding Agency Contact

For general questions about this announcement, please contact the EAC Office of Grants Management at *HAVCP@eac.gov* or 202–734–0639. The program website also provides up to date contact information at *https://www.eac.gov/grants/help-america-vote-college-program.*

H. Other Information

1. Paperwork Reduction Act. In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35), the information collection requirements associated with the programs, as covered in this Notice, have been approved by the Office of Management and Budget (OMB) under OMB Control Number 3265–0025. Public burden reporting for this collection of information is estimated to average 17 hours per response for individuals completing all parts of this form, including time for reviewing instructions, searching existing data sources, gathering, and maintaining the data needed, and completing and reviewing the collection of information. You are not required to respond to these questions unless this number is displayed. Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, U.S. Election Assistance Commission, 633 3rd Street NW, Suite 200, Washington, DC 20001.

2. Federal Funding Accountability and Transparency Act. All applicants, in accordance with 2 CFR part 25, must be registered in SAM and have a UEI number as stated in Section D.3. of this Notice. All recipients of federal financial assistance are required to report information about first-tier sub-awards and executive total compensation in accordance with 2 CFR part 170, Reporting subaward and executive compensation information.

3. Issuance of Federal Awards. The Election Assistance Commission is not obligated to make any federal awards as a result of this announcement.

4. EAC Terms and Conditions. All awards made under this Notice will be subject to the EAC's General Terms and Conditions and the Program-Specific Terms and Conditions for the program (where applicable). These Terms and Conditions contain detailed, mandatory compliance and reporting requirements.

5. Effects of Nondisclosure. The information requested is voluntary; however, to be a recipient of this grant program, disclosure of personal or sensitive information is required to receive federal benefits.

6. Use of Material. To ensure that materials generated with HAVA funding are available to the public and readily accessible to recipients and non-recipients, the EAC reserves a royalty-free, nonexclusive, and irrevocable right to obtain, use, modify, reproduce, publish, or disseminate publications and materials produced under the award, including data, and to authorize others to do so (2 CFR 200.315).

7. Uniform Guidance. All awards made under this Notice will be subject to the Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (Uniform Guidance), in 2 CFR part 200.

8. Federal Funding Accountability and Transparency Act. Grant recipients will be required to report at *www.FSRS.gov* on all subawards over $30,000 and may be required to report on executive compensation for recipients and subrecipients. Recipients must have the necessary systems in place to collect and report this information. See 2 CFR part 170 for more information and to determine how these requirements apply.

Camden Kelliher,

Deputy General Counsel, U.S. Election Assistance Commission.

BILLING CODE 4810–71–P

DEPARTMENT OF ENERGY

[Case Number 2022–004; EERE–2022–BT–WAV–0010]

Energy Conservation Program: Decision and Order Granting a Waiver to Norlake, Inc., dba Refrigerated Solutions Group, From the Department of Energy Walk-In Coolers and Walk-In Freezers Test Procedure

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notification of decision and order.

SUMMARY: The U.S. Department of Energy (''DOE'') gives notification of a Decision and Order (Case Number 2022–004) that grants to Norlake, Inc., dba Refrigerated Solutions Group (''RSG'') a waiver from specified portions of the DOE test procedure for determining the energy efficiency of specified walk-in cooler refrigeration systems. Under the Decision and Order, RSG is required to test and rate the specified basic models of its equipment in accordance with the alternate test procedure set forth in the Decision and Order.

DATES: The Decision and Order is effective on November 22, 2023. The Decision and Order will terminate upon the date on which use of the test procedure for walk-in coolers and walk-in freezers located at title 10 of the Code of Federal Regulations (''CFR''), part 431, subpart R, appendix C1 is required to determine compliance with energy conservation standards. At such time, RSG must use the relevant test procedure for this equipment for any testing to demonstrate compliance with the applicable standards, and any other representations of energy use.

FOR FURTHER INFORMATION CONTACT:

Ms. Julia Hegarty, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Email: *AS_Waiver_Request@ee.doe.gov*.

Mr. Matthew Schneider, U.S. Department of Energy, Office of the General Counsel, GC–33, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (240) 597–6265. Email: *matthew.schneider@hq.doe.gov*.

SUPPLEMENTARY INFORMATION: In accordance with 10 CFR 431.401(f)(2), DOE gives notification of the issuance of its Decision and Order as set forth below. The Decision and Order grants RSG a waiver from the applicable test procedure at 10 CFR part 431, subpart R, appendix C for the specified basic models for which RSG petitioned for waiver and provides that RSG must test and rate such equipment using the alternate test procedure specified in the Decision and Order. RSG's representations concerning the energy efficiency of the specified basic models must be based on testing according to the provisions and restrictions in the alternate test procedure set forth in the Decision and Order, and the representations must fairly disclose the test results. Distributors, retailers, and private labelers are held to the same requirements when making

representations regarding the energy efficiency of this equipment. (42 U.S.C. 6314(d))

Any manufacturer of a basic model employing a technology or characteristic for which a waiver was granted for another basic model and that results in the need for a waiver (as specified by DOE in a published decision and order in the **Federal Register**) must petition and be granted a waiver for that basic model. (10 CFR 431.401(j)) Manufacturers may also submit a request for interim waiver pursuant to the requirements of 10 CFR 431.401.

Case #2022–004

Decision and Order

I. Background and Authority

The Energy Policy and Conservation Act, as amended (''EPCA''),[1] authorizes the U.S. Department of Energy (''DOE'') to regulate the energy efficiency of a number of consumer products and certain industrial equipment. (42 U.S.C. 6291–6317) Title III, Part C [2] of EPCA established the Energy Conservation Program for Certain Industrial Equipment, which sets forth a variety of provisions designed to improve the energy efficiency for certain types of industrial equipment. This equipment includes walk-in coolers and walk-in freezers (collectively, ''walk-ins''), the focus of this document. (42 U.S.C. 6311(1)(G))

The energy conservation program under EPCA consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA include definitions (42 U.S.C. 6311), energy conservation standards (42 U.S.C. 6313), test procedures (42 U.S.C. 6314), labeling provisions (42 U.S.C. 6315), and the authority to require information and reports from manufacturers (42 U.S.C. 6316; 42 U.S.C. 6299).

The Federal testing requirements consist of test procedures that manufacturers of covered equipment must use as the basis for: (1) certifying to DOE that their equipment complies with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6316(a); 42 U.S.C. 6295(s)), and (2) making representations about the efficiency of that equipment (42 U.S.C. 6314(d)). Similarly, DOE must use these test procedures to determine whether the equipment complies with relevant standards promulgated under EPCA. (42 U.S.C. 6316(a); 42 U.S.C. 6295(s))

Under 42 U.S.C. 6314, EPCA sets forth the criteria and procedures DOE is required to follow when prescribing or amending test procedures for covered equipment. EPCA requires that any test procedures prescribed or amended under this section must be reasonably designed to produce test results which reflect energy efficiency, energy use or estimated annual operating cost of covered equipment during a representative average use cycle and requires that test procedures not be unduly burdensome to conduct. (42 U.S.C. 6314(a)(2)) The test procedures for walk-in refrigeration systems are set forth at 10 CFR part 431, subpart R, appendix C, *Uniform Test Method for the Measurement of Net Capacity and AWEF of Walk-in Cooler and Walk-in Freezer Refrigeration Systems* (''appendix C'') and appendix C1, *Uniform Test Method for the Measurement of Net Capacity and AWEF2 of Walk-In Cooler and Walk-In Freezer Refrigeration Systems* (''appendix C1'').[3]

Any interested person may submit a petition for waiver from DOE's test procedure requirements. 10 CFR 431.401(a)(1). DOE will grant a waiver from the test procedure requirements if DOE determines either that the basic model for which the waiver was requested contains a design characteristic that prevents testing of the basic model according to the prescribed test procedures, or that the prescribed test procedures evaluate the basic model in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 431.401(f)(2). In granting a waiver or interim waiver, DOE will not change the energy use or efficiency metric that the manufacturer must use to certify compliance with the applicable energy conservation standard and to make representations about the energy use or efficiency of the covered equipment. 10 CFR 431.401(a). DOE may grant the waiver subject to conditions, including adherence to alternate test procedures. 10 CFR 431.401(f).

As soon as practicable after the granting of any waiver, DOE will publish in the **Federal Register** a notice of proposed rulemaking to amend its regulations so as to eliminate any need for the continuation of such waiver. 10 CFR 431.401(*l*). As soon thereafter as practicable, DOE will publish in the **Federal Register** a final rule to that effect. *Id.* When DOE amends the test procedure to address the issues presented in a waiver, the waiver will automatically terminate on the date on which use of that test procedure is required to demonstrate compliance. 10 CFR 431.401(h)(3).

II. RSG's Petition for Waiver: Assertions and Determinations

On February 17, 2022, DOE received from RSG a petition for waiver and interim waiver from the DOE test procedure for walk-in refrigeration systems set forth at 10 CFR part 431, subpart R, appendix C. (RSG, No. 1, attachment 1, at pp. 1–3 [4]) Pursuant to 10 CFR 431.401(e)(i), DOE posted the petition on the DOE website. The petition did not identify any of the information contained therein as confidential business information.

DOE's currently applicable test procedure for walk-in refrigeration systems (*i.e.,* appendix C) incorporates by reference Air-Conditioning, Heating, and Refrigeration Institute (''AHRI'') Standard 1250–2009, *2009 Standard for Performance Rating of Walk-In Coolers and Freezers* (''AHRI 1250–2009''); AHRI Standard 420–2008, *Performance Rating of Forced-Circulation Free-Delivery Unit Coolers for Refrigeration* (''AHRI 420–2008''); and American Society of Heating, Refrigerating, and Air-Conditioning Engineers (''ASHRAE'') Standard 23.1–2010, *Methods of Testing for Rating the Performance of Positive Displacement Refrigerant Compressors and Condensing Units that Operate at Subcritical Temperatures of the Refrigerant* (''ASHRAE 23.1–2010''). AHRI 1250–2009 is the industry test standard for refrigeration systems for

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflect the last statutory amendments that impact Parts A and A–1 of EPCA.

[2] For editorial reasons, upon codification in the U.S. Code, Part C was redesignated as Part A–1.

[3] Appendix C is the test procedure currently required for walk-in refrigeration systems to demonstrate compliance with energy conservation standards. Use of appendix C1 will be required beginning on the compliance date of any amended energy conservation standards for walk-ins published after January 1, 2022. DOE has established separate test procedures for walk-in envelope components at 10 CFR part 431, subpart R, appendices A and B. Appendix A is used for testing the energy use of walk-in display panels, display doors, and non-display doors; appendix B is used for testing insulation R-value of non-display panels and non-display doors.

[4] A notation in this form provides a reference for information that is in the docket for this test procedure waiver (Docket No. EERE–2022–BT–WAV–0010) (available at *www.regulations.gov/document/EERE-2022-BT-WAV-0010*). This notation indicates that the statement preceding the reference is from document number 1 in the docket and appears at pages 1–3 of attachment 1 of that document. There are two attachments to document 1 of this docket. Attachment 1 is titled ''DOE Waiver 021722''. Attachment 2 is titled ''RSG DOE Single Package System Alternate Test Procedure 021522''.

walk-in coolers and freezers, including unit coolers and dedicated condensing units sold separately, as well as matched pairs. The procedure describes the method for measuring the refrigeration capacity and the electrical energy consumption for walk-in refrigeration systems. Using the refrigeration capacity and electrical energy consumption, AHRI 1250–2009 provides a calculation methodology to compute AWEF, the applicable energy-performance metric for refrigeration systems.

In its petition for waiver and interim waiver, RSG presented several ways in which the currently prescribed test procedure would evaluate the specified basic models in a manner so unrepresentative of their true energy consumption as to provide materially inaccurate comparative data. These issues are summarized below.

First, as presented in RSG's petition, the specified basic models of walk-in refrigeration systems are single-packaged dedicated systems that contain multiple refrigeration circuits that operate using a single power feed. (RSG, No. 1, attachment 1, at p. 1) RSG claimed that the specified basic models meet the definition of a single-packaged dedicated system. *Id.* DOE defines a single-packaged dedicated system as ''a single-package assembly that includes one or more compressors, a condenser, a means for forced circulation of refrigerated air, and elements by which heat is transferred from air to refrigerant, without any element external to the system imposing resistance to flow of the refrigerated air''. *See* 10 CFR 431.302. As described by RSG, each refrigeration circuit in the specified basic models is made up of a compressor, expansion, device, condenser, and evaporator. (RSG, No. 1, attachment 1, at p. 1) The separate refrigeration circuits may share condenser fans, evaporator fans and a control system. *Id.* In its request for waiver and interim waiver, RSG stated that neither appendix C nor AHRI 1250–2009 provide a method for testing a single-packaged dedicated system with multiple refrigeration circuits. *Id.*

Second, RSG stated that the current test procedure requires that the unit under test be set up using a 25-foot line-set. *Id.* Section 3.3 of appendix C provides the test method for matched systems, single-packaged dedicated systems, and unit coolers tested alone, which references AHRI 1250–2009. Section C5 (Methods of Testing for Walk-In Cooler and Freezer Systems that Have Matched Unit Coolers and Condensing Units) of AHRI 1250–2009 references test setup requirements that include the addition of a line-set that includes either one or two mass flow meters. Under section C5 of AHRI 1250–2009, the gross refrigeration capacity must be determined either by the dual instrumentation refrigerant enthalpy method (section C5.1.1 of AHRI 1250–2009, Method 1) or by the calibrated box method (section C5.1.2 of AHRI 1250–2009, Method 2). Both methods require installation of a refrigerant mass flow meter in the system's liquid line to determine the cooling capacity. Section C8.3 and Figure C1 of AHRI 1250–2009 specify the setup and measurements to be conducted for Method 1, for which 25-feet of additional refrigerant line is added to connect the condenser to the evaporator (unit cooler). Within this 25-foot line, two mass flow meters are incorporated, and the heat balance calculated from the two flow measurements must be within ±5 percent. Section C9.2 and Figure C2 of AHRI 1250–2009 specify the setup and measurements for Method 2, in which 26-feet of additional refrigerant line is added to connect the condenser to the unit cooler (as for Method 1), incorporating one mass flow meter. Air-side gross refrigeration capacity and refrigerant-side gross refrigeration capacity are determined and must be equal to within ±5 percent for the test to be considered valid. The 25 feet and 26 feet [5] of additional liquid line and suction line piping used to set up the test is termed a ''line-set''. In its petition for waiver and interim waiver, RSG stated that single-packaged dedicated systems are not intended to be remotely split via a line-set. (RSG, No. 1, attachment 1, at p. 1)

In its request for waiver and interim waiver, RSG noted that DOE has issued test procedure waivers for single-packaged dedicated refrigeration systems using air enthalpy test methods. (RSG, No. 1, attachment 1, at p. 2) DOE granted a waiver to Store It Cold for basic models of single-packaged dedicated systems on August 9, 2019. 84 FR 39286. Store It Cold petitioned for a waiver after determining that the dual instrumentation refrigerant enthalpy method specified in AHRI 1250–2009 was not providing consistent capacity measurements for its single-packaged dedicated systems. 84 FR 39286, 39287. The alternate test procedure associated with this prior waiver required that the specified single-packaged dedicated system basic models shall be tested using the Indoor Air Enthalpy Method and the Outdoor Air Enthalpy Method in accordance with ASHRAE 37–2009, *Methods of Testing for Rating Electrically Driven Unitary Air-Conditioning and Heat-Pump Equipment* (''ASHRAE 37''). 84 FR 39286, 39292. DOE also granted waivers to Air Innovations, CellarPro, Vinotemp, and Vinotheque for walk-in refrigeration systems used in wine cellar applications, for which some of the basic models included in these waivers were single-packaged dedicated systems.[6] The alternate test methods included in these waivers require the specified basic models to be tested in accordance with AHRI Standard 1250–2020 (*2020 Standard for Performance Rating of Walk-In Coolers and Freezers,* ''AHRI 1250–2020''), which references the air enthalpy methods in ASHRAE 37 for testing single-packaged dedicated systems.[7] Use of air enthalpy methods for testing a single-packaged dedicated system capture the impact of thermal loss and the infiltration of warm air into the evaporator portion of these systems, which increases the refrigerant load on the system. In its petition for waiver and interim waiver, RSG stated that its laboratory is not set up to conduct air enthalpy testing, and that it would require substantial time and expense to set up its laboratory to conduct air enthalpy testing. (RSG, No. 1, attachment 1, at p. 2) Additionally, RSG explained that it contacted third-party labs to inquire about testing single-packaged dedicated systems using the air enthalpy method, but these labs responded that they are not currently able to conduct air enthalpy testing. *Id.*

Third, in its request for waiver and interim waiver from the DOE test procedure, RSG stated that the current tolerance requirement of 0.5 °F for the on-coil temperature in section C3.3.3 of AHRI 1250–2009 is unrealistic. *Id.* RSG stated that indoor air temperature tolerances impact the on-coil temperatures, and that the test procedure currently prescribes a 1 °F indoor air temperature test condition tolerance.[8] *Id.* RSG therefore suggested

[5] AHRI 1250–2009 does not explain why Method 1 requires 25 feet of refrigeration line and Method 2 requires 26 feet of refrigeration line during test set up.

[6] See Waiver Decision and Orders for Air Innovations (86 FR 23702 (May 4, 2021)), CellarPro (86 FR 26496 (May 14, 2021)), Vinotheque (86 FR 26504 (May 14, 2021)), and Vinotemp (86 FR 36732 (Jul. 13, 2021)).

[7] Subsequent to DOE's grant of waiver to Store It Cold, AHRI published an updated version of AHRI 1250 (*i.e.,* AHRI 1250–2020) that provides testing provisions for single-packaged dedicated systems that incorporate by reference the approach used in ASHRAE 37 with some modification.

[8] Test condition tolerance is the maximum allowed deviation of the average of the measurements of a parameter made during a test period as compared with its target value. The

Continued

that the on-coil temperature tolerance should also be 1 °F. *Id.* RSG noted further that it can be difficult to repeatedly achieve an on-coil temperature tolerance of 0.5 °F when units are shut down, re-plumbed, and recharged for testing. *Id.*

RSG also requested an interim waiver from the existing DOE test procedure, explaining that if DOE were to deny its application for waiver and interim waiver, it would experience economic hardship in the form of lost sales and/or a significant delay in the distribution into commerce of the specified basic models. *Id.*

On July 22, 2022, DOE published a notification announcing its receipt of the petition for waiver and interim waiver and granted RSG an interim waiver. 87 FR 43808 (''Interim Waiver Order''). In the Interim Waiver Order, DOE initially determined that the alternate test procedure—with certain minor modifications as discussed in the Interim Waiver Order—appears to allow for the accurate measurement of the energy efficiency of the specified basic models, while alleviating the testing problems cited by RSG in its attempts to implement the DOE test procedure for these basic models. *Id.* at 87 FR 43814. The alternate test procedure established in the Interim Waiver Order is based on the calibrated box method (*i.e.,* Method 2 of AHRI 1250–2009) with modifications to the refrigerant enthalpy test provisions of this method. *Id.* at 87 FR 43813. Using the calibrated box method, the measured capacity includes the thermal loss through the evaporator of the single-packaged dedicated system under test. *Id.* The calibrated box method serves as the primary test method. A modified version of the single-packaged refrigerant enthalpy method is specified in the alternate test procedure for use as a secondary test method.[9] *Id.* Under the modified refrigerant enthalpy method, the refrigerant liquid line length is reduced from 25 feet (as prescribed in AHRI 1250–2009) to a maximum of 5 feet, allows for the capacity measurements of multiple refrigerant circuits, and adds a calculation to estimate the single-packaged thermal loss of the unit under test. *Id.* The capacity as measured by the primary and secondary test methods must be within 6 percent of one another for a valid test. *Id.* at 87 FR 43814.

The alternate test procedure established in the Interim Waiver Order differed from the alternate test procedure proposed by RSG with regard to the condenser air entering wet-bulb temperature test condition. *Id.* RSG proposed that the condenser air entering wet-bulb temperature test condition be 68 °F for single-packaged dedicated systems that do not use evaporative dedicated condensing units, for which all or part of the equipment is located in the outdoor room. *Id.* Whereas, the alternate test procedure established in the Interim Waiver Order specifies the condensing air entering wet-bulb temperature as 65 °F, which maintains consistency with the requirements in Table 8 of AHRI 1250–2020. *Id.*

In the Interim Waiver Order, DOE solicited comments from interested parties on all aspects of the petition and the specified alternate test procedure. 87 FR 43808, 43809. DOE did not receive any comments in response to the Interim Waiver Order.

On May 4, 2023, DOE published a test procedure final rule (''May 2023 Final Rule'') that established a new test procedure for walk-in coolers and walk-in freezers at appendix C1, in addition to specifying minor amendments to appendix C. 88 FR 28780, 28810. Appendix C1 includes test provisions for multi-circuit single-package dedicated systems that are substantively the same as the methodology granted in the Interim Waiver Order. Use of appendix C1 is not required until the compliance date of any amended energy conservation standards based on the test procedure in appendix C1. Until such time, use of appendix C is required to demonstrate compliance with current standards. As discussed in the May 2023 Final Rule, the amendments to appendix C did not include provisions for multi-circuit single-package dedicated systems.[10] As such, for the basic models subject to the Interim Waiver Order, the need for the waiver from appendix C will continue until such time as use of appendix C1 is required.

For the reasons explained here and in the Interim Waiver Order, absent a waiver the basic models identified by RSG in its petition cannot be tested and rated for energy consumption on a basis representative of their true energy consumption characteristics. Therefore, DOE has determined that the current test procedure for walk-in cooler refrigeration systems would evaluate the subject basic models in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data. DOE has reviewed the recommended procedure suggested by RSG and concludes that, with minor modification to the condenser air entering wet bulb temperature as discussed previously, it will allow for the accurate measurement of the energy use of the equipment, while alleviating the testing problems associated with RSG's implementation of DOE's applicable walk-in test procedure for the specified basic models.

Thus, DOE is requiring that RSG test and rate specified walk-in basic models according to the alternate test procedure specified in this Decision and Order, which is identical to the alternate test procedure specified in the Interim Waiver Order.[11]

This Decision and Order is applicable only to the basic models listed and does not extend to any other basic models. DOE evaluates and grants waivers for only those basic models specifically set out in the petition, not future models that may be manufactured by the petitioner. RSG may request that DOE extend the scope of this waiver to include additional basic models that employ the same technology as those listed in this waiver. 10 CFR 431.401(g). RSG may also submit another petition for waiver from the test procedure for additional basic models that employ a different technology and meet the criteria for test procedure waivers. 10 CFR 431.401(a)(1).

DOE notes that it may modify or rescind the waiver at any time upon DOE's determination that the factual basis underlying the petition for waiver is incorrect, or upon a determination that the results from the alternate test procedure are unrepresentative of the basic models' true energy consumption characteristics. 10 CFR 431.401(k)(1). Likewise, RSG may request that DOE rescind or modify the waiver if the company discovers an error in the information provided to DOE as part of its petition, determines that the waiver is no longer needed, or for other

indoor air dry-bulb test condition tolerance is specified as 1 °F in Table 2 of AHRI 1250–2009.

[9] A secondary test method's results are used to ensure the capacity tolerance is met when compared to the capacity determined by a primary test method, but are not used for rating performance.

[10] DOE notes a typographical error in Table III.8 of the May 2023 Final Rule. 88 FR 28780, 28827. In that table, the interim waiver granted to RSG was indicated as being addressed by amendments to appendix C, with compliance beginning October 31, 2023. *Id.* The table should have indicated the RSG interim waiver as being addressed by appendix C1, with a compliance date corresponding to ''Compliance date of updated standards.''

[11] DOE notes that while the test provisions of this Decision and Order are identical to those presented in the Interim Waiver Order, the section numbering of the test provisions specified in this Decision and Order are slightly different than those sections specified in the Interim Waiver Order due to other section numbering changes made to appendix C by the May 2023 Final Rule.

appropriate reasons. 10 CFR 431.401(k)(2).

III. Order

After careful consideration of all the material that was submitted by RSG, in this matter, it is *ordered* that:

(1) RSG must test and rate the following Norlake- and Masterbilt-branded basic models with the test procedure set forth in paragraph (2).

Cooler basic models	Freezer basic models
CPB050PC–S–0	CPF050PC–S–0
CPB075PC–S–0	CPF075PC–S–0

(2) The alternate test procedure for the RSG basic models identified in paragraph (1) of this Order is the test procedure for walk-in refrigeration systems prescribed by DOE at 10 CFR part 431, subpart R, appendix C (''appendix C'') as amended by the May 2023 Final Rule, except that multiple-circuit single-packaged dedicated systems shall use: (1) either the calibrated box method or an indoor air enthalpy test as the primary test method, as detailed below; (2) the modified refrigerant enthalpy method as the secondary test method, as detailed below; (3) the net capacity from the primary and secondary test methods must agree within ± 6 percent, as detailed below; and (4) reported values for the overall system shall be the summation of the gross capacities obtained from the modified refrigerant enthalpy method conducted for each refrigeration circuit included in the unit under test, as detailed below. All other requirements of appendix C as amended by the May 2023 Final Rule and DOE's regulations remain applicable.

In appendix C:

Revise section 3.1.1 to read as follows:

3.1.1. In Table 1 of AHRI 1250–2009, Instrumentation Accuracy, refrigerant temperature measurements shall have a tolerance of ±0.5 °F for unit cooler in/out. Temperature measurements used to determine water vapor content of the air shall be accurate to within ±0.4 °F. All other temperature measurements shall be accurate to ±1.0 °F.

Revise section 3.1.4 to read as follows:

3.1.4. In Tables 2 through 14 of AHRI 1250–2009, the Test Condition Outdoor Wet Bulb Temperature requirement and its associated tolerance apply only to units with evaporative cooling and single-packaged dedicated systems.

Insert new section 3.1.8 as follows:

3.1.8 Tables 3, 4, 7 and 8 of AHRI 1250–2009 shall be modified to read as follows:

TABLE 3—FIXED CAPACITY MATCHED REFRIGERATOR SYSTEM, CONDENSING UNIT LOCATED INDOOR

Test description	Unit cooler air entering dry-bulb, °F	Unit cooler air entering relative humidity, (%)	Condenser air entering dry-bulb, (°F)	Condenser air entering wet-bulb, °F	Compressor capacity	Test objective
Off Cycle Fan Power.	35	<50	.....	.....	Compressor Off	Measure fan input wattage during compressor off cycle.
Refrigeration Capacity.	35	<50	90	75 [1] or 65 [2]	Compressor On	Determine Net Refrigeration Capacity of Unit Cooler, input power, and EER at Rating Condition.

[1] Required only for evaporative Dedicated Condensing Units

[2] Maximum allowable value for Single-Packaged Dedicated Systems that do not use evaporative Dedicated Condensing Units, where all or part of the equipment is located in the outdoor room.

TABLE 4—FIXED CAPACITY MATCHED REFRIGERATOR SYSTEM, CONDENSING UNIT LOCATED OUTDOOR

Refrigeration Capacity B.	−10	<50	59	54 [1] or 46 [2]	Compressor On	Determine Net Refrigeration Capacity of Unit Cooler, input power, and EER at Rating Condition.
Refrigeration Capacity C.	−10	<50	35	34 [1] or 29 [2]	Compressor On	Determine Net Refrigeration Capacity of Unit Cooler, input power, and EER at Rating Condition.
Defrost Frost Load.	−10	Various	95	75 [1] or 68 [2]	System Dependent	Test according to section C11 of AHRI 1250–2009.

[1] Required only for evaporative Dedicated Condensing Units.
[2] Maximum allowable value for Single-Packaged Dedicated Systems that do not use evaporative Dedicated Condensing Units, where all or part of the equipment is located in the outdoor room.

Remove section 3.2.5.

Add a new section 4, following section 3.5 *Hot Gas Defrost Refrigeration Systems*

4.0 Multiple-Circuit Single-Packaged Dedicated Systems

When conducting testing in accordance with AHRI 1250–2009 (incorporated by reference; see 10 CFR 431.303), the following modifications must be made.

4.1 Specific Modifications: Test Conditions and Tolerance

4.1.1 Replace section C3.1.2 of AHRI 1250–2009 with the following: Air wet-bulb and dry-bulb temperatures entering the Single-Packaged Dedicated System at its evaporator return and condenser air inlet shall be measured based on the airflow area at the point of measurement. One measuring station is required for each 2.0 ft^2 of the first 10.0 ft^2 of airflow area and one additional measuring station is required for each 4.0 ft^2 of airflow area above 10.0 ft^2. A minimum of two stations shall be used and the number of measuring stations shall be rounded up to the next whole number.

4.1.2 Replace section C3.1.5 of AHRI 1250–2009 with the following: If sampling tubes are used, each tube opening may be considered a temperature measuring station provided the openings are uniformly spaced along the tube, the airflow rates entering each port are relatively uniform (±15%) and the arrangement of tubes complies with the location requirements of section C3.1.2 of AHRI 1250–2009. Additionally, a one-time temperature traverse shall be made over the measurement surface, prior to the tests to assess the temperature variation and ensure it complies with the allowable deviation specified in section C3.1.4 of AHRI 1250–2009. (Refer to ANSI/ASHRAE Standard 41.1 for more information and diagrams). If sampling tubes are not used for single-packaged dedicated systems that do not use evaporative dedicated condensing units, a single air wet-bulb or RH sensor may be used. When used, this sensor shall be located at the geometric center of the largest condenser coil face and 6–12 inches from the condenser coil.

4.1.3 Replace section 3.1.6 of AHRI 1250–2009 with the following: Refrigerant temperatures entering and leaving the evaporator section of the Single-Packaged Dedicated System shall be measured by a temperature measuring instrument placed in a thermometer well and inserted into the refrigerant stream. These wells shall be filled with non-solidifying, thermal conducting liquid or paste to ensure the temperature sensing instrument is exposed to a representative temperature. The entering temperature of the refrigerant shall be measured within six pipe diameters upstream of the expansion device. If the refrigerant tube outer diameter is less than ½-inch, the refrigerant temperature may be measured using the average of two temperature measuring instruments with a minimum accuracy of ±0.5 °F placed on opposite sides of the refrigerant tube surface. In this case, the refrigerant tube shall be insulated with 1-inch-thick insulation from a point 6 inches upstream of the measurement location to a point 6 inches downstream of the measurement location. Also, the entering measurement location may be moved to a location 6 inches upstream of the expansion device.

4.2 Refrigerant Properties Measurement

4.2.1 Replace section C3.3.1 of AHRI 1250–2009 with the following: With the equipment operating at the desired test conditions, the temperature and pressure of the refrigerant leaving the unit cooler, entering the expansion device, and entering and leaving the compressor shall be measured. For cases where the calibrated box method or indoor air enthalpy method is also conducted, data used to calculate capacity according to the single-package refrigerant enthalpy method and the additional method shall be collected over the same intervals.

4.2.2 Replace section C3.3.3 of AHRI 1250–2009 with the following: For Single-Packaged Dedicated Systems tested using either the calibrated box method or the indoor air enthalpy method as the primary measurement and the single-package refrigerant enthalpy method as the secondary method, a preliminary test for Rating Condition A using the primary method is required prior to setting up the refrigerant enthalpy method measurements. In preparation for this preliminary test, temperature sensors shall be attached to the equipment's evaporator and condenser coils. The sensors shall be located at points that are not affected by vapor superheat or liquid subcooling. Placement near the midpoint of the coil, at a return bend, is recommended. The preliminary test shall be conducted with the requirement that the temperatures of the on-coil sensors be included with the regularly recorded data. After the preliminary test is completed, the refrigerant shall be removed from the equipment, and the refrigerant enthalpy measurement setup shall be completed. The equipment

shall be evacuated and recharged with refrigerant. The test shall then be repeated. Once steady-state operation is achieved, refrigerant shall be added or removed until, as compared to the average values from the preliminary test, the following conditions are achieved: (1) each on-coil temperature sensor indicates a reading that is within ±1.0 °F, (2) the temperatures of the refrigerant entering and leaving the compressor are within ±4 °F, and (3) the refrigerant temperature entering the expansion device is within ±1 °F. Once these conditions have been achieved over an interval of at least ten minutes, refrigerant charging equipment shall be removed, and the remaining tests shall be conducted.

4.2.3 When conducting the refrigerant enthalpy method for a Single-Packaged Dedicated System, the length of the added liquid line conducting refrigerant out of the system, to the flow meter, and back into the system shall be no more than 5 feet. No such modification to the suction line shall be made.

4.3 Methods for Testing for Walk-In Cooler and Freezer Systems That Have Matched Unit Coolers and Condensing Units

Disregard section C5 of AHRI 1250–2009 and instead test according to the following method:

4.3.1 The Refrigeration Capacity for Single-Packaged Dedicated Systems shall be determined using either the Calibrated Box method or the Indoor Air Enthalpy method as a primary test method and the Single-Package Refrigerant Enthalpy method as the secondary test method.

4.3.1.1 Single-Package Refrigerant Enthalpy method shall determine gross refrigeration capacity by measuring the enthalpy change and the mass flow rate of the refrigerant using a single set of measurements.

4.3.1.2 Calibrated Box method shall determine net refrigeration capacity by measuring the heat input to the calibrated box, including thermal transfer through the calibrated box walls.

4.3.2 Indoor Air Enthalpy method shall determine net refrigeration capacity of Single-Packaged Dedicated System and input power in accordance with ASHRAE 37–2009, Figure C4 of AHRI 1250–2020, and the following modifications.

4.3.2.1 Net refrigeration capacity is determined by measuring airflow rate and the dry-bub temperature and water vapor content of the air that enters and leaves the coil.

4.3.2.2 Air enthalpies shall be determined in accordance with ANSI/ASHRAE 41.6. Entering air is to be sufficiently dry as to not produce frost on the evaporator coil. Therefore, only sensible capacity measured by dry bulb change shall be used to calculate capacity.

4.3.3 Testing Sequence. The primary test method shall be used to measure the capacity for Rating Condition A prior to set-up of the Single-Package Refrigerant Enthalpy Measurement. After set-up of the Refrigerant Enthalpy method, the Net Capacity shall be measured using both the primary test method and the Refrigerant Enthalpy method. The Net Capacity measurement using the Refrigerant Enthalpy method shall be within 6 percent of the net capacity measurement using the primary method.

If a capacity balance within tolerance is not initially achieved, take steps to reduce the thermal losses of the Single-Packaged Dedicated System evaporator compartment by sealing air gaps and potentially adding more external insulation. If using the Calibrated Box method as the primary method, achieving a capacity balance may require conducting the calibration with calibrated box insulation material at the same average temperature as during capacity measurement, or using multiple calibrations conducted at different average insulation material temperatures and using these data to construct a correlation for the calibration coefficient, K_{cb}, as a function of average insulation temperature. The official performance measurements are based on the primary method testing without any air gap sealing and additional external insulation used to achieve the 6 percent energy balance in place.

4.3.4 The refrigerant enthalpy method Net Capacity shall be calculated from the Gross Capacity Measurement as follows.

$$\dot{q}_{ss,2} = \dot{Q}_{ref} - 3.412 \times \dot{E}F_{comp,on} - \dot{Q}_{sploss}$$

Where $\dot{Q}_{sploss}$ represents the Single-Packaged Dedicated System thermal losses through the walls of the evaporator side of the Single-Packaged Dedicated System to the condenser side and to the exterior ambient, and shall be calculated as follows.

$$\dot{Q}_{sploss} = UA_{cond} \times (T_{condside} - T_{evapside}) + UA_{amb} \times (T_{amb} - T_{evapside})$$

Where:

UA_{cond} and UA_{amb} are, for the condenser/evaporator partition and the evaporator compartment walls exposed to ambient air, respectively, the product of the overall heat transfer coefficient and surface area of the unit as manufactured, *i.e.,* without external insulation that might have been added during the test;

$T_{evapside}$ is the air temperature in the evaporator compartment;

$T_{condside}$ is the air temperature in the condenser compartment; and

T_{amb} is the air temperature outside the Single-Packaged Dedicated System.

The Net Capacity to be used in AWEF calculations shall be the net capacity measured using the primary method.

4.3.5 Upon the completion of the Rating Condition A steady state test, an off-cycle evaporator fan power test shall be conducted to measure the evaporator fan power consumption during a compressor-off period in accordance with section C10 of AHRI 1250–2009.

4.3.6 Upon the completion of the Rating Condition A steady state test for walk-in freezer systems, a mandatory defrost test shall be conducted to establish the energy input for a defrost cycle.

4.3.7 Upon the completion of the Rating Condition A steady state test, off-cycle evaporator fan power test, and defrost test (for walk-in freezer systems), the Rating Condition B and C steady state tests shall be conducted. Capacity balance as described in section C9.2 of AHRI 1250–2020 for Rating Condition A is not required for Rating Conditions B and C.

4.4 Test Chamber Requirements

Disregard section C6 of AHRI 1250–2009 and instead test according to the following method:

4.4.1 For single-packaged dedicated systems, test chamber requirements shall be as follows:

a. For the calibrated box method, follow ASHRAE 16–2016 Section 6.1 for calibrated type calorimeters excluding water and water energy inputs for the indoor-side compartment.

b. For the indoor air enthalpy method, follow ASHRAE 37–2009.

4.5 Single-Packaged Dedicated System Refrigerant Enthalpy Method

4.5.1 General Description. In this method, capacity is determined from the refrigerant enthalpy change and flow rate. Enthalpy changes are determined from measurements of entering and leaving pressures and temperatures of the refrigerant, and the flow rate is determined by a suitable flow meter in the liquid line. This method shall not be used for tests in which the refrigerant liquid leaving the flow meter is subcooled less than 3 °F or for tests in which any instantaneous measurement of the superheat of the vapor leaving the evaporator coil is less than 5 °F. Supplementary cooling may be artificially provided for the liquid line to ensure enough subcooling when

making measurements to establish the capacity balance for Rating Condition A, however, no official measurements used to calculate AWEF may be made while providing such supplementary cooling.

4.5.2 Measurements. Refer to Section 4.1 of this appendix and section C3 of AHRI 1250–2009 for requirements of air-side and refrigerant-side measurements.

4.5.3 Test Setup and Procedure. Refer to Section 4.4 of this appendix, section C7 of AHRI 1250–2009, and Figure C3 of this section for specific test setup. The length of the added liquid line shall be 5 feet, maximum.

BILLING CODE 6450–01–P

Figure C3: Calibrated Box and Single-package Refrigerant Enthalpy Method

4.5.4 Data to be Measured and Recorded. Refer to ''Refrigerant Enthalpy Method'' in Table C2 in section C7.2 of AHRI 1250–2009 for the required data that need to measured and recorded, except as follows.

4.5.4.1 Water vapor content of air entering the unit cooler (evaporator) and condensing unit may be measured using a wet bulb temperature measurement or a relative humidity sensor, but both are not required.

4.5.4.2 Wet bulb temperature of air leaving the unit cooler (evaporator) and condensing unit need not be measured.

4.5.4.3 Required refrigerant pressure measurement includes only subcooled liquid entering the expansion valve and superheated vapor exiting the unit cooler (evaporator).

4.5.4.4 Only one refrigerant mass flow measurement is required.

4.5.4.5 Measurement of Refrigerant oil flow rate and oil/refrigerant mass ratio are not required.

4.5.5 Refrigeration Capacity Calculation.

4.5.5.1 The refrigerant-side gross capacity is calculated by

$$\dot{Q}_{ref} = \dot{m}_{ref}(h_{out} - h_{in})$$

4.5.5.2 Measurement of Capacity for a Single-Packaged Dedicated System with Multiple Refrigeration Circuits.

For a Single-Packaged Dedicated System with multiple refrigeration circuits, apply the refrigerant enthalpy method separately for each circuit and sum the separately-measured gross refrigeration capacities.

4.6 Calibrated Box Test Procedure

4.6.1 Measurements. Refer to section 4.1 of this section and section C3 of AHRI 1250–2009 for requirements of air-side and refrigerant-side measurements.

4.6.2 Apparatus setup for Calibrated Box Calibration and Test. Refer to section 4.4 of this section, section C7 of AHRI 1250–2009, and Figure C4 of this section for specific test setup.

BILLING CODE 6510–01–C

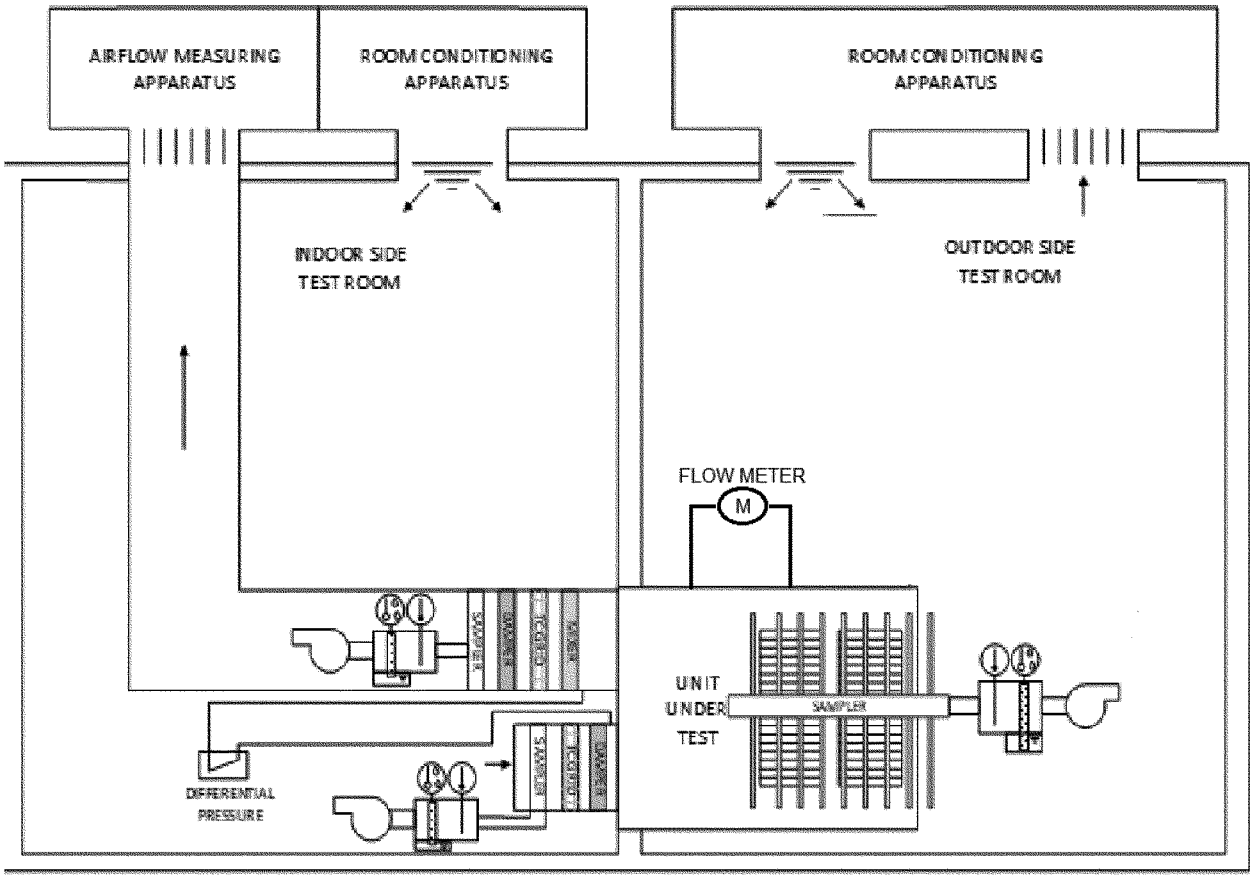

Figure C4: Indoor Air Enthalpy and Single-package Refrigerant Enthalpy Method

4.6.2.1 The calibrated box shall be installed in a temperature-controlled enclosure in which the temperature can be maintained at a constant level. When using the calibrated box method for Single-Packaged Dedicated Systems, the enclosure air temperature shall be maintained such that the condenser air entering conditions are as specified for the test.

4.6.2.2 The temperature-controlled enclosure shall be of a size that will provide clearances of not less than 18 in at all sides, top and bottom, except that clearance of any one surface may be reduced to not less than 5.5 inches.

4.6.2.3 The heat leakage of the calibrated box shall be noted in the test report.

4.6.2.4 Refrigerant lines within the calibrated box shall be well insulated to avoid appreciable heat loss or gain.

4.6.2.5 Instruments for measuring the temperature around the outside of the calibrated box to represent the enclosure temperature T_{en} shall be located at the center of each wall, ceiling, and floor.

Exception: in the case where a clearance around the outside of the calibrated box, as indicated above, is reduced to less than 18 inches, the number of temperature-measuring devices on the outside of that surface shall be increased to six, which shall be treated as a single temperature to be averaged with the temperature of each of the other five surfaces. There will be six rectangular sections of equal area, and each of these six sections will have a temperature-measuring instrument located at its center. If the refrigeration system is mounted at the location that would cover the center of the face on which it is mounted, up to four temperature measurements shall be used on that face to represent its temperature. Each sensor shall be aligned with the center of the face's nearest outer edge and centered on the distance between that edge and the single-packaged unit (this is illustrated in Figure C5 when using surface temperature sensors), and they shall be treated as a single temperature to be averaged with the temperature of each of the other five surfaces. However, any of these sensors shall be omitted if either (a) the distance between the outer

edge and the single-packaged unit is less than one foot or (b) if the sensor location would be within two feet of any of the foot-square surfaces discussed below representing a warm discharge air impingement area. In this case, the remaining sensors shall be used to represent the average temperature for the surface.

One of the following two approaches shall be used for the box external temperature measurement. Box calibration and system capacity measurement shall both be done using the same one of these approaches.

4.6.2.5.1 Air temperature sensors. Each temperature sensor shall be at a distance of 6 inches from the calibrated box. If the clearance from a surface of the box (allowed for one surface only) is less than 12 inches, the temperature measuring instruments shall be located midway between the outer wall of the calibrated box and the adjacent surface.

4.6.2.5.2 Surface temperature sensors. Surface temperature sensors shall be mounted on the calibrated box surfaces to represent the enclosure temperature, T_{en}.

Additional surface temperature sensors may be used to measure external hot spots during refrigeration system testing. If this is done, two temperature sensors shall be used to measure the average temperature of the calibrated box surface covered by the condensing section—they shall be centered on equal-area rectangles comprising the covered calibrated box surface whose common sides span the short dimension of this surface. Additional surface temperature sensors may be used to measure box surfaces on which warm condenser discharge air impinges. A pattern of square surfaces measuring one foot square shall be mapped out to represent the hot spot upon which the warm condenser air impinges. One temperature sensor shall be used to measure surface temperature at the center of each square (see Figure C5 of this section). A drawing showing this pattern and identifying the surface temperature sensors shall be provided in the test report. The average surface temperature of the overall calibrated box outer surface during testing shall be calculated as follows.

$$T_{en} = \frac{\sum_{i=1}^{6} A_i T_i + \sum_{j=1}^{2} A_j \left(T'_j - T_1\right) + \sum_{k=1}^{n} A_k \left(T''_k - T_1\right)}{\sum_{i=1}^{6} A_i}$$

Where:

A_i is the surface area of the i^{th} of the six calibrated box surfaces;

T_i is the average temperature measured for the i^{th} surface;

A_j is half of the surface area of the calibrated box covered by the condensing section;

T'_j is the j^{th} of the two temperature measurements underneath the condensing section;

T_1 is the average temperature of the four or fewer measurements representing the temperature of the face on which the single-packaged system is mounted, prior to adjustments associated with hot spots based on measurements T_j and/or T_k;

A_k is the area of the k^{th} of n 1-square-foot surfaces used to measure the condenser discharge impingement area hot spot; and,

T''_k is the k^{th} of the n temperature measurements of the condenser discharge impingement area hot spot.

BILLING CODE 6450–01–P

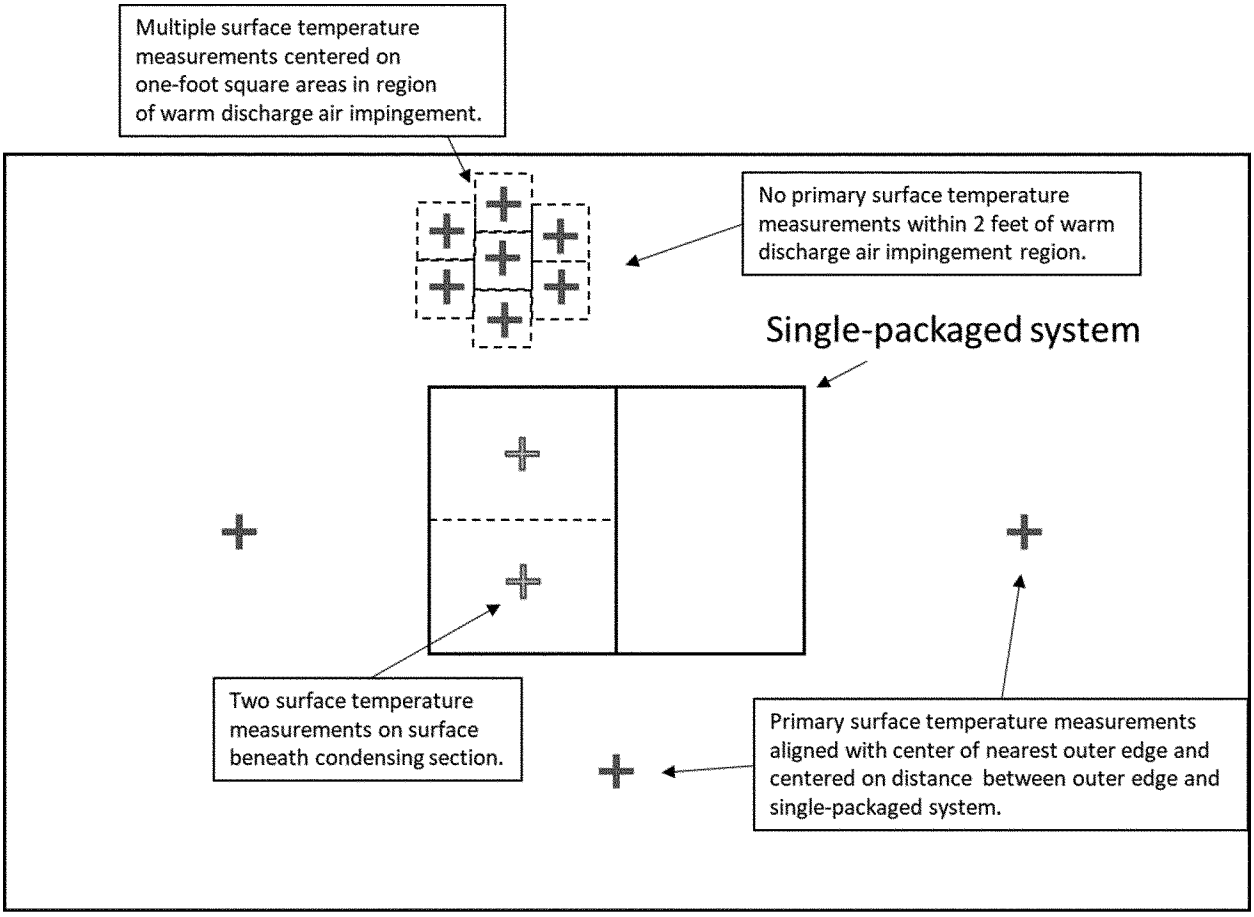

Figure C5: Illustration of Layout of Surface Temperature Sensors on Face of Calibrated Box on which Single-Packaged System is Mounted when Using Section 4.6.2.5.2 of 10 CFR Part 431 Subpart R, Appendix C.

BILLING CODE 6450–01–C

4.6.2.6 Heating means inside the calibrated box shall be shielded or installed in a manner to avoid radiation to the Single-Packaged Dedicated System, the temperature measuring instruments, and to the walls of the box. The heating means shall be constructed to avoid stratification of temperature, and suitable means shall be provided for distributing the temperature uniformly.

4.6.2.7 The average air dry-bulb temperature in the calibrated box during Single-Packaged Dedicated System tests and calibrated box heat leakage tests shall be the average of eight temperatures measured at the corners of the box at a distance of 2 inches to 4 inches from the walls. The instruments shall be shielded from any cold or warm surfaces except that they shall not be shielded from the adjacent walls of the box. The Single-Packaged Dedicated System under test shall be mounted such that the temperature instruments are not in the direct air stream from the discharge of the Single-Packaged Dedicated System.

4.6.3 Calibration of the Calibrated Box. Calibration of the Calibrated Box shall occur prior to installation of the Single-Packaged Dedicated System. This shall be done either (a) prior to cutting the opening needed to install the Single-Packaged Dedicated System, or (b) with an insulating panel with the same thickness and thermal resistance as the box wall installed in the opening intended for the Single-Packaged Dedicated System installation. Care shall be taken to avoid thermal shorts in the location of the opening either during calibration or during subsequent installation of the Single-Packaged Dedicated System. A calibration test shall be made for air movements comparable to those expected for Single-Packaged Dedicated System capacity measurement, *i.e.,* with air volume flow rate within 10 percent of the air volume flow rate of the Single-Packaged Dedicated System evaporator.

4.6.3.1 The heat input shall be adjusted to maintain an average box temperature not less than 25.0 °F above the test enclosure temperature.

4.6.3.2 The average dry-bulb temperature inside the calibrated box shall not vary more than 1.0 °F over the course of the calibration test.

4.6.3.3 A calibration test shall be the average of eleven consecutive hourly readings when the box has reached a steady-state temperature condition.

4.6.3.4 The box temperature shall be the average of all readings after a steady-state temperature condition has been reached.

4.6.3.5 The calibrated box has reached a steady-state temperature condition when:

4.6.3.5.1 The average box temperature is not less than 25 °F above the test enclosure temperature.

4.6.3.5.2 Temperature variations do not exceed 5.0 °F between temperature-measuring stations.

4.6.3.5.3 Temperatures do not vary by more than 2 °F at any one temperature-measuring station.

4.6.4 Data to be Measured and Recorded. Refer to Table C2 in section C7.2 of AHRI 1250–2020 for the required data that need to measured and recorded.

4.6.5 Refrigeration Capacity Calculation.

4.6.5.1 The heat leakage coefficient of the calibrated box is calculated by

$$K_{cb} = \frac{3.412 \times \dot{E}_c}{T_{en} - T_{cb}}$$

4.6.5.2 For each Dry Rating Condition, calculate the Net Capacity:

$\dot{q}_{ss} = K_{cb}\,(T_{en} - T_{cb}) + 3.412 \times \dot{E}_c$

(3) *Representations.* RSG may not make representations about the efficiency of a basic model listed in paragraph (1) of this Order for compliance, marketing, or other purposes unless that basic model has been tested in accordance with the provisions set forth in this alternate test procedure and such representations fairly disclose the results of such testing.

(4) This Order shall remain in effect until the date upon which use of appendix C1 is required to demonstrate compliance with any amended energy conservation standards based on the test procedure in appendix C1.

(5) This Order is issued on the condition that the statements and representations provided by RSG are valid. If RSG makes any modifications to the controls or configurations of any basic model subject to this Order, such modifications will render the waiver invalid with respect to that basic model, and RSG will either be required to use the current Federal test method or submit a new application for a test procedure waiver. DOE may rescind or modify this waiver at any time if it determines the factual basis underlying the petition for the waiver is incorrect, upon a determination that the results from the alternate test procedure are unrepresentative of a basic model's true energy consumption characteristics, or for other appropriate reasons. 10 CFR 431.401(k)(1). Likewise, RSG may request that DOE rescind or modify the waiver if RSG discovers an error in the information provided to DOE as part of its petition, determines that the waiver is no longer needed, or for other appropriate reasons. 10 CFR 431.401(k)(2).

(6) Issuance of this Order does not release RSG from the applicable requirements set forth at 10 CFR part 429.

DOE makes decisions on waivers and interim waivers for only those basic models specifically set out in the petition, not future models that may be manufactured by the petitioner. RSG may submit a new or amended petition for waiver and request for grant of interim waiver, as appropriate, for additional basic models of single-packaged dedicated systems with multiple refrigeration circuits. Alternatively, if appropriate, RSG may request that DOE extend the scope of a waiver or an interim waiver to include additional basic models employing the same technology as the basic models set forth in the original petition consistent with 10 CFR 431.401(g).

Signing Authority

This document of the Department of Energy was signed on November 17, 2023, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on November 17, 2023.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

[FR Doc. 2023–25873 Filed 11–21–23; 8:45 am]

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

[Case Number 2023–004; EERE–2023–BT–WAV–0016]

Energy Conservation Program: Notification of Petition for Waiver of United CoolAir Corporation From the Department of Energy Commercial Air Conditioners and Heat Pumps Test Procedure and Notification of Denial of Interim Waiver

AGENCY: Office of Energy Efficiency and Renewable Energy, Department of Energy.

ACTION: Notification of petition for waiver and denial of application for interim waiver; request for comments.

SUMMARY: This notification announces receipt of and publishes a petition for waiver and interim waiver from United CoolAir Corporation (''UCA''), which seeks a waiver for specified basic models of double-duct air conditioners and heat pumps from the U.S. Department of Energy (''DOE'') test procedure used for determining the efficiency of double-duct air conditioners and heat pumps. This notification also announces that DOE is declining to grant the request for an interim waiver for the reasons described in this notification. DOE solicits comments, data, and information concerning UCA's petition and its suggested alternate test procedure so as to inform DOE's final decision on UCA's waiver request.

DATES: Written comments and information are requested and will be accepted on or before December 22, 2023.

ADDRESSES: Interested persons are encouraged to submit comments using the Federal eRulemaking Portal at *www.regulations.gov* under docket number EERE–2023–BT–WAV–0016. Follow the instructions for submitting comments. Alternatively, interested persons may submit comments, identified by docket number EERE–2023–BT–WAV–0016, by any of the following methods:

(1) *Email: UnitedCoolAirACHP2023WAV0016@ee.doe.gov.* Include the case number [Case No. 2023–004] in the subject line of the message.

(2) *Postal Mail:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, Mailstop EE–5B, Petition for Waiver [Case No. 2023–004], 1000 Independence Avenue SW, Washington, DC 20585–0121. If possible, please submit all items on a compact disc (''CD''), in which case it is not necessary to include printed copies.

(3) *Hand Delivery/Courier:* Appliance and Equipment Standards Program, U.S. Department of Energy, Building Technologies Office, 950 L'Enfant Plaza SW, 6th Floor, Washington, DC 20024. Telephone: (202) 287–1445. If possible, please submit all items on a CD, in which case it is not necessary to include printed copies.

No telefacsimiles (''faxes'') will be accepted. For detailed instructions on submitting comments and additional information on this process, see the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: The docket for this activity, which includes **Federal Register** notices, comments, and other supporting documents/materials, is available for review at *www.regulations.gov.* All documents in the docket are listed in the *www.regulations.gov* index. However, not all documents listed in the index may be publicly available, such as information that is exempt from public disclosure.

The docket web page can be found at *www.regulations.gov/docket/EERE–2023–BT–WAV–0016.* The docket web page contains instructions on how to access all documents, including public comments, in the docket. See the **SUPPLEMENTARY INFORMATION** section for information on how to submit comments through *www.regulations.gov.*

FOR FURTHER INFORMATION CONTACT: FOR FURTHER INFORMATION CONTACT:

Ms. Julia Hegarty, U.S. Department of Energy, Office of Energy Efficiency and Renewable Energy, Building Technologies Office, Mailstop EE–5B, 1000 Independence Avenue SW, Washington, DC 20585–0121. Telephone: (240) 597–6737 Email: *AS_Waiver_Request@ee.doe.gov.*

Ms. Kathryn McIntosh, U.S. Department of Energy, Office of the General Counsel, Mail Stop GC–33, Forrestal Building, 1000 Independence Avenue SW, Washington, DC 20585–0103. Telephone: (202) 586–2002. Email: *Kathryn.McIntosh@hq.doe.gov.*

SUPPLEMENTARY INFORMATION: DOE is publishing UCA's petition for waiver in its entirety, pursuant to 10 CFR 431.401(b)(1)(iv). DOE invites all interested parties to submit in writing by December 22, 2023, comments and information on all aspects of the petition, including the alternate test procedure. Pursuant to 10 CFR 431.401(d), any person submitting written comments to DOE must also send a copy of such comments to the petitioner. The contact information for the petitioner is: John Hodges, *jhodges@hwglaw.com,* Harris, Wiltshire & Grannis LLP, 1919 M Street NW, Washington, DC 20036.

Submitting comments via www.regulations.gov. The *www.regulations.gov* web page will require you to provide your name and contact information. Your contact information will be viewable to DOE Building Technologies staff only. Your contact information will not be publicly viewable except for your first and last names, organization name (if any), and submitter representative name (if any). If your comment is not processed properly because of technical difficulties, DOE will use this information to contact you. If DOE cannot read your comment due to technical difficulties and cannot contact you for clarification, DOE may not be able to consider your comment.

However, your contact information will be publicly viewable if you include it in the comment or in any documents attached to your comment. Any information that you do not want to be publicly viewable should not be included in your comment, nor in any document attached to your comment. If this instruction is followed, persons viewing comments will see only first and last names, organization names, correspondence containing comments, and any documents submitted with the comments.

Do not submit to *www.regulations.gov* information for which disclosure is restricted by statute, such as trade secrets and commercial or financial information (hereinafter referred to as Confidential Business Information (''CBI'')). Comments submitted through *www.regulations.gov* cannot be claimed as CBI. Comments received through the website will waive any CBI claims for the information submitted. For information on submitting CBI, see the Confidential Business Information section.

DOE processes submissions made through *www.regulations.gov* before posting. Normally, comments will be posted within a few days of being submitted. However, if large volumes of comments are being processed simultaneously, your comment may not be viewable for up to several weeks. Please keep the comment tracking number that *www.regulations.gov* provides after you have successfully uploaded your comment.

Submitting comments via email, hand delivery/courier, or postal mail. Comments and documents submitted via email, hand delivery/courier, or postal mail also will be posted to *www.regulations.gov.* If you do not want your personal contact information to be publicly viewable, do not include it in your comment or any accompanying documents. Instead, provide your contact information on a cover letter. Include your first and last names, email address, telephone number, and optional mailing address. The cover letter will not be publicly viewable as long as it does not include any comments.

Include contact information each time you submit comments, data, documents, and other information to DOE. If you submit via postal mail or hand delivery/courier, please provide all items on a CD, if feasible, in which case it is not necessary to submit printed copies. Faxes will not be accepted.

Comments, data, and other information submitted to DOE electronically should be provided in PDF (preferred), Microsoft Word or Excel, WordPerfect, or text (ASCII) file format. Provide documents that are not secured, written in English and free of any defects or viruses. Documents should not contain special characters or any form of encryption and, if possible, they should carry the electronic signature of the author.

Campaign form letters. Please submit campaign form letters by the originating organization in batches of between 50 to 500 form letters per PDF or as one form letter with a list of supporters' names compiled into one or more PDFs. This reduces comment processing and posting time.

Confidential Business Information. According to 10 CFR 1004.11, any person submitting information that he or she believes to be confidential and exempt by law from public disclosure should submit via email two well-marked copies: one copy of the document marked confidential including all the information believed to be confidential, and one copy of the document marked ''non-confidential'' with the information believed to be confidential deleted. Submit these documents via email. DOE will make its own determination about the confidential status of the information and treat it according to its determination.

It is DOE's policy that all comments may be included in the public docket, without change and as received, including any personal information provided in the comments (except information deemed to be exempt from public disclosure).

Case Number 2023–004

Denial of Interim Waiver

I. Authority and Background

The Energy Policy and Conservation Act, as amended (''EPCA''),[1] authorizes the U.S. Department of Energy (''DOE'') to regulate the energy efficiency of several consumer products and certain industrial equipment. (42 U.S.C. 6291–6317) Title III, Part C of EPCA [2] established the Energy Conservation Program for Certain Industrial Equipment, which sets forth a variety of provisions designed to improve energy efficiency for certain types of industrial equipment. This equipment includes double-duct air conditioners and heat pumps, which are a subset of air-cooled commercial package air conditioning and heating equipment, the subject of this document. (42 U.S.C. 6311(1)(B)–(D))

The energy conservation program under EPCA consists essentially of four parts: (1) testing, (2) labeling, (3) Federal energy conservation standards, and (4) certification and enforcement procedures. Relevant provisions of EPCA include definitions (42 U.S.C. 6311), test procedures (42 U.S.C. 6314), labeling provisions (42 U.S.C. 6315), energy conservation standards (42 U.S.C. 6313), and the authority to require information and reports from manufacturers (42 U.S.C. 6316).

The Federal testing requirements consist of test procedures that manufacturers of covered equipment must use as the basis for: (1) certifying to DOE that their equipment complies with the applicable energy conservation standards adopted pursuant to EPCA (42 U.S.C. 6316(b); 42 U.S.C. 6296), and (2) making representations about the efficiency of that equipment (42 U.S.C. 6314(d)). Similarly, DOE uses these test procedures to determine whether the equipment complies with relevant standards promulgated under EPCA.

Under 42 U.S.C. 6314, EPCA sets forth the criteria and procedures DOE is required to follow when prescribing or amending test procedures for covered equipment. EPCA requires that any test procedures prescribed or amended under this section must be reasonably designed to produce test results which reflect the energy efficiency, energy use, or estimated annual operating cost of covered equipment (or class thereof) during a representative average use cycle and requires that test procedures not be unduly burdensome to conduct. (42 U.S.C. 6314(a)(2)) The test procedure for air-cooled commercial package air conditioning and heating equipment, including double-duct air conditioners and heat pumps, is contained in the Code of Federal Regulations (''CFR'') at 10 CFR part 431, subpart F, appendix A, *Uniform Test Method for the Measurement of Energy Consumption of Air-Cooled Small (≥65,000 Btu/h), Large, and Very Large Commercial Package Air Conditioning and Heating Equipment* (''appendix A'').

Under 10 CFR 431.401, any interested person may submit a petition for waiver from DOE's test procedure requirements. DOE will grant a waiver from the test procedure requirements if DOE determines either that the basic model(s) for which the waiver was requested contains a design characteristic that prevents testing of the basic model according to the prescribed test procedures, or that the prescribed test procedures evaluate the basic model in a manner so unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 431.401(f)(2). A petitioner must include in its petition any alternate test procedures known to the petitioner to evaluate the performance of the equipment type in a manner representative of the energy consumption characteristics of the basic model. 10 CFR 431.401(b)(1)(iii). DOE may grant the waiver subject to conditions, which may include adherence to alternate test procedures specified by DOE. 10 CFR 431.401(f)(2).

As soon as practicable after the granting of any waiver, DOE will publish in the **Federal Register** a notice of proposed rulemaking to amend its regulations so as to eliminate any need for the continuation of such waiver. 10 CFR 431.401(l). As soon thereafter as practicable, DOE will publish in the **Federal Register** a final rule to that effect. *Id.*

The waiver process also provides that DOE will grant an interim waiver from the test procedure requirements if it appears likely that the petition for waiver will be granted and/or if DOE determines that it would be desirable for public policy reasons to grant immediate relief pending a determination on the petition for waiver. 10 CFR 431.401(e)(3). Within one year of issuance of an interim waiver, DOE will either: (i) publish in the **Federal Register** a determination on the petition for waiver; or (ii) publish in the **Federal Register** a new or amended test procedure that addresses the issues presented in the waiver. 10 CFR 431.401(h)(1).

If the interim waiver test procedure methodology is different than the decision and order test procedure methodology, certification reports to DOE required under 10 CFR 429.12 and any representations must be based on either of the two methodologies until 180–360 days after the publication date of the decision and order, as specified by DOE in the decision and order. Thereafter, certification reports and any representations must be based on the decision and order test procedure methodology, unless otherwise specified by DOE. Once a manufacturer uses the decision and order test procedure methodology in a certification report or any representation, all subsequent certification reports and any representations must be made using the decision and order test procedure methodology while the waiver is valid. 10 CFR 431.401(i)(1). When DOE amends the test procedure to address the issues presented in a waiver, the waiver or interim waiver will automatically terminate on the date on which use of that test procedure is required to demonstrate compliance. 10 CFR 431.401(h)(3).

II. UCA's Petition for Waiver and Interim Waiver

On November 19, 2018, DOE received from UCA a petition for waiver and interim waiver from the test procedure for commercial air conditioners and heat pumps set forth at 10 CFR part 431 subpart F.[3] (UCA, No. 1 at pp. 1–9) [4] The petition did not identify any of the

[1] All references to EPCA in this document refer to the statute as amended through the Energy Act of 2020, Public Law 116–260 (Dec. 27, 2020), which reflect the last statutory amendments that impact Parts A and A–1 of EPCA.

[2] For editorial reasons, upon codification in the U.S. Code, Part C was redesignated as Part A–1.

[3] The specific models for which the petition applies include UCA C-Series commercial indoor horizontal double-duct air conditioner models C***T***, H***T***, E***T***, B***T***, and BC***T***, with nominally rated capacities of 72000, 96000, 120000, 144000 and 180000 Btu/h; C13-Series commercial indoor horizontal double-duct air conditioner models C***H***, H***H***, E***H***, B***H***, and BC***H***, with nominally rated capacities of 72000, 96000 and 120000 Btu/h; VertiCool Classic commercial indoor vertical double-duct air conditioner models VA***T***, VAR***T***, VARC***T***, BVA***T***, BCVA***T***, and EVA***T***, with nominally rated capacities of 72000, 96000, 120000, 144000, 180000, 240000 and 300000 Btu/h; and VertiCool Aurora commercial indoor vertical double-duct air conditioner models VA***H***, VAR***H***, VARC***H***, BVA***H***, BCVA***H***, and EVA***H***, with nominally rated capacities of 72000, 96000, 120000, 144000, 180000, 240000 and 300000 Btu/h. These models were provided by UCA in the Appendix included in its November 19, 2018 petition. The petition is included at the end of this notice.

[4] A notation in this form provides a reference for information that is in the docket for this test procedure waiver. This notation indicates that the statement preceding the reference is document number 1 in the docket and appears at page 2 of that document.

information contained therein as confidential business information.

In its petition, UCA stated that the current DOE test procedure does not address the unique characteristics of UCA's double-duct technology. (UCA, No. 1 at p. 1) UCA noted that the basic models for which it is seeking a waiver use a double-duct configuration, which do not have an outdoor section and instead have ducting to an outside wall or window for the supply and discharge of outside air to and from the indoor condenser. (UCA, No. 1 at p. 3) UCA asserts in its waiver petition that the energy characteristics of these double-duct air conditioners [5] are different from equipment with an outdoor section. (*Id.* at p. 3) UCA additionally states that the Federal test procedure does not account for this technology, and that the standard AHRI 340/360–2007,[6] incorporated by reference at the time of petition, was developed to test products with both outdoor and indoor sections (and UCA noted the references to ''indoor section'' and ''outdoor section'' throughout that standard). UCA asserted that because double-duct units do not have an outdoor section, they cannot be tested by the DOE test procedure and a waiver is necessary. (*Id.* at pp. 4–5) Further, UCA expressed that double-duct air conditioners have higher condenser fan motor horsepower to move condenser air against significant air pressure (0.5–1.5 in H_2O) and smaller but deeper condenser coils, which creates a higher pressure drop than that of an outdoor condensing section, resulting in more energy consumption of the condenser fan motor, and claimed that both of these characteristics were not accounted for in the test procedure. (*Id.*)

UCA also requested an interim waiver from the existing DOE test procedure, asserting that the petition for waiver is likely to be granted because the DOE test procedure does not address the unique characteristics of the requested basic models. (*Id.* at p. 7) UCA stated that without the granting of an interim waiver, UCA would suffer economic hardship and be at a competitive disadvantage if it must wait to rate these basic models pending a determination on petition for waiver. (*Id.*) UCA also claimed that the petition was supported by sound public policy because the products offered property owners and developers the ability to install new efficient central air conditioning in old buildings. (*Id.*)

III. Requested Alternate Test Procedure

EPCA requires that manufacturers use DOE test procedures when making representations about the energy consumption and energy consumption costs of covered equipment. (42 U.S.C. 6314(d)) Consistency is important when making representations about the energy efficiency of covered equipment, including when demonstrating compliance with applicable DOE energy conservation standards. Pursuant to 10 CFR 431.401, and after consideration of public comments on the petition, DOE may establish in a subsequent Decision and Order an alternate test procedure for the basic models addressed by the Interim Waiver Order.

UCA seeks to use an alternate test procedure to test and rate specific double-duct commercial unitary air conditioners (''CUAC'') basic models. As an alternate test procedure, UCA proposed to test the specified basic models by ducting the condenser fan and imposing external static pressure (''ESP'') per the manufacturer's instructions. Then, UCA proposed to adjust the input power of the condenser fan motor by subtracting ''added'' condenser motor horsepower imposed by the additional ESP, as presented below:

$$\varphi_{fa} = \frac{q \times \Delta p}{\eta}$$

Where:

ϕ_{fa} is the fan power adjustment, in watts;
η is 0.3×10^3 by convention;
Δp is the measured ESP difference, in pascals; and
q is the nominal airflow rate, in litres per second.

(UCA, No. 1 at pp. 6–7)

This formula is drawn from section 4.1.3.2 of ANSI/ARI/ASHRAE ISO Standard 13256–1:1998 [7] and is used in that test standard to adjust for the motor horsepower expended in moving air through the indoor ducts. UCA proposed that this formula be used to adjust the condenser motor horsepower for double-duct units tested at non-zero condenser ESP to account only for the motor horsepower utilized in overcoming internal resistance of the unit. (*Id.*)

In the course of reviewing UCA's petition, DOE requested additional data from UCA to support their proposed alternate test procedure. UCA provided confidential data to DOE that included condenser fan power values at various ESPs and adjusted condenser fan power based on their suggested approach for several basic models offered.

IV. Denial of Interim Waiver

DOE has reviewed UCA's application for an interim waiver, the alternate test procedure requested by UCA, publicly available specification sheets and installation manuals relevant to these basic models, and additional confidential data from UCA regarding its petition. In submitting a petition for waiver, a petitioner must demonstrate that the subject basic model contains one or more design characteristics that prevent testing of the basic model according to the prescribed test procedures or cause the prescribed test procedures to evaluate the basic model in a manner so unrepresentative of its true energy and/or water consumption characteristics as to provide materially inaccurate comparative data. 10 CFR 431.401(a)(1); 10 CFR 431.401(f)(2). In determining whether to grant a request for an interim waiver, DOE considers whether: (1) it appears likely that the petition for waiver will be granted; and/or (2) it would be desirable for public policy reasons to grant immediate relief pending a determination on the petition for waiver. 10 CFR 431.401(e)(=3).

As described, UCA claims in its petition for a waiver that the subject basic models contain a design characteristic (*i.e.,* no outdoor section) that prevents testing according to the DOE test procedure. In response to this claim, DOE notes that the current DOE test procedure for double-duct air conditioners and heat pumps is the same as that for single-duct commercial air conditioning and heating equipment at appendix A. In a direct final rule published on January 15, 2016 (''January 2016 Direct Final Rule''), DOE clarified

[5] As referenced in footnote 4 of the petition, quoting 10 CFR 431.92, double-duct air conditioner or heat pump means air-cooled commercial package air conditioning and heating equipment that—(1) Is either a horizontal single package or split-system unit; or a vertical unit that consists of two components that may be shipped or installed either connected or split; (2) Is intended for indoor installation with ducting of outdoor air from the building exterior to and from the unit, as evidenced by the unit and/or all of its components being non-weatherized, including the absence of any marking (or listing) indicating compliance with UL 1995, ''Heating and Cooling Equipment,'' or any other equivalent requirements for outdoor use; (3) (i) If it is a horizontal unit, a complete unit has a maximum height of 35 inches; (ii) If it is a vertical unit, a complete unit has a maximum depth of 35 inches; and (4) Has a rated cooling capacity greater than or equal to 65,000 Btu/h and up to 300,000 Btu/h.

[6] ANSI/AHRI Standard 340/360–2007, *2007 Standard for Performance Rating of Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment,* approved by ANSI on October 27, 2011, and updated by addendum 1 in December 2010 and addendum 2 in June 2011 (''AHRI 340/360–2007''). Available online at: *webstore.ansi.org.*

[7] ANSI/ARI/ISO Standard 13256–1:1998, *Water-source heat pumps—Testing and rating for performance—Part 1: Water-to-air and brine-to-air heat pumps,* ISO approved 1998. Available online at *webstore.ansi.org/.*

that double-duct air conditioners are tested and rated under the same test conditions as single-duct air conditioners, without any ducting connected to, or an external static pressure applied on, the condenser side. 81 FR 2420, 2445.

The DOE test procedure at appendix A references certain sections of both AHRI 340/360–2007 and ANSI/ASHRAE 37–2009.[8] As mentioned by UCA, Table 3 of AHRI 340/360–2007 uses the term ''outdoor section'' in a header for columns providing test conditions. This term refers to the section of an air conditioning or heat pump system that rejects or absorbs heat (during mechanical cooling or heating mode, respectively), and does not apply only to units installed outdoors. For an air-cooled air conditioner, the test conditions under the heading ''indoor section'' are used for indoor air (*i.e.,* the evaporator airstream) and the test conditions under the heating ''outdoor section'' are used for outdoor air (*i.e.,* the condenser airstream), regardless of whether the components are intended for indoor or outdoor installation. DOE notes that condenser temperature conditions for testing water-cooled commercial unitary air conditioners (''WCUACs'') are also specified under the ''outdoor section'' header, but similar to double-duct systems, both the indoor and outdoor sections of WCUACs are generally intended for indoor installation. Similarly, DOE notes that in rooftop air-cooled and evaporatively-cooled commercial unitary air conditioners, the ''indoor section'' (*i.e.,* the section conditioning indoor air) is located outdoors. Further, DOE notes that both ANSI/ASHRAE 37–2009 (which is referenced in the current DOE test procedure at appendix A) and ANSI/ASHRAE 37–2005 [9] (which is referenced by AHRI 340/360–2007) use the term ''outdoor side'' to refer to the condensing section of an air-conditioning system. Specifically, both versions of ASHRAE Standard 37 define ''outdoor side'' as ''that part of the system that rejects heat to or absorbs heat from a source external to the indoor airstream.'' This definition does not specify or require that the outdoor side is located outdoors. Therefore, DOE has tentatively determined that UCA has not demonstrated that the basic models subject to the petition contain a design characteristic that prevents testing of the basic model according to the prescribed test procedures because the test procedure applies to double-duct systems regardless of intended installation location.

DOE also evaluated UCA's petition to determine whether the prescribed test procedures evaluate the subject basic models in a manner so unrepresentative of their true energy consumption characteristics as to provide materially inaccurate comparative data. Relevant to this evaluation, DOE notes that the current energy conservation standards for double-duct air conditioners are defined in terms of the energy efficiency ratio (''EER'') metric, which as defined by the test procedure at appendix A, represent the performance of an air conditioner when operating at zero condenser ESP. DOE further notes that the rating conditions associated with a metric are integral to the metric—performance measured at a different condenser ESP, for example, would not represent an EER value (as that metric is currently defined in appendix A) and would therefore not provide comparative data with which to compare to other equipment on the market subject to the same EER standard. As such, DOE evaluated UCA's suggested alternate test procedure to determine whether it would provide a more representative measure of EER (*i.e.,* a more representative measure of performance at zero condenser ESP) compared to the current Federal test procedure.[10] DOE reviewed UCA's proposed alternate test procedure, including the additional confidential data provided to DOE by UCA, within this framework.

UCA's suggested alternate test procedure specifies testing at a manufacturer-specified non-zero condenser ESP and then adjusting the measured condenser fan power down to reflect operation at zero condenser ESP. This adjustment of the measured condenser fan power requires an assumption regarding the efficiency value of the condenser fan. In its petition, UCA requested to use an assumed fan efficiency value of 0.3. Based on its review, DOE has tentatively concluded that the fan efficiency value of 0.3 suggested by UCA is unrepresentatively low. In particular, confidential data provided by UCA suggests that for some of the models subject to UCA's petition for waiver, assuming a fan efficiency value of 0.3 would result in the fan power adjustment exceeding the actual fan power consumed at zero condenser ESP, thus resulting in negative condenser fan power being reflected in the metric.

As a result, the test procedure suggested by UCA would under-represent the condenser fan power that would be expected at zero condenser ESP because it subtracts an unrepresentatively high adjustment factor from the measured value of condenser fan power. This would result in EER ratings of performance at zero condenser ESP that are unrepresentatively high and therefore not comparable to EER ratings developed by other manufacturers of double-duct systems based on testing at zero condenser ESP (*i.e.,* ratings developed without any adjustment to measured condenser fan power). Therefore, DOE has tentatively concluded that the alternate test procedure suggested in UCA's petition for waiver would not evaluate the performance of the subject models in a manner more representative of the energy consumption characteristics of each basic model, within the context of representing EER performance at zero condenser ESP.

Additionally, DOE notes that multiple other manufacturers of double-duct systems list condenser fan motor performance at ESPs as low as zero in their product literature, demonstrating that there is nothing inherent to double-duct systems that prevents representing EER performance at zero condenser ESP in accordance with the current Federal test procedure.[11] Therefore, DOE has tentatively concluded that UCA has not demonstrated that the basic models subject to the petition contain a design characteristic that prevents testing of those models according to the prescribed test procedure or that the prescribed test procedure evaluates the basic model in a manner so

[8] ANSI/ASHRAE Standard 37–2009, *Methods of Testing for Rating Electrically Driven Unitary Air-Conditioning and Heat Pump Equipment* (''ANSI/ASHRAE 37–2009''). Available at online at: *webstore.ansi.org.*

[9] ANSI/ASHRAE Standard 37–2005, *Methods of Testing for Rating Electrically Driven Unitary Air-Conditioning and Heat Pump Equipment* (''ANSI/ASHRAE 37–2005''). Available at online at: *webstore.ansi.org.*

[10] DOE notes that it recently published a notice of proposed rulemaking (''NOPR'') regarding the test procedures for commercial unitary air conditioners and heat pumps, including double-duct air conditioners and heat pumps. 88 FR 56392 (August 17, 2023). This NOPR proposes a new test procedure that specifies the new metrics integrated ventilation, economizer, and cooling (''IVEC'') and integrated ventilation and heating efficiency (''IVHE''). These proposed new metrics would change the condenser ESP requirement from zero to 0.5 in. H_2O for double-duct air conditioners and heat pumps. Were DOE to adopt the test procedures for IVEC and IVHE for double-duct systems as proposed, testing to those metrics would not be required until DOE adopts energy conservation standards for double-duct systems in terms of those metrics.

[11] Condenser fan motor performance at condenser ESPs as low as zero is listed in the product datasheets for the Carrier Omnizone and Skypeak D-series double-duct model lines. These examples can be found on the docket at *regulations.gov/EERE-2023-BT-WAV-0016.*

unrepresentative of its true energy consumption characteristics as to provide materially inaccurate comparative data with other double-duct systems. Absent such data, DOE is unable to conclude that UCA's petition for waiver will likely be granted.

Further, DOE does not find that public policy reasons weigh in favor of granting immediate relief pending a determination on the petition for waiver. As previously indicated, multiple other manufacturers certify to DOE EER ratings for double-duct systems that are compliant with the currently applicable EER standards and are based on the current Federal test procedure, which reflects performance at zero condenser ESP. These models demonstrate that commercial consumers currently have multiple options for installing double-duct systems; therefore, DOE does not find granting immediate relief to UCA is necessary. For these reasons, DOE is denying UCA's petition for interim waiver and requesting comment.

DOE makes decisions on waivers and interim waivers for only those basic models specifically set out in the petition, not future models that may be manufactured by the petitioner. UCA may submit a new or amended petition for waiver and request for grant of interim waiver, as appropriate, for additional basic models of double-duct air conditioners and heat pumps.

While DOE declines to approve the use of UCA's suggested alternate test procedure in an interim waiver at this time, DOE may consider including an alternate procedure in a subsequent Decision and Order. DOE solicits comments from interested parties on all aspects of the petition, including any alternate test procedure.

V. Signing Authority

This document of the Department of Energy was signed on November 17, 2023, by Jeffrey Marootian, Principal Deputy Assistant Secretary for Energy Efficiency and Renewable Energy, pursuant to delegated authority from the Secretary of Energy. That document with the original signature and date is maintained by DOE. For administrative purposes only, and in compliance with requirements of the Office of the Federal Register, the undersigned DOE Federal Register Liaison Officer has been authorized to sign and submit the document in electronic format for publication, as an official document of the Department of Energy. This administrative process in no way alters the legal effect of this document upon publication in the **Federal Register**.

Signed in Washington, DC, on November 17, 2023.

Treena V. Garrett,

Federal Register Liaison Officer, U.S. Department of Energy.

In the Matter of: Energy Efficiency Program: Test Procedure for Commercial Air Conditioners and Heat Pumps

Petition of United CoolAir Corporation for Waiver and Application for Interim Waiver of Test Procedure for Commercial Air Conditioners and Heat Pumps

United CoolAir Corporation (UCA) respectfully submits this Petition for Waiver and Application for Interim Waiver [12] from DOE's test procedure for commercial air conditioners and heat pumps. UCA seeks a waiver because the current DOE test procedure [13] does not address the unique characteristics of UCA's double-duct technology. Therefore, UCA's double-duct models cannot be tested under the DOE test procedure. UCA also requests expedited treatment of the Petition and Application.

I. UCA

Since 1988, UCA has been a small, family-owned and operated American company. It is a specialty manufacturer of double-duct commercial air conditioners and other air conditioning products. It is located at 491 E Princess Street, York, PA 17403 (tel. 717–843–4311; *https://unitedcoolair.com*). UCA's start came with the creation of air conditioning units built to meet extremely high standards for the U.S. Military. Since then, UCA has evolved into a full service provider of unique and often complex HVAC systems.

II. Double-Duct Commercial Air Conditioners

UCA specializes in double-duct commercial air conditioners. They are used to provide efficient central air conditioning in older buildings that are being renovated or updated and where there is only limited space available. These systems fit entirely inside a building and thus are dramatically different from the bulky products that have outdoor as well as indoor components. Their modular sections can be taken through standard doors or smaller openings, around corners, down hallways, and placed into service elevators. Indoor installation (above the ceiling and crawl spaces) minimizes expensive handling, rigging, or permits, and avoids the need for building modifications. It also eliminates expensive repairs and replacements due to weather damage, theft, and vandalism. All of these products are built-to-order and adapted to the different requirements of unique buildings, while providing the latest in control and design technologies.

III. Basic Models for Which a Waiver Is Requested

The basic models for which a waiver is requested are set forth in the Appendix. They are double-duct commercial air conditioners distributed in commerce under the UCA brand name. The models are within the following series: C-Series; C13-Series; VertiCool Classic; and VertiCool Aurora.[14] The C-Series and C13-Series are indoor horizontal air conditioners. The VertiCool Classic and VertiCool Aurora series have vertical cabinets that fit neatly along walls, in closet spaces, or in mechanical rooms.

IV. Need for the Requested Waiver

The UCA double-duct models are specialized, niche products intended for indoor installation—almost entirely in old buildings. They are ideal for replacement or renovation applications, where space constraints prohibit roof-top or other types of products. They do not have an outdoor section, and their energy characteristics are different from products that have one. They have ducting to an outside wall or window for the supply and discharge of outside air to and from the indoor condenser.[15]

[12] *See* 10 CFR 431.401 (Petitions for waiver and interim waiver).

[13] *Id.* § 431.96.

[14] To the best of UCA's knowledge, AboveAir Technologies, Skymark, Task Applied Products, Skil-aire, and Compu-Aire are the only manufacturers of other commercial air conditioning basic models distributed in commerce in the United States to incorporate design characteristic(s) similar to those found in the models that are the subject of this petition. To the best of UCA's knowledge, AirPac, Carrier, and Addison used to produce similar products but no longer do.

[15] *Double-duct air conditioner or heat pump means air-cooled commercial package air conditioning and heating equipment* that—

(1) Is either a horizontal single package or split-system unit; or a vertical unit that consists of two components that may be shipped or installed either connected or split;

(2) Is intended for indoor installation with ducting of outdoor air from the building exterior to and from the unit, as evidenced by the unit and/or all of its components being non-weatherized, including the absence of any marking (or listing) indicating compliance with UL 1995, ''Heating and Cooling Equipment,'' or any other equivalent requirements for outdoor use;

(3)(i) If it is a horizontal unit, a complete unit has a maximum height of 35 inches; (ii) If it is a vertical unit, a complete unit has a maximum depth of 35 inches; and

Continued

DOE's test procedure does not account for this technology and is therefore inapplicable for these products.

DOE has recognized the useful, unique nature of double-duct products such as UCA's.

DOE agrees that these [double-duct] units have features that justify establishing separate equipment classes for them. Double-duct units, as evidenced by several commenters, offer a unique utility that may otherwise become unavailable if these units were subjected to the more rigorous standards required by this direct final rule for other CUAC and CUHP equipment. DOE notes that double-duct units, which are installed within the building envelope and use ductwork to transfer outdoor air to and from the outdoor unit, would have added challenges in meeting more stringent energy conservation standards due to space constraints and added condenser fan power.[16]

Even though DOE has agreed that double-duct products are unique and useful, its test procedure has not yet been amended to address and take into account their unique characteristics. Rather, the test procedure is silent on these products.

Instead, DOE's test procedure [17] incorporates AHRI Standard 340/360–2007,[18] which was developed to test units that have *both outdoor and indoor sections.* Specifically, AHRI 340/360-2007 requires: ''Standard Ratings shall be established at the Standard Rating Conditions specified in Table 3.'' [19] Table 3, ''Conditions for Standard Rating and Operating Tests,'' mandates conditions for an ''Indoor Section'' and ''Outdoor Section.'' [20] ''Table 3 indicates the tests and test conditions which are required to determine values of standard capacity and ratings and values of energy efficiency.'' [21] Therefore, double-duct units, which do not have an outdoor section, simply cannot be tested by the DOE test procedure. Moreover, even though DOE acknowledges ''added condenser fan power'' as a distinguishing characteristic of double-duct products,[22] the DOE test procedure does not account for the higher condenser motor horsepower of these products. Nor does it account for the smaller but deeper coil required for the double-duct systems to move air through the duct and discharge it to the outside.

An outdoor condenser/condensing unit utilizes a propeller fan (light duty) to move large volumes of air against low air pressure (0″ External Static Pressure—ESP) and utilizes a relatively small motor. In addition, since space (footprint/volume/height) and air path (perimeter inlet and top discharge) through the outdoor coil of such models are not an issue, outdoor condensing sections typically utilize 1 or 2 row deep 'U/L' shaped condenser coils to maximize heat transfer and minimize air pressure drop.

In contrast, a double-duct unit's condenser fan (heavy duty—typically centrifugal and belt driven) has to be designed to move condenser air against significant air pressure (0.5–1.5″ ESP), and it utilizes a relatively larger motor. Double-duct models also have smaller and deeper condenser coils than models with outdoor condensing sections, since cabinet space is much smaller than an outdoor condensing section. An indoor condenser coil is typically 3–4 rows deep, with higher pressure drop than an outdoor condensing section. Such higher pressure drop consumes more energy than that associated with an outdoor condensing section.

Since the DOE test procedure does not address and account for double-duct technology, a waiver is necessary. DOE's rules provide that DOE ''will grant a waiver from the test procedure requirements'' in such circumstances.[23] Accordingly, UCA urges that a waiver be granted for the basic models in the Appendix that will allow use of the alternate test procedure discussed below. Unlike the current test procedure, the alternate test procedure is designed to properly take into account UCA double-duct technology. The waiver should continue until DOE adopts an applicable amended test procedure.

V. Proposed Alternate Test Procedure

UCA proposes the following alternate test procedure to evaluate the performance of the basic models listed in the Appendix. It is the same as the existing DOE test procedure for commercial air conditioners, except that it takes double-duct technology into account. It does so by utilizing a formula drawn from Section 4.1.3.2 of ANSI/ARI/ASHRAE ISO Standard 13256- 1:1998 [24] to adjust for the motor horsepower expended in moving air through the indoor ducts. It bears noting that AHRI 340/360–2007 provides that ISO 13256–1:1998 is among those publications ''essential to the formation and implementation of the standard [340/360]. All references in this appendix [to 340/360] are considered as part of the standard.'' [25]

The formula in Section 4.1.3.2 of ISO 13256–1 normalizes the double-duct condenser motor horsepower by adjusting the condenser motor horsepower to account *only* for the motor horsepower utilized in overcoming *internal* resistance of the unit.

The waiver should provide that UCA shall be required to test the performance of the basic models listed in the Appendix hereto according to the test procedure for commercial air conditioners and heat pumps in 10 CFR part 431, subpart F (including AHRI 340/360–2007), except as follows:

1. Duct the condenser fan, and impose ESP, each as per manufacturer's instructions.

2. Adjust kW input by subtracting ''added'' condenser motor horsepower utilizing the following formula. (No changes to unit cooling capacity or heating capacity is required.)

$$\varphi_{fa} = \frac{q \times \Delta p}{\eta}$$

Where:

φ_{fa} is the fan power adjustment, in watts;
η is 0.3×10^3 by convention;
ΔP is the measured ESP difference, in pascals; and
q is the nominal airflow rate, in litres per second.

VI. Application for Interim Waiver

UCA also hereby applies for an interim waiver of the applicable test procedure requirements for the UCA basic models set forth in the Appendix. UCA meets the criteria for an interim waiver. UCA's Petition for Waiver is likely to be granted, because the current DOE test procedure [26] clearly does not address the unique characteristics of these UCA basic models. Without waiver relief, UCA would be subject to

(4) Has a rated cooling capacity greater than or equal to 65,000 Btu/h and up to 300,000 Btu/h.

10 CFR 431.92.

[16] *Energy Conservation Program for Certain Industrial Equipment: Energy Conservation Standards for Small, Large, and Very Large Air-Cooled Commercial Package Air Condition and Heating Equipment and Commercial Warm-Air Furnaces,* 81 FR 2420, 2446 (Jan. 15, 2016).

[17] 10 CFR 431.96.

[18] ANSI/AHRI Standard 340/360–2007 (formerly ARI Standard 340/360–2007), 2007 Standard for Performance Rating of Commercial and Industrial Unitary Air-Conditioning and Heat Pump Equipment.

[23] 10 CFR 431.401(f)(2).

[24] ANSI/ARI/ASHRAE ISO Standard 13256–1:1998.

[25] AHRI 340/360–2007, App. A §§ A1, A1.7.

[26] 10 CFR part 431, subpart F.

requirements that are inappropriate for these products. Additionally, UCA will suffer economic hardship and be at a competitive disadvantage if it must wait to rate these basic models pending a determination on the petition for waiver. DOE approval of UCA's interim waiver application is also supported by sound public policy. As noted above, these products offer property owners and developers the ability to install new efficient central air conditioning in old buildings.

VII. Conclusion

UCA respectfully requests that DOE grant its Petition for Waiver of the applicable test procedure for specified basic models, and also grant its Application for Interim Waiver. UCA also requests expedited treatment of the Petition and Application.

Respectfully submitted,

/s/

Scott Blake Harris John Hodges, Harris, Wiltshire & Grannis LLP, 1919 M Street NW Washington, DC 20036, (202) 730–1313

November 19, 2018

Appendix

The waiver and interim waiver requested herein should apply to testing and rating of the following basic models that are manufactured by UCA:

C-Series commercial indoor horizontal double-duct air conditioner models C...T..., H...T..., E...T..., B...T..., and BC...T..., with nominally rated capacities of 72000, 96000, 120000, 144000 and 180000 Btu/h.

C13-Series commercial indoor horizontal double-duct air conditioner models C...H..., H...H..., E...H..., B...H..., and BC...H..., with nominally rated capacities of 72000, 96000 and 120000 Btu/h.

VertiCool Classic commercial indoor vertical double-duct air conditioner models VA...T..., VAR...T..., VARC...T..., BVA...T..., BCVA...T..., and EVA...T..., with nominally rated capacities of 72000, 96000, 120000, 144000, 180000, 240000 and 300000 Btu/h.

VertiCool Aurora commercial indoor vertical double-duct air conditioner models VA...H..., VAR...H..., VARC...H..., BVA...H..., BCVA...H..., and EVA...H..., with nominally rated capacities of 72000, 96000, 120000, 144000, 180000, 240000 and 300000 Btu/h.

BILLING CODE 6450–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–14–000]

Total Peaking Services, LLC; Notice of Amendment of Authorization and Establishing Intervention Deadline

Take notice that on November 6, 2023 Total Peaking Services, LLC (TPS), 775 Oronoque Road, Milford, CT 06460, filed an application under section 7(b) of the Natural Gas Act (NGA), and Part 157 of the Commission's regulations requesting authorization to abandon by sale to its affiliate, the Southern Connecticut Gas Company (SCG), its liquefied natural gas (LNG) storage tank and associated liquefaction and revaporization facilities located in Milford, Connecticut (Milford Facility). TPS also requests authorization to cancel its FERC Gas Tariff in its entirety. Post-abandonment, the Milford Facility will be operated by SCG, the sole existing customer for the Milford Facility's output, and will remain in service under State of Connecticut jurisdiction. TPS states that the proposed abandonment by sale will not harm existing or prospective shippers and will not have any effect on the environment, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room. For assistance, contact the Federal Energy Regulatory Commission at *FercOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TTY (202) 502–8659.

Any questions regarding the proposed project should be directed to Danielle Mechling, Networks FERC Legal Director, Avangrid (UIL), 180 Marsh Hill Road, Orange, CT 06477, by phone at (203) 836–7464 or by email at *Danielle.mechling@avangrid.com*.

Pursuant to Section 157.9 of the Commission's Rules of Practice and Procedure,[1] within 90 days of this Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

[1] 18 CFR (Code of Federal Regulations) § 157.9.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file comments on the project, you can protest the filing, and you can file a motion to intervene in the proceeding. There is no fee or cost for filing comments or intervening. The deadline for filing a motion to intervene is 5:00 p.m. Eastern Time on December 6, 2023. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

Comments

Any person wishing to comment on the project may do so. Comments may include statements of support or objections, to the project as a whole or specific aspects of the project. The more specific your comments, the more useful they will be.

Protests

Pursuant to sections 157.10(a)(4)[2] and 385.211[3] of the Commission's

[2] 18 CFR 157.10(a)(4)

[3] 18 CFR 385.211

regulations under the NGA, any person [4] may file a protest to the application. Protests must comply with the requirements specified in section 385.2001 [5] of the Commission's regulations. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

To ensure that your comments or protests are timely and properly recorded, please submit your comments on or before December 7, 2023.

There are three methods you can use to submit your comments or protests to the Commission. In all instances, please reference the Project docket number CP24–14–000 in your submission.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments or protests electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments or protests by mailing them to the following address below. Your written comments must reference the Project docket number CP24–14–000.

To file via USPS: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of comments (options 1 and 2 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov*.

Persons who comment on the environmental review of this project will be placed on the Commission's environmental mailing list, and will receive notification when the environmental documents (EA or EIS) are issued for this project and will be notified of meetings associated with the Commission's environmental review process.

The Commission considers all comments received about the project in determining the appropriate action to be taken. However, the filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding. For instructions on how to intervene, see below.

Interventions

Any person, which includes individuals, organizations, businesses, municipalities, and other entities,[6] has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure [7] and the regulations under the NGA [8] by the intervention deadline for the project, which is December 7, 2023. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp*.

There are two ways to submit your motion to intervene. In both instances, please reference the Project docket number CP24–14–000 in your submission.

(1) You may file your motion to intervene by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Intervention.'' The eFiling feature includes a document-less intervention option; for more information, visit *https://www.ferc.gov/docs-filing/efiling/document-less-intervention.pdf*.; or

(2) You can file a paper copy of your motion to intervene, along with three copies, by mailing the documents to the address below. Your motion to intervene must reference the Project docket number CP24–14–000.

To file via USPS: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of motions to intervene (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov*.

Protests and motions to intervene must be served on the applicant either by mail or email at: Danielle Mechling, Networks FERC Legal Director, Avangrid (UIL), 180 Marsh Hill Road Orange, CT 06477, or by email at *Danielle.mechling@avangrid.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online. Service can be via email with a link to the document.

All timely, unopposed [9] motions to intervene are automatically granted by operation of Rule 214(c)(1).[10] Motions to intervene that are filed after the intervention deadline are untimely, and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations.[11] A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link

[4] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[5] 18 CFR 385.2001

[6] 18 CFR 385.102(d).

[7] 18 CFR 385.214.

[8] 18 CFR 157.10.

[9] The applicant has 15 days from the submittal of a motion to intervene to file a written objection to the intervention.

[10] 18 CFR 385.214(c)(1).

[11] 18 CFR 385.214(b)(3) and (d).

also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp*.

Intervention Deadline: 5:00 p.m. Eastern Time on December 7, 2023.

Dated: November 16, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER20–1041–003]

Wabash Valley Power Association, Inc.; Order Establishing Additional Briefing Procedures

Before Commissioners: Willie L. Phillips, Acting Chairman; James P. Danly, Allison Clements, and Mark C. Christie.

1. This order establishes additional briefing procedures following the issuance of an Initial Decision on January 28, 2022,[1] involving Wabash Valley Power Association's (Wabash) proposed, unexecuted agreement for early termination of two wholesale power supply contracts between Wabash (as seller) and Tipmont Rural Electric Membership Cooperative (Tipmont) (as buyer). In this order, we establish a briefing schedule to develop a more comprehensive record on which to make a determination, as discussed below.

I. Background

2. This proceeding concerns Tipmont's desired early termination of its membership with Wabash and two of its contracts that are on file with the Commission: the 1977 Contract that governs all-requirements service from 1977 through until 2028, and the 2006 Contract that governs such service from 2006 through 2050 (each a Contract, and collectively, Contracts). At issue also in this proceeding is an unexecuted 2020 Agreement For Early Termination of Wholesale Power Supply Contracts (Termination Agreement).

3. On October 1, 2018, Tipmont filed a complaint (Complaint) against Wabash requesting that the Commission: (1) find that Tipmont may terminate its Contracts early, and (2) initiate a proceeding to establish the just and reasonable level of stranded costs resulting from Tipmont's early departure.[2] On February 20, 2020, Wabash filed the Termination Agreement pursuant to section 205 of the Federal Power Act. On April 20, 2020, the Commission concurrently: (1) issued an order granting, denying, and dismissing various aspects of the Complaint; [3] and (2) issued an order accepting and suspending Wabash's proposed Termination Agreement and established hearing and settlement judge procedures.[4]

4. On July 30, 2020, after the Settlement Judge declared an impasse, the Chief Judge issued an order terminating settlement judge procedures and designated Administrative Law Judge Andrea McBarnette as the Presiding Judge. The hearing commenced on May 20, 2021, and concluded on June 8, 2021. The Presiding Judge issued the Initial Decision on January 28, 2022. Subsequently, the participants filed Briefs on Exceptions and Briefs Opposing Exceptions on March 31, 2022, and April 20, 2022, respectively.

II. Discussion

5. We establish a briefing schedule to allow the participants to address the issues set forth in Appendices A and B. Further briefing on these issues will help develop a more comprehensive record for the Commission to evaluate the justness and reasonableness of the Termination Agreement. Accordingly, we provide questions directed at Wabash in Appendix A and one question directed at Tipmont in Appendix B. Wabash and Tipmont are required to submit initial briefs within 45 days of the date of this order. At the initial briefing stage, Wabash may address only questions in Appendix A of this order, and Tipmont may address only the question in Appendix B of this order. Further, participants are permitted to file reply briefs within 30 days of the date of filing of initial briefs.[5] At the reply briefing stage, participants may address questions directed at the other party. Briefs making any factual assertions must be accompanied by a sworn affidavit of one or more witnesses.

The Commission orders:

(A) Wabash and Tipmont are hereby required to submit initial briefs within 45 days of the date of this order, as discussed in the body of this order.

(B) Participants are hereby permitted to file reply briefs within 30 days of the date of filing of initial briefs.[6]

(C) The Secretary is hereby directed to publish this order in the **Federal Register**.

By the Commission.

Issued: November 16, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

Appendix A

Questions Directed at Wabash

A. Transmission

1. Section 3 of the 1977 Contract and section 5 of the 2006 Contract allow Wabash to own transmission in limited circumstances.[7]

a. For each transmission asset reflected in the Black & Veatch Study, please identify the agreements (*i.e.,* Transmission Participation Agreements and Transmission, Operation and Maintenance Agreements) [8] that allow(s) Wabash to own said transmission assets and explain in each instance how such ownership right is consistent with the exception criteria in the Contracts.

b. For each of the agreements identified in response to part a., please state the corresponding amounts of transmission plant and transmission capital expenditure balances reflected in the Black & Veatch Study for years 2019–2021.

c. In addition, please identify any transmission assets that were excluded from the proposed buyout amount due to limitations set forth in the Contracts.

[1] *Wabash Valley Power Ass'n, Inc.,* 178 FERC ¶ 63,005 (2022).

[2] Timpont Rural Electric Member Cooperative, Complaint, Docket No. EL19–2–000, at 1–2 (filed Oct. 1, 2018) (Complaint).

[3] *Tipmont Rural Elec. Member Coop.* v. *Wabash Valley Power Ass'n, Inc.,* 171 FERC ¶ 61,059 (2020).

[4] *Wabash Valley Power Ass'n, Inc.,* 171 FERC ¶ 61,053 (2020).

[5] As participants in the hearing proceeding, Trial Staff and United Power, Inc. may submit reply briefs. This Commission, however, is generally less likely to allow new participants to intervene after issuance of a merits order. *See, e.g., Conn. Yankee Atomic Power Co.,* 92 FERC ¶ 61,269, at 61,899 (2000) (denying the subsidiaries of the Northeast Utilities system's (NU) out-of-time motion to intervene because ''[t]o permit NU's late intervention after the issuance of the Initial Decision . . . would result in undue burden on the active parties to the hearing.'').

[6] *See supra* note 5.

[7] *See e.g.,* Ex. TIP–0003 at 3 (''It is understood by and between the Parties that the express intent of Wabash Valley is to not own, operate or maintain any transmission facilities and/or substations except as such ownership, operation and maintenance may inure to Wabash Valley by reason of Transmission Participation Agreements and Transmission, Operation and Maintenance Agreements with other suppliers which own and operate bulk transmission systems.'').

[8] *See supra* n.7.

2. Wabash's transmission plant in service balance for year 2019 is $354.9 million in the Black & Veatch Study [9] and $312.8 million in Wabash's annual FERC Form No. 1 filing.[10] Please explain the divergence between these two values. Wabash's transmission plant in service balance for year 2020 is $423.1 million in the Black & Veatch Study [11] and $321.2 million in Wabash's 2020 budget study.[12] In addition, Wabash states that this value is $348.9 million in the Adjusted Black & Veatch Study.[13]

a. Please explain why Wabash's transmission plant in service balance for year 2020 decreased by $74.2 million between the original and Adjusted Black & Veatch studies.

b. Please explain the $27.7 million divergence between Wabash's transmission plant in service balance for year 2020 in the Adjusted Black & Veatch Study and Wabash's 2020 budget study.

c. Please provide updated versions of the spreadsheets contained in Ex. TIP–0097 and Ex. TIP–0113 that reflect the updated transmission plant in service balance for year 2020, and all other modified values, used in the Adjusted Black & Veatch Study.

3. Wabash's annual transmission capital expenditure for year 2019 is $50.6 million in the Black & Veatch Study,[14] $41.9 million in Wabash's annual FERC Form No. 1 filing,[15] and $42.2 million according to Wabash's work orders.[16] Please explain the divergence among these values.

4. Wabash's annual transmission capital expenditure for year 2020 is $71.8 million in the Black & Veatch Study,[17] $41.6 million in Wabash's annual FERC Form No. 1 filing,[18] and $66.5 million according to Wabash's work orders.[19] Please explain the divergence among these values.

5. Please explain the transmission service that Wabash takes under the MISO Tariff in association with delivery to Tipmont.

6. Wabash states that the original and Adjusted Black & Veatch studies ''make no adjustment to Wabash Valley's forecasted transmission revenues.'' [20]

a. Please explain how Wabash estimated the annual transmission revenues it would receive if Tipmont remained a member of Wabash and describe the source(s) of those revenues. Describe all assumptions and provide supporting workpapers.

b. In addition, please describe how these revenues compare to what Wabash would receive if Tipmont departs and procures network service for its entire load.

B. Capacity Price Forecast

7. Please identify the source of the $22.34/MW-day initial value used in forecasting the Black & Veatch Study's capacity price for years 2020–2025.[21]

8. Please explain how the Black & Veatch Study determined the annual growth rate for its forecasted capacity prices for years 2021–2025.[22]

9. Please explain why the Black & Veatch Study switches from using the recent capacity price level observed in the MISO market as a starting point for the capacity price forecast for years 2020–2025 to using weighted average solar power purchase agreement costs beginning in year 2026 specifically.[23]

C. Energy Price Forecast

10. Please explain how the Black & Veatch Study selects the New York Mercantile Exchange Henry Hub forward price curve dated October 2, 2019, as the basis for the projected natural gas prices used in years 2021–2031 of its energy price forecast.[24] In addition, please explain why the Black & Veatch Study uses a single forward curve instead of averaging over multiple forward curves.

11. Please explain why the Black & Veatch Study assumes that the five-year compound annual growth rate implied in the natural gas forward prices for 2027–2031 will persist through 2050.[25]

D. Miscellaneous Issues

12. Wabash proposes a 10-year buyout period, arguing that for any termination initiated prior to April 14, 2028, Tipmont agreed to a ten-year notice and buyout period during which Tipmont remains a member, continues to purchase all-requirements service, and makes additional monthly escrow payments based on the rate set by the Wabash board of directors.[26] In contrast, Tipmont argues that the 10-year buyout period has not been found to be just and reasonable; that, as long as Tipmont pays the verifiable stranded costs associated with Tipmont's exit,[27] Wabash and its members are protected from any financial impacts associated with such exit, whether Tipmont leaves immediately or in 10 years; and that Tipmont's continued membership in Wabash is causing harm to Tipmont.[28] Tipmont requests that the Commission direct Wabash to make a compliance filing that sets the date of Tipmont's exit as ''the first day of the month one year after the date of that Commission order.'' [29]

Please address the manner in which an immediate buyout scenario should be effectuated in the event the Commission finds the 10-year buyout period is not required by the parties' contracts and otherwise has not been shown to be just and reasonable.[30]

13. Wabash's property insurance costs for year 2019 are $1.5 million in the Black & Veatch Study [31] and $169,871 in Wabash's annual FERC Form No. 1 filing.[32] Please explain the divergence between these values.

14. Wabash's property tax costs for year 2019 are $5.57 million in the Black & Veatch Study and $5.37 million in Wabash's Trial Balance workpaper.[33] Please explain the divergence between these values.

Appendix B

Question Directed at Tipmont

15. According to Trial Staff, the London Economics International (LEI) Study's energy price forecast projects an approximate $3/MMBtu seasonal spread in intra-year natural gas prices beginning in 2030.[34] Please explain how the seasonal natural gas price spreads observed in the LEI Study's energy price forecast are consistent with current and expected natural gas market dynamics in MISO.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–12–000]

Transcontinental Gas Pipe Line Company, LLC; Notice of Application and Establishing Intervention Deadline

Take notice that on November 2, 2023, Transcontinental Gas Pipe Line Company, LLC (Transco), P.O. Box 1396, Houston, Texas 77251, filed an application under section 7b of the Natural Gas Act (NGA), and part 157 of the Commission's regulations requesting authorization for its Ship Shoal 246 to Ship Shoal 242 Abandonment Project (Project). The Project consists of Transco abandoning offshore laterals extending from Ship Shoal Block 246 Platform A to the Ship Shoal Block 242 underwater platform, and auxiliary facilities,

located Offshore, Louisiana. Transco states that this proposal is related to QuarterNorth Energy, LLC's intention to abandon its SS 246 Platform which Transco holds a minority interest in. Transco estimates the total cost of the Project to be $5,843,818, all as more fully set forth in the application which is on file with the Commission and open for public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*www.ferc.gov*) using the ''eLibrary'' link. Enter the docket number excluding the last three digits in the docket number field to access the document. At this time, the Commission has suspended access to the Commission's Public Reference Room. For assistance, contact the Federal Energy Regulatory Commission at *FercOnlineSupport@ferc.gov* or call toll-free, (886) 208–3676 or TTY (202) 502–8659.

Any questions regarding the proposed project should be directed to Travis Beach, Sr. Regulatory Analyst, P.O. Box 1396, Houston, Texas 77251 by phone at (281) 224–6248, or by email at *Travis.Beach@Williams.com.*

Pursuant to section 157.9 of the Commission's Rules of Practice and Procedure,[1] within 90 days of this Notice the Commission staff will either: complete its environmental review and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final environmental impact statement (FEIS) or environmental assessment (EA) for this proposal. The filing of an EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify Federal and State agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all Federal authorizations within 90 days of the date of issuance of the Commission staff's FEIS or EA.

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file comments on the project, you can protest the filing, and you can file a motion to intervene in the proceeding. There is no fee or cost for filing comments or intervening. The deadline for filing a motion to intervene is 5:00 p.m. Eastern Time on December 7, 2023. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202)502–6595 or *OPP@ferc.gov.*

Comments

Any person wishing to comment on the project may do so. Comments may include statements of support or objections, to the project as a whole or specific aspects of the project. The more specific your comments, the more useful they will be.

Protests

Pursuant to sections 157.10(a)(4)[2] and 385.211[3] of the Commission's regulations under the NGA, any person[4] may file a protest to the application. Protests must comply with the requirements specified in section 385.2001[5] of the Commission's regulations. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

To ensure that your comments or protests are timely and properly recorded, please submit your comments on or before December 7, 2023.

There are three methods you can use to submit your comments or protests to the Commission. In all instances, please reference the Project docket number CP24–12–000 in your submission.

(1) You may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You may file your comments or protests electronically by using the eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Comment on a Filing''; or

(3) You can file a paper copy of your comments or protests by mailing them to the following address below. Your written comments must reference the Project docket number (CP24–12–000).

To file via USPS: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of comments (options 1 and 2 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Persons who comment on the environmental review of this project will be placed on the Commission's environmental mailing list, and will receive notification when the environmental documents (EA or EIS) are issued for this project and will be notified of meetings associated with the Commission's environmental review process.

The Commission considers all comments received about the project in determining the appropriate action to be taken. However, the filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding. For instructions on how to intervene, see below.

Interventions

Any person, which includes individuals, organizations, businesses, municipalities, and other entities,[6] has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and

[1] 18 CFR (Code of Federal Regulations)157.9.

[2] 18 CFR 157.10(a)(4).

[3] 18 CFR 385.211.

[4] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[5] 18 CFR 385.2001.

[6] 18 CFR 385.102(d).

Procedure [7] and the regulations under the NGA [8] by the intervention deadline for the project, which is December 7, 2023. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

There are two ways to submit your motion to intervene. In both instances, please reference the Project docket number CP24–12–000 in your submission.

(1) You may file your motion to intervene by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Intervention.'' The eFiling feature includes a document-less intervention option; for more information, visit *https://www.ferc.gov/docs-filing/efiling/document-less-intervention.pdf.;* or

(2) You can file a paper copy of your motion to intervene, along with three copies, by mailing the documents to the address below. Your motion to intervene must reference the Project docket number CP24–12–000.

To file via USPS: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other courier: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of motions to intervene (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail or email at: Travis Beach, Sr. Regulatory Analyst, P.O. Box 1396, Houston, Texas 77251, or by email at *Travis.Beach@Williams.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online. Service can be via email with a link to the document.

All timely, unopposed [9] motions to intervene are automatically granted by operation of Rule 214(c)(1).[10] Motions to intervene that are filed after the intervention deadline are untimely, and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations.[11] A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

Intervention Deadline: 5:00 p.m. Eastern Time on December 7, 2023.

Dated: November 16, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

Combined Notice of Filings #1

Take notice that the Commission received the following exempt wholesale generator filings:

Docket Numbers: EG24–31–000.

Applicants: Sparta Solar, LLC.

Description: Sparta Solar, LLC submits Notice of Self–Certification of Exempt Wholesale Generator Status.

Filed Date: 11/16/23.

Accession Number: 20231116–5138.

Comment Date: 5 p.m. ET 12/7/23.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER10–2265–021; ER10–2355–011; ER10–2947–016; ER10–3223–010; ER11–1846–012; ER11–1847–012; ER11–1850–012; ER11–2062–029; ER11–2175–007; ER11–2176–006; ER11–2598–015; ER11–3188–007; ER11–3418–009; ER11–4307–030; ER11–4308–030; ER12–224–008; ER12–225–008; ER12–261–029; ER12–2301–007; ER13–1192–009; ER16–10–004; ER17–764–007; ER17–765–007; ER17–767–007; ER21–2826–002; ER10–2784–017.

Applicants: Astoria Gas Turbine Power LLC, NRG Curtailment Solutions, Inc., Stream Energy Delaware, LLC, Stream Energy Illinois, LLC, Stream Ohio Gas & Electric, LLC, NRG Chalk Point CT LLC, Hess Energy Marketing LLC, Stream Energy New York, LLC, Independence Energy Group LLC, Stream Energy New Jersey, LLC, Stream Energy Columbia, LLC, Reliant Energy Northeast LLC, Green Mountain Energy Company, Xoom Energy, LLC, Stream Energy Maryland, LLC, Gateway Energy Services Corporation, Stream Energy Pennsylvania, LLC, SGE Energy Sourcing, LLC, Energy Plus Holdings LLC, Direct Energy Business, LLC, Direct Energy Marketing Inc., Direct Energy Services, LLC, Indian River Power LLC, Vienna Power LLC, Midwest Generation LLC, NRG Power Marketing LLC.

Description: Response to October 6, 2023, Deficiency Letter of NRG Power Marketing LLC, et. al.

Filed Date: 11/6/23.

Accession Number: 20231106–5177.

Comment Date: 5 p.m. ET 11/27/23.

Docket Numbers: ER23–1956–001.

Applicants: Earthrise Tilton Interconnection, LLC.

Description: Compliance filing: Compliance Filing Reflecting Actual Effective Date of Tariff Records to be effective N/A.

Filed Date: 11/16/23.
Accession Number: 20231116–5141.
Comment Date: 5 p.m. ET 12/7/23.

Applicants: Bowline, LLC.
Description: § 205(d) Rate Filing: Market Based Tariff to be effective 11/17/2023.
Filed Date: 11/16/23.
Accession Number: 20231116–5135.
Comment Date: 5 p.m. ET 12/7/23.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf*. For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov*.

Dated: November 16, 2023.

Debbie-Anne A. Reese,

Deputy Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: RP24–157–000.
Applicants: Algonquin Gas Transmission, LLC.
Description: § 4(d) Rate Filing: Negotiated Rates—Salem Harbor 511199 eff 11–1–23 to be effective 11/15/2023.
Filed Date: 11/15/23.
Accession Number: 20231115–5126.
Comment Date: 5 p.m. ET 11/27/23.
Docket Numbers: RP24–158–000.

Applicants: Midwestern Gas Transmission Company.

Description: § 4(d) Rate Filing: Tariff Part 5.0 Metadata Correction to be effective 11/1/2023.

Filed Date: 11/15/23.

Accession Number: 20231115–5146.

Comment Date: 5 p.m. ET 11/27/23.

Docket Numbers: RP24–159–000.

Applicants: Southern Star Central Gas Pipeline, Inc.

Description: Compliance filing: Annual Operational Flow Order Report 2023 to be effective N/A.

Filed Date: 11/16/23.

Accession Number: 20231116–5069.

Comment Date: 5 p.m. ET 11/28/23.

Docket Numbers: RP24–160–000.

Applicants: Adelphia Gateway, LLC.

Description: § 4(d) Rate Filing: Adelphia Gateway NCA–NRA Filing to be effective 12/1/2023.

Filed Date: 11/16/23.

Accession Number: 20231116–5093.

Comment Date: 5 p.m. ET 11/28/23.

Docket Numbers: RP24–161–000.

Applicants: National Fuel Gas Supply Corporation.

Description: § 4(d) Rate Filing: Correction of Metadata to be effective 11/1/2023.

Filed Date: 11/16/23.

Accession Number: 20231116–5096.

Comment Date: 5 p.m. ET 11/28/23.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

Filings in Existing Proceedings

Docket Numbers: RP19–57–007.

Applicants: Algonquin Gas Transmission, LLC.

Description: Compliance filing: AGT New York Delivery Surcharge Cancellation to be effective 1/1/2024.

Filed Date: 11/15/23.

Accession Number: 20231115–5131.

Comment Date: 5 p.m. ET 11/27/23.

Any person desiring to protest in any the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5:00 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

eFiling is encouraged. BILLING CODE 6717–01–P

ENVIRONMENTAL PROTECTION AGENCY

[Petitions IV–2023–9; FRL–11547–01–R4]

Clean Air Act Operating Permit Program; Order on Petition for Objection to State Operating Permit for Century Aluminum of South Carolina, Inc. (Berkeley County, South Carolina)

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of final order on petition.

SUMMARY: The EPA Administrator signed an order dated November 2, 2023, granting in part, and denying in part the petition dated June 9, 2023, from Sierra Club and the Environmental Integrity Project. The petition requested that EPA object to Clean Air Act (CAA) title V operating permit issued by the South Carolina Department of Health and Environmental Control (SCDHEC) to the Century Aluminum of South Carolina, Inc. for its primary aluminum reduction facility located near Mt. Holly, in Berkeley County, South Carolina.

FOR FURTHER INFORMATION CONTACT: Art Hofmeister, Air Permits Section, EPA Region 4, (404) 562–9115, *hofmeister.art@epa.gov.* The final order and petitions are available at: *https://www.epa.gov/title-v-operating-permits/title-v-petition-database.*

SUPPLEMENTARY INFORMATION: EPA received a petition from Sierra Club and the Environmental Integrity Project dated June 9, 2023, requesting that EPA object to the issuance of operating permit no. TV–0420–0015 v1.1, issued by SCDHEC to Century Aluminum of South Carolina, Inc. near Mt. Holly, in Berkeley County, South Carolina. On November 2, 2023, the EPA Administrator issued an order granting in part and denying in part the petition. The order itself explains the bases for EPA's decision. Sections 307(b) and 505(b)(2) of the CAA provide that a petitioner may request review of those portions of an order that deny issues in a petition. Any petition for review shall be filed in the United States Court of Appeals for the appropriate circuit no later than January 22, 2024.

Dated: November 16, 2023.

Jeaneanne Gettle,

Acting Regional Administrator, Region 4.

ENVIRONMENTAL PROTECTION AGENCY

[EPA–HQ–OPPT–2023–0098; FRL–10582–06–OCSPP]

Certain New Chemicals or Significant New Uses; Statements of Findings for September 2023

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: The Toxic Substances Control Act (TSCA) requires EPA to publish in the **Federal Register** a statement of its findings after its review of certain TSCA submissions when EPA makes a finding that a new chemical substance or significant new use is not likely to present an unreasonable risk of injury to health or the environment. Such statements apply to premanufacture notices (PMNs), microbial commercial activity notices (MCANs), and significant new use notices (SNUNs) submitted to EPA under TSCA. This document presents statements of findings made by EPA on such submissions during the period from September 1, 2023, to September 30, 2023.

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPPT–2023–0098, is available online at *https://www.regulations.gov* or in-person at the Office of Pollution Prevention and Toxics Docket (OPPT Docket), Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC.

The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566–1744, and the telephone number for the OPPT Docket is (202) 566–0280. For the latest status information on EPA/DC services and docket access, visit *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT:

For technical information contact: Rebecca Edelstein, New Chemical Division (7405M), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 1200 Pennsylvania Ave., NW, Washington, DC 20460–0001; telephone number: (202) 564–1667 email address: *edelstein.rebecca@epa.gov.*

For general information contact: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554–1404; email address: *TSCA-Hotline@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Does this action apply to me?

This action provides information that is directed to the public in general.

B. What action is the Agency taking?

This document lists the statements of findings made by EPA after review of submissions under TSCA section 5(a) that certain new chemical substances or significant new uses are not likely to present an unreasonable risk of injury to health or the environment. This document presents statements of findings made by EPA during the reporting period.

C. What is the Agency's authority for taking this action?

TSCA section 5(a)(3) requires EPA to review a submission under TSCA section 5(a) and make one of several specific findings pertaining to whether the substance may present unreasonable risk of injury to health or the environment. Among those potential findings is that the chemical substance or significant new use is not likely to present an unreasonable risk of injury to health or the environment per TSCA section 5(a)(3)(C).

TSCA section 5(g) requires EPA to publish in the **Federal Register** a statement of its findings after its review of a submission under TSCA section 5(a) when EPA makes a finding that a new chemical substance or significant new use is not likely to present an unreasonable risk of injury to health or the environment. Such statements apply to PMNs, MCANs, and SNUNs submitted to EPA under TSCA section 5.

Anyone who plans to manufacture (which includes import) a new chemical substance for a non-exempt commercial purpose and any manufacturer or processor wishing to engage in a use of a chemical substance designated by EPA as a significant new use must submit a notice to EPA at least 90 days before commencing manufacture of the new chemical substance or before engaging in the significant new use.

The submitter of a notice to EPA for which EPA has made a finding of ''not likely to present an unreasonable risk of injury to health or the environment'' may commence manufacture of the chemical substance or manufacture or processing for the significant new use notwithstanding any remaining portion of the applicable review period.

D. Does this action have any incremental economic impacts or paperwork burdens?

No.

II. Statements of Findings Under TSCA Section 5(a)(3)(C)

In this unit, EPA provides the following information (to the extent that such information is not claimed as Confidential Business Information (CBI)) on the PMNs, MCANs and SNUNs for which, during this period, EPA has made findings under TSCA section 5(a)(3)(C) that the new chemical substances or significant new uses are not likely to present an unreasonable risk of injury to health or the environment:

The following list provides the EPA case number assigned to the TSCA section 5(a) submission and the chemical identity (generic name if the specific name is claimed as CBI).

- P–22–0057, Polysaccharide, polymer with 2-propenoic acid, sodium salt (Generic Name).

To access EPA's decision document describing the basis of the ''not likely to present an unreasonable risk'' finding made by EPA under TSCA section 5(a)(3)(C), look up the specific case number at *https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca/chemicals-determined-not-likely.*

Authority: 15 U.S.C. 2601 *et seq.*

Dated: November 16, 2023.

Shari Z. Barash,

Acting Director, New Chemicals Division, Office of Pollution Prevention and Toxics.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

[FR ID: 185258]

Privacy Act of 1974; System of Records

AGENCY: Federal Communications Commission.

ACTION: Notice of a modified system of records.

SUMMARY: The Federal Communication Commission (FCC or Commission, or the Agency) proposes to modify an existing system of records, FCC/OMD–25, Financial Operations Information System (FOIS), subject to the Privacy Act of 1974 (5 U.S.C. 552a) as amended. This action is necessary to meet the requirements of the Privacy Act to publish in the **Federal Register** notice of the existence and character of records maintained by the agency. The records in this system pertain to the mission and activities of the FCC's Financial Operations (FO) organization in the Office of Managing Director (OMD), which are associated with the Commission's financial and budgetary operations, programs, activities, and transactions. This modification makes various necessary changes and updates, including slightly renaming the system to reflect the fact that the system of records covers multiple systems and applications, clerical and clarity edits, formatting changes required by the Office of Management and Budget (OMB) Circular A–108 since its previous publication, the addition of one new routine use, the deletion of two routine uses, and the revision of multiple existing routine uses.

DATES: This modified system of records will become effective on November 22, 2023. Written comments on the routine uses are due by December 22, 2023. The routine uses in this action will become effective on December 22, 2023 unless comments are received that require a contrary determination.

ADDRESSES: Send comments to Katherine C. Clark, Attorney-Advisor, Office of General Counsel, Federal Communications Commission, 45 L Street NE, Washington, DC 20554, or to *privacy@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: Katherine C. Clark, (202) 418–1773, or *privacy@fcc.gov* (and to obtain a copy of the Narrative Statement and the Supplementary Document, which includes details of the modifications to this system of records).

SUPPLEMENTARY INFORMATION: As required by the Privacy Act of 1974, as amended, 5 U.S.C. 552a(e)(4) and

(e)(11), this document sets forth notice of the proposed modification of a system of records maintained by the FCC. The FCC previously provided notice of the system of records FCC/OMD–25, Financial Operations Information System (FOIS), by publication in the **Federal Register** on October 6, 2016 (81 FR 69522). This notice serves to update and modify FCC/OMD–25 as a result of various necessary changes and updates. The substantive changes and modifications to the previously published version of the FCC/OMD–25 system of records include:

1. Updating the name of the system of records to Financial Operations Information Systems (FOIS), to reflect that this system of records covers multiple systems and applications;

2. Updating the language in the Security Classification to follow OMB guidance;

3. Updating the Purposes section for clarity and to reflect modernization of the CORES system to incorporate functionalities that were previously provided through separate systems and forms;

4. Modifying the language in the Categories of Individuals and Categories of Records to be consistent with the language and phrasing now used in FCC SORNs;

5. Deleting two routine uses (listed by former routine use number): (7) ''Do Not Pay'' System, which has been consolidated into modified Routine Use (6) Financial Obligations Under the Debt Collection Acts; and (4) Audits and Oversight, for which disclosures are covered under another exception to the Privacy Act;

6. Updating and/or revising language in the following routine uses (listed by the routine use number provided in this notice): (1) Public Access; (2) Drug Debarment List; (5) Financial Obligations Under the Debt Collection Acts and Do Not Pay; (6) Financial Obligations as Required by the National Finance Center (USDA), *et al.;* (7) Litigation and (8) Adjudication (formerly a single routine use); (9) Law Enforcement and Investigation; (10) Congressional Inquiries; (11) Government-wide Program Management and Oversight; (18) Statistical/Analytical Studies; (19) Breach Notification, the revision of which is as required by OMB Memorandum No. M–17–12; and (21) Non-Federal Personnel;

7. Adding one new routine use: (20) Assistance to Federal Agencies and Entities Related to Breaches, the addition of which is required by OMB Memorandum No. M–17–12; and

8. Updating the existing records retention and disposal schedule with a new records schedule: N1–173–00–001, Commission Registration System (CORES).

The system of records is also revised for clarity and updated to reflect various administrative changes related to the system managers and system addresses; policies and practices for storage and retrieval of the information; administrative, technical, and physical safeguards; and updated notification, records access, and contesting records procedures.

SYSTEM NAME AND NUMBER:

FCC/OMD–25, Financial Operations Information Systems (FOIS).

SECURITY CLASSIFICATION:

No information in the system is classified.

SYSTEM LOCATION:

Financial Operations (FO), Office of Managing Director (OMD), Federal Communications Commission (FCC), 45 L Street NE, Washington, DC 20554.

SYSTEM MANAGER(S):

Financial Operations (FO), Office of Managing Director (OMD), Federal Communications Commission (FCC), 45 L Street NE, Washington, DC 20554.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. chapter 57; 31 U.S.C. 525, 3302(e); 44 U.S.C. 3101, 3102, 3309; Debt Collection Act of 1982 (Pub. L. 97–365), as amended by Debt Collection Improvement Act of 1996 (Pub. L. 104–134); section 639 of the Consolidated Appropriations Act of 2005 (Pub. L. 108–447); Federal Financial Management Improvement Act of 1996 (Pub. L. 104–208); Chief Financial Officers Act of 1990 (Pub. L. 101–576); Federal Managers Financial Integrity Act of 1982 (Pub. L. 97–255); Executive Order 9397; Budget and Accounting Procedures Act of 1950 (Pub. L. 81–784); section 5301 of the Anti-Drug Abuse Act of 1988 (Pub. L. 100–690), as amended by section 1002(d) of the Crime Control Act of 1990 (Pub. L. 100–647); and 47 U.S.C. 154(i) and (j).

PURPOSE(S) OF THE SYSTEM:

This system collects and maintains records contained in the information systems, subsystems, databases, and paper document files of the Financial Operations organization (FO) within OMD.[1] Collecting and maintaining this information allows staff access to documents necessary for key activities discussed in this SORN, including maintaining identity, regulatory, and financial information regarding individuals and entities doing business with the Commission, as well as information regarding the Commission's financial and budgetary operations, programs, functions, and transactions. These various systems include, but are not limited to FCC User Registration System, Commission Registration System (CORES), Financial Operations API, Financial Operations API Cloud, the Financial Operations Administration System, Genesis and related applications (*i.e.,* Genesis Portal, Genesis E2 WSDL, Genesis E2, and Genesis Reports), Alfresco, databases, and related FO documents and forms. Authorized FCC personnel (including authorized contract employees) use these records on a need-to-know basis to conduct the Commission financial and budgetary operations, programs, transactions, and statements, which include but are not limited to:

1. Processing and tracking payments made and monies owed from or to individuals (including FCC employees and authorized contract employees), FCC regulatees and licensees, and the FCC, and to ensure that payments by the FCC are based on a lawful official commitment and obligation of government funds, including but not limited to payments to cover administrative charges, penalties, forfeitures assessed, fees collected, services rendered, and direct loans;

2. Establishing records of ''receivables'' and tracking repayment status for any amount(s) claimed in the event of a debt owed to the FCC, which include but are not limited to repayment of overpayments and excess disbursements (including reimbursements and/or refunds for incorrect payments or overpayments), and other debts, advance payments, including but not limited to application processing fees, travel advances (including reimbursements authorized under the Travel Reimbursement Program covered by GSA/GOVT–3 and GSA/GOVT–4), advanced sick leave, and advanced annual leave, and withholding services from individuals who owe delinquent debt to the FCC or an FCC component, including billing and collection of bad checks;

3. Developing reports of taxable income using the records of payments

[1] The FO specifically maintains the FCC's Registration Number (FRN) system, the Commission-wide method for identifying and interacting with those individuals who have registered to do business with the FCC under 31 U.S.C. 7701(c)(2) and who incur application and/or regulatory fee obligations. An FRN collaterally allows that monies paid are properly matched with debts and obligations.

and uncollectible debts that are provided to the Internal Revenue Service (IRS) and applicable State and local taxing officials;

4. Tracking overdue and delinquent federal debts for debt collection purposes;

5. Initiating and completing computer matching to verify benefit and payment eligibility under relevant related Federal Government systems such as, but not limited to Treasury's ''Do Not Pay'' portal verification system, the GSA Excluded Parties and Debarment List, and the Department of Justice Drug Debarment Roster in connection with implementation of section 5301 of the Anti-Drug Abuse Act of 1998;

6. Populating FCC forms, which include but are not limited to Forms 44 and 45, 159 series, 160 and 161, and 1064, and other financial and budgetary forms and related documents and records, which are used to carry out these various financial, accounting, and budgetary activities, functions, and purposes;

7. Providing the viewing function for images of auction loans that the FCC has made to customers, to provide them access to their loan payment history (retained for historical purposes); and

8. Storing the information that the Department of Justice (DOJ) exchanges with the FCC in connection with the implementation of section 5301 of the Anti-Drug Abuse Act of 1988.[2]

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

1. FCC staff, including but not limited to employees (including interns), and contractors and vendors, who handle information in the FCC's financial and budgetary operations, which include but are not limited to FO's programs, processes, activities, and functions;

2. Individuals and representatives of entities who register with the FCC to receive a FCC Registration Number (FRN) to conduct business with the Commission; and

3. Individuals who intend to or do conduct business with the FCC as a regulatee, licensee, contractor, or vendor and who are listed on the Drug Debarment Roster (as a result of drug convictions for the distribution or possession of controlled substances) who have been denied all Federal benefits as part of their sentence pursuant to section 5301 of the Anti-Drug Abuse Act of 1988, and who have filed application(s) for any FCC professional or commercial license(s) and/or authorization(s).

CATEGORIES OF RECORDS IN THE SYSTEM:

1. FCC employees (including interns)—individual's name, Social Security Number (SSN), home address, phone number, bank account data, and miscellaneous monies received by the Commission (including, but not limited to reimbursement(s) authorized under the Travel Reimbursement Program covered by the government-wide system of records GSA/GOVT–3 and GSA/GOVT–4,[3] and related financial requirements);

2. Independent contractors—individual's name and Social Security Number (SSN) (required when the fee exceeds the minimum $600.00 threshold authorized by IRS Form 1099);

3. Individuals and representatives of entities who register to do business with the FCC and receive a FCC Registration Number (FRN)—individual's name, address(es), Social Security Number (SSN), Individual Taxpayer Identification Number (ITIN), telephone number(s), fax number(s), email address(es), records of services rendered, loan payment information, forfeitures assessed and collected, billing and collection of bad checks, bank deposit information, transaction type information, United States Treasury deposit data (notification of completion of FCC financial transactions with the US Treasury), and information substantiating fees collected, refunds issues, and interest, penalties, and administrative charges assessed to individuals.

4. Individuals on the DOJ's Drug Debarment List—individual's name, DOJ identification number (ID) (for the person denied Federal benefits), Individual Taxpayer Identification Number (ITIN), starting and ending date of the denial of Federal benefits, address, zip code, and (if required by the FCC application) birthdate, and confirmation report for DOJ matching; (Upon such a match, the FCC will initiate correspondence with the applicant, which will also be associated with the application. The confirmation report and any correspondence with the applicant will be among the records found in this system.); and

5. FCC Forms which include, but are not limited to, Forms 44 and 45; 159 series; 160 and 161; 1064, and other related financial and/or budgetary forms, assessments, and related documents.

RECORD SOURCE CATEGORIES:

Information in this system is provided by the following individuals: FCC employees (including interns), contractor employees, and individuals or representatives of entities who register to do business with the FCC, and the information obtained from the Federal Drug Debarment List database(s).

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed to authorized entities, as is determined to be relevant and necessary, outside the FCC as a routine use pursuant to 5 U.S.C. 552a(b)(3). In each of these cases, however, the FCC will determine whether disclosure of the records is compatible with the purpose(s) for which the records were collected:

1. Public Access—FCC Registration Numbers (FRNs) and certain information (excluding security/sensitive information) provided by individuals and representatives who register to do business with the Commission by obtaining an FRN are routinely made public. Individuals who have so registered also can use the Commission's automated reporting tools to access their own nonpublic information, which includes but is not limited to Regulatory Fees, fines, forfeitures, penalties, Debt Collection Improvement Act and other administrative changes, and related payments and assessments, and to determine the amount(s) owed.

2. Drug Debarment List—Records from CORES may be matched against the Department of Justice Drug Debarment List, and any results (not including the DOJ ID Number) and any correspondence with the applicant regarding this match will be associated with the FCC applicant for a license or authorization or recipient of FCC funds, and thus, be made routinely available (with redactions for date of birth and Social Security Number) for public

[2] This permits the FCC to perform the General Services Administration (GSA) Debarment List check as provided for in the Office of National Drug Control Policy plan for implementation of section 5301 through use of information generated by DOJ. The FCC will use the automated records obtained from DOJ only to make an initial determination of whether an individual applicant is subject to a denial of all Federal benefits or FCC benefits imposed under section 5301 of the Anti-Drug Abuse Act of 1988.

[3] The PII contained in the FCC's Travel and Reimbursement Program is covered by one or the other of the two government-wide systems of records maintained by the General Services Administration (GSA): GSA/GOV–3, ''Travel Charge Card Program,'' 78 FR 20108; or GSA/GOVT–4, ''Contracted Travel Services Program,'' 64 FR 20108.

inspection as part of the applicant's or recipient's file within the relevant FCC system.

3. ''*Pay.gov*'' System—To disclose the name and address of individuals to the Department of the Treasury to facilitate the collection of any fees owed to the FCC when an individual chooses to pay online using the Treasury's *Pay.gov* system.

4. Compliance with Welfare Reform Requirements—Names, Social Security Numbers, home addresses, dates of birth, dates of hire, quarterly earnings, employer identifying information, and State of hire of employees may be disclosed to the Office of Child Support Enforcement, Administration for Children and Families, Department of Health and Human Services for the purposes of locating individuals to establish paternity, establishing and modifying orders of child support, identifying sources of income, and for other child support enforcement actions as required by the Personal Responsibility and Work Opportunity Reconciliation Act.

5. Financial Obligations Under the Debt Collection Acts and ''Do Not Pay''—To other Federal agencies (including the Treasury Department, Bureau of Public Debt, and its authorized contractors) for the purpose of collecting and reporting on delinquent debts as authorized by the Debt Collection Improvement Act of 1996, as amended, and to prevent improper payment and to verify payment eligibility using Treasury's ''Do Not Pay'' (DNP) system and effecting payments. Records may also be disclosed to the Treasury Department and its contractors, pursuant to a DNP computer matching agreement between the FCC and Treasury for purposes authorized by 31 U.S.C. 3321, if the matching program requires data from this system of records, and to the Treasury Department and the Department of Justice, and their representatives and contractors, to report the results of debt collection or debt compromise to prepare necessary Federal, State, or local income and tax reporting records and reports (*e.g.,* IRS Form 1099). A record from this system also may be disclosed to any Federal, State, Tribal, or local agency to conduct an authorized computer matching program to identify and locate individuals who are delinquent in their repayment of certain debts owed to the U.S. Government. A record from this system may be used to prepare information on items included, but not limited to, income assessments required for taxation or other purposes to be disclosed to Federal (*i.e.,* IRS), State, and local governments.

6. Financial Obligations as Required by the National Finance Center (USDA), *et al.*—To the National Finance Center (the FCC's authorized payroll office), the Department of the Treasury Debt Management Services, and/or a current employer for financial obligations that include, but are not limited to those that effect a salary, IRS tax refund, tax or other debt liabilities of State, Municipality or other government agencies and entities, or administrative offsets necessary to satisfy an indebtedness; and to Federal agencies to identify and locate former employees for the purposes of collecting such indebtedness, including through administrative, salary, or tax refund offsets. Identifying and locating former employees, and the subsequent referral to such agencies for offset purposes, may be accomplished through authorized computer matching programs, following procedures required by the Debt Collection Act of 1982, the Debt Collection Improvement Act of 1996, and the computer matching provisions of the Privacy Act.

7. Litigation—To disclose records to DOJ when: (a) the FCC or any component thereof; (b) any employee of the FCC in his or her official capacity; (c) any employee of the FCC in his or her individual capacity where the DOJ or the FCC has agreed to represent the employee; or (d) the United States Government is a party to litigation or has an interest in such litigation, and by careful review, the FCC determines that the records are both relevant and necessary to the litigation, and the use of such records by the DOJ is for a purpose that is compatible with the purpose for which the FCC collected the records.

8. Adjudication—To disclose records in a proceeding before a court or adjudicative body, when: (a) the FCC or any component thereof; or (b) any employee of the FCC in his or her official capacity; or (c) any employee of the FCC in his or her individual capacity; or (d) the United States Government, is a party to litigation or has an interest in such litigation, and by careful review, the FCC determines that the records are both relevant and necessary to the litigation, and that the use of such records is for a purpose that is compatible with the purpose for which the agency collected the records.

9. Law Enforcement and Investigation—Where the FCC becomes aware of an indication of a violation or potential violation of civil or criminal law, rule, regulation, or order to disclose pertinent information to appropriate Federal, State, Tribal, local, international, or multinational agencies, or a component of such an agency, responsible for investigating, prosecuting, enforcing, or implementing a statute, rule, regulation, or order.

10. Congressional Inquiries—To provide information to a Congressional office from the record of an individual in response to an inquiry from that Congressional office made at the written request of that individual.

11. Government-wide Program Management and Oversight—To the DOJ to obtain that department's advice regarding disclosure obligations under FOIA; or to OMB to obtain that office's advice regarding obligations under the Privacy Act.

12. Employment, Clearances, Licensing, Contract, Grant, or other Benefits Decisions by the Agency—To a Federal, State, local, foreign, Tribal, or other public agency or authority maintaining civil, criminal, or other relevant enforcement records, or other pertinent records, or to another public authority or professional organization, if necessary to obtain information relevant to an investigation concerning the hiring or retention of an employee or other personnel action, the issuance or retention of a security clearance, the classifying of jobs, the letting of a contract, or the issuance or retention of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the requesting agency's decisions on the matter.

13. Employment, Clearances, Licensing, Contract, Grant, or other Benefits Decisions by Other than the Agency—To a Federal, State, local, foreign, Tribal, or other public agency or authority of the fact that this system of records contains information relevant to the hiring or retention of an employee, the issuance or retention of a security clearance, the conducting of a suitability or security investigation of an individual, the classifying of jobs, the letting of a contract, or the issuance or retention of a license, grant, or other benefit by the requesting agency, to the extent that the information is relevant and necessary to the agency's decision on the matter. The other agency or licensing organization may then make a request supported by the written consent of the individual for the entire records if it so chooses. No disclosure will be made unless the information has been determined to be sufficiently reliable to support a referral to another office within the agency or to another Federal agency for criminal, civil, administrative, personnel, or regulatory action.

14. Labor Relations—To officials of labor organizations recognized under 5 U.S.C. Chapter 71 upon receipt of a formal request and in accord with the conditions of 5 U.S.C. 7114 when relevant and necessary to their duties of exclusive representation concerning personnel policies, practices, and matters affecting working conditions.

15. Federal Labor Relations Authority—To disclose information to the Federal Labor Relations Authority when requested in connection with investigations of allegations of unfair labor practices or matters before the Federal Service Impasses Panel (FSIP).

16. Merit Systems Protection Board—To disclose information to officials of the Merit Systems Protection Board or the Office of the Special Counsel, when requested in connection with appeals, special studies of the civil service and other merit systems, review of the FCC rules and regulations, investigations of alleged or possible prohibited personnel practices, and such other functions, *e.g.,* as promulgated in 5 U.S.C. 1205 and 1206, or as may be authorized by law.

17. Equal Employment Opportunity Commission (EEOC)—To disclose information to the EEOC when requested in connection with investigations into alleged or possible discrimination practices in the Federal sector, compliance by Federal agencies with the Uniform Guidelines on Employee Selection Procedures or other functions vested in the Commission and to otherwise ensure compliance with the provisions of 5 U.S.C. 7201.

18. Statistical/Analytical Studies—To provide to Congress and OMB summary descriptive statistics and analytical studies in support of the financial and budgetary functions for which the records are collected and maintained, or for related FCC studies and reports. While published studies do not contain individual identifiers, in some instances the selection of elements of data included in the study may be structured in such a way as to make the data individually identifiable by inference.

19. Breach Notification—To appropriate agencies, entities, and persons when: (a) the Commission suspects or has confirmed that there has been a breach of the system of records; (b) the Commission has determined that as a result of the suspected or confirmed compromise there is a risk of harm to individuals, the Commission (including its information systems, programs, and operations), the Federal Government, or national security; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Commission's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

20. Assistance to Federal Agencies and Entities Related to Breaches—To another Federal agency or Federal entity, when the Commission determines that information from this system is reasonably necessary to assist the recipient agency or entity in: (a) responding to a suspected or confirmed breach or (b) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, program, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

21. Non-Federal Personnel—To disclose information to non-Federal personnel, including contractors, other vendors (*e.g.,* identity verification services), grantees, and volunteers who have been engaged to assist the FCC in the performance of a contract, service, grant, cooperative agreement, or other activity related to this system of records and who need to have access to the records in order to perform their activity.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Information in this system is maintained as follows:

1. The electronic data, records, and files reside on the FCC's network or on an FCC vendor's network;

2. The DOJ maintains the Drug Debarment data at its facilities and transfers the Drug Debarment data files to the FCC under the terms of the matching agreement. These files are immediately discarded by the FCC after being loaded into the secure database on the FCC's computer network; and

3. Paper documents, including printouts and other related materials, records, and files are stored in the FO office suite and at a FCC authorized contractors.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

1. Records in the financial and budgetary (electronic and paper) system of records can be retrieved by category field, *e.g.,* the individual's name(s), the type of transaction, call sign, processing number, SSN, ITIN, FRN, vendor code, fee control number, payment ID number, and/or sequential number.

2. Records in the DOJ Drug Debarment (electronic) system of records are retrieved and matched between CORES and that database (primarily using name and ITIN or name and zip code or additional data elements but also by address, date of birth, or other data elements obtained from the DOJ Drug Debarment database).

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

The information in this system is maintained and disposed of in accordance with the National Archives and Records Administration (NARA) Records Schedule N1–173–00–001, Commission Registration System (CORES).

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

The electronic records, files, and data are stored within FCC or a vendor's accreditation boundaries and maintained in a database housed in the FCC's or vendor's computer network databases. Access to the electronic files is restricted to authorized employees and contractors; and to IT staff, contractors, and vendors who maintain the IT networks and services. Other employees and contractors may be granted access on a need-to-know basis. The electronic files and records are protected by the FCC and third-party privacy safeguards, a comprehensive and dynamic set of IT safety and security protocols and features that are designed to meet all Federal privacy standards, including those required by the Federal Information Security Modernization Act of 2014 (FISMA), OMB, and the National Institute of Standards and Technology (NIST). Paper records (generally only Form 1876 and occasional print-outs, as needed) are stored in secured cabinets in the Financial Office.

RECORD ACCESS PROCEDURES:

Individuals wishing to request an amendment of records about them should follow the Notification Procedures below.

CONTESTING RECORD PROCEDURES:

Individuals wishing to contest information pertaining to him or her in the system of records should follow the Notification Procedures below.

NOTIFICATION PROCEDURES:

Individuals wishing to determine whether this system of records contains information about themselves may do so by writing to *privacy@fcc.gov.* Individuals requesting record access or amendment must also comply with the FCC's Privacy Act regulations regarding verification of identity as required under 47 CFR part 0, subpart E.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

81 FR 69522 (October 6, 2016).

Federal Communications Commission.

Marlene Dortch,

Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–0120; FR ID 185887]

Information Collection Being Reviewed by the Federal Communications Commission

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, and as required by the Paperwork Reduction Act of 1995 (PRA), the Federal Communications Commission (FCC or Commission) invites the general public and other Federal agencies to take this opportunity to comment on the following information collections. Comments are requested concerning: whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; the accuracy of the Commission's burden estimate; ways to enhance the quality, utility, and clarity of the information collected; ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology; and ways to further reduce the information collection burden on small business concerns with fewer than 25 employees. The FCC may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written PRA comments should be submitted on or before January 22, 2024. If you anticipate that you will be submitting comments but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below as soon as possible.

ADDRESSES: Direct all PRA comments to Cathy Williams, FCC, via email to *PRA@fcc.gov* and to *Cathy.Williams@fcc.gov.*

FOR FURTHER INFORMATION CONTACT: For additional information about the information collection, contact Cathy Williams at (202) 418–2918.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060–0120.

Title: Broadcast EEO Model Program Report, FCC Form 396–A.

Form Number: FCC–396–A.

Type of Review: Extension of a currently approved collection.

Respondents: Business or other for-profit entities, not-for-profit institutions.

Number of Respondents and Responses: 5,000 respondents, 5,000 responses.

Estimated Time per Response: 1 hour.

Frequency of Response: On occasion reporting requirement.

Obligation to Respond: Required to obtain benefits. The statutory authority for this collection of information is contained in section 154(i) and 303 of the Communications Act of 1934, as amended.

Total Annual Burden: 5,000 hours.

Total Annual Cost: No cost.

Needs and Uses: The Broadcast Equal Employment Opportunity (EEO) Model Program Report, FCC Form 396–A, is filed in conjunction with applicants seeking authority to: construct a new broadcast station; to obtain assignment of construction permit or license; and/or seeking authority to acquire control of an entity holding a construction permit or license. This program report is designed to assist the applicant in establishing an effective EEO program for its stations.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL COMMUNICATIONS COMMISSION

[OMB 3060–XXXX; FR ID 186010]

Information Collection Being Submitted for Review and Approval to Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comments.

SUMMARY: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995, the Federal Communications Commission (FCC or the Commission) invites the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Pursuant to the Small Business Paperwork Relief Act of 2002, the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.'' The Commission may not conduct or sponsor a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. No person shall be subject to any penalty for failing to comply with a collection of information subject to the PRA that does not display a valid OMB control number.

DATES: Written comments and recommendations for the proposed information collection should be submitted on or before December 22, 2023.

ADDRESSES: Comments should be sent to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Your comment must be submitted into *www.reginfo.gov* per the above instructions for it to be considered. In addition to submitting in *www.reginfo.gov* also send a copy of your comment on the proposed information collection to Nicole Ongele, FCC, via email to *PRA@fcc.gov* and to *Nicole.Ongele@fcc.gov.* Include in the comments the OMB control number as shown in the **SUPPLEMENTARY INFORMATION** below.

FOR FURTHER INFORMATION CONTACT: For additional information or copies of the information collection, contact Nicole Ongele at (202) 418–2991. To view a copy of this information collection request (ICR) submitted to OMB: (1) go to the web page *http://www.reginfo.gov/public/do/PRAMain,* (2) look for the section of the web page called ''Currently Under Review,'' (3) click on the downward-pointing arrow in the ''Select Agency'' box below the ''Currently Under Review'' heading, (4) select ''Federal Communications Commission'' from the list of agencies presented in the ''Select Agency'' box, (5) click the ''Submit'' button to the right of the ''Select Agency'' box, (6) when the list of FCC ICRs currently under review appears, look for the Title of this ICR and then click on the ICR Reference Number. A copy of the FCC submission to OMB will be displayed.

SUPPLEMENTARY INFORMATION: As part of its continuing effort to reduce paperwork burdens, as required by the Paperwork Reduction Act (PRA) of 1995

(44 U.S.C. 3501–3520), the FCC invited the general public and other Federal Agencies to take this opportunity to comment on the following information collection. Comments are requested concerning: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Commission, including whether the information shall have practical utility; (b) the accuracy of the Commission's burden estimates; (c) ways to enhance the quality, utility, and clarity of the information collected; and (d) ways to minimize the burden of the collection of information on the respondents, including the use of automated collection techniques or other forms of information technology. Pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, see 44 U.S.C. 3506(c)(4), the FCC seeks specific comment on how it might ''further reduce the information collection burden for small business concerns with fewer than 25 employees.''

OMB Control Number: 3060–XXXX.

Title: Enhanced A–CAM Cybersecurity and Supply Chain Risk Management Plan Requirements.

Form Number: N/A.

Type of Review: New information collection.

Respondents: Business or other for-profit entities and State, local or Tribal governments.

Number of Respondents and Responses: 450 respondents; 900 responses.

Estimated Time per Response: 10–50 hours.

Frequency of Response: One-time and on occasion reporting requirements.

Obligation to Respond: Required to obtain or retain benefits. Statutory authority for this information collection is contained in 47 U.S.C. 154(i), 214, 218–220, 254, 303(r), and 403.

Total Annual Burden: 27,000 hours.

Total Annual Cost: No cost.

Needs and Uses: On July 24, 2023, the Commission released the *Enhanced A–CAM Order* (Order), 88 FR 55918, August 17, 2023, WC Docket No. 10–90 et al., FCC 23–60, which adopted a voluntary path for supporting the widespread deployment of 100/20 Mbps broadband service throughout the rural areas served by carriers currently receiving Alternative Connect America Cost Model (A–CAM) support and in areas served by rate-of-return carriers eligible to receive legacy support by the end of 2028. The Commission extended by 10 years beyond the remaining five years, for a total of 15 years, the term of support for electing carriers and set a methodology for determining support amounts for locations without 100/20 Mbps broadband service within a potential budget of no more than $1.27 billion annually, or no more than $1.33 billion annually if certain conditions are met, using an updated version of the A–CAM. By adopting this program, the Commission furthered its long-standing goals by promoting the universal availability of voice and broadband networks, while also taking measures to minimize the burden on the nation's ratepayers. The Commission also adopted requirements for the Enhanced A–CAM program to complement existing Federal, State, and local funding programs, so that broadband funding can be used efficiently to maximize the deployment of high-quality broadband service across the United States.

To ensure that the Enhanced A–CAM program does not deprive rural consumers in high-cost areas of broadband service that is as secure as the service deployed pursuant to other Federal funding initiatives, the Commission required Enhanced A–CAM carriers to implement operational cybersecurity and supply chain risk management plans by January 1, 2024—the start of the Enhanced A–CAM support term. Enhanced A–CAM carriers must submit such plans to the Universal Service Administrative Company (USAC) and certify they have done so, by January 2, 2024 or within 30 days of approval under the Paperwork Reduction Act, whichever is later. Failure to submit the plans and make the certification shall result in 25% of monthly support being withheld until the carrier comes into compliance. If a carrier makes a substantive modification to its cybersecurity or supply chain risk management plan, the Commission requires that the carrier submit its updated plan to USAC within 30 days of making that modification.

The purpose of this information collection is to collect the operational cybersecurity and supply chain risk management plans required of the Enhanced A–CAM carriers by the start of the Enhanced A–CAM support term and address the burdens associated with that requirement.

Federal Communications Commission.

Marlene Dortch,

Secretary, Office of the Secretary.

BILLING CODE 6712–01–P

FEDERAL DEPOSIT INSURANCE CORPORATION

Designated Reserve Ratio for 2024

AGENCY: Federal Deposit Insurance Corporation.

ACTION: Notice of Designated Reserve Ratio for 2024.

SUMMARY: Pursuant to the Federal Deposit Insurance Act (FDI Act), the Board of Directors (Board) of the Federal Deposit Insurance Corporation (FDIC) designates that the Designated Reserve Ratio (DRR) for the Deposit Insurance Fund shall remain at 2 percent for 2024. The Board is publishing this notice as required by the FDI Act.

FOR FURTHER INFORMATION CONTACT: Ashley Mihalik, Associate Director, Financial Risk Management, Division of Insurance and Research, 202–898–3793, *amihalik@fdic.gov*; Daniel Hoople, Chief, Fund Analysis and Pricing Section, Division of Insurance and Research, 202–898–3835, *dhoople@fdic.gov*; or Kathryn Marks, Counsel, Legal Division, 202–898–3896, *kmarks@fdic.gov*.

SUPPLEMENTARY INFORMATION: Pursuant to the FDI Act, the Board designates that the DRR for the Deposit Insurance Fund shall remain at 2 percent for 2024. The Board is publishing this notice as required by section 7(b)(3)(A)(i) of the FDI Act (12 U.S.C. 1817(b)(3)(A)(i)). There is no need to amend 12 CFR 327.4(g), the section of the FDIC's regulations which sets forth the DRR, because the DRR for 2024 is the same as the current DRR.

Federal Deposit Insurance Corporation.

By order of the Board of Directors.

Dated at Washington, DC, on November 16, 2023.

James P. Sheesley,

Assistant Executive Secretary.

BILLING CODE 6714–01–P

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of filing of the following agreements under the Shipping Act of 1984. Interested parties may submit comments, relevant information, or documents regarding the agreements to the Secretary by email at *Secretary@fmc.gov,* or by mail, Federal Maritime Commission, 800 North Capitol Street, Washington, DC 20573. Comments will be most helpful to the Commission if received within 12 days of the date this

notice appears in the **Federal Register**, and the Commission requests that comments be submitted within 7 days on agreements that request expedited review. Copies of agreements are available through the Commission's website (*www.fmc.gov*) or by contacting the Office of Agreements at (202) 523–5793 or *tradeanalysis@fmc.gov.*

Agreement No.: 201307–001.

Agreement Name: Crowley/Sealand Space Charter Agreement.

Parties: Crowley Latin America Services, LLC; Maersk A/S DBA Sealand.

Filing Party: Wayne Rohde; Cozen O'Connor.

Synopsis: The amendment deletes Haiti from the geographic scope of the agreement and adjusts the amount of space being chartered.

Proposed Effective Date: 11/16/2023.

Location: https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/22408.

Dated: November 17, 2023.

Carl Savoy,

Federal Register Alternate Liaison Officer.

BILLING CODE 6730–02–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[Document Identifier: CMS–10418]

Agency Information Collection Activities: Submission for OMB Review; Comment Request

AGENCY: Centers for Medicare & Medicaid Services, Health and Human Services (HHS).

ACTION: Notice.

SUMMARY: The Centers for Medicare & Medicaid Services (CMS) is announcing an opportunity for the public to comment on CMS' intention to collect information from the public. Under the Paperwork Reduction Act of 1995 (the PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information (including each proposed extension or reinstatement of an existing collection of information) and to allow a second opportunity for public comment on the notice. Interested persons are invited to send comments regarding our burden estimates or any other aspect of this collection of information, including any of the following subjects: the necessity and utility of the proposed information collection for the proper performance of the agency's functions; the accuracy of the estimated burden; ways to enhance the quality, utility, and clarity of the information to be collected; and the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

DATES: Comments must be received by the OMB desk officer by December 22, 2023.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

To obtain copies of a supporting statement and any related forms for the proposed collection(s) summarized in this notice, please access the CMS PRA website by copying and pasting the following web address into your web browser: *https://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing.*

FOR FURTHER INFORMATION CONTACT: William Parham at (410) 786–4669.

SUPPLEMENTARY INFORMATION: Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. The term ''collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires federal agencies to publish a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension or reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, CMS is publishing this notice that summarizes the following proposed collection(s) of information for public comment:

1. *Type of Information Collection Request:* Revision of a currently approved collection; *Title of Information Collection:* Annual MLR and Rebate Calculation Report and MLR Rebate Notices; *Use:* Under section 2718 of the Affordable Care Act and implementing regulation at 45 CFR part 158, a health insurance issuer (issuer) offering group or individual health insurance coverage must submit a report to the Secretary concerning the amount the issuer spends each year on claims, quality improvement expenses, non-claims costs, Federal and State taxes and licensing and regulatory fees, the amount of earned premium, and beginning with the 2014 reporting year, the amounts related to the transitional reinsurance and risk adjustment programs established under sections 1341 and 1343, respectively, of the Affordable Care Act. An issuer must provide an annual rebate if the amount it spends on certain costs compared to its premium revenue (excluding Federal and States taxes and licensing and regulatory fees) does not meet a certain ratio, referred to as the medical loss ratio (MLR). Each issuer is required to submit annually MLR data, including information about any rebates it must provide, on a form prescribed by CMS, for each State in which the issuer conducts business. Each issuer is also required to provide a rebate notice to each policyholder that is owed a rebate and each subscriber of policyholders that are owed a rebate for any given MLR reporting year. Additionally, each issuer is required to maintain for a period of seven years all documents, records and other evidence that support the data included in each issuer's annual report to the Secretary.

Based upon CMS' experience in the MLR data collection and evaluation process, CMS is updating its annual burden hour estimates to reflect the actual numbers of submissions, rebates and rebate notices.

The 2022 MLR Reporting Form and Instructions reflect changes for the 2020 reporting year and beyond. For 2022, it is expected that issuers will submit fewer reports and on average, send fewer notices and rebate checks in the mail to policyholders and subscribers, which will reduce burden on issuers. *Form Number:* CMS–10418 (OMB control number: 0938–1164); *Frequency:* Annually; *Affected Public:* Private Sector, Business or other for-profit and not-for-profit institutions; *Number of Respondents:* 480; *Number of Responses:* 1,677; *Total Annual Hours:* 170,091. For policy questions regarding this collection contact Jiyun Lim at 667–290–9650.

Dated: November 17, 2023.

William N. Parham, III,

Director, Paperwork Reduction Staff, Office of Strategic Operations and Regulatory Affairs.

[FR Doc. 2023–25861 Filed 11–21–23; 8:45 am]

BILLING CODE 4120–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–P–4223]

Determination That BUPRENEX (Buprenorphine Hydrochloride) Injection, 0.3 Milligram/Milliliter, Was Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) has determined that BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 milligram (mg)/milliliter (mL), was not withdrawn from sale for reasons of safety or effectiveness. This determination means that FDA will not begin procedures to withdraw approval of abbreviated new drug applications (ANDAs) that refer to this drug product, and it will allow FDA to continue to approve ANDAs that refer to the product as long as they meet relevant legal and regulatory requirements.

FOR FURTHER INFORMATION CONTACT: Caitlin Callahan, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6269, Silver Spring, MD 20993–0002, 301–796–3600, *Caitlin.Callahan@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Section 505(j) of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 355(j)) allows the submission of an ANDA to market a generic version of a previously approved drug product. To obtain approval, the ANDA applicant must show, among other things, that the generic drug product: (1) has the same active ingredient(s), dosage form, route of administration, strength, conditions of use, and (with certain exceptions) labeling as the listed drug, which is a version of the drug that was previously approved and (2) is bioequivalent to the listed drug. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA).

Section 505(j)(7) of the FD&C Act requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the ''Approved Drug Products With Therapeutic Equivalence Evaluations,'' which is known generally as the ''Orange Book.'' Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug's NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (21 CFR 314.162).

A person may petition the Agency to determine, or the Agency may determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (§ 314.161 (21 CFR 314.161)). FDA may not approve an ANDA that does not refer to a listed drug.

BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 mg/mL, is the subject of NDA 018401, held by Indivior, Inc., and initially approved on December 29, 1981. BUPRENEX is indicated for the management of pain severe enough to require an opioid analgesic and for which alternate treatments are inadequate.

BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 mg/mL, is currently listed in the ''Discontinued Drug Product List'' section of the Orange Book. Odin Pharmaceuticals LLC submitted a citizen petition dated September 27, 2023 (Docket No. FDA–2023–P–4223), under 21 CFR 10.30, requesting that the Agency determine whether BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 mg/mL, was withdrawn from sale for reasons of safety or effectiveness.

After considering the citizen petition and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 mg/mL, was not withdrawn for reasons of safety or effectiveness. The petitioner has identified no data or other information suggesting that this drug product was withdrawn for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal of BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 mg/mL, from sale. We have also independently evaluated relevant literature and data for possible postmarketing adverse events. We have found no information that would indicate that this drug product was withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list BUPRENEX (buprenorphine hydrochloride) Injection, 0.3 mg/mL, in the ''Discontinued Drug Product List'' section of the Orange Book. The ''Discontinued Drug Product List'' delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. FDA will not begin procedures to withdraw approval of approved ANDAs that refer to this drug product. Additional ANDAs for this drug product may also be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for this drug product should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: November 17, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–D–4719]

Translation of Good Laboratory Practice Study Reports: Questions and Answers; Draft Guidance for Industry; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of availability.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the availability of a draft guidance for industry entitled ''Translation of GLP Study Reports: Questions and Answers.'' This guidance provides information to sponsors and nonclinical laboratories regarding the translation of study reports for studies conducted in compliance with good laboratory practice (GLP) regulations. GLP studies are nonclinical safety studies that include, but are not limited to nonclinical toxicology studies, safety pharmacology studies, and device safety studies. When study reports of GLP studies are translated from the original language into English, adequate documentation is critical to ensure

accurate and complete study data are submitted to FDA. This question-and-answer document is intended to clarify FDA's recommendations concerning the translation of GLP study reports from a non-English language into English for nonclinical studies conducted in compliance with GLP regulations.

DATES: Submit either electronic or written comments on the draft guidance by February 20, 2024 to ensure that the Agency considers your comment on this draft guidance before it begins work on the final version of the guidance.

ADDRESSES: You may submit comments on any guidance at any time as follows:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–D–4719 for ''Translation of GLP Study Reports: Questions and Answers.'' Received comments will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

You may submit comments on any guidance at any time (see 21 CFR 10.115(g)(5)).

Submit written requests for single copies of the draft guidance to the Division of Drug Information, Center for Drug Evaluation and Research, Food and Drug Administration, 10001 New Hampshire Ave., Hillandale Building, 4th Floor, Silver Spring, MD 20993–0002; or to the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your requests. See the **SUPPLEMENTARY INFORMATION** section for electronic access to the draft guidance document.

FOR FURTHER INFORMATION CONTACT: Tahseen Mirza, Center for Drug Evaluation and Research, Office of Study Integrity and Surveillance, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 2211, Silver Spring, MD 20993, 301–796–7645; Anne Taylor, Office of the Center Director, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993, 240–402–7911; Judith Davis, Office of Device Evaluation, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 1216, Silver Spring, MD 20993, 301–796–6636; Tong Zhou, Center for Veterinary Medicine, Office of New Animal Drug Evaluation, HFV–153, Food and Drug Administration, 7500 Standish Place, Rockville, MD, 20855, 240–402–0826; Yuguang Wang, Center for Food Safety and Applied Nutrition, Office of the Center Director, Food and Drug Administration, 5001 Campus Dr., Rm. 4A035, College Park, MD, 20740, 240-402–1757; Hans Rosenfeldt, Center for Tobacco Products, Office of Science, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. G335, Silver Spring, MD 20993, 301–796–1327; Darby Hull, Office of Regulatory Affairs, Food and Drug Administration, 12420 Parklawn Dr., Element Building, Rockville, MD 20857, 301–796–5949.

SUPPLEMENTARY INFORMATION:

I. Background

FDA is announcing the availability of a draft guidance for industry entitled ''Translation of GLP Study Reports: Questions and Answers.'' Nonclinical laboratory studies conducted in compliance with GLP regulations (21 CFR part 58) are being conducted by testing facilities located in foreign countries. In instances where the GLP study report is generated in a non-English language, the study report is often translated into English for submission to FDA. When translating a study report into English from a study conducted in compliance with GLP regulations, the translation should be clear, accurate, complete, and follow written processes and procedures. The sponsor should ensure that the

translated report is an accurate representation of the original GLP study report.

This draft guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The draft guidance, when finalized, will represent the current thinking of FDA on ''Translation of GLP Study Reports: Questions and Answers.'' It does not establish any rights for any person and is not binding on FDA or the public. You can use an alternative approach if it satisfies the requirements of the applicable statutes and regulations.

II. Paperwork Reduction Act of 1995

While this guidance contains no collection of information, it does refer to previously approved FDA collections of information. The previously approved collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501–3521). The collections of information in 21 CFR part 58 for good laboratory practice for nonclinical laboratory studies have been approved under OMB control number 0910–0119.

III. Electronic Access

Persons with access to the internet may obtain the draft guidance at *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/guidances-drugs, https://www.regulations.gov,* or *https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-guidances.*

Dated: November 17, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–4996]

Advancing Drug Development for the Prevention of Spontaneous Preterm Birth; Public Meeting

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public meeting.

SUMMARY: The Food and Drug Administration (FDA, the Agency, or we) is announcing the following public meeting entitled ''Advancing Drug Development for the Prevention of Spontaneous Preterm Birth.'' The meeting will be convened by Duke University's Robert J. Margolis, MD, Center for Health Policy (Duke-Margolis) and supported by a cooperative agreement with FDA. The meeting is intended to gather industry, family, clinician, researcher, ethicist, professional society, and other stakeholder input on the impact of preterm birth on families and on society, as well as on the ethical, regulatory, and clinical trial considerations surrounding the drug development for the prevention of spontaneous preterm birth.

DATES: The public meeting will be held on January 23 and 24, 2024, from 1 p.m. to 4:30 p.m. Eastern Time each day. See the **SUPPLEMENTARY INFORMATION** section for registration information.

ADDRESSES: The public meeting will be held virtually via Zoom.

FOR FURTHER INFORMATION CONTACT: Luke Durocher, Duke-Margolis Center for Health Policy, *margolisevents@duke.edu,* 202–621–2800; or Christina Chang, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993, 301–796–2078.

SUPPLEMENTARY INFORMATION:

I. Background Information

In the United States in 2021, 1 in every 10 infants was born prematurely (before 37 weeks of pregnancy). Infants born too early have higher rates of death and disability, resulting in a significant public health concern. The exact mechanisms and risk factors associated with spontaneous preterm birth are not fully understood, resulting in a dearth of interventions demonstrated to be effective and safe.

FDA endorses an informed and balanced approach to gathering data supporting the safe and effective use of drugs and biological products for the prevention of spontaneous preterm birth. Currently, there is a significant medical need for such therapies, as there are no FDA approved therapies for reducing the risk of neonatal morbidity/mortality resulting from spontaneous preterm birth. Input from this meeting will help provide guidance on the development of therapies for the prevention of spontaneous preterm birth.

II. Topics for Discussion at the Public Meeting

The meeting will allow participants (including clinicians, patients, family, researchers, ethicists, professional societies, and other stakeholders) to provide input on key topics, including:

- The current understanding of spontaneous preterm birth, including the epidemiology of the condition, etiologies, and pathophysiology
- Ethical and regulatory considerations and challenges associated with the development of therapeutics for the prevention of spontaneous preterm birth
- Impact of preterm birth on families and society
- Assessing efficacy and safety in clinical programs for therapeutics for spontaneous preterm birth prevention
- Dose-finding and clinical trial design considerations

For more information on the meeting topics and discussion questions, visit *https://duke.is/g/gde6.* Duke-Margolis will publish a discussion guide outlining background information and current thinking on the topic areas to this website approximately 2 weeks before the meeting date. FDA will also post the agenda and other meeting materials to this website approximately 5 business days before the meeting.

The format of the public meeting will consist of a series of presentations, panel discussions, and open discussion.

III. Participating in the Public Meeting

Registration: To register for the virtual public meeting, please visit the following website: *https://duke.is/g/gde6.* Please provide complete contact information for each attendee, including name, title, affiliation, address, email, and telephone.

Registration is free. Persons interested in attending this virtual public meeting must register. Early registration is recommended. Registrants will receive confirmation once they have been accepted. If you need special accommodations due to a disability, please contact Luke Durocher, Duke-Margolis Center for Health Policy, at *margolisevents@duke.edu* or at 202–621–2800.

Streaming Webcast of the Public Meeting: This virtual public meeting will be webcast via Zoom and the archived video footage will be available at the event website. The link for registration is the same as above: *https://duke.is/g/gde6.* Registered webcast participants will be sent technical system requirements in advance of the event. It is recommended that you review these technical system requirements prior to joining the streaming webcast of the public meeting. Although FDA has verified the website addresses in this document, please note that websites are subject to change over time.

Transcripts: Please be advised that transcripts of the public meeting will not be available.

Dated: November 16, 2023.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2023–N–4965]

Advancing the Use of Complex Innovative Designs in Clinical Trials: From Pilot to Practice; Public Workshop; Request for Comments

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop; request for comments.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the following public workshop entitled ''Advancing the Use of Complex Innovative Designs in Clinical Trials: From Pilot to Practice.'' The purpose of the public workshop is to discuss aspects of complex adaptive, Bayesian, and other novel clinical trial designs. This workshop is being conducted to meet the performance goal of convening a public workshop on complex innovative design (CID) included in the seventh authorization of the Prescription Drug User Fee Act (PDUFA VII). The workshop may also inform a draft guidance on the use of Bayesian methodology in clinical trials of drugs and biological products. In conjunction with the workshop, FDA is seeking comments on the use of CID to inform regulatory decision making, including high-level case examples of CIDs and approaches that can advance the use of these designs. The public workshop will be held on March 5, 2024, from 9 a.m. to 3:30 p.m. Eastern Time.

DATES: Either electronic or written comments on this public workshop must be submitted by April 5, 2024. See the **SUPPLEMENTARY INFORMATION** section for registration date and information.

ADDRESSES: The public workshop will be held at the FDA White Oak Campus, 10903 New Hampshire Ave., Bldg. 31 Conference Center, the Great Room, Silver Spring, MD 20993–0002. Entrance for the public workshop participants (non-FDA employees) is through Building 1 where routine security check procedures will be performed. For parking and security information, please refer to *https://www.fda.gov/about-fda/visitor-information.* The public workshop will use an online platform for the webcast.

You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of April 5, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2023–N–4965 for ''Advancing the Use of Complex Innovative Designs in Clinical Trials: From Pilot to Practice; Public Workshop; Request for Comments.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: Tuan Pham, Food and Drug Administration, Center for Drug Evaluation and Research, 10903 New Hampshire Ave., Bldg. 21, Rm. 3670, Silver Spring, MD 20993–0002, 301–348–1595, *CID.Meetings@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

This public workshop is intended to meet a performance goal FDA agreed to under the FDA User Fee Reauthorization Act of 2022, in accordance with the PDUFA Reauthorization Performance Goals and Procedures Fiscal Years 2023 Through 2027 letter (PDUFA VII letter), which is available at *https://www.fda.gov/media/151712/download.* Specifically, section I.4.e of the PDUFA VII letter outlines goals to enhance FDA's capacity to review complex innovative designs and convene a public workshop to discuss aspects of complex adaptive, Bayesian, and other novel clinical trial designs.

II. Topics for Discussion at the Public Workshop

The purpose of this public workshop is to facilitate discussion on the use of external data sources, Bayesian statistical methods, and simulations in complex innovative trial designs as well as trial implementation (*e.g.,* examples of defining and mitigating bias when using select trial design methods). Discussion topics will include considerations for external data sources, Bayesian statistical methods, simulations, and clinical trial implementation and will be based on FDA accumulated experience both within and outside of the Complex Innovative Trial Design Meeting Program (*https://www.fda.gov/drugs/development-resources/complex-innovative-trial-design-meeting-program*).

The workshop will consist of two sessions. The first session will focus on case studies that will illustrate various aspects of complex innovative designs and implementation. The second session will consist of panel discussions motivated by the case studies. There will be an opportunity for public comment.

Workshop updates, agenda, and background materials (if any) will be made available at *https://www.fda.gov/news-events/advancing-use-complex-innovative-designs-clinical-trials-pilot-practice-03052024* prior to the workshop.

III. Participating in the Public Workshop

Registration: To register for the public workshop, please visit *https://ComplexInnovativeDesignsWorkshop.eventbrite.com* by February 27, 2024, 11:59 p.m. Eastern Time. Registration will be available starting January 16, 2024. Please provide complete contact information for each attendee, including name, affiliation, and email. If you are unable to attend the workshop in person, you can register to view a live webcast of the workshop. You will be asked to indicate in your registration if you plan to attend in person or via the webcast.

Registration is free and based on space availability, with priority given to early registrants. Persons interested in attending this public workshop must register by February 27, 2024, 11:59 p.m. Eastern Time. Early registration is recommended because onsite seating is limited; therefore, FDA may limit the number of in-person participants from each organization. Registrants will receive a confirmation email after they register.

If you need special accommodations due to a disability, please contact Tuan Pham (see **FOR FURTHER INFORMATION CONTACT**) at least 14 days before the workshop.

Streaming Webcast of the Public Workshop: This public workshop will also be available on webcast. To register for the webcast of this public workshop, visit *https://ComplexInnovativeDesignsWorkshop.eventbrite.com* by February 27, 2024, 11:59 p.m. Eastern Time. Please provide complete contact information for each attendee, including name, affiliation, and email. A link to the webcast will be provided following registration. Although FDA verified the website addresses in this document, please note that websites are subject to change over time.

Transcripts: Please be advised that as soon as a transcript of the public workshop is available, it will be accessible at *https://www.regulations.gov.* It may be viewed at the Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852. A link to the transcript will also be available on the internet at *https://www.fda.gov/news-events/advancing-use-complex-innovative-designs-clinical-trials-pilot-practice-03052024.*

Dated: November 17, 2023.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute of Biomedical Imaging and Bioengineering; Notice of Closed Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of the following meeting of the National Institute of Biomedical Imaging and Bioengineering Special Emphasis Panel.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Institute of Biomedical Imaging and Bioengineering Special Emphasis Panel; Brain Initiative RFA (EB–22–003) Review SEP.

Date: February 2, 2024.

Time: 10:00 a.m. to 5:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, Democracy II, Suite 920, 6707 Democracy Blvd., Bethesda, MD 20817 (Virtual Meeting).

Contact Person: Yoon-Young Jang, M.D., Ph.D., Scientific Review Officer, National Institute of Biomedical Imaging and Bioengineering, National Institutes of Health, 6707 Democracy Blvd., Bethesda, MD 20892, (301) 451–3397, *yoon-young.jang@nih.gov.*

(Catalogue of Federal Domestic Assistance Program Nos. 93.866, National Institute of Biomedical Imaging and Bioengineering, National Institutes of Health.)

Dated: November 16, 2023.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS–2023–0041]

Establishment of Homeland Security Academic Partnership Council Subcommittees

AGENCY: The Office of Partnership and Engagement (OPE), The Department of Homeland Security (DHS).

ACTION: Notice of new taskings for the Homeland Security Academic Partnership Council (HSAPC).

SUMMARY: On November 14, 2023, the Secretary of DHS, Alejandro N. Mayorkas, issued three memoranda tasking the Homeland Security Academic Partnership Council (HSAPC) to establish three subcommittees further outlined below. This notice is not a solicitation for membership.

FOR FURTHER INFORMATION CONTACT: Zarinah ''Traci'' Silas, Executive Director of the Office of Academic Engagement and Designated Federal Officer, Homeland Security Academic Partnership Council, Department of Homeland Security at *HSAPC@hq.dhs.gov* or 202–891–2876.

SUPPLEMENTARY INFORMATION: The HSAPC provides organizationally independent, strategic, timely, specific, and actionable recommendations to the Secretary on key issues at the intersection of education, academia, and the DHS mission.

The Secretary has requested that the HSAPC form new subcommittees to study and provide recommendations in three critical areas for the Department:

1. Supporting K–12 school and higher education communities in fostering safety and inclusivity in schools and on campuses and supporting campus law enforcement professionals and others charged with keeping academic communities safe.

2. Combatting online child sexual exploitation and abuse (CSEA), including development of guidelines and best practices for educators and academic institutions to understand and reduce the risk of CSEA; establish processes and protocols to detect and report online CSEA and; partner with law enforcement and support communities to support investigations and victims. Additionally, the review and recommendation should include an assessment of DHS educational, awareness, and school safety resources to prevent, detect, and report CSEA. This should include best practices for content delivery, how it is delivered, who is delivering, and audience prioritization.

3. Foreign malign influence in higher education, including guidelines and best practices for higher education institutions to reduce the risk of and counter foreign malign influence; consideration of a public-private partnership to enhance collaboration and information sharing on foreign malign influence; and an assessment of how the U.S. Government can enhance its internal operations and posture to effectively coordinate and address foreign malign influence-related national security risks posed to higher education institutions.

Schedule: The subcommittees' findings and recommendations will be submitted to the HSAPC for its deliberation and vote during a public meeting on December 13, 2023 and a public meeting in Spring 2024.

Zarinah T. Silas,

Designated Federal Officer, Homeland Security Academic Partnership Council, U.S. Department of Homeland Security.

BILLING CODE 9112–FN–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS–2023–0046]

Establishment of Faith-Based Security Advisory Council Subcommittee

AGENCY: The Office of Partnership and Engagement (OPE), The Department of Homeland Security (DHS).

ACTION: Notice of a new tasking for the Faith-Based Security Advisory Council (FBSAC).

SUMMARY: On November 14, 2023, the Secretary of DHS, Alejandro N. Mayorkas, issued a memorandum tasking the Faith-Based Security Advisory Council (FBSAC) to establish a subcommittee further outlined below. This notice is not a solicitation for membership.

FOR FURTHER INFORMATION CONTACT: Sameer Hossain, Designated Federal Officer, Faith-Based Security Advisory Council of Department of Homeland Security, at *FBSAC@hq.dhs.gov* or 202–891–2876.

SUPPLEMENTARY INFORMATION: The FBSAC provides organizationally independent, strategic, timely, specific, and actionable advice to the Secretary through the OPE Assistant Secretary, who serves as the DHS Faith-Based Organizations Security Coordinator on security and preparedness matters related to places of worship, faith communities, and faith-based organizations. The Council consists of members who are: faith-based organization security officials; faith-based organization leaders; faith leaders; State and local public safety, law enforcement, and emergency management leaders; and a representative from the Department of Justice or Federal Bureau of Investigation.

The Secretary has requested that the FBSAC form a new subcommittee to study and provide recommendations in the following critical area for the Department:

1. Combatting online child sexual exploitation and abuse (CSEA), providing recommendations on how DHS can partner with faith-based organizations to inform faith-based leaders and communities about how to recognize and respond appropriately to incidents of online CSEA; and an assessment to gauge the strengths, gaps, and opportunities in faith-based community awareness, engagement, and whole-of-community involvement. This assessment should include recommendations for faith-based organization collaboration to raise public awareness of online CSEA.

Schedule: The subcommittees findings and recommendations will be submitted to the FBSAC for its deliberation and vote during a public meeting within 150 days of November 14, 2023.

Dated: November 16, 2023.

Sameer Hossain,

Designated Federal Officer, Faith-Based Security Advisory Council, U.S. Department of Homeland Security.

[FR Doc. 2023–25774 Filed 11–21–23; 8:45 am]

BILLING CODE 9112–FN–P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS–2023–0043]

Establishment of Homeland Security Advisory Council Subcommittee

AGENCY: Office of Partnership and Engagement (OPE), Department of Homeland Security (DHS).

ACTION: Notice of new tasking for the Homeland Security Advisory Council (HSAC).

SUMMARY: On November 14, 2023, DHS Secretary Alejandro Mayorkas issued a memorandum tasking the HSAC with establishing a subcommittee to provide recommendations to the Department to combat online child sexual exploitation and abuse. Details of the tasking are included below. This notice is not a solicitation for membership.

FOR FURTHER INFORMATION CONTACT: Rebecca Sternhell, Principal Deputy Assistant Secretary & Acting Executive Director, Homeland Security Advisory Council, Office of Partnership and Engagement, U.S. Department of Homeland Security at *HSAC@hq.dhs.gov* or 202–891–2876.

SUPPLEMENTARY INFORMATION: The Homeland Security Advisory Council provides organizationally independent, strategic, timely, specific, and

actionable advice and recommendations for the consideration of the Secretary of the Department of Homeland Security on matters related to homeland security. The Homeland Security Advisory Council is comprised of leaders in local law enforcement, first responders, public health, State, local and tribal government, national policy, the private sector, and academia.

The Secretary has requested that the HSAC form a new subcommittee to provide recommendations to the Department to combat online child sexual exploitation and abuse. Specifically, the tasking requested the following:

1. An assessment of how DHS can streamline and strengthen internal operations across components to effectively coordinate and collectively address online child sexual exploitation and abuse alongside our international partners, the technology industry, and non-governmental organizations.

2. An assessment and development of recommended actions for the technology industry to proactively identify, report, and prevent future sexual exploitation and abuse of children online. The assessment should include:

a. A review of existing authorities and how DHS could utilize these authorities to move our interests forward; and

b. Identification of the barriers impeding industry from providing actionable information to law enforcement to identify victims and perpetrators.

3. An assessment to gauge the strengths, gaps, and opportunities in public awareness, industry engagement, and whole-of-community involvement. This assessment should include recommendations for cross-industry collaboration to raise public awareness of online Child Sexual Exploitation and Abuse (CSEA).

A full report of findings and recommendations is due to be submitted from the HSAC by April 2024.

Dated: November 16, 2023.

Rebecca Sternhell,

Acting Executive Director, Homeland Security Advisory Council, Department of Homeland Security.

BILLING CODE 9112–FN–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–6429–C–02]

Section 3 Benchmarks for Creating Economic Opportunities for Low- and Very Low-Income Persons and Eligible Businesses; Correction

AGENCY: Office of the Assistant Deputy Secretary for Field Policy and Management, HUD.

ACTION: Notification of benchmarks; correction.

SUMMARY: The Department of the Housing and Urban Development (HUD) published a notice in the **Federal Register** on October 5, 2023, to inform members of the public that HUD was updating its 2020 version of the Section 3 benchmark notice pursuant to HUD's regulations, which require that HUD set Section 3 benchmarks by publishing a notification, subject to public comment, in the **Federal Register** and update the benchmarks no less frequently than once every three years by the same method of notification. The notice provided an opportunity for public comment about the Section 3 benchmark goals but did not include the option of electronic submission through *Regulations.gov.* The notice also did not specify a period of time for the public comment period. This notice corrects these omissions and establishes a public comment period of sixty days to submit comments.

DATES: *Effective Date:* December 22, 2023. The public comment period for the notice published in the **Federal Register** on October 5, 2023 (88 FR 69219) is January 22, 2024.

FOR FURTHER INFORMATION CONTACT: Nathan Roush, Program Analyst, Office of Field Policy and Management, Department of Housing and Urban Development, Five Points Plaza, 40 Marietta St. NW, Atlanta, GA 30303, telephone number 202–708–2426 (this is not a toll-free number). General email inquiries regarding Section 3 may be sent to *Section3@hud.gov.* HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

SUPPLEMENTARY INFORMATION:

Correction

In the **Federal Register** of October 5, 2023, in FR Doc 2023–22183, on page 69219, in the first column, the following corrections are made:

1. On page 69219, in the first column, in the Dates caption, revise the ''Dates'' section to read as follows:

DATES: *Effective Date:* December 22, 2023. *Comment Due Date:* January 22, 2024.

2. On page 69219, in the first column, after the dates section, add a section to read as follows:

ADDRESSES: HUD invites interested persons to submit comments to the Office of the General Counsel, Regulations Division, Department of Housing and Urban Development, 451 7th Street SW, Room 10276, Washington, DC 20410–0500. Communications should refer to the above docket number and title and should contain the information specified in the ''Request for Comments'' section. There are two methods for submitting public comments.

1. *Electronic Submission of Comments.* Comments may be submitted electronically through the Federal eRulemaking Portal at *www.regulations.gov.* HUD strongly encourages commenters to submit comments electronically. Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, ensures timely receipt by HUD, and enables HUD to make comments immediately available to the public. Comments submitted electronically through the website can be viewed by other commenters and interested members of the public. Commenters should follow instructions provided on that site to submit comments electronically.

2. *Submission of Comments by Mail.* Comments may be submitted by mail to the Regulations Division, Office of General Counsel, Department of Housing and Urban Development, 451 7th Street SW, Room 10276, Washington, DC 20410–0500. Due to security measures at all Federal agencies, however, submission of comments by mail often results in delayed delivery. To ensure timely receipt, HUD recommends that comments be mailed at least two weeks in advance of the public comment deadline.

Aaron Santa Anna,

Associate General Counsel, Office of Legislation and Regulations.

[FR Doc. 2023–25846 Filed 11–21–23; 8:45 am]

BILLING CODE 4210–67–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7070–N–87]

30-Day Notice of Proposed Information Collection: Evaluation of the Moving To Work (MTW) Expansion Asset Building Cohort, OMB Control No.: 2528–NEW

AGENCY: Office of Policy Development and Research, Chief Data Officer, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* December 22, 2023.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Interested persons are also invited to submit comments regarding this proposal and comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Anna Guido, Clearance Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410–5000; email *PaperworkReductionActOffice@hud.gov.*

FOR FURTHER INFORMATION CONTACT: Anna P. Guido, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410; email: *PaperworkReductionActOffice@hud.gov.* telephone (202)–402–5535. This is not a toll-free number, HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit: *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.* Copies of available documents submitted to OMB may be obtained from Ms. Guido.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on July 21, 2023 at 88 FR 47158.

A. Overview of Information Collection

Title of Information Collection: Evaluation of the Moving to Work (MTW) Expansion Asset Building Cohort.

OMB Approval Number: 2528–New.

Type of Request: New collection.

Form Number: N/A.

Description of the need for the information and proposed use: The purpose of this proposed information collection is to evaluate the Moving to Work Expansion Asset Building Cohort (hereinafter ''Asset Building Cohort''). This 60-day Notice informs the public of intent to collect data about the asset building programs implemented by the PHAs in the Asset Building Cohort and about the HUD-assisted residents selected to participate in the asset building programs. HUD selected 18 Public Housing Agencies (PHAs) to participate in the Asset Building Cohort, and 17 of these PHAs joined the MTW demonstration. Each PHA will implement an opt-out savings program, a rent reporting for credit building program, or a custom asset building program. The savings account and rent reporting programs are described in PIH Notice 2022–11. For the savings account program, PHAs will contribute at least $10 per month for 24 months to at least 25 residents to support buildup of emergency savings. For the rent reporting program, PHAs will report on-time rent payments made by participating public housing residents to credit agencies so that the residents' credit reports will gain a tradeline (rental tradeline). The added rental tradeline may increase residents' credit visibility and credit scores. HUD's Office of Policy Development and Research (PD&R) will evaluate the impacts of these asset building programs. The evaluation requires data from several sources, including the new information collection described in this Notice.

The first phase of the evaluation of the Asset Building Cohort is guided by a few overarching questions: (1) What programs are PHAs implementing? What are the characteristics of the group of residents participating in the programs? (2) How do participants understand the programs? And what do the programs mean for them personally? The programs will run for two years. The first phase of the evaluation will collect data from the following samples:

(1) PHA staff (n = 51), staff of partner organizations (n = 12), and PHA residents (n= 10)

(2) Residents that volunteered for the rent reporting for credit building pilot program, including households that were randomly assigned to have their rent payments reported to credit agencies and households that were assigned to a control group (who don't have their rent payments reported to credit agencies) (n = 300)

(3) Residents that volunteered for the rent reporting for credit building pilot program and agree to participate in in-depth qualitative interviews at up to four time points during the two years that the PHA is required to offer the program (n = 40)

The evaluator will conduct interviews of about 1 hour with staff from participating PHAs, organizational partners (*e.g.,* a bank that partners with a PHA to set up savings accounts for unbanked residents), and PHA residents to better understand facilitators and challenges to starting and running the asset building programs. The evaluator will interview up to 3 staff per PHA at all 17 PHAs, up to 3 partners at 4 PHAs selected for in-depth case studies, and up to 5 residents at 2 of the case study PHAs.

Residents participating in the rent reporting programs must complete an Informed Consent Form (ICF) and Baseline Information Form (BIF). The BIF will provide important information not otherwise available from HUD's administrative data, such as whether the household has significant barriers to employment. The BIF will take on average 15 minutes to complete. After enrollment in the program, 40 participants, including 20 members of the treatment group and 20 members of the control group, will be asked to participate in qualitative interviews of about 90 minutes each at two different time points during the first year of the rent reporting programs. The qualitative interviews will focus on experiences with the rent reporting program, household budgeting, and the broader context of interactions with banking, credit, and financial institutions. The **Federal Register** Notice provides an opportunity to comment on the data collection instruments and associated materials to be administered to the respondents at PHAs (including staff and residents) in the Asset Building Cohort and at partner organizations.

Respondents: Adults who work at, provide services at, or are assisted by

PHAs participating in the Asset Building Cohort.

Information collection	Number of respondents	Frequency of response	Responses per annum	Burden hour per response	Annual burden hours	Hourly cost per response	Annual cost
Program Implementation PHA staff interview guide	51	1	.33	1	17	$57.60	$979.20
Program Implementation partner staff interview guide	12	1	.33	1	4	42.48	169.92
Program Implementation resident interview guide	10	1	.33	1	3.33	10.31	34.37
Rent Reporting Informed Consent Form	300	1	.33	.25	25	11.05	276.25
Rent Reporting Baseline Information Form	300	1	.33	.25	25	11.05	276.25
Rent Reporting Qualitative Interview Guide 1	40	1	.6667	1.5	40	11.05	442.00
Rent Reporting Qualitative Interview Guide 2	40	1	.6667	1.5	40	11.05	442.00

Total burden annualized over 3-year period.

The average hourly rate for HUD-assisted households is calculated as follows: (1) For the Program Implementation resident interview guide we averaged the minimum wages of all states with a PHA implementing a Savings Account option, which includes California, Florida, Massachusetts, New Hampshire, Ohio, Oregon, and South Carolina, and calculate the average hourly minimum wage as $10.31. (2) For the interviews that apply only to PHAs in the rent reporting study, we averaged the minimum wages of all states with a PHA in the rent reporting study, which includes Connecticut, Florida, Idaho, Illinois, Maine, and New Hampshire, and and calculate the average hourly minimum wage as $11.05.

The average hourly rate for PHA staff ($57.60) is based on the average employer costs for State and Local Government employees. (Source: Bureau of Labor Statistics, December 2022 Employer Costs for Employee Compensation) The average hourly rate for partner organization staff ($42.48) is based on the average employer costs for civilian employees.

(Source: Bureau of Labor Statistics, December 2022 Employer Costs for Employee Compensation)

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

(5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

HUD encourages interested parties to submit comments in response to these questions.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. chapter 35.

Anna P. Guido,

Department Reports Management Office, Office of Policy Development and Research, Chief Data Officer.

BILLING CODE 4210–67–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_ID_FRN_MO4500175813]

Notice of Intent To Prepare an Environmental Impact Statement for the Caldwell Canyon Revised Mine and Reclamation Plan, Caribou County, Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of intent.

SUMMARY: In compliance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) Idaho Falls District intends to prepare an Environmental Impact Statement (EIS) to consider the effects of P4 Production, LLC's (P4 Production) Caldwell Canyon Revised Mine and Reclamation Plan (RMRP) in Caribou County, Idaho. This notice announces the beginning of the scoping process to solicit public comments and identify issues and alternatives.

DATES: This notice initiates the public scoping process for the EIS. The BLM requests that the public submit comments concerning the scope of the analysis, potential alternatives, and identification of relevant information and studies by December 22, 2023. In order to be considered during the preparation of the Draft EIS, please ensure your comments are received prior to the close of the 30-day scoping period or 15 days after the last public meeting, whichever is later. Additional information will be distributed through a press release, newspaper notice, BLM's ePlanning website, and email to the mailing list.

ADDRESSES: You may submit comments related to the Caldwell Canyon RMRP by any of the following methods:

- *Website: https://eplanning.blm.gov/eplanning-ui/project/2026858/510.*
- *Email: BLM_ID_CaldwellRevisedMRP_EIS@blm.gov.*
- *Fax:* (208) 478–6376.

• *Mail:* Caldwell Canyon Mine EIS, C/O Stantec Consulting Services Inc., 2890 East Cottonwood Parkway, Suite 300, Salt Lake City, UT 84121.

Documents pertinent to this proposal may be examined online at *https://eplanning.blm.gov/eplanning-ui/project/2026858/510* and at the BLM Pocatello Field Office.

FOR FURTHER INFORMATION CONTACT: Barry Myers, project manager, telephone (208) 559–3662; address 4350 Cliffs Drive, Pocatello, ID 83204; email *bmyers@blm.gov*. Contact Mr. Myers to have your name added to our mailing list. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services for contacting Mr. Myers. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: Following the preparation of a Final EIS, the Caldwell Canyon Mine and Reclamation project was approved in a 2019 Record of Decision (ROD). Since that approval in 2019 and continuing through May 2023, P4 Production developed and constructed various components of the original project including a service road, haul roads, various utility lines, loadout facilities, and earthwork to prepare for ore removal.

In June 2023, as a result of legal action challenging the BLM's decision and analysis, the Final EIS and ROD were vacated by the United States District Court for the District of Idaho (Case No. 4:21–cv–00182–BLM). As a result of this vacatur, P4 Production submitted a new RMRP, which the BLM will analyze under NEPA. The RMRP proposes modifying existing lease boundaries, developing two new open mine pits, constructing haul and access roads, installing various utility lines, and constructing water management features, monitoring wells, and shop and office facilities (the Project).

Purpose and Need for the Proposed Action

The purpose of the Project is for the BLM to evaluate and respond to the RMRP submitted for the recovery of phosphate ore and to modify leases, in accordance with the Mineral Leasing Act of 1920. P4 Production has certain rights and privileges to recover phosphate from their leases, including the exploration, mining, and disposal of the phosphate or phosphate rock, subject to applicable requirements. The need for the Project is to develop the phosphate resources, using an economically viable method, in accordance with federal laws and regulations governing federal mineral leases, consistent with applicable law.

Preliminary Proposed Action and Alternatives

P4 Production's RMRP proposes to mine phosphate ore in Caribou County, Idaho, from three existing federal phosphate leases by constructing two open pits, constructing haul and access roads, installing various utility lines, and constructing water management features, monitoring wells, and shop and office facilities, while implementing environmental protection measures and reclamation.

The Project would create two open pits, portions of which extend beyond the existing federal lease boundaries. To accommodate those portions of the pits that extend outside the current federal leases, P4 Production proposes to expand their leases in accordance with 43 CFR subpart 3510.

The mining and the support facilities would encompass approximately 1,830 acres. The expected mine life would be approximately 40 years. Reclamation would be concurrent with mining and is scheduled to conclude two years after mining ceases.

In addition to the No Action Alternative (not approving the RMRP and lease modifications) and the Proposed Action, other possible alternatives may include a new proposed haul and access road and utility corridor that avoid federal surface as much as possible, and alternatives that address the sage-grouse issues identified by the Court. The BLM welcomes comments on all preliminary alternatives, as well as suggestions for additional alternatives.

Summary of Expected Impacts

The BLM expects mining and hauling operations to: change groundwater and surface water quantity and quality within regulatory limits; remove and change the structure and composition of vegetation, including species important to Native American Tribes; disturb wetlands and riparian habitat; modify wildlife habitat, including sage-grouse habitat; change scenery; disturb soil; permanently remove mineral resources; create air and fugitive dust emissions; extend economic activity such as employment and the continued operation of an existing elemental phosphorous processing plant; support businesses and generate tax revenue; and reduce livestock grazing.

Anticipated Permits and Authorizations

The BLM anticipates that the following permits and approvals may be required for the Project:

- BLM; MRP approval or modification of approved MRP; 43 CFR 3590.2(a), 3592.1(a)
- BLM; Lease Modification/Fringe Lease; 43 CFR 3510
- BLM; Right-of-way; 90 Statute 2776; 43 U.S. Code (U.S.C.) 1761
- BLM; Phosphate Use Permit; 43 CFR 3501.10, 43 CFR 3516
- High Explosives Permit; 18 U.S.C. 40; 27 CFR 555
- Idaho Department of Environmental Quality; Point of Compliance under the Idaho Groundwater Quality Rule; IDAPA 58.01.11.401
- Idaho Department of Environmental Quality; Certification of Water Quality (Clean Water Act, Section 401); IDAPA 39–101, *et seq.;* Idaho Code Parts 39–3601, *et seq.*
- Idaho Department of Water Resources; Water Rights; Idaho Code Parts 42–201, *et seq.;* IDAPA 37.03.08, Water Appropriation Rules and 37.03.11 Conjunctive Management of Surface and Ground Water
- Idaho Department of Environmental Quality; Stormwater Pollution Prevention Plan, Idaho Pollutant Discharge Elimination System; (IDAPA 58.01.25)
- USACE; Section 404 Permit—required if surface disturbance and placement of fill is more than 0.5 acres of wetlands and 500 feet of stream channels; Clean Water Act [Title 33 U.S.C. 1344, Section 404(a)]
- Idaho Department of Water Resources; Stream Channel Alteration Permit; IDAPA 42–3801
- Idaho Department of Environmental Quality; Air Quality Permit to Construct; IDAPA 58.01.01
- Idaho Department of Lands; Reclamation Plan approval and modification of approved Reclamation Plan; IDAPA 20.03.02.010, 20.03.02.120, and 20.03.02.140
- Caribou County; Conditional Use Permit for facilities within an approved land use; Caribou County Zoning Ordinance, Chapter 13.

Schedule for the Decision-Making Process

The BLM will provide additional opportunities for public participation consistent with the NEPA process, including a 45-day comment period on the Draft EIS. The Draft EIS is anticipated to be available for public review in summer 2024 and the Final EIS is anticipated to be released in December 2024, with a Record of

Decision no sooner than 30 days after the release of the Final EIS.

Public Scoping Process

This notice of intent initiates the scoping period. The BLM will be holding a virtual public scoping meeting. The specific date and time of the virtual meeting, including information on how to register, will be announced in advance via press release, newspaper notice, the ePlanning project page, and email.

Cooperating Agencies

The Idaho Department of Environmental Quality, U.S. Army Corps of Engineers, Idaho Department of Lands, and Idaho Governor's Office of Energy and Minerals are Cooperating Agencies.

Responsible Official

Idaho Falls District Manager Mary D'Aversa is the BLM responsible official.

Nature of Decision To Be Made

The BLM Idaho Falls District Manager will decide whether and under what conditions to approve land use authorizations on BLM-managed public land and the RMRP on leased lands, and to recommend the approval or disapproval of proposed lease modifications to the BLM Idaho State Office Branch Chief for Minerals, Land Tenure, and Water Rights. The decision and recommendation will be documented in a ROD.

Additional Information

The BLM will identify, analyze, and consider mitigation to address the reasonably foreseeable impacts to resources from the Proposed Action and all analyzed reasonable alternatives and, in accordance with 40 CFR 1502.14(e), include appropriate mitigation measures not already included in the Proposed Action or Action Alternative(s). Mitigation may include avoidance, minimization, rectification, reduction or elimination over time, and compensation, and it may be considered at multiple scales, including the landscape scale.

The BLM will utilize and coordinate the NEPA process to help support compliance with applicable procedural requirements under the Endangered Species Act (16 U.S.C. 1536) and Section 106 of the National Historic Preservation Act (54 U.S.C. 306108) as provided in 36 CFR 800.2(d)(3), including public involvement requirements of Section 106. Information about historic and cultural resources and threatened and endangered species within the area potentially affected by the Project will assist the BLM in identifying and evaluating impacts to such resources.

The BLM will consult with Indian Tribal Nations on a government-to-government basis in accordance with Executive Order 13175, BLM MS 1780, and other Departmental policies. The BLM will send invites to potentially affected Tribal Nations prior to consultations. Tribal concerns, including impacts on Indian trust assets and potential impacts to cultural resources, will be given due consideration. Federal, State, and local agencies, along with Indian Tribal Nations and other stakeholders that may be interested in or affected by the proposed Project that the BLM is evaluating, are invited to participate in the scoping process and, if eligible, may request or be requested by the BLM to participate in the development of the environmental analysis as a Cooperating Agency. The BLM will also provide additional opportunities for government-to-government consultation at other times during the NEPA process.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

(Authority: 40 CFR 1501.9)

Mary D'Aversa,

District Manager, Idaho Falls District.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS–WASO–NRNHL–DTS#–36802; PPWOCRADI0, PCU00RP14.R50000]

National Register of Historic Places; Notification of Pending Nominations and Related Actions

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: The National Park Service is soliciting electronic comments on the significance of properties nominated before October 28, 2023, for listing or related actions in the National Register of Historic Places.

DATES: Comments should be submitted electronically by December 7, 2023.

ADDRESSES: Comments are encouraged to be submitted electronically to *National_Register_Submissions@nps.gov* with the subject line ''Public Comment on <property or proposed district name, (County) State>.'' If you have no access to email, you may send them via U.S. Postal Service and all other carriers to the National Register of Historic Places, National Park Service, 1849 C Street NW, MS 7228, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Sherry A. Frear, Chief, National Register of Historic Places/National Historic Landmarks Program, 1849 C Street NW, MS 7228, Washington, DC 20240, *sherry_frear@nps.gov,* 202–913–3763.

SUPPLEMENTARY INFORMATION: The properties listed in this notice are being considered for listing or related actions in the National Register of Historic Places. Nominations for their consideration were received by the National Park Service before October 28, 2023. Pursuant to Section 60.13 of 36 CFR part 60, comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Nominations submitted by State or Tribal Historic Preservation Officers:

Key: State, County, Property Name, Multiple Name (if applicable), Address/Boundary, City, Vicinity, Reference Number.

National Register of Historic Places; Notification of Pending Nominations and Related Actions

AGENCY: National Park Service, Interior.

ACTION: Notice.

SUMMARY: The National Park Service is soliciting electronic comments on the significance of properties nominated before October 21, 2023, for listing or related actions in the National Register of Historic Places.

DATES: Comments should be submitted electronically by December 7, 2023.

ADDRESSES: Comments are encouraged to be submitted electronically to *National_Register_Submissions@nps.gov* with the subject line ''Public Comment on <property or proposed district name, (County) State>.'' If you have no access to email, you may send them via U.S. Postal Service and all other carriers to the National Register of Historic Places, National Park Service, 1849 C Street NW, MS 7228, Washington, DC 20240.

FOR FURTHER INFORMATION CONTACT: Sherry A. Frear, Chief, National Register of Historic Places/National Historic Landmarks Program, 1849 C Street NW, MS 7228, Washington, DC 20240, *sherry_frear@nps.gov,* 202–913–3763.

SUPPLEMENTARY INFORMATION: The properties listed in this notice are being considered for listing or related actions in the National Register of Historic Places. Nominations for their consideration were received by the National Park Service before October 21, 2023. Pursuant to Section 60.13 of 36 CFR part 60, comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Nominations submitted by State or Tribal Historic Preservation Officers:

Key: State, County, Property Name, Multiple Name (if applicable), Address/Boundary, City, Vicinity, Reference Number.

DEPARTMENT OF THE INTERIOR

Office of Natural Resources Revenue

[Docket No. ONRR–2011–0002; DS63644000 DRT000000.CH7000 245D1113RT]

States' Decisions on Participating in Accounting and Auditing Relief for Federal Oil and Gas Marginal Properties

AGENCY: Office of Natural Resources Revenue, Interior.

ACTION: Notice.

SUMMARY: In accordance with Office of Natural Resources Revenue (ONRR) regulations, ONRR provides two types of accounting and auditing relief for Federal oil and gas production from marginal properties: the cumulative royalty reports and payments relief option, which allows a lessee or designee to submit one royalty report and payment for the calendar year's production; and other requested relief, which allows a lessee or designee to request any type of accounting and auditing relief that is appropriate for production from the marginal property and meets certain requirements. By October 1 of each calendar year, ONRR provides a list of qualifying marginal Federal oil and gas properties to the States receiving a portion of Federal royalties from those properties. Each State then decides whether to participate in neither, one, or both relief options. This Notice provides the public each State's decision on whether to participate in marginal property relief.

DATES: Applicable January 1, 2024.

FOR FURTHER INFORMATION CONTACT: Mr. Robert Sudar, Market & Spatial Analytics, Research, Enforcement, Guidance, and Appeals, ONRR, at (303) 231–3511; or by email to *Robert.Sudar@onrr.gov.*

SUPPLEMENTARY INFORMATION: Pursuant to the Federal Oil and Gas Royalty Simplification and Fairness Act of 1996 (30 U.S.C. 1726) and 30 CFR part 1204, subpart C, ONRR and States can relieve the lessee of a marginal Federal oil and gas property from certain reporting, accounting, and auditing requirements. ONRR's rules under 30 CFR 1204.202 and 1204.203 authorize two relief options: (1) cumulative royalty reports and payments relief option, which allows a lessee or designee to submit one royalty report and payment during a calendar year; and (2) other requested relief, which allows a lessee or designee to request any type of appropriate marginal property accounting and auditing relief that meets the requirements under § 1204.5 and is not prohibited under § 1204.204.

To qualify for the first relief option, *cumulative royalty reports and payments relief option,* properties must produce less than 1,000 barrels-of-oil-equivalent (BOE) per year for the base period (July 1, 2022, through June 30, 2023). Annual reporting relief will begin January 1, 2024, with the annual report and payment due February 28, 2025. If a lessee has an estimated payment on file, the payment due date is March 31, 2025. To qualify for the second relief option, *other requested relief,* the combined equivalent production of the marginal properties during the base period must equal an average daily well production of less than 15 BOE per well per day, as calculated under 30 CFR 1204.4(c).

Each State makes an annual determination as to whether it will participate in neither, one, or both relief options. This Notice fulfills the requirement in ONRR's rules to publish a notice of the State's ''intent to allow or not allow certain relief options . . . in the **Federal Register** no later than 30 days before the beginning of the applicable calendar year.'' *See* 30 CFR 1204.208(f).

The following table shows the States with qualifying marginal properties and those States' decisions on whether to participate in neither, one, or both relief options for calendar year 2024. An ''N/A'' means that no properties within the State met that condition for that type of relief:

State	Cumulative royalty report and payment relief (less than 1,000 BOE per year)	Other accounting and auditing relief (less than 15 BOE per well per day)
Alabama	No	No.
Arkansas	No	No.
California	No	No.
Colorado	No	No.
Kansas	No	No.
Louisiana	Yes	Yes.
Michigan	Yes	Yes.
Montana	No	No.
Nebraska	No	No.
Nevada	Yes	Yes.
New Mexico	No	Yes.
North Dakota	Yes	Yes.
Oklahoma	Yes	Yes.
South Dakota	Yes	Yes.
Utah	No	No.
Wyoming	Yes	No.

Pursuant to 30 U.S.C. 1726(c), a Federal oil and gas property located in a State where ONRR does not share a portion of Federal royalties with that State (that is, for 2024, a State not listed in the table above) is eligible for relief if it qualifies as a marginal property. For more information on how to obtain relief, please refer to 30 CFR 1204.205.

Unless the information that ONRR receives is proprietary data, all correspondence, records, or information received in response to this notice may be subject to disclosure under the Freedom of Information Act (FOIA, 5 U.S.C. 552 *et seq.*). If applicable, please highlight the proprietary portions, including any supporting documentation, or mark the page(s) containing proprietary data. ONRR protects proprietary information under the Trade Secrets Act (18 U.S.C. 1905), FOIA Exemption 4 (5 U.S.C. 552(b)(4)), and the Department of the Interior's FOIA regulations (43 CFR part 2).

Authority: Federal Oil and Gas Royalty Management Act of 1982, 30 U.S.C. 1701 *et seq.,* as amended by Federal Oil and Gas Royalty Simplification and Fairness Act of 1996 (RSFA, Pub. L. 104–185—Aug. 13, 1996,

as corrected by Pub. L. 104–200—Sept. 22, 1996).

Howard M. Cantor,

Director, Office of Natural Resources Revenue.

BILLING CODE 4335–30–P

INTERNATIONAL BOUNDARY AND WATER COMMISSION UNITED STATES AND MEXICO

Notice of Availability of a Draft Environmental Assessment (EA) and Finding of No Significant Impact (FONSI) for the Management of Federal Grazing Leases at the Falcon Dam and Reservoir, Starr and Zapata Counties, Texas

AGENCY: United States Section, International Boundary and Water Commission, United States and Mexico (USIBWC).

ACTION: Notice of availability; request for comments.

SUMMARY: The USIBWC hereby gives notice that the *Draft Environmental Assessment* (*EA) and Finding of No Significant Impact (FONSI) for the Management of Federal Grazing Leases at the Falcon Dam and Reservoir, Starr and Zapata Counties, Texas* is available. The EA evaluates land management alternatives to grazing leases that address low grazing lease values and limited access by USIBWC to leased lands. An Environmental Impact Statement will not be prepared unless additional information which may affect this decision is brought to our attention within 30 days from the date of this Notice.

DATES: Comments are due by December 28, 2023.

ADDRESSES: The electronic version of the amended Draft EA is available at the USIBWC web page: *https://www.ibwc.gov/reports-studies/eis-ea-public-comment/.* Physical copies of the Draft EA are available at the Joe A. Guerra Laredo Public Library, 1120 E. Calton Rd., Laredo, Texas 78041; the Olga V. Figueroa Zapata County Public Library, 901 Kennedy St., Zapata, Texas 78076; and the Roma Public Library, 1705 N Athens St., Roma, Texas 78584.

Comments should be sent to: Mark Howe, Cultural Resources Specialist, USIBWC, 4191 N Mesa; El Paso, Texas 79902. Email: *falconcomments@ibwc.gov.* All comments received may be made publicly available without change, including any personal information provided.

FOR FURTHER INFORMATION CONTACT: Mark Howe, Cultural Resources Specialist, Telephone: (915) 832–4767, email: *falconcomments@ibwc.gov.*

SUPPLEMENTARY INFORMATION: The USIBWC is updating or eliminating active and inactive grazing leases in use for commercial, residential, or recreational purposes on federal land in the Falcon Project (*i.e.,* Falcon Dam and Reservoir). Rights-of-way for the Falcon Project totaled 63,192 acres on the U.S. side of the Falcon Project as of 2000. This project will assist USIBWC in determining if grazing leases should be allowed or discontinued and/or whether land management alternatives should be established in lieu of grazing.

The grazing lease program has continued for areas along the Falcon Reservoir that were originally ranches and farms before the land was acquired by the federal Government pursuant to the Water Treaty of 1944 between the U.S. and Mexico, with construction of the Falcon Project completed on October 19, 1953. The grazing lease program assured those areas not under water or flooded and owned by the federal Government would be economically used as they were in the past by the local community. Initially leases allowed for agricultural uses in addition to grazing, but agricultural activities and any clearing of leased lands were later restricted to reduce potential impacts on cultural resources in accordance with National Historic Preservation Act requirements. Active leases currently only allow grazing activities.

Grazing leases, licenses, and permits consist of any written permit or other legal document for an individual, corporation, etc., to use and improve land owned by the U.S. Government under the jurisdiction of the USIBWC at Falcon Reservoir. In the past, 22,270.57 acres of land were under 159 active grazing leases originally issued in 1956. As of 2020, there were 117 active grazing leases with many that are still held by the descendants of the original permittees and/or stakeholders.

The purpose for the Proposed Action is to successfully manage federal land in the Falcon Project. Federal lands associated with the Falcon Project have been utilized by the public for various activities, including grazing leases, since the Falcon Project was established. However, the economic value of these leases and the challenges to successful land management require a reevaluation of the grazing lease program. The need is to implement land management alternatives to grazing leases that address low grazing lease values, limited access by USIBWC to leased lands, and unauthorized activities on leased lands.

Pursuant to Section 102(2)(c) of the National Environmental Policy Act (NEPA) of 1969; the Council on Environmental Quality Final Regulations, and the USIBWC Operational Procedures for Implementing Section 102 of NEPA, published in the **Federal Register** September 2, 1981, USIBWC developed and analyzed eight alternatives for modifying the grazing lease program at the Falcon Project, including the No Action Alternative. Alternative 1, No Action Alternative, is a requirement of the NEPA process and is included to provide a baseline against which the other alternatives can be evaluated. The action alternatives include: Alternative 2—Terminate Leases, Alternative 3—Change Rental Rates on Active Leases and Implement Improved Program Management, Alternative 4—Allow Hunting on Existing Grazing Leases, Alternative 5—Terminate Leases Not Directly Accessible from Public Rights-of-Way, Alternative 6—Negotiate Access Easements on Private Property for Existing Leases, Alternative 7—Amend Leases to Allow Vegetation Management, and Alternative 8—Form a Citizens' Committee to Provide Lease Management Support. The USIBWC has identified that one or any combination of the alternatives could be implemented to manage the grazing lease program at the Falcon Project.

Potential impacts on natural, cultural, and other resources were evaluated in the Draft EA. The USIBWC prepared a FONSI for the Action Alternatives, based on a review of the facts and analyses contained in the Draft EA.

Dated: November 15, 2023.

Rebecca A. Rizzuti,

Deputy Chief Legal Counsel, International Boundary and Water Commission, United States Section.

INTERNATIONAL TRADE COMMISSION

[USITC SE–23–055]

Sunshine Act Meetings

AGENCY HOLDING THE MEETING: United States International Trade Commission.

TIME AND DATE: November 30, 2023 at 11 a.m.

PLACE: Room 101, 500 E Street SW, Washington, DC 20436, Telephone: (202) 205–2000.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED:

1. *Agendas for future meetings:* none.
2. Minutes.
3. Ratification List.
4. Commission vote on Inv. No. 731–TA–1658 (Preliminary) (Truck and Bus Tires from Thailand). The Commission currently is scheduled to complete and file its determinations on December 1, 2023; views of the Commission currently are scheduled to be completed and filed on December 8, 2023.
5. Commission vote on Inv. Nos. 701–TA–566 and 731–TA–1342 (Review) (Softwood Lumber Products from Canada). The Commission currently is scheduled to complete and file its determinations and views of the Commission on December 20, 2023.
6. *Outstanding action jackets:* none.

CONTACT PERSON FOR MORE INFORMATION: Sharon Bellamy, Supervisory Hearings and Information Officer, 202–205–2000.

The Commission is holding the meeting under the Government in the Sunshine Act, 5 U.S.C. 552(b). In accordance with Commission policy, subject matter listed above, not disposed of at the scheduled meeting, may be carried over to the agenda of the following meeting.

By order of the Commission.

Issued: November 20, 2023.

Lisa Barton,

Secretary to the Commission.

DEPARTMENT OF JUSTICE

[OMB Number 1125–0017]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Certification and Release of Records

AGENCY: Executive Office for Immigration Review, Department of Justice.

ACTION: 30-Day notice.

SUMMARY: The Executive Office for Immigration Review (EOIR), Department of Justice (DOJ), will be submitting the following information collection (ICR) request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** on September 7, 2023, allowing a 60-day comment period.

DATES: Comments are encouraged and will be accepted for 30 days until December 22, 2023.

FOR FURTHER INFORMATION CONTACT: If you have comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact: Lauren Alder Reid, Assistant Director, Office of Policy, Executive Office for Immigration Review, 5107 Leesburg Pike, Suite 2500, Falls Church, VA 22041, telephone: 703–305–0289, email: *lauren.alder.reid@usdoj.gov.*

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

—Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
—Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
—Enhance the quality, utility, and clarity of the information to be collected; and/or
—Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

Written comments and recommendations for this information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the information collection or the OMB Control Number 1125–0017. This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view Department of Justice, information collections currently under review by OMB.

DOJ seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOJ notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Overview of This Information Collection

1. *Type of Information Collection:* Revision and extension of a previously approved collection.

2. *Title of the Form/Collection:* Certification and Release of Records.

3. *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* EOIR–59, Executive Office for Immigration Review.

4. *Affected public who will be asked or required to respond, as well as a brief abstract:* Individuals or households. The obligation to respond is optional and voluntary.

This ICR is used by EOIR to standardize and streamline requests for records related to cases or proceedings before EOIR pursuant to the Privacy Act and Freedom of Information Act (FOIA). An individual who is in or has been in proceedings before EOIR and seeks to authorize the disclosure of their information, including information retained in case files or a Record of Proceeding (documents, and if applicable, audio recordings), to an attorney, accredited representative, qualified organization, or other third party may use this form to authorize the disclosure. Revisions were made to the form to improve the Agency's implementation of the identity and guardianship verification requirements set forth in 28 CFR 16.41 and to ensure that privacy-protected information is not improperly released.

5. *Obligation to Respond:* Voluntary.

6. *Total Estimated Number of Respondents:* 55,475.

7. *Estimated Time per Respondent:* 10 minutes.

8. *Frequency:* Once a year or annually.

9. Total Estimated Annual Time Burden: 9,246 hours.

10. *Total Estimated Annual Other Costs Burden:* $0.

If additional information is required, contact: Darwin Arceo, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE, 4W–218, Washington, DC 20530.

Dated: November 16, 2023.

Darwin Arceo,

Department Clearance Officer for PRA, U.S. Department of Justice.

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Request for public comments.

SUMMARY: OSHA solicits public comments concerning the proposal to extend the Office of Management and Budget's (OMB) approval of the information collection requirements specified in the Fire Brigades Standard.

DATES: Comments must be submitted (postmarked, sent, or received) by January 22, 2024.

ADDRESSES:

Electronically: You may submit comments and attachments electronically at *https://www.regulations.gov,* which is the Federal eRulemaking Portal. Follow the instructions online for submitting comments.

Docket: To read or download comments or other material in the docket, go to *https://www.regulations.gov.* Documents in the docket are listed in the *https://www.regulations.gov* index; however, some information (*e.g.,* copyrighted material) is not publicly available to read or download through the website. All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

Instructions: All submissions must include the agency name and OSHA docket number (OSHA–2011–0009) for the Information Collection Request (ICR). OSHA will place all comments, including any personal information, in the public docket, which may be made available online. Therefore, OSHA cautions interested parties about submitting personal information such as social security numbers and birthdates.

For further information on submitting comments, see the ''Public Participation'' heading in the section of this notice titled **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Seleda Perryman or Theda Kenney, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor; telephone (202) 693–2222.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of Labor, as part of the continuing effort to reduce paperwork and respondent (*i.e.,* employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing information collection requirements in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, the collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of effort in obtaining information (29 U.S.C. 657).

OSHA does not mandate that employers establish fire brigades; however, if they do so, they must comply with the provisions of the Fire Brigades Standard. The provisions of the standard, including the paperwork requirements, apply to fire brigades, industrial fire departments, and private or contract fire departments, but not to airport crash rescue units or forest firefighting operations. Paragraphs (b)(1), (b)(2), and (c)(4) contain the paperwork requirements of the standard.

Under paragraph (b)(1) of the standard, employers must develop and maintain an organizational statement that establishes the: existence of a fire brigade; the basic organizational structure of the brigade; type, amount, and frequency of training provided to brigade members; expected number of members in the brigade; and functions that the brigade is to perform. This paragraph also specifies that the organizational statement must be available for review by workers, their designated representatives, and OSHA compliance officers. The organizational statement describes the functions performed by the brigade members and, thereby, determines the level of training and type of personal protective equipment (PPE) necessary for these members to perform their assigned functions safely. Making the statement available to workers, their designated representatives, and OSHA compliance officers ensures that the elements of the statement are consistent with the functions performed by the brigade members and the occupational hazards they experience, and that employers are providing training and PPE appropriate to these functions and hazards.

To permit a worker with known heart disease, epilepsy, or emphysema to participate in fire brigade emergency activities, paragraph (b)(2) of the standard requires employers to obtain a physician's certificate of the worker's fitness. This provision provides employers with a direct and efficient means of ascertaining whether or not they can safely expose workers with these medical conditions to the hazards of firefighting operations.

Paragraph (c)(4) of the standard requires employers to inform fire brigade members of special hazards, such as the storage and use of flammable liquids and gases, toxic chemicals, radioactive sources, water-reactive substances that may be present during fires and other emergencies, and any changes in these special hazards. It also requires that employers develop written procedures describing the actions that brigade members are to take when special hazards are present, and to make these procedures available in the education and training program and for review by brigade members.

II. Special Issues for Comment

OSHA has a particular interest in comments on the following issues:

- Whether the proposed information collection requirements are necessary for the proper performance of the agency's functions to protect workers, including whether the information is useful;
- The accuracy of OSHA's estimate of the burden (time and costs) of the information collection requirements, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information collected; and
- Ways to minimize the burden on employers who must comply; for example, by using automated or other technological information collection, and transmission techniques.

III. Proposed Actions

OSHA is requesting that OMB extend the approval of the information collection requirements contained in the

Fire Brigades Standard (29 CFR 1910.156). The agency is requesting an adjustment decrease in burden hours from 2,767 to 2,695, a total decrease of 72 hours. The adjustment is due to a decrease in the number of manufacturing facilities with 100 or more workers from 25,546 to 24,885. Also, the number of responses decreased from 3,832 to 3,733.

OSHA will summarize the comments submitted in response to this notice and will include this summary in the request to OMB to extend the approval of the information collection requirements.

Type of Review: Extension of a currently approved collection.

Title: The Fire Brigades Standard (29 CFR 1910.156).

OMB Control Number: 1218–0075.

Affected Public: Business or other for-profits.

Number of Respondents: 24,885.

Number of Responses: 3,733.

Frequency of Responses: On occasion.

Average Time per Response: Varies.

Estimated Total Burden Hours: 2,695.

Estimated Cost (Operation and Maintenance): $0.

IV. Public Participation—Submission of Comments on This Notice and internet Access to Comments and Submissions

You may submit comments in response to this document as follows: (1) electronically at *https://www.regulations.gov,* which is the Federal eRulemaking Portal; (2) by facsimile (fax); if your comments, including attachments, are not longer than 10 pages you may fax them to the OSHA Docket Office at 202–693–1648; or (3) by hard copy. All comments, attachments, and other material must identify the agency name and the OSHA docket number for the ICR (Docket No. OSHA–2011–0009). You may supplement electronic submissions by uploading document files electronically.

Comments and submissions are posted without change at *https://www.regulations.gov.* Therefore, OSHA cautions commenters about submitting personal information such as social security numbers and dates of birth. Although all submissions are listed in the *https://www.regulations.gov* index, some information (*e.g.,* copyrighted material) is not publicly available to read or download from this website. All submissions, including copyrighted material, are available for inspection and copying at the OSHA Docket Office. Information on using the *https://www.regulations.gov* website to submit comments and access the docket is available at the website's ''User Tips'' link.

Contact the OSHA Docket Office at (202) 693–2350, (TTY (877) 889–5627) for information about materials not available from the website, and for assistance in using the internet to locate docket submissions.

V. Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice. The authority for this notice is the Paperwork Reduction Act of 1995 (44 U.S.C. 3506 *et seq.*) and Secretary of Labor's Order No. 8–2020 (85 FR 58393).

Signed at Washington, DC.

James S. Frederick,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510–26–P

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA–2007–0043]

TUV SUD America, Inc.: Applications for Expansion of Recognition

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Notice.

SUMMARY: In this notice, OSHA announces the applications of TUV SUD America, Inc. (TUVAM) for expansion of recognition as a Nationally Recognized Testing Laboratory (NRTL) and presents the agency's preliminary finding to grant the applications.

DATES: Submit comments, information, and documents in response to this notice, or requests for an extension of time to make a submission, on or before December 7, 2023.

ADDRESSES: Comments may be submitted as follows:

Electronically: You may submit comments, including attachments, electronically at *http://www.regulations.gov,* the Federal eRulemaking Portal. Follow the online instructions for submitting comments.

Instructions: All submissions must include the agency's name and the docket number for this rulemaking (Docket No. OSHA–2007–0043). All comments, including any personal information you provide, are placed in the public docket without change and may be made available online at *https://www.regulations.gov.* Therefore, OSHA cautions commenters about submitting information they do not want made available to the public, or submitting materials that contain personal information (either about themselves or others), such as Social Security numbers and birthdates.

Docket: To read or download comments or other material in the docket, go to *http://www.regulations.gov.* Documents in the docket (including this **Federal Register** notice) are listed in the *http://www.regulations.gov* index; however, some information (*e.g.,* copyrighted material) is not publicly available to read or download through the website. All submissions, including copyrighted material, are available for inspection through the OSHA Docket Office. Contact the OSHA Docket Office at (202) 693–2350 (TTY (877) 889–5627) for assistance in locating docket submissions.

Extension of comment period: Submit requests for an extension of the comment period on or before December 7, 2023 to the Office of Technical Programs and Coordination Activities, Directorate of Technical Support and Emergency Management, Occupational Safety and Health Administration, U.S. Department of Labor, 200 Constitution Avenue NW, Room N–3653, Washington, DC 20210, or by fax to (202) 693–1644.

FOR FURTHER INFORMATION CONTACT: Information regarding this notice is available from the following sources:

Press inquiries: Contact Mr. Frank Meilinger, Director, OSHA Office of Communications, U.S. Department of Labor by phone: (202) 693–1999 or email: *meilinger.francis2@dol.gov.*

General and technical information: Contact Mr. Kevin Robinson, Director, Office of Technical Programs and Coordination Activities, Directorate of Technical Support and Emergency Management, Occupational Safety and Health Administration, U.S. Department of Labor by phone: (202) 693–1911 or email: *robinson.kevin@dol.gov.*

SUPPLEMENTARY INFORMATION:

I. Notice of the Applications for Expansion

OSHA is providing notice that TUV SUD America, Inc. (TUVAM) is applying for expansion of the current recognition as a NRTL. TUVAM requests the addition of two recognized testing standards and one recognized testing site to the NRTL scope of recognition.

OSHA recognition of a NRTL signifies that the organization meets the requirements specified in 29 CFR 1910.7. Recognition is an acknowledgment that the organization

can perform independent safety testing and certification of the specific products covered within its scope of recognition. Each NRTL's scope of recognition includes (1) the type of products the NRTL may test, with each type specified by its applicable test standard; and (2) the recognized site(s) that has/have the technical capability to perform the product-testing and product-certification activities for test standards within the NRTL's scope. Recognition is not a delegation or grant of government authority; however, recognition enables employers to use products approved by the NRTL to meet OSHA standards that require product testing and certification.

The agency processes an application by a NRTL for initial recognition and for an expansion or renewal of this recognition, following requirements in Appendix A, 29 CFR 1910.7. This appendix requires that the agency publish two notices in the **Federal Register** in processing an application. In the first notice, OSHA announces the application and provides its preliminary finding. In the second notice, the agency provides the final decision on the application. These notices set forth the NRTL's scope of recognition or modifications of that scope. OSHA maintains an informational web page for each NRTL, including TUVAM, which details the NRTL's scope of recognition. These pages are available from the OSHA website at: *https://www.osha.gov/nationally-recognized-testing-laboratory-program.*

TUVAM currently has sixteen facilities (sites) recognized by OSHA for product testing and certification, with its headquarters located at: TUV SUD America, Inc., 401 Edgewater Place, Suite 500, Wakefield, MA 01880. A complete list of TUVAM's scope of recognition (including sites recognized by OSHA) is available at: *https://www.osha.gov/nationally-recognized-testing-laboratory-program.*

II. General Background on the Applications

TUVAM submitted two applications to OSHA for expansion of the NRTL scope of recognition. The first application, dated June 8, 2020 (OSHA–2007–0043–0051), requested the expansion of the NRTL scope of recognition to include one additional test site located at: Daimlerstr, 40 Frankfurt am Main, Hessen 60314 Germany. The second application dated July 12, 2021 (OSHA–2007–0043–0052), requested the expansion of the NRTL scope of recognition to include two additional test standards that were removed from another NRTL expansion application (see OSHA–2007–0043–0042). In that application, TUVAM originally requested the addition of five standards to their scope of recognition on July 12, 2021. That application was amended to remove two standards, and the final **Federal Register** notice announcing the expansion of the NRTL scope of recognition to include the other three standards was published on June 29, 2022 (see 87 FR 38784). This notice covers the remaining two standards from the July 12, 2021, expansion application and the requested testing site. OSHA staff performed an on-site review of TUVAM's testing facilities at TUVAM Frankfurt on June 14–15, 2023, in which assessors found some nonconformances with the requirements of 29 CFR 1910.7. TUVAM has addressed these issues sufficiently, and OSHA staff has preliminarily determined that OSHA should grant the applications.

Table 1 below lists the appropriate test standards found in TUVAM's applications for expansion for testing and certification of products under the NRTL Program.

TABLE 1—PROPOSED LIST OF APPROPRIATE TEST STANDARDS FOR INCLUSION IN TUVAM'S NRTL SCOPE OF RECOGNITION

Test standard	Test standard title
UL 61010–2–040 ..	Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use—Part 2–040: Particular Requirements for Sterilizers and Washer-Disinfectors Used to Treat Medical Materials.
UL 61010–2–091 ..	Standard for Safety Requirements for Electrical Equipment for Measurement, Control and Laboratory Use—Part 2–091: Particular Requirements for Cabinet X-Ray Systems.

III. Preliminary Findings on the Applications

TUVAM submitted acceptable applications for expansion of the NRTL scope of recognition. OSHA's review of the application file, and pertinent documentation, indicate that TUVAM can meet the requirements prescribed by 29 CFR 1910.7 for expanding their recognition to include the addition of two additional testing standards and one additional testing site for NRTL testing and certification. This preliminary finding does not constitute an interim or temporary approval of TUVAM's applications. OSHA seeks comment on this preliminary determination.

IV. Public Participation

OSHA welcomes public comment as to whether TUVAM meets the requirements of 29 CFR 1910.7 for expansion of recognition as a NRTL. Comments should consist of pertinent written documents and exhibits.

Commenters needing more time to comment must submit a request in writing, stating the reasons for the request by the due date for comments. OSHA will limit any extension to 10 days unless the requester justifies a longer time period. OSHA may deny a request for an extension if it is not adequately justified.

To review copies of the exhibits identified in this notice, as well as comments submitted to the docket, contact the Docket Office, Occupational Safety and Health Administration, U.S. Department of Labor. These materials also are generally available online at *https://www.regulations.gov* under Docket No. OSHA–2007–0043 (for further information, see the ''*Docket*'' heading in the section of this notice titled **ADDRESSES**).

OSHA staff will review all comments to the docket submitted in a timely manner. After addressing the issues raised by these comments, staff will make a recommendation to the Assistant Secretary of Labor for Occupational Safety and Health on whether to grant TUVAM's applications for expansion of the scope of recognition. The Assistant Secretary will make the final decision on granting the applications. In making this decision, the Assistant Secretary may undertake other proceedings prescribed in Appendix A to 29 CFR 1910.7.

OSHA will publish a public notice of the final decision in the **Federal Register**.

V. Authority and Signature

James S. Frederick, Deputy Assistant Secretary of Labor for Occupational Safety and Health, 200 Constitution Avenue NW, Washington, DC 20210,

authorized the preparation of this notice. Accordingly, the agency is issuing this notice pursuant to Section 29 U.S.C. 657(g)(2), Secretary of Labor's Order No. 8–2020 (85 FR 58393; Sept. 18, 2020), and 29 CFR 1910.7.

Signed at Washington, DC.

James S. Frederick,

Deputy Assistant Secretary of Labor for Occupational Safety and Health.

[FR Doc. 2023–25758 Filed 11–21–23; 8:45 am]

BILLING CODE 4510–26–P

NATIONAL TRANSPORTATION SAFETY BOARD

[Docket No.: NTSB–2023–0005]

Information Collection: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery

AGENCY: National Transportation Safety Board (NTSB).

ACTION: Notice and request for comments for a new information collection.

SUMMARY: Under the Paperwork Reduction Act (PRA) of 1995, this notice announces that the NTSB's Information Collection Request (ICR) will be submitted to the Office of Management and Budget (OMB) for review and approval. On May 30, 2023, the NTSB published the requisite 60-Day Notice in the **Federal Register**, notifying the public that the NTSB seeks OMB approval on generic clearance for qualitative feedback on agency service delivery. To date, no comments have been received. However, the NTSB has since corrected a typographical error regarding the estimated average burden hours and has added to the list of the types of collections that this generic clearance covers. The NTSB is now issuing this 30-Day Notice, directing the public to submit all comments to OMB.

DATES: Submit written comments to OMB regarding this proposed collection of information by December 22, 2023.

ADDRESSES: Submit written comments to OMB at *www.reginfo.gov/public/do/PRAMain.* To find this IC, select ''Currently under Review—Open for Public Comments'' or use the search function.

FOR FURTHER INFORMATION CONTACT: William T. (Tom) McMurry, Jr., General Counsel, (202) 314–6080, *rulemaking@ntsb.gov.*

SUPPLEMENTARY INFORMATION: A **Federal Register** notice with a 60-day comment period was published on May 30, 2023, notifying the public of the agency's intent to seek OMB approval on generic clearance for qualitative feedback on agency service delivery; no comments were received as a result. However, the NTSB has since corrected a typographical error regarding the estimated average burden hours per respondent from 30 minutes to 5 minutes. This correction is consistent with the agency's total estimated annual burden hours of 1,250 for the 15,000 total estimated number of annual responses. Further, the NTSB has added to its list of the types of collections that this generic clearance covers. The NTSB is currently issuing this 30-Day notice, informing the public that the agency will now submit the following ICR to OMB and that all comments should be directed to OMB:

Title of Collection: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

Form Number: To be determined by specific collections.

Type of Request: New Collection.

Type of Review: Regular.

Type of Review Requested: 3 years from the date of approval.

Summary of the Collection of Information: With the goal of ensuring that the Federal Government provided the highest quality service as possible, Executive Order (E.O.) 12862 (Setting Customer Service Standards) was issued to set customer service standards to a level that either matched or exceeded the best service available in the private sector. Accordingly, E.O. 12862 directed Federal agencies to create customer surveys to obtain information on customer satisfaction. E.O. 14058 (Transforming Federal Customer Experience and Service Delivery to Rebuild Trust in Government) was later issued and reiterated the Federal Government's commitment to improve a customer's experience in an agency's service delivery. E.O. 14058 defined service delivery as an action related to a Federal benefit or service provided to a customer.

To ensure that the NTSB's service delivery is effective and meets its customer needs, the NTSB seeks OMB approval of a generic clearance to collect qualitative feedback on the agency's service delivery. This proposed IC provides a means to garner qualitative feedback in an efficient, timely manner in accordance with the commitment to improving service delivery.

Qualitative feedback is information that will provide insights into stakeholder perceptions, experiences, and expectations; provide an early warning of issues with service; or focus attention on areas where communication, training, or changes in operations might improve delivery of products and services. This feedback will allow for ongoing, collaborative, and actionable communications between the NTSB and its stakeholders. It will also allow for feedback to contribute directly to the improvement of program management.

The feedback solicited will target areas that include, but are not limited to: timeliness, appropriateness, accuracy of information, courtesy, efficiency of service delivery, and resolution of issues with service delivery. Responses will be assessed to plan and inform efforts to improve or maintain the quality of service offered to the public. If this information is not collected, vital feedback from stakeholders on the agency's services will be unavailable.

The agency will only submit a collection for approval under this generic clearance if it meets the following conditions:

- The collection is voluntary;
- The collection is low-burden for respondents (based on considerations of total burden hours, total number of respondents, or burden-hours per respondent) and is low-cost for both the respondents and the Federal Government;
- The collection is non-controversial and does not raise issues of concern to other Federal agencies;
- Any collection is targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near-future;
- Personally identifiable information (PII) is collected only to the extent necessary and is not retained;
- Information gathered is intended to be used only internally for general service improvement and program management purposes and is not intended for release outside of the agency (if released, the agency must indicate the qualitative nature of the information);
- Information gathered will not be used for the purpose of substantially informing influential policy decisions; and
- Information gathered will yield qualitative information; the collections will not be designed or expected to yield statistically reliable results or used as though the results are generalizable to the population of study. The types of collections that this generic clearance covers include, but are not limited to:
- Customer comment cards/complaint forms.
- Qualitative customer satisfaction surveys (*e.g.,* post-meeting surveys; web surveys).

• In-person observation testing (*e.g.,* website or software usability tests).
• Small discussion groups.
• Focus Groups of customers, potential customers, delivery partners, or other stakeholders.
• Cognitive laboratory studies, such as those used to refine questions or assess usability of a website.

Feedback collected under this generic clearance provides useful information, but it does not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: the target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior to fielding the study. Depending on the degree of influence the results are likely to have, such as collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

As a general matter, information collections under this request will not result in any new system of records containing privacy information and will not ask questions of a sensitive nature, such as sexual behavior and attitudes, religious beliefs, and other matters that are commonly considered private.

Current Actions: New collection of information.

Type of Review: New Collection.

Affected Public: Individuals and Households, Businesses and Organizations, and State, Local, or Tribal Government.

Total Estimated Annual Burden Hours: 1,250.

Estimated Average Burden Hours per Respondent: 5 minutes.

Frequency of Response: On occasion, per request.

Total Estimated No. of Annual Responses: 15,000.

The 1,250 annual burden hours requested are based on the number of collections the NTSB expects to conduct over the requested three-year period for this generic clearance.

Estimated Total Annual Burden Cost: $0.

Participation in this collection is voluntary, and there are no costs to respondents beyond the time spent participating in the surveys.

Request for Comments: OMB is interested in comments that include: (1) whether the proposed collection is necessary for the NTSB to perform its mission; (2) the accuracy of the estimated burden; (3) ways for the NTSB to enhance the quality, usefulness, and clarity of the IC; and (4) ways to minimize burden without reducing the quality of the IC.

William T. McMurry, Jr.,

General Counsel.

[FR Doc. 2023–25863 Filed 11–21–23; 8:45 am]

BILLING CODE 7533–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–611 and 50–612; NRC–2023–0138]

Kairos Power, LLC; Hermes 2

AGENCY: Nuclear Regulatory Commission.

ACTION: Construction permit application; opportunity to request a hearing and petition for leave to intervene; order imposing procedures.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is providing notice that an uncontested hearing will be held on the Kairos Power, LLC (Kairos) construction permit application that proposes the construction of a test reactor facility, identified as 'Hermes 2', in Oak Ridge, Tennessee, at a time and place to be set in the future by the Commission or designated by the Atomic Safety and Licensing Board. This notice provides the public an opportunity to request a hearing and petition for leave to intervene (*i.e.,* contested hearing) with respect to that application. The NRC staff is currently conducting a detailed technical review of the construction permit application. If the NRC issues a construction permit, the applicant, Kairos, would be authorized to construct its proposed test reactor facility in accordance with the provisions of the construction permit. Because the application contains Sensitive Unclassified Non-Safeguards Information (SUNSI), an order imposes procedures to obtain access to this type of information for contention preparation.

DATES: A request for a hearing or petitions for leave to intervene must be filed by January 22, 2024. Any potential party as defined in section 2.4 of title 10 of the *Code of Federal Regulations* (10 CFR) who believes access to SUNSI is necessary to respond to this notice must request document access by December 4, 2023.

ADDRESSES: Please refer to Docket ID NRC–2023–0138 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

• *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0138. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

• *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The ADAMS accession number for each document referenced (if it is available in ADAMS) is provided the first time that it is mentioned in this document.

• *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Michael Orenak, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–3229; email: *Michael.Orenak@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

On July 14, 2023, Kairos Power LLC (Kairos) submitted, pursuant to 10 CFR part 50, ''Domestic Licensing of Production and Utilization Facilities,'' an application (ADAMS Package Accession No. ML23195A121) for a construction permit for the 'Hermes 2' test reactor facility (a ''testing facility'' as defined in 10 CFR 50.2), that would consist of two fluoride salt-cooled test

reactor units at the East Tennessee Technology Park in Oak Ridge, Tennessee. A notice of receipt and availability was published in the **Federal Register** on August 4, 2023 (88 FR 51876). The NRC staff determined that Kairos submitted the application in accordance with 10 CFR 2.101(a)(5), and a notice of the acceptability of docketing of Kairos's application was published in the **Federal Register** on September 15, 2023 (88 FR 63632). The docket numbers established for this application are 50–611 and 50–612 for Units 1 and 2, respectively.

The NRC is considering issuance of a construction permit to Kairos that would authorize construction of the proposed Hermes 2 test reactor facility to be located in Oak Ridge, Tennessee. The Hermes 2 facility would contain two fluoride-salt cooled, high-temperature test reactors using solid tri-structural isotropic fuel in pebble form. Each test reactor would contain an intermediate heat transfer loop and share a common power generation system.

II. Hearing

Pursuant to the Atomic Energy Act of 1954, as amended, 10 CFR part 2, ''Agency Rules of Practice and Procedure,'' and part 50, notice is hereby given that an uncontested (*i.e.,* mandatory) hearing will be held, at a time and place to be set in the future by the Commission or designated by the Atomic Safety and Licensing Board (Board).

The hearing on the application for a construction permit filed by Kairos pursuant to 10 CFR part 50 will be conducted by a Board that will be designated by the Chief Judge of the Atomic Safety and Licensing Board Panel or will be conducted by the Commission. If the hearing is conducted by a Board, notice as to the membership of the Board will be published in the **Federal Register** at a later date. The NRC staff will complete a detailed technical review of the application and will document its findings in a safety evaluation. The Commission will refer a copy of the application to the Advisory Committee on Reactor Safeguards (ACRS) in accordance with 10 CFR 50.58, ''Hearings and Report of the Advisory Committee on Reactor Safeguards,'' and the ACRS will report on those portions of the application that concern safety. The NRC staff will also complete an environmental review of the application and will document its findings in accordance with the National Environmental Policy Act of 1969 (NEPA), as amended, and the Commission's regulations in 10 CFR part 51, ''Environmental Protection Regulations for Domestic Licensing and Related Regulatory Functions.'' The staff will prepare an environmental assessment that will be used to determine whether an environmental impact statement is necessary or a finding of no significant impact is warranted to satisfy the NRC's NEPA obligations.

III. Opportunity To Request a Hearing and Petition for Leave To Intervene

Within 60 days after the date of publication of this notice, any person (petitioner) whose interest may be affected by this action may file a request for a hearing and petition for leave to intervene (petition) with respect to the action. Petitions shall be filed in accordance with the Commission's ''Agency Rules of Practice and Procedure'' in 10 CFR part 2. Interested persons should consult 10 CFR 2.309. If a petition is filed, the presiding officer will rule on the petition and, if appropriate, a notice of a hearing will be issued.

Petitions must be filed no later than 60 days from the date of publication of this notice in accordance with the filing instructions in the ''Electronic Submissions (E-Filing)'' section of this document. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i) through (iii).

A State, local governmental body, Federally recognized Indian Tribe, or designated agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h)(1) no later than 60 days from the date of publication of this notice. Alternatively, a State, local governmental body, Federally recognized Indian Tribe, or agency thereof may participate as a non-party under 10 CFR 2.315(c).

For information about filing a petition and about participation by a person not a party under 10 CFR 2.315(c), see ADAMS Accession No. ML20340A053 (*https://adamswebsearch2.nrc.gov/webSearch2/main.jsp?AccessionNumber=ML20340A053*) and on the NRC website at *https://www.nrc.gov/about-nrc/regulatory/adjudicatory/hearing.html#participate.*

IV. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including documents filed by an interested State, local governmental body, Federally recognized Indian Tribe, or designated agency thereof that requests to participate under 10 CFR 2.315(c), must be filed in accordance with 10 CFR 2.302. The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases, to mail copies on electronic storage media, unless an exemption permitting an alternative filing method, as further discussed, is granted. Detailed guidance on electronic submissions is located in the ''Guidance for Electronic Submissions to the NRC'' (ADAMS Accession No. ML13031A056) and on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals.html.*

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at *Hearing.Docket@nrc.gov,* or by telephone at 301–415–1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals/getting-started.html.* After a digital ID certificate is obtained and a docket created, the participant must submit adjudicatory documents in Portable Document Format. Guidance on submissions is available on the NRC's public website at *https://www.nrc.gov/site-help/electronic-sub-ref-mat.html.* A filing is considered complete at the time the document is submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. ET on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email confirming receipt of the document. The E-Filing system also distributes an email that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to

participate in the proceeding, so that the filer need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed to obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC's Electronic Filing Help Desk through the ''Contact Us'' link located on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals.html,* by email to *MSHD.Resource@nrc.gov,* or by a toll-free call at 1–866–672–7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., ET, Monday through Friday, except Federal holidays.

Participants who believe that they have good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted in accordance with 10 CFR 2.302(b)–(d). Participants filing adjudicatory documents in this manner are responsible for serving their documents on all other participants. Participants granted an exemption under 10 CFR 2.302(g)(2) must still meet the electronic formatting requirement in 10 CFR 2.302(g)(1), unless the participant also seeks and is granted an exemption from 10 CFR 2.302(g)(1).

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, which is publicly available at *https://adams.nrc.gov/ehd,* unless excluded pursuant to an order of the presiding officer. If you do not have an NRC-issued digital ID certificate as previously described, click ''cancel'' when the link requests certificates and you will be automatically directed to the NRC's electronic hearing dockets where you will be able to access any publicly available documents in a particular hearing docket. Participants are requested not to include personal privacy information such as social security numbers, home addresses, or personal phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants should not include copyrighted materials in their submission.

Order Imposing Procedures for Access to Sensitive Unclassified Non-Safeguards Information for Contention Preparation

A. This Order contains instructions regarding how potential parties to this proceeding may request access to documents containing Sensitive Unclassified Non-Safeguards Information (SUNSI).

B. Within 10 days after publication of this notice of hearing or opportunity for hearing, any potential party who believes access to SUNSI is necessary to respond to this notice may request access to SUNSI. A ''potential party'' is any person who intends to participate as a party by demonstrating standing and filing an admissible contention under 10 CFR 2.309. Requests for access to SUNSI submitted later than 10 days after publication of this notice will not be considered absent a showing of good cause for the late filing, addressing why the request could not have been filed earlier.

C. The requestor shall submit a letter requesting permission to access SUNSI to the Office of the Secretary, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, Attention: Rulemakings and Adjudications Staff, and provide a copy to the Deputy General Counsel for Licensing, Hearings, and Enforcement, Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001. The expedited delivery or courier mail address for both offices is: U.S. Nuclear Regulatory Commission, 11555 Rockville Pike, Rockville, Maryland 20852. The email addresses for the Office of the Secretary and the Office of the General Counsel are *Hearing.Docket@nrc.gov* and *RidsOgcMailCenter.Resource@nrc.gov,* respectively.[1] The request must include the following information:

(1) A description of the licensing action with a citation to this **Federal Register** notice;

(2) The name and address of the potential party and a description of the potential party's particularized interest that could be harmed by the action identified in C.(1); and

(3) The identity of the individual or entity requesting access to SUNSI and the requestor's basis for the need for the information in order to meaningfully participate in this adjudicatory proceeding. In particular, the request must explain why publicly available versions of the information requested would not be sufficient to provide the basis and specificity for a proffered contention.

D. Based on an evaluation of the information submitted under paragraph C, the NRC staff will determine within 10 days of receipt of the request whether:

(1) There is a reasonable basis to believe the petitioner is likely to establish standing to participate in this NRC proceeding; and

(2) The requestor has established a legitimate need for access to SUNSI.

E. If the NRC staff determines that the requestor satisfies both D.(1) and D.(2), the NRC staff will notify the requestor in writing that access to SUNSI has been granted. The written notification will contain instructions on how the requestor may obtain copies of the requested documents, and any other conditions that may apply to access to those documents. These conditions may include, but are not limited to, the signing of a Non-Disclosure Agreement or Affidavit, or Protective Order[2] setting forth terms and conditions to prevent the unauthorized or inadvertent disclosure of SUNSI by each individual who will be granted access to SUNSI.

F. Filing of Contentions. Any contentions in these proceedings that are based upon the information received as a result of the request made for SUNSI must be filed by the requestor no later than 25 days after receipt of (or access to) that information. However, if more than 25 days remain between the petitioner's receipt of (or access to) the information and the deadline for filing all other contentions (as established in the notice of hearing or opportunity for hearing), the petitioner may file its SUNSI contentions by that later deadline.

G. Review of Denials of Access.

(1) If the request for access to SUNSI is denied by the NRC staff after a determination on standing and requisite need, the NRC staff shall immediately notify the requestor in writing, briefly stating the reason or reasons for the denial.

(2) The requestor may challenge the NRC staff's adverse determination by filing a challenge within 5 days of receipt of that determination with: (a) the presiding officer designated in this

[1] While a request for hearing or petition to intervene in this proceeding must comply with the filing requirements of the NRC's ''E-Filing Rule,'' the initial request to access SUNSI under these procedures should be submitted as described in this paragraph.

[2] Any motion for Protective Order or draft Non-Disclosure Affidavit or Agreement for SUNSI must be filed with the presiding officer or the Chief Administrative Judge if the presiding officer has not yet been designated, within 30 days of the deadline for the receipt of the written access request.

proceeding; (b) if no presiding officer has been appointed, the Chief Administrative Judge, or if this individual is unavailable, another administrative judge, or an Administrative Law Judge with jurisdiction pursuant to 10 CFR 2.318(a); or (c) if another officer has been designated to rule on information access issues, with that officer.

(3) Further appeals of decisions under this paragraph must be made pursuant to 10 CFR 2.311.

H. Review of Grants of Access. A party other than the requestor may challenge an NRC staff determination granting access to SUNSI whose release would harm that party's interest independent of the proceeding. Such a challenge must be filed within 5 days of the notification by the NRC staff of its grant of access and must be filed with: (a) the presiding officer designated in this proceeding; (b) if no presiding officer has been appointed, the Chief Administrative Judge, or if this individual is unavailable, another administrative judge, or an Administrative Law Judge with jurisdiction pursuant to 10 CFR 2.318(a); or (c) if another officer has been designated to rule on information access issues, with that officer.

If challenges to the NRC staff determinations are filed, these procedures give way to the normal process for litigating disputes concerning access to information. The availability of interlocutory review by the Commission of orders ruling on such NRC staff determinations (whether granting or denying access) is governed by 10 CFR 2.311.[3]

I. The Commission expects that the NRC staff and presiding officers (and any other reviewing officers) will consider and resolve requests for access to SUNSI, and motions for protective orders, in a timely fashion in order to minimize any unnecessary delays in identifying those petitioners who have standing and who have propounded contentions meeting the specificity and basis requirements in 10 CFR part 2. The attachment to this Order summarizes the general target schedule for processing and resolving requests under these procedures.

It is so ordered.

Dated: November 17, 2023.

For the Nuclear Regulatory Commission.

Carrie M. Safford,

Secretary of the Commission.

ATTACHMENT 1—General Target Schedule for Processing and Resolving Requests for Access to Sensitive Unclassified Non-Safeguards Information in This Proceeding

Day	Event/Activity
0	Publication of **Federal Register** notice of hearing or opportunity for hearing, including order with instructions for access requests.
10	Deadline for submitting requests for access to Sensitive Unclassified Non-Safeguards Information (SUNSI) with information: supporting the standing of a potential party identified by name and address; describing the need for the information in order for the potential party to participate meaningfully in an adjudicatory proceeding.
60	Deadline for submitting petition for intervention containing: (i) demonstration of standing; and (ii) all contentions whose formulation does not require access to SUNSI (+25 Answers to petition for intervention; +7 petitioner/requestor reply).
20	U.S. Nuclear Regulatory Commission (NRC) staff informs the requestor of the staff's determination whether the request for access provides a reasonable basis to believe standing can be established and shows need for SUNSI. (NRC staff also informs any party to the proceeding whose interest independent of the proceeding would be harmed by the release of the information.) If NRC staff makes the finding of need for SUNSI and likelihood of standing, NRC staff begins document processing (preparation of redactions or review of redacted documents).
25	If NRC staff finds no ''need'' or no likelihood of standing, the deadline for petitioner/requestor to file a motion seeking a ruling to reverse the NRC staff's denial of access; NRC staff files copy of access determination with the presiding officer (or Chief Administrative Judge or other designated officer, as appropriate). If NRC staff finds ''need'' for SUNSI, the deadline for any party to the proceeding whose interest independent of the proceeding would be harmed by the release of the information to file a motion seeking a ruling to reverse the NRC staff's grant of access.
30	Deadline for NRC staff reply to motions to reverse NRC staff determination(s).
40	(Receipt +30) If NRC staff finds standing and need for SUNSI, deadline for NRC staff to complete information processing and file motion for Protective Order and draft Non-Disclosure Agreement or Affidavit. Deadline for applicant/licensee to file Non-Disclosure Agreement or Affidavit for SUNSI.
A	If access granted: issuance of presiding officer or other designated officer decision on motion for protective order for access to sensitive information (including schedule for providing access and submission of contentions) or decision reversing a final adverse determination by the NRC staff.
A + 3	Deadline for filing executed Non-Disclosure Agreements or Affidavits. Access provided to SUNSI consistent with decision issuing the protective order.
A + 28	Deadline for submission of contentions whose development depends upon access to SUNSI. However, if more than 25 days remain between the petitioner's receipt of (or access to) the information and the deadline for filing all other contentions (as established in the notice of hearing or notice of opportunity for hearing), the petitioner may file its SUNSI contentions by that later deadline.
A + 53	(Contention receipt +25) Answers to contentions whose development depends upon access to SUNSI.
A + 60	(Answer receipt +7) Petitioner/Intervenor reply to answers.
>A + 60	Decision on contention admission.

[FR Doc. 2023–25818 Filed 11–21–23; 8:45 am]

BILLING CODE 7590–01–P

[3] Requestors should note that the filing requirements of the NRC's E-Filing Rule (72 FR 49139; August 28, 2007, as amended at 77 FR 46562; August 3, 2012, 78 FR 34247, June 7, 2013) apply to appeals of NRC staff determinations (because they must be served on a presiding officer or the Commission, as applicable), but not to the initial SUNSI request submitted to the NRC staff under these procedures.

NUCLEAR REGULATORY COMMISSION

[Docket No. 50–323; NRC–2023–0197]

Pacific Gas and Electric Company; Diablo Canyon Nuclear Power Plant, Unit 2

AGENCY: Nuclear Regulatory Commission.

ACTION: License amendment application; opportunity to comment, request a hearing, and petition for leave to intervene.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC, the Commission) is considering issuance of an amendment to Facility Operating License No. DPR–82, issued to Pacific Gas and Electric Company (PG&E, the licensee), for operation of the Diablo Canyon Nuclear Power Plant (Diablo Canyon), Unit 2. The proposed amendment would revise Technical Specification (TS) 3.7.8, ''Auxiliary Saltwater (ASW) System,'' Condition A note to allow a one-time Completion Time (CT) of 144 hours to replace the ASW Pump 2–2 motor during Cycle 24. The proposed amendment is being requested under exigent circumstances pursuant to NRC regulations.

DATES: Submit comments by December 6, 2023. Request for a hearing or petitions for leave to intervene must be filed by January 22, 2024.

ADDRESSES: You may submit comments by any of the following; however, the NRC encourages electronic comment submission through the Federal rulemaking website:

- *Federal rulemaking website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0197. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *Mail comments to:* Office of Administration, Mail Stop: TWFN–7–A60M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, ATTN: Program Management, Announcements and Editing Staff.

For additional direction on obtaining information and submitting comments, see ''Obtaining Information and Submitting Comments'' in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Siva P. Lingam, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–415–1564; email: *Siva.Lingam@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2023–0197 when contacting the NRC about the availability of information for this action. You may obtain publicly available information related to this action by any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2023–0197.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* The License Amendment Request 23–03, as supplemented, to revise Technical Specification (TS) 3.7.8, ''Auxiliary Saltwater (ASW) System,'' is available in ADAMS under Accession Nos. ML23319A204 and ML23320A312, respectively.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

B. Submitting Comments

The NRC encourages electronic comment submission through the Federal rulemaking website (*https://www.regulations.gov*). Please include Docket ID NRC–2023–0197 in your comment submission.

The NRC cautions you not to include identifying or contact information that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at *https://www.regulations.gov* as well as enter the comment submissions into ADAMS. The NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment into ADAMS.

II. Introduction

The NRC is considering issuance of an amendment to Facility Operating License No. DPR–82, issued to PG&E, for operation of Diablo Canyon, Unit 2, located in San Luis Obispo County, California.

The proposed amendment would revise TS 3.7.8, ''Auxiliary Saltwater (ASW) System,'' to provide a revised TS 3.7.8 Condition A Note to allow a one-time completion time (CT) of 144 hours to replace the ASW System Pump 2–2 motor during Cycle 24 for Diablo Canyon, Unit 2.

Pursuant to the requirements of sections 50.91 and 50.92 of Title 10 of the *Code of Federal Regulations* (10 CFR), the licensee requested approval of the amendment under exigent circumstances. The need to replace the ASW Pump 2–2 motor occurred on an emergent basis due to indication of a potential degraded motor bearing. The ASW Pump 2–2 motor is currently OPERABLE but trends in bearing performance indicate that OPERABILITY could be impacted prior to the next scheduled Unit 2 refueling outage in April 2023. In order to maintain high plant safety, PG&E currently plans to begin replacement of the ASW Pump 2–2 motor the week of December 11, 2023. The circumstances requiring this exigent amendment request could not reasonably have been avoided. Oil samples collected from ASW pump 2–2 in January 2023 up until August 21, 2023, were within acceptance limits. On October 23, 2023, the ASW Pump 2–2 oil sample visually exhibited further discoloration compared to the sample collected on August 21, 2023, indicating that degradation had continued. As a result of the indication of a potential degraded ASW Pump 2–2 motor bearing on October 23, 2023, the associated analysis on October 27, 2023, indicating a further step change increase in particulate count, and as a prudent measure to maintain high reliability of the ASW pump, PG&E currently plans to begin replacement of the ASW Pump 2–2 motor on the week of December 11, 2023. The replacement of this motor will have no impact on the unit

electrical load or electrical distribution systems.

Before any issuance of the proposed license amendment, the NRC will need to make the findings required by the Atomic Energy Act of 1954, as amended (the Act), and NRC's regulations.

Pursuant to 10 CFR 50.91(a)(6) for amendments to be granted under exigent circumstances, the NRC has made a proposed determination that the license amendment request involves no significant hazards consideration (NSHC). Under the NRC's regulations in 10 CFR 50.92, this means that operation of the facility in accordance with the proposed amendment would not (1) involve a significant increase in the probability or consequences of an accident previously evaluated; or (2) create the possibility of a new or different kind of accident from any accident previously evaluated; or (3) involve a significant reduction in a margin of safety. As required by 10 CFR 50.91(a), the licensee has provided its analysis of the issue of NSHC, which is presented as follows:

1. Does the proposed change involve a significant increase in the probability or consequences of an accident previously evaluated?

Response: No.

The proposed change to the requirements in TS 3.7.8, ''Auxiliary Saltwater (ASW) System'' Condition A will allow a one-time Completion Time of 144-hours during Unit 2 Cycle 24 for Auxiliary Saltwater System (ASW) Pump 2–2 to support the emergent replacement of the pump motor. The ASW system is not an initiator of any UFSAR Chapter 6 or 15 design basis accident or event, and therefore, the proposed change does not increase the probability of any accident previously evaluated. The ASW system is used to supply cooling water to respond to accidents that have been previously evaluated. The proposed change affects only the time allowed for an ASW system train to be inoperable and does not affect the design of the ASW system. With the change to TS 3.7.8, adequate ASW continues to be provided to perform the heat removal function for accidents previously evaluated and there is no significant impact on accident consequences. The proposed change does not significantly change how the plant would mitigate an accident previously evaluated.

Therefore, the proposed change does not involve a significant increase in the probability or consequences of an accident previously evaluated.

2. Does the proposed change create the possibility of a new or different kind of accident from any accident previously evaluated?

Response: No.

The proposed change does not result in a change in the manner in which the ASW system provides plant protection. The ASW system will continue to perform the function of heat removal while in the proposed revised TS 3.7.8 Condition A. The change does not involve a physical alteration of the plant that impacts the capability of the ASW system to perform its design function. Therefore, the proposed change does not create the possibility of a new or different accident from any accident previously evaluated.

3. Does the proposed change involve a significant reduction in a margin of safety?

Response: No.

The proposed change does not alter the manner in which safety limits, limiting safety system settings, or limiting conditions for operation are determined. The safety analysis acceptance criteria are not impacted by this change. The proposed change will not result in plant operation in a configuration outside the existing design basis since TS 3.7.8 Condition A already allows one train of the ASW system to be inoperable.

Therefore, the proposed change does not involve a significant reduction in a margin of safety.

The NRC staff has reviewed the licensee's analysis and, based on this review, the three standards of 10 CFR 50.92(c) are satisfied. Therefore, the NRC staff proposes to determine that the license amendment request involves a NSHC. In accordance with 10 CFR 50.91(a)(6), where the Commission finds that exigent circumstances exist, in that a licensee and the Commission must act quickly and that time does not permit the Commission to publish a **Federal Register** notice allowing 30 days for prior public comment, and it also determines that the amendment involves NSHCs, it can issue a **Federal Register** notice providing notice of an opportunity for hearing and allowing at least two weeks from the date of the notice for prior public comment. Therefore, in accordance with 10 CFR 50.91(a)(6)(i)(A), the NRC staff is providing a 14-day notice period for public comment.

The NRC is seeking public comments on this proposed determination that the license amendment request involves NSHC. Any comments received within 14 days after the date of publication of this notice will be considered in making any final determination.

Normally, the Commission will not issue the amendment until the expiration of the 14-day notice period. However, if circumstances change during the notice period, such that failure to act in a timely way would result, for example, in derating or shutdown of the facility, the Commission may issue the license amendment before the expiration of the 14-day notice period, provided that its final determination is that the amendment involves NSHC. The final determination will consider all public and State comments received. If the Commission takes this action, it will publish in the **Federal Register** a notice of issuance. The Commission expects that the need to take this action will occur very infrequently.

III. Opportunity to Request a Hearing and Petition for Leave to Intervene

Within 60 days after the date of publication of this notice, any person (petitioner) whose interest may be affected by this action may file a request for a hearing and petition for leave to intervene (petition) with respect to the action. Petitions shall be filed in accordance with the Commission's ''Agency Rules of Practice and Procedure'' in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.309. If a petition is filed, the Commission or a presiding officer will rule on the petition and, if appropriate, a notice of a hearing will be issued.

Petitions must be filed no later than 60 days from the date of publication of this notice in accordance with the filing instructions in the ''Electronic Submissions (E-Filing)'' section of this document. Petitions and motions for leave to file new or amended contentions that are filed after the deadline will not be entertained absent a determination by the presiding officer that the filing demonstrates good cause by satisfying the three factors in 10 CFR 2.309(c)(1)(i) through (iii).

If a hearing is requested and the Commission has not made a final determination on the issue of NHSC, the Commission will make a final determination on the issue of NSHC, which will serve to establish when the hearing is held. If the final determination is that the amendment request involves NHSC, the Commission may issue the amendment and make it immediately effective, notwithstanding the request for a hearing. Any hearing would take place after issuance of the amendment. If the final determination is that the amendment request involves a significant hazards consideration, then any hearing held would take place before the issuance of the amendment unless the Commission finds an imminent danger to the health or safety of the public, in which case it will issue an appropriate order or rule under 10 CFR part 2.

A State, local governmental body, Federally recognized Indian Tribe, or designated agency thereof, may submit a petition to the Commission to participate as a party under 10 CFR 2.309(h) no later than 60 days from the date of publication of this notice. Alternatively, a State, local governmental body, Federally recognized Indian Tribe, or agency

thereof may participate as a non-party under 10 CFR 2.315(c).

For information about filing a petition and about participation by a person not a party under 10 CFR 2.315, see ADAMS Accession No. ML20340A053 (*https://adamswebsearch2.nrc.gov/webSearch2/main.jsp?AccessionNumber=ML20340A053*) and on the NRC's public website at *https://www.nrc.gov/about-nrc/regulatory/adjudicatory/hearing.html#participate.*

IV. Electronic Submissions (E-Filing)

All documents filed in NRC adjudicatory proceedings, including documents filed by an interested State, local governmental body, Federally recognized Indian Tribe, or designated agency thereof that requests to participate under 10 CFR 2.315(c), must be filed in accordance with 10 CFR 2.302. The E-Filing process requires participants to submit and serve all adjudicatory documents over the internet, or in some cases, to mail copies on electronic storage media, unless an exemption permitting an alternative filing method, as further discussed, is granted. Detailed guidance on electronic submissions is located in the ''Guidance for Electronic Submissions to the NRC'' (ADAMS Accession No. ML13031A056) and on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals.html.*

To comply with the procedural requirements of E-Filing, at least 10 days prior to the filing deadline, the participant should contact the Office of the Secretary by email at *Hearing.Docket@nrc.gov,* or by telephone at 301–415–1677, to (1) request a digital identification (ID) certificate, which allows the participant (or its counsel or representative) to digitally sign submissions and access the E-Filing system for any proceeding in which it is participating; and (2) advise the Secretary that the participant will be submitting a petition or other adjudicatory document (even in instances in which the participant, or its counsel or representative, already holds an NRC-issued digital ID certificate). Based upon this information, the Secretary will establish an electronic docket for the proceeding if the Secretary has not already established an electronic docket.

Information about applying for a digital ID certificate is available on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals/getting-started.html.* After a digital ID certificate is obtained and a docket created, the participant must submit adjudicatory documents in Portable Document Format. Guidance on submissions is available on the NRC's public website at *https://www.nrc.gov/site-help/electronic-sub-ref-mat.html.* A filing is considered complete at the time the document is submitted through the NRC's E-Filing system. To be timely, an electronic filing must be submitted to the E-Filing system no later than 11:59 p.m. ET on the due date. Upon receipt of a transmission, the E-Filing system time-stamps the document and sends the submitter an email confirming receipt of the document. The E-Filing system also distributes an email that provides access to the document to the NRC's Office of the General Counsel and any others who have advised the Office of the Secretary that they wish to participate in the proceeding, so that the filer need not serve the document on those participants separately. Therefore, applicants and other participants (or their counsel or representative) must apply for and receive a digital ID certificate before adjudicatory documents are filed to obtain access to the documents via the E-Filing system.

A person filing electronically using the NRC's adjudicatory E-Filing system may seek assistance by contacting the NRC's Electronic Filing Help Desk through the ''Contact Us'' link located on the NRC's public website at *https://www.nrc.gov/site-help/e-submittals.html,* by email to *MSHD.Resource@nrc.gov,* or by a toll-free call at 1–866–672–7640. The NRC Electronic Filing Help Desk is available between 9 a.m. and 6 p.m., ET, Monday through Friday, except Federal holidays.

Participants who believe that they have good cause for not submitting documents electronically must file an exemption request, in accordance with 10 CFR 2.302(g), with their initial paper filing stating why there is good cause for not filing electronically and requesting authorization to continue to submit documents in paper format. Such filings must be submitted in accordance with 10 CFR 2.302(b)-(d). Participants filing adjudicatory documents in this manner are responsible for serving their documents on all other participants. Participants granted an exemption under 10 CFR 2.302(g)(2) must still meet the electronic formatting requirement in 10 CFR 2.302(g)(1), unless the participant also seeks and is granted an exemption from 10 CFR 2.302(g)(1).

Documents submitted in adjudicatory proceedings will appear in the NRC's electronic hearing docket, which is publicly available at *https://adams.nrc.gov/ehd,* unless excluded pursuant to an order of the presiding officer. If you do not have an NRC-issued digital ID certificate as previously described, click ''cancel'' when the link requests certificates and you will be automatically directed to the NRC's electronic hearing dockets where you will be able to access any publicly available documents in a particular hearing docket. Participants are requested not to include personal privacy information such as social security numbers, home addresses, or personal phone numbers in their filings unless an NRC regulation or other law requires submission of such information. With respect to copyrighted works, except for limited excerpts that serve the purpose of the adjudicatory filings and would constitute a Fair Use application, participants should not include copyrighted materials in their submission.

For further details with respect to this action, see the application for license amendment dated November 14, 2023, as supplemented by letter dated November 16, 2023 (ADAMS Accession Nos. ML23319A204 and ML23320A312, respectively).

POSTAL REGULATORY COMMISSION

[Docket Nos. MC2024–52 and CP2024–53]

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* November 27, 2023.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by

telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

[1] *See* Docket No. RM2018–3, Order Adopting Final Rules Relating to Non-Public Information, June 27, 2018, Attachment A at 19–22 (Order No. 4679).

II. Docketed Proceeding(s)

1. *Docket No(s).:* MC2024–52 and CP2024–53; *Filing Title:* USPS Request to Add Priority Mail Express, Priority Mail & USPS Ground Advantage Contract 13 to Competitive Product List and Notice of Filing Materials Under Seal; *Filing Acceptance Date:* November 15, 2023; *Filing Authority:* 39 U.S.C. 3642, 39 CFR 3040.130 through 3040.135, and 39 CFR 3035.105; *Public Representative:* Jennaca D. Upperman; *Comments Due:* November 27, 2023.

This Notice will be published in the **Federal Register**.

Change in Rates and Classes of General Applicability for Competitive Products

AGENCY: Postal Service™.

ACTION: Notice of a change in rates and classifications of general applicability for competitive products.

SUMMARY: This notice sets forth changes in rates and classifications of general applicability for competitive products.

DATES: *Applicable date:* January 21, 2024.

FOR FURTHER INFORMATION CONTACT: Elizabeth Reed, 202–268–3179.

SUPPLEMENTARY INFORMATION: On November 13, 2023, pursuant to their authority under 39 U.S.C. 3632, the Governors of the Postal Service established prices and classification changes for competitive products. The Governors' Decision and the record of proceedings in connection with such decision are reprinted below in accordance with section 3632(b)(2). Mail Classification Schedule language containing the new prices and classification changes can be found at *www.prc.gov.*

Sarah Sullivan,

Attorney, Ethics & Legal Compliance.

Decision of the Governors of the United States Postal Service on Changes in Rates and Classifications of General Applicability for Competitive Products (Governors' Decision No. 23–5)

November 13, 2023

Statement of Explanation and Justification

Pursuant to authority under section 3632 of title 39, as amended by the Postal Accountability and Enhancement Act of 2006 (''PAEA''), we establish prices and classifications of general applicability for the Postal Service's competitive products. The changes are described generally below, with a detailed description of the changes in the Postal Service's associated draft Mail Classification Schedule change document. That document contains the draft Mail Classification Schedule sections with classification changes in legislative format, and new prices displayed in the price charts.

As shown in the nonpublic annex being filed under seal herewith, the changes we establish should enable each competitive product to cover its attributable costs (39 U.S.C. 3633(a)(2)) and should result in competitive products as a whole complying with 39 U.S.C. 3633(a)(3), which, as implemented by 39 CFR 3035.107(c), requires competitive products collectively to contribute a minimum of 9.9 percent to the Postal Service's institutional costs. Accordingly, no issue of subsidization of competitive products by market dominant products should arise (39 U.S.C. 3633(a)(1)). We therefore find that the new prices and classification changes are in accordance with 39 U.S.C. 3632–3633 and 39 CFR 3035.102 and 104.

I. Domestic Products

A. Priority Mail Express

Overall, the Priority Mail Express price change represents a 5.9 percent increase. In 2023, we consolidated the Commercial Base and Commercial Plus price categories into one Commercial price category and differentiated the ''Local, 1, 2'' Zone prices. For January 2024, this new structure will be maintained. Dimensional weighting, which was introduced for all zones in 2019, will also continue in 2024.

Retail prices will increase an average of 5.9 percent. The price for the Retail Flat Rate Envelope, a significant portion of all Priority Mail Express volume, will increase to $30.45, with the Legal Size and Padded Flat Rate Envelopes priced at $30.65 and $31.20, respectively.

The Commercial price category will increase 5.9 percent on average. Commercial prices will, on average, reflect a 13.7 percent discount off of Retail prices. The eVS Unmanifested Fee will be renamed as ''Unmanifested Fee'' to accommodate the ongoing migration of customers from eVS to the USPS Ship platform. Finally, certain Nonstandard Fees (NSFs) applicable to Priority Mail Express will see a 20 percent increase in 2024.

B. Priority Mail

On average, the Priority Mail prices will be increased by 5.7 percent. Similar to Priority Mail Express, the Commercial Base and Commercial Plus price categories were consolidated into one Priority Mail Commercial price category and ''Local, 1, 2'' Zone prices were differentiated in 2023. For January 2024, this new structure will be maintained. Dimensional weighting, which was introduced for all zones in 2019, will also continue in 2024.

Retail prices will increase by an average of 5.6 percent. Retail Flat Rate Box prices will be: Small, $10.40; Medium, $18.40; Large, $24.75 and Large APO/FPO/DPO, $23.00. Thus, the Large APO/FPO/DPO Flat Rate Box will be $1.75 less than the Large Flat Rate Box. The regular Flat Rate Envelope will be priced at $9.85, with the Legal Size and Padded Flat Rate Envelopes priced at $10.15 and $10.60, respectively.

The Commercial price category will increase by 5.8 percent on average. Commercial prices will, on average, reflect a 20.5 percent discount off of Retail prices. The eVS Unmanifested Fee will be renamed as ''Unmanifested Fee'' to accommodate the ongoing migration of customers from eVS to the USPS Ship platform. Finally, certain Nonstandard Fees (NSFs) applicable to Priority Mail will see a 20 percent increase in 2024.

C. Parcel Select

On average, Parcel Select prices as a whole will increase 5.9 percent. New for 2024, we will be eliminating Parcel Select Lightweight as a separate price category; rather, ounce-based prices will be added under the destination-entered categories at 4-, 8-, and 12-ounce increments. With the elimination of Parcel Select Lightweight and prior structural changes made earlier in 2023, the prices for Parcel Select can now be expressed in a single price table, which further supports the Postal Service's product simplification efforts.

For destination delivery unit (DDU) entered parcels, the average price increase is 5.9 percent. For destination hub (Dhub) entered parcels, the average price increase is 5.9 percent. For destination sectional center facility (DSCF) destination entered parcels, the average price increase is 5.9 percent. For destination network distribution center (DNDC) parcels, the average price increase is 5.9 percent. Prices for USPS Connect Local, introduced in 2022, will remain unchanged for 2024. Dimensional weighting, which was introduced for all zones in 2019, will continue in 2024. The eVS Unmanifested Fee will be renamed as ''Unmanifested Fee'' to accommodate the ongoing migration of customers from eVS to the USPS Ship platform. Finally, certain Nonstandard Fees (NSFs) applicable to Parcel Select will see a 20 percent increase in 2024.

D. USPS Ground Advantage

USPS Ground Advantage, introduced in July 2023, is the Postal Service's flagship ground package product. The existing structure will be maintained for 2024. Overall, USPS Ground Advantage prices will increase 5.4 percent on average. Retail prices will increase 5.2 percent on average, while Commercial prices will increase 5.4 percent on average. The Alaska Limited Overland Routes (LOR) price category will see a 9.2 percent average increase for January 2024. The eVS Unmanifested Fee will be renamed as ''Unmanifested Fee'' to accommodate the ongoing migration of customers from eVS to the USPS Ship platform. Finally, certain Nonstandard Fees (NSFs) applicable to USPS Ground Advantage will see a 20 percent increase in 2024.

F. Domestic Extra Services

Premium Forwarding Service (PFS) prices will increase 3.0 percent on average in 2024. The retail counter enrollment fee will increase to $26.20. The online enrollment option, introduced in 2014, will increase to $24.10. The weekly reshipment fee will increase to $26.20. The reshipment fee for PFS Local, which was introduced in 2019 for P.O. Box customers, will increase to $26.20. Prices for Adult Signature service will increase to $9.35 for the basic service and $9.65 for the person-specific service. Address Enhancement Service prices will increase 3.0 percent on average in 2024. Competitive Post Office Box prices will be increasing 6.5 percent on average, within the existing price ranges. Package Intercept Service will increase to $17.50. The Pickup On Demand fee will remain unchanged for 2024, at $26.50. Premium Data Retention and Retrieval Service (USPS Tracking Plus), which was introduced in 2020, will not see a price change in 2024. The fee for Label Delivery Service, introduced in 2023 under the Competitive Ancillary Services product, will remain at $1.25 for 2024.

II. International Products

A. Expedited Services

International expedited services include Global Express Guaranteed (GXG) and Priority Mail Express International (PMEI). Overall, GXG prices will rise by 5.4 percent, and PMEI will be subject to an overall 5.4 percent increase. Commercial Plus prices will be equivalent to Commercial Base.

B. Priority Mail International

The overall increase for Priority Mail International (PMI) will be 5.4 percent. Commercial Plus prices will be equivalent to Commercial Base.

C. International Priority Airmail and International Surface Air Lift

Published prices for International Priority Airmail (IPA) and International Surface Air Lift (ISAL) will increase by 5.5 percent and 3.5 percent, respectively.

D. Airmail M-Bags

The published prices for Airmail M-Bags will increase by 5.4 percent.

E. First-Class Package International Service™

The overall increase for First-Class Package International Service (FCPIS) prices will be 6.4 percent. Commercial Plus prices will be equivalent to Commercial Base.

F. International Ancillary Services and Special Services

Prices for several international ancillary services will be increased, including a 2.5 percent increase for International Certificate of Mailing, a 3.0 percent increase for International Insurance, a 2.5 percent increase for International Registered Mail, a 2.7 percent increase for International Return Receipt, and a 3.0 percent increase for the Customs and Clearance Delivery Fee.

Order

The changes in prices and classes set forth herein shall be effective at 12:01 a.m. on January 21, 2024. We direct the Secretary to have this decision published in the **Federal Register** in accordance with 39 U.S.C. 3632(b)(2) and direct management to file with the Postal Regulatory Commission appropriate notice of these changes.

By the Governors.

/s/

Roman Martinez IV,

Chairman, Board of Governors.

United States Postal Service Office of the Board of Governors

Certification of Governors' Vote on Governors' Decision No. 23–5

Consistent with 39 U.S.C. 3632(a), I hereby certify that, on November 13, 2023, the Governors voted on adopting Governors' Decision No. 23–5, and that a majority of the Governors then holding office voted in favor of that Decision.

Date: November 13, 2023.

/s/

Michael J. Elston,

Secretary of the Board of Governors.

BILLING CODE 7710–12–P

OFFICE OF SCIENCE AND TECHNOLOGY POLICY

Notice of Request for Information; National Plan for Civil Earth Observations

AGENCY: Office of Science and Technology Policy (OSTP).

ACTION: Notice of Request for Information (RFI).

SUMMARY: The White House Office of Science and Technology Policy (OSTP) requests public inputs to inform the development of the congressionally mandated National Plan for Civil Earth Observations (hereinafter ''2023 National Plan''). This notice, which includes a draft of the 2023 National Plan, seeks information to achieve a future vision for continued United States global leadership in enabling and leveraging civil Earth Observations to increase access to Earth data, and address global changes. This notice serves as the follow-on Request for Information referenced in a **Federal Register** Notice titled ''Notice of Upcoming Request for Information; National Plan for Civil Earth Observations''.

DATES: Interested persons and organizations are invited to submit comments on or before 5 p.m. ET, December 31, 2023 to be considered.

ADDRESSES: Due to time constraints, mailed paper submissions will not be accepted, and electronic submissions received after the deadline may not be taken into consideration.

Interested individuals and organizations should submit comments electronically via regulations.gov (Docket #: OSTP–2023–XXXX). Due to time constraints, mailed paper submissions will not be accepted, and electronic submissions received after the deadline cannot be ensured to be incorporated or taken into consideration.

Instructions: Federal eRulemaking Portal: Go to *www.regulations.gov* to submit your comments electronically. Information on how to use *Regulations.gov,* including instructions for accessing agency documents, submitting comments, and viewing the docket, is available on the site under ''FAQ'' (*https://www.regulations.gov/faq*).

Privacy Note: OSTP's policy is to make all comments received from

members of the public available for public viewing in their entirety on the Federal eRulemaking Portal at *www.regulations.gov.* Therefore, commenters should be careful to include in their comments only information that they wish to make publicly available. OSTP requests that no proprietary information, copyrighted information, or personally identifiable information be submitted in response to this RFI.

Information obtained from this RFI may be used by the Government on a non-attribution basis for planning and strategy development. OSTP will not respond to individual submissions. A response to this RFI will not be viewed as a binding commitment to develop or pursue the project or ideas discussed. This RFI is not accepting applications for financial assistance or financial incentives.

Responses containing references, studies, research, and other empirical data that are not widely published should include copies of or electronic links to the referenced materials. Responses from minors, or responses containing profanity, vulgarity, threats, or other inappropriate language or content will not be considered.

Comments submitted in response to this notice are subject to the Freedom of Information Act (FOIA). Responses to this RFI may be posted without change online. Please note that the United States Government will not pay for response preparation, or for the use of any information contained in a response.

FOR FURTHER INFORMATION CONTACT: Ezinne Uzo-Okoro; tel: 202–456–4010.

SUPPLEMENTARY INFORMATION: Pursuant to 42 U.S.C. 6617, OSTP is soliciting public input through an RFI to obtain feedback from a wide variety of stakeholders, including individuals, industry, academia, research laboratories, nonprofits, and think tanks. OSTP is specifically interested in public input to inform the development and release of the 2023 National Plan to better leverage Earth Observations for addressing key societal challenges and trends of the coming decade. The first draft of the 2023 National Plan is included for public input.

Dated: November 16, 2023.

Stacy Murphy,

Deputy Chief Operations Officer/Security Officer.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98964; File No. SR–NYSEARCA–2023–79]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Connectivity Fee Schedule

November 16, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 9, 2023, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Connectivity Fee Schedule regarding colocation services and fees to provide Users with wireless connectivity to CME Group market data. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users [4] with wireless connectivity to CME Group market data.[5]

The Exchange currently provides Users with wireless connections to eight market data feeds or combinations of feeds from third-party markets (the ''Existing Third Party Data''),[6] and wired connections to more than 45 market data feeds or combinations of feeds.[7] The Exchange proposes to add to the Fee Schedule wireless connections to CME Group, Inc. (''CME Group'') market data (''CME Group Data'' and, together with the Existing Third Party Data, the ''Third Party Data''). Users would be offered the proposed wireless connection to the CME Group Data through connections into the colocation center in the Mahwah, New Jersey data center (''MDC'').[8]

The Exchange expects that the proposed rule change would become

[4] For purposes of the Exchange's colocation services, a ''User'' means any market participant that requests to receive colocation services directly from the Exchange. *See* Securities Exchange Act Release No. 76010 (September 29, 2015), 80 FR 60197 (October 5, 2015) (SR–NYSEArca–2015–82). As specified in the Fee Schedule, a User that incurs colocation fees for a particular colocation service pursuant thereto would not be subject to colocation fees for the same colocation service charged by the Exchange's affiliates the New York Stock Exchange LLC, NYSE American LLC, NYSE Chicago, Inc., and NYSE National, Inc. (together, the ''Affiliate SROs''). Each Affiliate SRO has submitted substantially the same proposed rule change to propose the changes described herein. *See* SR–NYSE–2023–44, SR–NYSEAMER–2023–59, SR–NYSECHX–2023–22, and SR–NYSENAT–2023–26.

[5] The Exchange filed a similar proposal in 2021, which it subsequently withdrew. *See* Securities Exchange Act Release No. 93810 (December 17, 2021), 86 FR 73026 (December 23, 2021) (SR–NYSE–2021–67, SR–NYSEAMER–2021–43, SR–NYSEARCA–2021–97, SR–NYSECHX–2021–17, SR–NYSENAT–2021–23).

[6] *See* Securities Exchange Act Release Nos. 76749 (December 23, 2015), 80 FR 81640 (December 30, 2015) (SR–NYSEArca–2015–99); 78377 (July 21, 2016), 81 FR 49327 (July 27, 2016) (SR–NYSEARCA–2016–99); and 80116 (February 28, 2017), 82 FR 12663 (March 6, 2017) (SR–NYSEArca–2017–18).

[7] *See* Securities Exchange Act Release No. 80310 (March 24, 2017), 82 FR 15763 (March 30, 2017) (SR–NYSEArca–2016–89).

[8] Through its Fixed Income and Data Services (''FIDS'') (previously ICE Data Services) business, Intercontinental Exchange, Inc. (''ICE'') operates the MDC. The Exchange and the Affiliate SROs are indirect subsidiaries of ICE. The proposed service would be provided by FIDS pursuant to an agreement with a non-ICE entity. FIDS does not own the wireless network that would be used to provide the service.

operative in the fourth quarter of 2023, and in any event, no later than December 31, 2023. The Exchange will announce the date that the wireless connection to the CME Group Data will be available through a customer notice.

To receive CME Group Data, the User would enter into an agreement with a third party for permission to receive the data, if required. The User would pay this third party any fees for the data content.

The Exchange proposes to revise the Fee Schedule to reflect fees related to the wireless connection to CME Group Data. For each wireless connection to CME Group Data, a User would be charged a $5,000 non-recurring initial charge and a monthly recurring charge of $6,000. If a User were to purchase more than one wireless connection to CME Group Data, it would pay more than one non-recurring initial charge. Each proposed wireless connection would include the use of one port for connectivity to CME Group Data, and a User would not pay a separate fee for the use of such port.[9]

The Exchange's proposed wireless connectivity to CME Group market data would not include the entire CME Group market data feed, which includes market data for approximately 1,200 futures symbols. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. Accordingly, FIDS has consulted with customers about which of the CME Group symbols they would like to be available wirelessly and plans to offer connectivity to a subgroup of symbols based on this customer feedback. The Exchange understands that Quincy Data LLC (''Quincy''),[10] a third party that already provides wireless connectivity to CME Group market data in the MDC, similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.[11]

Application and Impact of the Proposed Changes

The proposed changes would not apply differently to distinct types or sizes of market participants. Rather, they would apply to all Users equally.

As is currently the case, the purchase of any colocation service, including connectivity to Third Party Data, is completely voluntary and the Fee Schedule is applied uniformly to all Users.

Competitive Environment

The Exchange operates in a highly competitive market in which other vendors offer colocation services as a means to facilitate the trading and other market activities of those market participants who believe that colocation enhances the efficiency of their operations. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [12]

As explained below in this filing, the Exchange's proposed wireless connection to CME Group Data would compete with the wireless connection to CME Group market data provided by Quincy. Third-party vendors such as Quincy are not at any competitive disadvantage created by the Exchange.

The proposed change is not otherwise intended to address any other issues relating to colocation services or related fees, and the Exchange is not aware of any problems that Users would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[13] in general, and furthers the objectives of Section 6(b)(5) of the Act,[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange further believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,[15] because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Proposed Change Is Reasonable

The Exchange believes that the proposed rule change is reasonable. In considering the reasonableness of proposed services and fees, the Commission's market-based test considers ''whether the exchange was subject to significant competitive forces in setting the terms of its proposal . . . , including the level of any fees.'' [16] If the Exchange meets that burden, ''the Commission will find that its proposal is consistent with the Act unless 'there is a substantial countervailing basis to find that the terms' of the proposal violate the Act or the rules thereunder.'' [17] Here, the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because substantially similar substitutes are available, and the Exchange has not placed the third party vendors at a competitive disadvantage created by the Exchange.

Substantially Similar Substitutes Are Available

The Exchange's proposed wireless connection to CME Group Data would compete with other methods by which both the Exchange and various third parties already provide connectivity to CME Group market data to Users.

Quincy already provides wireless connectivity to CME Group market data in the MDC. Like the Exchange's

[9] If a User also connects to Existing Third Party Data, it would not be able to connect to such Existing Third Party Data using the same port that it uses for connectivity to CME Group Data.

[10] The Exchange understands that Quincy is an affiliate of McKay Brothers LLC.

[11] The Exchange understands that the third parties that provide wireless connectivity to CME Group market data to the MDC and other data centers in New Jersey (as discussed later in this filing) follow a substantially similar model, offering wireless connectivity to a selection of market data rather than to entire feeds.

Cir. 2010).

[17] *See* Wireless Approval Order, *supra* note 16, at 67049, citing 2008 ArcaBook Approval Order, *supra* note 16, at 74781.

proposed wireless connectivity, Quincy's wireless connectivity to CME Group market data includes a similarly-sized subset of symbols that almost completely overlaps with the symbols for which the Exchange proposes to provide wireless connectivity—presumably because customers have requested the same symbols of each provider. Specifically, like the Quincy wireless connection, the Exchange's proposed wireless connection would include the main futures for equity indices, government bonds, foreign exchanges, oil, and precious metals.[18] In addition, the Exchange's proposed wireless connection would also include several additional symbols that proposed Users have specifically requested be included. The Exchange plans to continuously monitor Users' preferences and their views of the usefulness of the included symbols, and may adjust them accordingly. The Exchange believes that the Quincy wireless connection to CME Group market data is at a same or similar speed as the Exchange's proposed connection, and at a similar price.[19]

Accordingly, the Quincy wireless connection to CME Group market data would compete with the Exchange's proposed wireless connection, and would exert significant competitive forces on the Exchange in setting the terms of its proposal, including the level of the Exchange's proposed fees.[20] If the Exchange were to set its proposed fees too high, Users could respond by instead selecting Quincy's substantially similar wireless connectivity to CME Group data.[21]

[18] Quincy's symbol list for wireless connectivity to CME Group data is available at *https://www.quincy-data.com/product-page/* under the heading ''2023 Quincy Extreme Data Symbol Set/North America QED Symbol Set.'' The Exchange understands that the Quincy wireless connection to CME Group data currently includes 26 symbols. The Exchange's proposed wireless connection to CME Group data would contain a similar number of symbols, nearly all of which are included in the Quincy wireless connection.

[19] Because Quincy is not a regulated entity, it is not obligated to make its latency figures or fees publicly available or the same for all entities.

[20] *See* 2008 ArcaBook Approval Order, *supra* note 16, at 74789 and n.295 (recognizing that products need not be identical to be substitutable).

[21] In addition, the Exchange believes that at least two third-party market participants, in addition to FIDS, offer fiber connections to CME Group market data in colocation. *See* Securities Exchange Act Release No. 81013 (June 23, 2017), 82 FR 29604 (June 29, 2017) (SR–NYSEARCA–2017–62). Unlike the proposed wireless connectivity, FIDS' fiber connection to CME Group market data includes the entire CME Group data feed, instead of a subset of symbols.

Third Party Competitors Are Not at a Competitive Disadvantage Created by the Exchange

The Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is available to any telecommunications provider. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[22] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party telecommunications service providers that have installed their equipment in the MDC's two meet-me-rooms (''Telecoms'').[23] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level[24] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[25] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third-party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

In sum, because the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because a substantially similar substitute is available, and the Exchange has not

[22] *See* NYSE Rule 3.13(c), NYSE American Rule 3.13E(c), NYSE Arca Rule 3.13(c), NYSE Chicago Rule 3.13(c), and NYSE National Rule 3.13(c) (Data Center Pole Restrictions—Connectivity to Co-Location Space). ''Patch Panel Point'' is defined as ''the patch panel where fiber connections for wireless services connect to the network row in the space used for co-location in the Data Center.'' *Id.* The proposed service would not use the MDC pole, so Rule 3.13(b) would not apply.

[23] Note that in the case of wireless connectivity, a User in colocation still requires a fiber circuit to transport data. If a Telecom is used, the data is transmitted wirelessly to the relevant pole, and then from the pole to the meet-me-room using a fiber circuit.

[24] *See* Securities Exchange Act Release No. 98000 (July 26, 2023), 88 FR 50244 (August 1, 2023) (SR–NYSEARCA–2023–47) (''MMR Notice'').

[25] *See id.* at 50247. Importantly, the Exchange is prevented from making any alteration to its meet-me-room services or fees without filing a proposal for such changes with the Commission.

placed the third-party vendors at a competitive disadvantage created by the Exchange, the proposed fees for the Exchange's wireless connectivity to CME Group Data are reasonable.[26] If the Exchange were to set its prices for wireless connectivity to CME Group Data at a level that Users found to be too high, Users could easily choose to connect to CME Group market data in colocation at the MDC through the competing Quincy wireless connection, as detailed above.

Additional Considerations

The Exchange believes that it is reasonable for the proposed wireless connection to CME Group Data not to transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. The Exchange believes it is reasonable for FIDS to select the symbols it will make available for wireless connectivity based on customer input and demand. The Exchange understands that Quincy similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.

The Exchange believes that it is reasonable that a User that connects to both CME Group Data and Existing Third Party Data may not use the same port for connectivity to both, and so would have at least two ports, because the proposed wireless connection would include the use of one port for connectivity to CME Group Data, and the connectivity to the Existing Third Party Data includes the use of one port for connectivity to Existing Third Party Data. A User would not pay a separate fee for using such ports.

The Proposed Change Is an Equitable Allocation of Fees and Credits

The Exchange believes that its proposal equitably allocates its fees among Users. Without this proposed rule change, Users would have fewer options for connectivity to CME Group market data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that the proposed change is equitable because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are equitably allocated because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select the Exchange's proposed wireless connections to CME Group Data would be charged the same amount for the same services.

The Proposed Change Is Not Unfairly Discriminatory

The Exchange believes that the proposed rule change is not unfairly discriminatory, for the following reasons. Without this proposed rule change, Users would have fewer options for connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that it is not unfairly discriminatory to not transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. There is limited bandwidth available on the wireless network to colocation, and there are a number of CME Group data feeds. Limiting the feeds to the selection of CME Group market data regarding securities for which FIDS determines there is demand would allow Users to receive the relevant CME Group Data over a wireless network.

The Exchange believes that the proposed change is not unfairly discriminatory because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are not unfairly discriminatory because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select wireless connections to CME Group Data would be charged the same amount for the same services. Users that opt to use wireless connections to CME Group Data would receive the CME Group Data that is available to all Users, as all market participants that contract with CME Group or its affiliate for CME Group Data, as required, may receive it.

For the reasons above, the proposed changes do not unfairly discriminate between or among market participants that are otherwise capable of satisfying any applicable colocation fees, requirements, terms, and conditions established from time to time by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes that the proposal will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of Section 6(b)(8) of the Act.[27]

The proposed change would not affect competition among national securities exchanges or among members of the Exchange, but rather between FIDS and its commercial competitors. The proposed wireless connection would provide Users with an alternative means of connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations.

Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection. The Exchange's proposed wireless connection and the existing Quincy wireless connection to CME Group market data are sufficiently similar substitutes and thus provide market participants with choices to meet their wireless connectivity needs.

In addition, the Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The

[26] *See* Wireless Approval Order, *supra* note 16.

[27] 15 U.S.C. 78f(b)(8).

Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is the same path followed by any Telecom. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[28] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party Telecoms that have installed their equipment in the MDC's two meet-me-rooms.[29] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level [30] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[31] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [32] and Rule 19b–4(f)(6) thereunder.[33] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b–4(f)(6) [34] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b4(f)(6)(iii),[35] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [36] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–NYSEARCA–2023–79 on the subject line.

Paper comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEARCA–2023–79. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 35050; File No. 812–15458]

John Hancock GA Mortgage Trust, et al.

November 16, 2023.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of application for an order (''Order'') under sections 17(d) and 57(i) of the Investment Company Act of 1940 (the ''Act'') and rule 17d–1 under the Act to permit certain joint transactions otherwise prohibited by sections 17(d) and 57(a)(4) of the Act and rule 17d–1 under the Act.

Summary of Application: Applicants request an order to amend a previous order granted by the Commission that permits certain business development companies (''BDCs'') and closed-end management investment companies to co-invest in portfolio companies with each other and with certain affiliated investment entities.

Applicants: John Hancock GA Mortgage Trust, John Hancock GA Senior Loan Trust, Manulife Investment Management Private Markets (US) LLC, John Hancock Life Insurance Company (U.S.A.), John Hancock Life & Health Insurance Company, John Hancock Life Insurance Company of New York, John Hancock Funding Company, LLC, Manulife SDF SPV—OH, LLC, MDLF Holdings Onshore LLC, Manulife Direct Lending Fund (Unlevered) L.P., and Manulife Direct Lending Fund, L.P.

Filing Dates: The application was filed on April 25, 2023, and amended on May 10, 2023, August 16, 2023, and October 4, 2023.

Hearing or Notification of Hearing: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on, December 11, 2023, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary at *Secretarys-Office@sec.gov*.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov*. Applicants: E. David Pemstein, John Hancock GA Mortgage Trust, John Hancock GA Senior Loan Trust, c/o John Hancock Life Insurance Company (U.S.A.), at *DPemstein@jhancock.com;* and George J. Zornada, Esq., K&L Gates LLP, at *George.Zornada@klgates.com*.

FOR FURTHER INFORMATION CONTACT: Kieran G. Brown, Senior Counsel, or Terri Jordan, Branch Chief, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' third amended and restated application, dated October 4, 2023, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field, on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *http://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98975; File No. SR–NYSEAMER–2023–57]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Expand the Application of the per User Access Fee for Use of Certain Market Data Products by Redistributors

November 16, 2023.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 1, 2023, NYSE American LLC (''NYSE American'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the fees for NYSE American BBO and NYSE American Trades by expanding the application of the Per User Access Fee. The Exchange proposes to implement the proposed fee change on November 1, 2023. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of,

[37] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to expand the application of the Per User Access Fee [4] for certain NYSE American market data products, as set forth on the NYSE American Proprietary Market Data Fee Schedule (''Fee Schedule''). Specifically, the Exchange proposes to expand the application of the Per User Access Fee, which is currently available for Redistributors [5] of NYSE American BBO and NYSE American Trades that subscribe to only such data feeds and do not subscribe to any other market data product listed on the Fee Schedule and use such market data product for external distribution only. The Exchange proposes to make the Per User Access Fee available to Redistributors of NYSE American OpenBook as well.

The proposed fee change, taken together with similar fee changes filed by the Exchange's affiliated exchanges, New York Stock Exchange LLC (''NYSE'') and NYSE Arca, Inc. (''NYSE Arca''),[6] will reduce the fees associated with the NYSE BQT proprietary data product for Redistributors of NYSE American OpenBook. As described below, NYSE BQT competes directly with similar products offered by both the Nasdaq and Cboe families of U.S. equity exchanges. Collectively, the proposed fee changes are intended to respond to the competition posed by similar products offered by the other exchange groups.

The Exchange proposes to implement the proposed fee change on November 1, 2023.

Background

The Securities and Exchange Commission (''Commission'') has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [7]

While Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [8] Indeed, equity trading is currently dispersed across 16 exchanges,[9] numerous alternative trading systems,[10] and broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 17% market share (whether including or excluding auction volume).[11]

With the NYSE BQT market data product, NYSE American and its affiliates compete head to head with the Nasdaq Basic [12] and Cboe One Feed [13] market data products. Similar to those market data products, NYSE BQT, which was established in 2014,[14] consists of certain elements from the NYSE American BBO and NYSE American Trades market data products as well as from market data products from the Exchange's affiliates, NYSE, NYSE Arca, NYSE Chicago, Inc. (''NYSE Chicago''),[15] and NYSE National, Inc. (''NYSE National'').[16] Similar to both Nasdaq Basic and the Cboe One Feed, NYSE BQT provides investors with a unified view of comprehensive last sale and BBO data in all Tape A, B, and C securities that trade on the Exchange, NYSE, NYSE Arca, NYSE Chicago, and NYSE National. Also similar to Nasdaq Basic and the Cboe One Feed, NYSE BQT is not intended to be used for purposes of making order-routing or trading decisions, but rather provides indicative prices for Tape A, B, and C securities.[17]

Together with NYSE and NYSE Arca, the Exchange proposes to compete for subscribers to NYSE BQT by designing the proposed fee change to be attractive to Redistributors of NYSE American OpenBook that intend to subscribe to and externally redistribute NYSE BQT. Currently, Redistributors of NYSE American OpenBook that want to subscribe to and redistribute NYSE BQT must pay the General Access Fee. Redistributors of NYSE American OpenBook who have data recipient customers interested in NYSE BQT may

[4] The Per User Access Fee is a lower access fee that currently applies for subscribers of NYSE American BBO and NYSE American Trades that receive a data feed and use those market data products in a display-only format. *See* Fee Schedule. *See also* Securities Exchange Act Release Nos. 87801 (December 19, 2019), 84 FR 71491 (December 27, 2019) (SR–NYSEAMER–2019–55) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change, as Modified by Partial Amendment No. 1, To Amend the Fees for NYSE American BBO and NYSE American Trades) (''BQT Fee Reduction Filing''); and 90408 (November 12, 2020), 85 FR 73556 (November 18, 2020) (SR–NYSEAMER–2020–79) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the Fees for NYSE American BBO and NYSE American Trades by Modifying the Application of the Access Fee and Amending the Fees for NYSE American Trades by Adopting a Waiver Applicable to the Redistribution Fee) (''Second BQT Fee Reduction Filing'').

[5] A Redistributor is a vendor or any other person that provides a NYSE data product to a data recipient or to any system that a data recipient uses, irrespective of the means of transmission or access.

[12] As described on the Nasdaq website, available here: *http://www.nasdaqtrader.com/Trader.aspx?id=nasdaqbasic,* Nasdaq Basic is a ''low cost alternative'' that provides ''Best Bid and Offer and Last Sale information for all U.S. exchange-listed securities based on liquidity within the Nasdaq market center, as well as trades reported to the FINRA Trade Reporting Facility (''TRF'').''

[13] As described on the Cboe website, available here: *https://markets.cboe.com/us/equities/market_data_services/cboe_one/,* the Cboe One Feed is a ''market data product that provides cost-effective, high-quality reference quotes and trade data for market participants looking for comprehensive, real-time market data'' and provides a ''unified view of the market from all four Cboe equity exchanges: BZX Exchange, BYX Exchange, EDGX Exchange, and EDGA Exchange.''

[14] *See* Securities Exchange Act Release Nos. 72750 (August 4, 2014), 79 FR 46494 (August 8, 2014) (notice—NYSE BQT); and 73553 (November 6, 2014), 79 FR 67491 (November 13, 2014) (approval order—NYSE BQT) (SR–NYSE–2014–40) (''NYSE BQT Filing'').

[15] In 2019, NYSE BQT was amended to include NYSE Chicago BBO and NYSE Chicago Trades. *See* Securities Exchange Act Release No. 87511 (November 12, 2019), 84 FR 63689 (November 18, 2019) (SR–NYSE–2019–60).

[16] In 2018, NYSE BQT was amended to include NYSE National BBO and NYSE National Trades. *See* Securities Exchange Act Release No. 83359 (June 1, 2018), 83 FR 26507 (June 7, 2018) (SR–NYSE–2018–22).

[17] *See* NYSE BQT Filing, *supra* note 14.

not be inclined to subscribe to NYSE BQT. When Redistributors do not subscribe to NYSE BQT, the prospective data recipients that are the customers of such Redistributors are unable to subscribe to NYSE BQT. The proposed fee change is designed to provide a financial incentive for such Redistributors to subscribe to NYSE BQT so that their customers, which have expressed an interest in subscribing to NYSE BQT, would be able to access the product via such Redistributors.

Currently, subscribers of each of the NYSE American BBO and NYSE American Trades products that receive a data feed pay a General Access Fee of $750 per month. In February 2020, the Exchange added the Per User Access Fee, which is a reduced fee of $100 per month available at that time only for subscribers of NYSE American BBO and NYSE American Trades that use those products in a display-only format, including for internal use for Professional Users and external distribution to both Professional and Non-Professional Users.[18]

In November 2020, the Exchange expanded the application of the reduced Per User Access Fee to Redistributors of NYSE American BBO and NYSE American Trades data feeds that do not subscribe to any other market data product listed on the Fee Schedule and use such market data products for external distribution only.[19]

As noted above, the Exchange now proposes to further expand the applicability of the reduced Per User Access Fee. Specifically, the Exchange proposes that Redistributors of NYSE American BBO and NYSE American Trades that do not subscribe to any other market data product listed on the Fee Schedule other than NYSE American OpenBook and use such market data products for external distribution only, would be eligible for the reduced Per User Access Fee. A Redistributor that receives such data feeds and uses the market data products for any other purpose (such as internal use) would continue to pay the $1,500 per month General Access Fee. And, as currently set forth in footnote 3 to the Fee Schedule, a subscriber would be charged only one access fee for each of the NYSE American BBO and NYSE American Trades products, depending on the use of that product.

To effect this change, the Exchange proposes to modify footnote 3 to the Fee Schedule as follows (proposed text italicized, proposed deletions bracketed):

> The Per User Access Fee is charged to: (i) a subscriber that receives a data feed and uses the market data product only for Professional Users and Non-Professional Users in a display-only format, including for internal use and external redistribution in a display-only format, and (ii) a Redistributor that subscribes [only] to the NYSE American BBO and NYSE American Trades data feeds, and does not subscribe to any other Products listed on this Fee Schedule *other than the NYSE American OpenBook data feed,* and uses these market data products for external distribution only. A subscriber that receives a data feed and uses the market data product for any other purpose, including if combined with Per User use, will be charged the General Access Fee. A subscriber will be charged only one access fee for each of the NYSE American BBO and NYSE American Trades products, depending on the use of that product.

The proposed rule change would result in lower fees for Redistributors that receive NYSE American BBO, NYSE American Trades, and NYSE American OpenBook data feeds, and use such market data products for external distribution only.[20] The Exchange believes that the proposed expansion of the reduced Per User Access Fee would provide an incentive for Redistributors that currently subscribe to NYSE American OpenBook to also subscribe to the NYSE BQT data feeds so that such product would be available to their customers, which have expressed an interest in subscribing to NYSE BQT.

The proposed rule change is intended to encourage greater use of NYSE BQT by making it more affordable for Redistributors that subscribe to NYSE American OpenBook and also have customers interested in subscribing to NYSE BQT. The proposed fee change would allow the Exchange to compete more effectively with Nasdaq Basic and Cboe One Feed by expanding the number of Redistributors that would subscribe to NYSE BQT, and therefore make the product more widely available to data subscribers interested in NYSE BQT.

Applicability of Proposed Rule Change

As noted above, the proposed rule change is designed to reduce the overall cost for Redistributors of NYSE BQT that also redistribute NYSE American OpenBook by expanding the applicability of the reduced Per User Access Fee. Today, the Exchange has thirty-one data feed subscribers, two of whom became Redistributors as a direct result of the Second BQT Fee Reduction Filing and currently pay the reduced Per User Access Fee. The Exchange believes that the proposed rule change would provide a further incentive for Redistributors that already subscribe to NYSE American OpenBook to subscribe to NYSE BQT for purposes of providing external distribution of NYSE BQT to potential data recipients interested in the product.

Because the proposed rule change is targeted to potential Redistributors of NYSE BQT that also subscribe to NYSE American OpenBook, the proposed change to the availability of the NYSE American BBO and NYSE American Trades Per User Access Fees, together with the proposed changes on NYSE and NYSE Arca, are narrowly tailored with that purpose in mind. Accordingly, this proposed fee change is not designed for Redistributors that are existing customers of NYSE American market data products (other than NYSE American OpenBook) or that engage in internal use of NYSE BQT. This proposed rule change would not result in any changes to the market data fees for NYSE American BBO and NYSE American Trades for such data subscribers.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[21] in general, and Sections 6(b)(4) and 6(b)(5) of the Act,[22] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that

[18] *See* BQT Fee Reduction Filing, *supra,* note 4.

[19] *See* Second BQT Fee Reduction Filing, *supra,* note 4.

[20] The Per User Access Fee is 93% lower than the General Access Fee. Together with the corresponding proposed rule changes by NYSE and NYSE Arca to similarly reduce the access fees to their BBO and Trades products for Redistributors, such Redistributors would be eligible for significantly lower access fees for NYSE BQT, from $6,250 per month to $850 per month ($250 + $200 + $200 +$200), a reduction of more than 86%.

[21] 15 U.S.C. 78f(b).

[22] 15 U.S.C. 78f(b)(4), (5).

current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [23]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

> In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [24]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [25]

More recently, the Commission confirmed that it applies a ''market-based'' test in its assessment of market data fees, and that under that test:

> the Commission considers whether the exchange was subject to significant competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder.[26]

1. The Proposed Fees Are Constrained by Significant Competitive Forces

An exchange may demonstrate that its fees are constrained by competitive forces by showing that platform competition applies.

As the United States Supreme Court recognized in *Ohio* v. *American Express,* platforms are firms that act as intermediaries between two or more sets of agents, and typically the choices made on one side of the platform affect the results on the other side of the platform via externalities, or ''indirect network effects.'' [27] Externalities are linkages between the different ''sides'' of a platform such that one cannot understand pricing and competition for goods or services on one side of the platform in isolation; one must also account for the influence of the other side. As the Supreme Court explained:

> To ensure sufficient participation, two-sided platforms must be sensitive to the prices that they charge each side. . . . Raising the price on side A risks losing participation on that side, which decreases the value of the platform to side B. If the participants on side B leave due to this loss in value, then the platform has even less value to side A—risking a feedback loop of declining demand. . . . Two-sided platforms therefore must take these indirect network effects into account before making a change in price on either side.[28]

The Exchange and its affiliated exchanges have long maintained that they function as platforms between consumers of market data and consumers of trading services. Proving the existence of linkages between the two sides of this platform requires an in-depth economic analysis of both public data and confidential Exchange data about particular customers' trading activities and market data purchases. Exchanges, however, are prohibited from sharing details about these specific customer activities and purchases. For example, pursuant to Exchange Rule 7.41E, transactions executed on the Exchange are processed anonymously.

Exchanges function as platforms for market data and transaction services mean that exchanges do not set fees for market data products without considering, and being constrained by, the effect the fees will have on the order-flow side of the platform. And as the D.C. Circuit recognized in *NetCoalition I,* ''[n]o one disputes that competition for order flow is fierce.'' [29] The court further noted that ''no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers,'' and that an exchange ''must compete vigorously for order flow to maintain its share of trading volume.'' [30]

As noted above, while Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [31] The Commission's Division of Trading and Markets has also recognized that with so many ''operating equities exchanges and dozens of ATSs, there is vigorous price competition among the U.S. equity markets and, as a result, [transaction] fees are tailored and frequently modified to attract particular types of order flow, some of which is highly fluid and price sensitive.'' [32] Indeed, today, equity trading is currently dispersed across 16 exchanges,[33] numerous alternative trading systems,[34] broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 17% market share.[35]

Further, low barriers to entry mean that new exchanges may, and do, rapidly and inexpensively enter the market and offer additional substitute platforms to compete with the Exchange. For example, since 2020, three new exchanges have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020; [36] Members Exchange (MEMX), which began operations as an exchange on

September 29, 2020;[37] and Miami International Holdings (MIAX), which began operations of its first equities exchange on September 29, 2020.[38]

These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others).[39]

For example, one of MEMX's founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering ''[l]ower pricing on market data.'' [40] Nor is this a new phenomenon: exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX ''BATS 2.0.'' [41]

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive and contestable.[42] And low barriers to entry act as a market check on high prices.[43]

In sum, the fierce competition for order flow thus constrains any exchange from pricing its market data at a supracompetitive price, and constrains the Exchange in setting its fees at issue here.

The proposed expansion of the Per User Access Fee is therefore reasonable because in setting it, the Exchange is constrained by the availability of numerous substitute platforms offering market data products and trading. Such substitutes need not be identical, but only substantially similar to the product at hand.

More specifically, in expanding the applicability of the Per user Access Fee to Redistributors of NYSE American OpenBook, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers have their pick of an increasing number of alternative platforms to use instead of the Exchange. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternative platforms to the Exchange's platform ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for trading order flow.

Even putting aside the facts that exchanges are platforms and that pricing decisions on the two sides of the platform are intertwined, the Exchange is constrained in setting the proposed market data fees by the availability of numerous substitute market data products. The Commission has been clear that substitute products need not be identical, but only substantially similar to the product at hand.[44]

The NYSE BQT market data product is subject to significant competitive forces that constrain its pricing. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. In the case of NYSE BQT, this product provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, which together account for approximately 20% of consolidated U.S. equities trading volume as of October 2023.[45] Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe's four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and are not intended to be used for order routing or trading decisions.

In addition to competing with proprietary data products from Nasdaq and Cboe, NYSE BQT also competes with the consolidated data feed. However, the Exchange does not claim that NYSE BQT is a substitute for consolidated data with respect to requirements under the Vendor Display Rule, which is Regulation NMS Rule 603(c).

The fact that this filing is proposing to further expand the application of the reduced Per User Access Fee is itself confirmation of the inherently competitive nature of the market for the sale of proprietary market data. For example, in August 2019, Cboe filed proposed rule changes to reduce certain of its Cboe One Feed fees and noted that it attracted two additional customers because of the reduced fees.[46] More

[46] *See* Securities Exchange Act Release Nos. 86667 (August 14, 2019) (SR–CboeBZX–2019–069);

recently, Nasdaq filed a proposed rule change to lower the enterprise license fee for broker-dealers distributing Nasdaq Basic to internal Professional subscribers and the enterprise license fee for broker-dealers distributing Nasdaq Last Sale to Professional subscribers.[47]

The Exchange notes that NYSE American proprietary market data products are entirely optional. The Exchange is not required to make the proprietary data products that are the subject of this proposed rule change available or to offer any specific pricing alternatives to any customers, nor is any firm or investor required to purchase the Exchange's data products. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfil regulatory obligations,[48] a customer's decision whether to purchase any of the Exchange's proprietary market data feeds is entirely discretionary. Most firms that choose to subscribe to proprietary market data feeds from the Exchange and its affiliates do so for the primary goals of using them to increase their revenues, reduce their expenses, and in some instances compete directly with the Exchange's trading services. Such firms are able to determine for themselves whether or not the products in question or any other similar products are attractively priced. If market data feeds from the Exchange and its affiliates do not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the products.

In addition, in the case of products that are also redistributed through market data vendors, such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. This competitive constraint is precisely what is driving the proposed fee changes here, which are designed to attract new market data vendors, and through them new subscribers, to the NYSE BQT product. Currently, only seven data feed vendors subscribe to NYSE BQT, and each vendor has limited redistribution of NYSE BQT. No other vendors currently subscribe to NYSE BQT and likely will not unless their customers request it, and customers will not elect to pay the proposed fees unless such product can provide value by sufficiently increasing revenues or reducing costs in the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

Because of the availability of substitutes, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. Those competitive pressures imposed by available alternatives are evident in the Exchange's proposed pricing.

In setting the proposed fees, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternatives to the Exchange's platform and, more specifically, alternatives to the market data products, including proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if the attendant fees are not justified by the returns that any particular vendor or data recipient would achieve through the purchase.

The proposed expansion of the Per User Access Fee is reasonable, for the following additional reasons.

Overall. This proposed fee change is a result of the competitive environment, as the Exchange seeks to decrease certain of its fees to attract Redistributors that do not currently subscribe to the NYSE BQT market data product. The Exchange is proposing the fee reduction at issue to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, and

86670 (August 14, 2019) (SR–CboeBYX–2019–012); 86676 (August 14, 2019) (SR–CboeEDGA–2019–013); and 86678 (August 14, 2019) (SR–CboeEDGX–2019–048) (Notices of filing and Immediate effectiveness of proposed rule change to reduce fees for the Cboe One Feed) (collectively ''Cboe One Fee Filings''). The Cboe One Fee Filings were in effect from August 1, 2019 until September 30, 2019, when the Commission suspended them and instituted proceedings to determine whether to approve or disapprove those proposals. *See, e.g.,* Securities Exchange Act Release No. 87164 (September 30, 2019), 84 FR 53208 (October 4, 2019) (SR–CboeBZX–2019–069). On October 1, 2019, the Cboe equities exchanges refiled the Cboe One Fee Filings on the basis that they had new customers subscribe as a result of the Cboe One Fee Filings, and therefore its fee proposal had increased competition for top-of-book market data. *See* Securities Exchange Act Release Nos. 87312 (October 15, 2019), 84 FR 56235 (October 21, 2019) (SR–CboeBZX–2019–086); 87305 (October 14, 2019), 84 FR 56210 (October 21, 2019) (SR–CboeBYX–2019–015); 87295 (October 11, 2019), 84 FR 55624 (October 17, 2019) (SR–CboeEDGX–2019–059); and 87294 (October 11, 2019), 84 FR 55638 (October 17, 2019) (SR–CboeEDGA–2019–015) (Notices of filing and immediate effectiveness of proposed rule changes to re-file the Small Retail Broker Distribution Program) (''Cboe One Fee Re-Filings''). On November 26, 2019, the Commission suspended the Cboe One Fee Re-Filings and instituted proceedings to determine whether to approve or disapprove those proposals. *See, e.g.,* Securities Exchange Act Release No. 87629 (November 26, 2019), 84 FR 66245 (December 3, 2019) (SR–CboeBZX–2019–086). On November 27, 2019, the Cboe equities exchanges refiled the Cboe One Fee Filings with one revision to the requirements for participating in the Small Retail Broker Distribution Program and additional information about the basis for the proposed fee changes. *See* Securities Exchange Act Release Nos. 87712 (December 10, 2019), 84 FR 68508 (December 16, 2019) (SR–CboeBZX–2019–101); 88713 (December 10, 2019), 84 FR 68530 (December 16, 2019) (SR–CboeBYX–2019–023); 87709 (December 10, 2019), 84 FR 68523 (December 16, 2019) (SR–CboeEDGA–2019–021); and 87711 (December 10, 2019), 84 FR 68501 (December 16, 2019) (SR–Cboe–EDGX–2019–071) (Notices of filing and immediate effectiveness of proposed rule changes to introduce a Small Retail Broker Distribution Program) (''Cboe One Third Fee Re-Filings''). On February 4, 2020, the Cboe equities exchanges withdrew the Cboe One Third Fee Re-Filings and, on the same date, refiled the Cboe One Fee Filings. *See* Securities Exchange Act Release Nos. 88221 (February 14, 2020), 85 FR 9904 (February 20, 2020) (SR–CboeBYX–2020–007); 88218 (February 14, 2020), 85 FR 9827 (February 20, 2020) (SR–CboeBZX–2020–014); 88220 (February 14, 2020), 85 FR 9912 (February 20, 2020) (SR–CboeEDGA–2020–004); and 88219 (February 14, 2020), 85 FR 9872 (February 20, 2020) (SR–CboeEDGX–2020–008) (Notices of filing and immediate effectiveness of proposed rule changes to introduce a Small Retail Broker Distribution Program) (''Cboe One Fourth Fee Re-Filings''). On April 15, 2020, the Cboe equities exchanges withdrew the Cboe One Fee Filings and the Cboe One Fee Re-Filings. Pursuant to the Cboe One Fourth Fee Re-Filings, the Small Retail Broker Distribution Program is currently in effect at the Cboe equities exchanges.

[47] *See* Securities Exchange Act Release No. 90177 (October 14, 2020), 85 FR 66620 (October 20, 2020) (SR–NASDAQ–2020–065) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Basic to Internal Professional Subscribers as Set Forth in the Equity 7 Pricing Schedule, Section 147, and the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Last Sale to Professional Subscribers at Equity 7, Section 139).

[48] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some broker-dealers and ATSs have chosen not to do so.

expanding the options available to firms making data purchasing decisions based on their business needs. The Exchange believes that this is consistent with the principles contained in Regulation NMS to ''promote the wide availability of market data and to allocate revenues to SROs that produce the most useful data for investors.'' [49]

Access Fee. By making the reduced Per User Access Fee available to Redistributors of NYSE American OpenBook for external distribution who do not subscribe to any other products listed on the Fee Schedule other than NYSE American BBO and NYSE American Trades, the Exchange believes that more Redistributors may choose to subscribe to these products, thereby expanding the distribution of this market data for the benefit of investors that participate in the national market system and increasing competition generally. The Exchange also believes that offering the Per User Access Fee to these Redistributors would expand the availability of NYSE BQT to potential data recipients that are interested in subscribing to NYSE BQT but do not have access to a Redistributor who subscribes to the data feeds.

The Exchange determined to make the reduced Per User Access Fee available to these Redistributors because it constitutes a substantial reduction of the current fee, with the intended purpose of increasing use of NYSE BQT by Redistributors. NYSE BQT has been in place since 2014 but has a very small number of subscribers. The Exchange believes that in order to compete with other indicative pricing products such as Nasdaq Basic and Cboe One Feed, it needs to provide a meaningful financial incentive for more Redistributors to choose to subscribe to NYSE BQT so that they can make it available to their customers. Accordingly, the proposed expansion of the Per User Access Fee, together with the proposed expansion of the Per User Access Fee by the Exchange's affiliates, is reasonable because the reductions will make NYSE BQT a more attractive offering for Redistributors that do not currently subscribe to any NYSE American market data products other than NYSE American OpenBook and make it more competitive with Nasdaq Basic and Cboe One Feed.

Evidence of the competition among exchange groups for these products has previously been demonstrated via fee changes. For example, following the introduction of the Cboe One Feed, Nasdaq responded by reducing its fees for the Nasdaq Basic product.[50] With the proposed changes by the Exchange, NYSE, and NYSE Arca, the Exchange is similarly seeking to compete by decreasing the total access fees for NYSE BQT from $6,250 to $850 for Redistributors that do not currently subscribe to any NYSE American market data products other than NYSE American OpenBook and have customers that are interested in subscribing to NYSE BQT but cannot do so until their Redistributor also subscribes. This proposed rule change therefore demonstrates the existence of an effective, competitive market because this proposal resulted from a need to generate innovative approaches in response to competition from other exchanges that offer market data for a specific segment of market participants.

For all of the foregoing reasons, the Exchange believes that the proposed fees are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed expansion of the Per User Access Fee is allocated fairly and equitably among the various categories of users of the Exchange's market data feed, and any differences among categories of users are justified.

Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to expand the application of the Per User Access Fee for Redistributors that would be subscribing to the NYSE American BBO, NYSE American Trades and NYSE American OpenBook data feeds and would use these market data products for external distribution only, which the Exchange hopes will attract new Redistributor subscribers for the NYSE BQT market data product so that the product can be made available to prospective market data recipients. The Exchange is proposing to expand the application of the reduced Per User Access Fee to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing to the NYSE American BBO, NYSE American Trades and NYSE American OpenBook data feeds and would use these market data products for external distribution only is equitable as the reduced fee would apply equally to all data recipients that choose to subscribe to NYSE American BBO, NYSE American Trades and NYSE American OpenBook for external distribution only. Because NYSE American BBO, NYSE American Trades and NYSE American OpenBook are optional products, any data recipient could choose to subscribe to such data feeds to distribute externally and be eligible for the Per User Access Fee. The Exchange does not believe that it is inequitable that the Per User Access Fee would be available only to data recipients that subscribe to NYSE American BBO, NYSE American Trades and NYSE American OpenBook and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange believes that charging a different access fee for a Redistributor that is engaged solely in external distribution of only the NYSE American BBO, NYSE American Trades and NYSE American OpenBook products is equitable because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT

[49] *See* Regulation NMS Adopting Release, 70 FR 37495, at 37503.

[50] *See e.g.,* Securities Exchange Act Release No. 83751 (July 31, 2018), 83 FR 38428 (August 6, 2018) (SR–NASDAQ–2018–058) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower Fees and Administrative Costs for Distributors of Nasdaq Basic, Nasdaq Last Sale, NLS Plus and the Nasdaq Depth-of-Book Products Through a Consolidated Enterprise License). Nasdaq filed the proposed fee change to lower the Enterprise Fee for Nasdaq Basic and other market data products in response to the Enterprise Fee for the Cboe One Feed adopted by Cboe family of exchanges.

if their Redistributor did not subscribe to and redistribute NYSE BQT.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE American market data products are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers.

Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to amend its fees to provide a financial incentive for Redistributors of NYSE American OpenBook that do not currently subscribe to any NYSE American market data products that decide to subscribe to NYSE BQT, which the Exchange hopes will attract more subscribers for the NYSE BQT market data product. The Exchange is proposing to expand the application of the Per User Access Fee to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing to the NYSE American BBO, NYSE American Trades and NYSE American OpenBook data feeds and would use these market data products for external distribution only is not unfairly discriminatory as the reduced fee would apply equally to all Redistributors that choose to subscribe to NYSE American BBO, NYSE American Trades and NYSE American OpenBook for external distribution only. Because NYSE American BBO, NYSE American Trades and NYSE American OpenBook are optional products, any data recipient could choose to subscribe to such data feeds to distribute externally and be eligible for the Per User Access Fee. The Exchange does not believe that it is unfairly discriminatory that the Per User Access Fee would be available only to data recipients that subscribe to NYSE American BBO, NYSE American Trades and NYSE American OpenBook and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. While some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange therefore believes that there is a meaningful distinction between internal use and redistribution of market data and that charging a different access fee to a Redistributor that is engaged solely in external distribution of only the NYSE American BBO, NYSE American Trades and NYSE American OpenBook products is not unfairly discriminatory because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

Moreover, the Exchange does not believe that it is unfairly discriminatory to offer the Per User Access Fee only to those Redistributors that would subscribe to the NYSE American BBO, NYSE American Trades and NYSE American OpenBook data feeds, and only for external distribution. This proposed rule change is designed to provide an incentive for Redistributors that currently subscribe to NYSE American OpenBook, but do not subscribe to NYSE BQT, and may have customers that are interested in subscribing to NYSE BQT, to subscribe to the NYSE American BBO and NYSE American Trades data feeds so that they can make NYSE BQT available to their customers. This fee incentive is not necessary for Redistributors that currently subscribe to the NYSE American BBO and NYSE American Trades data feeds because such Redistributors could already subscribe to NYSE BQT, but have chosen not to, and a reduction in their existing access fees would likely not result in such Redistributors choosing to subscribe to NYSE BQT.

For all of the foregoing reasons, the Exchange believes that the proposed fees are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Indeed, as demonstrated above, the Exchange believes the proposed rule changes are pro-competitive.

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the proposed fee schedule would apply to all subscribers of NYSE American market data products, and customers may not only choose whether to subscribe to the products at all, but also may tailor their subscriptions to include only the products and uses that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition. As shown above, to the extent that particular proposed fees apply to only a subset of subscribers, those distinctions are not unfairly discriminatory and do unfairly burden one set of customers over another.

Intermarket Competition. The Exchange believes that the proposed fees do not impose a burden on competition on other exchanges that is not necessary or appropriate; indeed, the Exchange believes the proposed fee changes would have the effect of increasing competition. As described above, exchanges are platforms for market data and trading. In setting the proposed fees, the Exchange is constrained by the availability of substitute platforms also offering market data products and trading, and low barriers to entry mean new exchange platforms are frequently introduced. The fact that exchanges are platforms ensures that no exchange can make pricing decisions for one side of its platform without considering, and being constrained by, the effects that price will have on the other side of the platform. In setting fees at issue here, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers will have its pick of an increasing number of alternative platforms to use instead of the Exchange. Given this

intense competition between platforms, no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. NYSE BQT provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, while Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe's four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and therefore, are reasonable substitutes for one another. Additionally, market data vendors are also able to offer close substitutes to NYSE BQT. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. These competitive pressures ensure that no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A)[51] of the Act and paragraph (f) of Rule 19b–4 thereunder.[52] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSEAMER–2023–57 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEAMER–2023–57. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEAMER–2023–57 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[53]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98967; File No. SR–NYSE–2023–34]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Designation of Longer Period for Commission Action on a Proposed Rule Change To Amend Section 312.03(b) of the NYSE Listed Company Manual To Modify the Circumstances Under Which a Listed Company Must Obtain Shareholder Approval of a Sale of Securities Below the Minimum Price to a Substantial Security Holder of the Company

November 16, 2023.

On September 26, 2023, New York Stock Exchange LLC (the ''Exchange'') filed with the Securities and Exchange Commission (''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'')[1] and Rule 19b–4 thereunder,[2] a proposed rule change to amend Section 312.03(b) of the NYSE Listed Company Manual (''Manual'') to modify the circumstances under which a listed company must obtain shareholder approval of a sale of securities below the Minimum Price[3] to a substantial security holder of the listed company. The proposed rule change was published for comment in the **Federal Register** on October 4, 2023.[4] The Commission received no comments on the proposed rule change.

Section 19(b)(2) of the Act[5] provides that, within 45 days of the publication of notice of the filing of a proposed rule change, or within such longer period up to 90 days as the Commission may designate if it finds such longer period to be appropriate and publishes its reasons for so finding, or as to which the self-regulatory organization consents, the Commission shall either approve the proposed rule change, disapprove the

proposed rule change, or institute proceedings to determine whether the proposed rule change should be disapproved. The 45th day after publication of the notice for this proposed rule change is November 18, 2023. The Commission is extending this 45-day time period.

The Commission finds that it is appropriate to designate a longer period within which to take action on the proposed rule change so that it has sufficient time to consider the proposed rule change. Accordingly, the Commission, pursuant to Section 19(b)(2) of the Act,[6] designates January 2, 2024, as the date by which the Commission shall either approve or disapprove, or institute proceedings to determine whether to disapprove, the proposed rule change (File No. SR–NYSE–2023–34).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[7]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 35051; 812–15511]

Jackson Credit Opportunities Fund and Jackson National Asset Management, LLC

November 16, 2023.

AGENCY: Securities and Exchange Commission (''Commission'' or ''SEC'').

ACTION: Notice.

Notice of an application under section 6(c) of the Investment Company Act of 1940 (the ''Act'') for an exemption from sections 18(a)(2), 18(c) and 18(i) of the Act, under sections 6(c) and 23(c) of the Act for an exemption from rule 23c–3 under the Act, and for an order pursuant to section 17(d) of the Act and rule 17d–1 under the Act.

Summary of Application: Applicants request an order to permit certain registered closed-end investment companies to issue multiple classes of shares and to impose asset-based distribution and/or service fees and early withdrawal charges.

Applicants: Jackson Credit Opportunities Fund and Jackson National Asset Management, LLC.

Filing Dates: The application was filed on October 2, 2023.

Hearing or Notification of Hearing: An order granting the requested relief will be issued unless the Commission orders a hearing. Interested persons may request a hearing on any application by emailing the SEC's Secretary at *Secretarys-Office@sec.gov* and serving the Applicants with a copy of the request by email, if an email address is listed for the relevant Applicant below, or personally or by mail, if a physical address is listed for the relevant Applicant below. Hearing requests should be received by the Commission by 5:30 p.m. on December 11, 2023, and should be accompanied by proof of service on the Applicants, in the form of an affidavit, or, for lawyers, a certificate of service. Pursuant to rule 0–5 under the Act, hearing requests should state the nature of the writer's interest, any facts bearing upon the desirability of a hearing on the matter, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by emailing the Commission's Secretary.

ADDRESSES: The Commission: *Secretarys-Office@sec.gov.* Applicants: Emily J. Bennett, Esq., Jackson National Asset Management, LLC, *emily.bennett@jackson.com;* with a copy to Paulita A. Pike, Esq., Ropes & Gray LLP, *paulita.pike@ropesgray.com.*

FOR FURTHER INFORMATION CONTACT: Trace W. Rakestraw, Senior Special Counsel, at (202) 551–6825 (Division of Investment Management, Chief Counsel's Office).

SUPPLEMENTARY INFORMATION: For Applicants' representations, legal analysis, and conditions, please refer to Applicants' application, dated October 2, 2023, which may be obtained via the Commission's website by searching for the file number at the top of this document, or for an Applicant using the Company name search field on the SEC's EDGAR system. The SEC's EDGAR system may be searched at *https://www.sec.gov/edgar/searchedgar/legacy/companysearch.html.* You may also call the SEC's Public Reference Room at (202) 551–8090.

For the Commission, by the Division of Investment Management, under delegated authority.

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98970; File No. SR–CboeBZX–2023–093]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Rules To Adopt Monthly Options Series

November 16, 2023.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 15, 2023, Cboe BZX Exchange, Inc. (''BZX Options'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange filed the proposal as a ''non-controversial'' proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[3] and Rule 19b–4(f)(6) thereunder.[4] The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX Options'') proposes to amend its Rules to adopt Monthly Options Series. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/bzx/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of

[7] 17 CFR 200.30–3(a)(31).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(iii).

[4] 17 CFR 240.19b–4(f)(6).

the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Rules to accommodate the listing of option series that would expire at the close of business on the last business day of a calendar month (''Monthly Options Series''). Pursuant to proposed Rules 19.6, Interpretation and Policy .08(a) and 29.11(k)(1),[5] the Exchange may list Monthly Options Series for up to five currently listed option classes that are either index options or options on exchange-traded funds (''ETFs'').[6] In addition, the Exchange may also list Monthly Options Series on any options classes that are selected by other securities exchanges that employ a similar program under their respective rules.[7] The Exchange may list 12 expirations for Monthly Options Series. Monthly Options Series need not be for consecutive months; however, the expiration date of a nonconsecutive expiration may not be beyond what would be considered the last expiration date if the maximum number of expirations were listed consecutively.[8] Other expirations in the same class are not counted as part of the maximum numbers of Monthly Options Series expirations for a class.[9] Monthly Options Series will be P.M.-settled.[10]

The strike price of each Monthly Options Series will be fixed at a price per share, with at least two, but no more than five, strike prices above and at least two, but no more than five, strike prices below the value of the underlying index or price of the underlying security at about the time that a Monthly Options Series is opened for trading on the Exchange. The Exchange will list strike prices for Monthly Options Series that are reasonably related to the current price of the underlying security or current index value of the underlying index to which such series relates at about the time such series of options is first opened for trading on the Exchange. The term ''reasonably related to the current price of the underlying security or index value of the underlying index'' means that the exercise price is within 30% of the current underlying security price or index value.[11] Additional Monthly Options Series of the same class may be open for trading on the Exchange when the Exchange deems it necessary to maintain an orderly market, to meet customer demand, or when the market price of the underlying security moves substantially from the initial exercise price or prices. To the extent that any additional strike prices are listed by the Exchange, such additional strike prices will be within 30% above or below the closing price of the underlying index or security on the preceding day. The Exchange may also open additional strike prices of Monthly Options Series that are more than 30% above or below the current price of the underlying security, provided that demonstrated customer interest exists for such series, as expressed by institutional, corporate, or individual customers or their brokers. Market-Makers trading for their own account will not be considered when determining customer interest under this provision. The opening of the new Monthly Options Series will not affect the series of options of the same class previously opened.[12] The interval between strike prices on Monthly Options Series will be the same as the interval for strike prices for series in that same options class that expire in accordance with the normal monthly expiration cycle.[13]

By definition, Monthly Options Series can never expire in the same week as a standard expiration series (which expire on the third Friday of a month) in the same class expires. The same, however, is not the case with regards to Short Term Option Series [14] or Quarterly Options Series. Therefore, to avoid any confusion in the marketplace, the Exchange proposes to amend Rules 19.6, Interpretation and Policy .05 (introductory paragraph), (b), and (h) and 22.11(h) (introductory paragraph) and (2) to provide the Exchange will not list a Short Term Option Series in a class on a date on which a Monthly Options Series or Quarterly Options

[5] The proposed rule change defines the term ''Monthly Options series'' in Rule 29.2(k) (and reletters current paragraphs (k) through (o) to be (l) through (p)) as a series in an options class that is approved for listing and trading on the Exchange in which the series is opened for trading on any business day and that expires at the close of business on the last business day of a calendar month.

[6] The Exchange proposes to amend Rule 19.6(a) and (b) to provide that proposed Rule 19.6, Interpretation and Policy .08 will describe how the Exchange will fix a specific expiration date and exercise price for Monthly Options Series and will govern the procedures for opening Monthly Options Series, respectively. The proposed change to Rule 19.6(a) is consistent with language in current Rule 19.6(a) for other Short Term Option Series and Quarterly Options Series. The proposed rule change also makes a nonsubstantive correction to pluralize the term ''policy'' (to become ''policies'') to be consistent with the terminology in the Rules. Additionally, the proposed rule change adds to Rule 19.6(b) that Interpretation and Policies .04 and .05 will govern the procedures for opening Quarterly Options Series and Short Term Option Series, respectively (as well as adding exception language to the beginning of that paragraph). This is merely a clarification, as Rule 19.6, Interpretations and Policies .04 and .05 clearly govern the opening procedures for those options listing programs. This proposed change is also consistent with Cboe Exchange, Inc. (''Cboe Options'') Rule 4.5(b), which has similar options listing programs.

[7] The Securities and Exchange Commission (the ''Commission'') recently approved a Cboe Options proposed rule change to adopt a substantively identical Monthly Options Series program. *See* Securities Exchange Act Release No. 98915 (November 13, 2023) (SR–CBOE–2023–049) (''Cboe Options Approval Order'').

[8] The Exchange notes this provision considers consecutive monthly listings. In other words, as other expirations (such as Quarterly Options Series) are not counted as part of the maximum, those expirations would not be considered when considering when the last expiration date would be if the maximum number were listed consecutively. For example, if it is January 2024 and the Exchange lists Quarterly Options Series in class ABC with expirations in March, June, September, December, and the following March, the Exchange could also list Monthly Options Series in class ABC with expirations in January, February, April, May, July, August, October, and November 2024 and January and February of 2025. This is because, if Quarterly Options Series, for example, were counted, the Exchange would otherwise never be able to list the maximum number of Monthly Options Series. This is consistent with the listing provisions for Quarterly Options Series, which permit calendar quarter expirations. The need to list series with the same expiration in the current calendar year and the following calendar year (whether Monthly or Quarterly expiration) is to allow market participants to execute one-year strategies pursuant to which they may roll their exposures in the longer-dated options (*e.g.* January 2025) prior to the expiration of the nearer-dated option (*e.g.* January 2024).

[9] *See* proposed Rules 19.6, Interpretation and Policy .08(b) and 29.11(k)(2).

[10] *See* proposed Rules 19.6, Interpretation and Policy .08(c) and 29.11(k)(3).

[11] *See* proposed Rules 19.6, Interpretation and Policy .08(d) and 29.11(k)(4). The Exchange notes these proposed provisions are consistent with the initial series provision for the Quarterly Options Series program in Rule 29.11(g)(3). While different than the initial strike listing provision for the Quarterly Options Series program in current Rule 19.6, Interpretation and Policy .04(b), the Exchange believes the proposed provision is appropriate, as it contemplates classes that may have strike intervals of $5 or greater. For consistency, the Exchange also proposes to amend Rule 19.6, Interpretation and Policy .04(b) to incorporate the same provision for initial series.

[12] *See* proposed Rules 19.6, Interpretation and Policy .08(e) and 29.11(k)(5).

[13] *See* proposed Rules 19.6, Interpretation and Policy .08(f) and 29.11(k)(6); *see also* Rule 19.6(d), (f), (g) and Interpretations and Policies .01–.03 and .06 (permissible strike prices for ETF classes) and Rule 29.11(c) (permissible strike prices for index options).

[14] The proposed rule change clarifies in Rule 29.11(a)(3) that index options have expiration months and weeks, which expirations may occur in consecutive weeks as specified in Rule 29.11(h). This is merely a clarification, as Rule 29.11(h) currently permits weekly expirations. This language is consistent with Cboe Options Rule 4.13(a)(2). Additionally, the proposed rule change adds to rule 29.11(a)(3) that index options may expire more than 12 months out as specified elsewhere in the Rule. This is consistent with current Rule 29.11(b), which permits long term index options to expire between 12 and 180 months after issuance, as well as proposed Rule 29.11(k)(2), as discussed above.

Series expires.[15] Similarly, proposed Rules 19.6, Interpretation and Policy .08(b) and 22.11(k)(2) provide that no Monthly Options Series may expire on a date that coincides with an expiration date of a Quarterly Options Series in the same index or ETF class. In other words, the Exchange will not list a Short Term Option Series on an index or ETF if a Monthly Options Series on that index or ETF were to expire on the same date, nor will the Exchange list a Monthly Options Series on an ETF or index if a Quarterly Options Series on that index or ETF were to expire on the same date to prevent the listing of series with concurrent expirations.[16]

With respect to Monthly Options Series added pursuant to proposed Rules 19.6, Interpretation and Policy .08(a) through (f) and 22.11(k)(1) through (6), the Exchange will, on a monthly basis, review series that are outside a range of five strikes above and five strikes below the current price of the underlying index or security, and delist series with no open interest in both the put and the call series having a: (i) strike higher than the highest strike price with open interest in the put and/or call series for a given expiration month; and (ii) strike lower than the lowest strike price with open interest in the put and/or call series for a given expiration month. Notwithstanding this delisting policy, customer requests to add strikes and/or maintain strikes in Monthly Options Series in series eligible for delisting will be granted. In connection with this delisting policy, if the Exchange identifies series for delisting, the Exchange will notify other options exchanges with similar delisting policies regarding eligible series for delisting and will work with such other exchanges to develop a uniform list of series to be delisted, so as to ensure uniform series delisting of multiply listed Monthly Options Series.[17]

The Exchange believes that Monthly Options Series will provide investors with another flexible and valuable tool to manage risk exposure, minimize capital outlays, and be more responsive to the timing of events affecting the securities that underlie option contracts. The Exchange believes limiting Monthly Options Series to five classes will ensure the addition of these new series will have a negligible impact on the Exchange's and the Options Price Reporting Authority's (''OPRA's'') quoting capacity. The Exchange represents it has the necessary systems capacity to support new options series that will result from the introduction of Monthly Options Series.

The Exchange notes that Rules 18.7 and 29.5 through 29.7 regarding position limits will apply to Monthly Options Series. These Rules provide that the position limits fixed by Cboe Options apply to options contracts traded on BZX Options, which would include Monthly Options Series. As noted above, Cboe Options recently received Commission approval to adopt a substantively identical Monthly Options Series Program as the one proposed in this rule filing.[18] Pursuant to those recently approved Cboe Options rules, Monthly Options Series will be aggregated with positions in options contracts on the same underlying security or index.[19] This is consistent with how position (and exercise) limits are currently imposed on series with other expirations (Short Term Option Series and Quarterly Options Series). Therefore, positions in options within class of index or ETF options, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. The Exchange believes this will address potential manipulative schemes and adverse market impacts surrounding the use of options.

The Exchange also represents its current surveillance programs will apply to Monthly Options Series and will properly monitor trading in the proposed Monthly Options Series. The Exchange currently lists Quarterly Options Series in certain ETF classes, which expire at the close of business at the end of four calendar months (*i.e.,* the end of each calendar quarter), and has not experienced any market disruptions nor issues with capacity. The Exchange's surveillance programs currently in place to support and properly monitor trading in these Quarterly Options Series, as well as Short Term Option Series and standard expiration series, will apply to the proposed Monthly Options Series. The Exchange believes its surveillances continue to be designed to deter and detect violations of its Rules, including position and exercise limits and possible manipulative behavior, and these surveillances will apply to Monthly Options Series that the Exchange determines to list for trading. Ultimately, the Exchange does not believe the proposed rule change raises any unique regulatory concerns because existing safeguards—such as position and exercise limits (and the aggregation of options overlying the same index or ETF) and reporting requirements—would continue to apply.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[20] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[21] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with

[15] The Exchange also proposes to make a nonsubstantive change to Rules 19.6, Interpretation and Policy .05 and 22.11(h) to change current references to ''monthly options series'' to ''standard expiration options series'' (*i.e.,* series that expire on the third Friday of a month), to eliminate potential confusion. The current references to ''monthly options series'' are intended to refer to those series that expire on the third Friday of a month, which are generally referred to in the industry as standard expirations. The proposed rule change also adds a heading to Rule 19.6, Interpretation and Policy .05 for consistency with other Interpretations and Policies in that Rule.

[16] The Exchange notes this would not prevent the Exchange from listing a P.M.-settled Monthly Options Series on an index with the same expiration date as an A.M.-settled Short Term Option Series on the same index, both of which may expire on a Friday. In other words, the Exchange may list a P.M-settled Monthly Options Series on an index concurrent with an A.M.-settled Short Term Option Series on that index and both of which expire on a Friday. The Exchange believes this concurrent listing would provide investors with yet another hedging mechanism and is reasonable given these series would not be identical (unlike if they were both P.M-settled). This could not occur with respect to ETFs, as all Short Term Option Series on ETFs are P.M.-settled.

[17] *See* proposed Rules 19.6, Interpretation and Policy .08(g) and 22.11(k)(7).

[18] *See* Cboe Options Approval Order.

[19] *See id.; see also* Cboe Options Rules 8.30, Interpretation and Policy .09 (regarding position limits for options on stocks and ETFs), 8.31(e) (regarding position limits for broad-based index options), 8.32(f) (regarding position limits for industry index options), 8.33(c) (regarding position limits for micro narrow-based indexes), and 8.34(c) (regarding position limits for individual stock or ETF based volatility index options). Pursuant to Cboe Options Rule 8.42 (and Exchange Rules 18.9 and 29.9), exercise limits for impacted index and ETF classes would be equal to the applicable position limits.

[20] 15 U.S.C. 78f(b).

[21] 15 U.S.C. 78f(b)(5).

the Section 6(b)(5)[22] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes the introduction of Monthly Options Series will remove impediments to and perfect the mechanism of a free and open market and a national market system by expanding hedging tools available to market participants. The Exchange believes the proposed monthly expirations will allow market participants to transact in the index and ETF options listed pursuant to the proposed rule change based on their timing as needed and allow them to tailor their investment and hedging needs more effectively. Further, the Exchange believes the availability of Monthly Options Series would protect investors and the public interest by providing investors with more flexibility to closely tailor their investment and hedging decisions in these options, thus allowing them to better manage their risk exposure.

The Exchange believes the Quarterly Options Series Program has been successful to date and the proposed Monthly Options Series program simply expands the ability of investors to hedge risk against market movements stemming from economic releases or market events that occur at months' ends in the same way the Quarterly Options Series Program has expanded the landscape of hedging for quarter-end news. Monthly Options Series will also complement Short Term Option Series, which allow investors to hedge risk against events that occur throughout a month. The Exchange believes the availability of additional expirations should create greater trading and hedging opportunities for investors, as well as provide investors with the ability to tailor their investment objectives more effectively.

The Exchange notes the proposed terms of Monthly Options Series, including the limitation to five index and ETF option classes, are substantively the same as the current terms of Quarterly Options Series.[23] Quarterly Options Series expire on the last business day of a calendar quarter, which is the last business day of every third month. The proposed Monthly Options Series would fill the gaps between Quarterly Options Series expirations by permitting series to expire on the last business day of every month, rather than every third month. The proposed Monthly Options Series may be listed in accordance with the same terms as Quarterly Options Series, including permissible strikes.[24] As is the case with Quarterly Options Series, no Short Term Option Series may expire on the same day as a Monthly Options Series. Similarly, as proposed, no Monthly Options Series may expire on the same day as a Quarterly Options Series. The Exchange believes preventing listing series with concurrent expirations in a class will eliminate potential investors confusion and thus protect investors and the public interest. Given that Quarterly Options Series the Exchange currently lists are essentially Monthly Options Series that can expire at the end of only certain calendar months, the Exchange believes it is reasonable to list Monthly Options Series in accordance with the same terms, as it will promote just and equitable principles of trade. The Exchange believes limiting Monthly Options Series to five classes will ensure the addition of these new series will have a negligible impact on the Exchange's and OPRA's quoting capacity. The Exchange represents it has the necessary systems capacity to support new options series that will result from the introduction of Monthly Options Series.

The Exchange further believes the proposed rule change regarding the treatment of Monthly Options Series with respect to determining compliance with position and exercise limits is designed to prevent fraudulent and manipulative acts and practices and promote just and equitable principles of trade. Monthly Options Series will be aggregated with options overlying the same ETF or index for purposes of compliance with position (and exercise) limits, which is consistent with how position (and exercise) limits are currently imposed on series with other expirations (Short Term Option Series, Quarterly Options Series, and Delayed Start Options Series).[25] Therefore, options positions within ETF or index option classes for which Monthly Options Series are listed, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. The Exchange believes this will address potential manipulative schemes and adverse market impacts surrounding the use of options. The Exchange also represents its current surveillance programs will apply to Monthly Options Series and will properly monitor trading in the proposed Monthly Options Series. The Exchange currently trades Quarterly Options Series in certain index and ETF classes, which expire at the close of business at the end of four calendar months (*i.e.,* the end of each calendar quarter), and has not experienced any market disruptions nor issues with capacity. The Exchange's surveillance programs currently in place to support and properly monitor trading in these Quarterly Options Series, as well as Short Term Option Series and standard expiration series, will apply to the proposed Monthly Options Series. The Exchange believes its surveillances continue to be designed to deter and detect violations of its Rules, including position and exercise limits and possible manipulative behavior, and these surveillances will apply to Monthly Options Series that the Exchange determines to list for trading. Ultimately, the Exchange does not believe the proposed rule change raises any unique regulatory concerns because existing safeguards—such as position and exercise limits (and the aggregation of options overlying the same ETF or index) and reporting requirements—would continue to apply.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe the proposed rule change to list Monthly Options Series will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, as any Monthly Options Series the Exchange lists for trading will be available in the same manner for all market participants who wish to trade such options. The Exchange notes the proposed terms of Monthly Options Series, including the limitation to five index and ETF option

[22] *Id.*

[23] *Compare* proposed Rules 19.6, Interpretation and Policy .08 and 29.11(k) *to* Rules 19.6, Interpretation and Policy .04 and 29.11(g), respectively.

[24] The Exchange notes the proposed maximum number of expirations is consistent with the maximum number of expirations permitted for end-of-month series in index classes. *See* Rule 29.11(j)(2) (which references Rule 29.11(a)(3), which permits up to 12 standard monthly expirations on the majority of index options currently listed on the Exchange).

[25] *See* Cboe Options Approval Order; *see also* Cboe Options Rules 8.30, Interpretation and Policy .09 (regarding position limits for options on stocks and ETFs), 8.31(e) (regarding position limits for broad-based index options), 8.32(f) (regarding position limits for industry index options), 8.33(c) (regarding position limits for micro narrow-based indexes), and 8.34(c) (regarding position limits for individual stock or ETF based volatility index options). Pursuant to Cboe Options Rule 8.42 (and Exchange Rules 18.9 and 29.9), exercise limits for impacted index and ETF classes would be equal to the applicable position limits.

classes, are substantively the same as the current terms of Quarterly Options Series.[26] Quarterly Options Series expire on the last business day of a calendar quarter, which is the last business day of every third month, making the concept of Monthly Options Series in a limited number of index and ETF options not novel. The proposed Monthly Options Series will fill the gaps between Quarterly Options Series expirations by permitting series to expire on the last business day of every month, rather than every third month. The proposed Monthly Options Series may be listed in accordance with the same terms as Quarterly Options Series, including permissible strikes.[27] Monthly Options Series will trade on the Exchange in the same manner as other options in the same class.

The Exchange does not believe the proposed rule change to list Monthly Options Series will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, as nothing prevents other options exchanges from proposing similar rules.[28] As discussed above, the proposed rule change would permit listing of Monthly Options Series in five index or ETF options, as well as any other classes that other exchanges may list under similar programs. To the extent that the availability of Monthly Options Series makes the Exchange a more attractive marketplace to market participants at other exchanges, market participants are free to elect to become market participants on the Exchange.

The Exchange believes that the proposed rule change may relieve any burden on, or otherwise promote, competition. Similar to Short Term Option Series and Quarterly Options Series, the Exchange believes the introduction of Monthly Options Series will not impose an undue burden on competition. The Exchange believes that it will, among other things, expand hedging tools available to market participants. The Exchange believes Monthly Options Series will allow market participants to purchase options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively.

The Exchange does not believe the proposed rule change regarding aggregation of positions for purposes of determining compliance with position (and exercise) limits will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because it will apply in the same manner to all market participants. The Exchange proposes to apply position (and exercise) limits to Monthly Options Series in the same manner it applies position limits to series with other expirations (Short Term Option Series and Quarterly Options Series). Therefore, positions in options in a class of ETF or index options, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. Additionally, the Exchange does not believe this proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because it will address potential manipulative schemes and adverse market impacts surrounding the use of options.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[29] and Rule 19b–4(f)(6) thereunder.[30] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[31] and subparagraph (f)(6) of Rule 19b–4 thereunder.[32]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act[33] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii)[34] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the Exchange may list Monthly Options Series at the same time as Cboe Options, which the Exchange believes will benefit investors by promoting competition in Monthly Options Series. The Commission believes that the proposed rule change presents no novel issues and that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.[35]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2023–093 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

[26] *See* Rules 19.6, Interpretation and Policy .04 and 29.11(g).

[27] The Exchange notes the proposed maximum number of expirations is consistent with the maximum number of expirations permitted for end-of-month series in index classes. *See* Rule 29.11(j)(2) (which references Rule 29.11(a)(3), which permits up to 12 standard monthly expirations on the majority of index options currently listed on the Exchange).

[28] As noted above, at least one other options exchange recently adopted a substantively identical Monthly Options Series program. *See* Cboe Options Approval Order.

[29] 15 U.S.C. 78s(b)(3)(A)(iii).

[30] 17 CFR 240.19b–4(f)(6).

[31] 15 U.S.C. 78s(b)(3)(A)(iii).

[32] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[33] 17 CFR 240.19b–4(f)(6).

[34] 17 CFR 240.19b–4(f)(6)(iii).

[35] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

All submissions should refer to file number SR–CboeBZX–2023–093. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2023–093 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[36]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

Sunshine Act Meetings

TIME AND DATE: 2:15 p.m. on Thursday, November 30, 2023.

PLACE: The meeting will be held via remote means and/or at the Commission's headquarters, 100 F Street NE, Washington, DC 20549.

STATUS: This meeting will be closed to the public.

MATTERS TO BE CONSIDERED: Commissioners, Counsel to the Commissioners, the Secretary to the Commission, and recording secretaries will attend the closed meeting. Certain staff members who have an interest in the matters also may be present.

In the event that the time, date, or location of this meeting changes, an announcement of the change, along with the new time, date, and/or place of the meeting will be posted on the Commission's website at *https://www.sec.gov.*

The General Counsel of the Commission, or her designee, has certified that, in her opinion, one or more of the exemptions set forth in 5 U.S.C. 552b(c)(3), (5), (6), (7), (8), 9(B) and (10) and 17 CFR 200.402(a)(3), (a)(5), (a)(6), (a)(7), (a)(8), (a)(9)(ii) and (a)(10), permit consideration of the scheduled matters at the closed meeting.

The subject matter of the closed meeting will consist of the following topics:

Institution and settlement of injunctive actions;

Institution and settlement of administrative proceedings;

Resolution of litigation claims;

Matters related to litigation; and

Other matters relating to examinations and enforcement proceedings.

At times, changes in Commission priorities require alterations in the scheduling of meeting agenda items that may consist of adjudicatory, examination, litigation, or regulatory matters.

CONTACT PERSON FOR MORE INFORMATION: For further information; please contact Vanessa A. Countryman from the Office of the Secretary at (202) 551–5400.

Authority: 5 U.S.C. 552b.

Dated: November 17, 2023.

Vanessa A. Countryman,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98974; File No. SR–NYSEARCA–2023–78]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Fees for NYSE Arca BBO and NYSE Arca Trades

November 16, 2023.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on November 1, 2023, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the fees for NYSE Arca BBO and NYSE Arca Trades by expanding the application of the Per User Access Fee. The Exchange proposes to implement the proposed fee change on November 1, 2023. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to expand the application of the Per User Access Fee[4]

[36] 17 CFR 200.30–3(a)(12), (59).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] The Per User Access Fee is a lower access fee that currently applies for subscribers of NYSE Arca BBO and NYSE Arca Trades that receive a data feed and use those market data products in a display-only format. *See* Fee Schedule. *See also* Securities Exchange Act Release Nos. 87795 (December 18, 2019), 84 FR 71043 (December 26, 2019) (SR–NYSEArca-2019–88) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change, as Modified by Partial Amendment No. 1, To Amend the Fees for NYSE Arca BBO and NYSE Arca Trades) (''BQT Fee Reduction Filing''); and 90409 (November 12, 2020), 85 FR 73522 (November 18, 2020) (SR–NYSEArca–2020–95) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the Fees for NYSE Arca BBO and NYSE Arca Trades by Modifying the Application of the Access Fee and Amending the Fees for NYSE Arca Trades by

for certain NYSE Arca market data products, as set forth on the NYSE Arca Proprietary Market Data Fee Schedule (''Fee Schedule''). Specifically, the Exchange proposes to expand the application of the Per User Access Fee, which is currently available for Redistributors [5] of NYSE Arca BBO and NYSE Arca Trades that subscribe to only such data feeds and do not subscribe to any other market data product listed on the Fee Schedule and use such market data product for external distribution only. The Exchange proposes to make the Per User Access Fee available to Redistributors of NYSE ArcaBook as well.

The proposed fee change, taken together with similar fee changes filed by the Exchange's affiliated exchanges, New York Stock Exchange LLC (''NYSE'') and NYSE American LLC (''NYSE American''),[6] will reduce the fees associated with the NYSE BQT proprietary data product for Redistributors of NYSE ArcaBook. As described below, NYSE BQT competes directly with similar products offered by both the Nasdaq and Cboe families of U.S. equity exchanges. Collectively, the proposed fee changes are intended to respond to the competition posed by similar products offered by the other exchange groups.

The Exchange proposes to implement the proposed fee change on November 1, 2023.

Background

The Securities and Exchange Commission (''Commission'') has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [7]

While Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [8] Indeed, equity trading is currently dispersed across 16 exchanges,[9] numerous alternative trading systems,[10] and broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 17% market share (whether including or excluding auction volume).[11]

With the NYSE BQT market data product, NYSE Arca and its affiliates compete head to head with the Nasdaq Basic [12] and Cboe One Feed [13] market data products. Similar to those market data products, NYSE BQT, which was established in 2014,[14] consists of certain elements from the NYSE Arca BBO and NYSE Arca Trades market data products as well as from market data products from the Exchange's affiliates, NYSE, NYSE American, NYSE Chicago, Inc. (''NYSE Chicago''),[15] and NYSE National, Inc. (''NYSE National'').[16] Similar to both Nasdaq Basic and the Cboe One Feed, NYSE BQT provides investors with a unified view of comprehensive last sale and BBO data in all Tape A, B, and C securities that trade on the Exchange, NYSE, NYSE American, NYSE Chicago, and NYSE National. Also similar to Nasdaq Basic and the Cboe One Feed, NYSE BQT is not intended to be used for purposes of making order-routing or trading decisions, but rather provides indicative prices for Tape A, B, and C securities.[17]

Together with NYSE and NYSE American, the Exchange proposes to compete for subscribers to NYSE BQT by designing the proposed fee change to be attractive to Redistributors of NYSE ArcaBook that intend to subscribe to and externally redistribute NYSE BQT. Currently, Redistributors of NYSE ArcaBook that want to subscribe to and redistribute NYSE BQT must pay the General Access Fee. Redistributors of NYSE ArcaBook who have data recipient customers interested in NYSE BQT may not be inclined to subscribe to NYSE BQT. When Redistributors do not subscribe to NYSE BQT, the prospective data recipients that are the customers of such Redistributors are unable to subscribe to NYSE BQT. The proposed fee change is designed to provide a financial incentive for such Redistributors to subscribe to NYSE BQT so that their customers, which have expressed an interest in subscribing to NYSE BQT, would be able to access the product via such Redistributors.

Currently, subscribers of each of the NYSE Arca BBO and NYSE Arca Trades products that receive a data feed pay a General Access Fee of $750 per month. In February 2020, the Exchange added the Per User Access Fee, which is a reduced fee of $100 per month available at that time only for subscribers of NYSE Arca BBO and NYSE Arca Trades that use those products in a display-only format, including for internal use for Professional Users and external distribution to both Professional and Non-Professional Users.[18]

In November 2020, the Exchange expanded the application of the reduced Per User Access Fee to Redistributors of NYSE Arca BBO and NYSE Arca Trades data feeds that do not subscribe to any other market data product listed on the Fee Schedule and use such market data

Adopting a Waiver Applicable to the Redistribution Fee) (''Second BQT Fee Reduction Filing'').

[5] A Redistributor is a vendor or any other person that provides a NYSE data product to a data recipient or to any system that a data recipient uses, irrespective of the means of transmission or access.

[18] *See* BQT Fee Reduction Filing, *supra,* note 4.

products for external distribution only.[19]

As noted above, the Exchange now proposes to further expand the applicability of the reduced Per User Access Fee. Specifically, the Exchange proposes that Redistributors of NYSE Arca BBOand NYSE Arca Trades that do not subscribe to any other market data product listed on the Fee Schedule other than NYSE ArcaBook and use such market data products for external distribution only, would be eligible for the reduced Per User Access Fee. A Redistributor that receives such data feeds and uses the market data products for any other purpose (such as internal use) would continue to pay the $1,500 per month General Access Fee. And, as currently set forth in footnote 3 to the Fee Schedule, a subscriber would be charged only one access fee for each of the NYSE Arca BBO and NYSE Arca Trades products, depending on the use of that product.

To effect this change, the Exchange proposes to modify footnote 3 to the Fee Schedule as follows (proposed text italicized, proposed deletions bracketed):

> The Per User Access Fee is charged to: (i) a subscriber that receives a data feed and uses the market data product only for Professional Users and Non-Professional Users in a display-only format, including for internal use and external redistribution in a display-only format, and (ii) a Redistributor that subscribes [only] to the NYSE Arca BBO and NYSE Arca Trades data feeds, and does not subscribe to any other Products listed on this Fee Schedule *other than the NYSE ArcaBook data feed,* and uses these market data products for external distribution only. A subscriber that receives a data feed and uses the market data product for any other purpose, including if combined with Per User use, will be charged the General Access Fee. A subscriber will be charged only one access fee for each of the NYSE Arca BBO and NYSE Arca Trades products, depending on the use of that product.

The proposed rule change would result in lower fees for Redistributors that receive NYSE Arca BBO, NYSE Arca Trades, and NYSE ArcaBook data feeds, and use such market data products for external distribution only.[20] The Exchange believes that the proposed expansion of the reduced Per User Access Fee would provide an incentive for Redistributors that currently subscribe to NYSE ArcaBook to also subscribe to the NYSE BQT data feeds so that such product would be available to their customers, which have expressed an interest in subscribing to NYSE BQT.

The proposed rule change is intended to encourage greater use of NYSE BQT by making it more affordable for Redistributors that subscribe to NYSE ArcaBook and also have customers interested in subscribing to NYSE BQT. The proposed fee change would allow the Exchange to compete more effectively with Nasdaq Basic and Cboe One Feed by expanding the number of Redistributors that would subscribe to NYSE BQT, and therefore make the product more widely available to data subscribers interested in NYSE BQT.

Applicability of Proposed Rule Change

As noted above, the proposed rule change is designed to reduce the overall cost for Redistributors of NYSE BQT that also redistribute NYSE ArcaBook by expanding the applicability of the Per User Access Fee. Today, the Exchange has thirty-one data feed subscribers, two of whom became Redistributors as a direct result of the Second BQT Fee Reduction Filing and currently pay the reduced Per User Access Fee. The Exchange believes that the proposed rule change would provide a further incentive for Redistributors that already subscribe to NYSE ArcaBook to subscribe to NYSE BQT for purposes of providing external distribution of NYSE BQT to potential data recipients interested in the product.

Because the proposed rule change is targeted to potential Redistributors of NYSE BQT that also subscribe to NYSE ArcaBook, the proposed change to the availability of the NYSE Arca BBO and NYSE Arca Trades Per User Access Fees, together with the proposed changes on NYSE and NYSE American, are narrowly tailored with that purpose in mind. Accordingly, this proposed fee change is not designed for Redistributors that are existing customers of NYSE Arca market data products (other than NYSE ArcaBook) or that engage in internal use of NYSE BQT. This proposed rule change would not result in any changes to the market data fees for NYSE Arca BBO and NYSE Arca Trades for such data subscribers.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[21] in general, and Sections 6(b)(4) and 6(b)(5) of the Act,[22] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [23]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

> In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [24]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [25]

More recently, the Commission confirmed that it applies a ''market-based'' test in its assessment of market data fees, and that under that test:

> the Commission considers whether the exchange was subject to significant

[19] *See* Second BQT Fee Reduction Filing, *supra,* note 4.

[20] The Per User Access Fee is 93% lower than the General Access Fee. Together with the corresponding proposed rule changes by NYSE and NYSE American to similarly reduce the access fees to their BBO and Trades products for Redistributors, such Redistributors would be eligible for significantly lower access fees for NYSE BQT, from $6,250 per month to $850 per month ($250 + $200 + $200 +$200), a reduction of more than 86%.

[21] 15 U.S.C. 78f(b).

[22] 15 U.S.C. 78f(b)(4), (5).

[25] *Id.* at 535.

competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder.[26]

1. The Proposed Fees Are Constrained by Significant Competitive Forces

An exchange may demonstrate that its fees are constrained by competitive forces by showing that platform competition applies.

As the United States Supreme Court recognized in *Ohio* v. *American Express,* platforms are firms that act as intermediaries between two or more sets of agents, and typically the choices made on one side of the platform affect the results on the other side of the platform via externalities, or ''indirect network effects.'' [27] Externalities are linkages between the different ''sides'' of a platform such that one cannot understand pricing and competition for goods or services on one side of the platform in isolation; one must also account for the influence of the other side. As the Supreme Court explained:

> To ensure sufficient participation, two-sided platforms must be sensitive to the prices that they charge each side. . . . Raising the price on side A risks losing participation on that side, which decreases the value of the platform to side B. If the participants on side B leave due to this loss in value, then the platform has even less value to side A—risking a feedback loop of declining demand. . . . Two-sided platforms therefore must take these indirect network effects into account before making a change in price on either side.[28]

The Exchange and its affiliated exchanges have long maintained that they function as platforms between consumers of market data and consumers of trading services. Proving the existence of linkages between the two sides of this platform requires an in-depth economic analysis of both public data and confidential Exchange data about particular customers' trading activities and market data purchases. Exchanges, however, are prohibited from sharing details about these specific customer activities and purchases. For example, pursuant to Exchange Rule 7.41–E, transactions executed on the Exchange are processed anonymously.

Exchanges function as platforms for market data and transaction services mean that exchanges do not set fees for market data products without considering, and being constrained by, the effect the fees will have on the order-flow side of the platform. And as the D.C. Circuit recognized in *NetCoalition I,* ''[n]o one disputes that competition for order flow is fierce.'' [29] The court further noted that ''no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers,'' and that an exchange ''must compete vigorously for order flow to maintain its share of trading volume.'' [30]

As noted above, while Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [31] The Commission's Division of Trading and Markets has also recognized that with so many ''operating equities exchanges and dozens of ATSs, there is vigorous price competition among the U.S. equity markets and, as a result, [transaction] fees are tailored and frequently modified to attract particular types of order flow, some of which is highly fluid and price sensitive.'' [32] Indeed, today, equity trading is currently dispersed across 16 exchanges,[33] numerous alternative trading systems,[34] broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 17% market share.[35]

Further, low barriers to entry mean that new exchanges may, and do, rapidly and inexpensively enter the market and offer additional substitute platforms to compete with the Exchange. For example, since 2020, three new exchanges have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020; [36] Members Exchange (MEMX), which began operations as an exchange on September 29, 2020; [37] and Miami International Holdings (MIAX), which began operations of its first equities exchange on September 29, 2020.[38]

These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others).[39]

For example, one of MEMX's founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering ''[l]ower pricing on market data.'' [40] Nor is this a new phenomenon: exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which

now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX ''BATS 2.0.'' [41]

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive and contestable.[42] And low barriers to entry act as a market check on high prices.[43]

In sum, the fierce competition for order flow thus constrains any exchange from pricing its market data at a supracompetitive price, and constrains the Exchange in setting its fees at issue here.

The proposed expansion of Per User Access Fee is therefore reasonable because in setting it, the Exchange is constrained by the availability of numerous substitute platforms offering market data products and trading. Such substitutes need not be identical, but only substantially similar to the product at hand.

More specifically, in expanding the applicability of the Per User Access Fee to Redistributors of NYSE ArcaBook, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers have their pick of an increasing number of alternative platforms to use instead of the Exchange. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternative platforms to the Exchange's platform ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for trading order flow.

Even putting aside the facts that exchanges are platforms and that pricing decisions on the two sides of the platform are intertwined, the Exchange is constrained in setting the proposed market data fees by the availability of numerous substitute market data products. The Commission has been clear that substitute products need not be identical, but only substantially similar to the product at hand.[44]

The NYSE BQT market data product is subject to significant competitive forces that constrain its pricing. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. In the case of NYSE BQT, this product provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, which together account for approximately 20% of consolidated U.S. equities trading volume as of October 2023.[45] Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe's four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and are not intended to be used for order routing or trading decisions.

In addition to competing with proprietary data products from Nasdaq and Cboe, NYSE BQT also competes with the consolidated data feed. However, the Exchange does not claim that NYSE BQT is a substitute for consolidated data with respect to requirements under the Vendor Display Rule, which is Regulation NMS Rule 603(c).

The fact that this filing is proposing to further expand the application of the reduced Per User Access Fee is itself confirmation of the inherently competitive nature of the market for the sale of proprietary market data. For example, in August 2019, Cboe filed proposed rule changes to reduce certain of its Cboe One Feed fees and noted that it attracted two additional customers because of the reduced fees.[46] More

Supp. 2d 172, 186 (D.D.C. 2001) (recognizing that ''[a]s a matter of law, courts have generally recognized that when a customer can replace the services of an external product with an internally-created system, this captive output (*i.e.* the self-production of all or part of the relevant product) should be included in the same market.''). In *SunGard,* the court rejected the Antitrust Division's attempt to block SunGuard's acquisition of the disaster recovery assets of Comdisco on the basis that the acquisition would ''substantially lessen competition in the market for shared hotsite disaster recovery services,'' when the evidence showed that ''internal hotsites'' created by customers competed with the ''external shared hotsite business'' engaged in by the merging parties. *Id.* at 173–74, 187.

[43] *United States* v. *Baker Hughes,* 908 F.2d 981, 987 (1990) (''In the absence of significant barriers [to entry], a company probably cannot maintain supracompetitive pricing for any length of time.''); *see also* David S. Evans and Richard Schmalensee, Markets with Two-Sided Platforms, in 1 Issues In Competition Law And Policy 667, 685 (ABA Section of Antitrust Law 2008) (noting that exchange mergers in 2005 and 2006 were approved by competition authorities in part in reliance on planned and likely entry of other firms).

[44] For example, in the National IF Approval Order, the Commission recognized that for some customers, the best bid and offer information from consolidated data feeds may function as a substitute for the NYSE National Integrated Feed product, which contains order by order information. *See* National IF Approval Order, *supra* note 26, at 67397 [release p. 21] (''[I]nformation provided by NYSE National demonstrates that a number of executing broker-dealers do not subscribe to the NYSE National Integrated Feed and executing broker-dealers can otherwise obtain NYSE National best bid and offer information from the consolidated data feeds.'' [46] *See* Securities Exchange Act Release Nos.86667 (August 14, 2019) (SR–CboeBZX–2019–069); 86670 (August 14, 2019) (SR–CboeBYX–2019–012); 86676 (August 14, 2019) (SR–CboeEDGA–2019–013); and 86678 (August 14, 2019) (SR–CboeEDGX–2019–048) (Notices of filing and Immediate effectiveness of proposed rule change to reduce fees for the Cboe One Feed) (collectively ''Cboe One Fee Filings''). The Cboe One Fee Filings were in effect from August 1, 2019 until September 30, 2019, when the Commission suspended them and instituted proceedings to determine whether to approve or disapprove those proposals. *See, e.g.,* Securities Exchange Act Release No. 87164 (September 30, 2019), 84 FR 53208 (October 4, 2019) (SR–CboeBZX–2019–069). On October 1, 2019, the Cboe equities exchanges refiled the Cboe One Fee Filings on the basis that they had new customers subscribe as a result of the Cboe One Fee Filings, and therefore its fee proposal had increased competition for top-of-book market data. *See* Securities Exchange Act Release Nos. 87312 (October 15, 2019), 84 FR 56235 (October 21, 2019) (SR–CboeBZX–2019–086); 87305 (October 14, 2019), 84 FR 56210 (October 21, 2019) (SR–CboeBYX–2019–015); 87295 (October 11, 2019), 84 FR 55624 (October 17, 2019) (SR–CboeEDGX–2019–059); and 87294 (October 11, 2019), 84 FR 55638 (October 17, 2019) (SR–CboeEDGA–2019–015) (Notices of filing and immediate effectiveness of proposed rule changes to re-file the Small Retail Broker Distribution Program) (''Cboe One Fee Re-Filings''). On November 26, 2019, the Commission suspended the Cboe One Fee Re-Filings and instituted proceedings to determine whether to approve or disapprove those proposals. *See, e.g.,* Securities Exchange Act Release No. 87629 (November 26, 2019), 84 FR 66245 (December 3, 2019) (SR–CboeBZX–2019–086). On November 27, 2019, the Cboe equities exchanges refiled the Cboe One Fee Filings with one revision to the requirements for participating in the Small Retail Broker Distribution Program and additional information about the basis for the proposed fee changes. *See* Securities Exchange Act Release Nos. 87712 (December 10, 2019), 84 FR 68508 (December 16, 2019) (SR–CboeBZX–2019–101); 88713 (December 10, 2019), 84 FR 68530 (December 16, 2019) (SR–CboeBYX–2019–023); 87709 (December 10, 2019), 84 FR 68523 (December 16, 2019) (SR–CboeEDGA–2019–021); and 87711 (December 10, 2019), 84 FR 68501 (December 16, 2019) (SR–Cboe-EDGX–2019–071) (Notices of filing and immediate effectiveness of proposed rule changes to introduce a Small Retail Broker Distribution Program) (''Cboe One Third Fee Re-Filings''). On February 4, 2020, the Cboe equities exchanges withdrew the Cboe One Third Fee Re-Filings and, on the same date, refiled the Cboe One Fee Filings. *See* Securities Exchange Act Release Nos. 88221 (February 14, 2020), 85 FR 9904 (February 20, 2020) (SR–CboeBYX–2020–007); 88218 (February 14, 2020), 85 FR 9827 (February

recently, Nasdaq filed a proposed rule change to lower the enterprise license fee for broker-dealers distributing Nasdaq Basic to internal Professional subscribers and the enterprise license fee for broker-dealers distributing Nasdaq Last Sale to Professional subscribers.[47]

The Exchange notes that NYSE Arca proprietary market data products are entirely optional. The Exchange is not required to make the proprietary data products that are the subject of this proposed rule change available or to offer any specific pricing alternatives to any customers, nor is any firm or investor required to purchase the Exchange's data products. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfil regulatory obligations,[48] a customer's decision whether to purchase any of the Exchange's proprietary market data feeds is entirely discretionary. Most firms that choose to subscribe to proprietary market data feeds from the Exchange and its affiliates do so for the primary goals of using them to increase their revenues, reduce their expenses, and in some instances compete directly with the Exchange's trading services. Such firms are able to determine for themselves whether or not the products in question or any other similar products are attractively priced. If market data feeds from the Exchange and its affiliates do not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the products.

In addition, in the case of products that are also redistributed through market data vendors, such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. This competitive constraint is precisely what is driving the proposed fee changes here, which are designed to attract new market data vendors, and through them new subscribers, to the NYSE BQT product. Currently, only seven data feed vendors subscribe to NYSE BQT, and each vendor has limited redistribution of NYSE BQT. No other vendors currently subscribe to NYSE BQT and likely will not unless their customers request it, and customers will not elect to pay the proposed fees unless such product can provide value by sufficiently increasing revenues or reducing costs in the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

Because of the availability of substitutes, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. Those competitive pressures imposed by available alternatives are evident in the Exchange's proposed pricing.

In setting the proposed fees, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternatives to the Exchange's platform and, more specifically, alternatives to the market data products, including proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if the attendant fees are not justified by the returns that any particular vendor or data recipient would achieve through the purchase.

2. The Proposed Fees Are Reasonable

The proposed expansion of the Per User Access Fee is reasonable, for the following additional reasons.

Overall. This proposed fee change is a result of the competitive environment, as the Exchange seeks to decrease certain of its fees to attract Redistributors that do not currently subscribe to the NYSE BQT market data product. The Exchange is proposing the fee reduction at issue to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, and expanding the options available to firms making data purchasing decisions based on their business needs. The Exchange believes that this is consistent with the principles contained in Regulation NMS to ''promote the wide availability of market data and to allocate revenues to SROs that produce the most useful data for investors.'' [49]

Access Fee. By making the reduced Per User Access Fee available to Redistributors of NYSE ArcaBook for external distribution who do not subscribe to any other products listed on the Fee Schedule other than NYSE Arca BBO and NYSE Arca Trades, the Exchange believes that more Redistributors may choose to subscribe to these products, thereby expanding the distribution of this market data for the benefit of investors that participate in the national market system and increasing competition generally. The Exchange also believes that offering the Per User Access Fee to these Redistributors would expand the availability of NYSE BQT to potential data recipients that are interested in subscribing to NYSE BQT but do not have access to a Redistributor who subscribes to the data feeds.

The Exchange determined to make the reduced Per User Access Fee available to these Redistributors because it constitutes a substantial reduction of the current fee, with the intended purpose of increasing use of NYSE BQT by Redistributors. NYSE BQT has been in place since 2014 but has a very small number of subscribers. The Exchange believes that in order to compete with other indicative pricing products such as Nasdaq Basic and Cboe One Feed, it needs to provide a meaningful financial incentive for more Redistributors to choose to subscribe to NYSE BQT so that they can make it available to their

20, 2020) (SR–CboeBZX–2020–014); 88220 (February 14, 2020), 85 FR 9912 (February 20, 2020) (SR–CboeEDGA–2020–004); and 88219 (February 14, 2020), 85 FR 9872 (February 20, 2020) (SR–CboeEDGX–2020–008) (Notices of filing and immediate effectiveness of proposed rule changes to introduce a Small Retail Broker Distribution Program) (''Cboe One Fourth Fee Re-Filings''). On April 15, 2020, the Cboe equities exchanges withdrew the Cboe One Fee Filings and the Cboe One Fee Re-Filings. Pursuant to the Cboe One Fourth Fee Re-Filings, the Small Retail Broker Distribution Program is currently in effect at the Cboe equities exchanges.

[47] *See* Securities Exchange Act Release No. 90177 (October 14, 2020), 85 FR 66620 (October 20, 2020) (SR–NASDAQ–2020–065) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Basic to Internal Professional Subscribers as Set Forth in the Equity 7 Pricing Schedule, Section 147, and the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Last Sale to Professional Subscribers at Equity 7, Section 139).

[48] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some broker-dealers and ATSs have chosen not to do so.

[49] *See* Regulation NMS Adopting Release, 70 FR 37495, at 37503.

customers. Accordingly, the proposed expansion of the Per User Access Fee, together with the proposed expansion of the Per User Access Fee filed by the Exchange's affiliates, is reasonable because the reductions will make NYSE BQT a more attractive offering for Redistributors that do not currently subscribe to any NYSE Arca market data products other than NYSE ArcaBook and make it more competitive with Nasdaq Basic and Cboe One Feed.

Evidence of the competition among exchange groups for these products has previously been demonstrated via fee changes. For example, following the introduction of the Cboe One Feed, Nasdaq responded by reducing its fees for the Nasdaq Basic product.[50] With the proposed changes by the Exchange, NYSE, and NYSE American, the Exchange is similarly seeking to compete by decreasing the total access fees for NYSE BQT from $6,250 to $850 for Redistributors that do not currently subscribe to any NYSE Arca market data products other than NYSE ArcaBook and have customers that are interested in subscribing to NYSE BQT but cannot do so until their Redistributor also subscribes. This proposed rule change therefore demonstrates the existence of an effective, competitive market because this proposal resulted from a need to generate innovative approaches in response to competition from other exchanges that offer market data for a specific segment of market participants.

For all of the foregoing reasons, the Exchange believes that the proposed fees are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed expansion of the Per User Access Fee is allocated fairly and equitably among the various categories of users of the Exchange's market data feed, and any differences among categories of users are justified.

Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to expand the application of the Per User Access Fee for Redistributors that would be subscribing to the NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook data feeds and would use these market data products for external distribution only, which the Exchange hopes will attract new Redistributor subscribers for the NYSE BQT market data product so that the product can be made available to prospective market data recipients. The Exchange is proposing to expand the application of the reduced Per User Access Fee to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing to the NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook data feeds and would use these market data products for external distribution only is equitable as the reduced fee would apply equally to all data recipients that choose to subscribe to NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook for external distribution only. Because NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook are optional products, any data recipient could choose to subscribe to such data feeds to distribute externally and be eligible for the Per User Access Fee. The Exchange does not believe that it is inequitable that the Per User Access Fee would be available only to data recipients that subscribe to NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange believes that charging a different access fee for a Redistributor that is engaged solely in external distribution of only the NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook products is equitable because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE Arca market data products are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers.

Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to amend its fees to provide a financial incentive for Redistributors of NYSE ArcaBook that do not currently subscribe to any NYSE Arca market data products that decide to subscribe to NYSE BQT, which the Exchange hopes will attract more subscribers for the NYSE BQT market data product. The Exchange is proposing to expand the application of the Per User Access Fee to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing to the NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook data feeds and would use these market data products for external distribution only is not unfairly discriminatory as the reduced fee would apply equally to all Redistributors that choose to subscribe to NYSE Arca BBO, NYSE

[50] *See e.g.,* Securities Exchange Act Release No. 83751 (July 31, 2018), 83 FR 38428 (August 6, 2018) (SR–NASDAQ–2018–058) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower Fees and Administrative Costs for Distributors of Nasdaq Basic, Nasdaq Last Sale, NLS Plus and the Nasdaq Depth-of-Book Products Through a Consolidated Enterprise License). Nasdaq filed the proposed fee change to lower the Enterprise Fee for Nasdaq Basic and other market data products in response to the Enterprise Fee for the Cboe One Feed adopted by Cboe family of exchanges.

Arca Trades and NYSE ArcaBook for external distribution only. Because NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook are optional products, any data recipient could choose to subscribe to such data feeds to distribute externally and be eligible for the Per User Access Fee. The Exchange does not believe that it is unfairly discriminatory that the Per User Access Fee would be available only to data recipients that subscribe to NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. While some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange therefore believes that there is a meaningful distinction between internal use and redistribution of market data and that charging a different access fee to a Redistributor that is engaged solely in external distribution of only the NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook products is not unfairly discriminatory because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

Moreover, the Exchange does not believe that it is unfairly discriminatory to offer the Per User Access Fee only to those Redistributors that would subscribe to the NYSE Arca BBO, NYSE Arca Trades and NYSE ArcaBook data feeds, and only for external distribution. This proposed rule change is designed to provide an incentive for Redistributors that currently subscribe to NYSE ArcaBook, but do not subscribe to NYSE BQT, and may have customers that are interested in subscribing to NYSE BQT, to subscribe to the NYSE Arca BBO and NYSE Arca Trades data feeds so that they can make NYSE BQT available to their customers. This fee incentive is not necessary for Redistributors that currently subscribe to the NYSE Arca BBO and NYSE Arca Trades data feeds because such Redistributors could already subscribe to NYSE BQT, but have chosen not to, and a reduction in their existing access fees would likely not result in such Redistributors choosing to subscribe to NYSE BQT.

For all of the foregoing reasons, the Exchange believes that the proposed fees are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Indeed, as demonstrated above, the Exchange believes the proposed rule changes are pro-competitive.

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the proposed fee schedule would apply to all subscribers of NYSE Arca market data products, and customers may not only choose whether to subscribe to the products at all, but also may tailor their subscriptions to include only the products and uses that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition. As shown above, to the extent that particular proposed fees apply to only a subset of subscribers, those distinctions are not unfairly discriminatory and do unfairly burden one set of customers over another.

Intermarket Competition. The Exchange believes that the proposed fees do not impose a burden on competition on other exchanges that is not necessary or appropriate; indeed, the Exchange believes the proposed fee changes would have the effect of increasing competition. As described above, exchanges are platforms for market data and trading. In setting the proposed fees, the Exchange is constrained by the availability of substitute platforms also offering market data products and trading, and low barriers to entry mean new exchange platforms are frequently introduced. The fact that exchanges are platforms ensures that no exchange can make pricing decisions for one side of its platform without considering, and being constrained by, the effects that price will have on the other side of the platform. In setting fees at issue here, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers will have its pick of an increasing number of alternative platforms to use instead of the Exchange. Given this intense competition between platforms, no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. NYSE BQT provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, while Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe's four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and therefore, are reasonable substitutes for one another. Additionally, market data vendors are also able to offer close substitutes to NYSE BQT. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. These competitive pressures ensure that no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A)[51] of the Act and paragraph (f) thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSEARCA–2023–78 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEARCA–2023–78. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEARCA–2023–78 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[52]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98966; File No. SR–NYSENAT–2023–26]

Self-Regulatory Organizations; NYSE National, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Connectivity Fee Schedule

November 16, 2023.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 9, 2023, NYSE National, Inc. (''NYSE National'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users with wireless connectivity to CME Group market data. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users[4] with wireless connectivity to CME Group market data.[5]

The Exchange currently provides Users with wireless connections to eight market data feeds or combinations of feeds from third-party markets (the ''Existing Third Party Data''),[6] and wired connections to more than 45 market data feeds or combinations of feeds.[7] The Exchange proposes to add to the Fee Schedule wireless connections to CME Group, Inc. (''CME Group'') market data (''CME Group Data'' and, together with the Existing Third Party Data, the ''Third Party Data''). Users would be offered the proposed wireless connection to the CME Group Data

[4] For purposes of the Exchange's colocation services, a ''User'' means any market participant that requests to receive colocation services directly from the Exchange. *See* Securities Exchange Act Release No. 83351 (May 31, 2018), 83 FR 26314 at n.9 (June 6, 2018) (SR–NYSENAT–2018–07) (''NYSE National Colocation Notice''). As specified in the Fee Schedule, a User that incurs colocation fees for a particular colocation service pursuant thereto would not be subject to colocation fees for the same colocation service charged by the Exchange's affiliates the New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., and NYSE Chicago, Inc. (together, the ''Affiliate SROs''). Each Affiliate SRO has submitted substantially the same proposed rule change to propose the changes described herein. *See* SR–NYSE–2023–44, SR–NYSEAMER–2023–59, SR–NYSEARCA–2023–79, and SR–NYSECHX–2023–22.

[5] The Exchange filed a similar proposal in 2021, which it subsequently withdrew. *See* Securities Exchange Act Release No. 93810 (December 17, 2021), 86 FR 73026 (December 23, 2021) (SR–NYSE–2021–67, SR–NYSEAMER–2021–43, SR–NYSEARCA–2021–97, SR–NYSECHX–2021–17, SR–NYSENAT–2021–23).

[6] *See* NYSE National Colocation Notice, *supra* note 4, at 26319–20.

[7] *See id.* at 26322–23.

through connections into the colocation center in the Mahwah, New Jersey data center (''MDC'').[8]

The Exchange expects that the proposed rule change would become operative in the fourth quarter of 2023, and in any event, no later than December 31, 2023. The Exchange will announce the date that the wireless connection to the CME Group Data will be available through a customer notice.

To receive CME Group Data, the User would enter into an agreement with a third party for permission to receive the data, if required. The User would pay this third party any fees for the data content.

The Exchange proposes to revise the Fee Schedule to reflect fees related to the wireless connection to CME Group Data. For each wireless connection to CME Group Data, a User would be charged a $5,000 non-recurring initial charge and a monthly recurring charge of $6,000. If a User were to purchase more than one wireless connection to CME Group Data, it would pay more than one non-recurring initial charge. Each proposed wireless connection would include the use of one port for connectivity to CME Group Data, and a User would not pay a separate fee for the use of such port.[9]

The Exchange's proposed wireless connectivity to CME Group market data would not include the entire CME Group market data feed, which includes market data for approximately 1,200 futures symbols. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. Accordingly, FIDS has consulted with customers about which of the CME Group symbols they would like to be available wirelessly and plans to offer connectivity to a subgroup of symbols based on this customer feedback. The Exchange understands that Quincy Data LLC (''Quincy''),[10] a third party that already provides wireless connectivity to CME Group market data in the MDC, similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.[11]

Application and Impact of the Proposed Changes

The proposed changes would not apply differently to distinct types or sizes of market participants. Rather, they would apply to all Users equally.

As is currently the case, the purchase of any colocation service, including connectivity to Third Party Data, is completely voluntary and the Fee Schedule is applied uniformly to all Users.

Competitive Environment

The Exchange operates in a highly competitive market in which other vendors offer colocation services as a means to facilitate the trading and other market activities of those market participants who believe that colocation enhances the efficiency of their operations. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [12]

As explained below in this filing, the Exchange's proposed wireless connection to CME Group Data would compete with the wireless connection to CME Group market data provided by Quincy. Third-party vendors such as Quincy are not at any competitive disadvantage created by the Exchange.

The proposed change is not otherwise intended to address any other issues relating to colocation services or related fees, and the Exchange is not aware of any problems that Users would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[13] in general, and furthers the objectives of Section 6(b)(5) of the Act,[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange further believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,[15] because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Proposed Change Is Reasonable

The Exchange believes that the proposed rule change is reasonable. In considering the reasonableness of proposed services and fees, the Commission's market-based test considers ''whether the exchange was subject to significant competitive forces in setting the terms of its proposal . . . , including the level of any fees.'' [16] If the Exchange meets that burden, ''the Commission will find that its proposal is consistent with the Act unless 'there is a substantial countervailing basis to find that the terms' of the proposal violate the Act or the rules thereunder.'' [17] Here, the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because substantially similar substitutes are available, and the Exchange has not placed the third party

[8] Through its Fixed Income and Data Services (''FIDS'') (previously ICE Data Services) business, Intercontinental Exchange, Inc. (''ICE'') operates the MDC. The Exchange and the Affiliate SROs are indirect subsidiaries of ICE. The proposed service would be provided by FIDS pursuant to an agreement with a non-ICE entity. FIDS does not own the wireless network that would be used to provide the service.

[9] If a User also connects to Existing Third Party Data, it would not be able to connect to such Existing Third Party Data using the same port that it uses for connectivity to CME Group Data.

[10] The Exchange understands that Quincy is an affiliate of McKay Brothers LLC.

[11] The Exchange understands that the third parties that provide wireless connectivity to CME Group market data to the MDC and other data centers in New Jersey (as discussed later in this filing) follow a substantially similar model, offering wireless connectivity to a selection of market data rather than to entire feeds.

vendors at a competitive disadvantage created by the Exchange.

Substantially Similar Substitutes Are Available

The Exchange's proposed wireless connection to CME Group Data would compete with other methods by which both the Exchange and various third parties already provide connectivity to CME Group market data to Users.

Quincy already provides wireless connectivity to CME Group market data in the MDC. Like the Exchange's proposed wireless connectivity, Quincy's wireless connectivity to CME Group market data includes a similarly-sized subset of symbols that almost completely overlaps with the symbols for which the Exchange proposes to provide wireless connectivity—presumably because customers have requested the same symbols of each provider. Specifically, like the Quincy wireless connection, the Exchange's proposed wireless connection would include the main futures for equity indices, government bonds, foreign exchanges, oil, and precious metals.[18] In addition, the Exchange's proposed wireless connection would also include several additional symbols that proposed Users have specifically requested be included. The Exchange plans to continuously monitor Users' preferences and their views of the usefulness of the included symbols, and may adjust them accordingly. The Exchange believes that the Quincy wireless connection to CME Group market data is at a same or similar speed as the Exchange's proposed connection, and at a similar price.[19]

Accordingly, the Quincy wireless connection to CME Group market data would compete with the Exchange's proposed wireless connection, and would exert significant competitive forces on the Exchange in setting the terms of its proposal, including the level of the Exchange's proposed fees.[20] If the Exchange were to set its proposed fees too high, Users could respond by instead selecting Quincy's substantially similar wireless connectivity to CME Group data.[21]

Third Party Competitors Are Not at a Competitive Disadvantage Created by the Exchange

The Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is available to any telecommunications provider. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[22] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party telecommunications service providers that have installed their equipment in the MDC's two meet-me-rooms (''Telecoms'').[23] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level[24] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[25] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third-party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its

[18] Quincy's symbol list for wireless connectivity to CME Group data is available at *https://www.quincy-data.com/product-page/* under the heading ''2023 Quincy Extreme Data Symbol Set/North America QED Symbol Set.'' The Exchange understands that the Quincy wireless connection to CME Group data currently includes 26 symbols. The Exchange's proposed wireless connection to CME Group data would contain a similar number of symbols, nearly all of which are included in the Quincy wireless connection.

[19] Because Quincy is not a regulated entity, it is not obligated to make its latency figures or fees publicly available or the same for all entities.

[20] *See* 2008 ArcaBook Approval Order, *supra* note 16, at 74789 and n.295 (recognizing that products need not be identical to be substitutable).

[21] In addition, the Exchange believes that at least two third-party market participants, in addition to FIDS, offer fiber connections to CME Group market data in colocation. *See* NYSE National Colocation Notice, *supra* note 4, at 26318. Unlike the proposed wireless connectivity, FIDS' fiber connection to CME Group market data includes the entire CME Group data feed, instead of a subset of symbols.

[22] *See* NYSE Rule 3.13(c), NYSE American Rule 3.13E(c), NYSE Arca Rule 3.13(c), NYSE Chicago Rule 3.13(c), and NYSE National Rule 3.13(c) (Data Center Pole Restrictions—Connectivity to Co-Location Space). ''Patch Panel Point'' is defined as ''the patch panel where fiber connections for wireless services connect to the network row in the space used for co-location in the Data Center.'' *Id.* The proposed service would not use the MDC pole, so Rule 3.13(b) would not apply.

[23] Note that in the case of wireless connectivity, a User in colocation still requires a fiber circuit to transport data. If a Telecom is used, the data is transmitted wirelessly to the relevant pole, and then from the pole to the meet-me-room using a fiber circuit.

[24] *See* Securities Exchange Act Release No. 98002 (July 26, 2023), 88 FR 50232 (August 1, 2023) (SR–NYSENAT–2023–12) (''MMR Notice'').

[25] *See id.* at 50235. Importantly, the Exchange is prevented from making any alteration to its meet-me-room services or fees without filing a proposal for such changes with the Commission.

competitors without seeking a formal fee change in a filing before the Commission.

In sum, because the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because a substantially similar substitute is available, and the Exchange has not placed the third-party vendors at a competitive disadvantage created by the Exchange, the proposed fees for the Exchange's wireless connectivity to CME Group Data are reasonable.[26] If the Exchange were to set its prices for wireless connectivity to CME Group Data at a level that Users found to be too high, Users could easily choose to connect to CME Group market data in colocation at the MDC through the competing Quincy wireless connection, as detailed above.

Additional Considerations

The Exchange believes that it is reasonable for the proposed wireless connection to CME Group Data not to transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. The Exchange believes it is reasonable for FIDS to select the symbols it will make available for wireless connectivity based on customer input and demand. The Exchange understands that Quincy similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.

The Exchange believes that it is reasonable that a User that connects to both CME Group Data and Existing Third Party Data may not use the same port for connectivity to both, and so would have at least two ports, because the proposed wireless connection would include the use of one port for connectivity to CME Group Data, and the connectivity to the Existing Third Party Data includes the use of one port for connectivity to Existing Third Party Data. A User would not pay a separate fee for using such ports.

The Proposed Change Is an Equitable Allocation of Fees and Credits

The Exchange believes that its proposal equitably allocates its fees among Users. Without this proposed rule change, Users would have fewer options for connectivity to CME Group market data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that the proposed change is equitable because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are equitably allocated because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select the Exchange's proposed wireless connections to CME Group Data would be charged the same amount for the same services.

The Proposed Change Is Not Unfairly Discriminatory

The Exchange believes that the proposed rule change is not unfairly discriminatory, for the following reasons. Without this proposed rule change, Users would have fewer options for connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that it is not unfairly discriminatory to not transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. There is limited bandwidth available on the wireless network to colocation, and there are a number of CME Group data feeds. Limiting the feeds to the selection of CME Group market data regarding securities for which FIDS determines there is demand would allow Users to receive the relevant CME Group Data over a wireless network.

The Exchange believes that the proposed change is not unfairly discriminatory because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are not unfairly discriminatory because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select wireless connections to CME Group Data would be charged the same amount for the same services. Users that opt to use wireless connections to CME Group Data would receive the CME Group Data that is available to all Users, as all market participants that contract with CME Group or its affiliate for CME Group Data, as required, may receive it.

For the reasons above, the proposed changes do not unfairly discriminate between or among market participants that are otherwise capable of satisfying any applicable colocation fees, requirements, terms, and conditions established from time to time by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes that the proposal will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of Section 6(b)(8) of the Act.[27]

The proposed change would not affect competition among national securities exchanges or among members of the Exchange, but rather between FIDS and its commercial competitors. The proposed wireless connection would provide Users with an alternative means of connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations.

Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection. The Exchange's proposed wireless connection and the existing Quincy wireless connection to CME Group market data are sufficiently similar

[26] *See* Wireless Approval Order, *supra* note 16.

[27] 15 U.S.C. 78f(b)(8).

substitutes and thus provide market participants with choices to meet their wireless connectivity needs.

In addition, the Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is the same path followed by any Telecom. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[28] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party Telecoms that have installed their equipment in the MDC's two meet-me-rooms.[29] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level[30] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[31] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[32] and Rule 19b–4(f)(6) thereunder.[33] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b–4(f)(6)[34] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[35] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[36] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSENAT–2023–26 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSENAT–2023–26. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98972; File No. SR–CboeEDGX–2023–069]

Self-Regulatory Organizations; Cboe EDGX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend its Rules To Adopt Monthly Options Series

November 16, 2023.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 15, 2023, Cboe EDGX Exchange, Inc. (''EDGX Options'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Exchange filed the proposal as a ''non-controversial'' proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[3] and Rule 19b–4(f)(6) thereunder.[4] The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe EDGX Exchange, Inc. (the ''Exchange'' or ''EDGX Options'') proposes to amend its Rules to adopt Monthly Options Series. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/options/regulation/rule_filings/edgx/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Rules to accommodate the listing of option series that would expire at the close of business on the last business day of a calendar month (''Monthly Options Series''). Pursuant to proposed Rules 19.6, Interpretation and Policy .08(a) and 29.11(k)(1),[5] the Exchange may list Monthly Options Series for up to five currently listed option classes that are either index options or options on exchange-traded funds (''ETFs'').[6] In addition, the Exchange may also list Monthly Options Series on any options classes that are selected by other securities exchanges that employ a similar program under their respective rules.[7] The Exchange may list 12 expirations for Monthly Options Series. Monthly Options Series need not be for consecutive months; however, the expiration date of a nonconsecutive expiration may not be beyond what would be considered the last expiration date if the maximum number of expirations were listed consecutively.[8] Other expirations in the same class are not counted as part of the maximum

[37] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] 15 U.S.C. 78s(b)(3)(A)(iii).

[4] 17 CFR 240.19b–4(f)(6).

[5] The proposed rule change defines the term ''Monthly Options series'' in Rule 29.2(l) (and reletters current paragraphs (l) through (p) to be (m) through (q)) as a series in an options class that is approved for listing and trading on the Exchange in which the series is opened for trading on any business day and that expires at the close of business on the last business day of a calendar month.

[6] The Exchange proposes to amend Rule 19.6(a) and (b) to provide that proposed Rule 19.6, Interpretation and Policy .08 will describe how the Exchange will fix a specific expiration date and exercise price for Monthly Options Series and will govern the procedures for opening Monthly Options Series, respectively. The proposed change to Rule 19.6(a) is consistent with language in current Rule 19.6(a) for other Short Term Option Series and Quarterly Options Series. The proposed rule change also makes a nonsubstantive correction to pluralize the term ''policy'' (to become ''policies'') to be consistent with the terminology in the Rules. Additionally, the proposed rule change adds to Rule 19.6(b) that Interpretation and Policies .04 and .05 will govern the procedures for opening Quarterly Options Series and Short Term Option Series, respectively (as well as adding exception language to the beginning of that paragraph). This is merely a clarification, as Rule 19.6, Interpretations and Policies .04 and .05 clearly govern the opening procedures for those options listing programs. This proposed change is also consistent with Cboe Exchange, Inc. (''Cboe Options'') Rule 4.5(b), which has similar options listing programs.

[7] The Securities and Exchange Commission (the ''Commission'') recently approved a Cboe Options proposed rule change to adopt a substantively identical Monthly Options Series program. *See* Securities Exchange Act Release No. 98915 (November 13, 2023) (SR–CBOE–2023–049) (''Cboe Options Approval Order'').

[8] The Exchange notes this provision considers consecutive monthly listings. In other words, as other expirations (such as Quarterly Options Series) are not counted as part of the maximum, those expirations would not be considered when considering when the last expiration date would be if the maximum number were listed consecutively. For example, if it is January 2024 and the Exchange lists Quarterly Options Series in class ABC with expirations in March, June, September, December, and the following March, the Exchange could also list Monthly Options Series in class ABC with expirations in January, February, April, May, July, August, October, and November 2024 and January and February of 2025. This is because, if Quarterly Options Series, for example, were counted, the Exchange would otherwise never be able to list the maximum number of Monthly Options Series. This is consistent with the listing provisions for Quarterly Options Series, which permit calendar quarter expirations. The need to list series with the same expiration in the current calendar year and the following calendar year (whether Monthly or Quarterly expiration) is to allow market participants to execute one-year strategies pursuant to which they may roll their exposures in the longer-dated options (*e.g.* January 2025) prior to the expiration of the nearer-dated option (*e.g.* January 2024).

numbers of Monthly Options Series expirations for a class.[9] Monthly Options Series will be P.M.-settled.[10]

The strike price of each Monthly Options Series will be fixed at a price per share, with at least two, but no more than five, strike prices above and at least two, but no more than five, strike prices below the value of the underlying index or price of the underlying security at about the time that a Monthly Options Series is opened for trading on the Exchange. The Exchange will list strike prices for Monthly Options Series that are reasonably related to the current price of the underlying security or current index value of the underlying index to which such series relates at about the time such series of options is first opened for trading on the Exchange. The term ''reasonably related to the current price of the underlying security or index value of the underlying index'' means that the exercise price is within 30% of the current underlying security price or index value.[11] Additional Monthly Options Series of the same class may be open for trading on the Exchange when the Exchange deems it necessary to maintain an orderly market, to meet customer demand, or when the market price of the underlying security moves substantially from the initial exercise price or prices. To the extent that any additional strike prices are listed by the Exchange, such additional strike prices will be within 30% above or below the closing price of the underlying index or security on the preceding day. The Exchange may also open additional strike prices of Monthly Options Series that are more than 30% above or below the current price of the underlying security, provided that demonstrated customer interest exists for such series, as expressed by institutional, corporate, or individual customers or their brokers. Market-Makers trading for their own account will not be considered when determining customer interest under this provision. The opening of the new Monthly Options Series will not affect the series of options of the same class previously opened.[12] The interval between strike prices on Monthly Options Series will be the same as the interval for strike prices for series in that same options class that expire in accordance with the normal monthly expiration cycle.[13]

By definition, Monthly Options Series can never expire in the same week as a standard expiration series (which expire on the third Friday of a month) in the same class expires. The same, however, is not the case with regards to Short Term Option Series [14] or Quarterly Options Series. Therefore, to avoid any confusion in the marketplace, the Exchange proposes to amend Rules 19.6, Interpretation and Policy .05 (introductory paragraph), (b), and (h) and 22.11(h) (introductory paragraph) and (2) to provide the Exchange will not list a Short Term Option Series in a class on a date on which a Monthly Options Series or Quarterly Options Series expires.[15] Similarly, proposed Rules 19.6, Interpretation and Policy .08(b) and 22.11(k)(2) provide that no Monthly Options Series may expire on a date that coincides with an expiration date of a Quarterly Options Series in the same index or ETF class. In other words, the Exchange will not list a Short Term Option Series on an index or ETF if a Monthly Options Series on that index or ETF were to expire on the same date, nor will the Exchange list a Monthly Options Series on an ETF or index if a Quarterly Options Series on that index or ETF were to expire on the same date to prevent the listing of series with concurrent expirations.[16]

With respect to Monthly Options Series added pursuant to proposed Rules 19.6, Interpretation and Policy .08(a) through (f) and 22.11(k)(1) through (6), the Exchange will, on a monthly basis, review series that are outside a range of five strikes above and five strikes below the current price of the underlying index or security, and delist series with no open interest in both the put and the call series having a: (i) strike higher than the highest strike price with open interest in the put and/or call series for a given expiration month; and (ii) strike lower than the lowest strike price with open interest in the put and/or call series for a given expiration month. Notwithstanding this delisting policy, customer requests to add strikes and/or maintain strikes in Monthly Options Series in series eligible for delisting will be granted. In connection with this delisting policy, if the Exchange identifies series for delisting, the Exchange will notify other options exchanges with similar delisting policies regarding eligible series for delisting and will work with such other exchanges to develop a uniform list of series to be delisted, so as to ensure uniform series delisting of multiply listed Monthly Options Series.[17]

The Exchange believes that Monthly Options Series will provide investors with another flexible and valuable tool to manage risk exposure, minimize capital outlays, and be more responsive to the timing of events affecting the securities that underlie option contracts. The Exchange believes limiting Monthly Options Series to five classes will ensure the addition of these new series will have a negligible impact on the Exchange's and the Options Price Reporting Authority's (''OPRA's'') quoting capacity. The Exchange represents it has the necessary systems capacity to support new options series

[9] *See* proposed Rules 19.6, Interpretation and Policy .08(b) and 29.11(k)(2).

[10] *See* proposed Rules 19.6, Interpretation and Policy .08(c) and 29.11(k)(3).

[11] *See* proposed Rules 19.6, Interpretation and Policy .08(d) and 29.11(k)(4). The Exchange notes these proposed provisions are consistent with the initial series provision for the Quarterly Options Series program in Rule 29.11(g)(3). While different than the initial strike listing provision for the Quarterly Options Series program in current Rule 19.6, Interpretation and Policy .04(b), the Exchange believes the proposed provision is appropriate, as it contemplates classes that may have strike intervals of $5 or greater. For consistency, the Exchange also proposes to amend Rule 19.6, Interpretation and Policy .04(b) to incorporate the same provision for initial series.

[12] *See* proposed Rules 19.6, Interpretation and Policy .08(e) and 29.11(k)(5).

[13] *See* proposed Rules 19.6, Interpretation and Policy .08(f) and 29.11(k)(6); *see also* Rule 19.6(d), (f), (g) and Interpretations and Policies .01–.03 and .06 (permissible strike prices for ETF classes) and Rule 29.11(c) (permissible strike prices for index options).

[14] The proposed rule change clarifies in Rule 29.11(a)(3) that index options have expiration months and weeks, which expirations may occur in consecutive weeks as specified in Rule 29.11(h). This is merely a clarification, as Rule 29.11(h) currently permits weekly expirations. This language is consistent with Cboe Options Rule 4.13(a)(2). Additionally, the proposed rule change adds to rule 29.11(a)(3) that index options may expire more than 12 months out as specified elsewhere in the Rule. This is consistent with current Rule 29.11(b), which permits long term index options to expire between 12 and 180 months after issuance, as well as proposed Rule 29.11(k)(2), as discussed above.

[15] The Exchange also proposes to make a nonsubstantive change to Rules 19.6, Interpretation and Policy .05 and 22.11(h) to change current references to ''monthly options series'' to ''standard expiration options series'' (*i.e.,* series that expire on the third Friday of a month), to eliminate potential confusion. The current references to ''monthly options series'' are intended to refer to those series that expire on the third Friday of a month, which are generally referred to in the industry as standard expirations. The proposed rule change also adds a heading to Rule 19.6, Interpretation and Policy .05 for consistency with other Interpretations and Policies in that Rule.

[16] The Exchange notes this would not prevent the Exchange from listing a P.M.-settled Monthly Options Series on an index with the same expiration date as an A.M.-settled Short Term Option Series on the same index, both of which may expire on a Friday. In other words, the Exchange may list a P.M-settled Monthly Options Series on an index concurrent with an A.M.-settled Short Term Option Series on that index and both of which expire on a Friday. The Exchange believes this concurrent listing would provide investors with yet another hedging mechanism and is reasonable given these series would not be identical (unlike if they were both P.M-settled). This could not occur with respect to ETFs, as all Short Term Option Series on ETFs are P.M.-settled.

[17] *See* proposed Rules 19.6, Interpretation and Policy .08(g) and 22.11(k)(7).

that will result from the introduction of Monthly Options Series.

The Exchange notes that Rules 18.7 and 29.5 through 29.7 regarding position limits will apply to Monthly Options Series. These Rules provide that the position limits fixed by Cboe Options apply to options contracts traded on EDGX Options, which would include Monthly Options Series. As noted above, Cboe Options recently received Commission approval to adopt a substantively identical Monthly Options Series Program as the one proposed in this rule filing.[18] Pursuant to those recently approved Cboe Options rules, Monthly Options Series will be aggregated with positions in options contracts on the same underlying security or index.[19] This is consistent with how position (and exercise) limits are currently imposed on series with other expirations (Short Term Option Series and Quarterly Options Series). Therefore, positions in options within class of index or ETF options, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. The Exchange believes this will address potential manipulative schemes and adverse market impacts surrounding the use of options.

The Exchange also represents its current surveillance programs will apply to Monthly Options Series and will properly monitor trading in the proposed Monthly Options Series. The Exchange currently lists Quarterly Options Series in certain ETF classes, which expire at the close of business at the end of four calendar months (*i.e.,* the end of each calendar quarter), and has not experienced any market disruptions nor issues with capacity. The Exchange's surveillance programs currently in place to support and properly monitor trading in these Quarterly Options Series, as well as Short Term Option Series and standard expiration series, will apply to the proposed Monthly Options Series. The Exchange believes its surveillances continue to be designed to deter and detect violations of its Rules, including position and exercise limits and possible manipulative behavior, and these surveillances will apply to Monthly Options Series that the Exchange determines to list for trading. Ultimately, the Exchange does not believe the proposed rule change raises any unique regulatory concerns because existing safeguards—such as position and exercise limits (and the aggregation of options overlying the same index or ETF) and reporting requirements—would continue to apply.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[20] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [21] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [22] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

In particular, the Exchange believes the introduction of Monthly Options Series will remove impediments to and perfect the mechanism of a free and open market and a national market system by expanding hedging tools available to market participants. The Exchange believes the proposed monthly expirations will allow market participants to transact in the index and ETF options listed pursuant to the proposed rule change based on their timing as needed and allow them to tailor their investment and hedging needs more effectively. Further, the Exchange believes the availability of Monthly Options Series would protect investors and the public interest by providing investors with more flexibility to closely tailor their investment and hedging decisions in these options, thus allowing them to better manage their risk exposure.

The Exchange believes the Quarterly Options Series Program has been successful to date and the proposed Monthly Options Series program simply expands the ability of investors to hedge risk against market movements stemming from economic releases or market events that occur at months' ends in the same way the Quarterly Options Series Program has expanded the landscape of hedging for quarter-end news. Monthly Options Series will also complement Short Term Option Series, which allow investors to hedge risk against events that occur throughout a month. The Exchange believes the availability of additional expirations should create greater trading and hedging opportunities for investors, as well as provide investors with the ability to tailor their investment objectives more effectively.

The Exchange notes the proposed terms of Monthly Options Series, including the limitation to five index and ETF option classes, are substantively the same as the current terms of Quarterly Options Series.[23] Quarterly Options Series expire on the last business day of a calendar quarter, which is the last business day of every third month. The proposed Monthly Options Series would fill the gaps between Quarterly Options Series expirations by permitting series to expire on the last business day of every month, rather than every third month. The proposed Monthly Options Series may be listed in accordance with the same terms as Quarterly Options Series, including permissible strikes.[24] As is the case with Quarterly Options Series, no Short Term Option Series may expire on the same day as a Monthly Options Series. Similarly, as proposed, no Monthly Options Series may expire on the same day as a Quarterly Options Series. The Exchange believes preventing listing series with concurrent expirations in a class will eliminate potential investors confusion and thus protect investors and the public interest. Given that Quarterly Options Series the Exchange currently lists are essentially Monthly Options Series that can expire at the end of only certain calendar

[18] *See* Cboe Options Approval Order.

[19] *See id.; see also* Cboe Options Rules 8.30, Interpretation and Policy .09 (regarding position limits for options on stocks and ETFs), 8.31(e) (regarding position limits for broad-based index options), 8.32(f) (regarding position limits for industry index options), 8.33(c) (regarding position limits for micro narrow-based indexes), and 8.34(c) (regarding position limits for individual stock or ETF based volatility index options). Pursuant to Cboe Options Rule 8.42 (and Exchange Rules 18.9 and 29.9), exercise limits for impacted index and ETF classes would be equal to the applicable position limits.

[20] 15 U.S.C. 78f(b).

[21] 15 U.S.C. 78f(b)(5).

[22] *Id.*

[23] *Compare* proposed Rules 19.6, Interpretation and Policy .08 and 29.11(k) *to* Rules 19.6, Interpretation and Policy .04 and 29.11(g), respectively.

[24] The Exchange notes the proposed maximum number of expirations is consistent with the maximum number of expirations permitted for end-of-month series in index classes. *See* Rule 29.11(j)(2) (which references Rule 29.11(a)(3), which permits up to 12 standard monthly expirations on the majority of index options currently listed on the Exchange).

months, the Exchange believes it is reasonable to list Monthly Options Series in accordance with the same terms, as it will promote just and equitable principles of trade. The Exchange believes limiting Monthly Options Series to five classes will ensure the addition of these new series will have a negligible impact on the Exchange's and OPRA's quoting capacity. The Exchange represents it has the necessary systems capacity to support new options series that will result from the introduction of Monthly Options Series.

The Exchange further believes the proposed rule change regarding the treatment of Monthly Options Series with respect to determining compliance with position and exercise limits is designed to prevent fraudulent and manipulative acts and practices and promote just and equitable principles of trade. Monthly Options Series will be aggregated with options overlying the same ETF or index for purposes of compliance with position (and exercise) limits, which is consistent with how position (and exercise) limits are currently imposed on series with other expirations (Short Term Option Series, Quarterly Options Series, and Delayed Start Options Series).[25] Therefore, options positions within ETF or index option classes for which Monthly Options Series are listed, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. The Exchange believes this will address potential manipulative schemes and adverse market impacts surrounding the use of options. The Exchange also represents its current surveillance programs will apply to Monthly Options Series and will properly monitor trading in the proposed Monthly Options Series. The Exchange currently trades Quarterly Options Series in certain index and ETF classes, which expire at the close of business at the end of four calendar months (*i.e.,* the end of each calendar quarter), and has not experienced any market disruptions nor issues with capacity. The Exchange's surveillance programs currently in place to support and properly monitor trading in these Quarterly Options Series, as well as Short Term Option Series and standard expiration series, will apply to the proposed Monthly Options Series. The Exchange believes its surveillances continue to be designed to deter and detect violations of its Rules, including position and exercise limits and possible manipulative behavior, and these surveillances will apply to Monthly Options Series that the Exchange determines to list for trading. Ultimately, the Exchange does not believe the proposed rule change raises any unique regulatory concerns because existing safeguards—such as position and exercise limits (and the aggregation of options overlying the same ETF or index) and reporting requirements—would continue to apply.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange does not believe the proposed rule change to list Monthly Options Series will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, as any Monthly Options Series the Exchange lists for trading will be available in the same manner for all market participants who wish to trade such options. The Exchange notes the proposed terms of Monthly Options Series, including the limitation to five index and ETF option classes, are substantively the same as the current terms of Quarterly Options Series.[26] Quarterly Options Series expire on the last business day of a calendar quarter, which is the last business day of every third month, making the concept of Monthly Options Series in a limited number of index and ETF options not novel. The proposed Monthly Options Series will fill the gaps between Quarterly Options Series expirations by permitting series to expire on the last business day of every month, rather than every third month. The proposed Monthly Options Series may be listed in accordance with the same terms as Quarterly Options Series, including permissible strikes.[27] Monthly Options Series will trade on the Exchange in the same manner as other options in the same class.

The Exchange does not believe the proposed rule change to list Monthly Options Series will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, as nothing prevents other options exchanges from proposing similar rules.[28] As discussed above, the proposed rule change would permit listing of Monthly Options Series in five index or ETF options, as well as any other classes that other exchanges may list under similar programs. To the extent that the availability of Monthly Options Series makes the Exchange a more attractive marketplace to market participants at other exchanges, market participants are free to elect to become market participants on the Exchange.

The Exchange believes that the proposed rule change may relieve any burden on, or otherwise promote, competition. Similar to Short Term Option Series and Quarterly Options Series, the Exchange believes the introduction of Monthly Options Series will not impose an undue burden on competition. The Exchange believes that it will, among other things, expand hedging tools available to market participants. The Exchange believes Monthly Options Series will allow market participants to purchase options based on their timing as needed and allow them to tailor their investment and hedging needs more effectively.

The Exchange does not believe the proposed rule change regarding aggregation of positions for purposes of determining compliance with position (and exercise) limits will impose any burden on intramarket competition that is not necessary or appropriate in furtherance of the purposes of the Act, because it will apply in the same manner to all market participants. The Exchange proposes to apply position (and exercise) limits to Monthly Options Series in the same manner it applies position limits to series with other expirations (Short Term Option Series and Quarterly Options Series). Therefore, positions in options in a class of ETF or index options, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. Additionally, the Exchange does not believe this proposed rule change will impose any burden on intermarket competition that is not necessary or appropriate in furtherance

[25] *See* Cboe Options Approval Order; *see also* Cboe Options Rules 8.30, Interpretation and Policy .09 (regarding position limits for options on stocks and ETFs), 8.31(e) (regarding position limits for broad-based index options), 8.32(f) (regarding position limits for industry index options), 8.33(c) (regarding position limits for micro narrow-based indexes), and 8.34(c) (regarding position limits for individual stock or ETF based volatility index options). Pursuant to Cboe Options Rule 8.42 (and Exchange Rules 18.9 and 29.9), exercise limits for impacted index and ETF classes would be equal to the applicable position limits.

[26] *See* Rules 19.6, Interpretation and Policy .04 and 29.11(g).

[27] The Exchange notes the proposed maximum number of expirations is consistent with the maximum number of expirations permitted for end-of-month series in index classes. *See* Rule 29.11(j)(2) (which references Rule 29.11(a)(3), which permits up to 12 standard monthly expirations on the majority of index options currently listed on the Exchange).

[28] As noted above, at least one other options exchange recently adopted a substantively identical Monthly Options Series program. *See* Cboe Options Approval Order.

of the purposes of the Act, because it will address potential manipulative schemes and adverse market impacts surrounding the use of options.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [29] and Rule 19b–4(f)(6) thereunder.[30] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [31] and subparagraph (f)(6) of Rule 19b–4 thereunder.[32]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act [33] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii) [34] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the Exchange may list Monthly Options Series at the same time as Cboe Options, which the Exchange believes will benefit investors by promoting competition in Monthly Options Series. The Commission believes that the proposed rule change presents no novel issues and that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.[35]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeEDGX–2023–069 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR-CboeEDGX–2023–069. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeEDGX–2023–069 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[36]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98962; File No. SR–NYSE–2023–44]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Connectivity Fee Schedule

November 16, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 9, 2023, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users with wireless connectivity to CME Group market data. The proposed rule change is available on the Exchange's website at

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users [4] with wireless connectivity to CME Group market data.[5]

The Exchange currently provides Users with wireless connections to eight market data feeds or combinations of feeds from third-party markets (the ''Existing Third Party Data''),[6] and wired connections to more than 45 market data feeds or combinations of feeds.[7] The Exchange proposes to add to the Fee Schedule wireless connections to CME Group, Inc. (''CME Group'') market data (''CME Group Data'' and, together with the Existing Third Party Data, the ''Third Party Data''). Users would be offered the proposed wireless connection to the CME Group Data through connections into the colocation center in the Mahwah, New Jersey data center (''MDC'').[8]

The Exchange expects that the proposed rule change would become operative in the fourth quarter of 2023, and in any event, no later than December 31, 2023. The Exchange will announce the date that the wireless connection to the CME Group Data will be available through a customer notice.

To receive CME Group Data, the User would enter into an agreement with a third party for permission to receive the data, if required. The User would pay this third party any fees for the data content.

The Exchange proposes to revise the Fee Schedule to reflect fees related to the wireless connection to CME Group Data. For each wireless connection to CME Group Data, a User would be charged a $5,000 non-recurring initial charge and a monthly recurring charge of $6,000. If a User were to purchase more than one wireless connection to CME Group Data, it would pay more than one non-recurring initial charge. Each proposed wireless connection would include the use of one port for connectivity to CME Group Data, and a User would not pay a separate fee for the use of such port.[9]

The Exchange's proposed wireless connectivity to CME Group market data would not include the entire CME Group market data feed, which includes market data for approximately 1,200 futures symbols. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. Accordingly, FIDS has consulted with customers about which of the CME Group symbols they would like to be available wirelessly and plans to offer connectivity to a subgroup of symbols based on this customer feedback. The Exchange understands that Quincy Data LLC (''Quincy''),[10] a third party that already provides wireless connectivity to CME Group market data in the MDC, similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.[11]

Application and Impact of the Proposed Changes

The proposed changes would not apply differently to distinct types or sizes of market participants. Rather, they would apply to all Users equally.

As is currently the case, the purchase of any colocation service, including connectivity to Third Party Data, is completely voluntary and the Fee Schedule is applied uniformly to all Users.

Competitive Environment

The Exchange operates in a highly competitive market in which other vendors offer colocation services as a means to facilitate the trading and other market activities of those market participants who believe that colocation enhances the efficiency of their operations. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [12]

As explained below in this filing, the Exchange's proposed wireless connection to CME Group Data would compete with the wireless connection to CME Group market data provided by Quincy. Third-party vendors such as Quincy are not at any competitive disadvantage created by the Exchange.

The proposed change is not otherwise intended to address any other issues relating to colocation services or related fees, and the Exchange is not aware of any problems that Users would have in complying with the proposed change.

[4] For purposes of the Exchange's colocation services, a ''User'' means any market participant that requests to receive colocation services directly from the Exchange. *See* Securities Exchange Act Release No. 76008 (September 29, 2015), 80 FR 60190 (October 5, 2015) (SR–NYSE–2015–40). As specified in the Fee Schedule, a User that incurs colocation fees for a particular colocation service pursuant thereto would not be subject to colocation fees for the same colocation service charged by the Exchange's affiliates NYSE American LLC, NYSE Arca, Inc., NYSE Chicago, Inc., and NYSE National, Inc. (together, the ''Affiliate SROs''). Each Affiliate SRO has submitted substantially the same proposed rule change to propose the changes described herein. *See* SR–NYSEAMER–2023–59, SR–NYSEARCA–2023–79, SR–NYSECHX–2023–22, and SR–NYSENAT–2023–26.

[5] The Exchange filed a similar proposal in 2021, which it subsequently withdrew. *See* Securities Exchange Act Release No. 93810 (December 17, 2021), 86 FR 73026 (December 23, 2021) (SR–NYSE–2021–67, SR–NYSEAMER–2021–43, SR–NYSEARCA–2021–97, SR–NYSECHX–2021–17, SR–NYSENAT–2021–23).

[6] *See* Securities Exchange Act Release Nos. 76748 (December 23, 2015), 80 FR 81609 (December 30, 2015) (SR–NYSE–2015–52); 78378 (July 21, 2016), 81 FR 49315 (July 27, 2016) (SR–NYSE–2016–49); and 80215 (February 28, 2017), 82 FR 12658 (March 6, 2017) (SR–NYSE–2017–05).

[7] *See* Securities Exchange Act Release No. 80311 (March 24, 2017), 82 FR 15741 (March 30, 2017) (SR–NYSE–2016–45).

[8] Through its Fixed Income and Data Services (''FIDS'') (previously ICE Data Services) business, Intercontinental Exchange, Inc. (''ICE'') operates the MDC. The Exchange and the Affiliate SROs are indirect subsidiaries of ICE. The proposed service would be provided by FIDS pursuant to an agreement with a non-ICE entity. FIDS does not own the wireless network that would be used to provide the service.

[9] If a User also connects to Existing Third Party Data, it would not be able to connect to such Existing Third Party Data using the same port that it uses for connectivity to CME Group Data.

[10] The Exchange understands that Quincy is an affiliate of McKay Brothers LLC.

[11] The Exchange understands that the third parties that provide wireless connectivity to CME Group market data to the MDC and other data centers in New Jersey (as discussed later in this filing) follow a substantially similar model, offering wireless connectivity to a selection of market data rather than to entire feeds.

[12] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[13] in general, and furthers the objectives of Section 6(b)(5) of the Act,[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange further believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,[15] because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Proposed Change Is Reasonable

The Exchange believes that the proposed rule change is reasonable. In considering the reasonableness of proposed services and fees, the Commission's market-based test considers ''whether the exchange was subject to significant competitive forces in setting the terms of its proposal . . . , including the level of any fees.'' [16] If the Exchange meets that burden, ''the Commission will find that its proposal is consistent with the Act unless 'there is a substantial countervailing basis to find that the terms' of the proposal violate the Act or the rules thereunder.'' [17] Here, the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because substantially similar substitutes are available, and the Exchange has not placed the third party vendors at a competitive disadvantage created by the Exchange.

Substantially Similar Substitutes Are Available

The Exchange's proposed wireless connection to CME Group Data would compete with other methods by which both the Exchange and various third parties already provide connectivity to CME Group market data to Users.

Quincy already provides wireless connectivity to CME Group market data in the MDC. Like the Exchange's proposed wireless connectivity, Quincy's wireless connectivity to CME Group market data includes a similarly-sized subset of symbols that almost completely overlaps with the symbols for which the Exchange proposes to provide wireless connectivity—presumably because customers have requested the same symbols of each provider. Specifically, like the Quincy wireless connection, the Exchange's proposed wireless connection would include the main futures for equity indices, government bonds, foreign exchanges, oil, and precious metals.[18] In addition, the Exchange's proposed wireless connection would also include several additional symbols that proposed Users have specifically requested be included. The Exchange plans to continuously monitor Users' preferences and their views of the usefulness of the included symbols, and may adjust them accordingly. The Exchange believes that the Quincy wireless connection to CME Group market data is at a same or similar speed as the Exchange's proposed connection, and at a similar price.[19]

Accordingly, the Quincy wireless connection to CME Group market data would compete with the Exchange's proposed wireless connection, and would exert significant competitive forces on the Exchange in setting the terms of its proposal, including the level of the Exchange's proposed fees.[20] If the Exchange were to set its proposed fees too high, Users could respond by instead selecting Quincy's substantially similar wireless connectivity to CME Group data.[21]

Third Party Competitors Are Not at a Competitive Disadvantage Created by the Exchange

The Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is available to any telecommunications provider. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[22] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms.

[13] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(5).

[15] 15 U.S.C. 78f(b)(4).

[16] *See* Securities Exchange Act Release No. 90209 (October 15, 2020), 85 FR 67044, 67049 (October 21, 2020) (Order Granting Accelerated Approval to Establish a Wireless Fee Schedule Setting Forth Available Wireless Bandwidth Connections and Wireless Market Data Connections) (SR–NYSE–2020–05, SR–NYSEAMER–2020–05, SR–NYSEARCA–2020–08, SR–NYSECHX–2020–02, SR–NYSENAT–2020–03, SR–NYSE–2020–11, SR–NYSEAMER–2020–10, SR–NYSEArca–2020–15, SR–NYSECHX–2020–05, SR–NYSENAT–2020–08) (''Wireless Approval Order''), citing Securities Exchange Act Release No. 59039 (December 2, 2008), 73 FR 74770, 74781 (December 9, 2008) (''2008 ArcaBook Approval Order''). *See NetCoalition* v. *SEC,* 615 F.3d 525 (D.C. Cir. 2010).

[17] *See* Wireless Approval Order, *supra* note 16, at 67049, citing 2008 ArcaBook Approval Order, *supra* note 16, at 74781.

[18] Quincy's symbol list for wireless connectivity to CME Group data is available at *https://www.quincy-data.com/product-page/* under the heading ''2023 Quincy Extreme Data Symbol Set/North America QED Symbol Set.'' The Exchange understands that the Quincy wireless connection to CME Group data currently includes 26 symbols. The Exchange's proposed wireless connection to CME Group data would contain a similar number of symbols, nearly all of which are included in the Quincy wireless connection.

[19] Because Quincy is not a regulated entity, it is not obligated to make its latency figures or fees publicly available or the same for all entities.

[20] *See* 2008 ArcaBook Approval Order, *supra* note 16, at 74789 and n.295 (recognizing that products need not be identical to be substitutable).

[21] In addition, the Exchange believes that at least two third-party market participants, in addition to FIDS, offer fiber connections to CME Group market data in colocation. *See* Securities Exchange Act Release No. 81014 (June 23, 2017), 82 FR 29615 (June 29, 2017) (SR–NYSE–2017–25). Unlike the proposed wireless connectivity, FIDS' fiber connection to CME Group market data includes the entire CME Group data feed, instead of a subset of symbols.

[22] *See* NYSE Rule 3.13(c), NYSE American Rule 3.13E(c), NYSE Arca Rule 3.13(c), NYSE Chicago Rule 3.13(c), and NYSE National Rule 3.13(c) (Data Center Pole Restrictions—Connectivity to Co-Location Space). ''Patch Panel Point'' is defined as ''the patch panel where fiber connections for wireless services connect to the network row in the space used for co-location in the Data Center.'' *Id.* The proposed service would not use the MDC pole, so Rule 3.13(b) would not apply.

Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party telecommunications service providers that have installed their equipment in the MDC's two meet-me-rooms (''Telecoms'').[23] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level [24] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[25] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third-party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

In sum, because the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because a substantially similar substitute is available, and the Exchange has not placed the third-party vendors at a competitive disadvantage created by the Exchange, the proposed fees for the Exchange's wireless connectivity to CME Group Data are reasonable.[26] If the Exchange were to set its prices for wireless connectivity to CME Group Data at a level that Users found to be too high, Users could easily choose to connect to CME Group market data in colocation at the MDC through the competing Quincy wireless connection, as detailed above.

Additional Considerations

The Exchange believes that it is reasonable for the proposed wireless connection to CME Group Data not to transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. The Exchange believes it is reasonable for FIDS to select the symbols it will make available for wireless connectivity based on customer input and demand. The Exchange understands that Quincy similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.

The Exchange believes that it is reasonable that a User that connects to both CME Group Data and Existing Third Party Data may not use the same port for connectivity to both, and so would have at least two ports, because the proposed wireless connection would include the use of one port for connectivity to CME Group Data, and the connectivity to the Existing Third Party Data includes the use of one port for connectivity to Existing Third Party Data. A User would not pay a separate fee for using such ports.

The Proposed Change Is an Equitable Allocation of Fees and Credits

The Exchange believes that its proposal equitably allocates its fees among Users. Without this proposed rule change, Users would have fewer options for connectivity to CME Group market data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that the proposed change is equitable because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are equitably allocated because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select the Exchange's proposed wireless connections to CME Group Data would be charged the same amount for the same services.

The Proposed Change Is Not Unfairly Discriminatory

The Exchange believes that the proposed rule change is not unfairly discriminatory, for the following reasons. Without this proposed rule change, Users would have fewer options for connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that it is not unfairly discriminatory to not transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset

[23] Note that in the case of wireless connectivity, a User in colocation still requires a fiber circuit to transport data. If a Telecom is used, the data is transmitted wirelessly to the relevant pole, and then from the pole to the meet-me-room using a fiber circuit.

[24] *See* Securities Exchange Act Release No. 97998 (July 26, 2023), 88 FR 50238 (August 1, 2023) (SR–NYSE–2023–27) (''MMR Notice'').

[25] *See id.* at 50241. Importantly, the Exchange is prevented from making any alteration to its meet-me-room services or fees without filing a proposal for such changes with the Commission.

[26] *See* Wireless Approval Order, *supra* note 16.

of that data. There is limited bandwidth available on the wireless network to colocation, and there are a number of CME Group data feeds. Limiting the feeds to the selection of CME Group market data regarding securities for which FIDS determines there is demand would allow Users to receive the relevant CME Group Data over a wireless network.

The Exchange believes that the proposed change is not unfairly discriminatory because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are not unfairly discriminatory because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select wireless connections to CME Group Data would be charged the same amount for the same services. Users that opt to use wireless connections to CME Group Data would receive the CME Group Data that is available to all Users, as all market participants that contract with CME Group or its affiliate for CME Group Data, as required, may receive it.

For the reasons above, the proposed changes do not unfairly discriminate between or among market participants that are otherwise capable of satisfying any applicable colocation fees, requirements, terms, and conditions established from time to time by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes that the proposal will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of Section 6(b)(8) of the Act.[27]

The proposed change would not affect competition among national securities exchanges or among members of the Exchange, but rather between FIDS and its commercial competitors. The proposed wireless connection would provide Users with an alternative means of connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations.

Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection. The Exchange's proposed wireless connection and the existing Quincy wireless connection to CME Group market data are sufficiently similar substitutes and thus provide market participants with choices to meet their wireless connectivity needs.

In addition, the Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is the same path followed by any Telecom. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[28] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party Telecoms that have installed their equipment in the MDC's two meet-me-rooms.[29] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level[30] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[31] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

[27] 15 U.S.C. 78f(b)(8).

[28] *See supra* note 22.

[29] *See supra* note 23.

[30] *See* MMR Notice, *supra* note 24.

[31] *See supra* note 25.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [32] and Rule 19b–4(f)(6) thereunder.[33] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b–4(f)(6) [34] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b4(f)(6)(iii),[35] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings Section 19(b)(2)(B) [36] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSE–2023–44 on the subject line.

Paper Comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSE–2023–44. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSE–2023–44 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[37]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98965; File No. SR–NYSECHX–2023–22]

Self-Regulatory Organizations; NYSE Chicago, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Connectivity Fee Schedule

November 16, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 9, 2023, the NYSE Chicago, Inc. (''NYSE Chicago'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users with wireless connectivity to CME Group market data. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users [4] with wireless connectivity to CME Group market data.[5]

The Exchange currently provides Users with wireless connections to eight market data feeds or combinations of feeds from third-party markets (the ''Existing Third Party Data''),[6] and wired connections to more than 45 market data feeds or combinations of feeds.[7] The Exchange proposes to add to the Fee Schedule wireless connections to CME Group, Inc. (''CME Group'') market data (''CME Group Data'' and, together with the Existing Third Party Data, the ''Third Party Data''). Users would be offered the proposed wireless connection to the CME Group Data through connections into the colocation center in the Mahwah, New Jersey data center (''MDC'').[8]

The Exchange expects that the proposed rule change would become operative in the fourth quarter of 2023, and in any event, no later than December 31, 2023. The Exchange will announce the date that the wireless connection to the CME Group Data will be available through a customer notice.

To receive CME Group Data, the User would enter into an agreement with a third party for permission to receive the data, if required. The User would pay this third party any fees for the data content.

The Exchange proposes to revise the Fee Schedule to reflect fees related to the wireless connection to CME Group Data. For each wireless connection to CME Group Data, a User would be charged a $5,000 non-recurring initial charge and a monthly recurring charge of $6,000. If a User were to purchase more than one wireless connection to CME Group Data, it would pay more than one non-recurring initial charge. Each proposed wireless connection would include the use of one port for connectivity to CME Group Data, and a User would not pay a separate fee for the use of such port.[9]

The Exchange's proposed wireless connectivity to CME Group market data would not include the entire CME Group market data feed, which includes market data for approximately 1,200 futures symbols. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. Accordingly, FIDS has consulted with customers about which of the CME Group symbols they would like to be available wirelessly and plans to offer connectivity to a subgroup of symbols based on this customer feedback. The Exchange understands that Quincy Data LLC (''Quincy''),[10] a third party that already provides wireless connectivity to CME Group market data in the MDC, similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.[11]

Application and Impact of the Proposed Changes

The proposed changes would not apply differently to distinct types or sizes of market participants. Rather, they would apply to all Users equally.

As is currently the case, the purchase of any colocation service, including connectivity to Third Party Data, is completely voluntary and the Fee Schedule is applied uniformly to all Users.

Competitive Environment

The Exchange operates in a highly competitive market in which other vendors offer colocation services as a means to facilitate the trading and other market activities of those market participants who believe that colocation enhances the efficiency of their operations. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [12]

As explained below in this filing, the Exchange's proposed wireless connection to CME Group Data would compete with the wireless connection to CME Group market data provided by Quincy. Third-party vendors such as Quincy are not at any competitive disadvantage created by the Exchange.

The proposed change is not otherwise intended to address any other issues relating to colocation services or related fees, and the Exchange is not aware of any problems that Users would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[13] in general, and furthers the objectives of Section 6(b)(5) of the Act,[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The

[4] For purposes of the Exchange's colocation services, a ''User'' means any market participant that requests to receive colocation services directly from the Exchange. *See* Securities Exchange Act Release No. 87408 (October 28, 2019), 84 FR 58778 at n.6 (November 1, 2019) (SR–NYSECHX–2019–12) (''NYSE Chicago Colocation Notice''). As specified in the Fee Schedule, a User that incurs colocation fees for a particular colocation service pursuant thereto would not be subject to colocation fees for the same colocation service charged by the Exchange's affiliates the New York Stock Exchange LLC, NYSE American LLC, NYSE Arca, Inc., and NYSE National, Inc. (together, the ''Affiliate SROs''). Each Affiliate SRO has submitted substantially the same proposed rule change to propose the changes described herein. *See* SR–NYSE–2023–44, SR–NYSEAMER–2023–59, SR–NYSEARCA–2023–79, and SR–NYSENAT–2023–26.

[5] The Exchange filed a similar proposal in 2021, which it subsequently withdrew. *See* Securities Exchange Act Release No. 93810 (December 17, 2021), 86 FR 73026 (December 23, 2021) (SR–NYSE–2021–67, SR–NYSEAMER–2021–43, SR–NYSEARCA–2021–97, SR–NYSECHX–2021–17, SR–NYSENAT–2021–23).

[6] *See* NYSE Chicago Colocation Notice, *supra* note 4, at 58784–85.

[7] *See id.* at 58787–88.

[8] Through its Fixed Income and Data Services (''FIDS'') (previously ICE Data Services) business, Intercontinental Exchange, Inc. (''ICE'') operates the MDC. The Exchange and the Affiliate SROs are indirect subsidiaries of ICE. The proposed service would be provided by FIDS pursuant to an agreement with a non-ICE entity. FIDS does not own the wireless network that would be used to provide the service.

[9] If a User also connects to Existing Third Party Data, it would not be able to connect to such Existing Third Party Data using the same port that it uses for connectivity to CME Group Data.

[10] The Exchange understands that Quincy is an affiliate of McKay Brothers LLC.

[11] The Exchange understands that the third parties that provide wireless connectivity to CME Group market data to the MDC and other data centers in New Jersey (as discussed later in this filing) follow a substantially similar model, offering wireless connectivity to a selection of market data rather than to entire feeds.

[12] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

[13] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(5).

Exchange further believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,[15] because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Proposed Change Is Reasonable

The Exchange believes that the proposed rule change is reasonable. In considering the reasonableness of proposed services and fees, the Commission's market-based test considers ''whether the exchange was subject to significant competitive forces in setting the terms of its proposal . . . , including the level of any fees.'' [16] If the Exchange meets that burden, ''the Commission will find that its proposal is consistent with the Act unless 'there is a substantial countervailing basis to find that the terms' of the proposal violate the Act or the rules thereunder.'' [17] Here, the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because substantially similar substitutes are available, and the Exchange has not placed the third party vendors at a competitive disadvantage created by the Exchange.

Substantially Similar Substitutes Are Available

The Exchange's proposed wireless connection to CME Group Data would compete with other methods by which both the Exchange and various third parties already provide connectivity to CME Group market data to Users.

Quincy already provides wireless connectivity to CME Group market data in the MDC. Like the Exchange's proposed wireless connectivity, Quincy's wireless connectivity to CME Group market data includes a similarly-sized subset of symbols that almost completely overlaps with the symbols for which the Exchange proposes to provide wireless connectivity—presumably because customers have requested the same symbols of each provider. Specifically, like the Quincy wireless connection, the Exchange's proposed wireless connection would include the main futures for equity indices, government bonds, foreign exchanges, oil, and precious metals.[18] In addition, the Exchange's proposed wireless connection would also include several additional symbols that proposed Users have specifically requested be included. The Exchange plans to continuously monitor Users' preferences and their views of the usefulness of the included symbols, and may adjust them accordingly. The Exchange believes that the Quincy wireless connection to CME Group market data is at a same or similar speed as the Exchange's proposed connection, and at a similar price.[19]

Accordingly, the Quincy wireless connection to CME Group market data would compete with the Exchange's proposed wireless connection, and would exert significant competitive forces on the Exchange in setting the terms of its proposal, including the level of the Exchange's proposed fees.[20] If the Exchange were to set its proposed fees too high, Users could respond by instead selecting Quincy's substantially similar wireless connectivity to CME Group data.[21]

Third Party Competitors Are Not at a Competitive Disadvantage Created by the Exchange

The Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is available to any telecommunications provider. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[22] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party telecommunications service providers that have installed their equipment in the MDC's two meet-me-rooms (''Telecoms'').[23] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level [24] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange

[15] 15 U.S.C. 78f(b)(4).

[16] *See* Securities Exchange Act Release No. 90209 (October 15, 2020), 85 FR 67044, 67049 (October 21, 2020) (Order Granting Accelerated Approval to Establish a Wireless Fee Schedule Setting Forth Available Wireless Bandwidth Connections and Wireless Market Data Connections) (SR–NYSE–2020–05, SR–NYSEAMER–2020–05, SR–NYSEArca–2020–08, SR–NYSECHX–2020–02, SR–NYSENAT–2020–03, SR–NYSE–2020–11, SR–NYSEAMER–2020–10, SR–NYSEArca–2020–15, SR–NYSECHX–2020–05, SR–NYSENAT–2020–08) (''Wireless Approval Order''), citing Securities Exchange Act Release No. 59039 (December 2, 2008), 73 FR 74770, 74781 (December 9, 2008) (''2008 ArcaBook Approval Order''). *See NetCoalition* v. *SEC,* 615 F.3d 525 (D.C. Cir. 2010).

[17] *See* Wireless Approval Order, *supra* note 16, at 67049, citing 2008 ArcaBook Approval Order, *supra* note 16, at 74781.

[18] Quincy's symbol list for wireless connectivity to CME Group data is available at *https://www.quincy-data.com/product-page/* under the heading ''2023 Quincy Extreme Data Symbol Set/North America QED Symbol Set.'' The Exchange understands that the Quincy wireless connection to CME Group data currently includes 26 symbols. The Exchange's proposed wireless connection to CME Group data would contain a similar number of symbols, nearly all of which are included in the Quincy wireless connection.

[19] Because Quincy is not a regulated entity, it is not obligated to make its latency figures or fees publicly available or the same for all entities.

[20] *See* 2008 ArcaBook Approval Order, *supra* note 16, at 74789 and n.295 (recognizing that products need not be identical to be substitutable).

[21] In addition, the Exchange believes that at least two third-party market participants, in addition to FIDS, offer fiber connections to CME Group market data in colocation. *See* NYSE Chicago Colocation Notice, *supra* note 4, at 58788. Unlike the proposed wireless connectivity, FIDS' fiber connection to CME Group market data includes the entire CME Group data feed, instead of a subset of symbols.

[22] *See* NYSE Rule 3.13(c), NYSE American Rule 3.13E(c), NYSE Arca Rule 3.13(c), NYSE Chicago Rule 3.13(c), and NYSE National Rule 3.13(c) (Data Center Pole Restrictions—Connectivity to Co-Location Space). ''Patch Panel Point'' is defined as ''the patch panel where fiber connections for wireless services connect to the network row in the space used for co-location in the Data Center.'' *Id.* The proposed service would not use the MDC pole, so Rule 3.13(b) would not apply.

[23] Note that in the case of wireless connectivity, a User in colocation still requires a fiber circuit to transport data. If a Telecom is used, the data is transmitted wirelessly to the relevant pole, and then from the pole to the meet-me-room using a fiber circuit.

[24] *See* Securities Exchange Act Release No. 98001 (July 26, 2023), 88 FR 50196 (August 1, 2023) (SR–NYSECHX–2023–14) (''MMR Notice'').

encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[25] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third-party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

In sum, because the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because a substantially similar substitute is available, and the Exchange has not placed the third-party vendors at a competitive disadvantage created by the Exchange, the proposed fees for the Exchange's wireless connectivity to CME Group Data are reasonable.[26] If the Exchange were to set its prices for wireless connectivity to CME Group Data at a level that Users found to be too high, Users could easily choose to connect to CME Group market data in colocation at the MDC through the competing Quincy wireless connection, as detailed above.

Additional Considerations

The Exchange believes that it is reasonable for the proposed wireless connection to CME Group Data not to transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. The Exchange believes it is reasonable for FIDS to select the symbols it will make available for wireless connectivity based on customer input and demand. The Exchange understands that Quincy similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.

The Exchange believes that it is reasonable that a User that connects to both CME Group Data and Existing Third Party Data may not use the same port for connectivity to both, and so would have at least two ports, because the proposed wireless connection would include the use of one port for connectivity to CME Group Data, and the connectivity to the Existing Third Party Data includes the use of one port for connectivity to Existing Third Party Data. A User would not pay a separate fee for using such ports.

The Proposed Change Is an Equitable Allocation of Fees and Credits

The Exchange believes that its proposal equitably allocates its fees among Users. Without this proposed rule change, Users would have fewer options for connectivity to CME Group market data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that the proposed change is equitable because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are equitably allocated because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select the Exchange's proposed wireless connections to CME Group Data would be charged the same amount for the same services.

The Proposed Change Is Not Unfairly Discriminatory

The Exchange believes that the proposed rule change is not unfairly discriminatory, for the following reasons. Without this proposed rule change, Users would have fewer options for connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that it is not unfairly discriminatory to not transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. There is limited bandwidth available on the wireless network to colocation, and there are a number of CME Group data feeds. Limiting the feeds to the selection of CME Group market data regarding securities for which FIDS determines there is demand would allow Users to receive the relevant CME Group Data over a wireless network.

The Exchange believes that the proposed change is not unfairly discriminatory because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are not unfairly discriminatory because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select wireless connections to CME Group Data would be charged the same amount for the same services. Users that opt to use

[25] *See id.* at 50199. Importantly, the Exchange is prevented from making any alteration to its meet-me-room services or fees without filing a proposal for such changes with the Commission.

[26] *See* Wireless Approval Order, *supra* note 16.

wireless connections to CME Group Data would receive the CME Group Data that is available to all Users, as all market participants that contract with CME Group or its affiliate for CME Group Data, as required, may receive it.

For the reasons above, the proposed changes do not unfairly discriminate between or among market participants that are otherwise capable of satisfying any applicable colocation fees, requirements, terms, and conditions established from time to time by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes that the proposal will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of Section 6(b)(8) of the Act.[27]

The proposed change would not affect competition among national securities exchanges or among members of the Exchange, but rather between FIDS and its commercial competitors. The proposed wireless connection would provide Users with an alternative means of connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations.

Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection. The Exchange's proposed wireless connection and the existing Quincy wireless connection to CME Group market data are sufficiently similar substitutes and thus provide market participants with choices to meet their wireless connectivity needs.

In addition, the Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is the same path followed by any Telecom. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[28] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party Telecoms that have installed their equipment in the MDC's two meet-me-rooms.[29] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level [30] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[31] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [32] and Rule 19b–4(f)(6) thereunder.[33] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b–4(f)(6) [34] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b4(f)(6)(iii),[35] the Commission may designate a shorter time if such

[35] 17 CFR 240.19b–4(f)(6)(iii).

action is consistent with the protection of investors and the public interest.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [36] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSECHX–2023–22 on the subject line.

Paper comments

- Send paper comments in triplicate to: Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSECHX–2023–22. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSECHX–2023–22 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[37]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98973; File No. SR–MIAX–2023–44]

Self-Regulatory Organizations; Miami International Securities Exchange LLC; Notice of Filing of a Proposed Rule Change To Accommodate the Listings of Monthly Options Series

November 16, 2023.

Pursuant to the provisions of Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'') [1] and Rule 19b–4 thereunder,[2] notice is hereby given that on November 14, 2023, Miami International Securities Exchange LLC (''MIAX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') a proposed rule change as described in Items I and II below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange is filing a proposal to amend its Rules to adopt Monthly Options Series.

The text of the proposed rule change is available on the Exchange's website at *http://www.miaxoptions.com/rule-filings,* at MIAX's principal office, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Rules to accommodate the listing of options series that would expire at the close of business on the last business day of a calendar month (''Monthly Options Series'').

Pursuant to proposed Interpretation and Policy .13 to Exchange Rule 404 and Interpretation and Policy .03 to Exchange Rule 1809, the Exchange may list Monthly Options Series for up to five currently listed option classes that are either index options or options on exchange-traded funds (''ETFs'').[3] In addition, the Exchange may also list Monthly Options Series on any options classes that are selected by other securities exchanges that employ a similar program under their respective rules.[4] The Exchange may list 12 expirations for Monthly Options Series. Monthly Options Series need not be for consecutive months; however, the expiration date of a nonconsecutive expiration may not be beyond what would be considered the last expiration date if the maximum number of expirations were listed consecutively.[5]

[3] The Exchange proposes to amend Exchange Rule 404(a) to provide that proposed Interpretation and Policy .13 to Exchange Rule 404 will describe how the Exchange will fix a specific expiration date and exercise price for Monthly Options Series and that proposed Interpretation and Policy .13 to Exchange Rule 404 will govern the procedures for opening Monthly Options Series, respectively. This is consistent with language in current Exchange Rules 404(a) for other Short Term Options Series and Quarterly Options Series.

[4] Currently, Cboe Exchange, Inc. has a similar program. *See* Securities Exchange Act Release No. 98915 (Nov. 13, 2023) (SR–CBOE–2023–049) (Order Approving a Proposed Rule Change To Adopt Monthly Options Series).

[5] The Exchange notes this provision considers consecutive monthly listings. In other words, as other expirations (such as Quarterly Options Series) are not counted as part of the maximum, those

Continued

Other expirations in the same class are not counted as part of the maximum numbers of Monthly Options Series expirations for a class.[6] Monthly Options Series will be P.M.-settled.[7]

The strike price of each Monthly Options Series will be fixed at a price per share, with at least two, but no more than five, strike prices above and at least two, but no more than five, strike prices below the value of the underlying index or price of the underlying security at about the time that a Monthly Options Series is opened for trading on the Exchange. The Exchange will list strike prices for Monthly Options Series that are reasonably related to the current price of the underlying security or current index value of the underlying index to which such series relates at about the time such series of options is first opened for trading on the Exchange. The term ''reasonably related to the current price of the underlying security or index value of the underlying index'' means that the exercise price is within 30% of the current underlying security price or index value.[8] Additional Monthly Options Series of the same class may be open for trading on the Exchange when the Exchange deems it necessary to maintain an orderly market, to meet Member[9] demand, or when the market price of the underlying security moves substantially from the initial exercise price or prices. To the extent that any additional strike prices are listed by the Exchange, such additional strike prices will be within 30% above or below the closing price of the underlying index or security on the preceding day. The Exchange may also open additional strike prices of Monthly Options Series that are more than 30% above or below the current price of the underlying security, provided that demonstrated Member interest exists for such series, as expressed by institutional, corporate, Members or their brokers. Market Makers trading for their own account will not be considered when determining Member interest under this provision. The opening of the new Monthly Options Series will not affect the series of options of the same class previously opened.[10] The interval between strike prices on Monthly Options Series will be the same as the interval for strike prices for series in that same options class that expire in accordance with the normal monthly expiration cycle.[11]

By definition, Monthly Options Series can never expire in the same week that a standard options series that expires on the third Friday of a month in the same class expires. The same, however, is not the case with respect to Short Term Options Series or Quarterly Options Series. Therefore, to avoid any confusion in the marketplace, the Exchange proposes to amend Interpretation and Policy .02 to Exchange Rule 404 to provide that the Exchange will not list a Short Term Options Series in a class on a date on which a Monthly Options Series or Quarterly Options Series expires.[12] Similarly, proposed Interpretation and Policy .13(b) to Exchange Rule 404 provide that no Monthly Options Series may expire on a date that coincides with an expiration date of a Quarterly Options Series in the same index or ETF class. In other words, the Exchange will not list a Short Terms Options Series on an index or ETF if a Monthly Options Series on that index or ETF were to expire on the same date, nor will the Exchange list a Monthly Options Series on an index or ETF if a Quarterly Options Series on that ETF were to expire on the same date to prevent the listing of series with concurrent expirations.[13]

With respect to Monthly Options Series added pursuant to proposed Interpretation and Policy .13(a)–(f) to Exchange Rule 404, the Exchange will, on a monthly basis, review series that are outside a range of five strikes above and five strikes below the current price of the underlying index or security, and delist series with no open interest in both the put and the call series having a strike: (i) higher than the highest strike price with open interest in the put and/or call series for a given expiration month; and (ii) lower than the lowest strike price with open interest in the put and/or call series for a given expiration month. Notwithstanding this delisting policy, Member requests to add strikes and/or maintain strikes in Monthly Options Series in series eligible for delisting will be granted. In connection with this delisting policy, if the Exchange identifies series for delisting, the Exchange will notify other options exchanges with similar delisting policies regarding eligible series for delisting and will work with such other exchanges to develop a uniform list of series to be delisted, so as to ensure uniform series delisting of multiply listed Monthly Options Series.[14]

The Exchange believes that Monthly Options Series will provide investors with another flexible and valuable tool to manage risk exposure, minimize capital outlays, and be more responsive to the timing of events affecting the securities that underlie options contracts. The Exchange believes limiting Monthly Options Series to five classes will ensure the addition of these new series will have a negligible impact

expirations would not be considered when considering when the last expiration date would be if the maximum number were listed consecutively. For example, if it is January 2024 and the Exchange lists Quarterly Options Series in class ABC with expirations in March, June, September, December, and the following March, the Exchange could also list Monthly Options Series in class ABC with expirations in January, February, April, May, July, August, October, and November 2024 and January and February of 2025. This is because, if Quarterly Options Series, for example, were counted, the Exchange would otherwise never be able to list the maximum number of Monthly Options Series. This is consistent with the listing provisions for Quarterly Options Series, which permit calendar quarter expirations. The need to list series with the same expiration in the current calendar year and the following calendar year (whether Monthly or Quarterly expiration) is to allow market participants to execute one-year strategies pursuant to which they may not roll their exposures in the longer-dated options (*e.g.,* January 2025) prior to the expiration of the nearer-dated option (*e.g.,* January 2024).

[6] *See* proposed Interpretation and Policy .13(b) to Exchange Rule 404.

[7] *See* proposed Interpretation and Policy .13(c) to Exchange Rule 404.

[8] *See* proposed Interpretation and Policy .13(d). The Exchange notes these proposed provisions are consistent with the initial series provision for the Quarterly Options Series program in Interpretation and Policy .03 to Exchange Rule 404. While different than the initial strike listing provision for the Quarterly Options Series program in current Interpretation and Policy .03 to Exchange Rule 404, the Exchange believes the proposed provision is appropriate, as it contemplates classes that may have strike intervals of $5 or greater.

[9] The term ''Member'' means an individual or organization approved to exercise the trading rights associated with a Trading Permit. Members are deemed ''members'' under the Exchange Act. *See* Exchange Rule 100.

[10] *See* proposed Interpretation and Policy .13(e) to Exchange Rule 404.

[11] *See* proposed Interpretation and Policy .13(f) to Exchange Rule 404; *see also* Interpretations and Policies .01 and .04, .06, .08, .09, .10 to Exchange Rule 404 (permissible strike prices for ETF classes) and Interpretations and Policies .05, .07, .11 to Exchange Rule 404 (permissible strike prices for index options).

[12] The Exchange also proposes to make a non-substantive change to Interpretation and Policy .02 to Exchange Rule 404 to change current references to ''monthly options series'' to ''standard expiration options series'' (*i.e.,* series that expire on the third Friday of a month), to eliminate potential confusion. The current references to ''monthly options series'' are intended to refer to those series that expire on the third Friday of a month, which are generally referred to in the industry as standard expirations.

[13] The Exchange notes this would not prevent the Exchange from listing a P.M.-settled Monthly Options Series on an index with the same expiration date as an A.M.-settled Short Term Options Series on the same index, both of which may expire on a Friday. The Exchange believes this concurrent listing would provide investors with yet another hedging mechanism and is reasonable given these series would not be identical (unlike if they were both P.M.-settled). This could not occur with respect to ETFs, as all Short Term Options Series on ETFs are P.M.-settled.

[14] *See* proposed Interpretation and Policy .13(g) to Exchange Rule. Pursuant to Exchange Rule 1807, exercise limits for impacted index and ETF classes would be equal to the applicable position limits.

on the Options Price Reporting Authority (''OPRA'') and the Exchange's quoting capacity. The Exchange represents it has the necessary systems capacity to support new options series that will result from the introduction of Monthly Options Series.

The Exchange also proposes to amend Exchange Rules 1804(d) and 1805(d) to provide that positions in Monthly Options Series will be aggregated with positions in options contracts on the same underlying security or index.[15] This is consistent with how position (and exercise) limits are currently imposed on series with other expirations (Short Term Options Series and Quarterly Options Series). Therefore, positions in options within class of index or ETF options, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. The Exchange believes this will address potential manipulative schemes and adverse market impacts surrounding the use of options.

The Exchange also represents its current surveillance programs will apply to Monthly Options Series and will properly monitor trading in the proposed Monthly Options Series. The Exchange currently lists Quarterly Options Series in certain ETF classes [16], which expire at the close of business at the end of four calendar months (*i.e.,* the end of each calendar quarter), and has not experienced any market disruptions nor issues with capacity. The Exchange's surveillance programs currently in place to support and properly monitor trading in these Quarterly Options Series, as well as Short Term Options Series and standard expiration series, will apply to the proposed Monthly Options Series. The Exchange believes its surveillances continue to be designed to deter and detect violations of its Rules, including position and exercise limits and possible manipulative behavior, and these surveillances will apply to Monthly Options Series that the Exchange determines to list for trading. Ultimately, the Exchange does not believe the proposed rule change raises any unique regulatory concerns because existing safeguards—such as position and exercise limits (and the aggregation of options overlying the same index or ETF) and reporting requirements—would continue to apply.

[15] *See* proposed Exchange Rules 1804(d) (regarding position limits for broad-based index options) and 1805(d) (regarding position limits for industry index options).

[16] The Exchange notes it currently lists quarterly expirations on certain ETF options pursuant to Interpretation and Policy .03 to Exchange Rule 404.

The Exchange notes that the proposed rule change is substantively identical to the proposed rule changes recently filed by the Cboe Exchange, Inc. (''Cboe'').[17] The Exchange notes that MIAX Chapters IV and XVIII are incorporated by reference into the rulebook of the Exchange's affiliate, MIAX Emerald, LLC (''Emerald''). As such, the amendments to MIAX Chapters IV and XVIII proposed herein will also apply to MIAX Emerald Chapters IV and XVIII.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[18] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [19] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5) [20] requirement that the rules of an exchange not be designed to permit unfair discrimination between Members, issuers, brokers, or dealers.

In particular, the Exchange believes the introduction of Monthly Options Series will remove impediments to and perfect the mechanism of a free and open market and a national market system by expanding hedging tools available to market participants. The Exchange believes the proposed monthly expirations will allow market participants to transact in the index and ETF options listed pursuant to the proposed rule change based on their timings as needed and allow them to tailor their investment and hedging needs more effectively. Further, the Exchange believes the availability of Monthly Options Series would protect investors and the public interest by providing investors with more flexibility to closely tailor their investment and hedging decisions in these options, thus allowing them to better manage their risk exposure.

The Exchange believes the Quarterly Options Series Program has been successful to date and the proposed Monthly Options Series program simply expands the ability of investors to hedge risk against market movements stemming from economic releases or market events that occur at month's end in the same way the Quarterly Options Series Program has expanded the landscape of hedging for quarter-end news. Monthly Options Series will also complement Short Term Options Series, which will allow investors to hedge risk against events that occur throughout a month. The Exchange believes the availability of additional expirations should create greater trading and hedging opportunities for investors, as well as provide investors with the ability to tailor their investment objectives more effectively.

The Exchange notes the proposed terms of Monthly Options Series, including the limitation to five index and ETF option classes, are substantively the same as the current terms of Quarterly Options Series.[21] Quarterly Options Series expire on the last business day of a calendar quarter, which is the last business day of every third month. The proposed Monthly Options Series would fills the gaps between Quarterly Options Series expirations by permitting series to expire on the last business day of every month, rather than every third month. The proposed Monthly Options Series may be listed in accordance with the same terms as Quarterly Options Series, including permissible strikes. As is the case with Quarterly Options Series, no Short Term Options Series may expire on the same day as a Monthly Options Series. Similarly, as proposed, no Monthly Options Series may expire on the same day as a Quarterly Options Series. The Exchange believes preventing listing series with concurrent expirations in a class will eliminate potential investors confusion and thus protect investors and the public interest. Given that Quarterly Options Series the Exchange currently lists are essentially Monthly Options Series that can expire at the end of only certain calendar months, the Exchange believes it is reasonable to list Monthly Options Series in accordance with the same terms, as it will promote just and equitable principles of trade. The Exchange believes limiting Monthly Options Series to five classes will

[17] *See* supra note 4.

[18] 15 U.S.C. 78f(b).

[19] 15 U.S.C. 78f(b)(5).

[20] *Id.*

[21] *Compare* proposed Interpretation and Policy .13 Exchange Rule 404 *to* Interpretation and Policy .03 to Exchange Rule 404.

ensure the addition of these new series will have a negligible impact on the Exchange and OPRA's quoting capacity. The Exchange represents it has the necessary systems capacity to support new options series that will result from the introduction of Monthly Options Series.

The Exchange further believes the proposed rule change regarding the treatment of Monthly Options Series with respect to determining compliance with position and exercise limits is designed to prevent fraudulent and manipulative acts and practices and promote just and equitable principles of trade. Monthly Options Series will be aggregated with options overlying the same ETF or index for purposes of compliance with position (and exercise) limits, which is consistent with how position (and exercise) limits are currently imposed on series with other expirations (Short Term Options Series and Quarterly Options Series). Therefore, options positions within ETF or index option classes for which Monthly Options Series are listed, regardless of their expirations, would continue to be subject to existing position (and exercise) limits. The Exchange believes this will address potential manipulative schemes and adverse market impacts surrounding the use of options. The Exchange also represents its current surveillance programs will apply to Monthly Options Series and will properly monitor trading in the proposed Monthly Options Series. As mentioned above, the Exchange currently trades Quarterly Options Series in certain ETF classes, which expire at the close of business at the end of three calendar months (*i.e.,* the end of each calendar quarter), and has not experienced any market disruptions nor issues with capacity. The Exchange's surveillance programs currently in place to support and properly monitor trading in these Quarterly Options Series, as well as Short Term Options Series, and standard expiration series, will apply to the proposed Monthly Options Series. The Exchange believes its surveillances continue to be designed to deter and detect violations of its Rules, including position and exercise limits and possible manipulative behavior, and these surveillances will apply to Monthly Options Series that the Exchange determines to list for trading. Ultimately, the Exchange does not believe the proposed rule change raises any unique regulatory concerns because existing safeguards—such as position and exercise limits (and the aggregation of options overlying the same ETF or index) and reporting requirements—would continue to apply.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act[22] and Rule 19b–4(f)(6) thereunder.[23] Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[24] and subparagraph (f)(6) of Rule 19b–4 thereunder.[25]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act[26] normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii)[27] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has requested that the Commission waive the 30-day operative delay so that the Exchange may immediately list Monthly Options Series, thereby providing an additional market to investors, which the Exchange believes will benefit investors by promoting competition in Monthly Options Series. The Commission notes that it recently approved Cboe's substantially similar proposal.[28] The Commission believes that the proposed rule change presents no novel issues and that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the operative delay and designates the proposed rule change operative upon filing.[29]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–MIAX–2023–44 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MIAX–2023–44. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE,

[22] 15 U.S.C. 78s(b)(3)(A)(iii).

[23] 17 CFR 240.19b–4(f)(6).

[24] 15 U.S.C. 78s(b)(3)(A)(iii).

[25] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6)(iii) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[26] 17 CFR 240.19b–4(f)(6).

[27] 17 CFR 240.19b–4(f)(6)(iii).

[28] *See* supra note 4.

[29] For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. *See* 15 U.S.C. 78c(f).

Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–MIAX–2023–44 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[30]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98963; File No. SR–NYSEAMER–2023–59]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the Connectivity Fee Schedule

November 16, 2023.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 9, 2023, NYSE American LLC (''NYSE American'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users with wireless connectivity to CME Group market data. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the Connectivity Fee Schedule (''Fee Schedule'') regarding colocation services and fees to provide Users[4] with wireless connectivity to CME Group market data.[5]

The Exchange currently provides Users with wireless connections to eight market data feeds or combinations of feeds from third-party markets (the ''Existing Third Party Data''),[6] and wired connections to more than 45 market data feeds or combinations of feeds.[7] The Exchange proposes to add to the Fee Schedule wireless connections to CME Group, Inc. (''CME Group'') market data (''CME Group Data'' and, together with the Existing Third Party Data, the ''Third Party Data''). Users would be offered the proposed wireless connection to the CME Group Data through connections into the colocation center in the Mahwah, New Jersey data center (''MDC'').[8]

The Exchange expects that the proposed rule change would become operative in the fourth quarter of 2023, and in any event, no later than December 31, 2023. The Exchange will announce the date that the wireless connection to the CME Group Data will be available through a customer notice.

To receive CME Group Data, the User would enter into an agreement with a third party for permission to receive the data, if required. The User would pay this third party any fees for the data content.

The Exchange proposes to revise the Fee Schedule to reflect fees related to the wireless connection to CME Group Data. For each wireless connection to CME Group Data, a User would be charged a $5,000 non-recurring initial charge and a monthly recurring charge of $6,000. If a User were to purchase more than one wireless connection to CME Group Data, it would pay more than one non-recurring initial charge. Each proposed wireless connection would include the use of one port for connectivity to CME Group Data, and a User would not pay a separate fee for the use of such port.[9]

The Exchange's proposed wireless connectivity to CME Group market data would not include the entire CME Group market data feed, which includes market data for approximately 1,200 futures symbols. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. Accordingly, FIDS has consulted with customers about which of the CME Group symbols they would like to be available wirelessly and plans to offer connectivity to a subgroup of symbols based on this customer feedback. The Exchange understands

[30] 17 CFR 200.30–3(a)(12), (59).

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

[4] For purposes of the Exchange's colocation services, a ''User'' means any market participant that requests to receive colocation services directly from the Exchange. *See* Securities Exchange Act Release No. 76009 (September 29, 2015), 80 FR 60213 (October 5, 2015) (SR–NYSEMKT–2015–67). As specified in the Fee Schedule, a User that incurs colocation fees for a particular colocation service pursuant thereto would not be subject to colocation fees for the same colocation service charged by the Exchange's affiliates the New York Stock Exchange LLC, NYSE Arca, Inc., NYSE Chicago, Inc., and NYSE National, Inc. (together, the ''Affiliate SROs''). Each Affiliate SRO has submitted substantially the same proposed rule change to propose the changes described herein. *See* SR–NYSE–2023–44, SR–NYSEARCA–2023–79, SR–NYSECHX–2023–22, and SR–NYSENAT–2023–26.

[5] The Exchange filed a similar proposal in 2021, which it subsequently withdrew. *See* Securities Exchange Act Release No. 93810 (December 17, 2021), 86 FR 73026 (December 23, 2021) (SR–NYSE–2021–67, SR–NYSEAMER–2021–43, SR–NYSEARCA–2021–97, SR–NYSECHX–2021–17, SR–NYSENAT–2021–23).

[6] *See* Securities Exchange Act Release Nos. 76748 (December 23, 2015), 80 FR 81648 (December 30, 2015) (SR–NYSEMKT–2015–85); 78376 (July 21, 2016), 81 FR 49311 (July 27, 2016) (SR–NYSEMKT–2016–17); and 80117 (February 28, 2017), 82 FR 12646 (March 6, 2017) (SR–NYSEMKT–2017–09).

[7] *See* Securities Exchange Act Release No. 80309 (March 24, 2017), 82 FR 15725 (March 30, 2017) (SR–NYSEMKT–2016–63).

[8] Through its Fixed Income and Data Services (''FIDS'') (previously ICE Data Services) business, Intercontinental Exchange, Inc. (''ICE'') operates the MDC. The Exchange and the Affiliate SROs are indirect subsidiaries of ICE. The proposed service would be provided by FIDS pursuant to an agreement with a non-ICE entity. FIDS does not own the wireless network that would be used to provide the service.

[9] If a User also connects to Existing Third Party Data, it would not be able to connect to such Existing Third Party Data using the same port that it uses for connectivity to CME Group Data.

that Quincy Data LLC (''Quincy''),[10] a third party that already provides wireless connectivity to CME Group market data in the MDC, similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.[11]

Application and Impact of the Proposed Changes

The proposed changes would not apply differently to distinct types or sizes of market participants. Rather, they would apply to all Users equally.

As is currently the case, the purchase of any colocation service, including connectivity to Third Party Data, is completely voluntary and the Fee Schedule is applied uniformly to all Users.

Competitive Environment

The Exchange operates in a highly competitive market in which other vendors offer colocation services as a means to facilitate the trading and other market activities of those market participants who believe that colocation enhances the efficiency of their operations. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [12]

As explained below in this filing, the Exchange's proposed wireless connection to CME Group Data would compete with the wireless connection to CME Group market data provided by Quincy. Third-party vendors such as Quincy are not at any competitive disadvantage created by the Exchange.

The proposed change is not otherwise intended to address any other issues relating to colocation services or related fees, and the Exchange is not aware of any problems that Users would have in complying with the proposed change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[13] in general, and furthers the objectives of Section 6(b)(5) of the Act,[14] in particular, because it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest and because it is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange further believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,[15] because it provides for the equitable allocation of reasonable dues, fees, and other charges among its members and issuers and other persons using its facilities and does not unfairly discriminate between customers, issuers, brokers, or dealers.

The Proposed Change Is Reasonable

The Exchange believes that the proposed rule change is reasonable. In considering the reasonableness of proposed services and fees, the Commission's market-based test considers ''whether the exchange was subject to significant competitive forces in setting the terms of its proposal . . . , including the level of any fees.'' [16] If the Exchange meets that burden, ''the Commission will find that its proposal is consistent with the Act unless 'there is a substantial countervailing basis to find that the terms' of the proposal violate the Act or the rules thereunder.'' [17] Here, the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because substantially similar substitutes are available, and the Exchange has not placed the third party vendors at a competitive disadvantage created by the Exchange.

Substantially Similar Substitutes Are Available

The Exchange's proposed wireless connection to CME Group Data would compete with other methods by which both the Exchange and various third parties already provide connectivity to CME Group market data to Users.

Quincy already provides wireless connectivity to CME Group market data in the MDC. Like the Exchange's proposed wireless connectivity, Quincy's wireless connectivity to CME Group market data includes a similarly-sized subset of symbols that almost completely overlaps with the symbols for which the Exchange proposes to provide wireless connectivity—presumably because customers have requested the same symbols of each provider. Specifically, like the Quincy wireless connection, the Exchange's proposed wireless connection would include the main futures for equity indices, government bonds, foreign exchanges, oil, and precious metals.[18] In addition, the Exchange's proposed wireless connection would also include several additional symbols that proposed Users have specifically requested be included. The Exchange plans to continuously monitor Users' preferences and their views of the usefulness of the included symbols, and may adjust them accordingly. The Exchange believes that the Quincy wireless connection to CME Group market data is at a same or similar speed as the Exchange's proposed connection, and at a similar price.[19]

Accordingly, the Quincy wireless connection to CME Group market data would compete with the Exchange's proposed wireless connection, and would exert significant competitive forces on the Exchange in setting the terms of its proposal, including the level

[10] The Exchange understands that Quincy is an affiliate of McKay Brothers LLC.

[11] The Exchange understands that the third parties that provide wireless connectivity to CME Group market data to the MDC and other data centers in New Jersey (as discussed later in this filing) follow a substantially similar model, offering wireless connectivity to a selection of market data rather than to entire feeds.

[12] *See* Securities Exchange Act Release No. 51808 (June 9, 2005), 70 FR 37496, 37499 (June 29, 2005).

[13] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(5).

[15] 15 U.S.C. 78f(b)(4).

[16] *See* Securities Exchange Act Release No. 90209 (October 15, 2020), 85 FR 67044, 67049 (October 21, 2020) (Order Granting Accelerated Approval to Establish a Wireless Fee Schedule Setting Forth Available Wireless Bandwidth Connections and Wireless Market Data Connections) (SR–NYSE–2020–05, SR–NYSEAMER–2020–05, SR–NYSEArca–2020–08, SR–NYSECHX–2020–02, SR–NYSENAT–2020–03, SR–NYSE–2020–11, SR–NYSEAMER–2020–10, SR–NYSEArca–2020–15, SR–NYSECHX–2020–05, SR–NYSENAT–2020–08) (''Wireless Approval Order''), citing Securities Exchange Act Release No. 59039 (December 2, 2008), 73 FR 74770, 74781 (December 9, 2008) (''2008 ArcaBook Approval Order''). *See NetCoalition* v. *SEC,* 615 F.3d 525 (D.C. Cir. 2010).

[17] *See* Wireless Approval Order, *supra* note 16, at 67049, citing 2008 ArcaBook Approval Order, *supra* note 16, at 74781.

[18] Quincy's symbol list for wireless connectivity to CME Group data is available at *https://www.quincy-data.com/product-page/* under the heading ''2023 Quincy Extreme Data Symbol Set/North America QED Symbol Set.'' The Exchange understands that the Quincy wireless connection to CME Group data currently includes 26 symbols. The Exchange's proposed wireless connection to CME Group data would contain a similar number of symbols, nearly all of which are included in the Quincy wireless connection.

[19] Because Quincy is not a regulated entity, it is not obligated to make its latency figures or fees publicly available or the same for all entities.

of the Exchange's proposed fees.[20] If the Exchange were to set its proposed fees too high, Users could respond by instead selecting Quincy's substantially similar wireless connectivity to CME Group data.[21]

Third Party Competitors Are Not at a Competitive Disadvantage Created by the Exchange

The Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is available to any telecommunications provider. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[22] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party telecommunications service providers that have installed their equipment in the MDC's two meet-me-rooms (''Telecoms'').[23] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that Telecoms pay to operate in the meet-me-rooms at a reasonable level [24] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[25] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third-party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

In sum, because the Exchange is subject to significant competitive forces in setting the terms on which it offers its proposal, in particular because a substantially similar substitute is available, and the Exchange has not placed the third-party vendors at a competitive disadvantage created by the Exchange, the proposed fees for the Exchange's wireless connectivity to CME Group Data are reasonable.[26] If the Exchange were to set its prices for wireless connectivity to CME Group Data at a level that Users found to be too high, Users could easily choose to connect to CME Group market data in colocation at the MDC through the competing Quincy wireless connection, as detailed above.

Additional Considerations

The Exchange believes that it is reasonable for the proposed wireless connection to CME Group Data not to transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. Wireless bandwidth capacity is a small fraction of the capacity required to transport the full CME Group feed. The Exchange believes it is reasonable for FIDS to select the symbols it will make available for wireless connectivity based on customer input and demand. The Exchange understands that Quincy similarly provides wireless connectivity to a subset of CME Group market data based on customer demand for particular symbols.

The Exchange believes that it is reasonable that a User that connects to both CME Group Data and Existing Third Party Data may not use the same port for connectivity to both, and so would have at least two ports, because the proposed wireless connection would include the use of one port for connectivity to CME Group Data, and the connectivity to the Existing Third Party Data includes the use of one port for connectivity to Existing Third Party Data. A User would not pay a separate fee for using such ports.

[20] *See* 2008 ArcaBook Approval Order, *supra* note 16, at 74789 and n.295 (recognizing that products need not be identical to be substitutable).

[21] In addition, the Exchange believes that at least two third-party market participants, in addition to FIDS, offer fiber connections to CME Group market data in colocation. *See* Securities Exchange Act Release No. 81015 (June 23, 2017), 82 FR 29610 (June 29, 2017) (SR–NYSEMKT–2017–32). Unlike the proposed wireless connectivity, FIDS' fiber connection to CME Group market data includes the entire CME Group data feed, instead of a subset of symbols.

[22] *See* NYSE Rule 3.13(c), NYSE American Rule 3.13E(c), NYSE Arca Rule 3.13(c), NYSE Chicago Rule 3.13(c), and NYSE National Rule 3.13(c) (Data Center Pole Restrictions—Connectivity to Co-Location Space). ''Patch Panel Point'' is defined as ''the patch panel where fiber connections for wireless services connect to the network row in the space used for co-location in the Data Center.'' *Id.* The proposed service would not use the MDC pole, so Rule 3.13(b) would not apply.

[23] Note that in the case of wireless connectivity, a User in colocation still requires a fiber circuit to transport data. If a Telecom is used, the data is transmitted wirelessly to the relevant pole, and then from the pole to the meet-me-room using a fiber circuit.

[24] *See* Securities Exchange Act Release No. 97999 (July 26, 2023), 88 FR 50190 (August 1, 2023) (SR–NYSEAMER–2023–36) (''MMR Notice'').

[25] *See id.* at 50193. Importantly, the Exchange is prevented from making any alteration to its meet-me-room services or fees without filing a proposal for such changes with the Commission.

[26] *See* Wireless Approval Order, *supra* note 16.

The Proposed Change Is an Equitable Allocation of Fees and Credits

The Exchange believes that its proposal equitably allocates its fees among Users. Without this proposed rule change, Users would have fewer options for connectivity to CME Group market data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that the proposed change is equitable because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are equitably allocated because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select the Exchange's proposed wireless connections to CME Group Data would be charged the same amount for the same services.

The Proposed Change Is Not Unfairly Discriminatory

The Exchange believes that the proposed rule change is not unfairly discriminatory, for the following reasons. Without this proposed rule change, Users would have fewer options for connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations. Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection.

The Exchange believes that it is not unfairly discriminatory to not transport information for all of the symbols included in CME Group data feeds to the MDC, but rather to transport a subset of that data. There is limited bandwidth available on the wireless network to colocation, and there are a number of CME Group data feeds. Limiting the feeds to the selection of CME Group market data regarding securities for which FIDS determines there is demand would allow Users to receive the relevant CME Group Data over a wireless network.

The Exchange believes that the proposed change is not unfairly discriminatory because it will result in fees being charged only to Users that voluntarily select to receive the corresponding services and because those services will be available to all Users. Furthermore, the Exchange believes that the services and fees proposed herein are not unfairly discriminatory because, in addition to the services being completely voluntary, they are available to all Users on an equal basis (*i.e.,* the same products and services are available to all Users). All Users that voluntarily select wireless connections to CME Group Data would be charged the same amount for the same services. Users that opt to use wireless connections to CME Group Data would receive the CME Group Data that is available to all Users, as all market participants that contract with CME Group or its affiliate for CME Group Data, as required, may receive it.

For the reasons above, the proposed changes do not unfairly discriminate between or among market participants that are otherwise capable of satisfying any applicable colocation fees, requirements, terms, and conditions established from time to time by the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange believes that the proposal will not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of Section 6(b)(8) of the Act.[27]

The proposed change would not affect competition among national securities exchanges or among members of the Exchange, but rather between FIDS and its commercial competitors. The proposed wireless connection would provide Users with an alternative means of connectivity to CME Group Data. The proposed change would provide Users with an additional choice with respect to the form and optimal latency of the connectivity they use to receive CME Group market data, allowing a User to select the connectivity that better suits its needs, helping it tailor its colocation operations to the requirements of its business operations.

Users that do not opt to utilize the Exchange's proposed wireless connection would still be able to obtain CME Group market data wirelessly using Quincy's wireless connection. The Exchange's proposed wireless connection and the existing Quincy wireless connection to CME Group market data are sufficiently similar substitutes and thus provide market participants with choices to meet their wireless connectivity needs.

In addition, the Exchange does not believe that FIDS would have any competitive advantage over either the existing third-party provider or any future providers of wireless connectivity to CME Group market data. The Exchange's proposed service for connectivity to CME Group Data does not have any special access to or advantage within the MDC. The Exchange's proposed wireless connection would lead to a pole, from which a fiber connection would lead into the MDC. The pole is owned by a third party and is not on the grounds of the MDC, and the path into the MDC through a meet-me-room is the same path followed by any Telecom. Within the MDC, the proposed connection would follow the same route as that of any User, connecting to equipment in colocation and then to any Users that are customers.

Further, all distances in the MDC are normalized and Exchange rules require that the distance from the Patch Panel Point to each User cabinet in colocation be the same.[28] Every provider of wireless connectivity to Users, including FIDS, is connected to the Patch Panel Point, and the length of the fiber path from the Patch Panel Point to each User cabinet in colocation is the same.

Nor does the Exchange have a competitive advantage over the third-party competitors offering wireless connectivity to CME Group market data by virtue of the fact that it owns and operates the MDC's meet-me-rooms. Users purchasing wireless connectivity to CME Group market data—like Users of any other colocation service—would require a circuit connecting out of the MDC, and in most cases, such circuits are provided by third-party Telecoms that have installed their equipment in the MDC's two meet-me-rooms.[29] Currently, 16 Telecoms operate in the meet-me-rooms and provide a variety of circuit choices. It is in the Exchange's best interest to set the fees that

[27] 15 U.S.C. 78f(b)(8).

[28] *See supra* note 22.

[29] *See supra* note 23.

Telecoms pay to operate in the meet-me-rooms at a reasonable level [30] so that market participants, including Telecoms, will maximize their use of the MDC. By setting the meet-me-room fees at a reasonable level, the Exchange encourages Telecoms to participate in the meet-me-rooms and to sell circuits to Users for connecting into and out of the MDC. These Telecoms then compete with each other by pricing such circuits at competitive rates. These competitive rates for circuits help draw in more Users and Hosted Customers to the MDC, which directly benefits the Exchange by increasing the customer base to whom the Exchange can sell its colocation services, which include cabinets, power, ports, and connectivity to many third-party data feeds, and because having more Users and Hosted Customers leads, in many cases, to greater participation on the Exchange. In this way, by setting the meet-me-room fees at a level attractive to telecommunications firms, the Exchange spurs demand for all of the services it sells at the MDC, while setting the meet-me-room fees too high would negatively affect the Exchange's ability to sell its services at the MDC.[31] Accordingly, there are real constraints on the meet-me-room fees the Exchange charges, such that the Exchange does not have an advantage in terms of costs when compared to third parties that enter the MDC through the meet-me-rooms to provide services to compete with the Exchange's services.

If anything, the Exchange is subject to a competitive disadvantage vis-à-vis third party competitors offering wireless connectivity to CME Group market data. Third-party competitors are not subject to the Commission's filing requirements, and therefore can freely change their services and pricing in response to competitive forces. In contrast, the Exchange's service and pricing would be standardized as set out in this filing, and the Exchange would be unable to respond to pricing pressure from its competitors without seeking a formal fee change in a filing before the Commission.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

[30] *See* MMR Notice, *supra* note 24.

[31] *See supra* note 25.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act [32] and Rule 19b–4(f)(6) thereunder.[33] Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b–4(f)(6)(iii) thereunder.

A proposed rule change filed under Rule 19b–4(f)(6) [34] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[35] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B) [36] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSEAMER–2023–59 on the subject line.

[32] 15 U.S.C. 78s(b)(3)(A)(iii).

[33] 17 CFR 240.19b–4(f)(6).

[34] 17 CFR 240.19b–4(f)(6).

[35] 17 CFR 240.19b–4(f)(6)(iii).

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–98976; File No. SR–NYSE–2023–42]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Expand the Application of the per User Access Fee for Use of Certain Market Data Products by Redistributors

November 16, 2023.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on November 1, 2023, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the fees for NYSE BBO and NYSE Trades by expanding the application of the Per User Access Fee. The Exchange proposes to implement the proposed fee change on November 1, 2023. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to expand the application of the Per User Access Fee [4] for certain NYSE market data products, as set forth on the NYSE Proprietary Market Data Fee Schedule (''Fee Schedule''). Specifically, the Exchange proposes to expand the application of the Per User Access Fee, which is currently available for Redistributors [5] of NYSE BBO and NYSE Trades that subscribe to only such data feeds and do not subscribe to any other market data product listed on the Fee Schedule other than NYSE BQT and use such market data product for external distribution only. The Exchange proposes to make the Per User Access Fee available to Redistributors of NYSE OpenBook as well.

The proposed fee change, taken together with similar fee changes filed by the Exchange's affiliated exchanges, NYSE American LLC (''NYSE American'') and NYSE Arca, Inc. (''NYSE Arca''),[6] will reduce the fees associated with the NYSE BQT proprietary data product for Redistributors of NYSE OpenBook. As described below, NYSE BQT competes directly with similar products offered by both the Nasdaq and Cboe families of U.S. equity exchanges. Collectively, the proposed fee changes are intended to respond to the competition posed by similar products offered by the other exchange groups.

The Exchange proposes to implement the proposed fee change on November 1, 2023.

[4] The Per User Access Fee is a lower access fee that currently applies for subscribers of NYSE BBO and NYSE Trades that receive a data feed and use those market data products in a display-only format. *See* Fee Schedule. *See also* Securities Exchange Act Release Nos. 87803 (December 19, 2019), 84 FR 71505 (December 27, 2019) (SR–NYSE–2019–70) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change, as Modified by Partial Amendment No. 1, To Amend the Fees for NYSE BBO and NYSE Trades) (''BQT Fee Reduction Filing''); and 90407 (November 12, 2020), 85 FR 73570 (November 18, 2020) (SR–NYSE–2020–91) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the Fees for NYSE BBO and NYSE Trades by Modifying the Application of the Access Fee and Amending the Fees for NYSE Trades by Adopting a Waiver Applicable to the Redistribution Fee) (''Second BQT Fee Reduction Filing'').

[5] A Redistributor is a vendor or any other person that provides a NYSE data product to a data recipient or to any system that a data recipient uses, irrespective of the means of transmission or access.

[6] *See* SR–NYSEAMER–2023–57 and SR–NYSEArca–2023–78.

Background

The Securities and Exchange Commission (''Commission'') has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [7]

While Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [8] Indeed, equity trading is currently dispersed across 16 exchanges,[9] numerous alternative trading systems,[10] and broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 17% market share (whether including or excluding auction volume).[11]

With the NYSE BQT market data product, NYSE and its affiliates compete head to head with the Nasdaq Basic [12] and Cboe One Feed [13] market data

[12] As described on the Nasdaq website, available here: *http://www.nasdaqtrader.com/Trader.aspx?id=nasdaqbasic,* Nasdaq Basic is a ''low cost alternative'' that provides ''Best Bid and Offer and Last Sale information for all U.S. exchange-listed securities based on liquidity within the Nasdaq market center, as well as trades reported to the FINRA Trade Reporting Facility (''TRF'').''

[13] As described on the Cboe website, available here: *https://markets.cboe.com/us/equities/market_data_services/cboe_one/,* the Cboe One Feed is a ''market data product that provides cost-effective, high-quality reference quotes and trade data for market participants looking for comprehensive,

products. Similar to those market data products, NYSE BQT, which was established in 2014,[14] consists of certain elements from the NYSE BBO and NYSE Trades market data products as well as from market data products from the Exchange's affiliates, NYSE American, NYSE Arca, NYSE Chicago, Inc. (''NYSE Chicago''),[15] and NYSE National, Inc. (''NYSE National'').[16] Similar to both Nasdaq Basic and the Cboe One Feed, NYSE BQT provides investors with a unified view of comprehensive last sale and BBO data in all Tape A, B, and C securities that trade on the Exchange, NYSE American, NYSE Arca, NYSE Chicago, and NYSE National. Also similar to Nasdaq Basic and the Cboe One Feed, NYSE BQT is not intended to be used for purposes of making order-routing or trading decisions, but rather provides indicative prices for Tape A, B, and C securities.[17]

Together with NYSE American and NYSE Arca, the Exchange proposes to compete for subscribers to NYSE BQT by designing the proposed fee change to be attractive to Redistributors of NYSE OpenBook that intend to subscribe to and externally redistribute NYSE BQT. Currently, Redistributors of NYSE OpenBook that want to subscribe to and redistribute NYSE BQT must pay the General Access Fee. Redistributors of NYSE OpenBook who have data recipient customers interested in NYSE BQT may not be inclined to subscribe to NYSE BQT. When Redistributors do not subscribe to NYSE BQT, the prospective data recipients that are the customers of such Redistributors ae unable to subscribe to NYSE BQT. The proposed fee change is designed to provide a financial incentive for such Redistributors to subscribe to NYSE BQT so that their customers, which have expressed an interest in subscribing to NYSE BQT, would be able to access the product via such Redistributors.

Currently, subscribers of each of the NYSE BBO and NYSE Trades products that receive a data feed pay a General Access Fee of $1,500 per month. In February 2020, the Exchange added the Per User Access Fee, which is a reduced fee of $100 per month available at that time only for subscribers of NYSE BBO and NYSE Trades that use those products in a display-only format, including for internal use for Professional Users and external distribution to both Professional and Non-Professional Users.[18]

In November 2020, the Exchange expanded the application of the reduced Per User Access Fee to Redistributors of NYSE BBO and NYSE Trades data feeds that do not subscribe to any other market data product listed on the Fee Schedule other than NYSE BQT and use such market data products for external distribution only.[19]

As noted above, the Exchange now proposes to further expand the applicability of the reduced Per User Access Fee. Specifically, the Exchange proposes that Redistributors of NYSE BBO and NYSE Trades that do not subscribe to any other market data product listed on the Fee Schedule other than NYSE BQT and/or NYSE OpenBook, and use such market data products for external distribution only, would be eligible for the reduced Per User Access Fee. A Redistributor that receives such data feeds and uses the market data products for any other purpose (such as internal use) would continue to pay the $1,500 per month General Access Fee. And, as currently set forth in footnote 8 to the Fee Schedule, a subscriber would be charged only one access fee for each of the NYSE BBO and NYSE Trades products, depending on the use of that product.

To effect this change, the Exchange proposes to modify footnote 8 to the Fee Schedule as follows (proposed text italicized, proposed deletions bracketed):

The Per User Access Fee is charged to: (i) a subscriber that receives a data feed and uses the market data product only for Professional Users and Non-Professional Users in a display-only format, including for internal use and external redistribution in a display-only format, and (ii) a Redistributor that subscribes [only] to the NYSE BBO and NYSE Trades data feeds, and does not subscribe to any other Products listed on this Fee Schedule other than NYSE BQT *and/or the NYSE OpenBook data feed,* and uses these market data products for external distribution only. A subscriber that receives a data feed and uses the market data product for any other purpose, including if combined with Per User use, will be charged the General Access Fee. A subscriber will be charged only one access fee for each of the NYSE BBO and NYSE Trades products, depending on the use of that product.

The proposed rule change would result in lower fees for Redistributors that receive NYSE BBO, NYSE Trades, and NYSE OpenBook data feeds, and use such market data products for external distribution only.[20] The Exchange believes that the proposed expansion of the reduced Per User Access Fee would provide an incentive for Redistributors that currently subscribe to NYSE OpenBook to also subscribe to the NYSE BQT data feeds so that such product would be available to their customers, which have expressed an interest in subscribing to NYSE BQT.

The proposed rule change is intended to encourage greater use of NYSE BQT by making it more affordable for Redistributors that subscribe to NYSE OpenBook and also have customers interested in subscribing to NYSE BQT. The proposed fee change would allow the Exchange to compete more effectively with Nasdaq Basic and Cboe One Feed by expanding the number of Redistributors that would subscribe to NYSE BQT, and therefore make the product more widely available to data subscribers interested in NYSE BQT.

Applicability of Proposed Rule Change

As noted above, the proposed rule change is designed to reduce the overall cost for Redistributors of NYSE BQT that also redistribute NYSE OpenBook by expanding the applicability of the Per User Access Fee. Today, the Exchange has thirty-one data feed subscribers, two of whom became Redistributors as a direct result of the Second BQT Fee Reduction Filing and currently pay the reduced Per User Access Fee. The Exchange believes that the proposed rule change would provide a further incentive for Redistributors that already subscribe to NYSE OpenBook to subscribe to NYSE BQT for purposes of providing external distribution of NYSE BQT to potential data recipients interested in the product.

real-time market data'' and provides a ''unified view of the market from all four Cboe equity exchanges: BZX Exchange, BYX Exchange, EDGX Exchange, and EDGA Exchange.''

[14] *See* Securities Exchange Act Release Nos. 72750 (August 4, 2014), 79 FR 46494 (August 8, 2014) (notice—NYSE BQT); and 73553 (November 6, 2014), 79 FR 67491 (November 13, 2014) (approval order—NYSE BQT) (SR–NYSE–2014–40) (''NYSE BQT Filing'').

[15] In 2019, NYSE BQT was amended to include NYSE Chicago BBO and NYSE Chicago Trades. *See* Securities Exchange Act Release No. 87511 (November 12, 2019), 84 FR 63689 (November 18, 2019) (SR–NYSE–2019–60).

[16] In 2018, NYSE BQT was amended to include NYSE National BBO and NYSE National Trades. *See* Securities Exchange Act Release No. 83359 (June 1, 2018), 83 FR 26507 (June 7, 2018) (SR–NYSE–2018–22).

[17] *See* NYSE BQT Filing, *supra* note 14.

[18] *See* BQT Fee Reduction Filing, *supra,* note 4.

[19] *See* Second BQT Fee Reduction Filing, *supra,* note 4.

[20] The Per User Access Fee is 93% lower than the General Access Fee. Together with the corresponding proposed rule changes by NYSE American and NYSE Arca to similarly reduce the access fees to their BBO and Trades products for Redistributors, such Redistributors would be eligible for significantly lower access fees for NYSE BQT, from $6,250 per month to $850 per month ($250 + $200 + $200 +$200), a reduction of more than 86%.

Because the proposed rule change is targeted to potential Redistributors of NYSE BQT that also subscribe to NYSE OpenBook, the proposed change to the availability of the NYSE BBO and NYSE Trades Per User Access Fees, together with the proposed changes on NYSE American and NYSE Arca, are narrowly tailored with that purpose in mind. Accordingly, this proposed fee change is not designed for Redistributors that are existing customers of NYSE market data products (other than NYSE OpenBook) or that engage in internal use of NYSE BQT. This proposed rule change would not result in any changes to the market data fees for NYSE BBO and NYSE Trades for such data subscribers.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[21] in general, and Sections 6(b)(4) and 6(b)(5) of the Act,[22] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [23]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

> In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [24]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [25]

More recently, the Commission confirmed that it applies a ''market-based'' test in its assessment of market data fees, and that under that test:

> the Commission considers whether the exchange was subject to significant competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder.[26]

1. The Proposed Fees Are Constrained by Significant Competitive Forces

An exchange may demonstrate that its fees are constrained by competitive forces by showing that platform competition applies.

As the United States Supreme Court recognized in *Ohio* v. *American Express,* platforms are firms that act as intermediaries between two or more sets of agents, and typically the choices made on one side of the platform affect the results on the other side of the platform via externalities, or ''indirect network effects.'' [27] Externalities are linkages between the different ''sides'' of a platform such that one cannot understand pricing and competition for goods or services on one side of the platform in isolation; one must also account for the influence of the other side. As the Supreme Court explained:

> To ensure sufficient participation, two-sided platforms must be sensitive to the prices that they charge each side. . . . Raising the price on side A risks losing participation on that side, which decreases the value of the platform to side B. If the participants on side B leave due to this loss in value, then the platform has even less value to side A—risking a feedback loop of declining demand. . . . Two-sided platforms therefore must take these indirect network effects into account before making a change in price on either side.[28]

The Exchange and its affiliated exchanges have long maintained that they function as platforms between consumers of market data and consumers of trading services. Proving the existence of linkages between the two sides of this platform requires an in-depth economic analysis of both public data and confidential Exchange data about particular customers' trading activities and market data purchases. Exchanges, however, are prohibited from sharing details about these specific customer activities and purchases. For example, pursuant to Exchange Rule 7.41E, transactions executed on the Exchange are processed anonymously.

Exchanges function as platforms for market data and transaction services mean that exchanges do not set fees for market data products without considering, and being constrained by, the effect the fees will have on the order-flow side of the platform. And as the D.C. Circuit recognized in *NetCoalition I,* ''[n]o one disputes that competition for order flow is fierce.'' [29] The court further noted that ''no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers,'' and that an exchange ''must compete vigorously for order flow to maintain its share of trading volume.'' [30]

As noted above, while Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [31] The Commission's Division of Trading and Markets has also recognized that with so many ''operating equities exchanges and dozens of ATSs, there is vigorous price competition among the U.S. equity markets and, as a result, [transaction] fees are tailored and frequently modified to attract particular types of order flow, some of which is highly

fluid and price sensitive.'' [32] Indeed, today, equity trading is currently dispersed across 16 exchanges,[33] numerous alternative trading systems,[34] broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 17% market share.[35]

Further, low barriers to entry mean that new exchanges may, and do, rapidly and inexpensively enter the market and offer additional substitute platforms to compete with the Exchange. For example, since 2020, three new exchanges have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020; [36] Members Exchange (MEMX), which began operations as an exchange on September 29, 2020; [37] and Miami International Holdings (MIAX), which began operations of its first equities exchange on September 29, 2020.[38]

These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others).[39]

For example, one of MEMX's founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering ''[l]ower pricing on market data.'' [40] Nor is this a new phenomenon: exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX ''BATS 2.0.'' [41]

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive and contestable.[42] And low barriers to entry act as a market check on high prices.[43]

In sum, the fierce competition for order flow thus constrains any exchange from pricing its market data at a supracompetitive price and constrains the Exchange in setting its fees at issue here.

The proposed expansion of the Per User Access Fee is therefore reasonable because in setting it, the Exchange is constrained by the availability of numerous substitute platforms offering market data products and trading. Such substitutes need not be identical, but only substantially similar to the product at hand.

More specifically, in expanding the applicability of the Per User Access Fee to Redistributors of NYSE OpenBook, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers have their pick of an increasing number of alternative platforms to use instead of the Exchange. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternative platforms to the Exchange's platform ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for trading order flow.

Even putting aside the facts that exchanges are platforms and that pricing decisions on the two sides of the platform are intertwined, the Exchange is constrained in setting the proposed market data fees by the availability of numerous substitute market data products. The Commission has been clear that substitute products need not be identical, but only substantially similar to the product at hand.[44]

The NYSE BQT market data product is subject to significant competitive forces that constrain its pricing. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-

[42] *United States* v. *SunGard Data Sys.,* 172 F. Supp. 2d 172, 186 (D.D.C. 2001) (recognizing that ''[a]s a matter of law, courts have generally recognized that when a customer can replace the services of an external product with an internally-created system, this captive output (*i.e.* the self-production of all or part of the relevant product) should be included in the same market.''). In *SunGard,* the court rejected the Antitrust Division's attempt to block SunGuard's acquisition of the disaster recovery assets of Comdisco on the basis that the acquisition would ''substantially lessen competition in the market for shared hotsite disaster recovery services,'' when the evidence showed that ''internal hotsites'' created by customers competed with the ''external shared hotsite business'' engaged in by the merging parties. *Id.* at 173–74, 187.

[43] *United States* v. *Baker Hughes,* 908 F.2d 981, 987 (1990) (''In the absence of significant barriers [to entry], a company probably cannot maintain supracompetitive pricing for any length of time.''); *see also* David S. Evans and Richard Schmalensee, Markets with Two-Sided Platforms, in 1 Issues In Competition Law and Policy 667, 685 (ABA Section of Antitrust Law 2008) (noting that exchange mergers in 2005 and 2006 were approved by competition authorities in part in reliance on planned and likely entry of other firms).

[44] For example, in the National IF Approval Order, the Commission recognized that for some customers, the best bid and offer information from consolidated data feeds may function as a substitute for the NYSE National Integrated Feed product, which contains order by order information. *See* National IF Approval Order, *supra* note 26, at 67397 [release p. 21] (''[I]nformation provided by NYSE National demonstrates that a number of executing broker-dealers do not subscribe to the NYSE National Integrated Feed and executing broker-dealers can otherwise obtain NYSE National best bid and offer information from the consolidated data feeds.'' (internal quotations omitted)).

time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. In the case of NYSE BQT, this product provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, which together account for approximately 20% of consolidated U.S. equities trading volume as of October 2023.[45] Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe's four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and are not intended to be used for order routing or trading decisions.

In addition to competing with proprietary data products from Nasdaq and Cboe, NYSE BQT also competes with the consolidated data feed. However, the Exchange does not claim that NYSE BQT is a substitute for consolidated data with respect to requirements under the Vendor Display Rule, which is Regulation NMS Rule 603(c).

The fact that this filing is proposing to further expand the application of the reduced Per User Access Fee is itself confirmation of the inherently competitive nature of the market for the sale of proprietary market data. For example, in August 2019, Cboe filed proposed rule changes to reduce certain of its Cboe One Feed fees and noted that it attracted two additional customers because of the reduced fees.[46] More recently, Nasdaq filed a proposed rule change to lower the enterprise license fee for broker-dealers distributing Nasdaq Basic to internal Professional subscribers and the enterprise license fee for broker-dealers distributing Nasdaq Last Sale to Professional subscribers.[47]

The Exchange notes that NYSE proprietary market data products are entirely optional. The Exchange is not required to make the proprietary data products that are the subject of this proposed rule change available or to offer any specific pricing alternatives to any customers, nor is any firm or investor required to purchase the Exchange's data products. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfil regulatory obligations,[48] a customer's decision whether to purchase any of the Exchange's proprietary market data feeds is entirely discretionary. Most firms that choose to subscribe to proprietary market data feeds from the Exchange and its affiliates do so for the primary goals of using them to increase their revenues, reduce their expenses, and in some instances compete directly with the Exchange's trading services. Such firms are able to determine for themselves whether or not the products in question or any other similar products are attractively priced. If market data feeds from the Exchange and its affiliates do not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the products.

In addition, in the case of products that are also redistributed through market data vendors, such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. This competitive constraint is precisely what is driving the proposed fee changes here, which are designed to attract new market data vendors, and through them new subscribers, to the NYSE BQT product. Currently, only seven data feed vendors subscribe to NYSE BQT, and each vendor has limited redistribution of NYSE BQT. No other vendors currently subscribe to NYSE BQT and likely will not unless their customers request it, and customers will not elect to pay the proposed fees unless such product can provide value by sufficiently increasing revenues or reducing costs in the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

Because of the availability of substitutes, an exchange that overprices

[46] *See* Securities Exchange Act Release Nos. 86667 (August 14, 2019) (SR–CboeBZX–2019–069); 86670 (August 14, 2019) (SR–CboeBYX–2019–012); 86676 (August 14, 2019) (SR–CboeEDGA–2019–013); and 86678 (August 14, 2019) (SR–CboeEDGX–2019–048) (Notices of filing and Immediate effectiveness of proposed rule change to reduce fees for the Cboe One Feed) (collectively ''Cboe One Fee Filings''). The Cboe One Fee Filings were in effect from August 1, 2019 until September 30, 2019, when the Commission suspended them and instituted proceedings to determine whether to approve or disapprove those proposals. *See, e.g.,* Securities Exchange Act Release No. 87164 (September 30, 2019), 84 FR 53208 (October 4, 2019) (SR–CboeBZX–2019–069). On October 1, 2019, the Cboe equities exchanges refiled the Cboe One Fee Filings on the basis that they had new customers subscribe as a result of the Cboe One Fee Filings, and therefore its fee proposal had increased competition for top-of-book market data. *See* Securities Exchange Act Release Nos. 87312 (October 15, 2019), 84 FR 56235 (October 21, 2019) (SR–CboeBZX–2019–086); 87305 (October 14, 2019), 84 FR 56210 (October 21, 2019) (SR–CboeBYX–2019–015); 87295 (October 11, 2019), 84 FR 55624 (October 17, 2019) (SR–CboeEDGX–2019–059); and 87294 (October 11, 2019), 84 FR 55638 (October 17, 2019) (SR–CboeEDGA–2019–015) (Notices of filing and immediate effectiveness of proposed rule changes to re-file the Small Retail Broker Distribution Program) (''Cboe One Fee Re-Filings''). On November 26, 2019, the Commission suspended the Cboe One Fee Re-Filings and instituted proceedings to determine whether to approve or disapprove those proposals. *See, e.g.,* Securities Exchange Act Release No. 87629 (November 26, 2019), 84 FR 66245 (December 3, 2019) (SR–CboeBZX–2019–086). On November 27, 2019, the Cboe equities exchanges refiled the Cboe One Fee Filings with one revision to the requirements for participating in the Small Retail Broker Distribution Program and additional information about the basis for the proposed fee changes. *See* Securities Exchange Act Release Nos. 87712 (December 10, 2019), 84 FR 68508 (December 16, 2019) (SR–CboeBZX–2019–101); 88713 (December 10, 2019), 84 FR 68530 (December 16, 2019) (SR–CboeBYX–2019–023); 87709 (December 10, 2019), 84 FR 68523 (December 16, 2019) (SR–CboeEDGA–2019–021); and 87711 (December 10, 2019), 84 FR 68501 (December 16, 2019) (SR–Cboe–EDGX–2019–071) (Notices of filing and immediate effectiveness of proposed rule changes to introduce a Small Retail Broker Distribution Program) (''Cboe One Third Fee Re-Filings''). On February 4, 2020, the Cboe equities exchanges withdrew the Cboe One Third Fee Re-Filings and, on the same date, refiled the Cboe One Fee Filings. *See* Securities Exchange Act Release Nos. 88221 (February 14, 2020), 85 FR 9904 (February 20, 2020) (SR–CboeBYX–2020–007); 88218 (February 14, 2020), 85 FR 9827 (February 20, 2020) (SR–CboeBZX–2020–014); 88220 (February 14, 2020), 85 FR 9912 (February 20, 2020) (SR–CboeEDGA–2020–004); and 88219 (February 14, 2020), 85 FR 9872 (February 20, 2020) (SR–CboeEDGX–2020–008) (Notices of filing and immediate effectiveness of proposed rule changes to introduce a Small Retail Broker Distribution Program) (''Cboe One Fourth Fee Re-Filings''). On April 15, 2020, the Cboe equities exchanges withdrew the Cboe One Fee Filings and the Cboe One Fee Re-Filings. Pursuant to the Cboe One Fourth Fee Re-Filings, the Small Retail Broker Distribution Program is currently in effect at the Cboe equities exchanges.

[47] *See* Securities Exchange Act Release No. 90177 (October 14, 2020), 85 FR 66620 (October 20, 2020) (SR–NASDAQ–2020–065) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Basic to Internal Professional Subscribers as Set Forth in the Equity 7 Pricing Schedule, Section 147, and the Enterprise License Fee for Broker-Dealers Distributing Nasdaq Last Sale to Professional Subscribers at Equity 7, Section 139).

[48] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some broker-dealers and ATSs have chosen not to do so.

its market data products stands a high risk that users may substitute another source of market data information for its own. Those competitive pressures imposed by available alternatives are evident in the Exchange's proposed pricing.

In setting the proposed fees, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The existence of numerous alternatives to the Exchange's platform and, more specifically, alternatives to the market data products, including proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if the attendant fees are not justified by the returns that any particular vendor or data recipient would achieve through the purchase.

The proposed expansion of the Per User Access Fee is reasonable, for the following additional reasons.

Overall. This proposed fee change is a result of the competitive environment, as the Exchange seeks to decrease certain of its fees to attract Redistributors that do not currently subscribe to the NYSE BQT market data product. The Exchange is proposing the fee reduction at issue to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, and expanding the options available to firms making data purchasing decisions based on their business needs. The Exchange believes that this is consistent with the principles contained in Regulation NMS to ''promote the wide availability of market data and to allocate revenues to SROs that produce the most useful data for investors.'' [49]

Access Fee. By making the reduced Per User Access Fee available to Redistributors of NYSE OpenBook for external distribution who do not subscribe to any other products listed on the Fee Schedule other than NYSE BBO and NYSE Trades, the Exchange believes that more Redistributors may choose to subscribe to these products, thereby expanding the distribution of this market data for the benefit of investors that participate in the national market system and increasing competition generally. The Exchange also believes that offering the Per User Access Fee to these Redistributors would expand the availability of NYSE BQT to potential data recipients that are interested in subscribing to NYSE BQT but do not have access to a Redistributor who subscribes to the data feeds.

The Exchange determined to make the reduced Per User Access Fee available to these Redistributors because it constitutes a substantial reduction of the current fee, with the intended purpose of increasing use of NYSE BQT by Redistributors. NYSE BQT has been in place since 2014 but has a very small number of subscribers. The Exchange believes that in order to compete with other indicative pricing products such as Nasdaq Basic and Cboe One Feed, it needs to provide a meaningful financial incentive for more Redistributors to choose to subscribe to NYSE BQT so that they can make it available to their customers. Accordingly, the proposed expansion of the Per User Access Fee, together with the proposed expansion of the Per User Access Fee by the Exchange's affiliates, is reasonable because the reductions will make NYSE BQT a more attractive offering for Redistributors that do not currently subscribe to any NYSE market data products other than NYSE OpenBook and make it more competitive with Nasdaq Basic and Cboe One Feed.

Evidence of the competition among exchange groups for these products has previously been demonstrated via fee changes. For example, following the introduction of the Cboe One Feed, Nasdaq responded by reducing its fees for the Nasdaq Basic product.[50] With the proposed changes by the Exchange, NYSE American, and NYSE Arca, the Exchange is similarly seeking to compete by decreasing the total access fees for NYSE BQT from $6,250 to $850 for Redistributors that do not currently subscribe to any NYSE market data products other than NYSE OpenBook and have customers that are interested in subscribing to NYSE BQT but cannot do so until their Redistributor also subscribes. This proposed rule change therefore demonstrates the existence of an effective, competitive market because this proposal resulted from a need to generate innovative approaches in response to competition from other exchanges that offer market data for a specific segment of market participants.

For all of the foregoing reasons, the Exchange believes that the proposed fees are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed expansion of the Per User Access Fee is allocated fairly and equitably among the various categories of users of the Exchange's market data feed, and any differences among categories of users are justified.

Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to expand the application of the Per User Access Fee for Redistributors that would be subscribing to the NYSE BBO, NYSE Trades and NYSE OpenBook data feeds and would use these market data products for external distribution only, which the Exchange hopes will attract new Redistributor subscribers for the NYSE BQT market data product so that the product can be made available to prospective market data recipients. The Exchange is proposing to expand the application of the reduced Per User Access Fee to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing to the NYSE BBO, NYSE Trades and NYSE OpenBook data feeds and would use these market data products for external distribution only is equitable as the reduced fee would apply equally to all data recipients that choose to subscribe to NYSE BBO, NYSE Trades and NYSE OpenBook for external distribution only. Because NYSE BBO, NYSE Trades and NYSE OpenBook are optional products, any data recipient could choose to subscribe to such data feeds to distribute externally and be eligible for the Per User Access Fee. The Exchange does not believe that it is inequitable that the Per User Access Fee would be available only to data recipients that subscribe to

[49] *See* Regulation NMS Adopting Release, 70 FR 37495, at 37503.

[50] *See e.g.,* Securities Exchange Act Release No. 83751 (July 31, 2018), 83 FR 38428 (August 6, 2018) (SR–NASDAQ–2018–058) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower Fees and Administrative Costs for Distributors of Nasdaq Basic, Nasdaq Last Sale, NLS Plus and the Nasdaq Depth-of-Book Products Through a Consolidated Enterprise License). Nasdaq filed the proposed fee change to lower the Enterprise Fee for Nasdaq Basic and other market data products in response to the Enterprise Fee for the Cboe One Feed adopted by Cboe family of exchanges.

NYSE BBO, NYSE Trades and NYSE OpenBook and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange believes that charging a different access fee for a Redistributor that is engaged solely in external distribution of only the NYSE BBO, NYSE Trades and NYSE OpenBook products is equitable because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE market data products are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers.

Overall. As noted above, this proposed fee change is a result of the competitive environment for market data products that provide indicative pricing information across a family of exchanges. To respond to this competitive environment, the Exchange seeks to amend its fees to provide a financial incentive for Redistributors of NYSE OpenBook that do not currently subscribe to any NYSE market data products that decide to subscribe to NYSE BQT, which the Exchange hopes will attract more subscribers for the NYSE BQT market data product. The Exchange is proposing to expand the application of the Per User Access Fee to make the Exchange's fees more competitive for a specific segment of market participants, thereby increasing the availability of the Exchange's data products, expanding the options available to firms making data purchasing decisions based on their business needs, and generally increasing competition.

Access Fee. The Exchange believes that making the Per User Access Fee available to Redistributors that would be subscribing to the NYSE BBO, NYSE Trades and NYSE OpenBook data feeds and would use these market data products for external distribution only is not unfairly discriminatory as the reduced fee would apply equally to all Redistributors that choose to subscribe to NYSE BBO, NYSE Trades and NYSE OpenBook for external distribution only. Because NYSE BBO, NYSE Trades and NYSE OpenBook are optional products, any data recipient could choose to subscribe to such data feeds to distribute externally and be eligible for the Per User Access Fee. The Exchange does not believe that it is unfairly discriminatory that the Per User Access Fee would be available only to data recipients that subscribe to NYSE BBO, NYSE Trades and NYSE OpenBook and only for external distribution. Internal use of data represents a different set of use cases than a Redistributor that is engaged only in external distribution of data. For example, non-display data can be used by data recipients for a wide variety of profit-generating purposes, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms that compete directly with the Exchange for order flow. The data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. While some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce the recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting end users. The Exchange therefore believes that there is a meaningful distinction between internal use and redistribution of market data and that charging a different access fee to a Redistributor that is engaged solely in external distribution of only the NYSE BBO, NYSE Trades and NYSE OpenBook products is not unfairly discriminatory because it would make NYSE BQT available to more data recipients that are customers of such Redistributors and who would not otherwise be able to access NYSE BQT if their Redistributor did not subscribe to and redistribute NYSE BQT.

Moreover, the Exchange does not believe that it is unfairly discriminatory to offer the Per User Access Fee only to those Redistributors that would subscribe to the NYSE BBO, NYSE Trades and NYSE OpenBook data feeds, and only for external distribution. This proposed rule change is designed to provide an incentive for Redistributors that currently subscribe to NYSE OpenBook, but do not subscribe to NYSE BQT, and may have customers that are interested in subscribing to NYSE BQT, to subscribe to the NYSE BBO and NYSE Trades data feeds so that they can make NYSE BQT available to their customers. This fee incentive is not necessary for Redistributors that currently subscribe to the NYSE BBO and NYSE Trades data feeds because such Redistributors could already subscribe to NYSE BQT, but have chosen not to, and a reduction in their existing access fees would likely not result in such Redistributors choosing to subscribe to NYSE BQT.

For all of the foregoing reasons, the Exchange believes that the proposed fees are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Indeed, as demonstrated above, the Exchange believes the proposed rule changes are pro-competitive.

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the proposed fee schedule would apply to all subscribers of NYSE market data products, and customers may not only choose whether to subscribe to the products at all, but also may tailor their subscriptions to include only the products and uses that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition. As shown above, to the extent that particular proposed fees apply to only a subset of subscribers, those distinctions are not unfairly discriminatory and do unfairly burden one set of customers over another.

Intermarket Competition. The Exchange believes that the proposed fees do not impose a burden on competition on other exchanges that is not necessary or appropriate; indeed, the Exchange believes the proposed fee changes would have the effect of increasing competition. As described above, exchanges are platforms for market data and trading. In setting the proposed fees, the Exchange is constrained by the availability of substitute platforms also offering market data products and trading, and low barriers to entry mean new exchange platforms are frequently introduced. The fact that exchanges are platforms ensures that no exchange can make pricing decisions for one side of its platform without considering, and being constrained by, the effects that price will have on the other side of the platform. In setting fees at issue here, the Exchange is constrained by the fact that, if its pricing across the platform is unattractive to customers, customers will have its pick of an increasing number of alternative platforms to use instead of the Exchange. Given this intense competition between platforms, no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Specifically, as described above, NYSE BQT competes head-to-head with the Nasdaq Basic product and the Cboe One Feed. These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of real-time quotes and last-sale prices in all Tape A, B, and C securities. Each product provides subscribers with consolidated top-of-book quotes and trades from multiple U.S. equities markets. NYSE BQT provides top-of-book quotes and trades data from five NYSE-affiliated U.S. equities exchanges, while Cboe One Feed similarly provides top-of-book quotes and trades data from Cboe's four U.S. equities exchanges. NYSE BQT, Nasdaq Basic, and Cboe One Feed are all intended to provide indicative pricing and therefore, are reasonable substitutes for one another. Additionally, market data vendors are also able to offer close substitutes to NYSE BQT. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. These competitive pressures ensure that no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A) [51] of the Act and paragraph (f) of Rule 19b–4 thereunder.[52] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSE–2023–42 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSE–2023–42. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSE–2023–42 and should be submitted on or before December 13, 2023.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[53]

Sherry R. Haywood,

Assistant Secretary.

SURFACE TRANSPORTATION BOARD

[Docket No. FD 35544]

Desertxpress Enterprises, LLC, and Desertxpress HSR Corporation—Construction and Operation Exemption—In Victorville, Cal., and Las Vegas, Nev.

In 2019, DesertXpress Enterprises, LLC, (DesertXpress) [1] filed a petition to reopen this proceeding, seeking modification of a 2011 condition concerning the construction of an approximately 190-mile rail line for high-speed passenger rail service between Victorville, Cal., and Las Vegas, Nev. (the LV Line). That condition authorized construction of a designated alignment. DesertXpress seeks authority

[1] On September 17, 2018, DesertXpress' ownership group entered into an agreement to sell the company to Brightline Holdings LLC (Brightline). *Fortress Inv. Grp. LLC—Continuance in Control—Cent. Me. & Que. Ry.,* FD 36225, slip op. at 1–2 (STB served Oct. 11, 2018). Brightline's acquisition of DesertXpress was consummated on March 4, 2019. (Pet. to Reopen 4.)

for modifications to the previously approved alignment.

Environmental review of the modified route had been ongoing and was recently completed. Specifically, the Board's Office of Environmental Analysis (OEA) has worked with the Federal Railroad Administration (FRA), the lead agency on the environmental and historic review for this project under the National Environmental Policy Act (NEPA) and related environmental laws, including Section 106 of the National Historic Preservation Act (NHPA). As part of this process, OEA has reviewed a 2020 reevaluation by FRA (FRA 2020 Reevaluation) of the modified alignment, as well as a subsequent reevaluation by FRA (FRA 2023 Reevaluation) considering further route modifications proposed by DesertXpress in 2022. OEA concludes that FRA adequately assessed the potential environmental and historic impacts associated with the project modifications and concurs with FRA's determination that a Supplemental Environmental Impact Statement (EIS) is not necessary. OEA also recommends that the Board impose the revised mitigation measures in Appendix D of the FRA 2023 Reevaluation. Historic review of the project modifications had also been ongoing and was completed this year. A Programmatic Agreement (PA) setting out the final terms for compliance with Section 106 was executed on August 15, 2023.

As discussed below, the Board will reopen this proceeding and grant DesertXpress' petition for exemption seeking authority for the modified alignment. The Board will also adopt FRA's 2020 and 2023 Reevaluations and impose the environmental mitigation measures listed in Appendix D of the FRA 2023 Reevaluation.

Background

On July 28, 2011, DesertXpress and its wholly owned subsidiary, DesertXpress HSR Corporation (collectively, DXE), filed a petition under 49 U.S.C. 10502 for an exemption from the prior approval requirements of 49 U.S.C. 10901 to construct and operate the LV Line. FRA, with OEA's participation as a cooperating agency, conducted an environmental review of the proposed project by preparing an EIS.[2] Following an examination of the entire record on both the transportation merits and potential environmental impacts, the Board granted the petition for a construction and operation exemption, subject to environmental conditions and the condition that DXE construct the 2011 Selected Alternative. *See DesertXpress Enters.—Constr. & Operation Exemption—in Victorville, Cal., & Las Vegas, Nev.* (*October 2011 Decision*), FD 35544, slip op. at 8 (STB served Oct. 25, 2011).[3]

On March 27, 2019, DesertXpress filed a petition to reopen this proceeding, seeking modification of the condition authorizing construction of the 2011 Selected Alternative to permit the LV Line to be constructed along a modified route, referred to as the ''I–15 median'' alignment. (Pet. to Reopen 1, 5.) DesertXpress stated that it had determined that it would be more efficient to construct the LV Line primarily in the median between the northbound and southbound lanes of the I–15 freeway and to utilize a single-track configuration with passing sidings. (*Id.* at 5.)

In a notice served on June 24, 2019, the Director of the Board's Office of Proceedings (Director) explained that FRA had agreed to reevaluate the environmental analysis relied upon by the Board in the *October 2011 Decision* in light of the alignment changes proposed by DesertXpress and that OEA would participate in that process as a cooperating agency. *See DesertXpress Enters.—Constr. & Operation Exemption—in Victorville, Cal., & Las Vegas, Nev.,* FD 35544, slip op. at 2 (STB served June 24, 2019). The Director added that the petition to reopen would be addressed after the FRA 2020 Reevaluation was completed. *DesertXpress Enters.—Constr. & Operation Exemption—in Victorville, Cal., & Las Vegas, Nev.,* FD 35544, slip op. at 2 (STB served June 24, 2019).

On September 15, 2020, DesertXpress filed a letter stating that FRA had completed the FRA 2020 Reevaluation[4] and concluded that a Supplemental EIS was not required for the proposed modifications to the alignment. (DesertXpress Letter 2, Sept. 15, 2020.) DesertXpress also asserted that ''[t]he Board need not revisit the [*October 2011 Decision's*] findings with respect to the transportation merits of the Line,'' as ''[n]one of those findings would be affected by substituting the modified I–15 median alignment for the side-running alignment previously designated by FRA.'' (DesertXpress Letter 2 n.4, Sept. 15, 2020.) Accordingly, DesertXpress asked the Board to grant its petition to reopen the *October 2011 Decision* to revise the routing condition to authorize it to build the modified alignment and project design specified in the FRA 2020 Reevaluation. (DesertXpress Letter 3, Sept. 5, 2020.)[5]

OEA then prepared an Environmental Memorandum (OEA 2020 Memo) concurring with the conclusions reached in the FRA 2020 Reevaluation. The Board also recommended that the Board consider FRA's 2020 Reevaluation, along with the EIS, when determining whether to authorize the LV Line as modified, and that it impose revised mitigation measures recommended by FRA in the FRA 2020 Reevaluation. OEA 2020 Memo 2. OEA further explained that FRA was working with appropriate consulting parties to complete the historic review under Section 106. *Id.*

The Board provided an opportunity for the public to comment in a decision served on December 3, 2020. *See DesertXpress Enters.—Constr. & Operation Exemption—in Victorville, Cal., & Las Vegas, Nev.,* FD 35544 (STB served Dec. 3, 2020). The Board did not receive any comments. In that decision, the Board also noted that review of historic and cultural resources was ongoing pursuant to Section 106 and that it could not issue a final decision modifying the routing condition, if appropriate, until that process was complete.

In 2022, DesertXpress proposed additional modifications, which were developed through the final design phase for the LV Line. DesertXpress' further modifications include, among other things, moving ''additional miles of track along the Las Vegas-Victorville route (as well as the Victor Valley station building) into the median between the northbound and southbound lanes'' of the I–15 freeway, relocating certain facilities, and adding temporary construction areas. (DesertXpress Letter 2, Sept. 19, 2023.) It asks the Board to modify the routing condition again to reflect those modifications. (*Id.* at 3.) After evaluating these additional modifications, FRA

[2] On July 8, 2011, FRA published its Record of Decision (ROD) approving the environmentally preferred alternative for the route, facilities, and technology (2011 Selected Alternative), subject to mitigation measures to avoid or minimize potential adverse environmental impacts. (*See* Pet. for Exemption, Ex. D.)

[3] The 2011 Selected Alternative contemplated a double-track rail line to be located almost entirely on the north/west side of the I–15 freeway travel lanes. (DesertXpress Letter 1, Sept. 15, 2020; Pet. for Exemption, Ex. D, 34–35, 63–64.)

[4] The FRA 2020 Reevaluation is available on FRA's website at *https://railroads.dot.gov/rail-network-development/environment/environmental-reviews/brightline-west-las-vegas-victor-valley.*

[5] In addition to locating the LV Line primarily within the I–15 freeway median, the modified alignment would also relocate the LV Line's southern terminus in Victor Valley from the City of Victorville to the Town of Apple Valley. (FRA 2020 Reevaluation, Summary 1 n1.)

issued the 2023 FRA Reevaluation,[6] concluding that a Supplemental EIS is not necessary and updating the mitigation measures. OEA then prepared the OEA 2023 Environmental Memorandum (OEA 2023 Memo) (appended to this decision) concurring with FRA's conclusions and recommending that the Board consider FRA's 2023 Reevaluation, along with the 2020 Reevaluation and the EIS, in deciding whether to authorize the LV Line as modified, and that it impose the updated mitigation measures contained in Appendix D of the FRA 2023 Reevaluation. OEA 2023 Memo 5. As noted above, a PA was executed on August 15, 2023, completing the Section 106 historic review process for this proceeding.

Discussion and Conclusions

Reopening the Proceeding

A party may seek to reopen a Board proceeding by submitting a petition that (1) presents new evidence or substantially changed circumstances that would materially affect the case or (2) demonstrates material error in a prior decision. 49 U.S.C. 1322(c); 49 CFR 1115.4. ''To warrant reopening, the new evidence must be newly available, and the new evidence or substantially changed circumstances must materially affect the prior decision.'' *Port of Moses Lake—Constr. Exemption—Moses Lake, Wash.,* FD 34936, slip op. at 2 (STB served Jan. 28, 2019) citing *Riffin—Pet. for Declaratory Ord.,* FD 34997 et al., slip op. at 6 (STB served, Oct. 29, 2012).

Here, DesertXpress has proposed to construct the LV Line along a modified alignment somewhat different from that which the Board authorized in the *October 2011 Decision.* The modifications led to the 2020 and 2023 FRA Reevaluations and the updated mitigation measures in Appendix D of the 2023 FRA Reevaluation. These developments constitute new evidence and changed circumstances that warrant reopening the *October 2011 Decision* to consider the modified alignment and revised mitigation.

Rail Transportation Analysis

The construction of new railroad lines requires prior Board authorization, through either a certificate under section 10901 or, as requested here, an exemption under section 10502 from the prior approval requirements of section 10901. Section 10901(c) directs the Board to grant authority for rail line construction proposals unless it finds the proposal ''inconsistent with the public convenience and necessity.'' *See Alaska R.R.—Constr. & Operation Exemption—A Rail Line Extension to Port MacKenzie, Alaska,* FD 35095, slip op. at 5 (STB served Nov. 21, 2011), *aff'd sub nom. Alaska Survival* v. *STB,* 705 F.3d 1073 (9th Cir. 2013). Under section 10502(a), the Board shall, to the maximum extent permissible, exempt a proposed rail line construction from the prior approval requirements of section 10901 when it finds that: (1) those procedures are not necessary to carry out the rail transportation policy of 49 U.S.C. 10101 and (2) either (a) the proposal is of limited scope or (b) the full application procedures are not needed to protect shippers from an abuse of market power.

In the *October 2011 Decision,* the Board concluded that DesertXpress met the standards of section 10502 for an exemption to construct and operate the LV Line. The Board found that the LV Line would provide additional transportation options and alleviate both automobile congestion on the I–15 freeway as well as constraints on the expansion of air travel in Southern California. *See Oct. 2011 Decision,* FD 35544, slip op. at 3. The Board further found that the LV Line would reduce air pollution and overall fuel consumption and noted the expected multi-billion-dollar beneficial impact on the economies of Nevada and California. *See id.* at 2 n.4 & 3 (referencing forecasts of LV Line ridership and automobile diversions, jobs, and economic impacts). The Board concluded that the requested exemption would reduce the need for federal regulation (49 U.S.C. 10101(2)), ensure the development of a sound rail transportation system with effective competition to meet the needs of the shipping public (49 U.S.C. 10101(4)), foster sound economic conditions in transportation (49 U.S.C. 10101(5)), reduce regulatory barriers to entry (49 U.S.C. 10101(7)), and promote energy conservation and reduce congestion consistent with 49 U.S.C. 10101(14). *See Oct. 2011 Decision,* FD 35544, slip op. at 3–4. The Board also found that other aspects of the rail transportation policy would not be affected. Finally, the Board found that regulation of the proposed construction is not necessary to protect shippers from the abuse of market power. *Id.*

No party challenged in this proceeding the Board's 2011 conclusions on the transportation merits of the proposal,[7] and nothing in the record developed since then, including the environmental analysis discussed in the next section, calls those conclusions into question. The LV Line, with a modified median alignment, would reduce highway congestion by diverting vehicle traffic from the I–15 freeway to a faster and more efficient rail option. As previously noted, diversions would also benefit the environment, in part due to the far lower emissions associated with rail. (*See also* Titus Letter 2, July 27, 2023 (''Estimates show that over 700 million vehicle miles traveled will be removed annually from the highway which will eliminate more than 400,000 tons of CO_2 emissions from the atmosphere.'').) And, as previously noted, construction of the LV Line is anticipated to generate billions of dollars in economic activity and tax revenue, and lead to the creation of thousands of jobs. (*See also id.* at 1–2.) Simply put, the benefits to the traveling public and, ultimately, the environment of adding a high-speed passenger rail option between Southern California and Las Vegas are considerable, and the project modifications do not change this conclusion. Moreover, the merits are enhanced by the Victor Valley-to-Rancho Cucamonga extension (RC Line), which would connect passengers on the LV Line to the Southern California commuter rail network.[8] The Board therefore reaffirms its 2011 conclusions regarding the transportation merits of the LV Line.

Environmental Analysis

NEPA requires that the Board examine the environmental effects of proposed federal actions and inform the public concerning those effects. *Balt. Gas & Elec. Co.* v. *Nat. Res. Def. Council,* 462 U.S. 87, 97 (1983). Under NEPA, the Board must consider potential beneficial and adverse environmental effects in reaching its decision. The two-fold purpose of NEPA is to ensure that the agency's decision-making process includes environmental considerations and to inform the public about those considerations. *Citizens Against Rails-to-Trails* v. *STB,* 267 F.3d 1144, 1151 (D.C. Cir. 2001). While NEPA prescribes the process that must

[6] The FRA 2023 Reevaluation is also available on FRA's website at *https://railroads.dot.gov/rail-network-development/environment/environmental-reviews/brightline-west-las-vegas-victor-valley.*

[7] See note 10, *infra.*

[8] In Docket No. FD 36488, DesertXpress filed a petition for exemption to construct and operate the RC Line, an approximately 50-mile high-speed passenger rail line, between the Victor Valley and Rancho Cucamonga in Southern California. The RC Line would connect with the southern terminal of the LV Line at the Victor Valley. The Board instituted a proceeding in Docket No. FD 36488 on July 12, 2021. *DesertXpress Enters.—Constr. & Operation Exemption—Passenger Rail Line Between Victor Valley & Rancho Cucamonga, Cal.,* FD 36488 (STB served July 12, 2021). The Board issued a decision today authorizing DesertXpress to construct and operate the RC Line.

be followed, it does not mandate a particular result. *Robertson* v. *Methow Valley Citizens Council,* 490 U.S. 332, 350–51 (1989). Thus, once the adverse environmental effects of a proposed action have been adequately identified and evaluated, the Board may conclude that ''other values outweigh the environmental costs.'' *Id.*

The FRA 2020 Reevaluation reassessed the project modifications alongside the proposed action described in the EIS and ROD. OEA 2020 Memo 3. FRA also updated and revised certain mitigation measures developed in the EIS to address changes in the affected environment and project changes since publication of the EIS. OEA 2020 Memo 3. FRA determined that, with mitigation, the project modifications would result in similar impacts to those evaluated in the EIS and concluded that the project modifications would reduce certain environmental impacts of the LV Line. OEA 2020 Memo 3. For example, the modified alignment assessed in the FRA 2020 Reevaluation, which would be single track and primarily in an existing median, would reduce the project's impact on land use, visual resources, air quality and climate change, and biological resources. *Id.* at 5, 7, 10, 12.

As part of FRA's review, it also identified regulatory changes that had taken effect since the issuance of the EIS and analyzed the affected environment to ensure that the conclusions of the EIS remained valid. OEA 2020 Memo 3. Based on the analysis and findings in the FRA 2020 Reevaluation, FRA concluded that the project modifications, with the implementation of the proposed mitigation, did not constitute changes to the proposed action that would result in significant environmental impacts that were not evaluated in the EIS and that a Supplemental EIS was not necessary. *Id.*

OEA concluded that FRA had adequately assessed the potential environmental impacts associated with the project modifications and concurred with FRA's determination that a Supplemental EIS was not necessary. OEA 2020 Memo 13. Accordingly, OEA recommended that the Board consider the FRA 2020 Reevaluation, along with the EIS, in deciding whether to authorize the project as modified. OEA 2020 Memo 13–14. OEA also recommended that the Board impose the revised mitigation measures recommended in the FRA 2020 Reevaluation. OEA 2020 Memo 14. As noted above, the Board provided an opportunity for public comment, and no comments were filed.[9]

Likewise, in the FRA 2023 Reevaluation, FRA determined that (1) the additional modifications proposed by DesertXpress in 2022, with the imposition of final proposed mitigation, would not result in substantial changes in the evaluation of impacts disclosed in the EIS or the FRA 2020 Reevaluation and (2) no Supplemental EIS is required. OEA 2023 Memo 4. FRA also determined that the modifications would generally avoid or minimize the overall effects of the project. *Id.* For example, FRA concluded that placement of additional components of the rail alignment and a greater portion of ancillary facilities within the I–15 freeway right-of-way would reduce biological resource impacts compared to the EIS or the FRA 2020 Reevaluation. OEA 2023 Memo 4 n.7. Similarly, constructing along the modified route would result in fewer air emissions compared to the route examined in the EIS because there would be no tunneling and less of a need to elevate the alignment. *Id.*

OEA further concluded that the FRA 2023 Reevaluation adequately assessed the potential environmental impacts associated with DesertXpress' additional modifications and concurred with FRA's determination that a Supplemental EIS is not necessary. OEA 2023 Memo 5. Accordingly, OEA recommends that the Board consider the FRA 2023 Reevaluation, along with the FRA 2020 Reevaluation and the EIS, when it decides whether to authorize the LV Line as modified. OEA 2023 Memo 5. OEA also recommends that, in any decision granting an exemption for construction and operation of the LV Line modified as described in the FRA 2020 and 2023 Reevaluations, the Board should impose all the mitigation measures included in Appendix D of the FRA 2023 Reevaluation. OEA 2023 Memo 5.

NHPA

Section 106 of NHPA requires federal agencies to ''take into account the effect of'' their licensing decisions (in this case, whether to grant DesertXpress' request to modify the LV Line alignment) on properties included in, or eligible for inclusion in, the National Register of Historic Places and, prior to the approval of an undertaking, to afford ACHP a reasonable opportunity to comment. *See* 54 U.S.C. 306108. Consultation with the SHPO is also required. *See* 36 CFR 800.2(a)(4) & (c)(1), 800.3(c)(3).

FRA determined that the project modifications would not result in substantial changes to the evaluation of cultural resource impacts from those identified in the EIS. OEA 2020 Memo 8. However, FRA concluded that the modified project would encounter new archaeological resources and historic built environment resources that were not previously evaluated. OEA 2020 Memo 8. In accordance with 36 CFR part 800, FRA moved the Section 106 process forward in consultation with the appropriate parties, including ACHP, the California and Nevada SHPOs, and federally recognized Native American tribes with an interest in the project area. OEA 2020 Memo 8. In response to requests from several consulting parties after FRA completed the FRA 2020 Reevaluation, FRA decided to resolve any adverse effects to historic archeological and built environment resources through the execution of a new PA. OEA 2020 Memo 8–9.

As noted in the PA executed on August 15, 2023, FRA identified 197 historic properties, assessed the adverse effects to those properties, and prepared a Historic Properties Treatment Plan that provides detailed methodology for implementing mitigation prescribed by the agreement and resolves adverse effects to all known historic properties. (2023 PA 6, 20.)[10] OEA concludes, and the Board agrees, that execution of the PA satisfies the requirements of Section

[9] In response to DesertXpress' petition for exemption to construct and operate the RC Line, see note 9, *supra,* the San Manuel Band of Mission Indians (San Manuel Band, now the Yuhaaviatam of San Manuel Nation) and Morongo Band of Mission Indians (Morongo Band), filed comments challenging the sufficiency of FRA's historic review process with respect to the modified alignment of the LV Line. (San Manuel Band Comments 1–2, FD 36488, May 5, 2021; Morongo Band Comments 1–2, FD 36488, June 4, 2021). Since those comments were filed, a new PA has been executed between (among others) FRA, STB, the California State Historic Preservation Office (SHPO), the Nevada SHPO, and the Advisory Council on Historic Preservation (ACHP). *See* note 11, *infra.* Execution of the PA satisfies the requirements of Section 106 for the modified route of the LV Line.

Also in the docket for the RC Line, the National Parks Conservation Association (NPCA) filed a comment suggesting that the LV Line was not adequately assessed under NEPA. (NPCA Comments 1, FD 36488 June 8, 2021.) NPCA further argued that the LV Line should have been considered simultaneously with the RC Line because, according to NPCA, ''there is no viable project'' absent the RC Line. (*Id.*) The Board disagrees. As explained above, both the LV Line's and RC Line's environmental and historic impacts have been thoroughly evaluated under NEPA and NHPA. And, as the Board found in 2011, the LV Line has considerable merit—including ridership demand—even without the RC Line. *See Oct. 2011 Decision,* FD 35544, slip op. at 2–3.

[10] The PA is available on FRA's website at *https://railroads.dot.gov/rail-network-development/environment/environmental-reviews/brightline-west-las-vegas-victor-valley.*

106 for the modified route. OEA 2023 Memo 4.

The Board's Analysis of the Environmental Issues

The Board will adopt the analyses and conclusions in the FRA 2020 and 2023 Reevaluations. The Board will also impose the final recommended mitigation measures listed in Appendix D of the FRA 2023 Reevaluation, which would lessen impacts from constructing and operating the modified alignment. The Board is satisfied that the FRA 2020 and 2023 Reevaluations took the requisite ''hard look'' at the potential environmental and historic impacts associated with modifications to the LV Line and properly determined that, with the mitigation in Appendix D of FRA's 2023 Reevaluation, the proposed modifications would not have potentially significant environmental impacts, and that preparation of a Supplemental EIS is unnecessary.

Conclusions

The Board already authorized construction and operation of the LV Line by exemption in 2011, and the modified alignment would lessen or avoid a number of potential environmental impacts by placing much of the routing in the I–15 median. As noted above, the merits of a high-speed rail passenger line connecting Las Vegas and Southern California are substantial, and are strengthened by the RC Line and its connection to the greater Southern California commuter rail network. Moreover, providing a rail alternative along the I–15 corridor would not only create a transportation benefit for passengers; it would also create environmental benefits in replacing highway vehicle traffic, and its associated emissions, with more environmentally-friendly rail travel. Therefore, after considering the transportation merits, the environmental issues, and the entire record, the Board will grant the petition for exemption and authorize the modified alignment of the LV Line by modifying the 2011 routing condition, subject to compliance with the mitigation measures listed in Appendix D of the FRA 2023 Reevaluation.

This action, as conditioned, will not significantly impact the quality of the human environment or the conservation of energy resources.

It is ordered:

1. DesertXpress' petition to reopen and modify the 2011 routing condition is granted.

2. Under 49 U.S.C. 10502, the Board exempts construction of the LV Line from the prior approval requirements of 4 U.S.C. 10901, with the modifications evaluated in the FRA 2020 and 2023 Reevaluations.

3. The Board adopts the environmental mitigation measures set forth in Appendix D of the FRA 2023 Reevaluation and imposes them as conditions to the exemption granted here.

4. Notice will be published in the **Federal Register**.

5. Petitions for reconsideration must be filed by December 6, 2023.

6. This decision is effective December 16, 2023.

Decided: November 15, 2023.

By the Board, Board Members Fuchs, Hedlund, Oberman, Primus, and Schultz.

Jeffrey Herzig,

Clearance Clerk.

Office of Environmental Analysis

MEMORANDUM

TO: Martin Oberman, Chairman; Karen Hedlund, Vice Chairman; Patrick Fuchs, Member; Michelle Schultz, Member; Robert Primus, Member

Cc: Mai Dinh, Director, Office of Proceedings

FROM: Danielle Gosselin, Director, Office of Environmental Analysis

DATE: October 30, 2023

SUBJECT: Docket No. FD 35544, DesertXpress Enterprises, LLC and DesertXpress HSR Corporation—Construction and Operation Exemption—in Victorville, Cal. and Las Vegas, Nev.: Environmental Memorandum

This memorandum summarizes a second reevaluation undertaken by the Federal Railroad Administration (FRA) in 2023 (2023 Reevaluation) of additional proposed project modifications to DesertXpress Enterprises, LLC's, d/b/a Brightline West (the Applicant), construction and operation of a high-speed passenger rail line between Southern California and Las Vegas, Nevada. This memorandum also presents the Office of Environmental Analysis' (OEA) final recommendations to the Board based on FRA's 2023 Reevaluation, including a recommendation that the Board impose the revised environmental mitigation in FRA's 2023 Reevaluation in any decision authorizing the project, as modified.

Introduction

On July 28, 2011, the Applicant submitted a petition for exemption under 49 U.S.C. 10502 for the construction and operation of an approximately 190-mile high-speed passenger rail line between the Victor Valley, in Southern California, and Las Vegas, Nevada (Line). The purpose of the Line was to create an alternative transportation option (in addition to auto and air) from Southern California to Las Vegas. The Applicant plans to provide passenger rail service on the Line.

The Board, through OEA, participated in the environmental review as a cooperating agency under the lead of FRA.[1] A number of other agencies, including the Bureau of Land Management (BLM), the Federal Highway Administration, the National Park Service, the California Department of Transportation (Caltrans), and the Nevada Department of Transportation (NDOT), participated in the environmental review process as cooperating agencies or consulting parties. FRA, with the assistance of the cooperating agencies, prepared a Draft Environmental Impact Statement (Draft EIS) in March 2009, a Supplemental Draft EIS in August 2010, and a Final Environmental Impact Statement (Final EIS) in March 2011.[2]

The EIS identified a preferred alternative and developed environmental mitigation conditions to avoid or minimize potential environmental impacts. Following the issuance of a Record of Decision (ROD) by FRA, the Board, on October 20, 2011, granted the Applicant's petition for exemption, subject to environmental conditions and the condition that the Applicant build the route designated in the EIS and ROD as environmentally preferable (2011 Decision).[3] Despite having the requisite agency approvals to construct and operate the Line, construction did not immediately proceed.

In 2018, the Applicant proposed design modifications to the Line, including modifying the rail alignment between the Victor Valley and Las Vegas so that it was located primarily within the I–15 freeway median with portions following the east side of the I–15 freeway; relocating the Southern California terminus from Victorville to the Town of Apple Valley (both located in the Victor Valley); collocating an operations maintenance storage facility with the passenger station in Apple Valley; and constructing certain ancillary facilities not previously evaluated in the EIS.

FRA prepared a written reevaluation[4] of the design modifications (2020

[1] FRA was the lead agency in the environmental review because of its jurisdiction and expertise related to high-speed train operations and railroad safety. *See DesertXpress Enters., LLC & DesertXpress HSR Corp.—Constr. & Operation Exemption—in Victorville, Cal. & Las Vegas, Nev.,* Docket No. FD 35544, slip op. at 4 n.6 (STB served Oct. 25, 2011).

[2] The DEIS, Supplemental DEIS, and FEIS are referred to collectively as the EIS.

[3] See *2011 Decision* at 1, 8.

[4] FRA's Procedures for Considering Environmental Impacts (64 FR 28545, May 26, 1999), provide that if major steps toward implementation of the proposed action have not occurred within the time frame, if any, set forth in the Final EIS, or within five years from the date of approval of the Final EIS, a written reevaluation of the adequacy, accuracy, and validity of the Final EIS is prepared, to determine if a new or supplemental EIS is necessary.

Reevaluation), in which it determined that the project modifications would reduce certain environmental impacts; updated and revised some mitigation measures developed in the EIS to address changes in the affected environment and project modifications since publication of the EIS; and concluded that a Supplemental EIS was not required and that the proposed project modifications are consistent with the proposed action described in FRA's EIS and ROD. The Board, through OEA, participated as a cooperating agency in FRA's reevaluation process.

On March 27, 2019, the Applicant filed a petition with the Board to reopen this proceeding, seeking modification to the condition in the *2011 Decision* authorizing construction of the Line along the previously selected preferred alternative route due to the Applicant's proposed design modifications and other changes. OEA prepared an Environmental Memorandum to the Board agreeing with FRA's conclusions in the 2020 Reevaluation that no Supplemental EIS was required, and recommending that, in any decision approving the proposed project, the Board impose the revised mitigation measures in FRA's 2020 Reevaluation. The Board then issued a decision on December 3, 2020 attaching the OEA memorandum, seeking public comment, and noting that the review of historic and cultural resources pursuant to Section 106 of the National Historic Preservation Act was still ongoing and that, therefore, the Board could not issue a final decision addressing the modified route and other changes until that process was complete. No comments were received.

FRA'S 2023 Reevaluation

In 2022, the Applicant proposed additional modifications, which were developed through the final design phase for the Line. These modifications included relocating the rail alignment on certain portions of the Line from the east side of the I–15 freeway to the median; revising the design of the Apple Valley station to include the passenger boarding and alighting platforms in the median of the I–15 freeway; raising and moving east a portion of the existing I–15 northbound lanes to provide the necessary footprint and access for these passenger platforms; adding or modifying certain ancillary features not previously evaluated in the EIS or 2020 Reevaluation, such as highway ramps, state highway patrol emergency crossovers, and culverts; and locating a vehicle maintenance facility and connecting freight track corridor at a site that had not previously been evaluated in Sloan, Nevada (Sloan VMF). A detailed table from the 2023 Reevaluation describing all of the additional modifications is attached to this memorandum.

FRA evaluated the additional modifications and issued a memorandum on September 15, 2023, concluding that a Supplemental EIS is not necessary. The 2023 Reevaluation focused on the modifications to the project footprint and facilities proposed since the issuance of FRA's 2020 Reevaluation, and also reflected changes since then to the affected environment, regulatory setting, and project effects. FRA reassessed each of the environmental resource areas analyzed in the EIS and 2020 Reevaluation: land use, community, and environmental justice communities; growth; farmlands and grazing lands; utilities/emergency services; traffic and transportation; visual resources; cultural resources; hydrology and water quality; geology and soils; paleontological resources; hazardous materials; air quality and global climate change; noise and vibration; energy; biological resources; [5] and cumulative impacts.[6] FRA determined that the additional modifications, with the imposition of final proposed mitigation (including, in most cases, mitigation that had already been proposed in the EIS and 2020 Reevaluation), would not result in substantial changes in the evaluation of impacts disclosed in the EIS or 2020 Reevaluation, that the modifications would generally avoid or minimize the overall effects of the project, and that no Supplemental EIS is required.[7]

Mitigation Measures

FRA has updated the mitigation measures included in the 2011 ROD and the 2020 Reevaluation to account for the additional project modifications, and principally to mitigate impacts on the desert tortoise and the desert tortoise habitat from the Sloan VMF footprint. The mitigation measures are described in detail in Attachment D of the 2023 Reevaluation.[8] The 2023 Reevaluation concludes that the mitigation measures developed in the EIS and the 2020 Reevaluation, as updated in the 2023 Reevaluation, would avoid or minimize potential environmental impacts and that no Supplemental EIS is required.

Section 106 Process

A Programmatic Agreement (PA) to govern the approach for ongoing compliance with Section 106 and implementation of the resolution of adverse effects was executed on August 15, 2023. This completed the Section 106 process for the proceeding.

OEA'S Final Environmental Recommendations

After participating in the reevaluation process and reviewing FRA's 2023 Reevaluation, OEA concludes that the 2023 Reevaluation adequately assesses the potential environmental impacts associated with the Applicant's additional modifications and concurs with FRA's determination that a Supplemental EIS is not necessary. Accordingly, OEA recommends that the Board consider FRA's 2023 Reevaluation, along with the 2020 Reevaluation and the EIS, when it decides whether to authorize the Line as modified. Mitigation measures imposed in FRA's ROD and the Board's prior decision, and refined in the 2020 Revaluation, were further refined in the 2023 Reevaluation. Therefore, OEA recommends that, in any decision approving the Line as modified in the 2020 and 2023 Reevaluations, the Board impose all the mitigation measures included in Appendix D of the 2023 Reevaluation.

Attachment

[5] FRA reinitiated consultation with the U.S. Fish and Wildlife Service (USFWS), under Section 7 of the Endangered Species Act for the additional modifications. USFWS recommended updates to the mitigation measures described in the project's Biological Opinion prepared in 2011, specifically mitigation for impacts from the Sloan VMF on the desert tortoise and desert tortoise habitat. FRA incorporated the revised mitigation measures into the 2023 Reevaluation. On September 1, 2023, USFWS concluded re-initiation of Section 7 consultation and determined that formal consultation was not required for the Line.

[6] With the exception of biological resources and cultural resources, FRA performed a desktop/qualitative evaluation for the above-listed resources as changes to the affected environment for those resources would be unlikely to occur or were easily assessed using publicly available resources. FRA performed more detailed evaluations to assess impacts to cultural resources and biological resources, which it documented in technical reports/memoranda. To facilitate review by BLM, FRA included a separate analysis for the Sloan VMF in the 2023 Reevaluation because the Sloan VMF has been proposed on land owned and managed by BLM. FRA's determination as to whether a Supplemental EIS is required considered all project modifications, including the Sloan VMF.

[7] For example, FRA concluded that placement of additional components of the rail alignment and a greater portion of ancillary facilities within the I–15 freeway right-of-way would reduce biological resource impacts compared to the EIS or the FRA 2020 Reevaluation. (FRA 2023 Reevaluation 51–54.) Similarly, constructing along the modified route would result in fewer air emissions compared to the route examined in the EIS because there would be no tunneling and less of a need to elevate the alignment. (*Id.* at 45.)

[8] The 2023 Reevaluation, including its attachments, is available on FRA's website at *https://railroads.dot.gov/rail-network-development/environment/environmental-reviews/brightline-west-las-vegas-victor-valley*.

PROJECT MODIFICATIONS (SINCE THE SEPTEMBER 2020 REEVALUATION) [9]

Project feature	Description of modification
Segment 1 Alignment (Apple Valley to Lenwood)	The Project modifications involve relocating the rail alignment between the Victor Valley Station and Sidewinder Road from east side of the I–15 freeway to the median. As such, the entirety of the Segment 1 rail alignment is now within the I–15 freeway median, which would result in reduced impacts and increase the efficiency of train operations. This design change is also favorable with Caltrans and FHWA as it would improve constructability of potential future I–15 freeway improvements in either the northbound or southbound directions. Additionally, the Segment 1 rail alignment would be extended less than one mile south of the Victor Valley Station to access a maintenance of way track that will be constructed to move equipment from the median rail mainline to the maintenance of way facility. Construction of a median-running rail alignment in this area, south of the Dale Evans Parkway intersection, would require realignment of the existing I–15 northbound travel lanes approximately 50 feet east, and reconstruction of the Dale Evans Parkway interchange including the overpass.[10] This is discussed further under the Victor Valley Station description below. Additionally, the I–15 northbound travel lanes would be elevated approximately 25 feet south of the interchange to allow the maintenance of way track to pass from the median to the maintenance of way facility. All roadway work would occur within existing Caltrans/NDOT ROW.
Segment 5 Alignment (PRIMM to Sloan Road)	Project modifications would relocate the rail alignment, between Primm and north of Goodsprings Road near Jean, from the east side of the I–15 freeway to the freeway median. As such, the entirety of the Segment 5 rail alignment is now located within the I–15 freeway median, which would result in reduced impacts, increase the safety and efficiency of train operations, and improve constructability for future I–15 widening in this portion of the alignment. Additionally, the previously considered Braid Structures near Primm and the Union Pacific Railroad (UPRR) crossing are no longer needed and have been removed.
Victor Valley Station (Previously Referred to as Dale Evans Station)	The Project design evaluated in September 2020 considered collocating an operations, maintenance, and storage facility (OMSF) with the Victor Valley Station, with a permanent footprint of approximately 300 acres. As discussed below, the current Project modifications include a relocation of the Vehicle Maintenance Facility (VMF) to a site on the west side of I–15 in Sloan. The Victor Valley Station permanent footprint would remain unchanged. As noted above, under Segment 1, the Project Modifications include relocating the rail alignment into the median of the I–15 freeway. To accommodate this new rail alignment, the Victor Valley Station layout has been revised to include the passenger boarding and alighting platforms in the median of the I–15 freeway. In order to provide the necessary footprint and access for these platforms, the existing I–15 northbound lanes would be raised and moved east within the Caltrans ROW south of the Dale Evans Parkway interchange. Passengers would access station platforms using a walkway underneath the relocated I–15 freeway northbound lanes.
Highway Ramp Realignments/Modifications	The Project design evaluated in September 2020 included realignment of portions of approximately 17 existing freeway on and off- ramps to accommodate the rail line within the I–15 freeway ROW. The current Project modifications include extending these on and off ramp realignments and ramp modifications and changing the location where these ramp realignment/reconstructions transition to the existing roadway/pavement. There are locations where these proposed freeway ramp modifications occur (from south to north): • The I–15 southbound ramps at Dale Evans Parkway. • The I–15 northbound ramps at Main Street in Barstow. • The I–15 northbound ramps and southbound ramps at East Primm Boulevard. • The I–15 southbound ramps at Goodsprings Road. • The I–15 southbound ramps at Sloan Road. These modifications would be located primarily on previously evaluated Project footprint within existing Caltrans/NDOT, and local ROW along the I–15 freeway. These modifications are the result of coordination with Caltrans and NDOT on final design details, in order to update the modified median-running alignment to adhere to current safety design standards.

PROJECT MODIFICATIONS (SINCE THE SEPTEMBER 2020 REEVALUATION) [9]—Continued

Project feature	Description of modification
California Highway Patrol (CHP) Emergency Crossovers	The Project design evaluated in September 2020 included eight emergency crossovers along the alignment in California. The current Project modifications include two new emergency crossovers at Zzyzx Road and Halloran Springs. Additionally, five previously evaluated emergency crossovers in Segment 3 would be relocated. These are located near Coyote Lake Road, Basin Road, Baker, and both north and south of Halloran Springs. Emergency crossovers would be located mainly on previously evaluated Project footprint within the existing Caltrans ROW. In total, the modified Project would include 10 emergency crossovers in California, located in Segment 3 between Yermo and Mountain Pass, and one emergency crossover in Nevada approximately 1.5-miles south of Sloan.
Roadwork	The Project design evaluated in September 2020 included roadwork at local interchanges and along the I–15 freeway at various locations. The current Project modifications include: • Realigning the I–15 freeway northbound lane approximately 50 feet east and raising the lane approximately 25 feet, to accommodate the passenger platforms in the I–15 median, tail track for train storage, a pedestrian underpass for access to/from the platforms, and a maintenance of way access track for trains. These roadwork improvements would occur along a 60-foot portion of the I–15 freeway northbound lane adjacent to the Victor Valley Station. • Additional roadwork at the Dale Evans Parkway interchange accessing the I–15 freeway southbound ramps. • I–15 freeway median widening at Segment 5 to accommodate the modified median-running alignment. • Raising of I–15 southbound lanes just south of the Sloan Road interchange to allow for tracks to exit the I–15 median under the southbound lanes and into the Sloan VMF site. The Project modifications also include small, on-road lane realignments along the I–15 freeway at Segment 6, near Silverado Ranch Boulevard and Blue Diamond Road.
Culverts	The Project design evaluated in September 2020 included drainage and culvert work throughout the Project limits. The current Project modifications include revised designs for three culverts and the addition of four culverts within Segment 5. The associated drainage and grading activities have also been modified accordingly.
Cemex Facility and Rail Connection	A new connection to the existing Cemex industrial rail track is proposed on the north side of Apple Valley, CA near the proposed Victor Valley Station. The connection would consist of a turnout off the existing Cemex track and approximately 2 miles of new track along the east side of I–15 freeway heading north, all within the Caltrans ROW limit. This connection would allow rail transportation of construction materials such as track ballast to the Project area. This reduces the need for trucking construction materials to the Project area.
Ivanpah Traction Power Substation (TPSS)	The Ivanpah modified TPSS 3-mile utility line and 3.5-mile redundant utility line would travel north of the existing solar field to connect to a Southern California Edison (SCE) substation adjacent to the BrightSource Ivanpah Electrical Generating System, west of the I–15 freeway, resulting in the reduction of approximately 0.18 acres of permanent footprint. These modifications are the result of coordination with SCE, BLM and USFWS.
California Maintenance Of Way (MOW) Facility	The Project design evaluated in September 2020 considered the relocation of the California MOW Facility from Baker, California, to the I–15 freeway median approximately six miles south of the California/Nevada state line, adjacent to the existing California Agricultural Inspection Station (CAIS). The 25-acre facility was proposed to be utilized for passive equipment storage. The MOW is no longer located adjacent to the CAIS and will be divided between the new site at Sloan and the Victor Valley Station area.

PROJECT MODIFICATIONS (SINCE THE SEPTEMBER 2020 REEVALUATION) [9]—Continued

Project feature	Description of modification
Sloan Vehicle Maintenance Facility (VMF)	The Project design evaluated in the DesertXpress EIS included an OMSF in close proximity to the original Victorville Station west of the I–15 freeway and included facilities for maintaining and storing trains. Project modifications evaluated in 2020 included relocating the Victorville Station to the south side of the I–15 freeway at Dale Evans Parkway in Apple Valley. At that time, it was proposed the OMSF would be collocated with the Victorville Station, and a separate location for vehicle maintenance and storage had not been identified. The current Project modifications include locating the vehicle maintenance and storage activities at a site located in Segment 6 west of and within 1.5 miles of the I–15 freeway, and south of Sloan Road; the Victor Valley Station permanent footprint would remain unchanged. An additional freight track corridor will be constructed to connect the VMF to the adjacent UPRR. Brightline West have filed a connection request and are coordinating with UPRR regarding the connection design and operational concepts. UPRR have granted preliminary approval of this rail connection, which would be subject to additional design development. The Sloan VMF and adjacent UPRR connection would require 246 acres of permanent footprint and 105 acres of temporary footprint,6 and includes: • Storage and staging tracks and overhead catenary system from which trains would be mobilized for daily operations. • Equipment and operations associated with the Sloan VMF, including but not limited to a train car wash station, a train performance monitoring station, an Operations Control Center, a power substation and distribution lines, utility connections, circulation system, site control, fencing, and parking. The Sloan VMF will be a permanent workplace for approximately 100 employees related to either the maintenance of the Brightline West train fleet or performing other functions such as driving the trains. These facilities would be located on land under BLM jurisdiction and would therefore require a ROW grant lease from BLM.
Temporary Construction Areas (TCAS)	TCAs are areas that would be utilized for construction staging and storage. No permanent project features would be installed in these areas, and they would be restored/vacated upon completion of construction. The modified Project includes an additional 202 TCAs located within Caltrans/NDOT ROW along the I–15 freeway corridor for construction of the rail alignment. These are in addition to TCAs previously identified in the original project description and the September 2020 Reevaluation. Most of these additional TCAs are areas located within the existing I–15 freeway ROW. The addition of these TCAs adds 1,492 acres of temporary footprint to the project [11] The Sloan VMF facility footprint includes 105 acres of temporary footprint required for constructing the Sloan VMF and UPRR Connection.

[9] Brightline West Victor Valley, CA to Las Vegas, NV High-Speed Rail Project Reevaluation (September 15, 2023) pgs. 4–7.
[10] This Reevaluation has assumed full reconstruction and replacement of the overpass. Caltrans will determine the necessary modifications to the I–15/Dale Evans interchange which may not include full reconstruction and replacement of the overpass.
[11] As more of the alignment has been shifted to be within the I–15 freeway median, additional TCAs are proposed since room for construction within the I–15 freeway median is more limited and needs to be spread out throughout the alignment.

BILLING CODE 4915–01–P

SURFACE TRANSPORTATION BOARD

[Docket No. FD 36488]

Desertxpress Enterprises, LLC—Authority To Construct and Operate—Petition for Exemption From 49 U.S.C. 10901—Passenger Rail Line Between the Victor Valley, Cal. and Rancho Cucamonga, Cal.

On April 13, 2021, DesertXpress Enterprises, LLC, a Nevada limited liability company, d/b/a Brightline West (DesertXpress),[1] filed a petition under 49 U.S.C. 10502 for an exemption from the prior approval requirements of 49 U.S.C. 10901 to construct and operate an approximately 50-mile high-speed passenger rail line between the Victor Valley, in Southern California, and Rancho Cucamonga, Cal. (the RC Line). DesertXpress plans to operate as a common carrier providing passenger rail service on the rail line to be constructed. DesertXpress does not plan to provide freight rail service. No comments opposing the transportation merits of DesertXpress' petition were filed.

On July 12, 2021, the Board instituted a proceeding under 49 U.S.C. 10502.[2] As discussed below, the Board, through the Office of Environmental Analysis (OEA), participated in the environmental and historic review of the RC Line as a cooperating agency

[1] On September 17, 2018, DesertXpress' ownership group entered into an agreement to sell the company to Brightline Holdings LLC (Brightline). *Fortress Inv. Grp. LLC—Continuance in Control—Cent. Me. & Que. Ry.,* FD 36225, slip op. at 1–2 (STB served Oct. 11, 2018). Brightline's acquisition of DesertXpress was consummated on March 4, 2019. (DesertXpress Pet. 2 n.2.)

[2] On July 21, 2023, DesertXpress filed a letter requesting that the Board expedite a final decision in this proceeding. On July 27, 2023, U.S. Representative Dina Titus filed a letter urging the Board to expeditiously consider DesertXpress' petition.

under the lead of the Federal Railroad Administration (FRA). This thorough environmental review took a ''hard look'' at environmental impacts, selected a preferred alternative, and recommended environmental mitigation conditions to avoid or minimize the selected alternative's potential environmental impacts. After considering the entire record on both the transportation and the environmental issues, the Board will grant DesertXpress' petition for exemption, subject to environmental conditions.

Background

In *DesertXpress Enterprises, LLC—Construction & Operation Exemption—in Victorville, Cal. and Las Vegas, Nev.,* FD 35544 (STB served Oct. 25, 2011), the Board exempted from the prior approval requirements of 49 U.S.C. 10901 DesertXpress' proposal to construct and operate an approximately 190-mile high-speed passenger rail line between Las Vegas, Nev., and the Victor Valley (the LV Line).[3] The RC Line will extend from a point of connection with the southern terminus of the LV Line in the Victor Valley to Rancho Cucamonga. (DesertXpress Pet. 4.) The RC Line's alignment will be entirely within the I–15 right-of-way except for the final mile at Rancho Cucamonga, which will exit the I–15 right-of-way, proceed west along 8th Street and terminate adjacent to the Southern California Regional Rail Authority's (Metrolink's) Rancho Cucamonga train station on the south side of 8th Street west of Milliken Avenue.[4] (*Id.* at 5.) DesertXpress' Rancho Cucamonga station will link DesertXpress' train services with the passenger services operated by Metrolink and the bus rapid transit system. (*Id.* at 6.) DesertXpress states that connecting its service to Metrolink's rail system in this manner will create a seamless all-rail option for travel between Las Vegas and points throughout the greater Los Angeles, Cal., Orange County, Cal., and San Bernardino, Cal. metropolitan areas. (*Id.* at 14.) The RC Line will be built and operated on a dedicated, fully grade-separated right-of-way with no at-grade crossings. (*Id.* at 4.) It will consist of a single main-line track with passing sidings and will be dedicated exclusively to high-speed passenger service. (*Id.* at 4, 18.)

DesertXpress currently plans to operate 50 trains per day (25 in each direction) between Las Vegas and Rancho Cucamonga. (*Id.* at 7.) Trains will depart from both Las Vegas and Rancho Cucamonga at 45-minute intervals and will operate at speeds up to 180 miles per hour. (*Id.*) The first trains will depart Rancho Cucamonga and Las Vegas at 5:30 a.m. with the final trains arriving in Rancho Cucamonga and Las Vegas at approximately 11:30 p.m. and 1:00 a.m., respectively. (*Id.*)

The RC Line is forecasted to attract approximately 1.5 million additional passengers to DesertXpress' train service, compared to the LV Line standing alone, by the third year of revenue operations. (*Id.* at 6.) Travelers on the RC Line will include both passengers traveling between Las Vegas and Southern California and passengers traveling between the Victor Valley and Rancho Cucamonga stations. (*Id.*) According to DesertXpress, the service between Victor Valley and Rancho Cucamonga is expected to attract more than half a million riders annually by the second year of service and the RC Line is expected to double the number of westbound passengers who choose DesertXpress train service for their travel from Las Vegas to Southern California. (*Id.*)

DesertXpress plans to commence construction of the RC Line as soon as practicable following approval of its petition. (*Id.* at 11.) According to DesertXpress, the estimated cost of constructing the RC Line is approximately $2 billion and Brightline plans to finance the construction with a blend of tax-exempt bonds, taxable debt, and equity. (*Id.*)

Several parties filed comments in response to DesertXpress' petition. The only comment on the transportation merits was filed on May 13, 2021 by the Allied Rail Unions[5] stating that they support DesertXpress' petition. On May 5, 2021, the San Manuel Band of Mission Indians (San Manuel Band) filed comments on environmental issues and a request for an extension of time to file further comments. The Board granted that request in a decision served on May 19, 2021. In addition, the San Manuel Band, Morongo Band of Mission Indians (Morongo Band), and the National Parks Conservation Association (NPCA) filed comments regarding environmental issues on June 3, 2021, June 4, 2021, and June 8, 2021, respectively. On June 22, 2021, DesertXpress filed a reply to the comments of San Manuel Band, Morongo Band, and NPCA.

Discussion and Conclusions

Rail Transportation Analysis. The construction of new rail lines requires prior Board authorization through issuance of a certificate under 49 U.S.C. 10901 or, as requested here, through an exemption under 49 U.S.C. 10502 from the prior approval requirements of section 10901. Section 10901(c) directs the Board to authorize rail line construction proposals unless it finds the proposal ''inconsistent with the public convenience and necessity.'' *See Alaska R.R.—Constr. & Operation Exemption—a Rail Line Extension to Port MacKenzie, Alaska,* FD 35095, slip op. at 5 (STB served Nov. 21, 2011), *aff'd sub nom. Alaska Survival* v. *STB,* 705 F.3d 1073 (9th Cir. 2013). Thus, Congress has established a presumption that rail construction projects are in the public interest unless shown otherwise. *See N. Plains Res. Council* v. *STB,* 668 F.3d 1067, 1091–92 (9th Cir. 2011); *Mid States Coal. for Progress* v. *STB,* 345 F.3d 520, 557 (8th Cir. 2003).

Under section 10502(a), the Board ''shall exempt'' a proposed rail line construction from the detailed application procedures of section 10901 when it finds that: (1) those procedures are not necessary to carry out the rail transportation policy of 49 U.S.C. 10101 (RTP); and (2) either (a) the proposal is of limited scope, or (b) the full application procedures are not necessary to protect shippers from an abuse of market power.

Based on the record in this proceeding, the Board concludes that the proposed construction qualifies for an exemption from the section 10901 prior approval requirements. Simply put, this is a project with a lot of upside and little, if any, downside, one that has the potential for broad public benefits, and one for which no issues about the project's current or future financial viability, including any negative effects of financial nonviability, have been raised.[6] Extending DesertXpress' previously approved service between Las Vegas and Victor Valley further south to Rancho Cucamonga and

[3] The LV Line has not yet been constructed. On March 27, 2019, DesertXpress filed a petition to reopen the Board's October 25, 2011 decision, in which DesertXpress requested that the Board approve changes to the alignment of the LV Line, including moving the proposed terminus approximately four miles from the City of Victorville to the Town of Apple Valley, both situated in the Victor Valley. The Board will address the proposed alignment changes to the LV Line in a separate decision.

[4] An additional DesertXpress station in the City of Hesperia, Cal. (south of Victorville) is also planned. (DesertXpress Pet. 5.)

[5] The Allied Rail Unions is a group of unions composed of the Brotherhood of Maintenance of Way Employes Division/IBT; Brotherhood of Railroad Signalmen; International Association of Sheet Metal, Air, Rail and Transportation Workers-Mechanical Division; and National Conference of Firemen and Oilers, 32BJ/SEIU.

[6] *See Mid States Coal. for Progress* v. *Surface Transp. Bd.,* 345 F.3d 520, 552 (8th Cir. 2003).

providing a connection to Metrolink's rail service there supports the RTP. It will provide additional transportation options for travelers throughout the greater Los Angeles, Orange County and San Bernardino metropolitan areas, thereby reducing congestion on the I–15 freeway, while also reducing air pollution and overall fuel consumption. Thus, the RC Line will help ''to ensure the development and continuation of a sound rail transportation system with effective competition among rail carriers and with other modes,'' 49 U.S.C. 10101(4), and will ''encourage and promote energy conservation.'' 49 U.S.C. 10101(14). In addition, constructing the RC line to extend DesertXpress' service will help ''foster sound economic conditions in transportation,'' 49 U.S.C. 10101(5), by increasing demand for DesertXpress' service. As noted above, it is projected that the RC Line will attract an additional 1.5 million passengers to DesertXpress' train service annually. An exemption will also minimize the time and administrative expense associated with obtaining Board approval and expedite the introduction of a new rail service for millions of travelers and will therefore both ''reduce regulatory barriers to entry into and exit from the industry,'' 49 U.S.C. 10101(7), and ''provide for the expeditious handling and resolution of . . . proceedings required or permitted to be brought [before the Board].'' 49 U.S.C. 10101(15). Other aspects of the RTP would not be adversely affected.

In addition, consideration of the RC Line under section 10901 here is not necessary to protect shippers from an abuse of market power. The RC Line will not be used to provide freight rail transportation to shippers, nor will it cause any shipper to lose access to any rail options.[7]

Environmental Analysis. The National Environmental Policy Act (NEPA) requires federal agencies to examine the environmental effects of proposed federal actions and to inform the public concerning those effects. *Balt. Gas & Elec. Co.* v. *Nat. Res. Def. Council,* 462 U.S. 87, 97 (1983). Under NEPA and related environmental laws, the Board must consider significant potential beneficial and adverse environmental impacts in deciding whether to authorize a railroad construction project as proposed, deny the proposal, or grant it with conditions (including environmental mitigation conditions). *Lone Star R.R. Track Constr. & Operation Exemption—in Howard Cnty., Tex.,* FD 35874, slip op at 4 (STB served Mar. 3, 2016). While NEPA prescribes the process that must be followed, it does not mandate a particular result. *Robertson* v. *Methow Valley Citizens Council,* 490 U.S. 332, 350 (1989). Once the adverse environmental effects have been adequately identified and evaluated, an agency may conclude that ''other values outweigh the environmental costs.'' *Id.*

In every exemption case, the Board considers both the transportation merits and the environmental impacts in deciding whether to authorize the proposed action. With respect to environmental issues, the Board, through OEA, participated in the environmental and historic review of the RC Line as a cooperating agency under the lead of FRA. FRA prepared an Environmental Assessment (EA) in accordance with NEPA, the National Historic Preservation Act (NHPA), and related environmental laws to evaluate the potential environmental and historic impacts of the RC Line. The EA analyzed both a Build Alternative and No-Build Alternative (*i.e.,* No-Action Alternative), and FRA identified the Build Alternative as the preferred alternative. (EA xv, 10–14.) The EA also identified mitigation measures to reduce potential environmental impacts. (EA 57–58, 61–63, 67, 90–102, 137–38, 173–76, 192, 198–200.) The EA was made available for public review and comment between October 28, 2022, and November 28, 2022.

On July 12, 2023, FRA issued a Finding of No Significant Impact (FONSI), which incorporated the EA by reference. The FONSI concluded that the Build Alternative would not significantly impact the quality of the human environment and should be authorized subject to appropriate environmental mitigation (FONSI 15 & Attach. A). The FONSI also addressed the public comments on the EA. The comments received on the EA were minor and the responses to the comments were limited to factual corrections or explanations of why the comments did not warrant further response. (FONSI 2.)

Concurrently with preparation of the EA, FRA initiated consultation under Section 106 of NHPA, which included efforts to identify, evaluate, and assess effects to historic properties that could be impacted by the RC Line.[8] (EA 138–58.) FRA concluded that construction and operation of the RC Line would have no adverse effects on resources listed in or eligible for listing in the National Register of Historic Places. (*Id.*) The California State Historic Preservation Officer (SHPO) did not object to FRA's finding of no adverse effect for the RC Line. FRA issued a final Finding of Effect report and made a finding of no adverse effect for the RC Line on June 30, 2023. (*Id.* at 13–14.) Accordingly, no historic mitigation was imposed. (*Id.* at 8, 10 & Attach. A.)

OEA prepared a memorandum making final environmental recommendations for this proceeding (Environmental Memo), which is attached to this decision. The Environmental Memo summarizes the environmental and historic review process, the potential environmental impacts of the construction and operation of the RC Line, and FRA's mitigation measures to minimize those impacts. (Environmental Memo 3–8.) The Environmental Memo recommends that the Board adopt FRA's EA and the conclusions in the FONSI, and that it impose the environmental mitigation measures set forth in Attachment A to the FONSI as conditions to any decision authorizing construction and operation of the RC Line. (Environmental Memo 8–9.)

The Board's Analysis of the Environmental Issues. The Board adopts FRA's analysis and conclusions in both the EA and FONSI. The Board is satisfied that OEA, together with FRA and the cooperating agencies, has taken the requisite ''hard look'' at the potential environmental impacts associated with DesertXpress' proposal and properly determined that, with the recommended environmental mitigation in the FONSI, the RC Line will not have potentially significant environmental impacts and that preparation of an Environmental Impact Statement is unnecessary.

As noted above, San Manuel Band, Morongo Band, and NPCA filed comments regarding environmental issues. However, those comments raise concerns regarding FRA's

[7] Because regulation of the proposed construction and operation is not needed to protect shippers from the abuse of market power, the Board need not determine whether the transaction is limited in scope. 49 U.S.C. 10502(a)(2).

[8] The Board participated as a consulting party in FRA's Section 106 consultation process, along with the Advisory Council on Historic Preservation, DesertXpress, Caltrans, City of Fontana, City of Ontario, City of Rancho Cucamonga, City of Rialto, City of Victorville, Federal Highway Administration, U.S. Army Corps of Engineers, and the United States Forest Service. (FONSI 13). As part of that process, FRA consulted with the Chairpersons of and/or Tribal Historic Preservation Officers for the Chemheuvi Indian Tribes, the Colorado River Indian Tribes, the Morongo Band of Mission Indians, the San Fernando Band of Mission Indians, the Soboba Band of Luiseno Indians, and the Twenty-Nine Palms Band of Mission Indians, and identified tribal contacts for the Yuhaaviatam of San Manuel Nation (formerly the San Manuel Band). (*Id.*)

environmental and historic review process with respect to the proposed modified alignment of the LV Line. (San Manuel Band Comments 1–2, May 5, 2021; Morongo Band Comments 1–2; NPCA Comments 1.) The LV Line is not at issue in this proceeding and parties were given the opportunity in *DesertXpress Enterprises, LLC,* Docket No. FD 35544, to provide comments in the LV Line proceeding. *See DesertXpress Enters., LLC,* FD 35544, slip op. 1–2 (STB served Dec. 3, 2020) (providing 20-day period for filing of public comments). Accordingly, comments regarding the modified alignment of the LV Line will not be considered in this proceeding.

In addition, San Manuel Band and NPCA urge the Board not to permit an exemption from review under the California Environmental Quality Act (CEQA). (San Manuel Band Comments 2–3, June 3, 2021; NPCA Comments 2.) However, the only issue for the Board in this case is whether to grant DesertXpress' petition seeking an exemption from 49 U.S.C. 10901. Moreover, state permitting or preclearance requirements like CEQA are categorically preempted under 49 U.S.C. 10501(b) as to any lines and facilities that are an integral part of the national rail transportation system. *EPA—Pet. for Declaratory Ord.,* FD 35803, slip op. at 7 (STB served Dec. 30, 2014); *see also City of Auburn* v. *United States,* 154 F.3d 1025, 1031 (9th Cir. 1998). Indeed, the Board previously found that section 10501 preempted the application of CEQA to the LV Line.[9] *DesertXpress Enters., LLC—Pet. for Declaratory Ord.,* FD 34914, slip op. at 5 (STB served June 27, 2007). Because CEQA's permitting requirements could be used to deny or significantly delay construction of the RC Line, CEQA review is preempted in this proceeding as well.[10]

The project's transportation merits—expanding the broader DesertXpress passenger service to provide more seamless transportation to and from Southern California and Las Vegas, as well as providing a passenger rail option between Rancho Cucamonga and Victor Valley—are manifest. And the environmental and historic impacts have been thoroughly analyzed as required under NEPA and NHPA, with environmental mitigation imposed as appropriate. Accordingly, the Board grants DesertXpress' petition for exemption.

This action, as conditioned, will not significantly impact the quality of the human environment or the conservation of energy resources.

It is ordered:

1. Under 49 U.S.C. 10502, the Board exempts DesertXpress' construction and operation of the RC Line from the prior approval requirements of 49 U.S.C. 10901, subject to the requirement that DesertXpress build the FRA-preferred Build Alternative.

2. The Board adopts the environmental mitigation measures set forth in Attachment A to the FONSI and imposes them as conditions to the exemption granted here.

3. Notice will be published in the **Federal Register**.

4. Petitions for reconsideration must be filed by December 6, 2023.

5. This decision is effective, December 16, 2023.

Decided: November 15, 2023.

By the Board, Board Members Fuchs, Hedlund, Oberman, Primus, and Schultz.

Jeffrey Herzig,

Clearance Clerk.

Surface Transportation Board

Washington, DC 20423

Office of Environmental Analysis

MEMORANDUM

TO: Martin Oberman, Chairman; Karen Hedlund, Vice Chairman; Patrick Fuchs, Member; Michelle Schultz, Member; Robert Primus, Member

Cc: Mai Dinh, Director, Office of Proceedings

FROM: Danielle Gosselin, Director, Office of Environmental Analysis

DATE: October 20, 2023

SUBJECT: Docket No. FD 36488, DesertXpress Enterprises, LLC—Construction and Operation Exemption—Passenger Rail Line Between Victor Valley and Rancho Cucamonga, Cal.: Environmental Memorandum

This memorandum summarizes the environmental and historic review conducted for the proposed 49-mile high-speed rail line between the Victor Valley and Rancho Cucamonga, California (RC Line or Project). The proposed RC Line would be part of the electrified high-speed passenger railroad system that DesertXpress Enterprises, LLC, d/b/a Brightline West (Brightline West) intends to construct and operate between Southern California and Las Vegas, Nevada. The memorandum also presents the Office of Environmental Analysis' (OEA) final recommendations to the Board regarding adoption of the Environmental Assessment (EA) for the Project, including the selection of the build alternative as the preferred alternative, and the environmental mitigation that should be imposed if the Board authorizes the RC Line.

Introduction

The Board, through OEA, participated in the environmental review of the RC Line as a cooperating agency under the lead of the Federal Railroad Administration (FRA). FRA prepared an EA in accordance with the National Environmental Policy Act (NEPA), the National Historic Preservation Act (NHPA), and related environmental laws to evaluate the potential environmental and historic impacts of the RC Line. The EA analyzed both a Build Alternative and No-Build Alternative (*i.e.,* No-Action Alternative), and FRA identified the Build Alternative as the Preferred Alternative. (EA xv, 10–14.) The EA also identified mitigation measures to reduce potential environmental impacts. (EA 57–58, 61–63, 67, 90–102, 137–38, 173–76, 192, 198–200.) The EA was made available for public review and comment between October 28, 2022, and November 28, 2022.

On July 12, 2023, FRA issued a Finding of No Significant Impact (FONSI), which incorporated the EA by reference,[1] and which concluded that the Build-Alternative would not significantly impact the quality of the human environment and should be authorized subject to appropriate

[9] Although the California High-Speed Rail Authority conducted an environmental review under CEQA as well as NEPA for the California High-Speed Train System—a project within the Board's jurisdiction—it ''elected'' to apply CEQA on its own volition and, in its environmental documentation, reserved the right to assert federal preemption in response to any potential legal challenge to its CEQA compliance. *Cal. High-Speed Rail Auth.—Pet. for Declaratory Ord.,* FD 35861, slip op. at 1–2, 11 (STB served Dec. 12, 2014); *see also Cal. High-Speed Rail Auth.—Constr. Exemption—in Merced, Madera, & Fresno Cntys., Cal.,* FD 35724 et al., slip op. at 3 n.6 (STB served Dec. 20, 2022) (finding that the ''Board is only required to comply with NEPA'' and related federal environmental laws despite FRA and California High-Speed Rail Authority conducting joint NEPA and CEQA review).

[10] While the RC Line will be an intrastate line located completely within California, it will connect to the LV Line, which will extend into Nevada. Therefore, the RC Line will be part of the interstate rail network and will be subject to the Board's jurisdiction. *See e.g.,* 49 U.S.C. 10501(a)(2)(A) (stating that the Board has jurisdiction over rail transportation between a place in ''a State and a place in the same or another State as part of the interstate rail network''); *Cal. High-Speed Rail Auth.—Pet. for Declaratory Ord.,* FD 35724, slip op. at 13–14 (STB served June 13, 2013) (finding that a rail line to be located completely within California was subject to Board jurisdiction because it would have extensive interconnectivity with Amtrak, an interstate passenger rail carrier).

[1] The FONSI attached an errata sheet making certain corrections to the EA. (FONSI, Attachment B.) FRA used an errata sheet in lieu of a Final EA because the comments received on the EA were minor and the responses to the comments were limited to factual corrections or explanations of why the comments did not warrant further response. (FONSI 2.)

environmental mitigation. (FONSI 15, 17 & Attachment A.) The FONSI summarized the Project's potential construction and operations impacts, as well as FRA's proposed mitigation measures, and addressed the public comments on the EA. (FONSI 7–13 & Attachment C.)

OEA has independently reviewed the EA and FONSI and agrees with FRA's analysis and conclusions. Further, OEA has determined that the EA adequately assesses the potential environmental and historic impacts of the RC Line and complies with the Board's responsibilities under NEPA, NHPA, and related environmental laws. OEA also concurs with FRA's selection of the Build-Alternative as the Preferred Alternative. Therefore, in any decision authorizing construction and operation of the RC Line, OEA recommends that the Board: (1) adopt the EA and FRA's conclusions in the FONSI; (2) approve construction and operation of FRA's Build-Alternative for the RC Line; and (3) impose the environmental mitigation in Attachment A to the FONSI.

Background

On April 13, 2021, Brightline West filed a petition for exemption with the Board under 49 U.S.C. 10502 to construct and operate the RC Line. Brightline West proposes to construct the RC Line within the Interstate-15 (I–15) right-of way for 48 miles and on existing transportation corridors for the last mile into the proposed Rancho Cucamonga station. (FONSI 1.) The RC Line would include two new rail stations—one in Hesperia and one in Rancho Cucamonga, both in California.[2] (*Id.*)

The purpose of the RC Line is to provide an alternative transportation option (in addition to cars) between the Los Angeles metropolitan region and the High Desert of San Bernardino County. (FONSI 3.) Trains are expected to operate daily every 60 minutes between the Victor Valley and Rancho Cucamonga. (*Id.* at 1.) The trip between the Victor Valley and Rancho Cucamonga will be approximately 35 minutes. Service will be coordinated with existing and planned Metrolink service at the Rancho Cucamonga station to provide a convenient connection between the RC Line and commuter rail systems. (*Id.*) Trains traversing over the RC Line would be capable of reaching a top speed of approximately 140 miles per hour. (*Id.*)

Summary of Environmental Impacts and Mitigation Measures

The charts below from FRA's FONSI provide an overview of the potential construction and operations impacts of the RC Line, and the associated mitigation measures to minimize these impacts.

Analysis area	Long-term operational impacts of the selected alternative	Mitigation
Transportation	The Rancho Cucamonga station will result in traffic impacts to three intersections that are projected to operate at unacceptable level of service during the 2025 Opening Year conditions during peak periods and will also degrade the level of service at the Milliken Avenue/7th Street Intersection compared to the 2045 No Build scenario.	During Project design, Brightline West will coordinate with SBCTA, Caltrans, Rancho Cucamonga, and Hesperia to incorporate intersection improvements to lessen or avoid adverse impacts to traffic to the extent feasible, including optimizing signal timing to reflect changes in traffic flows in station areas during operation of the Project.
	Operation of the Project would increase demand for local transit at the Hesperia station, such that the hourly volume of passengers desiring to depart the station via bus will likely exceed the available bus capacity during any single hour. At the Rancho Cucamonga station, the Project will impact passengers utilizing regional rail on Sunday, when there is a 5-hour period in the late afternoon/early evening with only one train in each direction.	Brightline West will coordinate with local transit agencies to identify opportunities to best serve the needs of transit users at the Hesperia and Rancho Cucamonga stations without significantly affecting other transit services.
	Based on ridership estimates, parking at the Hesperia and Rancho Cucamonga stations will exceed the amount of existing and planned spaces at the station in the 2045 Horizon Year.	Brightline West will develop and implement a parking demand management plan prior to operation of the Project to manage increasing parking demand at the Hesperia and Rancho Cucamonga stations.
Land Use and Community Facilities.	None	None.
Socioeconomic Environment.	None	None.
Cultural Resources	None	None.
Aesthetics	The Project would have a permanent impact on views of the San Gabriel and San Bernardino Mountains, as well as the Southern California Edison Boulder Dam-San Bernardino transmission lines from northbound I–15, looking north toward the split of northbound and southbound I–15 as it climbs toward the summit of Cajon Pass.	During the design phase, Brightline West will design rail features, including bridge pillars/columns, raised tracks, trains, catenary structures, crash barriers, retaining walls, abutments, fencing, and embankments to blend with or represent the surrounding desert or urban environment. Features will be created or stained in muted desert colors. Bright colors and highly reflective materials will be avoided, as feasible. Project elements defined in the design process will include visual elements that contribute to a sense of place and a memorable experience for motorists, pedestrians, and rail passengers. Concrete will be embossed with patterns, where appropriate, that are indicative of the surrounding environment and that create a visual link between the railway features and their surroundings and will be similar in character to recent nearby freeway projects.
Water Quality	The Project will result in permanent increased impervious surface along the rail alignment and the proposed Hesperia station, which will increase the amount of stormwater runoff and nonpoint-source pollution in some areas, affecting 48 ephemeral or intermittent drainage features.	To protect water quality, Brightline West will install permanent water quality treatment devices in accordance with the National Pollutant Discharge Elimination System (NPDES) permit obtained for the Project (Mitigation Measure WQ–7).
		Brightline West will redesign and resize the existing drainage features to accommodate the potential increase in runoff along the rail alignment. Additionally, stormwater treatment will be designed in accordance with the Caltrans Project Planning and Design Guide (PPDG). The 100-year, 24-hour storm event will be used to determine the appropriate size of drainage facilities need for the Project (Mitigation Measure WQ–8).

[2] A station at Victorville connecting the RC Line to the separate high-speed passenger rail project between the Victor Valley and Las Vegas, Nevada, was approved by the Board in 2011. *DesertXpress Enters., LLC, et al.—Constr. & Operation Exemption—in Victorville, Cal. & Las Vegas, Nev.,* FD 35544, slip op. at 2, 5 (STB served Oct. 25, 2011). On March 27, 2019, Brightline West petitioned the Board to reopen the 2011 decision to permit construction of the Victor Valley-Las Vegas line along a different route than what had been previously approved. The project modifications also include moving the Victorville station to within the Town of Apple Valley. The Victor Valley-Las Vegas line has involved a separate environmental review and is currently pending before the Board.

Analysis area	Long-term operational impacts of the selected alternative	Mitigation
Wetlands and Stream Areas.	During Project operation, railway crossings over Debris Cone Creek, Cajon Wash/Creek, and Lytle Creek will require new structures in the channels. All crossings will result in less than 0.1 acre of permanent fill. The Project will have no permanent impacts on the Mojave River itself, but a small portion (less than 0.01 acre) of wetlands associated with the Mojave River will be permanently impacted.	Prior to construction, Brightline West will coordinate with USACE to obtain a jurisdictional determination for aquatic resources. If applicable, Brightline West will obtain any required permits and implement all required permit conditions.
Floodplains	None	None.
Biological Resources	Approximately 64 acres of native vegetation habitat types will be permanently converted to transportation uses by the Project. Permanent impacts occur in a wide variety of habitat types; most permanent impacts would occur in Desert Scrub habitats (37 acres).	Brightline West will implement mitigation and compensation strategies identified during consultation with USFWS and documented in USFWS' Biological Opinion. Brightline West will also obtain an Incidental Take Permit for Endangered Species Act (ESA)-listed species. Refer to Attachment A, for a list and description of Mitigation Measures BIO–1 through BIO–57.
Geology, Soils, and Seismicity.	Seismic activity during operation could result in impacts related to surface fault rupture, ground shaking, and liquefaction because the Project alignment crosses or comes within 1,000 feet of four major faults: the Sierra Madre, the San Jacinto, the San Andreas, and the Cleghorn faults.	Brightline West will hire qualified geologists and geotechnical engineers to conduct geotechnical investigations along the Project alignment for potential hazards related to geology, soils, seismicity. Brightline West will incorporate recommendations of the evaluation that avoid or minimize hazardous impacts and will be implemented prior to design and construction. Refer to Attachment A for a list and description of Mitigation Measures GEO–2 through GEO–8.
Air Quality and Greenhouse Gas.	None. The Project will not result in exceedances of the de minimis thresholds for criteria pollutants in the applicable air basins. As ridership increases during the operation period, the Project will reduce emissions of both criteria pollutants and GHGs by providing an alternative to passenger car travel and reducing vehicle miles traveled within the South Coast Air Basin and Mojave Desert Air Basin, resulting in a beneficial impact to air quality and reductions in greenhouse gas emissions.	None.
Energy Resources	None	None.
Noise and Vibration	None	None.
Safety and Security	None	None.
Environmental Justice	The Project will not result in disproportionately high and adverse human health or environmental effects on minority populations and low-income populations.	None.

Analysis area	Temporary construction-related impacts of the selected alternative	Mitigation
Transportation	None	None.
Land Use and Community Facilities.	None	None.
Socioeconomic Environment.	None	None.
Cultural Resources	None	None.
Aesthetics	Changes in visual quality from construction will result from implementation of standard industry practices, including the use of temporary lighting, fences, barriers, stockpiling of materials, and the use of heavy equipment, and will result in temporary visual disturbances to natural visual resources.	Brightline West will implement measures to minimize nighttime light spillover onto adjacent properties, to reduce glare for freeway motorists, and to prevent visible lighting overflow into the natural dark sky of the desert at night. Visual screening, such as fences, will be erected along construction and staging areas as appropriate. Landscaping and native vegetation that is cleared for temporary construction areas (TCA) will be replaced by Brightline West within one year of the completion of construction at any location along the alignment.
Water Quality	Construction of the Project will impact water quality from activities involving soil disturbance, excavation, cutting/filling, stockpiling, and grading. Grading could result in increased erosion and sedimentation of surface waters. Stormwater runoff from TCAs could contain sediment and other contaminants, and could carry contaminants to drainages, groundwater, and impaired water bodies.	Brightline West will implement Best Management Practices (BMP) during construction and operation of the Project to minimize impacts on aquatic resources (Mitigation Measure WQ–1), comply with the statewide National Pollutant Discharge Elimination System (Mitigation Measure WQ–2), implement a stormwater pollution prevention program (SWPPP) (Mitigation Measure WQ–3), implement a spill prevention, control and countermeasures plan (SPCC) (Mitigation Measure WQ–4), locate TCAs to avoid key water features (Mitigation Measure WQ–5), and obtain water from existing, commercially available water sources (Mitigation Measure WQ–6).
Wetlands and Streams	Construction of bridges over the Bell Mountain Wash, Mojave River, Brush Creek, Cleghorn Creek, Cajon Wash/Creek and Lytle Creek, will involve work in the Ordinary High Water Mark (OHWM). The Project may require temporary soil disturbance and vegetation clearing within the Mojave River riparian area and in and around other drainages along the corridor.	Brightline West will contract with a qualified biologist, who will be on site prior to and during construction of the Project to identify and protect aquatic resources. The biologist will define the boundaries of the aquatic resources and will supervise the placement of exclusion fencing to protect those areas during all project activities. Additionally, a silt fence around the construction areas adjacent to aquatic resources will protect the resources, including waters of the United States (WOTUS), from runoff and spills associated with construction activities, if any. Aquatic resources that are affected by construction activities (e.g., clearing, ground disturbance) will be restored by Brightline West with native vegetation within one year of the completion of construction at any location along the alignment.

Analysis area	Temporary construction-related impacts of the selected alternative	Mitigation
Floodplains	Project construction will involve the use of heavy, earth-moving equipment in the floodplains of the Mojave River and Lytle Creek, and near the floodplains of Etiwanda Channel and Hawker-Crawford Channel Construction activities within floodplains will likely result in temporary impacts such and minor erosion and runoff on floodplains.	Brightline West will implement BMPs prior to construction to minimize the temporary effects on floodplains, and construction equipment and materials will not be stored within the floodplain. Brightline West will return any temporary effects on floodplains to preconstruction conditions.
Biological Resources	Construction of the project would have temporary impacts on approximately 2,206 acres of various types of wildlife habitat. The most common habitat types would be Urban (1,787 acres), Desert Scrub (168 acres), and Mixed Chaparral (128 acres). Construction impacts would include disturbance of vegetation and soils, construction noise, hydrologic modifications, facilitation of invasive species, and changes in habitat elements that increase or decrease populations of predators or prey species.	Brightline West will implement mitigation and compensation strategies identified during consultation with USFWS and documented in USFWS' Biological Opinion. Brightline West will also obtain an Incidental Take Permit for ESA-listed species. Refer to Attachment A, for a list and description of Mitigation Measures BIO–1 through BIO–57.
Geology, Soils, and Seismicity.	Construction of the Project may result in impacts related to ground fissures due to pile driving.	Brightline West will retain qualified geologists and geotechnical engineers to conduct geotechnical investigations along the Project alignment for potential hazards related to geology, soils, seismicity. Recommendations of the evaluation that avoid or minimize hazardous impacts will be implemented prior to design and construction (Mitigation Measure GEO–1).
Air Quality and Greenhouse Gas.	Construction of the Project will temporarily generate emissions of both criteria pollutants and GHGs. However, the Project will not result in exceedances of the de minimis thresholds for criteria pollutants in the applicable air basins. The Project will result in short-term increases in GHG emissions from construction activities.	Prior to construction activities, Brightline West will develop and implement a fugitive dust control plan and utilize additional means to reduce construction period emissions of air pollutants, such as solar powered signal boards.
Energy Resources	None	None.
Noise and Vibration	Construction of the Project will result in short-term noise impacts to resources due to elevated noise levels associated with construction activities, including construction equipment, diesel engines, impact pile driving and jackhammering.	Brightline West will require the contractors to prepare a detailed Noise Control Plan (Mitigation Measure NOI–1) in coordination with a qualified noise monitor prior to construction. Brightline West will comply with all applicable local noise regulations to minimize temporary construction noise and vibration impacts (Mitigation Measure NOI–2).
Hazardous Materials	Construction of the Project may result in the release of hazardous materials through disturbance of identified hazardous materials sites and using hazardous materials, either of which may result in impacts on human health. There is also the potential to encounter previously unidentified hazardous materials along the Project footprint.	Brightline West will prepare a Hazardous Materials Management Plan (HMMP) prior to application for permits for demolition, grading, or construction, as required by the State of California (Mitigation Measure HAZ–1). The HMMP shall be reviewed and approved by either the office of the State Fire Marshall or the San Bernardino County Certified Unified Program Agency (CUPA). Activities identified in the HMMP will be implemented by Brightline West throughout the construction period.
Safety	Construction of the Project will involve use of heavy equipment on site, earthwork, and other major construction activities, including the transportation of overweight and oversized materials. Throughout construction, workers and nearby community members could be exposed to hazards, which could affect human health or present to safety from construction site hazards and accidents, associated with construction site equipment and activities. Project construction could temporarily increase fire risks in the high fire hazard severity zones (FHSZ) due to the storage and use of flammable or combustible materials, operation of vehicles and heavy machinery. The Rancho Cucamonga and Hesperia stations will not be located within FSHZ zones.	Brightline West will implement construction safety requirements during construction, per regulatory requirements, including California Division of Occupational Safety and Health (Cal OSHA) Construction Safety Orders and California Public Utilities Commission (CPUC) General Order No. 176.
Environmental Justice	The Project will not result in disproportionately high and adverse human health or environmental effects on minority populations and low-income populations.	None.

Historic Review Under Section 106

Concurrently with preparation of the EA, FRA initiated consultation under Section 106 of the NHPA, which included efforts to identify, evaluate, and assess effects to historic properties that could be impacted by the RC Line. (EA 138–58.) As part of that process, FRA consulted with the Chairpersons of and/or Tribal Historic Preservation Officers for the Chemheuvi Indian Tribes, the Colorado River Indian Tribes, the Morongo Band of Mission Indians, the San Fernando Band of Mission Indians, the Soboba Band of Luiseno Indians, and the Twenty-Nine Palms Band of Mission Indians, and identified tribal contacts for the Yuhaaviatam of San Manuel Nation. (FONSI 13.) The Board participated as a consulting party in FRA's Section 106 consultation process, along with the Advisory Council on Historic Preservation, Brightline West, Caltrans, City of Fontana, City of Ontario, City of Rancho Cucamonga, City of Rialto, City of Victorville, Federal Highway Administration, United States Army Corps of Engineers, and the United States Forest Service. (*Id.*)

FRA concluded that construction and operation of the RC Line would have no adverse effects on resources listed in or eligible for listing in the National Register of Historic Places. (*Id.*) On May 22, 2023, the California State Historic Preservation Officer did not object to FRA's finding of no adverse effect for the RC Line. FRA issued a final Finding of Effect report and made a finding of no adverse effect for the Project on June 30, 2023. (*Id.* at 13–14.) Accordingly, no historic mitigation was imposed. (*Id.* at 8, 10 & Attachment A.)

OEA's Final Environmental Recommendations

After participating in FRA's environmental review, OEA concludes that the EA adequately assesses the potential environmental and historic impacts associated with the RC Line and concurs with the conclusions reached by FRA in the FONSI. Accordingly, OEA recommends that the Board adopt FRA's EA and the conclusions in the FONSI, and that it impose the environmental mitigation attached to the FONSI at Attachment A as conditions to any decision authorizing construction and operation of the RC Line. OEA concludes that FRA's mitigation measures are adequate to address the potential environmental and historic impacts of the RC Line. Therefore,

OEA does not recommend any additional environmental or historic mitigation.

BILLING CODE 4915–01–P

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket Number USTR–2023–0012; Dispute Number WT/DS617]

WTO Dispute Settlement Proceeding Regarding a United States Anti-Dumping Measure on Oil Country Tubular Goods From Argentina

AGENCY: Office of the United States Trade Representative.

ACTION: Notice with request for comments.

SUMMARY: The Office of the United States Trade Representative (USTR) invites public comments concerning the issues raised in this World Trade Organization (WTO) dispute settlement proceeding regarding a United States anti-dumping measure on oil country tubular goods from Argentina.

DATES: Although USTR will accept any comments submitted during the course of the dispute settlement proceedings, you should submit your comment on or before December 22, 2023, to be assured of timely consideration by USTR.

ADDRESSES: USTR strongly prefers electronic submissions made through the Federal eRulemaking Portal: *http://www.regulations.gov.* Follow the instructions for submitting comments in sections III and IV below. The Docket Number is USTR–2023–0012. For alternatives to on-line submissions, please contact Sandy McKinzy at (202) 395–9483 in advance of the deadline.

FOR FURTHER INFORMATION CONTACT: Michael Gagain, Senior Associate General Counsel, (202) 395–9529, or Matthew Jaffe, Senior Associate General Counsel, (202) 395–9512.

SUPPLEMENTARY INFORMATION:

I. Background

Section 127(b)(1) of the Uruguay Round Agreements Act (URAA) (19 U.S.C. 3537(b)(1)) requires notice and opportunity for comment after the United States submits or receives a request for the establishment of a WTO dispute settlement panel. Accordingly, USTR is providing notice that Argentina has requested a dispute settlement panel pursuant to the WTO Understanding on Rules Procedures Governing the Settlement of Disputes (DSU). The panel established by the WTO will hold its meetings in Geneva Switzerland.

II. Major Issues Raised by Argentina

On May 17, 2023, Argentina requested consultations with the United States concerning the imposition of antidumping duties on oil country tubular goods from Argentina, following final determinations by the U.S. Department of Commerce (DOC) and U.S. International Trade Commission (ITC) in *Oil Country Tubular Goods From Argentina: Final Affirmative Determination of Sales at Less Than Fair Value and Final Negative Determination of Critical Circumstances* (DOC investigation number A–357–824), and *Oil Country Tubular Goods From Argentina, Mexico, Russia, and South Korea* (ITC investigation numbers 701–TA–671–672 and 731–TA–1571–1573), and section 771(7)(G) of the Tariff Act of 1930 (19 U.S.C. 1677(7)(G)). The consultation request can be found at *www.wto.org* in a document designated as WT/DS617/1. The United States and Argentina held consultations on July 6, 2023. On September 1, 2023, Argentina made its request to the WTO to establish a dispute settlement panel under the Marrakesh Agreement Establishing the World Trade Organization (WTO Agreement). That request may be found at *www.wto.org* in a document designated as WT/DS617/3. On October 26, 2023, the WTO established a panel to examine Argentina's complaint.

Argentina's panel request appears to be concerned with the DOC's examination of whether there was sufficient domestic industry support to justify initiation of its investigation; the ITC's cumulation analysis in its material injury investigation; aspects of the ITC's analyses of volume and imports and price effects in its investigation; and aspects of the ITC's analyses of injury and causation. Argentina claims that the imposition of duties is inconsistent with Article VI of the WTO *General Agreement on Tariffs and Trade 1994* (GATT 1994); and Articles 1, 3.1, 3.2, 3.3, 3.4, 3.5, 5.1, 5.2, 5.3, 5.4, 6.6, and 18.1 of the WTO *Agreement on Implementation of Article VI of the General Agreement on Tariffs and Trade 1994* (Antidumping Agreement). Argentina further alleges that section 771(7)(G) of the Tariff Act of 1930 is inconsistent with Articles 3.1, 3.2, 3.3, 3.4, and 3.5 of the Antidumping Agreement.

III. Public Comments: Requirements for Submissions

To be assured of consideration, submit your written comments by the December 22, 2023 deadline. All submissions must be in English. USTR strongly encourages submissions via *Regulations.gov*, using Docket Number USTR–2023–0012.

To make a submission via *Regulations.gov*, enter Docket Number USTR–2023–0012 in the 'search for' field on the home page and click 'search.' The site will provide a search results page listing all documents associated with this docket. Find a reference to this notice by selecting 'notice' under 'document type' in the 'refine documents results' section on the left side of the screen and click on the link entitled 'comment.' *Regulations.gov* allows users to make submissions by filling in a 'type comment' field, or by attaching a document using the 'upload file' field. USTR prefers that you provide submissions in an attached document and, in such cases, that you write 'see attached' in the 'type comment' field. USTR prefers submissions in Microsoft Word (.doc) or Adobe Acrobat (.pdf). If you use an application other than those two, please indicate the name of the application in the 'type comment' field.

Please do not attach separate cover letters, exhibits, annexes, or other attachments to electronic submissions; rather, include any in the same file as the submission itself, not as separate files. You will receive a tracking number upon completion of the submission procedure at *Regulations.gov*. The tracking number is confirmation that *Regulations.gov* received your submission. Keep the confirmation for your records. USTR is not able to provide technical assistance for *Regulations.gov*.

For further information on using *Regulations.gov*, please consult the resources provided on the website by clicking on 'How to Use *Regulations.gov*' on the bottom of the home page. Contact the *Regulations.gov* help desk with technical questions on submitting comments at *regulationshelpdesk@gsa.gov* or 1–866–498–2945.

If you are unable to provide submissions as requested, please contact Sandy McKinzy at (202) 395–9483 in advance of the deadline to arrange for an alternative method of transmission. USTR may not consider submissions that you do not make in accordance with these instructions.

IV. Confidential Submissions

If you ask USTR to treat information you submit as business confidential information (BCI), you must certify that the information is business confidential and you would not customarily release it to the public. For any comments submitted electronically containing BCI, the file name of the business

confidential version should begin with the characters 'BCI.' You must clearly mark any page containing BCI with 'BUSINESS CONFIDENTIAL' at the top of that page. Filers of submissions containing BCI also must submit a public version of their submission that will be placed in the docket for public inspection. The file name of the public version should begin with the character 'P.' The 'BCI' and 'P' should be followed by the name of the person or entity submitting the comments. If this is not sufficient to protect BCI or otherwise protect business interests, please contact Sandy McKinzy at (202) 395–9483 in advance of the deadline to discuss whether alternative arrangements are possible.

USTR may determine that information or advice contained in a comment, other than BCI, is confidential in accordance with section 135(g)(2) of the Trade Act of 1974 (19 U.S.C. 2155(g)(2)). If a submitter believes that information or advice is confidential, they must clearly designate the information or advice as confidential and mark it as 'SUBMITTED IN CONFIDENCE' at the top and bottom of the cover page and each succeeding page, and provide a non-confidential summary of the information or advice.

V. Public Viewing of Comments

Pursuant to section 127(e) of the URAA (19 U.S.C. 3537(e)), USTR will maintain a docket on this dispute settlement proceeding. USTR will post written submissions in the docket for public inspection, except properly designated BCI and other confidential information. You can view submissions at *Regulations.gov* by entering Docket Number USTR–2023–0012 in the search field on the home page.

If a dispute settlement panel is convened, or in the event of an appeal from a panel, USTR will make the following documents publicly available at *www.ustr.gov:* the U.S. submissions and any non-confidential summaries of submissions received from other participants in the dispute. If a dispute settlement panel is convened, or in the event of an appeal from a panel, the report of the panel, and, if applicable, the report of the Appellate Body, will also be available on the website of the World Trade Organization, at *www.wto.org.*

Juan Millan,

Deputy General Counsel for Monitoring and Enforcement, Office of the United States Trade Representative.

[FR Doc. 2023–25802 Filed 11–21–23; 8:45 am]

BILLING CODE 3390–F4–P

OFFICE OF THE UNITED STATES TRADE REPRESENTATIVE

[Docket Number USTR–2023–0013]

Request for Comments and Notice of Public Hearing Concerning the Operation of the United States-Mexico-Canada Agreement With Respect To Trade in Automotive Goods

AGENCY: Office of the United States Trade Representative (USTR).

ACTION: Request for comments and notice of public hearing.

SUMMARY: The U.S. Trade Representative must conduct a review of trade in automotive goods under the United States-Mexico-Canada Agreement (USMCA) and submit a report to the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives no later than July 1, 2024. USTR invites comments concerning the operation of the USMCA with respect to automotive goods, including the implementation and enforcement of the USMCA rules of origin for automotive goods, as well as whether the automotive provisions of the USMCA are effective in light of technological and production advances.

DATES: January 17, 2024 at 11:59 p.m. EST: Deadline for submission of written comments, request to testify, and written testimony.

February 7, 2024 at 10:00 a.m. EST: USTR and the Interagency Committee on Trade in Automotive Goods will convene a public hearing to receive oral testimony.

ADDRESSES: USTR strongly prefers electronic submissions made through the Federal rulemaking Portal: *https://www.regulations.gov/* (*Regulations.gov*). Follow the instructions for submitting written comments, testimony, and requests to testify in sections III through V below, using docket number USTR–2023–0013. For alternatives to on-line submissions, please contact Justin Hoffmann, Deputy Assistant U.S. Trade Representative for Market Access and Industrial Competitiveness, in advance of the deadline at (202) 395–2990 or *Justin.D.Hoffmann@ustr.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Justin Hoffmann, Deputy Assistant U.S. Trade Representative for Market Access and Industrial Competitiveness at (202) 395–2990 or *Justin.D.Hoffmann@ustr.eop.gov.*

SUPPLEMENTARY INFORMATION:

I. USMCA Background

On January 29, 2020, the President signed into law the USMCA Implementation Act (Pub. L. 116–113), which implements the USMCA between the United States, the United Mexican States, and Canada attached as an Annex to the Protocol Replacing the North American Free Trade Agreement. The USMCA entered into force on July 1, 2020.

The USMCA includes new rules of origin to claim preferential treatment for automotive goods, including higher Regional Value Content (RVC) thresholds, mandatory requirements to produce core parts in the region, mandatory steel and aluminum purchasing requirements, and a Labor Value Content (LVC) requirement. The USMCA allows vehicle producers to request an alternative staging regime for these requirements that would permit a longer period of transition to help ensure that future production is able to meet the new rules. The standard staging regime is specified under the Automotive Appendix to Chapter 4 of the USMCA, with the exception of Article 8, which specifies provisions relating to the alternative staging regime.

The USMCA Implementation Act and Executive Order 13908 established the Interagency Committee on Trade in Automotive Goods (Committee) to advise the President and the U.S. Trade Representative on the implementation, enforcement and modification of the USMCA provisions related to automotive goods. In addition, the Committee reviews the operation of the USMCA with respect to trade in automotive goods, including the economic effects of the USMCA automotive rules of origin on the U.S. economy, workers and consumers, and the impact of new technology on such rules.

II. Report to Congress

Section 202A(g) of the USMCA Implementation Act requires the U.S. Trade Representative, in consultation with the Committee, to conduct a biennial review of the operation of the USMCA with respect to trade in automotive goods, including:

(a) To the extent practicable, a summary of actions taken by producers to demonstrate compliance with the automotive rules of origin, use of the alternative staging regime, enforcement of such rules of origin, and other relevant matters.

(b) Whether the automotive rules of origin are effective and relevant in light of new technology and changes in content, production processes and character of automotive goods.

USTR submitted its first report to Congress on June 30, 2022. No later than

July 1, 2024, USTR will submit the results of the second biennial review to the Committee on Finance of the Senate and the Committee on Ways and Means of the House of Representatives and post a public version of the report to its website at *https://www.ustr.gov.* The 2022 report is available on USTR's website at *https://ustr.gov/sites/default/files/2022%20USMCA%20Autos%20Report%20to%20Congress.pdf.*

III. Request for Public Input

In accordance with the USMCA Implementation Act, USTR and the Committee seek views from producers of automotive goods, labor organizations and other interested parties regarding:

1. The overall operation of the USMCA with respect to automotive goods.

2. Actions taken by automotive and parts producers to demonstrate compliance with the USMCA automotive rules of origin, including:

a. The applicable RVC requirements for passenger vehicles, light trucks, heavy trucks, other vehicles and parts thereof.

b. The North American steel and aluminum purchase requirements.

c. The LVC requirements.

3. The use of alternative staging regimes by vehicle producers to meet the USMCA automotive rules of origin.

4. Enforcement of the USMCA automotive rules of origin, including the alternative staging regimes and the automotive certification process for steel and aluminum content, LVC and RVC.

5. Whether the current USMCA automotive rules of origin are effective in light of new technology and changes in the content, production processes and character of automotive goods. In particular, whether the rules of origin remain effective for:

a. The large-scale transition towards electric and other clean-energy vehicles;

b. The transition away from internal combustion and diesel vehicles;

c. The automotive parts applicable to electric and clean-energy vehicles and internal combustion or diesel vehicles; or

d. Any other vehicle and part subject to the USMCA automotive rules of origin.

6. Whether the USMCA rules of origin are effective in supporting the competitiveness of the North American automotive industry in light of global challenges, such as excess capacity of electric vehicles.

7. An update on the supply chain challenges identified in the 2022 report (*e.g.,* semiconductor shortage, war in Ukraine) and the impact the USMCA had on overcoming those supply chain challenges.

8. The impact of the 2022 Inflation Reduction Act and similar legislation, *e.g.,* the CHIPS and Science Act of 2022, and the Infrastructure Investment and Jobs Act, on the overall trade in automotive goods under the USMCA and those goods' ability to meet the USMCA rules of origin.

9. Specific issues faced by producers of heavy-duty trucks and other automotive goods not specifically addressed above.

10. Any other topics relevant to the trade in automotive goods under the USMCA.

IV. Hearing Participation

USTR will convene a public hearing on February 7, 2024 related to the operation of the USMCA with respect to autos. Persons wishing to observe the public hearing will find a link on USTR's web page for the USMCA on the day of the hearing at *https://ustr.gov/trade-agreements/free-trade-agreements/united-states-mexico-canada-agreement.* To ensure participation, you must submit requests to present oral testimony at the hearing and written testimony by 11:59 p.m. EST on January 17, 2024, via *Regulations.gov*, using Docket Number USTR–2023–0013. Instructions for submission are in section V below. Remarks at the hearing will be limited to no more than five minutes to allow for possible questions from the Committee. Because it is a public hearing, testimony should not include any business confidential information (BCI).

V. Procedures for Written Submissions

To be assured of consideration, submit your written comments, requests to testify, and written testimony by the January 17, 2024, 11:59 p.m. EST deadline. All submissions must be in English. USTR strongly encourages submissions via *Regulations.gov*, using Docket Number USTR–2023–0013.

To make a submission via *Regulations.gov*, enter Docket Number USTR–2023–0013 in the 'search for' field on the home page and click 'search.' The site will provide a search results page listing all documents associated with this docket. Find a reference to this notice by selecting 'notice' under 'document type' in the 'refine documents results' section on the left side of the screen and click on the link entitled 'comment.' *Regulations.gov* allows users to make submissions by filling in a 'type comment' field, or by attaching a document using the 'upload file' field. USTR prefers that you provide submissions in an attached document and, in such cases, that you write 'see attached' in the 'type comment' field. USTR prefers submissions in Microsoft Word (.doc) or Adobe Acrobat (.pdf). If you use an application other than those two, please indicate the name of the application in the 'type comment' field.

At the beginning of your submission or on the first page (if an attachment), include the following text: (1) 2024 USMCA Autos Report; (2) your organization's name; and (3) whether the submission is a comment, request to testify, or written testimony. Please do not attach separate cover letters, exhibits, annexes, or other attachments to electronic submissions; rather, include any in the same file as the submission itself, not as separate files. You will receive a tracking number upon completion of the submission procedure at *Regulations.gov*. The tracking number is confirmation that *Regulations.gov* received your submission. Keep the confirmation for your records. USTR is not able to provide technical assistance for *Regulations.gov*.

For further information on using *Regulations.gov*, please consult the resources provided on the website by clicking on 'How to Use *Regulations.gov*' on the bottom of the home page. USTR may not consider submissions that you do not make in accordance with these instructions.

If you are unable to provide submissions as requested, please contact Justin Hoffmann, Deputy Assistant U.S. Trade Representative for Market Access and Industrial Competitiveness, in advance of the deadline at *Justin.D.Hoffmann@ustr.eop.gov* or (202) 395–2990, to arrange for an alternative method of transmission. USTR will not accept hand-delivered submissions. General information concerning USTR is available at *www.ustr.gov*.

If you ask USTR to treat information you submit as BCI, you must certify that the information is business confidential and you would not customarily release it to the public. For any comments submitted electronically containing BCI, the file name of the business confidential version should begin with the characters 'BCI.' You must clearly mark any page containing BCI with 'BUSINESS CONFIDENTIAL' at the top of that page. Filers of submissions containing BCI also must submit a public version of their submission that will be placed in the docket for public inspection. The file name of the public version should begin with the character 'P.'

USTR will post written submissions in the docket for public inspection,

except properly designated BCI. You can view submissions at *Regulations.gov* by entering Docket Number USTR–2023–0013 in the search field on the home page.

Greta Peisch,

General Counsel, Office of the United States Trade Representative.

BILLING CODE 3390–F4–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2023–2226]

Notice of Intent To Designate as Abandoned Supplemental Type Certificate No. SA3–483

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of intent to Designate Supplemental Type Certificate as abandoned; request for comments.

SUMMARY: This Notice announces the FAA's intent to designate Supplemental Type Certificate (STC) No. SA3–483 as abandoned and make the related engineering data available upon request. The FAA has received a request to provide engineering data concerning this STC. The FAA has been unsuccessful in contacting the STC holder concerning the STC. This action is intended to enhance aviation safety.

DATES: We must receive all comments by May 20, 2024.

ADDRESSES: You may send comments on this notice by any of the following methods:

- *Federal eRulemaking Portal:* Go to *regulations.gov.* Follow the instructions for submitting comments.
- *Mail:* JoWanna Jenkins, Program Management Specialist, Central Certification Branch (Chicago), 2300 East Devon Avenue, Room 107, Des Plaines, IL 60018.
- *Email: jowanna.jenkins@faa.gov.* Include ''Docket No. FAA–2023–2226'' in the subject line of the message.
- *Hand Delivery:* Deliver to Mail address above between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: JoWanna Jenkins, Program Management Specialist, Central Certification Branch (Chicago), 2300 East Devon Avenue, Room 107, Des Plaines, IL 60018; telephone 847–294–7145; email *jowanna.jenkins@faa.gov.*

SUPPLEMENTARY INFORMATION:

Comments Invited

The FAA invites interested parties to provide comments, written data, views, or arguments relating to this notice. Send your comments to an address listed under the **ADDRESSES** section. Include ''Docket No. FAA–2023–2226'' at the beginning of your comments. The FAA will consider all comments received on or before the closing date. All comments received will be available in the docket for examination by interested persons.

Background

The FAA is posting this notice to inform the public of the intent to designate as abandoned STC No. SA3–483, which installs a Continental Model C85–12 engine on a Mooney Model M–18C 55 airplane, and subsequently release the related engineering data.

The FAA has received a third-party request for the release of the aforementioned engineering data under the provisions of the Freedom of Information Act (FOIA), 5 U.S.C. 552. The FAA cannot release commercial or financial information under FOIA without the permission of the data owner. However, in accordance with title 49 of the United States Code section 44704(a)(5), the FAA can provide STC ''engineering data'' it possesses for STC maintenance or improvement, upon request, if the following conditions are met:

1. The FAA determines the STC has been inactive for three years or more;
2. Using due diligence, the FAA is unable to locate the owner of record or the owner of record's heir; and
3. The availability of such data will enhance aviation safety.

There has been no activity with this STC holder for more than three years.

On August 24, 2023, the FAA sent a registered letter to the STC holder, Donna R. Sparks, at her last known address, 6414 East 86th Street, Kansas City, MO 64138. The letter informed Ms. Sparks that the FAA had received a request for engineering data related to STC No. SA3–483 and was conducting a due diligence search to determine whether the STC was inactive and may be considered abandoned. The letter further requested Ms. Sparks to respond in writing within 60 days and state whether she is the holder of the STC. The FAA also attempted to contact Ms. Sparks by other means, including telephone communication, email, and certified mail, without success.

Information Requested

If you are the owner or heir or a transferee of STC No. SA3–483 or have any knowledge regarding who may now hold STC No. SA3–483, please contact JoWanna Jenkins using a method described in this notice under **FOR FURTHER INFORMATION CONTACT**. If you are the heir of the owner, or the owner by transfer, of STC No. SA3–483, you must provide a notarized copy of your government-issued identification with a letter and background establishing your ownership of the STC and, if applicable, your relationship as the heir to the deceased holder of the STC.

Conclusion

If the FAA does not receive any response by May 20, 2024, the FAA will consider STC No. SA3–483 abandoned, and the FAA will proceed with the release of the requested data. This action is for the purpose of maintaining the airworthiness of an aircraft and enhancing aviation safety.

Issued on November 16, 2023.

Ross Landes,

Deputy Director for Regulatory Operations, Compliance & Airworthiness Division, Aircraft Certification Service.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2023–2183; Summary Notice No. 2023–46]

Petition for Exemption; Summary of Petition Received; Gulfstream

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petition for exemption received.

SUMMARY: This notice contains a summary of a petition seeking relief from specified requirements of Federal Aviation Regulations. The purpose of this notice is to improve the public's awareness of, and participation in, the FAA's exemption process. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

DATES: Comments on this petition must identify the petition docket number and must be received on or before December 12, 2023.

ADDRESSES: Send comments identified by docket number FAA–2023–2183 using any of the following methods:

- *Federal eRulemaking Portal:* Go to *http://www.regulations.gov* and follow the online instructions for sending your comments electronically.

• *Mail:* Send comments to Docket Operations, M–30; U.S. Department of Transportation (DOT), 1200 New Jersey Avenue SE, Room W12–140, West Building Ground Floor, Washington, DC 20590–0001.

• *Hand Delivery or Courier:* Take comments to Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

• *Fax:* Fax comments to Docket Operations at 202–493–2251.

Privacy: In accordance with 5 U.S.C. 553(c), DOT solicits comments from the public to better inform its rulemaking process. DOT posts these comments, without edit, including any personal information the commenter provides, to *http://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *http://www.dot.gov/privacy.*

Docket: Background documents or comments received may be read at *http://www.regulations.gov* at any time. Follow the online instructions for accessing the docket or go to the Docket Operations in Room W12–140 of the West Building Ground Floor at 1200 New Jersey Avenue SE, Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Deana Stedman, AIR–646, Federal Aviation Administration, phone (209) 231–3187, email *deana.stedman@faa.gov.* This notice is published pursuant to 14 CFR 11.85.

Issued in Washington, DC, on November 17, 2023.

Daniel J. Commins,

Manager, Integration and Performance.

PETITION FOR EXEMPTION

Docket No.: FAA–2023–2183.

Petitioner: Gulfstream.

Section(s) of 14 CFR Affected: §§ 25.951(c), 25.952(a), and 25.901(d).

Description of Relief Sought: The petitioner has requested a partial exemption from the affected sections of 14 CFR for a period of 3 years, in order to develop and conduct a full-scale test of the fuel system to show that the fuel system icing threat has been adequately mitigated for the Model GVIII–G700 and Model GVIII–G800 airplanes.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2023–2327]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Unmanned Aircraft Remote Identification Message Elements

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The collection involves electronic information that is broadcast directly from certain unmanned aircraft, specifically standard remote identification unmanned aircraft and unmanned aircraft equipped with a remote identification broadcast module. With certain limited exceptions, the Remote Identification of Unmanned Aircraft rule prohibits the operation of unmanned aircraft within the airspace of the United States unless the unmanned aircraft are broadcasting certain remote identification message elements throughout their operation. An exception to the general rule is when an unmanned aircraft is not equipped with remote identification equipment but is operated within visual line of sight and within an FAA-recognized identification area.

DATES: Written comments should be submitted by January 22, 2024.

ADDRESSES: Please send written comments:

By Electronic Docket: www.regulations.gov (Enter docket number into search field).

By mail: Benjamin Walsh, FAA Flight Standards Service, Emerging Technologies Division, AFS–700, 800 Independence Ave SW, Washington, DC 20591.

By fax: 202–267–8233.

FOR FURTHER INFORMATION CONTACT: Benjamin Walsh by email at: *ben.walsh@faa.gov;* phone: 202–267–8233.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0783.

Title: Unmanned Aircraft Remote Identification Message Elements.

Form Numbers: N/A.

Type of Review: Renewal of an information collection.

Background: Regulations for the Remote Identification of Unmanned Aircraft were published on January 15, 2021, and are contained in 14 Code of Federal Regulations (14 CFR), part 89. Requirements for the operation of unmanned aircraft with remote identification are contained in part 89, subpart B. The Remote Identification rule requires unmanned aircraft with remote identification equipment to broadcast remote identification message elements directly from the unmanned aircraft using radio frequency spectrum in accordance with 47 CFR part 15, where operations may occur without a Federal Communications Commission (FCC) individual license. These unmanned aircraft include standard remote identification unmanned aircraft and unmanned aircraft equipped with remote identification broadcast modules.

A standard remote identification unmanned aircraft must be capable of broadcasting the following remote identification message elements:

(a) The identity of the unmanned aircraft consisting of:

(1) A serial number assigned to the unmanned aircraft by the person responsible for the production of the standard remote identification unmanned aircraft; or

(2) A session ID.

(b) An indication of the latitude and longitude of the control station.

(c) An indication of the geometric altitude of the control station.

(d) An indication of the latitude and longitude of the unmanned aircraft.

(e) An indication of the geometric altitude of the unmanned aircraft.

(f) An indication of the velocity of the unmanned aircraft.

(g) A time mark identifying the Coordinated Universal Time (UTC) time of applicability of a position source output.

(g) An indication of the emergency status of the unmanned aircraft.

A remote identification broadcast module must be capable of broadcasting the following remote identification message elements:

(a) The identity of the unmanned aircraft consisting of the serial number assigned to the remote identification broadcast module by the person responsible for the production of the remote identification broadcast module.

(b) An indication of the latitude and longitude of the unmanned aircraft.

(c) An indication of the geometric altitude of the unmanned aircraft.

(d) An indication of the velocity of the unmanned aircraft.

(e) An indication of the latitude and longitude of the take-off location of the unmanned aircraft.

(f) An indication of the geometric altitude of the take-off location of the unmanned aircraft.

(g) A time mark identifying the Coordinated Universal Time (UTC) time of applicability of a position source output.

The collection of this information in the remote identification message elements is necessary to comply with the FAA's statutory requirement to develop and implement standards for remotely identifying operators and owners of unmanned aircraft. The collection of this information will also provide airspace awareness to enable the FAA, national security agencies, and law enforcement entities to distinguish compliant airspace users from those potentially posing a safety or security risk.

The remote identification message elements that unmanned aircraft operators are required to broadcast under Part 89 are considered publicly available information. The remote identification message elements broadcast directly from the unmanned can be received by anyone who has the appropriate equipment, such as a personal wireless device, that can receive broadcast messages.

Respondents: The collection of information through the broadcasting of message elements from a standard remote identification unmanned aircraft or remote identification broadcast module is entirely automatic. The collection uses automated, electronic, and related technological collection techniques. This framework makes it relatively simple and straightforward for individuals to comply with the broadcast requirements by operating unmanned aircraft that are standard remote identification unmanned aircraft or unmanned aircraft equipped with a remote identification broadcast module.

Frequency: Operators of unmanned aircraft with remote identification are required to broadcast the remote identification message elements addressed in this information collection on occasion (when the unmanned aircraft with remote identification is operated in the airspace of the United States).

Estimated Average Burden per Response: To transmit remote identification message elements, each remote pilot is required to operate either a standard remote identification unmanned aircraft or unmanned aircraft equipped with a remote identification broadcast module. The collection of information through the broadcasting of the remote identification message elements is entirely automatic, therefore there is no average burden associated with the broadcast of the remote identification message elements.

Estimated Total Annual Burden: The collection of information through the broadcasting of the remote identification message elements is entirely automatic, therefore there is no annual burden associated with the broadcast of the remote identification message elements.

Issued in Washington, DC, on November 17, 2023.

Joseph Morra,

Manager, Emerging Technologies Division, AFS–700.

[FR Doc. 2023–25839 Filed 11–21–23; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF THE TREASURY

Alcohol and Tobacco Tax and Trade Bureau

[Docket No. TTB–2023–0005]

Proposed Information Collections; Comment Request (No. 91)

AGENCY: Alcohol and Tobacco Tax and Trade Bureau (TTB); Treasury.

ACTION: Notice and request for comments.

SUMMARY: As part of our continuing effort to reduce paperwork and respondent burden, and as required by the Paperwork Reduction Act of 1995, we invite comments on the continuing or proposed information collections listed below in this document.

DATES: We must receive your written comments on or before January 22, 2024.

ADDRESSES: You may send comments on the information collections described in this document using one of these two methods:

- *Internet*—To submit comments electronically, use the comment form for this document posted on the ''*Regulations.gov*'' e-rulemaking website at *https://www.regulations.gov* within Docket No. TTB–2023–0005.
- *Mail*—Send comments to the Paperwork Reduction Act Officer, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005.

Please submit separate comments for each specific information collection described in this document. You must reference the information collection's title, form or recordkeeping requirement number (if any), and OMB control number in your comment.

You may view copies of this document, the relevant TTB forms, and any comments received at *https://www.regulations.gov* within Docket No. TTB–2023–0005. TTB has posted a link to that docket on its website at *https://www.ttb.gov/rrd/information-collection-notices.* You also may obtain paper copies of this document, the listed forms, and any comments received by contacting TTB's Paperwork Reduction Act Officer at the addresses or telephone number shown below.

FOR FURTHER INFORMATION CONTACT: Michael Hoover, Regulations and Rulings Division, Alcohol and Tobacco Tax and Trade Bureau, 1310 G Street NW, Box 12, Washington, DC 20005; 202–453–1039, ext. 135; or complete the Regulations and Rulings Division contact form at *https://www.ttb.gov/contact-rrd.*

SUPPLEMENTARY INFORMATION:

Request for Comments

The Department of the Treasury and its Alcohol and Tobacco Tax and Trade Bureau (TTB), as part of a continuing effort to reduce paperwork and respondent burden, invite the general public and other Federal agencies to comment on the proposed or continuing information collections described below, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Comments submitted in response to this document will be included or summarized in our request for Office of Management and Budget (OMB) approval of the relevant information collection. All comments are part of the public record and subject to disclosure. Please do not include any confidential or inappropriate material in your comments.

We invite comments on: (a) Whether an information collection is necessary for the proper performance of the agency's functions, including whether the information has practical utility; (b) the accuracy of the agency's estimate of the information collection's burden; (c) ways to enhance the quality, utility, and clarity of the information collected; (d)

ways to minimize the information collection's burden on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide the requested information.

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information has a valid OMB control number.

Information Collections Open for Comment

Currently, we are seeking comments on the following forms, letterhead applications or notices, recordkeeping requirements, questionnaires, or surveys:

OMB Control No. 1513–0009

Title: Application to Establish and Operate Wine Premises and Wine Bond.

TTB Form Number: TTB F 5120.25, TTB F 5120.36.

Abstract: The Internal Revenue Code (IRC) at 26 U.S.C. 5351 through 5357 provides for the establishment of bonded wine cellars, bonded wineries, and taxpaid wine bottling houses and, to establish such wine premises, these IRC sections require the filing of applications and bonds. Under these authorities, TTB has issued TTB F 5120.25, Application to Establish and Operate Wine Premises, to collect information that TTB uses to determine the qualifications of anyone applying to establish a new wine premises. Proprietors of established wine premises also use TTB F 5120.25 to report subsequent changes to information such as location and ownership. Unless exempted by the IRC at 26 U.S.C. 5551(d), wine premises proprietors use TTB F 5120.36, Wine Bond, to file bond coverage with TTB. The bond may be secured through a surety company, or it may be secured with collateral (cash, Treasury Bonds or Treasury Notes).

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to a change in agency estimates, TTB is decreasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 5,800.
- *Average Responses per Respondent:* 1 (one per year).
- *Number of Responses:* 5,800.
- *Average per-response Burden:* 0.97 hours.
- *Total Burden:* 5,626 hours.

OMB Control No. 1513–0015

Title: Brewer's Bond and Brewer's Bond Continuation Certificate; Brewer's Collateral Bond and Brewer's Bond Collateral Bond Continuation Certificate.

TTB Form Number: TTB F 5130.22, TTB F 5130.23, TTB F 5130.25 and TTB F 5130.27.

Abstract: In general, the IRC at 26 U.S.C. 5401(b) requires brewers to execute a bond before starting business, subject to regulations issued by the Secretary of the Treasury (the Secretary) and the exemptions for certain small brewers that are eligible to pay excise taxes on an annual or quarterly basis as provided under 26 U.S.C. 5551(d). Also under section 5401, brewers' bonds expire every four years, and a brewer must provide a new bond or a continuation certificate extending the terms of an existing bond. Additionally, under the IRC at 26 U.S.C. 7101 and subject to regulations prescribed by the Secretary, a brewer may furnish a surety bond under which a surety company guarantees payment of the proprietor's unpaid tax liabilities, or a brewer may submit other obligations, such as United States Treasury securities. Under those IRC authorities, the TTB regulations in 27 CFR part 25 require brewers to file a surety bond using TTB F 5130.22, Brewer's Bond, or a collateral bond backed by U.S. Treasury securities, notes, or cash using TTB F 5130.25, Brewer's Collateral Bond. To continue an existing bond, a brewer may furnish a surety bond continuation certificate using TTB F 5130.23 or a collateral bond continuation certificate using TTB F 5130.27, as appropriate. The collected information is necessary to document the required bonds.

Current Actions: There are no program changes associated with this information collection, and TTB is submitting it for extension purposes only. As for adjustments, due to changes in agency estimates, TTB is decreasing the estimated number of annual respondents and responses to this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profits.

- *Number of Respondents:* 150.
- *Average Responses per Respondent:* 1 (one) per year.
- *Number of Responses:* 150.
- *Average per-response Burden:* 0.84.
- *Total Burden:* 126 hours.

OMB Control No. 1513–0017

Title: Drawback on Beer Exported.

TTB Form Number: TTB F 5130.6.

Abstract: Under the IRC at 26 U.S.C. 5055, brewers may receive drawback (refund) of the Federal excise tax paid on beer produced in the United States when such beer is subsequently exported or delivered for use as supplies on vessels and aircraft if proof of such action is provided as the Secretary may by regulation require. Under this authority, after taxpaid domestic beer is exported to a foreign country, delivered to the U.S. Armed Forces for export, delivered for use as supplies on vessels or aircraft, or transferred to a foreign trade zone for export, the TTB regulations allow the brewer or exporter to file a claim for drawback of the excise taxes paid on such beer using TTB F 5130.6. The required information is necessary as it provides documentation through which TTB can determine that beer for which export drawback is claimed is eligible for such drawback.

Current Actions: There are no program changes associated with this information collection, and TTB is submitting it for extension purposes only. As for adjustments, due to changes in agency estimates, TTB is decreasing the estimated number of annual respondents and responses to this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 725.
- *Average Responses per Respondent:* 20 per year.
- *Number of Responses:* 14,500.
- *Average per-response Burden:* 1 hour.
- *Total Burden:* 14,500 hours.

OMB Control No. 1513–0025

Title: Notice of Release of Tobacco Products, Cigarette Papers, or Cigarette Tubes.

TTB Form Number: TTB F 5200.11

Abstract: The IRC at 26 U.S.C. 5704 provides, among other things, that tobacco products and cigarette papers and tubes that have been imported or exported and then returned may be released from customs custody, without payment of tax, for delivery to an export warehouse proprietor or a manufacturer of tobacco products or cigarette papers and tubes, in accordance with regulations issued by the Secretary. Under that IRC authority, the TTB tobacco-related import regulations in 27 CFR part 41 require industry members

who do not file customs entries electronically to use TTB F 5200.11 to give notice of release of tobacco products, cigarette papers, or cigarette tubes. At importation, industry members, TTB, and customs bonded warehouse proprietors or government officials use TTB F 5200.11 to, respectively, request, authorize, and document the release of such products from customs custody, without payment of tax, to a manufacturer or export warehouse proprietor authorized to receive such articles. (The electronic submission of import data and notices of release to TTB through Customs and Border Protection systems is approved under OMB Number 1513–0064, Importer's Records and Reports.)

Current Actions: There are no program changes or adjustments associated with this information collection, and TTB is submitting it for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profits.

- *Number of Respondents:* 10.
- *Average Responses per Respondent:* 6 (one) per year.
- *Number of Responses:* 60.
- *Average per-response Burden:* 0.25 hours.
- *Total Burden:* 15 hours.

OMB Control No. 1513–0032

Title: Inventory—Manufacturer of Tobacco Products or Processed Tobacco.

TTB Form Number: TTB F 5210.9.

Abstract: The IRC at 26 U.S.C. 5721 requires manufacturers of tobacco products and processed tobacco to complete an inventory at the commencement of business, the conclusion of business, and at any other time the Secretary by regulation prescribes. Under the IRC at 26 U.S.C. 5741, these manufacturers are also required to keep records and make them available for inspection in the manner the Secretary by regulation prescribes. Under these authorities, the TTB regulations in 27 CFR part 40 require manufacturers of tobacco products and processed tobacco to provide inventories on TTB F 5210.9 at the commencement of business, the conclusion of business, when changes in business ownership or factory location occur, and at any other time as directed by the appropriate TTB officer. The use of TTB F 5210.9 provides a uniform format for recording inventories. The collected information is necessary to ensure that manufacturers of tobacco products pay the appropriate amount of Federal excise tax, and that processed tobacco, which is not subject to that tax, is not diverted to the illegal manufacture of otherwise taxable tobacco products.

Current Actions: There are no program changes or adjustments associated with this information collection at this time, and TTB is submitting it for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 100.
- *Average Responses per Respondent:* 1 (one) per year.
- *Number of Responses:* 100.
- *Average per-response Burden:* 5 hours.
- *Total Burden:* 500 hours.

OMB Control No. 1513–0036

Title: Signing Authority for Corporate and LLC Officials.

TTB Form Number: TTB F 5100.1.

Abstract: Under the IRC at 26 U.S.C. 6061, any return, statement, or other document required to be made under internal revenue laws or regulations ''shall be signed in accordance with forms or regulations'' prescribed by the Secretary. Under that section's authority, TTB provides form TTB F 5100.1, which corporations and limited liability companies (LLCs) may use to identify the specific officials or employees, by name or by position title, authorized by their articles of incorporation, bylaws, or governing officials to act on behalf of, or sign documents for, the entity in TTB matters. This information collection allows TTB to identify the corporate and LLC officials or employees authorized to act on an entity's behalf in TTB matters.

Current Actions: There are no program changes associated with this information collection, and TTB is submitting it for extension purposes only. As for adjustments, due to changes in agency estimates, TTB is decreasing the estimated number of annual respondents, responses, and burden hours associated with this collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profits.

- *Number of Respondents:* 2,150.
- *Average Responses per Respondent:* 1 per year.
- *Number of Responses:* 2,150.
- *Average per-response Burden:* 11.47 minutes.
- *Total Burden:* 411 hours.

OMB Control No. 1513–0037

Title: Withdrawal of Spirits, Specially Denatured Spirits, or Wines for Exportation.

TTB Form Number: TTB F 5100.11.

Abstract: The IRC at 26 U.S.C. 5066, 5214, and 5362 provides that distilled spirits, denatured spirits, and wines may be withdrawn from bonded premises, without payment of excise tax, for export, for transfer to a foreign trade zone or a customs bonded warehouse, or for use as supplies on certain vessels or aircraft, subject to regulations prescribed by the Secretary. Under those IRC authorities, the TTB alcohol export regulations in 27 CFR part 28 require exporters to use TTB F 5100.11 to report and document removals of distilled spirits, denatured spirits, and wines, without payment of tax, for export purposes. Those purposes include direct export to a foreign country or United States armed forces stationed overseas; transfer to a foreign trade zone, a customs manufacturing bonded warehouse, or a customs bonded warehouse for subsequent export; or for use as supplies on international vessels or aircraft. The collected information is necessary as it allows TTB to determine that exporters of spirits and wines withdrawn without payment of tax possess the appropriate bond coverage, and the form provides certification that the products in question were, in fact, exported or laden and not diverted into domestic commerce, which would make the products subject to tax.

Current Actions: There are no program changes associated with this information collection, and TTB is submitting it for extension purposes only. As for adjustments, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profits.

- *Number of Respondents:* 370.
- *Average Responses per Respondent:* 20.
- *Number of Responses:* 7,400.
- *Average per-response Burden:* 0.5 hour (30 minutes).
- *Total Burden:* 3,700 hours.

OMB Control No. 1513–0038

Title: Application for Transfer of Spirits and/or Denatured Spirits in Bond.

TTB Form Number: TTB F 5100.16.

Abstract: Under the IRC at 26 U.S.C. 5005(c), when a proprietor of a distilled spirits plant (DSP) or an alcohol fuel plant (AFP, a type of DSP) desires to have spirits or denatured spirits transferred to its plant from another domestic plant, the proprietor must

make an application to receive such spirits in bond. Under that IRC authority, the TTB regulations in 27 CFR part 19 require the receiving proprietor to file an application for the transfer on TTB F 5100.16, Application for Transfer of Spirits and/or Denatured Spirits in Bond. TTB must approve the application before the transfer may occur. The collected information is necessary to ensure that the receiving plant has adequate bond coverage, as required.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to a change in agency estimates resulting from continued growth in the number of DSPs in the United States, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 505.
- *Average Responses per Respondent:* 6 per year.
- *Number of Responses:* 3,030.
- *Average per-response Burden:* 0.152 hours.
- *Total Burden:* 461 hours.

OMB Control No. 1513–0044

Title: Distilled Spirits Plants—Notices of Alternations and Changes in Production Status, and Alternating Premises Records.

Abstract: Under the IRC at 26 U.S.C. 5178(a), a DSP is a delineated place on which only certain authorized activities may be conducted. However, under section 5178(b), the Secretary may authorize other businesses on a DSP's premises upon application under certain circumstances. Also, under the IRC at 26 U.S.C. 5221, DSP proprietors are required to give written notification, in the form and manner prescribed by regulation, when they begin, suspend, or resume production of spirits. In addition, the IRC at 26 U.S.C. 5555 requires those liable for any tax imposed by chapter 51 of the IRC to keep such records, submit such returns and statements, and comply with such rules and regulations as the Secretary may prescribe. Under these authorities, TTB has issued regulations in 27 CFR part 19 requiring DSP proprietors to provide written notification regarding alternations of DSPs between proprietors or for customs purposes, and regarding changes to the production status of spirits. TTB also has issued regulations requiring DSP proprietors to keep alternating premises records when alternating operations at DSPs, including with an adjacent bonded wine cellar, taxpaid wine bottling house or brewery, as a manufacturer of eligible flavors, or as general premises. The collected information is necessary to ensure compliance with the statutory provisions regarding authorized activities and the applicable Federal excise tax.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 1,560.
- *Average Responses per Respondent:* 5 per year.
- *Number of Responses:* 7,800.
- *Average per-response Burden:* 0.5 hours (30 minutes).
- *Total Burden:* 3,900 hours.

OMB Control No. 1513–0048

Title: Registrations and Miscellaneous Requests and Notices for Distilled Spirits Plants; Distilled Spirits Related Requests and Notices.

TTB Form Number: TTB F 5110.41.

Abstract: The IRC at 26 U.S.C. 5171 and 5172, provides than an application to register a DSP must be made in conformity with regulations issued by the Secretary, while 26 U.S.C. 5201 requires DSPs to operate in conformity with such regulations. The IRC at 26 U.S.C. 5312 also authorizes the Secretary to issue regulations regarding the use of distilled spirits by certain educational and scientific institutions for experimental or research use, and that section authorizes the establishment and regulation of experimental DSPs. Under those authorities, the TTB regulations in 27 CFR part 19 prescribe the use of TTB F 5110.41 to register a DSP or to make certain amendments to an existing DSP registration. The TTB regulations in part 19 also require DSP operators to submit various miscellaneous notices or requests to vary their operations from the requirements of that part. In addition, the regulations in part 19 require persons who are neither registered DSPs nor applicants for registration to submit applications or notices related to certain distilled spirits activities, such as the establishment of an experimental DSP or the use of spirits for research purposes. The required information assists TTB in determining a person's eligibility to establish and operate a DSP, whether a variance from TTB's regulatory requirements should be approved, and whether entities that are not DSPs are eligible to engage in certain distilled spirits-related activities.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 4,600.
- *Average Responses per Respondent:* 1.1944 per year.
- *Number of Responses:* 5,495.
- *Average per-response Burden:* 1.7047 hours.
- *Total Burden:* 9,367 hours.

OMB Control No. 1513–0050

Title: Tax Deferral Bond—Distilled Spirits (Puerto Rico).

TTB Form Number: TTB F 5110.50.

Abstract: Under the IRC at 26 U.S.C. 7652, beverage distilled spirits, as well as nonbeverage products containing spirits subject to tax, produced in Puerto Rico and brought into the United States, are subject to a tax equal to that imposed by the IRC on domestically produced spirits. That section also authorizes the Secretary to prescribe regulations regarding the mode and time for the collection of such taxes. In addition, the IRC at 26 U.S.C. 7101 and 7102 authorizes the Secretary to issue regulations regarding bonds required under the IRC or its related regulations. Under those IRC authorities, the TTB regulations in 27 CFR part 26 allow respondents who ship taxable distilled spirits products produced in Puerto Rico to the United States to either pay the required tax prior to shipment or to file a bond to defer payment of the tax due until the submission of the respondent's next excise tax return. The regulations require those who elect to defer tax payment on such shipments to file a bond on TTB F 5110.50 to guarantee payment of the taxes due in case of default. The information collected administers these statutory provisions.

Current Actions: There are no program changes or adjustments to this

information collection, and TTB is submitting for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 10.
- *Average Responses per Respondent:* 1 (1 per year).
- *Number of Responses:* 10.
- *Average per-response Burden:* 1 hour.
- *Total Burden:* 10 hours.

OMB Control No. 1513–0053

Title: Report of Wine Premises Operations.

TTB Form Number: TTB F 5120.17.

Abstract: The IRC at 26 U.S.C. 5367 authorizes the Secretary to issue regulations requiring the keeping of records and the filing of returns related to wine cellar and bottling house operations. Section 5555 of the IRC also generally requires any person liable for tax under chapter 51 of the IRC to keep records, provide statements, and make returns as the Secretary prescribes by regulation. Under those IRC authorities, the TTB wine regulations in 27 CFR part 24 require wine premises proprietors to file periodic operations reports on form TTB F 5120.17. TTB uses the collected information to verify excise tax liabilities and ensure that respondents operate wine premises in accordance with applicable Federal law and regulations. TTB also uses this report to collect raw data on wine premises activity for its generalized monthly statistical report on wine operations, which TTB makes public on its website.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to changes in agency estimates, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 17,000.
- *Average Responses per Respondent:* 4.34 per year.
- *Number of Responses:* 74,460.
- *Average per-response Burden:* 1.10 hours.
- *Total Burden:* 81,906 hours.

OMB Control No. 1513–0064

Title: Importer's Records and Reports.

TTB REC Number: TTB REC 5170/1.

Abstract: Pursuant to chapters 51 and 52 of the IRC and the Federal Alcohol Administration Act (FAA Act, 27 U.S.C. 201 *et seq.*), TTB regulates, among other things, the importation of alcohol and tobacco products. Under those statutory authorities, TTB has issued regulations in 27 CFR requiring importers of alcohol and tobacco products to provide certain information regarding their permits, the products imported, and the taxes paid on those products or, for products released from customs custody without payment of tax, the transfer of such products to a bonded facility. TTB also uses the collected information to ensure that imported alcohol beverage labels comply with FAA Act labeling requirements. Under this information collection, importers generally submit the required information electronically through Customs and Border Protection's interface during the import entry process, and the required information is then transmitted to TTB. In addition, importers may submit letterhead applications to TTB to request variances from established regulatory provisions. The collected import and letterhead variance information is necessary to ensure that importers comply with Federal laws and regulations regarding alcohol and tobacco products or that TTB can authorize alternatives that are not contrary to law and are consistent with the intent of existing requirements.

Current Actions: There are no program changes or adjustments to this information collection, and TTB is submitting for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits; State and local governments.

- *Number of Respondents:* 10,550.
- *Average Responses per Respondent:* 6 per year.
- *Number of Responses:* 63,300.
- *Average per-response Burden:* 0.33 hours (20 minutes).
- *Total Burden:* 21,100 hours.

OMB Control No. 1513–0083

Title: Excise Tax Return.

TTB Form Number: TTB F 5000.24.

Abstract: Under the IRC at 26 U.S.C. 5061(a) and 5703(b), the Federal alcohol and tobacco excise taxes imposed by the IRC are collected on the basis of a return, containing such information as the Secretary requires by regulation. Under those IRC authorities, the TTB regulations require such excise taxpayers, other than those in Puerto Rico, report their alcohol or tobacco excise tax liability using TTB F 5000.24, Excise Tax Return. Tobacco taxpayers and large alcohol producers file their returns and pay their excise taxes on a semi-monthly basis, while certain small alcohol producers file returns and pay taxes on a quarterly or annual basis, depending on certain circumstances. The collected information is necessary to establish a taxpayer's identity, the amount and type of taxes due, and the amount of the payment made.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to a change in agency estimates, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 20,382.
- *Average Responses per Respondent:* 6.2.
- *Number of Responses:* 126,370.
- *Average per-response Burden:* 0.75 hours (45 minutes).
- *Total Burden:* 94,775.5 hours.

OMB Control No. 1513–0092

Title: Marks on Wine Containers.

TTB REC Number: TTB REC 5120/3.

Abstract: The IRC at 26 U.S.C. 5041 imposes a per gallon Federal excise tax of varying rates on six classes of wine—three classes of still wines (based on alcohol content), two classes of effervescent wines, and one class of hard cider. Under the authority of the IRC at 26 U.S.C. 5368, 5388, and 5662, the TTB regulations in 27 CFR part 24, Wine, require wine premises proprietors to correctly identify wines kept on or removed from their premises by placing certain marks, labels, or other information on all production, storage, and consumer containers of wine. Because of the varying excise tax rates on wines, and because different tax classes of wine may be produced at the same premises, the required information is necessary to ensure that wines are correctly identified for excise tax purposes. However, the placement of identifying information on wine containers is a usual and customary business practice carried out by wine premises proprietors, regardless of any regulatory requirement to do so, in order to track their wine production and inventory and, ultimately, identify the products for the consumer.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to a change in agency estimates, TTB is increasing the estimated number of annual

respondents and total responses associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 17,000.
- *Average Responses per Respondent:* 1 (once per year).
- *Number of Responses:* 17,000.
- *Average per-response and Total Burden:* None. This information collection consists of usual and customary marks and labels on wine containers placed by respondents during the normal course of business, regardless of any regulatory requirement to do so. As such, under the Office of Management and Budget (OMB) regulations at 5 CFR 1320.3(b)(2), this information collection imposes no additional burden on respondents.

OMB Control No. 1513–0113

Title: Special Tax ''Renewal'' Registration and Return/Special Tax Location Registration Listing.

TTB Form Number: TTB F 5630.5R.

Abstract: The IRC at 26 U.S.C. 5731 and 5732 requires manufacturers of tobacco products, manufacturers of cigarette papers and tubes, and export warehouse proprietors to pay an annual special (occupational) tax (SOT) for each such premises that they operate, on the basis of a return and under regulations issued by the Secretary. TTB annually sends a SOT return and premises registration form, TTB F 5630.5R, with pre-populated premises data to tobacco industry members that have previously paid special tax. TTB's use of TTB F 5630.5R facilitates the registration of premises subject to SOT and the timely payment of that tax by businesses subject to it.

Current Actions: There are no program changes or adjustments to this information collection, and TTB is submitting for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 220.
- *Average Responses per Respondent:* 1 (one) per year.
- *Number of Responses:* 220.
- *Average per-response Burden:* 0.25 hours (15 minutes).
- *Total Burden:* 55 hours.

OMB Control No. 1513–0115

Title: Usual and Customary Business Records Relating to Wine.

TTB REC Number: TTB REC 5120/1.

Abstract: Under the authority of the IRC at 26 U.S.C. 5362, 5367, 5369, 5370, and 5555, the TTB regulations require wineries, taxpaid wine bottling houses, and vinegar plants to keep certain usual and customary business records. These records include purchase and sales invoices, and internal records related to their production and processing of wine, and their packaging, storage, and shipping operations. TTB routinely inspects these records to verify proper payment of Federal wine excise taxes, and to ensure that proprietors produce, package, store, ship, and transfer wine in compliance with the applicable Federal statutory and regulatory requirements.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to a change in agency estimates, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 17,000.
- *Average Responses per Respondent:* 1 (one) per year.
- *Number of Responses:* 17,000.
- *Average per-response and Total Burden:* None. This information collection consists of usual and customary business records kept by wine industry members during the normal course of business, regardless of any regulatory requirement to do so. As such, under the Office of Management and Budget (OMB) regulations at 5 CFR 1320.3(b)(2), this information collection imposes no additional burden on respondents.

OMB Control No. 1513–0123

Title: Application, Permit, and Report—Wine and Beer (Puerto Rico); and Application, Permit and Report—Distilled Spirits Products (Puerto Rico).

TTB Form Number: TTB F 5110.21, F 5110.51.

Abstract: In general, under the IRC at 26 U.S.C. 7652, merchandise manufactured in Puerto Rico and shipped to the United States for consumption or sale is subject to a tax equal to the internal revenue tax imposed in the United States upon like articles of merchandise of domestic manufacture. That section also authorizes the Secretary to issue regulations regarding the collection of such taxes, which, as provided in that section, are largely transferred to the treasury of Puerto Rico. Under that IRC authority, the TTB regulations in 27 CFR part 26 require persons who intend to ship alcohol products produced in Puerto Rico to the United States for consumption or sale to file an application and permit to compute the tax on, tax-pay, and withdraw those products for shipment. As such, the TTB regulations prescribe the use of TTB F 5100.21 for beer or wine products, and TTB F 5110.51 for distilled spirits products. In cases where the respondent makes the shipment taxpaid, TTB uses the required information to verify that the respondent has paid the correct amount of tax. In cases where the respondent is eligible to defer the tax payment, TTB uses the information to ensure that the respondent's bond coverage is adequate to cover the taxes due. If necessary, TTB also uses the collected information to enforce collection of any Federal excise tax owed on such shipments.

Current Actions: There are no program changes or adjustments to this information collection, and TTB is submitting for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 35.
- *Average Responses per Respondent:* 1 (one) per year.
- *Number of Responses:* 35.
- *Average per-response Burden:* 1 hour.
- *Total Burden:* 35 hours.

OMB Control No. 1513–0125

Title: Distilled Spirits Bond.

TTB Form Number: TTB F 5110.56.

Abstract: The IRC at 26 U.S.C. 5173 and 5181 requires DSPs and AFPs, respectively, to furnish a bond, unless exempted from doing so under the IRC at 26 U.S.C. 5551(d) or 5181(c)(3). Under those IRC authorities, the TTB regulations in 27 CFR part 19 require proprietors of such plants that are required to submit a bond to use TTB F 5110.56 to file with TTB either a surety bond or a collateral bond using cash or U.S. securities. Using that same form, proprietors also may withdraw coverage for one or more plants, and DSP proprietors may provide operations coverage for adjacent wine cellars. The collected information is necessary to implement the statutory provisions and ensure payment of delinquent Federal alcohol excise tax liabilities.

Current Actions: There are no program changes to this information collection, and TTB is submitting for extension purposes only. As for adjustments, due to a change in agency estimates resulting from continued growth in the number of DSPs in the

United States, TTB is increasing the estimated number of annual respondents, total responses, and burden hours associated with this information collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 400.
- *Average Responses per Respondent:* 1 (one) per year.

- *Average per-response Burden:* 1 hour.
- *Total Burden:* 400 hours.

OMB Control No. 1513–0128

Title: Records to Support Tax Free and Tax Overpayment Sales of Firearms and Ammunition.

TTB Form Number: TTB F 5600.33, TTB F 5600.34, TTB F 5600.35, TTB F 5600.36, TTB F 5600.37.

Abstract: The Internal Revenue Code (IRC) at 26 U.S.C. 4181 imposes a tax on the sale of firearms and ammunition. However, under the IRC at 26 U.S.C. 4221(a), certain sales may be made tax-free, including sales made for further manufacture, export, or use as supplies on vessels or aircraft, and sales made to a State or local government or to a nonprofit education organization for their exclusive use. In addition, for such sales where the tax has been paid, the tax is considered an overpayment subject to credit or refund under the IRC at 26 U.S.C. 6416(b)(2) and (3). The TTB regulations in 27 CFR part 53 prescribe that those otherwise subject to this tax must maintain records, including statements or certificates containing specified information, documenting the tax-free or tax-overpaid nature of such sales. Respondents may use commercial records or self-generated supporting statement or certificates, or, for certain transactions, respondents may use TTB-provided forms, which, when completed, document the required supporting information. The required supporting information is maintained by respondents at their business premises, and TTB may examine these records during audits.

Current Actions: There are no program changes or adjustments to this information collection, and TTB is submitting for extension purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profits.

- *Number of Respondents:* 3,500.
- *Average Responses per Respondent:* 12 (once per month).
- *Number of Responses:* 42,000.
- *Average per-response Burden:* 0.375 hours (22.5 minutes).
- *Total Burden:* 15,750 hours.

Dated: November 16, 2023.

Amy R. Greenberg,

Director, Regulations and Rulings Division.

Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems; Quality Reporting Programs; Payment for Intensive Outpatient Services in Hospital Outpatient Departments, Community Mental Health Centers, Rural Health Clinics, Federally Qualified Health Centers, and Opioid Treatment Programs; Hospital Price Transparency; Changes to Community Mental Health Centers Conditions of Participation, Changes to the Inpatient Prospective Payment System Medicare Code Editor; Rural Emergency Hospital Conditions of Participation Technical Correction

AGENCY: Centers for Medicare & Medicaid Services (CMS), Department of Health and Human Services (HHS).

ACTION: Final rule with comment period.

SUMMARY: This final rule with comment period revises the Medicare hospital outpatient prospective payment system (OPPS) and the Medicare ambulatory surgical center (ASC) payment system for calendar year 2024 based on our continuing experience with these systems. In this final rule, we describe the changes to the amounts and factors used to determine the payment rates for Medicare services paid under the OPPS and those paid under the ASC payment system. Also, this final rule updates and refines the requirements for the Hospital Outpatient Quality Reporting (OQR) Program, the ASC Quality Reporting (ASCQR) Program, and the Rural Emergency Hospital Quality Reporting (REHQR) Program. In this final rule, we are also establishing a payment for certain intensive outpatient services under Medicare, beginning January 1, 2024. In addition, this final rule updates and refines requirements for hospitals to make public their standard charge information and enforcement of hospital price transparency. We are finalizing changes to the community mental health center (CMHC) Conditions of Participation (CoPs) to provide requirements for furnishing intensive outpatient (IOP) services, and we are finalizing the proposed personnel qualifications for mental health counselors (MHCs) and marriage and family therapists (MFTs). Additionally, we are finalizing the removal of discussion of the inpatient prospective payment system (IPPS) Medicare Code Editor (MCE) from the annual IPPS rulemakings, beginning with the fiscal year (FY) 2025 rulemaking. Finally, we are finalizing a technical correction to the Rural Emergency Hospital (REH) CoPs under the standard for the designation and certification of REHs.

DATES:

Effective date: The provisions of this rule are effective January 1, 2024.

Comment period: To be assured consideration, comments must be received at one of the addresses provided below, by January 1, 2024.

ADDRESSES: In commenting, please refer to file code CMS–1786–FC.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *https://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1786–FC, P.O. Box 8010, Baltimore, MD 21244–8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1786–FC, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

SUPPLEMENTARY INFORMATION: *Inspection of Public Comments:* All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the comment period on the following website as soon as possible after they have been received: *https://www.regulations.gov.* Follow the search instructions on that website to view public comments. CMS will not post on *Regulations.gov* public comments that make threats to individuals or institutions or suggest that the individual will take actions to harm the individual. CMS continues to encourage individuals not to submit duplicative comments. We will post acceptable comments from multiple unique commenters even if the content is identical or nearly identical to other comments.

Addenda Available Only Through the Internet on the CMS Website

In the past, a majority of the Addenda referred to in our OPPS/ASC proposed and final rules were published in the **Federal Register** as part of the annual rulemakings. However, beginning with the calendar year (CY) 2012 OPPS/ASC proposed rule, all of the Addenda no longer appear in the **Federal Register** as part of the annual OPPS/ASC proposed and final rules to decrease administrative burden and reduce costs associated with publishing lengthy tables. Instead, these Addenda are published and available only on the CMS website. The Addenda relating to the OPPS are available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

The Addenda relating to the ASC payment system are available at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/asc-regulations-and-notices.*

Table of Contents

I. Summary and Background

A. Executive Summary of This Document

1. Purpose

In this final rule with comment period, we are updating the payment policies and payment rates for services furnished to Medicare beneficiaries in hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs), beginning January 1, 2024. Section 1833(t) of the Social Security Act (the Act) requires us to annually review and update the payment rates for services payable under the Hospital Outpatient Prospective Payment System (OPPS). Specifically, section 1833(t)(9)(A) of the Act requires the Secretary of the Department of Health and Human Services (the Secretary) to review certain components of the OPPS not less often than annually, and to revise the groups, the relative payment weights, and the wage and other adjustments that take into account changes in medical practice, changes in technology, and the addition of new services, new cost data, and other relevant information and factors. In addition, under section 1833(i)(D)(v) of the Act, we annually review and update the ASC payment rates. This final rule with comment period also includes additional policy changes made in accordance with our experience with the OPPS and the ASC payment system and recent changes in our statutory authority. We describe these and various other statutory authorities in the relevant sections of this final rule with comment period. In addition, this final rule with comment period updates and refines the requirements for the Hospital Outpatient Quality Reporting (OQR) Program, the ASC Quality Reporting (ASCQR) Program, and Rural Emergency Hospital Quality Reporting (REHQR) Program. In addition, this final rule with comment period establishes payment for intensive outpatient services under Medicare, beginning January 1, 2024. This final rule with comment period also updates and refines the requirements for hospitals to make public their standard charges and CMS enforcement of hospital price transparency regulations. In addition, we are finalizing changes to the CMHC CoPs to provide requirements for furnishing IOP services. In addition, we are finalizing changes to the CMHC CoPs to provide requirements for furnishing IOP services, as well as finalizing the proposed personnel qualifications for MHCs and MFTs. We are also finalizing the removal of discussion of the IPPS Medicare Code Editor (MCE) from the annual IPPS rulemakings, beginning with the FY 2025 rulemaking. Finally, we are finalizing a technical correction to the Rural Emergency Hospital (REH) CoPs under the standard for the designation and certification of REHs.

2. Summary of the Major Provisions

- *OPPS Update:* For 2024, we are increasing the payment rates under the OPPS by an Outpatient Department (OPD) fee schedule increase factor of 3.1 percent. This increase factor is based on the final inpatient hospital market basket percentage increase of 3.3 percent for inpatient services paid under the hospital inpatient prospective payment system (IPPS) reduced by a final productivity adjustment of 0.2 percentage point. Based on this update, we estimate that total payments to OPPS providers (including beneficiary cost sharing and estimated changes in enrollment, utilization, and case mix) for calendar year (CY) 2024 will be approximately $88.9 billion, an increase of approximately $6.0 billion compared to estimated CY 2023 OPPS payments.

We are continuing to implement the statutory 2.0 percentage point reduction in payments for hospitals that fail to meet the hospital outpatient quality reporting requirements by applying a reporting factor of 0.9806 to the OPPS payments and copayments for all applicable services.

- *Data used in CY 2024 OPPS/ASC Ratesetting:* To set OPPS and ASC payment rates, we normally use the most updated claims and cost report data available. The best available claims data is the most recent set of data which would be from 2 years prior to the calendar year that is the subject of rulemaking. Cost report data usually lags the claims data by a year and we believe that using the most updated cost report extract available from the Healthcare Cost Report Information System (HCRIS) is appropriate for CY 2024 OPPS ratesetting. Therefore, we are using our typical data process of using the most updated cost reports and claims data available for CY 2024 OPPS ratesetting.
- *Partial Hospitalization Update:* For CY 2024, we are finalizing changes to our methodology used to calculate the Community Mental Health Center (CMHC) and hospital-based PHP (HB PHP) geometric mean per diem costs. We also are finalizing changes to expand PHP payment from two APCs to four APCs.
- *Medicare Payment for Intensive Outpatient Programs:* Beginning in CY 2024, we are finalizing payment for intensive outpatient program (IOP) services under Medicare. We are finalizing the scope of benefits, physician certification requirements, coding and billing, and payment rates under the IOP benefit. IOP services may be furnished in hospital outpatient departments, community mental health centers (CMHCs), federally qualified health centers (FQHCs), and rural health clinics (RHCs). We also are finalizing payment for intensive outpatient services provided by opioid treatment programs (OTPs) under the existing OTP benefit.
- *Changes to the Inpatient Only (IPO) List:* For 2024, we are finalizing our proposal to not remove any services from the IPO list for CY 2024.
- 340B*Acquired Drugs:* For CY 2024, we are continuing to apply the default rate, generally average sales price (ASP) plus 6 percent, to 340B acquired drugs and biologicals in this final rule with comment period. Therefore, drugs and biologicals acquired under the 340B program will be paid at the same payment rate as those drugs and biologicals not acquired under the 340B program.
- *Biosimilar Packaging Exception:* For CY 2024, we are finalizing our proposal to except biosimilars from the OPPS threshold packaging policy when their reference products are separately paid. However, we are not finalizing that all the biosimilars related to the reference product would be similarly

packaged if a reference product's per-day cost falls below the threshold packaging policy.

• *Finalizing to Pay IHS and Tribal Hospitals that Convert to a Rural Emergency Hospital (REH) Under the IHS All-Inclusive Rate (AIR):* For CY 2024, we are finalizing that IHS and tribal hospitals that convert to an REH be paid for hospital outpatient services under the same all-inclusive rate that would otherwise apply if these services were performed by an IHS or tribal hospital that is not an REH. We also are finalizing that IHS and tribal hospitals that convert to an REH would receive the REH monthly facility payment consistent with how this payment is applied to REHs that are not tribally or IHS operated.

• *Device Pass-Through Payment Applications:* For CY 2024, we received six applications for device pass-through payments. We sought public comment on these applications and are approving four applicants for device pass-through payment status in this final rule with comment period.

• *Cancer Hospital Payment Adjustment:* For CY 2024, we are continuing to provide additional payments to cancer hospitals so that a cancer hospital's payment-to-cost ratio (PCR) after the additional payments is equal to the weighted average PCR for the other OPPS hospitals using the most recently submitted or settled cost report data. Section 16002(b) of the 21st Century Cures Act requires that this weighted average PCR be reduced by 1.0 percentage point. In light of the public health emergency (PHE) impact on claims and cost data used to calculate the target PCR, we have maintained the CY 2021 target PCR of 0.89 through CYs 2022 and 2023. In this final rule with comment period, we are finalizing to reduce the target PCR by 1.0 percentage point each calendar year until the target PCR equals the PCR of non-cancer hospitals using the most recently submitted or settled cost report data. For CY 2024, we are finalizing a target PCR of 0.88 to determine the CY 2024 cancer hospital payment adjustment to be paid at cost report settlement. That is, the payment adjustments will be the additional payments needed to result in a PCR equal to 0.88 for each cancer hospital.

• *ASC Payment Update:* For CYs 2019 through 2023, we adopted a policy to update the ASC payment system using the hospital market basket update. In light of the impact of the COVID–19 PHE on healthcare utilization, we are finalizing to extend our policy to update the ASC payment system using the hospital market basket update an additional 2 years—through CYs 2024 and 2025. Using the hospital market basket methodology, for CY 2024, we are increasing payment rates under the ASC payment system by 3.1 percent for ASCs that meet the quality reporting requirements under the ASCQR Program. This increase is based on a hospital market basket percentage increase of 3.3 percent reduced by a productivity adjustment of 0.2 percentage point. Based on this final update, we estimate that total payments to ASCs (including beneficiary cost sharing and estimated changes in enrollment, utilization, and case-mix) for CY 2024 will be approximately $7.1 billion, an increase of approximately $207 million compared to estimated CY 2023 Medicare payments.

• *Changes to the List of ASC Covered Surgical Procedures:* For CY 2024, we are adding 37 surgical procedures, including total shoulder arthroplasty (TSA) (Healthcare Common Procedure Coding System (HCPCS) code 23472), to the ASC covered procedures list (CPL) based upon existing criteria at § 416.166.

• *Hospital Outpatient Quality Reporting (OQR) Program:* We are finalizing our proposals to: (1) modify the COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure beginning with the CY 2024 reporting period/CY 2026 payment determination; (2) modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure beginning with the voluntary CY 2024 reporting period; (3) modify the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure beginning with the CY 2024 reporting period/CY 2026 payment determination; and (4) amend multiple codified regulations to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We are finalizing with modification the proposal to adopt the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting (THA/TKA PRO–PM) with voluntary reporting beginning with the CY 2025 reporting period through the CY 2027 reporting period followed by mandatory reporting beginning one year later than proposed with the CY 2028 reporting period/CY 2031 payment determination.

We are finalizing with modification the proposal to adopt the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) measure with voluntary reporting beginning with the CY 2025 reporting period and mandatory reporting beginning 1 year later than proposed with the CY 2027 reporting period/CY 2029 payment determination.

We are not finalizing our proposal to remove the Left without Being Seen measure. We are also not finalizing our proposal to re-adopt with modification the Hospital Outpatient Volume Data on Selected Outpatient Procedures measure.

We also requested public comment on: (1) patient and workforce safety (including sepsis); (2) behavioral health (including suicide prevention); and (3) telehealth as potential future measurement topic areas in the Hospital OQR Program.

• *Ambulatory Surgical Center Quality Reporting (ASCQR) Program:* We are finalizing our proposals to: (1) modify the COVID–19 Vaccination Coverage Among Health Care Personnel (HCP) measure beginning with the CY 2024 Reporting Period/CY 2026 payment determination; (2) modify the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure beginning with the voluntary CY 2024 reporting period; (3) modify the Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure beginning with the CY 2024 reporting period/CY 2026 payment determination; and (4) amend multiple codified regulations to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We are finalizing with modification the proposal to adopt the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM) with voluntary reporting beginning with the CY 2025 reporting period through the CY 2027 reporting period followed by mandatory reporting beginning 1 year later than proposed with the CY 2028 reporting period/CY 2031 payment determination.

We are not finalizing our proposal to re-adopt with modification the ASC Facility Volume Data on Selected ASC Surgical Procedures measure.

• *Rural Emergency Hospital Quality Reporting (REHQR) Program:* We are finalizing our proposals to: (1) codify the statutory authority for the REHQR Program; (2) adopt and codify policies related to measure retention and measure modification; (3) adopt one chart-abstracted measure, Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients, beginning with the CY 2024 reporting period; (4) adopt three claims-based measures, Abdomen Computed Tomography (CT)—Use of Contrast Material, Facility 7-Day Risk-Standardized Hospital Visit Rate After Outpatient Colonoscopy, and Risk-Standardized Hospital Visits Within 7 Days After Hospital Outpatient Surgery, beginning with the CY 2024 reporting period; (5) establish related reporting requirements beginning with the CY 2024 reporting period; (6) adopt and codify policies related to public reporting of data; (7) codify foundational requirements related to REHQR Program participation; (8) adopt and codify policies related to the form, manner, and timing of data submission under the REHQR Program; (9) adopt and codify a review and corrections period for submitted data; and (10) adopt and codify an Extraordinary Circumstances Exception (ECE) process for data submission requirements.

We are finalizing with modification the proposal to adopt and codify a policy related to immediate measure removal such that it is referred to more appropriately as immediate measure suspension. In such a case, a quality measure considered by CMS to have potential patient safety concerns will be immediately suspended from the program and then addressed in the next appropriate rulemaking cycle.

We also requested comment on the following potential measures and approaches for implementing quality reporting under the REHQR Program: (1) electronic clinical quality measures (eCQMs); (2) care coordination measures; and (3) a tiered approach for quality measure reporting.

• *Mental Health Services Furnished Remotely by Hospital Staff to Beneficiaries in Their Homes:* For CY 2024, we are finalizing technical refinements to the existing coding for remote mental health services to allow for multiple units to be billed daily. We also are finalizing to create a new, untimed code to describe group psychotherapy. Finally, we are delaying the in-person visit requirements until January 1, 2025.

• *OPPS Payment for Dental Services:* For CY 2024, we are assigning over 240 HCPCS codes describing dental services to various clinical APCs to align with Medicare payment provisions regarding dental services adopted in the CY 2024 Physician Fee Schedule (PFS) final rule (87 FR 69404; November 18, 2023).

• *Comment Solicitation on Payment for High-Cost Drugs Provided by Indian Health Service and Tribal Facilities:* We sought comment on whether Medicare should pay separately for high-cost drugs provided by IHS and tribal facilities. Commenters supported establishing a payment methodology that would allow IHS and Tribal healthcare facilities to receive separate payment outside of the IHS outpatient hospital all-inclusive rate (AIR) for oncology drugs and services whose costs exceed the AIR. Their preferred approach was to treat the AIR payment amount as a payment threshold and to have a separate payment for a drug if the cost of the drug was more than the AIR. Commenters also wanted CMS to ensure the integrity of the AIR if separate payment is established for high-cost oncology drugs and other high-cost services. We will consider these comments for future rulemaking.

• *Supervision by Nurse Practitioners, Physician Assistants and Clinical Nurse Specialists of Cardiac, Intensive Cardiac and Pulmonary Rehabilitation Services Furnished to Outpatients:* For CY 2024, to comply with section 51008 of the Bipartisan Budget Act of 2018 and to ensure consistency with final revisions to §§ 410.47 and 410.49 in the CY 2024 PFS final rule, published in the **Federal Register** of November 16, 2023 (FR Doc. 2023–24184), we are revising § 410.27(a)(1)(iv)(B)(*1*) to expand the practitioners who may supervise cardiac rehabilitation (CR), intensive cardiac rehabilitation (ICR), and pulmonary rehabilitation (PR) services to include nurse practitioners (NPs), physician assistants (PAs), and clinical nurse specialists (CNSs). We also are allowing for the direct supervision requirement for CR, ICR, and PR to include virtual presence of the physician through audio-video real-time communications technology (excluding audio-only) through December 31, 2024, and extend this policy to the nonphysician practitioners, that is NPs, PAs, and CNSs, who are eligible to supervise these services in CY 2024.

• *Payment for Intensive Cardiac Rehabilitation Services (ICR) Provided by an Off-Campus, Non-Excepted Provider Based Department (PBD) of a Hospital:* For CY 2024, to address an unintended reimbursement disparity created by application of the off-campus, non-excepted payment rate to intensive cardiac rehabilitation services (ICR), we are paying for ICR services furnished by an off-campus, non-excepted PBD of a hospital at 100 percent of the OPPS rate, which is the amount paid for these services under the PFS.

• *Final Updates to Requirements for Hospitals to Make Public a List of Their Standard Charges:* We are finalizing our proposals to revise several of our HPT requirements in order to improve our monitoring and enforcement capabilities by improving access to, and the usability of, hospital standard charge information; reducing the compliance burden on hospitals by providing CMS templates and technical guidance for display of hospital standard charge information; aligning, where feasible, certain HPT requirements and processes with requirements and processes we have implemented in the Transparency in Coverage (TIC) initiative; and making other modifications to our monitoring and enforcement capabilities that will, among other things, increase its transparency to the public. Together, we believe these activities will enhance existing and future enforcement actions while also providing the public with more meaningful standard charge information that can be used to improve the accuracy of consumer-friendly price estimator tools. Specifically, we are finalizing: (1) definitions of several terms; (2) a requirement that hospitals make a good faith effort to ensure standard charge information is true, accurate, and complete, and to include a statement affirming this in the machine-readable file (MRF); (3) new data elements that hospitals must include in their MRFs, as well a requirement that hospitals encode standard charge information in a CMS template layout; (4) phased implementation timeline applicable to the new requirements we are finalizing in this final rule with comment period; (5) a requirement that hospitals to include a .txt file in the root folder that includes a direct link to the MRF and a link in the footer on its website that links directly to the publicly available web page that hosts the link to the MRF; and (6) improvements to our enforcement process by updating our methods to assess hospital compliance, requiring hospitals to acknowledge receipt of warning notices, working with health system officials to address noncompliance issues in one or more hospitals that are part of a health system, and publicizing more

information about CMS enforcement activities related to individual hospital compliance. Specifically, and as discussed in more detail in section XVIII of this final rule with comment, we are finalizing that the effective date of the changes to the hospital price transparency regulations at 45 CFR part 180 will be January 1, 2024. However, the regulation text will specify later dates by which hospitals must be in compliance with some of these new requirements, and we will begin enforcing those requirements on those specified dates. We believe this phased implementation approach is necessary to provide hospitals time to collect and encode the required standard charge information completely and accurately.

• *Community Mental Health Center (CMHC) Conditions of Participation (CoPs):* The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–238) established in section 4124 coverage of intensive outpatient (IOP) services in CMHCs. The legislation extended Medicare coverage and payment of IOP services furnished by a CMHC beginning January 1, 2024, adding to the existing coverage and payment for partial hospitalization (PHP) services in CMHCs. Section 4121 of the CAA, 2023 also established a new Medicare benefit category for services furnished and directly billed by Mental Health Counselors (MHCs) and Marriage and Family Therapists (MFTs). To implement these provisions of section 4121 of the CAA, 2023, CMS is finalizing, as proposed, to modify the requirements for CMHCs to include IOP services throughout the CoPs. We are also finalizing our proposal to modify the CMHC CoPs for personnel qualifications to add a definition of marriage and family therapists and revise the current definition of mental health counselors. In addition, we are adding MFTs and MHCs to the list of practitioners who can lead interdisciplinary team meetings when deemed necessary.

• *Changes to the Inpatient Prospective Payment System Medicare Code Editor:* Consistent with the process that is used for updates to the Integrated Outpatient Code Editor (I/OCE) and other Medicare claims editing systems, we are finalizing our proposal to remove discussion of the IPPS Medicare Code Editor (MCE) from the annual IPPS rulemakings, beginning with the FY 2025 rulemaking, and to generally address future changes or updates to the MCE through instruction to the MACs.

• *Request for Public Comments on Potential Payment under the IPPS and OPPS for Establishing and Maintaining Access to Essential Medicines:* We sought comment on potential separate payment under the IPPS for establishing and maintaining access to a buffer stock of essential medicines.

• *Rural Emergency Hospital (REH) Conditions of Participation (CoPs):* On November 23, 2022, we published a final rule for the REH health and safety standards, which was included in the ''Medicare Program: Hospital Outpatient Prospective Payment and Ambulatory Surgical Center Payment Systems and Quality Reporting Programs; Organ Acquisition; Rural Emergency Hospitals: Payment Policies, Conditions of Participation, Provider Enrollment, Physician Self-Referral; New Service Category for Hospital Outpatient Department Prior Authorization Process; Overall Hospital Quality Star Rating; COVID–19'' final rule with comment period (87 FR 71748). We are finalizing as proposed a technical correction to the REH CoPs under the standard for the designation and certification of REHs.

3. Summary of Costs and Benefits

In section XXVI of this final rule with comment period, we set forth a detailed analysis of the regulatory and federalism impacts that the changes will have on affected entities and beneficiaries. Key estimated impacts are described below.

a. Impacts of All OPPS Changes

Table 168 in section XXVI.C of this final rule with comment period displays the distributional impact of all the OPPS changes on various groups of hospitals and CMHCs for CY 2024 compared to all estimated OPPS payments in CY 2023. We estimate that the final policies in this final rule would result in a 3.2 percent overall increase in OPPS payments to providers. We estimate that total OPPS payments for CY 2024, including beneficiary cost-sharing, to the approximately 3,600 facilities paid under the OPPS (including general acute care hospitals, children's hospitals, cancer hospitals, and CMHCs) will increase by approximately $2.2 billion compared to CY 2023 payments, excluding our estimated changes in enrollment, utilization, and case-mix.

We estimated the isolated impact of our OPPS policies on CMHCs because CMHCs have historically only been paid for partial hospitalization services under the OPPS. Beginning in CY 2024, they will also be paid for new intensive outpatient program (IOP) services under the OPPS. Continuing the provider-specific structure we adopted beginning in CY 2011, and basing payment fully on the type of provider furnishing the service, we estimate a 9.2 percent increase in CY 2024 payments to CMHCs relative to their CY 2023 payments.

b. Impacts of the Updated Wage Indexes

We estimate that our update of the wage indexes based on the fiscal year (FY) 2024 IPPS final rule wage indexes will result in a 0.0 percent increase for urban hospitals under the OPPS and a 1.2 percent increase for rural hospitals. These wage indexes include the continued implementation of the Office of Management and Budget (OMB) labor market area delineations based on 2010 Decennial Census data, with updates, as discussed in section II.C of this final rule with comment period.

c. Impacts of the Rural Adjustment and the Cancer Hospital Payment Adjustment

We are implementing the reduction to the cancer hospital payment adjustment for CY 2024 required by section 1833(t)(18)(C) of the Act, as added by section 16002(b) of the 21st Century Cures Act, and the final target payment-to-cost ratio (PCR) for CY 2024 cancer hospital adjustment of 0.89. However, as section 16002 requires that we reduce the target PCR by 0.01, that brings the final target PCR to 0.88 instead. This is 0.01 less than the target PCR of 0.89 from CY 2021 through CY 2023, which was previously held at the pre-PHE target.

d. Impacts of the OPD Fee Schedule Increase Factor

For the CY 2024 OPPS/ASC, we are establishing an OPD fee schedule increase factor of 3.1 percent and applying that increase factor to the conversion factor for CY 2024. As a result of the OPD fee schedule increase factor and other budget neutrality adjustments, we estimate that urban hospitals will experience an increase in payments of approximately 3.2 percent and that rural hospitals will experience an increase in payments of 4.2 percent. Classifying hospitals by teaching status, we estimate non-teaching hospitals will experience an increase in payments of 3.9 percent, minor teaching hospitals will experience an increase in payments of 3.5 percent, and major teaching hospitals will experience an increase in payments of 2.4 percent. We also classified hospitals by the type of ownership. We estimate that hospitals with voluntary ownership will experience an increase of 3.2 percent in payments, while hospitals with government ownership will experience an increase of 2.8 percent in payments. We estimate that hospitals with proprietary ownership will experience an increase of 4.6 percent in payments.

e. Impacts of the Final ASC Payment Update

For impact purposes, the surgical procedures on the ASC covered surgical procedure list are aggregated into surgical specialty groups using CPT and HCPCS code range definitions. The percentage change in estimated total payments by specialty groups under the CY 2024 payment rates, compared to estimated CY 2023 payment rates, generally ranges between a decrease of 11 percent and an increase of 8 percent, depending on the service, with some exceptions. We estimate the impact of applying the final inpatient hospital market basket update to ASC payment rates will increase payments by $207 million under the ASC payment system in CY 2024. We note that an increase based on the Consumer Price Index for all urban consumers (CPI–U) update would be 2.5 percent and would increase payments by $174 million under the ASC payment system in CY 2024. This increase would have been based on a projected CPI–U update of 2.9 percent minus a multifactor productivity adjustment required by the Affordable Care Act of 0.4 percentage point.

f. Impacts of Hospital Price Transparency

The policies we are finalizing to enhance automated access to hospital MRFs and aggregation and use of MRF data are estimated to increase burden on hospitals, including a one-time mean of $2,787 per hospital, and a total national cost of $19,784,539 ($2,787 × 7,098 hospitals). The cost estimate reflects estimated costs ranging from $1,274 and $4,181 per hospital, and a total national cost ranging from $9,040,620 to $29,676,809. As discussed in detail in section XXVI of this final rule with comment period, we believe that the benefits to the public (and to hospitals themselves) outweigh the burden imposed on hospitals.

B. Legislative and Regulatory Authority for the Hospital OPPS

When Title XVIII of the Act was enacted, Medicare payment for hospital outpatient services was based on hospital-specific costs. In an effort to ensure that Medicare and its beneficiaries pay appropriately for services and to encourage more efficient delivery of care, the Congress mandated replacement of the reasonable cost-based payment methodology with a prospective payment system (PPS). The Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) added section 1833(t) to the Act, authorizing implementation of a PPS for hospital outpatient services. The OPPS was first implemented for services furnished on or after August 1, 2000. Implementing regulations for the OPPS are located at 42 CFR parts 410 and 419.

The Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113) made major changes in the hospital OPPS. The following Acts made additional changes to the OPPS: the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554); the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173); the Deficit Reduction Act of 2005 (DRA) (Pub. L. 109–171), enacted on February 8, 2006; the Medicare Improvements and Extension Act under Division B of Title I of the Tax Relief and Health Care Act of 2006 (MIEA–TRHCA) (Pub. L. 109–432), enacted on December 20, 2006; the Medicare, Medicaid, and SCHIP Extension Act of 2007 (MMSEA) (Pub. L. 110–173), enacted on December 29, 2007; the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275), enacted on July 15, 2008; the Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, as amended by the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), enacted on March 30, 2010 (these two public laws are collectively known as the Affordable Care Act); the Medicare and Medicaid Extenders Act of 2010 (MMEA, Pub. L. 111–309); the Temporary Payroll Tax Cut Continuation Act of 2011 (TPTCCA, Pub. L. 112–78), enacted on December 23, 2011; the Middle Class Tax Relief and Job Creation Act of 2012 (MCTRJCA, Pub. L. 112–96), enacted on February 22, 2012; the American Taxpayer Relief Act of 2012 (Pub. L. 112–240), enacted January 2, 2013; the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67) enacted on December 26, 2013; the Protecting Access to Medicare Act of 2014 (PAMA, Pub. L. 113–93), enacted on March 27, 2014; the Medicare Access and CHIP Reauthorization Act (MACRA) of 2015 (Pub. L. 114–10), enacted April 16, 2015; the Bipartisan Budget Act of 2015 (Pub. L. 114–74), enacted November 2, 2015; the Consolidated Appropriations Act, 2016 (Pub. L. 114–113), enacted on December 18, 2015, the 21st Century Cures Act (Pub. L. 114–255), enacted on December 13, 2016; the Consolidated Appropriations Act, 2018 (Pub. L. 115–141), enacted on March 23, 2018; the Substance Use Disorder—Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (Pub. L. 115–271), enacted on October 24, 2018; the Further Consolidated Appropriations Act, 2020 (Pub. L. 116–94), enacted on December 20, 2019; the Coronavirus Aid, Relief, and Economic Security Act (Pub. L. 116–136), enacted on March 27, 2020; the Consolidated Appropriations Act, 2021 (Pub. L. 116–260), enacted on December 27, 2020; the Inflation Reduction Act, 2022 (Pub. L. 117–169), enacted on August 16, 2022; and Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–238), enacted December 29, 2022.

Under the OPPS, we generally pay for hospital Part B services on a rate-per-service basis that varies according to the APC group to which the service is assigned. We use the Healthcare Common Procedure Coding System (HCPCS) (which includes certain Current Procedural Terminology (CPT) codes) to identify and group the services within each APC. The OPPS includes payment for most hospital outpatient services, except those identified in section I.C of this final rule with comment period. Section 1833(t)(1)(B) of the Act provides for payment under the OPPS for hospital outpatient services designated by the Secretary (which includes partial hospitalization services furnished by CMHCs), and certain inpatient hospital services that are paid under Medicare Part B.

The OPPS rate is an unadjusted national payment amount that includes the Medicare payment and the beneficiary copayment. This rate is divided into a labor-related amount and a nonlabor-related amount. The labor-related amount is adjusted for area wage differences using the hospital inpatient wage index value for the locality in which the hospital or CMHC is located.

All services and items within an APC group are comparable clinically and with respect to resource use, as required by section 1833(t)(2)(B) of the Act. In accordance with section 1833(t)(2)(B) of the Act, subject to certain exceptions, items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest median cost (or mean cost, if elected by the Secretary) for an item or service in the APC group is more than 2 times greater than the lowest median cost (or mean cost, if elected by the Secretary) for an item or service within the same APC group (referred to as the ''2 times rule''). In implementing this provision, we generally use the cost of the item or service assigned to an APC group.

For new technology items and services, special payments under the OPPS may be made in one of two ways. Section 1833(t)(6) of the Act provides for temporary additional payments, which we refer to as ''transitional pass-through payments,'' for at least 2 but not more than 3 years for certain drugs, biological agents, brachytherapy devices used for the treatment of cancer, and categories of other medical devices. For new technology services that are not eligible for transitional pass-through payments, and for which we lack sufficient clinical information and cost data to appropriately assign them to a clinical APC group, we have established special APC groups based on costs, which we refer to as New Technology APCs. These New Technology APCs are designated by cost bands which allow us to provide appropriate and consistent payment for designated new procedures that are not yet reflected in our claims data. Similar to pass-through payments, an assignment to a New Technology APC is temporary; that is, we retain a service within a New Technology APC until we acquire sufficient data to assign it to a clinically appropriate APC group.

C. Excluded OPPS Services and Hospitals

Section 1833(t)(1)(B)(i) of the Act authorizes the Secretary to designate the hospital outpatient services that are paid under the OPPS. While most hospital outpatient services are payable under the OPPS, section 1833(t)(1)(B)(iv) of the Act excludes payment for ambulance, physical and occupational therapy, and speech-language pathology services, for which payment is made under a fee schedule. It also excludes screening mammography, diagnostic mammography, and effective January 1, 2011, an annual wellness visit providing personalized prevention plan services. The Secretary exercises the authority granted under the statute to also exclude from the OPPS certain services that are paid under fee schedules or other payment systems. Such excluded services include, for example, the professional services of physicians and nonphysician practitioners paid under the Medicare Physician Fee Schedule (MPFS); certain laboratory services paid under the Clinical Laboratory Fee Schedule (CLFS); services for beneficiaries with end-stage renal disease (ESRD) that are paid under the ESRD prospective payment system; and services and procedures that require an inpatient stay that are paid under the hospital IPPS. In addition, section 1833(t)(1)(B)(v) of the Act does not include applicable items and services (as defined in subparagraph (A) of paragraph (21)) that are furnished on or after January 1, 2017, by an off-campus outpatient department of a provider (as defined in subparagraph (B) of paragraph (21)). We set forth the services that are excluded from payment under the OPPS in regulations at 42 CFR 419.22.

Under § 419.20(b) of the regulations, we specify the types of hospitals that are excluded from payment under the OPPS. These excluded hospitals are:

- Critical access hospitals (CAHs);
- Hospitals located in Maryland and paid under Maryland's All-Payer or Total Cost of Care Model;
- Hospitals located outside of the 50 States, the District of Columbia, and Puerto Rico; and
- Indian Health Service (IHS) hospitals.

D. Prior Rulemaking

On April 7, 2000, we published in the **Federal Register** a final rule with comment period (65 FR 18434) to implement a prospective payment system for hospital outpatient services. The hospital OPPS was first implemented for services furnished on or after August 1, 2000. Section 1833(t)(9)(A) of the Act requires the Secretary to review certain components of the OPPS, not less often than annually, and to revise the groups, the relative payment weights, and the wage and other adjustments to take into account changes in medical practices, changes in technology, the addition of new services, new cost data, and other relevant information and factors.

Since initially implementing the OPPS, we have published final rules in the **Federal Register** annually to implement statutory requirements and changes arising from our continuing experience with this system. These rules can be viewed on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

E. Advisory Panel on Hospital Outpatient Payment (the HOP Panel or the Panel)

1. Authority of the Panel

Section 1833(t)(9)(A) of the Act, as amended by section 201(h) of Public Law 106–113, and redesignated by section 202(a)(2) of Public Law 106–113, requires that we consult with an expert outside advisory panel composed of an appropriate selection of representatives of providers to annually review (and advise the Secretary concerning) the clinical integrity of the payment groups and their weights under the OPPS. In CY 2000, based on section 1833(t)(9)(A) of the Act, the Secretary established the Advisory Panel on Ambulatory Payment Classification Groups (APC Panel) to fulfill this requirement. In CY 2011, based on section 222 of the Public Health Service Act (the PHS Act), which gives discretionary authority to the Secretary to convene advisory councils and committees, the Secretary expanded the panel's scope to include the supervision of hospital outpatient therapeutic services in addition to the APC groups and weights. To reflect this new role of the panel, the Secretary changed the panel's name to the Advisory Panel on Hospital Outpatient Payment (the HOP Panel). The HOP Panel is not restricted to using data compiled by CMS, and in conducting its review, it may use data collected or developed by organizations outside the Department.

2. Establishment of the Panel

On November 21, 2000, the Secretary signed the initial charter establishing the Panel, and, at that time, named the APC Panel. This expert panel is composed of appropriate representatives of providers (currently employed full-time, not as consultants, in their respective areas of expertise) who review clinical data and advise CMS about the clinical integrity of the APC groups and their payment weights. Since CY 2012, the Panel also is charged with advising the Secretary on the appropriate level of supervision for individual hospital outpatient therapeutic services. The Panel is technical in nature, and it is governed by the provisions of the Federal Advisory Committee Act (FACA). The current charter specifies, among other requirements, that the Panel—

- May advise on the clinical integrity of Ambulatory Payment Classification (APC) groups and their associated weights;
- May advise on the appropriate supervision level for hospital outpatient services;
- May advise on OPPS APC rates for ASC covered surgical procedures;
- Continues to be technical in nature;
- Is governed by the provisions of the FACA;
- Has a Designated Federal Official (DFO); and
- Is chaired by a Federal Official designated by the Secretary.

The Panel's charter was amended on November 15, 2011, renaming the Panel and expanding the Panel's authority to include supervision of hospital outpatient therapeutic services and to add critical access hospital (CAH) representation to its membership. The

Panel's charter was also amended on November 6, 2014 (80 FR 23009), and the number of members was revised from up to 19 to up to 15 members. The Panel's current charter was approved on November 21, 2022, for a 2-year period.

The current Panel membership and other information pertaining to the Panel, including its charter, **Federal Register** notices, membership, meeting dates, agenda topics, and meeting reports, can be viewed on the CMS website at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/FACA/AdvisoryPanelonAmbulatoryPaymentClassificationGroups.html.*

3. Panel Meetings and Organizational Structure

The Panel has held many meetings, with the last meeting taking place on August 21, 2023. Prior to each meeting, we publish a notice in the **Federal Register** to announce the meeting, new members, and any other changes of which the public should be aware. Beginning in CY 2017, we have transitioned to one meeting per year (81 FR 31941). In CY 2018, we published a **Federal Register** notice requesting nominations to fill vacancies on the Panel (83 FR 3715). CMS is currently accepting nominations at: *https://mearis.cms.gov.*

In addition, the Panel has established an administrative structure that, in part, currently includes the use of three subcommittee workgroups to provide preparatory meeting and subject support to the larger panel. The three current subcommittees include the following:

- APC Groups and Status Indicator Assignments Subcommittee, which advises and provides recommendations to the Panel on the appropriate status indicators to be assigned to HCPCS codes, including but not limited to whether a HCPCS code or a category of codes should be packaged or separately paid, as well as the appropriate APC assignment of HCPCS codes regarding services for which separate payment is made;
- Data Subcommittee, which is responsible for studying the data issues confronting the Panel and for recommending options for resolving them; and
- Visits and Observation Subcommittee, which reviews and makes recommendations to the Panel on all technical issues pertaining to observation services and hospital outpatient visits paid under the OPPS.

Each of these workgroup subcommittees was established by a majority vote from the full Panel during a scheduled Panel meeting, and the Panel recommended at the August 21, 2023, meeting that the subcommittees continue. We accepted this recommendation.

For discussions of earlier Panel meetings and recommendations, we refer readers to previously published OPPS/ASC proposed and final rules, the CMS website mentioned earlier in this section, and the FACA database at *https://facadatabase.gov.*

F. Public Comments Received on the CY 2024 OPPS/ASC Proposed Rule

We received approximately 3,777 timely pieces of correspondence on the CY 2024 OPPS/ASC proposed rule that appeared in the **Federal Register** on July 31, 2023 (88 FR 49552 through 49921), from individuals, elected officials, providers and suppliers, practitioners, manufacturers and advocacy groups. We provide summaries of the public comments, and our responses are set forth in the various sections of this final rule with comment period under the appropriate headings. We note that we received some public comments that were outside the scope of the CY 2024 OPPS/ASC proposed rule. Out-of-scope-public comments are not addressed in this CY 2024 OPPS/ASC final rule with comment period.

G. Public Comments Received on the CY 2023 OPPS/ASC Final Rule With Comment Period

We received approximately 12 timely pieces of correspondence on the CY 2023 OPPS/ASC final rule with comment period that appeared in the **Federal Register** on November 23, 2022 (87 FR 71748).

II. Updates Affecting OPPS Payments

A. Recalibration of APC Relative Payment Weights

1. Database Construction

a. Database Source and Methodology

Section 1833(t)(9)(A) of the Act requires that the Secretary review not less often than annually and revise the relative payment weights for Ambulatory Payment Classifications (APCs). In the April 7, 2000, OPPS final rule with comment period (65 FR 18482), we explained in detail how we calculated the relative payment weights that were implemented on August 1, 2000, for each APC group.

For the CY 2024 OPPS, we proposed to recalibrate the APC relative payment weights for services furnished on or after January 1, 2024, and before January 1, 2025 (CY 2024), using the same basic methodology that we described in the CY 2023 OPPS/ASC final rule with comment period (86 FR 63466), using CY 2022 claims data. That is, we proposed to recalibrate the relative payment weights for each APC based on claims and cost report data for hospital outpatient department (HOPD) services to construct a database for calculating APC group weights.

For the purpose of recalibrating the proposed APC relative payment weights for CY 2024, we began with approximately 180 million final action claims (claims for which all disputes and adjustments have been resolved and payment has been made) for HOPD services furnished on or after January 1, 2022, and before January 1, 2023, before applying our exclusionary criteria and other methodological adjustments. After the application of those data processing changes, we used approximately 93 million final action claims to develop the proposed CY 2024 OPPS payment weights. For exact numbers of claims used and additional details on the claims accounting process, we refer readers to the claims accounting narrative under supporting documentation for the CY 2024 OPPS/ASC proposed rule on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

Addendum N to the CY 2024 OPPS/ASC proposed rule (which is available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*) included the proposed list of bypass codes for CY 2024. The proposed list of bypass codes contains codes that are reported on claims for services in CY 2022 and, therefore, includes codes that were in effect in CY 2022 and used for billing. We retained these deleted bypass codes on the proposed CY 2024 bypass list because these codes existed in CY 2022 and were covered OPD services in that period, and CY 2022 claims data were used to calculate proposed CY 2024 payment rates. Keeping these deleted bypass codes on the bypass list potentially allows us to create more ''pseudo'' single procedure claims for ratesetting purposes. ''Overlap bypass codes'' that are members of the proposed multiple imaging composite APCs are identified by asterisks (*) in the third column of Addendum N to the CY 2024 OPPS/ASC proposed rule. HCPCS codes that we proposed to add for CY 2024 are identified by asterisks (*) in the fourth column of Addendum N.

We did not receive any public comments on our general proposal to recalibrate the relative payment weights for each APC based on claims and cost report data for HOPD services or on our

proposed bypass code process. We are finalizing as proposed the ''pseudo'' single claims process and the final CY 2024 list of bypass codes, as displayed in Addendum N to this final rule with comment period (which is available via the internet on the CMS website). For this final rule with comment period, for the purpose of recalibrating the final APC relative payment weights for CY 2024, we used approximately 103 million final actions claims (claims for which all disputes and adjustments have been resolved and payment has been made) for HOPD services furnished on or after January 1, 2022, and before January 1, 2023. For exact numbers of claims used and additional details on the claims accounting process, we refer readers to the claims accounting narrative under supporting documentation for this final rule with comment period on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

b. Calculation and Use of Cost-to-Charge Ratios (CCRs)

For CY 2024, we proposed to continue to use the hospital-specific overall ancillary and departmental cost-to-charge ratios (CCRs) to convert charges to estimated costs through application of a revenue code-to-cost center crosswalk. To calculate the APC costs on which the proposed CY 2024 APC payment rates are based, we calculated hospital-specific departmental CCRs for each hospital for which we had CY 2022 claims data by comparing these claims data to the most recently available hospital cost reports, which, in most cases, are from CY 2021. For the proposed CY 2024 OPPS payment rates, we used the set of claims processed during CY 2022. We applied the hospital-specific CCR to the hospital's charges at the most detailed level possible, based on a revenue code-to-cost center crosswalk that contains a hierarchy of CCRs used to estimate costs from charges for each revenue code. To ensure the completeness of the revenue code-to-cost center crosswalk, we reviewed changes to the list of revenue codes for CY 2022 (the year of claims data we used to calculate the proposed CY 2024 OPPS payment rates) and updates to the National Uniform Billing Committee (NUBC) 2022 Data specifications Manual. That crosswalk is available for review and continuous comment on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

In the CY 2023 OPPS/ASC final rule with comment period, a few commenters recommended that we revise our revenue code-to-cost center crosswalk to provide consistency with the NUBC definitions and to improve the accuracy of cost data for OPPS ratesetting with respect to chimeric antigen receptor therapy (CAR–T) administration services (87 FR 71758). In that final rule with comment period, we stated that we intend to explore the implications of this recommendation further and may consider such changes in future rulemaking. In the CY 2024 OPPS/ASC proposed rule, we explored the impacts of the commenters' recommendation from the CY 2023 OPPS/ASC final rule with comment period that we assign primary cost centers to certain CAR–T-related revenue codes that were not previously assigned cost centers. Specifically, in the CY 2024 OPPS/ASC proposed rule, we explored the commenter's recommendations regarding changes to the revenue code-to-cost center crosswalk, which included:

- Revising revenue codes 0870 (Cell/Gene Therapy General Classification) and 0871 (Cell Collection) to be mapped to a primary cost center of 9000 (Clinic);
- Revising revenue codes 0872 (Specialized Biologic Processing and Storage—Prior to Transport) and 0873 (Storage and Processing After Receipt of Cells from Manufacturer) to be mapped to a primary cost center of 3350 (Hematology);
- Revising revenue codes 0874 (Infusion of Modified Cells) and 0875 (Injection of Modified Cells) to be mapped to a primary cost center of 6400 (Intravenous Therapy); and
- Revising revenue codes 0891 (Special Processed Drugs—FDA Approved Cell Therapy) and 0892 (Special Processed Drugs—FDA Approved Gene Therapy) to be mapped to a primary cost center of 7300 (Drugs Charged to Patients).

After reviewing the impact of these crosswalk revisions on our proposed CY 2024 OPPS APC geometric mean costs, we only observed an increase in the geometric mean cost of CPT code 0540T (Chimeric antigen receptor t-cell (car-t) therapy; car-t cell administration, autologous)—from $148.31 to $294.17 for the CY 2024 OPPS/ASC proposed rule—as a result of the revenue code for CPT code 0540T being assigned to a new cost center and the new corresponding cost-to-charge ratio. We did not observe any significant impact on APC geometric mean costs or payment as a result of these revisions. We stated that we believe these revisions would provide greater consistency with the NUBC definitions (which already adopted these revenue code revisions) and more accurately account for the costs of CAR–T administration services under the OPPS. Therefore, for CY 2024 and subsequent years, we proposed to adopt the aforementioned revisions to revenue codes 0870, 0871 0872, 0873, 0874, 0875, 0891, and 0892 in our revenue code-to-cost center crosswalk.

We solicited comment on our proposed changes to the revenue code-to-cost center crosswalk for CY 2024.

In accordance with our longstanding policy, similar to our finalized policy for CY 2023 OPPS ratesetting, we proposed to calculate CCRs for the standard cost centers—cost centers with a predefined label—and nonstandard cost centers—cost centers defined by a hospital—accepted by the electronic cost report database. In general, the most detailed level at which we calculate CCRs is the hospital-specific departmental level.

While we generally view the use of additional cost data as improving our OPPS ratesetting process, we have historically not included cost report lines for certain nonstandard cost centers in the OPPS ratesetting database construction when hospitals have reported these nonstandard cost centers on cost report lines that do not correspond to the cost center number. We believe it is important to further investigate the accuracy of these cost report data before including such data in the ratesetting process. Further, we believe it is appropriate to gather additional information from the public as well before including them in OPPS ratesetting. For CY 2024, we proposed not to include the nonstandard cost centers reported in this way in the OPPS ratesetting database construction.

Comment: Two commenters supported our proposed revenue code-to-cost center crosswalk changes associated with CAR–T.

Response: We appreciate the commenters' support for our proposal.

Comment: A few commenters listed a number of concerns regarding the revenue code-to-cost center crosswalk mappings associated with revenue codes 0815 and 0819. They noted that the 2552–96 revenue code-to-cost center crosswalk does not show the cost center used for ratesetting. They also noted that the current 2552–10 revenue code-to-cost center crosswalk includes a primary cost center mapping to 112.50 and no secondary or tertiary cost centers listed.

A commenter requested more detail around the cost reporting and billing patterns related to revenue codes 0815 and cost centers 112.50 and 7700. A commenter believed that the mapping

for revenue code 0819 to cost center 8600 was incongruent with CMS instructions for cost reporting periods after 2017 to no longer include donor costs in cost center 8600. They believed that this mapping should not apply.

Commenters stated that cost center 7700 represented a logical alternative mapping for revenue code 0815 but noted that it did not represent all donor search and cell acquisition costs because those costs were only recently calculated through Worksheet D–6 of the Medicare cost report and that data would not be available for ratesetting for several years. They also suggested that CMS review the use of the hospital overall ancillary CCR until more accurate information could be obtained in both cost center 7700 and Worksheet D–6. A commenter also requested that CMS ensure that the Worksheet D–6 is available for all cost reporting periods beginning on or after October 1, 2020.

Response: As discussed in this section and briefly in the claims accounting narrative available online, the revenue code-to-cost center crosswalk is a hierarchy that attempts to apply departmental cost center CCRs to estimate costs from charges. Where no specific CCR is available, the provider's overall ancillary CCR will be applied. There may be significant differences in the cost reports used in our ratesetting process, based on providers' charging structures as well as cost reporting periods. As a result, the revenue code-to-cost center crosswalk is designed to accommodate that flexibility by selecting what we believe to be the most accurate CCRs available.

The Medicare cost report form 2552–10 was implemented for cost reporting periods on or after May 1, 2010. Providers have familiarity with cost reporting using this form. While there may be a range in the cost reporting periods available, all cost report data used in ratesetting for the CY 2024 OPPS final rule with comment period are based on the Medicare cost report form 2552–10. The 2552–96 crosswalk is largely provided for historical reference purposes and not because it is actively used in our ratesetting process. However, we can consider removing those worksheets from the form if they no longer serve a purpose for hospitals.

With regard to the primary mapping of revenue code 0815 to cost center 112.50 (Stem Cell Acquisition) indicated in the display version of the revenue code-to-cost center crosswalk, the cost center was inadvertently listed as a primary mapping. The primary and sole mapping for revenue code 0815 in our current ratesetting process is to cost center 7700 (Allogeneic Stem Cell Acquisition). In cases where that cost center CCR is not available in a provider's cost report but services are billed using revenue code 0815, the overall ancillary CCR would instead be applied to reduce charges to estimated cost. We note that there are no cost reports we are including in the CY 2024 OPPS ratesetting process that report cost and charges under 112.50, and there are no revenue code-to-cost center crosswalk mappings to that cost center.

As discussed earlier, the cost reports used in OPPS ratesetting can have varying cost reporting periods and varying cost reporting structures. Therefore, the cost center CCR mappings included in the revenue code-to-cost center crosswalk are designed to accommodate this variability. For revenue code 0815 (Allogeneic Stem Cell Acquisition Services), most of the providers billing using this revenue code are also cost reporting with cost center 7700. Within our ratesetting process, the CCRs for cost center 7700 are significantly higher than those for the overall ancillary CCR; and we continue to believe that the preference should be to use the cost center 7700 CCR unless it is not otherwise available. We note that billing using revenue code 0819 (Organ Acquisition: Other donor) is extremely limited, with only a single line observed within our data. We believe that having the flexibility to use its cost center 8600 mapping where this revenue code is billed is more reflective than the overall ancillary CCR. However, we will monitor the data to determine if this cost center CCR mapping continues to remain appropriate in the future.

While we do not have any specific changes at this time associated with the data from Worksheet D–6 of the Medicare cost report form, we will review the data as they become available. Based on that review, we will consider inclusion of that data and integration into the cost estimation process, if appropriate. We appreciate commenter input as we consider possible changes in the OPPS ratesetting process we use to estimate service costs. We also note that the cost reporting software has already been updated to allow for submission of data regarding these acquisition costs for cost reporting periods on or after October 1, 2020.

After consideration of the public comments we received, we are finalizing the proposed crosswalk, including the proposed changes associated with CAR–T. In addition, we are making the change to our display copy of the revenue code-to-cost center crosswalk to assign cost center 77 as the primary cost center CCR mapping for revenue code 0815.

2. Final Data Development and Calculation of Costs Used for Ratesetting

In this section of this final rule with comment period, we discuss the use of claims to calculate the OPPS payment rates for CY 2024. The Hospital OPPS page on the CMS website on which this final rule with comment period is posted (*https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient*) provides an accounting of claims used in the development of the final payment rates. That accounting provides additional detail regarding the number of claims derived at each stage of the process. In addition, later in this section we discuss the file of claims that comprises the data set that is available upon payment of an administrative fee under a CMS data use agreement. The CMS website, *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient,* includes information about obtaining the ''OPPS Limited Data Set,'' which now includes the additional variables previously available only in the OPPS Identifiable Data Set, including International Classification of Diseases, Tenth Revision, Clinical Modification (ICD–10–CM) diagnosis codes and revenue code payment amounts. This file is derived from the CY 2022 claims that are used to calculate the final payment rates for this final rule with comment period.

Previously, the OPPS established the scaled relative weights on which payments are based using APC median costs, a process described in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74188). However, as discussed in more detail in section II.A.2.f of the CY 2013 OPPS/ASC final rule with comment period (77 FR 68259 through 68271), we finalized the use of geometric mean costs to calculate the relative weights on which the CY 2013 OPPS payment rates were based. While this policy changed the cost metric on which the relative payments are based, the data process in general remained the same under the methodologies that we used to obtain appropriate claims data and accurate cost information in determining estimated service cost.

We used the methodology described in sections II.A.2.a through II.A.2.c of this final rule with comment period to calculate the costs we used to establish the final relative payment weights used in calculating the OPPS payment rates for CY 2024 shown in Addenda A and B to this final rule with comment period (which are available via the internet on

the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*). We refer readers to section II.A.4 of this final rule with comment period for a discussion of the conversion of APC costs to scaled payment weights.

We note that under the OPPS, CY 2019 was the first year in which the claims data used for setting payment rates (CY 2017 data) contained lines with the modifier ''PN,'' which indicates nonexcepted items and services furnished and billed by off-campus provider-based departments (PBDs) of hospitals. Because nonexcepted items and services are not paid under the OPPS, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58832), we finalized a policy to remove those claim lines reported with modifier ''PN'' from the claims data used in ratesetting for the CY 2019 OPPS and subsequent years. For the CY 2024 OPPS, we proposed to continue to remove claim lines with modifier ''PN'' from the ratesetting process.

For details of the claims accounting process used in final rule with comment period, we refer readers to the claims accounting narrative under supporting documentation for this final rule with comment period on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

We did not receive any public comments on our proposal and are finalizing our proposal to continue to remove claim lines reported with modifier ''PN'' from the ratesetting process.

a. Calculation of Single Procedure APC Criteria-Based Costs

(1) Blood and Blood Products

Since the implementation of the OPPS in August 2000, we have made separate payments for blood and blood products through APCs rather than packaging payment for them into payments for the procedures with which they are administered. Hospital payments for the costs of blood and blood products, as well as for the costs of collecting, processing, and storing blood and blood products, are made through the OPPS payments for specific blood product APCs.

In the CY 2024 OPPS/ASC proposed rule, we proposed to continue to establish payment rates for blood and blood products using our blood-specific CCR methodology (88 FR 49562), which utilizes actual or simulated CCRs from the most recently available hospital cost reports to convert hospital charges for blood and blood products to costs. This methodology has been our standard ratesetting methodology for blood and blood products since CY 2005. It was developed in response to data analysis indicating that there was a significant difference in CCRs for those hospitals with and without blood-specific cost centers and past public comments indicating that the former OPPS policy of defaulting to the overall hospital CCR for hospitals not reporting a blood-specific cost center often resulted in an underestimation of the true hospital costs for blood and blood products. To address the differences in CCRs and to better reflect hospitals' costs, our methodology simulates blood CCRs for each hospital that does not report a blood cost center by calculating the ratio of the blood-specific CCRs to hospitals' overall CCRs for those hospitals that do report costs and charges for blood cost centers and applies this mean ratio to the overall CCRs of hospitals not reporting costs and charges for blood cost centers on their cost reports. We proposed to calculate the costs upon which the proposed payment rates for blood and blood products are based using the actual blood-specific CCR for hospitals that reported costs and charges for a blood cost center and a hospital-specific, simulated, blood-specific CCR for hospitals that did not report costs and charges for a blood cost center.

We continue to believe that the hospital-specific, simulated, blood-specific CCR methodology takes into account the unique charging and cost accounting structure of each hospital, it better responds to the absence of a blood-specific CCR for a hospital than alternative methodologies, such as defaulting to the overall hospital CCR or applying an average blood-specific CCR across hospitals. This methodology also yields more accurate estimated costs for these products and results in payment rates for blood and blood products that appropriately reflect the relative estimated costs of these products for hospitals without blood cost centers and for these blood products in general.

We refer readers to Addendum B to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*) for the final CY 2024 payment rates for blood and blood products (which are generally identified with status indicator ''R'').

For a more detailed discussion of payments for blood and blood products through APCs, we refer readers to:

- the CY 2005 OPPS proposed rule (69 FR 50524 and 50525) for a more comprehensive discussion of the blood-specific CCR methodology;
- the CY 2008 OPPS/ASC final rule with comment period (72 FR 66807 through 66810) for a detailed history of the OPPS payment for blood and blood products; and
- the CY 2015 OPPS/ASC final rule with comment period (79 FR 66795 and 66796) for additional discussion of our policy not to make separate payments for blood and blood products when they appear on the same claims as services assigned to a C–APC.

Comment: Two commenters discussed our payment policies for blood and blood products. One commenter expressed concerns about lower payment rates for some blood products in CY 2024 as compared to CY 2023 and encouraged CMS to work with interested parties in the blood products and blood services community to address this issue. The other commenter expressed their support for separate payment for blood and blood products in the OPPS for most services.

Response: We appreciate the input from the commenters, and we will keep these issues in mind in future rulemaking.

After consideration of the public comments we received, we are adopting as final our proposals for blood and blood products using our blood-specific CCR methodology without modification. Refer to Addendum B to this final rule with comment period (which is available via the internet on the CMS website) for the final CY 2024 payment rates for blood and blood products.

(2) Brachytherapy Sources

Section 1833(t)(2)(H) of the Act mandates the creation of additional groups of covered OPD services that classify devices of brachytherapy—cancer treatment through solid source radioactive implants—consisting of a seed or seeds (or radioactive source) (''brachytherapy sources'') separately from other services or groups of services. The statute provides certain criteria for the additional groups. For the history of OPPS payment for brachytherapy sources, we refer readers to prior OPPS final rules, such as the CY 2012 OPPS/ASC final rule with comment period (77 FR 68240 and 68241). As we have stated in prior OPPS updates, we believe that adopting the general OPPS prospective payment methodology for brachytherapy sources is appropriate for a number of reasons (77 FR 68240). The general OPPS methodology uses costs based on claims data to set the relative payment weights

for hospital outpatient services. This payment methodology results in more consistent, predictable, and equitable payment amounts per source across hospitals by averaging the extremely high and low values, in contrast to payment based on hospitals' charges adjusted to costs. We believe that the OPPS methodology, as opposed to payment based on hospitals' charges adjusted to cost, also would provide hospitals with incentives for efficiency in the provision of brachytherapy services to Medicare beneficiaries. Moreover, this approach is consistent with our payment methodology for the vast majority of items and services paid under the OPPS. We refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70323 through 70325) for further discussion of the history of OPPS payment for brachytherapy sources.

For CY 2024, except where otherwise indicated, we proposed to use the costs derived from CY 2022 claims data to set the proposed CY 2024 payment rates for brachytherapy sources because CY 2022 is the year of data we proposed to use to set the proposed payment rates for most other items and services that would be paid under the CY 2024 OPPS. We proposed this methodology for CY 2024 and subsequent years. With the exception of the proposed payment rate for brachytherapy source C2645 (Brachytherapy planar source, palladium-103, per square millimeter) and the proposed payment rates for low-volume brachytherapy APCs discussed in section III.D of the CY 2024 OPPS/ASC proposed rule (88 FR 49563), we proposed to base the payment rates for brachytherapy sources on the geometric mean unit costs for each source, consistent with the methodology that we proposed for other items and services paid under the OPPS, as discussed in section II.A.2 of the CY 2024 OPPS/ASC proposed rule (88 FR 49563). We also proposed for CY 2024 and subsequent years to continue the other payment policies for brachytherapy sources that we finalized and first implemented in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60537). For CY 2024 and subsequent years, we proposed to pay for the stranded and nonstranded not otherwise specified (NOS) codes, HCPCS codes C2698 (Brachytherapy source, stranded, not otherwise specified, per source) and C2699 (Brachytherapy source, non-stranded, not otherwise specified, per source), at a rate equal to the lowest stranded or nonstranded prospective payment rate for such sources, respectively, on a per-source basis (as opposed to, for example, per mCi), which is based on the policy we established in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66785). For CY 2024 and subsequent years, we also proposed to continue the policy we first implemented in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60537) regarding payment for new brachytherapy sources for which we have no claims data, based on the same reasons we discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66786; which was delayed until January 1, 2010, by section 142 of Pub. L. 110–275). Specifically, this policy is intended to enable us to assign new HCPCS codes for new brachytherapy sources to their own APCs, with prospective payment rates set based on our consideration of external data and other relevant information regarding the expected costs of the sources to hospitals. The proposed CY 2024 payment rates for brachytherapy sources are included on Addendum B to the CY 2024 OPPS/ASC proposed rule (which is available via the internet on the CMS website) and identified with status indicator ''U.''

For CY 2018, we assigned status indicator ''U'' (Brachytherapy Sources, Paid under OPPS; separate APC payment) to HCPCS code C2645 (Brachytherapy planar source, palladium-103, per square millimeter) in the absence of claims data and established a payment rate using external data (invoice price) at $4.69 per mm^2 for the brachytherapy source's APC—APC 2648 (Brachytx planar, p-103). For CY 2019, in the absence of sufficient claims data, we continued to establish a payment rate for C2645 at $4.69 per mm^2 for APC 2648 (Brachytx planar, p-103). Our CY 2018 claims data available for the CY 2020 OPPS/ASC final rule with comment period (84 FR 61142) included two claims with a geometric mean cost for HCPCS code C2645 of $1.02 per mm^2. In response to comments from interested parties, we agreed that, given the limited claims data available and a new outpatient indication for C2645, a payment rate for HCPCS code C2645 based on the geometric mean cost of $1.02 per mm^2 may not adequately reflect the cost of HCPCS code C2645. In the CY 2020 OPPS/ASC final rule with comment period, we finalized our policy to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act, which states that the Secretary shall establish, in a budget neutral manner, other adjustments as determined to be necessary to ensure equitable payments, to maintain the CY 2019 payment rate of $4.69 per mm^2 for HCPCS code C2645 for CY 2020. Similarly, in the absence of sufficient claims data to establish an APC payment rate, in the CY 2021, CY 2022, and CY 2023 OPPS/ASC final rules with comment period (85 FR 85879 and 85880 and 86 FR 63469 and 87 FR 71760 and 71761), we finalized our policy to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2019 payment rate of $4.69 per mm^2 for HCPCS code C2645 for CY 2021, for CY 2022, and for CY 2023.

We reviewed CY 2022 claims data available for the CY 2024 OPPS/ASC proposed rule, and we observed three claims that reported HCPCS code C2645. Each claim reported one unit of HCPCS code C2645 and the geometric mean unit cost from these three claims was $168.67. We stated we were unable to use these claims for ratesetting purposes given the reporting of only one unit per claim and the high geometric mean cost. Therefore, we proposed to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2023 payment rate of $4.69 per mm^2 for HCPCS code C2645, which we proposed to assign to APC 2648 (Brachytx planar, p-103), for CY 2024.

For this final rule with comment period, we once again reviewed CY 2022 claims data available; and we observed the same three claims that reported HCPCS code C2645.

Additionally, for CY 2022 and subsequent calendar years, we adopted a Universal Low Volume APC policy for clinical and brachytherapy APCs. As discussed in further detail in section X.C of the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted this policy to mitigate wide variation in payment rates that occur from year to year for APCs with low utilization. Such volatility in payment rates from year to year can result in even lower utilization and potential barriers to access. Brachytherapy APCs that have fewer than 100 single claims used for ratesetting purposes are designated as Low Volume APCs unless an alternative payment rate is applied, such as the use of our equitable adjustment authority under section 1833(t)(2)(E) of the Act in the case of APC 2648 (Brachytx planar, p-103), for which HCPCS code C2645 (Brachytherapy planar source, palladium-103, per square millimeter) is the only code assigned as discussed previously in this section.

For CY 2024, we proposed to designate five brachytherapy APCs as Low Volume APCs as these APCs meet

our criteria to be designated as a Low Volume APC. For more information on the brachytherapy APCs we proposed to designate as Low Volume APCs, see section III.D of the CY 2024 OPPS/ASC proposed rule (88 FR 49628) and section III.D of this final rule with comment period.

We invited interested parties to submit recommendations for new codes to describe new brachytherapy sources. We will continue to add new brachytherapy source codes and descriptors to our systems for payment on a quarterly basis.

We did not receive any public comments on either proposal described. We are finalizing, without modification, to use our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the CY 2023 payment rate of $4.69 per mm^2 for HCPCS code C2645, which is assigned to APC 2648 (Brachytx planar, p-103), for CY 2024.

Similarly, for CY 2024 and subsequent years we are finalizing, without modification, our proposal to continue to set the payment rates for other brachytherapy sources that are not otherwise assigned to designated Low Volume APCs for CY 2024 using our established prospective payment methodology. The final CY 2024 payment rates for brachytherapy sources are included in Addendum B to this final rule with comment period (which is available via the internet on the CMS website) and are identified with status indicator ''U.'' We continue to invite interested parties to submit recommendations for new codes to describe new brachytherapy sources. Such recommendations should be directed via email to *outpatientpps@cms.hhs.gov* or by mail to the Division of Outpatient Care, Mail Stop C4–01–26, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244. We will continue to add new brachytherapy source codes and descriptors to our systems for payment on a quarterly basis.

b. Comprehensive APCs (C–APCs) for CY 2024

(1) Background

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 74861 through 74910), we finalized a comprehensive payment policy that packages payment for adjunctive and secondary items, services, and procedures into the most costly primary procedure under the OPPS at the claim level. The policy was finalized in CY 2014, but the effective date was delayed until January 1, 2015, to allow additional time for further analysis, opportunity for public comment, and systems preparation. The comprehensive APC (C–APC) policy was implemented effective January 1, 2015, with modifications and clarifications in response to public comments received regarding specific provisions of the C–APC policy (79 FR 66798 through 66810).

A C–APC is defined as a classification for the provision of a primary service and all adjunctive services provided to support the delivery of the primary service. We established C–APCs as a category broadly for OPPS payment and implemented 25 C–APCs beginning in CY 2015 (79 FR 66809 and 66810). We have gradually added new C–APCs since the policy was implemented beginning in CY 2015, with the number of C–APCs now totaling 72 (80 FR 70332; 81 FR 79584 and 79585; 83 FR 58844 through 58846; 84 FR 61158 through 61166; 85 FR 85885; 86 FR 63474; and 87 FR 71769).

Under our C–APC policy, we designate a service described by a HCPCS code assigned to a C–APC as the primary service when the service is identified by OPPS status indicator ''J1.'' When such a primary service is reported on a hospital outpatient claim, taking into consideration the few exceptions that are discussed below, we make payment for all other items and services reported on the hospital outpatient claim as being integral, ancillary, supportive, dependent, and adjunctive to the primary service (hereinafter collectively referred to as ''adjunctive services'') and representing components of a complete comprehensive service (78 FR 74865 and 79 FR 66799). Payments for adjunctive services are packaged into the payments for the primary services. This results in a single prospective payment for each of the primary, comprehensive services based on the costs of all reported services at the claim level. One example of a primary service would be a partial mastectomy and an example of a secondary service packaged into that primary service would be a radiation therapy procedure.

Services excluded from the C–APC policy under the OPPS include services that are not covered OPD services, services that cannot by statute be paid for under the OPPS, and services that are required by statute to be separately paid. This includes certain mammography and ambulance services that are not covered OPD services in accordance with section 1833(t)(1)(B)(iv) of the Act; brachytherapy seeds, which also are required by statute to receive separate payment under section 1833(t)(2)(H) of the Act; pass-through payment drugs and devices, which also require separate payment under section 1833(t)(6) of the Act; self-administered drugs (SADs) that are not otherwise packaged as supplies because they are not covered under Medicare Part B under section 1861(s)(2)(B) of the Act; and certain preventive services (78 FR 74865 and 79 FR 66800 and 66801). A list of services excluded from the C–APC policy is included in Addendum J to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*). If a service does not appear on this list of excluded services, payment for it will be packaged into the payment for the primary C–APC service when it appears on an outpatient claim with a primary C–APC service.

The C–APC policy payment methodology set forth in the CY 2014 OPPS/ASC final rule with comment period and modified and implemented beginning in CY 2015 is summarized as follows (78 FR 74887 and 79 FR 66800):

Basic Methodology. As stated in the CY 2015 OPPS/ASC final rule with comment period, we define the C–APC payment policy as including all covered OPD services on a hospital outpatient claim reporting a primary service that is assigned to status indicator ''J1,'' [1] excluding services that are not covered OPD services or that cannot by statute be paid for under the OPPS. Services and procedures described by HCPCS codes assigned to status indicator ''J1'' are assigned to C–APCs based on our usual APC assignment methodology by evaluating the geometric mean costs of the primary service claims to establish resource similarity and the clinical characteristics of each procedure to establish clinical similarity within each APC.

In the CY 2016 OPPS/ASC final rule with comment period, we expanded the C–APC payment methodology to qualifying extended assessment and management encounters through the ''Comprehensive Observation Services'' C–APC (C–APC 8011). Services within this APC are assigned status indicator ''J2.'' [2] Specifically, we make a payment through C–APC 8011 for a claim that:

[1] Status indicator ''J1'' denotes Hospital Part B Services Paid Through a Comprehensive APC. Further information can be found in CY 2024 Addendum D1.

[2] Status indicator ''J2'' denotes Hospital Part B Services That May Be Paid Through a Comprehensive APC. Further information can be found in CY 2024 Addendum D1.

• Does not contain a procedure described by a HCPCS code to which we have assigned status indicator ''T;''

• Contains 8 or more units of services described by HCPCS code G0378 (Hospital observation services, per hour);

• Contains services provided on the same date of service or one day before the date of service for HCPCS code G0378 that are described by one of the following codes: HCPCS code G0379 (Direct admission of patient for hospital observation care) on the same date of service as HCPCS code G0378; CPT code 99281 (Emergency department visit for the evaluation and management of a patient (Level 1)); CPT code 99282 (Emergency department visit for the evaluation and management of a patient (Level 2)); CPT code 99283 (Emergency department visit for the evaluation and management of a patient (Level 3)); CPT code 99284 (Emergency department visit for the evaluation and management of a patient (Level 4)); CPT code 99285 (Emergency department visit for the evaluation and management of a patient (Level 5)) or HCPCS code G0380 (Type B emergency department visit (Level 1)); HCPCS code G0381 (Type B emergency department visit (Level 2)); HCPCS code G0382 (Type B emergency department visit (Level 3)); HCPCS code G0383 (Type B emergency department visit (Level 4)); HCPCS code G0384 (Type B emergency department visit (Level 5)); CPT code 99291 (Critical care, evaluation and management of the critically ill or critically injured patient; first 30–74 minutes); or HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient); and

• Does not contain services described by a HCPCS code to which we have assigned status indicator ''J1.''

The assignment of status indicator ''J2'' to a specific set of services performed in combination with each other allows for all other OPPS payable services and items reported on the claim (excluding services that are not covered OPD services or that cannot by statute be paid for under the OPPS) to be deemed adjunctive services representing components of a comprehensive service and resulting in a single prospective payment for the comprehensive service based on the costs of all reported services on the claim (80 FR 70333 through 70336).

Services included under the C–APC payment packaging policy, that is, services that are typically adjunctive to the primary service and provided during the delivery of the comprehensive service, include diagnostic procedures, laboratory tests, and other diagnostic tests and treatments that assist in the delivery of the primary procedure; visits and evaluations performed in association with the procedure; uncoded services and supplies used during the service; durable medical equipment as well as prosthetic and orthotic items and supplies when provided as part of the outpatient service; and any other components reported by HCPCS codes that represent services that are provided during the complete comprehensive service (78 FR 74865 and 79 FR 66800).

In addition, payment for hospital outpatient department services that are similar to therapy services, such as speech language pathology, and delivered either by therapists or nontherapists is included as part of the payment for the packaged complete comprehensive service. These services that are provided during the perioperative period are adjunctive services and are deemed not to be therapy services as described in section 1834(k) of the Act, regardless of whether the services are delivered by therapists or other nontherapist health care workers. We have previously noted that therapy services are those provided by therapists under a plan of care in accordance with section 1835(a)(2)(C) and section 1835(a)(2)(D) of the Act and are paid for under section 1834(k) of the Act, subject to annual therapy caps as applicable (78 FR 74867 and 79 FR 66800). However, certain other services similar to therapy services are considered and paid for as hospital outpatient department services. Payment for these nontherapy outpatient department services that are reported with therapy codes and provided with a comprehensive service is included in the payment for the packaged complete comprehensive service. We note that these services, even though they are reported with therapy codes, are hospital outpatient department services and not therapy services. We refer readers to the July 2016 OPPS Change Request 9658 (Transmittal 3523) for further instructions on reporting these services in the context of a C–APC service.

Items included in the packaged payment provided in conjunction with the primary service also include all drugs, biologicals, and radiopharmaceuticals, regardless of cost, except those drugs with pass-through payment status and SADs, unless they function as packaged supplies (78 FR 74868, 74869, and 74909 and 79 FR 66800). We refer readers to Section 50.2M, Chapter 15, of the Medicare Benefit Policy Manual for a description of our policy on SADs treated as hospital outpatient supplies, including lists of SADs that function as supplies and those that do not function as supplies.[3]

We define each hospital outpatient claim reporting a single unit of a single primary service assigned to status indicator ''J1'' as a single ''J1'' unit procedure claim (78 FR 74871 and 79 FR 66801). Line-item charges for services included on the C–APC claim are converted to line-item costs, which are then summed to develop the estimated APC costs. These claims are then assigned one unit of the service with status indicator ''J1'' and later used to develop the geometric mean costs for the C–APC relative payment weights. (We note that we use the term ''comprehensive'' to describe the geometric mean cost of a claim reporting ''J1'' service(s) or the geometric mean cost of a C–APC, inclusive of all the items and services included in the C–APC service payment bundle.) Charges for services that would otherwise be separately payable are added to the charges for the primary service. This process differs from our traditional cost accounting methodology only in that all such services on the claim are packaged (except certain services as described above). We apply our standard data trims, which exclude claims with extremely high primary units or extreme costs.

The comprehensive geometric mean costs are used to establish resource similarity and, along with clinical similarity, dictate the assignment of the primary services to the C–APCs. We establish a ranking of each primary service (single unit only) to be assigned to status indicator ''J1'' according to its comprehensive geometric mean costs. For the minority of claims reporting more than one primary service assigned to status indicator ''J1'' or units thereof, we identify one ''J1'' service as the primary service for the claim based on our cost-based ranking of primary services. We then assign these multiple ''J1'' procedure claims to the C–APC to which the service designated as the primary service is assigned. If the reported ''J1'' services on a claim map to different C–APCs, we designate the ''J1'' service assigned to the C–APC with the highest comprehensive geometric mean cost as the primary service for that claim. If the reported multiple ''J1'' services on a claim map to the same C–APC, we designate the most costly service (at the HCPCS code level) as the primary service for that claim. This

[3] *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c15.pdf.*

process results in initial assignments of claims for the primary services assigned to status indicator ''J1'' to the most appropriate C–APCs based on both single and multiple procedure claims reporting these services and clinical and resource homogeneity.

Complexity Adjustments. We use complexity adjustments to provide increased payment for certain comprehensive services. We apply a complexity adjustment by promoting qualifying paired ''J1'' service code combinations or paired code combinations of ''J1'' services and certain add-on codes (as described further below) from the originating C–APC (the C–APC to which the designated primary service is first assigned) to the next higher paying C–APC in the same clinical family of C–APCs. We apply this type of complexity adjustment when the paired code combination represents a complex, costly form or version of the primary service according to the following criteria:

- Frequency of 25 or more claims reporting the code combination (frequency threshold); and
- Violation of the 2 times rule, as stated in section 1833(t)(2) of the Act and section III.B.2 of this final rule with comment period, in the originating C–APC (cost threshold).

These criteria identify paired code combinations that occur commonly and exhibit materially greater resource requirements than the primary service. The CY 2017 OPPS/ASC final rule with comment period (81 FR 79582) included a revision to the complexity adjustment eligibility criteria. Specifically, we finalized a policy to discontinue the requirement that a code combination (that qualifies for a complexity adjustment by satisfying the frequency and cost criteria thresholds described above) also not create a 2 times rule violation in the higher level or receiving APC.

After designating a single primary service for a claim, we evaluate that service in combination with each of the other procedure codes reported on the claim assigned to status indicator ''J1'' (or certain add-on codes) to determine if there are paired code combinations that meet the complexity adjustment criteria. For a new HCPCS code, we determine initial C–APC assignment and qualification for a complexity adjustment using the best available information, crosswalking the new HCPCS code to a predecessor code(s) when appropriate.

Once we have determined that a particular code combination of ''J1'' services (or combinations of ''J1'' services reported in conjunction with certain add-on codes) represents a complex version of the primary service because it is sufficiently costly, frequent, and a subset of the primary comprehensive service overall according to the criteria described above, we promote the claim including the complex version of the primary service as described by the code combination to the next higher cost C–APC within the clinical family, unless the primary service is already assigned to the highest cost APC within the C–APC clinical family or assigned to the only C–APC in a clinical family. We do not create new APCs with a comprehensive geometric mean cost that is higher than the highest geometric mean cost (or only) C–APC in a clinical family just to accommodate potential complexity adjustments. Therefore, the highest payment for any claim including a code combination for services assigned to a C–APC would be the highest paying C–APC in the clinical family (79 FR 66802).

We package payment for all add-on codes into the payment for the C–APC. However, certain primary service add-on combinations may qualify for a complexity adjustment. As noted in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70331), all add-on codes that can be appropriately reported in combination with a base code that describes a primary ''J1'' service are evaluated for a complexity adjustment.

To determine which combinations of primary service codes reported in conjunction with an add-on code may qualify for a complexity adjustment for CY 2024, we apply the frequency and cost criteria thresholds discussed above, testing claims reporting one unit of a single primary service assigned to status indicator ''J1'' and any number of units of a single add-on code for the primary ''J1'' service. If the frequency and cost criteria thresholds for a complexity adjustment are met and reassignment to the next higher cost APC in the clinical family is appropriate (based on meeting the criteria outlined above), we make a complexity adjustment for the code combination; that is, we reassign the primary service code reported in conjunction with the add-on code to the next higher cost C–APC within the same clinical family of C–APCs. As previously stated, we package payment for add-on codes into the C–APC payment rate. If any add-on code reported in conjunction with the ''J1'' primary service code does not qualify for a complexity adjustment, payment for the add-on service continues to be packaged into the payment for the primary service and is not reassigned to the next higher cost C–APC. We list the complexity adjustments for ''J1'' and add-on code combinations for CY 2024, along with all the other final complexity adjustments, in Addendum J to this final rule with comment period (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

Addendum J to this final rule with comment period includes the cost statistics for each code combination that would qualify for a complexity adjustment (including primary code and add-on code combinations). Addendum J to this final rule with comment period also contains summary cost statistics for each of the paired code combinations that describe a complex code combination that would qualify for a complexity adjustment and be reassigned to the next higher cost C–APC within the clinical family. The combined statistics for all proposed reassigned complex code combinations are represented by an alphanumeric code with the first four digits of the designated primary service followed by a letter. For example, the final geometric mean cost listed in Addendum J for the code combination described by complexity adjustment assignment 3320R, which is assigned to C–APC 5224 (Level 4 Pacemaker and Similar Procedures), includes all paired code combinations that will be reassigned to C–APC 5224 when CPT code 33208 is the primary code. Providing the information contained in Addendum J to this final rule with comment period allows interested parties the opportunity to better assess the impact associated with the assignment of claims with each of the paired code combinations eligible for a complexity adjustment.

Comment: We received support from commenters for a variety of existing and proposed complexity adjustments.

Response: We thank the commenters for their support.

Comment: Multiple commenters requested that CMS apply a complexity adjustment to additional code combinations. The specific C–APC complexity adjustment code combinations requested by the commenters for CY 2024 are listed in Table 1 below.

BILLING CODE 4150–28–P

TABLE 1: C-APC COMPLEXITY ADJUSTMENTS REQUESTED BY COMMENTERS FOR CY 2024

Primary "J1" HCPCS/CPT Code	Secondary "J1" HCPCS/CPT code	Primary C-APC Assignment	Requested complexity adjusted C-APC assignment
28297 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method)	**27687** (Gastrocnemius recession (e.g., strayer procedure))	5114	5115
28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint)	**27687** (Gastrocnemius recession (e.g., strayer procedure))	5114	5115
	27691 (Transfer or transplant of single tendon (with muscle redirection or rerouting); deep (e.g., anterior tibial or posterior tibial through interosseous space, flexor digitorum longus, flexor hallucis longus, or peroneal tendon to midfoot or hindfoot))	5114	5115
	28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint)	5114	5115
43270 (Esophagogastroduodenoscopy, flexible, transoral; with ablation of tumor(s), polyp(s), or other lesion(s) (includes pre- and post-dilation and guide wire passage, when performed)	**43252** (Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy)	5302	5303
43252 (Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy)	**43239** (Esophagogastroduodenoscopy, flexible, transoral; with biopsy, single or multiple)	5302	5303
	43270 ((Esophagogastroduodenoscopy, flexible, transoral; with ablation of tumor(s), polyp(s), or other lesion(s) (includes pre- and post-dilation and guide wire passage, when performed))	5302	5303

C9600 (Percutaneous transcatheter placement of drug eluting intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch)	**C1761** (Catheter, transluminal intravascular lithotripsy, coronary)	5193	5194
92928 (Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch)		5193	5194
92943 (Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel)		5193	5194
92920 (Percutaneous transluminal coronary angioplasty; single major coronary artery or branch)		5192	5193
31629 (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with transbronchial needle aspiration biopsy(s), trachea, main stem and/or lobar bronchus(i))	**31652** (Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with endobronchial ultrasound (ebus) guided transtracheal and/or transbronchial sampling (e.g., aspiration[s]/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structure)	5154	5155
43260 (Endoscopic retrograde cholangiopancreatography (ercp); diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure))	**43273** (Endoscopic cannulation of papilla with direct visualization of pancreatic/common bile duct(s) (list separately in addition to code(s) for primary procedure))	5303	5304
43261 (Endoscopic retrograde cholangiopancreatography (ercp); with biopsy, single or multiple)		5303	5304
43262 (Endoscopic retrograde cholangiopancreatography (ercp); with sphincterotomy/papillotomy)		5303	5304
43264 (Endoscopic retrograde cholangiopancreatography (ercp); with removal of calculi/debris from biliary/pancreatic duct(s))		5303	5304
47534 (Placement of biliary drainage catheter, percutaneous,	**47542** (Balloon dilation of biliary duct(s) or of ampulla	5341	5342

including diagnostic cholangiography when performed, imaging guidance (eg, ultrasound and/or fluoroscopy), and all associated radiological supervision and interpretation; internal-external)	(sphincteroplasty), percutaneous, including imaging guidance (e.g., fluoroscopy), and all associated radiological supervision and interpretation, each duct (list separately in addition to code for primary procedure))		
20982 (Ablation therapy for reduction or eradication of 1 or more bone tumors (e.g., metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency)	**22510** (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; cervicothoracic)	5114	5115
20982 ((Ablation therapy for reduction or eradication of 1 or more bone tumors (e.g., metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency))	**22511** (Percutaneous vertebroplasty (bone biopsy included when performed), 1 vertebral body, unilateral or bilateral injection, inclusive of all imaging guidance; lumbosacral)	5114	5115
29827 (Arthroscopy, shoulder, surgical; with rotator cuff repair)	**C1763** (Connective tissue, non-human (includes synthetic))	5114	5115
52214 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) of trigone, bladder neck, prostatic fossa, urethra, or periurethral glands)	**C9738** (Adjunctive blue light cystoscopy with fluorescent imaging agent (list separately in addition to code for primary procedure))	5374	5375
52224 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) or treatment of minor (less than 0.5 cm) lesion(s) with or without biopsy)		5374	5375
52234 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; small bladder tumor(s) (0.5 up to 2.0 cm))		5374	5375
52235 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection		5374	5375

of; medium bladder tumor(s) (2.0 to 5.0 cm))			
52240 (Cystourethroscopy, with fulguration (including cryosurgery or laser surgery) and/or resection of; large bladder tumor(s))		5375	5376

BILLING CODE 4150–28–C

Response: We reviewed each of the requested code combinations suggested by commenters, listed in Table 1, against our complexity adjustment criteria. The code combination for primary HCPCS code 43270 with secondary HCPCS code 43252 meets our cost and frequency criteria, qualifying for a complexity adjustment for CY 2024. All the remaining code combinations listed failed to meet our cost or frequency criteria and do not qualify for complexity adjustments for CY 2024. Additionally, the code combinations for primary HCPCS codes, C9600, 92928, 92943, and 92920 with secondary HCPCS code C1761 would not qualify for complexity adjustments for CY 2024 as the Coronary IVL device, described by C1761, is still on transitional pass-through status through June 2024. Addendum J to this final rule with comment period includes the cost statistics for each code combination that was evaluated for a complexity adjustment.

Comment: Commenters requested that CMS modify, waive, or eliminate the established C–APC complexity adjustment eligibility criteria of 25 or more claims reporting the code combination (frequency) and a violation of the 2 times rule in the originating C–APC (cost) to allow additional code combinations to qualify for complexity adjustments. These commenters were concerned that C–APC packaging and a lack of complexity adjustment would limit access to procedures. Specifically, some commenters expressed concern that CMS's methodology for determining complexity adjustments is unnecessarily restrictive, particularly the 25-claim threshold, and suggested that CMS eliminate the 25-claim threshold and implement a complexity adjustment whenever a code pair exceeds the cost threshold. Other commenter suggestions included considering an amount halfway between the standard APC and the complexity-adjusted APC as a cost threshold, as well as a implementing a sliding scale approach for procedures with high frequency that do not meet the cost criteria.

Commenters were concerned that when multiple ''J1'' primary services are reported on a claim, along with an add-on service, the add-on service is not evaluated for a complexity adjustment. Commenters cited examples where significant claims volume from add-on services may not be incorporated into the complexity adjustment evaluation. Commenters also reiterated requests to broaden the complexity adjustment policy and allow clusters of procedures, consisting of a ''J1'' code pair and multiple other associated add-on codes used in combination with that ''J1'' code pair, to qualify for complexity adjustments. Commenters stated that there are certain complex procedures that include numerous add-on codes and this approach would allow more accurate reflection of medical practice when multiple procedures are performed together. They noted that lack of additional payment for these code combinations can present a financial challenge for the providers who perform these more resource intensive services.

In addition, commenters requested that CMS expand its review of procedure combinations to include ''J1'' and expiring transitional pass-through codes to allow facilities to continue to provide these services after pass-through expiration.

Response: We appreciate these comments. At this time, we do not believe changes to the C–APC complexity adjustment criteria are necessary or that we should make exceptions to the criteria to allow claims with the code combinations suggested by the commenters to receive complexity adjustments. As we stated in the CY 2017 OPPS/ASC final rule (81 FR 79582), we believe that the complexity adjustment criteria, which require a frequency of 25 or more claims reporting a code combination and a violation of the 2 times rule in the originating C–APC, are appropriate to determine if a combination of procedures represents a complex, costly subset of the primary service that should qualify for the adjustment and be paid at the next higher paying C–APC in the clinical family. As we previously stated in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61161), a minimum of 25 claims is already a very low threshold for a national payment system. Lowering the minimum of 25 claims further could lead to unnecessary complexity adjustments for service combinations that are rarely performed.

As we explained in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58843), we do not believe that it is necessary to adjust the complexity adjustment criteria to allow claims that include more than two ''J1'' procedures, add-on codes, or procedures that are not assigned to C–APCs to qualify for a complexity adjustment. As previously mentioned, we believe the current criteria are adequate to determine if a combination of procedures represents a complex, costly subset of the primary service. We will continue to monitor the application of the complexity adjustment criteria for future rulemaking.

After consideration of the public comments we received, we are finalizing the C–APC complexity adjustment policy for CY 2024 as proposed. We are also finalizing the proposed complexity adjustments, with the addition of one new code combination suggested by commenters, that meet our complexity adjustment criteria.

(2) Exclusion of Procedures Assigned to New Technology APCs from the C–APC Policy Services that are assigned to New Technology APCs are typically new procedures that do not have sufficient claims history to establish an accurate payment for them. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to an appropriate clinical APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years

if sufficient data upon which to base a decision for reassignment have not been collected (82 FR 59277).

The C–APC payment policy packages payment for adjunctive and secondary items, services, and procedures into the most costly primary procedure under the OPPS at the claim level. Prior to CY 2019, when a procedure assigned to a New Technology APC was included on the claim with a primary procedure, identified by OPPS status indicator ''J1,'' payment for the new technology service was typically packaged into the payment for the primary procedure. Because the new technology service was not separately paid in this scenario, the overall number of single claims available to determine an appropriate clinical APC for the new service was reduced. This was contrary to the objective of the New Technology APC payment policy, which is to gather sufficient claims data to enable us to assign the service to an appropriate clinical APC.

To address this issue and ensure that there are sufficient claims data for services assigned to New Technology APCs, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58847), we finalized excluding payment for any procedure that is assigned to a New Technology APC (APCs 1491 through 1599 and APCs 1901 through 1908) from being packaged when included on a claim with a ''J1'' service assigned to a C–APC. In the CY 2020 OPPS/ASC final rule with comment period, we finalized that beginning in CY 2020, payment for services assigned to a New Technology APC would be excluded from being packaged into the payment for comprehensive observation services assigned status indicator ''J2'' when they are included on a claim with a ''J2'' service (84 FR 61167).

(3) Exclusion of Drugs and Biologicals Described by HCPCS Code C9399 (Unclassified Drugs or Biologicals) From the C–APC Policy

Section 1833(t)(15) of the Act, as added by section 621(a)(1) of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173), provides for payment under the OPPS for new drugs and biologicals until HCPCS codes are assigned. Under this provision, we are required to make payment for a covered outpatient drug or biological that is furnished as part of covered outpatient department services but for which a HCPCS code has not yet been assigned in an amount equal to 95 percent of average wholesale price (AWP) for the drug or biological.

In the CY 2005 OPPS/ASC final rule with comment period (69 FR 65805), we implemented section 1833(t)(15) of the Act by instructing hospitals to bill for a drug or biological that is newly approved by the Food and Drug Administration (FDA) and that does not yet have a HCPCS code by reporting the National Drug Code (NDC) for the product along with the newly created HCPCS code C9399 (Unclassified drugs or biologicals). We explained that when HCPCS code C9399 appears on a claim, the Outpatient Code Editor (OCE) suspends the claim for manual pricing by the Medicare Administrative Contractor (MAC). The MAC prices the claim at 95 percent of the drug or biological's AWP, using Red Book or an equivalent recognized compendium, and processes the claim for payment. We emphasized that this approach enables hospitals to bill and receive payment for a new drug or biological concurrent with its approval by the FDA. The hospital does not have to wait for the next quarterly release or for approval of a product specific HCPCS code to receive payment for a newly approved drug or biological or to resubmit claims for adjustment. We instructed that hospitals would discontinue billing HCPCS code C9399 and the NDC upon implementation of a product specific HCPCS code, status indicator, and appropriate payment amount with the next quarterly update. We also note that HCPCS code C9399 is paid in a similar manner in the ASC setting, as 42 CFR 416.171(b) outlines that certain drugs and biologicals for which separate payment is allowed under the OPPS are considered covered ancillary services for which the OPPS payment rate, which is 95 percent of AWP for HCPCS code C9399, applies. Since the implementation of the C–APC policy in 2015, payment for drugs and biologicals described by HCPCS code C9399 had been included in the C–APC payment when these products appear on a claim with a primary C–APC service. Packaging payment for these drugs and biologicals that appear on a hospital outpatient claim with a primary C–APC service is consistent with our C–APC packaging policy under which we make payment for all items and services, including all non-pass-through drugs, reported on the hospital outpatient claim as being integral, ancillary, supportive, dependent, and adjunctive to the primary service and representing components of a complete comprehensive service, with certain limited exceptions (78 FR 74869). It was our position that the total payment for the C–APC with which payment for a drug or biological described by HCPCS code C9399 is packaged includes payment for the drug or biological at 95 percent of its AWP.

However, we determined that in certain instances, drugs and biologicals described by HCPCS code C9399 are not being paid at 95 percent of their AWPs when payment for them is packaged with payment for a primary C–APC service. In order to ensure payment for new drugs, biologicals, and radiopharmaceuticals described by HCPCS code C9399 at 95 percent of their AWP, for CY 2023 and subsequent years, we finalized our proposal to exclude any drug, biological, or radiopharmaceutical described by HCPCS code C9399 from packaging when the drug, biological, or radiopharmaceutical is included on a claim with a ''J1'' service, which is the status indicator assigned to a C–APC, and a claim with a ''J2'' service, which is the status indicator assigned to comprehensive observation services. See Addendum J for the CY 2024 C–APC payment policy exclusions.

In the CY 2023 OPPS/ASC final rule with comment period, we finalized the proposal in section XI. ''CY 2023 OPPS Payment Status and Comment Indicators'' of the CY 2024 OPPS/ASC proposed rule to add a new definition to status indicator ''A'' to include unclassified drugs and biologicals that are reportable with HCPCS code C9399 (87 FR 72051). The definition, found in Addendum D1, would ensure the MAC prices claims for drugs, biologicals, or radiopharmaceuticals billed with HCPCS code C9399 at 95 percent of the drug or biological's AWP and pays separately for the drug, biological, or radiopharmaceutical under the OPPS when it appears on the same claim as a primary C–APC service.

(4) Additional C–APCs for CY 2024

For CY 2024 and subsequent years, we proposed to continue to apply the C–APC payment policy methodology. We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79583) for a discussion of the C–APC payment policy methodology and revisions.

Each year, in accordance with section 1833(t)(9)(A) of the Act, we review and revise the services within each APC group and the APC assignments under the OPPS. As a result of our annual review of the services and the APC assignments under the OPPS, we did not propose to convert any standard APCs to C–APCs in CY 2024, but we did propose to create two new APCs that will both be C–APCs. Thus, we

proposed that the number of C–APCs for CY 2024 would be 72 C–APCs.

We proposed to split the Level 2 Intraocular APC (APC 5492) into two and assign the higher cost procedures previously within this APC to a new Level 3 Intraocular APC (APC 5493). The previous Level 3, Level 4, and Level 5 Intraocular APCs (APCs 5493, 5494, and 5495) would be renamed the Level 4, Level 5, and Level 6 Intraocular APC (APCs 5494, 5495, and 5496), respectively. We refer readers to section III.E of the CY 2024 OPPS/ASC proposed rule (88 FR 49552) for more information regarding the proposal.

We also proposed to add a new Level 2 Abdominal/Peritoneal/Biliary and Related Procedures APC (APC 5342) to improve clinical and resource homogeneity in the Level 1 Abdominal/Peritoneal/Biliary and Related Procedures APC (APC 5341).

Comment: Commenters supported the creation of the two new proposed C–APCs, C–APCs 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures APC) and 5496 (Level 6 Intraocular APC) for CY 2024, based on resource cost and clinical characteristics.

Response: We appreciate commenters' support.

Comment: Several commenters expressed concerns with the C–APC methodology for surgical insertion codes for brachytherapy treatment, noting that these concerns impact beneficiary access to brachytherapy in the HOPD setting. These commenters stated that the C–APC methodology lacks the appropriate charge capture mechanisms to accurately reflect the services associated with the C–APC, that there are significant variations in the clinical practice and billing patterns in the hospital claims data used for ratesetting, and that the C–APC rates do not accurately or fully reflect the services and costs associated with the primary procedure. Commenters urged the agency to explore alternatives, including that CMS discontinue the C–APC policy for all brachytherapy insertion codes, implementing a modified C–APC methodology to allow separate payment for specified preparation and planning codes, or moving brachytherapy for cervical cancer treatment to C–APC 5416 (Level 6 Gynecologic Procedures).

Response: We appreciate the comments on the C–APC methodology. However, we believe that the current C–APC methodology is appropriately applied to these surgical procedures and is accurately capturing costs, particularly as the brachytherapy sources used for these procedures are excluded from C–APC packaging and are separately payable. This methodology also enables hospitals to manage their resources with maximum flexibility by monitoring and adjusting the volume and efficiency of services themselves.

We reviewed the request by commenters to move brachytherapy procedures, CPT code 57155 and CPT code 58346, to a higher paying C–APC. For CPT code 57155, the claims data in the two times rule evaluation show that this code is being paid at the appropriate level in C–APC 5415 (Level 5 Gynecologic Procedures). For CPT code 53846, given that this code has fewer than 100 claims, it does not meet the significance threshold for the two times rule evaluation, and we do not believe the few claims available provide an accurate reflection of the service's cost sufficient to move this procedure to a higher C–APC. We will continue to examine these concerns and will determine if any modifications to this policy are warranted in future rulemaking.

Comment: Several commenters requested that CMS unpackage and pay separately for all status indicator ''K'' drugs from C–APCs due to certain instances of high-cost drugs and biologics, such as CAR–T, being paid through C–APC 8011 and potentially impacting beneficiary access to high-cost therapies.

Response: We thank the commenters for their comments. We will take the issue of C–APCs and payments for high-cost drugs into consideration for future rulemaking.

After consideration of the public comments we received, we are finalizing as proposed C–APCs 5342 (Level 2 Abdominal/Peritoneal/Biliary and Related Procedures APC) and 5496 (Level 6 Intraocular APC) for CY 2024. Table 2 lists the final C–APCs for CY 2024. All C–APCs are displayed in Addendum J to this CY 2024 OPPS/ASC final rule with comment period (which is available via the internet on the CMS website). Addendum J to this final rule with comment period also contains all the data related to the C–APC payment policy methodology, including the list of complexity adjustments and other information for CY 2024.

RADTX = Radiation Oncology
SCTXX = Stem Cell Transplant
UROXX = Urologic Procedures
VASCX = Vascular Procedures
WPMXX = Wireless PA Pressure Monitor

BILLING CODE 4150–28–C

c. Calculation of Composite APC Criteria-Based Costs

As discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66613), we believe it is important that the OPPS enhance incentives for hospitals to provide necessary, high-quality care as efficiently as possible. For CY 2008, we developed composite APCs to provide a single payment for groups of services that are typically performed together during a single clinical encounter and that result in the provision of a complete service. Combining payment for multiple, independent services into a single OPPS payment in this way enables hospitals to manage their resources with maximum flexibility by monitoring and adjusting the volume and efficiency of services themselves. An additional advantage to the composite APC model is that we can use data from correctly coded multiple procedure claims to calculate payment rates for the specified combinations of services, rather than relying upon single procedure claims which may be low in volume and/or incorrectly coded. Under the OPPS, we currently have composite policies for mental health services and multiple imaging services. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66611 through 66614 and 66650 through 66652) for a full discussion of the development of the composite APC methodology, and the CY 2012 OPPS/ASC final rule with comment period (76 FR 74163) and the CY 2018 OPPS/ASC final rule with comment period (82 FR 59241, 59242, and 59246 through 52950) for more recent background.

(1) Mental Health Services Composite APC

For CY 2024, we proposed to continue our longstanding policy of limiting the aggregate payment for specified less resource-intensive mental health services furnished on the same date to the payment for a day of partial hospitalization services provided by a hospital, which we consider to be the most resource-intensive of all outpatient mental health services (88 FR 49572). We refer readers to the April 7, 2000, OPPS final rule with comment period (65 FR 18452 through 18455) for the initial discussion of this longstanding policy and the CY 2012 OPPS/ASC final rule with comment period (76 FR 74168) for more recent background.

In the CY 2018 OPPS/ASC proposed rule and final rule with comment period (82 FR 33580, 33581, 59246, and 59247, respectively), we proposed and finalized the policy for CY 2018 and subsequent years that, when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the maximum per diem payment rate for partial hospitalization services provided by a hospital, those specified mental health services will be paid through composite APC 8010 (Mental Health Services Composite). In addition, we set the payment rate for composite APC 8010 for CY 2018 at the same payment rate that will be paid for APC 5863, which is the maximum partial hospitalization per diem payment rate for a hospital, and finalized a policy that the hospital will continue to be paid the payment rate for composite APC 8010. Under this policy, the Integrated OCE (I/OCE) will continue to determine whether to pay for these specified mental health services individually, or to make a single payment at the same payment rate established for APC 5863 for all the specified mental health services furnished by the hospital on that single date of service. We continue to believe that the costs associated with administering a partial hospitalization program at a hospital represent the most resource intensive of all outpatient mental health services.

We proposed that when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the per diem payment rate for 3 partial hospitalization services provided in a

day by a hospital, those specified mental health services would be paid through composite APC 8010 for CY 2024. In addition, we proposed to set the payment rate for composite APC 8010 at the same payment rate that we proposed for APC 5863, which is a partial hospitalization per diem payment rate for 3 partial hospitalization services furnished in a day by a hospital, and that the hospital continue to be paid the proposed payment rate for composite APC 8010. We explained that while APC 5863 is no longer the maximum partial hospitalization per diem payment rate for a hospital, due to proposed APC 5864, which is 4 or more hospital-based PHP services per day, discussed in section VIII.B of this CY 2024 OPPS/ASC proposed rule, we believed it was still appropriate to apply the APC 5863 per diem payment amount as the upper limit on payment per day for individual OPPS mental health services. This is because the daily mental health cap would not be expected to reach a level of intensity beyond 3 services per day, as described by APC 5863. The PHP is meant to be the most intensive mental health services program, requiring inpatient care if PHP is not received. We would not anticipate more than three services per patient on a given day, as patients needing additional services in 1 day would potentially require an inpatient admission, as described by APC 5863. Thus, setting the mental health cap at APC 5863, rather than the 4 service per day APC 5864, is more consistent with our longstanding policy, which has been for the 3 service per day APC. We note that the proposed CY 2024 payment amount for APC 5863 would be comparable to the CY 2023 payment amount for APC 5863, which is the PHP APC used to set the daily mental health cap for CY 2023.

However, as we have historically set the daily mental health cap for composite APC 8010 at the maximum partial hospitalization per diem payment rate for a hospital, we also solicited comment on whether the next higher-level APC, proposed APC 5864, which is for four hospital-based PHP services per day, would be appropriate to use as the daily mental health cap.

Comment: One commenter supported CMS's alternative proposal to use APC 5864 as the basis for setting the daily mental health cap for APC 8010. They stated that as CMS is introducing APC 5864 to capture four or more hospital-based PHP services per day, as opposed to three services in APC 5863, the mental health cap should be increased to match this new code.

Response: We thank the commenter for their comment. Although setting the daily mental health cap at APC 5863 would be comparable to the CY 2023 payment for APC 5863, we recognize that raising the cap allows hospitals increased flexibility to determine the level of care necessary for their patient. Additionally, setting the mental health cap at APC 5864 aligns with our longstanding policy of limiting the aggregate payment for specified less resource-intensive mental health services furnished on the same date to the payment for a day of partial hospitalization services provided by a hospital, which we consider to be the most resource-intensive of all outpatient mental health services. Based upon the comment we received as well as the fact that we have historically set the daily mental health cap for composite APC 8010 at the maximum partial hospitalization per diem payment rate for a hospital, we are finalizing APC 5864, which is for four hospital-based PHP services per day, as the daily mental health cap.

Comment: Several commenters recommended that CMS change the status indicator for two neuropsychological testing codes (HCPCS codes 96133 and 96137) from SI = N to SI = Q3 to allow separate payment for additional hours of testing on the same date or increase the payment rate for the primary testing procedure code. The commenters noted that the payment rate for Composite APC 8010, which is capped at the maximum per diem partial hospitalization rate, is lower than the individual HCPCS code APC payment rates and does not provide sufficient payment for these procedures.

Response: After reviewing this issue, we believe the Composite APC methodology is being appropriately applied in this case, as packaging multiple testing services performed on a single date of service creates incentives for hospitals to provide these services in the most cost-efficient manner. We will continue to examine these concerns and will determine if any modifications to this policy are warranted in future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal, without modification, that when the aggregate payment for specified mental health services provided by one hospital to a single beneficiary on a single date of service, based on the payment rates associated with the APCs for the individual services, exceeds the maximum per diem payment rate for partial hospitalization services provided by a hospital, those specified mental health services would be paid through composite APC 8010 for CY 2024. In addition, we are finalizing setting the payment rate for composite APC 8010 for CY 2024 at the same payment rate that we set for APC 5864, which is the maximum partial hospitalization per diem payment rate for a hospital.

(2) Multiple Imaging Composite APCs (APCs 8004, 8005, 8006, 8007, and 8008)

Effective January 1, 2009, we provide a single payment each time a hospital submits a claim for more than one imaging procedure within an imaging family on the same date of service, to reflect and promote the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session (73 FR 41448 through 41450). We utilize three imaging families based on imaging modality for purposes of this methodology: (1) ultrasound; (2) computed tomography (CT) and computed tomographic angiography (CTA); and (3) magnetic resonance imaging (MRI) and magnetic resonance angiography (MRA). The HCPCS codes subject to the multiple imaging composite policy and their respective families are listed in Table 3 below.

While there are three imaging families, there are five multiple imaging composite APCs due to the statutory requirement under section 1833(t)(2)(G) of the Act that we differentiate payment for OPPS imaging services provided with and without contrast. While the ultrasound procedures included under the policy do not involve contrast, both CT/CTA and MRI/MRA scans can be provided either with or without contrast. The five multiple imaging composite APCs established in CY 2009 are:

- APC 8004 (Ultrasound Composite);
- APC 8005 (CT and CTA without Contrast Composite);
- APC 8006 (CT and CTA with Contrast Composite);
- APC 8007 (MRI and MRA without Contrast Composite); and
- APC 8008 (MRI and MRA with Contrast Composite).

We define the single imaging session for the ''with contrast'' composite APCs as having at least one or more imaging procedures from the same family performed with contrast on the same date of service. For example, if the hospital performs an MRI without contrast during the same session as at least one other MRI with contrast, the hospital will receive payment based on the payment rate for APC 8008, the ''with contrast'' composite APC.

We make a single payment for those imaging procedures that qualify for payment based on the composite APC payment rate, which includes any packaged services furnished on the same date of service. The standard (noncomposite) APC assignments continue to apply for single imaging procedures and multiple imaging procedures performed across families. For a full discussion of the development of the multiple imaging composite APC methodology, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68559 through 68569).

For CY 2024, we proposed to continue to pay for all multiple imaging procedures within an imaging family performed on the same date of service using the multiple imaging composite APC payment methodology. We continue to believe that this policy would reflect and promote the efficiencies hospitals can achieve when performing multiple imaging procedures during a single session.

For CY 2024, except where otherwise indicated, we proposed to use the costs derived from CY 2022 claims data to set the proposed CY 2024 payment rates. Therefore, for CY 2024, the payment rates for the five multiple imaging composite APCs (APCs 8004, 8005, 8006, 8007, and 8008) were based on proposed geometric mean costs calculated from CY 2022 claims available for the CY 2024 OPPS/ASC proposed rule that qualify for composite payment under the current policy (that is, those claims reporting more than one procedure within the same family on a single date of service). To calculate the proposed geometric mean costs, we used the same methodology that we used to calculate the geometric mean costs for these composite APCs since CY 2014, as described in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74918). The imaging HCPCS codes referred to as ''overlap bypass codes'' that we removed from the bypass list for purposes of calculating the proposed multiple imaging composite APC geometric mean costs, in accordance with our established methodology as stated in the CY 2014 OPPS/ASC final rule with comment period (78 FR 74918), were identified by asterisks in Addendum N to the CY 2024 OPPS/ASC proposed rule (which is available via the internet on the CMS website) and are discussed in more detail in section II.A.1.b of the CY 2024 OPPS/ASC proposed rule (88 FR 49561).

For this CY 2024 OPPS/ASC final rule, we were able to identify approximately 0.99 million ''single session'' claims out of an estimated 2.2 million potential claims for payment through composite APCs from our ratesetting claims data, which represents approximately 45.0 percent of all eligible claims, to calculate the final CY 2024 geometric mean costs for the multiple imaging composite APCs. Table 2 of this CY 2024 OPPS/ASC final rule lists the final HCPCS codes that would be subject to the multiple imaging composite APC policy and their respective families and approximate composite APC final geometric mean costs for CY 2024.

We did not receive any public comments on this policy. We are finalizing our proposal to continue the use of multiple imaging composite APCs to pay for services providing more than one imaging procedure from the same family on the same date without modification. Table 3 below lists the HCPCS codes that will be subject to the multiple imaging composite APC policy and their respective families and approximate composite APC final geometric mean costs for CY 2024.

BILLING CODE 4150–28–P

3. Changes to Packaged Items and Services

a. Background and Rationale for Packaging in the OPPS

Like other prospective payment systems, the OPPS relies on the concept of averaging to establish a payment rate for services. The payment may be more or less than the estimated cost of providing a specific service or a bundle of specific services for a particular beneficiary. The OPPS packages payments for multiple interrelated items and services into a single payment to create incentives for hospitals to furnish services most efficiently and to manage their resources with maximum flexibility. Our packaging policies support our strategic goal of using larger payment bundles in the OPPS to maximize hospitals' incentives to provide care in the most efficient manner. For example, where there are a variety of devices, drugs, items, and supplies that could be used to furnish a service, some of which are more costly than others, packaging encourages hospitals to use the most cost-efficient item that meets the patient's needs, rather than to routinely use a more expensive item, which may occur if separate payment is provided for the item.

Packaging also encourages hospitals to effectively negotiate with manufacturers and suppliers to reduce the purchase price of items and services or to explore alternative group purchasing arrangements, thereby encouraging the most economical health care delivery. Similarly, packaging encourages hospitals to establish protocols that ensure that necessary services are furnished, while scrutinizing the services ordered by practitioners to maximize the efficient use of hospital resources. Packaging payments into larger payment bundles promotes the predictability and accuracy of payment for services over time. Finally, packaging may reduce the

importance of refining service-specific payment because packaged payments include costs associated with higher cost cases requiring many ancillary items and services and lower cost cases requiring fewer ancillary items and services. Because packaging encourages efficiency and is an essential component of a prospective payment system, packaging payments for items and services that are typically integral, ancillary, supportive, dependent, or adjunctive to a primary service has been a fundamental part of the OPPS since its implementation in August 2000. As we continue to develop larger payment groups that more broadly reflect services provided in an encounter or episode of care, we have expanded the OPPS packaging policies. Most, but not necessarily all, categories of items and services currently packaged in the OPPS are listed in 42 CFR 419.2(b). Our overarching goal is to make payments for all services under the OPPS more consistent with those of a prospective payment system and less like those of a per-service fee schedule, which pays separately for each coded item. As a part of this effort, we have continued to examine the payment for items and services provided under the OPPS to determine which OPPS services can be packaged to further achieve the objective of advancing the OPPS toward a more prospective payment system.

b. Policy and Comment Solicitation on Packaged Items and Services

For CY 2024, we examined the items and services currently provided under the OPPS, reviewing categories of integral, ancillary, supportive, dependent, or adjunctive items and services for which we believe payment would be appropriately packaged into payment for the primary service that they support. Specifically, we examined the HCPCS code definitions (including CPT code descriptors) and hospital outpatient department billing patterns to determine whether there were categories of codes for which packaging would be appropriate according to existing OPPS packaging policies or a logical expansion of those existing OPPS packaging policies.

For CY 2024, we did not propose any changes to the overall packaging policy discussed above. We proposed to continue to conditionally package the costs of selected newly identified ancillary services into payment for a primary service where we believe that the packaged item or service is integral, ancillary, supportive, dependent, or adjunctive to the provision of care that was reported by the primary service HCPCS code.

While we did not propose any changes to the overall packaging policy, we solicited comments on potential modifications to our packaging policy as described in the following sections.

Comment: Several commenters expressed concerns that packaging policies may create access barriers and incentives for stinting on care. They urged CMS to do a comprehensive evaluation and study all OPPS packaging policies to determine whether they reduce patients' access to appropriate therapies and quality of care. They also requested CMS provide continued opportunity for interested parties to weigh in to help advance patient access to new innovations.

One commenter suggested that packaging can only create the types of efficiency incentives CMS intends when there are certain principles in place, recommending CMS only package items/services that truly have substitutes, take cost and volume into consideration when determining whether to package an item/service, and package the charges for packaged items and/or services in a more logical and deliberate manner. Another commenter clarified that potential access issues cannot always be identified by a decline in volume of packaged services; access issues also occur when patients do not receive the most clinically appropriate drug, biological, or service because of how packaging policies prioritize minimizing costs. Commenters felt that these issues are increasingly important as health care moves toward more personalized medicine and new innovations.

Commenters stated that, when CMS defines a packaging threshold, manufacturers may select a price to ensure that the costs exceed the packaging threshold to market the fact that separate CMS payment is available. Commenter felt this conflicted with CMS' goal to provide hospitals with incentives to choose the most clinically viable and cost-effective option for their patients.

Response: We appreciate the comments on this issue, and we will take these suggestions into consideration for future rulemaking.

After consideration of the public comments we received, we are finalizing our overall OPPS packing policy, as proposed, for CY 2024.

c. Comment Solicitation on Access to Non-Opioid Treatments for Pain Relief

The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), was signed into law on December 29, 2022. Section 4135(a) and (b) of the CAA, 2023, titled ''Access to Non-Opioid Treatments for Pain Relief,'' amended sections 1833(t)(16) and 1833(i) of the Act, respectively, to provide for temporary additional payments for non-opioid treatments for pain relief (as that term is defined in section 1833(t)(16)(G)(i) of the Act). In particular, section 1833(t)(16)(G) of the Act provides that with respect to a non-opioid treatment for pain relief furnished on or after January 1, 2025, and before January 1, 2028, the Secretary shall not package payment for the non-opioid treatment for pain relief into payment for a covered OPD service (or group of services) and shall make an additional payment for the non-opioid treatment for pain relief as specified in clause (ii) of that section. Clauses (ii) and (iii) of section 1833(t)(16)(G) of the Act provide for the amount of additional payment and set a limitation on that amount, respectively. Because the additional payments are required to begin on January 1, 2025, we previously stated that we will include our proposals to implement the CAA, 2023, section 4135 amendments in the CY 2025 OPPS/ASC proposed rule. We discussed section 4135 of CAA, 2023, at length in section XIII.F of the CY 2024 OPPS/ASC proposed rule (88 FR 49767), and we solicited comment on numerous aspects of this future policy. While we expect this policy to operate similarly in the ASC and HOPD settings, we welcomed comment on whether there are any HOPD-specific payment issues we should take into consideration as we plan to implement section 1833(t)(16)(G) of the Act for CY 2025.

We thank commenters for their detailed comments regarding the implementation of section 4135 of the CAA, 2023. We received a range of comments regarding potential qualifying drugs, biologicals, devices, and services, as well as evidence requirements for medical devices, payment amounts, and payment limitations. See section XIII.F of this final rule with comment period for a brief summary of the comments received. We intend to take these comments into consideration as we develop our proposals for the CY 2025 OPPS/ASC proposed rule.

d. Comment Solicitation on OPPS Packaging Policy for Diagnostic Radiopharmaceuticals

(i) Background on OPPS Packaging Policy for Diagnostic Radiopharmaceuticals

Under the OPPS, we package several categories of nonpass-through drugs, biologicals, and radiopharmaceuticals, regardless of the cost of the products. As the products are packaged according to

the policies in § 419.2(b), we refer to these packaged drugs, biologicals, and radiopharmaceuticals as ''policy-packaged'' drugs, biologicals, and radiopharmaceuticals. In particular, under § 419.2(b)(15), payment for drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure is packaged with the payment for the related procedure or service. Packaging costs into a single aggregate payment for a service, encounter, or episode of care is a fundamental principle that distinguishes a prospective payment system from a fee schedule. In general, packaging the costs of supportive items and services into the payment for the primary procedure or service with which they are associated encourages hospital efficiencies and enables hospitals to manage their resources with maximum flexibility.

Diagnostic radiopharmaceuticals, which include contrast agents, stress agents, and other products, are one specific type of product that is policy packaged under the category described by § 419.2(b)(15). Since we implemented this policy in CY 2008, interested parties have raised concerns regarding policy packaging of diagnostic radiopharmaceuticals. In previous rulemaking (87 FR 71962 and 71963), commenters recommended that CMS always pay separately for diagnostic radiopharmaceuticals paid under the OPPS, not just when the products have pass-through payment status. Many of these commenters mentioned that pass-through payment status helps the diffusion of new diagnostic radiopharmaceuticals into the market. However, commenters believe the packaged payment rate is often inadequate after pass-through status expires, especially in cases where the diagnostic radiopharmaceutical is high-cost and has low utilization.

CMS has previously heard from interested parties regarding alternative payment methodologies, such as subjecting diagnostic radiopharmaceuticals to the drug packaging threshold and creating separate APC payments for diagnostic radiopharmaceuticals with a per-day cost greater than $500. Interested parties have also recommended that we analyze our nuclear medicine APC structure and consider establishing additional nuclear medicine APCs to more accurately reflect the costs of diagnostic radiopharmaceuticals. Historically, commenters opposed incorporating the cost of diagnostic radiopharmaceuticals into the associated nuclear medicine APC as the nuclear medicine APCs are sometimes paid at a lower rate than the payment rate for the diagnostic radiopharmaceutical itself when it has pass-through payment status (87 FR 71962 and 71963).

Importantly, commenters historically have also been concerned that packaging payment for precision diagnostic radiopharmaceuticals in the outpatient setting creates barriers to beneficiary access for safety net hospitals serving a high proportion of Medicare beneficiaries and hospitals serving underserved communities (87 FR 71962 and 71963). Commenters specified that certain populations, such as those with Alzheimer's disease, depend on the use of certain high-cost diagnostic radiopharmaceuticals. Commenters discussed difficulties enrolling hospitals in clinical studies due to OPPS packaging policies. Commenters also suggested that CMS pay separately under the OPPS specifically for radiopharmaceuticals that are used for Alzheimer's disease. Additionally, commenters have recommended that CMS continue to apply radiolabeled product edits to the nuclear medicine procedures to ensure that all packaged costs are included on nuclear medicine claims in order to establish appropriate payment rates in the future. Many of these comments and our responses have been discussed in rulemaking since the policy to package diagnostic radiopharmaceuticals was adopted. We refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 71962 and 71963) for the most recent discussion of this subject.

As stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49577), we continue to believe that diagnostic radiopharmaceuticals are an integral component of many nuclear medicine and imaging procedures and charges associated with them should be reported on hospital claims to the extent they are used. Accordingly, the payment for the radiopharmaceuticals should be reflected within the payment for the primary procedure. We note that ratesetting uses the geometric mean of reported procedure costs based on data submitted to CMS from all hospitals paid under the OPPS to set the payment rate for the service. The costs that are calculated by Medicare reflect the average costs of items and services that are packaged into a primary procedure and will not necessarily equal the sum of the cost of the primary procedure and the average sales price of the specific items and services used in the procedure in each case. Furthermore, the costs are based on the reported costs submitted to Medicare by the hospitals and not the list price established by the manufacturer. Claims data that include the radiopharmaceutical packaged with the associated procedure reflect the combined cost of the procedure and the radiopharmaceutical used in the procedure.

As CMS has reiterated over the years, we believe these packaging policies are inherent principles of the OPPS and are essential to a prospective payment system. We are also committed to ensuring beneficiary access to diagnostic radiopharmaceuticals while also ensuring the availability of new and innovative diagnostic tools for Medicare beneficiaries. Therefore, we sought public comments on potential modifications to our packaging policy for diagnostic radiopharmaceuticals in order to ensure equitable payment and continued beneficiary access.

Below we include the comment solicitation described in the CY 2024 OPPS/ASC proposed rule (88 FR 49578) followed by a brief summary of the public comments we received.

(ii) Comment Solicitation on Potential Issues Caused by Current Payment of Diagnostic Radiopharmaceuticals Under the OPPS

As described in the CY 2024 OPPS/ASC proposed rule (88 FR 49578), we solicited comment on how the OPPS packaging policy for diagnostic radiopharmaceuticals has impacted beneficiary access, including whether there are specific patient populations or clinical disease states for whom this issue is especially critical. We sought information on specific cost-prohibitive diagnostic radiopharmaceuticals that commenters believe are superior to alternative diagnostic modalities. We were interested to learn the specific clinical scenarios that exist for which it is only clinically appropriate to use the more expensive diagnostic radiopharmaceutical, rather than a lower cost alternative, as well as what clinical scenarios exist in which the only diagnostic modality is a high-cost radiopharmaceutical. We sought information or evidence that these high-cost diagnostic radiopharmaceuticals have unique clinical value, and access has been negatively impacted by our packaging policy. We also sought information about whether commenters believe these high-cost and low-utilization diagnostic radiopharmaceuticals are being appropriately utilized according to their clinical treatment algorithm, meaning the stepwise procedures generally accepted by the medical community for diagnosis, or clinical practice guidelines.

We were also interested in learning more about whether there is a difference in outcomes for patients, or patient quality of care, based on the radiopharmaceutical used as well as whether there is a difference for hospitals, such as in terms of financial outcomes, based on the radiopharmaceutical that used.

(iii) Comment Solicitation on New Approaches To Payment of Diagnostic Radiopharmaceuticals Under the OPPS

In addition, we solicited comment on the following potential approaches that would enhance beneficiary access, while also maintaining the principles of the outpatient prospective payment system. These approaches included: (1) paying separately for diagnostic radiopharmaceuticals with per-day costs above the OPPS drug packaging threshold of $140; (2) establishing a specific per-day cost threshold that may be greater or less than the OPPS drug packaging threshold; (3) restructuring APCs, including by adding nuclear medicine APCs for services that utilize high-cost diagnostic radiopharmaceuticals; (4) creating specific payment policies for diagnostic radiopharmaceuticals used in clinical trials; and (5) adopting codes that incorporate the disease state being diagnosed or a diagnostic indication of a particular class of diagnostic radiopharmaceuticals.

To expand upon the first listed option on which we solicited comments, we specifically sought comments about whether we should use our statutory authority for separately payable drugs, biologicals, and radiopharmaceuticals under 1833(t)(14)(A)(iii)(II) of the Act in order to pay separately for diagnostic radiopharmaceuticals and subject those diagnostic radiopharmaceuticals to the longstanding OPPS drug packaging threshold policy, proposed to be $140 for CY 2023. Or said another way, payment for diagnostic radiopharmaceuticals with per-day costs greater than $140 would not be packaged and would be paid separately based on available average sales price (ASP), wholesale acquisition cost (WAC), or average wholesale price (AWP) data with the applicable add-on. This would be similar to payment for therapeutic radiopharmaceuticals and other drugs and biologicals as discussed in section V.B. of the CY 2024 OPPS/ASC proposed rule. We believe this could be a reasonable first step as this threshold is well understood and known to commenters as therapeutic drugs, biologicals, and radiopharmaceuticals are currently paid separately if they have a calculated per-day cost above this threshold and are not policy-packaged. However, it is also our longstanding belief that diagnostic radiopharmaceuticals should have their payment packaged as they function as supplies during a diagnostic test or procedure and enable the provision of an independent service and are not themselves the primary therapeutic modality. We sought additional information from interested parties on this approach. We note, for CY 2024, the OPPS drug packaging threshold was proposed to be $140. However, based on updated data, we are finalizing a threshold of $135 for CY 2024. For more information on the drug packaging threshold, see section V.B.1.a of this final rule with comment period.

Regarding the second listed option, we sought comment on whether to pay separately for a diagnostic radiopharmaceutical with a specific per-day cost threshold that may be greater or less than the OPPS drug packaging threshold. Specifically, we were interested to learn why interested parties believe a threshold-based policy is important as well as interested parties' rationale for creating a threshold that would be different from the OPPS drug packaging threshold.

Regarding the third listed option, we have heard from some interested parties that they believe APC restructuring, including adding additional nuclear medicine APCs for services utilizing high-cost diagnostic radiopharmaceuticals, would be appropriate. We sought comment as to how these interested parties specifically envision operationalizing this approach and what advantage this approach would have for beneficiaries, hospitals, and CMS over other options.

For the fourth listed option, we recently became aware that some interested parties believe that CMS packaging policies could influence participation of beneficiaries and testing sites in clinical trials, particularly those studying Alzheimer's disease, and were interested to learn more about these concerns. While we believe there could be a multitude of reasons for difficulty in recruiting study sites and beneficiaries for clinical trials, including the COVID–19 PHE, we requested comment as to whether CMS should consider creating payment policies for diagnostic radiopharmaceuticals used in clinical trials. Specifically, we were interested to learn what commenters believe an appropriate payment mechanism would be for these diagnostic radiopharmaceuticals, whether there are certain disease states or categories of trials for which we should target our payment policies, ways in which this policy could help promote equitable recruitment and diverse participation, and the method by which CMS should determine which clinical trial diagnostic radiopharmaceuticals should be subject to this policy.

Finally, for approach five, we sought comment on new codes that CMS could adopt that may incorporate the disease state being diagnosed or a diagnostic indication of a particular class of diagnostic radiopharmaceuticals. CMS could create indication-specific coding to reflect the imaging procedure and the target of the imaging procedure. For example, CMS could create a code to represent a positron emission tomography (PET) scan that detects a specific protein. If multiple diagnostic radiopharmaceuticals are available to use during this PET scan to detect this specific protein, then their payment would be packaged into the payment for this newly created code and reflected in the payment for this code. Therefore, if there is a specific clinical indication for which only very costly diagnostic radiopharmaceuticals are available, our data would appropriately reflect their utilization. Alternatively, if there is a specific clinical indication in which a wide variety of diagnostic radiopharmaceuticals can be used, all with varying costs, then our data would reflect this and our payment rates would not incentivize a higher-cost diagnostic radiopharmaceutical when there is a lower-cost, but clinically similar, diagnostic radiopharmaceutical alternative. This coding approach could be coupled with the restructuring of the nuclear medicine APC family. We believe this approach of more granular coding could allow for more specific data to be reported and thus more targeted and appropriate payment rates to be developed. This approach would also help to maintain the principles of a prospective payment system by maintaining current packaging policies as payment for the diagnostic radiopharmaceutical would continue to be packaged into the payment for the procedure in which the diagnostic radiopharmaceutical is used.

We also sought additional explanation from interested parties as to why they believe their suggested approach is the best policy approach to ensure beneficiary access to diagnostic radiopharmaceuticals and equitable payment for innovative and effective technologies. We welcomed comment regarding ideas discussed in this section, discussed in prior rulemaking, or new ideas for payment for diagnostic radiopharmaceuticals in the OPPS.

Finally, we were interested in hearing from stakeholders how the discussed policy modifications might impact our overarching goal of utilizing packaging policies to better align OPPS policies with those of a prospective payment system rather than a fee schedule. We stated we would also like to know if making any of the policy changes discussed previously could have negative consequences for beneficiaries, such as unintentionally influencing clinical practice decisions, increasing beneficiary cost-sharing obligations, or inadvertently encouraging the use of higher-cost diagnostic radiopharmaceuticals over lower cost, but equally effective, diagnostic options.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49578), we noted that depending on the comments received, we may adopt as final one or more alternative payment mechanisms for radiopharmaceuticals for CY 2024.

Comment: We received a significant number of comments in response to the comment solicitation on potential issues caused by our current payment policy for diagnostic radiopharmaceuticals under the OPPS and on new approaches to payment for these products. Overall, commenters described clinical scenarios in which they believed CMS' payment policies created the most significant access issues, and accordingly, commenters urged CMS to reform payment policy for diagnostic radiopharmaceuticals to address these concerns. However, there was not a general consensus among commenters as to the most effective way for CMS to reform its OPPS diagnostic radiopharmaceutical payment policy.

Commenters expressed concerns regarding the CMS policy to package diagnostic radiopharmaceuticals and the financial burden it has on facilities. These commenters believed radiopharmaceuticals are not supplies but instead are essential elements in driving the procedures themselves. Commenters believe that, for newer, more innovative radiopharmaceuticals, the current OPPS packaging policy has led to a lack of patient access to the technologies after their pass-through status expires, especially if there is no clinical alternative. Commenters also suggested that many of these diagnostic radiopharmaceuticals offer additional precision and improved clinical outcomes compared to predecessor products for a variety of disease states. Commenters also discussed that, in their view, some groups were more disadvantaged than others, such as rural communities and minority groups, from the lack of access. Similarly, some commenters discussed that the impact was more profound on certain disease states, such as neuroendocrine tumors, Alzheimer's disease, Parkinson's disease, Lewy body dementia, epilepsy, brain disorders, thyroid disorders, neuroendocrine tumors, heart disease, and a variety of cancers.

Many commenters suggested potential ways to develop a payment policy to address some of these issues. Predominately, most commenters requested that CMS provide separate payment for diagnostic radiopharmaceuticals. However, we received many different suggestions as to the best way to pay separately. Some commenters believed paying separately for all diagnostic radiopharmaceuticals regardless of their per-day cost was the best methodology to avoid encouraging upward price inflation to above a certain threshold. Other commenters thought that applying the existing OPPS per-day cost threshold (finalized to be $135 for CY 2024) to the payment of diagnostic radiopharmaceuticals would be an adequate solution. Others supported a $500 threshold, and many cited the Facilitating Innovative Nuclear Diagnostics Act (FIND Act) of 2023 as their rationale for that number. Some of commenters recommended the OPPS drug packaging threshold but recognized the $500 threshold number may be a more targeted approach relative to the OPPS drug packaging threshold as the higher cost diagnostic radiopharmaceuticals were the most disadvantaged by the OPPS packaging policy in their view. Still others contended the opposite that $500 would be too high a threshold. Many deferred to CMS to pick an appropriate packaging threshold for diagnostic radiopharmaceuticals. Others requested more information to allow them to make a more well-informed comment on this issue. Many commenters requested CMS use the ASP methodology in order to pay for diagnostic radiopharmaceuticals. Similarly, some suggested we pay for diagnostic radiopharmaceuticals similarly to the Physician Fee Schedule methodology and others recommended CMS reassess the pass-through payment methodology.

The majority of commenters discussed their views on providing separate payment for diagnostic radiopharmaceuticals, but some commenters also discussed the other aspects of the policy we solicited comment on. Commenters' views were mixed on these aspects. For example, some commenters supported CMS restructuring the nuclear medicine APCs and more specifically, one commenter supported packaging diagnostic radiopharmaceuticals in a new APC. However, other commenters did not believe this was sufficiently targeted enough or that it did not provide the needed granularity, and some thought new APCs would not accurately account for the variable costs of diagnostic radiopharmaceuticals and those yet to be approved. Similarly, many acknowledged that diagnostic radiopharmaceuticals should be paid separately in clinical trials, but that a clinical trial-specific policy would not address the broader issue at hand. Several commenters did recognize the difficulties that some clinical trials that utilize diagnostic radiopharmaceuticals have had in recruiting patients, such as the NEW IDEAS trial. Many commenters did not recommend CMS pursue issuing new HCPCS codes for disease-specific diagnostic radiopharmaceuticals as the process would be too complex, burdensome, lack the required specificity, and require continual updating. Alternatively, at least one commenter indicated that this methodology could have some merit in addressing this issue. This commenter stated that a specific code that incorporates the disease state would provide clinical and scientific specificity, which would enable CMS to collect data to improve care.

Many requested CMS create a new policy to be implemented for CY 2024, while others requested that CMS release more information on the per-day threshold and any proposed changes to the payment methodology before finalizing a new payment policy. These commenters acknowledged that reimbursement policy changes are complex and require careful consideration and an evaluation of all relevant factors. Some commenters were concerned with how any changes for CY 2024 could impact the Nuclear Medicine APC rates and requested an opportunity to evaluate and comment on those changes before they become the new policy.

Response: We sincerely thank commenters for their interest and engagement on this important issue. We agree this is a complex and important issue and, given the wide array of information presented through the public comment process, we intend to further consider these points and take them into consideration for future notice and comment rulemaking. We welcome ongoing dialogue and engagement from stakeholders regarding suggestions for potential future payment changes, including on any of the five potential approaches included in the original comment solicitation as well as any other potential solutions.

Please also see section V of this final rule with comment period, OPPS Payment for Drugs, Biologicals, and Radiopharmaceuticals, for additional details on payment for diagnostic radiopharmaceuticals in the OPPS.

4. Calculation of OPPS Scaled Payment Weights

We established a policy in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68283) of using geometric mean-based APC costs to calculate relative payment weights under the OPPS. In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71778 through 71780), we applied this policy and calculated the relative payment weights for each APC for CY 2023 that were shown in Addenda A and B of the CY 2023 OPPS/ASC final rule with comment period (which were made available via the internet on the CMS website) using the APC costs discussed in sections II.A.1 and II.A.2 of the CY 2023 OPPS/ASC final rule with comment period (87 FR 71757 through 71777). For CY 2024, as we did for CY 2023, we proposed to continue to apply the policy established in CY 2013 and calculate relative payment weights for each APC for CY 2024 using geometric mean-based APC costs.

For CY 2012 and CY 2013, outpatient clinic visits were assigned to one of five levels of clinic visit APCs, with APC 0606 representing a mid-level clinic visit. In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75036 through 75043), we finalized a policy that created alphanumeric HCPCS code G0463 (Hospital outpatient clinic visit for assessment and management of a patient), representing all clinic visits under the OPPS. HCPCS code G0463 was assigned to APC 0634 (Hospital Clinic Visits). We also finalized a policy to use CY 2012 claims data to develop the CY 2014 OPPS payment rates for HCPCS code G0463 based on the total geometric mean cost of the levels one through five CPT Evaluation or Assessment and Management (E/M) codes for clinic visits previously recognized under the OPPS (CPT codes 99201 through 99205 and 99211 through 99215). In addition, we finalized a policy to no longer recognize a distinction between new and established patient clinic visits.

For CY 2016, we deleted APC 0634 and reassigned the outpatient clinic visit HCPCS code G0463 to APC 5012 (Level 2 Examinations and Related Services) (80 FR 70372). For CY 2024, as we did for CY 2023, we propose to continue to standardize all of the relative payment weights to APC 5012. We believe that standardizing relative payment weights to the geometric mean of the APC to which HCPCS code G0463 is assigned maintains consistency in calculating unscaled weights that represent the cost of some of the most frequently provided OPPS services. For CY 2024, as we did for CY 2023, we proposed to assign APC 5012 a relative payment weight of 1.00 and to divide the geometric mean cost of each APC by the geometric mean cost for APC 5012 to derive the unscaled relative payment weight for each APC. The choice of the APC on which to standardize the relative payment weights does not affect payments made under the OPPS because we scale the weights for budget neutrality.

Section 1833(t)(9)(B) of the Act requires that APC reclassification and recalibration changes, wage index changes, and other adjustments be made in a budget neutral manner. Budget neutrality ensures that the estimated aggregate weight under the OPPS for CY 2024 is neither greater than nor less than the estimated aggregate weight that would have been calculated without the changes. To comply with this requirement concerning the APC changes, we proposed to compare the estimated aggregate weight using the CY 2023 scaled relative payment weights to the estimated aggregate weight using the proposed CY 2024 unscaled relative payment weights.

For CY 2023, we multiplied the CY 2023 scaled APC relative payment weight applicable to a service paid under the OPPS by the volume of that service from CY 2022 claims to calculate the total relative payment weight for each service. We then added together the total relative payment weight for each of these services in order to calculate an estimated aggregate weight for the year. For CY 2024, we proposed to apply the same process using the estimated CY 2024 unscaled relative payment weights rather than scaled relative payment weights. We proposed to calculate the weight scalar by dividing the CY 2023 estimated aggregate weight by the unscaled CY 2024 estimated aggregate weight.

For a detailed discussion of the weight scalar calculation, we refer readers to the OPPS claims accounting document available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.* Click on the link labeled ''Hospital Outpatient Prospective Paymen—Notice of Final Rulemaking with Comment Period (NFRM)'' for 2024, which can be found under the heading ''Hospital Outpatient Regulations and Notices'' and open the claims accounting document link, which is labeled ''2024 NPRM OPPS Claims Accounting (PDF).''

We proposed to compare the estimated unscaled relative payment weights in CY 2024 to the estimated total relative payment weights in CY 2023 using CY 2022 claims data, holding all other components of the payment system constant to isolate changes in total weight. Based on this comparison, we proposed to adjust the calculated CY 2024 unscaled relative payment weights for purposes of budget neutrality. We proposed to adjust the estimated CY 2024 unscaled relative payment weights by multiplying them by a proposed weight scalar of 1.4529 to ensure that the proposed CY 2024 relative payment weights are scaled to be budget neutral. The proposed CY 2024 relative payment weights listed in Addenda A and B to the CY 2024 OPPS/ASC proposed rule (which are available via the internet on the CMS website) are scaled and incorporate the recalibration adjustments discussed in sections II.A.1 and II.A.2 of the CY 2024 OPPS/ASC proposed rule.

Section 1833(t)(14) of the Act provides the payment rates for certain specified covered outpatient drugs (SCODs). Section 1833(t)(14)(H) of the Act provides that additional expenditures resulting from this paragraph shall not be taken into account in establishing the conversion factor, weighting, and other adjustment factors for 2004 and 2005 under paragraph (9) but shall be taken into account for subsequent years. Therefore, the cost of those SCODs (as discussed in section V.B.2 of the CY 2024 OPPS/ASC proposed rule) is included in the budget neutrality calculations for the CY 2024 OPPS.

We did not receive any public comments on the proposed weight scalar calculation, and we are finalizing our proposal to use the calculation process described in the proposed rule, without modification, for CY 2024. For CY 2024, as we did for CY 2023, we will continue to apply the policy established in CY 2013 and calculate relative payment weights for each APC for CY 2024 using geometric mean-based APC costs. For CY 2024, as we did for CY 2023, we will assign APC 5012 a relative payment weight of 1.00; and we will divide the geometric mean cost of each APC by the geometric mean cost for APC 5012 to derive the unscaled relative payment weight for each APC. To comply with this requirement concerning the APC changes, we will compare the estimated aggregate weight using the CY 2023 scaled relative payment weights to the estimated

aggregate weight using the CY 2024 unscaled relative payment weights.

Using updated final rule claims data, we are updating the estimated CY 2024 unscaled relative payment weights by multiplying them by a weight scalar of 1.4429 to ensure that the final CY 2024 relative payment weights are scaled to be budget neutral. The final CY 2024 relative payments weights listed in Addenda A and B of this final rule with comment period (available via the internet on the CMS website) were scaled and incorporate the recalibration adjustments discussed in sections II.A.1 and II.A.2 of this final rule with comment period.

B. Conversion Factor Update

1. OPD Fee Schedule Increase Factor

Section 1833(t)(3)(C)(ii) of the Act requires the Secretary to update the conversion factor used to determine the payment rates under the OPPS on an annual basis by applying the OPD fee schedule increase factor. For purposes of section 1833(t)(3)(C)(iv) of the Act, subject to sections 1833(t)(17) and 1833(t)(3)(F) of the Act, the OPD fee schedule increase factor is equal to the hospital inpatient market basket percentage increase applicable to hospital discharges under section 1886(b)(3)(B)(iii) of the Act. In the FY 2024 IPPS/Long Term Care Hospital (LTCH) PPS proposed rule (88 FR 27004 and 27005), consistent with current law, based on IHS Global, Inc.'s fourth quarter 2022 forecast, the proposed FY 2024 IPPS market basket percentage increase was 3.0 percent. We noted that under our regular process for the CY 2024 OPPS/ASC final rule with comment period, we would use the market basket update for the FY 2024 IPPS/LTCH PPS final rule (88 FR 58640) which would be based on IHS Global, Inc.'s second quarter 2023 forecast of the FY 2024 IPPS market basket percentage increase. We stated that if that forecast is different than the IPPS market basket percentage increase used for the CY 2024 OPPS/ASC proposed rule, the CY 2024 OPPS/ASC final rule with comment period OPD fee schedule increase factor would reflect that updated forecast of the market basket percentage increase. We proposed for CY 2024 an OPD fee schedule increase factor of 2.8 percent for the CY 2024 OPPS (which is the proposed estimate of the hospital inpatient market basket percentage increase of 3.0 percent, less the proposed 0.2 percentage point productivity adjustment).

Comment: Many commenters indicated that the proposed CY 2024 OPPS fee schedule increase factor was inadequate because it failed to take into account the fiscal reality currently faced by hospitals due to inflation, operating margins, increased labor costs, and other economic factors. Some of these commenters reiterated concerns included in public comments submitted in response to the FY 2024 IPPS/LTCH PPS proposed rule about what they believed was the inadequacy of the IPPS market basket percentage increase. Commenters explained that because section 1833(t)(3)(C)(iv) requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year, the same concerns that they articulated about the IPPS market basket apply with respect to the OPPS fee schedule increase factor.

Several commenters, in support of their argument that the proposed market basket percentage increase is inadequate, stated that hospitals continue to face significant inflationary pressures. Commenters specifically expressed concern that the proposed OPPS payment update for CY 2024 does not adequately consider the cost growth that hospitals have faced over the last few years, noting cost increases related to workforce (including contract labor), drugs, medical supplies, personal protective equipment (PPE), and capital investment. The commenters stated that the significant inflation over the past several years due to the COVID–19 PHE has not been fully captured by the OPPS payment update. Multiple commenters were concerned that CMS use of time-lagged data did not reflect current inflationary trends and encouraged CMS to use more recent economic data to calculate the market basket increase.

Many commenters, in support of their argument that the CY 2024 proposed market basket percentage increase is inadequate, pointed to a February 2022 analysis from the American Hospital Association stating that Medicare only pays 84 percent of hospital costs; and they cited MedPAC's March 2023 report to Congress, which stated that overall Medicare hospital margins were minus 8.2 percent without COVID–19 relief funds in 2021 and were projected to be minus 10 percent in 2023.

Several commenters appreciated the proposed payment increase but also agreed with other commenters that the proposed update is inadequate given inflation and labor and supply pressures that hospitals, particularly rural hospitals, have been facing and continue to face.

Many commenters had significant concerns that the proposed OPPS payment update does not adequately reflect labor costs. Commenters stated the significant increases in labor expenses over the last couple of years have been largely driven by increased utilization of contract staff (due to workforce shortages) and growth in employee salaries. Two commenters cited their own independent analysis of payroll data done by one of the commenters to calculate the increased cost of labor, which they stated was significantly higher than the annual increases for compensation prices that CMS finalized over the last several years. Given the significant difference between the increased cost of labor versus what CMS estimates using the Bureau of Labor Statistics' Employment Cost Index (ECI), many commenters stated they had significant concerns that CMS's data source for estimating the cost of labor does not capture current market dynamics and underestimates the actual cost of healthcare labor. They cited analysis predicting that nursing staff shortages will continue for the next several years. Specifically, commenters raised concerns about CMS's use of the ECI in the market basket. Commenters stated they believe the Bureau of Labor Statistics' (BLS) ECI does not accurately reflect the shift from salaried employees to contract labor since the ECI does not collect data for contract staff, and thus does not capture extraordinary labor cost growth associated with hospitals' increased reliance on clinicians contracted through staffing agencies in response to supply shortages. Multiple commenters highlighted their belief that a closely related measure—the Employer Costs for Employee Compensation (ECEC)—may be a better and more timely data source for growth in hospital compensation costs compared to the ECI. One commenter claimed that all else being equal, if the hospital ECI growth had matched the hospital ECEC growth, this would have meant an additional three percentage point increase in the IPPS market basket percentage increase over the 2019 to 2022 time period. The commenter noted that, in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59032), CMS rejected the use of the ECEC as an alternative to the ECI as a measure of change in hospital wage costs because it includes both changes in compensation as well as changes in employment. However, the commenter felt there were flaws in both the ECI and the ECEC; and, according to the commenter, the ECEC has, based on a retrospective analysis, better predicted labor costs during this period of high inflation and price instability. Several commenters recommended that CMS

use its exceptions and adjustments authority under section 1886(d)(5)(I) of the Act to adopt new or supplemental data sources such as commercial databases on hospital payrolls, to ensure labor costs are adequately reflected in the payment update in the OPPS final rule.

One commenter also requested CMS identify more accurate data inputs and use its existing authority to calculate the final rule ''base'' (before additional adjustments) market basket update with data that better reflect the rapidly increasing input prices facing hospitals. The commenter suggested that CMS should consider using the average growth rate in allowable Medicare costs per risk adjusted discharge for IPPS hospitals between FY 2019 and FY 2021 to calculate the CY 2024 final rule market basket update rather than using the growth in the ECI as the price proxy for compensation in the IPPS and OPPS market basket. The commenter requested using Medicare cost report data from Worksheets D–1, Part II, Lines 48 and 49 and S–3, Part 1, Column 13 to determine the Medicare costs per discharge. The commenter stated that this growth rate will capture the increased cost of contract labor, unlike the ECI. Based on their analysis of Medicare cost report data, they found that this methodology would yield an unadjusted market basket update of 4.39 percent for FY 2024 and CY 2024 rather than the 2.8 percent net market basket update proposed by CMS.

The commenter also responded to CMS's analysis of using Medicare cost report data to Calculate the market basket increase in the FY 2024 IPPS/LTCH PPS final rule (88 FR 59032). The commenter believes that using the Medicare case mix index to risk adjust the costs per discharge will eliminate any case-mix changes and provide an accurate comparison of the resources used to treat patients. The commenter also believes that because they are measuring changes in costs from FY 2019 to FY 2021 there should be only a minimal impact on service inputs based on changes in technology. Finally, they assert the increase in case mix CMS observes is a direct result of hospitals caring for sicker, more resource-intensive patients as procedures that previously performed in the inpatient setting have become outpatient procedures.

The commenter also stated that Medicare margins have declined over the last 20 years and believes this is due to persistently inadequate Medicare market basket updates. They further stated that hospitals' financial situations are so precarious that MedPAC recommended to Congress that it increase IPPS and OPPS payments over what is currently in the law to preserve access.

Finally, several commenters also requested that CMS use its exceptions and adjustments authority under section 1886(d)(5)(I) to increase the CY 2024 OPPS hospital market basket update higher than the proposed percentage increase. One commenter urged CMS to review the hospital cost data and the margin on Medicare reimbursement and readjust payment rates based on the new baseline cost of care that includes the results of supply shocks and labor shortages. Two other commenters requested that CMS use its authority to increase the FY 2024 IPPS market basket percentage increase to at least 5 percent, which would result in a CY 2024 OPPS/ASC fee schedule increase factor of the same amount.

Response: We acknowledge commenters' concerns, however, as we stated in the CY 2024 OPPS/ASC proposed rule, section 1833(t)(3)(C)(iv) of the Act requires the OPD fee schedule increase factor for a year to equal the IPPS market basket percentage increase factor applicable under section 1886(b)(3)(B)(iii) to hospital discharges in the fiscal year ending in such year. Accordingly, we are unable to adopt a final OPD fee schedule increase factor different than the IPPS market basket percentage increase factor finalized in the FY 2024 IPPS/LTCH PPS final rule. We refer commenters to that final rule for responses regarding the issues commenters raised (88 FR 59032 and 59033).

2. Productivity Adjustment

Section 1833(t)(3)(F)(i) of the Act requires that, for 2012 and subsequent years, the OPD fee schedule increase factor under subparagraph (C)(iv) be reduced by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment as equal to the 10-year moving average of changes in annual economy-wide, private nonfarm business multifactor productivity (MFP) (as projected by the Secretary for the 10-year period ending with the applicable fiscal year, year, cost reporting period, or other annual period) (the ''productivity adjustment''). In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51689 through 51692), we finalized our methodology for calculating and applying the productivity adjustment. The U.S. Department of Labor's Bureau of Labor Statistics (BLS) publishes the official measures of private nonfarm business productivity for the U.S. economy. We note that previously the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act was published by BLS as private nonfarm business multifactor productivity. Beginning with the November 18, 2021, release of productivity data, BLS replaced the term multifactor productivity (MFP) with total factor productivity (TFP). BLS noted that this is a change in terminology only and will not affect the data or methodology. As a result of the BLS name change, the productivity measure referenced in section 1886(b)(3)(B)(xi)(II) of the Act is now published by BLS as private nonfarm business total factor productivity. However, as mentioned, the data and methods are unchanged. Please see *www.bls.gov* for the BLS historical published TFP data. A complete description of IHS Global, Inc.'s (IGI) TFP projection methodology is available on the CMS website at *https://www.cms.gov/data-research/statistics-trends-and-reports/medicare-program-rates-statistics/market-basket-research-and-information.* In addition, we note that beginning with the FY 2022 IPPS/LTCH PPS final rule, we refer to this adjustment as the productivity adjustment rather than the MFP adjustment to more closely track the statutory language in section 1886(b)(3)(B)(xi)(II) of the Act. We note that the adjustment continues to rely on the same underlying data and methodology. In the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 27005), the proposed productivity adjustment for FY 2024 was 0.2 percentage point.

Therefore, we proposed that the productivity adjustment for the CY 2024 OPPS/ASC would be 0.2 percentage point. We also proposed that if more recent data subsequently became available after the publication of the CY 2024 OPPS/ASC proposed rule (for example, a more recent estimate of the market basket percentage increase and/or the productivity adjustment), we would use such updated data, if appropriate, to determine the CY 2024 market basket update and the productivity adjustment, which are components in calculating the OPD fee schedule increase factor under sections 1833(t)(3)(C)(iv) and 1833(t)(3)(F) of the Act.

We note that section 1833(t)(3)(F) of the Act provides that application of this subparagraph may result in the OPD fee schedule increase factor under section 1833(t)(3)(C)(iv) of the Act being less than 0.0 percent for a year and may result in OPPS payment rates being less than rates for the preceding year. As described in further detail below, we

proposed for CY 2024 an OPD fee schedule increase factor of 2.8 percent for the CY 2024 OPPS/ASC (which is the proposed estimate of the hospital inpatient market basket percentage increase of 3.0 percent, less the proposed 0.2 percentage point productivity adjustment).

Comment: Several commenters expressed concern about the application of the productivity adjustment, stating that the PHE has had unimaginable impacts on hospital productivity. They stated that even before the PHE, the CMS Office of the Actuary (OACT) indicated that hospital productivity will be less than the general economy-wide productivity, which is the measure that is required by law to be used to derive the productivity adjustment. Commenters noted that hospitals are highly labor intensive and the large amounts of staff turnover during the PHE substantially reduced hospital productivity. Given that CMS is required by statute to implement a productivity adjustment to the market basket update, commenters asked the agency to work with Congress to permanently eliminate what they stated is an unjustified reduction to hospital payments. Further, they asked CMS to use its ''exceptions and adjustments'' authority under section 1886(d)(5)(I) of the Act to remove the productivity adjustment for any fiscal year that was covered under PHE determination (*i.e.,* 2020 (0.4 percent), 2021 (0.0 percent), 2022 (0.7 percent), and 2023 (0.3 percent)) from the calculation of the market basket update for FY 2024 and any year thereafter. A few commenters expressed concerns about the proposed productivity adjustment given the extreme and uncertain circumstances under which hospitals and health systems are currently operating and urged CMS to eliminate the productivity cut for FY 2024.

Response: While we appreciate the commenters' concerns, section 1833(t)(3)(F)(i) requires that after determining the OPD fee schedule increase factor under subparagraph (C)(iv), the Secretary shall reduce such increase factor by the productivity adjustment described in section 1886(b)(3)(B)(xi) of the Act. As required by statute, the FY 2024 productivity adjustment is derived based on the 10-year moving average growth in economy-wide productivity for the period ending FY 2024.

We thank the commenters for their comments. After consideration of the comments received and consistent with our proposal, we are finalizing an OPD fee schedule increase factor of 3.1 percent for CY 2024, which consists of the IPPS market basket increase factor of 3.3 percent less a 0.2 percentage point productivity adjustment.

3. Other Conversion Factor Adjustments

To set the OPPS conversion factor for 2024, we proposed to increase the CY 2023 conversion factor of $85.585 by 2.8 percent. In accordance with section 1833(t)(9)(B) of the Act, we proposed further to adjust the conversion factor for CY 2024 to ensure that any revisions made to the wage index and rural adjustment are made on a budget neutral basis. We proposed to calculate an overall budget neutrality factor of 0.9974 for wage index changes by comparing proposed total estimated payments from our simulation model using the proposed FY 2024 IPPS wage indexes to those payments using the FY 2023 IPPS wage indexes, as adopted on a calendar year basis for the OPPS. We further proposed to calculate an additional budget neutrality factor of 0.9975 to account for our proposed policy to cap wage index reductions for hospitals at 5 percent on an annual basis.

For CY 2024, we proposed to maintain the current rural adjustment policy, as discussed in section II.E of the CY 2024 OPPS/ASC proposed rule. Therefore, the proposed budget neutrality factor for the rural adjustment was 1.0000.

We proposed to calculate a CY 2024 budget neutrality adjustment factor for the cancer hospital payment adjustment by transitioning from the target PCR of 0.89 we finalized for CYs 2020 through 2023 (which included the 1.0 percentage point reduction as required by section 16002(b) of the 21st Century Cures Act) and incrementally reducing the target PCR by an additional 1.0 percentage point for each calendar year, beginning with CY 2024, until the target PCR equals the PCR of non-cancer hospitals calculated using the most recent data minus 1.0 percentage point as required by section 16002(b) of the 21st Century Cures Act. Therefore, we proposed to apply a budget neutrality adjustment factor of 1.0005 to the conversion factor for the cancer hospital payment adjustment. In accordance with section 1833(t)(18)(C) of the Act, as added by section 16002(b) of the 21st Century Cures Act (Pub. L. 114–255), we reduce the target PCR by 0.01, which brings the proposed target PCR to 0.88. This is 0.01 less than the target PCR of 0.89 from CY 2021 through CY 2023, which was held at the pre-PHE target.

For the CY 2024 OPPS/ASC proposed rule, we estimated that proposed pass-through spending for drugs, biologicals, and devices for CY 2024 would equal approximately $234.1 million, which represents 0.26 percent of total projected CY 2024 OPPS spending. Therefore, we stated that the proposed conversion factor would be adjusted by the difference between the 0.16 percent estimate of pass-through spending for CY 2023 and the 0.26 percent estimate of proposed pass-through spending for CY 2024, resulting in a proposed decrease to the conversion factor for CY 2024 of 0.1 percent.

We proposed that estimated payments for outliers would remain at 1.0 percent of total OPPS payments for CY 2024. We estimated for the CY 2024 OPPS/ASC proposed rule that outlier payments would be approximately 0.78 percent of total OPPS payments in CY 2023; the 1.00 percent for proposed outlier payments in CY 2024 would constitute a 0.22 percent increase in payment in CY 2024 relative to CY 2023.

For 2024, we proposed to use a conversion factor of $87.488 in the calculation of the national unadjusted payment rates for those items and services for which payment rates are calculated using geometric mean costs; that is, the proposed OPD fee schedule increase factor of 2.8 percent for CY 2024, the required proposed wage index budget neutrality adjustment of approximately 0.9974, the proposed 5 percent annual cap for individual hospital wage index reductions adjustment of approximately 0.9975, the proposed cancer hospital payment adjustment of 1.0005, and the proposed adjustment of an decrease of 0.1 percentage point of projected OPPS spending for the difference in pass-through spending, which resulted in a proposed conversion factor for CY 2024 of $87.488.

For CY 2024, we also proposed that hospitals that fail to meet the reporting requirements of the Hospital OQR Program would continue to be subject to a further reduction of 2.0 percentage points to the OPD fee schedule increase factor. For hospitals that fail to meet the requirements of the Hospital OQR Program, we proposed to make all other adjustments discussed above, but use a reduced OPD fee schedule update factor of 0.8 percent (that is, the proposed OPD fee schedule increase factor of 2.8 percent further reduced by 2.0 percentage points). This resulted in a proposed reduced conversion factor for CY 2024 of $85.782 for hospitals that fail to meet the Hospital OQR Program requirements (a difference of −1.706 in the conversion factor relative to hospitals that met the requirements). For further discussion of the Hospital OQR Program, we refer readers to section XIV of the CY 2024 OPPS/ASC

proposed rule. For 2024, we proposed to use a reduced conversion factor of $85.782 in the calculation of payments for hospitals that fail to meet the Hospital OQR Program requirements (a difference of –1.706 in the conversion factor relative to hospitals that met the requirements).

We received no comments on our proposed adjustments to the conversion factor for CY 2024. For this CY 2024 OPPS/ASC final rule with comment period, based on more recent data available, the OPD fee schedule increase factor for the CY 2024 OPPS is 3.1 percent (which reflects the 3.3 percent final estimate of the hospital inpatient market basket percentage increase with a −0.2 percentage point productivity adjustment). For CY 2024, we are using a conversion factor of $87.382 in the calculation of the national unadjusted payment rates for those items and services for which payment rates are calculated using geometric mean costs; that is, the OPD fee schedule increase factor of 3.1 percent for CY 2024, the required wage index budget neutrality adjustment of 0.9912, the 5 percent annual cap for individual hospital wage index reductions of 0.9997, the cancer hospital payment adjustment of 1.0005, and the adjustment of 0.11 (or 0.27 less 0.16) percentage point of projected OPPS spending for the difference in pass-through spending that results in a conversion factor for CY 2024 of $87.382. We are also finalizing a reduced conversion factor of $85.687 in the calculation of payments for hospitals that fail to meet the Hospital OQR Program requirements (a difference of −1.695 in the conversion factor relative to hospitals that met the requirements).

The calculations we performed to determine the CY 2024 final conversion factor are shown in Table 4.

BILLING CODE 4150–28–P

TABLE 4: CALCULATION OF CY 2024 FINAL OPPS CONVERSION FACTOR

Start: CY 2023 Final OPPS Conversion Factor = **$85.585**
Step 1a: Adjust the conversion factor to temporarily account for additional drug and device pass-through spending and outlier spending in CY 2023. This action causes an increase in the conversion factor. So, the amount of both drug and device pass-through spending (0.0016) and the percentage of outlier spending (0.01). as a share of total OPPS outpatient hospital spending is subtracted from 1.0000, which represents total OPPS outpatient hospital spending for CY 2023. ➢ 1.0000– (0.0016+0.01) = 0.9884 *Step 1b:* Divide $85.585 by 0.9884 ➢ $85.585/0.9884 = **$86.589**
Step 2: Adjust the conversion factor by the required wage index budget neutrality adjustment of approximately 0.9912. This adjustment reduces the amount of OPPS outpatient hospital spending and is multiplied with $86.589. ➢ $86.589* 0.9912 = $**85.827**
Step 3: Adjust the conversion factor by the 5 percent annual cap for individual hospital wage index reductions adjustment of approximately 0.9997. This adjustment reduces the amount of OPPS outpatient hospital spending and is multiplied with $85.827. ➢ $85.827* 0.9997 = **$85.802**
Step 4: Adjust the conversion factor by the cancer hospital payment adjustment of 1.0005. Because the PCR for cancer hospitals is declining between CY 2023 and CY 2024, it increases the amount of OPPS outpatient hospital spending for providers that are not cancer hospitals and is multiplied with $85.802. ➢ $85.802*1.0005 = **$85.845**
Step 5: Adjust the conversion factor by rural SCH adjustment policy of 1.0000. Since we are maintaining our current policy, there is no impact on the conversion by this policy. ➢ $85.845*1.0000 = **$85.845**
Step 6a: Adjust the conversion factor by the OPD fee schedule increase factor of 0.031 for CY 2024. The OPD fee schedule increase factor increases outpatient hospital spending in CY 2024 over CY 2023 and is added to 1.0000 which represents total outpatient hospital OPPS spending in CY 2023.

➢ 1.0000+0.031 = 1.0310
Step 6b: Multiply $85.845 by 1.0310. ➢ $85.845*1.0310 = **$88.506**
Step 7a: Adjust the conversion factor to remove additional drug and device pass-through spending and outlier spending for CY 2024. This action causes a decrease in the conversion factor. So, the amount of both drug and device pass-through spending (0.0027) and the percentage of outlier spending (0.01) as a share of total OPPS outpatient hospital spending is subtracted from 1.0000, which represents total OPPS outpatient hospital spending for CY 2024. ➢ 1.0000– (0.0027+0.01) = 0.9873
Step 7b: Multiply $88.506 by 0.9873 to get the CY 2024 final OPPS conversion factor. ➢ $88.506/0.9873 = **$87.382**
Finish: **CY 2024 OPPS Conversion Factor = $87.382**

C. Wage Index Changes

Section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust the portion of payment and coinsurance attributable to labor-related costs for relative differences in labor and labor-related costs across geographic regions in a budget neutral manner (codified at 42 CFR 419.43(a)). This portion of the OPPS payment rate is called the OPPS labor-related share. Budget neutrality is discussed in section II.B of this CY 2024 OPPS/ASC final rule with comment period.

The OPPS labor-related share is 60 percent of the national OPPS payment. This labor-related share is based on a regression analysis that determined that, for all hospitals, approximately 60 percent of the costs of services paid under the OPPS were attributable to wage costs. We confirmed that this labor-related share for outpatient services is appropriate during our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPPS final rule with comment period (70 FR 68553). We proposed to continue this policy for the CY 2024 OPPS/ASC (88 FR 49584). We refer readers to section II.H of the CY 2024 OPPS/ASC proposed rule for a description and an example of how the wage index for a particular hospital is used to determine payment for the hospital.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification.

As discussed in the claims accounting narrative included with the supporting documentation for this final rule with comment period (which is available via the internet on the CMS website (*https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*)), for estimating APC costs, we would standardize 60 percent of estimated claims costs for geographic area wage variation using the same FY 2024 pre-reclassified wage index that we use under the IPPS to standardize costs. This standardization process removes the effects of differences in area wage levels from the determination of a national unadjusted OPPS payment rate and copayment amount.

Under 42 CFR 419.41(c)(1) and 419.43(c) (published in the OPPS April 7, 2000, final rule with comment period (65 FR 18495 and 18545)), the OPPS adopted the final fiscal year IPPS post-reclassified wage index as the calendar year wage index for adjusting the OPPS standard payment amounts for labor market differences. Therefore, the wage index that applies to a particular acute care, short-stay hospital under the IPPS also applies to that hospital under the OPPS. As initially explained in the September 8, 1998, OPPS/ASC proposed rule (63 FR 47576), we believe that using the IPPS wage index as the source of an adjustment factor for the OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall. In accordance with section 1886(d)(3)(E) of the Act, the IPPS wage index is updated annually.

The Affordable Care Act contained several provisions affecting the wage index. These provisions were discussed in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74191). Section 10324 of the Affordable Care Act added section 1886(d)(3)(E)(iii)(II) to the Act, which defines a frontier State and amended section 1833(t) of the Act to add paragraph (19), which requires a frontier State wage index floor of 1.00 in certain cases, and states that the frontier State floor shall not be applied in a budget neutral manner. We codified these requirements at § 419.43(c)(2) and (3) of our regulations. In the CY 2024 OPPS/ASC proposed rule (88 FR 49584 and 49585), we proposed to implement this provision in the same manner as we have since CY 2011. Under this policy, the frontier State hospitals would receive a wage index of 1.00 if the otherwise applicable wage index (including reclassification, the rural floor, and rural floor budget neutrality) is less than 1.00. Because the HOPD receives a wage index based on the geographic location of the specific

inpatient hospital with which it is associated, the frontier State wage index adjustment applicable for the inpatient hospital also would apply for any associated HOPD. We refer readers to the FY 2011 through FY 2023 IPPS/LTCH PPS final rules for discussions regarding this provision, including our methodology for identifying which areas meet the definition of ''frontier States'' as provided for in section 1886(d)(3)(E)(iii)(II) of the Act: for FY 2011, 75 FR 50160 through 50161; for FY 2012, 76 FR 51793, 51795, and 51825; for FY 2013, 77 FR 53369 and 53370; for FY 2014, 78 FR 50590 and 50591; for FY 2015, 79 FR 49971; for FY 2016, 80 FR 49498; for FY 2017, 81 FR 56922; for FY 2018, 82 FR 38142; for FY 2019, 83 FR 41380; for FY 2020, 84 FR 42312; for FY 2021, 85 FR 58765; for FY 2022, 86 FR 45178; and for FY 2023, 87 FR 49006.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification.

In addition to the changes required by the Affordable Care Act, we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49585) that the proposed FY 2024 IPPS wage indexes continue to reflect a number of adjustments implemented in past years, including, but not limited to, reclassification of hospitals to different geographic areas, the rural floor provisions, the imputed floor wage index adjustment in all-urban states, an adjustment for occupational mix, an adjustment to the wage index based on commuting patterns of employees (the out-migration adjustment), and the permanent 5-percent cap on any decrease to a hospital's wage index from its wage index in a prior FY. Beginning with FY 2024, we proposed to include hospitals with § 412.103 reclassification along with geographically rural hospitals in all rural wage index calculations, and to exclude ''dual reclass'' hospitals (hospitals with simultaneous § 412.103 and Medicare Geographic Classification Review Board (MGCRB) reclassifications) implicated by the hold harmless provision at section 1886(d)(8)(C)(ii) of the Act (88 FR 26973 and 26974). We also proposed to continue the low wage index hospital policy, under which we increase the wage index for hospitals with a wage index value below the 25th percentile wage index value for a fiscal year by half the difference between the otherwise applicable final wage index value for a year for that hospital and the 25th percentile wage index value for that year across all hospitals. We refer readers to the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26963 through 26986) for a detailed discussion of all proposed changes to the FY 2024 IPPS wage indexes.

We noted that in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021), we finalized a permanent approach to smooth year-to-year decreases in hospitals' wage indexes. Specifically, for FY 2023 and subsequent years, we apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY, regardless of the circumstances causing the decline. That is, a hospital's wage index for FY 2024 would not be less than 95 percent of its final wage index for FY 2023, and for subsequent years, a hospital's wage index would not be less than 95 percent of its final wage index for the prior FY. We stated that we believe this policy would increase the predictability of IPPS payments for hospitals and mitigate instability and significant negative impacts to hospitals resulting from changes to the wage index. It would also eliminate the need for temporary and potentially uncertain transition adjustments to the wage index in the future due to specific policy changes or circumstances outside hospitals' control. Except for newly opened hospitals, we will apply the cap for a fiscal year using the final wage index applicable to the hospital on the last day of the prior fiscal year. A newly opened hospital would be paid the wage index for the area in which it is geographically located for its first full or partial fiscal year, and it would not receive a cap for that first year, because it would not have been assigned a wage index in the prior year (in accordance with 42 CFR 419.41(c)(1) and 419.43(c), as noted above).

Core Based Statistical Areas (CBSAs) are made up of one or more constituent counties. Each CBSA and constituent county has its own unique identifying codes. The FY 2018 IPPS/LTCH PPS final rule (82 FR 38130) discussed the two different lists of codes to identify counties: Social Security Administration (SSA) codes and Federal Information Processing Standard (FIPS) codes. Historically, CMS listed and used SSA and FIPS county codes to identify and crosswalk counties to CBSA codes for purposes of the IPPS and OPPS wage indexes. However, the SSA county codes are no longer being maintained and updated, although the FIPS codes continue to be maintained by the U.S. Census Bureau. The Census Bureau's most current statistical area information is derived from ongoing census data received since 2010; the most recent data are from 2015. The Census Bureau maintains a complete list of changes to counties or county equivalent entities on the website at: *https://www.census.gov/geo/reference/county-changes.html* (which, as of May 6, 2019, migrated to: *https://www.census.gov/programs-surveys/geography.html*). In the FY 2018 IPPS/LTCH PPS final rule (82 FR 38130), for purposes of crosswalking counties to CBSAs for the IPPS wage index, we finalized our proposal to discontinue the use of the SSA county codes and begin using only the FIPS county codes. Similarly, for the purposes of crosswalking counties to CBSAs for the OPPS wage index, in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59260), we finalized our proposal to discontinue the use of SSA county codes and begin using only the FIPS county codes. For CY 2024, under the OPPS, we are continuing to use only the FIPS county codes for purposes of crosswalking counties to CBSAs.

In the CY 2024 OPPS/ASC proposed rule, we proposed to use the FY 2024 IPPS post-reclassified wage index for urban and rural areas as the wage index for the OPPS to determine the wage adjustments for both the OPPS payment rate and the copayment rate for CY 2024 (88 FR 49585). Therefore, any policies and adjustments for the FY 2024 IPPS post-reclassified wage index would be reflected in the final CY 2024 OPPS wage index beginning on January 1, 2024. We refer readers to the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26963 through 26986) and the proposed FY 2024 hospital wage index files posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2024-ipps-proposed-rule-home-page.* Regarding budget neutrality for the CY 2024 OPPS wage index, we refer readers to section II.B of this CY 2024 OPPS/ASC final rule with comment period. We continue to believe that using the IPPS post-reclassified wage index as the source of an adjustment factor for the OPPS is reasonable and logical, given the inseparable, subordinate status of the HOPD within the hospital overall.

Hospitals that are paid under the OPPS, but not under the IPPS, do not have an assigned hospital wage index under the IPPS. Therefore, for non-IPPS hospitals paid under the OPPS, it is our longstanding policy to assign the wage index that would be applicable if the hospital was paid under the IPPS, based on its geographic location and any applicable wage index policies and adjustments. We proposed to continue this policy for CY 2024 (88 FR 49585 and 49586). We refer readers to the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 26963 through 26986) for a detailed

discussion of the proposed changes to the FY 2024 IPPS wage indexes.

It has been our longstanding policy to allow non-IPPS hospitals paid under the OPPS to qualify for the out-migration adjustment if they are located in a section 505 out-migration county (section 505 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA)) (Pub. L. 108–173). Applying this adjustment is consistent with our policy of adopting IPPS wage index policies for hospitals paid under the OPPS. We note that, because non-IPPS hospitals cannot reclassify, they are eligible for the out-migration wage index adjustment if they are located in a section 505 out-migration county. This is the same out-migration adjustment policy that would apply if the hospital were paid under the IPPS. For CY 2024, we proposed to continue our policy of allowing non-IPPS hospitals paid under the OPPS to qualify for the outmigration adjustment if they are located in a section 505 out-migration county (section 505 of the MMA) (88 FR 49585 and 49586). Furthermore, we proposed that the wage index that would apply for CY 2024 to non-IPPS hospitals paid under the OPPS would continue to include the rural floor adjustment and any policies and adjustments applied to the IPPS wage index to address wage index disparities. In addition, we proposed that the wage index that would apply to non-IPPS hospitals paid under the OPPS would include the 5-percent cap on wage index decreases.

Comment: Multiple commenters supported our policy to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY. Commenters also requested that the proposed 5-percent cap policy be excluded from budget neutrality, which would allow the cap to be applied while avoiding decreases to the wage index in areas with high wage indexes.

Response: We appreciate the commenters' support of our policy to apply a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY. We finalized the proposal and the associated proposed budget neutrality adjustment in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49018 through 49021) and agree that the policy will promote payment stability for HOPDs as well.

We stated in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49021) that we will apply the cap in a budget neutral manner through a national adjustment to the standardized amount each fiscal year. Specifically, we will apply a budget neutrality adjustment to ensure that estimated aggregate payments under our wage index cap policy for hospitals that would have a decrease in their wage indexes for the upcoming fiscal year of more than 5 percent would equal what estimated aggregate payments would have been without the wage index cap policy. We proposed to apply a similar budget neutrality adjustment in the OPPS for each calendar year (87 FR 44530). For the OPPS, section 1833(t)(2)(D) of the Act requires the Secretary to determine a wage adjustment factor to adjust the portion of payment and coinsurance attributable to labor-related costs for relative differences in labor and labor-related costs across geographic regions in a budget neutral manner, which is inconsistent with the commenters' request to exclude the wage index cap policy from budget neutrality.

Comment: Multiple commenters supported our policy to treat urban hospitals reclassified as rural hospitals under § 412.103 as rural hospitals for purposes of the rural wage indexes and the rural floor.

Response: We appreciate the commenters' support of our policy.

Comment: Multiple commenters supported our low-wage index policy, which, for hospitals with a wage index value below the 25th percentile, increases the hospital's wage index by half the difference between the otherwise applicable wage index value for that hospital and the 25th percentile wage index value for all hospitals.

Response: We appreciate the support of the commenters.

After consideration of the public comments we received, we are finalizing our proposal without modification to use the FY 2024 IPPS post-reclassified wage index for urban and rural areas as the wage index for the OPPS to determine the wage adjustments for both the OPPS payment rate and the copayment rate for CY 2024. Any policies and adjustments for the FY 2024 IPPS post-reclassified wage index will be reflected in the final CY 2024 OPPS wage index beginning on January 1, 2024, including, but not limited to, reclassification of hospitals to different geographic areas, the rural floor provisions, the imputed floor wage index adjustment in all-urban states, an adjustment for occupational mix, an adjustment to the wage index based on commuting patterns of employees (the out-migration adjustment), an adjustment to the wage index for certain low wage index hospitals to help address wage index disparities between low and high wage index hospitals, and a 5-percent cap on any decrease to a hospital's wage index from its wage index in the prior FY. We refer readers to the FY 2024 IPPS/LTCH PPS final rule (88 FR 58958 through 58988) and the FY 2024 hospital wage index files posted on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2024-ipps-final-rule-home-page.* Regarding budget neutrality for the CY 2024 OPPS wage index, we refer readers to section II.B. of this final rule with comment period.

For CMHCs, for CY 2024, we proposed to continue to calculate the wage index by using the post-reclassification IPPS wage index based on the CBSA where the CMHC is located (88 FR 48586). Furthermore, we proposed that the wage index that would apply to a CMHC for CY 2024 would continue to include the rural floor adjustment and any policies and adjustments applied to the IPPS wage index to address wage index disparities. In addition, the wage index that would apply to CMHCs would include the 5-percent cap on wage index decreases. Also, we proposed that the wage index that would apply to CMHCs would not include the outmigration adjustment because that adjustment only applies to hospitals.

We did not receive any public comments on our proposals, and we are finalizing our proposals regarding CMHC wage index calculations without modification.

Table 4A associated with the FY 2024 IPPS/LTCH PPS final rule (available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps/fy-2024-ipps-final-rule-home-page*) identifies counties that would be eligible for the out-migration adjustment. Table 2 associated with the FY 2024 IPPS/LTCH PPS final rule (available for download via the website above) identifies IPPS hospitals that would receive the out-migration adjustment for FY 2024. We are including the outmigration adjustment information from Table 2 associated with the FY 2024 IPPS/LTCH PPS final rule as Addendum L to this final rule with comment period, with the addition of non-IPPS hospitals that would receive the section 505 outmigration adjustment under this final rule with comment period. Addendum L is available via the internet on the CMS website. We refer readers to the CMS website for the OPPS at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.* At this link, readers will find a link to the final FY 2024 IPPS wage index tables and Addendum L.

D. Statewide Average Default Cost-to-Charge Ratios (CCRs)

In addition to using CCRs to estimate costs from charges on claims for ratesetting, we use overall hospital-specific CCRs calculated from the hospital's most recent cost report (OMB NO: 0938–0050 for Form CMS–2552–10) to determine outlier payments, payments for pass-through devices, and monthly interim transitional corridor payments under the OPPS during the PPS year. For certain hospitals, under the regulations at 42 CFR 419.43(d)(5)(iii), we use the statewide average default CCRs to determine the payments mentioned earlier if it is not possible to determine an accurate CCR for a hospital in certain circumstances. This includes hospitals that are new, hospitals that have not accepted assignment of an existing hospital's provider agreement, and hospitals that have not yet submitted a cost report. We also use the statewide average default CCRs to determine payments for hospitals whose CCR falls outside the predetermined ceiling threshold for a valid CCR or for hospitals in which the most recent cost report reflects an all-inclusive rate status (Medicare Claims Processing Manual (Pub. 100–04), Chapter 4, Section 10.11).

We discussed our policy for using default CCRs, including setting the ceiling threshold for a valid CCR, in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599) in the context of our adoption of an outlier reconciliation policy for cost reports beginning on or after January 1, 2009. For details on our process for calculating the statewide average CCRs, we refer readers to the Claims Accounting Narrative for this CY 2024 OPPS/ASC final rule with comment period, which is posted on our website. We proposed to calculate the default ratios for CY 2024 using the most recent cost report data.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification to calculate the default ratios for CY 2024 using the June 2021 HCRIS cost reports, consistent with the broader proposal regarding CY 2024 OPPS ratesetting.

We no longer publish a table in the **Federal Register** containing the statewide average CCRs in the annual OPPS proposed rule and final rule with comment period. These CCRs with the upper limit will be available for download with each OPPS CY proposed rule and final rule on the CMS website. We refer readers to our website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html;* click on the link on the left of the page titled ''Hospital Outpatient Regulations and Notices'' and then select the relevant regulation to download the statewide CCRs and upper limit in the downloads section of the web page.

E. Adjustment for Rural Sole Community Hospitals (SCHs) and Essential Access Community Hospitals (EACHs) Under Section 1833(t)(13)(B) of the Act for CY 2024

In the CY 2006 OPPS final rule with comment period (70 FR 68556), we finalized a payment increase for rural sole community hospitals (SCHs) of 7.1 percent for all services and procedures paid under the OPPS, excluding drugs, biologicals, brachytherapy sources, and devices paid under the pass-through payment policy, in accordance with section 1833(t)(13)(B) of the Act, as added by section 411 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (MMA) (Pub. L. 108–173). Section 1833(t)(13) of the Act provides the Secretary the authority to make an adjustment to OPPS payments for rural hospitals, effective January 1, 2006, if justified by a study of the difference in costs by APC between hospitals in rural areas and hospitals in urban areas. Our analysis showed a difference in costs for rural SCHs. Therefore, for the CY 2006 OPPS, we finalized a payment adjustment for rural SCHs of 7.1 percent for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, brachytherapy sources, items paid at charges reduced to costs, and devices paid under the pass-through payment policy, in accordance with section 1833(t)(13)(B) of the Act.

In the CY 2007 OPPS/ASC final rule with comment period (71 FR 68010 and 68227), for purposes of receiving this rural adjustment, we revised our regulations at § 419.43(g) to clarify that essential access community hospitals (EACHs) are also eligible to receive the rural SCH adjustment, assuming these entities otherwise meet the rural adjustment criteria. Currently, two hospitals are classified as EACHs, and as of CY 1998, under section 4201(c) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33), a hospital can no longer become newly classified as an EACH.

This adjustment for rural SCHs is budget neutral and applied before calculating outlier payments and copayments. We stated in the CY 2006 OPPS final rule with comment period (70 FR 68560) that we would not reestablish the adjustment amount on an annual basis, but we may review the adjustment in the future and, if appropriate, would revise the adjustment. We provided the same 7.1 percent adjustment to rural SCHs, including EACHs, again in CYs 2008 through 2023.

For CY 2024, we proposed to continue the current policy of a 7.1 percent payment adjustment for rural SCHs, including EACHs, for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, brachytherapy sources, items paid at charges reduced to costs, and devices paid under the pass-through payment policy, applied in a budget neutral manner.

Comment: Two commenters requested that the 7.1 percent payment adjustment be allowed for providers other than rural SCHs and EACHs. The commenters suggested that Medicare dependent hospitals and urban sole community hospitals either receive the adjustment or be studied to see if they are eligible to receive the adjustment.

Response: Our study of the difference in costs by APC between hospitals in rural areas and hospitals in urban areas only showed a significant difference in costs for rural SCHs. We did not identify significant cost differences between hospitals in urban areas and Medicare dependent hospitals. In addition, our authority under section 1833(t)(13) of the Act only extends to rural hospitals. Therefore, we are not expanding the types of hospitals eligible for the 7.1 percent payment adjustment at this time.

Comment: Multiple commenters are in favor of our policy to apply a 7.1 percent payment adjustment for rural SCHs, including EACHs.

Response: We appreciate the commenters' support of our policy.

After consideration of the public comments we received, we are finalizing our proposal, without modification, to continue in CY 2024 our current policy of utilizing a budget neutral 7.1 percent payment adjustment for rural SCHs, including EACHs, for all services and procedures paid under the OPPS, excluding separately payable drugs and biologicals, devices paid under the pass-through payment policy, and items paid at charges reduced to costs.

F. Payment Adjustment for Certain Cancer Hospitals for CY 2024

1. Background

Since the inception of the OPPS, which was authorized by the Balanced

Budget Act of 1997 (BBA) (Pub. L. 105–33), Medicare has paid the 11 hospitals that meet the criteria for cancer hospitals identified in section 1886(d)(1)(B)(v) of the Act under the OPPS for covered outpatient department services. These cancer hospitals are exempted from payment under the IPPS. With the Medicare, Medicaid and SCHIP Balanced Budget Refinement Act of 1999 (Pub. L. 106–113), the Congress added section 1833(t)(7), ''Transitional Adjustment to Limit Decline in Payment,'' to the Act, which requires the Secretary to determine OPPS payments to cancer and children's hospitals based on their pre-BBA payment amount (these hospitals are often referred to under this policy as ''held harmless'' and their payments are often referred to as ''hold harmless'' payments).

As required under section 1833(t)(7)(D)(ii) of the Act, a cancer hospital receives the full amount of the difference between payments for covered outpatient department services under the OPPS and a ''pre-BBA amount.'' That is, cancer hospitals are permanently held harmless to their ''pre-BBA amount,'' and they receive transitional outpatient payments (TOPs) or hold harmless payments to ensure that they do not receive a payment that is lower in amount under the OPPS than the payment amount they would have received before implementation of the OPPS, as set forth in section 1833(t)(7)(F) of the Act. The ''pre-BBA amount'' is the product of the hospital's reasonable costs for covered outpatient department services occurring in the current year and the base payment-to-cost ratio (PCR) for the hospital defined in section 1833(t)(7)(F)(ii) of the Act. The ''pre-BBA amount'' and the determination of the base PCR are defined at § 419.70(f). TOPs are calculated on Worksheet E, Part B, of the Hospital Cost Report or the Hospital Health Care Complex Cost Report (Form CMS–2552–96 or Form CMS–2552–10 (OMB NO: 0938–0050), respectively), as applicable each year. Section 1833(t)(7)(I) of the Act exempts TOPs from budget neutrality calculations.

Section 3138 of the Affordable Care Act (Pub. L. 111–148) amended section 1833(t) of the Act by adding a new paragraph (18), which instructs the Secretary to conduct a study to determine if, under the OPPS, outpatient costs incurred by cancer hospitals described in section 1886(d)(1)(B)(v) of the Act with respect to APC groups exceed outpatient costs incurred by other hospitals furnishing services under section 1833(t) of the Act, as determined appropriate by the Secretary. Section 1833(t)(18)(A) of the Act requires the Secretary to take into consideration the cost of drugs and biologicals incurred by cancer hospitals and other hospitals. Section 1833(t)(18)(B) of the Act provides that, if the Secretary determines that cancer hospitals' costs are higher than those of other hospitals, the Secretary shall provide an appropriate adjustment under section 1833(t)(2)(E) of the Act to reflect these higher costs. In 2011, after conducting the study required by section 1833(t)(18)(A) of the Act, we determined that outpatient costs incurred by the 11 specified cancer hospitals were greater than the costs incurred by other OPPS hospitals. For a complete discussion regarding the cancer hospital cost study, we refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74200 and 74201).

Based on these findings, we finalized a policy to provide a payment adjustment to the 11 specified cancer hospitals that reflects their higher outpatient costs, as discussed in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74202 through 74206). Specifically, we adopted a policy to provide additional payments to the cancer hospitals so that each cancer hospital's final PCR for services provided in a given calendar year is equal to the weighted average PCR (which we refer to as the ''target PCR'') for other hospitals paid under the OPPS. The target PCR is set in advance of the calendar year and is calculated using the most recently submitted or settled cost report data that are available at the time of final rulemaking for the calendar year. The amount of the payment adjustment is made on an aggregate basis at cost report settlement. We note that the changes made by section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs are assessed, as usual, after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period. Table 5 displays the target PCR for purposes of the cancer hospital adjustment for CY 2012 through CY 2023.

TABLE 5: CANCER HOSPITAL ADJUSTMENT TARGET PAYMENT-TO-COST RATIOS (PCRS), CY 2012 THROUGH CY 2023

Calendar Year	Target PCR
2012	0.91
2013	0.91
2014	0.90
2015	0.90
2016	0.92
2017	0.91
2018	0.88
2019	0.88
2020	0.89
2021	0.89
2022	0.89
2023	0.89

2. Policy for CY 2024

Section 16002(b) of the 21st Century Cures Act (Pub. L. 114–255) amended section 1833(t)(18) of the Act by adding subparagraph (C), which requires that in applying § 419.43(i) (that is, the payment adjustment for certain cancer hospitals) for services furnished on or after January 1, 2018, the target PCR adjustment be reduced by 1.0 percentage point less than what would otherwise apply. Section 16002(b) also provides that, in addition to the percentage reduction, the Secretary may consider making an additional percentage point reduction to the target PCR that takes into account payment rates for applicable items and services described under section 1833(t)(21)(C) of the Act for hospitals that are not cancer hospitals described under section 1886(d)(1)(B)(v) of the Act. Further, in making any budget neutrality adjustment under section 1833(t) of the Act, the Secretary shall not take into account the reduced expenditures that result from application of section 1833(t)(18)(C) of the Act.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49587 through 49589), we proposed to provide additional payments to the 11 specified cancer hospitals so that each cancer hospital's proposed PCR is equal to the weighted average PCR (or ''target PCR'') for the other OPPS hospitals, generally using the most recent submitted or settled cost report data that are available, reduced by 1.0 percentage point, to comply with section 16002(b) of the 21st Century Cures Act, and adjusted by the proposed post-Public Health Emergency transition as described later in this section. We did not propose an additional reduction beyond the 1.0 percentage point reduction required by section 16002(b) of the 21st Century Cures Act for CY 2024.

Under our established policy, to calculate the proposed CY 2024 target PCR, we used the same extract of cost report data from HCRIS used to estimate costs for the CY 2024 OPPS which, in most cases, would be the most recently available hospital cost reports. Using these cost report data, we included data from Worksheet E, Part B, for each hospital, using data from each hospital's most recent cost report, whether as submitted or settled.

We then limited the dataset to the hospitals with CY 2022 claims data that we used to model the impact of the proposed CY 2024 APC relative payment weights (3,406 hospitals) because it is appropriate to use the same set of hospitals that are being used to calibrate the modeled CY 2024 OPPS. The cost report data for the hospitals in this dataset were from cost report periods with fiscal year ends ranging from 2017 to 2022; however, the cost reporting periods were predominantly from fiscal years ending in 2021 and 2022. We then removed the cost report data of the 47 hospitals located in Puerto Rico from our dataset because we did not believe their cost structure reflected the costs of most hospitals paid under the OPPS, and, therefore, their inclusion may bias the calculation of hospital-weighted statistics. We also removed the cost report data of 14 hospitals because these hospitals had cost report data that were not complete (missing aggregate OPPS payments, missing aggregate cost data, or missing both), so that all cost reports in the study would have both the payment and cost data necessary to calculate a PCR for each hospital, leading to a proposed analytic file of 3,345 hospitals with cost report data.

Using this smaller dataset of cost report data, we estimated that, on average, the OPPS payments to other hospitals furnishing services under the OPPS were approximately 86 percent of reasonable cost (weighted average PCR of 0.86). Therefore, after applying the 1.0 percentage point reduction, as required by section 16002(b) of the 21st Century Cures Act, using our standard process the payment amount associated with the cancer hospital payment adjustment to be determined at cost report settlement would be the additional payment needed to result in a target PCR equal to 0.85 for each cancer hospital.

However, we noted that a proposed cancer hospital target PCR of 0.85 for CY 2024 is dramatically lower than the target PCR from previous years. Historically, as shown in Table 5 of the final rule, the target PCR for cancer hospitals has been between 0.88 and 0.92. In light of our concerns about the impact of the COVID–19 PHE on CY 2020 claims and cost data, we finalized a policy to continue the target PCR of 0.89 from CY 2021 for CY 2022 and for CY 2023 as an appropriate cancer hospital adjustment under our authority described in section 1833(t)(2)(E) of the Act. We explained that we believe the impact of the COVID–19 PHE claims and cost data used to calculate the target PCR of 0.85 may continue to have some limited influence on our target PCR calculations. However, we also explained that we believe we should begin to take into consideration the PCR of non-cancer hospitals based on the most recently available data for calculating the target PCR. We noted that we do not know if the changes in the data that have yielded a significantly lower PCR for non-cancer hospitals using the most recently available data are likely to continue in future years or if, when data from after the PHE is available, we will see the target PCR increase toward its historical norm. We stated that we are concerned that using the 0.85 target PCR calculated from the most recent data could lead to instability in cancer hospital adjustment payments and volatility in the PCR as we transition to utilizing post-PHE data. Therefore, in the CY 2024 OPPS/ASC proposed rule, we proposed to transition from the target PCR of 0.89 we finalized for CYs 2020 through 2023 (which included the 1.0 percentage point reduction as required by section 16002(b) of the 21st Century Cures Act) and incrementally reduce the target PCR by an additional 1.0 percentage point for each calendar year, beginning with CY 2024, until the target PCR equals the PCR of non-cancer hospitals calculated using the most recent data minus 1.0 percentage point as required by section 16002(b) of the 21st Century Cures Act. Therefore, utilizing this methodology for the CY 2024 OPPS/ASC proposed rule, we proposed to reduce the CY 2023 target PCR of 0.89 by 1 percentage point and proposed a cancer hospital target PCR of 0.88 for CY 2024.

Comment: Several commenters supported the proposed methodology of incrementally reducing the target PCR until it equals the target PCR based on cost report data. A few of those commenters also requested that the repayments made to 340B hospitals associated with the prior 340B-acquired drug policy be included in the final CY 2024 target PCR.

Response: We appreciate commenters' support for our proposal.

We also appreciate the commenters' suggestion to include repayments made to 340B hospitals in calculating the CY 2024 target PCR. The cancer hospital adjustment target PCR calculation relies on historical cost report data, and we believe that the proposed methodology continues to remain appropriate for the CY 2024 target PCR without the addition of anticipated future payments. However, the request raises a valid concern regarding if and how best to accommodate changes made as part of the final 340B Remedy policy. We believe that having public input on how to appropriately account for those changes once the 340B Remedy policy is finalized and implemented will be important, including because the cancer hospital adjustment is budget neutral within the OPPS and thus any changes to it will affect not only cancer

hospitals, but all hospitals paid under the system.

After consideration of the public comments we received, we are finalizing without modification our proposed policy to reduce the target PCR by 1 percentage point until such time that it equals the target PCR calculated based on cost report data. Therefore, a CY 2024 target PCR of 0.88 will apply to the 11 specified cancer hospitals for CY 2024.

Table 6 shows the estimated percentage increase in OPPS payments to each cancer hospital for CY 2024, due to the cancer hospital payment adjustment policy. The actual, final amount of the CY 2024 cancer hospital payment adjustment for each cancer hospital will be determined at cost report settlement and will depend on each hospital's CY 2024 payments and costs from the settled CY 2024 cost report. We note that the requirements contained in section 1833(t)(18) of the Act do not affect the existing statutory provisions that provide for TOPs for cancer hospitals. The TOPs will be assessed, as usual, after all payments, including the cancer hospital payment adjustment, have been made for a cost reporting period.

TABLE 6: ESTIMATED CY 2024 HOSPITAL-SPECIFIC PAYMENT ADJUSTMENT FOR CANCER HOSPITALS TO BE PROVIDED AT COST REPORT SETTLEMENT

Provider Number	Hospital Name	Estimated Percentage Increase in OPPS Payments for CY 2024 due to Payment Adjustment
050146	City of Hope Comprehensive Cancer Center	58.0%
050660	USC Norris Cancer Hospital	34.2%
100079	Sylvester Comprehensive Cancer Center	41.9%
100271	H. Lee Moffitt Cancer Center & Research Institute	25.0%
220162	Dana-Farber Cancer Institute	43.1%
330154	Memorial Sloan-Kettering Cancer Center	58.1%
330354	Roswell Park Cancer Institute	19.1%
360242	James Cancer Hospital & Solove Research Institute	14.5%
390196	Fox Chase Cancer Center	20.8%
450076	M.D. Anderson Cancer Center	44.8%
500138	Seattle Cancer Care Alliance	39.4%

G. Hospital Outpatient Outlier Payments

1. Background

The OPPS provides outlier payments to hospitals to help mitigate the financial risk associated with high-cost and complex procedures, where a very costly service could present a hospital with significant financial loss. As explained in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66832 through 66834), we set our projected target for aggregate outlier payments at 1.0 percent of the estimated aggregate total payments under the OPPS for the prospective year. Outlier payments are provided on a service-by-service basis when the cost of a service exceeds the APC payment amount multiplier threshold (the APC payment amount multiplied by a certain amount) as well as the APC payment amount plus a fixed-dollar amount threshold (the APC payment plus a certain dollar amount). In CY 2023, the outlier threshold was met when the hospital's cost of furnishing a service exceeded 1.75 times the APC payment amount (the multiplier threshold) and exceeded the APC payment amount plus $8,625 (the fixed-dollar amount threshold) (87 FR 71788 through 71790). If the hospital's cost of furnishing a service exceeds both the multiplier threshold and the fixed-dollar threshold, the outlier payment is calculated as 50 percent of the amount by which the hospital's cost of furnishing the service exceeds 1.75 times the APC payment amount. Beginning with CY 2009 payments, outlier payments are subject to a reconciliation process similar to the IPPS outlier reconciliation process for cost reports, as discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599).

It has been our policy to report the actual amount of outlier payments as a percent of total spending in the claims being used to model the OPPS. Our estimate of total outlier payments as a percent of total CY 2022 OPPS payments, using CY 2022 claims available for this CY 2024 OPPS final rule, is approximately 0.95 percent. Therefore, for CY 2022, we estimate that

we did not meet the outlier target by 0.05 percent of total aggregated OPPS payments.

For this final rule with comment period, using CY 2022 claims data and CY 2023 payment rates, we estimate that the aggregate outlier payments for CY 2023 would be approximately 0.83 percent of the total CY 2023 OPPS payments. We provide estimated CY 2024 outlier payments for hospitals and CMHCs with claims included in the claims data that we used to model impacts in the Hospital–Specific Impacts—Provider-Specific Data file on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

2. Outlier Calculation for CY 2024

For CY 2024, we proposed to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPPS. We proposed that a portion of that 1.0 percent, an amount equal to less than 0.01 percent of outlier payments (or 0.0001 percent of total OPPS payments), would be allocated to CMHCs for PHP and IOP outlier payments. This is the amount of estimated outlier payments that would result from the proposed CMHC outlier threshold as a proportion of total estimated OPPS outlier payments. We proposed to modify our outlier policy and which APCs are eligible for an outlier payment if a CMHC's cost for services exceeds 3.40 times the APC payment rate. The outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the proposed APC payment rate.

For further discussion of CMHC outlier payments, we refer readers to section VIII.C of this final rule with comment period.

To ensure that the estimated CY 2024 aggregate outlier payments would equal 1.0 percent of estimated aggregate total payments under the OPPS, we proposed that the hospital outlier threshold be set so that outlier payments would be triggered when a hospital's cost of furnishing a service exceeds 1.75 times the APC payment amount and exceeds the APC payment amount plus the fixed-dollar threshold.

We calculated the proposed fixed-dollar threshold using the standard methodology most recently used for CY 2023 (87 FR 71788 through 71790). For purposes of estimating outlier payments for CY 2024, we use the hospital-specific overall ancillary CCRs available in the April 2023 update to the Outpatient Provider-Specific File (OPSF). The OPSF contains provider-specific data, such as the most current CCRs, which are maintained by the MACs and used by the OPPS Pricer to pay claims. The claims that we generally use to model each OPPS update lag by two years.

In order to estimate the CY 2024 hospital outlier payments, we inflate the charges on the CY 2022 claims using the same proposed charge inflation factor of 1.118412 that we used to estimate the IPPS fixed-loss cost threshold for the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 27220). We used an inflation factor of 1.05755 to estimate CY 2023 charges from the CY 2022 charges reported on CY 2022 claims before applying CY 2023 CCRs to estimate the percent of outliers paid in CY 2023. The proposed methodology for determining these charge inflation factors is discussed in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 27219 and 27220). As we stated in the CY 2005 OPPS final rule with comment period (69 FR 65844 through 65846), we believe that the use of the same charge inflation factors is appropriate for the OPPS because, with the exception of the inpatient routine service cost centers, hospitals use the same ancillary and cost centers to capture costs and charges for inpatient and outpatient services.

As noted in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68011), we are concerned that we could systematically overestimate the OPPS hospital outlier threshold if we did not apply a CCR inflation adjustment factor. Therefore, we proposed to apply the same CCR adjustment factor that we proposed to apply for the FY 2024 IPPS outlier calculation to the CCRs used to simulate the proposed CY 2024 OPPS outlier payments to determine the fixed-dollar threshold. Specifically, for CY 2024, we proposed to apply an adjustment factor of 0.977799 to the CCRs that were in the April 2023 OPSF to trend them forward from CY 2023 to CY 2024. The methodology for calculating the proposed CCR adjustment factor, as well as the solicitation of comments on an alternative approach, is discussed in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 27221).

To model hospital outlier payments for the CY 2024 proposed rule, we applied the overall CCRs from the April 2023 OPSF after adjustment (using the proposed CCR inflation adjustment factor of 0.977799 to approximate CY 2024 CCRs) to charges on CY 2022 claims that were adjusted (using the proposed charge inflation factor of 1.118412 to approximate CY 2024 charges). We simulated aggregated CY 2022 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiplier threshold constant and assuming that outlier payments would continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payments equaled 1.0 percent of aggregated estimated total CY 2024 OPPS payments. We estimated that a proposed fixed-dollar threshold of $8,350, combined with the proposed multiplier threshold of 1.75 times the APC payment rate, would allocate 1.0 percent of aggregated total OPPS payments to outlier payments. For CMHCs, we proposed that, if a CMHC's cost for partial hospitalization or intensive outpatient services exceeds 3.40 times the APC payment rate, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC payment rate.

Section 1833(t)(17)(A) of the Act, which applies to hospitals, as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to report data required for the quality measures selected by the Secretary, in the form and manner required by the Secretary under section 1833(t)(17)(B) of the Act, incur a 2.0 percentage point reduction to their OPD fee schedule increase factor; that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that would apply to certain outpatient items and services furnished by hospitals that are required to report outpatient quality data and that fail to meet the Hospital Outpatient Quality Reporting (OQR) Program requirements. For hospitals that fail to meet the Hospital OQR Program requirements, we proposed to continue the policy that we implemented in CY 2010 that the hospitals' costs would be compared to the reduced payments for purposes of outlier eligibility and payment calculation. For more information on the Hospital OQR Program, we refer readers to section XIV of the CY 2024 OPPS/ASC proposed rule.

We note that in section II.G. of the CY 2024 OPPS/ASC proposed rule and our references here to that proposal, discussion of the proposed fixed-dollar threshold referenced the prior year's proposal of $8,350 rather than the correct proposed threshold, which was $6,875. However, the correct proposed fixed-dollar outlier threshold of $6,875 was used in developing the hospital impacts and was noted in the discussion of the effect of the CY 2024 proposed

rule policies on payments to hospitals (88 FR 49895).

Comment: A commenter expressed concern about the increases in the fixed-dollar outlier threshold, noting that fewer cases would qualify for OPPS outlier payments.

Response: We appreciate the commenter's concern; however, we note that both the incorrect proposed fixed-dollar outlier threshold of $8,350 and the correct proposed threshold of $6,875 are a decrease from the CY 2023 fixed-dollar outlier threshold of $8,625. We have reviewed and analyzed our methodology as well as the most up to date CCRs available in the July 2023 OPSF for determining estimated outlier payments. We continue to believe that they are appropriate for estimating hospital costs for establishing the fixed-dollar outlier threshold.

The fixed-dollar threshold better targets outlier payments to those high-cost and complex procedures where a very costly service could present a hospital with significant financial loss. We maintain the target outlier percentage of 1.0 percent of estimated aggregate total payment under the OPPS and have a fixed-dollar threshold so that OPPS outlier payments are made only when the hospital would experience a significant loss for furnishing a particular service. The methodology we use to calculate the fixed-dollar threshold for the prospective payment year is based on several data inputs that may change from prior payment years. For instance, updated hospital CCR data and changes to the OPPS payment methodology influence projected outlier payments in the prospective year. As a result of those and other factors, the fixed-dollar threshold can also fluctuate from year to year.

In the past several years, we have seen significant increases in the fixed-dollar outlier threshold; however, the proposed CY 2024 fixed-dollar outlier threshold would have decreased relative to CY 2023. Further, we continue to observe a decrease under our final fixed-dollar outlier threshold when compared to the CY 2023. We believe that the changes that we observe in the fixed-dollar outlier threshold accurately reflect changes that hospitals are experiencing in providing healthcare. However, we will continue to monitor changes as more updated data are available.

After consideration of the public comment we received, we are finalizing our proposal, without modification, to continue our policy of estimating outlier payments to be 1.0 percent of the estimated aggregate total payments under the OPPS and to use our established methodology to set the OPPS outlier fixed-dollar loss threshold for CY 2024.

3. Final Outlier Calculation

Consistent with historical practice, we used updated data for this final rule with comment period for outlier calculations. For CY 2024, we are applying the overall CCRs from the July 2023 OPSF file after adjustment (using the CCR adjustment factor of 0.990843 to approximate CY 2024 CCRs) to charges on CY 2022 claims that were adjusted using a charge inflation factor of 1.11904 to approximate CY 2024 charges. These are the same CCR adjustment and charge inflation factors that were used to set the IPPS fixed-dollar thresholds for the FY 2024 IPPS/LTCH PPS final rule (88 FR 59353). We simulated aggregated CY 2024 hospital outlier payments using these costs for several different fixed-dollar thresholds, holding the 1.75 multiple-threshold constant and assuming that outlier payments will continue to be made at 50 percent of the amount by which the cost of furnishing the service would exceed 1.75 times the APC payment amount, until the total outlier payment equaled 1.0 percent of aggregated estimated total CY 2024 OPPS payments. We estimate that a fixed-dollar threshold of $7,750 combined with the multiple threshold of 1.75 times the APC payment rate, will allocate the 1.0 percent of aggregated total OPPS payments to outlier payments.

For CMHCs, if a CMHC's cost for partial hospitalization or intensive outpatient services exceeds 3.40 times the APC payment rate, the outlier payment will be calculated as 50 percent of the amount by which the cost exceeds 3.40 times the APC payment rate.

H. Calculation of an Adjusted Medicare Payment From the National Unadjusted Medicare Payment

The national unadjusted payment rate is the payment rate for most APCs before accounting for the wage index adjustment or any applicable adjustments. The basic methodology for determining prospective payment rates for HOPD services under the OPPS is set forth in existing regulations at 42 CFR part 419, subparts C and D. For this CY 2024 OPPS/ASC final rule with comment period, the payment rate for most services and procedures for which payment is made under the OPPS is the product of the conversion factor calculated in accordance with section II.B of this final rule with comment period and the relative payment weight described in section II.A of this final rule with comment period. The national unadjusted payment rate for most APCs contained in Addendum A to this final rule with comment period (which is available via the CMS website ''Hospital Outpatient Regulations and Notices'') and for most HCPCS codes to which separate payment under the OPPS has been assigned in Addendum B to this final rule with comment period (which is available on the CMS website link above) is calculated by multiplying the final CY 2024 scaled weight for the APC by the CY 2024 conversion factor.

We note that section 1833(t)(17) of the Act, which applies to hospitals, as defined under section 1886(d)(1)(B) of the Act, requires that hospitals that fail to submit data required to be submitted on quality measures selected by the Secretary, in the form and manner and at a time specified by the Secretary, incur a reduction of 2.0 percentage points to their OPD fee schedule increase factor, that is, the annual payment update factor. The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data and that fail to meet the Hospital OQR Program requirements. For further discussion of the payment reduction for hospitals that fail to meet the requirements of the Hospital OQR Program, we refer readers to section XIV of this final rule with comment period.

Below we demonstrate the steps used to determine the APC payments that will be made in a CY under the OPPS to a hospital that fulfills the Hospital OQR Program requirements and to a hospital that fails to meet the Hospital OQR Program requirements for a service that has any of the following status indicator assignments: ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''Q4,'' ''R,'' ''S,'' ''T,'' ''U,'' or ''V'' (as defined in Addendum D1 to this final rule with comment period, which is available via the internet on the CMS website), in a circumstance in which the multiple procedure discount does not apply, the procedure is not bilateral, and conditionally packaged services (status indicator of ''Q1'' and ''Q2'') qualify for separate payment. We note that, although blood and blood products with status indicator ''R'' and brachytherapy sources with status indicator ''U'' are not subject to wage adjustment, they are subject to reduced payments when a hospital fails to meet the Hospital OQR Program requirements.

Individual providers interested in calculating the payment amount that they would receive for a specific service

from the national unadjusted payment rates presented in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website) should follow the formulas presented in the following steps. For purposes of the payment calculations below, we refer to the national unadjusted payment rate for hospitals that meet the requirements of the Hospital OQR Program as the ''full'' national unadjusted payment rate. We refer to the national unadjusted payment rate for hospitals that fail to meet the requirements of the Hospital OQR Program as the ''reduced'' national unadjusted payment rate. The reduced national unadjusted payment rate is calculated by multiplying the reporting ratio of 0.9805 times the ''full'' national unadjusted payment rate. The national unadjusted payment rate used in the calculations below is either the full national unadjusted payment rate or the reduced national unadjusted payment rate, depending on whether the hospital met its Hospital OQR Program requirements to receive the full CY 2024 OPPS fee schedule increase factor.

Step 1. Calculate 60 percent (the labor-related portion) of the national unadjusted payment rate. Since the initial implementation of the OPPS, we have used 60 percent to represent our estimate of that portion of costs attributable, on average, to labor. We refer readers to the April 7, 2000 OPPS/ASC final rule with comment period (65 FR 18496 and 18497) for a detailed discussion of how we derived this percentage. During our regression analysis for the payment adjustment for rural hospitals in the CY 2006 OPPS final rule with comment period (70 FR 68553), we confirmed that this labor-related share for hospital outpatient services is appropriate.

The formula below is a mathematical representation of Step 1 and identifies the labor-related portion of a specific payment rate for a specific service.

X is the labor-related portion of the national unadjusted payment rate.

X = .60 * (national unadjusted payment rate).

Step 2. Determine the wage index area in which the hospital is located and identify the wage index level that applies to the specific hospital. The wage index values assigned to each area would reflect the geographic statistical areas (which are based upon OMB standards) to which hospitals are assigned for FY 2024 under the IPPS, reclassifications through the Medicare Geographic Classification Review Board (MGCRB), section 1886(d)(8)(B) ''Lugar'' hospitals, and reclassifications under section 1886(d)(8)(E) of the Act, as implemented in § 412.103 of the regulations. We are continuing to apply for the CY 2024 OPPS wage index any adjustments for the FY 2024 IPPS post-reclassified wage index, including, but not limited to, the rural floor adjustment, a wage index floor of 1.00 in frontier states, in accordance with section 10324 of the Affordable Care Act of 2010, and an adjustment to the wage index for certain low wage index hospitals. For further discussion of the wage index we are applying for the CY 2024 OPPS, we refer readers to section II.C of this final rule with comment period.

Step 3. Adjust the wage index of hospitals located in certain qualifying counties that have a relatively high percentage of hospital employees who reside in the county, but who work in a different county with a higher wage index, in accordance with section 505 of the Medicare Prescription Drug, Improvement, and Modernization Act of 2003 (Pub. L. 108–173). Addendum L to this final rule with comment period (which is available via the internet on the CMS website) contains the qualifying counties and the associated wage index increase developed for the final FY 2024 IPPS wage index (which are listed in Table 3 associated with the FY 2024 IPPS/LTCH PPS final rule and available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/acute-inpatient-pps*). (Click on the link on the left side of the screen titled ''FY 2024 IPPS Final Rule Home Page'' and select ''FY 2024 Final Rule Tables.'') This step is to be followed only if the hospital is not reclassified or redesignated under section 1886(d)(8) or section 1886(d)(10) of the Act.

Step 4. Multiply the applicable wage index determined under Steps 2 and 3 by the amount determined under Step 1 that represents the labor-related portion of the national unadjusted payment rate.

The formula below is a mathematical representation of Step 4 and adjusts the labor-related portion of the national unadjusted payment rate for the specific service by the wage index.

X_a is the labor-related portion of the national unadjusted payment rate (wage adjusted).

X_a = labor-portion of the national unadjusted payment rate * applicable wage index.

Step 5. Calculate 40 percent (the nonlabor-related portion) of the national unadjusted payment rate and add that amount to the resulting product of Step 4. The result is the wage index adjusted payment rate for the relevant wage index area.

The formula below is a mathematical representation of Step 5 and calculates the remaining portion of the national payment rate, the amount not attributable to labor, and the adjusted payment for the specific service.

Y is the nonlabor-related portion of the national unadjusted payment rate.

Y = 0.40 * (national unadjusted payment rate).

Step 6. If a provider is an SCH, as set forth in the regulations at § 412.92, or an EACH, which is considered to be an SCH under section 1886(d)(5)(D)(iii)(III) of the Act, and located in a rural area, as defined in § 412.64(b), or is treated as being located in a rural area under § 412.103, multiply the wage index adjusted payment rate by 1.071 to calculate the total payment.

The formula below is a mathematical representation of Step 6 and applies the rural adjustment for rural SCHs.

Adjusted Medicare Payment (SCH or EACH) = Adjusted Medicare Payment * 1.071.

Step 7. The adjusted payment rate is the sum of the wage adjusted labor-related portion of the national unadjusted payment rate and the nonlabor-related portion of the national unadjusted payment rate.

X_a is the labor-related portion of the national unadjusted payment rate (wage adjusted).

Y is the nonlabor-related portion of the national unadjusted payment rate.

Adjusted Medicare Payment = $X_a + Y$

We are providing examples below of the calculation of both the full and reduced national unadjusted payment rates that would apply to certain outpatient items and services performed by hospitals that meet and that fail to meet the Hospital OQR Program requirements, using the steps outlined previously. For purposes of this example, we are using a provider that is located in Brooklyn, New York, that is assigned to CBSA 35614. This provider bills one service that is assigned to APC 5071 (Level 1 Excision/Biopsy/Incision and Drainage). The final CY 2024 full national unadjusted payment rate for APC 5071 is $671.05. The final reduced national adjusted payment rate for APC 5071 for a hospital that fails to meet the Hospital OQR Program requirements is $658.03. This reduced rate is calculated by multiplying the reporting ratio of 0.9806 by the full unadjusted payment rate for APC 5071.

Step 1. The labor-related portion of the final full national unadjusted payment is approximately $402.63 (0.60 * $671.05). The labor-related portion of the final reduced national adjusted payment is approximately $394.82 (0.60 * $658.03).

Step 2 & 3. The FY 2024 wage index for a provider located in CBSA 35614 in New York, which includes the adoption of the final IPPS 2024 wage index policies, is 1.3562.

Step 4. The wage adjusted labor-related portion of the final full national unadjusted payment is approximately $546.05 ($402.63 *1.3562). The wage adjusted labor-related portion of the final reduced national adjusted payment is approximately $535.45 ($394.82 * 1.3562).

Step 5. The nonlabor-related portion of the final full national unadjusted payment is approximately $268.42 (0.40 * $671.05). The nonlabor-related portion of the final reduced national adjusted payment is approximately $263.21 (0.40 * $658.03).

Step 6. For this example of a provider located in Brooklyn, New York, the rural adjustment for rural SCHs does not apply.

Step 7. The sum of the labor-related and nonlabor-related portions of the final full national unadjusted payment is approximately $814.47 ($546.05 + $268.42). The sum of the portions of the final reduced national adjusted payment is approximately $798.66 ($535.45 + $263.21) as shown in Table 7.

TABLE 7: FINAL FULL NATIONAL UNADJUSTED PAYMENT RATE AND FINAL REDUCED NATIONAL ADJUSTED PAYMENT RATE

Final Full national unadjusted payment rate	Final Reduced national adjusted payment rate
$814.47	$798.66

We did not receive any public comments on these steps under the methodology that we included in the CY 2024 OPPS/ASC proposed rule to determine the APC payments for CY 2024. Therefore, we are using the steps in the methodology specified above, to demonstrate the calculation of the final CY 2024 OPPS payments using the same parameters.

I. Beneficiary Copayments

1. Background

Section 1833(t)(3)(B) of the Act requires the Secretary to set rules for determining the unadjusted copayment amounts to be paid by beneficiaries for covered OPD services. Section 1833(t)(8)(C)(ii) of the Act specifies that the Secretary must reduce the national unadjusted copayment amount for a covered OPD service (or group of such services) furnished in a year in a manner so that the effective copayment rate (determined on a national unadjusted basis) for that service in the year does not exceed a specified percentage. As specified in section 1833(t)(8)(C)(ii)(V) of the Act, the effective copayment rate for a covered OPD service paid under the OPPS in CY 2006, and in CYs thereafter, shall not exceed 40 percent of the APC payment rate.

Section 1833(t)(3)(B)(ii) of the Act provides that, for a covered OPD service (or group of such services) furnished in a year, the national unadjusted copayment amount cannot be less than 20 percent of the OPD fee schedule amount. However, section 1833(t)(8)(C)(i) of the Act limits the amount of beneficiary copayment that may be collected for a procedure (including items such as drugs and biologicals) performed in a year to the amount of the inpatient hospital deductible for that year.

Section 4104 of the Affordable Care Act eliminated the Medicare Part B coinsurance for preventive services furnished on and after January 1, 2011, that meet certain requirements, including flexible sigmoidoscopies and screening colonoscopies, and waived the Part B deductible for screening colonoscopies that become diagnostic during the procedure. For a discussion of the changes made by the Affordable Care Act with regard to copayments for preventive services furnished on and after January 1, 2011, we refer readers to section XII.B of the CY 2011 OPPS/ASC final rule with comment period (75 FR 72013).

Section 122 of the Consolidated Appropriations Act (CAA) of 2021 (Pub. L. 116–260), Waiving Medicare Coinsurance for Certain Colorectal Cancer Screening Tests, amends section 1833(a) of the Act to offer a special coinsurance rule for screening flexible sigmoidoscopies and screening colonoscopies, regardless of the code that is billed for the establishment of a diagnosis as a result of the test, or for the removal of tissue or other matter or other procedure, that is furnished in connection with, as a result of, and in the same clinical encounter as the colorectal cancer screening test. We refer readers to section X.B of the CY 2022 OPPS/ASC final rule with comment period for the full discussion of this policy (86 FR 63740 through 63743). Under the regulation at 42 CFR 410.152(l)(5)(i)(B), the Medicare Part B payment percentage for colorectal cancer screening tests described in the regulation at § 410.37(j) that are furnished in CY 2023 through 2026 is 85 percent, with beneficiary coinsurance equal to 15 percent.

On August 16, 2022, the Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169) was signed into law. Section 11101(a) of the IRA amended section 1847A of the Act by adding a new subsection (i), which requires the payment of rebates into the Supplementary Medical Insurance Trust Fund for Part B rebatable drugs if the payment limit amount exceeds the inflation-adjusted payment amount, which is calculated as set forth in section 1847A(i)(3)(C) of the Act. The provisions of section 11101 of the IRA are currently being implemented through program instruction, as permitted under section 1847A(c)(5)(C) of the Act. As such, we issued guidance for the computation of inflation-adjusted beneficiary coinsurance under section 1847A(i)(5) of the Act and amounts paid under section 1833(a)(1)(EE) of the Act on February 9, 2023.[4] [5] For additional information regarding implementation of section 11101 of the IRA, please see the inflation rebates resources page at *https://www.cms.gov/inflation-reduction-act-and-medicare/inflation-rebates-medicare.* We also refer readers

[4] *https://www.cms.gov/files/document/medicare-part-b-inflation-rebate-program-initial-guidance.pdf.*

[5] In addition, beginning with the April 2023 ASP Drug Pricing file, the file includes the coinsurance percentage for each drug and specifies ''inflation-adjusted coinsurance'' in the ''Notes'' column if the coinsurance for a drug is less than 20 percent of the Medicare Part B payment amount. Drug pricing files are available at *https://www.cms.gov/medicare/medicare-fee-for-service-part-b-drugs/mcrpartbdrugavgsalesprice.*

to the CY 2024 PFS proposed rule (88 FR 52262) for a detailed discussion of proposals related to inflation-adjusted beneficiary coinsurance and Medicare payment for Medicare Part B rebatable drugs.

Section 11101(b) of the IRA amended sections 1833(i) and 1833(t)(8) of the Act by adding a new paragraph (9) and subparagraph (F), respectively. Section 1833(i)(9) requires under the ASC payment system that in the case of a Part B rebatable drug, in lieu of calculation of coinsurance that would otherwise apply under the ASC payment system, the provisions of section 1847A(i)(5) of the Act shall, as determined appropriate by the Secretary, apply for calculation of beneficiary coinsurance in the same manner as the provisions of section 1847A(i)(5) of the Act apply under that section. Similarly, section 1833(t)(8)(F) of the Act requires under the OPPS that in the case of a Part B rebatable drug (except for a drug that has no copayment applied under subparagraph (E) of such section or for which payment is packaged into the payment for a covered OPD service or group of services), in lieu of the calculation of the copayment amount that would otherwise apply under the OPPS, the provisions of section 1847A(i)(5) of the Act shall, as determined appropriate by the Secretary, apply in the same manner as the provisions of section 1847A(i)(5) of the Act apply under that section. Section 1847A(i)(5) of the Act requires that for Part B rebatable drugs, as defined in section 1847A(i)(2)(A) of the Act, furnished on or after April 1, 2023, in calendar quarters in which the amount specified in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of selected drugs described under section 1192(c) of the Act, the amount specified in section 1847A(b)(1)(B) of the Act), exceeds the inflation-adjusted payment amount determined in accordance with section 1847A(i)(3)(C) of the Act, the coinsurance will be 20 percent of the inflation-adjusted payment amount for such quarter (hereafter, the inflation-adjusted coinsurance amount). This inflation-adjusted coinsurance amount is applied as a percent, as determined by the Secretary, to the payment amount that would otherwise apply for such calendar quarter in accordance with section 1847A(b)(1)(B) or (C) of the Act, as applicable, including in the case of a selected drug.

Paragraph (9) of section 1833(i) of the Act and subparagraph (F) of section 1833(t)(8) of the Act, as added by section 11101(b) of the IRA, also provide that in lieu of the amounts of payment otherwise applicable under the ASC payment system and the OPPS, the provisions of paragraph (1)(EE) of subsection (a) of section 1833 of the Act shall apply, as determined appropriate by the Secretary. Section 11101(b) of the IRA amended section 1833(a)(1) of the Act by adding a new subparagraph (EE), which requires that if the specific payment amount described in section 1847A(i)(3)(A)(ii)(I) of the Act (or, in the case of a selected drug, the payment amount described in section 1847A(b)(1)(B) of the Act) exceeds the inflation-adjusted payment amount of a Part B rebatable drug, the Part B payment will, subject to the deductible and sequestration, equal the difference between such payment amount and the inflation-adjusted coinsurance amount.

In the CY 2024 OPPS/ASC proposed rule, we proposed to codify the OPPS program payment and cost sharing amounts for Part B rebatable drugs as required by section 1833(t)(8)(F) by adding a new paragraph (e) to § 419.41, which cross-references the regulations proposed in the CY 2024 PFS proposed rule (§§ 410.152(m) and 489.30(b)(6)). We also proposed to amend the regulation text to reflect our longstanding policies for calculating the Medicare program payment and cost sharing amounts for separately payable drugs and biologicals by adding a new paragraph (d) to § 419.41. Similarly, we proposed to codify the ASC cost sharing amounts for Part B rebatable drugs as required by section 1833(i)(9) of the Act by revising § 416.172(d) to include a cross-reference to 42 CFR 489.30(b)(6), as proposed in the CY 2024 PFS proposed rule to codify the cost sharing amounts for Part B rebatable drugs with prices increasing at a rate faster than inflation. We did not propose any changes to the ASC regulations at 42 CFR part 416 to reflect the Medicare payment amount for Part B rebatable drugs with prices increasing at a rate faster than inflation, because 42 CFR 416.171(b) already incorporates, for the ASC payment system, the payment amounts that apply for the OPPS under 42 CFR part 419. Part 419 would include our proposed new § 419.41(e), which addresses Medicare payment for Part B rebatable drugs under the OPPS.

We did not receive any public comments on our proposal to codify amendments to §§ 419.41 and 416.172. Therefore, we are finalizing our proposal to codify the OPPS program payment and cost sharing amounts for Part B rebatable drugs as required by section 1833(t)(8)(F) of the Act by adding a new paragraph (e) to § 419.41. We are also finalizing our proposal to amend the regulation text to reflect our longstanding policies for calculating the Medicare program payment and cost sharing amounts for separately payable drugs and biologicals by adding a new paragraph (d) to § 419.41. We are finalizing our proposal to codify the ASC cost sharing amounts for Part B rebatable drugs as required by section 1833(i)(9) of the Act by revising § 416.172(d) to include a cross-reference to 42 CFR 489.30(b)(6), as finalized in the CY 2024 PFS final rule to codify the cost sharing amounts for Part B rebatable drugs with prices increasing at a rate faster than inflation.

Comment: A commenter pointed out an error in the preamble of the CY 2024 OPPS/ASC proposed rule related to the rebatable drugs under the IRA. Specifically, the commenter noted that the preamble language incorrectly suggested that a provider is paid the amount specified in section 1833(a)(1)(EE) with respect to a Part B rebatable drug when the inflation-adjusted amount exceeds the specified payment amount, which is the inverse of what the statute provides and therefore, is incorrect.

Response: We thank the commenter for pointing out the error where the references to the specified payment amount and the inflation-adjusted amount were inadvertently transposed in the preamble. We have corrected the preamble for this final rule with comment period.

2. OPPS Copayment Policy

For CY 2024, we proposed to determine copayment amounts for new and revised APCs using the same methodology that we implemented beginning in CY 2004. (We refer readers to the November 7, 2003 OPPS final rule with comment period for a discussion of that methodology (68 FR 63458).) In addition, we proposed to use the same standard rounding principles that we have historically used in instances where the application of our standard copayment methodology would result in a copayment amount that is less than 20 percent and cannot be rounded, under standard rounding principles, to 20 percent. (We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66687) in which we discuss our rationale for applying these rounding principles.) The final national unadjusted copayment amounts for services payable under the OPPS that would be effective January 1, 2024, are included in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website).

As discussed in section XIV.E of the CY 2024 OPPS/ASC proposed rule (88

FR 49594) and this final rule with comment period, for CY 2024, the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies will equal the product of the reporting ratio and the national unadjusted copayment, or the product of the reporting ratio and the minimum unadjusted copayment, respectively, for the service.

We note that OPPS copayments may increase or decrease each year based on changes in the calculated APC payment rates, due to updated cost report and claims data, and any changes to the OPPS cost modeling process. However, as described in the CY 2004 OPPS final rule with comment period, the development of the copayment methodology generally moves beneficiary copayments closer to 20 percent of OPPS APC payments (68 FR 63458 and 63459).

In the CY 2004 OPPS final rule with comment period (68 FR 63459), we adopted a new methodology to calculate unadjusted copayment amounts in situations including reorganizing APCs, and we finalized the following rules to determine copayment amounts in CY 2004 and subsequent years.

- When an APC group consists solely of HCPCS codes that were not paid under the OPPS the prior year because they were packaged or excluded or are new codes, the unadjusted copayment amount would be 20 percent of the APC payment rate.
- If a new APC that did not exist during the prior year is created and consists of HCPCS codes previously assigned to other APCs, the copayment amount is calculated as the product of the APC payment rate and the lowest coinsurance percentage of the codes comprising the new APC.
- If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is equal to or *greater than* the prior year's rate, the copayment amount remains constant (unless the resulting coinsurance percentage is less than 20 percent).
- If no codes are added to or removed from an APC and, after recalibration of its relative payment weight, the new payment rate is *less than* the prior year's rate, the copayment amount is calculated as the product of the new payment rate and the prior year's coinsurance percentage.
- If HCPCS codes are added to or deleted from an APC and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in a decrease in the coinsurance percentage for the reconfigured APC, the copayment amount would not change (unless retaining the copayment amount would result in a coinsurance rate less than 20 percent).
- If HCPCS codes are added to an APC and, after recalibrating its relative payment weight, holding its unadjusted copayment amount constant results in an increase in the coinsurance percentage for the reconfigured APC, the copayment amount would be calculated as the product of the payment rate of the reconfigured APC and the lowest coinsurance percentage of the codes being added to the reconfigured APC.

We noted in the CY 2004 OPPS final rule with comment period that we would seek to lower the copayment percentage for a service in an APC from the prior year if the copayment percentage was greater than 20 percent. We noted that this principle was consistent with section 1833(t)(8)(C)(ii) of the Act, which accelerates the reduction in the national unadjusted coinsurance rate so that beneficiary liability will eventually equal 20 percent of the OPPS payment rate for all OPPS services to which a copayment applies, and with section 1833(t)(3)(B) of the Act, which achieves a 20-percent copayment percentage when fully phased in and gives the Secretary the authority to set rules for determining copayment amounts for new services. We further noted that the use of this methodology would, in general, reduce the beneficiary coinsurance rate and copayment amount for APCs for which the payment rate changes as the result of the reconfiguration of APCs and/or recalibration of relative payment weights (68 FR 63459).

We did not receive any public comments on our proposal, and we are finalizing our proposal to determine copayment amounts for new and revised APCs using the same methodology that we implemented beginning in CY 2004. In addition, we are finalizing the use of the same standard rounding principles that we have historically used in instances where the application of our standard copayment methodology would result in a copayment amount that is less than 20 percent and cannot be rounded, under standard rounding principles, to 20 percent. (We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66687) in which we discuss our rationale for applying these rounding principles.) The finalized national unadjusted copayment amounts for services payable under the OPPS that would be effective January 1, 2024, are included in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website).

3. Calculation of an Adjusted Copayment Amount for an APC Group

Individuals interested in calculating the national copayment liability for a Medicare beneficiary for a given service provided by a hospital that met or failed to meet its Hospital OQR Program requirements should follow the formulas presented in the following steps.

Step 1. Calculate the beneficiary payment percentage for the APC by dividing the APC's national unadjusted copayment by its payment rate. For example, using APC 5071, $134.21 is approximately 20 percent of the full national unadjusted payment rate of $671.05. For APCs with only a minimum unadjusted copayment in Addenda A and B to this final rule with comment period (which are available via the internet on the CMS website), the beneficiary payment percentage is 20 percent.

The formula below is a mathematical representation of Step 1 and calculates the national copayment as a percentage of national payment for a given service.

B Is the Beneficiary Payment Percentage

B = National unadjusted copayment for APC/national unadjusted payment rate for APC.

Step 2. Calculate the appropriate wage-adjusted payment rate for the APC for the provider in question, as indicated in Steps 2 through 4 under section II.H of this with comment period. Calculate the rural adjustment for eligible providers, as indicated in Step 6 under section II.H of this final rule with comment period.

Step 3. Multiply the percentage calculated in Step 1 by the payment rate calculated in Step 2. The result is the wage-adjusted copayment amount for the APC.

The formula below is a mathematical representation of Step 3 and applies the beneficiary payment percentage to the adjusted payment rate for a service calculated under section II.H of this final rule with comment period, with and without the rural adjustment, to calculate the adjusted beneficiary copayment for a given service.

Wage-adjusted copayment amount for the APC = Adjusted Medicare Payment * *B.*

Wage-adjusted copayment amount for the APC (SCH or EACH) = (Adjusted Medicare Payment * 1.071) * *B.*

Step 4. For a hospital that failed to meet its Hospital OQR Program requirements, multiply the copayment

calculated in Step 3 by the reporting ratio of 0.9806.

The finalized unadjusted copayments for services payable under the OPPS that would be effective January 1, 2024, are shown in Addenda A and B to this final rule with comment period (which are available via the CMS website). We note that the final national unadjusted payment rates and copayment rates shown in Addenda A and B to this final rule with comment period reflect the CY 2024 OPD fee schedule increase factor discussed in section II.B of this final rule with comment period.

In addition, as noted earlier, section 1833(t)(8)(C)(i) of the Act limits the amount of beneficiary copayment that may be collected for a procedure performed in a year to the amount of the inpatient hospital deductible for that year.

III. OPPS Ambulatory Payment Classification (APC) Group Policies

A. OPPS Treatment of New and Revised HCPCS Codes

Payments for OPPS procedures, services, and items are generally based on medical billing codes, specifically, HCPCS codes, that are reported on HOPD claims. HCPCS codes are used to report surgical procedures, medical services, items, and supplies under the hospital OPPS. The HCPCS is divided into two principal subsystems, referred to as Level I and Level II of the HCPCS. Level I is comprised of CPT (Current Procedural Terminology) codes, a numeric and alphanumeric coding system that is established and maintained by the American Medical Association (AMA), and consists of Category I, II, III, multianalyte assays with algorithmic analyses (MAAA), and proprietary laboratory analyses (PLAA) CPT codes. Level II, which is established and maintained by CMS, is a standardized coding system that is used primarily to identify products, supplies, and services not included in the CPT codes. Together, Level I and II HCPCS codes are used to report procedures, services, items, and supplies under the OPPS payment system. Specifically, we recognize the following codes on OPPS claims:

- Category I CPT codes, which describe surgical procedures, diagnostic and therapeutic services, and vaccine codes;
- Category III CPT codes, which describe new and emerging technologies, services, and procedures;
- MAAA CPT codes, which describe laboratory multianalyte assays with algorithmic analyses (MAA);
- PLA CPT codes, which describe proprietary laboratory analyses (PLA) services; and
- Level II HCPCS codes (also known as alpha-numeric codes), which are used primarily to identify drugs, devices, supplies, temporary procedures, and services not described by CPT codes.

The codes are updated and changed throughout the year. CPT and Level II HCPCS code changes that affect the OPPS are published through the annual rulemaking cycle and through the OPPS quarterly update Change Requests (CRs). Generally, these code changes are effective January 1, April 1, July 1, or October 1. CPT code changes are released by the AMA (via their website) while Level II HCPCS code changes are released to the public via the CMS HCPCS website. CMS recognizes the release of new CPT and Level II HCPCS codes outside of the formal rulemaking process via OPPS quarterly update CRs. Based on our review, we assign the new codes to interim status indicators (SIs) and APCs. These interim assignments are finalized in the OPPS/ASC final rules. This quarterly process offers hospitals access to codes that more accurately describe the items or services furnished and provides payment for these items or services in a timelier manner than if we waited for the annual rulemaking process. We solicit public comments on the new CPT and Level II HCPCS codes, status indicators, and APC assignments through our annual rulemaking process.

We note that, under the OPPS, the APC assignment determines the payment rate for an item, procedure, or service. The items, procedures, or services not exclusively paid separately under the hospital OPPS are assigned to appropriate status indicators. Certain payment status indicators provide separate payment while other payment status indicators do not. In section XI. (CY 2024 Payment Status and Comment Indicators) of this final rule with comment period, we discuss the various status indicators used under the OPPS. We also provide a complete list of the status indicators and their definitions in Addendum D1 to this final rule with comment period.

1. April 2023 HCPCS Codes Proposed Rule Comment Solicitation

For the April 2023 update, 67 new HCPCS codes were established and made effective on April 1, 2023. Through the April 2023 OPPS quarterly update CR (Transmittal 11937, Change Request 13136, dated March 31, 2023), we recognized several new HCPCS codes for separate payment under the OPPS. We solicited public comments on the proposed APC and status indicator assignments for the codes listed in Table 6 (New HCPCS Codes Effective April 1, 2023) of the CY 2024 OPPS/ASC proposed rule (88 FR 49595 through 49599), which are also displayed in Table 8.

We received some public comments on the proposed OPPS APC and SI assignments for the new Level II HCPCS codes implemented in April 2023. The comments and our responses are addressed in their respective sections of this final rule with comment period, which include, but are not limited to: sections III.C. (New Technology APCs), III.E. (OPPS APC-Specific Policies), and IV. (OPPS Payment for Devices). For those April 2023 codes for which we received no comments, we are finalizing the proposed APC and status indicator assignments. We note that several of the HCPCS C-codes have been replaced with HCPCS J-codes, effective January 1, 2024. Their replacement codes are listed in Table 8. In addition, in prior years we included the final OPPS status indicators and APC assignments in the coding preamble tables, however, because the same information can be found in Addendum B, we are no longer including them in Table 8. Therefore, readers are advised to refer to the OPPS Addendum B for the final OPPS status indicators, APC assignments, and payment rates for all codes reportable under the hospital OPPS. These new codes that were effective April 1, 2023, were assigned to comment indicator ''NP'' in Addendum B to the CY 2024 OPPS/ASC proposed rule to indicate that the codes are assigned to an interim APC assignment and comments would be accepted on their interim APC assignments. The complete list of status indicators and definitions used under the OPPS can be found in Addendum D1 to this final rule with comment period, while the complete list of comment indicators and definitions can be found in Addendum D2 to this final rule with comment period. We note that OPPS Addendum B (OPPS payment file by HCPCS code), Addendum D1 (OPPS Status Indicators), and Addendum D2 (OPPS Comment Indicators) are available via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 8: NEW HCPCS CODES EFFECTIVE APRIL 1, 2023

April 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
A2019	A2019	Kerecis omega3 marigen shield, per square centimeter
A2020	A2020	Ac5 advanced wound system (ac5)
A2021	A2021	Neomatrix, per square centimeter
A4341	A4341	Indwelling intraurethral drainage device with valve, patient inserted, replacement only, each
A4342	A4342	Accessories for patient inserted indwelling intraurethral drainage device with valve, replacement only, each
A4560	A4560	Neuromuscular electrical stimulator (nmes), disposable, replacement only
A6590	A6590	External urinary catheters; disposable, with wicking material, for use with suction pump, per month
A6591	A6591	External urinary catheter; non-disposable, for use with suction pump, per month
A7049	A7049	Expiratory positive airway pressure intranasal resistance valve
C9145	C9145	Injection, aprepitant, (aponvie), 1 mg
C9146	J9063	Injection, mirvetuximab soravtansine-gynx, 1 mg
C9147	J9347	Injection, tremelimumab-actl, 1 mg
C9148	J9380	Injection, teclistamab-cqyv, 0.5 mg
C9149	J9381	Injection, teplizumab-mzwv, 5 mcg
E0677	E0677	Non-pneumatic sequential compression garment, trunk
E0711	E0711	Upper extremity medical tubing/lines enclosure or covering device, restricts elbow range of motion
E1905	E1905	Virtual reality cognitive behavioral therapy device (cbt), including pre-programmed therapy software
J0208	J0208	Injection, sodium thiosulfate, 100 mg
J0218	J0218	Injection, olipudase alfa-rpcp, 1 mg
J0612	J0612	Injection, calcium gluconate (fresenius kabi), per 10 mg
J0613	J0613	Injection, calcium gluconate (wg critical care), per 10 mg
J1411	J1411	Injection, etranacogene dezaparvovec-drlb, per therapeutic dose
J1449	J1449	Injection, eflapegrastim-xnst, 0.1 mg
J1747	J1747	Injection, spesolimab-sbzo, 1 mg
J2403	J2403	Chloroprocaine hcl ophthalmic, 3% gel, 1 mg
J9196	J9196	Injection, gemcitabine hydrochloride (accord), not therapeutically equivalent to j9201, 200 mg
J9294	J9294	Injection, pemetrexed (hospira) not therapeutically equivalent to j9305, 10 mg
J9296	J9296	Injection, pemetrexed (accord) not therapeutically equivalent to j9305, 10 mg
J9297	J9297	Injection, pemetrexed (sandoz), not therapeutically equivalent to j9305, 10 mg
K1035	K1035	Molecular diagnostic test reader, nonprescription self-administered and self-collected use, fda approved, authorized or cleared
L8678	L8678	Electrical stimulator supplies (external) for use with implantable neurostimulator, per month
M0010	M0010	Enhancing oncology model (eom) monthly enhanced oncology services (meos) payment for eom enhanced services
Q4265	Q4265	Neostim tl, per square centimeter
Q4266	Q4266	Neostim membrane, per square centimeter

April 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
Q4267	Q4267	Neostim dl, per square centimeter
Q4268	Q4268	Surgraft ft, per square centimeter
Q4269	Q4269	Surgraft xt, per square centimeter
Q4270	Q4270	Complete sl, per square centimeter
Q4271	Q4271	Complete ft, per square centimeter
Q5127	Q5127	Injection, pegfilgrastim-fpgk (stimufend), biosimilar, 0.5 mg
Q5128	Q5128	Injection, ranibizumab-eqrn (cimerli), biosimilar, 0.1 mg
Q5129	Q5129	Injection, bevacizumab-adcd (vegzelma), biosimilar, 10 mg
Q5130	Q5130	Injection, pegfilgrastim-pbbk (fylnetra), biosimilar, 0.5 mg
0364U	0364U	Oncology (hematolymphoid neoplasm), genomic sequence analysis using multiplex (PCR) and next-generation sequencing with algorithm, quantification of dominant clonal sequence(s), reported as presence or absence of minimal residual disease (MRD) with quantitation of disease burden, when appropriate
0365U	0365U	Oncology (bladder), analysis of 10 protein biomarkers (A1AT, ANG, APOE, CA9, IL8, MMP9, MMP10, PAI1, SDC1 and VEGFA) by immunoassays, urine, algorithm reported as a probability of bladder cancer
0366U	0366U	Oncology (bladder), analysis of 10 protein biomarkers (A1AT, ANG, APOE, CA9, IL8, MMP9, MMP10, PAI1, SDC1 and VEGFA) by immunoassays, urine, algorithm reported as a probability of recurrent bladder cancer
0367U	0367U	Oncology (bladder), analysis of 10 protein biomarkers (A1AT, ANG, APOE, CA9, IL8, MMP9, MMP10, PAI1, SDC1 and VEGFA) by immunoassays, urine, diagnostic algorithm reported as a risk score for probability of rapid recurrence of recurrent or persistent cancer following transurethral resection
0368U	0368U	Oncology (colorectal cancer), evaluation for mutations of APC, BRAF, CTNNB1, KRAS, NRAS, PIK3CA, SMAD4, and TP53, and methylation markers (MYO1G, KCNQ5, C9ORF50, FLI1, CLIP4, ZNF132 and TWIST1), multiplex quantitative polymerase chain reaction (qPCR), circulating cell-free DNA (cfDNA), plasma, report of risk score for advanced adenoma or colorectal cancer
0369U	0369U	Infectious agent detection by nucleic acid (DNA and RNA), gastrointestinal pathogens, 31 bacterial, viral, and parasitic organisms and identification of 21 associated antibiotic-resistance genes, multiplex amplified probe technique
0370U	0370U	Infectious agent detection by nucleic acid (DNA and RNA), surgical wound pathogens, 34 microorganisms and identification of 21 associated antibioticresistance genes, multiplex amplified probe technique, wound swab
0371U	0371U	Infectious agent detection by nucleic acid (DNA or RNA), genitourinary pathogen, semiquantitative identification, DNA from 16 bacterial organisms and 1 fungal organism, multiplex amplified probe technique via quantitative polymerase chain reaction (qPCR), urine
0372U	0372U	Infectious disease (genitourinary pathogens), antibiotic-resistance gene detection, multiplex amplified probe technique, urine, reported as an antimicrobial stewardship risk score
0373U	0373U	Infectious agent detection by nucleic acid (DNA and RNA), respiratory tract infection, 17 bacteria, 8 fungus, 13 virus, and 16 antibiotic-resistance genes, multiplex amplified probe technique, upper or lower respiratory specimen
0374U	0374U	Infectious agent detection by nucleic acid (DNA or RNA), genitourinary pathogens, identification of 21 bacterial and fungal organisms and identification of 21 associated antibiotic-resistance genes, multiplex amplified probe technique, urine

April 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
0375U	0375U	Oncology (ovarian), biochemical assays of 7 proteins (follicle stimulating hormone, human epididymis protein 4, apolipoprotein A-1, transferrin, beta-2 macroglobulin, prealbumin [ie, transthyretin], and cancer antigen 125), algorithm reported as ovarian cancer risk score
0376U	0376U	Oncology (prostate cancer), image analysis of at least 128 histologic features and clinical factors, prognostic algorithm determining the risk of distant metastases, and prostate cancerspecific mortality, includes predictive algorithm to androgen deprivationtherapy response, if appropriate
0377U	0377U	Cardiovascular disease, quantification of advanced serum or plasma lipoprotein profile, by nuclear magnetic resonance (NMR) spectrometry with report of a lipoprotein profile (including 23 variables)
0378U	0378U	RFC1 (replication factor C subunit 1), repeat expansion variant analysis by traditional and repeat-primed PCR, blood, saliva, or buccal swab
0379U	0379U	Targeted genomic sequence analysis panel, solid organ neoplasm, DNA (523 genes) and RNA (55 genes) by nextgeneration sequencing, interrogation for sequence variants, gene copy number amplifications, gene rearrangements, microsatellite instability, and tumor mutational burden
0380U	0380U	Drug metabolism (adverse drug reactions and drug response), targeted sequence analysis, 20 gene variants and CYP2D6 deletion or duplication analysis with reported genotype and phenotype
0381U	0381U	Maple syrup urine disease monitoring by patient-collected blood card sample, quantitative measurement of alloisoleucine, leucine, isoleucine, and valine, liquid chromatography with tandem mass spectrometry (LCMS/MS)
0382U	0382U	Hyperphenylalaninemia monitoring by patient-collected blood card sample, quantitative measurement of phenylalanine and tyrosine, liquid chromatography with tandem mass spectrometry (LC-MS/MS)
0383U	0383U	Tyrosinemia type I monitoring by patient-collected blood card sample, quantitative measurement of tyrosine, phenylalanine, methionine, succinylacetone, nitisinone, liquid chromatography with tandem mass spectrometry (LC-MS/MS)
0384U	0384U	Nephrology (chronic kidney disease), carboxymethyllysine, methylglyoxal hydroimidazolone, and carboxyethyl lysine by liquid chromatography with tandem mass spectrometry (LCMS/MS) and HbA1c and estimated glomerular filtration rate (GFR), with risk score reported for predictive progression to high-stage kidney disease
0385U	0385U	Nephrology (chronic kidney disease), apolipoprotein A4 (ApoA4), CD5 antigen-like (CD5L), and insulin-like growth factor binding protein 3 (IGFBP3) by enzyme-linked immunoassay (ELISA), plasma, algorithm combining results with HDL, estimated glomerular filtration rate (GFR) and clinical data reported as a risk score for developing diabetic kidney disease
0386U*		Gastroenterology (Barrett's esophagus), P16, RUNX3, HPP1, and FBN1 methylation analysis, prognostic and predictive algorithm reported as a risk score for progression to high-grade dysplasia or esophageal cancer

*CPT code 0386U was deleted on September 30, 2023, with no replacement code.

BILLING CODE 4150–28–C

2. July 2023 HCPCS Codes Proposed Rule Comment Solicitation

For the July 2023 update, 97 new codes were established and made effective July 1, 2023. Through the July 2023 OPPS quarterly update CR (Transmittal 12077, Change Request 13210, dated June 13, 2023), we recognized several new codes for separate payment and assigned them to appropriate interim OPPS status indicators and APCs. We solicited public comments on the proposed APC and status indicator assignments for the codes listed in Table 7 (New HCPCS Codes Effective July 1, 2023) of the CY 2024 OPPS/ASC proposed rule (88 FR 49599–49605), which are also listed in Table 9.

We received some public comments on the proposed OPPS APC and SI assignments for the new Level II HCPCS codes implemented on July 1, 2023. The comments and our responses are addressed in their respective sections of this final rule with comment period, which include, but are not limited to: sections III.C (New Technology APCs), III.E (OPPS APC-Specific Policies), and IV (OPPS Payment for Devices). For those July 1, 2023, codes for which we received no comments, we are finalizing the proposed APC and status indicator assignments. We note that one HCPCS C-code has been replaced with a HCPCS J-code. The replacement code is listed in Table 9. Additionally, we note that in prior years we included the final OPPS status indicators and APC assignments in the coding preamble tables, however, because the same information can be found in Addendum B, we are no longer including them in Table 9. Therefore, readers are advised to refer to the OPPS Addendum B for the final OPPS status indicators, APC assignments, and payment rates for all codes reportable under the hospital OPPS. These new codes that were effective July 1, 2023, were assigned to comment indicator ''NP'' in Addendum B to the CY 2024 OPPS/ASC proposed rule to indicate that the codes are assigned to an interim APC assignment and comments would be accepted on their interim APC assignments. The complete list of status indicators and definitions used under the OPPS can be found in Addendum D1 to this final rule with comment period, while the complete list of comment indicators and definitions can be found in Addendum D2 to this final rule with comment period. We note that OPPS Addendum B (OPPS payment file by HCPCS code), Addendum D1 (OPPS Status Indicators), and Addendum D2 (OPPS Comment Indicators) are available via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 9: NEW HCPCS CODES EFFECTIVE JULY 1, 2023

July 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
C9150	C9150	Xenon Xe-129 hyperpolarized gas, diagnostic, per study dose
C9151	J2781	Injection, pegcetacoplan, intravitreal, 1 mg
C9784	C9784	Gastric restrictive procedure, endoscopic sleeve gastroplasty, with esophagogastroduodenoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components
C9785	C9785	Endoscopic outlet reduction, gastric pouch application, with endoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components.
C9786	C9786	Echocardiography image post processing for computer aided detection of heart failure with preserved ejection fraction, including interpretation and report
C9787	C9787	Gastric electrophysiology mapping with simultaneous patient symptom profiling
J0137	J0137	Injection, acetaminophen (hikma) not therapeutically equivalent to J0131, 10 mg
J0206	J0206	Injection, allopurinol sodium, 1 mg
J0216	J0216	Injection, alfentanil hydrochloride, 500 micrograms
J0457	J0457	Injection, aztreonam, 100 mg
J0665	J0665	Injection, bupivicaine, not otherwise specified, 0.5 mg
J0736	J0736	Injection, clindamycin phosphate, 300 mg
J0737	J0737	Injection, clindamycin phosphate (baxter), not therapeutically equivalent to J0736, 300 mg
J1440	J1440	Fecal microbiota, live - jslm, 1 ml
J1576	J1576	Injection, immune globulin (panzyga), intravenous, non-lyophilized (e.g., liquid), 500 mg
J1805	J1805	Injection, esmolol hydrochloride, 10 mg
J1806	J1806	Injection, esmolol hydrochloride (wg critical care) not therapeutically equivalent to J1805, 10 mg
J1811	J1811	Insulin (fiasp) for administration through dme (i.e., insulin pump) per 50 units
J1812	J1812	Insulin (fiasp), per 5 units
J1813	J1813	Insulin (lyumjev) for administration through dme (i.e., insulin pump) per 50 units
J1814	J1814	Insulin (lyumjev), per 5 units
J1836	J1836	Injection, metronidazole, 10 mg
J1920	J1920	Injection, labetalol hydrochloride, 5 mg
J1921	J1921	Injection, labetalol hydrochloride (hikma) not therapeutically equivalent to J1820, 5 mg
J1941	J1941	Injection, furosemide (furoscix), 20 mg
J1961	J1961	Injection, lenacapavir, 1 mg
J2249	J2249	Injection, remimazolam, 1 mg
J2305	J2305	Injection, nitroglycerin, 5 mg
J2329	J2329	Injection, ublituximab-xiiy, 1mg

July 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
J2371	J2371	Injection, phenylephrine hydrochloride, 20 micrograms
J2372	J2372	Injection, phenylephrine hydrochloride (biorphen), 20 micrograms
J2427	J2427	Injection, paliperidone palmitate extended release (invega hafyera, or invega trinza), 1 mg
J2561	J2561	Injection, phenobarbital sodium (sezaby), 1 mg
J2598	J2598	Injection, vasopressin, 1 unit
J2599	J2599	Injection, vasopressin (american regent) not therapeutically equivalent to J2598, 1 unit
J2806	J2806	Injection, sincalide (maia) not therapeutically equivalent to j2805, 5 micrograms
J7213	J7213	Injection, coagulation factor ix (recombinant), ixinity, 1 i.u.
J9029	J9029	Injection, nadofaragene firadenovec-vncg, per therapeutic dose
J9056	J9056	Injection, bendamustine hydrochloride (vivimusta), 1 mg
J9058	J9058	Injection, bendamustine hydrochloride (apotex), 1 mg
J9059	J9059	Injection, bendamustine hydrochloride (baxter), 1 mg
J9063	J9063	Injection, mirvetuximab soravtansine-gynx, 1 mg
J9259	J9259	Injection, paclitaxel protein-bound particles (american regent) not therapeutically equivalent to j9264, 1 mg
J9322	J9322	Injection, pemetrexed (bluepoint) not therapeutically equivalent to J9305, 10 mg
J9323	J9323	Injection, pemetrexed ditromethamine, 10 mg
J9347	J9347	Injection, tremelimumab-actl, 1 mg
J9350	J9350	Injection, mosunetuzumab-axgb, 1 mg
J9380	J9380	Injection, teclistamab-cqyv, 0.5 mg
J9381	J9381	Injection, teplizumab-mzwv, 5 mcg
Q4272	Q4272	ESA no a, per square centimeter
Q4273	Q4273	Eason air, per square centimeter
Q4274	Q4274	ESA no ac, per square centimeter
Q4275	Q4275	Eason aca, per square centimeter
Q4276	Q4276	Orion, per square centimeter
Q4277	Q4277	Woundplus membrane or e-graft, per square centimeter
Q4278	Q4278	Epieffect, per square centimeter
Q4280	Q4280	Xcell amnio matrix, per square centimeter
Q4281	Q4281	Barrera sl or barrera dl, per square centimeter
Q4282	Q4282	Cygnus dual, per square centimeter
Q4283	Q4283	Biovance tri-layer or biovance 3l, per square centimeter
Q4284	Q4284	Dermabind sl, per square centimeter
Q5131	Q5131	Injection, adalimumab-aacf (idacio), biosimilar, 20 mg
0791T	0791T	Motor-cognitive, semi-immersive virtual reality–facilitated gait training, each 15 minutes (List separately in addition to code for primary procedure)

July 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
0792T	0792T	Application of silver diamine fluoride 38%, by a physician or other qualified health care professional
0793T	0793T	Percutaneous transcatheter thermal ablation of nerves innervating the pulmonary arteries, including right heart catheterization, pulmonary artery angiography, and all imaging guidance
0794T	0794T	Patient-specific, assistive, rules-based algorithm for ranking pharmaco-oncologic treatment options based on the patient's tumor-specific cancer marker information obtained from prior molecular pathology, immunohistochemical, or other pathology results which have been previously interpreted and reported separately
0795T	0795T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; complete system (ie, right atrial and right ventricular pacemaker components)
0796T	0796T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right atrial pacemaker component (when an existing right ventricular single leadless pacemaker exists to create a dual-chamber leadless pacemaker system)
0797T	0797T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)
0798T	0798T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography), when performed; complete system (ie, right atrial and right ventricular pacemaker components)
0799T	0799T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography), when performed; right atrial pacemaker component
0800T	0800T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)
0801T	0801T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; dual-chamber system (ie, right atrial and right ventricular pacemaker components)

July 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
0802T	0802T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right atrial pacemaker component
0803T	0803T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)
0804T	0804T	Programming device evaluation (in person) with iterative adjustment of implantable device to test the function of device and to select optimal permanent programmed values, with analysis, review, and report, by a physician or other qualified health care professional, leadless pacemaker system in dual cardiac chambers
0805T	0805T	Transcatheter superior and inferior vena cava prosthetic valve implantation (ie, caval valve implantation [CAVI]); percutaneous femoral vein approach
0806T	0806T	Transcatheter superior and inferior vena cava prosthetic valve implantation (ie, caval valve implantation [CAVI]); open femoral vein approach
0807T	0807T	Pulmonary tissue ventilation analysis using software-based processing of data from separately captured cinefluorograph images; in combination with previously acquired computed tomography (CT) images, including data preparation and transmission, quantification of pulmonary tissue ventilation, data review, interpretation and report
0808T	0808T	Pulmonary tissue ventilation analysis using software-based processing of data from separately captured cinefluorograph images; in combination with computed tomography (CT) images taken for the purpose of pulmonary tissue ventilation analysis, including data preparation and transmission, quantification of pulmonary tissue ventilation, data review, interpretation and report
0809T*	N/A	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, placement of transfixing device(s) and intra-articular implant(s), including allograft or synthetic device(s)
0810T	0810T	Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies
0387U	0387U	Oncology (melanoma), autophagy and beclin 1 regulator 1 (AMBRA1) and loricrin (AMLo) by immunohistochemistry, formalinfixed paraffin-embedded (FFPE) tissue, report for risk of progression
0388U	0388U	Oncology (non-small cell lung cancer), next-generation sequencing with identification of single nucleotide variants, copy number variants, insertions and deletions, and structural variants in 37 cancer-related genes, plasma, with report for alteration detection
0389U	0389U	Pediatric febrile illness (Kawasaki disease [KD]), interferon alphainducible protein 27 (IFI27) and mast cell-expressed membrane protein 1 (MCEMP1), RNA, using reverse transcription polymerase chain reaction (RT-qPCR), blood, reported as a risk score for KD

July 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
0390U	0390U	Obstetrics (preeclampsia), kinase insert domain receptor (KDR), Endoglin (ENG), and retinol-binding protein 4 (RBP4), by immunoassay, serum, algorithm reported as a risk score
0391U	0391U	Oncology (solid tumor), DNA and RNA by next-generation sequencing, utilizing formalin-fixed paraffin-embedded (FFPE) tissue, 437 genes, interpretive report for single nucleotide variants, splicesite variants, insertions/deletions, copy number alterations, gene fusions, tumor mutational burden, and microsatellite instability, with algorithm quantifying immunotherapy response score
0392U	0392U	Drug metabolism (depression, anxiety, attention deficit hyperactivity disorder [ADHD]), gene-drug interactions, variant analysis of 16 genes, including deletion/duplication analysis of CYP2D6, reported as impact of gene-drug interaction for each drug
0393U	0393U	Neurology (eg, Parkinson disease, dementia with Lewy bodies), cerebrospinal fluid (CSF), detection of misfolded α-synuclein protein by seed amplification assay, qualitative
0394U	0394U	Perfluoroalkyl substances (PFAS) (eg, perfluorooctanoic acid, perfluorooctane sulfonic acid), 16 PFAS compounds by liquid chromatography with tandem mass spectrometry (LC-MS/MS), plasma or serum, quantitative
0395U	0395U	Oncology (lung), multi-omics (microbial DNA by shotgun nextgeneration sequencing and carcinoembryonic antigen and osteopontin by immunoassay), plasma, algorithm reported as malignancy risk for lung nodules in early-stage disease
0396U	0396U	Obstetrics (pre-implantation genetic testing), evaluation of 300000 DNA single-nucleotide polymorphisms (SNPs) by microarray, embryonic tissue, algorithm reported as a probability for single-gene germline conditions
0397U	0397U	Oncology (non-small cell lung cancer), cell-free DNA from plasma, targeted sequence analysis of at least 109 genes, including sequence variants, substitutions, insertions, deletions, select rearrangements, and copy number variations
0398U	0398U	Gastroenterology (Barrett esophagus), P16, RUNX3, HPP1, and FBN1 DNA methylation analysis using PCR, formalin-fixed paraffin-embedded (FFPE) tissue, algorithm reported as risk score for progression to high-grade dysplasia or cancer
0399U	0399U	Neurology (cerebral folate deficiency), serum, detection of anti-human folate receptor IgGbinding antibody and blocking autoantibodies by enzyme-linked immunoassay (ELISA), qualitative, and blocking autoantibodies, using a functional blocking assay for IgG or IgM, quantitative, reported as positive or not detected
0400U	0400U	Obstetrics (expanded carrier screening), 145 genes by nextgeneration sequencing, fragment analysis and multiplex ligationdependent probe amplification, DNA, reported as carrier positive or negative
0401U	0401U	Cardiology (coronary heart disease [CAD]), 9 genes (12 variants), targeted variant genotyping, blood, saliva, or buccal swab, algorithm reported as a genetic risk score for a coronary event

*CPT code 0809T will be deleted on December 31, 2023.

BILLING CODE 4150–28–C

3. October 2023 HCPCS Codes Final Rule Comment Solicitation

For the October 2023 update, 64 new codes were established and made effective October 1, 2023. Through the October 2023 OPPS quarterly update CR (Transmittal 12077, Change Request 13210, dated June 13, 2023), we recognized several new codes for separate payment and assigned them to appropriate interim OPPS status indicators and APCs. For CY 2024, consistent with our established policy, we proposed in the CY 2024 OPPS/ASC

proposed rule (88 FR 49605) that the HCPCS codes that would be effective October 1, 2023, would be flagged with comment indicator ''NI'' in Addendum B in the CY 2024 OPPS/ASC final rule with comment period to indicate that we have assigned the codes to interim OPPS status indicators for CY 2024. Table 10 below lists the codes that were effective October 1, 2023. We note that several of the temporary C-codes have been replaced with permanent J-codes effective January 1, 2024. We are inviting public comments in this final rule on the interim payment indicators, which will be finalized in the CY 2025 OPPS/ASC final rule with comment period. We note these same codes will be subject to comment in the CY 2025 OPPS/ASC proposed rule with comment period, and will be finalized in the CY 2025 OPPS/ASC final rule with comment period.

BILLING CODE 4150–28–P

TABLE 10: NEW HCPCS CODES EFFECTIVE OCTOBER 1, 2023

October 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
0019M	0019M	Cardiovascular disease, plasma, analysis of protein biomarkers by aptamer-based microarray and algorithm reported as 4-year likelihood of coronary event in high-risk populations
0402U	0402U	Infectious agent (sexually transmitted infection), Chlamydia trachomatis, Neisseria gonorrhoeae, Trichomonas vaginalis, Mycoplasma genitalium, multiplex amplified probe technique, vaginal, endocervical, or male urine, each pathogen reported as detected or not detected
0403U	0403U	Oncology (prostate), mRNA, gene expression profiling of 18 genes, first-catch post-digital rectal examination urine (or processed first-catch urine), algorithm reported as percentage of likelihood of detecting clinically significant prostate cancer
0404U	0404U	Oncology (breast), semiquantitative measurement of thymidine kinase activity by immunoassay, serum, results reported as risk of disease progression
0405U	0405U	Oncology (pancreatic), 59 methylation haplotype block markers, next-generation sequencing, plasma, reported as cancer signal detected or not detected
0406U	0406U	Oncology (lung), flow cytometry, sputum, 5 markers (meso-tetra [4-carboxyphenyl] porphyrin [TCPP], CD206, CD66b, CD3, CD19), algorithm reported as likelihood of lung cancer
0407U	0407U	Nephrology (diabetic chronic kidney disease [CKD]), multiplex electrochemiluminescent immunoassay (ECLIA) of soluble tumor necrosis factor receptor 1 (sTNFR1), soluble tumor necrosis receptor 2 (sTNFR2), and kidney injury molecule 1 (KIM-1) combined with clinical data, plasma, algorithm reported as risk for progressive decline in kidney function
0408U	0408U	Infectious agent antigen detection by bulk acoustic wave biosensor immunoassay, severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2) (coronavirus disease [COVID-19])
0409U	0409U	Oncology (solid tumor), DNA (80 genes) and RNA (36 genes), by next-generation sequencing from plasma, including single nucleotide variants, insertions/deletions, copy number alterations, microsatellite instability, and fusions, report showing identified mutations with clinical actionability
0410U	0410U	Oncology (pancreatic), DNA, whole genome sequencing with 5-hydroxymethylcytosine enrichment, whole blood or plasma, algorithm reported as cancer detected or not detected

October 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
0411U	0411U	Psychiatry (eg, depression, anxiety, attention deficit hyperactivity disorder [ADHD]), genomic analysis panel, variant analysis of 15 genes, including deletion/duplication analysis of CYP2D6
0412U	0412U	Beta amyloid, Aβ42/40 ratio, immunoprecipitation with quantitation by liquid chromatography with tandem mass spectrometry (LC-MS/MS) and qualitative ApoE isoform-specific proteotyping, plasma combined with age, algorithm reported as presence or absence of brain amyloid pathology
0413U	0413U	Oncology (hematolymphoid neoplasm), optical genome mapping for copy number alterations, aneuploidy, and balanced/complex structural rearrangements, DNA from blood or bone marrow, report of clinically significant alterations
0414U	0414U	Oncology (lung), augmentative algorithmic analysis of digitized whole slide imaging for 8 genes (ALK, BRAF, EGFR, ERBB2, MET, NTRK1-3, RET, ROS1), and KRAS G12C and PD-L1, if performed, formalin-fixed paraffin-embedded (FFPE) tissue, reported as positive or negative for each biomarker
0415U	0415U	Cardiovascular disease (acute coronary syndrome [ACS]), IL-16, FAS, FASLigand, HGF, CTACK, EOTAXIN, and MCP-3 by immunoassay combined with age, sex, family history, and personal history of diabetes, blood, algorithm reported as a 5-year (deleted risk) score for ACS
0416U	0416U	Infectious agent detection by nucleic acid (DNA), genitourinary pathogens, identification of 20 bacterial and fungal organisms, including identification of 20 associated antibiotic-resistance genes, if performed, multiplex amplified probe technique, urine
0417U	0417U	Rare diseases (constitutional/heritable disorders), whole mitochondrial genome sequence with heteroplasmy detection and deletion analysis, nuclear-encoded mitochondrial gene analysis of 335 nuclear genes, including sequence changes, deletions, insertions, and copy number variants analysis, blood or saliva, identification and categorization of mitochondrial disorder–associated genetic variants
0418U	0418U	Oncology (breast), augmentative algorithmic analysis of digitized whole slide imaging of 8 histologic and immunohistochemical features, reported as a recurrence score
0419U	0419U	Neuropsychiatry (eg, depression, anxiety), genomic sequence analysis panel, variant analysis of 13 genes, saliva or buccal swab, report of each gene phenotype
A2022	A2022	Innovaburn or innovamatrix xl, per square centimeter
A2023	A2023	Innovamatrix pd, 1 mg
A2024	A2024	Resolve matrix, per square centimeter

October 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
A2025	A2025	Miro3d, per cubic centimeter
A9156	A9156	Oral mucoadhesive, any type (liquid, gel, paste, etc.), per 1 ml
A9268	A9268	Programmer for transient, orally ingested capsule
A9269	A9269	Programable, transient, orally ingested capsule, for use with external programmer, per month
A9292	A9292	Prescription digital visual therapy, software-only, fda cleared, per course of treatment
A9573	A9573	Injection, gadopiclenol, 1 ml
A9603	A9603	Injection, pafolacianine, 0.1 mg
A9697	A9697	Injection, carboxydextran-coated superparamagnetic iron oxide, per study dose
B4148	B4148	Enteral feeding supply kit; elastomeric control fed, per day, includes but not limited to feeding/flushing syringe, administration set tubing, dressings, tape
C9152	J0402	Injection, aripiprazole, (abilify asimtufii), 1 mg
C9153	J0184	Injection, amisulpride, 1 mg
C9154	J0576	Injection, buprenorphine extended-release (brixadi), 1 mg
C9155	J9321	Injection, epcoritamab-bysp, 0.16 mg
C9156	A9608	Flotufolastat F 18, diagnostic, 1 millicurie
C9157	J1304	Injection, tofersen, 1 mg
C9158	J2799	Injection, risperidone, (uzedy), 1 mg
C9788	0857T	Opto-acoustic imaging, breast, unilateral, including axilla when performed, real-time with image documentation, augmentative analysis and report (List separately in addition to code for primary procedure)
C9789	C9789	Instillation of anti-neoplastic pharmacologic/biologic agent into renal pelvis, any method, including all imaging guidance, including volumetric measurement if performed
C9790	C9790	Histotripsy (ie, non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including image guidance
C9791	C9791	Magnetic resonance imaging with inhaled hyperpolarized xenon-129 contrast agent, chest, including preparation and administration of agent
C9792	C9792	Blinded or nonblinded procedure for symptomatic New York Heart Association (NYHA) Class II, III, IVa heart failure; transcatheter implantation of left atrial to coronary sinus shunt using jugular vein access, including all imaging necessary to intra procedurally map the coronary sinus for optimal shunt placement (e.g., TEE or ICE ultrasound, fluoroscopy), performed under general anesthesia in an approved investigational device exemption (IDE) study)

Q4285	Q4285	Nudyn dl or nudyn dl mesh, per square centimeter
Q4286	Q4286	Nudyn sl or nudyn slw, per square centimeter
V2526	V2526	Contact lens, hydrophilic, with blue-violet filter, per lens

BILLING CODE 4150–28–C

4. January 2024 HCPCS Codes

a. New Level II HCPCS Codes Final Rule Comment Solicitation

Consistent with past practice, we are soliciting comments on the new Level II HCPCS codes that will be effective January 1, 2024, in this final rule with comment period, thereby allowing us to finalize the status indicators and APC assignments for the codes in the CY 2025 OPPS/ASC final rule with comment period. Unlike the CPT codes that are effective January 1 and are included in the OPPS/ASC proposed rules, and except for the proposed new C-codes and G-codes listed in Addendum O of the CY 2024 OPPS/ASC proposed rule, most Level II HCPCS codes are not released until sometime around November to be effective

January 1. Because these codes are not available until November, we are unable to include them in the OPPS/ASC proposed rules. Consequently, for CY 2024, we proposed to include the new Level II HCPCS codes effective January 1, 2024 (that would be incorporated in the January 2024 OPPS quarterly update CR), in Addendum B to the CY 2024 OPPS/ASC final rule with comment period. Specifically, for CY 2024, we proposed to continue our established policy of assigning comment indicator ''NI'' in Addendum B to this final rule with comment period to the new HCPCS codes that will be effective January 1, 2024, to indicate that we are assigning them an interim status indicator, which is subject to public comment. We are inviting public comments in this final rule with comment period on the status indicators and APC assignments, which will be finalized in the CY 2025 OPPS/ASC final rule with comment period. Similar to the codes effective October 1, 2023, these new Level II HCPCS codes that will be effective January 1, 2024, will be subject to comment in the CY 2025 OPPS/ASC proposed rule with comment period, and will be finalized in the CY 2025 OPPS/ASC final rule with comment period.

b. New CY 2024 CPT Codes Proposed Rule Comment Solicitation

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66841 through 66844), we finalized a revised process of assigning APCs and status indicators for new and revised Category I and III CPT codes that would be effective January 1. Specifically, for the new/revised CPT codes that we receive in a timely manner from the AMA's CPT Editorial Panel, we finalized our proposal to include the codes that would be effective January 1 in the OPPS/ASC proposed rules, along with proposed APC and status indicator assignments for them, and to finalize the APC and status indicator assignments in the OPPS/ASC final rules beginning with the CY 2016 OPPS update. For those new/revised CPT codes that were received too late for inclusion in the OPPS/ASC proposed rule, we finalized our proposal to establish and use HCPCS G-codes that mirror the predecessor CPT codes and retain the current APC and status indicator assignments for a year until we can propose APC and status indicator assignments in the following year's rulemaking cycle. We note that even if we find that we need to create HCPCS G-codes in place of certain CPT codes for the PFS proposed rule, we do not anticipate that these HCPCS G-codes will always be necessary for OPPS purposes. We will make every effort to include proposed APC and status indicator assignments for all new and revised CPT codes that the AMA makes publicly available in time for us to include them in the proposed rule, and to avoid resorting to use of HCPCS G-codes and the resulting delay in utilization of the most current CPT codes. Also, we finalized our proposal to make interim APC and status indicator assignments for CPT codes that are not available in time for the proposed rule and that describe wholly new services (such as new technologies or new surgical procedures), to solicit public comments in the final rule, and to finalize the specific APC and status indicator assignments for those codes in the following year's final rule.

For the CY 2024 OPPS update, we received the CPT codes that will be effective January 1, 2024, from the AMA in time to be included in the CY 2024 OPPS/ASC proposed rule with comment period. The new, revised, and deleted CPT codes can be found in Addendum B to the proposed rule (which is available via the internet on the CMS website). We note that the new and revised CPT codes are assigned to a proposed APC assignment and comment indicator ''NP'' in Addendum B of the proposed rule to indicate that the code is new for the next calendar year or the code is an existing code with substantial revision to its code descriptor in the next calendar year as compared to the current calendar year, and that comments will be accepted on the proposed APC assignment and status indicator.

Further, we reminded readers that the CPT code descriptors that appear in Addendum B are short descriptors and do not accurately describe the complete procedure, service, or item described by the CPT code. Therefore, we included the 5-digit placeholder codes and their long descriptors for the new and revised CY 2024 CPT codes in Addendum O to the proposed rule (which is available via the internet on the CMS website) so that the public could adequately comment on the proposed APCs and SI assignments. The 5-digit placeholder codes were included in Addendum O, specifically under the column labeled ''CY 2024 OPPS/ASC Proposed Rule 5-Digit AMA Placeholder Code,'' to the proposed rule. We noted that the final CPT code numbers would be included in this CY 2024 OPPS/ASC final rule with comment period. We also noted that not every code listed in Addendum O is subject to public comment. For the new and revised Category I and III CPT codes, we requested public comments on only those codes that are assigned comment indicator ''NP.''

In summary, in the CY 2024 OPPS/ASC proposed rule, we solicited public comments on the proposed CY 2024 SI and APC assignments for the new and revised Category I and III CPT codes that would be effective January 1, 2024. The CPT codes were listed in Addendum B to the proposed rule with short descriptors only. We listed them again in Addendum O to the proposed rule with long descriptors. We also proposed to finalize the SI and APC assignments for these codes (with their final CPT code numbers) in the CY 2024 OPPS/ASC final rule with comment period. The proposed SI and APC assignments for these codes were included in Addendum B to the proposed rule (which is available via the internet on the CMS website).

We received comments on several of the new CPT codes that were assigned to comment indicator ''NP'' in Addendum B to the CY 2024 OPPS/ASC proposed rule. We have responded to those public comments in sections III.C, III.E, and IV of this CY 2024 OPPS/ASC final rule with comment period.

The final SIs, APC assignments, and payment rates for the new CPT codes that are effective January 1, 2024, can be found in Addendum B to this final rule with comment period. In addition, the SI meanings can be found in Addendum D1 (OPPS Payment Status Indicators for CY 2024) to this final rule with comment period. Addenda B and D1 are available via the internet on the CMS website.

Finally, Table 11, which is a reprint of Table 8 from the CY 2024 OPPS/ASC proposed rule (88 FR 49606), shows the comment timeframe for new and revised HCPCS codes. The table provides information on our current process for updating codes through our OPPS quarterly update CRs, seeking public comments, and finalizing the treatment of these codes under the OPPS.

TABLE 11: COMMENT AND FINALIZATION TIMEFRAMES FOR NEW AND REVISED OPPS-RELATED HCPCS CODES

OPPS Quarterly Update CR	Type of Code	Effective Date	Comments Sought	When Finalized
April 2023	HCPCS (CPT and Level II codes)	April 1, 2023	CY 2024 OPPS/ASC proposed rule	CY 2024 OPPS/ASC final rule with comment period
July 2023	HCPCS (CPT and Level II codes)	July 1, 2023	CY 2024 OPPS/ASC proposed rule	CY 2024 OPPS/ASC final rule with comment period
October 2023	HCPCS (CPT and Level II codes)	October 1, 2023	CY 2024 OPPS/ASC final rule with comment period	CY 2025 OPPS/ASC final rule with comment period

	Level II HCPCS Codes	January 1, 2024	CY 2024 OPPS/ASC final rule with comment period	CY 2025 OPPS/ASC final rule with comment period

B. OPPS Changes—Variations Within APCs

1. Background

Section 1833(t)(2)(A) of the Act requires the Secretary to develop a classification system for covered hospital outpatient department services. Section 1833(t)(2)(B) of the Act provides that the Secretary may establish groups of covered OPD services within this classification system, so that services classified within each group are comparable clinically and with respect to the use of resources. In accordance with these provisions, we developed a grouping classification system, referred to as Ambulatory Payment Classifications (APCs), as set forth in regulations at 42 CFR 419.31. We use Level I (also known as CPT codes) and Level II HCPCS codes (also known as alphanumeric codes) to identify and group the services within each APC. The APCs are organized such that each group is homogeneous both clinically and in terms of resource use. Using this classification system, we have established distinct groups of similar services. We also have developed separate APC groups for certain medical devices, drugs, biologicals, therapeutic radiopharmaceuticals, and brachytherapy devices that are not packaged into the payment for the procedure.

We have packaged into the payment for each procedure or service within an APC group the costs associated with those items and services that are typically ancillary and supportive to a primary diagnostic or therapeutic modality and, in those cases, are an integral part of the primary service they support. Therefore, we do not make separate payment for these packaged items or services. In general, packaged items and services include, but are not limited to, the items and services listed in regulations at 42 CFR 419.2(b). A further discussion of packaged services is included in section II.A.3 of this final rule with comment period.

Under the OPPS, we generally pay for covered hospital outpatient services on a rate-per-service basis, where the service may be reported with one or more HCPCS codes. Payment varies according to the APC group to which the independent service or combination of services is assigned. In the CY 2024 OPPS/ASC proposed rule (88 FR 49607), for CY 2024, we proposed that each APC relative payment weight represents the hospital cost of the services included in that APC, relative to the hospital cost of the services included in APC 5012 (Clinic Visits and Related Services). The APC relative payment weights are scaled to APC 5012 because it is the hospital clinic visit APC and clinic visits are among the most frequently furnished services in the hospital outpatient setting.

2. Application of the 2 Times Rule

Section 1833(t)(9)(A) of the Act requires the Secretary to review, not less often than annually, and revise the APC groups, the relative payment weights, and the wage and other adjustments described in paragraph (2) to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. Section 1833(t)(9)(A) of the Act also requires the Secretary to consult with an expert outside advisory panel composed of an appropriate selection of

representatives of providers to review (and advise the Secretary concerning) the clinical integrity of the APC groups and the relative payment weights. We note that the Advisory Panel on Hospital Outpatient Payment (also known as the HOP Panel or the Panel) recommendations for specific services for the CY 2024 OPPS update will be discussed in the relevant specific sections throughout this final rule with comment period.

In addition, section 1833(t)(2) of the Act provides that, subject to certain exceptions, the items and services within an APC group cannot be considered comparable with respect to the use of resources if the highest cost for an item or service in the group is more than 2 times greater than the lowest cost for an item or service within the same group (referred to as the ''2 times rule''). The statute authorizes the Secretary to make exceptions to the 2 times rule in unusual cases, such as for low-volume items and services (but the Secretary may not make such an exception in the case of a drug or biological that has been designated as an orphan drug under section 526 of the Federal Food, Drug, and Cosmetic Act). In determining the APCs with a 2 times rule violation, we consider only those HCPCS codes that are significant based on the number of claims. We note that, for purposes of identifying significant procedure codes for examination under the 2 times rule, we consider procedure codes that have more than 1,000 single major claims or procedure codes that both have more than 99 single major claims and contribute at least 2 percent of the single major claims used to establish the APC cost to be significant (75 FR 71832). This longstanding definition of when a procedure code is significant for purposes of the 2 times rule was selected because we believe that a subset of 1,000 or fewer claims is negligible within the set of approximately 100 million single procedure or single session claims we use for establishing costs. Similarly, a procedure code for which there are fewer than 99 single claims and that comprises less than 2 percent of the single major claims within an APC will have a negligible impact on the APC cost (75 FR 71832). In the CY 2024 OPPS/ASC proposed rule, for CY 2024, we proposed to make exceptions to this limit on the variation of costs within each APC group in unusual cases, such as for certain low-volume items and services.

For the CY 2024 OPPS update, we identified the APCs with violations of the 2 times rule; and we proposed changes to the procedure codes assigned to these APCs (with the exception of those APCs for which we proposed a 2 times rule exception) in Addendum B to the CY 2024 OPPS/ASC proposed rule. We note that Addendum B does not appear in the printed version of the **Federal Register** as part of this final rule with comment period. Rather, it is published and made available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.* To eliminate a violation of the 2 times rule and improve clinical and resource homogeneity in the APCs for which we did not propose a 2 times rule exception, we proposed to reassign these procedure codes to new APCs that contain services that are similar with regard to both their clinical and resource characteristics. In many cases, the proposed procedure code reassignments and associated APC reconfigurations for CY 2024 included in the CY 2024 OPPS/ASC proposed rule are related to changes in costs of services that were observed in the CY 2022 claims data available for CY 2024 ratesetting. Addendum B to the CY 2024 OPPS/ASC proposed rule identifies with a comment indicator ''CH'' those procedure codes for which we proposed a change to the APC assignment or status indicator, or both, that were initially assigned in the July 1, 2023 OPPS Addendum B Update (available via the internet on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*).

3. APC Exceptions to the 2 Times Rule

Taking into account the APC changes that we proposed to make for CY 2024, we reviewed all of the APCs for which we identified 2 times rule violations to determine whether any of the APCs would qualify for an exception. We used the following criteria to evaluate whether to propose exceptions to the 2 times rule for affected APCs:

- Resource homogeneity;
- Clinical homogeneity;
- Hospital outpatient setting utilization;
- Frequency of service (volume); and
- Opportunity for upcoding and code fragments.

For a detailed discussion of these criteria, we refer readers to the April 7, 2000 final rule (65 FR 18457 and 18458).

Based on the CY 2022 claims data available for the CY 2024 OPPS/ASC proposed rule, we found 21 APCs with violations of the 2 times rule. We applied the criteria as described above to identify the APCs for which we proposed to make exceptions under the 2 times rule for CY 2024 and found that all of the 21 APCs we identified met the criteria for an exception to the 2 times rule based on the CY 2022 claims data available for the CY 2024 OPPS/ASC proposed rule. We note that, on an annual basis, based on our analysis of the latest claims data, we identify violations to the 2 times rule and propose changes when appropriate. Those APCs that violate the 2 times rule are identified and appear in Table 12 below. In addition, we did not include in that determination those APCs where a 2 times rule violation was not a relevant concept, such as APC 5401 (Dialysis), which only has two HCPCS codes assigned to it that have similar geometric mean costs and do not create a 2 times rule violation. Therefore, we have only identified those APCs, including those with criteria-based costs, such as device-dependent CPT/HCPCS codes, with violations of the 2 times rule, where a 2 times rule violation is a relevant concept.

Table 9 of the CY 2024 OPPS/ASC proposed rule (88 FR 49608) listed the 21 APCs for which we proposed to make an exception under the 2 times rule for CY 2024 based on the criteria cited above and claims data submitted between January 1, 2022, and December 31, 2022, and processed on or before June 30, 2023, and CCRs, if available. The proposed geometric mean costs for covered hospital outpatient services for these and all other APCs that were used in the development of the proposed rule can be found on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

Based on the updated final rule CY 2022 claims data used for this CY 2024 final rule with comment period, we found a total of 22 APCs with violations of the 2 times rule. Of these 22 total APCs, 19 were identified in the proposed rule and three are newly identified APCs. The following two APCs appeared in Table 9 of the CY 2024 OPPS/ASC proposed rule (88 FR 49608) as violating the 2 times rule, however, after conducting our data analysis for this final rule with comment period, we found that the APCs no longer violate the 2 times rule:

- APC 5303 (Level 3 Upper GI Procedures)
- APC 5822 (Health and Behavior Services)

In addition, the three newly identified APCs with violations of the 2 times rule include the following:

- APC 5734 (Level 4 Minor Procedures)

- APC 5743 (Level 3 Electronic Analysis of Devices)
- APC 5791 (Level 1 Pulmonary Treatment)

Although we did not receive any comments on Table 9 of the proposed rule, we did receive comments on APC assignments for specific HCPCS codes. The comments, and our responses, can be found in section III.E. of this final rule with comment period. In addition, we received a comment related to the application of the 2 times rule to the nuclear medicine APCs and packaged diagnostic radiopharmaceuticals. Below is the comment and our response.

Comment: A commenter stated that the statutory standard at section 1833(t)(2)(B) of the Social Security Act applies to the resources of both items and services, and if CMS continues to package diagnostic radiopharmaceuticals, the commenter suggested including the cost of the packaged radiopharmaceuticals when evaluating the nuclear medicine APCs for 2 times rule violations. The commenter added that, if needed, CMS should consider establishing additional APCs to ensure that the nuclear medicine APCs do not violate the 2 times rule when the costs of the packaged diagnostic radiopharmaceuticals are included.

Response: As we stated in the CY 2023 OPPS/ASC final rule (87 FR 71963), diagnostic radiopharmaceuticals are an integral component of many nuclear medicine and imaging procedures, and the payment for them is packaged with the primary procedure. We reiterate that the payment rates for the nuclear medicine APCs are established in a manner that uses the reported costs to furnish the procedure based on data submitted to CMS from all hospitals paid under the OPPS. The costs that are calculated for the nuclear medicine APCs reflect the average costs of items and services that are packaged into a primary procedure and will not necessarily equal the sum of the cost of the primary procedure and diagnostic radiopharmaceutical used in the procedure. Claims data that include the radiopharmaceutical packaged with the associated procedure reflect the combined cost of the procedure and the radiopharmaceutical used in the procedure. Consequently, we believe that our general standard of applying the 2 times rule to all clinical APCs, including the nuclear medicine APCs, is appropriate.

After considering the public comments we received on APC assignments and our analysis of the CY 2022 costs from hospital claims and cost report data available for this CY 2024 final rule with comment period, we are finalizing our proposals with some modifications. Specifically, we are finalizing our proposal to except 19 of the 21 proposed APCs from the 2 times rule for CY 2022 claims data and also excepting three additional APCs (APCs 5734, 5743, and 5791) for a total of 22 APCs.

In summary, Table 12 lists the 22 APCs that we are excepting from the 2 times rule for CY 2024 based on the criteria described earlier and a review of updated claims data for dates of service between January 1, 2022, and December 31, 2022, that were processed on or before June 30, 2023, and updated CCRs, if available. We note that, for cases in which a recommendation by the HOP Panel appears to result in or allow a violation of the 2 times rule, we generally accept the HOP Panel's recommendation because those recommendations are based on explicit consideration of resource use, clinical homogeneity, site of service, and the quality of the claims data used to determine the APC payment rates. The geometric mean costs for hospital outpatient services for these and all other APCs that were used in the development of this final rule with comment period can be found on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

BILLING CODE 4150–28–P

TABLE 12: FINAL CY 2024 APC EXCEPTIONS TO THE 2 TIMES RULE

APC	APC Group Title
5012	Clinic Visits and Related Services

BILLING CODE 4150–28–C

C. New Technology APCs

1. Background

In the CY 2002 OPPS final rule (66 FR 59903), we finalized changes to the time period in which a service can be eligible for payment under a New Technology APC. Beginning in CY 2002, we retain services within New Technology APC groups until we gather sufficient claims data to enable us to assign the service to an appropriate clinical APC. This policy allows us to move a service from a New Technology APC in less than 2 years if sufficient data are available. It also allows us to retain a service in a New Technology APC for more than 2 years if sufficient data upon which to base a decision for reassignment have not been collected.

We also adopted in the CY 2002 OPPS final rule the following criteria for assigning a complete or comprehensive service to a New Technology APC: (1) the service must be truly new, meaning it cannot be appropriately reported by an existing HCPCS code assigned to a clinical APC and does not appropriately fit within an existing clinical APC; (2) the service is not eligible for transitional pass-through payment (however, a truly new, comprehensive service could qualify for assignment to a new technology APC even if it involves a device or drug that could, on its own, qualify for a pass-through payment); and (3) the service falls within the scope of Medicare benefits under section 1832(a) of the Act and is reasonable and necessary in accordance with section 1862(a)(1)(A) of the Act (66 FR 59898 through 59903). For additional information about our New Technology APC policy, we refer readers to *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/pass-through-payment-status-new-technology-ambulatory-payment-classification-apc* and then follow the instructions to access the MEARIS™ system for OPPS New Technology APC applications.

In the CY 2004 OPPS final rule with comment period (68 FR 63416), we restructured the New Technology APCs to make the cost intervals more consistent across payment levels and refined the cost bands for these APCs to retain two parallel sets of New Technology APCs: one set with a status indicator of ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment) and the other set with a status indicator of ''T'' (Significant Procedure, Multiple Reduction Applies. Paid under OPPS; separate APC payment). These current New Technology APC configurations allow us to price new technology services more appropriately and consistently.

For CY 2023, there were 52 New Technology APC levels, ranging from the lowest cost band assigned to APC 1491 (New Technology—Level 1A ($0–$10)) to the highest cost band assigned to APC 1908 (New Technology—Level 52 ($145,001–$160,000)). We note that the cost bands for the New Technology

APCs, specifically, APCs 1491 through 1599 and 1901 through 1908, vary with increments ranging from $10 to $14,999. These cost bands identify the APCs to which new technology procedures and services with estimated service costs that fall within those cost bands are assigned under the OPPS. Payment for each APC is made at the mid-point of the APC's assigned cost band. For example, payment for New Technology APC 1507 (New Technology—Level 7 ($501–$600)) is made at $550.50.

Under the OPPS, one of our goals is to make payments that are appropriate for the services that are necessary for the treatment of Medicare beneficiaries. The OPPS, like other Medicare payment systems, is budget neutral and increases are limited to the annual hospital market basket increase reduced by the productivity adjustment. We believe that our payment rates reflect the costs that are associated with providing care to Medicare beneficiaries and are adequate to ensure access to services (80 FR 70374). For many emerging technologies, there is a transitional period during which utilization may be low, often because providers are first learning about the technologies and their clinical utility. Quite often, parties request that Medicare make higher payments under the New Technology APCs for new procedures in that transitional phase. These requests, and their accompanying estimates for expected total patient utilization, often reflect very low rates of patient use of expensive equipment, resulting in high per-use costs for which requesters believe Medicare should make full payment. Medicare does not, and we believe should not, assume responsibility for more than its share of the costs of procedures based on projected utilization for Medicare beneficiaries and does not set its payment rates based on initial projections of low utilization for services that require expensive capital equipment. For the OPPS, we rely on hospitals to make informed business decisions regarding the acquisition of high-cost capital equipment, taking into consideration their knowledge about their entire patient base (Medicare beneficiaries included) and an understanding of Medicare's and other payers' payment policies. We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68314) for further discussion regarding this payment policy.

Some services assigned to New Technology APCs have very low annual volume, which we consider to be fewer than 100 claims (86 FR 63528). Where utilization of services assigned to a New Technology APC is low, it can lead to wide variation in payment rates from year to year, resulting in even lower utilization and potential barriers to access to new technologies, which ultimately limits our ability to assign the service to the appropriate clinical APC. To mitigate these issues, we finalized a policy, in the CY 2019 OPPS/ASC final rule with comment period, to utilize our equitable adjustment authority at section 1833(t)(2)(E) of the Act to adjust how we determine the costs for low-volume services assigned to New Technology APCs (83 FR 58892 and 58893). Specifically, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58893), we established that, in each of our annual rulemakings, we would calculate and present the result of each statistical methodology (arithmetic mean, geometric mean, and median) based on up to 4 years of claims data and solicit public comment on which methodology should be used to establish the payment rate for the low-volume new technology service. In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63529), we replaced the New Technology APC low volume policy with the universal low volume APC policy. Unlike the New Technology APC low volume policy, the universal low volume APC policy applies to clinical APCs and brachytherapy APCs, in addition to procedures assigned to New Technology APCs, and uses the highest of the geometric mean, arithmetic mean, or median based on up to 4 years of claims data to set the payment rate for the APC. We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63529) for further discussion regarding this policy.

Finally, we note that, in a budget-neutral system, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment. We rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its initial payment rates, including those made through New Technology APCs, for new services that lack hospital claims data based on realistic utilization projections for all such services delivered in cost-efficient hospital outpatient settings. As the OPPS acquires claims data regarding hospital costs associated with new procedures, we regularly examine the claims data and any available new information regarding the clinical aspects of new procedures to confirm that our OPPS payments remain appropriate for procedures as they transition into mainstream medical practice (77 FR 68314). For CY 2024, we included the proposed payment rates for New Technology APCs 1491 to 1599 and 1901 through 1908 in Addendum A to the CY 2024 OPPS/ASC proposed rule (which is available on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

2. Procedures Assigned to New Technology APC Groups for CY 2024

As we described in the CY 2002 OPPS final rule (66 FR 59902), we generally retain a procedure in the New Technology APC to which it is initially assigned until we have obtained sufficient claims data to justify reassignment of the procedure to a clinically appropriate APC. In addition, in cases where we find that our initial New Technology APC assignment was based on inaccurate or inadequate information (although it was the best information available at the time), where we obtain new information that was not available at the time of our initial New Technology APC assignment, or where the New Technology APCs are restructured, we may, based on more recent resource utilization information (including claims data) or the availability of refined New Technology APC cost bands, reassign the procedure or service to a different New Technology APC that more appropriately reflects its cost (66 FR 59903).

Consistent with our current policy, for CY 2024, we proposed to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment of the service to an appropriate clinical APC. The flexibility associated with this policy allows us to reassign a service from a New Technology APC in less than 2 years if we have obtained sufficient claims data. It also allows us to retain a service in a New Technology APC for more than 2 years if we have not obtained sufficient claims data upon which to base a reassignment decision (66 FR 59902).

a. Administration of Subretinal Therapies Requiring Vitrectomy (APC 1563)

Effective January 1, 2021, CMS established HCPCS code C9770 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent) and assigned it to a New Technology APC based on the geometric mean cost of CPT code 67036 (Vitrectomy,

mechanical, pars plana approach) due to similar resource utilization. For CY 2021, HCPCS code C9770 was assigned to APC 1561 (New Technology—Level 24 ($3001–$3500)). This code may be used to describe the administration of HCPCS code J3398 (Injection, voretigene neparvovec-rzyl, 1 billion vector genomes). This procedure was previously discussed in depth in the CY 2021 OPPS/ASC final rule with comment period (85 FR 85939 and 85940). For CY 2022, we maintained the APC assignment of APC 1561 (New Technology—Level 24 ($3001–$3500)) for HCPCS code C9770 (86 FR 63531 and 63532).

HCPCS code J3398 (Injection, voretigene neparvovec-rzyl, 1 billion vector genomes) is for a gene therapy product indicated for a rare mutation-associated retinal dystrophy. Voretigene neparvovec-rzyl (Luxturna®) was approved by FDA in December of 2017 and is an adeno-associated virus vector-based gene therapy indicated for the treatment of patients with confirmed biallelic RPE65 mutation-associated retinal dystrophy.[6] This therapy is administered through a subretinal injection, which interested parties describe as an extremely delicate and sensitive surgical procedure. The FDA package insert describes one of the steps for administering Luxturna as, ''after completing a vitrectomy, identify the intended site of administration. The subretinal injection can be introduced via pars plana.''

Interested parties, including the manufacturer of Luxturna®, recommended CPT code 67036 (Vitrectomy, mechanical, pars plana approach) for the administration of the gene therapy.[7] However, the manufacturer previously contended the administration was not accurately described by any existing codes as CPT code 67036 (Vitrectomy, mechanical, pars plana approach) does not account for the administration itself.

CMS recognized the need to accurately describe the unique procedure that is required to administer the therapy described by HCPCS code J3398. Therefore, in the CY 2021 OPPS/ASC proposed rule (85 FR 48832), we proposed to establish a new HCPCS code, C97X1 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent) to describe this process. We stated that we believed this new HCPCS code accurately described the unique service associated with intraocular administration of HCPCS code J3398. We recognized that CPT code 67036 represents a clinically similar procedure and process that approximates similar resource utilization to C97X1. However, we also recognized that it is not prudent for the code that describes the administration of this unique gene therapy, C97X1, to be assigned to the same C–APC to which CPT code 67036 is assigned, as this would package the primary therapy, HCPCS code J3398, into the code that represents the process to administer the gene therapy.

Therefore, for CY 2021, we proposed to assign the services described by C97X1 to a New Technology APC with a cost band that contains the geometric mean cost for CPT code 67036. The placeholder code C97X1 was replaced by HCPCS code C9770. For CY 2021, we finalized our proposal to create HCPCS code C9770 (Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent), and we assigned this code to APC 1561 (New Technology—Level 24 ($3001–$3500)) using the geometric mean cost of CPT code 67036. For CY 2022, we continued to assign HCPCS code C9770 to APC 1561 (New Technology—Level 24 ($3001–$3500)) using the geometric mean cost of CPT code 67036.

CY 2023 was the first year that claims data were available for HCPCS code C9770; so we proposed and finalized a policy to base the payment rate of HCPCS code C9770 on claims data for that code rather than on the geometric mean cost of CPT code 67036. Given the low number of claims for this procedure, we designated HCPCS code C9770 as a low volume procedure under our universal low volume APC policy and used the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data to calculate an appropriate payment rate for purposes of assigning HCPCS code C9770 to a New Technology APC.

Based on the claims data available for the CY 2023 OPPS/ASC final rule with comment period, we found the median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology fell within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3501–$4000)). Therefore, we finalized our proposal to assign HCPCS code C9770 to APC 1562 for CY 2023.

CPT code 0810T (Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies) will be effective July 1, 2023. We recognized the similarity between HCPCS code C9770 and CPT code 0810T; therefore, we proposed to delete HCPCS code C9770 effective December 31, 2023, and to recognize CPT code 0810T starting January 1, 2024. We proposed to determine the payment rate for the procedure using the claims data for HCPCS code C9770. Similar to CY 2023, for CY 2024, given that there are only 10 single frequency claims available for ratesetting, we proposed to designate CPT code 0810T as a low volume procedure under our universal low volume APC policy and to use the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data for HCPCS code C9770 to calculate an appropriate payment rate for purposes of assigning CPT code 0810T to a New Technology APC.

Using all available claims from the 4-year lookback period, we determined the geometric mean cost to be $3,944, the arithmetic mean cost to be $4,192, and the median cost to be $4,148. Because the arithmetic mean is the statistical methodology that estimated the highest cost for the service, we proposed to use this cost to determine the New Technology APC placement. The arithmetic mean of $4,192 falls within the cost band for New Technology APC 1563 (New Technology—Level 26 ($4001–$4500)). Therefore, we proposed to assign CPT code 0810T to APC 1563 for CY 2024. Additionally, we proposed to perform a similar analysis using updated claims data in the CY 2024 OPPS/ASC final rule with comment period and update the APC placement as needed.

Please refer to Table 13 below for the proposed OPPS New Technology APC and status indicator assignments for HCPCS code C9770 and CPT code 0810T for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 13: FINAL CY 2023 AND PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9770 AND CPT CODE 0810T

HCPCS Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
C9770	Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent	T	1562	D	N/A
0810T	Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies	E1	N/A	T	1563

Comment: We received three comments in support of our proposal to delete HCPCS code C9770 and reassign CPT code 0810T to APC 1563 for CY 2024.

Response: We thank the commenters for their support. After consideration of the public comment we received, we are finalizing our policy as proposed. Specifically, we are finalizing our proposal to delete HCPCS code C9770 and assign CPT code 0810T to APC 1563 (New Technology—Level 26 ($4001–$4500)) for CY 2024. We are also finalizing our proposal to designate CPT code 0810T as a low volume procedure under our universal low volume APC policy and use the greater of the geometric mean, arithmetic mean, or median cost calculated based on the available claims data for HCPCS code C9770 to calculate an appropriate payment rate for purposes of assigning CPT code 0810T to a New Technology APC.

Based on updated claims data available for this final rule with comment period from the 4-year lookback period, we found the geometric mean cost for the service to be approximately $3,901.57, the arithmetic mean cost to be approximately $4,129.91, and the median cost to be approximately $4,141.06. The median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology falls within the cost band for New Technology APC 1563 (New Technology—Level 26 ($4001–$4500)). Therefore, we are assigning HCPCS code C9770 to APC 1563 for CY 2023. Please refer to Table 14 below for the final OPPS New Technology APC and status indicator assignments for HCPCS code C9770 and CPT code 0810T for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 14: PROPOSED AND FINAL CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9770 AND CPT CODE 0810T

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
C9770	Vitrectomy, mechanical, pars plana approach, with subretinal injection of pharmacologic/biologic agent	D	N/A	D	N/A
0810T	Subretinal injection of a pharmacologic agent, including vitrectomy and 1 or more retinotomies	T	1563	T	1563

b. Bronchoscopy with Transbronchial Ablation of Lesion(s) by Microwave Energy (APC 1562)

Effective January 1, 2019, CMS established HCPCS code C9751 (Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3–D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration[s]/biopsy[ies]) and all mediastinal and/or hilar lymph node stations or structures and therapeutic intervention(s)). This microwave ablation procedure utilizes a flexible catheter to access the lung tumor via a working channel and may be used as an alternative procedure to a percutaneous microwave approach. Based on our review of the New Technology APC application for this service and the service's clinical similarity to existing services paid under the OPPS, we estimated the likely cost of the procedure would be between $8,001 and $8,500.

In claims data available for CY 2019 for the CY 2021 OPPS/ASC final rule with comment period, there were four claims reported for bronchoscopy with transbronchial ablation of lesions by microwave energy. Given the low volume of claims for the service, we proposed for CY 2021 to apply the universal low volume APC policy we adopted in CY 2019, under which we utilize our equitable adjustment authority under section 1833(t)(2)(E) of the Act to calculate the geometric mean, arithmetic mean, and median costs to determine an appropriate payment rate for purposes of assigning bronchoscopy with transbronchial ablation of lesions by microwave energy to a New Technology APC. We found the geometric mean cost for the service to be approximately $2,693, the arithmetic mean cost to be approximately $3,086, and the median cost to be approximately $3,708. The median was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology fell within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3501–$4000)). Therefore, we assigned HCPCS code C9751 to APC 1562 for CY 2021.

In CY 2022, we again used the claims data from CY 2019 for HCPCS code C9751. Because the claims data was unchanged from when it was used in CY 2021, the values for the geometric mean cost ($2,693), the arithmetic mean cost ($3,086), and the median cost ($3,708) for the service described by HCPCS code C9751 remained the same. The highest cost metric using these methodologies was again the median and within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3,501–$4,000)). Therefore, we continued to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3,501– $4,000)), with a payment rate of $3,750.50 for CY 2022.

There were no claims reported in CY 2020, CY 2021, or CY 2022 for HCPCS code C9751. Therefore, for CY 2024, the only available claims for HCPCS code C9751 continue to be from CY 2019; and the reported claims are the same claims used to calculate the payment rate for the service in the CY 2021, CY 2022, and CY 2023 OPPS/ASC final rules with comment period. Given the low number of claims for this procedure, we proposed to continue to designate this procedure as a low volume procedure under our universal low volume policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the procedure to the appropriate New Technology APC. Because our proposal uses the same claims as we used for CY 2021, CY 2022, and CY 2023, the same values for the geometric mean cost, arithmetic mean cost, and the median cost are used to propose a payment rate for CY 2024. Once again, the median ($3,708) was the statistical methodology that estimated the highest cost for the service. The payment rate calculated using this methodology continues to fall within the cost band for New Technology APC 1562 (New Technology—Level 25 ($3501–$4000)). Therefore, we proposed to continue to assign HCPCS code C9751 to APC 1562 (New Technology—Level 25 ($3501–$4000)), with a proposed payment rate of $3,750.50 for CY 2024.

Comment: We received one comment in support of our proposal to continue to assign HCPCS code C9751 to APC 1562.

Response: We thank the commenter for their support. After consideration of the public comment we received, we are finalizing our policy as proposed. Please refer to Table 15 below for the final

OPPS New Technology APC and status indicator assignment for HCPCS code C9751 for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

TABLE 15: FINAL CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODE C9751

HCPCS Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
C9751	Bronchoscopy, rigid or flexible, transbronchial ablation of lesion(s) by microwave energy, including fluoroscopic guidance, when performed, with computed tomography acquisition(s) and 3-D rendering, computer-assisted, image-guided navigation, and endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (e.g., aspiration[s]/biopsy[ies]	T	1562

c. Cardiac Positron Emission Tomography (PET)/Computed Tomography (CT) Studies (APCs 1520, 1521, and 1522)

Effective January 1, 2020, we assigned three CPT codes (78431, 78432, and 78433) that describe the services associated with cardiac PET/CT studies to New Technology APCs. CPT code 78431 was assigned to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50. CPT codes 78432 and 78433 were assigned to APC 1523 (New Technology—Level 23 ($2501–$3000)) with a payment rate of $2,750.50. We did not receive any claims data for these services for either of the CY 2021 or CY 2022 OPPS proposed or final rules. Therefore, we continued to assign CPT code 78431 to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50 in CY 2021 and CY 2022. Likewise, we continued to assign CPT codes 78432 and 78433 to APC 1523 (New Technology—Level 23 ($2501–$3000)) with a payment rate of $2,750.50.

For CY 2023, we used CY 2021 claims data to determine the payment rates for CPT codes 78431, 78432, and 78433. Based on our analysis of the available claims data, for CY 2023, we assigned CPT code 78431 to APC 1523 (New Technology—Level 23 ($2501–$3000)) with a payment rate of $2,750.50; CPT code 78432 to APC 1520 (New Technology—Level 20 ($1801-$1900)) with a payment rate of $1,850.50 based on the application of the universal low-volume policy; and CPT code 78433 to APC 1521 (New Technology—Level 21 ($1901–$2000)) with a payment rate of $1,950.50.

For CY 2024, the OPPS payment rates were proposed to be based on available CY 2022 claims data. CPT code 78431 had over 22,000 single frequency claims in CY 2022. The geometric mean for CPT code 78431 was approximately $2,300, which is an amount that is below the cost band for APC 1523 (New Technology—Level 23 ($2501–$3000)), where the procedure is currently assigned. We proposed, for CY 2024, that CPT code 78431 be reassigned to APC 1522 (New Technology—Level 22 ($2001–$2500)) with a payment rate of $2,250.50. Please refer to Table 16 below for the proposed New Technology APC and status indicator assignments for CPT code 78431.

There were only six single frequency claims in CY 2022 for CPT code 78432. As this is below the threshold of 100 claims for a service within a year, we proposed to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT code 78432 to the appropriate New Technology APC. Using available claims data from CY 2021 and CY 2022, our analysis found the geometric mean cost of the service is approximately $1,658, the arithmetic mean cost of the service is approximately $1,445, and the median cost of the service is approximately $1,562. The geometric mean was the statistical methodology that estimated the highest cost for the service. The geometric mean cost of $1,658, is an amount that is below the cost band for APC 1520 (New Technology—Level 20 ($1801–$1900)), where the procedure is currently assigned. Therefore, we proposed, for CY 2024, to assign CPT code 78432 to APC 1518 (New Technology—Level 18 ($1601–$1700)) with a payment rate of $1,650.50. Please refer to Table G12 for the proposed New Technology APC and status indicator assignments for CPT code 78432.

There were over 1200 single frequency claims for CPT code 78433 in CY 2022. The geometric mean for CPT code 78433 was approximately $1,960, which is an amount that is within the cost band for APC 1521 (New Technology—Level 21 ($1901–$2000)), to which it is currently assigned. Therefore, for CY 2024, we propose to continue to assign CPT code 78433 to APC 1521 with a payment rate of $1,950.50.

Please refer to Table 16 below for the proposed OPPS New Technology APC and status indicator assignment for CPT codes 78431, 78432, and 78433 for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 16: FINAL CY 2023 AND PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 78431, 78432, AND 78433

CPT Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed OPPS CY 2024 APC
78431	Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed); multiple studies at rest and stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan	S	1523	S	1522
78432	Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability);	S	1520	S	1518
78433	Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability); with concurrently acquired computed tomography transmission scan	S	1521	S	1521

Comment: We received several comments disagreeing with the proposed payment rates for CPT codes 78431, 78432, and 78433. Several commenters stated that the proposed APC assignments for 2024 are not consistent with the resources needed to perform these services and requested that CMS assign all three CPT codes to New Technology APC 1523 (New Technology—Level 23 ($2501–$3000)). While commenters explained differences between each service, commenters still requested that all three codes be assigned to the same New Technology APC.

Response: We thank the commenters for their input on our proposal. We do not agree that it would be appropriate to assign all three codes describing the services associated with cardiac PET/CT studies to the same New Technology APC. Since CPT codes 78431, 78432, and 78433 first became effective on January 1, 2020, they have all been assigned to different New Technology APCs based on the perceived resource expenditures stemming from clinical differences in their code descriptors. Since first receiving claims data for these codes for the CY 2023 rulemaking cycle, there are differences between the codes in terms of claims data and claims frequency that serve as further evidence for the need for variations in New Technology APC assignments. Additionally, public comments regarding the clinical and resource differences between each code further underscore the need for different New Technology APC assignments. Therefore, we are not accepting commenters' suggestion to reverse course at this time and assign the three codes describing different services associated with cardiac PET/CT studies to the same New Technology APC.

Comment: Some commenters urged that CMS maintain stable payment rates for three to five years to allow for

appropriate adoption and implementation of the cardiac PET/CT services.

Commenters explained that it takes time for hospitals to gain experience with new codes and for providers to become aware of how to appropriately bill new codes. Commenters pointed out that CPT codes 78431, 78432, and 78432 were made effective in 2020, which coincided with the COVID–19 public health emergency, and explained that there are still lingering effects of COVID–19 in terms of hospitals ordering and implementing new technology.

Response: We note that we did not change the New Technology APC assignments for CPT codes 78431, 78432, and 78433 between CY 2020 through CY 2022. Therefore, CPT codes 78431, 78432, and 78433 had the exact same payment rate for three full calendar years. We believe that the time that has already been provided is sufficient for interested parties to educate providers on coding and for hospitals to appropriately report the services performed. Additionally, it is generally not our policy to judge the accuracy of provider coding and charging for purposes of ratesetting. We rely on hospitals and providers to accurately report the use of HCPCS codes in accordance with their code descriptors, and CPT and CMS instructions, and to report services accurately on claims and charges and costs for the services on their Medicare hospital cost report.

Comment: Commenters strongly disagreed with the proposed APC reassignment for CPT code 78432 from APC 1520 to APC 1518 for CY 2024, and urged that CMS reassign CPT code 78432 to New Technology APC 1523, the New Technology APC to which it was first assigned in CY 2020 when there were no claims data yet available for the code. Commenters stated that they believed that six single frequency claims is not sufficient data to set payment rates for CPT code 78432. Other commenters explained that CPT code 78432 uses more resources than CPT code 78431 and requested that CMS consider collecting additional claims data in CY 2024 for CPT code 78432 before proposing to make an APC reassignment. Some commenters stated that they did not believe that it would benefit hospitals to adjust APC assignments year to year. These commenters stated that changes in APC assignments causes instability in payments and angst for hospitals.

Response: We thank the commenters for their input, but note that section 1833(t)(9)(A) of the Act requires that the Secretary review not less often than annually and revise the groups, the relative payment weights, and the wage and other adjustments to take into account, among other things, new cost data. For services assigned to New Technology APCs, as the OPPS acquires claims data regarding hospital costs associated with new procedures, we regularly examine the claims data and any available new information regarding the clinical aspects of new procedures to confirm that our OPPS payments remain appropriate for procedures as they transition into mainstream medical practice (77 FR 68314). Therefore, we do not agree with commenters' suggestions that we should not regularly update the APC assignments for services like cardiac PET/CT.

With that said, we are sympathetic to comments regarding the instability of the payment rate for CPT code 78432 if we were to finalize its proposed APC assignment based on the extremely limited number of claims that exist for the code. While there have been 2 more claims processed for CPT code 78432 since the time of the publication of the CY 2024 OPPS/ASC proposed rule, the claims frequency for CPT code 78432 remains extremely low at only 7 claims. As we have stated previously, low utilization of services assigned to a New Technology APC can lead to wide variation in payment rates from year to year, resulting in even lower utilization and potential barriers to access to new technologies, which in turn limits our ability to assign the service to an appropriate clinical APC (83 FR 58893). In order to mitigate the wide payment fluctuations that have occurred for new technology services with fewer than 100 claims and to provide more predictable payment for these services, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58893) we established that, in each of our annual rulemakings, we would seek public comments on which statistical methodology (arithmetic mean, geometric mean, or median) should be used for each low-volume service assigned to a New Technology APC. In addition, we explained that we would use our assessment of the resources used to perform a service and guidance from the developer or manufacturer of the service, as well as other stakeholders, to determine the most appropriate payment rate. For CY 2022, we proposed to continue to utilize our equitable adjustment authority under section 1833(t)(2)(E) of the Act to calculate the geometric mean, arithmetic mean, and median using up to 4 years of claims data to select the appropriate payment rate for purposes of assigning services with fewer than 100 claims per year to a New Technology APC. Because there were fewer than 100 claims per year for CPT code 78432, we would usually apply our universal low volume APC policy to determine its New Technology APC assignment.

However, we recognize that if we utilized our universal low volume APC policy to establish a New Technology APC assignment for CY 2024 for CPT 78432, the same negative impacts caused by wide variations in payment rate that we sought to mitigate by adopting the universal low volume APC policy would result if we assigned CPT 78432 to the APC we proposed based on our universal low volume APC policy. While some payment fluctuations are expected and would not justify deviating from applying our universal low volume APC policy or making regular ratesetting changes, we have concerns that if we were to apply the universal low volume APC policy in this case to CPT code 78432 as proposed, we would see even lower utilization of CPT code 78432 compared to CPT codes 78431 and 78433, which have seen steady claims frequency increases since first being assigned to New Technology APCs. For example, for the CY 2023 OPPS/ASC final rule, we assigned CPT code 78431 to New Technology APC 1523 based on over 18,000 claims and CPT code 78433 to APC 1521 based on nearly 1,000 claims. For CY 2024, the claims volumes for both CPT code 78431 and 78433 have continued to increase to over 24,000 and 1,300 claims respectively, while utilization for CPT code 78432 has remained extremely limited. Specifically, there are only two more claims, 7 total, that we can use to set the payment rate for CPT code 78432 for CY 2024 compared to CY 2023. Because CPT code 78432 is one of three codes that describe the services associated with cardiac PET/CT studies, we have concerns that continued low claims frequency for CPT code 78432 will limit our ability to assign the service to an appropriate clinical APC. We believe that changing the APC payment rate based on an extremely low number of claims for CPT code 78432 for CY 2024 would further discourage utilization of the code as compared to CPT codes 78431 and 78433. While it is possible that patients may have a greater need for the services described by CPT code 78431 or 78433 rather than the service described by CPT code 78432, such that claims volume may always be lower for CPT code 78432 than the other codes describing cardiac PET/CT imaging

services, we would not want to make a change in payment that may further discourage utility of CPT code 78432 without first confirming that this is the case. Furthermore, we did not receive any comments on our proposal that explained that the service described by CPT code 78432 should only be furnished in extremely rare circumstances compared to CPT codes 78431 and 78433. Therefore, for CY 2024, we believe it is appropriate to utilize our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the New Technology APC assignment for CPT code 78432 as finalized in the CY 2023 OPPS Final Rule for one additional year by assigning the code to New Technology APC 1520.

Comment: Several commenters also disagreed with the proposal to reassign CPT code 78431 from APC 1523 to APC 1522 based on the claims data available. Although one commenter stated that with over 22,000 claims considered for CPT code 78431, the proposed APC payment for CPT code 78431 appears to be based on a large volume of information and appears to be reliable, the commenter disagreed with the proposal due to the impact a $500 reduction in payment rate may have on service lines.

Response: We disagree that it is inappropriate to change the APC assignment for CPT code 78431 based on the claims available. We based our proposal on over 22,000 claims for CPT code 78431, which demonstrate that the code had a geometric mean cost of approximately $2,300. Since the publication of the CY 2024 OPPS proposed rule (88 FR 49552), there are over 2,000 additional claims available for rate setting for CPT code 78431 for CY 2024. With the significant number of claims available for CPT code 78431, we believe it is appropriate to modify the APC assignment for CPT code 78431 based on our claims data for CY 2024.

Comment: Some commenters suggested that CMS consider alternatives to making adjustments in payment rates for services assigned to New Technology APCs that would allow for greater stability and predictability in payment rates from year to year. For example, one commenter suggested that CMS consider creating New Technology APCs with narrower cost bands between each APC or utilize several years of cost data—not unlike the low volume APC policy—to smooth the potential for large fluctuations.

Response: We appreciate the commenters' feedback and will consider the suggestions for future rulemaking.

Based on the comments received, we are finalizing our proposals for CPT codes 78431, 78432, and 78433 with modification. For CY 2024, we are finalizing the APC assignments for CPT codes 78431 and 78433 as proposed. Therefore, for CY 2024, we are assigning CPT code 78431 to New Technology APC 1522 and CPT code 78433 to New Technology APC 1521, as proposed. For CPT code 78432, we are invoking our equitable adjustment authority under section 1833(t)(2)(E) of the Act to maintain the New Technology APC assignment for CPT code 78432 as finalized in the CY 2023 OPPS final rule for an additional year. Therefore, we are assigning CPT code 78432 to APC 1520 for CY 2024.

Please refer to Table 17 below for the final OPPS New Technology APC and status indicator assignments for CPT codes 7843, 78432, and 78433 for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

BILLING CODE 4150–28–P

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed OPPS CY 2024 APC	Final OPPS CY 2024 SI	Final OPPS CY 2024 APC
78431	Myocardial imaging, positron emission tomography (PET), perfusion study (including ventricular wall motion[s] and/or ejection fraction[s], when performed); multiple studies at rest and stress (exercise or pharmacologic), with concurrently acquired computed tomography transmission scan	S	1522	S	1522
78432	Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability);	S	1518	S	1520
78433	Myocardial imaging, positron emission tomography (PET), combined perfusion with metabolic evaluation study (including ventricular wall motion[s] and/or ejection fraction[s], when performed), dual radiotracer (e.g., myocardial viability); with concurrently acquired computed tomography transmission scan	S	1521	S	1521

d. V-Wave Medical Interatrial Shunt Procedure (APC 1590)

A randomized, double-blinded, controlled IDE study is currently in progress for the V-Wave interatrial shunt. The V-Wave interatrial shunt is for patients with severe symptomatic heart failure and is designed to regulate left atrial pressure in the heart. All participants who passed initial screening for the study receive a right heart catheterization procedure described by CPT code 93451 (Right heart catheterization including measurement(s) of oxygen saturation and cardiac output, when performed). Participants assigned to the experimental group also receive the V-Wave interatrial shunt procedure while participants assigned to the control group only receive right heart catheterization. The developer of V-Wave was concerned that the current coding of these services by Medicare would reveal to the study participants whether they had received the interatrial shunt because an additional procedure code, CPT code 93799 (Unlisted cardiovascular service or procedure), would be included on the claims for participants receiving the interatrial shunt. Therefore, for CY 2020, we created a temporary HCPCS code to describe the V-Wave interatrial shunt procedure for both the experimental group and the control group in the study. Specifically, we established HCPCS code C9758 (Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization,

trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (e.g., ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study) to describe the service, and we assigned the service to New Technology APC 1589 (New Technology—Level 38 ($10,001–$15,000)) with a payment rate of $12,500.50.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 85946), we stated that we believe similar resources and device costs are involved with the V-Wave interatrial shunt procedure and the Corvia Medical interatrial shunt procedure (HCPCS code C9760), except that payment for HCPCS codes C9758 and C9760 differs based on how often the interatrial shunt is implanted when each code is billed. An interatrial shunt is implanted one-half of the time HCPCS code C9758 is billed, whereas an interatrial shunt is implanted every time HCPCS code C9760 is billed. Accordingly, for CY 2021, we reassigned HCPCS code C9758 to New Technology APC 1590 (New Technology—Level 39 ($15,001–$20,000)), which reflects the cost of receiving the interatrial shunt one-half of the time the procedure is performed.

For CY 2022, we used the same claims data from CY 2019 that we did for the CY 2021 OPPS final rule with comment period. Because there were no claims reporting HCPCS code C9758, we continued to assign HCPCS code C9758 to New Technology APC 1590 with a payment rate of $17,500.50 for CY 2022. For CY 2023 we used claims data from CY 2019 through CY 2022. Because there were no claims reporting HCPCS code C9758, we continued to assign HCPCS code C9758 to New Technology APC 1590 with a payment rate of $17,500.50 for CY 2023.

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. Although HCPCS code C9758 was effective January 1, 2020, we have no claims data at this time. Because we have no claims data, for CY 2024, we proposed to continue to assign HCPCS code C9758 to New Technology APC 1590 with a proposed payment rate of $17,500.50.

Please refer to Table 18 below for the proposed OPPS New Technology APC and status indicator assignment for HCPCS code C9758 for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 18: PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
C9758	Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, transesophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (e.g., ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study	T	1590

Comment: We received one comment on our proposal. The commenter supports our assignment of HCPCS code C9758 to APC 1590 for CY 2024.

Response: We appreciate the commenter's support for our proposal.

After consideration of the public comments we received, we are finalizing our proposal without modification. Please refer to Table 19 below for the final OPPS New Technology APC and status indicator assignments for HCPCS code C9758 for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

BILLING CODE 4150–28–C

TABLE 19: FINAL CY 2023 AND CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR BLINDED INTRATRIAL SHUNT PROCEDURE

HCPCS Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS SI	Final 2024 OPPS SI	Final 2024 OPPS SI
C9758	Blinded procedure for NYHA class III/IV heart failure; transcatheter implantation of interatrial shunt or placebo control, including right heart catheterization, trans-esophageal echocardiography (TEE)/intracardiac echocardiography (ICE), and all imaging with or without guidance (e.g., ultrasound, fluoroscopy), performed in an approved investigational device exemption (IDE) study	T	1590	T	1590

e. Corvia Medical Interatrial Shunt Procedure (APC 1592)

On July 1, 2020, we established HCPCS code C9760 (Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt or placebo control, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (*e.g.,* ultrasound, fluoroscopy), performed in an approved investigational device exemption (ide) study) to facilitate payment for the implantation of the Corvia Medical interatrial shunt.

As we stated in the CY 2021 OPPS final rule with comment period (85 FR 85947), we believe that similar resources and device costs are involved with the Corvia Medical interatrial shunt procedure and the V-Wave interatrial shunt procedure. But unlike the V-Wave interatrial shunt, which is implanted half the time the associated interatrial shunt procedure described by HCPCS code C9758 is billed, the Corvia Medical interatrial shunt is implanted every time the associated interatrial shunt procedure (HCPCS code C9760) is billed. Therefore, for CY 2021, we assigned HCPCS code C9760 to New Technology APC 1592 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of $27,500.50. We also modified the code descriptor for HCPCS code C9760 to remove the phrase ''or placebo control,'' from the descriptor. In CY 2022, we used the same claims data as was used in the CY 2021 OPPS final rule to determine the payment rate for HCPCS code C9760 because there were no claims for this service in CY 2019, the year used for ratesetting for CY 2022. Accordingly, we continued to assign HCPCS code C9760 to New Technology APC 1592 in CY 2022. For CY 2023, we used claims data from CY 2021 through CY 2022 to determine the payment rate for HCPCS code C9760. Because there were no claims for this service, we continued to assign HCPCS code C9760 to New Technology APC 1592 in CY 2023.

For CY 2024, the OPPS payment rates were proposed to be based on available CY 2022 claims data. There was only one claim for HCPCS code C9760 within this time period. As this is below the threshold of 100 claims for a service within a year, we would designate C9760 as a low volume service and apply our universal low volume APC policy. Under this policy, we would use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign HCPCS code C9760 to the appropriate New Technology APC. Using the only one claim available for HCPCS code C9760, the geometric mean, arithmetic mean, and median costs were estimated to be approximately $7,945 for this service. However, because there is only a single claim for HCPCS code C9760, its payment rate appears to be an outlier based on the cost information we received from the manufacturer. Therefore, we have concerns that the

universal low volume APC policy calculations do not accurately capture the cost of the service. Therefore, we proposed to continue assigning HCPCS code C9760 to New Technology APC 1592.

Please refer to Table 20 below for the proposed OPPS New Technology APC and status indicator assignment for HCPCS code C9760 for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 20: PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR NON-RANDOMIZED, NON-BLINDED INTERATRIAL SHUNT PROCEDURE

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
C9760	Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt or placebo control, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (e.g., ultrasound, fluoroscopy	T	1592

Comment: We received one comment on our proposal. The commenter expressed support for finalizing the New Technology APC assignment as proposed. The commenter stated that continuing the current APC assignments is critical to ensure that HCPCS codes C9758 and C9760 can be furnished during ongoing CMS-approved IDE trials. The commenter further stated that the proposed APC assignment for HCPCS code C9760 will enable studies to proceed, preserve beneficiary access, and allow a more robust claims history to be developed on which to base permanent clinical APC assignment in the future.

Response: We appreciate the commenter's support for our proposal to assign HCPCS code C9760 to APC 1592.

First, we note that based on update claims data available for this final rule with comment period, we received one additional claim for CY 2022 since the publication of the CY 2024 OPPS proposed rule. Using the only two claims available for HCPCS code C9760, the geometric mean, arithmetic mean, and median costs are estimated to be approximately $10,520 for this service. However, because there are only two claims for HCPCS code C9760, we continue to believe its payment rate appears to be an outlier based on the cost information we received from the manufacturer. We continue to have concerns that application of the universal low volume APC policy in this case would not accurately capture the cost of the service. Therefore, after consideration of the public comment we received and our analysis of the extremely limited claims data available, we are finalizing our policy as proposed. Specifically, we are finalizing our proposal to assign HCPCS code C9760 to APC 1592 New Technology—Level 41 ($25,001–$30,000) for CY 2024.

After consideration of the public comment we received, we are finalizing our proposal without modification. Please refer to Table 21 below for the final OPPS New Technology APC and status indicator assignments for HCPCS code C9760 for CY 2024. The CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
C9760	Non-randomized, non-blinded procedure for nyha class ii, iii, iv heart failure; transcatheter implantation of interatrial shunt or placebo control, including right and left heart catheterization, transeptal puncture, trans-esophageal echocardiography (tee)/intracardiac echocardiography (ice), and all imaging with or without guidance (e.g., ultrasound, fluoroscopy	T	1592	T	1592

f. Supervised Visits for Esketamine Self-Administration (APCs 1513 and 1520)

On March 5, 2019, FDA approved Spravato™ (esketamine) nasal spray, used in conjunction with an oral antidepressant, for treatment of depression in adults who have tried other antidepressant medicines but have not benefited from them (treatment-resistant depression (TRD)). This is the first FDA approval of esketamine for any use.

Esketamine is a noncompetitive N-methyl D-aspartate (NMDA) receptor antagonist. It is a nasal spray supplied as an aqueous solution of esketamine hydrochloride in a vial with a nasal spray device. Each device delivers two sprays containing a total of 28 mg of esketamine. Patients would require either two (2) devices (for a 56 mg dose) or three (3) devices (for an 84 mg dose) per treatment.

Because of the risk of serious adverse outcomes resulting from sedation and dissociation caused by esketamine nasal spray administration, and the potential for misuse or abuse of the product, it is only available through a restricted distribution system under a Risk Evaluation and Mitigation Strategy (REMS). A REMS is a drug safety program that the FDA can require for certain medications with serious safety concerns to help ensure the benefits of the medication outweigh its risks. The Spravato™ REMS program requires the esketamine nasal spray to be dispensed and administered to enrolled patients in health care settings that are certified in the REMS. See *www.fda.gov* for more information regarding the Spravato™ REMS program compliance requirements.

A treatment session of esketamine consists of instructed nasal self-administration by the patient followed by a period of at least two (2) hours post-administration observation of the patient under direct supervision of a health care professional in the certified health care setting. Please refer to the CY 2020 PFS final rule and interim final rule for more information about supervised visits for esketamine nasal spray self-administration (84 FR 63102 through 63105).

To facilitate prompt beneficiary access to the new, potentially life-saving treatment for TRD using esketamine, we created two new HCPCS G codes, G2082 and G2083, effective January 1, 2020. HCPCS code G2082 is for an outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine through nasal self-administration and includes two hours of post-administration observation. For CY 2020, HCPCS code G2082 was assigned to New Technology APC 1508 (New Technology—Level 8 ($601–$700)) with a payment rate of $650.50. HCPCS code G2083 describes a similar service to HCPCS code G2082 but involves the administration of more than 56 mg of esketamine. For CY 2020, HCPCS code G2083 was assigned to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000)) with a payment rate of $950.50. Updates to the APC assignments for G2082 and G2083 have been made in past rules. Please see the CY 2021 OPPS/ASC final rule with comment period (85 FR 85948), CY 2022 OPPS/ASC final rule with comment period (86 FR 63538), and the CY 2023 OPPS/ASC final rule with comment period (87 FR 71816).

For CY 2024, we proposed to use CY 2022 available claims data to determine the payment rates for HCPCS codes G2082 and G2083. Therefore, for CY 2024, we proposed to assign these two HCPCS codes to New Technology APCs based on the codes' geometric mean costs. Specifically, we proposed to assign HCPCS code G2082 to New Technology APC 1513 (New Technology—Level 13 ($1,101–$1,200)) based on its geometric mean cost of $1,123. We also proposed to assign HCPCS code G2083 to New Technology

APC 1518 (New Technology—Level 18 ($1,601–$1,700)) based on its geometric mean cost of $1,628.

The proposed New Technology APC and status indicator assignments for HCPCS codes G2082 and G2083 are shown in Table 22. The CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 22: FINAL CY 2023 AND PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR HCPCS CODES G2082 AND G2083

HCPCS Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
G2082	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of up to 56 mg of esketamine nasal self-administration, includes 2 hours post-administration observation	S	1512	S	1513
G2083	Office or other outpatient visit for the evaluation and management of an established patient that requires the supervision of a physician or other qualified health care professional and provision of greater than 56 mg esketamine nasal self-administration, includes 2 hours post-administration observation	S	1516	S	1518

Comment: We received one comment in support of our proposals to assign HCPCS code G2082 to APC 1513 and HCPCS code G2083 to APC 1518.

Response: We thank the commenter for their support.

We note the geometric mean costs for both HCPCS code G2082 and HCPCS code G2083 have changed since the proposed rule. Based on the updated claims data available for this final rule, the approximate geometric mean cost for HCPCS code G2082 is $1,189.24. Even though the geometric mean cost has increased slightly since the proposed rule, the proposed APC assignment of APC 1513 (New Technology—Level 13 ($1,101–$1,200)) is still appropriate and we are adopting this APC assignment as the final APC assignment for this HCPCS code G2082. Based on updated claims data available for this final rule with comment period, the approximate geometric mean cost for HCPCS code G2083 has increased to $1,821.48. Based on the updated claims available, we are finalizing a New Technology APC assignment for HCPCS code G2083 to APC 1520 (New Technology—Level 20 ($1,801–$1,900)) for CY 2024.

As a final note, as we have begun to gather adequate claims data, we are considering placement of HCPCS codes G2082 and G2083 into clinical APCs through future rulemaking.

Details about the New Technology APC and status indicator assignments for these HCPCS codes are shown in Table 23. The CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website.

BILLING CODE 4150–28–C

g. DARI Motion Procedure (APC 1505)

Effective January 1, 2022, CPT code 0693T (Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report) is associated with the DARI Motion Procedure, a service that provides human motion analysis to aid clinicians in pre- and post-operative surgical intervention and in making other treatment decisions, including selecting the best course of physical therapy and rehabilitation. The technology consists of eight cameras that surround a patient, which send live video to a computer workstation that analyzes the video to create a 3D reconstruction of the patient without the need for special clothing, markers, or devices attached to the patient's clothing or skin. For CY 2022, we assigned CPT code 0693T to New Technology APC 1505 (New Technology—Level 5 ($301–$400)). For CY 2023, the OPPS payment rates were based on claims submitted between January 1, 2021, and December 31, 2021, processed through June 30, 2022. Due to its effective date of January 1, 2022, there were no claims available for CPT code 0693T for rate setting in CY 2023. Therefore, in CY 2023, we continued to assign CPT code 0693T to New Technology APC 1505.

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. Although CPT code 0693T was effective January 1, 2022, we did not have any claims data at the time of the CY 2024 OPPS/ASC proposed rule. Therefore, for CY 2024, we proposed to continue to assign CPT code 0693T to APC 1505 with a proposed payment rate of $350.50.

Please refer to Table 24 below for the proposed OPPS New Technology APC and status indicator assignment for CPT code 0693T for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 24: PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE DARI MOTION PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0693T	Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report	S	1505

We did not receive any public comments on our proposal, and we still do not have any claims for the service. Therefore, for CY 2024, we are finalizing our proposal without modification. Specifically, for CY 2024, we are assigning CPT code 0693T to APC 1505 and SI ''S.'' The final New Technology APC and status indicator assignments for CPT code 0693T for CY 2024 are found in Table 25. The CY 2024 payment rates can be found in Addendum B to this final rule with comment period via the internet on the CMS website. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addendum D1 can also be found via the internet on the CMS website.

h. Liver Histotripsy Service (APC 1576)

CPT code 0686T (Histotripsy (*i.e.,* non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance) was first effective July 1, 2021, and describes the histotripsy service associated with the use of the HistoSonics system. Histotripsy is a non-invasive, non-thermal, mechanical process that uses a focused beam of sonic energy to destroy cancerous liver tumors and is currently in a non-randomized, prospective clinical trial to evaluate the efficacy and safety of the device for the treatment of primary or metastatic tumors located in the liver.[8]

When HCPCS code 0686T was first effective, the histotripsy procedure was designated as a Category A IDE clinical study (NCT04573881). Since devices in Category A IDE studies are excluded from Medicare payment, payment for CPT code 0686T only reflected the cost of the service that is performed each time it is reported on a claim. For CY 2023, we assigned CPT code 0686T to New Technology APC 1575 (New Technology—Level 38 ($10,000–$15,000) with a payment rate of $12,500. However, on March 2, 2023, the histotripsy IDE clinical study was re-designated as a Category B (Non-experimental/Investigational) IDE study. Due to this new designation, the proposed payment for CPT code 0686T in CY 2024 would reflect payment for both the service that is performed and the device used each time it is reported on a claim.

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. There are only two claims for CPT code 0686T within this time period. We note that 0686T was still designated as a Category A IDE study for these claims and therefore, the payment for these claims only included payment for the cost of the service. As the available claims data is below the threshold of 100 claims for a service within a year, we could propose to designate CPT code 0686T as a low volume service under our universal low volume APC policy, and use the highest of the geometric mean cost, arithmetic mean cost, or median cost to assign CPT code 0686T to the appropriate New Technology APC. Based on the two available claims in CY 2022, when CPT

[8] ClinicalTrials.gov. ''The HistoSonics System for Treatment of Primary and Metastatic Liver Tumors Using Histotripsy (#HOPE4LIVER) (#HOPE4LIVER).'' Accessed May 10, 2022. *https://clinicaltrials.gov/ct2/show/study/NCT04573881.*

code 0686T was still designated as a Category A IDE study, the geometric mean is estimated to be: $4,466; the median is estimated to be: $4,480; and the arithmetic mean is estimated to be: $4,480. Because $4,480 is the greatest of these methodologies, we would use this value to set the payment rate for CPT code 0686T. However, we have concerns that the available claims data and universal low volume APC policy calculations would not accurately capture the cost of the service following its approval as a Category B IDE study in March of 2023. If 0686T were still designated as a Category A IDE study, then the two claims available would be appropriate to set its payment rate, as the claims reflect the cost of the service and exclude the cost of the device. However, because CPT code 0686T was approved as a Category B IDE study, meaning Medicare coverage and payment of the device is no longer statutorily prohibited, the two CY 2022 claims available would not accurately capture the cost of 0686T for CY 2024.

Therefore, based on the service costs reflected in the available claims and our estimates of the cost of the Category B device, for CY 2024, we proposed to maintain CPT code 0686T's current APC assignment. Specifically, we proposed to assign CPT code 0686T to APC 1575 (New Technology—Level 38 ($10,001–$15,000)) with a payment rate of $12,500.50 as shown in Table 26.

TABLE 26: PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER HISTOTRIPSY SERVICE

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0686T	Histotripsy (i.e., non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance	S	1575

Comment: Two commenters, including the developer of the liver histotripsy procedure have asked us to reassign CPT code 0686T to APC 1577 (New Technology—Level 40 ($20,001–$25,000)) with a payment rate of $22,500.50 because on March 2, 2023, the FDA changed the device classification to a Category B IDE study, which allows a device that is used in the medical procedure to receive additional payment. The developer stated that the cost of the device used in the procedure was around $7,500 and asked us to assign the liver histotripsy to a higher-paying new technology APC cost band that would reflect the cost of both the procedure and the device used in the procedure.

Response: We agree with the commenters that payment for CPT code 0686T should be increased to reflect that providers participating the Category B IDE study for the procedure may now receive payment for both the services provided and the device used to perform the procedure described by CPT code 0686T. However, we do not believe that a $10,000 payment increase for the procedure is supported by the data when the device only costs $7,500 and there are only two claims for the service. Therefore, we are assigning CPT code 0686T to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50.

HCPCS code 0686T (Histotripsy (that is, non-thermal ablation via acoustic energy delivery) of malignant hepatocellular tissue, including image guidance) will be assigned to APC 1576 (New Technology—Level 39 ($15,001–$20,000)) with a payment rate of $17,500.50. Please refer to Table 27 below for the OPPS New Technology APC and status indicator assignment for CPT code 0686T for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule via the internet on the CMS website.

i. Liver Multiscan Service (APC 1511)

Effective July 1, 2021, CPT codes 0648T (Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; single organ) and 0649T (Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure); single organ (list separately in addition to code for primary procedure)) are associated with the Liver MultiScan service. LiverMultiScan is a Software as a medical Service (SaaS) that is intended to aid the diagnosis and management of chronic liver disease, the most prevalent of which is Non-Alcoholic Fatty Liver Disease (NAFLD). It provides standardized, quantitative imaging biomarkers for the characterization and assessment of inflammation, hepatocyte ballooning, and fibrosis, as well as steatosis, and iron accumulation. LiverMultiScan receives MR images acquired from patients' providers and analyzes the images using their proprietary Artificial Intelligence (AI) algorithms. It then sends the providers a quantitative metric report of the patient's liver fibrosis and inflammation. For CY 2023, we assigned CPT codes 0648T and 0649T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50.

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. We identified only 39 claims each for CPT code 0648T and CPT code 0649T during this time period. As this is below the threshold of 100 claims for a service within a year, we proposed to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign CPT codes 0648T and 0649T to the appropriate New Technology APC. There are available claims data from CY 2021 and CY 2022 for CPT codes 0648T and 0649T. Our analysis of the data for CPT code 0648T found the geometric mean cost of the service is approximately $269, the arithmetic mean cost of the service is approximately $320, and the median cost of the service is approximately $313. Our analysis of the data for CPT code 0649T found the geometric mean cost of the service is approximately $102, the arithmetic mean cost of the service is approximately $136, and the median cost of the service is approximately $83. The arithmetic mean was the statistical methodology that estimated the highest cost for CPT codes 0648T and 0649T. In accordance with our SaaS Add-on Codes policy (87 FR 72032 and 72033), SaaS CPT add-on codes are assigned to the identical APCs and the same status indicator assignments as their standalone codes. Consistent with our SaaS Add-on Codes policy, CPT code 0649T, the add-on code for Liver MultiScan would be assigned to the identical APC and status indicator to CPT code 0648T, the standalone code for the same service. Therefore, we proposed, for CY 2024, to assign CPT codes 0648T and 0649T to APC 1505 (New Technology—Level 5 ($301–$400)) with a payment rate of $350.50 as shown in Table 28.

BILLING CODE 4150–28–P

TABLE 28: FINAL CY 2023 AND PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE LIVER MULTISCAN SERVICE

CPT Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0648T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained without diagnostic mri examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session; single organ	S	1511	S	1505
0649T	Quantitative magnetic resonance for analysis of tissue composition (e.g., fat, iron, water content), including multiparametric data acquisition, data preparation and transmission, interpretation and report, obtained with diagnostic MRI examination of the same anatomy (e.g., organ, gland, tissue, target structure) (List separately in addition to code for primary procedure)	S	1511	S	1505

Comment: Multiple commenters asked that we not change the APC assignment for both Liver Multiscan procedures. Many commenters stated that the cost of each of the services is at least $950, which is the current payment rate for these services. Other commenters noted that only 40 claims have been received for each service, which they believe is an insufficient number of claims to estimate the cost for these services.

Response: We recognize that software-based technologies are rapidly evolving, like the product used for both CPT code 0648 and CPT code 0649T. As noted in our comment solicitation on payment policy for software as a service (SaaS) procedures in the CY 2023 OPPS final rule (87 FR 72035 and 72036), we are considering for future rulemaking whether specific adjustments to payment policies and rate calculations are necessary to more accurately and appropriately pay for these products and services across settings of care. CMS remains open to feedback on these issues and welcomes engagement from interested parties, including from manufacturers, providers, and beneficiaries. We agree with the commenters that for both CPT code 0648 and CPT code 0649T, we should wait for more claims data before adjusting the current payment rates for these services.

Comment: One commenter supported our proposal because it would help lower the cost of non-invasive liver evaluations performed for liver fibrosis and liver fat quantification by encouraging providers to use a broader array of diagnostic approaches.

Response: We appreciate the support of the commenter for our original proposal, but we are adopting a final policy not to change the payment rates for CPT code 0648T and CPT code 0649T in CY 2024.

After consideration of the public comments we received, we are implementing our proposal with modifications. We will use our equitable adjustment authority under section 1833(t)(2)(E) to continue to assign CPT codes 0648T and 0649T to New Technology APC 1511 (New Technology—Level 11 ($901–$1,000) with a payment rate of $950.50. Please refer to Table 29 below for the final OPPS New Technology APC and status indicator assignments for CPT codes 0648T and 0649T for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule via the internet on the CMS website.

BILLING CODE 4150–28–C

j. Minimally Invasive Glaucoma Surgery (MIGS) (APC 5493)

Prior to CY 2022, extracapsular cataract removal with insertion of intraocular lens was reported using CPT codes describing cataract removal alongside a CPT code for device insertion. Specifically, the procedure was described using CPT codes 66982 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (e.g., iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; without endoscopic cyclophotocoagulation) or 66984 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification); without endoscopic cyclophotocoagulation) and 0191T (Insertion of anterior segment aqueous drainage device, without extraocular reservoir, internal approach, into the trabecular meshwork; initial insertion).

For CY 2022, the AMA's CPT Editorial Panel created two new Category I CPT codes describing extracapsular cataract removal with insertion of intraocular lens prosthesis, specifically, CPT codes 66989 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (e.g., iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (e.g., trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more) and 66991 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (e.g., irrigation and aspiration or phacoemulsification); with insertion of intraocular (e.g., trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more); deleted a Category III CPT code, specifically, CPT code 0191T, describing insertion of anterior segment aqueous drainage device; and created a new Category III CPT code, specifically, CPT code 0671T, describing anterior segment aqueous drainage device without concomitant cataract removal.

For CY 2022, we finalized the assignment of CPT codes 66989 and 66991 to New Technology APC 1563 (New Technology—Level 26 ($4,001–$4,500)). We stated that we believed that the change in coding for MIGS is significant in that it changes longstanding billing for the service from reporting two separate CPT codes to reporting a single bundled code. Without claims data, and given the magnitude of the coding change, we explained that we did not believe we had the necessary information on the costs associated with CPT codes 66989 and 66991 to assign them to a clinical APC at that time. We maintained these APC assignments for CY 2023.

For CY 2023, the payment rates were based on claims data submitted between January 1, 2021, and December 31, 2021, and processed on or before June 30, 2022, and CCRs, if available. Because CPT codes 66989 and 66991 were

effective January 1, 2022, and we had no claims data for CY 2022, we finalized continued assignment of CPT codes 66989 and 66991 to New Technology APC 1563.

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. For CY 2024, based on our analysis of claims data, we found a total of 898 single frequency claims and an estimated geometric mean cost of $5,241.55 for CPT code 66989 and a total of 5,576 single frequency claims and an estimated geometric mean cost of $4,957.01 for CPT code 66991. Given the claims volume, we believe it is appropriate to reassign the service to a clinical APC using our regular process of using the most recent year of claims data for a procedure. Upon review, we determined that the most appropriate clinical APC family for CPT codes 66989 and 66991 would be the Intraocular Procedures APC family (APC 5491 through 5495). However, there was a large payment rate difference between the level 2 Intraocular Procedures APC (APC 5492), which has a payment rate of $3,970.62, and the level 3 Intraocular Procedures APC (APC 5493), which has a payment rate of $14,067.62. Assigning CPT codes 66989 and 66991 to either APC 5492 or 5493 would result in a payment rate that would not reflect the cost for these procedures.

Therefore, given the significant difference in payment between APC 5492 and APC 5493, we believe it is appropriate to restructure the Intraocular Procedures APC family. Specifically, we proposed to create a sixth level in the Intraocular Procedures APC family by dividing APC 5492 into two APCs—an APC for services with a geometric mean cost of less than $5,000 and an APC for services with a geometric mean cost of greater than, or equal to, $5000. We believe that the creation of an additional level in the Intraocular APC family will create a smoother distribution of the costs between the different levels based on their resource costs and clinical characteristics. See section III.E. of the CY 2024 OPPS/ASC proposed rule for a detailed discussion of our proposal to restructure the Intraocular Procedures APC family. Reorganizing the Intraocular Procedures APCs would create a proposed Level 3 APC to be referred to as ''Proposed APC 5493'' with a payment rate of approximately $5,110.58, which is closer to the geometric mean of CPT codes 66989 and 66991. We note that, although these services have different estimated geometric mean costs, interested parties have indicated that it is preferable that they be placed within the same APC due to clinical similarity; therefore, we propose to reassign CPT codes 66989 and 66991 to Proposed APC 5493 for CY 2024.

The proposed clinical APC and status indicator assignments for CPT codes 66989 and 66991 are found in Table 30.

TABLE 30: CY 2023 FINAL AND CY 2024 PROPOSED OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 66989 AND 66991

HCPCS Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
66989	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	S	1563	S	5493
66991	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	S	1563	S	5493

Comment: We received three comments in support of our proposal to reassign CPT codes 66989 and 66991 to Proposed APC 5493 for CY 2024.

Response: We appreciate the commenters' support for our proposals.

After consideration of the public comments we received, we are finalizing our proposal without modification. Please refer to Table 31 below for the final OPPS New Technology APC and status indicator assignment for CPT codes 66989 and 66991. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

TABLE 31: CY 2023 FINAL AND CY 2024 FINAL OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 66989 AND 66991

HCPCS Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
66989	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (eg, iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	S	1563	S	5493
66991	Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (eg, irrigation and aspiration or phacoemulsification); with insertion of intraocular (eg, trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more	S	1563	S	5493

k. Scalp Cooling (APC 1514)

CPT code 0662T (Scalp cooling, mechanical; initial measurement and calibration of cap) became effective on July 1, 2021, to describe initial measurement and calibration of a scalp cooling device for use during chemotherapy administration to prevent hair loss. According to Medicare's National Coverage Determination (NCD) policy, specifically, NCD 110.6 (Scalp Hypothermia During Chemotherapy to Prevent Hair Loss), the scalp cooling cap itself is classified as an incident to supply to a physician service, and would not be paid under the OPPS; however, interested parties have indicated that there are substantial resource costs of around $1,900 to $2,400 associated with calibration and fitting of the cap. CPT guidance states that CPT code 0662T should be billed once per chemotherapy session, which we interpret to mean once per course of chemotherapy. Therefore, if a course of chemotherapy involves, for example, 6 or 18 sessions, HOPDs should report CPT 0662T only once for that 6 or 18 therapy sessions. For CY 2022, we assigned CPT code 0662T to APC New Technology 1520 (New Technology—Level 20 ($1801–$1900)) with a payment rate of $1,850.50. For CY 2023, we did not have any claims data; so, we continued to assign CPT code 0662T to APC 1520.

For CY 2024, the OPPS payment rates are proposed to be based on available

CY 2022 claims data. The Scalp Cooling service became effective in the OPPS in CY 2022, and we have identified 11 single frequency paid claims for CPT code 0662T for CY 2022. As this is below the threshold of 100 claims for a service within a year, we proposed to designate CPT code 0662T as a low volume service under our universal low volume APC policy and to use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to the appropriate New Technology APC. Based on our review of the available claims, the geometric mean cost for CPT code 0662T is $831.16; the median is $797.63; and the arithmetic mean is $1,284.59. Therefore, for CY 2024, we proposed to designate this service as a low volume service under our universal low volume APC policy and reassign CPT code 0662T to APC 1514 (New Technology—Level 14 ($1201–$1300)) with a payment rate of $1,250.50 for CY 2024 based on the arithmetic mean of $1,284.59 as shown in Table 32.

TABLE 32: FINAL CY 2023 AND PROPOSED CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE SCALP COOLING PROCEDURE

CPT Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0662T	Scalp cooling, mechanical; initial measurement and calibration of cap	S	1520	S	1514

Comment: Multiple commenters asked that we continue to assign CPT code 0662T to APC New Technology 1520 (New Technology—Level 20 ($1801–$1900)) with a payment rate of $1,850.50 for CY 2024. The commenters believe that 12 claims are not enough data to determine the cost of the procedure and that we should wait for more paid claims for the service before reducing payment for the service. Commenters stated that they had concerns with how hospital outpatient departments were billing CPT code 0662T and believed that they were incorrectly billing for the service.

Response: We disagree with the commenters. First, it is generally not our policy to judge the accuracy of provider coding and charging for purposes of ratesetting. We rely on hospitals and providers to accurately report the use of HCPCS codes in accordance with their code descriptors, and CPT and CMS instructions, and to report services accurately on claims and charges and costs for the services on their Medicare hospital cost report. The 12 claims for CPT code 0662T have a geometric mean of around $833 which is over $1,000 below the current $1,850.50 payment rate for the service. While there may be some future variation with the geometric mean for this service, it is likely to be closer to $830 than $1,850. CPT code 0662T is eligible to be evaluated through the new technology service low volume APC policy and has a median of $780.47, an arithmetic mean of $1,217.74, and a geometric mean of $832.96. Therefore, we will assign CPT code 0662T to the APC we proposed, APC 1514 (New Technology—Level 14 ($1201–$1300)) with a payment rate of $1,250.50 based on the updated arithmetic mean for the service of $1,217.74.

After consideration of the public comments we received, we are implementing our proposal without modification. Please refer to Table 33 below for the final OPPS New Technology APC and status indicator assignment for CPT code 0662T. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

TABLE 33: FINAL CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE SCALP COOLING PROCEDURE

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0662T	Scalp cooling, mechanical; initial measurement and calibration of cap	S	1514

l. Optellum Lung Cancer Prediction (LCP) (APC 1508)

CPT codes 0721T (Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging) and 0722T (Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)) became effective July 1, 2022, and are associated with the Optellum LCP technology. The Optellum LCP applies an algorithm to a patient's CT scan to produce a raw risk score for a patient's pulmonary nodule. The physician uses the risk score to quantify the risk of lung cancer and to determine what the next management step should be for the patient (for example, CT surveillance versus invasive procedure). For CY 2023, we assigned CPT codes 0721T and 0722T to APC New Technology 1508 (New Technology—Level 8 ($601–$700)).

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. There are no claims available for CPT codes 0721T and 0722T. Therefore, for CY 2024, we proposed to continue assigning CPT codes 0721T and 0722T to New Technology APC 1508.

Please refer to Table 34 below for the proposed OPPS New Technology APC and status indicator assignment for HCPCS codes 0721T and 0722T for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 34: PROPOSED CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE OPTELLUM LCP PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0721T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging	S	1508
0722T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)	S	1508

We did not receive any public comments on our proposal and are finalizing it without modification. HCPCS codes 0721T and 0722T will be assigned to New Technology APC 1508 with a status indication of ''S'' for CY 2024. Please refer to Table 35 below for the final OPPS New Technology APC and status indicator assignment for CPT

codes 0721T and 0722T. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

TABLE 35: FINAL CY 2023 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE OPTELLUM LCP PROCEDURE

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0721T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained without concurrent CT examination of any structure contained in previously acquired diagnostic imaging	S	1508
0722T	Quantitative computed tomography (CT) tissue characterization, including interpretation and report, obtained with concurrent CT examination of any structure contained in the concurrently acquired diagnostic imaging dataset (list separately in addition to code for primary procedure)	S	1508

m. Quantitative Magnetic Resonance Cholangiopancreatography (QMRCP) (APC 1511)

Effective July 1, 2022, CPT codes 0723T (Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (eg, organ, gland, tissue, target structure) during the same session) and 0724T (Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (eg, organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)) are associated with the QMRCP Software as a medical Service (SaaS). The service performs quantitative assessment of the biliary tree and gallbladder. It uses a proprietary algorithm that produces a three-dimensional reconstruction of the biliary tree and pancreatic duct and also provides precise quantitative information of biliary tree volume and duct metrics. For CY 2023, we assigned CPT codes 0723T and 0724T to New Technology APC 1511 (New Technology—Level 11 ($900–$1,000)).

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. For CPT code 0723T, there were no claims during this time period. Because there are no claims available, we proposed to continue to assign CPT code 0723T to New Technology APC 1511 with a payment rate of $950.50.

For CPT code 0724T, there was only one claim for CY 2022. As this is below the threshold of 100 claims for a service within a year, we explained that we could propose to designate CPT code 0724T as a low volume service under our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign the service to an appropriate New Technology APC. Because there is only one claim available, the geometric mean, arithmetic mean, and median costs are estimated to be $26 for this service. However, we explained that because there is only a single claim for CPT code 0724T, the single claim available appears to be an outlier based on the cost information we received from the manufacturer. Therefore, we stated that we had concerns that the universal low volume APC policy calculations would not accurately capture the cost of the service. Therefore, for CY 2024, we proposed to continue assigning CPT code 0724T to New Technology APC 1511 with a payment rate of $950.50.

Please refer to Table 36 below for the proposed OPPS New Technology APC and status indicator assignment for HCPCS codes 0723T and 0724T for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 36: PROPOSED CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0723T	Quantitative magnetic resonance cholangiopancreatography (QMRCP) including data preparation and transmission, interpretation and report, obtained without diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) during the same session	S	1511
0724T	Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)	S	1511

We did not receive any public comments on our proposal and are finalizing it without modification. HCPCS codes 0723T and 0724T will be assigned to New Technology APC 1511 with a status indication of ''S'' for CY 2024. Please refer to Table 37 below for the final OPPS New Technology APC and status indicator assignment for HCPCS codes 0723T and 0724T. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

TABLE 37: FINAL CY 2024 OPPS NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE QMRCP PROCEDURE

0724T	Quantitative magnetic resonance cholangiopancreatography (QMRCP), including data preparation and transmission, interpretation and report, obtained with diagnostic magnetic resonance imaging (MRI) examination of the same anatomy (e.g., organ, gland, tissue, target structure) (list separately in addition to code for primary procedure)	S	1511

n. CardiAMP (APC 1590)

The CardiAMP cell therapy IDE studies are two randomized, double-blinded, controlled IDE studies: the CardiAMP Cell Therapy Chronic Myocardial Ischemia Trial[9] and the CardiAMP Cell Therapy Heart Failure Trial.[10] The two trials are designed to investigate the safety and efficacy of autologous bone marrow mononuclear cells treatment for the following: (1) patients with medically refractory and symptomatic ischemic cardiomyopathy; and (2) patients with refractory angina pectoris and chronic myocardial ischemia. On April 1, 2022, we established HCPCS code C9782 to describe the CardiAMP cell therapy IDE studies and assigned HCPCS code C9782 to APC 1574 (New Technology—Level 37 ($9,501–$10,000)) with the status indicator ''T.'' We subsequently revised the descriptor for HCPCS code C9782 to: (Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (*e.g.,* mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (*e.g.,* transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study) to clarify the inclusion of the Helix transendocardial injection catheter device in the descriptor. Additionally, we determined that APC 1590 (New Technology—Level 39 ($15,001–$20,000)) most accurately accounted for the resources associated with furnishing the procedure described by HCPCS code C9782.

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. There are no available claims for ratesetting for CY 2024. Therefore, for CY 2024, we proposed to continue assigning HCPCS code C9782 to New Technology APC 1590 with a payment rate of $17,050.50.

Please refer to Table 38 below for the proposed OPPS New Technology APC and status indicator assignment for HCPCS code C9782 for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 38: PROPOSED CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE CARDIAMP CELL THERAPY IDE STUDIES

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
C9782	Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (e.g., mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (e.g., transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study	T	1590

We did not receive any public comments on our proposal and are finalizing it without modification. HCPCS code C9782 will be assigned to New Technology APC 1590 with a status indication of ''T'' for CY 2024. Please refer to Table 39 below for the final OPPS New Technology APC and status indicator assignment for CPT code C9782. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

TABLE 39: FINAL CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR THE CARDIAMP CELL THERAPY IDE STUDIES

HCPCS Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
C9782	Blinded procedure for New York Heart Association (NYHA) Class II or III heart failure, or Canadian Cardiovascular Society (CCS) Class III or IV chronic refractory angina; transcatheter intramyocardial transplantation of autologous bone marrow cells (e.g., mononuclear) or placebo control, autologous bone marrow harvesting and preparation for transplantation, left heart catheterization including ventriculography, all laboratory services, and all imaging with or without guidance (e.g., transthoracic echocardiography, ultrasound, fluoroscopy), all device(s), performed in an approved Investigational Device Exemption (IDE) study	T	1590

o. Surfacer® Inside-Out® Access Catheter System (APC 1534)

HCPCS code C9780 (Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (*e.g.,* inside-out technique), including imaging guidance) describes the procedure associated with the use of the Surfacer® Inside-Out® Access Catheter System that is designed to address central venous occlusion. HCPCS code C9780 was established on October 1, 2021, and since its establishment the code has been assigned to New Technology APC 1534 (New Technology—Level 34 ($8001–$8500)).

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. Although HCPCS code C9780 was effective October 1, 2021, we have no claims data at this time. Because we have no claims data available, for CY 2024, we proposed to continue to assign HCPCS code C9780 to APC 1534 with a proposed payment rate of $8,250.50 as shown in Table 40.

TABLE 40: PROPOSED CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR SURFACER® INSIDE-OUT® ACCESS CATHETER SYSTEM PROCEDURE

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	S	1534

We did not receive any public comments on our proposal and are finalizing it without modification. There are no paid claims for the service described by HCPCS code 9780 for CY 2024. Therefore, we will continue to assign this service to APC 1534 with a proposed payment rate of $8,250.50. Please refer to Table 41 below for the final OPPS New Technology APC and status indicator assignment for HCPCS code C9780 for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule via the internet on the CMS website.

C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	S	1534

p. Insertion or Replacement of Neurostimulator System for Treatment of Central Sleep Apnea; Complete System (APC 1580)

HCPCS code 0424T (Insertion or replacement of a neurostimulator system for treatment of central sleep apnea; complete system (transvenous placement of right or left stimulation lead, sensing lead, implantable pulse generator)) is associated with the use of the Remede® System, which is used to treat adult patients with moderate to severe Central Sleep Apnea. HCPCS code 0424T was first effective in January 1, 2016, and subsequently assigned to Comprehensive APC 5464 (Neurostimulator and Related Procedures APC—Level 4). For CY 2021, we created a 5-level structure for the Neurostimulator and Related Procedure APC series, and consequently, assigned HCPCS code 0424T to the highest level in the series: Comprehensive APC 5465 (Neurostimulator & Related Procedures APC—Level 5). For CY 2023, we proposed to continue the 5-level structure for the Neurostimulator and Related Procedure APC series, while also soliciting comment on the creation of an additional Level 6 APC in the series. In the CY 2023 final rule with comment period, we finalized our proposal to continue the 5-level APC structure based on a determination that

the existing structure remained appropriate based on clinical and cost characteristics. However, we also recognized that CPT code 0424T was not appropriately assigned to the Comprehensive APC 5465 based on a significant difference between its geometric mean cost and that of the APC. Therefore, for CY 2023, we finalized the assignment of HCPCS code 0424T to New Technology APC 1581 (New Technology—Level 44 ($50,001–$60,000)).

For CY 2024, the OPPS payment rates are proposed to be based on available CY 2022 claims data. There are only 30 claims for HCPCS code 0424T available during this time period. As this is below the threshold of 100 claims for a service within a year, we propose to apply our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign HCPCS code 0424T to the appropriate New Technology APC. Considering the available claims data for HCPCS code 0424T, the arithmetic mean is $49,468; the median is $48,285; and the geometric mean cost is $44,287. Of these, the arithmetic mean is the statistical methodology that estimates the highest cost for the service. The payment rate calculated using this methodology falls within the cost band for New Technology APC 1580 (New Technology—Level 43 ($40,001–$50,000)) with a payment rate of $45,000.50. Therefore, for CY 2024, we proposed to assign HCPCS code 0424T to New Technology APC 1580. We note that for the CY 2024 update, the CPT Editorial Panel is deleting HCPCS code 0424T and replacing it with placeholder code 3X008 effective January 1, 2024. Consequently, we proposed to assign HCPCS code 0424T to status indicator ''D'' to indicate the code will be deleted and assigning its replacement code, specifically, placeholder code 3X008, to APC 1580 for CY 2024. For placeholder code 3X008, we stated the final 5-digit CPT code number would be listed in the CY 2024 OPPS/ASC final rule with comment period. This information is summarized in Table 42.

TABLE 42: PROPOSED CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR HCPCS 0424T/3X008

HCPCS Code	Long Descriptor	Final CY 2023 OPPS SI	Final CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0424T	Insertion or replacement of a neurostimulator system for treatment of central sleep apnea; complete system (transvenous placement of right or left stimulation lead, sensing lead, implantable pulse generator	S	1581	D	N/A
3X008	Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed	N/A	N/A	S	1580

Comment: One commenter, the manufacturer, claimed that in CY 2022 two of the 21 paid claims for CPT code 0424T were inappropriately billed by hospitals that according to the manufacturer's records could not have purchased the device used in the procedure described by CPT code 0424T. The manufacturer asked that we exclude the two claims from our analysis to determine the payment rate for the procedure.

Response: We appreciate the comment, but as have regularly stated since the establishment of the OPPS, it is the responsibility of providers and other interested parties to work with the MACs to fix any claims that may have been billed or paid inappropriately for a service. In this case, and in most cases, we assume that if a paid claim has been present on the claims file for several months that the claim as been paid appropriately. Therefore, we will not remove the two claims in question when performing our new technology low volume analyses to determine the payment rate for HCPCS code 0424T.

After consideration of the public comments we received, we are implementing our proposal without modification. Our updated low volume analysis for HCPCS code 0424T finds that the median for paid claims for the service is $47,387.06, the arithmetic mean is $47,967.41, and the geometric mean is $43,063.94. The highest amount of the three values is the arithmetic mean of $47,967.41. Therefore, the service described by 0424T and placeholder code 3X008 will be assigned to New Technology APC 1580

(New Technology—Level 43 ($40,001–$50,000)) with a payment rate of $45,000.50. In addition, placeholder code 3X008 has been replaced with CPT code 33276 (Insertion of phrenic nerve stimulator system (pulse generator and stimulating lead[s]), including vessel catheterization, all imaging guidance, and pulse generator initial analysis with diagnostic mode activation, when performed).

Please refer to Table 43 below for the final OPPS New Technology APC and status indicator assignment for CPT code 33276 for CY 2024. The final CY 2024 payment rates can be found in Addendum B to this final rule via the internet on the CMS website.

TABLE 43: FINAL CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENT FOR HCPCS 0424T/33276

q. Cleerly Labs (APC 1511)

Cleerly Labs is a Software as a Service (SaaS) that assesses the extent of coronary artery disease severity using Atherosclerosis Imaging-Quantitative Computer Tomography (AI–QCT). This procedure is performed to quantify the extent of coronary plaque and stenosis in patients who have undergone coronary computed tomography analysis (CCTA). The AMA CPT Editorial Panel established the following four codes associated with this service, effective January 1, 2021:

0623T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic; angiography; data preparation and transmission, computerized analysis of data, with review of computerized analysis output to reconcile discordant data, interpretation and report.

0624T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; data preparation and transmission.

0625T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of data from coronary computed tomographic angiography.

0626T: Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; review of computerized analysis output to reconcile discordant data, interpretation and report.

In the CY 2021 OPPS/ASC final rule with comment period, we assigned the CPT codes 0623T, 06234T, 0625T, and 0626T to status indicator ''E1'' to indicate that the codes are not payable by Medicare when submitted on outpatient claims because the service had not received FDA clearance at the time of the assignment.

For the October 2022 update, based on our review of the New Technology application submitted to CMS for OPPS payment consideration, we evaluated the current status indicator assignments for CPT codes 0623T–0626T. Based on the technology and its potential utilization in the HOPD setting, our evaluation of the service, as well as input from our medical advisors, we assigned CPT code 0625T to a separately payable status. Specifically, in the October 2022 OPPS Update CR (Change Request 12885, Transmittal 11594, dated September 9, 2022), we reassigned CPT code 0625T to status indicator ''S'' (Significant Procedures, Not Discounted when Multiple. Paid under OPPS; separate APC payment) and APC 1511 (New Technology—Level 11 ($900–$1000)) with a payment rate of $950.50, effective October 1, 2022, following our review of the manufacturer's New Technology APC application.

For CY 2024, the OPPS payment rates were proposed to be based on available CY 2022 claims data. There are 90 claims for CPT code 0625T during this time period. As this is below the threshold of 100 claims for a service within a year, we explained that we could propose to designate CPT code 0625T as a low volume service under our universal low volume APC policy and use the highest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data to assign code 0625T to the appropriate New Technology APC. We found the geometric mean cost for the service to be approximately $3.70, the

arithmetic mean cost to be approximately $4.10, and the median cost to be approximately $3.50. Under our universal low volume APC policy, we would use the greatest of the statistical methodologies, the arithmetic mean, to assign CPT code 0625T to New Technology 1491 (New Technology Level 1A—(0–$10)) with a payment rate of $5.00. However, we acknowledged that, because CPT code 0625T was only made separately payable as part of the OPPS in October 2022, and, therefore, the claims available only reflect two months of data, we were concerned that we do not have sufficient claims data to justify reassignment to another New Technology APC (66 FR 69902). Therefore, consistent with our current policy to retain services within New Technology APC groups until we obtain sufficient claims data to justify reassignment (66 FR 59902), for CY 2024 we proposed to maintain CPT code 0625T's current assignment. Specifically, for CY 2024, we proposed to continue to assign CPT code 0625T to New Technology APC 1511 with a payment rate of $950.50.

Please refer to Table 44 below for the proposed OPPS New Technology APC and status indicator assignment for CPT code 0625T for CY 2024. The proposed CY 2024 payment rates can be found in Addendum B to the CY 2024 OPPS/ASC proposed rule via the internet on the CMS website.

TABLE 44: PROPOSED CY 2024 NEW TECHNOLOGY APC AND STATUS INDICATOR ASSIGNMENTS FOR CLEERLY LABS HCPCS CODE 0625T

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
0625T	Automated quantification and characterization of coronary atherosclerotic plaque to assess severity of coronary disease, using data from coronary computed tomographic angiography; computerized analysis of data from coronary computed tomographic angiography	S	1511

Comment: We received comments supporting our proposal for 0625T. Commenters stated that they agree with our reasoning that there are limited claims data available because CPT code 0625T was only made separately payable as part of the OPPS in October 2022. One commenter noted that there may also be a limited number of claims in CY 2023 and urged CMS to be cognizant of that in developing the CY 2025 payment rate for CPT code 0625T. The commenter also stated that there will likely be sufficient CY 2024 claims data for CMS to consider a different APC assignment for CPT code 0625T for CY 2026 with the availability of a new device that may be utilized with service described by CPT code 0625T.

Response: We thank the commenters for their support of our proposal. We note that the policy being finalized in this final rule with comment with regard to CPT code 0625T applies only for CY 2024. Regarding the APC assignments for CPT code 0625T for future years, we will similarly consider the claims data available and public comments received in selecting the APC assignment for the code.

We note that based on updated claims data available for this final rule with comment period, the low volume policy calculations have changed slightly. However, the concerns stated in the CY 2024 OPPS/ASC proposed rule regarding having insufficient claims data to justify reassignment to another New Technology APC remain. Therefore, after consideration of the public comments we received and the limited claims data available, we are finalizing the APC assignment for CPT code 0625T as proposed.

Please refer to Table 45 below for the final OPPS New Technology APC and status indicator assignment for CPT code 0625T. The final CY 2024 payment rates can be found in Addendum B to this final rule with comment via the internet on the CMS website.

D. Universal Low Volume APC Policy for Clinical and Brachytherapy APCs

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted a policy to designate clinical and brachytherapy APCs as low volume APCs if they have fewer than 100 single claims that can be used for ratesetting purposes in the claims year used for ratesetting for the prospective year. For the CY 2024 OPPS/ASC proposed rule, CY 2022 claims are generally the claims used for ratesetting; and clinical and brachytherapy APCs with fewer than 100 single claims from CY 2022 that can be used for ratesetting would be low volume APCs subject to our universal low volume APC policy. As we stated in the CY 2022 OPPS/ASC final rule with comment period, we adopted this policy to reduce the volatility in the payment rate for those APCs with fewer than 100 single claims. Where a clinical or brachytherapy APC has fewer than 100 single claims that can be used for ratesetting, under our low volume APC payment adjustment policy, we determine the APC cost as the greatest of the geometric mean cost, arithmetic mean cost, or median cost based on up to 4 years of claims data. We excluded APC 5853 (Partial Hospitalization for CMHCs) and APC 5863 (Partial Hospitalization for Hospital-based PHPs) from our universal low volume APC policy given the different nature of policies that affect the partial hospitalization program. We also excluded APC 2698 (Brachytx, stranded, nos) and APC 2699 (Brachytx, non-stranded, nos) as our current methodology for determining payment rates for non-specified brachytherapy sources is appropriate.

Based on claims data available for the CY 2024 OPPS/ASC proposed rule, we proposed to designate five brachytherapy APCs and five clinical APCs as low volume APCs under the OPPS. The five brachytherapy APCs and five clinical APCs meet our criteria of having fewer than 100 single claims in the claims year used for ratesetting (CY 2022 for the CY 2024 OPPS/ASC proposed rule). Eight of the ten APCs were designated as low volume APCs in CY 2023. Based on data for the CY 2024 OPPS/ASC proposed rule, APC 2642 (Brachytx, stranded, C–131) now meets our criteria to be designated a Low Volume APC; and we proposed to designate it as such for CY 2024. Further, with the proposed addition of Level 6 Intraocular APC (APC 5496), as discussed in section III.E of the CY 2024 OPPS/ASC proposed rule, and the reassignment of certain intraocular procedures from Level 2 to Level 3, the Level 4 Intraocular APC (which was the Level 3 Intraocular APC in CY 2023), now meets our criteria to be designated a Low Volume APC; and we proposed to designate it as such for CY 2024.

Table 46 includes the APC geometric mean cost without the low volume APC designation, that is, if we calculated the geometric mean cost based on CY 2022 claims data available for ratesetting; the median, arithmetic mean, and geometric mean cost using up to 4 years of claims data based on the APC's designation as a low volume APC; and the statistical methodology we proposed to use to determine the APC's cost for ratesetting purposes for CY 2024. As discussed in our CY 2022 OPPS/ASC final rule with comment period (86 FR 63751 through 63754), given our concerns with CY 2020 claims data as a result of the PHE, the 4 years of claims data we proposed to use to calculate the costs for these APCs are CYs 2018, 2019, 2021, and 2022.

TABLE 46: COST STATISTICS FOR FINAL LOW VOLUME APCS USING COMPREHENSIVE (OPPS) RATESETTING METHODOLOGY FOR CY 2024

APC	APC Description	CY 2022 Claims Available for Ratesetting	Geometric Mean Cost without Low Volume APC Designation	Final Median Cost	Final Arithmetic Mean Cost	Final Geometric Mean Cost	Final CY 2024 APC Cost
2632	Iodine I-125 sodium iodide	0	---*	$31.74	$61.83	$41.06	$61.83
2635	Brachytx, non-str, HA, P-103	21	$97.56	$58.38	$60.78	$54.74	$60.78
2636	Brachy linear, non-str, P-103	1	$60.16	$22.17	$55.57	$32.95	$55.57
2642	Brachytx, stranded, C-131	82	$93.94	$76.36	$100.23	$79.27	$100.23
2647	Brachytx, NS, Non-HDRIr-192	2	$415.40	$201.69	$358.12	$166.75	$358.12
5244	Level 4 Blood Product Exchanges and Related Services	66	$69,452.75	$45,702.69	$53,516.13	$45,639.70	$53,516.13
5494	Level 4 Intraocular Procedures	55	$13,367.49	$11,993.21	$12,140.88	$11,065.60	$12,140.88
5495	Level 5 Intraocular Procedures	91	$7,548.24	$15,457.23	$14,722.07	$11,025.70	$15,457.23
5496	Level 6 Intraocular Procedures	26	$11,541.28	$16,990.74	$15,263.22	$12,931.30	$16,990.74

* For this rule, there are no CY 2022 claims that contain the HCPCS code assigned to APC 2632 that are available for CY 2024 OPPS/ASC ratesetting.

Comment: One commenter requested clarification about the meaning of the statement ''using up to four years of data'' regarding the calculation of the geometric mean, arithmetic mean, and median for the universal low volume APC policy for clinical and brachytherapy APCs (88 FR 49627). The commenter also requested more information on why there was a difference in the geometric mean amount reported in the CY 2024 OPPS proposed rule in Table 27 for APC 5244 (Level 4 Blood Product Exchanges and Related Services), which was $52,105 based on claims from CY 2022 as compared to the geometric mean reported for APC 5244 in the 2 times rule discussion for the CY 2024 OPPS proposed rule, which was $71,154 and also based on claims from CY 2022 (88 FR 49628).

Response: When we state that we are using up to four years of data for the universal low volume APC policy for clinical and brachytherapy APCs, we mean that we will use four years of data

if four years of data is available for an APC, but we may need to use between one and three years of data if fewer years of data are available. We will use the greatest number of years of data available, unless there is a substantial reason not to use a particular year of data. The data will also be for consecutive years unless, again, there is substantial reason not to use a particular year of data. For example, we stated in the CY 2024 OPPS proposed rule (88 FR 49627) that we had concerns with CY 2020 claims data as a result of the COVID–19 PHE, and that we were therefore using data from CYs 2018, 2019, 2021, and 2022.

The commenter correctly noted that we inadvertently provided an outdated geometric mean cost for APC 5244 based on only CY 2022 claims data. Based on data available for the proposed rule, the correct geometric mean cost without low volume APC designation that should have been displayed in Table 27 for APC 5244 was $71,154.

Comment: One commenter supports the universal low volume APC policy for clinical and brachytherapy APCs in general but requests that the policy only be invoked when application of the universal low volume policy would increase the payment amount for the low-volume APC.

Response: The purpose of the universal low volume APC policy for clinical and brachytherapy APCs is to bring payment stability to these low-volume APCs rather than to ensure higher payment rates. With payment stability, whether it is limiting annual increases or decreases in the payment rate, providers are better able to plan what their expenses and compensation will be for performing certain low-volume services, and they can use that information to help budget for the cost of these low-volume services over several years.

After consideration of the public comments we received, we are implementing our proposals without modification except where we are updating the payment rates for low-volume clinical and brachytherapy APCs with claims data updated through June 20, 2023.

E. APC-Specific Policies

1. Ablation of Bone Tumors CPT Code 20982 (APC 5115)

CPT code 20982 (Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency) describes a primarily palliative procedure that reduces the size of bone tumors and lessens the pain from the tumors. For the CY 2024 OPPS proposed rule, CPT code 20982 had a geometric mean of around $11,773 and we proposed to assign the procedure to APC 5114 (Level 4 Musculoskeletal Procedures), which has a payment rate of around $6,974.

Comment: One commenter asked that we reassign CPT code 20982 from APC 5114 to APC 5115 (Level 5 Musculoskeletal Procedures) with a payment rate of around $13,421. The commenter noted that this bone tumor ablation procedure was one of the highest cost procedures assigned to APC 5114 and that the payment rate for APC 5114 only covered around 60 percent of the cost of CPT code 20982. The commenter also noted that while the bone tumor ablation procedure would be overpaid in APC 5115, the additional payment was only 13 percent of the cost of CPT code 20982.

Response: We agree with the commenter. In addition to the underpayment and overpayment amounts cited by the commenter, we also found that if CPT code 20982 had enough claims to be a significant procedure in APC 5114, it would be in violation of the 2 times rule by over $1,000 as two times the lowest cost significant procedure in that APC was around $10,700 while the payment rate for CPT code 20982 is around $11,773.

After consideration of the public comments we received, we are assigning CPT code 20982 to APC 5115 (Level 5 Musculoskeletal Procedures). Table 47 shows the finalized status indicator and APC assignment for this procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 47: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 20982

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
20982	Ablation therapy for reduction or eradication of 1 or more bone tumors (eg, metastasis) including adjacent soft tissue when involved by tumor extension, percutaneous, including imaging guidance when performed; radiofrequency	J1	5115

2. Administration of Lacrimal Ophthalmic Insert Into Lacrimal Canaliculus (APC 5503)

Dextenza, which is described by HCPCS code J1096 (Dexamethasone, lacrimal ophthalmic insert, 0.1 mg), is a drug indicated for ''the treatment of ocular inflammation and pain following ophthalmic surgery'' and for ''the treatment of ocular itching associated with allergic conjunctivitis.'' [11]

The manufacturer of the drug previously asserted that this drug is administered and described by CPT code 0356T (Insertion of drug-eluting implant (including punctal dilation and implant removal when performed) into lacrimal canaliculus, each). Interested parties also previously stated that Dextenza is inserted in a natural opening in the eyelid (called the punctum) and that the drug is designed

[11] Dextenza. FDA Package Insert. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/208742s007lbl.pdf.*

to deliver a tapered dose of dexamethasone to the ocular surface for up to 30 days. CPT code 0356T was deleted December 31, 2021, and replaced with CPT code 68841 (Insertion of drug-eluting implant, including punctal dilation when performed, into lacrimal canaliculus, each), effective January 1, 2022. Interested parties currently assert that the drug, Dextenza, is administered and described by CPT code 68841. We refer readers to the CY 2023 OPPS/ASC final rule with comment period for a detailed history on CMS payment assignments for CPT code 0356T and CPT code 68841 (87 FR 71840).

In the CY 2024 OPPS/ASC proposed rule (87 FR 49765), we proposed that Dextenza (HCPCS code J1096) continues to function as a surgical supply that meets the criteria described at § 416.174, and we proposed to continue to make separate payment for Dextenza as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. We proposed that payment for Dextenza would continue to be packaged when furnished in the HOPD but paid separately when furnished in an ASC. We proposed to package HCPCS code J1096 under the OPPS and assign the code to a status indicator of ''N'' (packaged). This is consistent with our packaging policy outlined at 42 CFR 419.2(b), which lists the types of items and services for which payment is packaged under the OPPS. Specifically, § 419.2(b)(16) includes drugs and biologicals that function as supplies when used in a surgical procedure as packaged costs. Historically, we have stated that we consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy (79 FR 66875).

For CY 2024, we proposed to continue to assign CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures) with a proposed payment rate of $2,249.64. We also proposed to continue to assign CPT code 68841 OPPS status indicator ''Q1'' and an ASC payment indicator of ''N1.''

The issue of payment for CPT code 68841 was brought to the Advisory Panel on Hospital Outpatient Payment (also known as HOP Panel) in 2023 for CY 2024 rulemaking. At the August 2023 meeting, based on the information presented, the Panel recommended that CMS assign HCPCS code 68841 a status indicator (SI) of ''J1'' (Hospital Part B Services Paid Through a Comprehensive APC) as they believed this assignment would treat CPT code 68841 similarly to other clinically related codes.

Comment: Several commenters stated that increased payment, and separate payment, for CPT code 68841, the code that describes the administration of the drug, was required to ensure continued beneficiary access to the drug Dextenza (HCPCS code J1096) in both the HOPD and ASC settings. Some commenters did not make a specific suggestion as to the final APC assignment but contended that the proposed payment was inadequate. Commenters cited various payment rates, such as $500, $1,200, $2,350, and $2,500 as potential appropriate payment rates for CPT 68841 under the OPPS and ASC payment system. Commenters emphasized that a change was needed to ensure adequate payment in the ASC setting, where the commenters stated the majority of these Dextenza administrations occur.

Several commenters argued for a change in the OPPS status indicator and the ASC payment indicator to allow separate payment for CPT code 68841. Some commenters stated that a ''Q1'' status indicator (STV-Packaged Codes) was inappropriate but did not provide an alternative suggestion. However, some other commenters suggested assignment to a ''J1''(Hospital Part B Services Paid Through a Comprehensive APC) status indicator. One commenter contended that a status indicator of ''S'' (Procedure or Service, Not Discounted When Multiple) or ''T'' (Procedure or Service, Multiple Procedure Reduction Applies) would also be appropriate but believed that ''J1'' would be the most accurate and would generate consistency among APC 5503, as all other codes within APC 5503 are assigned to status indicator ''J1.''

Several commenters pointed to the clinical importance of providing Dextenza to patients, noting that it reduces ocular pain and inflammation and reduces the burden of topical eyedrop application. Additionally, commenters stated that they usually perform the procedure to administer Dextenza in conjunction with ophthalmic surgeries. Commenters believed the procedure is a distinct surgical procedure that requires additional operating room time and resources. These commenters believed that the cataract surgery is conducted and concluded, as evidenced by the removal of the surgical drape and speculum, and then the Dextenza administration procedure begins. The commenters further mentioned that additional payment was needed to compensate for a variety of tasks associated with the administration of Dextenza, such as ordering, billing, counting inventory, technician training, surgical tools, and instrument sterilization, among others. Commenters also pointed to the fact that there are 112 single frequency claims as evidence that both Dextenza and its administration should be paid separately as there is no other procedure on the claim.

Overall, commenters were concerned that the lack of increased or separate payment may reduce access to Dextenza, particularly in the ASC setting.

Response: We thank commenters for their feedback. We agree with commenters that it is still appropriate to assign CPT code 68841 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures).

For the CY 2024 OPPS update, based on claims submitted between January 1, 2022, and December 30, 2022, processed through June 30, 2023, our analysis of the latest claims data for this final rule with comment period shows a geometric mean cost of approximately $1,993.20 for predecessor CPT code 68841 based on 172 single claims, which is comparable to the geometric mean cost of about $2,288.49 for APC 5503. Based on the data, we continue to believe that assignment to APC 5503 for CPT code 68841 is appropriate.

We also continue to believe that assignment of CPT code 68841 to an OPPS status indicator of ''Q1'' and an associated ASC payment indicator of ''N1,'' is appropriate. We continue to believe that CPT code 68841 is mostly performed during ophthalmic surgeries, such as cataract surgeries. A status indicator ''Q1,'' indicating a conditionally packaged procedure, describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indictor ''N1'') under the ASC payment system. Although stakeholders state this is an independent surgical procedure and should not be packaged into the primary ophthalmic procedure in which the drug and drug administration are associated, based on observed clinical patterns as to how the drug is used, we do not agree. Based on claims data, out of over 7,000 total frequency claims, CPT code 68841 is used independently only about 2 percent of the time,

meaning that the other 98 percent of the time CPT code 68841 has its payment packaged into the primary procedure with which it is associated. These data reinforce our belief that Dextenza and CPT code 68841 are not furnished independent of a surgical procedure and should be packaged into the primary ophthalmic procedure with which the drug and drug administration are associated.

While we recognize that there are some claims that may only include CPT code 68841 without a primary ophthalmic surgery on the claim, we do not believe that this is a frequent occurrence based on our claims data and clinical use patterns; as previously mentioned, our claims data shows that only 172 out of 7,327 claims are performed independently of another primary procedure (only about 2 percent of claims).

After consideration of the public comments, we are finalizing our proposal, without modification, to assign CPT code 68841 to APC 5503 with OPPS status indicator ''Q1'' (STVPackaged Codes) for CY 2024, which typically means there will be a packaged APC payment if this code is billed on the same claims as a HCPCS code assigned to status indictor ''S,'' ''T,'' or ''V'' (Clinic or Emergency Department Visit). In addition, based on the OPPS assignments, we are finalizing an ASC payment indicator of ''N1'' (Packaged service/item; no separate payment made) for CPT code 68841 for CY 2024.

For the final CY 2024 OPPS payment rates, we refer readers to OPPS Addendum B to this final rule with comment period. In addition, we refer readers to OPPS Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. For the final CY 2024 ASC payment rates and payment indicators, we refer readers to Addendum AA and Addendum BB for the ASC payment rates, and Addendum DD1 for the ASC payment indicator and their definitions. The OPPS Addenda B and D1 and ASC Addenda AA, BB, and DD1 are available via the internet on the CMS website.[12]

Please refer to Table 48 for the code descriptor, APC assignment, status indicator assignment, and payment indicator assignment for CPT code 68841 for CY 2024.

TABLE 48: FINAL CY 2024 OPPS AND ASC PAYMENT ASSIGNMENTS FOR CPT CODE 68841

HCPCS Code	Descriptor	Final CY 2024 OPPS APC	Final CY 2024 OPPS SI	Final CY 2024 ASC PI
68841	Insertion of drug-eluting implant, including punctal dilation when performed, into lacrimal canaliculus, each	5503	Q1	N1

Similar to our rationale outlined for CPT code 68841, we also find it appropriate to package Dextenza (HCPCS code J1096) based on its clinical use patterns. Consistent with our clinical review and commenters' input, we believe this drug is mostly administered during ophthalmic surgeries, such as cataract surgeries. The packaging of this drug is consistent with our regulations at 42 CFR 419.2(b). Specifically, 42 CFR 419.2(b)(16) includes among the items and services for which payment is packaged under the OPPS, drugs and biologicals that function as supplies when used in a surgical procedure. Historically, we have stated that we consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy (79 FR 66875). We therefore believe packaging of HCPCS code J1096 is appropriate in the HOPD setting for CY 2024.

Although packaged under the OPPS, as discussed in section XIII.E. of this final rule with comment period, we believe Dextenza (HCPCS code J1096), meets the criteria described at § 416.174; and we are finalizing our proposal to make separate payment for Dextenza as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. For more information on the ASC payment for HCPCS code J1096 for CY 2024, refer to section XIII.E. of this final rule with comment period.

As a reminder, for OPPS billing, because charges related to packaged services are used for outlier and future rate setting, hospitals are advised to report both CPT code 68841, the administration service, and HCPCS code J1096, the Dextenza drug, on the claim whenever Dextenza is provided in the HOPD setting. It is extremely important that hospitals report all HCPCS codes consistent with their descriptors, CPT and/or CMS instructions and correct coding principles, and all charges for all services they furnish, whether payment for the services is made separately or is packaged.

Finally, for the final CY 2024 OPPS payment rates, we refer readers to OPPS Addendum B to this final rule with comment period. In addition, we refer readers to OPPS Addendum D1 to this final rule with comment period for the status indicator definitions for all codes reported under the OPPS. For the final CY 2024 ASC payment rates and payment indicators, we refer readers to Addendum AA and Addendum BB for the ASC payment rates and Addendum DD1 for the ASC payment indicator and their definitions. The OPPS Addenda B and D1 and ASC Addenda AA, BB, and DD1 are available via the internet on the CMS website.[13]

[13] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

3. Aquabeam Waterjet Ablation Service CPT Code 0421T (APC 5376)

CPT code 0421T (Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed) describes the Aquabeam waterjet ablation service. According to the manufacturer, Aquabeam is for treating lower urinary tract symptoms (LUTS) due to benign prostatic hyperplasia (BPH) by using a high-velocity water stream to ablate and remove tissue from enlarged prostates.

For the OPPS CY 2024 proposed rule, we calculated the geometric mean for CPT code 0421T to be $9,609.07, and we assigned the service to APC 5376 (Level 6 Urology and Related Services), which has a payment rate of $8,947.91. There were 2,375 claims used to calculate the geometric mean for CPT code 0421T.

Comment: One commenter, the manufacturer of the Aquabeam system, requested that we assign CPT code 0421T to APC 5377 (Level 7 Urology and Related Services) with a payment rate of $12,712.15 instead of assigning the service to APC 5376 with a payment rate of $8,947.91. The commenter asserts that the Aquabeam procedure has more clinical and resource similarity to procedures in APC 5377 than in APC 5376 because, according to the commenter, the procedures in APC 5377 are device-intensive procedures similar to how the Aquabeam procedure is a device-intensive procedure. The commenter also notes that the Aquabeam procedure is one of the highest cost procedures assigned to APC 5376.

Response: We disagree with the commenter. CPT code 0421T is one of the more costly procedures in APC 5376 but it is not the costliest. The cost of the procedure is around $800 more than the payment rate of APC 5376, but it is over $2,700 less than the payment rate of APC 5377. The Aquabeam procedure also does not violate the 2 times rule in its current assignment in APC 5376, and several of the procedures with similar cost to the Aquabeam procedure are device-intensive procedures with a similar percentage device offset as the Aquabeam procedure. Finally, if CPT code 0421T were to be reassigned into APC 5377, its cost would be over $2,000 less than the lowest-cost significant procedure in that APC.

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT code 0421T. Table 49 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 49: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0421T

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0421T	Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed	J1	5376

4. Aquadex® Ultrafiltration (APC 5241)

CPT code 0692T (Therapeutic ultrafiltration) describes an apheresis procedure through which plasma water and sodium are removed from the blood using the Aquadex® SmartFlow System. The procedure is indicated in patients who are diagnosed with hypervolemia and are non-responsive to the more traditional treatments such as diuretic medications. CPT code 0692T was established effective January 1, 2022, and since its establishment, the code has been assigned to APC 5241 (Level 1 Blood Product Exchange and Related Services). At the August 21, 2023, HOP Panel Meeting, a presenter provided information to the Panel on the description of the service and the cost of the Aquadex® Ultrafiltration device and procedure. At the conclusion of the presentation, the presenter advised the Panel to request that CMS reassign CPT code 0692T from APC 5241 to APC 5242. The HOP Panel had no recommendations. For CY 2024, we proposed to maintain the assignment to APC 5241, with a payment rate of $417.32.

Comment: We received one comment from the manufacturer requesting that CMS reassign CPT code 0692T from APC 5241 with a payment of $426.24 to APC 5242 (Level 2 Blood Product Exchange and Related Services) with a payment of $1,504.13. The commenter stated that the proposed APC assignment and payment does not accurately reflect the resources, time, and costs necessary to complete the therapeutic ultrafiltration procedure. The commenter pointed out that the current APC assignment consists of mostly transfusion procedures, with CPT code 36430 (Transfusion, blood or blood components) accounting for 99 percent of the more than 200,000 single frequency claims for services assigned to this APC. They also note that there are several apheresis procedures assigned to APC 5242.

Response: Under the OPPS, we review our claims data on an annual basis to determine the payment rates. For CY 2024, the OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Because the code was new in 2022, we have very limited claims data (1 claim). However, we note that with all new codes for which we lack pricing information, our policy has been to assign the service to an existing APC based on input from a variety of sources, including, but not limited to, review of the clinical similarity of the

service to existing procedures, input from CMS medical advisors, and review of all other information available to us. The OPPS is a prospective payment system that provides payment for groups of services that share clinical and resource use characteristics. Based on our understanding of the service and input from our medical advisors, we do not agree that CPT code 0692T is dissimilar to other services in APC 5241 such that it should be assigned to a different APC. In particular, our medical advisors noted the similarities between platelet apheresis (CPT code 36513) and the therapeutic ultrafiltration procedure. For CY 2024, based on our evaluation, we are finalizing our proposal to continue the assignment to APC 5241 for CPT code 0692T.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 0692T to APC 5241 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

5. Aqueous Shunt Procedure (APC 5492)

For CY 2023, we assigned CPT code 66180 (Aqueous shunt to extraocular equatorial plate reservoir, external approach; with graft) to APC 5492 (Level 2 Intraocular Procedures) with a payment of $3,995.58. For CY 2024, as shown in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule with comment period, we proposed to maintain the APC assignment to APC 5492 with a payment rate of $3,970.62 for CPT code 66180.

Comment: One commenter suggested reassigning CPT code 66180 to APC 5493 (Level 3 Intraocular Procedures, with a payment rate of $5,110.58, based on its similarity to CPT code 66179 (Aqueous shunt to extraocular equatorial plate reservoir, external approach; without graft), which is proposed in APC 5493. The commenter explained that CPT code 66180 and CPT code 66179 are very similar procedures but clarified that CPT code 66180 requires additional time and resources to affix the scleral patch graft used in the procedure. Based on their similarity, the commenter urged CMS to reassign CPT code 66179 to APC 5493.

Response: While the procedures may be the same, our claims data for this final rule with comment period shows that the resources to perform the procedures are significantly different. For 2024, the OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Based on our evaluation of the claims data, the geometric mean cost for CPT code 66180 is lower than CPT code 66179. Specifically, our claims data show a geometric mean cost of about $4,595 for CPT code 66180 based on 3,124 single claims (out of 3,140 total claims). In contrast, the geometric mean cost for CPT code 66179 is slightly higher at approximately $4,988 based on 134 single claims (out of 135 total claims). The cost range for the significant procedures assigned to APC 5492 is between approximately $3,138 (for CPT code 65820) and $4,694 (for CPT code 66183), while the cost range for the significant procedures assigned to APC 5493 is between about $4,943 (for CPT code 66991) and $5,357 (for CPT code 66989). Based on the cost range for APC 5492 and 5493, we believe that the resource costs and clinical homogeneity for CPT code 66180 are consistent with those procedures in APC 5492, rather than APC 5493. Therefore, we believe we should continue to assign CPT code 66180 to APC 5492.

In summary, after consideration of the public comment we received, we are finalizing our proposal, without modification, to continue to assign CPT code 66180 to APC 5492 for CY 2024. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addenda D1 and Addendum B are available via the internet on the CMS website.

6. Arthrodesis, Sacroiliac Joint, Percutaneous, with Image Guidance, Including Placement of Intra-Articular Implant(s) (*e.g.,* Bone Allograft[s], Synthetic Device[s]), Without Placement of Transfixation Device (APC 5116)

The CPT Editorial Panel established CPT code 27278, to describe arthrodesis, sacroiliac joint, percutaneous, with image guidance, including placement of intra-articular implant(s) (*e.g.,* bone allograft[s], synthetic device[s]), without placement of transfixation device, effective January 1, 2024. Because the final CY 2024 CPT code numbers were not available when we published the proposed rule, the code was listed as placeholder code 2X000 in the OPPS Addendum B of the CY 2024 OPPS/ASC proposed rule.

For CY 2024, we proposed to assign CPT code 27278 to status indicator ''J1'' and APC 5116 (Level 6 Musculoskeletal Procedures) with a proposed payment rate of $20,692.25 based on clinical similarity and resource use to the predecessor code 0775T.

Comment: One commenter supported our proposal to assign CPT code 27278 to APC 5116 due to clinical similarity and resource use to the predecessor code 0775T.

Response: We appreciate the commenter's feedback on this new CPT code and we agree with the commenter's recommendation to finalize the APC assignment.

In summary, after reviewing the public comment for the proposal, we are adopting as final our proposal to assign CPT code 27278 to APC 5116. The final CY 2024 payment rate for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

7. Artificial Iris Insertion Procedures (APC 5496)

For the July 2020 update, the AMA's CPT Editorial Panel established three CPT codes to describe the CustomFlex Artificial Iris device implantation procedure. Table 50 below lists the long descriptors for the codes. In addition to the surgical CPT codes, as discussed in the CY 2021 OPPS/ASC final rule with comment period (85 FR 85990 through 85992), we approved the associated device, specifically, the CustomFlex Artificial Iris, for pass-through status effective January 1, 2021, and established a new category for this device, specifically, HCPCS code C1839 (Iris prosthesis). The designation of pass-through status for the device indicates that, under the OPPS, the device is paid separately in addition to the surgical CPT codes.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71889), we listed device category HCPCS code C1839 in Table 52 (Devices with Pass-Through Status (Or Adjusted Separate Payment) Expiring At The End of the Fourth Quarter of 2022, In 2023, or In 2024), as one of the device codes whose pass-through status would expire on December 31, 2022. However, section 4141 (Extension of Pass-Through Status Under the Medicare Program for Certain Devices Impacted by COVID–19) of the Consolidated Appropriations Act, 2023 extended pass-through status for a 1-year period beginning on January 1,

2023, for devices whose pass-through status would have ended on December 31, 2022. Consequently, pass-through for HCPCS code C1839 will now expire on December 31, 2023.

As listed in Table 50 below, for CY 2023, we assigned HCPCS code C1839 to status indicator ''H'' to indicate that the device is on pass-through status. In addition, we assigned CPT codes 0616T–0618T to APC 5495 (Level 5 Intraocular Procedures) with a payment rate of $18,089.98. For CY 2024, we proposed to reassign device category code C1839 from status indicator ''H'' (device pass-through) to status indicator ''N'' (packaged) since its pass-through status expires on December 31, 2023. With the additional costs from the expired pass-through device, we proposed to reassign CPT codes 0616T, 0617T, and 0618T from APC 5495 to APC 5496 (Level 6 Intraocular APC), which is a Low Volume APC and is discussed in further detail in section III.D of this final rule with comment period. In addition, the discussion related to device HCPCS code C1839 can be found in section IV.b of this final rule with comment period.

TABLE 50: CY 2023 AND PROPOSED CY 2024 OPPS SI AND APCS FOR THE ARTIFICIAL IRIS INSERTION PROCEDURES

HCPCS Code	Long Descriptor	CY 2023 OPPS SI	CY 2023 OPPS APC	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC
C1839	Iris prosthesis	H		N	
0616T	Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; without removal of crystalline lens or intraocular lens, without insertion of intraocular lens	J1	5495	J1	5496
0617T	Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with removal of crystalline lens and insertion of intraocular lens	J1	5495	J1	5496
0618T	Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with secondary intraocular lens placement or intraocular lens exchange	J1	5495	J1	5496

Comment: Some commenters applauded our proposal to reassign CPT codes 0616T, 0617T, and 0618T to APC 5496, and requested that CMS finalize the APC assignment.

Response: As listed in Table 46 in section III.D. of this final rule with comment period, APC 5496 is designated as one of the low volume APCs for CY 2024. Based on our review of the claims data for APC 5496, we found the cost for CPT code 0616T to be about $18,080 based on 15 single claims, approximately $12,873 for CPT code 0617T based on 7 claims, and about $17,733 for CPT code 1618T based on 13 single claims. Based on our analysis of the updated data for this final rule, we identified APC 5496 as a Low Volume APC with a cost of $16,990.74, and a final payment amount of $16,547.60 for CY 2024. We believe that APC 5496 is the appropriate assignment for CPT codes 0616T, 0617T, and 0618T based on their clinical characteristic and resource similarity to the procedure in the APC.

In summary, after consideration of the public comments, we are finalizing our proposal, without modification, and assigning CPT codes 0616T, 0617T, and 0618T to APC 5496 for CY 2024. Table 51 list the final OPPS SIs and APC for the codes. The final CY 2024 OPPS payment rate for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 51: FINAL CY 2024 OPPS SI AND APCS FOR THE ARTIFICIAL IRIS INSERTION PROCEDURES

HCPCS Code	Long Descriptor	CY 2023 OPPS SI	CY 2023 OPPS APC	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
C1839	Iris prosthesis	H		N	
0616T	Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; without removal of crystalline lens or intraocular lens, without insertion of intraocular lens	J1	5495	J1	5496
0617T	Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with removal of crystalline lens and insertion of intraocular lens	J1	5495	J1	5496
0618T	Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with secondary intraocular lens placement or intraocular lens exchange	J1	5495	J1	5496

8. Autologous Adipose-Derived Regenerative Cell (ADRC) Therapy for Partial Thickness Rotator Cuff Tear (APC 5055)

Effective July 1, 2022, the AMA's CPT Editorial Panel created two new Category III CPT codes to describe autologous adipose-derived regenerative cell (ADRC) therapy for partial thickness rotator cuff tear:

- 0717T: Autologous adipose-derived regenerative cell (ADRC) therapy for partial thickness rotator cuff tear; adipose tissue harvesting, isolation and preparation of harvested cells, including incubation with cell dissociation enzymes, filtration, washing, and concentration of ADRCs
- 0718T: Autologous adipose-derived regenerative cell (ADRC) therapy for partial thickness rotator cuff tear; injection into supraspinatus tendon including ultrasound guidance, unilateral

These codes describe a prospective, randomized multicenter pivotal trial of autologous adult adipose-derived regenerative cell (ADRC) injection into partial-thickness rotator cuff tears that is currently in progress. The purpose of this investigation is to evaluate the safety and superior effectiveness in functional improvement in patients with partial-thickness rotator cuff tears (PTRCTs) after the administration of a single injection of adipose-derived regenerative cells (ADRCs) into the partial-thickness rotator cuff tear compared to the administration of a single corticosteroid injection into the associated subacromial space. For CY 2024, we proposed to assign CPT codes 0717T and 0718T to status indicator ''E1'' to indicate that these codes are not paid by Medicare when submitted on outpatient claims (any outpatient bill type) since, at the time, the clinical trial had not been approved by CMS as IDE Category B study.

Comment: One commenter requested that we reassign CPT codes 0717T and 0718T from status indicator ''E1'' to status indicator ''J1'' and assign them to APC 5114 (Level 4 Musculoskeletal Procedures) with a proposed payment rate of $6,895.06. The commenter stated that this was the best placement based on clinical and resource coherence. The commenter also stated that this was consistent with their calculation that the total cost of the device was $3,186.11. The commenter stated that the cost of their procedure including the device was $6,316 in 2022. The commenter noted that on August 24, 2023, the CMS Coverage and Analysis Group (CAG) approved their Category B IDE study and included it on the approved list of covered Category B IDE trials.

Response: We thank the commenter for the recommendation. Because the clinical trial was approved by CMS as a Category B IDE study on August 24, 2023, we are assigning CPT codes 0717T and 0718T to separate payment under OPPS. Based on input from our medical advisors, we are assigning both CPT codes 0717T and 0718T to status indicator ''T'' and APC 5055 (Level 5 Skin Procedures) based on clinical similarity with CPT code 15771 (Grafting of autologous fat harvested by liposuction technique to trunk, breasts, scalp, arms, and/or legs; 50 cc or less injectate).

The final 2024 payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

9. Barostim CPT Code 0266T (APC 1580)

Barostim is a fully implantable neurostimulator system with an indication to treat heart failure symptoms in a limited number of patients who meet the FDA-approved eligibility criteria. Barostim received device pass-through status in the OPPS starting in January 2021 and its device pass-through status is scheduled to end on December 31, 2023. In the OPPS, once pass-through status ends for a device, the cost of the device is packaged into its associated procedure, which for Barostim is CPT code 0266T (Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed)).

Claims from CY 2022 will be used to set the payment rate for the Barostim implant procedure. There are 123 claims for the Barostim implant procedure in CY 2022, and all claims report using Barostim as a part of the Barostim implant procedure. Therefore, the geometric mean cost of the Barostim implant procedure reflects the full cost of the device and the resources used to implant it. The Neurostimulator and Related Procedures APC has five payment levels. The estimated payment amount for CY 2024 for Level 5, which is the highest level, is around $30,700. The geometric mean cost of the Barostim implant procedure is nearly $46,000. In the CY 2024 OPPS proposed rule, we proposed to assign the Barostim implant procedure to APC 5465 (Level 5 Neurostimulator and Related Procedures).

Comment: The HOP Panel and multiple commenters including the manufacturer requested that CPT code 0266T be assigned to APC 1580 (New Technology—Level 43 ($40,001–$50,000)) with a payment rate of around $45,000. The commenters noted that in the CY 2023 OPPS/ASC final rule we assigned a different neurostimulator procedure whose geometric mean cost was over $25,000 more than the payment rate for APC 5465, CPT code 0424T (Insertion or replacement of neurostimulator system for treatment of central sleep apnea; complete system (transvenous placement of right or left stimulation lead, sensing lead, implantable pulse generator)), to New Technology APC 1581 (New Technology—Level 44 ($50,001–$60,000) with a payment rate of around $55,000 as APC 1581 more closely reflected the cost of the service.

Response: We agree with the commenters. The updated geometric mean for CPT code 0266T is around $47,300 which is nearly $17,000 more than the updated payment rate for APC 5465 of around $30,500. Also as noted by the commenters, we had in CY 2023 moved another neurostimulator procedure described by CPT code 0424T to a new technology APC when its geometric mean was found to be substantially higher than the payment rate for APC 5465.

After consideration of the public comments we received, we are not adopting our proposal as final. Instead, we are adopting a final APC assignment for CPT code 0266T to APC 1580 (New Technology—Level 43 ($40,001–$50,000)). Table 52 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 52: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0266T

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0266T	Implantation or replacement of carotid sinus baroreflex activation device; total system (includes generator placement, unilateral or bilateral lead placement, intra-operative interrogation, programming, and repositioning, when performed	S	1580

10. Barricaid® Spine/Lumbar Disk Surgery (APC 5115)

For CY 2024, we proposed to assign HCPCS code C9757 (Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and excision of herniated intervertebral disc, and repair of annular defect with implantation of bone anchored annular closure device, including annular defect measurement, alignment and sizing assessment, and image guidance; 1 interspace, lumbar) to APC 5115 (Level 5 Musculoskeletal Procedures) with a proposed payment rate of $13,269.40. The proposed short descriptor for HCPCS code C9757 was ''spine/lumbar disk surgery.''

Comment: We received a comment from the manufacturer of the Barricaid® device, which is the bone-anchored annular closure device that is implanted during the procedure described by HCPCS code C9757. Specifically, the commenter requested that we revise the short descriptor for HCPCS code C9757 from ''spine/lumbar disk surgery'' to ''spine bone-anchor implant surgery,'' which could help limit erroneous claims for HCPCS code C9757 that do not include the Barricaid® device. The commenter also requested that CMS issue a transmittal or Medicare Learning Network® (MLN) Matters article to educate hospital outpatient departments that a bone-anchored implant must be used to report HCPCS code C9757, and that the code cannot be reported using any other type of non-FDA approved technology or when a suture-based supply is used.

Response: We thank the commenter for their input. First, we note that coders are generally aware that they need to read the entire long descriptors, and not rely on short descriptors alone, for the codes they are billing to ensure they are

reporting the procedures, services, and items accurately. In addition, it is generally not our policy to judge the accuracy of provider coding and charging for purposes of ratesetting. We rely on hospitals and providers to accurately report the use of HCPCS codes in accordance with their code descriptors and CPT and CMS instructions, and to report services accurately on claims and charges and costs for the services on their Medicare hospital cost report. Nonetheless, we are sympathetic to the commenter's concern regarding the descriptor, and consequently, we believe that a slight modification to the short descriptor may be helpful to ensuring that a device is used every time the HCPCS code C9757 is billed on a claim. We note that there is a maximum number of characters that can be used for the short descriptor field. In light of this character field limitation and to further clarify that a device should be implanted each time HCPCS code C9757 is billed, for CY 2024 we are revising the short descriptor for the code from ''Spine/lumbar disk surgery'' to ''Spine device implant surgery.''

After consideration of the public comment, we are finalizing our proposal to assign HCPCS code C9757 to APC 5115 with one modification to the code's short descriptor. For CY 2024, the short descriptor for HCPCS code C9757 is ''Spine device implant surgery'' to clarify that a device must be implanted each time the service is performed. The final CY 2024 short descriptor for HCPCS code C9757 can be found in Addendum B to this final rule with comment period. Addendum B is available via the internet on the CMS website. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

11. Biliary Endoscopy CPT Codes 47539 and 47564 (APCs 5361 and 5362)

CPT code 47539 (Placement of stent(s) into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, without placement of separate biliary drainage catheter) with a geometric mean cost of around $7,576 and CPT code 47564 (Laparoscopy, surgical; cholecystectomy with exploration of common duct) with a geometric mean cost of around $7,576 describe procedures that are performed when a patient has a blockage of their bile duct. For the CY 2024 OPPS proposed rule, we proposed to assign both procedures to APC 5361 (Level 1 Laparoscopy and Related Services) with a payment rate of around $5,608.

Comment: One commenter requested that we assign both CPT code 47539 and CPT code 47564 to APC 5362 (Level 2 Laparoscopy and Related Services) with a payment rate of around $9,984. The commenter noted that both of these procedures had a geometric mean cost that was more than 2-times the lowest-cost significant procedure assigned to APC 5361 (CPT code 49587), with a 2-times limit of around $7,207, which is less than the $7,576 geometric mean rate for both procedures. The commenters contended the only reason there is not a 2-times violation is neither CPT code 47539 nor CPT code 47564 is a significant procedure for determining the payment rate for APC 5361. The commenter also noted that the procedures described by CPT codes 47539 and 47564 have clinical and resource similarities to both the procedures in the higher-cost portion of APC 5361 and the lower-cost portion of APC 5362, which was another reason the commenters believed the procedures should be moved to APC 5362.

Response: We appreciate the request of the commenter. Since the release of the CY 2024 OPPS proposed rule, we have updated our 2-times analysis of claims from CY 2022 that are used to set rates for CY 2024. Our updated results find that the 2-times limit for APC 5361 based on CPT code 49587 as the lowest-cost significant procedure is around $7,318. The updated geometric mean cost for CPT code 47539 is around $7,316, which means by just $2 there would not be a 2 times rule violation if CPT code 47539 was a significant procedure in determining the payment rate for APC 5361. For CPT code 47564, the updated geometric mean cost for the procedure is $7,557, which means there would be a 2 times rule violation if the procedure was significant in APC 5361. Our review of the procedures assigned to APC 5361 and APC 5362 found the procedure described by CPT code 47539 had more clinical and resource similarities with the procedures in APC 5361, while the procedure described by CPT code 47564 appeared to have more clinical and resource similarities with the procedures in APC 5362.

After consideration of the public comments we received, we are implementing our proposal without modification for CPT code 47539 to assign the procedure to APC 5361 (Level 1 Laparoscopy and Related Services). We also are implementing our proposal with modification for CPT code 47564 by assigning the procedure to APC 5362 (Level 2 Laparoscopy and Related Services). Table 53 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 53: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 47539 AND 47564

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
47539	Placement of stent(s) into a bile duct, percutaneous, including diagnostic cholangiography, imaging guidance (eg, fluoroscopy and/or ultrasound), balloon dilation, catheter exchange(s) and catheter removal(s) when performed, and all associated radiological supervision and interpretation; new access, without placement of separate biliary drainage catheter	J1	5361
47564	Laparoscopy, surgical; cholecystectomy with exploration of common duct	J1	5362

12. Bone Density Tests/Bone Mass Measurement: Biomechanical Computed Tomography (BCT) Analysis and Digital X-ray Radiogrammetry-Bone Mineral Density (DXR–BMD) Analysis) (APCs 5521, 5523, and 5731)

CPT code 0743T (Bone strength and fracture risk using finite element analysis of functional data and bone mineral density (BMD), with concurrent vertebral fracture assessment, utilizing data from a computed tomography scan, retrieval and transmission of the scan data, measurement of bone strength and BMD and classification of any vertebral fractures, with overall fracture-risk assessment, interpretation and report) became effective January 1, 2023. This code describes the service associated with BCT analysis with concurrent vertebral fracture assessment (VFA).

In addition to new CPT code 0743T, there are five existing CPT codes describing BCT analysis that were effective July 1, 2019. The codes and their long descriptors are listed below.

- 0554T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; retrieval and transmission of the scan data, assessment of bone strength and fracture risk and bone-mineral density, interpretation and report.
- 0555T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; retrieval and transmission of the scan data.
- 0556T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; assessment of bone strength and fracture risk and bone mineral density.
- 0557T: Bone strength and fracture risk using finite element analysis of functional data and bone-mineral density utilizing data from a computed tomography scan; interpretation and report.
- 0558T: Computed tomography scan taken for the purpose of biomechanical computed tomography analysis.

In the CY 2023 OPPS/ASC notice of proposed rulemaking (NPRM), we proposed to reassign CPT codes 0554T–0558T to status indicator E1. In response to public comment on the proposal, in the CY 2023 OPPS/ASC final rule (87 FR71844 through 71846), we stated that, based on our review and understanding of the service, BCT analysis does not meet Medicare's definition of bone mass measurement, as specified in § 410.31(a), which specifies the coverage of, and payment for, bone mass measurements for Medicare beneficiaries. Therefore, we assigned CPT codes 0554T–0558T and CPT code 0743T to status indicator ''E1'' to indicate that these codes are not covered by Medicare, and not paid by Medicare when submitted on outpatient claims (any outpatient bill type).

In the CY 2024 OPPS/ASC proposed rule, we proposed to continue to assign CPT codes 0554T–0558T and CPT code 0743T to status indicator ''E1.''

Comment: Several commenters stated that they disagree with the status indicator assignment of ''E1'' and that the BCT CPT codes 0554–0558T and CPT Code 0743T (BCT+VFA) meet the regulatory definition of Bone Mass Measurement (BMM). Commenters contended that the BCT and BCT+VFA procedures are reasonable and necessary diagnostic tests that meet all aspects of both the statutory and regulatory definitions of BMM.

Another commenter stated that they urge CMS to restore coverage for BCT codes and BCT with concurrent VFA as covered bone mass measurement and assign them to status indicators ''S.''

Response: We appreciate these comments. While CMS further considers this issue, we will not finalize, as proposed, the status indicator of ''E1'' for these codes, but instead are assigning certain BCT codes describing HOPD services to clinical APCs. Specifically, for CY 2024, we are assigning CPT code 0555T to APC 5731 (Level 1 Minor Procedures) and SI ''S,'' CPT code 0556T to APC 5523 (Level 3 Imaging without Contrast) and SI ''S,'' and CPT code 0558T to APC 5521 (Level 1 Imaging without Contrast) with SI of ''S,'' which were the same APC assignments for the codes between CY 2019 and CY 2022. In addition, we are assigning CPT codes 0554T, 0557T, and 0743T to SI ''M'' (Items and Services Not Billable to the MAC. Not paid under OPPS.) to indicate that these codes are not payable under the OPPS since they describe physician-only services. As we have consistently stated in past rules (87 FR 71879) and quarterly change requests to assign new codes to APCs (see, *e.g.,* Pub 100–04 Medicare Claims Processing, Transmittal 11937), the fact that a drug, device, procedure or service is assigned a HCPCS code and a payment rate under the OPPS does not imply coverage by the Medicare program, but indicates only how the product, procedure, or service may be paid if covered by the program.

Medicare Administrative Contractors (MACs) determine whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. Accordingly, we emphasize that HOPDs would only receive payment for these services when the appropriate MAC determines that the service meets the relevant conditions for coverage and payment.

In summary, after consideration of the public comments, we are not finalizing our proposal for CPT codes 0554T–0558T and CPT code 0743T. The final payment rates for the separately payable codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

13. Cardiac Computed Tomography Angiography (CCTA) (APC 5571)

For the 2006 update, the AMA's CPT Editorial Panel established six Category III CPT codes to describe cardiac computed tomography angiography with contrast materials effective January 1, 2006. The codes were active and separately payable under the OPPS between January 1, 2006, through December 31, 2009. The CPT Editorial Panel deleted the Category III CPT codes and replaced them with Category I CPT codes 75572 through 75574 effective January 1, 2010. With the deletion of the Category III CPT codes on December 31, 2009, we crosswalked the APC assignments from the Category III CPT codes (predecessor codes) to the new Category I CPT codes effective January 1, 2010. Since 2010, the Category I CPT codes describing cardiac computed tomography angiography with contrast materials are CPT codes 75572, 75573, and 75574. The codes and their long descriptors are listed below.

- 75572: Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3D image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)
- 75573: Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3D image postprocessing, assessment of left ventricular (LV) cardiac function, right ventricular (RV) structure and function and evaluation of vascular structures, if performed)
- 75574: Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3D image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)

For CY 2023, as we indicated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 71847 through 71850), we assigned the codes to APC 5571 (Level 1 Imaging with Contrast). As listed in the OPPS Addendum A (OPPS APCs) that was released with the CY 2023 OPPS/ASC final rule with comment period, APC 5571 was assigned a payment rate of $180.34 effective January 1, 2023. We note that the OPPS payment rate applies only to the hospital outpatient facility and does not include the physician service payment. Physician services are paid under Medicare's Physician Fee Schedule (PFS). For reference, the 54 below shows the total CY 2023 Medicare reimbursement for CPT codes 75572, 75573, and 75574.

TABLE 54: CY 2023 OPPS AND PFS Payment FOR CPT CODES 75572, 75573, AND 75574

HCPCS Code	CY 2023 OPPS (hospital outpatient facility)	CY 2023 PFS (physician service)	CY 2023 Total Medicare Reimbursement
75572	$ 180.34	$ 83.02	$ 263.36
75573	$ 180.34	$ 120.98	$ 301.32
75574	$ 180.34	$ 113.86	$ 294.20

For CY 2024, based on the latest claims data, we proposed to continue to assign the codes to APC 5571 with a proposed payment rate of $177.09. As a reminder, we update the OPPS payment rates on an annual basis consistent with the requirements set forth in section 1833(t)(9)(A) of the Act that requires the HHS Secretary to review, not less often than annually, and revise the APC groups, the relative payment weights, and the wage and other adjustments to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors. We received several comments related to our proposed payment for the CCTA codes. Many of the comments, which were form letters, addressed the same issues that were brought to our attention in the CY 2021 OPPS/ASC final rule (85 FR 85956 through 85959). Below is a summary of the public comments to the CY 2024 OPPS/ASC proposed rule and our responses to the comments.

Comment: Several commenters noted that the payment for the CCTA codes has declined since 2017 and expressed concern with the continued assignment to APC 5571. They indicated that the reimbursement amount is insufficient to cover the cost of providing the service and argued that the payment amount does not take into account the hospital resources required to perform the test, including the use of the equipment, medication administration, staff time, and scanner time. To pay appropriately for the service, many of the commenters requested the reassignment of CPT codes 75572 and 75573 to APC 5572 (Level 2 Imaging with Contrast), with a proposed payment of $369.86. These same commenters also requested the reassignment of CPT code 75574 to APC 5573 (Level 3 Imaging with Contrast), with a proposed payment rate of $775.83.

Response: Under the OPPS, we use the latest claims data to set the annual payment rates. Payment rates for CY 2024 are based on claims with dates of service between January 1, 2022, and December 31, 2022, processed through June 30, 2023. As illustrated in Table 55

below, analysis of our claims data shows that the geometric mean cost for the codes range between $150.58 and $219.06. Specifically, the geometric mean cost for CPT code 75572 is $150.57 based on 22,575 single claims (out of 40,066 total claims), $219.06 for CPT code 75573 based on 437 single claims (out of 678 total claims), and $193.29 for CPT code 75574 based on 55,871 single claims (out of 78,932 total claims). Based on our analysis, the geometric mean costs for all three codes are consistent with the geometric mean cost for APC 5571, whose geometric mean cost is $179.94. In contrast, the geometric mean costs for APCs 5572 and 5573 are $376.62 and $784.12, respectively. Based on the geometric mean costs for CPT codes 75572 (GMC $150.57) and 75573 (GMC $219.06), we do not believe that reassigning the codes to APC 5572 (GMC $376.62) would be appropriate. Similarly, based on the latest claims data for CPT code 75574 (GMC $193.29), we do not believe that reassigning the code to APC 5573 (GMC $784.11) would be appropriate. We believe that reassigning the codes to either APC 5572 or 5573 would significantly overpay for the service. Based on the claims data, we believe that assigning CPT codes 75572, 75573, and 75574 to APC 5571 remains appropriate based on clinical characteristics and resource homogeneity to the other services in the APC. In addition, because the CCTA CPT codes have been in existence since 2010, we do not believe that hospital outpatient facilities have been coding these services inappropriately. Consequently, we believe our claims data reflect the cost of providing the service.

TABLE 55: VOLUME FOR CCTA EXAMS (CLAIMS SUBMITTED BETWEEN 1/1/2013 THROUGH 12/31/2022)

Final Rule	Claim Submission Timeframe	75572 Single Freq	75572 Geometric Mean Cost	75573 Single Freq	75573 Geometric Mean Cost	75574 Single Freq	75574 Geometric Mean Cost
CY 2015	1/1/2013-12/31/2013	3,855	$205.23	164	$222.17	10,820	$231.29
CY 2016	1/1/2014-12/31/2014	4,188	$196.60	275	$231.58	10,481	$231.45
CY 2017	1/1/2015-12/31/2015	4,905	$195.81	256	$201.90	11,154	$237.58
CY 2018	1/1/2016-12/31/2016	5,703	$185.82	177	$166.19	12,848	$239.04
CY 2019	1/1/2017-12/31/2017	7,256	$185.70	143	$205.35	14,785	$230.69
CY 2020	1/1/2018-12/31/2018	12,299	$158.74	323	$185.26	25,434	$195.62
CY 2021/ CY 2022	1/1/2019-12/31/2019	14,262	$157.27	317	$193.55	32,502	$196.53
CY 2023	1/1/2021-12/31/2021	19,245	$159.60	371	$237.59	46,352	$208.47
CY 2024	1/1/2022-12/31/2022	22,575	$150.57	437	$219.06	55,871	$193.29

Comment: A commenter suggested discontinuing payment for CPT code 75573 and instead reassigning the current payment rate for CPT code 75573 for CPT codes 75574, 93571, and 93572. The commenter noted that in addition to CPT code 75574, CPT codes 93571 and 93572 are under-reimbursed.

Response: Under the OPPS, we cannot reallocate or remove the reimbursement from one active/existing code and distribute to other codes. In cases where

a code is deleted and replaced with another code, we will crosswalk the payment for the deleted code/predecessor code to the new code. However, in this case, CPT code 75573 is an active code under the OPPS, and its payment cannot be removed and reassigned to another code. Payment determination under the OPPS is based on analysis of the latest claims data. For CY 2024, OPPS payments are based on our analysis of claims with dates of service between January 1, 2022, and December 31, 2022, processed through June 30, 2023. As stated above, we have claims data for CPT code 75573, which indicates that the service is performed in the HOPD setting.

With regard to CPT codes 93571 and 93572 codes, we note these codes are assigned status indicator ''N'' to indicate that their payment is packaged in the primary code. Below are the complete long descriptors for CPT codes 93571 and 93572:

- 93571: Intravascular doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; initial vessel (list separately in addition to code for primary procedure)
- 93572: Intravascular doppler velocity and/or pressure derived coronary flow reserve measurement (coronary vessel or graft) during coronary angiography including pharmacologically induced stress; each additional vessel (list separately in addition to code for primary procedure)

The words ''list separately in addition to code for primary procedure'' are included in the long descriptors for CPT code 93571 and 93572 to indicate that that the codes are considered ''add-ons'' to another primary code that cannot be reported independently. Specifically, add-on codes must always be reported with another primary code on the same day. The AMA states in the CPT 2024 Professional Edition (page xviii) that ''add-on codes are always performed in addition to the primary service or procedure and must never be reported as a stand-alone code.'' In most cases, add-on codes are typically ancillary and supportive to a primary diagnostic or therapeutic modality and are an integral part of the primary service they support. As specified under regulation 42 CFR 419.2(b)(18), add-on codes are generally packaged under the OPPS, and payment for the codes are bundled with the primary codes. Consequently, CPT codes 93571 and 93572 are not paid separately under the OPPS, but instead, their payment is packaged into the primary code.

In addition, because we have claims data for CPT code 75573, we would not reallocate the payment for the code to CPT codes 93571, 93572, and 75574. As stated above, our claims data show a geometric mean cost of $219.06 for CPT code 75573 based on 437 single claims (out of 678 total claims). Therefore, we believe that CPT code 75573 should continue to be paid separately under APC 5571.

Comment: Many commenters urged CMS to allow hospitals the flexibility to submit charges for cardiac CT procedures with other than the general CT revenue code (0350) or the general MRI revenue code (0610), thereby allowing future estimates to reflect the true cost of providing the service. Some commenters suggested that the Medicare Administrative Contractors (MACs) have made it mandatory to report only the general CT revenue code (0350) for the CCTA codes. Another commenter reported that MACs have applied edits to the CCTA codes that prevent hospitals from reporting a cardiac revenue code for cardiac CT services when appropriate.

Response: Based on our evaluation, we have not found any MAC edits that prevent hospitals from reporting the appropriate revenue code for the CCTA codes. We analyzed our claims data and based on claims with dates of service between January 1, 2022, and December 31, 2022, processed through June 30, 2023, we found seven revenue codes reported with CPT codes 75572, 75573, and 75574, specifically, revenue codes 0320, 0321, 0329, 0350, 0351, 0352, and 0359. Of these seven revenue codes, four apply to CT services, specifically, revenue codes 0350, 0351, 0352, and 0359. As evidenced by the claims data, hospital outpatient facilities are reporting revenue codes that describe CT services for the CCTA codes. We note that the general MRI revenue code, specifically, revenue code 0610, was not reported with the CCTA codes. Moreover, as listed in Table 56 below, we included the costs for these revenue codes in the CY 2024 ratesetting. That is, the costs attributed to the CCTA codes are included in the payment for CPT codes 75572, 75573, and 75574.

TABLE 56: REVENUE CODES REPORTED WITH CCTA EXAMS CPT CODES 75572, 75573, AND 75574

2022 Revenue center ID	Description (applicable to CY 2022 claims)	Used in 2024 OPPS (2022 claims)	2552-96 Primary cost center source for CCR	2552-96 Primary cost center name	2552-10 Primary cost center source for CCR	2552-10 Primary cost center name
0320	Radiology - Diagnostic	Y	4100	Radiology-Diagnostic	0320	Radiology - Diagnostic
0321	Radiology - Diagnostic: Angiocardiography	Y	3030	Angiocardiography	0321	Radiology - Diagnostic: Angiocardiography
0329	Radiology - Diagnostic: Other	Y	4100	Radiology-Diagnostic	0329	Radiology - Diagnostic: Other
0350	CT Scan	Y	3230	CAT Scan	0350	CT Scan
0351	CT Scan: Head	Y	3230	CAT Scan	0351	CT Scan: Head
0352	CT Scan: Body	Y	3230	CAT Scan	0352	CT Scan: Body
0359	CT Scan: Other CT scans	Y	3230	CAT Scan	0359	CT Scan: Other CT scans

Furthermore, as we stated in the CY 2023 OPPS/ASC final rule (87 FR 71849), hospital outpatient facilities are responsible for reporting the appropriate cost centers and revenue codes. As stated in section 20.5 in Chapter 4 (Part B Hospital) of the Medicare Claims Processing, CMS ''does not instruct hospitals on the assignment of HCPCS codes to revenue codes for services provided under OPPS since hospitals' assignment of cost vary. Where explicit instructions are not provided, HOPDs should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report.'' Therefore, hospital outpatient facilities must determine the most appropriate cost center and revenue code for the CCTA codes. This instruction is reiterated in the Medicare Administrative Contractor (MAC) instructions for revenue code reporting for CCT and CCTA services, as noted in the various articles listed in Table 57. As stated in Table 57, MACs ''may specify revenue codes to help providers identify those revenue codes typically used'' to report a service, however, the guidance is purely advisory, and not mandatory, which is in contrast to statements made by several commenters. The MAC instructions can be found on the CMS.gov website, specifically, on the Medicare Coverage Database website.

TABLE 57: MEDICARE ADMINISTRATIVE CONTRACTORS (MAC) REVENUE CODE INSTRUCTION FOR CPT CODES 75572, 75573, AND 75574

Medicare Administrative Contractors (MACs) Instructions for Revenue Code Reporting for CCT and CCTA			
Medicare Coverage Database: https://www.cms.gov/medicare-coverage-database/search.aspx			
Contractors may specify revenue codes to help providers identify those revenue codes typically used to report this service. In most instances revenue codes are purely advisory. Unless specified in the article, services reported under other revenue codes are equally subject to this coverage determination. Complete absence of all revenue codes indicates that coverage is not influenced by revenue code and the article should be assumed to apply equally to all revenue codes.			
Article ID	Title	Medicare Administrative Contractor (MAC)	Revenue Code Suggestion
A56451	Billing and Coding: Cardiac Computed Tomography (CCT) and Coronary Computed Tomography Angiography (CCTA)	CGS Administrators, LLC	0321: Radiology - Diagnostic - Angiocardiography; 0359: CT Scan - CT - Other
A56691	Billing and Coding: Cardiac Computed Tomography & Angiography (CCTA)	Palmetto GBA	
A56737	Billing and Coding: Cardiac Computed Tomography (CCT) and Coronary Computed Tomography Angiography (CCTA)	National Government Services, Inc.	
A57552	Billing and Coding: Coronary Computed Tomography Angiography (CCTA)	Wisconsin Physicians Service Insurance Corporation	

In summary, after consideration of the public comments, we are finalizing our proposal, without modification, and assigning the CCTA CPT codes 75572, 75573, and 75574 to APC 5571. The final CY 2024 OPPS payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

14. Cardiac Leadless Pacemaker Procedures (APCs 5183, 5224, and 5741)

For the July 2023 update, the CPT Editorial Panel established 10 new codes effective July 1, 2023, to describe the various procedures related to three new leadless pacemaker systems, specifically, the Aveir VR, Aveir AR, and Aveir DR leadless pacemaker systems. The codes describe the insertion, removal and replacement, removal-only, and programming associated with the new devices. The codes, and their long descriptors are listed in Table 58. Based on our evaluation of the codes, we determined that the Aveir VR received FDA approval, however, the Aveir AR and Aveir DR Systems were still pending FDA approval. Because the Aveir VR System received FDA premarket approval (PMA) in March 2022 and was approved by CMS for Medicare coverage under Coverage with Evidence Development (CED) on June 21, 2022 (Study Title: Aveir VR Coverage With Evidence Development Post-Approval Study; Clinicaltrials.gov number: NCT05336877), we assigned the related CPT codes to specific status indicator and APC assignments effective July 1, 2023. For the Aveir AR, and Aveir DR Systems that were still pending FDA approval, we assigned the codes to status indicator ''E1'' to indicate that they were not payable by Medicare when submitted on outpatient claims (any outpatient bill type) because the services associated with these codes are either not covered by any Medicare outpatient benefit category, statutorily excluded by Medicare, or not reasonable and necessary. These codes, and their OPPS SI and APC assignments were listed in the July 2023 OPPS quarterly update CR (Transmittal 12077, Change Request 13210, dated June 13, 2023). Table 58 below list the codes, long descriptors, status indicators, and APC assignments for the 10 codes that were listed in the July 2023 OPPS quarterly update CR.

BILLING CODE 4150–28–P

TABLE 58: JULY 2023 OPPS SI AND APC ASSIGNMENTS FOR THE LEADLESS PACEMAKER CPT CODES 0795 – 0804T

CPT Code	Long Descriptor	July 2023 OPPS SI	July 2023 OPPS APC	July 2023 APC Group Title
0795T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; complete system (ie, right atrial and right ventricular pacemaker components)	E1		
0796T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right atrial pacemaker component (when an existing right ventricular single leadless pacemaker exists to create a dual-chamber leadless pacemaker system)	E1		
0797T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)	J1	5194	Level 4 Endovascular Procedures
0798T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography), when performed; complete system (ie, right atrial and right ventricular pacemaker components)	E1		
0799T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral	E1		

CPT Code	Long Descriptor	July 2023 OPPS SI	July 2023 OPPS APC	July 2023 APC Group Title
	venography), when performed; right atrial pacemaker component			
0800T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)	J1	5183	Level 3 Vascular Procedures
0801T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; dual-chamber system (ie, right atrial and right ventricular pacemaker components)	E1		
0802T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right atrial pacemaker component	E1		
0803T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)	J1	5194	Level 4 Endovascular Procedures
0804T	Programming device evaluation (in person) with iterative adjustment of implantable device to test the function of device and to select optimal permanent programmed values, with analysis, review, and report, by a physician or other qualified health care professional, leadless pacemaker system in dual cardiac chambers	Q1	5741	Level 1 Electronic Analysis of Devices

BILLING CODE 4150–28–C

For CY 2024, as listed in the OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to continue to assign the 10

codes to the same status indicator and APC assignments listed in Table 58. In addition to the codes effective July 1, 2023, we also listed the four Aveir AR-related CPT codes, specifically, CPT codes 0823T, 0824T, 0825T, and 0826T, that are effective January 1, 2024, in OPPS Addendum B, and proposed to assign them to status indicator ''E1'' since the device had not received FDA approval. The codes were listed in OPPS Addendum B with their placeholder codes since we had not received the final CPT code numbers from AMA in time for publication of the proposed rule.

- 0823T (placeholder code X125T): Insertion of permanent right atrial single-chamber leadless pacemaker
- 0824T (placeholder code X126T): Removal of permanent right atrial single-chamber leadless pacemaker
- 0825T (placeholder code X127T): Removal and replacement of permanent right atrial single-chamber leadless pacemaker
- 0826T (placeholder code X128T): Programming device evaluation, single chamber

We note a commenter provided background information on the technology associated with the new codes, the FDA approval for the three leadless pacemaker systems, and the cost of the complete system. First, the commenter clarified that the new codes relate to the Aveir DR dual-chamber leadless pacemaker, which is a modular system, that consists of two implanted leadless pacemakers, specifically, the Aveir VR single-chamber right ventricular component, and the Aveir AR single-chamber right atrial component. Secondly, the commenter clarified that the Aveir VR received FDA PMA approval in March 2022, and the Aveir DR and Aveir AR were approved by the FDA for commercial use through a PMA supplement on June 29, 2023. Additionally, the commenter reported that the price for the Aveir DR dual chamber leadless pacemaker is $24,000 and includes the following components: one Aveir VR right ventricular leadless pacemaker, one Aveir AR right atrial leadless pacemaker, two delivery catheters, and one introducer. The commenter indicated that the Aveir VR and Aveir AR devices may be implanted at the same time, thus representing the complete Aveir DR dual-chamber leadless pacemaker. Alternatively, the single-chamber components (Aveir VR and Aveir AR) may be implanted separately.

We received several comments related to our proposal. Below are the responses to the comments.

Comment: A commenter disagreed with the proposed APC assignment for the codes describing insertion of a leadless pacemaker for the complete system and single-chamber devices. Specifically, the commenter disagreed with the proposed assignment of APC 5194 (Level 4 Endovascular Procedures; proposed payment of $17,195.36) for CPT codes 33274 and 0797T, and suggested assignment to APC 5524 (Level 4 Pacemaker and Similar Procedures; proposed payment of $18,718.23). This same commenter disagreed with the status indicator assignment of ''E1'' for CPT codes 0795T, 0796T, and 0823T, and recommended revision to APC 5524. Another device manufacturer also disagreed with the proposed status indicator assignment of ''E1'' for CPT codes 0795T, 0796T, and 0823T, and recommended assignment to either APC 5231 (Level 1 ICD and Similar Procedures; proposed payment of $23,075.10) or APC 5224. This same device manufacturer recommended reassignment from status indicator ''E1'' to APC 5194 (Level 4 Endovascular Procedures; proposed payment of $17,195.36) for CPT codes 0796T and 0823T.

Response: Because the codes are new, specifically, CPT codes 0795T, 0796T, 0797T, and 0823T, we have no claims data. In determining the appropriate APC placement for new codes, we generally rely on input from a variety of sources, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; information from interested specialty societies; and review of all other information available to us. Based on our evaluation of the codes, we agree that these insertion codes are more appropriate in APC 5224 (Level 4 Pacemaker and Similar Procedures) based on clinical similarity and resource homogeneity to the procedures in the APC. Therefore, we are assigning CPT codes 0795T, 0796T, 0797T, and 0823T, to APC 5224 for CY 2024.

With respect to CPT code 33274, which was effective January 1, 2019, our analysis of the claims data for this final rule shows a geometric mean cost of about $19,560 based on 4,349 single claims (out of 4,408 total claims), which we believe is consistent with the geometric mean cost of approximately $19,082 for APC 5224. Therefore, we agree with the commenter that CPT code 33274 fits more appropriately in APC 5224 rather than APC 5194, whose geometric mean cost is about $17,173. Consequently, we are reassigning CPT code 33274 from APC 5194 to APC 5224 for CY 2024.

Comment: For the removal and replacement codes, specifically, CPT codes 0801T, 0802T, 0803T, and 0825T, some commenters disagreed with the proposed status indicator assignment of ''E1.'' For CPT code 0801T, the commenters recommended assignment to either APC 5224 or 5231, and for CPT code 0803T, they disagreed with assignment to APC 5194 and suggested assignment to APC 5224. For CPT codes 0802T and 0825T, the commenters recommended assignment to APC 5224.

Response: Because these removal and replacement codes are new, we have no claims data. However, based on our review of the codes, input from our clinicians, and their clinical similarity to the procedures in APC 5224, we believe these codes should be assigned to APC 5224 and the corresponding status indicator ''J1.'' Therefore, for CY 2024, we are assigning CPT codes 0801T, 0802T, 0803T, and 0825T to APC 5224 and SI ''J1.''

Comment: For the removal-only codes, specifically, CPT codes 0798T, 0799T, and 0824T, the commenters disagreed with the proposed status indicator assignment of ''E1.'' For CPT code 0798T, one commenter recommended assignment to APC 5183 (Level 3 Vascular Procedures; proposed payment of $3,054.97), while another commenter suggested assignment to APC 5184 (Level 4 Vascular Procedures; proposed payment of $5,284.18). Similarly, the commenters agreed that CPT codes 0799T and 0824T should be reassigned from status indicator ''E1'' to APC 5183. Another commenter suggested assigning the new leadless pacemaker removal-only codes, specifically, CPT codes 0798T, 0799T, 0800T, and 0824T, to the same APC as CPT code 33275 (APC 5183) since they all describe the same procedure.

Response: With the exception of CPT code 33275, which was effective January 1, 2019, we have no claims data for the removal-only codes, specifically, 0798T, 0799T, 0800T, and 0824T. However, based on input from our clinicians, and their similarity to CPT code 33275, we agree that all five codes should be placed in APC 5183. Therefore, for CPT codes 0798T, 0799T, and 0824T, we are reassigning the codes from status indicator ''E1'' to APC 5183 for CY 2024. We note that we did not receive any alternative APC recommendations for CPT codes 33275 and 0800T, therefore, we are finalizing their APC assignments as proposed.

Comment: For the programming code, specifically, CPT code 0826T, the commenters disagreed with the

proposed status indicator assignment of ''E1,'' and suggested assignment to APC 5741 (Level 1 Electronic Analysis of Devices; proposed payment of $36.79). One commenter recommended the assignment of CPT codes 0804T and 0826T to the same APC as existing CPT code 93279 (APC 5741) since they describe the same service.

Response: Because the code is new, we have no claims data. However, based on recommendations from our clinicians, and suggestions from the commenters, we are reassigning CPT code 0826T from status indicator ''E1'' to APC 5741 for CY 2024. Similarly, for CPT code 0804T, because the code is new, we have no claims data. However, based on input from the commenters, and suggestions from our clinicians, we are finalizing our proposal, without modification, to assign the code to APC 5741. For CPT code 93279, our analysis of the claims data for this final rule shows a geometric mean cost of approximately $34 based on 13,655 single claims (out of 22,664 total claims), which is in line with the geometric mean cost of approximately $37 for APC 5741. Therefore, for CPT code 93279, we are finalizing our proposal, without modification, to assign the code to APC 5741.

Comment: A device manufacturer reported that their suggested APCs for the new leadless pacemaker CPT codes do not include the device cost since they intend to submit a device pass-through application to CMS. They note that approval of the pass-through application would enable hospital outpatient facilities to receive separate payment for the device for a period of two to three years.

Response: We appreciate the clarification, and suggest the commenter refer to the Medicare Electronic Application Request Information System (MEARIS), specifically, at *https://mearis.cms.gov/public/home,* to submit their device pass-through application.

Comment: A commenter mentioned that in OPPS Addendum B of the CY 2024 OPPS/ASC proposed rule, CMS proposed to continue to assign HCPCS code G2066 (Interrogation device evaluation(s), (remote) up to 30 days; implantable cardiovascular physiologic monitor system, implantable loop recorder system, or subcutaneous cardiac rhythm monitor system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results) to APC 5741, however, in the CY 2024 PFS proposed rule (88 FR 52321), CMS proposed to delete the code, and assign the direct practice expense inputs to CPT codes 93297 and 93298. The commenter requested clarification on whether HCPCS code G2066 will remain active for CY 2024, and if not, what alternative codes should be reported by the hospital outpatient facilities.

Response: HCPCS code G2066 will be deleted December 31, 2023, with no replacement code. We note that HCPCS code G2066 does not describe an interrogation device evaluation associated with a leadless pacemaker system, rather, it describes an interrogation device evaluation for an implantable cardiovascular physiologic monitor system, implantable loop recorder system, or subcutaneous cardiac rhythm monitor system. Under the OPPS, the interrogation device evaluation code that should be reported for the leadless pacemaker systems is CPT code 93296. The code was effective January 1, 2009, and is assigned to APC 5741. Below is the complete long descriptor for the code:

- 93296: Interrogation device evaluation(s) (remote), up to 90 days; single, dual, or multiple lead pacemaker system, leadless pacemaker system, or implantable defibrillator system, remote data acquisition(s), receipt of transmissions and technician review, technical support and distribution of results.

In addition, we did not receive any comments on our proposed APC assignment for CPT code 93296. Therefore, for CY 2024, we are finalizing our proposed APC for this code. In summary, after consideration of the comments that we received, we are finalizing our proposal to the status indicator and APC assignments for the 18 codes listed in Tables 59, 60, 61, 62, and 63 below. Because the codes for the leadless pacemaker are new, we have no claims data. We believe that the assignment to APC 5224 for the insertion, as well as for the removal and replacement procedure codes, is the best approach at this time. Similarly, we believe that the assignment to APC 5183 for the removal-only codes are appropriate. We also believe that the assignment to APC 5741 for the programming and the interrogation device evaluation codes is appropriate at this time. We reiterate that we analyze our claims data on an annual basis to establish the annual OPPS payment rates. Once we have data, we will reevaluate and, if necessary, reassign the codes to appropriate APCs based on the latest claims data. Finally, the final payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

BILLING CODE 4150–28–C

15. Cardiac Magnetic Resonance Imaging (APC 5572)

For CY 2023, we assigned CPT code 75561 (Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences) to APC 5572 (Level 2 Imaging with Contrast) with a payment rate of $368.43. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain the assignment to APC 5572 with a payment rate of $369.86.

Comment: A commenter disagreed with the assignment to APC 5572 for CPT code 75561 and requested a change to APC 5573. The commenter indicated that the service described by the code is clinically similar to the service described by CPT code 75563 (Cardiac magnetic resonance imaging for morphology and function without contrast material(s), followed by contrast material(s) and further sequences; with stress imaging), which is proposed to be assigned to APC 5573 (Level 3 Imaging with Contrast), with a payment of $775.83.

Response: We reviewed our claims data for this final rule, which is based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023, and found that the resource costs associated with CPT codes 75561 and 75563 are very different. Specifically, our claims data show a geometric mean cost of about $440 for CPT code 75561 based on

23,451 single claims (out of 27,479 total claims), which is significantly lower than the geometric mean cost of approximately $833 for CPT code 75563 based on 3,377 single claims (out of 3,818 total claims). We believe that the geometric mean cost of about $440 for CPT code 75561 is consistent with the geometric mean cost of approximately $377 for APC 5572, rather than APC 5573, whose geometric mean cost is approximately $784. Based on the data, we believe that the clinical and resource characteristics of CPT code 75561 are sufficiently similar to the other procedures assigned to APC 5572 and should continue to be assigned to the APC.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 75561 to APC 5572 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI definitions for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

16. Cardiac Resynchronization Therapy Procedures (APCs 5054, 5221, 5223, 5231, 5731, and 5741)

On November 1, 2016, CMS approved for Medicare coverage the Category B Investigational Device Exemption (IDE) study associated with EBR System's WiSE System for cardiac resynchronization therapy (Study Title: Stimulation Of the Left Ventricular Endocardium for Cardiac Resynchronization Therapy in Non-Responders and Previously Untreatable Patients, SOLVE CRT; NCT number NCT02922036; IDE number G150244). In 2019, AMA established eight Category III CPT codes associated with the WiSE System effective January 1, 2019. The codes are CPT codes 0515T through 0522T, and describe the implant, removal and replacement, revision, interrogation, and programming of the system. For 2024, the AMA's CPT Editorial Panel revised the descriptors for existing CPT codes 0517T, 0518T, 0519T, 0520T, and established three new codes, specifically, CPT codes 0861T, 0862T, and 0863T, effective January 1, 2024.

For the 2024 update, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to assign the codes to the SIs and APCs listed in Table 64 below, for the existing, new, and revised codes.

BILLING CODE 4150–28–P

TABLE 64: EXISTING, NEW, AND REVISED CATEGORY III CPT CODES RELATED TO THE WISE SYSTEM

CPT Code	2023 Description	2024 Description	Proposed CY 2024 OPPS APC	Proposed CY 2024 OPPS APC Group Title	Proposed CY 2024 OPPS Payment
0515T	Insertion; complete system	Insertion; complete system	5231	Level 1 ICD and Similar Procedures	$23,075.10
0516T	Insertion; electrode	Insertion; electrode	5222	Level 2 Pacemaker and Similar Procedures	$8,264.84
0517T	Insertion; battery and/or transmitter only	Insertion; (both) battery and transmitter	5222	Level 2 Pacemaker and Similar Procedures	$8,264.84
0518T	Removal; battery and/or transmitter	Removal; battery	5211	Level 1 Electrophysiologic Procedures	$1,146.59
0861T	N/A	(new code for 2024) Removal; (both) battery and transmitter	5211	Level 1 Electrophysiologic Procedures	$1,146.59
0519T	Removal and replacement; battery and/or transmitter	Removal and replacement; (both) battery and transmitter	5221	Level 1 Pacemaker and Similar Procedures	$3,903.23
0520T	Removal and replacement; battery and/or transmitter, including a new electrode	Removal and replacement; Battery	5221	Level 1 Pacemaker and Similar Procedures	$3,903.23
0862T	N/A	(new code for 2024) Relocation; battery	5054	Level 4 Skin Procedures	$1,770.89
0863T	N/A	(new code for 2024) Relocation; transmitter	5054	Level 4 Skin Procedures	$1,770.89
0521T	In-person interrogation evaluation	In-person interrogation evaluation	5731	Level 1 Minor Procedures	$26.53
0522T	In-person programming device evaluation	In-person programming device evaluation	5741	Level 1 Electronic Analysis of Devices	$36.79

BILLING CODE 4150–28–C

We received comments from the WiSE System manufacturer on our proposed assignments for the codes listed in Table 64. The commenter clarified that the

IDE clinical trial associated with the WiSE System has ended and that they expect FDA PMA approval in the second quarter of 2024. The commenter also provided the following target pricing for the components of the WiSE System:

- WiSE System: $45,000
- Electrode: $17,300
- Battery: $9,000
- Transmitter: $18,700
- Battery and Transmitter: $27,700

Of the 11 codes, the device manufacturer disagreed with the proposed APC assignments for seven codes listed in Table 64. Below are the comments associated with certain codes, their suggested APC assignments, and our responses to the comments.

Comment: For CPT code 0515T (Insertion of wireless cardiac stimulator for left ventricular pacing, including device interrogation and programming, and imaging supervision and interpretation, when performed; complete system (includes electrode and generator [transmitter and battery])), we proposed to continue to assign to APC 5231 (Level 1 ICD and Similar Procedures; proposed payment of $ 23,075.10). The device manufacturer disagreed with the assignment and suggested reassignment to APC 1581 (New Technology—Level 44 ($50,001–$60,000)) with a proposed payment of $55,000.50, based on its target price of $45,000 for the complete WiSE System.

Response: CPT code 0515T was effective January 1, 2019. We note that the 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Analysis of our claims data show a geometric mean cost of about $43,974 based on 2 single claims (out of 2 total claims). The commenter reported a target price of $45,000 for the complete system, however, based on the low volume of only 2 single claims, we believe that we should maintain the code's assignment to APC 5231 before reassigning to a more appropriate APC. We believe that the continued assignment to APC 5231 will enable Medicare to track the services accordingly and establish an appropriate payment for the code. Therefore, we are finalizing our proposal to APC 5231 for CPT code 0515T.

Comment: The device manufacturer disagreed with our proposal to continue to assign CPT code 0516T to APC 5222 (Level 2 Pacemaker and Similar Procedures; proposed payment of $8,264.84) and recommended reassignment to APC 5224 (Level 4 Pacemaker and Similar Procedures; proposed payment of $18,718.23).

Response: CPT code 0516T was also effective January 1, 2019. Our claims data show a geometric mean cost of about $9,645 based on 2 single claims (out of 2 total claims). Based on our evaluation of the procedure, opinion from our clinicians, and the similarity of the procedure to CPT code 33207 (Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); ventricular), which we proposed for assignment to APC 5223 (Level 3 Pacemaker and Similar Procedures; proposed payment of $10,354.26), we believe that APC 5223 is the more appropriate assignment for CPT code 0516T. Therefore, for CY 2024, we are finalizing our proposal with modification, and assigning CPT code 0516T to APC 5223.

Comment: As noted in Table 64, the code descriptor for CPT code 0517T in CY 2023 described the insertion of the battery and/or transmitter only; however, for 2024, the revised descriptor describes the insertion of both the battery and transmitter. We proposed to continue to assign CPT code 0517T to APC 5222 (Level 2 Pacemaker and Similar Procedures; proposed payment of $8,264.84). A commenter disagreed with the assignment and recommended reassignment to APC 5232 (Level 2 ICD and Similar Procedures; proposed payment of $31,975.11). We note the commenter listed APC 5231 (Level 1 ICD; proposed payment of $23,075.10) but included in parentheses the proposed payment of $31,975.11, which is the proposed payment for APC 5232 (Level 2 ICD). We believe the commenter meant to suggest APC 5232 rather than APC 5231.

Response: Based on our analysis of the data for this final rule, our claims data shows a geometric mean cost of approximately $51,240 based on 2 single claims (out of 2 total claims) for CPT code 0517T. Based on the revised descriptor which describes insertion of a battery and a transmitter, as well as input from our clinicians, we believe we should reassign the code from APC 5222 (Level 2 Pacemaker and Similar Procedures; proposed payment of $8,264.84) to APC 5223 (Level 3 Pacemaker and Similar Procedures; proposed payment of $10,354.26). Because the IDE clinical study associated with the WiSE System has just ended and the device is still pending FDA PMA approval, we do not believe that we should reassign CPT code 0517T to APC 5232 at this time. We believe that assignment to APC 5223 for CPT code 0517T is the best approach at this time. Therefore, for CY 2024, we are finalizing our proposal with modification, and reassigning CPT code 0517T to APC 5223. We will evaluate the APC assignment for CPT code 0517T in next year's rulemaking to determine whether another APC would be more appropriate.

Comment: As noted in Table 64, for CY 2023, CPT code 0518T described the removal of the ''battery and/or transmitter'' and was assigned to APC 5221 (Level 1 Pacemaker and Similar Procedures). However, for 2024, based on its revised description of removal of ''battery component only,'' we proposed to reassign the code to APC 5211 (Level 1 Electrophysiologic Procedures; proposed payment of $1,146.59) to reflect the reduced resources to perform the procedure. A commenter disagreed with the proposed assignment and suggested reassignment to APC 5222 (Level 2 Pacemaker and Similar Procedures; proposed payment of $8,264.84) consistent with the APC assignment for CPT code 33233 (Removal of permanent pacemaker pulse generator only).

Response: Based on our analysis of the data for this final rule, we have no claims data for CPT code 0518T. However, based on input from our clinicians and the code's similarity to 33241 (Removal of implantable defibrillator pulse generator only), which is proposed to be assigned to APC 5221 (Level 1 Pacemaker and Similar Procedures), we believe that we should reassign the code to APC 5221. Therefore, for CY 2024, we are finalizing our proposal with modification, and reassigning CPT code 0518T to APC 5221.

Comment: As noted in Table 64, for CY 2023, CPT code 0519T described removal and replacement of the battery and/or transmitter. However, for CY 2024, the code has been revised to describe the removal and replacement of both the battery and transmitter. For CY 2024, we proposed to continue to assign the code to APC 5221 (Level 1 Pacemaker and Similar Procedures; proposed payment of $ 3,903.23). A commenter disagreed with the assignment and suggested reassignment to APC 5232 (Level 2 ICD and Similar Procedures; proposed payment of $31,975.11). Similar to CPT code 0517T, the commenter listed APC 5231 (Level 1 ICD; proposed payment of $23,075.10) but included in parentheses a proposed payment amount of $31,975.11, which is the proposed payment for APC 5232 (Level 2 ICD). We believe the commenter meant to suggest APC 5232 rather than APC 5231.

Response: Analysis of our claims data show a geometric mean cost of about $6,127 for CPT code 0519T based on 4

single claims (out of 4 total claims). Because the revised code describes the removal and replacement of the battery and transmitter, we believe this code should be assigned to the same APC as CPT code 0517T. Therefore, for CY 2024, we are finalizing our proposal with modification, and assigning CPT code 0519T to APC 5223.

Comment: As noted in Table 64, for CY 2023, CPT code 0520T described the removal and replacement of a pulse generator, including a new electrode, and was assigned to APC 5231 (Level 1 ICD and Similar Procedures) with a payment rate of $22,818.32. However, for 2024, the code descriptor has been revised significantly and now describes the removal and replacement of the battery component only. Based on the reduced work associated with the revised descriptor, we proposed to reassign CPT code 0520T to APC 5221 (Level 1 Pacemaker and Similar Procedures; proposed payment of $3,903.23). The device manufacturer disagreed with the proposal and suggested assignment to APC 5223 (Level 3 Pacemaker and Similar Procedures; proposed payment of $10,354.26), consistent with the APC assignment for CPT code 33206 (Insertion of new or replacement of permanent pacemaker with transvenous electrode(s); atrial)).

Response: We have no claims data for CPT code 0520T, however, based on our evaluation of the procedure and recommendation from our clinicians, we agree with the commenter that the code should be reassigned to APC 5223. Therefore, for CY 2024, we are finalizing our proposal with modification, and assigning CPT code 0520T to APC 5223.

Comment: CPT code 0861T is a new code for CY 2024. We proposed to assign the code to APC 5211 (Level 1 Electrophysiologic Procedures; proposed payment rate of $ 1,146.59), based on its similarity to CPT code 0518T (Removal of only pulse generator component(s) (battery and/or transmitter) of wireless cardiac stimulator for left ventricular pacing), which is also proposed to APC 5211. The commenter disagreed with the proposal, and recommended assignment to APC 5222 (Level 2 Pacemaker and Similar Procedures; proposed payment of $8,264.84).
