Response: Consistent with our final policy for CPT code 0518T, we believe that we should reassign CPT code 0861T to APC 5221. Therefore, for CY 2024, we are finalizing our proposal with modification, and assigning CPT code 0861T to APC 5221.

Comment: As listed in Table GX1, we proposed to assign CPT codes 0862T, 0863T, 0521T, and 0522T, to the APCs listed in Table GX1. The device manufacturer agreed with our APC assignments for the codes.

Response: We appreciate the commenter's feedback. Therefore, for CY 2024, we are finalizing our proposal without modification for CPT codes 0862T, 0863T, 0521T, and 0522T.

Finally, we remind the commenter that under the OPPS, one of our goals is to make payments that are appropriate for the services that are necessary for the treatment of Medicare beneficiaries. The OPPS, like other Medicare payment systems, is budget neutral and increases are limited to the annual hospital market basket increase reduced by the productivity adjustment. We note that, in a budget-neutral system, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment. We rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its initial payment rates. For new procedures and items, we get many requests from manufacturers to increase the reimbursement for the code associated with their procedures and items. These requests, and their accompanying estimates for expected total patient utilization, often reflect very low rates of patient use of expensive equipment, resulting in high per-use costs for which requesters believe Medicare should make full payment. Medicare does not, and we believe should not, assume responsibility for more than its share of the costs of procedures based on projected utilization for Medicare beneficiaries and does not set its payment rates based on initial projections of low utilization for services that require expensive capital equipment. On balance, we believe that our payment rates reflect the costs that are associated with providing care to Medicare beneficiaries and are adequate to ensure access to services (80 FR 70374).

In summary, after consideration of the public comment that we received, we are finalizing the APC assignments for CPT codes 0515T through 0522T, and 0861T through 0863T to the APCs listed in Table 65 below. As we do every year, we will reevaluate the APC assignments for these codes in the next rulemaking cycle. We remind hospitals that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS. The final payment rates for the codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

TABLE 65: FINAL CY 2024 SIs AND APC ASSIGNMENTS FOR THE CARDIAC RESYNCHRONIZATION THERAPY CPT CODES 0515T THROUGH 0522T, AND CPT CODES 0861T THROUGH 0863T

17. Catheter Placement Codes (APCs 5181 Through 5184)

For CY 2024, we proposed to continue to assign catheter placement CPT codes 36555–36597 status indicator ''J1'' and to APCs 5181 through 5184 with the proposed payment rates listed in table 66.

BILLING CODE 4150–28–P

TABLE 66: PROPOSED CY 2024 OPPS SI, APC, AND PAYMENT RATE FOR THE CATHETER PLACEMENT CODES

HCPCS Code	Long Descriptor	Proposed CY 2024 OPPS SI	Proposed CY 2024 OPPS APC	Proposed CY 2024 OPPS APC Title	Proposed CY 2024 OPPS Payment Rate
36555	Insertion of non-tunneled centrally inserted central venous catheter; younger than 5 years of age	J1	5183	Level 3 Vascular Procedures	$3,054.97
36556	Insertion of non-tunneled centrally inserted central venous catheter; age 5 years or older	J1	5183	Level 3 Vascular Procedures	$3,054.97
36557	Insertion of tunneled centrally inserted central venous catheter, without subcutaneous port or pump; younger than 5 years of age	J1	5184	Level 4 Vascular Procedures	$5,284.18
36558	Insertion of tunneled centrally inserted central venous catheter, without subcutaneous port or pump; age 5 years or older	J1	5183	Level 3 Vascular Procedures	$3,054.97
36560	Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; younger than 5 years of age	J1	5183	Level 3 Vascular Procedures	$3,054.97
36561	Insertion of tunneled centrally inserted central venous access device, with subcutaneous port; age 5 years or older	J1	5183	Level 3 Vascular Procedures	$3,054.97
36563	Insertion of tunneled centrally inserted central venous access	J1	5184	Level 4 Vascular Procedures	$5,284.18

	device with subcutaneous pump				
36565	Insertion of tunneled centrally inserted central venous access device, requiring 2 catheters via 2 separate venous access sites; without subcutaneous port or pump (e.g., tesio type catheter)	J1	5183	Level 3 Vascular Procedures	$3,054.97
36566	Insertion of tunneled centrally inserted central venous access device, requiring 2 catheters via 2 separate venous access sites; with subcutaneous port(s)	J1	5184	Level 4 Vascular Procedures	$5,284.18
36568	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; younger than 5 years of age	J1	5182	Level 2 Vascular Procedures	$1,534.27
36569	Insertion of peripherally inserted central venous catheter (PICC), without subcutaneous port or pump, without imaging guidance; age 5 years or older	J1	5182	Level 2 Vascular Procedures	$1,534.27
36570	Insertion of peripherally inserted central venous access device, with subcutaneous port; younger than 5 years of age	J1	5183	Level 3 Vascular Procedures	$3,054.97
36571	Insertion of peripherally inserted central venous access device, with subcutaneous port; age 5 years or older	J1	5183	Level 3 Vascular Procedures	$3,054.97

36576	Repair of central venous access device, with subcutaneous port or pump, central or peripheral insertion site	J1	5182	Level 2 Vascular Procedures	$1,534.27
36578	Replacement, catheter only, of central venous access device, with subcutaneous port or pump, central or peripheral insertion site	J1	5183	Level 3 Vascular Procedures	$3,054.97
36580	Replacement, complete, of a non-tunneled centrally inserted central venous catheter, without subcutaneous port or pump, through same venous access	J1	5182	Level 2 Vascular Procedures	$1,534.27
36581	Replacement, complete, of a tunneled centrally inserted central venous catheter, without subcutaneous port or pump, through same venous access	J1	5183	Level 3 Vascular Procedures	$3,054.97
36582	Replacement, complete, of a tunneled centrally inserted central venous access device, with subcutaneous port, through same venous access	J1	5183	Level 3 Vascular Procedures	$3,054.97
36583	Replacement, complete, of a tunneled centrally inserted central venous access device, with subcutaneous pump, through same venous access	J1	5184	Level 4 Vascular Procedures	$5,284.18
36584	Replacement, complete, of a peripherally inserted central venous catheter	J1	5182	Level 2 Vascular Procedures	$1,534.27

	(PICC), without subcutaneous port or pump, through same venous access, including all imaging guidance, image documentation, and all associated radiological supervision and interpretation required to perform the replacement				
36585	Replacement, complete, of a peripherally inserted central venous access device, with subcutaneous port, through same venous access	J1	5183	Level 3 Vascular Procedures	$3,054.97
36595	Mechanical removal of pericatheter obstructive material (e.g., fibrin sheath) from central venous device via separate venous access	J1	5183	Level 3 Vascular Procedures	$3,054.97
36596	Mechanical removal of intraluminal (intracatheter) obstructive material from central venous device through device lumen	J1	5182	Level 2 Vascular Procedures	$1,534.27
36597	Repositioning of previously placed central venous catheter under fluoroscopic guidance	J1	5182	Level 2 Vascular Procedures	$1,534.27

BILLING CODE 4150–28–C

Comment: We received one comment where the commenter requested that we change the status indicator for all catheter placements CPT codes in the 365XX series from status indicator ''J1'' to status indicator ''T.'' This commenter stated that there are times that patients require placement of such a catheter and then receive an infusion of a drug such as chemotherapy. Because several of those codes are assigned to status indicator ''J1,'' the drug cost, unless the drug is a pass-through drug, is not reimbursed. For one infusion, Lutathera (HCPCS code A9513), the drug cost is $55,000 and the $1,487 payment for C–APC 5182 clearly does not cover that cost. The commenter noted that while outlier payment will apply, it is inadequate to compensate for the actual expenditure for the treatment.

Response: The Outpatient Coding Editor (IOCE) will package the drug cost into the Comprehensive APC, even if we change the status indicators for the catheter placement codes from ''J1'' to ''T'' because the APCs that the catheter placement codes are assigned to are assigned to status indicator ''J1.'' Therefore, the drug costs would not be reimbursed separately if we change the status indicators for the catheter placement codes from ''J1'' to ''T.'' Because of this, the only way to receive separate payment for the individual

procedures in these situations would be for the status indicator of the APC and all services assigned to the APC to be ''T.'' We continue to believe that this APC is appropriately assigned to comprehensive status. While there may be cases that would involve more complexity and cost, those packaged costs are reflected in claims used for ratesetting and the HCPCS and APC geometric mean costs, to the degree that they are performed in that manner. Nevertheless, we appreciate the comment, and we will take the commenter's recommendation into consideration in future rulemaking.

In summary, after consideration of the comment we have received, we are finalizing our proposal without modification. Specifically, we will continue to assign catheter placement codes listed in Table 66 to status indicator ''J1'' for CY2024. We plan to review the comprehensive APC policy for CY 2025 to determine if we need to adopt any packaging changes as part of that rulemaking. The final CY 2024 OPPS payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

18. Cerene Cryotherapy Endometrial Ablation Procedure (APC 5415)

For CY 2023, we assigned CPT code 58356 (Endometrial cryoablation with ultrasonic guidance, including endometrial curettage, when performed) to APC 5415 (Level 5 Gynecologic Procedures) with a payment rate of $4,635.11. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain the assignment for the code to APC 5415 with a payment rate of $4,783.96.

Comment: A commenter requested that we finalize the proposed assignment to APC 5415 for CPT code 58356.

Response: We reviewed our claims data for this final rule with comment period, which is based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023, and found no claims data for CPT code 58356. However, because the code has been in existence since January 1, 2005, we reviewed our historical claims data for the last 5 years, specifically, the historical cost statistics released with the CY 2019 through CY 2023 OPPS/ASC final rules, and found some claims for the code. Specifically, our historical claims data show a geometric mean cost that ranged between $1,712 and $5,032, based on 3 and 5 single claims. Because the code has been assigned to this same APC for many years now, we believe we should the maintain the assignment to APC 5415 for CPT code 58356. We note that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 58356 to APC 5415 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

19. Complex Bunion Correction Procedures CPT Codes 28297 and 28740 (APC 5114)

CPT code 28297 (Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method) with a geometric mean cost of around $10,664 and CPT code 28740 (Arthrodesis, midtarsal or tarsometatarsal, single joint) with a geometric mean cost of around $10,376 describe complex bunion correction procedures. For the CY 2024 OPPS proposed rule, we proposed assigning both procedures to APC 5114 (Level 4 Musculoskeletal Procedures) with a payment rate of around $6,974.

Comment: One commenter noted that CPT codes 28297 and 28740 were close to violating the 2 times rule in APC 5114 and eligible for reassignment to APC 5115 (Level 5 Musculoskeletal Procedures) with a payment rate of around $13,421 if these procedures had been identified as significant procedures for 2 times rule purposes as the lowest-cost significant procedure. The lowest cost significant procedure in APC 5114 (CPT code 27385) had a geometric mean cost of around $5,357 and two times the amount would have been $10,714, which is just $50 more than the cost of CPT 28297 and about $350 more than the cost of CPT 28740. The commenter believed that there was a good chance that these procedures may have geometric means exceeding the 2 times rule requirements once the CY 2024 claims data were updated.

Response: Our review of updated data for CY 2024 found that neither CPT code 28297 nor CPT code 28740 violates the 2 times rule in their current assignment to APC 5114 if the procedures were significant. The updated estimated 2-times limit based on CPT code 27385 was around $10,797. CPT code 28297's updated geometric mean cost was around $10,728 and CPT code 28740 updated geometric mean cost was around $10,565. Also, these procedures were towards the higher-cost end of APC 5114 but moving them to APC 5115 would group CPT codes 28297 and 28740 with procedures that are generally more complex and resource-intensive than the procedures described by CPT codes 28297 and 28740.

After consideration of the public comments we received, we are implementing our proposal without modification for CPT codes 28297 and 28740. Table 67 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 67: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 28297 AND 28740

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
28297	Correction, hallux valgus (bunionectomy), with sesamoidectomy, when performed; with first metatarsal and medial cuneiform joint arthrodesis, any method	J1	5114
28740	Arthrodesis, midtarsal or tarsometatarsal, single joint	J1	5114

20. Cryoablation of the Prostate (APC 5376)

CPT code 55873 (Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring)) describes the procedure associated with cryoablation of the prostate. For CY 2023, we assigned the code to APC 5376 (Level 6 Urology and Related Services), with a payment rate of $8,557.53. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to continue the code's assignment to APC 5376 with a payment rate of $8,847.08.

Comment: A commenter requested that we finalize the proposed assignment to APC 5376 for CPT code 55873.

Response: We note that the CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We reviewed the claims data for this final rule, and based on our review, we found the geometric mean cost of approximately $8,942 for CPT code 55873 based on 938 single claims (out of 942 total claims), is consistent with the geometric mean cost of about $9,022 for APC 5376. Based on the resource costs, we believe that CPT code 55873 appropriately fits in APC 5376 based on its clinical similarity and resource homogeneity to the codes in the APC.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 55873 to APC 5376 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

21. Drug Induced Sleep Endoscopy Evaluation CPT Code 42975 (APC 5153)

For the CY 2024 OPPS final rule, we proposed that CPT code 42975 (Drug-induced sleep endoscopy, with dynamic evaluation of velum, pharynx, tongue base, and larynx for evaluation of sleep-disordered breathing, flexible, diagnostic) with a geometric mean around $1,291 be assigned to APC 5153 (Level 3 Airway Endoscopy) with a payment rate of around $1,657.

Comment: One commenter supported our decision to assign CPT code 42975 to APC 5153.

Response: We appreciate the support of the commenter.

After consideration of the public comment we received, we are implementing our proposal without modification for CPT code 42975 to continue to assign the procedure to APC 5153 (Level 3 Airway Endoscopy). Table 68 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 68: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 42975

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
42975	Drug-induced sleep endoscopy, with dynamic evaluation of velum, pharynx, tongue base, and larynx for evaluation of sleep-disordered breathing, flexible, diagnostic	J1	5153

22. EchoGo Echocardiography Image Processing Service (APC 5743)

Effective July 1, 2023, based on a New Technology application received by CMS for an echocardiography image processing service, CMS established C9786 (Echocardiography image post processing for computer aided detection of heart failure with preserved ejection fraction, including interpretation and report) and assigned it to APC 5742 (Level 2 Electronic Analysis of Devices). For CY 2024, CMS proposed to continue to assign HCPCS code C9786 to APC 5742.

Comment: One commenter supported the establishment of HCPCS code C9786 to describe the service and believed that the clinical APC group to which we proposed to assign the code for C9786 was appropriate. The commenter recommended that we work with the manufacturer to ensure proper accounting of hospital resources used to furnish the service.

Response: We thank the commenter for their support. We welcome ongoing dialogue and engagement from interested parties, including manufacturers, regarding hospital resource costs and suggestions for payment changes for consideration in future rulemaking.

Comment: We received a comment from the manufacturer requesting that HCPCS code C9786 be reassigned to APC 5743 (Level 3 Imaging without Contrast), which had a proposed payment rate of $277.18. The commenter believes that assigning HCPCS code C9786 to APC 5743 would be more appropriate based on resources involved in furnishing the service. The commenter explained that in addition to a per-service cost, there are a number of other costs incurred by hospitals to furnish the service, including a cardiac sonographer, use of a Picture Archiving and Communication System (PACS) workstation, and IT related costs. The commenter explained that the combined costs incurred by hospitals to furnish C9786 are considerably greater than those for procedures assigned to APC 5742, but are similar to the costs incurred for procedures assigned to APC 5743.

Response: We thank the commenter for their recommendation. Based on our evaluation of the additional information provided and the services assigned to APC 5743, we agree that there are more resource similarities between HCPCS code C9786 and the codes assigned to APC 5743 than to the codes assigned to APC 5742. Therefore, for CY 2024 we are finalizing assigning HCPCS code C9786 to APC 5743.

After consideration of the public comments, we are finalizing the assignment of HCPCS code C9786 to APC 5743. The final CY 2024 payment rate for these codes can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website. In addition, we note that CMS recognizes that software-based technologies are rapidly evolving, like the product used for HCPCS code C9786. Consistent with our comment solicitation on payment policy for software as a service (SaaS) procedures in the CY 2023 OPPS final rule (87 FR 72035 and 72036), we are considering, for future rulemaking, whether or not specific adjustments to payment policies and rate calculations are necessary to more accurately and appropriately pay for these products and services across settings of care. CMS remains open to feedback on these issues and welcomes engagement from interested parties, including from manufacturers, providers, and beneficiaries.

23. Endoscopic Procedure—Upper GI Tract CPT Code 43252 (APC 5302)

CPT code 43252 (Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy) describes a service that is used to visualize the upper portions of the GI tract from the esophagus to the duodenum. For the CY 2024 OPPS proposed rule, the geometric mean cost for this procedure was around $1,611, and we proposed to assign CPT code 43252 to APC 5302 (Level 2 Upper GI Procedures) with a payment rate of around $1,854. The payment rate for APC 5302 is approximately $240 more than the geometric mean cost of CPT code 43252.

Comment: Two commenters requested that we assign CPT code 43252 to APC 5303 (Level 3 Upper GI Procedures) with a payment rate of around $3,803 for CY 2024. The procedure is assigned to APC 5303 for CY 2023 APC. Commenters assert that the payment amount for APC 5302 is too low for the procedure described by CPT code 43252. One commenter referenced an independent data analysis showing the number of claims for the service declined from around 340 services in CY 2021 to around 213 services in CY 2022. The commenter had questions about the quality of the CY 2022 data as some providers who had previously performed the procedure described by CPT code 43252 did not perform the procedure in CY 2022.

Response: As we have stated regularly over the history of the OPPS, it is the responsibility of providers and other interested parties and not CMS to resolve potential claims and reporting issues for individual CPT codes and medical services payable by Medicare. There is no clear systematic error with the claims data for CPT code 43252. Also, the geometric mean cost for the service, which is around $1,596, is substantially lower than the payment rate for APC 5302 which is around $1,863. We note as well that in CY 2021, the geometric mean cost for CPT code 43252, which was around $1,985 was roughly $1,350 less than the payment rate for APC 5303, which was around $3,350. Therefore, it is not unexpected that the procedure would be reassigned to a lower-paying APC for CY 2024.

After consideration of the public comments we received, we are implementing our proposal without modification for CPT code 43252 to continue to assign the procedure to APC 5302 (Level 2 Upper GI Procedures). Table 69 shows the finalized status indicator and APC assignment for the procedure code. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 69: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 43252

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
43252	Esophagogastroduodenoscopy, flexible, transoral; with optical endomicroscopy	J1	5302

24. Endovascular Procedures With Coronary And Peripheral Intravascular Lithotripsy (IVL) (APC 5192, 5193, 5194)

Coronary IVL is a device that, according to its manufacturer, can help surgeons perform a safe and effective angioplasty procedure when arterial plaque is calcified. These procedures also are known as percutaneous coronary intervention (PCI). Coronary IVL received device pass-through status in the OPPS on July 1, 2021, and the device pass-through status is scheduled to expire on June 30, 2024. The device is described by HCPCS code C1761 (Catheter, transluminal intravascular lithotripsy, coronary) and is currently assigned to APC 2033 (Cath, trans intra litho/coro). The procedure also is reported with add-on CPT code 0715T (Percutaneous transluminal coronary lithotripsy (list separately in addition to code for primary procedure)), which is packaged in the OPPS. In CY 2024, CPT code 0715T is being replaced by CPT code 92972 (Percutaneous transluminal coronary lithotripsy (list separately in addition to code for primary procedure)). We propose to package this code as well.

According to the manufacturer, the Coronary IVL device is used primarily with four endovascular procedures:

- C9600 (Percutaneous transcatheter placement of drug eluting intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch);
- 92928 (Percutaneous transcatheter placement of intracoronary stent(s), with coronary angioplasty when performed; single major coronary artery or branch);
- 92943 (Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of intracoronary stent, atherectomy and angioplasty; single vessel); and
- 92920 (Percutaneous transluminal coronary angioplasty; single major coronary artery or branch).

For the OPPS CY 2024 proposed rule, we proposed to assign these procedures to either APC 5192 (Level 2 Endovascular Procedures) or APC 5193 (Level 3 Endovascular Procedures), based on the geometric mean cost of each procedure. Because both APC 5192 and APC 5193 are comprehensive APCs, claims with higher costs for the PCI procedures described are eligible for a complexity adjustment which can provide one higher APC level of payment for these procedures. We also proposed to continue to assign HCPCS code C1761 to APC 2033 until June 30, 2024, when device pass-through status ends for HCPCS code C1761. Starting July 1, 2024, HCPCS code C1761 is proposed to be packaged with its associated endovascular procedures.

Comment: Three commenters including the manufacturer of the Coronary IVL have requested that we take action to preserve the additional payment for the device described by HCPCS code C1761 that is used for PCI procedures through the end of CY 2024. The commenters suggest that we either use our equitable adjustment authority to extend pass-through status for HCPCS code C1761 through December 31, 2024, or increase the payment for the procedures most frequently used with Coronary IVL starting on July 1, 2024.

Response: We appreciate the commenters' request to ensure consistent payment throughout CY 2024 for PCI procedures (HCPCS code C9600, CPT codes 92928, 92943, and 92920) that are performed using the Coronary IVL device described by HCPCS code C1761. However, only a small share of the PCI procedures are using the Coronary IVL device. Less than 6 percent of the procedures billed with HCPCS code C9600, CPT code 92928, and CPT code 92943 use the device described by HCPCS code C1761. For CPT code 92920, the percentage of procedures using the Coronary IVL device is less than 0.5 percent. The low amount of utilization of the Coronary IVL device with these PCI procedures means that it would not be appropriate to assign these procedures to a higher-paying APC to account for the cost of the device. These code combinations would also not meet the criteria for a complexity adjustment, as discussed in section II.A.2.b of this final rule with comment period. Likewise, we do not see a justification for extending device pass-through status for HCPCS code C1761. Device pass-through did not start for the Coronary IVL device until after the most serious disruptions in medical care occurred with the COVID–19 PHE, and none of the commenters suggested that CMS did not get adequate cost data for the device. In fact, the manufacturer was even willing to have pass-through status end early for HCPCS code C1761 because they felt enough cost data regarding the device had been collected.

After consideration of the public comments we received, we are implementing our proposal without modification for HCPCS codes C1761 and C9600 and CPT codes 92920, 92928, 92943, and 92972. Table 70 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period or the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

92972	Percutaneous transluminal coronary lithotripsy (List separately in addition to code for primary procedure)	N	N/A	N	N/A

BILLING CODE 4150–28–C

25. Extracorporeal Shock Wave Lithotripsy CPT Code 50590 (APC 5374)

Extracorporeal shock wave lithotripsy is a procedure used to break up stone in the urinary tract using directed shock wave therapy. Shock waves are generated by a lithotripter which is a machine and capital equipment for the provider. The procedure is described by CPT code 50590 (Lithotripsy, extracorporeal shock wave). For the CY 2024 OPPS proposed rule, CPT code 50590 had a geometric mean of around $3,450, and we proposed to assign the

service to APC 5374 (Level 4 Urology and Related Services).

Comment: The HOP Panel and multiple commenters requested that CPT code 50590 be reassigned to APC 5375 (Level 5 Urology and Related Services) with a payment rate of around $5,016 to account for some of the capital cost of the procedure. The capital costs identified were primarily the purchase and maintenance of the lithotripter which, according to one commenter, cost $600,000 to purchase and another $60,000 a year to maintain. The commenters also stated that the procedure described by CPT code 50590 has clinical and resource similarity with procedures currently assigned to APC 5375.

Response: We disagree with the commenters. Payments for services are for costs for providing individual procedures, but capital costs, depreciation, and other similar costs are largely excluded from our determination of the cost of a procedure. We note that the OPPS is a budget neutral system and, as such, the OPPS does not pay the full hospital cost of services, including for services that require the purchase and maintenance of high-cost capital equipment. We also compared the cost of CPT code 50590 to the cost of procedures currently assigned to APC 5375. While the cost of the procedure described by CPT code 50590 is around the middle of the cost range for APC 5374, it would be one of the lowest cost procedures in APC 5375. The number of procedures for CPT code 50590 would mean it would be a significant procedure in APC 5375, but its cost is around $700 lower than the current lowest-cost significant procedure for that APC. In addition, CPT code 50590 would be overpaid by around $1,500 if it was reassigned to APC 5375. Accordingly, we are continuing to assign CPT code 50590 to APC 5374.

After consideration of the public comments we received, we are implementing our proposal without modification for CPT code 50590 to continue to assign the procedure to APC 5374 (Level 4 Urology and Related Services). Table 71 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 71: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 50590

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
50590	Lithotripsy, extracorporeal shock wave	J1	5374

26. Eye-Movement Analysis Without Spatial Calibration (APC 5734)

The CPT Editorial Panel established CPT code 0615T (Eye-movement analysis without spatial calibration, with interpretation and report), effective July 1, 2020, to describe eye-movement analysis without spatial calibration that involves the use of the EyeBOX system as an aid in the diagnosis of concussion, also known as mild traumatic brain injury (mTBI). The EyeBOX is intended to measure and analyze eye movements as an aid in the diagnosis of concussion within one week of head injury in patients 5 through 67 years of age in conjunction with a standard neurological assessment of concussion. A negative EyeBOX classification may correspond to eye movement that is consistent with a lack of concussion. A positive EyeBOX classification corresponds to eye movement that may be present in both patients with or without a concussion.

For CY 2023, we assigned CPT code 0615T to APC 5734 (Level 4 Minor Procedures) with a payment rate of $116.11. For CY 2024, we proposed to continue to assign the code to APC 5734 with a payment rate of $123.302.

Comment: A device manufacturer disagreed with the proposed APC assignment and requested a revision to APC 5722 (Level 2 Diagnostic Tests and Related Services) with a payment rate of $ 304.35. The device manufacturer indicated that the proposed payment is insufficient since the cost to provide the service is about $250. The commenter noted that the proposed reimbursement of $123.302 does not include the cost of providing the EyeBox service, along with the other services provided on the same day (clinic visit and other services). The device manufacturer suggested reassigning CPT code 0615T to APC 5722 (Level 2 Diagnostic Tests and Related Services) to ensure appropriate payment for the service associated with the EyeBOX test.

Response: For 2024, the OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Even with the latest claims data for this final rule with comment period, we still have no claims data for CPT code 0615T. We discussed in the CY 2023 OPPS/ASC final rule with comment period that based on the claims used for the CY 2023 OPPS update, we saw no claims associated with this code (87 FR 71858). Thus, this is the second year in which we have no claims data for the code. We believe that EyeBOX may not be utilized by Medicare patients, and this may be the reason we have no claims data for the code. Based on the lack of claims data, we believe that we should maintain the assignment to APC 5734 for CPT code 0615T. Therefore, we are not revising the APC assignment for CY 2024 for CPT code 0615T. We remind the commenter that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS.

In summary, after consideration of the public comment we received, we are finalizing our proposal, without modification, to continue assignment to APC 5734 for CPT code 0615T for CY 2024. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reported under the OPPS. In addition, we refer readers to Addendum A of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addenda A and Addendum B are available via the internet on the CMS website.

27. Femoral Popliteal Revascularization Procedure (APC 5192)

For CY 2023, we assigned CPT code 37224 (Revascularization, endovascular, open or percutaneous, femoral, popliteal artery(s), unilateral; with transluminal angioplasty) to APC 5192 (Level 2 Endovascular Procedures), with a payment rate of $5,215.40. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain the assignment to APC 5192 with a payment rate of $5,500.17.

Comment: A commenter requested an APC reassignment for CPT code 37224 from APC 5192 to APC 5193 (Level 3 Endovascular Procedures), with a payment rate of $10,602.57, based on resource cost and clinical comparability to the procedures in the APC 5193.

Response: The CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We analyzed the claims data for this final rule, and based on our review, we found the geometric mean cost of approximately $8,211 for CPT code 37224 based on 6,690 single claims (out of 6,730 total claims), is consistent with the geometric mean cost of about $5,598 for APC 5192, rather than the geometric mean cost of approximately $10,774 for APC 5193. Based on the claims data, we believe that CPT code 37224 fits more appropriately in APC 5192 rather than in APC 5193 based on resource cost and clinical similarity and to the procedures in APC 5192. We note that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS based on our analysis of the latest claims data.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 37224 to APC 5192 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

28. Fluorescence In Situ Hybridization (FISH) Laboratory Service (APC 5672)

For CY 2024, we proposed to reassign CPT code 88366 ((In situ hybridization (eg, FISH), per specimen; each multiplex procedure) from APC 5673 (Level 3 Pathology) to APC 5672 (Level 2 Pathology) with a proposed payment rate of $165.41.

Comment: We received two comments explaining that CMS's proposal to reassign CPT code 88366 to APC 5672 would not capture the resource costs of the service. The commenters stated that, while not reflected in the OPPS claims data, the direct supply and equipment practice expense costs associated with the service reported under CPT code 88366 are nearly $30 higher than the proposed CY 2024 payment rate for APC 5672. The commenters requested that we continue to assign CPT code 88366 to APC 5673, as CMS has in previous years.

Response: We appreciate the commenters' feedback on our proposal. However, we have no reason to believe that the claims data used to calculate the cost for CPT code 88366 does not appropriately reflect the hospitals' cost for providing this service, as asserted by the commenter. The commenter did not provide an explanation as to why the OPPS claims data did not reflect the cost of the service. We examined our claims data for the last several years, given the concern raised by the commenter regarding the accuracy of the claims data. In our review of the claims data for CPT code 88366, we found a steadily moderate volume of claims, and geometric mean costs that have remained stable, and consistently lower than the geometric mean costs for APC 5673 while remaining close to the geometric mean cost for APC 5672. For example, for the CY 2021 and CY 2022 final rules, the single frequency claims for CPT code 88366 were approximately 350 per year and the geometric mean costs for the code were just slightly below the geometric mean cost of APC 5672. Similarly, when we reviewed the claims data for the CY 2024 proposed rule, the claims frequency remained consistent at 348 single frequency claims and the geometric mean cost for CPT code 88366 was $113.14, approximately $50 lower than the geometric mean for APC 5672, which was $167.30. Therefore, based on our review of the available claims data, we believe that assigning CPT code 88366 to APC 5672 would be clinically and resource appropriate.

After consideration of the public comments, we are finalizing our proposal without modification to assign CPT code 88366 to APC 5672 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

29. Fractional Flow Reserve Derived From Computed Tomography (FFRCT)/ HeartFlow (APC 5724)

Fractional Flow Reserve Derived from Computed Tomography (FFRCT), also known by the trade name HeartFlow, is a noninvasive diagnostic service that allows physicians to measure coronary artery disease in a patient through the use of coronary CT scans. The HeartFlow service is indicated for clinically stable symptomatic patients with coronary artery disease, and, in many cases, may avoid the need for an invasive coronary angiogram procedure. HeartFlow uses a proprietary data analysis process performed at a central facility to develop a three-dimensional image of a patient's coronary arteries, which allows physicians to identify the fractional flow reserve to assess whether patients should undergo further invasive testing (that is, a coronary angiogram).

HeartFlow is currently described by CPT code 0503T (Noninvasive estimated coronary fractional flow reserve (ffr) derived from coronary computed tomography angiography data using computation fluid dynamics physiologic simulation software analysis of functional data to assess the severity of coronary artery disease; analysis of fluid dynamics and simulated maximal coronary hyperemia, and generation of estimated ffr model). On January 1, 2024, CPT code 0503T will be replaced by CPT code 75580 (Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional). HeartFlow is currently assigned to APC 5724 (Level 4 Diagnostic Tests and Related Services), and we have proposed for CY 2024 to continue to assign HeartFlow (CPT code 75580) to APC 5724 with a payment rate of around $1,024.

Comment: One commenter expressed concerns that HeartFlow is underpaid in its current and proposed APC assignment of APC 5724, which the commenter feels may limit access to the procedure.

Response: The geometric mean cost for the HeartFlow procedure in CY 2024 is around $860 which is substantially lower than the payment rate for APC 5724 which is around $1,024. The HeartFlow procedure is receiving a payment that is over $160 the estimated cost of the service, which means most providers are receiving sufficient payment for the service.

Comment: Multiple commenters supported our proposal to continue to assign HeartFlow to APC 5724 for CY 2024.

Response: We appreciate the support of the commenters of our policy.

After consideration of the public comments we received, we are finalizing our proposal without modification. Table 72 shows the finalized status indicator and APC assignment for CPT code 75580 for CY 2024. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 72: FINAL CY 2024 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 75580

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
75580	Noninvasive estimate of coronary fractional flow reserve (FFR) derived from augmentative software analysis of the data set from a coronary computed tomography angiography, with interpretation and report by a physician or other qualified health care professional	S	5724

30. Gastric Electrophysiology Mapping with Simultaneously Validated Patient System Profiling (GEMS) Service (APC 5723)

Effective July 1, 2023, based on a New Technology application received by CMS for the GEMS service, CMS established HCPCS code C9787 (Gastric electrophysiology mapping with simultaneous patient symptom profiling) and assigned it to APC 5723 (Level 3 Diagnostic Tests and Related Services). For CY 2024, CMS proposed to continue to assign HCPCS code C9787 to APC 5723 with a proposed payment rate of $512.71 for CY 2024.

Comment: We received several comments, including a comment from the manufacturer, requesting that we reassign HCPCS code C9787 to New Technology APC 1520 (New Technology—Level 20 ($1801–$1900)) with a payment rate of $1,850 given the lack of resource coherence with APC 5723. The commenters provided invoice costs and stated that the proposed APC assignment would be insufficient to cover the cost of furnishing the service and, therefore, may limit patient access. Per the comments received, hospitals would incur a minimum cost of $1,489 for the single-use device and supply costs associated with the Gastric Alimetry System, in addition to capital equipment costs of $10,000 for the Gastric Alimetry Reader as well as other capital costs. Given these costs, one commenter stated that even reassigning HCPCS code C9787 to the highest level in the same APC series as proposed, APC 5724 (Level 4 Diagnostic Tests and Related Services), would be insufficient to cover the costs of the service. While one commenter stated that the closest clinical APC with clinical and resource coherence for the GEMS service is APC 5302 (Level 2 Upper GI Procedures) with a proposed payment rate of $1,833.10 for CY 2024, the commenter still believed that assignment to a New Technology APC would be most appropriate because the service is new and the technology was first cleared by the FDA in June 2022. The commenter further stated that without an assignment to a New Technology APC, there is a significant risk that CMS will never generate the necessary claims data to assign the service to an appropriate clinical APC because hospitals will not offer the service when payment is less than a third of the cost to provide it.

Response: We thank the commenters for their input.

We disagree with the APC assignments recommended by commenters based on the purported costs of the service. Based on our review of the technology used as part of the service, clinical similarity of the service to existing procedures, input from CMS medical advisors, and review of all other information available to us, after further evaluation, we have found close resource and clinical similarities between HCPCS code C9787 and certain procedures currently assigned to APC 5723, including CPT code 0779T (Gastrointestinal myoelectrical activity study, stomach through colon, with interpretation and report). For example, both services are non-invasive diagnostic aids for gastrointestinal disorders that collect electrical signals through adhesive patches. From a resource perspective, we believe the costs associated with CPT code 0779T would be similar to those for HCPCS code C9787 based on similarities between the technologies and invoice prices. While the comments submitted focused on the purported resource costs of HCPCS code C9787, we did not find that the information provided was sufficient to differentiate between the service described by CPT code 0779T and that of HCPCS code C9787, and ultimately demonstrate that an assignment to APC 5723 is inappropriate. Because we believe that HCPCS code C9787 has similar clinical and resource characteristics as CPT code 0779T, we are finalizing our proposal to continue to assign C9787 to APC 5723 for CY 2024.

After consideration of the public comments, we are finalizing our proposal to continue to assign HCPCS code C9787 to APC 5723. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

31. High Intensity-Focused Ultrasound (HIFU) of the Prostate (APC 5376)

CPT code 55880 (Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (hifu), including ultrasound guidance) was effective January 1, 2021. For CY 2023, we assigned the code to APC 5376 (Level 6 Urology and Related Services),

with a payment rate of $8,557.53. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain the assignment to APC 5376 with a payment rate of $8,847.08.

Comment: A commenter requested that we finalize the proposed assignment to APC 5376 for CPT code 55880.

Response: Our analysis of the claims data for this final rule demonstrates that the geometric mean cost for CPT code 55880 is approximately $6,613, which is consistent with APC 5376, whose geometric mean cost ranges between $6,613 and $9,827. We believe the code fits appropriately in APC 5376 based on clinical similarity and resource homogeneity with the procedures in the APC.

In summary, after consideration of the public comment, we are finalizing our proposal without modification to assign CPT code 55880 to APC 5376 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

32. Hospital Outpatient Clinic Visit for Assessment and Management of a Patient (G0463)

In 2014, CMS established HCPCS code G0463 to describe the service associated with a hospital outpatient clinic visit for assessment and management of a patient. In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75042), we stated that the code is applicable for hospital use only representing any clinic visit under the OPPS. We further stated that HCPCS code G0463 replaces evaluation and management (E&M) CPT codes 99201–99205 (new patient) and 99211–99215 (established patient), thereby eliminating the distinction between new and established clinic visits.

Comment: We received two comments requesting CMS revise the definition of HCPCS code G0463 (Hospital Outpatient Clinic Visit for Assessment and Management of a Patient), and issue guidance for the correct use of this code, or alternatively create a new HCPCS code that describes a hospital outpatient department assessment. Both commenters assert that commercial payers are processing institutional claims from hospitals which include HCPCS code G0463 and have implemented billing policies which inappropriately conflate HCPCS code G0463 as a professional Evaluation and Management (E/M) code. The commenters state that the misuse of HCPCS code G0463 does not support orderly, consistent, and standardized hospital outpatient coding and billing for outpatient visits, and it is CMS's responsibility to ensure that the code is used correctly.

Response: HCPCS code G0463 was established for use under Medicare's hospital OPPS. We reiterate that HCPCS code G0463 is used to describe hospital outpatient clinic services, not professional services. As part of the Health Insurance Portability and Accountability Act (HIPAA) code set, third-party payers may use any HCPCS code, including HCPCS codes established by CMS, to implement their policies, however, CMS does not establish third-party payer payment policies. Because the request to modify the descriptor is to implement third-party payer payment policies, we disagree that CMS should be responsible for providing instructions for how the code should be reported on non-Medicare claims. Third-party payers routinely provide coding guidance for how providers should report services and items for payment under their specific policies. If the commenters have concerns with the instructions provided by the third-party payers, we recommend the commenters reach out to the third-party payer that provided the guidance. We note that under the OPPS, HCPCS code G0463 is used to report clinic visits and enable Medicare to pay appropriately for those visits. For more information on the history of HCPCS code G0463, refer to the CY 2014 OPPS/ASC final rule with comment period.

33. Imaging of Retina for Detection or Monitoring of Disease (CPT Code 92229) (APC 5733)

CPT code 92229 (Imaging of retina for detection or monitoring of disease; point-of-care autonomous analysis and report, unilateral or bilateral) is performed to screen patients with diabetes for signs of diabetic retinopathy and other eye diseases. The code was established in January 2021 and assigned to APC 5733 (Level 3 Minor Procedures). The code was assigned to Level 3 Minor Procedures because the service had clinical and resource similarity to long-established CPT code 92227 (Imaging of retina for detection or monitoring of disease; with remote clinical staff review and report, unilateral or bilateral) which also is assigned to Level 3 Minor Procedures.

In CY 2022, there were 174 claims for CPT code 92229 and the geometric mean for the service was $34.53. The cost of the procedure was substantially closer to the payment rate for APC 5732 (Level 2 Minor Procedures) with a payment rate of $34.53 than to the payment rate for APC 5733 of $58.79. Based on these data, we proposed assigning CPT code 92229 to APC 5732 for CY 2024.

Comment: Multiple commenters requested that we continue to assign CPT code 92229 to APC 5733 for CY 2024. The commenters asserted that there had not been enough claims data to accurately determine the cost of the procedure. Also, the commenters noted that the procedure described by CPT code 92229 had clinical and resource similarities to other procedures that had been assigned to either Level 3 Minor Procedures (APC 5733) or Level 4 Minor Procedures (APC 5734). Finally, the commenters also expressed concerns that assigning CPT code 92229 to APC 5732 would reduce access to retinal screenings for people with diabetes or at risk for eye diseases, especially for patients who are either poor or members of minority populations.

Response: We note that CMS recognizes that software-based technologies are rapidly evolving, like the procedure described by CPT code 92229. In line with our comment solicitation on payment policy for software as a service (SaaS) procedures in the CY 2023 OPPS final rule (87 FR 72035 and 72036), CMS is considering, for future rulemaking, whether or not specific adjustments to payment policies and rate calculations are necessary in order to more accurately and appropriately pay for these products and services across settings of care. CMS remains open to feedback on these issues and welcomes engagement from interested parties, including from manufacturers, providers, and beneficiaries. We agree with the commenters that for CPT code 92229 we should wait for more claims data to be available before adjusting the current payment rates for these services.

After consideration of the public comments we received, we are implementing our proposal with modification by maintaining the current assignment for CPT code 92229 in APC 5733 (Level 3 Minor Procedures). Table 73 shows the finalized status indicator and APC assignment for CPT code 92229 for CY 2024. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 73: FINAL CY 2024 OPPS APC AND STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 92229

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
92229	Imaging of retina for detection or monitoring of disease; point-of-care autonomous analysis and report, unilateral or bilateral	S	5733

34. Imagio® Breast Imaging Service (APC 5522)

Effective October 1, 2023, based on a New Technology application received by CMS for the Imagio® Breast Imaging System, CMS established HCPCS code C9788 (Opto-acoustic imaging, breast (including axilla when performed), unilateral, with image documentation, analysis and report, obtained with ultrasound examination) and assigned it to APC 5521 (Level 1 Imaging without Contrast). For CY 2024, CMS proposed to continue to assign HCPCS code C9788 to APC 5521. Additionally, the AMA established a new Category III code to describe the same service, which will be effective January 1, 2024. For CY 2024, CMS also proposed to assign CPT placeholder code X183T (Opto-acoustic imaging, breast, unilateral, including axilla when performed, real-time with image documentation, augmentative analysis and report (List separately in addition to code for primary procedure)) to APC 5521, the same APC to which HCPCS code C9788 is assigned. Since the release of the proposed rule, CPT placeholder code X183T has been finalized as CPT code 0857T. We note that because both HCPCS code C9788 and CPT code 0857T describe the same service, effective January 1, 2024, CMS will delete HCPCS code C9788 and only CPT code 0857T will be used to bill for the service. For clarity, we will refer only to CPT code 0857T throughout this discussion regarding the final payment policy for the service for CY 2024.

Comment: We received a comment from the manufacturer stating that the initial assignment to APC 5521 is inappropriately low to cover hospital costs to furnish the service. Based on resource costs, the commenter requested that CMS reassign CPT code 0857T from APC 5521 to APC 5523 (Level 3 Imaging without Contrast) with a proposed CY 2024 payment rate of $236.31. Specifically, the commenter provided a breakdown of the per-use device cost by dividing the price of the capital equipment, the Imagio® Breast Imaging System, by its useful life of 5 years and further dividing it by an estimated total use per year. The commenter noted that the cost breakdown was provided based on figures that had been updated since the time of their New Technology APC application in December 2022. Based on the calculations of the per-use device cost, as well as the procedure costs for equipment, labor, and supply, the commenter stated that the proposed payment rate for APC 5523 was a more appropriate APC assignment for the service.

Response: We thank the commenter for their comment. We note that, in a budget neutral environment, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment, like that of the Imagio® Breast Imaging System. We believe that our payment rates reflect the costs that are associated with providing care to Medicare beneficiaries and are adequate to ensure access to services (80 FR 70374). Therefore, we rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its initial payment rates for new services that lack hospital claims data based on realistic Medicare utilization projections for all such services delivered in cost-efficient hospital outpatient settings.

With that said, based on the comment received, including the cost information provided, and further review of the service, we agree that the proposed APC assignment for CPT code 0857T to APC 5521 is not appropriate. However, we also do not believe that Medicare should pay for the entire cost of capital equipment as provided by the manufacturer when hospitals will furnish the service using the same equipment for both Medicare and non-Medicare beneficiaries. Therefore, we believe that an APC assignment to APC 5522 (Level 2 Imaging without Contrast) with a proposed payment rate of $106.04 would be more resource appropriate.

Comment: The commenter requested CMS's feedback on what cost data or cost analysis are accepted by CMS when products are new to the market. Specifically, when there are few claims submitted for a new device, the commenter asked whether CMS would be open to accepting invoices provided by the company or other documentation to ensure an appropriate initial APC assignment rather than having to go through multiple rounds of reassignment requests through multiple rulemaking cycles.

Response: We appreciate the comment. We generally assign new CPT codes to an APC based on input from a variety of sources, including, but not limited to, review of the resource costs and clinical similarity of the service to existing procedures; input from CMS medical advisors; information from interested specialty societies; and review of all other information available to us. We also believe continued engagement with interested parties through notice and comment rulemaking is a fundamental piece of the OPPS and allows for CMS to gather additional information. Regarding invoice pricing, CMS considers invoices provided by commenters or manufacturers, as well as other available cost information when assigning services to clinical APCs. However, invoice pricing is not the only piece of information that we consider, and therefore, we may appropriately assign a service to a clinical APC based on clinical and resource similarities, with a payment rate that nevertheless may not match the initial invoice costs provided exactly.

After consideration of the public comment, we are finalizing the assignment of CPT code 0857T to APC 5522. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. We also refer readers to

Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

35. InSpace Subacromial Tissue Spacer Procedure (APC 5115)

For 2024, we proposed to continue to assign HCPCS code C9781 Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression acromioplasty, and biceps tenodesis when performed) to APC 5115 (Level 5 Musculoskeletal Procedures) with a proposed payment rate of $13,269.40.

Comment: We received several comments that endorsed the proposed APC assignment. Commenters expressed strong support for CMS's proposed increase to the payment rates associated with the InSpace balloon placement procedure described by HCPCS code C9781. They stated that the payment rates ensure that both patients and healthcare providers are able to fully leverage the benefits this technology offers.

Response: We appreciate the commenters' support of our proposal. Based on our review of claims data available for this final rule with comment period, we believe an assignment to APC 5115 for CPT code C9781 is appropriate for CY 2024.

In summary, after consideration of the public comments, we are finalizing our proposal without modification and assigning CPT code C9781 to APC 5115 for CY 2024. The final CY 2024 OPPS payment rate for the code can be found in Addendum B to this final rule with comment period.

36. Integrated Neurostimulation Services for Bladder Dysfunction (APCs 5461 and 5464)

For CY 2024, the CPT Editorial Panel established four new Category III CPT codes, specifically, CPT codes 0816T, 0817T, 0818T and 0819T to describe integrated neurostimulation services for bladder dysfunction, effective January 1, 2024. CPT code 0816T is associated with the eCoin System. Because the final CY 2024 CPT code numbers were not available when we published the proposed rule, the codes were listed as placeholder codes X129T, X130T, X131T and X132T in the OPPS Addendum B of the CY 2024 OPPS/ASC proposed rule.

- 0816T: Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (*e.g.,* array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subcutaneous
- 0817T: Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (*e.g.,* array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subfascial
- 0818T: Revision or removal of integrated neurostimulation system for bladder dysfunction, including analysis, programming, and imaging, when performed, posterior tibial nerve; subcutaneous
- 0819T: Revision or removal of integrated neurostimulation system for bladder dysfunction, including analysis, programming, and imaging, when performed, posterior tibial nerve; subfascial

In the 2024 OPPS/ASC proposed rule, we proposed to assign CPT codes 0816T and 0817T to APC 5464 (Level 4 Neurostimulator and Related Procedures) with a proposed payment rate of $21,376.53 based on clinical and resource similarity to CPT code 64590 (Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling). In addition, we proposed to assign CPT codes 0818T and 0819T to APC 5461 (Level 1 Neurostimulator and Related Procedures) with a proposed payment rate of $3,364.67 based on clinical and resource similarity to CPT code 64595 (Revision or removal of peripheral or gastric neurostimulator pulse generator or receiver).

Comment: Most commenters endorsed the assignment of CPT code 0816T to APC 5464. They were appreciative that CMS recognizes through this APC assignment the importance of advancing healthcare options for Medicare beneficiaries and the need for continued accessibility of new technologies, like the eCoin system procedure, into sites of service that best serve the complexities of treating some Medicare beneficiaries. One commenter stated that they believe the decision by CMS appropriately aligns the proposed payment level with the intended purpose and clinical complexity of the eCoin system described by CPT code 0816T. In doing so, the commenter stated, CMS continues to empower appropriate medical decision-making by providers for Medicare beneficiaries that will best align with each patient's unique healthcare needs. Another commenter expressed that they were very pleased with our decision to assign implantable tibial generator codes 0816T and 0817T to Level 4 APC 5464 and revision/removal generator codes 0818T and 0819T to Level 1 APC 5461. This commenter stated that this decision creates resource and clinical parity with CPT code 64590 (Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling) which describes sacral neuromodulation (SNM) generator implant and CPT code 64595 (Revision or removal of peripheral or gastric neurostimulator pulse generator or receiver) which describes revision/removal procedures which have the same Level 4 APC and Level 1 APC categories, respectively. This supports the fact that implantable tibial procedures require similar resources and support as SNM including pre-op time, recovery, fluoroscopy, patient follow-up, monitoring and anesthesia.

Response: We appreciate the commenters' feedback on these new Category III CPT codes. We agree with commenters' recommendations to finalize the proposed APC assignments.

In summary, after reviewing the public comments for the proposal, we are finalizing our proposal without modification to assign CPT codes 0816T and 0817T to APC 5464 and to assign CPT codes 0818T and 0819T to APC 5461. The final CY 2024 payment rates for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

For additional discussion regarding the commenters' request to increase the device offset of CPT codes 0816T and 0817T refer to section IV.B. of this final rule with comment period.

37. LimFlow TADV Procedure CPT Code 0620T (APC 1578)

The LimFlow TADV procedure which is described by CPT code 0620T (Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed) is a new endovascular procedure that is used to treat patients with chronic limb-

threatening ischemia. According to the developer, these patients are no longer eligible for conventional endovascular or open bypass surgery to treat their artery blockage, and without this procedure, they are likely to face limb amputation.

According to the developer, the LimFlow TADV procedure received full FDA PMA approval on September 11, 2023. Previously, the procedure could be performed through a Category B IDE study. CPT code 0620T, which describes the LimFlow TADV procedure was established in January of 2021 and was assigned to APC 5194 (Level 4 Endovascular Procedures) with a payment rate of around $17,400, which is the highest-paying APC for endovascular procedures. For the CY 2024 proposed rule, we proposed to continue to assign CPT code 0266T to APC 5194.

Comment: The HOP Panel and two commenters, including the developer of LimFlow TADV procedure, requested that CPT code 0620T be reassigned to a New Technology APC that better reflects the cost of the procedure. Commenters were concerned that if CPT code 0620T continued to be assigned to APC 5194, the low payment for the procedure would discourage providers from performing the procedure and deny access to LimFlow TADV to vulnerable and underserved populations.

Response: We agree with the HOP Panel and commenters that CPT code 0620T should be reassigned to a New Technology APC that better reflect the costs of the procedure. Because there are only 15 claims for the procedure for CY 2021 and CY 2022, the LimFlow TADV procedure is subject to our new technology procedure low-volume policy. An analysis of the median, arithmetic mean, and geometric mean of CPT code 0620T found that the median was $25,801.85, the arithmetic mean was $28,628.62, and the geometric mean was $26,716.31. Based on our policy, we estimate the cost of the LimFlow TADV procedure to be $28,628.62 as the arithmetic mean has the highest value of the three cost statistics. Therefore, we plan to reassign CPT code 0620T to New Technology APC 1578 (New Technology—Level 41 ($25,001–$30,000)) with a payment rate of around $27,500.

After consideration of the public comments we received, we are implementing our proposal with modification for CPT code 0620T as we will update its APC assignment to APC 1578 (New Technology—Level 41 ($25,001–$30,000)). Table 74 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 74: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 0620T

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0620T	Endovascular venous arterialization, tibial or peroneal vein, with transcatheter placement of intravascular stent graft(s) and closure by any method, including percutaneous or open vascular access, ultrasound guidance for vascular access when performed, all catheterization(s) and intraprocedural roadmapping and imaging guidance necessary to complete the intervention, all associated radiological supervision and interpretation, when performed	S	1578

38. Lixelle Apheresis

Lixelle β2-microglobulin Apheresis Column is indicated for use in the treatment of dialysis-related amyloidosis (DRA), a disease that affects people with end-stage renal disease (ESRD). DRA is a metabolic disorder from the failure of the kidney to filter and remove β2-microglobulin, typically from chronic hemodialysis (typically 5 years or longer). The Lixelle device is used in an apheresis procedure that selectively removes β2-microglobulin from circulating blood and used pursuant to a physician prescription in conjunction with hemodialysis. It is intended to be used at each hemodialysis session (that is, frequency of treatment is expected to be 3 times per week). In March 2015, FDA approved LIXELLE® as a Class III Humanitarian Use Device (HUD) with an approved Humanitarian Device Exemption (HDE). There are currently no specific HCPCS or CPT code that represent the Lixelle service.

Comment: A commenter urged CMS to provide reimbursement for Lixelle to benefit patients with DRA. Another commenter requested separate payment under the Medicare ESRD PPS. This same commenter stated that if separate payment does not apply under the ESRD PPS, the service should be paid separately under the OPPS when furnished in the HOPD facility. Specifically, the commenter requested that CMS provide separate payment under the OPPS, and offered the following options:

(1) establish a new HCPCS C code or G code for the Lixelle apheresis procedure and assign the code to APC 5242 (Level 2 Blood Product Exchange and Related Services); or

(2) pay separately for the apheresis procedure used with the Lixelle device through CPT code 36516 (Therapeutic apheresis with extracorporeal immunoadsorption, selective adsorption or selective filtration and plasma

reinfusion), proposed to be assigned to APC 5243 (Level 3 Blood Product Exchange and Related Services) for CY 2024, and require the use of a modifier or add-on code when the Lixelle apheresis procedure is billed to reduce the payment for the procedure to the payment rate for APC 5242 (Level 2 Blood Product Exchange and Related Services); or

(3) allow separate payment for the dialysis performed as part of Lixelle apheresis procedure through HCPCS code G0257 (Unscheduled or emergency dialysis treatment for an ESRD patient in a hospital outpatient department that is not certified as an ESRD facility), which is assigned to APC 5401 (Dialysis) for CY 2024, and require the use of a modifier or add-on code to provide additional payment beyond that provided for APC 5401

Response: We appreciate the recommendations and will consider them for future rulemaking. We note this complex, ongoing issue is still under consideration and a thorough evaluation is necessary to ensure the appropriate Medicare benefit category and payment for the service.

39. Meibomian Gland Repair (MGR) (APC 5733)

For 2020, the AMA's Editorial Panel established CPT code 0563T (Evacuation of meibomian glands, using heat delivered through wearable, open-eye eyelid treatment devices and manual gland expression, bilateral), effective January 1, 2020, to describe the treatment associated meibomian gland dysfunction (MGD) and dry eye disease (DED). For CY 2023, we assigned the code to APC 5733 (Level 3 Minor Procedures) with a payment rate of $57.48. For CY 2024, we proposed to continue with the assignment to APC 5733 with a payment of $58.13.

Comment: A commenter disagreed with proposed assignment to APC 5733 and stated that the proposed payment for CPT code 0563T does not reflect the time, intensity, clinical resources, and technology required to provide the service. The commenter indicated that the time and resources required to perform the service is significantly greater than the proposed reimbursement for APC 5733. The commenter further stated that based on the clinical complexity of the service, CPT code 0563T would be more appropriately placed in APC 5502 (Level 2 Extraocular, Repair, and Plastic Eye Procedures) with a payment of $991.30, based on its clinical similarity to the procedures in the APC, and urged CMS to revise the assignment to APC 5502.

Response: We reviewed our claims data for this final rule with comment period. We note that the CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Based on our evaluation of the claims data for this final rule with comment period, we found no claims data for the code. Due to the lack of claims data, we believe that we should continue to assign the code to APC 5733. Once we have adequate claims data, we will review and determine whether a change in the APC assignment is necessary.

In summary, after consideration of the public comment, we are finalizing our proposal without modification, and assigning CPT code 0563T to APC 5733 for CY 2024. As we do every year, we will reevaluate the APC assignment for the code in the next rulemaking cycle. We note that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS. The final CY 2024 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

40. MindMotion® GO Neurorehabilitative Remote Therapy Service (APC 5741)

Effective July 1, 2022, the CPT Editorial Panel created CPT codes 0733T (Remote real-time, motion capture-based neurorehabilitative therapy ordered by a physician or other qualified health care professional; supply and technical support, per 30 days) and 0734T (Remote real-time, motion capture-based neurorehabilitative therapy ordered by a physician or other qualified health care professional; treatment management services by a physician or other qualified healthcare professional, per calendar month) to describe the clinician services associated with patient use of MindMotion® GO, a rehabilitative at home therapy program, remotely monitored by a therapist, for patients who have suffered certain neurological conditions. For CY 2024, CMS proposed to continue to assign CPT code 0733T to APC 5741 (Level 1 Electronic Analysis of Devices) with a proposed payment rate of $36.79. CMS also proposed to continue to assign status indicator ''B'' to CPT code 0734T for CY 2024.

Comment: We received a comment from the manufacturer requesting that we assign CPT code 0733T to a more clinically and resource appropriate APC for CY 2024. The commenter stated that the proposed APC assignment to APC 5741 for CPT code 0733T was not resource appropriate because it did not cover the cost of several items and capital equipment, including a mini-PC to run the treatment software, 3D motion-tracking camera to track patient movement, camera to enable certain hand rehabilitative exercises, and a pressure-sensitive peripheral to measure hand grip for different hand rehab exercises. The commenter did not provide invoice costs or estimated costs for these components. Additionally, the commenter stated that they believed APC 5741 is not clinically appropriate for CPT code 0733T because the APC contains several monitoring services, and, per the commenter, CPT code 0733T performs remote monitoring subsequent to its ability to provide treatment. Finally, the commenter pointed to CPT code 0693T (Comprehensive full body computer-based markerless 3D kinematic and kinetic motion analysis and report), which describes the service involving the DARI Motion Procedure and has a proposed APC assignment to New Technology APC 1505 (New Technology—Level 5 ($301–$400)) for CY 2024, as a clinically similar service.

Response: We thank the commenter for their input regarding the proposed CY 2024 APC assignment for CPT 0733T. First, because the code was first made effective on July 1, 2022, and is relatively new, we do not have any claims data at this time. However, we note that as is our policy for new codes for which we lack pricing information, we assign the service to an existing APC based on input from a variety of sources, including, but not limited to, review of the clinical similarity of the service to existing procedures, input from CMS medical advisors, and review of all other information available to us. Based on our understanding of the service and input from our medical advisors, we do not agree that CPT code 0733T is dissimilar to other services in APC 5741 such that it should be assigned to a different APC. We believe that CPT code 0733T is more similar to services in APC 5741 than services in other APCs, including CPT code 0693T, which is currently assigned to New Technology APC. We note that the long descriptor for CPT code 0733T describes a remote service similar to other codes with remote components in APC 5741, including CPT code 98976. Based on the

nature of the procedure and the information available to us, we continue to believe that CPT code 0733T is appropriate for assignment to APC 5741 for CY 2024.

Comment: The manufacturer also commented to support the reassignment of the status indicator for CPT code 0734T from status indicator ''B'' to status indicator ''S,'' based on a public presentation at the Advisory Panel on Outpatient Payment (HOP Panel) on August 22, 2023, recommending that the status indicator assignment of CPT code 0734T and other remote monitoring codes change from ''B'' to ''S'' and be assigned to APC 5741.

Response: We first note that CMS did not propose to change the status indicator of CPT code 0734T from ''B'' to ''S'' for CY 2024. CPT code 0734T describes a professional service, specifically treatment management services by a physician or other qualified healthcare professional. Therefore, CPT code 0734T is not payable under the OPPS and would not be appropriate for separate payment as indicated by status indicator ''S.'' For CY 2024, we believe it is appropriate to finalize the status indicator for CPT 0734T as proposed.

After consideration of the public comment, we are finalizing our proposal to continue to assign CPT code 0733T to APC 5741 as proposed. We are also finalizing our proposal to continue to assign status indicator ''B'' to CPT code 0734T. The final CY 2024 payment rate for CPT code 0733T can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

41. Minimally Invasive Glaucoma Surgery (MIGS) (APC 5493)

CPT code 0671T (Insertion of anterior segment aqueous drainage device into the trabecular meshwork, without external reservoir, and without concomitant cataract removal, one or more) was effective January 1, 2022. For CY 2023, we assigned CPT code 0671T to APC 5491 (Level 1 Intraocular Procedures) with a payment rate of $2,159.44. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to reassign the code to APC 5492 (Level 2 Intraocular Procedures), with a payment rate of $3,970.62. We received some comments related to the proposal.

Comment: Several commenters agreed with our proposal and requested that we finalize the assignment to APC 5492. However, other commenters disagreed with the assignment to APC 5492, and instead suggested assignment to APC 5493 (Level 3 Intraocular Procedures), with a payment rate of $5,110.58. These commenters reported that CPT code 0671T is one of three MIG codes that the CPT Editorial Panel established effective January 1, 2022, and noted that the other two MIG codes (66989 and 66991) are proposed for assignment to APC 5493. Because of its similarity to CPT codes 66989 and 66991, the commenters suggested reassignment to APC 5493 for CPT code 0671T.

Response: We reviewed our claims data for this final rule with comment period. The CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We note that CY 2024 is the first year that we have claims data for the code. Based on our analysis of the claims data for this final rule, the resource costs related to CPT code 0671T seems more appropriately in APC 5493 rather than APC 5492. Specifically, our claims data shows a geometric mean cost of about $5,610 for CPT code 0671T based on 79 single claims (out of 79 total claims), which is consistent with the geometric mean cost of approximately $5,118 for APC 5493, rather than the geometric mean cost of approximately $3,982 for APC 5492. Based on the resource costs to furnish the service associated with CPT code 0671T, which are consistent with APC 5493, we believe that reassignment to APC 5493 is appropriate. Therefore, we are revising the assignment for CPT code 0671T, to APC 5493 for CY 2024.

With regard to the other two MIG codes mentioned by the commenter, specifically, CPT codes 66989 and 66991, refer to section III.C. of this final rule with comment period for the discussion related to the payment for the codes.

In summary, after consideration of the public comments, we are finalizing the APC assignment for CPT code 0671T with modification. Specifically, we are revising the APC assignment for CPT code 0671T to APC 5493 for CY 2024. The final CY 2024 OPPS payment rate for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

42. Musculoskeletal Procedures (APCs 5111 Through 5116)

Prior to the CY 2016 OPPS, payment for musculoskeletal procedures was primarily divided according to anatomy and the type of musculoskeletal procedure. As part of the CY 2016 reorganization to better structure the OPPS payments to utilize prospective payment packages, we consolidated these individual APCs so that they became a general Musculoskeletal APC series (80 FR 70397 and 70398).

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59300), we continued to apply a six-level structure for the Musculoskeletal APCs because doing so provided an appropriate distinction for resource costs at each level and provided clinical homogeneity. However, we indicated that we would continue to review the structure of these APCs to determine whether additional granularity would be necessary. In the CY 2019 OPPS proposed rule (83 FR 37096), we recognized that commenters had previously expressed concerns regarding the granularity of the current APC levels and, therefore, requested comment on the establishment of additional levels. Specifically, we solicited comments on the creation of a new APC level between the current Level 5 and Level 6 within the Musculoskeletal APC series. While some commenters suggested APC reconfigurations and requested changes to APC assignments, many commenters requested that we maintain the current six-level structure and continue to monitor the claims data as they become available. Therefore, in the CY 2019 OPPS/ASC final rule with comment period, we maintained the six-level APC structure for the Musculoskeletal Procedures APCs (83 FR 58920 and 58921).

For CY 2024, based on the claims data available for the CY 2024 OPPS/ASC proposed rule, we continued to believe that the six-level APC structure for the Musculoskeletal Procedures APC series is appropriate and we proposed to maintain it for the CY 2024 OPPS update.

Comment: One commenter requested that CMS reassign CPT code 23472 (Arthroplasty, glenohumeral joint; total shoulder) from APC 5115to APC 5116 (Level 6 Musculoskeletal Procedures). According to the commenter, the requested assignment would more closely track hospital resources used in performing these procedures and appropriately align with other clinically similar procedures. The commenter stated that with regard to cost, according

to CMS's 2 Times Listing document released with the proposed rule, the geometric mean cost (GMC) of claims reporting total shoulder CPT 23472 is $17,423.52, which represents the highest cost ''significant'' procedure within APC 5115. In fact, the GMC of CPT code 23472 exceeds the GMC of four ''significant'' procedures that CMS proposes to assign to APC 5116:

- CPT 22867 (Insertion of interlaminar/interspinous process stabilization/distraction device, without fusion, including image guidance when performed, with open decompression, lumbar; single level)—GMC of $14,803.74
- CPT 27279 (Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device)—GMC of $15,788.69
- CPT 22856 (Total disc arthroplasty (artificial disc), anterior approach, including discectomy with end plate preparation (includes osteophytectomy for nerve root or spinal cord decompression and microdissection); single interspace, cervical)—GMC of $16,078.32
- CPT 22612 (Arthrodesis, posterior or posterolateral technique, single interspace; lumbar (with lateral transverse technique, when performed))—GMC of $16,870.82

This commenter stated that the GMC of CPT code 23472 is about $500.00 closer to the GMC of APC 5116 ($20,928.08) than APC 5115 ($13,420.64), reinforcing that APC 5116 is a more appropriate assignment for CPT 23472 and furthermore, this payment misalignment—resulting in a $4,000 opportunity cost to hospitals performing this procedure on average—threatens the availability of this procedure on an outpatient basis.

The commenter also provided clinical information, stating that shoulder replacement and reverse shoulder replacement procedures represented by CPT code 23472 are very complex, involving three bones and limited access space due to the muscles, ligaments, and tendons surrounding the joint. These procedures are clinically comparable to other procedures assigned to APC 5116, such as total elbow arthroplasty (TEA) CPT code 24363. TEA and TSA procedures involve similar complexity and are typically performed by specialized, fellowship- or subspecialty-trained shoulder and elbow orthopaedic surgeons.

Response: We appreciate the commenter's recommendation. Based on our analysis of the latest CY 2022 claims data available for CY 2024 OPPS ratesetting, the geometric mean cost associated with CPT code 23472 is $17,370.78 based on 51,120 single claims (out of 51,506 total claims), which is consistent with the geometric mean cost of $18,250.77 for APC 5116. We also note that the APC 5115 has a range of HCPCS geometric mean costs for cost significant codes from $10,641.75 to $16,292.97with the geometric mean cost of CPT code 23472 being at the higher end of the cost range. The geometric mean cost for APC 5115 is $12,889.60.

Based on the data, we believe that APC 5116 is the more appropriate assignment rather than APC 5115 for CPT code 23472. Therefore, we agree with the commenter and are reassigning CPT code 23472 from APC 5115 to APC 5116 for CY 2024. The final CY 2024 OPPS payment rates for the codes can be found in Addendum B to this final rule with comment period.

After consideration of the public comments, we are finalizing our proposal to maintain the six-level Musculoskeletal Procedures APC structure. We are also finalizing an assignment of CPT code 23472 to APC 5116, rather than APC 5115, for the CY 2024 OPPS.

43. Noncontact Near-infrared (NIR) Spectroscopy (APC 5732)

In July 2021, the AMA's CPT Editorial Panel established three new codes to describe the service related to noncontact near-infrared spectroscopy. For CY 2024, the CPT Editorial Panel made several changes to the codes to accurately describe the services currently performed in the medical setting for noncontact near-infrared spectroscopy. Specifically, the CPT Editorial Panel took the following actions for CY 2024:

- deleted CPT code 0641T and 0642T, effective December 31, 2023;
- revised the descriptor for existing CPT code 0640T to include the services previously described in CPT codes 0641T and 0642T; and
- established two new codes, specifically, CPT code 0859T, which was listed as placeholder code X1914T in the CY 2024 OPPS/ASC proposed rule, and CPT code 0860T, which was listed as placeholder code X171T, effective January 1, 2024.

The complete long descriptors for the codes are listed below in Table 75, along with the CY 2023 and proposed CY 2024 OPPS status indicator and APC assignments (where applicable).

TABLE 75: CY 2023 AND PROPOSED CY 2024 OPPS SI AND APC FOR THE NIR SPECTROSCOPY CPT CODES 0640T – 0642T, AND CPT CODES 0859T-0860T

CPT Code	Place-holder Code	Long Descriptor	CY 2023 OPPS SI	CY 2023 OPPS APC	Proposed 2024 OPPS SI	Proposed 2024 OPPS APC
0640T		Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; first anatomic site	M		T	5732
0859T	X194T	Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; each additional anatomic site (List separately in addition to code for primary procedure)			N	
0641T		Noncontact near-infrared spectroscopy studies of flap or wound (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO_2]); image acquisition only, each flap or wound	T	5732	D	
0642T		Noncontact near-infrared spectroscopy studies of flap or wound (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO_2]); interpretation and report only, each flap or wound	M		D	
0860T	X171T	Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), for screening for peripheral arterial disease, including provocative maneuvers, image acquisition, interpretation, and report, one or both lower extremities			E1	

Based on the code changes, we proposed to take the following actions for CY 2024:

- CPT code 0640T: With the revised descriptor to include the descriptions that were listed in CPT codes 0641T and 0642T, we proposed to revise the status indicator for CPT code 0640T from ''M'' (professional-only service) to ''T'' and assigned the code to APC 5732 (Level 2 Minor Procedures), with a payment $ 37.05. Under the OPPS, the predecessor code for CPT code 0640T is CPT code 0641T.
- CPT code 0641T: We proposed to assign the code to status indicator ''D'' to indicate that the code would be deleted at the end of the year, and crosswalked the separate payment status indicator of ''T'' and assignment of APC 5732 to CPT code 0640T.

• CPT code 0642T: We proposed to assign the code to status indicator ''D'' to indicate that the code would be deleted at the end of the year. Because the code was assigned to status indicator ''M'' (professional-only service), we did not crosswalk this code to any payable indicators or APC.

• CPT code 0859T: Because the code describes an add-on service to CPT code 0640T, and must always be reported on the same day with CPT code 0640T, we proposed to assign the code to status indicator ''N'' to indicate that the code is packaged and payment is included in the primary service. Under the OPPS, most add-on codes are packaged, as specified in 42 CFR 419.2(b)(18).

• CPT code 0860T: We proposed to assign this code to status indicator ''E1'' to indicate that the code is not covered or payable by Medicare for CY 2024.

We received several comments related to our proposals. Below are the comments and our responses.

Comment: Many commenters requested separate payment for CPT code 0860T and indicated that Medicare beneficiaries would benefit from essential screening for peripheral arterial disease (PAD). Some commenters clarified that one-third of patients over age 65 with diabetes or a history of smoking have PAD, and with the increased risk of death and other cardiovascular complications, including heart attack and stroke, the commenters believe that it is essential to diagnose and treat PAD as early as possible. The commenters urged CMS to make available PAD screening options to the Medicare population and requested separate payment for the service.

Response: CPT code 0860T describes a screening for peripheral arterial disease (PAD). Currently, Medicare has not established coverage for screening for PAD. Specifically, this screening code does not qualify for Medicare coverage since there is no national coverage determination (NCD) for PAD screening. Consequently, we proposed to assign the code to status indicator ''E1'' to indicate that the code is not payable by Medicare when submitted on outpatient claims (any outpatient bill type) because the service associated with the code is either not covered by any Medicare outpatient benefit category, statutorily excluded by Medicare, or not reasonable and necessary.

We note that on August 7, 2013, CMS published a **Federal Register** notice (78 FR 48164 through 48169), updating the process used for opening, deciding or reconsidering national coverage determinations (NCDs). If the commenter would like to request Medicare coverage for PAD screening, we strongly recommend submitting an application to CMS. New screening and preventive tests coverage are added through the National Coverage Determination (NCD) process. Information on the Medicare coverage determination process, the application process, as well how to request a new NCD, or revision to an existing NCD, can be found on the CMS website, specifically, at *https://www.cms.gov/medicare/coverage/determination-process/request.*

Comment: Several commenters requested separate payment for CPT code 0640T, and suggested reassignment to status indicator ''S'' (Procedure or Service, Not Discounted When Multiple. Paid under OPPS; separate APC payment.), and APC 5722 (Level 2 Diagnostic Tests; proposed payment of $304.35). The commenters reported that the NIR technology described by CPT code 0640T is similar to the technology described with CPT code 0598T, which is assigned to status indicator ''S'' and APC 5722. Specifically, CPT code 0598T describes a hand-held device that detects bacteria in a wound through fluorescence color, while CPT code 0640T and CPT code 0859T describes a hand-held device that detect a wound's blood oxygen level at the point of care. Because of its similarity to CPT code 0598T, the commenters recommended reassignment to APC 5722 for CPT code 0640T.

Response: Prior to the descriptor revision for CPT code 0640T, the technical service associated with noncontact near-infrared spectroscopy was described by CPT code 0641T, which was assigned to APC 5732 for CY 2023. Under the OPPS, the predecessor code for CPT code 0640T is CPT code 0641T. We note that the CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Based on our analysis of the claims data for this final rule with comment period, we found a geometric mean cost of about $14 for predecessor CPT code 0641T based on 46 single claims (out of 266 total claims). In contrast, we found a geometric mean cost of approximately $239 for CPT code 0598T based on 529 single claims (out of 1,317 total claims). Based on the data, the resource cost associated with noncontact real-time fluorescence imaging (CPT code 0598T), is significantly higher compared to noncontact near-infrared (NIR) spectroscopy (CPT code 0640T/0641T). While both technologies may have the same indication, we disagree that the resource cost for noncontact near-infrared (NIR) spectroscopy is similar to noncontact real-time fluorescence imaging. Therefore, we do not agree that both technologies should be placed in the same APC. We believe that the code describing noncontact near-infrared (NIR) spectroscopy, specifically, CPT code 0640T, is appropriately placed in APC 5732.

Comment: Many commenters requested separate payment for CPT code 0859T, and suggested assignment to status indicator ''S'' and APC 5722.

Response: Under the OPPS, CPT code 0859T is assigned to status indicator ''N'' to indicate that the payment is packaged in the primary code. The phrase ''list separately in addition to code for primary procedure'' is included in the long descriptor for CPT code 0859T to indicate that that the code is considered an ''add-on'' to another primary code and cannot be reported independently. Add-on codes must always be reported with another primary code on the same day. The AMA states in the CPT 2024 Professional Edition (page xviii) that ''add-on codes are always performed in addition to the primary service or procedure and must never be reported as a stand-alone code.'' In most cases, add-on codes are typically ancillary and supportive to a primary diagnostic or therapeutic modality and are an integral part of the primary service they support. As specified under regulation 42 CFR 419.2(b)(18), add-on codes are packaged under the OPPS, and payment for the codes are bundled with the primary codes. Consequently, CPT code 0859T is not paid separately under the OPPS, but instead, the payment is packaged into the primary code. In this instance, the primary code for CPT code 0859T is CPT code 0640T.

In summary, after consideration of the public comments, we are finalizing the status indicators and APC assignment, without modification, for CPT codes 0640T, 0641T, 0642T, 0859T, and 0860T. Table 76 below list the final CY 2024 OPPS SI and APC assignment for the codes. As we do every year, we will reevaluate the APC assignment for the codes in the next rulemaking cycle. We note that we review, on an annual basis, the APC assignments for all items and services paid under the OPPS. The final CY 2024 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

TABLE 76: FINAL CY 2024 OPPS SI AND APC FOR THE NIR SPECTROSCOPY CPT CODES 0640T-0642T, AND CPT CODES 0859T-0860T

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0640T	Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; first anatomic site	T	5732
0859T	Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), other than for screening for peripheral arterial disease, image acquisition, interpretation, and report; each additional anatomic site (List separately in addition to code for primary procedure)	N	
0641T	Noncontact near-infrared spectroscopy studies of flap or wound (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO_2]); image acquisition only, each flap or wound	D	
0642T	Noncontact near-infrared spectroscopy studies of flap or wound (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation [StO_2]); interpretation and report only, each flap or wound	D	
0860T	Noncontact near-infrared spectroscopy (eg, for measurement of deoxyhemoglobin, oxyhemoglobin, and ratio of tissue oxygenation), for screening for peripheral arterial disease, including provocative maneuvers, image acquisition, interpretation, and report, one or both lower extremities	E1	

44. Optilume Benign Prostatic Hyperplasia (BPH) Procedure (APC 5376)

On February 5, 2020, CMS approved for Medicare coverage the Category B Investigational Device Exemption (IDE) study associated with Urotronic's BPH Catheter System (Study Title: A Clinical Study to Evaluate the Safety and Efficacy of the Optilume™ BPH Catheter System in Men With Symptomatic BPH (PINNACLE); NCT number NCT04131907; IDE number G190217). In July 2020, AMA's CPT Editorial Panel established CPT code 0619T (Cystourethroscopy with transurethral anterior prostate commissurotomy and drug delivery, including transrectal ultrasound and fluoroscopy, when performed), effective July 1, 2020, to describe the surgery related to the BPH Catheter System.

For 2023, we assigned CPT code 0619T to APC 5375 (Level 5 Urology and Related Procedures) with a payment rate of $4,702.18. For 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain the assignment to APC 5375 with a payment of $4,959.89.

Comment: A commenter made some requests related to CPT code 0619T. First, the commenter explained that the surgery associated with the code involves a $5,700 Optilume BPH Catheter System Kit that contains two balloon catheters, one that is drug-coated, and another that is non-drug coated. The commenter indicated that the estimate for the total surgery cost, which includes the cost of the device, is approximately $12,109. Based on their estimate for the total surgery cost, the commenter requested a reassignment from APC 5375 to APC 5377 (Level 7 Urology and Related Procedures, proposed payment of $12,568.91), which would include the cost of both the procedure and the device kit. Secondly, as an alternative, if CMS is unable to reassign the code to APC 5377, the commenter requested the approval of their New Technology Procedure/Service application, and the establishment of a new HCPCS C-code to describe the procedure whose payment is assigned to New Technology APC 1575 with a payment of $12,500.50. In addition, the commenter clarified that the 2 claims for CPT code 0619T do not apply to the Optilume BPH procedure since the device received FDA Premarket Approval (PMA) just recently in June 2023.

Response: First, with regards to the New Technology APC application submitted to CMS, in general, New Technology APC application determinations are not made via rulemaking. We note that in this specific case, the application is pending review and still under consideration. Therefore, we are unable to respond to the APC request for the New Technology APC application in this final rule with comment period.

Secondly, we note that the CY 2024 OPPS payment rates are based on claims

submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We reviewed the claims data for this final rule, and based on our review, we found the geometric mean cost of approximately $6,218 for CPT code 0619T based on 3 single claims (out of 3 total claims). Although one commenter suggested that the 2 claims we have for the CY 2024 ratesetting are not valid because the device received FDA PMA approval in June 2023 and could not represent the Optilume BPH device, we note that Medicare approved coverage of the Category B IDE study that involves the use of this device in February 2020. Although the Optilume BPH device received FDA approval in June 2023, because the Category B IDE study was approved much earlier in February 2020, HOPD facilities may have reported the device on Medicare claims by using an unlisted device code (for example, C1889) or device revenue code (for example, 027X).

Based on the comments received, evaluation of the procedure, and our assessment of the request, we believe that CPT code 0619T is most similar to CPT code 0421T (Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed)), which is assigned to APC 5376 with a proposed payment rate of $8,847.08. We note that APC 5376 contains several BPH-related procedures, which include the following:

- 0421T: Transurethral waterjet ablation of prostate, including control of post-operative bleeding, including ultrasound guidance, complete (vasectomy, meatotomy, cystourethroscopy, urethral calibration and/or dilation, and internal urethrotomy are included when performed)
- 55873: Cryosurgical ablation of the prostate (includes ultrasonic guidance and monitoring
- 55880: Ablation of malignant prostate tissue, transrectal, with high intensity-focused ultrasound (hifu), including ultrasound guidance), and
- C9740: Cystourethroscopy, with insertion of transprostatic implant; 4 or more implants

Based on the similarity to CPT code 0421T and the other BPH-related procedures in APC 5376, we believe that assigning CPT code 0619T to APC 5376 is the best approach at this time. We reiterate that we review our claims data on an annual basis to establish the OPPS payment rates. Once we have data, we will evaluate and, if necessary, reassign the code to an appropriate APC based on the latest claims data.

Finally, we remind the commenter that under the OPPS, one of our goals is to make payments that are appropriate for the services that are necessary for the treatment of Medicare beneficiaries. The OPPS, like other Medicare payment systems, is budget neutral and increases are limited to the annual hospital market basket increase reduced by the productivity adjustment. We note that, in a budget-neutral system, payments may not fully cover hospitals' costs in a particular circumstance, including those for the purchase and maintenance of capital equipment. We rely on hospitals to make their decisions regarding the acquisition of high-cost equipment with the understanding that the Medicare program must be careful to establish its initial payment rates. For new procedures and items, we get many requests from manufacturers to increase the reimbursement for the code associated with their procedures and items. These requests, and their accompanying estimates for expected total patient utilization, often reflect very low rates of patient use of expensive equipment, resulting in high per-use costs for which requesters believe Medicare should make full payment. Medicare does not, and we believe should not, assume responsibility for more than its share of the costs of procedures based on projected utilization for Medicare beneficiaries and does not set its payment rates based on initial projections of low utilization for services that require expensive capital equipment. On balance, we believe that our payment rates reflect the costs that are associated with providing care to Medicare beneficiaries and are adequate to ensure access to services (80 FR 70374).

In summary, after consideration of the public comment that we received, we are finalizing our proposal, with modification. Specifically, we are finalizing our proposal and assigning CPT code 0619T to APC 5376 for CY 2024. The final payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

45. Optilume Urethral Stricture Procedure (APC 5375)

Effective January 1, 2018, the AMA's CPT Editorial Panel established Category III CPT code 0499T (Cystourethroscopy, with mechanical dilation and urethral therapeutic drug delivery for urethral stricture or stenosis, including fluoroscopy, when performed) to describe the procedure related to the Optilume Urethral Stricture Device System. For 2024, AMA is deleting the Category III CPT code on December 31, 2023, and replacing it with a Category I CPT code, specifically, CPT code 52284 (Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed), effective January 1, 2024. We note that CPT code 52284 was listed as placeholder code 5X000 in OPPS Addendum B and Addendum O that was released with the CY 2024 OPPS/ASC proposed rule with comment period. Because we had not received the final CPT code numbers from AMA for the new codes that would be effective January 1, 2024, in time for the publication of the proposed rule, we listed the new CPT codes with their respective placeholder codes in OPPS Addendum B and Addendum O.

For CY 2023, we assigned CPT code 0499T to APC 5374 (Level 4 Urology and Related Services) with a payment rate of $4,702.18. Because CPT code 0499T was scheduled for deletion on December 31, 2023, and replaced with CPT code 52284 effective January 1, 2024, we proposed some changes to the codes for CY 2024. Specifically, for CY 2024, as listed in the OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to:

- Assign CPT code 0499T to status indicator ''D'' to indicate that the code would be deleted at the end of the year; and
- Crosswalk the replacement code, specifically, CPT 52284, to APC 5374 with a payment rate of $3,337.81

We note that at the August 21, 2023, HOP Panel Meeting, a presentation was made requesting the reassignment to APC 5375 for CPT code 52284 (placeholder code 5X000). Based on the information presented at the meeting, the Panel made no recommendation on the APC assignment for the code.

Comment: Several commenters requested the reassignment for CPT code 52284 from APC 5374 to APC 5375 (Level 5 Urology and Related Services), with a payment rate of $4,959.89. They indicated that the procedure involves

the use of a single-use device whose cost is $2,395, and they believe that the payment amount of approximately $3,338 for APC 5374 is insufficient to cover the total cost of the procedure. These commenters suggested the reassignment of CPT code 52284 to APC 5375. One commenter clarified that the Optilume Urethral Stricture device was commercially available in January 2022, however, prior to this date, the device was provided free of charge for clinical trials. This same commenter noted that the claims data in the CY 2024 OPPS/ASC proposed rule shows an increase in claims volume for predecessor CPT code 0499T, as well as an increase in the geometric mean cost, that they believe warrants a change in the assignment from APC 5374 to APC 5375.

Response: The CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We reviewed the claims data for this final rule, and based on our analysis, we found the geometric mean cost of approximately $4,489 for (predecessor code) CPT 0499T based on 77 single claims (out of 79 total claims), which is consistent with the geometric mean cost of about $5,067 for APC 5375, rather than the geometric mean cost of approximately $3,414 for APC 5374. Based on our evaluation, we believe that the resource costs of furnishing the service associated with CPT code 52284 are higher than the resource costs associated with APC 5374. Consequently, we believe that CPT code 52284 fits accurately in APC 5375 based on its clinical and resource homogeneity to the procedures in the APC.

In summary, after consideration of the public comments, we are finalizing the APC assignment for CPT code 52284 with modification. Specifically, we are revising the APC assignment for CPT code 52284 to APC 5375 for CY 2024. The final CY 2024 OPPS payment rate for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

46. Payment for Procedures Using an Amniotic Membrane (APCs 5502 and 5503)

CPT code 65426 (Excision or transposition of pterygium; with graft) describes a surgical ocular procedure that requires the use of graft tissue. This procedure can be performed either with the patient's own tissue (a graft from the patient's eye) or with an amniotic membrane tissue product that is purchased by the provider. CPT code 65778 (Placement of amniotic membrane on the ocular surface; without sutures) describes the placement of an amniotic membrane on the ocular surface. For the CY 2024 OPPS proposed rule, we proposed to assign CPT code 65426 to APC 5503 (Level 3 Extraocular, Repair, and Plastic Eye Procedures) and we proposed to assign CPT code 65778 to APC 5502 (Level 2 Extraocular, Repair, and Plastic Eye Procedures).

Comment: One commenter, a manufacturer of the amniotic membrane used in both CPT codes 65426 and 65778, requested that payment for CPT code 65426 be increased from APC 5503 with a payment rate of around $2,300 to APC 5504 (Level 4 Extraocular, Repair, and Plastic Eye Procedures) with a payment rate of around $3,800. Likewise, the commenter requested that the payment for CPT code 65778 be increased from APC 5502 with a payment rate of around $1,000 to APC 5503 with a payment rate of around $2,300. The commenter requested the payment increases because the offset amounts for the amniotic membrane devices used in these procedures was substantially lower than the expected cost of the device. The commenter believes the cause of the low device percentage for these services is that many hospitals are not reporting the cost of the amniotic device, and an increased payment would ensure that providers receive a payment that recognizes the cost of the amniotic device.

Response: We disagree with the request of the commenter. Reporting service charges and appropriately coding expenditures on claims is the responsibility of the provider, and we do not adjust service payments to remedy potential coding errors. The commenter believes there is some type of systemic coding error that is leading to the low device offsets for CPT codes 65426 and 65778. We encourage the commenter to engage in provider education to encourage more thorough reporting of the device costs of these procedures. The commenter may also choose to work with the MACs to develop approaches to ensure the cost of the amniotic membrane device is included more regularly with these procedures.

After consideration of the public comments we received, we are implementing our proposal without modification for CPT codes 65426 and 65778. Table 77 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 77: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 65426 AND 65778

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
65426	Excision or transposition of pterygium; with graft	J1	5503
65778	Placement of amniotic membrane on the ocular surface; without sutures	Q2	5502

47. Peroral Endoscopic Myotomy (POEM) CPT Code 43497 (APC 5331)

According to interested parties, the POEM (Peroral Endoscopic Myotomy) procedure is a newer technique for the management of achalasia and is similar to laparoscopic Heller Myotomy performed by both advanced gastroenterologists and endoscopic surgeons. Achalasia is a disease that occurs due to the inability of the lower esophageal sphincter to relax and is also associated with loss of peristalsis in the esophagus. This procedure is described by CPT code 43497 (Lower esophageal myotomy, transoral (*i.e.,* peroral endoscopic myotomy [poem])), which has a geometric mean cost for CY 2024 of around $6,736. For the CY 2024 OPPS proposed rule, we proposed to assign the procedure to APC 5303 (Level 3 Upper GI Procedures) with a payment rate of around $3,803. APC 5303 is the highest-paying APC in the Upper GI Procedures APC series. CPT code 43497 is a significant procedure that contributes to the establishment of the overall payment rate for APC 5303.

Comment: Two commenters requested that we assign CPT code 43497 to APC 5331 (Complex GI Procedures) to resolve a 2 times rule violation with the procedure. The commenters noted that the geometric mean cost of CPT code 43497, which is around $6,736 is more than twice the cost of the lowest-cost significant procedure (CPT code 43260), which is around $6,454. Also, the geometric mean cost of CPT code 43497 is nearly $3,000 more than the payment rate for APC 5303.

Response: We agree with the request of the commenters that CPT code 43497 should be reassigned from APC 5303 to APC 5331 not only because of the 2 times rule violation and the substantial difference between the cost of CPT code 43497 and the payment rate for APC 5303, but in addition, we determined that the procedure described by CPT code 43497 has clinical and resource similarities with the other procedures of similar cost that are assigned to APC 5313.

After consideration of the public comments we received, we are implementing our proposal with modification for CPT code 43497 as we will update its APC assignment to APC 5331 (Complex GI Procedures). Table 78 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 78: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 43497

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
43497	Lower esophageal myotomy, transoral (ie, peroral endoscopic myotomy [poem]))	J1	5331

48. Transluminal Mechanical Thrombectomy, Noncoronary, Non-intracranial, Arterial or Arterial Bypass Graft, Including Fluoroscopic Guidance and Intraprocedural Pharmacological Thrombolytic Injection(s); Initial Vessel (APC 5194)

For 2024, we proposed to move CPT code 37184 (Primary percutaneous transluminal mechanical thrombectomy, noncoronary, non-intracranial, arterial or arterial bypass graft, including fluoroscopic guidance and intraprocedural pharmacological thrombolytic injection(s); initial vessel) from APC 5193 (Level 3 Endovascular Procedures) with a proposed payment rate of $10,602.57 to APC 5194 (Level 4 Endovascular Procedures) with a proposed payment rate of $17,195.36.

Comment: One commenter supported our proposal to move CPT code 37184 to APC 5194, stating that this APC assignment more accurately reflects the costs and resources associated with these procedures.

Response: We thank the commenter for the support of the CMS' proposal. Based on our examination of the latest claims data for this final rule with comment period, we believe that the assignment of CPT code 37184 to APC 5194 is appropriate for CY 2024.

In summary, after consideration of the public comment, we are finalizing our proposal without modification and assigning CPT code 37184 to APC 5194. The final CY 2024 OPPS payment rates for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

49. ProSense Cryoablation Procedure (APC 5091)

For CY 2023, we assigned CPT code 0581T (Ablation, malignant breast tumor(s), percutaneous, cryotherapy, including imaging guidance when performed, unilateral) to APC 5091 (Level 1 Breast/Lymphatic Surgery and Related Procedures) with a payment rate of $3,437.80. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain the assignment to the same APC with a payment rate of $3,652.27.

Comment: A commenter disagreed with the assignment to APC 5091 for CPT code 0581T and requested a revision to APC 5092 (Level 2 Breast/Lymphatic Surgery and Related Procedures), with a payment rate $6,241.92. The commenter clarified that the procedure described by the code involves the use of a single-use device that cost $2,200. With the device cost, the commenter estimated the total procedure cost to be $7,019.79. This estimate was derived from the CY 2023 Medicare Physician Fee Schedule Final Rule CMS Public Use File, which include cost estimates for labor, equipment, time, and supply. The commenter indicated that the proposed payment rate of $3,652.27 for APC 5091 is insufficient to cover the total procedure cost, and believes the proposed payment of $6,241.92 for APC 5092 is more appropriate. This same commenter explained that in CY 2022, CPT code was assigned to ''E1,'' to indicate that the code was not

separately payable under the OPPS. To address the lack of claims data for CY 2022, the commenter performed their own data analysis that included claims for two procedures (0581T and 19105) as billed to Medicare and private payers. Based on the dataset, they found an average provider charge of $9,450 and with a maximum charge amount of $24,294 for CPT code 0581T (N=8 private payer, N=1 Medicare) based on fully paid claims for CY 2022 and the first half of 2023. The commenter further noted that CPT code 0581T violates the 2 times rule in APC 5091, and therefore, should be reassigned to APC 5092 to correct the violation.

Response: First, APC 5091 does not violate the 2 times rule. As specified in section III.B (OPPS Changes—Variations Within APCs) of this final rule with comment period, we consider only those HCPCS codes that are significant based on the number of claims to determine the APCs with2 times rule violation. For APC 5091, the geometric mean cost for the significant procedures range between approximately $2,745 (for CPT code 19120) and $4,807 (for CPT code 19371). Based on this range, APC 5091 does not violate the 2 times rule. Secondly, although CPT code 0581T was not separately payable under the OPPS during CY 2022, some HOPDs submitted CPT code 0581T on Medicare claims. For this final rule we are using claims that were submitted for services between January 1, 2022, and December 31, 2022, processed through June 30, 2023. This includes claims that potentially had different policies and SI and APC assignments applied to them in the claims year. Our ratesetting process takes those claims and simulates the prospective OPPS payment, in which we observed a geometric mean cost of approximately $4,357 for CPT code 0581T based on 37 single claims (out of 37 total claims) for this code. Based on this information, we believe that we should maintain CPT code 0581T in APC 5091 since the observed geometric mean cost of $4,357 is consistent with the geometric mean cost of approximately $3,733 for APC 5091, rather than the geometric mean cost of about $6,386 for APC 5092. As we do every year, we will reevaluate the APC assignment for CPT code 0581T for the CY 2025 rulemaking cycle. We remind the commenter, that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 0581T to APC 5091 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

50. Radiofrequency Ablation Procedures—CPT Codes 32998, 47382, and 50592 (APC 5361)

For CY 2023, we assigned certain radiofrequency ablation procedures, specifically, CPT codes 32998, 47382, and 50592 to APC 5361 (Level 1 Laparoscopy and Related Services), with a payment rate of $5,212.15. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to continue the assignment to APC 5361, with a payment rate of $5,544.60. Below are the long descriptors for CPT codes 32998, 47382, and 50592:

- 32998: Ablation therapy for reduction or eradication of 1 or more pulmonary tumor(s) including pleura or chest wall when involved by tumor extension, percutaneous, including imaging guidance when performed, unilateral; radiofrequency
- 47382: Ablation, 1 or more liver tumor(s), percutaneous, radiofrequency
- 50592: Ablation, 1 or more renal tumor(s), percutaneous, unilateral, radiofrequency

Comment: A commenter disagreed with the proposed assignment to APC 5361 and requested a revision to APC 5362 (Level 2 Laparoscopy and Related Services), with a payment rate of $9,871.90, based on clinical and resource homogeneity to the codes in the APC. The commenter indicated that CPT codes 32998, 47382, and 50592 are very similar to certain procedures in APC 5362, specifically, the laparoscopic ablation procedures described by CPT codes 47370, 47371, and 50542, and the percutaneous cryoablation procedures described by CPT codes 47383, 50593, and 32994.

Response: We note the CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We analyzed our data, and below in Table 79 are the claims data for this final rule with comment period for the codes mentioned by the commenter.

TABLE 79: COST STATISTICS FOR CERTAIN RADIOFREQUENCY, LAPAROSCOPIC, AND CRYOABLATION PROCEDURES

CPT Code	Short Descriptor	Single Freq	Total Freq	Geometric Mean Cost
Radiofrequency Ablation Procedures				
32998	Ablate pulm tumor perq rf	171	174	$6,538.10
47382	Percut ablate liver rf	2,104	2,119	$7,140.84
50592	Perc rf ablate renal tumor	954	964	$6,810.13
Laparoscopic Ablation Procedures				
47370	Laparo ablate liver tumor rf	290	292	$9,467.15
47371	Laparo ablate liver cryosurg	5	5	$13,119.65
50542	Laparo ablate renal mass	62	62	$10,400.97
Percutaneous Cryoablation Procedures				
32994	Ablate pulm tumor perq crybl	265	267	$8,189.36
47383	Perq abltj lvr cryoablation	207	208	$9,269.14
50593	Perc cryo ablate renal tum	3,082	3,118	$8,596.92

As illustrated in Table 79, the resource costs associated with the laparoscopic ablation procedures and the percutaneous cryoablation procedures are higher than the resource costs associated with the radiofrequency ablation procedures. In particular, we found the geometric mean cost for CPT codes 32998, 47382, and 50592 ranged between approximately $6,538 and $7,141, which is consistent with the geometric mean cost of about $5,651 for APC 5361. We do not agree that the resource costs to perform these procedures are similar to those of the laparoscopic ablation procedures described by CPT codes 47370, 47371, and 50542, whose geometric mean cost range between $9,467 to $13,120, or the percutaneous cryoablation procedures described by CPT codes 47383, 50593, and 32994, whose geometric mean cost range between $8,189 and $9,269. We believe the resource costs related to the laparoscopic ablation procedures and percutaneous cryoablation procedures are appropriately reflected in APC 5362, whose geometric mean cost is approximately $10,081. Based on our analysis, we do not agree that the resource costs of the radiofrequency ablation procedures are similar to those of the laparoscopic ablation procedures or the percutaneous cryoablation procedures, which are in APC 5362. Therefore, we believe that CPT codes 32998, 47382, and 50592 should be maintained in APC 5361 based on clinical coherence and resource cost homogeneity.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT codes 32998, 47382, and 50592 to APC 5361 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

51. Radiofrequency Ablation, Posterior Nasal Nerve CPT Code 31242 (APC 5165)

For the CY 2024 OPPS final rule, we proposed that CPT code 31242 (placeholder code 3X016) (Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve) be assigned to APC 5165 (Level 5 ENT Procedures) with a payment rate of around $5,647. There are currently no claims data available for the procedure.

Comment: Two commenters expressed their support of our assignment of CPT code 31242/3X016 to APC 5165.

Response: We appreciate the support of the commenters for payment rate proposal.

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT code 31242 (listed as placeholder code 3X016 in the CY 2024 OPPS/ASC proposed rule with comment period) to continue to assign the procedure to APC 5165 (Level 5 ENT Procedures). Table 80 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 80: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 31242/3X016

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
31242	Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve	J1	5165

52. Remote Physiological Monitoring Services

For CY 2024, we proposed to continue to assign CPT codes 99457 (Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; first 20 minutes) and 99458 (Remote physiologic monitoring treatment management services, clinical staff/physician/other qualified health care professional time in a calendar month requiring interactive communication with the patient/caregiver during the month; each additional 20 minutes (list separately in addition to code for primary procedure) to status indicator ''B.''

At the August 21, 2023, HOP Panel Meeting, a presenter advised the Panel to request that CMS reassign CPT code 99457 to APC 5741 (Level 1 Electronic Data Analysis) with a proposed payment rate of $36.79 and CPT code 99458 is reassigned to status indicator ''N.''

Based on the information presented at the meeting, the Panel recommended that CMS considered changing the SI for CPT codes 99457 and 99458 to make them separately payable under the OPPS such that the services can be bundled with clinical visits in the month in which they occur and separately payable when no clinical visit with the appropriate supervising clinician occurs in the same month as the service.

Comment: We received one public comment, and the commenter requested a separate payment under OPPS for RPM treatment management services CPT codes 99457 and 99458. The commenter stated that separate payment under the OPPS for 99457 and 99458 is appropriate because they closely mirror the time-based chronic care management (CCM), described by CPT code 99490 (Chronic care management services with the following required elements: multiple (two or more) chronic conditions expected to last at least 12 months, or until the death of the patient, chronic conditions that place the patient at significant risk of death, acute exacerbation/decompensation, or functional decline, comprehensive care plan established, implemented, revised, or monitored; first 20 minutes of clinical staff time directed by a physician or other qualified health care professional, per calendar month), which is assigned to status indicator ''S'' and APC 5822 (Level 2 Health and Behavior Services) with a proposed payment rate of $86.86.

Response: We continue to believe that, since CPT code 99457 primarily describes the work associated with the billing of professional services, which would not be paid separately under the OPPS, and CPT code 99458 describes an add-on service to CPT code 99457, neither service is appropriate for separate payment under the OPPS. Therefore, we will continue to assign these codes to status indicator ''B'' for CY 2024.

In summary, after consideration of the public comment, we are finalizing our proposal without modification. Specifically, we are continuing to assign HCPCS codes 99457 and 99458 to status indicator ''B'' for CY 2024. We refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

53. Remote Therapeutic Monitoring Treatment Management Services

For CY 2024, we proposed to change the status indicator for CPT codes 98980 (Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; first 20 minutes) and 98981 (Remote therapeutic monitoring treatment management services, physician or other qualified health care professional time in a calendar month requiring at least one interactive communication with the patient or caregiver during the calendar month; each additional 20 minutes (list separately in addition to code for primary procedure) from status indicator ''M'' to status indicator ''B'' since these services describe work associated with billing for professional services.

At the August 21, 2023, HOP Panel Meeting, a presenter advised the Panel to request that CMS reassign CPT code 98980 to APC 5741 (Level 1 Electronic Data Analysis) with a proposed payment rate of $36.79 and CPT code 98981 is reassigned to status indicator ''N.''

Based on the information presented at the meeting, the Panel recommended that CMS considered changing the SI for CPT code 98980 to ''S'' and assign the code to APC 5741 (Level 1 Electronic Analysis of Devices) and changed the status indicator for CPT code 98981 to ''N'' per OPPS policy.

Comment: We received one comment and the commenter requested assigning a relative value unit (RVU) value for CPT codes 98980 and 98981 and removing status indicator ''B.''

Response: We thank the commenter for the input but note that the comment related to an assignment of the RVU value is out of scope for the purposes of this OPPS/ASC final rule with comment period as RVUs are used to value services paid under the PFS. We continue to believe that, since CPT code 98980 primarily describes the work associated with the billing of professional services, which would not be paid separately under the OPPS, and CPT code 98981 describes an add-on service to CPT code 98980, neither service is appropriate for payment under the OPPS. Therefore, we will continue to assign these codes to status indicator ''B'' to indicate that the codes are not paid under OPPS and that alternate codes that are recognized by OPPS may be available.

In summary, after consideration of the public comment, we are finalizing our proposal without modification. Specifically, we are continuing to assign HCPCS codes 98980 and 98981 to status indicator ''B'' for CY 2024. We will

review these codes again for future rulemaking. We refer readers to Addendum D1 of this final rule with comment period for the status indicator (SI) meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

54. RNS Neurostimulator Surgical Service (APCs 5113 and 5464)

For CY 2024, the AMA CPT Editorial Board created three new CPT codes to describe the services associated with the RNS System, a skull-mounted cranial neurostimulator and treatment option for persons with medically intractable epilepsy. Specifically, effective January 1, 2024, the three new CPT codes are:

- 61889 (placeholder code 619X1)—Insertion of skull-mounted cranial neurostimulator pulse generator or receiver, including craniectomy or craniotomy, when performed, with direct or inductive coupling, with connection to depth and/or cortical strip electrode array(s).
- 61891 (placeholder code 619X2)—Revision or replacement of skull-mounted cranial neurostimulator pulse generator or receiver with connection to depth and/or cortical strip electrode array(s).
- 61892 (placeholder code 619X3)—Removal of skull-mounted cranial neurostimulator pulse generator or receiver with cranioplasty, when performed.

Because 61889 is only performed in the inpatient setting, CMS proposed to assign the code to status indicator ''C'' for CY 2024 and, therefore, did not assign the code to an APC. For CY 2024, CMS proposed to assign 61891 to APC 5463 (Level 3 Neurostimulator and Related Procedures) with a proposed payment rate of $13,899.52 and 61892 to APC 5113 (Level 3 Musculoskeletal Procedures) with a proposed payment rate of $3111.88. We note that CPT codes 61889, 61891, and 61892 were listed as placeholder codes 619X1, 619X2, and 619X3, respectively, in OPPS Addendum B and Addendum O that were released with the CY 2024 OPPS/ASC proposed rule with comment period. Because we had not received the final CPT code numbers from AMA for the new codes that would be effective January 1, 2024, in time for the publication of the proposed rule, we listed the new CPT codes with their respective placeholder codes in OPPS Addendum B and Addendum O.

Comment: We received several comments, including one from the manufacturer, requesting that we reassign CPT codes 61891 and 61892 to higher paying APCs based on cost concerns. The commenters requested that, for CY 2024, CMS assign CPT code 61891 to APC 5465 (Level 5 Neurostimulator and Related Procedures) with a proposed payment rate of $30,354.65 and CPT code 61892 to APC 5463 (Level 3 Neurostimulator and Related Procedures) with a proposed payment rate of $13,899.52. One commenter stated that the proposed APC assignments for CPT codes 61891 and 61892 would result in a 54 percent and a 78 percent reduction, respectively, in hospital outpatient payment, which they stated would impact Medicare beneficiary access. To support their requested APC changes, the commenter referred to two codes that are currently used to describe the services as predecessor codes for CPT codes 61891 and 61892. The commenter stated that for purposes of APC assignment, CMS should consider CPT code 61886 (Insertion or replacement of cranial neurostimulator pulse generator or receiver, direct or inductive coupling; with connection to 2 or more electrode arrays) as the predecessor code for 61891 and CPT code 61888 (Revision or removal of cranial neurostimulator pulse generator or receiver) as the predecessor code for 61892.

The commenter noted the change in the code descriptions of the new CPT codes (61891, 61892) compared to the code descriptors of the existing codes (61886, 61888) as related to revision procedures. The commenter stated that it was unknown to them why the new CPT codes included revision and replacement in the same code (61891) compared to the existing CPT codes where replacement is a separate code (61886) and removal and revision procedures are included in the same code (61888). However, the commenter pointed out that revisions of the RNS neurostimulator are exceedingly rare and that they expect the vast majority, if not all, of the procedures reported with 61891 to be a replacement of the RNS neurostimulator, rather than a revision, where no neurostimulator device is implanted. Finally, the commenter provided their own analyses comparing epilepsy vs non-epilepsy-related claims for CPT codes 61886 and 61888 to demonstrate that epilepsy related claims for both codes, for which the RNS neurostimulator surgical service would be used, had higher geometric mean costs than non-epilepsy related claims.

Response: We thank the commenters for their input on our proposal. First, we disagree with the commenter's assertion that we should use CPT code 61886 as the predecessor code for CPT code 61891 because the long descriptors for each code are substantially different. Specifically, while CPT code 61886 describes the insertion or replacement of a neurostimulator, where a neurostimulator device will be implanted each time the service is billed, CPT code 61891 describes the revision or replacement of the neurostimulator, where a neurostimulator device may or may not be implanted when the service is billed. While we appreciate the additional feedback from commenters explaining that revision procedures are extremely rare, we have an obligation to set APC assignments according to the long descriptor provided by the AMA. Because we believe the resource costs for a service where a high-cost neurostimulator device may or may not be implanted are lower than the resource costs for a service where a high-cost neurostimulator device is implanted each time, we disagree that CPT code 61891 should be assigned to the same APC as CPT code 61886. However, in light of the comments provided regarding the rarity of revision procedures and based on clinical similarities between CPT code 61891 and other cranial neurostimulator codes currently assigned to APC 5464 (Level 4 Neurostimulators), we believe that assigning CPT code 61891 to APC 5464 would be clinically and resource appropriate.

Regarding the assignment for CPT code 61892, we also disagree with the comments recommending that we use CPT code 61888 as the predecessor code for CPT code 61892. While CPT code 61888 may describe a removal of the neurostimulator or a revision, CPT code 61892 only describes the removal procedure. Therefore, we do not believe that CPT code 61892 should be assigned to the same APC as CPT code 61888 because the codes are different in terms of resource and clinical considerations based on the disparity between the codes' long descriptors. After review of the comments provided and further analysis from our medical advisors, we believe that the removal procedure described by CPT code 61892 is similar to the service described by CPT 69727 (Removal, entire osseointegrated implant, skull; with magnetic transcutaneous attachment to external speech processor, within the mastoid and/or involving a bony defect less than 100 sq mm surface area of bone deep to the outer cranial cortex), and should be assigned to the same clinical APC. Therefore, we continue to believe that an assignment to APC 5113 (Level 3 Musculoskeletal Procedures) is

clinically and resource appropriate for CPT code 61892.

After consideration of the public comments, we are finalizing the assignment of CPT code 61891 to APC 5464. Additionally, we are finalizing the assignment of CPT code 61892 to APC 5113. The final CY 2024 payment rate for both codes can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

55. Scleral Reinforcement (APC 5492)

For CY 2023, we assigned CPT code 67255 (Scleral reinforcement (separate procedure); with graft) to APC 5491 (Level 1 Intraocular Procedures) with a payment rate of $2,159.44. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to maintain assignment to APC 5491 (Level 1 Intraocular Procedures) with a payment rate of $2,255.61.

Comment: A commenter disagreed with the assignment to APC 5491 and suggested reassignment to APC 5492 (Level 2 Intraocular Procedures), with a payment rate of $3,970.62, based on the latest claims data.

Response: We reviewed our claims data for this final rule with comment period. We note the CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Based on our examination of the claims data, we found the geometric mean cost of approximately $3,990 for CPT code 67255 based on 111 single claims (out of 111 total claims), which is consistent with the geometric mean cost of about $3,982 for APC 5492. We believe that the resource costs related to CPT code 67255 are higher compared to that of APC 5491, whose geometric mean cost is approximately $2,282, and more comparable to APC 5492. Therefore, we believe that we should reassign CPT code 67255 to APC 5492, since the procedure fits more appropriately in this APC based on clinical similarity and resource homogeneity.

In summary, after consideration of the public comment, we are finalizing the APC assignment for CPT code 67255 with modification. Specifically, we are revising the APC assignment from APC 5491 to APC 5492 for CPT code 67255 for CY 2024. The final CY 2024 OPPS payment rate for this code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

56. SpaceOAR Hydrogel Procedure (APC 5375)

CPT code 55874 (Transperineal placement of biodegradable material, peri-prostatic, single or multiple injection(s), including image guidance, when performed) describes the procedure associated with the SpaceOAR Hydrogel, a perirectal spacer made of gel-like material that temporarily creates a space between the prostate and rectum in prostate patients undergoing radiation therapy. For CY 2023, we assigned the code to APC 5375 (Level 5 Urology and Related Services), with a payment rate of $4,702.18. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to continue the assignment to APC 5376 (Level 6 Urology and Related Services) with a payment rate of $4,959.89.

Comment: Several commenters requested a reassignment to APC 5376 based on the claims data for the CY 2024 update.

Response: The CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We reviewed the claims data for this final rule, and based on our analysis, we found the geometric mean cost of approximately $6,634 for CPT code 55874 based on 9,361 single claims (out of 9,470 total claims), is consistent with the geometric mean cost of about $5,067 for APC 5375, rather than the geometric mean cost of approximately $9,022 for APC 5376. Based on the resource costs, we believe that CPT code 55874 fits more appropriately in APC 5375 based on its clinical similarity and resource homogeneity to the procedures in the APC. We note that we review, on an annual basis, the APC assignments for all services and items paid under the OPPS based on our analysis of the latest claims data.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 55874 to APC 5375 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

57. Spinal Injection Service (APC 5115)

For CY 2024, we proposed to assign CPT codes 0627T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with fluoroscopic guidance, lumbar; first level) and 0629T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with ct guidance, lumbar; first level) to APC 5115 (Level 5 Musculoskeletal Procedures) with a proposed payment rate of $13,269.40.

Comment: We received a comment supporting our proposal to assign CPT codes 0627T and 0629T to APC 5115 (Level 5 Musculoskeletal Procedures).

Response: We thank the commenter for support of our proposal to assign CPT codes to APC 5115.

After consideration of the public comment received, we are finalizing our proposal without modification. The final CY 2024 payment rate for these codes can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

58. Synchronized Diaphragmatic Stimulation (SDS) System for Augmentation of Cardiac Function

For the 2022 update, the CPT Editorial Panel established 12 new codes, specifically, CPT codes 0674T through 0685T, to describe the various services related to the synchronized diaphragmatic stimulation (SDS) system that is used to treat certain patients with chronic heart failure. The codes were effective January 1, 2022, and describe the implanting, revising, removing and replacing the implantable stimulator and leads, as well as interrogation and programming of the SDS system. The complete long descriptors for the 12 codes are listed in Table 81 below. For the 2022 and 2023 update, we assigned the codes to status indicator ''E1'' to indicate that they are not payable by Medicare when submitted on outpatient claims (any outpatient bill type) because the services associated with these codes are either not covered by any Medicare outpatient benefit category, statutorily excluded by Medicare, or not reasonable and necessary. For CY 2024, we proposed to continue to assign the codes to status indicator ''E1.''

Comment: A device manufacturer reported that the device associated with the codes received Breakthrough Device

Designation from the FDA and is scheduled to start a Category B Investigational Device Exemption (IDE) clinical trial in early 2024. In anticipation of the clinical trial and to ensure that hospitals receive Medicare reimbursement for the clinical trial, the manufacturer requested a reassignment in the status indicator, and suggested specific APCs and status indicator assignments for the 12 codes. In particular, the commenter suggested specific APC assignments for nine of the 12 codes, and recommended the assignment of status indicator ''N'' (packaged) for the three add-on codes. The manufacturer indicated that once they receive approval from the FDA for the IDE study, they intend to submit an application to CMS for Medicare coverage of their IDE clinical trial.

Response: Because the IDE study protocol has not received FDA approval, and has not been approved for Medicare coverage, we believe that we should continue to assign CPT codes 0674T through 0685T to status indicator ''E1'' for CY 2024. If this technology later meets CMS' standards for coverage, we will reassess the status indicator and APC assignments in a future quarterly update and/or rulemaking cycle.

In summary, after consideration of the public comment received, we are finalizing our proposal, without modification, to assign status indicator ''E1'' to CPT codes 0674T through 0685T. The final status indicator assignment for the codes is listed in Table 81. We refer readers to Addendum D1 of this final rule with comment period for the complete list of the OPPS payment status indicators and their definitions for CY 2024. Addendum D1 is available via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 81: CY 2024 OPPS STATUS INDICATOR ASSIGNMENT FOR THE SERVICES RELATED TO THE SYNCHRONIZED DIAPHRAGMATIC STIMULATION SYSTEM CPT CODES 0674T – 0685T

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Final CY 2024 OPPS SI
0674T	Laparoscopic insertion of new or replacement of permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including an implantable pulse generator and diaphragmatic lead(s)	E1	E1
0675T	Laparoscopic insertion of new or replacement of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; first lead	E1	E1
0676T	Laparoscopic insertion of new or replacement of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; each additional lead (list separately in addition to code for primary procedure)	E1	E1
0677T	Laparoscopic repositioning of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; first repositioned lead	E1	E1

CPT Code	Long Descriptor	Proposed CY 2024 OPPS SI	Final CY 2024 OPPS SI
0678T	Laparoscopic repositioning of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, including connection to an existing pulse generator; each additional repositioned lead (list separately in addition to code for primary procedure)	E1	E1
0679T	Laparoscopic removal of diaphragmatic lead(s), permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	E1
0680T	Insertion or replacement of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, with connection to existing lead(s)	E1	E1
0681T	Relocation of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function, with connection to existing dual leads	E1	E1
0682T	Removal of pulse generator only, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	E1
0683T	Programming device evaluation (in-person) with iterative adjustment of the implantable device to test the function of the device and select optimal permanent programmed values with analysis, review and report by a physician or other qualified health care professional, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	E1
0684T	Peri-procedural device evaluation (in-person) and programming of device system parameters before or after a surgery, procedure, or test with analysis, review, and report by a physician or other qualified health care professional, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	E1
0685T	Interrogation device evaluation (in-person) with analysis, review and report by a physician or other qualified health care professional, including connection, recording and disconnection per patient encounter, permanent implantable synchronized diaphragmatic stimulation system for augmentation of cardiac function	E1	E1

BILLING CODE 4150–28–C

59. Transcatheter Renal Sympathetic Denervation Procedure (APC 5192)

For CY 2023, we assigned CPT code 0338T and 0339T to APC 5192 (Level 2 Endovascular Procedures), with a payment rate of $5,215.40. For CY 2024, as listed in OPPS Addendum B that was released with the CY 2024 OPPS/ASC proposed rule, we proposed to continue the assignment to APC 5192 with a payment rate of $5,500.17. Below are the long descriptors for the codes:

- 0338T: Transcatheter renal sympathetic denervation, percutaneous approach including arterial puncture, selective catheter placement(s) renal artery(ies), fluoroscopy, contrast injection(s), intraprocedural roadmapping and radiological supervision and interpretation, including pressure gradient measurements, flush aortogram and

diagnostic renal angiography when performed; unilateral

- 0339T: Transcatheter renal sympathetic denervation, percutaneous approach including arterial puncture, selective catheter placement(s) renal artery(ies), fluoroscopy, contrast injection(s), intraprocedural roadmapping and radiological supervision and interpretation, including pressure gradient measurements, flush aortogram and diagnostic renal angiography when performed; bilateral

Comment: A commenter requested a reassignment to APC 5193 (Level 3 Endovascular Procedures, with a payment rate of $10,602.57, based on clinical similarity to the procedures in the APC.

Response: The CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. We evaluated the claims data for this final rule, and based on our review, we found no claims for CPT code 0338T. We also reviewed our historical claims data for the last 5 years, specifically, the cost statistics data that was released with the CY 2019 through CY 2023 OPPS/ASC final rules, and found that we have no claims data for CPT code 0338T. In contrast, we found some data for CPT code 0339T. For this final rule with comment period, our claims data show a geometric mean cost of about $16,423 for CPT code 0339T based on 1 single claim (out of 1 total claim). Similar to CPT code 0338T, we reviewed our historical claims data for the last 5 years and found inconsistent cost information. Specifically, our claims data show a geometric mean cost that has ranged between $651 and $1,081, based on 1 and 9 single claims. Based on the historical and current claims data for this final rule with comment period, we believe that both codes should be maintained in APC 5192.

In summary, after consideration of the public comment, we are finalizing our proposal, without modification, to assign CPT code 0338T and 0339T to APC 5192 for CY 2024. The final CY 2024 payment rate for the code can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website.

60. Transnasal EGD CPT Codes 0652T–0654T (APCs 5302 and 5303)

For the CY 2024 OPPS final rule, we proposed to assign CPT code 0652T (Esophagogastroduodenoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)) with no claims data for CY 2024 and CPT code 0653T (Esophagogastroduodenoscopy, flexible, transnasal; with biopsy, single or multiple) with a geometric mean cost of around $3,987 to APC 5302 (Level 2 Upper GI Procedures) with a payment rate of around $1,854. In addition, we proposed to assign CPT code 0654T (Esophagogastroduodenoscopy, flexible, transnasal; with insertion of intraluminal tube or catheter) with a geometric mean cost of around $2,057 to APC 5303 (Level 3 Upper GI Procedures) with a payment rate of $3,803.

Comment: One commenter supported our decision to assign CPT codes 0652T and 0653T to APC 5302. The commenter also supported our decision to assign CPT code 0654T to APC 5303.

Response: We appreciate the commenter's support for our proposals.

After consideration of the public comments we received, we are finalizing our proposal without modification to continue to assign CPT codes 0652T and 0653T to APC 5302 (Level 2 Upper GI Procedures). We also are finalizing our proposal without modification to continue to assign CPT code 0654T to APC 5303 (Level 3 Upper GI Procedures). Table 82 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 82: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODES 0652T – 0654T

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
0652T	Esophagogastroduodenoscopy, flexible, transnasal; diagnostic, including collection of specimen(s) by brushing or washing, when performed (separate procedure)	J1	5302
0653T	Esophagogastroduodenoscopy, flexible, transnasal; with biopsy, single or multiple	J1	5302
0654T	Esophagogastroduodenoscopy, flexible, transnasal; with insertion of intraluminal tube or catheter	J1	5303

61. Upper GI Tract Endoscopy Bile and Pancreatic Ducts (APC 5302)

CPT code 43275 (Endoscopic retrograde cholangiopancreatography (ERCP); with removal of foreign body(s) or stent(s) from biliary/pancreatic duct(s)) describes an endoscopy procedure that is performed to treat medical issues with the bile and pancreatic ducts. CPT code 43275 has a geometric mean cost of around $2,725 for CY 2024. In the CY 2024 OPPS proposed rule, we assigned CPT code 43275 to APC 5302 (Level 2 Upper GI

Procedures) with a payment rate of around $1,854.

Comment: One commenter requested that CPT code 43275 be reassigned to APC 5303 (Level 3 Upper GI Procedures) with a payment rate of around $3,803. The commenter states that performing endoscopic retrograde cholangiopancreatography (ERCP) requires more training and experience for gastrointestinal endoscopists as compared to other gastrointestinal endoscopic procedures leading to higher cost for the procedure described by CPT code 43275. The commenter also notes that CPT code was assigned to APC 5202 for CY 2023 where it is the lowest-cost significant procedure. Moving CPT code 43275 to APC 5302 would increase the 2 times rule threshold in APC 5303, which according to the commenter, may reduce the procedure code combinations that would be eligible for complexity adjustments. The commenter also notes that CPT code 43275 while in APC 5302 is less than $300 away from a 2 times rule violation in that APC. Finally, the commenter believes that there no significant financial impact whether CPT code 43275 is assigned to either APC 5302 or APC 5303.

Response: We appreciate the request of the commenter. We note that while CPT code 43275 would be one of the higher-paid procedures in APC 5302, the procedure will be underpaid by less than $900 and there are several other procedures in APC 5302 with similar geometric costs as CPT code 43275. Assigning CPT code 43275 to APC 5303 would make the procedure the second lowest-paid procedure in APC 5303. In addition, the payment rate of APC 5303 would be around $1,000 more than the geometric mean cost of CPT code 43275.

After consideration of the public comments we received, we are finalizing our proposal without modification for CPT code 43275 to continue to assign the procedure to APC 5302 (Level 2 Upper GI Procedures). Table 83 shows the finalized status indicator and APC assignment for all of the procedure codes. We refer readers to Addendum B of this final rule with comment period for the payment rates for all codes reportable under the OPPS. Addendum B is available via the internet on the CMS website.

TABLE 83: FINAL CY 2024 OPPS APC STATUS INDICATOR ASSIGNMENTS FOR CPT CODE 43275

CPT Code	Long Descriptor	Final CY 2024 OPPS SI	Final CY 2024 OPPS APC
43275	Endoscopic retrograde cholangiopancreatography (ercp); with removal of foreign body(s) or stent(s) from biliary/pancreatic duct(s)	J1	5302

62. Xen Glaucoma Treatment Procedure (APC 5493)

For 2017, the AMA's Editorial Panel established two new codes, specifically, CPT code 0449T and 0450T, effective January 1, 2017, to describe the surgical procedure associated with the Xen Glaucoma Treatment System. The complete long descriptors for the codes, are listed below:

- 0449T (Insertion of aqueous drainage device, without extraocular reservoir, internal approach, into the subconjunctival space; initial device)
- 0450T (Insertion of aqueous drainage device, without extraocular reservoir, internal approach, into the subconjunctival space; each additional device (list separately in addition to code for primary procedure))

For CY 2023, CPT code 0449T is assigned to APC 5492 (Level 2 Intraocular Procedures) with a payment of $3,995.58. In addition, we assigned CPT code 0450T to status indicator ''N'' to indicate that the code is packaged, and payment for the service is included in the primary code. For CY 2024, we proposed to continue the assignment to APC 5492 for CPT code 0449T. Similarly, we proposed to maintain the assignment of status indicator ''N'' (packaged) for CPT code 0450T.

Comment: A commenter reported that the proposed reassignment for CPT 66991, which is one of the existing MIG codes, from APC 1563 (New Technology—Level 26 ($4001–$4500)) to APC 5493 (Level 3 Intraocular Procedures), seems appropriate. However, the commenter indicated that the geometric mean cost for CPT code 0449T is higher than the cost of CPT code 66991, yet CPT code 0449T has been proposed to continue to be assigned to APC 5492. In addition, the commenter suggested that the work associated with CPT code 0449T is significantly more complex than that of CPT code 66991. Based on the claims data and the clinical complexity of the work associated with the service described by CPT code 0449T, the commenter urged CMS to reassign CPT code 0449T to APC 5493, which is the same APC proposed for CPT code 66991.

Response: We reviewed our claims data for this final rule with comment period. The CY 2024 OPPS payment rates are based on claims submitted between January 1, 2022, and December 31, 2022, processed through June 30, 2023. Based on our evaluation of the claims data for this final rule with comment period, we agree that the geometric mean cost for CPT code 0449T is higher compared to the geometric mean cost for CPT code 66991. Specifically, our claims data show a geometric mean cost of approximately $4,995 for CPT code 0449T based on 415 single claims (out of 421), which is higher than the geometric mean cost of about $4,943 for CPT code 66991 based on 6,011 single claims (out of 6,069) total claims. We agree that CPT code 0449T should be reassigned to APC 5493 based on clinical and resource homogeneity with the procedures assigned to APC 5493. We believe the resource costs associated with CPT code 0449T are similar to those procedures in APC 5493, rather than APC 5492. Therefore, we are revising the assignment for CPT code 0449T to APC 5493 for CY 2024.

With regard to CPT code 66991 (MIG code) mentioned by the commenter, we refer readers to section III.C (New Technology APCs) of this final rule with comment period for the discussion

related to the CY 2024 payment for the code.

In summary, after consideration of the public comments, we are finalizing the APC assignment for CPT code 0449T with modification. Specifically, we are revising the APC assignment from APC 5492 to APC 5493 for CPT code 0449T for CY 2024. We note we did not receive any comment for CPT code 0450T, therefore, we are finalizing the proposed status indicator. The final CY 2024 OPPS payment rate for all the codes payable under the OPPS can be found in Addendum B to this final rule with comment period. In addition, we refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addendum D1 is available via the internet on the CMS website.

63. XV Lung Ventilation Analysis Software (APC 5722)

Effective July 1, 2023, the CPT Editorial Panel created CPT codes 0807T (Pulmonary tissue ventilation analysis using software-based processing of data from separately captured cinefluorograph images; in combination with previously acquired computed tomography (CT) images, including data preparation and transmission, quantification of pulmonary tissue ventilation, data review, interpretation and report) and 0808T (Pulmonary tissue ventilation analysis using software-based processing of data from separately captured cinefluorograph images; in combination with computed tomography (CT) images taken for the purpose of pulmonary tissue ventilation analysis, including data preparation and transmission, quantification of pulmonary tissue ventilation, data review, interpretation and report). Both CPT codes 0807T and 0808T are used with the XV Lung Ventilation Analysis Software, which is a respiratory imaging platform to identify respiratory deficiencies. The difference between the two codes is that CPT code 0808T includes a CT scan during the service, and CPT code 0807T does not. For CY 2024, we proposed to assign CPT code 0807T to APC 5721 (Level 1 Diagnostic Tests and Related Services) with a proposed payment rate of $151 and CPT code 0808T to APC 5722 (Level 2 Diagnostic Tests and Related Services) with a proposed payment rate of $304.

Comment: We received a comment from the manufacturer of the XV Lung Ventilation Analysis Software expressing support for the proposed APC assignment for 0808T.

Response: We thank the commenter for their support for the APC assignment for CPT code 0808T and agree that the proposed APC assignment for CPT code 0808T accurately captures the costs associated with the service. Therefore, we are finalizing the APC assignment for CPT code 0808T as proposed.

Comment: The manufacturer also commented on the proposed APC assignment for CPT code 0807T. The commenter stated that the proposed APC assignment for CPT code 0807T does not properly account for the costs associated with the required fluoroscopy imaging that is a part of the service. The commenter provided the CY 2024 proposed rule geometric mean costs for two fluoroscopy codes: CPT code 76000 (Fluoroscopy (separate procedure), up to 1 hour physician or other qualified health care professional time) with a proposed geometric mean cost of $262, and CPT code 76496 (Unlisted fluoroscopic procedure (eg, diagnostic, interventional) with a proposed geometric mean cost of $133, and explained that the proposed APC assignment for CPT code 0807T would not cover the costs of the fluoroscopy based on the proposed geometric mean costs of the two fluoroscopy codes. To account for the costs of the fluoroscopy that is performed as part of the service, the commenter requested that CMS assign CPT code 0807T to APC 5722 for CY 2024.

Response: After further evaluation of CPT code 0807T, the resources required to perform the procedure, and input from our medical advisors, we believe it is appropriate to reassign CPT code 0807T to APC 5722. Based on our evaluation of the additional information provided to CMS as well as the claims data for existing fluoroscopy codes, we believe that the resource costs associated with CPT code 0807T are higher than those associated with the code's proposed APC assignment. Therefore, we are revising the APC assignment for CPT code 0807T for CY 2024.

After consideration of the public comment, we are finalizing our proposal without modification to assign CPT code 0808T to APC 5722 for CY 2024. We are also finalizing the reassignment of CPT code 0807T to APC 5722 for CY 2024. The final CY 2024 payment rate for these codes can be found in Addendum B to this final rule with comment period. We also refer readers to Addendum D1 of this final rule with comment period for the SI meanings for all codes reported under the OPPS. Addenda B and D1 are available via the internet on the CMS website. In addition, we note that CMS recognizes that software-based technologies are rapidly evolving, like the product used for HCPCS code C9786. In line with our comment solicitation on payment policy for software as a service (SaaS) procedures in the CY 2023 OPPS final rule (87 FR 72035 and 72036), CMS is considering, for future rulemaking, whether or not specific adjustments to payment policies and rate calculations are necessary in order to more accurately and appropriately pay for these products and services across settings of care. CMS remains open to feedback on these issues and welcomes engagement from interested parties, including from manufacturers, providers, and beneficiaries.

64. New Technology Applications Submitted to CMS

Comment: We received comments regarding three pending New Technology APC applications, for the TriNav™ Infusion System, Trabeculocanalicular Outflow Restoration, and Optilume Benign Prostatic Hyperplasia (BPH) services.

Response: We note that pending New Technology APC applications are reviewed via a sub-regulatory process, and therefore, application determinations are not made via rulemaking. As a result, we did not propose to create new codes for any of these services or assign them to New Technology APCs in the CY 2024 OPPS/ASC proposed rule. These New Technology APC applications are currently being reviewed and applicants will be notified of CMS's decision through our normal process.

IV. OPPS Payment for Devices

A. Pass-Through Payment for Devices

1. Beginning Eligibility Date for Device Pass-Through Status and Quarterly Expiration of Device Pass-Through Payments

a. Background

The intent of transitional device pass-through payment, as implemented at § 419.66, is to facilitate access for beneficiaries to the advantages of new and truly innovative devices by allowing for adequate payment for these new devices while the necessary cost data is collected to incorporate the costs for these devices into the procedure APC rate (66 FR 55861). Under section 1833(t)(6)(B)(iii) of the Act, the period for which a device category eligible for transitional pass-through payments under the OPPS can be in effect is at least 2 years but not more than 3 years. Prior to CY 2017, our regulation at § 419.66(g) provided that this pass-through payment eligibility period began on the date CMS established a

particular transitional pass-through category of devices, and we based the pass-through status expiration date for a device category on the date on which pass-through payment was effective for the category. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79654), in accordance with section 1833(t)(6)(B)(iii)(II) of the Act, we amended § 419.66(g) to provide that the pass-through eligibility period for a device category begins on the first date on which pass-through payment is made under the OPPS for any medical device described by such category.

In addition, prior to CY 2017, our policy was to propose and finalize the dates for expiration of pass-through status for device categories as part of the OPPS annual update. This means that device pass-through status would expire at the end of a calendar year when at least 2 years of pass-through payments had been made, regardless of the quarter in which the device was approved. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79655), we changed our policy to allow for quarterly expiration of pass-through payment status for devices, beginning with pass-through devices approved in CY 2017 and subsequent calendar years, to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through payment devices. We also have an established policy to package the costs of the devices that are no longer eligible for pass-through payments into the costs of the procedures with which the devices are reported in the claims data used to set the payment rates (67 FR 66763).

We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79648 through 79661) for a full discussion of the current device pass-through payment policy.[14]

In the CY 2023 OPPS/ASC final rule with comment period, we finalized our policy to publicly post online OPPS device pass-through applications received on or after March 1, 2023, beginning with the issuance of the CY 2025 proposed rule and for each OPPS rulemaking thereafter. We refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 71934 through 71938) for a full discussion of the policy to publicly post OPPS device pass-through applications.

b. Expiration of Transitional Pass-Through Payments for Certain Devices

As stated earlier, section 1833(t)(6)(B)(iii) of the Act requires that, under the OPPS, a category of devices be eligible for transitional pass-through payments for at least 2 years, but not more than 3 years. Currently, there are 15 device categories eligible for pass-through payment. These devices are listed in Table 84 of this final rule with comment where we detail the expiration dates of pass-through payment status for each of the 15 devices currently receiving device pass-through payment.

[14] To apply for OPPS transitional device pass-through status, applicants complete an application that is subject to the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). This information collection (CMS–10052) is currently approved under OMB control number 0938–0857 and has an expiration date of November 30, 2025.

In the CY 2022 OPPS/ASC final rule with comment period we used CY 2019 claims data, rather than CY 2020 claims data, to inform CY 2022 ratesetting (86 FR 63755). As a result, we utilized our equitable adjustment authority at section 1833(t)(2)(E) of the Act to provide up to four quarters of separate payment for 27 drugs and biologicals and one device category whose pass-through payment status expired between December 31, 2021 and September 30, 2022 to mimic continued pass-through payment, promote adequate access to innovative therapies for Medicare beneficiaries, and gather sufficient data for purposes of assigning these devices to clinical APCs (86 FR 63755). A full discussion of this final policy is included in section X.F of the CY 2022 OPPS/ASC final rule with comment (86 FR 63755).

Section 4141(a)(2) of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117–328) amended section 1833(t)(6) by adding a new subparagraph (K), which extended the device pass-through status under paragraph (6) for a 1-year period beginning January 1, 2023, for device categories whose period of pass-through status would have ended on December 31, 2022. There are five device categories for which pass-through status would have ended on December 31, 2022, but which will now end on December 31, 2023. Pass-through status began for these device categories on January 1, 2020.

BILLING CODE 4150–28–P

TABLE 84: DEVICES WITH PASS-THROUGH STATUS EXPIRING IN 2023, IN 2024, OR IN 2025

HCPCS Code	Long Descriptor	Effective Date	Pass-Through Expiration Date
C1824*	Generator, cardiac contractility modulation (implantable)	1/1/2020	12/31/2023
C1982*	Catheter, pressure-generating, one-way valve, intermittently occlusive	1/1/2020	12/31/2023
C1839*	Iris prosthesis	1/1/2020	12/31/2023
C1734*	Orthopedic/device/drug matrix for opposing bone-to-bone or soft tissue-to bone (implantable)	1/1/2020	12/31/2023
C2596*	Probe, image-guided, robotic, waterjet ablation	1/1/2020	12/31/2023
C1052	Hemostatic agent, gastrointestinal, topical	1/1/2021	12/31/2023
C1062	Intravertebral body fracture augmentation with implant (e.g., metal, polymer)	1/1/2021	12/31/2023
C1825	Generator, neurostimulator (implantable), nonrechargeable with carotid sinus baroreceptor stimulation lead(s)	1/1/2021	12/31/2023
C1761	Catheter, transluminal intravascular lithotripsy, coronary	7/1/2021	6/30/2024
C1831	Personalized, anterior and lateral interbody cage (implantable)	10/1/2021	9/30/2024
C1832	Autograft suspension, including cell processing and application, and all system components	1/1/2022	12/31/2024
C1833	Monitor, cardiac, including intracardiac lead and all system components (implantable)	1/1/2022	12/31/2024
C1826	Generator, neurostimulator (implantable), includes closed feedback loop leads and all implantable components, with rechargeable battery and charging system	1/1/2023	12/31/2025
C1827	Generator, neurostimulator (implantable), non-rechargeable, with implantable stimulation lead and external paired stimulation controller	1/1/2023	12/31/2025
C1747	Endoscope, single-use (i.e. disposable), urinary tract, imaging/illumination device (insertable)	1/1/2023	12/31/2025

*Device for which pass-through status was extended for a 1-year period by section (a)(2) of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117-328), titled "Extension of Pass-Through Status Under the Medicare Program for Certain Devices Impacted by COVID-19."

BILLING CODE 4150–28–C

2. New Device Pass-Through Applications for CY 2024

a. Background

Section 1833(t)(6) of the Act provides for pass-through payments for devices, and section 1833(t)(6)(B) of the Act requires CMS to use categories in determining the eligibility of devices for pass-through payments. As part of implementing the statute through regulations, we have continued to believe that it is important for hospitals to receive pass-through payments for devices that offer substantial clinical improvement in the treatment of Medicare beneficiaries to facilitate access by beneficiaries to the advantages of the new technology. Conversely, we have noted that the need for additional payments for devices that offer little or no clinical improvement over previously existing devices is less apparent. In such cases, these devices can still be used by hospitals, and hospitals will be paid for them through appropriate APC payment. Moreover, a goal is to target pass-through payments for those devices where cost considerations are most likely to interfere with patient access (66 FR 55852; 67 FR 66782; and 70 FR 68629).

As specified in regulations at § 419.66(b)(1) through (3), to be eligible for transitional pass-through payment under the OPPS, a device must meet the following criteria:

- If required by FDA, the device must have received FDA approval or clearance and FDA marketing authorization (except for a device that has received an FDA investigational device exemption (IDE) and has been classified as a Category B device by FDA), or meet another appropriate FDA exemption; and the pass-through payment application must be submitted within 3 years from the date of the initial FDA marketing authorization, if required, unless there is a documented, verifiable delay in U.S. market availability after FDA marketing authorization is granted, in which case CMS will consider the pass-through payment application if it is submitted within 3 years from the date of market availability;
- The device is determined to be reasonable and necessary for the diagnosis or treatment of an illness or injury or to improve the functioning of a malformed body part, as required by section 1862(a)(1)(A) of the Act; and
- The device is an integral part of the service furnished, is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted (either permanently or temporarily), or applied in or on a wound or other skin lesion.

In addition, according to § 419.66(b)(4), a device is not eligible to be considered for device pass-through payment if it is any of the following: (1) equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciation assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or (2) a material or supply furnished incident to a service (for example, a suture, customized surgical kit, or clip, other than a radiological site marker).

Separately, we use the following criteria, as set forth under § 419.66(c), to determine whether a new category of pass-through payment devices should be established. The device to be included in the new category must—

- Not be appropriately described by an existing category or by any category previously in effect established for transitional pass-through payments, and was not being paid for as an outpatient service as of December 31, 1996;
- Have an average cost that is not ''insignificant'' relative to the payment amount for the procedure or service with which the device is associated as determined under § 419.66(d) by demonstrating: (1) the estimated average reasonable cost of devices in the category exceeds 25 percent of the applicable APC payment amount for the service related to the category of devices; (2) the estimated average reasonable cost of the devices in the category exceeds the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent; and (3) the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device exceeds 10 percent of the APC payment amount for the related service (with the exception of brachytherapy and temperature-monitored cryoablation, which are exempt from the cost requirements as specified at § 419.66(c)(3) and (e)); and
- Demonstrate a substantial clinical improvement, that is, substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment, or, for devices for which pass-through payment status will begin on or after January 1, 2020, as an alternative pathway to demonstrating substantial clinical improvement, a device is part of the FDA's Breakthrough Devices Program and has received marketing authorization for the indication covered by the Breakthrough Device designation.

Beginning in CY 2016, we changed our device pass-through evaluation and determination process. Device pass-through applications are still submitted to CMS through the quarterly sub-regulatory process, but the applications are subject to notice and comment rulemaking in the next applicable OPPS annual rulemaking cycle. Under this process, all applications that are preliminarily approved upon quarterly review will automatically be included in the next applicable OPPS annual rulemaking cycle, while submitters of applications that are not approved upon quarterly review will have the option of being included in the next applicable OPPS annual rulemaking cycle or withdrawing their application from consideration. Under this notice-and-comment process, applicants may submit new evidence, such as clinical trial results published in a peer-reviewed journal or other materials, for consideration during the public comment process for the proposed rule. This process allows those applications that we are able to determine meet all of the criteria for device pass-through payment under the quarterly review process to receive timely pass-through payment status, while still allowing for a transparent, public review process for all applications (80 FR 70417 and 70418).

In the CY 2020 annual rulemaking process, we finalized an alternative pathway for devices that are granted a Breakthrough Device designation (84 FR 61295) and receive FDA marketing authorization for the indication covered by the Breakthrough Device designation. Under this alternative pathway, devices that are granted an FDA Breakthrough Device designation are not evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2) for the purposes of determining device pass-through payment status, but do need to meet the other requirements for pass-through payment status in our regulation at § 419.66. Devices that are part of the Breakthrough Devices Program, have received FDA marketing authorization for the indication covered by the Breakthrough Devices designation, and meet the other criteria in the regulation can be approved through the quarterly process and announced through that process (81 FR 79655). Proposals regarding these devices and whether pass-through payment status should continue to apply are included in the next applicable OPPS rulemaking cycle. This

process promotes timely pass-through payment status for innovative devices, while also recognizing that such devices may not have a sufficient evidence base to demonstrate substantial clinical improvement at the time of FDA marketing authorization.

More details on the requirements for device pass-through payment applications are included on the CMS website in the application form itself at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/passthrough_payment.html,* in the ''Downloads'' section. In addition, CMS is amenable to meeting with applicants or potential applicants to facilitate information sharing to support the evaluation of an OPPS device pass-through payment application or discuss general application criteria, including the substantial clinical improvement criterion.

b. Applications Received for Device Pass-Through Status for CY 2024

We received six complete applications by the March 1, 2023, quarterly deadline, which was the last quarterly deadline for applications to be received in time to be included in this rule. We received three of the applications in the second quarter of 2022, one of the applications in the third quarter of 2022, no applications in the fourth quarter of 2022, and two of the applications in the first quarter of 2023. One of the applications was approved for device pass-through status during the quarterly review process: MY01 Continuous Compartmental Pressure Monitor, which was submitted on May 31, 2022, and conditionally approved as HCPCS code C1834 on October 1, 2022. However, after further review, we determined that the conditional approval was in error, and consequently, we deleted code C1834 on March 31, 2023.

Applications received for the later deadlines for the remaining 2023 quarters (the quarters beginning June 1, September 1, and December 1 of 2023), if any, will be discussed in the CY 2025 OPPS/ASC proposed rule. We note that the quarterly application process and requirements have not changed because of the addition of rulemaking review. Detailed instructions on submission of a quarterly device pass-through payment application are included on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Downloads/catapp.pdf.*

Discussions of the applications we received by the March 1, 2023, deadline are included below.

(1) Alternative Pathway Device Pass-Through Applications

We received two device pass-through applications by the March 2023 quarterly application deadline for devices that have received Breakthrough Device designation from FDA and FDA marketing authorization for the indication for which they have a Breakthrough Device designation, and therefore are eligible to apply under the alternative pathway.

(a) CavaClear Inferior Vena Cava (IVC) Filter Removal Laser Sheath

Phillips North America, LLC submitted an application for a new device category for transitional pass-through payment status for CavaClear Inferior Vena Cava (IVC) Filter Removal Laser Sheath (CavaClear) for CY 2024. Per the applicant, CavaClear is a breakthrough device intended for tissue ablation in the removal of embedded IVC filters that have failed a previous retrieval method. IVC filters are used to capture blood clots and prevent them from moving to the lungs in patients with venous thromboembolism. Per the applicant, research has shown that IVC filters may have long-term complications, including device migration, filter fracture, and IVC occlusion; as a result, FDA issued a safety notice that recommends that physicians remove retrievable IVC filters as soon as they are no longer needed. The applicant stated that CavaClear facilitates the detachment of firmly adherent IVC filters using ultraviolet laser energy. The applicant explained that CavaClear uses circumferential tissue ablation that can aid in capturing the filter within seconds of laser activation, which can help increase physician efficiency, and may help lower costs by reducing the number of retrieval attempts to remove an embedded IVC filter.

According to the applicant, CavaClear is a 14F or 16F laser catheter used for the intra-operative removal of IVC filters. The applicant further explained that CavaClear consists of optical fibers arranged in a circle, sandwiched between inner and outer polymer tubing. The fibers terminate at the distal end within a polished tip and at the proximal end within a coupler that mates with the excimer laser. According to the applicant, inner and outer stainless-steel bands, which form a radiopaque marker, protect the optical fibers at the distal tip. The applicant also stated that CavaClear was designed to slide through an introducer sheath with an inner lumen to allow an appropriate traction platform to pass through it. Per the applicant, the device facilitates detachment of IVC filters from the IVC wall using ultraviolet laser energy and subsequent collapse of the filter, partially within the laser sheath and entirely within the introducer sheath. The laser sheath was designed for use with the CVX–300® Excimer Laser or Philips Laser System (PLS), which allows the multifiber laser sheaths to transmit ultraviolet energy to the tissue at the distal tip of the device. The applicant further explained that, when activated, the laser ablates the tissue and frees the IVC filter from overgrowth in a controllable fashion. The applicant stated that by using cool ultraviolet laser energy around the embedded IVC filter, CavaClear can assist in fast filter capture with low force.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), CavaClear received FDA Breakthrough Device designation effective April 23, 2021, for the ablation of tissue in the removal of IVC filters that have failed a previous retrieval method. FDA granted the applicant De Novo classification for CavaClear (laser-powered IVC filter retrieval catheter) on December 21, 2021, for the same indication as the one covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for CavaClear on May 30, 2022, which is within 3 years of the date of the initial FDA marketing authorization.

We solicited public comment on whether CavaClear meets the newness criterion at § 419.66(b)(1).

Comment: The applicant submitted a comment reiterating that CavaClear meets the newness criterion at 42 CFR 419.66(b)(1), stating that CMS received the application for a new device category for transitional pass-through payment status for CavaClear on May 30, 2022, which is within 3 years of the date of the initial FDA marketing authorization.

Response: We appreciate the commenter's input and agree that because we received the application for CavaClear on May 30, 2022, which is within 3 years of FDA approval on April 23, 2021, that CavaClear meets the newness criterion.

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, CavaClear is integral to the service provided, is used for one patient only, comes in contact with human tissue, and is surgically implanted or

inserted into the patient through the insertion of a laser catheter temporarily for the interoperative removal of IVC filters as required at § 419.66(b)(3).

We invited public comment on whether CavaClear meets the eligibility criterion at § 419.66(b)(3).

Comment: The applicant submitted a comment reiterating that CavaClear satisfies the eligibility criterion at 42 CFR 419.66(b)(3) because the device is integral to the service provided, is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted into the patient through the insertion of a laser catheter temporarily for the interoperative removal of IVC filters.

Response: We appreciate the commenter's input. Based on the information we have received and our review of the application, we agree with the applicant that CavaClear is integral to the service provided, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted. Therefore, we have determined that CavaClear meets the eligibility criteria at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), the applicant also claimed that CavaClear meets the criterion because it is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

We invited public comment on whether CavaClear meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant submitted a comment reiterating that CavaClear satisfies the exclusion criterion at 42 CFR 419.66(b)(4) because it is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

Response: We appreciate the commenter's input. Based on the information we have received and our review of the application, we agree with the applicant that CavaClear meets the device eligibility requirements of § 419.66(b)(4) because it is not a piece of equipment, instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service. We have therefore determined that CavaClear meets the device eligibility requirements of § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant described CavaClear as an IVC filter removal device that uses a laser to ablate tissue and is intended to facilitate detaching and removing indwelling IVC filters. Per the applicant, CavaClear is the first and only FDA-cleared solution for advanced IVC filter removal, and the applicant claimed that no previous device categories for pass-through payment appropriately describe CavaClear. Per the applicant, the possible existing pass-through code, HCPCS code C2629 (Introducer/sheath, other than guiding, other than intracardiac electrophysiological, laser), does not appropriately describe CavaClear because CavaClear uses a unique laser mechanism of action, unlike the snag, snare, and forceps method to remove IVC filters. Per the applicant, CavaClear is not intended to remove pacemaker and defibrillator leads like the products described by C2629, and CavaClear impacts different anatomy than the products described by C2629. Specifically, the applicant asserted that C2629 includes devices that are indicated to remove implanted pacemaker and defibrillator leads and devices via a catheter inserted into the vascular system. In addition, the applicant noted that FDA granted CavaClear De Novo classification, reflecting that there is no legally marketed predicate device for CavaClear.

In the proposed rule, we noted, based on the description the applicant provided, that CavaClear is a laser sheath intended for use in the IVC, which is not intracardiac, and thus could be encompassed by the descriptor of C2629. We also noted that another existing pass-through payment category may appropriately describe CavaClear. Specifically, we stated that we believed that C1773 (Retrieval device, insertable (used to retrieve fractured medical devices)) may appropriately describe CavaClear. Pass-through payment category C1773 is a broad category descriptor for a device that retrieves another device within a patient's vascular system. Based on the description the applicant provided, CavaClear is a device (a laser-powered sheath that uses a laser to ablate tissue in the IVC) used to retrieve another medical device (an IVC filter device), which is consistent with the descriptor for C1773. In this context, we believe CavaClear may be similar to the devices currently described by C2629 and C1773, and therefore, CavaClear may also be appropriately described by C2629 and C1773.

We invited public comment on whether CavaClear meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concerns that CavaClear may be appropriately described by C2629 or C1773, the applicant and several commenters commented that CavaClear meets eligibility requirements of § 419.66(c)(1), stating that CavaClear can be distinguished from the devices currently described by HCPCS codes C2629 and C1773 and, as such, meets the device category criterion. Specifically, the commenters asserted that CavaClear differs from devices described in C2629 and C1773 by mechanism of action, clinical use, impacted anatomy, and FDA clearance pathway.

All commenters addressing the device category criterion offered support for approval of the application. Commenters stated that CavaClear's mechanism of action is unique because it uses laser energy to ablate scar tissue to facilitate the safe detachment and removal of indwelling IVC filters. Commenters also noted that CavaClear's photothermal laser tissue ablation is administered with individualized tools and a unique traction platform different from other devices. One commenter stated that there is no other device that uses excimer laser technology to ablate the scar tissue that embeds IVC filter struts. Finally, the applicant and multiple commenters provided that CavaClear is also the only device to address the unmet medical need identified by FDA safety communications on IVC retrievals.

Multiple commenters also noted that CavaClear was granted De Novo classification by FDA, reflecting FDA's determination that there is no legally marketed predicate device for CavaClear. In addition, the applicant stated that CavaClear received Breakthrough Device designation from FDA, which they believe implies that CavaClear is the first device of its kind to address the condition for which it is designed and is the only FDA-cleared treatment option for advanced IVC filter removal.

With respect to our concern that CavaClear may be appropriately described by C2629, the applicant stated that CavaClear differs significantly from devices described in the C2629 category (Introducer/sheath, other than guiding, other than intracardiac

electrophysiological, laser). First, the applicant asserted, and multiple commenters agreed, that the devices described by C2629 are used to remove pacemaker and defibrillator leads from the superior vena cava (SVC) while CavaClear removes IVC filters from the inferior vena cava. Specifically, the applicant stated that CavaClear removes a different implant (IVC filter), as compared to other devices in need of removal (pacemaker and defibrillator leads). In addition, the impacted anatomy is different than that of the other products. The applicant explained that the IVC filter is placed in the IVC and the cardiac leads are placed via the SVC.

The applicant also sought to clarify how, in comparison to the devices described in the C2629 category, CavaClear's mechanism of action is unique. The applicant asserted that CavaClear's mechanism of action is different and is based on four components: vessel access, traction platform, tissue separation, and physical removal of the implanted device. The applicant stated that the vessel access site for CavaClear is via internal jugular or femoral vein, as opposed to the subclavian vein for the other laser sheath devices. The applicant also asserted that CavaClear's traction platform is different than the other laser sheath products, with no additional rail required for traction other than a snare, and the tools used to perform extraction are specific to the CavaClear device. Further, the applicant and a few commenters provided that the photothermal cool tissue ablation cannot be administered without the individualized tools and traction platform.

Finally, the applicant provided clarification regarding the physical removal of the implanted device using CavaClear. The applicant stated that to remove the IVC filter the CavaClear device interacts to collapse the filter in combination with the application of energy. By contrast, for other devices, there is no such interaction to physically alter the explanted device.

With respect to our concern that CavaClear may be appropriately described by C1773, the applicant asserted that CavaClear differs significantly from devices described in C1773 (Retrieval device, insertable (used to retrieve fractured medical devices)).

As with devices in the C2629 category, the applicant sought to clarify how, in comparison to the devices described in the C1773 category, CavaClear's mechanism of action is unique. The applicant reiterated that CavaClear's mechanism of action is different and is based on four components: vessel access, traction platform, tissue separation, and physical removal of the implanted device through photothermal cool tissue laser ablation.

Commenters asserted that CavaClear can be distinguished from the devices broadly described in C1773 because those described devices represent mechanical (non-laser) or more rudimentary approaches to retrieval as compared to CavaClear. Specifically, the applicant provided that for the devices described in C1773 that retrieve IVC filters (for example, endovascular snares, goose neck snares), the mechanism of action relies on the device to capture the apical hook of the filter (often embedded in the wall of the IVC or encapsulated). If accessible, the snare requires straight pulling, sometimes substantially, of the filter into a sheath with equal and opposite traction/countertraction applied to the snare and sheath to disengage the filter from the IVC wall. The applicant asserted that excessive pull forces have a higher risk of vasculature injury, filter breakage and fragmentation, and a potential for fragment embolization to the heart and/or lungs.

The applicant also clarified that devices in C1773 that do not retrieve IVC filters but are used for lead extraction (for example, Tightrail), generally feature a stainless steel cutting tool to mechanically dilate tissue surrounding a pacemaker or defibrillator lead. The device's stainless steel cutting tool features a handle, trigger, and drive mechanism that allows trigger pulls of the device to be converted into torque for mechanical dilation of tissue on the distal end. By contrast, CavaClear features fiberoptics for transmission of ultraviolet light to ablate tissue surrounding an IVC filter. Finally, the applicant noted that retrieval devices included in C1773 that are used to remove pacemaker and/or defibrillator cardiac implantable electronic devices are not indicated for and should not be used for retrieving IVC filters; the physician specialty performing lead extractions are electrophysiologists and cardiac surgeons, as compared to interventional radiologists and vascular surgeons who perform IVC filter removals; and the access site for these devices is different from CavaClear as the device is typically inserted into the subclavian vein as opposed to the jugular or femoral vein for CavaClear.

Response: We appreciate the input provided by these commenters. We have taken this information into consideration in making our final determination of the device category criterion, discussed below.

Comment: Along with the applicant, commenters urged CMS to establish a new pass-through payment category that describes CavaClear. The applicant asserted that CMS has set past precedent that would allow establishment of a narrower device category to account for new innovative technologies that were not contemplated when categories were first established. For example, CMS has established narrower device pass-through categories describing neurostimulators and transluminal angioplasty catheters to facilitate pass-through status for new technologies. Commenters asserted that these examples illustrate that CMS has, in the past, exercised flexibility in establishing new device categories that involve new technologies that appear to be described by existing broad categories. In doing so, the applicant asserted, CMS recognized that historical overly broad device categories may not necessarily be appropriate for new technologies that were not contemplated when the categories were established. The applicant urged CMS to exercise similar flexibility in evaluating CavaClear and creating a narrower device category to accurately describe the new technology. Several other commenters agreed with the applicant's assertion that CMS has the flexibility to create new device categories from existing broad categories to recognize technological advances within a device class.

Response: We appreciate the commenters' input. We agree with the applicant and commenters that CMS has the flexibility to create new device categories when we recognize that the existing device categories do not accurately describe the new proposed technology. However, we note that we must clearly establish that a proposed device is not described by existing device categories prior to exercising that flexibility. After consideration of the public comments we received, we agree there is no existing pass-through payment category that appropriately describes CavaClear because no current category appropriately describes an insertable introducer/sheath retrieval device that utilizes a photothermal cool laser to ablate caval tissue and retrieve intact IVC filters that are no longer clinically indicated. Neither pass-through category C2629 nor C1773 fully describes CavaClear and its complex mechanism of action. Based on this information, we have determined that CavaClear meets the first eligibility criterion at § 419.66(c)(1).

We received additional public comments regarding § 419.66(c)(1) that

did not impact our decision on whether or not CavaClear meets the § 419.66(c)(1) criterion, however we address these comments below.

Comment: The applicant stated that they believe CMS is adopting an overly restrictive interpretation of the device category requirements, particularly as they relate to devices with FDA Breakthrough Device designation. The applicant asserted that CMS' interpretation of the criteria for a new device category for CavaClear suggests that any new technology that could be aligned to an existing category that was created more than 20 years ago, despite unique characteristics that differentiate it from other devices in the category, would automatically fail to meet the threshold for a new device category. The applicant further stated that both categories CMS identifies as potentially describing CavaClear (C2629 and C1773) were established over two decades ago and use very broad language to describe existing technologies and technology development at the time; however, technologies have advanced significantly since then, and thus, these broad categories may be unnecessarily restricting pass-through status for technologies that are indeed novel.

Response: We appreciate the commenter's feedback; however, we disagree that our current interpretation of the device category requirements suggests that any new technology that could be aligned to a previous or existing device category would automatically fail to meet the threshold for a new device category. To the contrary, as the commenters noted, CMS has historically established device codes for new and innovative technologies when it has been determined that the proposed category is not appropriately described by any of the existing categories or by any category previously in effect. Device pass-through applications in no way automatically fail to meet the threshold for a new device category, rather, CMS' goal is to evaluate each application to clearly ascertain whether the proposed device is described by any of the existing categories or by any category previously in effect in order to determine if a new device category should be established.

Comment: The applicant expressed concern that CMS' interpretation of the device category requirement will result in inappropriate limits upon the use of the Alternative Pathway for device pass-through and encouraged CMS to consider the totality of evidence when assessing whether a device falls into an existing device category. Specifically, the applicant encouraged CMS to consider factors such as different mechanisms of action, unmet medical need, and differentiated clinical use when evaluating a new category.

Response: We appreciate the commenters' feedback. We disagree that our current interpretation of the device category requirement will result in inappropriate limits upon the use of the Alternative Pathway for device pass-through. CMS has established an evaluation process that ensures that we have the information we need to evaluate applications and make determinations based on the totality of the evidence; part of that evaluation is determining if a previous or existing device code appropriately describes the proposed device. We appreciate the suggestions made by the commenters regarding the factors CMS should use to evaluate the device category requirement and appreciate their support to our current process.

Comment: The applicant requested that CMS modify the device pass-through criteria to automatically consider devices with FDA Breakthrough Device designation to not be appropriately described by any of the existing or previous device categories, and therefore, meet the § 419.66(c)(1) criterion. The applicant noted that when CMS established an alternative pathway for Breakthrough Devices seeking new technology add-on payment in the inpatient hospital setting, CMS stated, ''if a medical device is part of FDA's Breakthrough Devices Program and received FDA marketing authorization, it would be considered new and not substantially similar to an existing technology for purposes of the new technology add-on payment.'' The applicant argued that to ensure consistency in policy across payment systems, CMS should deem CavaClear new for the purpose of device pass-through, and not described by an existing or past category.

Response: We appreciate the commenters' feedback. Under the IPPS, beginning with applications for FY 2021, a medical device designated under FDA's Breakthrough Devices Program that has received marketing authorization as a Breakthrough Device, for the indication covered by the Breakthrough Device designation, may qualify for the new technology add-on payment under an alternative pathway. Under an alternative pathway, a technology will be considered not substantially similar to an existing technology for purposes of the new technology add-on payment under the IPPS and will not need to meet the requirement that it represents an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries. These technologies must still be within the 2- to 3-year newness period to be considered ''new'' and must also still meet the cost criterion (88 FR 58919).

When we adopted the alternative pathway for device pass-through payments under the OPPS, we stated that applications for devices that have received FDA marketing authorization and are part of the FDA Breakthrough Devices Program would not be evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2) for purposes of determining device pass-through payment status, but would continue to need to meet the other requirements for pass-through payment status in our regulations at § 419.66(c)(1) (84 FR 61295). The commenter is correct that under the alternative pathway for device pass-through status under the OPPS, a device must still meet the device category criterion at § 419.66(c)(1), consistent with the policy we adopted beginning in CY 2020. We recognize that this feature of the OPPS alternative pathway for Breakthrough Devices differs from the IPPS alternative pathway because Breakthrough Devices do not need to meet the substantial similarity requirement. Nonetheless, we do not believe that the current policy creates a barrier to devices with Breakthrough Device designation and note that we have previously granted OPPS device pass-through status for Breakthrough Devices that have applied for the alternative pathway, including the devices discussed in this final rule with comment period, because these devices have not been described by existing device categories or those previously in effect.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device is included in the category that has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body party compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. We explained in the proposed rule that CavaClear has a Breakthrough Device designation and

marketing authorization from FDA for the indication covered by the Breakthrough Device designation, and therefore, appears to meet the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine if the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of cost significance requirements. The applicant stated that CavaClear would be reported with HCPCS code listed in Table 85.

TABLE 85: HCPCS CODE REPORTED WITH CAVACLEAR

HCPCS Code	Long Descriptor	SI	APC
37193	Retrieval (removal) of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed	J1	5183

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule with comment period (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. For our calculations, we used APC 5183, which had a CY 2022 payment rate of $2,923.63 at the time the application was received. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). HCPCS code 37193 had a device offset amount of $762.48 at the time the application was received.[15] According to the applicant, the cost of CavaClear is $3,165.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of $3,165.00 for CavaClear is 108.26 percent of the applicable APC payment amount for the service related to the category of devices of $2,923.63 (($3,165.00/$2,923.63) × 100 = 108.26 percent). Therefore, we stated that we believed CavaClear meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $3,165 for CavaClear is 415.09 percent of the cost of the device-related portion of the APC payment amount for the related service of $762.48 (($3,165.00/$762.48) × 100 = 415.09 percent). Therefore, we stated that we believed CavaClear meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $3,165.00 for CavaClear and the portion of the APC payment amount for the device of $762.48 is 82.18 percent of the APC payment amount for the related service of $2,923.63 ((($3,165.00 − 762.48)/$2,923.63) × 100 = 82.18 percent). Therefore, we stated that we believed that CavaClear meets the third cost significance requirement.

We invited public comment on whether CavaClear meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: The applicant reiterated that it believes it satisfies the criterion at 42 CFR 419.66(c)(3) and that the cost of the device is not insignificant as determined by CMS' analysis of the three cost significance criteria for CavaClear.

Response: We appreciate the commenter's input. Based on our findings from the first, second, and third cost significant tests, we believe that CavaClear meets the cost significance criteria specified at § 419.66(d).

We invited public comment on whether CavaClear meets the device pass-through payment criteria discussed in this section.

Comment: Several commenters, including the applicant, submitted comments in support of pass-through payment approval for CavaClear. A few commenters underlined that pass-through payment approval for CavaClear will help increase Medicare beneficiary access to technological advancements in treatment. Several commenters also stated that CavaClear addresses an unmet medical need and provides the ability to remove IVC filters that otherwise would remain in place, leaving patients with significant symptoms. They further asserted that CavaClear will have an impact on reducing complications from IVC filter removals, time spent on IVC filter removals, and associated healthcare costs.

Response: We appreciate the commenters' input on the potential impact on Medicare beneficiary access, safety, and associated healthcare costs.

After our review of the device pass-through application and consideration of the public comments we received, we have determined that CavaClear meets

[15] We noted that the applicant selected a value of $537.36 for the device offset amount. However, the value selected is inconsistent with the device offset amount related to HCPCS 37193 in APC 5183 found in Addendum P to the CY 2022 OPPS/ASC final rule with comment period, as corrected in the 2022 Correction Notification OPPS Addendum (87 FR 2060). We selected the value of $762.48, which we believe is the accurate value. Based on our initial assessment for the proposed rule, using the device offset amount of $762.48 would result in CavaClear meeting the cost significance requirement.

the requirements for device pass-through status described at § 419.66. As stated previously, devices that are granted an FDA Breakthrough Device designation are not evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2)(i) for the purposes of determining device pass-through payment status but must meet the other criteria for device pass-through status. We believe CavaClear meets those other criteria, and therefore, effective beginning January 1, 2024, we are finalizing approval for device pass-through payment status for CavaClear under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(b) CERAMENT® G

BONESUPPORT AB submitted an application for a new device category for transitional pass-through payment status for CERAMENT® G for CY 2024. Per the applicant, CERAMENT® G is a single-use implantable bone void filler combination device/drug that remodels into bone and elutes gentamicin. The applicant further explained that CERAMENT® G is an adjunct to systematic antibiotic therapy as part of the surgical treatment of osteomyelitis (that is, bone infection) in the extremities and is used where there is a need for supplemental bone void filler material. The applicant asserted that CERAMENT® G can reduce the recurrence of chronic osteomyelitis from gentamicin-sensitive microorganisms to protect bone healing and augment provisional hardware to help support bone fragments during the surgical procedure. The applicant stated that CERAMENT® G is the first on-label solution for a one-stage surgical approach to treating bone infections with its unique dual mode of action: (1) promote bone healing (bone remodeling), and (2) protect bone healing (elution of a local broad-spectrum antibiotic). According to the applicant, once implanted, CERAMENT® G resorbs overtime and remodels into bone in 6 to 12 months.

Per the applicant, CERAMENT® G is comprised of three key compounds: (1) hydroxyapatite (HA), (2) calcium sulfate (CaS), and (3) gentamicin sulfate. According to the applicant, by combining calcium sulfate and hydroxyapatite, a balance is achieved between implant resorption rate and bone remodeling rate. The applicant further explained that the CaS acts as a resorbable carrier for HA. The applicant described that HA has a slow resorption rate and high osteoconductivity promoting bone remodeling and thus gives long-term structural support to the newly-formed bone. The gentamicin sulfate is a broad-spectrum aminoglycoside antibiotic that is sensitive to a spectrum of aerobic bacteria, particularly gram-negative bacilli, as well as aerobic gram-positive cocci, in particular Staphylococcus aureus, some coagulase negative staphylococci (CoNS) (for example, Staphylococcus epidermidis), and some strains of streptococci. According to the applicant, the gentamicin sulfate is present in the bone void filler to prevent colonization from gentamicin-sensitive microorganisms to protect bone healing.

Per the applicant, CERAMENT® G is comprised of eight components (these components contain the three key compounds as well as other parts for the successful application of CERAMENT® G): (1) CERAMENT® CMI, a closed mixing injection system pre-packed with ceramic bone substitute (CBS), is a mixture of the CaS (60 wt percent) and HA (40 wt percent). The applicant further explained that the mixing device is comprised of a 60 mL syringe, which in its proximal part is equipped with a movable combined plunger and mixing paddle, and in its distal part with a luer-lock connection. The movable mixing paddle allows effective mixing of the material inside the syringe. Calcium Sulfate and Hydroxyapatite (CSH) are the setting component of the bone void filler, and per the applicant, this component will react to calcium sulfate dihydrate (CSD) and will be resorbed over time, giving place for natural bone to grow into the bone graft. The applicant described that CSD is added as a seeding agent to accelerate the setting reaction of CSH to CSD, and that HA is an osteoconductive mineral similar to natural bone (this part of the bone graft substitute will not be resorbed and does not need to be surgically removed). The applicant stated that CSH and CSD conform to specifications based on the monograph Calcium Sulfate Dihydrate 0982, European Pharmacopoeia (EP) and the Official Monograph for Calcium Sulfate U.S. Pharmacopoeia/National Formulary (USP) as well as internal requirements; (2) CERAMENT® ID, an injection device used to inject the paste into the bone void or gap; (3) Valve, a needleless valve needed for the transfer of the ceramic paste from the CERAMENT® CMI to the CERAMENT® ID; (4) Tip Extenders, which are sterile, plastic needles with an inner diameter of 2.55 mm and two lengths (50 and 100 mm), that are connected to the CERAMENT® ID to facilitate placement of the paste at the debridement site; (5) CERAMENT® GENTAMICIN, the gentamicin sulfate in a glass vial equipped with a stopper and a cap. The gentamicin sulfate subcomponent has a potency equivalent to ≥590μg gentamicin/mg (anhydrous substance) and is dissolved in the 0.9 percent sterile sodium chloride solution and mixed with the CBS powder. Per the applicant, the prepared paste sets to a calcium sulfate dihydrate matrix with embedded hydroxyapatite particles, and gentamicin sulfate. The applicant further explained that it delivers 17.5 mg gentamicin per mL paste. Per the applicant, the gentamicin sulfate subcomponent complies with the EP monograph for gentamicin sulfate; (6) CERAMENT® MIXING LIQUID, a sterile sodium chloride, (NaCl) solution, 9 mg per mL in a glass vial. Per the applicant, it is the liquid component of CERAMENT® G. This component contains water which is needed for the calcium sulfate reaction to occur. The liquid meets requirements of the compendial excipient of USP/EP grade and is also registered in the inactive ingredient database; (7) BONESUPPORT DP, which includes two ventilated dispensing pins to facilitate easy handling when preparing the gentamicin solution; and (8) BONESUPPORT SYRINGE, a single packed, sterile 10 mL syringe with a male/female rotator assembly, and is used when preparing the gentamicin solution.

According to the applicant, after the surgical site has been prepared and any dead bone is debrided (that is, removed), the CERAMENT® G paste is prepared by the surgeon or surgical technician by: (1) mixing the gentamicin powder with the provided saline to make a gentamicin liquid; (2) adding the gentamicin liquid to the powder in the CERAMENT® CMI syringe and mixing the gentamicin liquid and powder; and (3) transferring the resulting paste to a smaller delivery syringe. Four minutes after the start of mixing, the paste is ready to be used as a bone void filler. Per the applicant, it can be injected using the tip extenders provided in the kit or by attaching a needle to the delivery syringe, or it can be placed into a bead mold to form beads. Fifteen minutes after the start of mixing, CERAMENT® G can be drilled into, if required. At 20 minutes, it is fully set, at which time the wound can be closed.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4).

With respect to the newness criterion at § 419.66(b)(1), CERAMENT® G received FDA Breakthrough Device designation effective March 12, 2020, as a resorbable, gentamicin-eluting ceramic bone graft substitute intended for use as a bone void filler as an adjunct to systemic antibiotic therapy and surgical debridement (standard treatment approach to a bone infection) as part of the surgical treatment of osteomyelitis. By eluting gentamicin, CERAMENT® G can inhibit the colonization of gentamicin-sensitive microorganisms to protect bone healing. CERAMENT® G can augment provisional hardware to help support bone fragments during the surgical procedure and is resorbed and replaced by bone during the healing process. FDA granted the applicant De Novo classification for CERAMENT® G under the generic name, ''Resorbable calcium salt bone void filler containing a single approved aminoglycoside antibacterial substance'' on May 17, 2022, for the same indication as the one covered by the Breakthrough Device designation. We received the application for a new device category for transitional pass-through payment status for CERAMENT® G on May 31, 2022, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether CERAMENT® G meets the newness criterion at § 419.6C6(b)(1).

We did not receive public comments regarding whether CERAMENT® G meets the newness criterion at § 419.66(b)(1). We received the application for a new device category for transitional pass-through payment status for CERAMENT® G on May 31, 2022, which is within 3 years of FDA Breakthrough Device designation effective March 12, 2020, and the FDA De Novo classification on May 17, 2022. As such we have concluded that CERAMENT® G meets the newness criterion.

With respect to the integral part of the service criterion at § 419.66(b)(3), the applicant did not indicate whether CERAMENT® G is integral to the service provided. However, per the applicant, CERAMENT® G is used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted into the patient as required at § 419.66(b)(3).

We invited public comment on whether CERAMENT® G meets the eligibility criterion at § 419.66(b)(3).

We did not receive public comments regarding whether CERAMENT® G meets the eligibility requirements at § 419.66(b)(3). Based on the information we have received and our review of the application, we determined that CERAMENT® G is integral to the service provided, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted. Therefore, based on our review of the application, we have determined that CERAMENT® G meets the eligibility criteria at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), the applicant did not address whether CERAMENT® G is equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, or if CERAMENT® G is a supply or material furnished incident to a service.

We invited public comment on whether CERAMENT® G meets the exclusion criterion at § 419.66(b)(4).

We did not receive public comments regarding whether CERAMENT® G meets the eligibility requirements at § 419.66(b)(4). Based on the information we have received and our review of the application, we determined that CERAMENT® G is not a piece of equipment, instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service. Therefore, based on our review of the application, we have determined that CERAMENT® G meets the eligibility criteria at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant described CERAMENT® G as a single-use implantable bone void filler combination device/drug that remodels into bone and elutes gentamicin. The applicant asserted that there are no existing bone void filler devices cleared or approved for use in the U.S. for single stage surgical reconstruction of bone defects that provide stability, promote bone formation, and effectively support the surgical treatment of infection by antibiotic elution. However, for comparison purposes, the applicant listed HCPCS code C1734 (Orthopedic/device/drug matrix for opposing bone-to-bone or soft-tissue-to-bone (implantable), as a device category that it considers similar to CERAMENT® G's device category.[16]

The applicant stated that CERAMENT® G differs from the bone substitutes AUGMENT® and AUGMENT® Injectable [17] (devices described by HCPCS code C1734). We noted that CMS approved an application for AUGMENT® Bone Graft as a new device category for transitional pass-through payment status and established HCPCS code C1734 as a new device category beginning in CY 2020. We referred readers to the CY 2019 OPPS/ASC final rule with comment period (84 FR 61292 through 61294) for a full discussion of the AUGMENT® Bone Graft application and decision.[18] The applicant asserted that CERAMENT® G and AUGMENT® differ in terms of the product composition and mechanism of action or intended use. In addition, the applicant asserted that the products are intended for different groups of patients. With respect to composition, per the applicant, CERAMENT® G consists of HA, CaS, and gentamicin sulfate. In contrast, the applicant stated that AUGMENT® consists of beta-tricalcium phosphate (β-TCP) and recombinant human platelet-derived growth factor (rhPDGF–BB), and AUGMENT® Injectable consists of β-TCP, rhPDGF–BB, and a collagen matrix. With respect to the mechanism of action, the applicant stated that CaS in CERAMENT® G acts as a resorbable carrier for HA, which has a slow resorption rate and high osteoconductivity, providing a scaffold for new bone generation. The applicant further explained that by combining CaS and HA, a gentamicin, CERAMENT® G can reduce the recurrence of chronic osteomyelitis from gentamicin-sensitive microorganisms to protect bone healing. In contrast, according to the applicant, the rhPDGF–BB in AUGMENT® acts as

[16] HCPCS code C1734 is a device category for which pass-through status was extended for a 1-year period beginning January 1, 2023, by section (a)(2) of the Consolidated Appropriations Act, 2023 (CAA, 2023) (Pub. L. 117–328), titled ''Extension of Pass-Through Status Under the Medicare Program for Certain Devices Impacted by COVID–19.'' *https://www.cms.gov/files/document/r11801cp.pdf.*

[17] The applicant differentiates itself from AUGMENT® and AUGMENT® Injectable, but does not use the term ''AUGMENT® Bone Graft'' in the application. However, the link provided in the application goes to the AUGMENT® web page that describes AUGMENT® Regenerative Solutions, AUGMENT® Bone Graft and AUGMENT® Injectable. We use the term ''AUGMENT®'' to collectively refer to the AUGMENT® products described herein and those listed on the AUGMENT® website. The applicant provided web page (in footnote): AUGMENT BONE GRAFT website: *http://www.augmentbonegraft.com/healthcare-professionals/.*

[18] *https://www.govinfo.gov/content/pkg/FR-2019-11-12/pdf/2019-24138.pdf.*

a chemo-attractant and mitogen for cells involved in wound healing and promotes angiogenesis at the site of healing, and the β-TCP acts as a bone void filler to prevent soft tissue from collapsing into the void.

Per the applicant, CERAMENT® G is indicated for use as a bone void filler in skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement (standard treatment approach to a bone infection) as part of the surgical treatment of osteomyelitis in defects in the extremities. In contrast, per the applicant, AUGMENT® and AUGMENT® Injectable are indicated for use as an alternative to autograft in arthrodesis in patients who require a bone fusion, such as patients who have arthritis, avascular necrosis, joint instability or deformity, or require joint arthroplasty of the ankle and/or hindfoot. Further, the applicant asserted that AUGMENT® cannot be used in the patients for whom CERAMENT® G is indicated because AUGMENT® is specifically contraindicated in patients with an active infection at the operative site.

We noted that, based on the description of the device provided by the applicant, CERAMENT® G and AUGMENT® differ in terms of composition and intended use, but also noted that device categories are not intended to be device-specific. Rather, device categories are intended to encompass any device that can be appropriately described by the category. As such, when we evaluate a potential pass-through device to determine whether it meets the device category criterion at § 419.66(c)(1), we compare the subject device to the device category descriptor rather than to the specific device for which the device category was created. Specifically, C1734 describes any device that meets the following descriptor: Orthopedic/device/drug matrix for opposing bone-to-bone or soft-tissue-to-bone (implantable), and per the applicant, CERAMENT® G is described as an implantable device/drug matrix that, with its intended use, will oppose soft-tissue-to-bone. In this context, we stated that we believe CERAMENT® G may be similar to the devices currently described by C1734, and therefore CERAMENT® G may also be appropriately described by C1734.

We invited public comment on whether CERAMENT® G meets the device category criterion at § 419.66(c)(1).

Comment: In response to our concerns that CERAMENT® G may be appropriately described by C1734, the applicant commented that CERAMENT® G meets eligibility requirements of § 419.66(c)(1), stating that CERAMENT® G can be distinguished from the device currently described by HCPCS code C1734 and, as such, meets the device category criterion. Specifically, the applicant asserted that CERAMENT® G differs from the device described in C1734 by composition, mechanisms of action, indication for use, intended patient population, associated treatment cases and procedures, and by FDA designation and classification.

All commenters addressing the CERAMENT® G transitional pass-through application offered support for approval of the application and creation of a new device category. The applicant provided that CERAMENT® G was granted Breakthrough Device designation by FDA as a class II device with the following indication for use: CERAMENT® G is a resorbable, gentamicin-eluting ceramic bone void filler intended for use as a bone void filler in skeletally mature patients as an adjunct to systemic antibiotic therapy and surgical debridement (standard treatment approach to a bone infection) as part of the surgical treatment of osteomyelitis in defects in the extremities. The applicant further commented that one of the requirements of FDA class II designation was to assure that there is no risk of antimicrobial resistance from using the product, and that the antimicrobial properties of CERAMENT® G are unique, and robust clinical evidence demonstrates that recurrence of infection is reduced with the use of CERAMENT® G in the management of bone infection.

With respect to our concern that CERAMENT® G may be appropriately described by C1734, the applicant stated that CERAMENT® G differs significantly from the device, AUGMENT®, described in the C1734 category (Orthopedic/device/drug matrix for opposing bone-to-bone or soft-tissue-to-bone (implantable)). The applicant asserted that the most important fundamental differences between CERAMENT® G and AUGMENT® is their composition and their intended patient population. Specifically, the applicant asserted, and all commenters agreed, that the antimicrobial properties in the CERAMENT® G composition are unique. Further, the applicant reiterated that CERAMENT® G is intended for patients with bone infection as an adjunct to systemic antibiotic therapy and surgical debridement (standard treatment approach to a bone infection) as part of the surgical treatment of osteomyelitis in defects in the extremities, with all commenters stating that CERAMENT® G is the only approved bone void filler that does this. The only device described by C1734, AUGMENT®, does not contain an antimicrobial agent, is intended for patients requiring ankle and foot bone fusion due to arthritis-related conditions, avascular necrosis and/or joint instability, is not intended for use in patients with bone infection, and is contraindicated to local infection at the site of implantation.

The applicant also sought to clarify how, in comparison to the device described in C1734 category, CERAMENT® G's mechanism of action is unique. Commenters stated that CERAMENT® G's mechanism of action is unique, in that it is the only approved bone void filler that elutes antibiotics directly into the site of infection and bone. Some commenters also noted that this unique mechanism of action allows for single-stage procedures in the outpatient setting for a patient with osteomyelitis compared to treatment that consists of six weeks or more of intravenous antibiotics that can lead to adverse events such as acute kidney injury and the development of multidrug resistant bacteria. The applicant reiterated that CERAMENT® G's unique mechanism of action is that it elutes gentamicin (the antimicrobial agent) to protect against gentamicin-sensitive microorganisms. Specifically, while both CERAMENT® G's and AUGMENT®'s mechanisms of action include providing an osteoconductive scaffold for new bone generation, CERAMENT® G also elutes gentamicin to protect against microorganisms, which AUGMENT® does not. The applicant further clarified that CERAMENT® G augments provisional hardware to help support bone fragments during the surgical procedure and acts only as a temporary support media and is not intended to provide structural support during the healing process. One commenter noted that having predictable and sustained release of gentamicin with CERAMENT® G is a major differentiator which contributes to successful clinical outcomes, and that CERAMENT® G's antimicrobial property is important to protect bone healing and in turn, prevent the recurrence of infection.

The applicant also asserted that CERAMENT® G can be distinguished from the only device described in C1734, AUGMENT®, based on their associated treatment cases and procedures. The applicant reiterated that CERAMENT® G's associated treatment cases are those addressing patients with a bone infection, whereas

AUGMENT®'s associated treatment cases are those addressing patients who require ankle and foot bone fusion. Further, the applicant clarified that CERAMENT® G's associated procedures (CPT codes) are in Musculoskeletal Procedure Levels 2, 3, and 4, which correspond to APC 5112, 5113, and 5114. In contrast, the procedures indicated for AUGMENT® are for Musculoskeletal Procedures Levels 5 and 6, which correspond to APC 5115 and 5116. The applicant noted that this results in distinct APC payment ranges for CERAMENT® G and AUGMENT®. Specifically, based on the corresponding APC for each device, the Medicare payment range for CERAMENT® G would be $1,535.85 to $6,895.06, and for AUGMENT® it is $13,269.40 to $20,692.25.

Response: We appreciate the input provided by these commenters. We have taken this information into consideration in making our final determination of whether to establish a new device category for CERAMENT® G, discussed below.

Comment: Along with the applicant, commenters urged CMS to establish a new device category that describes CERAMENT® G's unique composition and mechanism of action. The applicant asserted that CMS has set past precedent that would allow establishment of a new device category to account for new-technology antimicrobial products. For example, per the applicant, CMS has routinely recognized the diversity of physician-administered drugs and biologicals within its policy for granting transitional pass-through payment status and has not lumped all drugs and biologicals into a single category. The applicant asserted this unique antimicrobial composition and mechanism of action of CERAMENT® G merits a new and different device category than that described by C1734, and that a new category should acknowledge the antimicrobial properties of CERAMENT® G. The applicant urged CMS to exercise similar flexibility in evaluating CERAMENT® G and to create a new device category to accurately describe the new technology, in this case a new device/drug antimicrobial technology.

Response: We appreciate the commenters' input. We agree with commenters that CMS has a precedent of establishing new device categories to account for new and innovative technologies not described by existing device categories. While the evaluation of physician-administered drugs and biologicals provided as an example by the applicant is not applicable to our determination of whether to grant transitional pass-through payment status for a particular device, we nevertheless agree with the applicant and commenters that there are circumstances where a new device category must be created because the existing device categories do not describe a new technology.

After consideration of the public comments we received, we agree there is no existing pass-through payment device category that appropriately describes CERAMENT® G because no current category appropriately describes bone void filler devices cleared or approved for use for single stage surgical reconstruction of bone defects that provide stability, promote bone formation, and support the surgical treatment of infection by antibiotic elution antimicrobial agent. Based on this information, we have determined that CERAMENT® G meets the first eligibility criterion at § 419.66(c)(1).

We received additional public comments regarding § 419.66(c)(1) that did not impact our decision on whether or not CERAMENT® G meets the § 419.66(c)(1) criterion, however we address these comments below.

Comment: The applicant commented that antimicrobial products should receive equal benefits in the outpatient setting as they do in the inpatient setting. The applicant suggested that CMS should acknowledge the importance of preventing antimicrobial resistance and promoting antibiotic stewardship in the hospital outpatient setting by creating new device categories for device pass-through payment that differentiate antimicrobial products from non-antimicrobial products. Specifically, the applicant proposed that CMS adopt an initiative similar to the alternative technology add-on payment pathway for Qualified Infectious Disease Products (QIDPs) established in the FY 2020 IPPS/LTCH PPS final rule.[19] The applicant urged CMS to grant new device categories to technologies that promote CMS goal of confronting antimicrobial resistance, asserting that separating these technologies acknowledges the fact that products with antimicrobial fighting properties can be more expensive and ensures that companies are adequately reimbursed for their products while avoiding excessive reimbursement of less expensive non-antimicrobial devices.

The applicant requested that CMS take the antimicrobial performance of CERAMENT® G into account when considering approval of the device pass-through payment application. Specifically, the applicant further stated that the antimicrobial properties in CERAMENT® G effectively reduce the recurrence of infection. Citing McNally et al.,[20] the applicant stated that mid- to long-term clinical outcomes of CERAMENT® G in a single-stage protocol show high levels of effectiveness where 94 percent of patients were infection-free after a mean follow-up of 6.05 years, and that in patients with recurrent infection, no cultures identified new resistance to gentamicin.

Response: We appreciate the commenters' feedback. Regarding the request to develop an alternative pathway for device pass-through payments for other special designations (other than those that are part of the FDA's Breakthrough Device program and have received marketing authorization for the indication covered by the Breakthrough Device designation, as previously discussed), we recognize that the goal of facilitating access to new technologies for Medicare beneficiaries could also apply to other designations, and we will keep these suggestions in mind for consideration in future rulemaking.

With respect to the applicant's request that CMS take the antimicrobial performance of CERAMENT® G into account when considering approval of the device pass-through payment application, we appreciate the input provided by these commenters. We have taken this information into consideration in making our final determination of whether to establish a new device category for CERAMENT® G, discussed below.

Comment: The applicant, and all commenters, asserted that without a new device category, CERAMENT® G will not be accessible in the outpatient setting because the reimbursement without a transitional pass-through payment would not cover the cost of outpatient surgery with CERAMENT® G. Specifically, the applicant reiterated the information in their application that the average cost per case treated with CERAMENT® G of $7,567 is much greater than the Medicare payment rates for the assigned APCs. The applicant further asserted that several doctors have expressed their concerns about being able to access and provide

[19] We refer readers to the FY 2020 IPPS/LTCH PPS final rule with comment period (84 FR 42294 through 42297) for a full discussion of the Qualified Infectious Disease Products (QIDPs) policy.

[20] McNally, M.A., Ferguson, J.Y., Scarborough, M., Ramsden, A., Stubbs, D.A., and Atkins, B.L. (2022) Mid- to long-term results of single-stage surgery for patients with chronic osteomyelitis using a bioabsorbable loaded ceramic carrier. *The bone & joint journal, 104.B*(9), 1095–1100.

CERAMENT® G to patients in the hospital outpatient setting without the additional transitional pass-through payment available to supplement the existing APC payment rates. Commenters noted that access to CERAMENT® G in the outpatient setting is in the interest of Medicare beneficiaries to allow for outpatient surgeries that are otherwise moved to inpatient care.

Response: We appreciate the commenters' feedback and acknowledge the cost concerns related to the utilization of CERAMENT® G in the outpatient setting. The third criterion for establishing a device category at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. We address the cost of the CERAMENT® G and the cost significance criteria below.

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. CERAMENT® G has a Breakthrough Device designation and marketing authorization from FDA for the indication covered by the Breakthrough Device designation (as explained in more detail in the discussion of the newness criterion) and therefore appears to meet the criterion at § 419.66(c)(2)(ii) and is not evaluated for substantial clinical improvement.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that CERAMENT® G would be reported with HCPCS codes listed in Table 86.

BILLING CODE 4150–28–P

TABLE 86: HCPCS CODES REPORTED WITH CERAMENT® G

HCPCS Code	Long Descriptor	SI	APC
21510	Incision, deep, with opening of bone cortex (e.g., for osteomyelitis or bone abscess), thorax	**	**
23035	Incision, bone cortex (e.g., osteomyelitis or bone abscess), shoulder area	J1	5112
23170	Sequestrectomy (e.g., for osteomyelitis or bone abscess), clavicle	J1	5113
23172	Sequestrectomy (e.g., for osteomyelitis or bone abscess), scapula	**	**
23174	Sequestrectomy (e.g., for osteomyelitis or bone abscess), humeral head to surgical neck	**	**
23180	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis), clavicle	J1	5114
23182	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis), scapula	J1	5114
23184	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis), proximal humerus	J1	5114
23935	Incision, deep, with opening of bone cortex (e.g., for osteomyelitis or bone abscess), humerus or elbow	J1	5113
24134	Sequestrectomy (e.g., for osteomyelitis or bone abscess), shaft or distal humerus	J1	5114
24136	Sequestrectomy (e.g., for osteomyelitis or bone abscess), radial head or neck	**	**
24138	Sequestrectomy (e.g., for osteomyelitis or bone abscess), olecranon process	J1	5114
24140	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis), humerus	J1	5113
24145	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis), radial head or neck	J1	5114
24147	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis), olecranon process	J1	5113
25035	Incision, deep, bone cortex, forearm and/or wrist (e.g., osteomyelitis or bone abscess)	J1	5114
25150	Partial excision (craterization, saucerization, or diaphysectomy) of bone (e.g., for osteomyelitis); ulna	J1	5113
25151	Partial excision (craterization, saucerization, or diaphysectomy) of bone (e.g., for osteomyelitis); radius	J1	5113
26230	Partial excision (craterization, saucerization, or diaphysectomy) bone (e.g., osteomyelitis); metacarpal	J1	5113
26992	Incision, bone cortex, pelvis and/or hip joint (e.g., osteomyelitis or bone abscess)	**	**

HCPCS Code	Long Descriptor	SI	APC
27070	Partial excision, wing of ilium, symphysis pubis, or greater trochanter of femur, (craterization, saucerization) (e.g., osteomyelitis or bone abscess); superficial	**	**
27071	Partial excision, wing of ilium, symphysis pubis, or greater trochanter of femur, (craterization, saucerization) (e.g., osteomyelitis or bone abscess); deep (subfascial or intramuscular) abscess); deep (subfascial or intramuscular)	**	**
27303	Incision, deep, with opening of bone cortex, femur or knee (e.g., osteomyelitis or bone abscess)	**	**
27360	Partial excision (craterization, saucerization, or diaphysectomy) bone, femur, proximal tibia and/or fibula (e.g., osteomyelitis or bone abscess)	J1	5113
27607	Incision (e.g., osteomyelitis or bone abscess), leg or ankle	J1	5113
27640	Partial excision (craterization, saucerization, or diaphysectomy), bone (e.g., osteomyelitis); tibia	J1	5113
27641	Partial excision (craterization, saucerization, or diaphysectomy), bone (e.g., osteomyelitis); fibula	J1	5113
28005	Incision, bone cortex (e.g., osteomyelitis or bone abscess), foot	J1	5113
28120	Partial excision (craterization, saucerization, sequestrectomy, or diaphysectomy) bone (e.g., osteomyelitis or bossing); talus or calcaneus	J1	5113
28122	Partial excision (craterization, saucerization, sequestrectomy, or diaphysectomy) bone (e.g., osteomyelitis or bossing); tarsal or metatarsal bone, except talus or calcaneus	J1	5113

** Denotes a HCPCS code that was not evaluated for the cost criterion because the HCPCS code was not included in Addendum P to the CY 2022 OPPS/ASC final rule with comment period, as corrected in the 2022 Correction Notification OPPS Addendum (87 FR 2060).

BILLING CODE 4150–28–C

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule with comment period (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. For our calculations, we used APC 5112, which had a CY 2022 payment rate of $1,422.51 at the time the application was received. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). HCPCS code 23035 had a device offset amount of $217.36 at the time the application was received. We noted that the applicant submitted cost information for two different device sizes (5 ml and 10 ml) for CERAMENT® G. Per the applicant, the average patient will require approximately 10 ml per procedure, with a weighted cost of $7,567.00 per patient.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of $7,567.00 for CERAMENT® G is 531.95 percent of the applicable APC payment amount for the service related to the category of devices of $1,422.51 (($7,567.00/$1,422.51) × 100 = 531.95 percent). Therefore, we stated that we believe CERAMENT® G meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $7,567.00 for CERAMENT® G is 3,481.32 percent of the cost of the device-related portion of the APC payment amount for the related service of $217.36 (($7,567.00/$217.36) × 100 = 3,481.32 percent). Therefore, we stated that we believe CERAMENT® G meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $7,567.00 for CERAMENT® G and the portion of the APC payment amount for the device of $217.36 is 516.67 percent of the APC payment amount for the related service of $1,422.51 ((($7,567.00

− $217.36)/$1,422.51) × 100 = 516.67 percent). Therefore, we stated that we believe CERAMENT® G meets the third cost significance requirement.

We invited public comment on whether the CERAMENT® G meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

We did not receive public comments regarding whether CERAMENT® G meets the cost criteria at § 419.66(d)(1) through (3). Based on the information we have received, we have determined that CERAMENT® G meets the cost criterion for device pass-through payment status.

After consideration of the public comments we received, and our review of the device pass-through application, we have determined that CERAMENT® G meets the requirements for device pass-through status described at § 419.66. As stated previously, devices that are granted an FDA Breakthrough Device designation and have marketing authorization for the indication covered by the Breakthrough Device designation are not evaluated in terms of the current substantial clinical improvement criterion at § 419.66(c)(2)(i) for the purposes of determining device pass-through payment status but must meet the other criteria for device pass-through status. We believe CERAMENT® G meets the criteria at § 419.66, and therefore, effective beginning January 1, 2024, we are finalizing approval for device pass-through payment status for CERAMENT® G under the alternative pathway for devices that have an FDA Breakthrough Device designation and have received FDA marketing authorization for the indication covered by the Breakthrough Device designation.

(2) Traditional Device Pass-Through Applications

(a) Ambu® aScope™ 5 Broncho HD

Ambu Inc. submitted an application for a new device category for transitional pass- through payment status for the Ambu® aScope™ 5 Broncho HD for CY 2024. Per the applicant, the Ambu® aScope™ 5 Broncho HD is one component of the Ambu® aScope™ 5 Broncho HD System which consists of: (1) the Ambu® aScope™ 5 Broncho HD (5.0/2.2 or 5.6/2.8), a sterile, single-use, disposable flexible/rigid bronchoscope; and (2) Ambu® aBox™ 2, a compatible, reusable display unit. The applicant is only seeking a new device category for transitional pass through payment status for the Ambu® aScope™ 5 Broncho HD component.

Per the applicant, the Ambu® aScope™ 5 Broncho HD, consists of: (1) a handle, to hold the scope (designed for left or right hand); (2) a control lever, to move the distal tip up or down in a single plane; (3) a working channel and working channel port, for instillation of fluids and insertion of endotherapy instruments; (4) a biopsy valve, to be attached to the working channel port, for insertion of endotherapy instruments or attachment of a syringe; (5) a suction connector, for connection of suction tubing; (6) a suction button, to activate suction when pressed; (7) endoscope buttons 1 and 2 (depending on settings in display unit, the two remote switches allow for direct activation on handle of four different functionalities such as image and video capturing, initiate advanced red contrast (ARC), and zoom); (8) a rotation control ring, for rotation of the insertion cord during procedure; (9) a tube connection, for fixation of tubes with standard connector during procedure; (10) an insertion cord and insertion portion, flexible airway insertion cord; (11) bending section, maneuverable part; (12) distal tip, which contains the camera, light source (two light-emitting diodes (LEDs)), and the working channel exit; (13) display unit connector, to connect to the port on the Ambu® aBox™ 2 display unit; (14) a cable, to transmit the image signal to the Ambu® aBox™ 2 display unit; (15) a protective handle cover, to protect the control lever during transport and storage; (16) a protective pipe, to protect the insertion cord during transport and storage; and (17) an introducer, to facilitate introduction of luer lock syringes.

The applicant stated that the Ambu® aScope™ 5 Broncho HD is an imaging/illumination bronchoscope device that uses an integrated camera module and built-in dual LED illumination to provide access to, and imaging of, the lungs for diagnostic and therapeutic purposes for patients with pulmonary pathology. The device is intended for endoscopy and endoscopic surgery within the lungs, also known as bronchoscopy. According to the applicant, the Ambu® aScope™ 5 Broncho HD was designed to perform a wide array of diagnostic and interventional pulmonology procedures. The applicant noted that the Ambu® aScope™ 5 Broncho HD is a single-use bronchoscope designed to be used with the Ambu® aBox™ 2 display unit, endotherapy instruments and other ancillary equipment for bronchoscopic procedures, and examination within the airways and the tracheobronchial tree. It is intended to provide visualization via the compatible display unit, the Ambu® aBox™ 2, and to allow passage of endotherapy instruments via its working channel.

Per the applicant, the Ambu® aScope™ 5 Broncho HD bronchoscope is inserted into the patient airway through either the mouth, nose, or via a tracheostomy, if present. The applicant explained that when the Ambu® aScope™ 5 Broncho HD bronchoscope has reached the correct position, endotherapy instruments can be inserted into the working channel system of the bronchoscope. Per the applicant, an introducer supplied with the bronchoscope can be attached to the working channel port via a luer lock adaptor while the bronchoscope is in use. The applicant noted that the suction system may be used to remove blood, saliva, and mucus from the airway. The applicant indicated that a bronchoscope operator monitors the field of view via the integrated camera of the Ambu® aScope™ 5 Broncho HD bronchoscope and the procedure is finished when the device is pulled out completely.

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), on July 25, 2022, the applicant received 510(k) clearance from FDA for the Ambu® aScope™ 5 Broncho HD as a device to be used for endoscopic procedures and examination within the airways and tracheobronchial tree. We received the application for a new device category for transitional pass-through payment status for the Ambu® aScope™ 5 Broncho HD on February 28, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether the Ambu® aScope™ 5 Broncho HD meets the newness criterion at § 419.66(b)(1).

We did not receive public comments regarding whether the Ambu® aScope™ 5 Broncho HD meets the newness criterion at § 419.66(b)(1). We received the application for a new device category for transitional pass-through payment status for Ambu® aScope™ 5 Broncho HD on February 28, 2023, which is within 3 years of July 25, 2022, the date of FDA 510(k) approval to market the Ambu® aScope™ 5 Broncho HD, and as such we have concluded that the Ambu® aScope™ 5 Broncho HD meets the newness criterion.

With respect to the eligibility criterion at § 419.66(b)(3), according to the

applicant, the Ambu® aScope™ 5 Broncho HD is integral to the service provided, is used for one patient only, comes in contact with human tissue, and is surgically inserted as required by § 4189.66(b)(3).

We invited public comment on whether the Ambu® aScope ™ 5 Broncho HD meets the criterion at § 419.66(b)(3).

We did not receive any comments on whether the Ambu® aScope ™ 5 Broncho HD meets the eligibility criteria at § 419.66(b)(3). Based on the information we have received and our review of the application, we agree with the applicant that Ambu® aScope ™ 5 Broncho HD is integral to the service provided, used for one patient only, comes in contact with human tissue, and is surgically implanted or inserted. Therefore, we have determined that Ambu® aScope ™ 5 Broncho HD meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), the applicant did not address whether the Ambu® aScope ™ 5 Broncho HD is equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, or if the Ambu® aScope ™ 5 Broncho HD is a supply or material furnished incident to a service.

We invited public comment on whether the Ambu® aScope™ 5 Broncho HD meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant asserted that the Ambu® aScope™ 5 Broncho HD meets the eligibility requirements at § 419.66(b)(4). The applicant clarified that the device is not equipment, an instrument, apparatus, implement, or item for which depreciation and financing are recovered. The applicant indicated that the device is not a material or supply furnished incident to a service. The applicant stated that the device is purely an operating cost and is not subject to capitalization or a depreciation schedule.

Response: We appreciate the applicant's input. Based on the information we have received and our review of the application, we agree with the applicant that the Ambu® aScope™ 5 Broncho HD meets the device eligibility requirements of § 419.66(b)(4) because it is not a piece of equipment, instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service. Therefore, we have determined that the Ambu® aScope™ 5 Broncho HD meets the eligibility criterion at § 419.66 (b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant described the Ambu® aScope™ 5 Broncho HD as a single-use, disposable, digital flexible/rigid bronchoscope that is used in pulmonary procedures (bronchoscopy) to diagnose and treat conditions of the lungs, including tumors or bronchial cancer, airway blockage (obstruction), narrowed areas in airways (strictures), inflammation, and infections such as tuberculosis (TB), pneumonia, fungal or parasitic lung infections, interstitial pulmonary disease, causes of persistent cough, causes of coughing up blood, spots seen on chest X-rays, and vocal cord paralysis. The applicant claimed that the Ambu® aScope™ 5 Broncho HD is different from other endoscopes because it is a single-use endoscope indicated for use in the respiratory system, the device records snapshots or video of images, and the device is temporarily inserted into the patient airway to diagnose and treat lung problems. According to the applicant, there are two possible existing pass-through device categories, represented by the following codes: C1748 (Endoscope, single-use (that is, disposable), upper gastrointestinal tract (GI), imaging/illumination device (insertable)); and C1747 (Endoscope, single-use (that is, disposable), urinary tract, imaging/illumination device (insertable)). The applicant noted that while these two codes are for single-use endoscopic devices, they are only appropriate for GI and urinary tract imaging, respectively. Therefore, the applicant asserted that these two codes would not apply to a single-use, disposable, bronchoscope for use in pulmonary procedures. We noted that while C1748 and C1747 are intended to be used in different anatomical areas of the patient, the codes for both device categories describe devices that are single use and have imaging capabilities.

We invited public comment on whether the Ambu® aScope™ 5 Broncho HD meets the device category criterion at § 419.66(c)(1).

Comment: The applicant reiterated that the device is not appropriately described by any existing device categories. The applicant noted that although HCPCS codes C1747 and C1748 do describe single-use endoscopes and have imaging capabilities, they are intended to be used in different anatomical areas, specifically the urinary tract and the upper GI tract, respectively. The applicant asserted that the device is used in pulmonary procedures and meets the device category criterion. Another commenter referenced an FDA guidance [21] on the 510(k) Program issued on July 28, 2014, to support the applicant's assertion by stating that the device was cleared for marketing under 21 CFR 874.4680, and therefore the device cannot be legally labeled for use or otherwise promoted for GI/urology use.

Response: We appreciate the applicant and commenter's input. Based on the information we have received and our review of the application, we agree there is no existing pass-through payment category that appropriately describes the Ambu® aScope™ 5 Broncho HD because no current or previously in effect category describes a single-use endoscope indicated for use in the respiratory system. Based on this information, we have determined that the Ambu® aScope™ 5 Broncho HD meets the eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The applicant claimed that the Ambu® aScope™ 5 Broncho HD represents a substantial clinical improvement over existing technologies by: (1) eliminating complex cleaning/reprocessing procedures, (2) reducing microbial transmission and infection since it is single-use, (3) eliminating the need for continuous training of reprocessing staff, (4) minimizing the risk of patient

[21] FDA Guidance July 28, 2014. ''The 510(k) Program: Evaluating Substantial Equivalence in Premarket Notification [510(k)]: Guidance for Industry and Food and Drug Administration Staff''.

cross-contamination, (5) assuring that a sterilized scope will be used each time, and (6) assuring that there will be no biofilm from endoscope channels. The applicant provided four articles, an FDA guidance letter, and an FDA safety notice specifically for the purpose of addressing the substantial clinical improvement criterion.

In support of its claim that the use of the Ambu® aScope™ 5 Broncho HD eliminates complex cleaning/reprocessing procedures because it is a single-use device, the applicant referenced an FDA Reprocessing Final Guidance document [22] issued March 17, 2015. This FDA document provides guidance to medical device manufacturers on the complex activities involved in crafting and validating reprocessing instructions that ensure that the device can be used safely and for the purpose for which it is intended. The guidance document is limited to reusable medical devices and single-use medical devices that are initially supplied as non-sterile to the user and require the user to process the device prior to its use. In this guidance document, the FDA identifies a subset of reusable medical devices (including bronchoscopes and accessories) that pose a greater likelihood of microbial transmission and represent a high risk of infection (subclinical or clinical) if they are not adequately reprocessed and indicates design features which may pose a challenge to adequate reprocessing for arthroscopes, laparoscopic instruments, and electrosurgical instruments, and their respective accessories. However, the FDA guidance does not mention sterile, single-use medical devices in this document.

In support of its claim that the use of the Ambu® aScope™ 5 Broncho HD reduces microbial transmission and infection because it is single use, the applicant referenced an FDA safety notice [23] issued on September 17, 2015 (2015 FDA safety notice). The FDA notice discussed the findings of an investigation into infections associated with reprocessed reusable medical devices, including an analysis of Medical Device Reports (MDRs) submitted to FDA from manufacturers and health care facilities. The notice provided that between January 2010 and June 2015, FDA received 109 MDRs concerning infections or device contamination associated with flexible bronchoscopes. However, FDA noted that, when compared to the number of bronchoscopy procedures performed in the U.S. each year, this is considered a small number of MDRs. In 2014, FDA received 50 MDRs that mentioned infections or device contamination associated with reprocessed flexible bronchoscopes, which prompted additional investigation of this issue. FDA indicated that a small number of the reported infections were from persistent device contamination despite following the manufacturer's reprocessing instructions, however, most of the infections were the result of the failure to meticulously follow manufacturer instructions for reprocessing, or the continued use of devices despite integrity, maintenance, and mechanical issues. FDA provided additional recommendations for health care facilities and staff that reprocess flexible bronchoscopes, and for patients considering bronchoscopy procedures, but did not reference single-use bronchoscopes in the notice.

In support of its claim that the use of the Ambu® aScope™ 5 Broncho HD eliminates the need for continuous training of reprocessing staff, the applicant referenced a study by Châteauvieux et al.,[24] which assessed the organizational and economic impacts of the introduction of a single-use flexible bronchoscope (FB) (Ambu® aScope™, versions 2 and 3) in comparison with a reusable FB (Pentax®) at the hospital level. The study took place between May 2016 and October 2016 in the Georges Pompidou European Hospital, an 800-bed university hospital in France. Châteauvieux et al. noted that the introduction of single-use FBs led to a more simplified process, less stress for medical and paramedical staff in emergency situations, teaching benefits, and easier management of transport, in comparison with reusable FBs. However, the authors recommended limiting the use of single use FBs to specific situations, and to prioritize the use of reusable devices for most of the bronchoscopies for cost savings.

The applicant referred to a meta study by Barron and Kennedy [25] to support its claim that the use of Ambu® aScope™ 5 Broncho HD minimizes the risk of patient cross-contamination, ensuring that health care providers have taken optimal steps to safeguard their patients. Barron and Kennedy summarized the major advantages of single-use FBs over the standard reusable FBs in clinical scenarios. The authors noted that single-use FBs offer a safer alternative to standard reusable FBs in specific scenarios where reduced risk of cross infection was critical in the immunocompromised patient and in rare cases of prior contamination due to transmissible spongiform encephalopathies.

The applicant referred to a self-sponsored study [26] by Ofstead et al.[27] in 2019, in support of its claim that the use of the Ambu® aScope™ 5 Broncho HD ensures a sterilized scope is available for each procedure while reusable endoscopes may not be sterile even if manufacturers' cleaning protocols are followed. The study first referenced Ofstead et al.'s 2017 [28] evaluation of the effectiveness of bronchoscope processing in three large hospitals where every bronchoscope had visible defects, protein was detected on 100 percent of high-level disinfected bronchoscopes, and bacteria or mold was found on 58 percent of the patient-ready bronchoscopes. Then, in 2019, Ofstead et al. conducted a study to determine the time and cost of acquiring, maintaining, and reprocessing bronchoscopes in four hospitals (two in the Midwest and two in the West Coast). Three hospitals had obtained single-use Ambu® bronchoscopes (2018, version unspecified) for procedures done in certain departments, after hours, or in emergency situations. Per Ofstead et al.

[28] Ofstead C.L., Quick M.R., Wetzler H.P., et al. (2018) Effectiveness of reprocessing for flexible bronchoscopes and endobronchial ultrasound bronchoscopes. *Chest, 154*(5):1024–34.

(2019), the cost for procedures with reusable bronchoscopes ($281 to $803) were comparable or higher than the cost of single-use bronchoscopes ($220 to $315), due to acquisition and maintenance of large inventories of bronchoscopes to ensure real-time availability for various hospital departments. Ofstead et al. (2019) suggested the use of single-use bronchoscopes and accessories for after hours and emergency situations and any procedures that do not require advanced bronchoscopy capabilities. Ofstead et al. (2019) summarized the steps that can be taken to reduce risks related to bronchoscope contamination and to focus on implementing quality management systems to improve personnel competence, bronchoscope inventory management, maintenance, reprocessing effectiveness, and storage. In addition to following manufacturer's steps for reprocessing the devices, Ofstead et al. (2019) suggest the use of single-use bronchoscopes and accessories for after hours and emergency situations and any procedures that do not require advanced bronchoscopy capabilities, which are currently available in the list of recommendations.

The applicant referenced a review article by Kovaleva et al.[29] in support of its claim that the Ambu® aScope™ 5 Broncho HD's single-use feature is free of biofilm from endoscope channels since routine cleaning procedures do not remove biofilm reliably from endoscope channels. This review presents an overview of the infections and cross-contaminations related to flexible gastrointestinal endoscopy and bronchoscopy and illustrates the impact of biofilm on endoscope reprocessing and post-endoscopic infection. Kovaleva et al. noted that the use of antibiofilm-oxidizing agents with an antimicrobial coating inside washer disinfectors could reduce biofilm build-up inside endoscopes and automated endoscope re-processors and decrease the risk of transmitting infections.[30] Per Kovaleva et al. while sterilization can be helpful to destroy microorganisms within biofilms, ethylene oxide sterilization may fail in the presence of organic debris after an inadequate cleaning procedure before reprocessing of flexible endoscopes. There was no mention of single-use bronchoscopes in the study.

The applicant cited a self-sponsored, laboratory study by Kurman et al.,[31] in general support of its application. Kurman et al. evaluated and assessed four different manufacturers' single-use flexible bronchoscopes (SFB), including the nominated device and its prior model, against their reusable flexible bronchoscopes (RFB) on a cadaver (that is, corpse) model, benchtop fixturing, and an artificial plastic lung model. The study compared the Ambu® aScope™ 5 Broncho HD with four devices: (1) Olympus H-SteriScope; (2) Verathon BFLEX; (3) Boston Scientific Exalt-B; and (4) Ambu® aScope™ 4 Broncho (the prior model of the nominated device). The study concluded that the Ambu® aScope™ 5 Broncho HD has the highest overall performance, the highest overall rating for sampling, and highest maneuverability in difficult segmental airways among the comparator devices.

The applicant indicated that the Ambu® aScope™ 5 Broncho HD differs from these comparator devices as it is the only device that is compatible with argon gas plasma coagulation, cryotherapy, and laser, with an HD (1200x800) chip, has more degrees of articulation with tools, and provides image and video capture from the scope handle with multiple programmable functions including capture photo, start/end video, enable zoom, and initiate ARC. In addition, the applicant stated that the nominated device is superior to its earlier legally marketed device in terms of maneuverability into difficult segmental airways, overall performance, and overall sampling assessment. The applicant asserted that the nominated device differs from the predicate device due to a rotation mechanism on the handle and its superior articulation, which allow for more complicated procedures to be performed such as cryotherapy and coagulation. The applicant stated that the nominated device is equipped with an HD image chip and increased depth-of-field and field-of-view, which allow interventional pulmonologists to perform inspections, biopsies, and debulking. The applicant also stated that the nominated device's programmable buttons allow for superior documentation than the earlier bronchoscope device.

We noted that the nominated device was determined to be substantially equivalent to the earlier device that the applicant had previously legally marketed. The FDA 510(k) summary indicated that both devices share similar technological characteristics including the optical system, bending section, diameter of insertion cord and distal end, and insertion portion length. Furthermore, the 510(k) summary indicated that both have the same technical characteristics, which include a maneuverable tip controlled by the user, flexible insertion cord, camera and a LED light source at the distal tip. Both are sterilized by ethylene oxide, are single-use devices, and have the ability to aspirate and collect samples in bronchoalveolar lavage and bronchial wash procedures.

We noted that in its application, the applicant provided a comparison of certain devices or device categories that it believed are most closely related or similar to the Ambu® aScope™ 5 Broncho HD. The applicant identified six reusable devices that it believed are most closely related: (1) Olympus Evis Exera Iii Bronchovideoscope Bf-h190; (2) Pentax EB–J10 Video Bronchoscope; (3) Fujifilm EB–580S Video Bronchoscope; (4) Olympus BF–Q190; (5) Olympus BF–1TH190; and (6) Olympus BF–XT190. According to the applicant, these devices are used during the same specific procedure(s) and/or services with which the Ambu® aScope™ 5 Broncho HD is used. The applicant stated that the Ambu® aScope™ 5 Broncho HD's single-use feature is unique among the comparators. According to the applicant, the single-use feature eliminates bronchoscope reprocessing. The applicant further submitted several articles reporting results on the prevalence of infection due to incomplete or inadequate processing for reusable bronchoscopes, which we summarize as follows. An article by Shimizu et al.[32] concluded that patients with larger lesions, endobronchial lesions, histology of small-cell lung cancer, and advanced-disease stage tended to develop pulmonary infectious complications more often than other patients. A 2020 systematic literature review and meta-analysis by Travis et al.[33] reported an estimated average reusable FB cross-contamination rate of 8.69 percent ± 1.86 (standard division [SD]) (95 percent confidence interval [CI]: 5.06–12.33 percent) among eight

Risk factors for pulmonary infection after diagnostic bronchoscopy in patients with lung cancer. *Nagoya journal of medical science, 82*(1), 69–77. *https://doi.org/10.18999/nagjms.82.1.69.*

[33] Travis, H.S., Russell, R.V., & Kovaleva, J. (2023). Cross-contamination rate of reusable flexible bronchoscopes: A systematic literature review and meta-analysis. *Journal of infection prevention,* 17571774231158203.

studies from the U.S. and four European countries. Travis et al.[34] attributed the infection rate to the differences in the study design and sampling methods, geography, low number of data points, clinical settings, and an aversion towards publishing negative findings among the eight studies. Furthermore, the applicant submitted a 2019 systematic review and cost-effective analysis by Mouritsen et al.,[35] which reported an average 2.8 percent cross-contamination rate from reusable, flexible bronchoscopes among 16 studies from the United Kingdom, U.S., France, Spain, Australia, and Taiwan. Mouristen et al. identified that the single-use flexible bronchoscopes were cost effective and associated with a reduction of infection risk of approximately 1.71–4.07 percent compared with reusable flexible bronchoscopes. Lastly, the applicant again cited the meta study by Barron and Kennedy [36] referencing the findings from Ofstead et al.,[37] the review by Mouristen et al., and the Emergency Care Research Institute's (ECRI's) report.[38] Of note, ECRI highlighted the recontamination of flexible endoscopes due to mishandling or improper storage as one of the top 10 health technology hazards.

Based on the evidence submitted with the application, we noted the following concerns: We noted concern about whether the Ambu® aScope™ 5 Broncho HD can be distinguished from similar devices on the market and the earlier versions of the nominated device on the market sufficiently to demonstrate substantial clinical improvement. Four of the studies the applicant submitted, Châteauvieux et al.,[39] Barron and Kennedy, Kurman et al., and Ofstead et al., investigated and provided data on the applicant's earlier models of the device, but did not provide comparisons to the nominated device. In addition, we noted that the studies provided also did not compare the nominated device to an appropriate comparator such as a single-use bronchoscope from a different manufacturer or a standard reusable bronchoscope, in a clinical setting. In addition, we noted that the applicant's self-sponsored study by Kurman, et al. was conducted in the laboratory (that is, on cadaver, benchtop fixturing, and artificial plastic lung) and not in the clinical setting. In order to demonstrate substantial clinical improvement over currently available treatments, we consider supporting evidence, preferably published peer-reviewed clinical trials, that shows improved clinical outcomes, such as reduction in mortality, complications, subsequent interventions, future hospitalizations, recovery time, pain, or a more rapid beneficial resolution of the disease process compared to the standard of care.

Furthermore, we noted that the Châteauvieux et al.[40] and Barron and Kennedy [41] studies suggested limiting the use of single-use bronchoscope device to specific situations (that is, after hours or emergency), immunocompromised patients, and in rare cases of preventing prior contamination in the inpatient setting. We believed that further investigation with comparators in these specified cases would be particularly helpful to determine whether the device demonstrates a substantial clinical improvement over currently available treatment options in the clinical setting where it is most likely to be used.

We noted concern that the application and all the articles submitted as evidence of substantial clinical improvement discuss potential adverse events from reusable bronchoscope procedures, but do not directly show any clinical improvement that results from the use of the Ambu® aScope™ 5 Broncho HD. We noted that Shimizu et al.,[42] Travis et al.,[43] Barron and Kennedy,[44] and Ofstead et al.[45] provided information about the risks associated with reprocessing reusable devices and reported mixed results.

We also noted that the 2015 FDA safety notice [46] provided preliminary information regarding infections associated with the use of reprocessed flexible bronchoscopes, but did not discuss or recommend the use of disposable, single-use devices in the notice. Furthermore, we noted the following concerns about studies on the prevalence of infection due to incomplete/inadequate reprocessing of reusable bronchoscopes. The studies authored by Châteauvieux et al.,[47] Shimizu et al.,[48] Travis et al.,[49] and Mouritsen et al.[50] have small sample sizes. Furthermore, the Barron and Kennedy,[51] Travis et al.,[52] and Mouritsen et al.[53] studies used different

Continued

study designs and sampling methodologies or were performed in various clinical settings other than outpatient, which may affect the quality and reliability of the data provided in support of the applicant's assertions. We did not believe that we had sufficient information on the prevalence of infection to evaluate the applicant's substantial clinical improvement claims for the nominated device. We sought comments on the prevalence of infection due to incomplete/inadequate processing for bronchoscopes in the U.S. and whether single-use bronchoscopes reduce the infection rate in patients to identify the extent of the problem with existing technologies.

The applicant provided evidence which seemed to rely on indirect inferences from other sources of data. We questioned the relevance of the 2015 FDA safety notice [54] to the nominated device because as stated above, the guidance applies to reprocessed flexible bronchoscopes broadly, but not to disposable, single-use devices comparable to the nominated device. We expressed concern that many of the applicant's substantial clinical improvement claims rely on an assumption that inadequate reprocessing of reusable bronchoscopes is positively correlated with heightened risk of infection. We expressed concern that the applicant provided studies with small sample sizes and other limitations, as described above, as their only support. We noted that the applicant provided background information on the established reprocessing guidelines [55] for reusable devices; however, the existence of reprocessing guidelines does not provide evidence on the prevalence of infection rates, establish a relationship between infection risk and reprocessing procedures, or substantiate that single-use disposable scopes, or the nominated device specifically, would be a substantial clinical improvement over currently available treatments.

We invited public comment on whether the Ambu® aScope™ 5 Broncho HD meets the substantial clinical improvement criterion at § 419.66(c)(2)(i).

Comment: The applicant and several commenters responded to our concern about whether the Ambu® aScopeTM 5 Broncho HD could be distinguished from similar devices on the market and the earlier versions of the nominated device on the market sufficiently to demonstrate substantial clinical improvement and that four of the studies the applicant submitted, Châteauvieux et al., Barron and Kennedy, Kurman et al.,[56] and Ofstead et al., investigated and provided data on the applicant's earlier models of the device, but did not provide comparisons to the nominated device. The applicant and commenters provided feedback that Ambu® aScope™ 5 Broncho HD improves clinical applications and reduces cross-contamination compared to other single-use and reusable bronchoscopes, including its predicate device. Several commenters stated that the device can perform advanced bronchoscopy procedures, without concern for contamination, infection, and scope damage. One commenter stated that they have witnessed the usage of this bronchoscope for advanced procedures without incident, noting that it is the preferred device in their clinical practice for valve placement, rigid bronchoscopy, and all cases outside of the endoscopy suite. Another commenter noted that reusable bronchoscopes have a complex design with variable disinfection/sterilization requirements which leads to issues with reprocessing. Multiple commenters stated that single-use bronchoscopes create an assurance that a sterilized scope will be used each time, reduce the risk of patient cross-contamination in the ICUs, and allow improved patient access and room turnover compared with reusable scopes. One commenter asserted that the nominated device is superior to other devices in specific patient populations needing interventional pulmonology procedures.

Commenters cited personal experience with Ambu® aScope™ 5 Broncho HD, asserting that transitioning to the nominated device several months ago has eliminated iatrogenic bronchoscopy-related transmission of infection in their health care facility and Ambu® aScope™ 5 Broncho HD has directly led to clinical improvement in cases of endobronchial valve insertion in their facility, as more patients can be treated with endobronchial valve insertion for bronchoscopic lung volume reduction. The applicant provided that after being commercially available for one year in Europe, the USA, Canada, Australia, New Zealand, and Japan, they observed that more than 80 percent of users have adopted the nominated device into their bronchoscopy suites for advanced procedures, including but not limited to tumor debulking, endobronchial valve placement, cryobiopsy, as well as endobronchial and transbronchial biopsies, which single-use bronchoscopes were previously unable to perform. The applicant reiterated that the device is the only single-use flexible bronchoscopy (FB) capable of performing advanced bronchoscopy as it has superior bending angles, an HD imaging chip, and is compatible with argon gas plasma coagulation, cryotherapy, and laser. The applicant also asserted that early clinical feedback suggests that the device is a viable alternative to reusable bronchoscopes due to its superior angulation range and flexibility. Further, the applicant clarified that the Kurman et al.[57] study did provide data on the nominated device, including table providing a side-by-side comparison of the technical specs of the Ambu® aScope™ 5 Broncho HD and its comparators which showed that the nominated device had better flexion and extension without tools compared to the reusable scope, the nominated device had the most degrees of flexion and extension with all accessory tools compared to other single-use scopes and the reusable scope, the nominated the device was able to reach the same anatomical location with biopsy forceps in the right-upper lobe segment, and the nominated device rated similar to the reusable scope and better than the other single-use scopes in image sharpness and near and far field resolutions.

Finally, the applicant asserted that while there are similarities between Ambu® aScope™ 5 Broncho HD and the predicate devices, the Ambu® aScope™ 5 Broncho HD can be distinguished from the predicate devices because its technical characteristics, such as a rotation mechanism on the handle and superior articulation, which allow it to perform more complex bronchoscopy procedures, are unique to the Ambu® aScope™ 5 Broncho HD.

Response: We appreciate the commenters' examples supporting the superiority of the Ambu® aScope™ 5 Broncho HD. In addition, we appreciate the clarification on the Kurman et al.[58]

review and cost effectiveness analysis of reusable vs. single-use flexible bronchoscopes. *Anaesthesia, 75*(4), 529–540.

[54] FDA Safety Communications, Infections Associated with Reprocessed Flexible Bronchoscopes: FDA Safety Communication, issued September 17, 2015. *https://www.fdanews.com/ext/resources/files/09-15/092115-safety-notice.pdf?1442508647.*

[57] *Ibid.*

[58] *Ibid.*

study along with the table providing a side-by-side comparison of the technical specs of the Ambu® aScope™ 5 Broncho HD and its comparators. After reviewing the information provided in the public comment and clarifications from the applicant on the Kurman et al.[59] study that directly compare the nominated device with other single-use scopes, we agree with the commenters' and the applicant's statements that the device can be distinguished from similar devices on the market and the earlier versions of the nominated device on the market sufficiently to demonstrate substantial clinical improvement.

Comment: In response to our concern that the nominated device was determined to be substantially equivalent to the earlier device that the applicant had previously legally marketed, and the FDA 510(k) summary indicated that both devices have the same technical characteristics, the applicant along with a few commenters expressed their belief that the FDA 510K term ''substantially equivalent'' does not imply the device is the same as its predicate device. Rather, the applicant asserted that the 510(k) term ''substantially equivalent'' indicates that a nominated device is as safe and effective as its predicate device. One commenter noted that as defined in 21 CFR part 807,[60] every 510(k)-cleared medical device has been found substantially equivalent to one or more predicate devices. One commenter suggested that the regulatory substantial equivalence cannot be used to conclude the inability to demonstrate substantial clinical improvement in the context of CFR 419.66(c)(2).

Response: We appreciate the comments regarding the FDA 510K term ''substantially equivalent'' and the reference to 21 CFR part 807.[61] We agree that FDA determination of substantial equivalence cannot alone be used to conclude that a device cannot to demonstrate substantial clinical improvement as required by the regulation at 42 CFR 419.66(c)(2). However, we note that the FDA 510(k) summary provided by the applicant indicated that both nominated and predicate devices share similar technological characteristics such as optical system, bending section, diameter of insertion cord and distal end, and insertion portion length. We expressed concern in the proposed rule regarding the language in the FDA 510(k) summary because we could not determine, based on the information available to us at the time, whether the Ambu® aScope™ 5 Broncho HD could be distinguished from similar devices on the market and the earlier versions of the nominated device on the market sufficiently to demonstrate substantial clinical improvement. Neither could we determine exactly how the nominated device is superior to its earlier legally marketed device, as per the applicant's assertion. As noted above, after reviewing the information provided in the public comment, particularly the Kurman et al.[62] study, we agree with the commenters' and the applicant's statements that the device can be distinguished from similar devices on the market and the earlier versions of the nominated device on the market sufficiently to demonstrate substantial clinical improvement.

Comment: In response to the concern that the applicant's self-sponsored study by Kurman et al.[63] may not be sufficient to show improved clinical outcomes because it was conducted in the laboratory (that is, on cadaver, benchtop fixturing, and artificial plastic lung) and not in the clinical setting, the applicant asserted that the benchtop studies in this category are considered the industry standard and have been well accepted as the best way to compare single use and reusable bronchoscopes. In support of this assertion, the applicant provided six studies[64 65 66 67 68 69] as examples and indicated that there is no feasible way to accurately measure the flexion and deflection angles of a tool in vivo. Commenters supported the applicant's assertion and indicated that benchtop studies are standard and commonly utilized throughout the medical community. The applicant referenced results of one benchtop study (among the six examples referenced earlier) by Ho et al.,[70] published prior to the device's release. The study reviewed the published evidence on the applications of single-use (SU) and reusable bronchoscopes in bronchoscopy suites and intensive care units, and concluded that the portability, immediate availability, and theoretical reduced risk of clinically relevant infections confer an advantage of using SUFB over reusable FB in certain scenarios in the bronchoscopy and intensive care units. The applicant stated that improvements in maneuverability, angle tip deflection, and image quality are critical for a broader adoption of single-use FBs in more complex procedures.

Response: We thank the commenters for their input. While we maintain our belief that data which indicates that a device demonstrates substantial clinical improvements over currently available treatments in the clinical setting where it is most likely to be used is beneficial, we recognize that obtaining such data is not always feasible. After reviewing the information provided in the public comment, including clarifications from the applicant on the Kurman et al.[71] study, the additional six benchtop studies (as referenced above) supplied by the applicant, and the comments supporting the applicant's assertion that benchtop studies for bronchoscopes are considered to be the industry standard and have been well accepted as the best way to compare single-use and reusable bronchoscopes, we agree that the applicant's self-sponsored study by Kurman et al.[72] is sufficient to show improved clinical outcomes.

Comment: In response to our concern that the submitted evidence of substantial clinical improvement

[72] *Ibid.*

discussed potential adverse events from reusable bronchoscope procedures, but did not directly show any clinical improvement that resulted from the use of the Ambu® aScope™ 5 Broncho HD, the applicant reiterated that the single use nature of the Ambu® aScope™ 5 Broncho HD avoids the adverse issues and risk associated with reprocessing detailed in the articles referenced in its application as there is no reprocessing or reuse of the bronchoscope. The applicant noted that, the successful Uretero 1 device pass-through application included the Bozzini et al. study which does not include the nominated device as the comparator. The applicant stated that, in the same fashion as the Uretero 1 device pass-through application, the Ambu® aScope™ 5 Broncho HD application is using the transitive property to highlight that because clinical benefits can be seen with single-use endoscopes and the nominated device is single-use, the nominated device is therefore an improvement over reusable endoscopes. Another commenter referenced the CY 2023 OPPS/ASC final rule with comment period, wherein CMS approved the Uretero 1 device pass-through application and established device pass-through code HCPCS C1747 (Endoscope, single-use (that is, disposable), urinary tract, imaging/illumination device (insertable)). Specifically, the commenter pointed out that CMS stated that we agreed that the evidence demonstrating the improved patient outcomes and reduced patient risk associated with the disposable device in comparison with reusable devices represents substantial clinical improvement. This commenter suggested that this conclusion should also apply to single-use bronchoscopes as well. The commenters believed that single-use scopes reduce reprocessing-related bronchoscope infection risk, and that this risk reduction is a substantial clinical improvement.

Response: We appreciate the commenters' input. As the applicant and commenter indicated, CMS approved Uretero1 [73] for transitional pass-through payment status in the CY 2023 OPPS/ASC final rule with comment period. We note that we expressed similar concerns relating to the lack of comparative studies between the single-use Uretero1 device and other disposable devices and indicated that, while we ultimately agreed that the totality of evidence demonstrated improved patient outcomes and reduced patient risk associated with the disposable device in comparison with reusable devices represents substantial clinical improvement, it would have been helpful to see comparative studies. The applicant and the commenter seem to suggest that because we determined that the Uretero 1 device demonstrated substantial clinical improvement despite providing a study which does not include the nominated device as a comparator, that we should similarly determine that the type of evidence submitted by Ambu® aScope™ 5 Broncho HD represents substantial clinical improvement. We note that we do not believe that this implied approach to application evaluation is appropriate. Rather, we continue to believe that our current process wherein we evaluate all evidence submitted for each device pass-through application as it applies to the nominated device is appropriate. Due to inherent differences in the devices themselves and the supporting documentation submitted, CMS may have different concerns as they relate to the nominated device. In addition, we are not precluded from evaluating evidence and expressing concerns regarding evidence submitted in support of an application simply because that type of evidence has been submitted in support of a previous application. While we encourage applicants to read the application summaries presented in previous OPPS/ASC rules as they can help applicants determine the types of documentation that have been submitted and assess areas of potential concern with their technology, we caution applicants not to rely solely on the presumption that previously submitted types of evidence, evaluated for a different device, either need not be submitted or need not be fully addressed as it relates to their technology. Further, we encourage applicants to submit all relevant supporting evidence with their device pass-through application to allow us to adequately evaluate and include the data in the notice of proposed rulemaking.

With regard to our concern that the submitted evidence of substantial clinical improvement discussed potential adverse events from reusable bronchoscope procedures but did not directly show any clinical improvement that resulted from the use of the Ambu® aScope™ 5 Broncho HD, we indicated that it would be helpful to see published peer-reviewed comparative studies between the single-use Ambu® aScope™ 5 Broncho HD device and other disposable devices. After reviewing the information provided in the public comment, specifically the 2021 FDA safety notice,[74] the Ho et al.[75] study that supported the increased risks associated with using reusable devices, and the Kurman et al. study which distinguished the device from similar devices on the market and the earlier versions of the nominated device on the market, we agree that the evidence demonstrates there are improved patient outcomes and reduced patient risk associated with the single-use Ambu® aScope™ 5 Broncho HD device in comparison with reusable devices.

Comment: In response to the concern regarding the relevance of the 2015 FDA safety notice to the nominated device, specifically that the guidance appeared to apply to reprocessed flexible bronchoscopes broadly, not to disposable, single-use devices comparable to the nominated device, and that many of the applicant's substantial clinical improvement claims rely on an assumption that inadequate reprocessing of reusable bronchoscopes is positively correlated with heightened risk of infection, the applicant submitted a 2021 FDA safety notice [76] showing FDA's analysis of Medical Device Reports (MDRs) related to infections or device contamination associated with reusable flexible bronchoscopes from 2015–2021. The document states that between January 2010 and June 2015, the FDA received 109 MDRs related to infections or device contamination associated with reusable flexible bronchoscopes, and between July 2015 and January 2021, the FDA received 867 additional MDRs. Of the 867 reports received between July 2015 and January 2021, there were seven reports of deaths. Since 2015, the number of MDRs relevant to infection or contamination submitted to the FDA has increased from under 100 per year to between 100–200 per year. In addition, the applicant noted that FDA received at

[73] In the CY 2023 OPPS/ASC final rule with comment period CMS approved Uretero1 as a new device category for transitional pass-through payment status and established HCPCS code C1747 as a new device category beginning in January 2023 (87 FR 7129 through 71934) effective January 1, 2023.

[74] FDA Safety Communications, Flexible Bronchoscopes and Updated Recommendations for Reprocessing: FDA Safety Communication, issued June 25, 2021. *https://www.fda.gov/medical-devices/safety-communications/flexible-bronchoscopes-and-updated-recommendations-reprocessing-fda-safety-communication.*

[75] Ho, E., Wagh, A., Hogarth, K., Murgu, S. (2022). Single-use and reusable flexible bronchoscopes in pulmonary and critical caremedicine. *Diagnostics, 12*(1):174. Retrieved from: *https://doi.org/10.3390/diagnostics12010174.*

[76] FDA Safety Communications, Flexible Bronchoscopes and Updated Recommendations for Reprocessing: FDA Safety Communication, issued June 25, 2021. *https://www.fda.gov/medical-devices/safety-communications/flexible-bronchoscopes-and-updated-recommendations-reprocessing-fda-safety-communication.*

least 226 bronchoscope-related MDRs from July 2021 to July 2023. The applicant asserted that the latest MDR numbers highlight the sustained increase of these MDRs. The applicant also noted that the MDR system is a passive surveillance system and may undercount the true number of bronchoscope infections and/or contaminations.

In reference to CMS's concern regarding the relevance of the 2015 FDA safety notice, the applicant stated that CMS determined that a similar communication (FDA advisory notice) was sufficient to demonstrate substantial clinical improvement for Uretero 1 in CY 2023. The applicant further provided that compared to ureteroscopes, which received 450 reports from 2017–2021 (from roughly 600,000 cases per year), reusable bronchoscopes received 867 from 2015–2021 (out of roughly 500,000 cases per year). The applicant asserted that given CMS' previous acceptance of FDA guidance documents as evidence of substantial clinical improvement and the increased incidents of MDRs for bronchoscopes when compared to ureteroscopes, the bronchoscope MDR data provided must also be considered sufficient evidence.

A few commenters, including the applicant, pointed out that the supplemental update [77] issued on June 25, 2021, directly addresses the omission of single-use medical devices from the FDA safety communication [78] originally dated September 17, 2015, regarding infections associated with reprocessed flexible bronchoscopes. The commenters stated that the supplemental update urges health care providers to consider using single-use bronchoscopes in situations where there is an increased risk of spreading infection and recommends the use of sterilization instead of high-level disinfection for all flexible bronchoscope reprocessing. One commenter clarified that some reusable flexible bronchoscopes are physically incompatible with some or all sterilization methods, while others may be capable of withstanding the sterilization process, but the manufacturers have not provided a validated sterilization process in the 510(k) cleared device labeling. Another commenter stated that the single-use flexible bronchoscopes minimize the risk of patient cross-contamination and agreed with the applicant's assertation that reusable bronchoscopes frequently lead to issues of cross-contamination and infection because of complex designs and issues with reprocessing, especially for patients who are immunocompromised.

A few commenters also provided additional data on the prevalence of inadequately reprocessed bronchoscopes posing an increased risk of remaining contaminated and cross-infecting patients with multidrug-resistant organisms. One commenter cited a recently published peer-reviewed article by Mehta and Muscarella (2020),[79] which provides evidence both for the significance of this application and the prevalence of infection due to, among other risk factors, the inadequate reprocessing of reusable bronchoscopes. The primary objectives of the study were to investigate the risk of bronchoscopes transmitting infections of carbapenem-resistant Enterobacteriaceae (CRE) and related multidrug-resistant organisms (MDROs). This study's findings suggest that bronchoscopes may pose an under-recognized potential for transmission of CRE and related MDROs, warranting greater public awareness, enhanced preventive measures, and updated reprocessing guidance. Per the commenter, this study's data suggests that the cleaning and high-level disinfection of bronchoscopes performed in accordance with published guidelines and manufacturer instructions may not always be sufficiently effective to eliminate this risk. The study concluded that inadequate reprocessing of reusable bronchoscopes is positively correlated with heightened risk of infection. Another commenter indicated that while it is important for hospitals to improve reprocessing practices in general, a clean reusable scope will never be as clean as a sterile, single-use scope, even following the most rigorous cleaning protocols. The commenter stated that while CMS highlighted the low number of reported infections given the number of bronchoscopies that occur each year, unlike many other types of endoscopes that enter a sterile or otherwise clean anatomy (ureter), patients who need a bronchoscopy often require such procedures due to potential infection which could mask bronchoscope-mediated transmission of infectious agents.

Response: We appreciate the applicant's and the commenters' responses and additional evidence. We found the data contained in the updated 2021 FDA safety notice [80] compelling. While FDA noted in the 2015 FDA safety notice submitted as part of the application that when compared to the number of bronchoscopy procedures performed in the U.S. each year this is considered a small number of MDRs, we agree with the applicant's assertion that the latest MDR numbers provided in the 2021 FDA safety notice [81] highlight the sustained increase of these MDRs. While we acknowledge some of the data limitations, after reviewing the information provided in the public comment and the 2021 FDA safety notice,[82] we agree with the commenters that reusable bronchoscopes present a risk of cross-infection due to contamination. We understand that despite strictly adhering to the manufacturers' recommendations for reprocessing, some bronchoscopes still show evidence of biofilms, which are a source of cross-contamination. The applicant and other commenters provided sources: Mehta and Muscarella (2020) [83] and the 2021 FDA safety notice,[84] that demonstrate that even ''properly'' re-processed bronchoscopes have positive microbial growth via reusable bronchoscopes which is mitigated by single-use bronchoscopes like Ambu aScope™ 5 Broncho HD sufficiently to demonstrate substantial clinical improvement in situations where there is an increased risk of spreading infection. After consideration of the public comments received, we believe that commenters have addressed our concerns regarding whether the Ambu® aScope™ 5 Broncho HD meets the substantial clinical improvement criterion and that the Ambu® aScope™ 5 Broncho HD represents a substantial clinical improvement over existing technologies due to compelling evidence from the applicant and other commenters as discussed above,

specifically the 2021 FDA safety notice [85] and Ho et al.[86] study that demonstrated the increased risks associated with using reusable devices

In response to the applicant's comments comparing the Uretero 1 application summary included in the CY 2023 OPPS/ASC final rule with comment period with the application summary for the nominated device included in this final rule with comment period, we note that we expressed a similar concern in the Uretero 1 application summary that the FDA advisory letter regarding ureteroscopes did not mention single-use devices and it was not clear how the recommendations in the letter supported the applicant's claims of substantial clinical improvement related to Uretero1. While we ultimately determined that evidence was sufficient to demonstrate substantial clinical improvement, we would like to reiterate that we evaluate all evidence submitted for each device pass-through application as it applies to the nominated device. While we agree that data provided regarding the increased incidents of MDRs for bronchoscopes and the nominated devices' impact of mitigating infection risk, we do not agree that CMS' previous acceptance of FDA guidance documents must be considered sufficient evidence of substantial clinical improvement for the nominated device. The ultimate determination of whether evidence demonstrates substantial clinical improvement for one application, while taken into consideration as appropriate, is not controlling on future determinations. Again, due to inherent differences in the devices themselves and the supporting documentation submitted, CMS may have different concerns as they relate to the nominated device. In addition, we are not precluded from evaluating evidence and expressing concerns regarding types of evidence submitted in support of an application simply because that type of evidence has been submitted in support of a previous application. As we stated previously, while we encourage applicants to read the application summaries presented in previous OPPS/ASC rules as they can help applicants determine the types of documentation that have been submitted and assess areas of potential concern with their technology, we caution applicants from relying solely on the presumption that previously submitted types of evidence, evaluated for a different device, either need not be submitted or need not be fully addressed as it relates to their technology. We encourage applicants to submit all relevant supporting evidence with their device pass-through application to allow us to adequately evaluate and include the data in the notice of proposed rulemaking.

Comment: In response to our concern that the Châteauvieux et al.[87] and Barron and Kennedy [88] studies suggested limiting the use of single-use bronchoscope devices to specific situations (that is, after hours or emergency), immunocompromised patients, and in rare cases of preventing prior contamination in the inpatient setting, the applicant asserted that this recommendation was made due to the potential cost burdens of reusable scopes referenced in the study. The applicant further asserted that if cost was not a barrier and facilities widely adopted single-use bronchoscopes, such as the Ambu® aScope™ 5 Broncho HD, the benefits of advanced bronchoscopy procedures would be more accessible. One commenter, writing in support of approval of the nominated device for pass-through payment, expressed concern that the cost of Ambu® aScope™ 5 Broncho HD created a barrier to utilization, and agreed with the applicant that Châteauvieux et al.[89] and Barron and Kennedy [90] suggest limiting single-use scopes to specific case types because of cost. However, this commenter noted that studies by Maerkedahl et al., Mouritsen et al., and Kurman et al. all found that single-use scopes are economically advantageous relative to reusable scopes. This commenter stated that despite these findings, cost does admittedly remain a major barrier to broader adoption of single-use scopes. This commenter noted that improving reimbursement would help mitigate this barrier and allow more physicians to use the device for advanced bronchoscopy cases where it is now the preferred option. The applicant, in response to this comment indicated that, as this section (the substantial clinical improvement section under which the comment was submitted) is not about cost, it is not relevant to whether the Ambu® aScope™ 5 Broncho HD can provide a substantial clinical improvement.

Response: We appreciate the commenters' input. While the applicant did not provide in its application additional information about situations where use of single-use bronchoscopes would be optimal, we appreciate the insight provided from the applicant and several commenters who gave specific examples for how the device allows for advanced bronchoscopy procedures to be performed with a single-use scope, without concern for contamination, specifically for procedures that include but are not limited to: transbronchial biopsy, airway inspection for high-risk/immunocompromised patients, and procedures with high-frequency tools.

While we maintain our belief that further investigation with comparators in these specified cases would more directly establish whether the device demonstrates a substantial clinical improvement over currently available treatment options in the clinical setting where it is most likely to be used, we understand that this data may not be available. We agree with the commenters that Châteauvieux et al.[91] and Barron and Kennedy [92] studies suggested limiting the use of single-use bronchoscope device to specific situations, in part, due to cost considerations. After consideration of the public comments received, we agree that the evidence demonstrates that the device is a substantial clinical improvement over currently available treatment options in the clinical setting.

In addition, we thank the commenter for their input on how approval would impact existing barriers to broader adoption of single-use scopes. While the

applicant is correct that we do not assess cost in § 419.66(c)(2), CMS recognizes the importance of addressing cost as a barrier to utilization, and as stated in section 2.a., a goal of transitional pass-through is to target pass-through payments for those devices where cost considerations are most likely to interfere with patient access (66 FR 55852; 67 FR 66782; and 70 FR 68629). We address the cost of Ambu® aScope™ 5 Broncho HD and the cost significance criteria below.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that the Ambu® aScope™ 5 Broncho HD would be reported with HCPCS codes listed in Table 87.

BILLING CODE 4150–28–P

TABLE 87: HCPCS CODES REPORTED WITH THE AMBU® ASCOPE™ 5 BRONCHO HD

HCPCS Code	Long Descriptor	SI	APC
31615	Tracheobronchoscopy through established tracheostomy incision	T	5162
31622	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with cell washing	J1	5153
31623	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with brushing or protected brushings	J1	5153
31624	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with bronchial alveolar lavage	J1	5153
31625	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with bronchial or endobronchial biopsy(s), single or multiple sites	J1	5153
31626	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with placement of fiducial markers, single or multiple	J1	5155
31628	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with transbronchial lung biopsy(s), single lobe	J1	5154
31629	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with transbronchial needle aspiration biopsy(s). Trachea, main stem and/or lobar bronchus(i)	J1	5154
31630	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with tracheal/bronchial dilation or closed reduction of fracture	J1	5154
31631	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with placement of tracheal stent(s) (includes tracheal/bronchial dilation as required	J1	5155
31634	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with balloon occlusion, with assessment of air leak, with administration of occlusive substance (e.g., fibrin glue), if performed	J1	5155
31635	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with removal of foreign body	J1	5153
31636	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with placement of bronchial stent(s)(includes tracheal/bronchial dilation as required), initial bronchus	J1	5155
31638	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with revision of tracheal or bronchial stent inserted at previous session (includes tracheal/bronchial dilation as required)	J1	5155
31640	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with excision of tumor	J1	5154
31641	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with destruction of tumor or relief of stenosis by any method other than excision (e.g., laser therapy, cryotherapy)	J1	5154

HCPCS Code	Long Descriptor	SI	APC
31643	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with placement of catheter(s) for intracavitary radioelement application	J1	5153
31645	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with therapeutic aspiration of tracheobronchial tree, initial	J1	5153
31646	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with therapeutic aspiration of tracheobronchial tree, subsequent, sams hospital stay	T	5152
31647	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with balloon occlusion, when performed, assessment of air leak, airway sizing, and insertion of bronchial valve(s), initial lobe	J1	5155
31648	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with removal of bronchial valve(s), initial lobe	J1	5154
31652	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (e.g., aspiration(s)/biopsy[ies]), one or two mediastinal and/or hilar lymph node stations or structures	J1	5154
31653	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with endobronchial ultrasound (EBUS) guided transtracheal and/or transbronchial sampling (eg, aspiration(s)/biopsy[ies]), 3 or more mediastinal and/or hilar lymph node stations or structures	J1	5154
31660	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial thermoplasty, 1 lobe	J1	5155
31661	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; with bronchial thermoplasty, 2 or more lobes	J1	5155
31785	Excision of tracheal tumor or carcinoma; cervical	J1	5165
32400	Biopsy, pleura, percutaneous needle	J1	5072
32550	Insertion of indwelling tunneled pleural catheter with cuff	J1	5341
32551	Tube thoracostomy, includes connection to drainage system (eg, water seal), when performed, open (separate procedure)	J1	5182
32552	Removal of indwelling tunneled pleural catheter with cuff	Q2	5181
32554	Thoracentesis, needle or catheter, aspiration of the pleural space; without imaging guidance	T	5181
31627	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with computer-assisted, image-guided navigation	**	N/A
31632	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with transbronchial lung biopsy(s), each additional lobe (list separately in addition to code for primary procedure)	**	N/A
31633	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with transbronchial needle aspiration	**	N/A

HCPCS Code	Long Descriptor	SI	APC
	biopsy(s), each additional lobe (list separately in addition to code for primary procedure)		
31637	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, each additional major bronchus stented (list separately in addition to code for primary procedure)	**	N/A
31649	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with removal of bronchial valve(s), each additional lobe (list separately in addition to code for primary procedure)	**	N/A
31654	Bronchoscopy, rigid or flexible, including fluoroscopic guidance, when performed; diagnostic, with endobronchial ultrasound (EBUS) during bronchoscopic diagnostic or therapeutic intervention(s) for peripheral lesion(s)	**	N/A
31780	Excision tracheal stenosis and anastomosis; cervical	**	N/A

32815	Open closure of major bronchial fistula	**	N/A

** Denotes a HCPCS code that was not evaluated for the cost criterion because the HCPCS code was not included in Addendum P to the CY 2022 OPPS/ASC final rule with comment period, as corrected in the 2022 Correction Notification OPPS Addendum (87 FR 2060).

BILLING CODE 4150–28–C

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule with comment period (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. For our calculations, we used APC 5152, which had a CY 2022 payment rate of $383.33 at the time the application was received. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). We noted that the HCPCS code 31646 identified by the applicant had a device offset amount of $0.00 at the time the application was received. Accordingly, we are evaluating the cost significance requirements using $0.00 as the appropriate device offset amount. According to the applicant, the cost of the Ambu® aScope™ 5 Broncho HD is $799.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of $799.00 for the Ambu® aScope™ 5 Broncho HD is 208.44 percent of the applicable APC payment amount for the service related to the category of devices of $383.33 (($799.00/$383.33) × 100 = 208.44 percent). Therefore, we stated that we believe the Ambu® aScope™ 5 Broncho HD meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). Given that there are no device-related costs in the APC payment amount, and the Ambu® aScope™ 5 Broncho HD has an estimated average reasonable cost of $799.00, we stated that we believe the Ambu® aScope™ 5 Broncho HD meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $799.00 for the Ambu® aScope™ 5 Broncho HD and the portion of the APC payment amount for the device of $0.00 exceeds the APC payment amount for the related service of $799.00 by 208.44 percent ((($799.00 − $0.00)/$383.33) × 100 = 208.44 percent). Therefore, we stated that we believe the Ambu aScope™ 5 Broncho HD meets the third cost significance requirement.

We invited public comment on whether the Ambu® aScope™ 5 Broncho HD meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

We did not receive any comments with regard to any of the cost significance requirements specified at § 419.66(d). Based on our findings from the first, second, and third cost significant tests, we believe that the Ambu® aScopeTM 5 Broncho HD device

meets the cost significance criterion specified at § 419.66(d).

After consideration of the public comments we received and our review of the device pass-through application, we have determined that the Ambu® aScope™ 5 Broncho HD meets the criteria for device pass-through status. We are approving this application because the documentation (namely the FDA document and additional studies) that were submitted in response to the proposed rule address our concerns and provide evidence of substantial clinical improvement that is required. Therefore, we are approving the Ambu® aScope™ 5 Broncho HD for transitional pass-through payment status beginning January 1, 2024.

(b) Praxis Medical CytoCore

Praxis Medical, LLC submitted an application for a new device category for transitional pass-through payment status for Praxis Medical CytoCore (CytoCore) for CY 2024. Per the applicant, CytoCore is a single-use disposable biopsy instrument. Per the applicant, at the time of biopsy, the motorized CytoCore device contains gears and an internal motor that spins a minimally invasive needle to increase cellular yields in fewer passes. The applicant further explained that CytoCore is vacuum-assisted and can easily be operated using one hand. According to the applicant, the primary use is for biopsy of any suspicious thyroid nodule.

The applicant stated that the CytoCore Biopsy Instrument device package includes: (1) a single CytoCore biopsy instrument, powered by an alkaline type battery; (2) three luer adaptors; (3) a 5ml syringe; and (4) an instructions for use (IFU) booklet. Per the applicant, the CytoCore is compatible with disposable needles of 22-to-25-gauge and 4-to-10-cm length that are intended for soft tissue biopsy procedures (needles are not included in the device package). The applicant further explained that only the CytoCore luer adapters and syringes provided by Praxis can be used on CytoCore and that the CytoCore luer adapters can only be used with the CytoCore Biopsy Instrument.

Per the applicant, the operator of CytoCore can direct the needle and draw back the plunger with only one hand, thereby diminishing the need to move the needle in an in-and-out motion to harvest cells. As with other types of biopsies, the sample collected can help make a diagnosis or rule out conditions such as cancer. The applicant claimed that CytoCore enables the physician to collect more cellular material in fewer passes and reduce the number of repeat biopsies and surgeries resulting from inadequate cellular samples obtained using standard fine needle aspiration (FNA). According to the applicant, CytoCore is designed to collect enough DNA for pathology to definitively rule in or out cancer and inform subsequent treatment at the time of the first biopsy. Per the applicant, studies report nondiagnostic rates for biopsies to be as high as 30 to 50 percent using FNA biopsy.[93]

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), on March 31, 2020, the applicant received 510(k) clearance from FDA for CytoCore for use as a device to hold a syringe for performing a biopsy of an identified mass with one hand. We received the application for a new device category for transitional pass-through payment status for CytoCore on August 31, 2022, which is within 3 years from the date of the initial FDA marketing authorization.

We invited public comments on whether CytoCore meets the newness criterion at § 419.66(b)(1).

We did not receive public comments regarding whether CytoCore meets the newness criterion at § 419.66(b)(1). We received the application for a new device category for transitional pass-through payment status for CytoCore on August 31, 2022, which is within 3 years of the initial FDA marketing authorization on March 31, 2020, and as such, we have concluded that CytoCore meets the newness criterion.

With respect to the eligibility criterion at § 419.66(b)(3), the applicant did not assert whether CytoCore is integral to the service provided. According to the applicant, CytoCore is used for one patient only. Per the applicant, CytoCore comes into contact with human tissue and is surgically inserted via the syringe attached to the motorized CytoCore device. Per the applicant, CytoCore is used with a 22-to-25-gauge standard fine needle (not included in the device package), which is inserted into human tissue to collect cellular samples. The applicant stated that the fine needle is attached to CytoCore, inserted into the nodule, and cellular material is collected through the needle into the syringe. The applicant further explained that the cellular material is visible in the hub of the needle or the luer adapter. However, we noted that the motorized CytoCore device itself is not surgically implanted or inserted (either permanently or temporarily) or applied in or on a wound or other skin lesion, as required at § 419.66(b)(3). Further, we noted that according to the FDA 510(k) Summary and Indication for Use, CytoCore is a device to hold a syringe for performing a biopsy of an identified mass with one hand and that the device never comes in contact with the patient.

With respect to the exclusion criterion at § 419.66(b)(4), the applicant did not address whether CytoCore is equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets. The applicant also did not address whether CytoCore is a supply or material furnished incident to a service or whether the device is surgically implanted or inserted (either permanently or temporarily) or applied in or on a wound or other skin lesion, as required by § 419.66(b)(3). However, in the CY 2000 OPPS interim final rule with comment period (65 FR 67804 and 67805), we explained how we interpret the exclusion criterion at § 419.66(b)(3). We stated that we consider a device to be surgically implanted or inserted if it is surgically inserted or implanted via a natural or surgically created orifice or inserted or implanted via a surgically created incision. We also stated that we do not consider an item used to cut or otherwise create a surgical opening to be a device that is surgically implanted or inserted. We consider items used to create incisions, such as scalpels, electrocautery units, biopsy apparatuses, or other commonly used operating room instruments, to be supplies or capital equipment not eligible for transitional pass-through payments. We stated that we believe the function of these items is different and distinct from that of devices that are used for surgical implantation or insertion. Finally, we stated that, generally, we would expect that surgical implantation or insertion of a device occurs after the surgeon uses certain primary tools, supplies, or instruments to create the surgical path or site for implanting the device. In the CY 2006 OPPS final rule with comment period (70 FR 68516, 70 FR 68629 and 68630), we adopted as final our interpretation that the surgical insertion or implantation criterion can be met by devices that are surgically inserted or implanted via a natural or surgically created orifice, as well as those devices that are inserted or implanted via a surgically created incision. We reiterated that we maintain all of the other criteria in § 419.66 of the

[93] CMS made minor edits to the device description in this final rule with public comment to improve clarity.

regulations, namely, that we do not consider an item used to cut or otherwise create a surgical opening to be a device that is surgically implanted or inserted.

We invited public comments on whether CytoCore meets the exclusion criteria at § 419.66(b)(3) and (4).

Comment: The applicant asserted that CytoCore meets the eligibility requirements at § 419.66(b)(3) and (4). In response to our concerns that the motorized CytoCore device itself is not surgically implanted or inserted (either permanently or temporarily) or applied in or on a wound or other skin lesion, as required at § 419.66(b)(3), the applicant asserted that CytoCore is integral to the service provided for Fine Needle Aspiration (FNA) of suspicious thyroid nodules because the CytoCore motorized device is an essential component, offering precise control with a needle that is attached to the device, and CytoCore is adaptable for various lesion characteristics. Further, the applicant explained that, using ultrasound guidance, the needle is advanced through the patient's skin into the nodule, ensuring collection of adequate material.

In response to our concerns that Cytocore may be considered a supply or material furnished incident to a service as described in § 419.66(b)(4), the applicant stated that CytoCore does not function as a surgical tool. In support of this assertion, the applicant referenced the FDA definition of a manual surgical instrument (21 CFR 878.4800). The applicant stated that, because CytoCore is powered and non-resuable, it does not meet the definition of a ''surgical instrument'' per the FDA definition.

Response: We appreciate the commenter's input regarding whether CytoCore meets the eligibility criteria at § 419.66(b)(4). However, we do not believe that CytoCore meets the eligibility criteria described at § 419.66(b)(4).

With respect to the eligibility criterion at § 419.66(b)(4), while we appreciate the assertion that CytoCore may not be defined as a ''surgical instrument'' according to the FDA definition (21 CFR 878.4800), we note that FDA and CMS utilize different definitions for many terms. In this instance, CMS has established a clear definition for a supply or material furnished incident to a service for the purposes of determining OPPS device pass-through payment eligibility.

In the proposed rule, we reiterated that for the criteria at § 419.66, CMS adopted the interpretation of § 419.66(b)(4) in the CY 2006 OPPS final rule with comment period (70 FR 68629 and 68630). Specifically, we stated that CMS does not consider an item used to cut or otherwise create a surgical opening to be a device that is surgically implanted or inserted. CMS considers a device to be surgically implanted or inserted if it is surgically inserted or implanted via a natural or surgically created orifice or inserted or implanted via a surgically created incision. Further, we provided that CMS considers items used to create incisions, such as scalpels, electrocautery units, biopsy apparatuses, or other commonly used operating room instruments, to be supplies or capital equipment not eligible for transitional pass-through payments. The function of these items is different and distinct from surgical implantation or insertion and CMS expects that surgical implantation or insertion of a device occurs after the surgeon uses certain primary tools, supplies, or instruments to create the surgical path or site for implanting the device.

With respect to the eligibility criterion at § 419.66(b)(4), based on the information we received in the application and the public comments as well as discussion of the criterion in § 419.66(b)(4) that we adopted in the CY 2006 OPPS final rule with comment period (70 FR 68629 and 68630), we have determined that CytoCore is a biopsy apparatus and, as such, is a material or supply furnished incident to a service, in accordance with the device eligibility requirements in the proposed rule and, as such, does not meet the eligibility criteria at § 419.66(b)(4).

CytoCore does not meet the eligibility criteria to be considered a device for transitional pass-through payment. Therefore, we did not evaluate whether the product meets the other criteria required for transitional pass-through payment for devices, including whether it is described by existing or previous categories, whether it is a substantial clinical improvement, or whether it meets the cost criteria. We are not approving CytoCore for transitional pass-through payment status for CY 2024 because the product does not meet the eligibility criteria at § 419.66(b)(4).

We note that we received public comments with regard to the substantial clinical improvement criterion for this device, but because we have determined that the device does not meet the eligibility criteria and therefore, is not eligible for approval for transitional pass-through payment status for CY 2024, we are not summarizing comments received or making a determination on that criterion in this final rule.

(c) EchoTip®

Cook Medical submitted an application for a new device category for transitional pass-through payment status for the EchoTip® Insight Portosystemic Pressure Gradient Measurement System® (EchoTip®) for CY 2024. According to the applicant, EchoTip® is used in the diagnosis and management of patient populations with chronic liver diseases (CLDs), and especially with non-alcoholic fatty liver Disease (NAFLD). The applicant stated that EchoTip® directly measures pressures in the hepatic and portal venous vasculatures and is used in conjunction with an ultrasound endoscope. A curvilinear array echoendoscope is advanced to the stomach, and the portal and hepatic veins are visualized under ultrasound guidance. A 25-gauge needle (which is prepared prior to the endoscopy by attaching it to connection tubing and a disposable transducer) is advanced through the echoendoscope which then punctures the hepatic vein through the liver parenchyma, and a pressure measurement is obtained. Per the applicant, a total of three measurements are obtained, after which the needle is retracted into the echoendoscope which is then repositioned for portal vein access. The needle is then advanced to the portal vein where another set of three pressure measurements is obtained. The portosystemic pressure gradient is calculated by determining the difference between the two averaged measurements.

According to the applicant, EchoTip® is a single-use, disposable device comprised of the EchoTip® Insight Needle, a connecting tube, and a Compass CT transducer. EchoTip® is supplied with a 10 ml syringe. Once assembled, EchoTip® is used with an ultrasound endoscope and directly measures pressures in the hepatic and portal venous vasculatures. The EchoTip® Insight Needle is stainless steel, has a handle and protective outer sheath, and attaches to the accessory channel of the endoscope. The polyethylene connecting tube consists of a 90 cm tube, a female luer fitting, a male luer fitting, and a stopcock. The connecting tube is used to attach the transducer to the needle handle. The stopcock is used to aid priming of the assembled components. The Compass CT transducer is a self-calibrating disposable pressure transducer with integrated digital display. EchoTip® is intended for direct measurement and monitoring of physiological pressure,

including during the infusion of fluids and therapeutic and diagnostic agents.[94]

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4).

We invited public comment on whether EchoTip® meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated their belief that EchoTip® meets the newness criterion. The applicant stated that the FDA granted de Novo authorization on November 20, 2019, therefore meeting the criteria at § 419.66(b)(1) because the application is within 3 years of the date of the initial FDA marketing authorization on November 20, 2019.

Response: We appreciate the commenter's input and agree that because we received the application for EchoTip® on June 29, 2022, which is within 3 years of FDA approval on November 20, 2019, EchoTip® meets the newness criterion.

With respect to the eligibility criterion at § 419.66(b)(3), the applicant stated that EchoTip® is integral to the service provided, is used for one patient only, comes in contact with human skin, and is applied in or on a wound or other skin lesion. According to the applicant, the hepatic vein and portal vein are punctured through the liver parenchyma to obtain pressure measurements.

We invited public comment on whether EchoTip® meets the integral part of the service criterion at § 419.66(b)(3).

Comment: The applicant asserted that EchoTip® meets the eligibility requirements at § 419.66(b)(3), stating that EchoTip® is a prescription, single-use device consisting of the EchoTip® Insight Needle, a connecting tube, and a Compass CT transducer that is integral to the service provided.

Response: After consideration of the public comments we received, we agree that the applicant meets the eligibility criterion at § 419.66(b)(3) because it is integral to the service provided, is used for one patient only, and punctures the hepatic vein and portal vein through the liver parenchyma to obtain pressure measurements.

With respect to the exclusion criterion at § 419.66(b)(4), the applicant claimed that EchoTip® meets the device eligibility requirements because it is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

We invited public comment on whether EchoTip® meets the exclusion criterion at § 419.66(b)(4).

Comment: The applicant asserted that EchoTip® meets the device eligibility requirements because it is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

Response: We appreciate the commenter's input. We agree with the applicant that EchoTip® meets the device eligibility requirements at § 419.66(b)(4) because it is not a piece of equipment, instrument, apparatus, implement, or item for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service. Therefore, based on the public comments we have received and our review of the application, we have determined that EchoTip® meets the eligibility criteria at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant described EchoTip® as the only device authorized by the FDA with an indication to directly access and measure pressure in the hepatic and portal venous vasculatures in conjunction with an ultrasound endoscope. Per the applicant, FDA established that there is no recognized predicate product, or other similar approved device with a similar mechanism of action. Per the applicant, no previous device categories for pass-through payment have encompassed EchoTip® and there are no similar device categories. We stated in the CY 2024 OPPS/ASC proposed rule that, upon review, it does not appear that there are any existing pass-through payment categories that might apply to EchoTip®.

We invited public comment on whether EchoTip® meets the device category criterion at § 419.66(c)(1).

Comment: Regarding the eligibility criterion at § 419.66(c)(1), the applicant reiterated that there is no comparable existing pass-through payment category that describes EchoTip®.

Response: We appreciate the commenter's input. After consideration of the public comments we received, we continue to believe that there is not an existing pass-through payment category that describes EchoTip®, and therefore, EchoTip® meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of the FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The applicant claimed that EchoTip® represents a substantial clinical improvement over existing technologies in the diagnosis and management of chronic liver disease because: (1) Endoscopic ultra-sound-guided direct portal-systemic pressure gradient measurement (EUS–PPG)-guided measurement is clinically safer and more accurate than the current standard transjugular endovascular indirect measurement, referred to as the hepatic venous pressure gradient (HVPG); (2) EUS–PPG is technically feasible and superior to HVPG; (3) EUS–PPG has benefits in non-cirrhotic patients; and (4) EUS–PPG has utility in the evaluation of ESRD patients and kidney transplant candidacy. The applicant provided four articles specifically for the purpose of addressing the substantial clinical improvement criterion claims. The applicant also included one background article that discussed social determinants of health and disparities in liver disease.[95]

[94] CMS made minor edits to the device description in this final rule with public comment to improve clarity.

[95] Kardashian, A., Wilder, J., Terrault, N. Price, J. (2021). Addressing social determinants of liver disease during the COVID–19 pandemic and beyond: A call to action. *Hepatology, 73*(2): 811–820.

In support of the first claim, the applicant submitted an article on a prospective, single-armed, single-academic center study.[96] Patients with suspected liver disease or cirrhosis were enrolled prospectively from 2020 to 2021. EUS–PPG was measured by calculating the difference between the mean portal pressure and the mean hepatic vein pressure. PH was defined as PPG >5 mm Hg and clinically significant PH as PPG<10 mm Hg. The primary outcomes were procedural technical success rate and correlation of EUS–PPG with fibrosis stage obtained from concurrent EUS-guided liver biopsy sampling and the correlation of EUS–PPG with patients' imaging, clinical, and laboratory findings. The secondary outcome was occurrence of procedural adverse events. EUS–PPG measurement was successful in 23 patients, leading to a technical success rate of 96 percent. The authors reported that there was no statistically significant correlation between the fibrosis stage on histology and measured PPG (P=.559). According to the authors, this did not change after excluding three patients without established chronic liver disease from the analysis. The authors reported that one patient experienced a mild adverse event with postprocedural abdominal pain resulting in an emergency department visit. The authors also reported that five patients (28 percent) received oral acetaminophen in the post anesthesia care unit for mild abdominal pain after the procedure, which resolved in all cases before discharge without the need for further pharmacotherapy.

In support of its second claim, the applicant submitted a single-center retrospective study on patients with various CLDs undergoing EUS–PPG and EUS-guided liver biopsy (EUS-bx) to assess correlation with histological hepatic fibrosis stage and various clinical, laboratory, endoscopic and imaging variables indicative of advanced liver disease.[97] Cases with EUS–PPG were identified at the University of California Irvine, a tertiary endoscopy center, between January 2014 and March 2020. Three different ways of evaluating the EUS–PPG outcomes were assessed: (1) success rate of the EUS–PPG measurement; (2) performance; and (3) safety profile. The primary outcome evaluated was the association between EUS–PPG and the presence of histologic liver fibrosis, stage ≥ 3. EUS–PPG procedures were successfully completed in all 64 cases. On multivariate analysis, EUS–PPG ≥ 5 mmHg was significantly associated with fibrosis stage ≥ 3 on EUG-liver biopsy (LR 27.0, 95 percent CI = 1.653–360.597, p = 0.004), independent from C-cirrhosis, clinical portal hypertension, thrombocytopenia, splenomegaly, aspartate aminotransferase to platelet ration index score > 2, and fibrosis-4 score > 3.25. There were six complications in total, including abdominal pain (n = 3) and sore throat (n = 3). The authors reported that there were no subjects who had post-EUS–PPG emergency room (ER) visits or hospital admissions.

In support of its third claim, the applicant submitted a review of endoscopic ultrasound guided interventions. The article [98] discussed the diagnosis and treatment of portal hypertension and treatment of gastric varices (GV) and compared liver biopsy, HVPG, and EUS–PPG. With respect to the utility of HVPG, the authors explained that in the absence of fibrosis/nodules (that is, cirrhosis) the pressure equalizes throughout the interconnected sinusoidal network, and results in minimal gradient (that is, normal; up to 4 mmHg). Thus, according to the authors, HVPG does not provide useful information regarding prehepatic or presinusoidal portal hypertension (PH) (that is, non-cirrhotic causes of PH). In comparison, EUS-guided portal pressure gradient (PPG) measurements employ a direct sampling technique. Thus, the study authors found direct measurement of the portal vein pressure could be considered the gold standard because it is not an estimate of sinusoidal pressure as is HVPG. The difference in the mean measurement of these pressures is termed the PPG which is analogous to the HVPG, with the caveat that direct portal vein measurement also allows for the assessment of prehepatic/presinusoidal PH; a limitation of the transjugular approach. The study authors cited a study by Huang et al.[99] that used a porcine animal model with a novel EUS-guided system which included a manometer attached to a 25-gauge fine needle aspiration (FNA) needle for directly measuring pressures in the hepatic and portal veins. The purpose of this animal study was to assess clinical feasibility and assess correlation with the standard of care: HVPG measurement through transjugular approach. The study authors further cited a pilot study involving 28 patients between the age of 18–75 years with a history of liver disease or suspected cirrhosis that underwent EUS–PPG measurements using the technique and equipment in the animal study. The portal vein and hepatic vein were targeted via a transgastric–transduodenal approach (inferior vena cava (IVC) was substituted for hepatic vein when not technically feasible). The technical success rate of EUS–PPG measurement was 100 percent without any adverse events. The study authors concluded that EUS–PPG measurement was a safe and feasible alternative to HVPG measurement.

In support of its fourth claim, the applicant submitted a letter in which the author described a retrospective, single-center study to determine feasibility, safety, and utility of EUS–PPG using EUS-liver biopsy as comparison in patients with end stage renal disease (ESRD) and suspected portal hypertension.[100] According to the letter author, the purpose of the study was to investigate the use of EUS–PPG to assess pressure and the recommendation to decide between kidney transplant (KT) or combined liver KT. According to the letter author, the study suggested that new endoscopic and EUS findings were discovered with successful/reproducible EUS–PPG in 10 out of 11 (91 percent) subjects. The author stated there were no significant adverse events such as bleeding related to venous punctures, transfusions, or EUS–PPG-related hospitalizations. The author referenced conclusions from the study citing the need for further studies correlating EUS–PPG with wedged hepatic vein pressure gradient (WHVPG), assessing patient experience, and analyzing cost/benefit of one-stop versus piecemeal procedures. It is also noted in the letter that WHVPG may not always be feasible in ESRD patients due to catheter-related suprapubic thromboses. We noted that

this source did not include the original retrospective study, only a letter referencing it and highlighting its potential value to further research.

Based on the evidence submitted with the application, we noted the following concerns: a lack of direct comparison of EUS–PPG with HVPG and non-invasive methods, a lack of consistent correlation with liver biopsy, the reliance on non-peer reviewed studies, and small sample sizes.

In the first two claims, the applicant asserted EUS–PPG is clinically safer and more accurate than HVPG and technically superior to HVPG. However, the applicant did not directly compare EUS–PPG and HVPG. The Hajifathalian et al. study,[101] which was submitted in support of the first claim, stated EUS–PPG offers an alternative and potentially superior methodology to measure PPG regardless of liver disease etiology, without showing evidence of a direct comparison between EUS–PPG and HVPG. The Choi et al. study,[102] which was submitted in support of the second claim, directly compared EUS–PPG with EUS-liver biopsy, but it did not compare EUS–PPG with HVPG. The authors cited the lack of direct comparison between EUS–PPG and HVPG as a limitation in the study. Further these two studies had small sample sizes and were conducted at a single site; the Hajifathalian et al. study included 24 patients while the Choi et al. study included 64 patients.

In addition, we noted that the Hajifathalian et al. study results did not demonstrate correlation with fibrosis stage obtained from concurrent EUS-guided liver biopsy sampling. According to the authors, there was no statistically significant correlation between the fibrosis stage on histology and measured PPG (P=.559). We expressed concern that the lack of correlation would not support the claim that EUS-guided PPG measurement is more accurate than the current method using an indirect measurement with the use of HVPG.

In support of its fourth claim, we noted that the applicant relied on a letter to the editor that provides a study description rather than submitting the study directly as evidence for its claim.[103] In the enclosed letter, the author also noted that future studies are needed to correlate EUS–PPG with WHVPG. Lastly, the article the applicant provided in support of social determinants of health and disparities did not directly discuss the device. Additional supporting evidence, preferably published peer-reviewed clinical trials that show improved clinical outcomes would help with our assessment of whether EchoTip® demonstrates substantial clinical improvement over existing technologies.

We invited public comment on whether EchoTip® meets the substantial clinical improvement criterion at § 419.66(c)(2)(i).

Comment: In response to our concern that the applicant has not demonstrated the endoscopic ultra-sound-guided direct portal-systemic pressure gradient measurement (EUS–PPG) is clinically safer and more accurate than hepatic venous pressure gradient (HVPG) and technically superior to HVPG without directly comparing EUS–PPG and HVPG, we received comments from the applicant reiterating that the Huang et al.[104] studies compared EchoTip® direct EUS–PPG with the indirect HVPG method in a swine model using rapid dextran infusion to create transient portal hypertension and confirmed EchoTip® direct EUS–PPG matches pressures measured using a transjugular balloon catheter. The applicant asserted that the findings comparing preoperative EchoTip® direct EUS–PPG with HVPG in patients with cirrhosis or suspected cirrhosis undergoing abdominal surgery showed results that match findings from literature substantiating that direct portal vein pressures (PVP) correlate to the indirect Wedged Hepatic Vein Pressures (WHVP). The applicant commented that an additional finding was that patients preferred the EchoTip® procedure to the transjugular HVPG.

The applicant further summarized multiple historical documents from the 1950s,[105] [106] 1970s,[107] [108] [109] 1980s,[110] and early 2000s [111] [112] demonstrating the limitations of HVPG especially in diabetic patients. The applicant, through these historical studies, asserted that it has been well established that direct measurement of portal venous pressure correlates with indirect measurement of portal pressure using WHVP, and that the HVPG determined using either direct PVP or indirect WHVP correlate with one another in patients with sinusoidal portal hypertension.

The applicant asserted that direct measurement with EchoTip® addresses known limitations of the transjugular HVPG and non-invasive assessment. The applicant asserted HVPG with the indirect method can provide erroneous results. According to the applicant, Tandon et al. has shown good interobserver agreement between appropriately performed transjugular HVPG, but that adherence to specific techniques is critical for accurate measurement.[113] However, because of the variety of complicated portal hemodynamics and because the procedure is so complicated, the HVPG may not always reflect the substantial severity of portal hypertension in over 16 percent of patients with sinusoidal portal hypertension. The applicant also submitted preliminary findings from the Lim, et al. study comparing preoperative EchoTip® direct EUS–PPG with HVPG

[113] Tandon, P., Ripoll, C., Assis, D., et. al. (2016). The interpretation of hepatic venous pressure gradient tracings—excellent interobserver agreement unrelated to experience. *Liver Int, 36*(8): 1160–6.

in patients with cirrhosis or suspected cirrhosis undergoing abdominal surgery. The applicant stated that the study showed the median pressure gradient was similar between the EUS–PPG measurements and transjugular HVPG measurements, with a high correlation coefficient between the two techniques (r = 0.972; P = 0.006). The applicant stated that while only six patients were included, the results match findings from the considerable literature substantiating that direct portal vein pressures (PVP) correlate to the indirect Wedged Hepatic Vein Pressures (WHVP). The applicant stated that an additional finding was that patients preferred the EchoTip® procedure to the transjugular HVPG.

Response: We thank the applicant for their comments. However, we maintain the concerns we articulated in the proposed rule. While we agree that the limitations of HVPG for obtaining clinical information are well established, the additional literature provided does not address our concern about the lack of data comparing EUS–PPG to HVPG. The additional literature is based on patient data that is several decades out of date that may not be comparable to more recent patient data or clinical practices and does not rely on direct comparison between HVPG and other measurements, and rather only cites the limitations of HVPG in certain patient populations. The applicant restated its references to the Huang, et al. study, which offers the only direct comparison between EchoTip® and HVPG and provided new references to the Lim et al. study, in which the human patient model only included six study participants. We do not agree that data from animal studies is sufficient to extrapolate to human populations for the purposes of demonstrating substantial clinical improvement. Furthermore, we cited concerns about small sample sizes specifically in the Hajifathalian et al. and the Choi et al. studies, which included 24 and 64 patients respectively, while the applicant's more recently submitted data in the Lim et al. study includes even fewer patients.

Comment: In response to our concern that the Hajifathalian et al. study results did not achieve correlation with fibrosis stage obtained from concurrent EUS-guided liver biopsy sampling, the applicant asserted that the lack of correlation was due to a small heterogenous sample, but offered that the authors noted good correlation in true negatives and true positives. The applicant further asserted that direct comparison between EchoTip® PPG and HVPG and concurrent liver biopsy during the same encounter could only be accomplished in a highly specialized and controlled setting due to the need for simultaneous endoscopic ultrasound and transjugular catheterization. The applicant reiterated that in the Choi, et al. study included in their application, EUS–PPG was significantly associated with fibrosis stage ≥ 3 on EUG-liver biopsy (LR 27.0, 95 percent CI = 1.653–360.597, p = 0.004).[114]

Response: We thank the applicant for their comments and the additional context. However, we maintain the concerns we articulated in the proposed rule, specifically, as indicated by the applicant, that the Hajifathalian et al. study is too small to show significant clinical improvement. In addition, the comments do not address our earlier concerns with the Hajifathalian et al. and Choi et al. studies regarding the lack of direct comparison between HVPG and EUS–PPG.

Comment: In response to our concern that supporting evidence, preferably published peer-reviewed clinical trials, that show improved clinical outcomes would help inform our assessment of whether EchoTip® demonstrates substantial clinical improvement over existing technologies, the applicant submitted comments stating that the goal for both the referring physician and general gastroenterologist is to identify patients truly in need of specialized care from the hepatology specialist. The applicant stated that most gastroenterology practices have access to interventional gastroenterologists who can perform the EchoTip® procedure and can identify patients who need to be referred to the appropriate practitioner for intervention to manage their disease. In addition, EchoTip® fits into existing workflow in the endoscopy suite and eliminates the concerns with the high false positive rates found with non-invasive tests such as transient elastography and various risk score calculations. The applicant stated that therefore, EchoTip® does meet the criterion for substantial clinical improvement by offering an efficient way to identify patients needing specialty hepatology care, overcomes the issues with the traditional transjugular HVPG in the population with metabolic associated steatohepatitis (MASH) and metabolic dysfunction-associated steatotic liver disease (MASLD), and prevents misclassification of disease severity with non-invasive tests.

In support of the claim that direct portal vein pressure measurement is more accurate for determining the presence of portal hypertension in certain cases, the applicant submitted additional literature on the use of EchoTip® in clinical care. The applicant discussed the Jirapinyo et al. study,[115] in which the author found a significant reduction in PPG, with 79 percent of patients experiencing a reduction of over 20 percent within 6 months after use of EchoTip® during the endoscopic gastric plication (EGP) procedure. The applicant also referenced a case study in which EchoTip® was used to clear a patient for a successful EGP after previous endoscopic findings showed esophageal varicosities.[116] The applicant also asserted that EchoTip® can be used by gastroenterologists, in addition to hepatology specialists who may be less accessible.

Response: We thank the applicant for their comments and additional literature. However, while the literature discusses the limitations of HVPG and the need for direct measurement, it did not provide peer-reviewed literature on whether EchoTip® improves clinical outcomes in comparison to HVPG. In addition, while the applicant referenced the Jirapinyo et al. study and a case study to show a significant reduction in PPG associated with a reduction in the risks of variceal bleeding and death, the full studies were not included with the submitted comments. We understand the applicant claims EchoTip® may be more readily available in settings where hepatologists are not easily accessible, however, the applicant has not addressed our concern as to whether EchoTip® direct EUS–PPG is a substantial clinical improvement over HVPG.

Comment: Several commenters stated support for EchoTip®'s eligibility for transitional pass-through status, stating that EchoTip® is helpful in the measurement of portal hypertension and diagnosis of multiple conditions related to elevated pressures of the liver.

One commenter asserted EchoTip® meets substantial clinical improvement because EchoTip® identifies patients that need intensive hepatology care

[114] Choi, A., Chang, K., Samaransena, J. et al. (2022). Endoscopic ultrasound-guided porto-systemic pressure gradient measurement correlates with histological hepatic fibrosis. *Digestive Diseases and Sciences. https://doi.org/10.1007/s10620-022-07418-7.*

[115] Jirapinyo, P., Thompson, C., Garcia-Tsao, L., et al. (2023). Endoscopic gastric plication reduces portosystemic pressure gradients in patients with nafld and compensated advanced chronic liver disease. *Endoscopy.* DOI: 10.1055/a–2146–8857.

[116] Krishnan, A., Shah-Khan, S.M., Hadi, Y., et al. (2023). Convergence of endobariatrics and endohepatology for evaluation and treatment of obesity and nonalcoholic fatty liver disease. *Endoscopy, 55:* E841–E843. DOI 10.1055/a–2094–9794.

based on the gold standard of portal pressure measurement. According to the commenter, it offers a solution to the inaccuracies in the current standard of care (transjugular hepatic venous pressure gradient (HVPG)) in patients who have pre-sinusoidal conditions, such as nonalcoholic steatohepatitis (NASH) and nonalcoholic fatty liver disease (NAFLD). The commenter also asserted EchoTip® improves patient safety by eliminating radiation exposure risks with HVPG.

A few commenters stated EchoTip® allows for a single procedure in a single setting compared to other clinical options that might require multiple visits across multiple specialties. In addition, a few commenters stated their patients preferred EchoTip® to other procedures. One commenter stated using EchoTip® was particularly useful for patients with morbid obesity where other options may not be available or as accurate, further stating that in such cases PPG measurement has been invaluable because it has given very good and accurate clinical information that could not be obtained from other means such as CT scan, fibroscan, etc. The commenter also stated that EchoTip® has significant clinical value because it obviates the need for patient to go to two separate procedures—HVPG measurement and then a separate session to get a percutaneous liver biopsy. One commenter stated that EchoTip® has been very beneficial by differentiating patients that have cirrhosis as a new diagnosis and those that were mislabeled, leading to life-changing consequences. One commenter stated that EchoTip® allows them to determine which patients with liver disease are safe to undergo surgery. Another commenter stated that EchoTip® has a unique yet intuitive design that offers the capability to accurately measure portal pressures and commented that a distinctive feature is its echogenic tip. The commenter opined that this aspect of the device dramatically enhances procedural accuracy, ensuring that the needle tip is correctly positioned within the desired vein each time. The commenter stated that additionally, the use of a 25-gauge needle simplifies access to both the portal and hepatic veins, minimizing tissue disruption and elevating the overall patient experience. The commenter further praised the device's compact design, and integration of a display with the system's self-calibrating transducer which provides clear, real-time pressure readings to aid in making informed clinical decisions. The commenter concluded that the device has significantly enhanced diagnostic precision for cases indicating portal hypertension, thereby assisting their team in treatment planning and improved patient outcomes.

Response: We thank the commenters for their responses. We appreciate that EchoTip® has changed the way some physicians practice, but due to the concerns stated above concerning small sample size and a lack of peer-reviewed direct comparison between EchoTip® and HVPG, we do not believe there is enough data to support the applicant's claims about significant clinical improvement over existing methods for measurement of portal gradient pressures. Further, despite the prognostic information measurement of portal gradient pressure provides, given all other current and evolving non-invasive technologies, it remains unclear whether obtaining this measurement is the standard of care in the management of patients with CLD. As noted by Rudnick et al., with the exception of intrahepatic portosystemic shunts and trans-jugular liver biopsies, HVPG measurements are not routinely obtained.[117] Additionally, we were not provided any literature to support the claim that EchoTip® eliminates radiation exposure risks with HVPG.

After consideration of the public comments we received, we are not approving EchoTip® for transitional pass-through payment status in CY 2024 because the technology does not meet the substantial clinical improvement criterion at § 419.66(c)(2)(i). Because we have determined that EchoTip® does not meet the substantial clinical improvement criterion, we are not evaluating whether the device meets the cost criterion.

We note that we received public comments with regard to the cost criteria for EchoTip®, but because we have determined that the device does not meet the substantial clinical improvement eligibility criterion and therefore, is not eligible for approval for transitional pass-through payment status for CY 2024, we are not summarizing comments received or making a determination on those criteria in this final rule.

(d) FLEX Vessel Prep™ System

Venture Med Group, Inc. submitted an application for a new device category for transitional pass-through payment status for FLEX Vessel Prep™ System (FLEX VP™) for CY 2024. Per the applicant, FLEX VP™ is an endovascular, over-the-wire, retractable, sheathed catheter with a three-strut treatment element at the distal tip used to help resolve stenoses occluding vascular access in patients with End-Stage Renal Disease (ESRD) on hemodialysis. According to the applicant, FLEX VP™ is used with percutaneous transluminal angioplasty (PTA) catheters to facilitate dilation of stenoses and for the treatment of in-stent restenosis of balloon expandable and self-expanding stents in the peripheral vasculature. The applicant asserted that FLEX VP™ consists of three integrated components: (1) control handle, which includes the flush and guidewire ports and sheath and treatment element actuators; (2) catheter shaft; and (3) treatment element, which includes three proximally mounted micro-surgical blades on protective skids. The struts are radially opposed, and the proximal portion of each strut includes a micro-surgical blade. A radiopaque marker is located distally to assist in the positioning of the catheter.

According to the applicant, when deployed, FLEX VP™'s struts independently engage with neointimal hyperplastic stenoses occluding an arteriovenous fistula or graft used for hemodialysis. As the device is pulled back through the lesion, the blades create three continuous, parallel micro-incisions, approximately 250 microns in depth, along the lesion's entire length. The applicant provided that this is a non-balloon-based device where the struts exert a consistent force of approximately one atmosphere on the vessel wall. Per the applicant, additional micro-incisions may be created by using several passes of the device. According to the applicant, the device breaks the lesion surface to facilitate the effectiveness of a percutaneous transluminal balloon angioplasty, which immediately follows use of the device in restoring patency to the vascular access.

The applicant asserted that the micro-incisions improve acute luminal gain and vessel compliance by releasing circumferential tension in the lesion. The applicant asserted that this preparation could help reduce vessel trauma and complications (including severe dissection and need for a bail-out stent) and the need for high pressure balloons (which risk barotrauma). Per the applicant, the interventionalist advances FLEX VP™ past the lesion, then unsheathes and expands the treatment element and slowly draws the catheter back, allowing each micro-surgical blade to simultaneously and independently engage with the lesion.

[117] Rudnick, S., Conway, J., Russo, M. (2021). Current state of endohepatology: Diagnosis and treatment of portal hypertension and its complications with endoscopic ultrasound. *World Journal of Hepatology, 13*(8): 887–895.

This step produces three continuous, parallel micro-incisions along the lesion's length. According to the applicant, this process may be repeated several times; once the lesion is crossed on the first pass, the treatment element is re-sheathed, advanced again through the lesion, and rotated approximately 30 to 90 degrees. The treatment element is then re-deployed and the process is repeated.[118]

As stated previously, to be eligible for transitional pass-through payment under the OPPS, a device must meet the criteria at § 419.66(b)(1) through (4). With respect to the newness criterion at § 419.66(b)(1), on September 11, 2020, the applicant received 510(k) clearance from FDA for FLEX VP™ for use with PTA catheters to facilitate dilation of stenoses in the femoral and popliteal arteries and treatment of obstructive lesions of native or synthetic arteriovenous dialysis fistulae. The device is also indicated for treatment of in-stent restenosis of balloon expandable and self-expanding stents in the peripheral vasculature. We received the application for a new device category for transitional pass-through payment status for FLEX VP™ on February 28, 2023, which is within 3 years of the date of the initial FDA marketing authorization.

We invited public comment on whether FLEX VP™ meets the newness criterion at § 419.66(b)(1).

Comment: With respect to the newness criterion at § 419.66(b)(1), the applicant reiterated that FLEX VP™ received 510(k) clearance from the FDA on September 11, 2020, and that CMS received VentureMed Group's application for a new device category on February 28, 2023, which is within 3 years of the date of FDA clearance. Since CMS received the application within the required 3 years, the applicant stated that it is clear FLEX VP™ meets the newness criterion.

Response: We appreciate the applicant's input and agree that because we received the application for FLEX VP™ on February 28, 2023, which is within 3 years of the FDA clearance date of September 11, 2020, FLEX VP™ meets the newness criterion.

With respect to the eligibility criterion at § 419.66(b)(3), according to the applicant, FLEX VP™ is integral to the service provided, is used for one patient only, comes in contact with human skin, and is applied through an incision (for hemodialysis patients, the incision is in the wrist or arm area). Prior to balloon angioplasty, FLEX VP™ is inserted through an incision, over an endovascular guidewire until the device is positioned distal to the lesion to be treated.

We invited public comment on whether FLEX VP™ meets the integral part of the service criterion at § 419.66(b)(3).

Comment: With respect to the eligibility criterion at § 419.66(b)(3), the applicant reiterated that FLEX VP™ is integral to the service provided, is used for one patient only, comes in contact with human skin, and is applied through an incision. Because of these attributes the applicant stated it is clear that FLEX VP™ meets the eligibility criteria at § 419.66(b)(3).

Response: We appreciate the applicant's input. We agree with the applicant and have determined that FLEX VP™ meets the eligibility criterion at § 419.66(b)(3).

With respect to the exclusion criterion at § 419.66(b)(4), the applicant claimed that FLEX VP™ meets the device eligibility requirements of § 419.66(b)(4) because it is not equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service.

We invited public comment on whether FLEX VP™ meets the exclusion criterion at § 419.66(b)(4).

Comment: With respect to the exclusion criterion at § 419.66(b)(4), the applicant reiterated that FLEX VP™ is not equipment, an instrument, apparatus, implement or item of this type for which depreciation and financing expenses are recovered, and it is not a supply or material furnished incident to a service. Accordingly, the applicant stated it is clear that FLEX VP™ meets the exclusion criterion at § 419.66(b)(4).

Response: We appreciate the applicant's input. We agree with the applicant and have determined that FLEX VP™ meets the exclusion criterion at § 419.66(b)(4).

In addition to the criteria at § 419.66(b)(1) through (4), the criteria for establishing new device categories are specified at § 419.66(c). The first criterion, at § 419.66(c)(1), provides that CMS determines that a device to be included in the category is not appropriately described by any of the existing categories or by any category previously in effect, and was not being paid for as an outpatient service as of December 31, 1996. The applicant described FLEX VP™ as an endovascular, over-the-wire, retractable, sheathed catheter with a three-strut treatment element at the distal tip used to help resolve stenoses occluding vascular access in patients with ESRD on hemodialysis. Per the applicant, no previous device categories for pass-through payment have encompassed FLEX VP™ and there are no similar device categories. Upon review, it did not appear that there are any existing pass-through payment categories that might apply to FLEX VP™.

We invited public comment on whether FLEX VP™ meets the device category criterion at § 419.66(c)(1).

Comment: With respect to the new device category criterion at § 419.66(c)(1), the applicant reiterated that no pass-through payment categories now exist that might apply to the FLEX VP™ and, therefore, the device meets the new device category criterion at § 419.66(c)(1).

Response: We appreciate the applicant's input. We continue to believe that there is not an existing pass-through payment category that describes FLEX VP™, and therefore, that FLEX VP™ meets the device category eligibility criterion at § 419.66(c)(1).

The second criterion for establishing a device category, at § 419.66(c)(2), provides that CMS determines either of the following: (i) that a device to be included in the category has demonstrated that it will substantially improve the diagnosis or treatment of an illness or injury or improve the functioning of a malformed body part compared to the benefits of a device or devices in a previously established category or other available treatment; or (ii) for devices for which pass-through status will begin on or after January 1, 2020, as an alternative to the substantial clinical improvement criterion, the device is part of FDA's Breakthrough Devices Program and has received FDA marketing authorization for the indication covered by the Breakthrough Device designation. The applicant stated that FLEX VP™ represents a substantial clinical improvement over existing technologies by: (1) improving clinical outcomes for the hemodialysis patient population with dysfunctional arteriovenous (AV) access; and (2) reducing the rate of device-related complications. The applicant cited two studies describing the findings of a single clinical trial specifically for the purpose of addressing the substantial clinical improvement criterion.

The first study presented findings six months after patients were treated with FLEX VP™ followed by balloon angioplasty (Aruny et al.),[119] and the

[118] CMS made minor edits to the device description in this final rule with public comment to improve clarity.

[119] Aruny et al. Real-world results of a novel vessel preparation device prior to balloon

second study presented findings at 12 months post-treatment with FLEX VP™ followed by balloon angioplasty (author not identified in the manuscript for the 12-month follow up).[120] Both studies focused on results from methods used to show the durability of the treatments of blocked vascular accesses with FLEX VP™. The trial was a prospective, observational controlled clinical trial. A total of 148 lesions or blockages were treated with FLEX VP™ prior to a PTA in 114 subjects (the population was 53.5 percent female; 65.8 percent Black or African American (B/AA)), treated at eight clinical sites. All subjects were hemodialysis patients with vascular blockages. Of the 114 subjects, 104 patients had prior treatments to correct stenoses before enrolling in the trial. A primary endpoint was anatomic success, defined as angiographic confirmation of <30 percent residual stenosis post-procedure without adverse event. Additional assessments included dialysis circuit primary patency or vascular openness, clinical success and procedural success. The trial also measured the target lesion primary patency (TLPP) and freedom from target lesion restenosis (FFTLR) to determine if there is a decreased rate of subsequent therapeutic interventions. The two studies of the single clinical trial also examined the rate of device-related complications. No serious adverse events were reported initially (Aruny et al.), or in the 12-month follow-up (author not identified in the manuscript for the 12-month follow-up). The studies looked at differences in outcomes based on race and sex and found no significant differences. Per the applicant, the results suggest that FLEX VP™ followed by angioplasty can substantially reduce the number and burden of maintenance procedures for hemodialysis patients with arteriovenous fistula (AVF), arteriovenous graft (AVG), and AV disfunctions that cause cephalic arch stenoses.

In support of its first claim, that FLEX VP™ improves clinical outcomes for the hemodialysis patient population with dysfunctional AV access, the applicant asserted that FLEX VP™ decreased both the rates of therapeutic interventions and subsequent therapeutic interventions. The applicant provided the following evidence from the clinical trial and two studies. FLEX VP™ treatment prior to angioplasty benefits hemodialysis patients by improving the level of openness of blocked (or stenosed) arteriovenous access; a recurring issue that occurs because of the fistulas created to facilitate hemodialysis. The use of FLEX VP™ also allows the site with prior blockage (also known as lesions) to stay open for a longer period of time, reducing the frequency of future angioplasty procedures. The applicant discussed how the initial study (Aruny et al.), found that patients treated with FLEX VP™ prior to PTA (FLEX+PTA) had 6 months TLPP of 63.7 percent openness, versus the 15.6 percent to 50.5 percent rates of vascular openness after PTA alone, observed in other publications. This study also presented results for FFTLR, a calculation to determine an average number of days of durability of the percentage of the patency or lesion openness reported; for the overall hemodialysis population studied it was 206.7 days. The applicant also described results for patients with only AVFs or AVGs. For FLEX+PTA in AVF patients, TLPP was 70.6 percent and FFTLR was 219.7 days. For FLEX+PTA in AVG patients, TLPP was 46.6 percent and FFTLR was 173.9 days. Confirmation of reliability of the findings was shown by dialysis access circuit primary patency: 54.3 percent (AVF 54.1 percent; AVG 47.4 percent). According to the applicant, per the literature, the results of dialysis access circuit primary patency with only angioplasty performed, ranged from 0 percent to 48 percent. The applicant also presented results 12 months post-treatment (author not identified in the manuscript for the 12-month follow up) supporting the durability of the FLEX+PTA. Per the applicant, results generally accord with Aruny et al.'s 6-month results and exceed PTA-only results from the literature. Overall, TLPP was 45.7 percent (versus 62.2 percent at 6 months) and FFTLR was 250.9 days (versus literature (PTA only), 131.4 days). Per the applicant, this result suggests that compared to the durability of PTA only, FTA+PTA would result in a lower frequency of treatments to remove stenosis in hemodialysis patients overall. For AVFs, TLPP was 47.4 percent (versus 67.5 percent at 6 months); FFTLR was 258.5 days (versus literature, 156.9 days). For AVGs, TLPP was 43.8 percent (versus 52.4 percent at 6 months); FFTLR was 239.4 days (versus literature, 76.6 days). Overall, 12 months circuit primary patency was 36.5 percent (versus 54.3 percent at 6 months).[121]

In further support of the applicant's first claim, the applicant presented results from the clinical trial comparing B/AA patients to non-B/AA patients. In support of FLEX VP™ prior to PTA improving clinical outcomes for B/AA hemodialysis patient population with dysfunctional AV access, the applicant discussed the initial Aruny et al. study, in which B/AA patients had better results with FLEX VP™ intervention than did non-B/AA patients. The B/AA cohort (65.8 percent of sample) had TLPP of 63.76 percent versus 58.8 percent for the non-B/AA cohort after treatment with FLEX+PTA. FFTLR was 207.8 days for B/AA versus 192.2 days for non-B/AA. For B/AA patients with cephalic arch lesions, TLPP was 78.6 percent versus 58.3 percent for non-B/AA. The applicant asserted that these results were achieved despite pre-existing disparities in patient's experience with AV access care. B/AA patients had more years since they started hemodialysis ($p<0.01$), suggesting a possibility of increased severity or complexity of lesions in the B/AA patients.[122] The applicant also presented results 12 months post-treatment.[123] In terms of B/AA patient outcomes comparable to the overall sample, the B/AA cohort (65.8 percent of sample) had TLPP of 45.9 percent versus 45.7 percent overall patients and FFTLR was 257.8 days for B/AA versus 250.9 days overall patients. In B/AA patients with cephalic arch lesions, TLPP was 71.8 percent versus 59.7 percent overall patients.

Furthermore, in support of the applicant's first claim, the applicant provided the following evidence from the clinical trial. In support of FLEX VP™ improving clinical outcomes for a female hemodialysis patient population with dysfunctional AV access, the applicant stated that in the initial Aruny et al. study, females differed from males significantly in their pre-existing experiences with AV care. Female patients had more years since they started hemodialysis ($p<0.01$) and since AV access creation ($p<0.01$); females had more prior AV access interventions ($p<0.05$). According to the applicant, this potentially suggests that female

angioplasty for arteriovenous access repair in diverse populations on dialysis, under review, JVA, Feb. 2023.

[120] Durability of arteriovenous access repair involving vessel preparation by longitudinal micro-incisions before balloon angioplasty, unpublished manuscript (no author identified).

[121] *Ibid.*

[122] Aruny et al. Real-world results of a novel vessel preparation device prior to balloon angioplasty for arteriovenous access repair in diverse populations on dialysis, under review, JVA, Feb. 2023.

[123] Durability of arteriovenous access repair involving vessel preparation by longitudinal micro-incisions before balloon angioplasty, unpublished manuscript (no author identified).

patients are more prone to complexity of lesions or recurrence of stenosis. However, no statistically significant differences in results of TLPP and FFTLR measures at 6 months post treatment were observed between females and males treated with FLX VP™ followed by PTA. Therefore, females receiving a FLEX VP™ intervention prior to PTA achieved results comparable to males, notwithstanding pre-existing disparities.[124]

In further support of the applicant's first claim, the applicant explained that cephalic arch (CA) stenoses are notoriously difficult to treat effectively and have some of the worst dialysis access and frequency of recurrence results. The applicant explained that complications are also high. In this sample, the target stenosis was in the CA in 25/114 patients (21.9 percent). TLPP following FLEX+PTA at 6 months (Aruny et al.) was 70.6 percent overall patients, and 76.8 percent in the B/AA cohort. According to the applicant comparable figures in the literature ranged from 0 percent to 51.6 percent. Access dialysis circuit primary patency obtained from the literature for PTA only was 66.4 percent for CA cases.[125] The applicant also presented results 12-month post-treatment (author not identified in the manuscript for the 12-month follow up). TLPP for these patients following FLEX+PTA at 12 months was 59.7 percent for overall patients and 71.8 percent in the B/AA cohort. According to the applicant, comparable figures in the clinical literature ranged from 0 percent to 33.9 percent and access dialysis circuit primary patency was 55.3 percent for CA cases.[126]

In support of the applicant's second claim, the applicant asserted that no serious adverse events were reported from the initial study (Aruny et al.). Five procedural complications and one dissection related to the FLEX VP™ device were recorded. Three dissections were associated with PTA.[127] The applicant also presented results 12 months post-treatment (author not identified in the manuscript for the 12-month follow-up), noting that no serious adverse events were reported during 12-month follow-up.

According to the applicant, these findings confirm the safety record for FLEX VP™, which is better when compared to the Journal of Vascular and Interventional Radiology (JVIR) Quality Improvement Guidelines thresholds for AVF and AVG. According to the applicant, in the literature, up to 15 percent cephalic arch lesions result in vessel rupture and about 12 percent of PTAs in B/AA patients are reported to result in major complications.[128]

Ultimately, the applicant concluded that FLEX VP™ is safe and effective, notably in patients with AVGs and those with CA stenoses, and furthermore, despite observed differences in time since hemodialysis onset, clinical success was similar across sex and race, suggesting an opportunity to enhance health equity.[129] The applicant also added that FLEX VP™, when used with PTA, provides sustained clinical improvement over existing technologies by increasing the patency and time to reintervention of PTA procedures in AVFs and AVGs at 12 months (author not identified in the manuscript for the 12-month follow-up), while reducing the potential for serious complications, such as perforations and vessel rupture. Favorable results at 6 months for the B/AA cohort reported in Aruny et al.'s article were sustained in the 12 month results. Further, according to the applicant, the use of FLEX VP™ offers the prospect of improved treatment of unresponsive or difficult to treat stenosis in the cephalic arch.[130]

Based on the evidence submitted in the application, we noted the following concerns: The applicant presented two studies (Aruny et al. [a 6-month follow up], and an unpublished manuscript which did not identify an author [12-month follow up] submitted with the application that are based on a single clinical trial of 114 patients followed for 12 months. Per the applicant, the results from the 6-months follow up are not yet published, and the results from 12-months post-treatment are also unpublished and only available at the FLEX VP™ registry. Therefore, we noted that the evidence presented on benefits to patients in hemodialysis is not peer-reviewed and this may reduce the strength of the evidence presented and the opinion of peers on study quality. In order to demonstrate substantial clinical improvement over currently available treatments, we consider supporting evidence, preferably published peer-reviewed clinical trials, that shows improved clinical outcomes, such as reduction in mortality, complications, subsequent interventions, future hospitalizations, recovery time, pain, or a more rapid beneficial resolution of the disease process compared to the standard of care. We also noted that, due to the clinical trial design, there is insufficient data on the impact of angioplasty with the drug-coated balloon option. The drug in these balloons may play a role in the improvement of patency or openness durability and additional studies to strengthen the initial observations presented by the applicant would be helpful.

Lastly, we noted the applicant did not show a clear crosswalk of findings or data in terms of device-related complications (including dissection and embolectomy) observed in the trial and compared to those referenced in literature. For example, procedural complications and dissection were mentioned in the FLEX VP™ group while rupture and major complications were mentioned in the literature. The clinical trial results presented one dissection attributed to FLEX VP™ after 148 lesions were treated with FLEX VP™ plus PTA. Per the applicant, there are approximately 732,000 interventions per year in the U.S. to maintain lifesaving arteriovenous access and FLEX VP™ could potentially be used in a fraction of those; this increases the concern for frequency of complications and therefore, additional studies may be needed to strengthen the second substantial clinical improvement claim.

We invited public comment on whether FLEX VP™ meets the substantial clinical improvement criterion at § 419.66(c)(2)(i).

Comment: All commenters addressing the substantial clinical improvement criterion offered support for approval of the FLEX VP™ application. Commenters highlighted a number of added benefits when FLEX VP™ was used prior to PTA in hemodialysis patents, including: positive outcomes for a cephalic arch and AV graft case; reduction on barotrauma associated with angioplasty; and its effectiveness and easy usability, specifically during AV interventions. A few commenters,

including the applicant, explained that reporting procedural complications was based on the Society of Interventional Radiology (SIR) typology and under this typology all complications reported in the AV registry were minor. With zero major complications reported, all commenters agreed on the safety of FLEX VP™ compared to what is reported in the peer-reviewed literature. One commenter stated that FLEX VP™ substantially reduced procedural complications for patients by lowering the need for bail-out stenting. Several commenters, including the applicant, stated that the use of FLEX VP™ prior to PTA enables a longer and lasting patency for AV procedures, thereby reducing the frequency of interventions as patients treated using the device returned for access repair less often than patients without the use of FLEX VP™. A few commenters, including the applicant, noted the FLEX VP™ benefits for patient populations underserved and underrepresented in trials as demonstrated through the studies submitted with the application. One commenter stated that dialysis patients should have every option available that will improve clinical outcomes for their AV access and quality of care.

Response: We appreciate the input provided by these commenters. We have taken this information into consideration in making our final determination of whether FLEX VP™ meets the substantial clinical improvement criterion, discussed below.

Comment: To address our concerns that the evidence presented with the application regarding the benefits to patients on hemodialysis was not peer-reviewed; the applicant and a commenter noted that the data in the application is now published in three separate peer-reviewed journals.[131] [132] [133]

Response: We appreciate the applicant's and the commenter's responses to our concern regarding publication of the data presented in the application and for including the references. We agree with commenters that the published peer-reviewed clinical data shows improved clinical outcomes through the reduction in the frequency of subsequent interventions to maintain patency in hemodialysis patients with AV grafts.

Comment: To address our concerns that, due to the clinical trial design, there was insufficient data on the impact of angioplasty with drug coated balloons (DCBs), as presented by the applicant, and that the drug in these balloons may play a role in the improvement of patency or openness durability, the applicant commented that DCBs are not the standard of care for AV access interventions, and that is the reason for the low number of DCB interventions captured in the FLEX VP™ Registry (also referred to as the AV Registry by commenters). Additionally, the applicant discussed the results of a meta-analysis suggesting that DCBs did not improve primary patency in target lesions at six months and 12 months when compared to conventional balloon angioplasty.[134] A few commenters also stated that DCBs are not the standard of care relative to angioplasty with traditional balloons for AV access procedures. The applicant asserted that DCBs are not approved for use with AV grafts in the United States. In addition to the applicant, a few commenters noted that drug collated balloons (DCBs) were infrequently included in the real-world registry used on the studies presented in the application. A commenter stated that although the body of positive evidence for DCBs is growing, debate remains about their broad application to AV access procedures and suggested that FLEX VP™ may enhance the benefits of DCBs.

Response: We appreciate the applicant's and other commenters' responses to our concern that there is insufficient data on the impact of angioplasty with DCB. We have taken this information into consideration in making our final determination of the substantial clinical improvement criterion, discussed below.

Comment: To address our concerns that the applicant did not present a clear crosswalk of findings or data in terms of device-related complications (including dissection and embolectomy) observed in the trial and compared to those referenced in the literature, the applicant asserted that specific data was collected in the AV Registry related to the following procedural complications: dissections, perforations, and embolization. The applicant stated that the data collected in the AV Registry on procedural complications would be considered minor complications in the SIR typology. One commenter agreed with the approach to use SIR typology to address complications. The applicant stated that the AV Registry data shows zero major complications for FLEX VP™ plus PTA in their studies. The applicant added that a review of recent literature found that: ''The major complication rates following PTA for failing AVFs ranged from 0 to 2.1 percent, while for the AVGs ranged from 2.1 to 6 percent. Papers with mixed AVGs and AVFs reported major complication rates of 3–5 percent.'' [135]

Response: We appreciate the applicant's and commenter's responses to our concerns that the applicant did not present a clear crosswalk of findings or data in terms of device-related complications (including dissection and embolectomy) observed in the trial and compared to those referenced in the literature. We agree with the commenter's assertions, including the applicant, that according to SIR typology, the data on procedural complications using FLEX VP™ resulted in minor complications only. We agree with the applicant's and commenter's assertions that DCB interventions were infrequent in the AV Registry because this procedure is not the standard of care for AV interventions. We also agree with the suggestion from the applicant and the commenters that FLEX VP™ could enhance the benefits of DCBs. Finally, we agree with the applicant's and commenter's assertions that the published peer-reviewed clinical data shows improved clinical outcomes through the reduction in the frequency of subsequent interventions to maintain patency. After consideration of the

(''The most significant complications reported are thrombosis, rupture and dissection requiring either stent graft placement or surgical revision of the fistula.'')

applicant's response and the public comments received, we believe that commenters have addressed our concerns regarding whether FLEX VP™ meets the substantial clinical improvement criterion and that FLEX VP™ represents a substantial clinical improvement over existing technologies.

The third criterion for establishing a device category, at § 419.66(c)(3), requires us to determine that the cost of the device is not insignificant, as described in § 419.66(d). Section 419.66(d) includes three cost significance criteria that must each be met. The applicant provided the following information in support of the cost significance requirements. The applicant stated that FLEX VP™ would be reported with HCPCS codes listed in Table 88.

TABLE 88: HCPCS CODES REPORTED WITH FLEX VP™

HCPCS Code	Long Descriptor	SI	APC
36902	Introduction of catheters, dialysis circuit, with transluminal balloon angioplasty	J1	5192
36903	Introduction of catheters, dialysis circuit, with transcatheter placement of intravascular stent and all angioplasty	J1	5193
36905	Percutaneous transluminal mechanical thrombectomy, dialysis circuit, with transluminal balloon angioplasty	J1	5193
36906	Percutaneous transluminal mechanical thrombectomy, dialysis circuit, with transcatheter placement of intravascular stent and all angioplasty	J1	5194

To meet the cost criterion for device pass-through payment status, a device must pass all three tests of the cost criterion for at least one APC. As we explained in the CY 2005 OPPS final rule with comment period (69 FR 65775), we generally use the lowest APC payment rate applicable for use with the nominated device when we assess whether a device meets the cost significance criterion, thus increasing the probability the device will pass the cost significance test. For our calculations, we used APC 5192, which had a CY 2022 payment rate of $5,061.89 at the time the application was received. Beginning in CY 2017, we calculate the device offset amount at the HCPCS/CPT code level instead of the APC level (81 FR 79657). HCPCS code 36902 had a device offset amount of $1,271.04 at the time the application was received.[136] According to the applicant, the cost of FLEX VP™ is $1,995.00.

Section 419.66(d)(1), the first cost significance requirement, provides that the estimated average reasonable cost of devices in the category must exceed 25 percent of the applicable APC payment amount for the service related to the category of devices. The estimated average reasonable cost of $1,995.00 for FLEX VP™ is 39.41 percent of the applicable APC payment amount for the service related to the category of devices of $5,061.89 (($1,995.00/$5,061.89) × 100 = 39.41 percent). Therefore, we stated that we believe FLEX VP™ meets the first cost significance requirement.

The second cost significance requirement, at § 419.66(d)(2), provides that the estimated average reasonable cost of the devices in the category must exceed the cost of the device-related portion of the APC payment amount for the related service by at least 25 percent, which means that the device cost needs to be at least 125 percent of the offset amount (the device-related portion of the APC found on the offset list). The estimated average reasonable cost of $1,995.00 for FLEX VP™ is 156.96 percent of the cost of the device-related portion of the APC payment amount for the related service of $1,271.04 (($1,995.00/$1,271.04) × 100 = 156.96 percent). Therefore, we stated that we believe that FLEX VP™ meets the second cost significance requirement.

The third cost significance requirement, at § 419.66(d)(3), provides that the difference between the estimated average reasonable cost of the devices in the category and the portion of the APC payment amount for the device must exceed 10 percent of the APC payment amount for the related service. The difference between the estimated average reasonable cost of $1,995.00 for FLEX VP™ and the portion of the APC payment amount for the device of $1,271.04 is 14.30 percent of the APC payment amount for the related service of $5,061.89 ((($1,995.00 − $1,271.04)/$5,061.89) × 100 = 14.30 percent). Therefore, we stated that we believed that FLEX VP™ meets the third cost significance requirement.

We invited public comment on whether FLEX VP™ meets the device pass-through payment criteria discussed in this section, including the cost criterion for device pass-through payment status.

Comment: With respect to cost significance criteria, the applicant reiterated that FLEX VP™ meets all three of the cost significance criteria.

Response: We appreciate the commenter's input. Based on our findings from the first, second, and third cost significant tests, we believe that FLEX VP™ meets the cost significance criteria specified at § 419.66(d).

Comment: A commenter expressed concerns on how the device offset amounts are calculated and stated that CMS should calculate the device-related portion of APCs for purposes of determining transitional pass-through eligibility and the device offset using only the cost of the devices replaced by the proposed transitional pass-through device category. The commenter asserted that this approach results in adequate reimbursement to facilities. The commenter recommended that CMS

[136] We noted that the applicant selected a value of $1391.99 for the device offset amount. However, the value selected is inconsistent with the device offset amount related to HCPCS 36902 in APC 5192 found in Addendum P to the CY 2022 OPPS/ASC final rule with comment period, as corrected in the 2022 Correction Notification OPPS Addendum (87 FR 2060). We selected the value of $1271.04, which we believe is the accurate value. Based on our initial assessment for the proposed rule, using the device offset amount of $1271.04 would result in FLEX VP™ meeting the cost significance requirement.

apply this methodology to FLEX VP™ if applicable.

Response: We appreciate the commenter's input. As we have done in prior years, CMS continues to evaluate the application of the device offset amount on a case-by-case basis to ensure the appropriate payment is made for a device on pass-through status. In cases where a device on pass-through status replaces previously existing technologies, we continue to believe it is appropriate to apply the device offset amount. We have reviewed FLEX VP™ offset amounts and confirm that the device offset amount is accurate.

After considering the public comments we received and consideration of the cost criterion, we have determined that FLEX VP™ meets the cost criterion for device pass-through status.

After considering the public comments we received and our review of the device pass-through application, we have determined that FLEX VP™ meets the criteria for device pass-through status. Therefore, we are finalizing approval for device pass-through payment status for FLEX VP™ effective beginning January 1, 2024.

B. Device-Intensive Procedures

1. Background

Under the OPPS, prior to CY 2017, device-intensive status for procedures was determined at the APC level for APCs with a device offset percentage greater than 40 percent (79 FR 66795). Beginning in CY 2017, CMS began determining device-intensive status at the HCPCS code level. In assigning device-intensive status to an APC prior to CY 2017, the device costs of all the procedures within the APC were calculated and the geometric mean device offset of all of the procedures had to exceed 40 percent. Almost all of the procedures assigned to device-intensive APCs utilized devices, and the device costs for the associated HCPCS codes exceeded the 40-percent threshold. The no cost/full credit and partial credit device policy (79 FR 66872 and 66873) applies to device-intensive procedures and is discussed in detail in section IV.B.4 of this final rule. A related device policy was the requirement that certain procedures assigned to device-intensive APCs require the reporting of a device code on the claim (80 FR 70422) and is discussed in detail in section IV.B.3 of this final rule. For further background information on the device-intensive APC policy, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70421 through 70426).

a. HCPCS Code-Level Device-Intensive Determination

As stated earlier, prior to CY 2017, under the device-intensive methodology we assigned device-intensive status to all procedures requiring the implantation of a device that were assigned to an APC with a device offset greater than 40 percent and, beginning in CY 2015, that met the three criteria listed below. Historically, the device-intensive designation was at the APC level and applied to the applicable procedures within that APC. In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658), we changed our methodology to assign device-intensive status at the individual HCPCS code level rather than at the APC level. Under this policy, a procedure could be assigned device-intensive status regardless of its APC assignment, and device-intensive APC designations were no longer applied under the OPPS or the ASC payment system.

We believe that a HCPCS code-level device offset is, in most cases, a better representation of a procedure's device cost than an APC-wide average device offset based on the average device offset of all of the procedures assigned to an APC. Unlike a device offset calculated at the APC level, which is a weighted average offset for all devices used in all of the procedures assigned to an APC, a HCPCS code-level device offset is calculated using only claims for a single HCPCS code. We believe that this methodological change results in a more accurate representation of the cost attributable to implantation of a high-cost device, which ensures consistent device-intensive designation of procedures with a significant device cost. Further, we believe a HCPCS code-level device offset removes inappropriate device-intensive status for procedures without a significant device cost that are granted such status because of their APC assignment.

Under our existing policy, procedures that meet the criteria listed in section IV.C.1.b of this final rule are identified as device-intensive procedures and are subject to all the policies applicable to procedures assigned device-intensive status under our established methodology, including our policies on device edits and no cost/full credit and partial credit devices discussed in sections IV.C.3 and IV.C.4 of this final rule.

b. Use of the Three Criteria to Designate Device-Intensive Procedures

We clarified our established policy in the CY 2018 OPPS/ASC final rule with comment period (82 FR 52474), where we explained that device-intensive procedures require the implantation of a device and additionally are subject to the following criteria:

- All procedures must involve implantable devices that would be reported if device insertion procedures were performed;
- The required devices must be surgically inserted or implanted devices that remain in the patient's body after the conclusion of the procedure (at least temporarily); and
- The device offset amount must be significant, which is defined as exceeding 40 percent of the procedure's mean cost.

We changed our policy to apply these three criteria to determine whether procedures qualify as device-intensive in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66926), where we stated that we would apply the no cost/full credit and partial credit device policy—which includes the three criteria listed previously—to all device-intensive procedures beginning in CY 2015. We reiterated this position in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70424), where we explained that we were finalizing our proposal to continue using the three criteria established in the CY 2007 OPPS/ASC final rule with comment period for determining the APCs to which the CY 2016 device intensive policy will apply. Under the policies we adopted in CYs 2015, 2016, and 2017, all procedures that require the implantation of a device and meet the previously described criteria are assigned device-intensive status, regardless of their APC placement.

2. Device-Intensive Procedure Policy for CY 2019 and Subsequent Years

As part of our effort to better capture costs for procedures with significant device costs, in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58944 through 58948), for CY 2019, we modified our criteria for device-intensive procedures. We had heard from interested parties that the criteria excluded some procedures that interested parties believed should qualify as device-intensive procedures. Specifically, we were persuaded by interested party arguments that procedures requiring expensive surgically inserted or implanted devices that are not capital equipment should qualify as device-intensive procedures, regardless of whether the device remains in the patient's body after the conclusion of the procedure. We agreed that a broader definition of device-intensive procedures was warranted,

and made two modifications to the criteria for CY 2019 (83 FR 58948). First, we allowed procedures that involve surgically inserted or implanted single-use devices that meet the device offset percentage threshold to qualify as device-intensive procedures, regardless of whether the device remains in the patient's body after the conclusion of the procedure. We established this policy because we no longer believe that whether a device remains in the patient's body should affect a procedure's designation as a device-intensive procedure, as such devices could, nonetheless, comprise a large portion of the cost of the applicable procedure. Second, we modified our criteria to lower the device offset percentage threshold from 40 percent to 30 percent, to allow a greater number of procedures to qualify as device intensive. We stated that we believe allowing these additional procedures to qualify for device-intensive status will help ensure these procedures receive more appropriate payment in the ASC setting, which will help encourage the provision of these services in the ASC setting. In addition, we stated that this change would help to ensure that more procedures containing relatively high-cost devices are subject to the device edits, which leads to more correctly coded claims and greater accuracy in our claims data. Specifically, for CY 2019 and subsequent years, we finalized that device-intensive procedures will be subject to the following criteria:

- All procedures must involve implantable devices assigned a CPT or HCPCS code;
- The required devices (including single-use devices) must be surgically inserted or implanted; and
- The device offset amount must be significant, which is defined as exceeding 30 percent of the procedure's mean cost (83 FR 58945).

In addition, to further align the device-intensive policy with the criteria used for device pass-through payment status, we finalized, for CY 2019 and subsequent years, that for purposes of satisfying the device-intensive criteria, a device-intensive procedure must involve a device that:

- Has received FDA marketing authorization, has received an FDA investigational device exemption (IDE), and has been classified as a Category B device by FDA in accordance with §§ 405.203 through 405.207 and 405.211 through 405.215, or meets another appropriate FDA exemption from premarket review;
- Is an integral part of the service furnished;
- Is used for one patient only;
- Comes in contact with human tissue;
- Is surgically implanted or inserted (either permanently or temporarily); and
- Is not either of the following:

++ Equipment, an instrument, apparatus, implement, or item of the type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or

++ A material or supply furnished incident to a service (for example, a suture, customized surgical kit, scalpel, or clip, other than a radiological site marker) (83 FR 58945).

In addition, for new HCPCS codes describing procedures requiring the implantation of devices that do not yet have associated claims data, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658), we finalized a policy for CY 2017 to apply device-intensive status with a default device offset set at 41 percent for new HCPCS codes describing procedures requiring the implantation or insertion of a device that did not yet have associated claims data until claims data are available to establish the HCPCS code-level device offset for the procedures. This default device offset amount of 41 percent was not calculated from claims data; instead, it was applied as a default until claims data were available upon which to calculate an actual device offset for the new code. The purpose of applying the 41-percent default device offset to new codes that describe procedures that implant or insert devices was to ensure ASC access for new procedures until claims data become available.

As discussed in the CY 2019 OPPS/ASC proposed rule and final rule with comment period (83 FR 37108, 37109, 58945, and 58946, respectively), in accordance with our policy stated previously to lower the device offset percentage threshold for procedures to qualify as device-intensive from greater than 40 percent to greater than 30 percent, for CY 2019 and subsequent years, we modified this policy to apply a 31-percent default device offset to new HCPCS codes describing procedures requiring the implantation of a device that do not yet have associated claims data until claims data are available to establish the HCPCS code-level device offset for the procedures. In conjunction with the policy to lower the default device offset from 41 percent to 31 percent, we continued our current policy of, in certain rare instances (for example, in the case of a very expensive implantable device), temporarily assigning a higher offset percentage if warranted by additional information such as pricing data from a device manufacturer (81 FR 79658). Once claims data are available for a new procedure requiring the implantation or insertion of a device, device-intensive status is applied to the code if the HCPCS code-level device offset is greater than 30 percent, according to our policy of determining device-intensive status by calculating the HCPCS code-level device offset.

In addition, in the CY 2019 OPPS/ASC final rule with comment period, we clarified that since the adoption of our policy in effect as of CY 2018, the associated claims data used for purposes of determining whether or not to apply the default device offset are the associated claims data for either the new HCPCS code or any predecessor code, as described by CPT coding guidance, for the new HCPCS code. Additionally, for CY 2019 and subsequent years, in limited instances where a new HCPCS code does not have a predecessor code as defined by CPT, but describes a procedure that was previously described by an existing code, we use clinical discretion to identify HCPCS codes that are clinically related or similar to the new HCPCS code but are not officially recognized as a predecessor code by CPT, and to use the claims data of the clinically related or similar code(s) for purposes of determining whether or not to apply the default device offset to the new HCPCS code (83 FR 58946). Clinically related and similar procedures for purposes of this policy are procedures that have few or no clinical differences and use the same devices as the new HCPCS code. In addition, clinically related and similar codes for purposes of this policy are codes that either currently or previously describe the procedure described by the new HCPCS code. Under this policy, claims data from clinically related and similar codes are included as associated claims data for a new code, and where an existing HCPCS code is found to be clinically related or similar to a new HCPCS code, we apply the device offset percentage derived from the existing clinically related or similar HCPCS code's claims data to the new HCPCS code for determining the device offset percentage. We stated that we believe that claims data for HCPCS codes describing procedures that have minor differences from the procedures described by new HCPCS codes will provide an accurate depiction of the cost relationship between the procedure and the device(s) that are used, and will be appropriate to use to set a new code's

device offset percentage, in the same way that predecessor codes are used. If a new HCPCS code has multiple predecessor codes, the claims data for the predecessor code that has the highest individual HCPCS-level device offset percentage is used to determine whether the new HCPCS code qualifies for device-intensive status. Similarly, in the event that a new HCPCS code does not have a predecessor code but has multiple clinically related or similar codes, the claims data for the clinically related or similar code that has the highest individual HCPCS level device offset percentage is used to determine whether the new HCPCS code qualifies for device-intensive status.

As we indicated in the CY 2019 OPPS/ASC proposed rule and final rule with comment period, additional information for our consideration of an offset percentage higher than the default of 31 percent for new HCPCS codes describing procedures requiring the implantation (or, in some cases, the insertion) of a device that do not yet have associated claims data, such as pricing data or invoices from a device manufacturer, should be directed to the Division of Outpatient Care, Mail Stop C4–01–26, Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850, or electronically at *outpatientpps@cms.hhs.gov.* Additional information can be submitted prior to issuance of an OPPS/ASC proposed rule or as a public comment in response to an issued OPPS/ASC proposed rule. Device offset percentages will be set in each year's final rule.

Comment: Commenters requested that we assign device-intensive status to the following procedures:

- CPT code 0581T (Ablation, malignant breast tumor(s), percutaneous, cryotherapy, including imaging guidance when performed, unilateral)
- CPT code 31242 (Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve)
- CPT code 52284 (Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed)
- CPT code 53854 (Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy)
- HCPCS code C9757 (Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and excision of herniated intervertebral disc, and repair of annular defect with implantation of bone anchored annular closure device, including annular defect measurement, alignment and sizing assessment, and image guidance; 1 interspace, lumbar);
- HCPCS code C9761 (Cystourethroscopy, with ureteroscopy and/or pyeloscopy, with lithotripsy, and ureteral catheterization for steerable vacuum aspiration of the kidney, collecting system, ureter, bladder, and urethra if applicable (must use a steerable ureteral catheter)

Response: Based on CY 2022 claims data available for this final rule, the procedures requested by commenters do not have device offset percentages that exceed the 30-percent threshold required for device-intensive status under the OPPS or ASC payment system and, therefore, are not eligible to be assigned device-intensive status. CPT codes 31242 and 52284 were issued after publication of the proposed rule and have an effective date of January 1, 2024. CPT code 52284 is replacing CPT code 0499T (Cystourethroscopy, with mechanical dilation and urethral therapeutic drug delivery for urethral stricture or stenosis, including fluoroscopy, when performed), which has a device offset percentage of 25.33 percent based on the most recent claims data. Since the predecessor code of CPT code 52284, CPT code 0499T, would not meet our criteria for device-intensive status, we are not accepting the commenter's recommendation to assign device-intensive status to CPT code 52284 for CY 2024.

However, CPT code 31242 does not have claims data from a predecessor code that may be used to determine a device offset percentage. After reviewing the clinical description and characteristics of the procedure, we agree with commenters that CPT code 31242 meets our requirements to be assigned device-intensive status. Therefore, for CY 2024, we are assigning CPT code 31242 device-intensive with a default device offset percentage of 31 percent.

Comment: Two commenters requested that we assign the device offset percentage for CPT codes 0816T (Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (eg, array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subcutaneous) and 0817T (Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (eg, array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subfascial) using claims data from CPT code 64590 (Insertion or replacement of peripheral, sacral, or gastric neurostimulator pulse generator or receiver, direct or inductive coupling requiring pocket creation and connection between electrode array and pulse generator or receiver) rather than using the default 31 percent device offset percentage. Commenters suggested claims data for CPT code 64590 would provide a more accurate device offset amount.

Response: We are not accepting the commenters' recommendation. While we may assign device-intensive status to new procedures that have significant device costs, we generally assign the percentage of such device costs at 31 percent of total procedure costs until claims data become available. However, if there is available claims data from the predecessor code of a new procedure or claims data from a clinically similar procedure that uses the same device, our current policy allows us to use this proxy claims data to establish a device offset percentage in lieu of the default 31 percent. We do not agree that CPT code 64590 was the predecessor code for either CPT code 0816T or 0817T and believe that CPT code 64999 (Unlisted procedure, nervous system) was the CPT code previously used when reporting the procedures described by the new CPT codes 0816T and 0817T. CPT code 64999 does not exceed our device-intensive threshold under the OPPS; and, since this CPT code can be used for various types of unlisted procedures, we do not believe this procedure would be an accurate reflection of the device costs of CPT code 0816T or 0817T. Because 0816T and 0817T do not have claims data from a predecessor code or a similar code that uses the same device, we are finalizing our proposal to assign the default 31 percent device offset percentage to CPT codes 0816T and 0817T for CY 2024.

Comment: Two commenters requested that we increase the device offset for CPT code 0629T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with ct guidance, lumbar; first level) to be in alignment with CPT code 0627T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with fluoroscopic guidance, lumbar; first level) as both procedures use the same device.

Response: We thank the commenters for their suggestion. We stated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 71941) that we did not have any claims data for CPT code 0629T to determine a device offset percentage. Under our current policy, we may assign an alternative device offset percentage if we have claims data from a clinically similar procedure code that uses the same device. We agreed with commenters to apply the device offset percentage from claims data for CPT code 0627T to CPT code 0629T for CY 2023 as the procedures are clinically similar and utilize the same device. Similarly, for CY 2024, because we do not have claims data to determine a device offset percentage for CPT code 0629T, we are accepting the commenters' recommendation and will continue to use the most recent claims data from CPT code 0627T to assign the device offset percentage for CPT code 0629T.

Comment: One commenter requested that we reexamine the claims data for CPT codes 31296, 31297, and 31298 and designate them as device-intensive procedures.

Response: After examining the claims data for CPT codes 31296, 31297, and 31298, we have determined that the device offset percentages for these procedures do not exceed the 30 percent device-intensive threshold. Therefore, we are not assigning device-intensive status to these procedures for CY 2024.

The full listing of the final CY 2024 device-intensive procedures can be found in Addendum P to this final rule with comment period (which is available via the internet on the CMS website). Further, our claims accounting narrative contains a description of our device offset percentage calculation. Our claims accounting narrative for this final rule with comment period can be found under supporting documentation for this CY 2024 OPPS/ASC final rule with comment period on our website at: *https://www.cms.gov/medicare/medicare-fee-for-service-payment/hospitaloutpatientpps.*

3. Device Edit Policy

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66795), we finalized a policy and implemented claims processing edits that require any of the device codes used in the previous device-to-procedure edits to be present on the claim whenever a procedure code assigned to any of the APCs listed in Table 5 of the CY 2015 OPPS/ASC final rule with comment period (the CY 2015 device-dependent APCs) is reported on the claim. In addition, in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70422), we modified our previously existing policy and applied the device coding requirements exclusively to procedures that require the implantation of a device assigned to a device-intensive APC. In the CY 2016 OPPS/ASC final rule with comment period, we also finalized our policy that the claims processing edits are such that any device code, when reported on a claim with a procedure assigned to a device-intensive APC (listed in Table 42 of the CY 2016 OPPS/ASC final rule with comment period (80 FR 70422)) will satisfy the edit.

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79658 through 79659), we changed our policy for CY 2017 and subsequent years to apply the CY 2016 device coding requirements to the newly defined device-intensive procedures. For CY 2017 and subsequent years, we also specified that any device code, when reported on a claim with a device-intensive procedure, will satisfy the edit. In addition, we created HCPCS code C1889 to recognize devices furnished during a device-intensive procedure that are not described by a specific Level II HCPCS Category C-code. Reporting HCPCS code C1889 with a device-intensive procedure will satisfy the edit requiring a device code to be reported on a claim with a device-intensive procedure. In the CY 2019 OPPS/ASC final rule with comment period, we revised the description of HCPCS code C1889 to remove the specific applicability to device-intensive procedures (83 FR 58950). For CY 2019 and subsequent years, the description of HCPCS code C1889 is ''Implantable/insertable device, not otherwise classified.'' In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71830), we described a commenter's concern about the potentially inadequate payment rate for APC 5495 (Level 5 Intraocular Procedures) and their recommendation that we use our equitable adjustment authority to limit the potential reduction in the CY 2023 APC payment rate by applying a 10 percent cap on the reduction in relative weights for Low Volume APCs in CY 2023. While we did not accept the commenter's recommendation to limit a Low Volume APC's decline in relative weight to no more than 10 percent, we stated we would continue to monitor the costs and payment rates for procedures assigned to Low Volume APCs to determine if additional changes or refinements to our current policy are needed.

In our review of claims data for CPT code 0308T (Insertion of ocular telescope prosthesis including removal of crystalline lens or intraocular lens prosthesis), we noticed unusual coding, charge, and cost data in the claims data from CY 2017, CY 2018, CY 2019, and CY 2021. Some claims did not report the correct device code—HCPCS code C1840 (Lens, intraocular (telescopic))—and such claims had substantially lower costs than claims that reported the correct device code. In particular, claims that reported the correct device code had an average device cost of $15,030.04, while claims that did not report the correct device code had an average device cost of $430.72. The vast majority of claims for CPT code 0308T in our 4-year analysis did report the correct device code; however, the limited number of claims that either reported the wrong procedure code or reported the wrong device code had an outsized impact on the APC payment rate because of the very low volume of claims for this APC. Because payment stability for this Low Volume APC relies so critically on accurate reporting of the procedure's associated costs, we believe this APC would benefit from a procedure-to-device edit—a claims processing edit that requires a certain device code to be included on the claim when hospitals report a specific procedure code. The procedures associated with the Level 5 Intraocular APC, which we proposed to reassign to a new Level 6 Intraocular APC (APC 5496) in section III.E of the CY 2024 OPPS/ASC proposed rule, describe the implantation of specific device codes:

- CPT code 0308T (Insertion of ocular telescope prosthesis including removal of crystalline lens or intraocular lens prosthesis) describes the implantation of device HCPCS code C1840 (Lens, intraocular (telescopic));
- CPT code 0616T (Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; without removal of crystalline lens or intraocular lens, without insertion of intraocular lens) describes the implantation of device HCPCS code C1839 (Iris prosthesis);
- CPT code 0617T (Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with removal of crystalline lens and insertion of intraocular lens) describes the implantation of device HCPCS code C1839 (Iris prosthesis); or
- CPT code 0618T (Insertion of iris prosthesis, including suture fixation and repair or removal of iris, when performed; with secondary intraocular lens placement or intraocular lens exchange) also describes the implantation of device HCPCS code C1839 (Iris prosthesis).

We proposed to establish a procedure-to-device edit for the four aforementioned procedures assigned to APC 5496 (Level 6 Intraocular Procedures) and require hospitals to report the correct device HCPCS codes when reporting any of the four procedures. While some interested parties have previously recommended in past rulemaking that we reestablish all of our previous procedure-to-device edits, we do not expect to extend this policy beyond the procedures assigned to APC 5496 (Level 6 Intraocular Procedures). We explained that we continue to rely on hospitals' accurate reporting and believe our current device edits policy of requiring device-intensive procedures to be subject to an additional device reporting edit has improved our ratesetting for hospital outpatient department procedures without placing an undue burden on hospitals. However, we noted that we believe this APC represents a unique situation—the APC (which was the Level 5 Intraocular APC in previous years) has been a Low Volume APC (fewer than 100 claims in a claims year) since we established our Low Volume APC policy, the procedures associated with this APC have significant procedure costs often greater than $15,000, and the procedures associated with this APC require the implantation of a high-cost intraocular device. We stated that we believe requiring a procedure-to-device edit for procedures assigned to the APC 5496 (Level 6 Intraocular Procedures), would not be administratively burdensome to hospitals given the low volume of services associated for this APC and will have a meaningful and significant impact on the payment rate for this APC and the stability of the payment rate in the future.

We solicited comments on our proposal to modify our device edits policy to require a procedure-to-device edit for procedures assigned to APC 5496 (Level 6 Intraocular Procedures) for CY 2024.

Comment: We received one comment in support of the proposed procedure-to-device edit for CPT code 0308T. We also received one comment in support of the proposed procedure-to-device edits for CPT codes 0616T, 0617T, and 0618T.

Response: We thank the commenters for their support. After consideration of the public comments we received, we are finalizing our proposal to modify our device edits policy to require a procedure-to-device edit for procedures assigned to APC 5496 (Level 6 Intraocular Procedures) for CY 2024.

Comment: One commenter requested that CMS restore the device-to-procedure and procedure-to-device edits. The commenter recommended that we apply such edits to specific procedures, such as total hip arthroplasty or total knee arthroplasty procedures, and require a specific device code rather than any device code. We also received one comment requesting that we create device-to-procedure edit for HCPCS code C9761 and CPT code 0715T due to rejected claims.

Response: We are not accepting the commenters' recommendations and do not believe additional device-to-procedure edits are warranted for the situations the commenters described. We are finalizing our proposal to reinstate device-to-procedure edits for procedures assigned APC 5496 (Level 6 Intraocular APC) to improve the payment structure for that APC as well as the Intraocular APC family. The high cost, low-volume nature of that APC represents a unique situation that we believe would benefit from a device-to-procedure edit and place extremely little reporting burden on providers. However, as we stated in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66794) and have reiterated in subsequent rulemaking, we continue to believe that the elimination of device-to-procedure edits and procedure-to-device edits is appropriate due to the experience hospitals now have in coding and reporting these claims fully. Under our current policy, hospitals are still expected to adhere to the guidelines of correct coding and append the correct device code to the claim when applicable. We believe our current device edits policy, which requires that a device code be reported on a claim for procedures that have significant device costs, continues to accurately capture the device costs associated with device-intensive procedures and provides the necessary flexibility to hospitals to code claims accurately.

Comment: One commenter suggested that there is confusion among hospitals as to whether to report a device code for certain procedures in the HCPCS C-code range and urged CMS establish a device-to-procedure edit for all C-code procedures to ensure appropriate device costs are collected.

Response: We thank the commenter for the suggestion; however, we believe our current policy already addresses the commenter's concern. We are not aware of any provider confusion as to reporting device costs for certain device-intensive procedures in the HCPCS C-code range. However, if such procedures are assigned device-intensive status, then they are subject to our device edits policy; and hospitals would already be required to report a device code on the claim when billing the procedure code.

4. Adjustment to OPPS Payment for No Cost/Full Credit and Partial Credit Devices

a. Background

To ensure equitable OPPS payment when a hospital receives a device without cost or with full credit, in CY 2007, we implemented a policy to reduce the payment for specified device-dependent APCs by the estimated portion of the APC payment attributable to device costs (that is, the device offset) when the hospital receives a specified device at no cost or with full credit (71 FR 68071 through 68077). Hospitals were instructed to report no cost/full credit device cases on the claim using the ''FB'' modifier on the line with the procedure code in which the no cost/full credit device is used. In cases in which the device is furnished without cost or with full credit, hospitals were instructed to report a token device charge of less than $1.01. In cases in which the device being inserted is an upgrade (either of the same type of device or to a different type of device) with a full credit for the device being replaced, hospitals were instructed to report as the device charge the difference between the hospital's usual charge for the device being implanted and the hospital's usual charge for the device for which it received full credit. In CY 2008, we expanded this payment adjustment policy to include cases in which hospitals receive partial credit of 50 percent or more of the cost of a specified device. Hospitals were instructed to append the ''FC'' modifier to the procedure code that reports the service provided to furnish the device when they receive a partial credit of 50 percent or more of the cost of the new device. We refer readers to the CY 2008 OPPS/ASC final rule with comment period for more background information on the ''FB'' and ''FC'' modifiers payment adjustment policies (72 FR 66743 through 66749).

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75007), beginning in CY 2014, we modified our policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit. For CY 2013 and prior years, our policy had been to reduce OPPS payment by 100 percent of the device offset amount when a hospital furnishes

a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital receives partial credit in the amount of 50 percent or more of the cost for the specified device. For CY 2014, we reduced OPPS payment, for the applicable APCs, by the full or partial credit a hospital receives for a replaced device. Specifically, under this modified policy, hospitals are required to report on the claim the amount of the credit in the amount portion for value code ''FD'' (Credit Received from the Manufacturer for a Replaced Device) when the hospital receives a credit for a replaced device that is 50 percent or greater than the cost of the device. For CY 2014, we also limited the OPPS payment deduction for the applicable APCs to the total amount of the device offset when the ''FD'' value code appears on a claim. For CY 2015, we continued our policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit and to use the three criteria established in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68072 through 68077) for determining the APCs to which our CY 2015 policy will apply (79 FR 66872 and 66873). In the CY 2016 OPPS/ASC final rule with comment period (80 FR 70424), we finalized our policy to no longer specify a list of devices to which the OPPS payment adjustment for no cost/full credit and partial credit devices would apply and instead apply this APC payment adjustment to all replaced devices furnished in conjunction with a procedure assigned to a device-intensive APC when the hospital receives a credit for a replaced specified device that is 50 percent or greater than the cost of the device.

b. Policy for No Cost/Full Credit and Partial Credit Devices

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79659 and 79660), for CY 2017 and subsequent years, we finalized a policy to reduce OPPS payment for device-intensive procedures, by the full or partial credit a provider receives for a replaced device, when a hospital furnishes a specified device without cost or with a full or partial credit. Under our current policy, hospitals continue to be required to report on the claim the amount of the credit in the amount portion for value code ''FD'' when the hospital receives a credit for a replaced device that is 50 percent or greater than the cost of the device.

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75005 through 75007), we adopted a policy of reducing OPPS payment for specified APCs when a hospital furnishes a specified device without cost or with a full or partial credit by the lesser of the device offset amount for the APC or the amount of the credit. We adopted this change in policy in the preamble of the CY 2014 OPPS/ASC final rule with comment period and discussed it in sub-regulatory guidance, including Chapter 4, Section 61.3.6 of the Medicare Claims Processing Manual. Further, in the CY 2021 OPPS/ASC final rule with comment period (85 FR 86017, 86018, and 86302), we made conforming changes to our regulations at § 419.45(b)(1) and (2) that codified this policy.

We did not propose any changes, and we did not receive any public comments related to our policies regarding payment for no cost/full credit and partial credit devices for CY 2024.

V. OPPS Payment for Drugs, Biologicals, and Radiopharmaceuticals

A. OPPS Transitional Pass-Through Payment for Additional Costs of Drugs, Biologicals, and Radiopharmaceuticals

1. Background

Section 1833(t)(6) of the Act provides for temporary additional payments or ''transitional pass-through payments'' for certain drugs and biologicals. Throughout this final rule with comment period, the term ''biological'' is used because this is the term that appears in section 1861(t) of the Act. A ''biological'' as used in this final rule with comment period includes (but is not necessarily limited to) a ''biological product'' or a ''biologic'' as defined under section 351 of the PHS Act. As enacted by the Medicare, Medicaid, and SCHIP Balanced Budget Refinement Act of 1999 (BBRA) (Pub. L. 106–113), this pass-through payment provision requires the Secretary to make additional payments to hospitals for: current orphan drugs for rare diseases and conditions, as designated under section 526 of the Federal Food, Drug, and Cosmetic Act; current drugs and biologicals and brachytherapy sources used in cancer therapy; and current radiopharmaceutical drugs and biologicals. ''Current'' refers to those types of drugs or biologicals mentioned above that are hospital outpatient services under Medicare Part B for which transitional pass-through payment was made on the first date the hospital OPPS was implemented.

Transitional pass-through payments also are provided for certain ''new'' drugs and biologicals that were not being paid for as an HOPD service as of December 31, 1996, and whose cost is ''not insignificant'' in relation to the OPPS payments for the procedures or services associated with the new drug or biological. For pass-through payment purposes, radiopharmaceuticals are included as ''drugs.'' As required by statute, transitional pass-through payments for a drug or biological described in section 1833(t)(6)(C)(i)(II) of the Act can be made for a period of at least 2 years, but not more than 3 years, after the payment was first made for the drug as a hospital outpatient service under Medicare Part B. Final CY 2024 pass-through drugs and biologicals and their designated APCs are assigned status indicator ''G'' in Addenda A and B to this CY 2024 OPPS/ASC final rule with comment period (which are available on the CMS website).[137]

Section 1833(t)(6)(D)(i) of the Act specifies that the pass-through payment amount, in the case of a drug or biological, is the amount by which the amount determined under section 1842(o) of the Act for the drug or biological exceeds the portion of the otherwise applicable Medicare OPD fee schedule that the Secretary determines is associated with the drug or biological. The methodology for determining the pass-through payment amount is set forth in regulations at 42 CFR 419.64. These regulations specify that the pass-through payment equals the amount determined under section 1842(o) of the Act minus the portion of the APC payment that CMS determines is associated with the drug or biological.

Section 1847A of the Act establishes the average sales price (ASP) methodology, which is used for payment for drugs and biologicals described in section 1842(o)(1)(C) of the Act furnished on or after January 1, 2005. The ASP methodology, as applied under the OPPS, uses several sources of data as a basis for payment, including the ASP, the wholesale acquisition cost (WAC), and the average wholesale price (AWP). In this final rule with comment period, the term ''ASP methodology'' and ''ASP-based'' are inclusive of all data sources and methodologies described therein. Additional information on the ASP methodology can be found on our website at: *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price.*

2. Transitional Pass-Through Payment Period for Pass-Through Drugs, Biologicals, and Radiopharmaceuticals and Quarterly Expiration of Pass-Through Status

As required by statute, transitional pass-through payments for a drug or biological described in section 1833(t)(6)(C)(i)(II) of the Act can be made for a period of at least 2 years, but not more than 3 years, after the payment was first made for the drug or biological as a hospital outpatient service under Medicare Part B. Our current policy is to accept pass-through applications on a quarterly basis and to begin pass-through payments for approved pass-through drugs and biologicals on a quarterly basis through the next available OPPS quarterly update after the approval of a drug's or biological's pass-through status. However, prior to CY 2017, we expired pass-through status for drugs and biologicals on an annual basis through notice-and-comment rulemaking (74 FR 60480). In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79662), we finalized a policy change, beginning with pass-through drugs and biologicals approved in CY 2017 and subsequent calendar years, to allow for a quarterly expiration of pass-through payment status for drugs, biologicals, and radiopharmaceuticals to afford a pass-through payment period that is as close to a full 3 years as possible for all pass-through drugs, biologicals, and radiopharmaceuticals.

This change eliminated the variability of the pass-through payment eligibility period, which previously varied based on when a particular application was initially received. We adopted this change for pass-through approvals beginning on or after CY 2017, to allow, on a prospective basis, for the maximum pass-through payment period for each pass-through drug without exceeding the statutory limit of 3 years. Notice of drugs for which pass-through payment status is ending during the calendar year is included in the quarterly OPPS Change Request transmittals.

3. Drugs and Biologicals With Expiring Pass-Through Payment Status in CY 2023

There are 43 drugs and biologicals for which pass-through payment status expires by December 31, 2023, as listed in Table 89. These drugs and biologicals will have received OPPS pass-through payment for 3 years during the period of April 1, 2020, through December 31, 2023. In accordance with the policy finalized in CY 2017 and described earlier, pass-through payment status for drugs and biologicals approved in CY 2017 and subsequent years will expire on a quarterly basis, with a pass-through payment period as close to 3 years as possible.

With the exception of those groups of drugs and biologicals that are always packaged when they do not have pass-through payment status (specifically, anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including diagnostic radiopharmaceuticals, contrast agents, and stress agents); and drugs and biologicals that function as supplies when used in a surgical procedure), our standard methodology for providing payment for drugs and biologicals with expiring pass-through payment status in an upcoming calendar year is to determine the product's estimated per day cost and compare it with the OPPS drug packaging threshold for that calendar year (which will be $135 for CY 2024), as discussed further in section V.B.1 of this final rule with comment period. If the estimated per day cost for the drug or biological is less than or equal to the applicable OPPS drug packaging threshold, we package payment for the drug or biological into the payment for the associated procedure in the upcoming calendar year. If the estimated per day cost of the drug or biological is greater than the OPPS drug packaging threshold, we provide separate payment at the applicable ASP methodology-based payment amount (which is generally ASP plus 6 percent), as discussed further in section V.B.2 of this final rule with comment period.

BILLING CODE 4150–28–P

an application that is subject to the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501 *et seq.*). This information collection (CMS–10008) is currently approved under OMB control number of 0938–0802 and has an expiration date of January 31, 2025.

BILLING CODE 4150–28–C

Comment: One commenter requested CMS use its equitable adjustment authority to extend the pass-through eligibility period for three radiopharmaceuticals whose pass-through payment status will expire between September 30, 2023, and December 31, 2023. The commenter stated that if CMS does not unpackage diagnostic radiopharmaceuticals in 2024, they recommended extending pass-through status through at least CY 2024 due to the effect of the PHE on claims data used for ratesetting. This same commenter supported CMS's policy under which radiopharmaceuticals are treated as drugs that are eligible for pass-through status. This commenter additionally commended CMS for proposing to continue its policy to provide for quarterly expiration of pass-through payment status.

Response: We thank the commenter for their comment, but we continue to believe that the data collected for CY 2024 ratesetting will result in the necessary cost data being collected and incorporated into the costs for expiring pass-through drugs, biologicals, and devices into the procedure APC rate. Therefore, we believe that the claims data used in CY 2024 OPPS ratesetting for procedures including these drugs, biologicals, and devices with expiring pass-through status is sufficient and an additional extension of separate payment to mimic pass-through status is neither necessary nor appropriate. We refer readers to section IV of the CY 2023 OPPS/ASC final rule with comment period (87 FR 71887) for a full discussion of CMS's final decision not to provide any additional quarters of separate payment for any drug, biological, or device category whose pass-through payment status will expire between December 31, 2022, and December 31, 2023. We appreciate commenters' support for our policy to treat radiopharmaceuticals as drugs that are eligible for drug pass-through status and to continue quarterly expiration of pass-through status.

4. Drugs, Biologicals, and Radiopharmaceuticals With Pass-Through Payment Status Expiring in CY 2024

We proposed to end pass-through payment status in CY 2024 for 25 drugs and biologicals. These drugs and biologicals, which were initially approved for pass-through payment status between April 1, 2021, and January 1, 2022, are listed in Table 90. The APCs and HCPCS codes for these drugs and biologicals, which have pass-through payment status that will end by December 31, 2024, are assigned status indicator ''G'' (Pass-Through Drugs and Biologicals) in Addenda A and B to the CY 2024 OPPS/ASC proposed rule (which are available on the CMS website).[139] The APCs and HCPCS codes for these drugs and biologicals are assigned status indicator ''G'' only for the duration of their pass-through status.

Section 1833(t)(6)(D)(i) of the Act sets the amount of pass-through payment for pass-through drugs and biologicals (the pass-through payment amount) as the difference between the amount authorized under section 1842(o) of the Act and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is associated with the drug or biological. For CY 2024 and subsequent years, we proposed to continue to pay for pass-through drugs and biologicals using the ASP methodology, meaning a payment rate based on ASP, WAC, or AWP, as applicable. This payment rate is generally ASP plus 6 percent, equivalent to the payment rate these drugs and biologicals would receive in the physician's office setting in CY 2024. We note that, under the OPD fee schedule, separately payable drugs assigned to an APC are generally payable at ASP plus 6 percent. Therefore, we proposed that a $0 pass-through payment amount would be paid for pass-through drugs and biologicals under the CY 2024 OPPS, and in subsequent years, because the difference between the amount authorized under section 1842(o) of the Act, which is generally ASP plus 6 percent, and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is appropriate, which is also proposed to be the same payment rate, which is generally ASP plus 6 percent, is $0. We proposed that this policy and the other policies proposed in this section would apply in both CY 2024 and subsequent years as they have been our longstanding policies under the OPPS. Therefore, we explained that we do not believe the policies need to be reproposed annually and should apply for subsequent years until such time as we propose to change them.

In the case of policy-packaged drugs (which include the following: anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including contrast agents, diagnostic radiopharmaceuticals, and stress agents); and drugs and biologicals that function as supplies when used in a surgical procedure), we proposed that their pass-through payment amount would be equal to a payment rate calculated using the ASP methodology, meaning a payment rate based on ASP, WAC, or AWP. We proposed that this payment rate would generally be ASP plus 6 percent for CY 2024 and subsequent years, minus a payment offset for the portion of the otherwise applicable OPD fee schedule that the Secretary determines is associated with the drug or biological as described in section V.A.6 of this final rule with comment period. We proposed this policy because, if not for the pass-through payment status of these policy-packaged products, payment for these products would be packaged into the associated procedure and therefore, there are associated OPD fee schedule amounts for them.

We proposed to continue to update pass-through payment rates on a quarterly basis on the CMS website during CY 2024 and subsequent years if later quarter ASP submissions (or more recent WAC or AWP information, as applicable) indicate that adjustments to the payment rates for these pass-through payment drugs or biologicals are necessary. For a full description of this policy, we refer readers to the CY 2006 OPPS/ASC final rule with comment period (70 FR 68632 through 68635).

For CY 2024 and subsequent years, consistent with our CY 2023 policy for diagnostic and therapeutic radiopharmaceuticals, we proposed to continue to provide payment for both diagnostic and therapeutic radiopharmaceuticals that are granted pass-through payment status based on the ASP methodology. As stated earlier, for purposes of pass-through payment, we consider radiopharmaceuticals to be drugs under the OPPS. Therefore, if a diagnostic or therapeutic radiopharmaceutical receives pass-through payment status during CY 2024 or subsequent years, we proposed to follow the standard ASP methodology to determine the pass-through payment rate that drugs receive under section 1842(o) of the Act, which is generally ASP plus 6 percent. If ASP data are not available for a radiopharmaceutical, we proposed to provide pass-through payment at WAC plus 3 percent (consistent with our policy in section V.B.2.a of the CY 2024 OPPS/ASC proposed rule (88 FR 49680)), the equivalent payment provided for pass-through drugs and biologicals without ASP information. Additional detail on the WAC plus 3 percent payment policy can be found in section V.B.2.a of this CY 2024 OPPS/ASC final rule with comment period. If WAC information also is not available, we proposed to provide payment for the pass-through radiopharmaceutical at 95 percent of its most recent AWP.

We refer readers to Table 90 below for the list of drugs and biologicals with pass-through payment status expiring during CY 2024. We did not receive any public comments on this section.

BILLING CODE 4150–28–C

5. Drugs, Biologicals, and Radiopharmaceuticals With Pass-Through Payment Status Continuing Through CY 2024

We proposed to continue pass-through payment status in CY 2024 for 42 drugs and biologicals. These drugs and biologicals, which were approved for pass-through payment status with effective dates beginning between April 1, 2022, and October 1, 2023, are listed in Table 91. The APCs and HCPCS codes for these drugs and biologicals, which have pass-through payment status that would continue after December 31, 2024, are assigned status indicator ''G'' in Addenda A and B to this final rule with comment period (which are available on the CMS website).[140]

Section 1833(t)(6)(D)(i) of the Act sets the amount of pass-through payment for pass-through drugs and biologicals (the pass-through payment amount) as the difference between the amount authorized under section 1842(o) of the Act and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is associated with the drug or biological. For CY 2024 and subsequent years, we proposed to continue to pay for pass-through drugs and biologicals at a payment rate based on the ASP methodology, which may be based on ASP, WAC, or AWP, but is generally ASP plus 6 percent, which is equivalent to the payment rate these drugs and biologicals would receive in the physician's office setting in CY 2024. We proposed that a $0 pass-through payment amount would be paid for pass-through drugs and biologicals that are not policy-packaged under the

[140] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

CY 2024 OPPS or in subsequent years, because the difference between the amount authorized under section 1842(o) of the Act, which would generally be ASP plus 6 percent, and the portion of the otherwise applicable OPD fee schedule that the Secretary determines is appropriate, which would also generally be ASP plus 6 percent, is $0.

In the case of policy-packaged drugs (which include the following: anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including contrast agents, diagnostic radiopharmaceuticals, and stress agents); and drugs and biologicals that function as supplies when used in a surgical procedure), we proposed that their pass-through payment amount would be equal to a payment rate based on the ASP methodology, which may be based on ASP, WAC, or AWP, but would generally be ASP plus 6 percent for CY 2024, minus a payment offset for any predecessor drug products contributing to the pass-through payment as described in section V.A.6 of this final rule with comment period. We proposed this policy because, if not for the pass-through payment status of these policy-packaged products, payment for these products would be packaged into the associated procedure and therefore, there are associated OPD fee schedule amounts for them.

We proposed to continue to update pass-through payment rates on a quarterly basis on our website during CY 2024, and in subsequent years, if later quarter ASP submissions (or more recent WAC or AWP information, as applicable) indicate that adjustments to the payment rates for these pass-through payment drugs or biologicals are necessary. For a full description of this policy, we refer readers to the CY 2006 OPPS/ASC final rule with comment period (70 FR 68632 through 68635).

For CY 2024 and subsequent years, consistent with our CY 2023 policy for diagnostic and therapeutic radiopharmaceuticals, we proposed to continue to provide payment for both diagnostic and therapeutic radiopharmaceuticals that are granted pass-through payment status based on the ASP methodology. As stated earlier, for purposes of pass-through payment, we consider radiopharmaceuticals to be drugs under the OPPS. Therefore, if a diagnostic or therapeutic radiopharmaceutical receives pass-through payment status during CY 2024, we will continue to follow the standard ASP methodology to determine the pass-through payment rate that drugs receive under section 1842(o) of the Act, which would generally be ASP plus 6 percent. If ASP data are not available for a radiopharmaceutical, we would provide pass-through payment at WAC plus 3 percent (consistent with our policy in section V.B.2.a of this final rule with comment period), the equivalent payment provided to pass-through drugs and biologicals without ASP information. Additional detail on the WAC plus 3 percent payment policy can be found in section V.B.2.a of this final rule with comment period. If WAC information also is not available, we would provide payment for the pass-through radiopharmaceutical at 95 percent of its most recent AWP.

We proposed that the other policies in this section would apply in both CY 2024 and subsequent years as they have been our longstanding policies under the OPPS. Therefore, we do not believe the policies need to be reproposed-annually and should apply for subsequent years until such time as we propose to change them.

The drugs and biologicals that we proposed would have pass-through payment status expire after December 31, 2024, are shown in Table 91. We did not receive any public comments on this section.

BILLING CODE 4150–28–C

6. Provisions for Reducing Transitional Pass-Through Payments for Policy-Packaged Drugs, Biologicals, and Radiopharmaceuticals To Offset Costs Packaged Into APC Groups

Under the regulation at 42 CFR 419.2(b)(15), nonpass-through drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure are packaged in the OPPS. This category includes diagnostic radiopharmaceuticals, contrast agents, stress agents, and other diagnostic drugs. Also, under the regulation at 42 CFR 419.2(b)(16), nonpass-through

drugs and biologicals that function as supplies in a surgical procedure are packaged in the OPPS. This category includes skin substitutes and other surgical-supply drugs and biologicals. Finally, under the regulation at 42 CFR 419.2(b)(4), anesthesia drugs are packaged in the OPPS. As described earlier, section 1833(t)(6)(D)(i) of the Act specifies that the transitional pass-through payment amount for pass-through drugs and biologicals is the difference between the amount paid under section 1842(o) of the Act and the otherwise applicable OPD fee schedule amount. Because a payment offset is necessary in order to provide an appropriate transitional pass-through payment, we deduct from the pass-through payment for policy-packaged drugs, biologicals, and radiopharmaceuticals an amount reflecting the portion of the APC payment associated with predecessor products in order to ensure no duplicate payment is made. This amount reflecting the portion of the APC payment associated with predecessor products is called the payment offset.

The payment offset policy applies to all policy-packaged drugs, biologicals, and radiopharmaceuticals. For a full description of the payment offset policy as applied to policy-packaged drugs, which include diagnostic radiopharmaceuticals, contrast agents, stress agents, and skin substitutes, we refer readers to the discussion in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70430 through 70432). For CY 2024 and subsequent years, as we did in CY 2023, we proposed to continue to apply the same policy-packaged offset policy to payment for pass-through diagnostic radiopharmaceuticals, pass-through contrast agents, pass-through stress agents, and pass-through skin substitutes. We proposed that these policies would apply in both CY 2024 and subsequent years as they are our longstanding policies under the OPPS, and we do not believe they need to be reproposed annually. Instead, we believe they should apply for subsequent years until such time as we propose to change them or until such time as the APCs to which a payment offset may be applicable for certain products change. The APCs to which a payment offset may be applicable for pass-through diagnostic radiopharmaceuticals, pass-through contrast agents, pass-through stress agents, and pass-through skin substitutes are identified in Table 92. We note that in the CY 2024 OPPS/ASC proposed rule (88 FR 49676), we erroneously labeled these APCs as ''CY 2023'' rather than the correct ''CY 2024.''

TABLE 92: APCs TO WHICH A POLICY-PACKAGED DRUG OR RADIOPHARMACEUTICAL OFFSET MAY BE APPLICABLE IN CY 2024

Skin Substitute	
5054	Level 4 Skin Procedures
5055	Level 5 Skin Procedures

We proposed to continue to post annually on our website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/annual-policy-files* a file that contains the APC offset amounts that will be used for that year for purposes of both evaluating cost significance for candidate pass-through payment device categories and drugs and biologicals and establishing any appropriate APC offset amounts. Specifically, the file will continue to provide the amounts and percentages of APC payment associated with packaged implantable devices, policy-packaged drugs, and threshold packaged drugs and biologicals for every OPPS clinical APC.

Comment: One commenter requested that we establish a ''two-times rule'' for diagnostic radiopharmaceuticals since they are packaged into the cost of the associated testing or administration procedure. While the commenter did not describe their precise goal, it appears they support a policy where, if the per-day cost of a diagnostic radiopharmaceutical is more than twice the cost of testing or the administration procedure where the product would be used, we should use our process under the OPPS to create a temporary HCPCS code to describe a new testing or administration procedure. The temporary HCPCS code for the new testing or administrative procedure would only be used with high-cost diagnostic radiopharmaceuticals for which the commenter believes payment is not sufficient. The commenter believed creating a temporary code for testing or administrative procedures for

use only with high-cost diagnostic radiopharmaceuticals would better reflect the cost of the high-cost diagnostic radiopharmaceutical products as lower-cost products would not be billed with, and would thus be excluded from the cost of, the test or procedure for which the temporary HCPCS would be established.

Response: Our packaged payment policies for diagnostic radiopharmaceuticals are designed to encourage the use of the most cost-effective items and services for Medicare beneficiaries. Creating separate HCPCS codes for procedures utilizing high-cost diagnostic radiopharmaceuticals would segment payment for diagnostic radiopharmaceuticals and would reduce the prospective nature of the OPPS. We believe that the policy the commenter is suggesting may discourage the use of effective, lower-cost products.

However, we appreciate the comment and will consider it as we explore possible changes to our diagnostic radiopharmaceutical payment policy, which may include new payment and coding approaches for high-cost diagnostic radiopharmaceuticals in the outpatient hospital setting in future rulemaking. Additionally, please refer to section II.A.3 of this final rule with comment period for a discussion of our comment solicitation regarding possible new approaches for the payment of diagnostic radiopharmaceuticals.

Comment: One commenter asked for an analysis of how we incorporate the cost of diagnostic radiopharmaceuticals with pass-through status into the payment for the associated test or administration procedure when the pass-through status of the diagnostic radiopharmaceutical ends.

Response: We identify single procedure claims that describe a procedure where a diagnostic radiopharmaceutical whose pass-through status is ending is used. The separate cost of the diagnostic radiopharmaceutical is added to the payment rate of the associated single procedure minus any existing drug offset for the service. We then calculate the geometric mean cost of all existing claims for the associated procedure. In many cases, there may be several diagnostic radiopharmaceuticals that can be used with a given procedure. The cost of the procedure will reflect the resource cost to perform the procedure along with the share of the procedures performed with the drug for which pass-through status is ending and the share of other diagnostic radiopharmaceuticals that may already be packaged into the cost of the associated procedure.

We advise the commenter to refer to the CY 2024 OPPS final rule claims accounting narrative and to section II.A.3 of this final rule with comment period for information on how costs from drugs, including diagnostic radiopharmaceuticals, and other ancillary services are included in the cost of their associated procedures when payment for those drugs and ancillary services is packaged.

Comment: One commenter requested that CMS release a copy of the APC offset file with future OPPS/ASC proposed rules to enable the public to calculate the percentage of APC payment associated with packaged drug costs using APC offset data for the upcoming calendar year.

Response: We thank the commenter for their suggestion, and we will consider it for future rulemaking.

Comment: One commenter supported keeping four payment levels (APC 5591 through APC 5594) for the Nuclear Medicine and related services APC.

Response: We appreciate the support of the commenter.

After consideration of the public comments we received, we are finalizing our proposals without modification regarding the APCs where drug offsets for policy-packaged drugs or radiopharmaceuticals could apply. We are also finalizing our proposal, without modification, to continue to annually post a file that contains the APC offset amounts.

B. OPPS Payment for Drugs, Biologicals, and Radiopharmaceuticals Without Pass-Through Payment Status

1. Criteria for Packaging Payment for Drugs, Biologicals, and Radiopharmaceuticals

a. Packaging Threshold

In accordance with section 1833(t)(16)(B) of the Act, the threshold for establishing separate APCs for payment of drugs and biologicals was set to $50 per administration during CYs 2005 and 2006. In CY 2007, we used the four-quarter moving average Producer Price Index (PPI) levels for Pharmaceutical Preparations (Prescription) to trend the $50 threshold forward from the third quarter of CY 2005 (when the Pub. L. 108–173 mandated threshold became effective) to the third quarter of CY 2007. We then rounded the resulting dollar amount to the nearest $5 increment in order to determine the CY 2007 threshold amount of $55. Using the same methodology as that used in CY 2007 (which is discussed in more detail in the CY 2007 OPPS/ASC final rule with comment period (71 FR 68085 and 68086)), we set the packaging threshold for establishing separate APCs for drugs and biologicals at $135 for CY 2023 (87 FR 71960 and 71961).

Following the CY 2007 methodology, for the CY 2024 OPPS/ASC proposed rule, we used the most recently available four quarter moving average PPI levels to trend the $50 threshold forward from the third quarter of CY 2005 to the third quarter of CY 2024 and rounded the resulting dollar amount ($138.44) to the nearest $5 increment, which yielded a figure of $140. In performing this calculation, we used the most recent forecast of the quarterly index levels for the PPI for Pharmaceuticals for Human Use (Prescription) (Bureau of Labor Statistics series code WPUSI07003) from IHS Global, Inc. IGI is a nationally recognized economic and financial forecasting firm with which CMS contracts to forecast the various price indexes including the PPI Pharmaceuticals for Human Use (Prescription). Based on these calculations using the CY 2007 OPPS methodology, we proposed a packaging threshold for CY 2024 of $140.

Comment: One commenter requested that the drug packaging threshold not be increased for CY 2024, but instead be maintained at $135 per day. The commenter believes that the level of the drug packaging threshold has increased faster over the last several years than the rate of increase in OPPS payment rates.

Response: Consistent with our longstanding policy and practices, for the final rule, we recalculated the drug packaging threshold amount with updated data for the four-quarter moving average PPI level. When we trended the $50 threshold forward from the third quarter of CY 2005 to the third quarter of CY 2024 and rounded the resulting dollar amount ($137.36) to the nearest $5 increment, we calculated a threshold amount of $135, which is $5 less than our proposed threshold. We note, however, that we are not changing the methodology by which we calculate the threshold. Rather, recalculating the threshold amount using the updated data for the four-quarter moving average PPI level resulted in a lower amount that rounded to $135.

After consideration of the public comments we received and consistent with our standard methodology, we are finalizing our proposal with modification. We will maintain the drug packaging threshold for CY 2024 at $135 per day, as the updated threshold amount calculated rounded to the

nearest $5 increment is now $135, rather than the proposed $140.

b. Packaging of Payment for HCPCS Codes That Describe Certain Drugs, Certain Biologicals, and Certain Therapeutic Radiopharmaceuticals Under the Cost Threshold (''Threshold-Packaged Drugs'')

To determine the proposed CY 2024 packaging status for all nonpass-through drugs and biologicals that are not policy packaged, we calculated, on a HCPCS code-specific basis, the per day cost of all drugs, biologicals, and therapeutic radiopharmaceuticals that had a HCPCS code in CY 2022 and were paid (via packaged or separate payment) under the OPPS. We used data from CY 2022 claims processed through June 30, 2022, for this calculation. However, we did not perform this calculation for those drugs and biologicals with multiple HCPCS codes that include different dosages, as described in section V.B.1.d of this final rule with comment period, or for the following policy-packaged items that we propose to continue to package in CY 2024: anesthesia drugs; drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure; and drugs and biologicals that function as supplies when used in a surgical procedure.

In order to calculate the per day costs for drugs, biologicals, and therapeutic radiopharmaceuticals to determine their proposed packaging status in CY 2024, we used the methodology that was described in detail in the CY 2006 OPPS proposed rule (70 FR 42723 and 42724) and finalized in the CY 2006 OPPS final rule with comment period (70 FR 68636 through 68638). For each drug and biological HCPCS code, we used an estimated payment rate based on the ASP methodology, which is generally ASP plus 6 percent (which is the payment rate we proposed for separately payable drugs and biologicals) for CY 2024, as discussed in more detail in section V.B.2.b of this final rule with comment period) to calculate the CY 2024 proposed rule per day costs. We used the manufacturer-submitted ASP data from the fourth quarter of CY 2022 (data that were used for payment purposes in the physician's office setting, effective April 1, 2023) to determine the proposed rule per day cost.

As is our standard methodology, for CY 2024, we proposed to use payment rates based on the ASP data from the fourth quarter of CY 2022 for budget neutrality estimates, packaging determinations, impact analyses, and completion of Addenda A and B to the CY 2024 OPPS proposed rule (which are available via the internet on the CMS website) because these are the most recent data available for use at the time of development of the CY 2024 OPPS proposed rule. These data also were the basis for drug payments in the physician's office setting, effective April 1, 2023. For items that did not have an ASP-based payment rate, such as some therapeutic radiopharmaceuticals, we used their mean unit cost derived from the CY 2022 hospital claims data to determine their per day cost.

We proposed to package items with a per day cost less than or equal to $140 and identify items with a per day cost greater than $140 as separately payable unless they are policy-packaged. Consistent with our past practice, we cross-walked historical OPPS claims data from the CY 2022 HCPCS codes that were reported to the CY 2023 HCPCS codes that we display in Addendum B to the OPPS CY 2024 proposed rule (which is available on the CMS website) [141] for proposed payment in CY 2024.

Our policy during previous cycles of OPPS rulemaking has been to use updated ASP and claims data to make final determinations of the packaging status of HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals for the OPPS/ASC final rule with comment period. We note that it is also our policy to make an annual packaging determination for a HCPCS code only when we develop the OPPS/ASC final rule with comment period for the update year. Only HCPCS codes that are identified as separately payable in the final rule with comment period are subject to quarterly updates. For our calculation of per day costs of HCPCS codes for drugs and biologicals in the CY 2024 OPPS proposed rule, we proposed to use ASP data from the fourth quarter of CY 2022, which is the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective April 1, 2023, along with updated hospital claims data from CY 2022. We note that we also proposed to use these data for budget neutrality estimates and impact analyses for the CY 2024 OPPS proposed rule.

Payment rates for HCPCS codes for separately payable drugs and biologicals included in Addenda A and B of the CY 2024 OPPS proposed rule are based on ASP data from the second quarter of CY 2023. These data will be the basis for calculating payment rates for drugs and biologicals in the physician's office setting using the ASP methodology, effective October 1, 2023. These payment rates would then be updated in the January 2024 OPPS update, based on the most recent ASP data to be used for physicians' office and OPPS payment as of January 1, 2024. For items that do not currently have an ASP-based payment rate, we calculated their mean unit cost from all of the CY 2022 claims data and updated cost report information available for the CY 2024 OPPS proposed rule to determine their final per day cost.

Consequently, the packaging status of some HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals in the OPPS/ASC proposed rule may be different from the same drugs' HCPCS codes' packaging status determined based on the data used for this final rule with comment period. Under such circumstances, we proposed to continue to follow the established policies initially adopted for the CY 2005 OPPS (69 FR 65780) in order to more equitably pay for those drugs whose costs fluctuate relative to the proposed CY 2024 OPPS drug packaging threshold and the drug's payment status (packaged or separately payable) in CY 2023. These established policies have not changed for many years and are the same as described in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70434). Specifically, for CY 2024 and subsequent years, consistent with our historical practice, we proposed to apply the following policies to those HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals whose relationship to the drug packaging threshold changes based on the updated drug packaging threshold and on the final updated data:

- HCPCS codes for drugs and biologicals that were paid separately in CY 2023 and that are proposed for separate payment in CY 2024, and that then have per day costs equal to or less than the CY 2024 final rule drug packaging threshold, based on the updated ASPs and hospital claims data used for the CY 2024 final rule, would continue to receive separate payment in CY 2024.
- HCPCS codes for drugs and biologicals that were packaged in CY 2023 and that are proposed for separate payment in CY 2024, and that then have per day costs equal to or less than the CY 2024 final rule drug packaging threshold, based on the updated ASPs and hospital claims data used for the CY 2024 final rule, would remain packaged in CY 2024.
- HCPCS codes for drugs and biologicals for which we proposed

[141] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

packaged payment in CY 2024 but that then have per-day costs greater than the CY 2024 final rule drug packaging threshold, based on the updated ASPs and hospital claims data used for the CY 2024 final rule, would receive separate payment in CY 2024.

We did not receive any public comments on our proposal, and we are finalizing our proposal with modification because of the change in the amount of the drug packaging threshold that was described in section V.B.1.a of this final rule with comment period. We will package items with a per day cost less than or equal to $135 and identify items with a per day cost greater than $135 as separately payable unless they are policy-packaged. In addition, we are finalizing, without modification, our proposal to recalculate the mean unit cost for items that do not currently have an ASP-based payment rate from all of the CY 2022 claims data and updated cost report information available for this CY 2024 final rule with comment period to determine their final per day cost.

We also did not receive any public comments on our proposal to continue to follow the established policies, initially adopted for the CY 2005 OPPS (69 FR 65780), when the packaging status of HCPCS codes for drugs, biologicals, and therapeutic radiopharmaceuticals in the proposed rule is different from the same drug's HCPCS code's packaging status determined based on the data used for the final rule with comment period. For CY 2024, we are finalizing these two proposals without modification. Please refer to Addendum B to this final rule with comment period, which is available on the CMS website, for information on the packaging status of drugs, biologicals, and therapeutic radiopharmaceuticals.

c. Policy-Packaged Drugs, Biologicals, and Radiopharmaceuticals

As mentioned earlier in this section, under the OPPS, we package several categories of nonpass-through drugs, biologicals, and radiopharmaceuticals, regardless of the cost of the products. Because the products are packaged according to the policies in 42 CFR 419.2(b), we refer to these packaged drugs, biologicals, and radiopharmaceuticals as ''policy-packaged'' drugs, biologicals, and radiopharmaceuticals. These policies are either longstanding or based on longstanding principles and inherent to the OPPS and are as follows:

- Anesthesia, certain drugs, biologicals, and other pharmaceuticals; medical and surgical supplies and equipment; surgical dressings; and devices used for external reduction of fractures and dislocations (§ 419.2(b)(4));
- Intraoperative items and services (§ 419.2(b)(14));
- Drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure (including, but not limited to, diagnostic radiopharmaceuticals, contrast agents, and pharmacologic stress agents) (§ 419.2(b)(15)); and
- Drugs and biologicals that function as supplies when used in a surgical procedure (including, but not limited to, skin substitutes and similar products that aid wound healing and implantable biologicals) (§ 419.2(b)(16)).

The policy at § 419.2(b)(16) is broader than that at § 419.2(b)(14). As we stated in the CY 2015 OPPS/ASC final rule with comment period: ''We consider all items related to the surgical outcome and provided during the hospital stay in which the surgery is performed, including postsurgical pain management drugs, to be part of the surgery for purposes of our drug and biological surgical supply packaging policy'' (79 FR 66875). The category described by § 419.2(b)(15) is large and includes diagnostic radiopharmaceuticals, contrast agents, stress agents, and some other products. The category described by § 419.2(b)(16) includes skin substitutes and some other products. We believe it is important to reiterate that cost consideration is not a factor when determining whether an item is a surgical supply (79 FR 66875).

Comment: One commenter recommended that CMS continue to apply radiolabeled product edits to the nuclear medicine procedures to ensure that all packaged costs are included on nuclear medicine claims in order to establish appropriate payment rates in the future. The commenter was concerned that many providers performing nuclear medicine procedures are not including the cost of diagnostic radiopharmaceuticals used for the procedures in their claim submissions. The commenter believes this lack of drug cost reporting could be causing the cost of nuclear medicine procedures to be underreported and therefore requested that the radiolabeled product edits be reinstated.

Response: We appreciate the commenter's feedback; however, we are not reinstating the radiolabeled product edits for nuclear medicine procedures, which required a diagnostic radiopharmaceutical to be present on the same claim as a nuclear medicine procedure for payment to be made under the OPPS. As previously discussed in the CY 2020 OPPS/ASC final rule with comment period (85 FR 86033 and 86034), the edits were in place between CY 2008 and CY 2014 (78 FR 75033). We believe the period of time in which the edits were in place was sufficient for hospitals to gain experience reporting procedures involving radiolabeled products and to become accustomed to ensuring that they code and report charges so that their claims fully and appropriately reflect the costs of those radiolabeled products. As with all other items and services recognized under the OPPS, we expect hospitals to code and report their costs appropriately, regardless of whether there are claims processing edits in place.

We welcome ongoing dialogue and engagement from interested parties regarding suggestions for payment changes for consideration in future rulemaking.

d. Packaging Determination for HCPCS Codes That Describe the Same Drug or Biological But Different Dosages

In the CY 2010 OPPS/ASC final rule with comment period (74 FR 60490 and 60491), we finalized a policy to make a single packaging determination for a drug, rather than an individual HCPCS code, when a drug has multiple HCPCS codes describing different dosages because we believe that adopting the standard HCPCS code-specific packaging determinations for these codes could lead to inappropriate payment incentives for hospitals to report certain HCPCS codes instead of others. We continue to believe that making packaging determinations on a drug-specific basis eliminates payment incentives for hospitals to report certain HCPCS codes for drugs and allows hospitals flexibility in choosing to report all HCPCS codes for different dosages of the same drug or only the lowest dosage HCPCS code. Therefore, we proposed to continue our policy to make packaging determinations on a drug-specific basis, rather than a HCPCS code-specific basis, for those HCPCS codes that describe the same drug or biological but different dosages in CY 2024.

In order to propose a packaging determination that is consistent across all HCPCS codes that describe different dosages of the same drug or biological, we aggregated both our CY 2022 claims data and our pricing information, which is based on the ASP methodology, which is generally ASP plus 6 percent, across all of the HCPCS codes that describe each distinct drug or biological in order to determine the mean units per

day of the drug or biological in terms of the HCPCS code with the lowest dosage descriptor. The following drugs did not have pricing information available for the ASP methodology for the CY 2024 OPPS/ASC proposed rule; and, as is our current policy for determining the packaging status of other drugs, we used the mean unit cost available from the CY 2022 claims data to make the proposed packaging determinations for them: HCPCS code C9257 (Injection, bevacizumab, 0.25 mg); HCPCS code J1840 (Injection, kanamycin sulfate, up to 500 mg); HCPCS code J1850 (Injection, kanamycin sulfate, up to 75 mg); HCPCS code J3472 (Injection, hyaluronidase, ovine, preservative free, per 1000 usp units); HCPCS code J7100 (Infusion, dextran 40, 500 ml); and HCPCS code J7110 (Infusion, dextran 75, 500 ml).

For all other drugs and biologicals that have HCPCS codes describing different doses, we then multiplied the proposed weighted average ASP methodology based payment rate, which is generally ASP plus 6 percent, per-unit payment amount across all dosage levels of a specific drug or biological by the estimated units per day for all HCPCS codes that describe each drug or biological from our claims data to determine if the estimated per day cost of each drug or biological is less than or equal to the proposed CY 2024 drug packaging threshold of $140 (in which case all HCPCS codes for the same drug or biological would be packaged) or greater than the proposed CY 2024 drug packaging threshold of $140 (in which case all HCPCS codes for the same drug or biological would be separately payable). The proposed packaging status of each drug and biological HCPCS code to which this methodology would apply in CY 2024 is displayed in Table 93.

BILLING CODE 4150–28–P

TABLE 93: HCPCS CODES TO WHICH THE CY 2024 DRUG-SPECIFIC PACKAGING DETERMINATION METHODOLOGY APPLIES

CY 2024 HCPCS Code	CY 2024 Long Descriptor	CY 2024 Status Indicator (SI)
C9257	Injection, bevacizumab, 0.25 mg	K
J9035	Injection, bevacizumab, 10 mg	K
J1020	Injection, methylprednisolone acetate, 20 mg	N
J1030	Injection, methylprednisolone acetate, 40 mg	N
J1040	Injection, methylprednisolone acetate, 80 mg	N
J1460	Injection, gamma globulin, intramuscular, 1 cc	K
J1560	Injection, gamma globulin, intramuscular over 10 cc	K
J1642	Injection, heparin sodium, (heparin lock flush), per 10 units	N
J1644	Injection, heparin sodium, per 1000 units	N
J2788	Injection, rho d immune globulin, human, minidose, 50 micrograms (250 i.u.)	N
J2790	Injection, rho d immune globulin, human, full dose, 300 micrograms (1500 i.u.)	N
J2920	Injection, methylprednisolone sodium succinate, up to 40 mg	N
J2930	Injection, methylprednisolone sodium succinate, up to 125 mg	N
J3471	Injection, hyaluronidase, ovine, preservative free, per 1 usp unit (up to 999 usp units)	N
J3472	Injection, hyaluronidase, ovine, preservative free, per 1000 usp units	N
J7030	Infusion, normal saline solution, 1000 cc	N
J7040	Infusion, normal saline solution, sterile (500 ml=1 unit)	N
J7050	Infusion, normal saline solution, 250 cc	N
J7100	Infusion, dextran 40, 500 ml	N
J7110	Infusion, dextran 75, 500 ml	N
J7515	Cyclosporine, oral, 25 mg	N
J7502	Cyclosporine, oral, 100 mg	N
J8520	Capecitabine, oral, 150 mg	N
J8521	Capecitabine, oral, 500 mg	N
J9250	Methotrexate sodium, 5 mg	N
J9260	Methotrexate sodium, 50 mg	N

BILLING CODE 4150–28–C

We did not receive any public comments on our proposal, and we are finalizing our proposal with the only modification being that the final CY 2024 drug packaging threshold will be $135 per day as described in section V.B.1.a. of this final rule with comment period. All other parts of the proposal are finalized without modification.

2. Payment for Drugs and Biologicals Without Pass-Through Status That Are Not Packaged

a. Payment for Specified Covered Outpatient Drugs (SCODs) and Other Separately Payable Drugs and Biologicals

Section 1833(t)(14) of the Act defines certain separately payable radiopharmaceuticals, drugs, and biologicals and mandates specific payments for these items. Under section 1833(t)(14)(B)(i) of the Act, a ''specified covered outpatient drug'' (known as a SCOD) is defined as a covered outpatient drug, as defined in section 1927(k)(2) of the Act, for which a separate APC has been established and that either is a radiopharmaceutical agent or a drug or biological for which payment was made on a pass-through basis on or before December 31, 2002.

Under section 1833(t)(14)(B)(ii) of the Act, certain drugs and biologicals are designated as exceptions and are not

included in the definition of SCODs. These exceptions are—

- A drug or biological for which payment is first made on or after January 1, 2003, under the transitional pass-through payment provision in section 1833(t)(6) of the Act.
- A drug or biological for which a temporary HCPCS code has not been assigned.
- During CYs 2004 and 2005, an orphan drug (as designated by the Secretary).

Section 1833(t)(14)(A)(iii) of the Act requires that payment for SCODs in CY 2006 and subsequent years be equal to the average acquisition cost for the drug for that year as determined by the Secretary, subject to any adjustment for overhead costs and taking into account the hospital acquisition cost survey data collected by the Government Accountability Office (GAO) in CYs 2004 and 2005, and later periodic surveys conducted by the Secretary as set forth in the statute. If hospital acquisition cost data are not available, the law requires that payment be equal to payment rates established under the methodology described in section 1842(o), section 1847A, or section 1847B of the Act, as calculated and adjusted by the Secretary as necessary for purposes of paragraph (14). We refer to this alternative methodology as the ''statutory default.'' Most physician Part B drugs are paid at ASP plus 6 percent in accordance with section 1842(o) and section 1847A of the Act.

Section 1833(t)(14)(E)(ii) of the Act provides for an adjustment in OPPS payment rates for SCODs to take into account overhead and related expenses, such as pharmacy services and handling costs. Section 1833(t)(14)(E)(i) of the Act required MedPAC to study pharmacy overhead and related expenses and to make recommendations to the Secretary regarding whether, and if so how, a payment adjustment should be made to compensate hospitals for overhead and related expenses. Section 1833(t)(14)(E)(ii) of the Act authorizes the Secretary to adjust the weights for ambulatory procedure classifications for SCODs to take into account the findings of the MedPAC study.[142]

It has been our policy since CY 2006 to apply the same treatment to all separately payable drugs and biologicals, which include SCODs, and drugs and biologicals that are not SCODs. Therefore, we apply the payment methodology in section 1833(t)(14)(A)(iii) of the Act to SCODs, as required by statute, but we also apply it to separately payable drugs and biologicals that are not SCODs, which is a policy determination rather than a statutory requirement. For CY 2023 and subsequent years, we finalized a policy to apply section 1833(t)(14)(A)(iii)(II) of the Act to all separately payable drugs and biologicals, including SCODs. Although we do not distinguish SCODs in this discussion, we note that we are required to apply section 1833(t)(14)(A)(iii)(II) of the Act to SCODs; but we also are applying this provision to other separately payable drugs and biologicals, consistent with our history of using the same payment methodology for all separately payable drugs and biologicals.

For a detailed discussion of our OPPS drug payment policies from CY 2006 to CY 2012, we refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68383 through 68385). In the CY 2013 OPPS/ASC final rule with comment period (77 FR 68386 through 68389), we first adopted the statutory default policy to pay for separately payable drugs and biologicals at ASP plus 6 percent based on section 1833(t)(14)(A)(iii)(II) of the Act. We have continued this policy of paying for separately payable drugs and biologicals at the statutory default for CYs 2014 through 2023.

In the case of a drug or biological during an initial sales period in which data on the prices for sales of the drug or biological are not sufficiently available from the manufacturer, section 1847A(c)(4) of the Act permits the Secretary to make payments that are based on WAC. Under section 1833(t)(14)(A)(iii)(II) of the Act, the amount of payment for a separately payable drug equals the average price for the drug for the year established under, among other authorities, section 1847A of the Act. As explained in greater detail in the CY 2019 PFS final rule, under section 1847A(c)(4) of the Act, although payments may be based on WAC, unlike section 1847A(b) of the Act (which specifies that payments using ASP or WAC must be made with a 6 percent add-on), section 1847A(c)(4) of the Act does not require that a particular add-on amount be applied to WAC-based pricing for this initial period when ASP data are not available. Consistent with section 1847A(c)(4) of the Act, in the CY 2019 PFS final rule (83 FR 59661 through 59666), we finalized a policy that, effective January 1, 2019, WAC-based payments for Part B drugs made under section 1847A(c)(4) of the Act will utilize a 3-percent add-on in place of the 6 percent add-on that was being used according to our policy in effect as of CY 2018. For the CY 2019 OPPS, we followed the same policy finalized in the CY 2019 PFS final rule (83 FR 59661 through 59666). Since CY 2020, we have continued to utilize a 3 percent add-on instead of a 6 percent add-on for drugs that are paid based on WAC pursuant to our authority under section 1833(t)(14)(A)(iii)(II) of the Act (84 FR 61318 and 85 FR 86039), which provides, in part, that the amount of payment for a SCOD is the average price of the drug in the year established under section 1847A of the Act. We also apply this provision to non-SCOD separately payable drugs. Because we establish the average price for a drug paid based on WAC under section 1847A of the Act as WAC plus 3 percent instead of WAC plus 6 percent, we believe it is appropriate to price separately payable drugs paid based on WAC at the same amount under the OPPS. Our policy to pay for drugs and biologicals at WAC plus 3 percent, rather than WAC plus 6 percent, applies whenever WAC-based pricing is used for a drug or biological under 1847A(c)(4). We refer readers to the CY 2019 PFS final rule (83 FR 59661 through 59666) for additional background on this policy.

Consistent with our current policy, payments for separately payable drugs and biologicals are included in the budget neutrality adjustments, under the requirements in section 1833(t)(9)(B) of the Act. Also, the budget neutral weight scalar is not applied in determining payments for these separately payable drugs and biologicals.

We note that separately payable drug and biological payment rates listed in Addenda A and B to the CY 2024 OPPS/ASC proposed rule (available on the CMS website),[143] which illustrate the proposed CY 2024 payment based on the ASP methodology for separately payable nonpass-through drugs and biologicals and the ASP methodology for pass-through drugs and biologicals, reflect either ASP information that is the basis for calculating payment rates for drugs and biologicals in the physician's office setting effective April 1, 2023, or WAC, AWP, or mean unit cost from CY 2022 claims data and updated cost report information available for the CY 2024 OPPS/ASC proposed rule. In general, these published payment rates are not the same as the actual January 2024 payment rates. This is because payment rates for drugs and biologicals

[142] Medicare Payment Advisory Committee. June 2005 Report to the Congress. Chapter 6: Payment for pharmacy handling costs in hospital outpatient departments. Available at: *https://www.medpac.gov/wp-content/uploads/import_data/scrape_files/docs/default-source/reports/June05_ch6.pdf.*

[143] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

with ASP information for January 2024 will be determined through the standard quarterly process where ASP data submitted by manufacturers for the third quarter of CY 2023 (July 1, 2023, through September 30, 2023) will be used to set the payment rates that are released for the quarter beginning in January 2024 in December 2023. In addition, payment rates for drugs and biologicals in Addenda A and B to the proposed rule, for which there was no ASP, WAC, or AWP information available for April 2023, are based on mean unit cost in the available CY 2022 claims data. If new pricing information becomes available for payment for the quarter beginning in January 2024, we will price payment for these drugs and biologicals based on their newly available information. Finally, there may be drugs and biologicals that have ASP, WAC, or AWP information available for the CY 2024 OPPS/ASC proposed rule (reflecting April 2023 ASP data) that do not have ASP, WAC, or AWP information available for the quarter beginning in January 2024. These drugs and biologicals would then be paid based on mean unit cost data derived from CY 2022 hospital claims. Therefore, the proposed payment rates listed in Addenda A and B to the proposed rule are not for January 2024 payment purposes and are only illustrative of the CY 2024 OPPS payment methodology using the most recently available information at the time of issuance of the CY 2024 OPPS/ASC proposed rule.

For CY 2024, we did not propose any changes to our policies for payment for separately payable drugs and biologicals; and we are continuing our payment policy that has been in effect since CY 2013 to pay for separately payable drugs and biologicals in accordance with section 1833(t)(14)(A)(iii)(II) of the Act (the statutory default).

We did, however, propose to amend the regulation text to reflect our longstanding policies for calculating the Medicare program payment and copayment amounts for separately payable drugs and biologicals by adding a new paragraph (d) to § 419.41.

Comment: A few commenters supported separate payment for specific drugs, biologicals, and radiopharmaceuticals for CY 2023. Commenters also supported CMS paying for all separately payable drugs and biologicals as SCODs. Multiple commenters expressed their approval for our proposal to pay for separately payable drugs and biologicals at ASP plus 6 percent.

Response: We appreciate the commenters' feedback and support.

Comment: One commenter requested that an add-on percentage of greater than 6 percent of ASP be paid for separately payable radiopharmaceuticals to reflect higher overhead and handling costs for these products.

Response: The add-on percentage of 6 percent is generally viewed as reflecting the overhead and handling cost of most drugs, radiopharmaceuticals, and biologicals that are separately payable in the OPPS even though the overhead and handling costs for individual products may be higher or lower than 6 percent of the ASP. We believe that the add-on percentage of 6 percent is appropriate for separately payable radiopharmaceuticals.

Comment: One commenter requested that we exclude radiopharmaceuticals from our proposed policy, explaining that during an initial sales period in which cost data for the drug or biological are not sufficiently available from the manufacturer, payments can be made for drugs using WAC pricing plus a 3 percent price add-on. The commenters believe the cost of preparing radiopharmaceuticals is higher than the cost of preparing other drugs and biologicals and a 6 percent price add-on should be required anytime that we use WAC to price a radiopharmaceutical.

Response: The WAC of a drug or biological is defined in section 1847A(c)(6)(B) of the Act as the manufacturer's list price for the drug or biological to wholesalers or direct purchasers in the United States, not including prompt pay or other discounts, rebates or reductions in price, for the most recent month for which the information is available, as reported in wholesale price guides or other publications of drug or biological pricing data. Because the WAC does not include discounts, it typically exceeds ASP, and the use of a WAC-based payment amount for the same drug results in higher dollar payments than the use of an ASP-based payment amount. Also, MedPAC, in their June 2017 Report to the Congress (*https://www.medpac.gov/wp-content/uploads/import_data/scrape_files/docs/defaultsource/reports/jun17_reporttocongress_sec.pdf*), suggested that greater parity between ASP-based acquisition costs and WAC-based payments for Part B drugs could be achieved and recommended changing the 6 percent add-on for WAC-based payments to 3 percent. Given this evidence that WAC pricing tends to overestimate drug cost, we believe our current policy to pay for drugs at WAC plus 3 percent for drugs, biologicals, and radiopharmaceuticals when ASP is not available more accurately reflects the cost of new products recently entering the market than does WAC plus 6 percent.

For CY 2024, we did not propose any changes to our policies for payment for separately payable drugs and biologicals; and we are continuing our payment policy that has been in effect since CY 2013 to pay for separately payable drugs and biologicals in accordance with section 1833(t)(14)(A)(iii)(II) of the Act (the statutory default).

We did, however, propose to amend the regulation text to reflect our longstanding policies for calculating the Medicare program payment and copayment amounts for separately payable drugs and biologicals by adding a new paragraph (d) to § 419.41. After consideration of the comments received, we are finalizing the proposal without modification.

b. Biosimilar Biological Products

(1) Provisions of the Inflation Reduction Act Relating to Biologicals

The Inflation Reduction Act (Pub. L. 117–169, August 16, 2022) (hereinafter referred to as ''IRA'') contains two provisions that affect payment limits for biosimilar biological products (hereinafter referred to as ''biosimilars''): section 11402 of the IRA amends the payment limit for new biosimilars furnished on or after July 1, 2024, during the initial period when ASP data is not available. Section 11403 of the IRA makes changes to the payment limit for certain biosimilars with an ASP that is not more than the ASP of the reference product for a period of 5 years. We implemented section 11403 of the IRA under program instruction,[144] [145] as permitted under section 1847A(c)(5)(C) of the Act.

Section 11402 of the IRA amended section 1847A(c)(4) of the Act by adding subparagraph (B), which limits the payment amount for biosimilars during the initial period described in section 1847A(c)(4)(A). The provision requires that for new biosimilars furnished on or after July 1, 2024, during the initial period when ASP data are not available, the payment limit for the biosimilar is the lesser of (1) an amount not to exceed 103 percent of the WAC of the biosimilar or the Medicare Part B drug

[144] *https://www.cms.gov/files/document/r11496cp.pdf.*

[145] *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price.*

payment methodology in effect on November 1, 2003, or (2) 106 percent of the lesser of the WAC or ASP of the reference product, or in the case of a selected drug during a price applicability period, 106 percent of the maximum fair price of the reference product. We referred readers to the CY 2024 PFS proposed rule for the discussion of the proposed changes to the regulation at § 414.904 to codify section 11402 of the IRA (88 FR 52384 and 52385).

Section 11403 of the IRA amended section 1847A(b)(8) of the Act by establishing a temporary payment increase for qualifying biosimilar biological products (hereinafter referred to as ''qualifying biosimilars'') furnished during the applicable 5-year period.[146] Section 1847(b)(8)(B)(iii) of the Act defines ''qualifying biosimilar biological product'' as a biosimilar biological product (as described in section 1847A(b)(1)(C) of the Act) with an ASP (as described in section 1847A(b)(8)(A)(i) of the Act) less than the ASP of the reference product for a calendar quarter during the applicable 5-year period. Section 11403 of the IRA requires that a qualifying biosimilar be paid at ASP plus 8 percent of the reference product's ASP rather than 6 percent during the applicable 5-year period. Section 1847A(b)(8)(B)(ii) of the Act defines the applicable 5-year period for a qualifying biosimilar for which payment has been made using ASP (that is, payment under section 1847A(b)(8) of the Act) as of September 30, 2022, as the 5-year period beginning on October 1, 2022. For a qualifying biosimilar for which payment is first made using ASP during the period beginning October 1, 2022, and ending December 31, 2027, the statute defines the applicable 5-year period as the 5-year period beginning on the first day of such calendar quarter of such payment. We referred readers to the CY 2024 PFS proposed rule for the discussion of the proposed changes to the regulations at §§ 414.902 and 414.904 to codify section 11403 of the IRA.

Section 1833(t)(14)(A)(iii) of the Act provides for payment of separately covered outpatient drugs (SCODs), and currently, CMS pays under the OPPS for SCODs consistent with the payment methodology set forth in section 1833(t)(14)(A)(iii)(II) of the Act (the statutory default). Through rulemaking, CMS adopted a policy to apply the statutory default payment methodology to separately payable drugs and biologicals that are not SCODs (70 FR 68715 and 68716). Under this authority, the payment rate for SCODs and applicable separately payable drugs and biologicals is determined in accordance with sections 1842(o) and 1847A of the Act, as calculated and adjusted by the Secretary as necessary for purposes of paragraph (14). Because our current policy is to pay for separately payable drugs and biologicals at payment amounts determined under section 1847A, we proposed that, for a separately payable biosimilar that is new for purposes of section 1847A(c)(4)(A), the OPPS payment amount would be the amount determined under section 1847A, subject to the payment limit in section 1847A(c)(4)(A). We also proposed that, for a separately payable biosimilar that meets the definition of a ''qualifying biosimilar biological product'' for purposes of section 1847A(b)(8)(B)(iii) of the Act, the OPPS payment amount for the biosimilar would be the amount determined under section 1847A, subject to the temporary payment increase under section 1847A(b)(8)(B)(iii). We proposed to codify OPPS payment for biosimilars consistent with sections 1847A(c)(4)(A) and 1847A(b)(8)(B)(iii) by adding new paragraphs (f) and (g) to the regulation at § 419.41. The proposed regulation text cross-references the regulation text included in the PFS proposed rule, which proposed to codify the requirements in sections 1847A(c)(4)(A) and 1847A(b)(8)(B)(iii). We referred readers to the PFS proposed rule for more information about those proposed regulations.

We did not receive any public comments on our proposal and, for CY 2024, we are finalizing as proposed our proposal that the OPPS payment amount for a separately payable biosimilar that meets the definition of a ''qualifying biosimilar biological product'' for purposes of section 1847A(b)(8)(B)(iii) of the Act will be the amount determined under section 1847A, subject to the temporary payment increase under section 1847A(b)(8)(B)(iii). For CY 2024, we are finalizing as proposed our proposal to codify OPPS payment for biosimilars consistent with sections 1847A(c)(4)(A) and 1847A(b)(8)(B)(iii) by adding new paragraphs (f) and (g) to the regulation at § 419.41. The final regulation text cross-references the regulation text included in the PFS final rule, which codifies the requirements in sections 1847A(c)(4)(A) and 1847A(b)(8)(B)(iii). We refer readers to the PFS final rule for more information about those regulations.

(2) Proposal To Except Biosimilars From the OPPS Packaging Threshold When Their Reference Products Are Separately Paid

Medicare Part B spending for biologicals and biosimilars has significantly outpaced the spending for non-biologic drugs for the past 16 years. According to a 2020 report from the Assistant Secretary for Planning and Evaluation (ASPE), the spending for biologicals and biosimilars represented 77 percent of Medicare Part B prescription drug spending in CY 2017.[147] In a 2020 MedPAC report, the top 10 Part B drugs based on spending were all biologicals, and spending on them in the HOPD represented 39 percent of total HOPD drug spending in CY 2019.[148] Although Part B drug spending for biologicals and biosimilars has grown tremendously in the past 16 years, we also recognize that there is evidence that the entry of biosimilars into the market has contributed to lower aggregate spending for the Medicare program.[149]

Congress has made legislative changes related to payment for biosimilars. First, it amended the Social Security Act to provide for payment of biosimilars in the Affordable Care Act (ACA) and more recently, in the IRA, to update payment for certain biosimilars. In particular, section 3139 of the ACA amended section 1847A(b) by adding a new paragraph (8), which provides that the payment amount for a biosimilar biological product is the biosimilar's ASP and 6 percent of the reference product's ASP.[150] And as explained previously, section 11402 of the IRA changed the payment limit for biosimilars during the initial period when ASP data is not available; and section 11403 of the IRA temporarily

increased the payment limit for certain biosimilars.

Our overarching policy goal is to create incentives for efficiency and selection of the least costly products while still meeting a beneficiary's clinical needs and to protect the long-term solvency of the Part B Trust Fund. When we established a policy to pay for biosimilars, we intended to promote the use of biosimilars as a less expensive alternative to their reference products. For CY 2016 and CY 2017, we finalized a policy to pay for biosimilar biological products based on the payment allowance of the product as determined under section 1847A of the Act and to subject nonpass-through biosimilar biological products to our annual threshold-packaged policy (for CY 2016, 80 FR 70445 and 70446; and for CY 2017, 81 FR 79674). In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59351), we explained that consistent with our established OPPS drug, biological, and radiopharmaceutical payment policy, HCPCS coding for biosimilar biological products will be based on policy established under the CY 2018 PFS final rule with comment period (82 FR 53182 through 53187), where CMS finalized a policy to implement separate HCPCS codes for biosimilar biological products. We also clarified that all biosimilar biological products will be eligible for pass-through payment and not just the first biosimilar biological product for a reference product.

Our threshold packaging policy's intent is to create incentives for efficiency, but we have concerns that packaging biosimilars when the reference product or other marketed biosimilars are separately paid may create financial incentives for providers to select more expensive, but clinically similar, products. In most cases, a biosimilar either has pass-through status or is separately payable. However, there have been a few instances where biosimilars are packaged. For example, in CY 2021, we noted that HCPCS code Q5105 (Injection, epoetin alfa-epbx, biosimilar, (Retacrit) (for esrd on dialysis), 100 units), was on pass-through status through September 2021. HCPCS code Q5105 is a biosimilar for HCPCS code Q4081 (injection, epoetin alfa, 1000 units (for esrd on dialysis)), and HCPCS code Q4081 is currently packaged under the OPPS. After HCPCS code Q5105's pass-through status expired, payment for HCPCS code Q5105 was packaged because its per day cost fell below our packaging threshold of $130 for CY 2021. In CY 2023, payment for HCPCS code Q5101 (Injection, filgrastim-sndz, biosimilar, (zarxio), 1 microgram) is packaged because its per day cost fell below our packaging threshold of $135 for CY 2023. HCPCS code Q5101 is the biosimilar for HCPCS code J1442 (Injection, filgrastim (g-csf), excludes biosimilars, 1 microgram), which is currently separately payable with a status indicator ''K.''

Packaging payment for both of these biosimilars is consistent with our policy since CY 2018 to subject nonpass-through biosimilars to the OPPS threshold-packaging policy. However, we believe this policy may create incentives to use the more expensive reference product or biosimilars that are separately payable, as hospitals would be paid less for using the threshold-packaged biosimilar. For example, the CY 2023 threshold packaging of the biosimilar described by HCPCS code Q5101 (Injection, filgrastim-sndz, biosimilar, (zarxio), 1 microgram) may have created a financial incentive for providers to select the separately paid reference product or the separately paid filgrastim biosimilar over the packaged filgrastim biosimilar, which is inconsistent with our policy goal of encouraging efficiency and promoting use of biosimilars as lower cost alternatives to their reference products. Accordingly, for CY 2024, we proposed to except biosimilars from the OPPS threshold packaging policy when their reference products are separately paid, meaning we would pay separately for these biosimilars even if their per-day cost is below the threshold packaging policy. We believe the threshold packaging exception for biosimilars when their reference products are separately paid would preserve our policy intent to promote biosimilar use as a lower cost alternative to higher cost reference products.

In addition, if a reference product's per-day cost falls below the threshold packaging policy, we proposed that all the biosimilars related to the reference product would be similarly packaged regardless of whether their per-day costs are above the threshold. This would allow for consistent treatment of similar biological products in the unusual circumstance in which a biosimilar is priced above the reference product. For the purpose of identifying biosimilar(s) related to a reference product, we would rely on the product's FDA approval under section 351(k) of the Public Health Service Act. For example, filgrastimsndz (Zarxio), filgrastim-aafi (Nivestym), and filgrastim-ayow (Releuko-) are biosimilars related to filgrastim (Neupogen).[151]

Comment: Several commenters expressed support for our proposal to except biosimilars from the drug packaging threshold when their reference products are separately paid and not packaged.

Response: We thank the commenters for their support to except biosimilars from the current threshold packaging policies when their reference product is above the threshold and paid separately. As stated earlier, when we established a policy to pay for biosimilars, we intended to promote the use of biosimilars as a less expensive alternative to their reference products. Our threshold packaging policy's intent is to create incentives for efficiency, but we have concerns that packaging biosimilars when the reference product or other marketed biosimilars are separately paid may create financial incentives for providers to select more expensive, but clinically similar, products. We believe the threshold packaging exception for biosimilars when their reference products are separately paid would preserve our policy intent to promote biosimilar use as a lower cost alternative to higher cost reference products.

Comment: Commenters generally opposed our proposal to package payment for biosimilar(s) when its reference product is below the drug packaging threshold and packaged. The commenters contended the current threshold packaging policy imposes inflationary pressure on drug costs by incentivizing manufacturers to maintain the ASP above the packaging threshold to ensure separate payment while providers are incentivized to select the higher cost biologicals for a similar reason.

Response: We thank the commenters for their insights on this subject. The threshold-packaging policy's intent is to create incentives for efficiency. We proposed the threshold-packaging exception for biosimilars when its reference product is separately paid to remove the financial incentives for providers to select a more expensive biological. We believe there are merits to our proposal to package biosimilars when their reference product's per day cost is below the drug packaging threshold and payment for the reference product is packaged. We believe this corresponding policy proposal would also remove the financial incentive to use the more expensive biologic, in this scenario, the biosimilar(s) (the more

[151] *https://purplebooksearch.fda.gov/results?query=filgrastim&title=Zarxio.*

expensive and separately paid product) when its reference product falls below the packaging threshold. At the same time, we acknowledge that the scenario of the per day cost of a reference product falling below the packaging threshold while the per day cost of a biosimilar remains above the packaging threshold has not yet occurred. For this reason, for CY 2024, we are not finalizing our proposal to package biosimilar(s) when their related reference product's per day cost is below the drug packaging threshold and payment for the reference product is packaged. We will continue to monitor Part B drug utilization and spending for biologicals and potentially revisit this issue in future rulemaking.

Comment: We received several comments requesting that the policy of excepting biosimilars from the OPPS drug packaging threshold be applied retroactively beginning with CY 2023. One commenter indicated that making this policy change retroactive to CY 2023 would support the continued use of biosimilars.

Response: Under the statute, retroactive rulemaking authority is reserved for certain special circumstances that do not apply here. We believe it would be inappropriate to apply our retroactive rulemaking authority under section 1871(e)(1)(A) of the Act in this case.

Comment: Some commenters recommended that CMS categorically exempt reference and biosimilar biological products from its threshold packaging policy. The commenters believed the threshold packaging policy imposes inflationary pressures on drug costs by incentivizing manufacturers to price their products above the packaging threshold and, as a result, incentivizing providers to switch to those products above the packaging threshold, which would be paid separately.

Response: We thank the commenters for their comment. We believe our threshold packaging policy encourages efficiency and is an essential component of a prospective payment system. However, we will continue to review new policy ideas that promote the use of biosimilars as a less expensive alternative to their reference products for future rulemaking.

Comment: One commenter stated the best policy is to treat biosimilars and their reference product similarly by either packaging all of them or paying separately for all of them. The commenter stated that if any one of the related products (a biosimilar or reference product) is below the packaging threshold, it would be appropriate to package all of them. Conversely, the commenter believed biosimilars and their reference products should be separately payable only if the per day costs of all of the products exceed the packaging threshold.

Response: We thank the commenter for their feedback. As mentioned above, we believe the threshold packaging exception for biosimilars when their reference products are separately paid is consistent with our broader policy intent to promote biosimilar use as a lower cost alternative to higher cost reference products. However, we will not finalize our proposal to package biosimilar(s) when their related reference product's per day cost is below the drug packaging threshold and payment for the reference product is packaged for CY 2024.

After consideration of the public comments we received, we are finalizing our proposal with modification. Specifically, we are finalizing the exception of biosimilars from the OPPS threshold packaging policy when their reference products are separately paid, meaning for CY 2024, we would pay separately for these biosimilars even if their per-day cost is below the threshold packaging policy. We believe creating a threshold-packaging exception for biosimilars when their reference products are separately paid will remove the financial incentive to use a more expensive separately payable biologic and preserve our policy intent to promote biosimilar use as a lower cost alternative to higher cost reference products. However, we believe our policy proposal to package biosimilar(s) when the reference product's per-day cost falls below the packaging threshold would be unnecessary at this time since this scenario has not yet occurred. We will examine the claims data, monitor Part B drug utilization and spending for biologics, and address this issue in future rulemaking if necessary.

(3) Comment Solicitation on Packaging Policy for Reference Products and Biosimilars

While we proposed to except biosimilars from the threshold packaging policy when their reference products are separately paid, we also solicited comment on the packaging of payment for a reference product *and* its biosimilar(s) into the payment for the associated service or procedure when the per-day cost of the reference product, *or* any of its biosimilar(s), is less than or equal to the applicable OPPS drug packaging threshold. While both our proposed policy and the policy described by this comment solicitation share the goal of consistent treatment of similar biologic products, the method to achieve that goal differs. Our proposed policy would result in biosimilars being paid separately if their reference product is paid separately, whereas here we sought comment on a policy that would result in packaged payment for a biologic if the reference product or any of its biosimilars have per day costs below the drug packaging threshold.

For example, for purposes of this comment solicitation, if a biosimilar's per-day cost is above the threshold and separately paid but its reference product is packaged, the biosimilar (and all its related biosimilar(s)) would be packaged.

Additionally, we sought comment on other ways to structure payment for biologicals and biosimilars that would encourage efficiency while maintaining beneficiary access.

Comment: Commenters generally opposed our comment solicitation to package payment for biosimilar(s) and the reference product when the per-day cost of any of the products fall below the packaging threshold.

Response: At this time, we are only finalizing our proposed policy to except biosimilars from the OPPS threshold-packaging policy when their reference products are separately paid, meaning that CMS will pay separately for these biosimilars even if their per-day cost falls below the cost threshold of the threshold-packaging policy. At this time, we are not implementing a policy that packages payment for reference products and biosimilars if the per-day cost of any product drops below the OPPS drug packaging threshold. It is important to note that we have not yet encountered a situation where the per-day cost of the reference product is below the packaging threshold and the per-day cost of biosimilar products is above the packaging threshold. CMS will continue to monitor payment and utilization patterns as well as overall Part B spending for biosimilars and their reference products and address any problematic pricing trends that may develop in future rulemaking.

Comment: MedPAC stated that if any one of the products (the biosimilar or reference product) is below the packaging threshold, they should all be treated similarly and packaged, and that biosimilar products and their reference product should be separately payable only if the cost of all of the products exceeds the packaging threshold.

Response: We thank MedPAC for their response to this comment solicitation. As mentioned above, we believe our final policy to except biosimilars from the OPPS threshold-packaging policy when their reference products are

separately paid will remove the financial incentive to use a more expensive separately payable biological. We believe this policy is consistent with broader agency goals of promoting biosimilars as a lower cost alternative to higher cost reference products.

Comment: One commenter appreciated that we solicited comments on alternative methods to structure payments for biosimilars. The commenter noted that the current ASP-based payment methodology for biosimilars has resulted in declining provider reimbursement that may disincentivize use of these products.

Response: We thank the commenter for sharing their concerns. We do not have any data to support the assertion that the current ASP-based payment methodology for biosimilars has resulted in declining provider reimbursement that may disincentivize provider use. We reiterate that the ACA requires the ASP add-on for biosimilars to be 6 percent of the reference product's ASP. Additionally, section 11403 of the IRA amended section 1847A(b)(8) of the Act by establishing a temporary payment limit increase for qualifying biosimilar biological products of ASP plus 8 percent of the reference product's ASP rather than 6 percent during the applicable 5-year period. Consistent with these authorities and with the policy we are finalizing to except biosimilars from the threshold packaging policy when their reference products are separately paid, we seek to promote the use of biosimilars as a less expensive alternative to their reference products, to provide more options to patients and physicians, and to encourage competition to provide a robust and comprehensive selection of choices for patients at a fair price.

Comment: One commenter urged CMS to work with stakeholders to develop new payment approaches for Part B biosimilars to ensure sustainability.

Response: We thank the commenter, and we believe in a strong working relationship with the interested parties on Part B issues. We continue to believe that biosimilars are a less expensive alternative to their reference products. For CY 2016 and CY 2017, we finalized a policy to provide for the separate coding and payment for products approved under each individual abbreviated application, rather than grouping all biosimilars with a common reference product into codes (80 FR 70445 and 70446 and 81 FR 79674). Additionally, as required by section 11403, we established a temporary payment limit increase for qualifying biosimilar biological products of ASP plus 8 percent of the reference product's ASP rather than 6 percent during the applicable 5-year period. We believe that these policies together will encourage greater manufacturer participation in the marketplace and the introduction of more biosimilar products, thus driving competition and providing savings in the long term.

Comment: One commenter urged CMS to consider how the Agency can encourage other payers to similarly promote biosimilars.

Response: We thank the commenter, but we note this comment is out of scope for this final rule.

We thank commenters for their valuable feedback, and we will continue to explore policy ideas to increase healthcare efficiency and promote biosimilar use in future rulemaking.

3. Payment Policy for Therapeutic Radiopharmaceuticals

In the CY 2023 OPPS/ASC final rule with comment period, we adopted as final our proposal to continue our longstanding payment policy for therapeutic radiopharmaceuticals for CY 2023 and subsequent years. Accordingly, this payment policy for therapeutic radiopharmaceuticals continues to apply in CY 2024. We pay for separately payable therapeutic radiopharmaceuticals under the ASP methodology adopted for separately payable drugs and biologicals. If ASP methodology (ASP, WAC, and AWP) information is unavailable for a therapeutic radiopharmaceutical, we base therapeutic radiopharmaceutical payment on mean unit cost data derived from hospital claims. The rationale outlined in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60524 and 60525) for applying the principles of separately payable drug pricing to therapeutic radiopharmaceuticals continues to be appropriate for nonpass-through, separately payable therapeutic radiopharmaceuticals. Therefore, we are paying for all nonpass-through, separately payable therapeutic radiopharmaceuticals at ASP plus 6 percent (or applicable WAC or AWP amount) based on the statutory default described in section 1833(t)(14)(A)(iii)(II) of the Act. For a full discussion of ASP-based payment for therapeutic radiopharmaceuticals, we refer readers to the CY 2010 OPPS/ASC final rule with comment period (74 FR 60520 and 60521).

Consistent with the policy we adopted for CY 2023 and subsequent years, for CY 2024, we will rely on the most recently available mean unit cost data derived from hospital claims data for payment rates for therapeutic radiopharmaceuticals for which ASP methodology (ASP, WAC, and AWP) data are unavailable and to update the payment rates for separately payable therapeutic radiopharmaceuticals according to our usual process for updating the payment rates for separately payable drugs and biologicals on a quarterly basis if updated ASP methodology (ASP, WAC, and AWP) information is unavailable. For a complete history of the OPPS payment policy for therapeutic radiopharmaceuticals, we refer readers to the CY 2005 OPPS final rule with comment period (69 FR 65811), the CY 2006 OPPS final rule with comment period (70 FR 68655), and the CY 2010 OPPS/ASC final rule with comment period (74 FR 60524).

The proposed CY 2024 payment rates for nonpass-through, separately payable therapeutic radiopharmaceuticals are included in Addenda A and B of the CY 2024 OPPS/ASC proposed rule (which are available on the CMS website).[152]

We did not receive any public comments on our payment policy for therapeutic radiopharmaceuticals or our proposed CY 2024 final payment rates for nonpass-through, separately payable therapeutic radiopharmaceuticals, and we are finalizing our proposed rates without modification.

4. Payment for Blood Clotting Factors

For CY 2023, we provided payment for blood clotting factors under the same methodology as other nonpass-through separately payable drugs and biologicals under the OPPS and continued paying an updated furnishing fee (87 FR 71969 and 71970). That is, for CY 2023, we provided payment for blood clotting factors under the OPPS at ASP plus 6 percent, plus an additional payment for the furnishing fee. We note that when blood clotting factors are provided in physicians' offices or other settings for which Medicare makes payment under Part B, a furnishing fee is also applied to the payment. The CY 2023 updated furnishing fee was $0.250 per unit.

In the CY 2023 OPPS/ASC final rule with comment period, we adopted as final for CY 2023 and subsequent years a policy to pay for blood clotting factors at ASP plus 6 percent, consistent with our payment policy for other nonpass-through, separately payable drugs and biologicals, and to pay an updated furnishing fee. Our policy to pay a furnishing fee for blood clotting factors under the OPPS is consistent with the methodology applied in the physician's

[152] *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

office and in the inpatient hospital setting. These methodologies were first articulated in the CY 2006 OPPS final rule with comment period (70 FR 68661) and later discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66765). The proposed furnishing fee update is based on the percentage increase in the Consumer Price Index (CPI) for medical care for the 12-month period ending with June of the previous year. Because the Bureau of Labor Statistics releases the applicable CPI data after the PFS and OPPS/ASC proposed rules are published, we are not able to include the actual updated furnishing fee in the proposed rules. Therefore, in accordance with our policy as finalized in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66765), we will announce the actual figure for the percent change in the applicable CPI and the updated furnishing fee calculated based on that figure through applicable program instructions and posting on our website at: *https://www.cms.gov/medicare/payment/fee-for-service-providers/part-b-drugs/average-drug-sales-price.*

We did not receive any public comments on our proposed payment policy for blood clotting factors and are finalizing our proposal without modification. For CY 2024, we will continue to pay for blood clotting factors using the same methodology as other separately payable drugs and biologicals under the OPPS and will continue to pay an updated furnishing fee. We will announce the actual figure of the percent change in the applicable CPI and the updated furnishing fee calculation based on that figure through the applicable program instructions and posting on the CMS website.

5. Payment for Nonpass-Through Drugs, Biologicals, and Radiopharmaceuticals With HCPCS Codes But Without OPPS Hospital Claims Data

In the CY 2023 OPPS/ASC final rule with comment period, we adopted as final our proposal to continue our longstanding payment policy for nonpass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPPS hospital claims data for CY 2023 and subsequent years. Therefore, for CY 2024, this policy will continue to apply. For a detailed discussion of the payment policy and methodology, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70442 and 70443). Consistent with our policy, because we have no claims data and must determine if these products exceed the per-day cost threshold, we estimated the average number of units of each product that would typically be furnished to a patient during one day in the hospital outpatient setting and utilized the ASP methodology to determine whether their payment will be packaged as well as their payment status indicators. We refer readers to Table 94 below for the final CY 2024 status indicator for each of the nonpass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPPS hospital claims data, which are also listed in Addendum B to this rule on the CMS website.[153]

BILLING CODE 4150–28–P

TABLE 94: DRUGS AND BIOLOGICALS WITHOUT OPPS CLAIMS DATA

CY 2024 HCPCS Code	CY 2024 Long Descriptor	Final CY 2024 Status Indicator	Final CY 2024 APC
90378	Respiratory syncytial virus monoclonal antibody, recombinant, for intramuscular use, 50 mg, each	K	9003
A9604	Samarium SM-153 lexidronam, therapeutic, per treatment dose, up to 150 millicuries	K	1295
C9488	Injection, conivaptan hydrochloride, 1 mg	K	9488
J0470	injection, dimercaprol, per 100 mg	K	9039
J0691	Injection, lefamulin, 1 mg	E2	
J0800	injection, corticotropin, up to 40 units	D	
J0879	Injection, difelikefalin, 0.1 microgram, (for esrd on dialysis)	N	
J1426	Injection, casimersen, 10 mg	G	9412
J1427	Injection, viltolarsen, 10 mg	K	9386
J1429	Injection, golodirsen, 10 mg	K	9356
J1458	injection, galsulfase, per 5 mg	K	9224
J1551	Injection, immune globulin (cutaquig), 100 mg	K	9007
J1554	Injection, immune globulin (asceniv), 500 mg	K	9392
J1632	Injection, brexanolone, 1mg	K	9333
J1951	Injection, leuprolide acetate for depot suspension (fensolvi), 1 mg	K	9419
J3031	Injection, fremanezumab-vfrm, 1 mg (code may be used for Medicare when drug administered under the direct supervision of a physician, not for use when drug is self-administered)	K	9197
J3485	injection, zidovudine, 10 mg	N	
J7181	Factor XIII (antihemophilic factor, recombinant), Tretten, per i.u.	K	1746

J7203	Injection factor ix, (antihemophilic factor, recombinant), glycopegylated, (rebinyn), 1 iu	K	9468
J7332	Hyaluronan or derivative, triluron, for intra-articular injection, 1 mg	K	9338
J8705	Topotecan, oral, 0.25 mg	K	1238
J9019	Injection, asparaginase (erwinaze), 1,000 iu	K	9289
J9210	Injection, emapalumab-lzsg, 1 mg	K	9310
J9348	Injection, naxitamab-gqgk, 1 mg	G	9408
Q0222	Injection, bebtelovimab, 175 mg	K	9401
Q2041	Axicabtagene ciloleucel, up to 200 million autologous anti-cd19 car positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose	K	9035
Q2053	Brexucabtagene autoleucel, up to 200 million autologous anti-cd19 car positive viable t cells, including leukapheresis and dose preparation procedures, per therapeutic dose	K	9391
Q2055	Idecabtagene vicleucel, up to 460 million autologous b-cell maturation antigen (bcma) directed car-positive t cells, including leukapheresis and dose preparation procedures, per therapeutic dose	G	9422

BILLING CODE 4150–28–C

We did not receive any specific public comments regarding our payment for non-pass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPPS hospital claims data. For CY 2024, we will continue to assign drug or biological products status indicator ''K'' and pay for these products separately for the remainder of CY 2024 if pricing information becomes available. The CY 2024 payment status of each of the nonpass-through drugs, biologicals, and radiopharmaceuticals with HCPCS codes but without OPPS hospital claims data is listed in Addendum B to this final rule with comment period, which is available on the CMS website.

6. OPPS Payment Methodology for 340B Purchased Drugs and Biologicals

a. Overview

Under the OPPS, we generally set payment rates for separately payable drugs and biologicals under section 1833(t)(14)(A) of the Act. Section 1833(t)(14)(A)(iii)(II) of the Act provides that, if hospital acquisition cost data is not available, the payment amount is the average price for the drug in a year established under section 1842(o) of the Act, which cross-references section 1847A of the Act, which generally sets a default rate of ASP plus 6 percent for certain drugs and biologicals. The provision also provides that the average price for the drug or biological in the year as established under section 1847A of the Act is calculated and adjusted by the Secretary as necessary for purposes of paragraph (14). As described below, beginning in CY 2018, the Secretary adjusted the 340B drug payment rate to ASP minus 22.5 percent to approximate a minimum average discount for 340B drugs and biologicals, which was based on findings of the GAO [154] and MedPAC [155] that 340B hospitals were acquiring drugs and biologicals at a significant discount under HRSA's 340B Drug Pricing Program. We direct readers to the CY 2018 OPPS/ASC final rule with comment period for a more detailed discussion of the 340B drug payment policy (82 FR 52493 through 52511).

This policy has been the subject of extensive litigation, including before the Supreme Court of the United States. On June 15, 2022, the Supreme Court held in *American Hospital Association* v. *Becerra,* 142 S. Ct. 1896, that if CMS has not conducted a survey of hospitals' acquisition costs, it may not vary the payment rates for outpatient prescription drugs by hospital group. While the Supreme Court's decision addressed payment rates for CYs 2018 and 2019, it had implications for subsequent payment rates. Therefore, for CY 2023, we finalized a policy to revert to the default payment rate, which is generally ASP plus 6 percent, for 340B acquired drugs and biologicals and finalized a policy to pay for 340B

March 2016 Report to the Congress: Medicare Payment Policy. March 2016. Available at *https://www.medpac.gov/document/http-www-medpac-gov-docs-default-source-reports-may-2015-report-to-the-congress-overview-of-the-340b-drug-pricing-program-pdf/.*

acquired drugs and biologicals no differently than we pay for drugs and biologicals that are not acquired through the 340B program. We also finalized a budget neutrality adjustment to the CY 2023 OPPS conversion factor of 0.9691 percent rather than the 0.9596 percent adjustment we had proposed. This adjustment offset the prior increase of 3.19 percent that was applied to the conversion factor when we implemented the 340B payment policy in CY 2018 in a budget neutral manner and ensured the CY 2023 conversion factor was equivalent to the conversion factor that would be in place if the 340B drug payment policy had never been implemented.

After the publication of the proposed CY 2023 OPPS rule, on September 28, 2022, the District Court issued a final judgment vacating the 340B reimbursement rate for the remainder of 2022, which the District Court explained would automatically reestablish the default rate for 340B-acquired drugs and biologicals. The agency took the necessary steps, including issuing instructions to Medicare contractors and updating drug payment files, to implement that September 28, 2022, decision and has since paid the default rate, which is generally ASP plus 6 percent, for 340B acquired drugs and biologicals.[156]

Comment: Many commenters supported our proposal to continue to pay a rate of ASP plus 6 percent, or equivalent, for 340B-acquired drugs and biologicals. Several commenters acknowledged the benefit of the 340B program for their particular hospital and reiterated their belief that CMS should maintain the same payment rate for 340B-acquired drugs and those drugs not acquired through the 340B program. When explaining the benefit of the 340B program, one commenter asked CMS to work with HRSA, Congress, and others to protect the 340B program.

Response: We thank commenters for their support. We note that the 340B Drug Pricing Program is a program administered by HRSA and comments regarding its administration are outside the scope of this final rule with comment period.

Comment: Some commenters believed that CMS should not continue the increased ASP plus 6 percent payment rate for 340B-acquired drugs. These commenters believed that this would increase out-of-pocket costs for beneficiaries for these drugs and were concerned about the benefit of the 340B drug pricing program to vulnerable patients. One commenter spoke about the perverse incentive that the significant difference between 340B drug acquisition costs and the Medicare payment rate creates. The commenter was concerned that this incentive could further exacerbate the issue of increased drug spending and drug prices. Several commenters encouraged CMS to take appropriate steps to curtail payments that are significantly greater than the rate at which hospitals acquire 340B drugs and noted that a survey of hospital acquisition costs could help CMS achieve significant drug savings. Similarly, one commenter believed that CMS's proposed policy would be paying hospitals close to 50 percent more than their 340B drug acquisitions costs and that CMS has already determined that a generous reimbursement rate for 340B-acquired drugs would be ASP minus 28.7 percent per a previous drug acquisition cost survey. This commenter was concerned that CMS was ignoring the Supreme Court ruling that, in their view, stated that the CMS could vary reimbursement rates based on survey data and that payment rates based on ASP plus 6 percent were arbitrary. There were also concerns from this commenter that CMS violated the Administrative Procedure Act by not acknowledging and using this survey data to inform payment rates.

Response: We thank the commenters for their viewpoints expressed here and for their suggestions regarding drug cost surveys. For CY 2024, we are continuing our policy to apply to longstanding payment methodologies for 340B-acquired drugs that existed prior to CY 2018. In the CY 2021 OPPS/ASC final rule with comment period, we adopted as final our proposal to continue the Medicare payment policy for 340B drugs in place at that time (that is, the policy to pay a general rate of ASP minus 22.5 percent), rather than finalizing our alternative proposal to pay for 340B drugs at a rate of ASP minus 28.7 percent based on survey data (86 FR 63646 through 63648). We stated that while we believed our methods to conduct the 340B drug acquisition cost survey referenced in that rule, as well as the methodology we used to calculate the proposed average or typical discount received by 340B entities on 340B drugs, were valid, we nonetheless recognized that we received many comments on that survey from stakeholders. We noted that using survey data is complex, and we emphasized that we wished to continue to evaluate how to balance and weigh the use of survey data, the necessary adjustments to the data, and the weighting and incorporation of ceiling prices—all to determine how best to take the relevant factors into account for potentially using the survey to set Medicare OPPS drug payment policy (86 FR 63646). Since the CY 2021 OPPS/ASC final rule with comment period was issued, the Supreme Court held that because CMS had not conducted a survey of hospitals' acquisition costs, it could not vary the payment rates for outpatient prescription drugs by hospital group. *See Am. Hosp. Ass'n* v. *Becerra,* 142 S. Ct. 1896, 1906 (2022). We are concerned that using data from the 2020 survey, which surveyed only 340B hospitals, might not comport with the Supreme Court's decision.

We are also mindful of the burden surveys place on hospitals and CMS, should we decide to conduct an updated survey. The survey we previously conducted was just a survey of 340B hospitals; we did not conduct a survey of additional hospital groups at that time. And while that more limited survey placed a certain burden on 340B providers (a comment we received at the time), a survey of all hospital groups would be a much larger, more complex endeavor. According to the GAO hospitals survey in 2005, surveys may be useful on occasion to validate ratesetting data CMS receives, such as ASP. However, they also create significant work for hospitals and CMS as the data collector. For these reasons, GAO recommended that CMS survey hospitals only occasionally to validate hospital acquisition costs. We are mindful of these concerns but will take the commenters' feedback regarding a survey of hospital drug acquisition costs into consideration as we consider potential future rulemaking.

After a consideration of comments received, for CY 2024, we are finalizing the general payment rate of ASP plus 6 percent as the default payment rate for drugs and biologicals acquired under the 340B program and will pay for these drugs and biologicals no differently than we pay for those drugs and biologicals that are not acquired under the 340B program.

We note that many commenters also referenced the 340B Remedy proposed rule (88 FR 44078) in their comments. We note that these comments were out of scope for purposes of this CY 2024 OPPS/ASC final rule with comment period; however, the 340B Remedy final rule publishes in the **Federal Register** of November 8, 2023 (FR Doc. 2023–24407), and the summaries of and our responses to the public comments can be found on the CMS OPPS website.[157]

[156] Vacating Differential Payment Rate for 340B-Acquired Drugs in 2022 Outpatient Prospective Payment System Final Rule with Comment Period. *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient.*

b. Payment for 340B Drugs and Biologicals in CYs 2018 Through 2022

For full descriptions of our OPPS payment policy for drugs and biologicals acquired under the 340B program beginning in CY 2018, we refer readers to the CY 2018 OPPS/ASC final rule with comment period (82 FR 59353 through 59371); the CY 2019 OPPS/ASC final rule with comment period (83 FR 59015 through 59022); the CY 2021 OPPS/ASC final rule with comment period (85 FR 86042 through 86055); the CY 2022 OPPS/ASC final rule with comment period (86 FR 63640 through 63649); and the CY 2023 OPPS/ASC final rule with comment period (87 FR 71970 through 71976).

In July of 2023, CMS published a proposed rule, referred to as the ''remedy proposed rule'' to address the reduced payment amounts to 340B hospitals under the reimbursement rates in effect for CYs 2018 through 2022 and to comply with the statutory requirement to maintain budget neutrality under the OPPS. The remedy proposed rule does not propose changes to our CY 2024 OPPS drug payment policy or the CY 2024 OPPS conversion factor, but it does propose changes to the calculation of the OPPS conversion factor beginning in CY 2025. We believe our proposed remedy rule is consistent with the Supreme Court's decision in *American Hospital Association* and the District Court's remand order. We refer readers to the 340B Remedy proposed rule (88 FR 44078) for a full description of the proposed remedy policy as well as the 340B Remedy final rule.

c. CY 2024 Proposed 340B Drug Payment Policy

For CY 2024, consistent with our policy finalized for CY 2023, we proposed to continue to pay the statutory default rate, which is generally ASP plus 6 percent, for 340B acquired drugs and biologicals. The payment for 340B acquired drugs and biologicals will not differ from the payment rate for drugs and biologicals not acquired through the 340B program. We believe this policy is appropriate given the Supreme Court decision discussed previously.

In the CY 2023 OPPS/ASC final rule with comment period, we maintained the requirement that 340B hospitals report the ''JG'' (*Drug or biological acquired with 340B drug pricing program discount, reported for informational purposes*) or ''TB'' (*Drug or biological acquired with 340B drug pricing program discount, reported for informational purposes for select entities*) modifiers to identify drugs and biologicals acquired through the 340B Program for informational purposes (87 FR 71974). We explained that we believed maintaining both modifiers would reduce provider burden compared to shifting to a single modifier, as all providers can continue utilizing the modifier (either ''JG'' or ''TB'') that they had been using for the previous five calendar years. On December 20, 2022, we issued ''Part B Inflation Rebate Guidance: Use of 340B Modifiers,'' which, in accordance with section 1847A(i) of the Act, requires all 340B covered entities, including hospital-based and non-hospital-based entities, to report the applicable modifier for separately payable drugs and biologicals acquired through the 340B Program.[158] Section 1847A(i) of the Act, as added by the Inflation Reduction Act, requires the Secretary to establish a Part B inflation rebate by manufacturers of certain single source drugs and biologicals with prices increasing faster than the rate of inflation. Section 1847A(i)(3)(B)(ii)(I) of the Act specifically excludes units of drugs and biologicals for which the manufacturer provides a discount under the 340B program from the units of drugs and biologicals for which a manufacturer otherwise may have a Part B inflation rebate liability. Effective implementation of the Part B inflation rebate requires CMS to identify units of drugs and biologicals acquired through the 340B Program so they can be subtracted from the total number of otherwise rebatable units as applicable. This guidance explained that the ''JG'' and ''TB'' modifiers provide an existing mechanism to identify drugs and biologicals acquired through the 340B Program that is familiar to most 340B covered entities paid under the OPPS, and stated that it did not change the requirements in the CY 2023 OPPS/ASC final rule with comment period (*i.e.,* that 340B covered entity hospitals should continue to use the modifiers they used previously to identify 340B drugs and biologicals). For claims with dates of service beginning no later than January 1, 2024, the guidance instructed all 340B covered entities to report the appropriate modifier, including those not currently reporting the ''JG'' or ''TB'' modifier, such as Ryan White clinics and hemophilia clinics, which should report the ''JG'' modifier on separately payable Part B claim lines for drugs and biologicals acquired through the 340B Program.

Although we stated in the CY 2023 OPPS/ASC final rule with comment period and in the ''Part B Inflation Rebate Guidance: Use of 340B Modifiers'' that hospital-based 340B covered entities should continue to use the modifier they used previously (either the ''JG'' or ''TB'' modifier), we now believe utilizing a single modifier will allow for greater simplicity, especially because both modifiers are used for the same purpose: to identify separately payable drugs and biologicals acquired under the 340B Program. Requiring hospitals to report a single modifier would allow CMS to continue to identify and exclude 340B-acquired drugs and biologicals from the definition of units for the purpose of Part B inflation rebate liability, while eliminating the need to use two modifiers for the same purpose. Additionally, we believed the proposal would lessen the burden on providers as they would only have to report one modifier for all scenarios in which a 340B drug is acquired. Accordingly, we proposed that all 340B covered entity hospitals paid under the OPPS would report the ''TB'' modifier effective January 1, 2025, even if the hospital previously reported the ''JG'' modifier.

The ''JG'' modifier would remain effective through December 31, 2024. Hospitals that currently report the ''JG'' modifier could choose to continue to use it in CY 2024 or choose to transition to use of the ''TB'' modifier during that year. Beginning on January 1, 2025, the ''JG'' modifier would be deleted, and hospitals would be required to report drugs and biologicals acquired through the 340B program using the ''TB'' modifier. Additionally, beginning January 1, 2025, we would revise the ''TB'' modifier descriptor (*Drug or biological acquired with 340B drug pricing program discount, reported for informational purposes for select entities*) to no longer include ''. . .*for select entities*'' as all entities would report this modifier after this date. We noted that the proposal, if finalized, would update the December 20, 2022, guidance titled ''Part B Inflation Rebate Guidance: Use of the 340B Modifiers.''[159] Additionally, CMS plans to further update this guidance to align the modifier requirements for 340B covered entity providers and suppliers not paid under the OPPS with the modifier requirement changes for 340B covered entity hospitals paid under the OPPS.

For more information on the Medicare Part B inflation rebate program, please visit ''Inflation Rebates in Medicare'' at *https://www.cms.gov/inflation-*

reduction-act-and-medicare/inflation-rebates-medicare.

Comment: Commenters generally opposed the continued requirement to report the 340B modifiers, citing the administrative burden associated with the required reporting. Commenters believed CMS should abandon the requirement of any 340B modifiers after the Supreme Court decision that the 340B drug payment policy was unlawful.

Response: We thank the commenters for their feedback. We reiterate that the 340B modifier requirement is to identify and exclude 340B-acquired drugs and biologicals from the definition of units for the purpose of Part B inflation rebate liability. We note that the requirement for the 340B modifier(s) was not the subject of the Supreme Court 340B decision. We believe it is appropriate to consolidate the 340B modifier to a single modifier, which will allow for greater operational simplicity to achieve the IRA policy objective.

Comment: A commenter requested that CMS clarify the purpose for the continued requirement of a 340B modifier. The commenter stated the CY 2024 OPPS/ASC proposed rule on this subject is unclear if the only purpose of the modifier is for implementing the Inflation Reduction Act requirements related to Part B inflation rebates.

Response: We thank the commenter for their feedback. We reiterate the purpose of the 340B modifier requirement is to is to identify and exclude 340B-acquired drugs and biologicals from the definition of units for the purpose of Part B inflation rebate liability.

Comment: Commenters stated that the 340B modifier requirement presents a considerable administrative burden for 340B hospitals, demanding substantial staff time and resources. One commenter explained that hospital pharmacists devote significant time to determining if new drug codes require the 340B modifier. Once the drugs have been identified, the pharmacists must then communicate with other departments to ensure the drugs are properly coded and billed. This is in addition to the regular self-audits pharmacists perform. Some commenters stated that reporting only one 340B modifier could eventually be less burdensome (by reducing potential confusion) than the current two modifiers. However, they noted that hospitals currently billing with the ''JG'' modifier will still be required to change their processes and bill using the ''TB'' modifier by January 1, 2025, presenting an additional unnecessary administrative burden. The commenters stated it is not necessary for CMS to collect the information via the 340B modifier(s) in order to comply with the IRA and that CMS could exclude all drug claims with the status indicator ''K'' that are billed by 340B hospitals from the IRA rebate calculations as a less burdensome alternative.

Response: We thank commenters for their feedback. As mentioned above, we note that this continued requirement for the 340B modifier is to identify and exclude 340B-acquired drugs and biologicals from the Part B inflation rebate liability. Many 340B hospitals have been reporting the 340B modifiers since CY 2018, and many hospitals already report a modifier through their State Medicaid program. We believe that the continued requirement for a single 340B modifier on outpatient claims for 340B-acquired drugs would promote consistency between the two programs.

We disagree with commenters that CMS could accurately exclude 340B drugs from the IRA rebate calculation without imposing a burden on 340B providers. Some 340B covered entities provide healthcare services to both 340B and non-340B patients, and the payment status indicator ''K'' does not differentiate between340B and non-340B claims. Therefore, the 340B modifier is needed to identify 340B drugs.

Comment: Some commenters supported the requirement of a single 340B modifier and agreed a single modifier will simplify the identification of 340B drugs or biologicals and help support reducing duplicate discounts and diversion. They also stated that their study showed 340B participating rural referral centers and sole community centers reported only 61 percent of Part B separately payable products with the applicable 340B modifiers. The commenters noted that there is no penalty for 340B providers that choose not to comply with the policy and recommended that CMS establish a robust audit process with appropriate penalties to deter abuses of the 340B program. They also suggested CMS adopt a ''non-340B'' modifier to enhance enforcement of the policy to report the appropriate modifier, thereby reducing duplicate discounts and diversion.

Response: We thank the commenters for their feedback. We are not aware that covered entities are underreporting 340B claims. We note that some 340B covered entities often provide healthcare services to both 340B and non-340B patients, but it is their responsibility to submit accurate claims. Under the False Claims Act 31, U.S.C. 3729–3733, Medicare has the authority to fine providers who knowingly, willfully, and repeatedly bill inaccurately coded claims. Providers are required to maintain current knowledge of Medicare billing policies and to submit accurate claims. Providers are also required to maintain all documentation to support the validity of the services reported on the claim and ensure this information is available upon request.

We noted that we had received a similar suggestion for a ''non-340B'' modifier in the CY 2018 OPPS/ASC final rule with comment period (82 FR 52508 and 52509). We disagree with the commenters and as noted in the 2018 OPPS/ASC final rule with comment period, we believe a consistent application of the modifier being required for a drug that was purchased under the 340B Program instead of a drug not purchased under the 340B Program will help improve program integrity by helping ensure that hospitals are not receiving ''duplicate discounts'' through both the Medicaid rebate program and the 340B Program.

After consideration of the public comments we received, we are finalizing our proposal without modification to require that all 340B covered entity hospitals paid under the OPPS report the ''TB'' modifier effective January 1, 2025, even if the hospital previously reported the ''JG'' modifier, for 340B-acquired drugs and biologicals. We believe the transition to a single 340B modifier ''TB'' will allow for greater simplicity, especially because both modifiers are used for the same purpose to continue to identify and exclude 340B-acquired drugs and biologicals from the definition of units for the purpose of Part B inflation rebate liability. We believe this policy will reduce the burden on providers as they would only have to report one modifier for all scenarios in which a 340B drug is acquired. The ''JG'' modifier will remain effective through December 31, 2024. Hospitals that currently report the ''JG'' modifier may choose to continue to use it in CY 2024 or choose to transition to use of the ''TB'' modifier sooner, provided all hospitals are using the ''TB'' modifier by January 1, 2025.

7. High-Cost/Low-Cost Threshold for Packaged Skin Substitutes

a. Background

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 74938), we unconditionally packaged skin substitute products into their associated surgical procedures as part of a broader policy to package all drugs and biologicals that function as supplies

when used in a surgical procedure. As part of the policy to package skin substitutes, we also finalized a methodology that divides the skin substitutes into a high-cost group and a low-cost group, to ensure adequate resource homogeneity among APC assignments for the skin substitute application procedures (78 FR 74933). In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66886), we stated that skin substitutes are best characterized as either surgical supplies or devices because of their required surgical application and because they share significant clinical similarity with other surgical devices and supplies.

Skin substitutes assigned to the high-cost group are described by HCPCS codes 15271 through 15278. Skin substitutes assigned to the low-cost group are described by HCPCS codes C5271 through C5278. Geometric mean costs for the various procedures are calculated using only claims for the skin substitutes that are assigned to each group. Specifically, claims billed with HCPCS code 15271, 15273, 15275, or 15277 are used to calculate the geometric mean costs for procedures assigned to the high-cost group, and claims billed with HCPCS code C5271, C5273, C5275, or C5277 are used to calculate the geometric mean costs for procedures assigned to the low-cost group (78 FR 74935).

Each of the HCPCS codes described earlier are assigned to one of the following three skin procedure APCs according to the geometric mean cost for the code: APC 5053 (Level 3 Skin Procedures): HCPCS codes C5271, C5275, and C5277; APC 5054 (Level 4 Skin Procedures): HCPCS codes C5273, 15271, 15275, and 15277; or APC 5055 (Level 5 Skin Procedures): HCPCS code 15273. In CY 2023, the payment rate for APC 5053 (Level 3 Skin Procedures) was $580.95, the payment rate for APC 5054 (Level 4 Skin Procedures) was $1,725.86, and the payment rate for APC 5055 (Level 5 Skin Procedures) was $3,253.04. This information is also available in Addenda A and B of the CY 2023 final rule with comment period (87 FR 71748) (Addenda A and B are available on the CMS website: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

We have continued the high-cost/low-cost categories policy since CY 2014, and we proposed to continue it for CY 2024. Under the current policy, skin substitutes in the high-cost category are reported with the skin substitute application CPT codes, and skin substitutes in the low-cost category are reported with the analogous skin substitute HCPCS C-codes. For a discussion of the CY 2014 and CY 2015 methodologies for assigning skin substitutes to either the high-cost group or the low-cost group, we refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 74932 through 74935) and the CY 2015 OPPS/ASC final rule with comment period (79 FR 66882 through 66885).

For a discussion of the high-cost/low-cost methodology that was adopted in CY 2016 and has been in effect since then, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70434 and 70435). Beginning in CY 2016 and in subsequent years, we adopted a policy where we determined the high-cost/low-cost status for each skin substitute product based on either a product's geometric mean unit cost (MUC) exceeding the geometric MUC threshold or the product's per day cost (PDC) (the total units of a skin substitute multiplied by the mean unit cost and divided by the total number of days) exceeding the PDC threshold. We assigned each skin substitute that exceeded either the MUC threshold or the PDC threshold to the high-cost group. In addition, we assigned any skin substitute with a MUC or a PDC that did not exceed either the MUC threshold or the PDC threshold to the low-cost group (87 FR 71976).

However, some skin substitute manufacturers have raised concerns about significant fluctuation in both the MUC threshold and the PDC threshold from year to year using the methodology developed in CY 2016. The fluctuation in the thresholds may result in the reassignment of several skin substitutes from the high-cost group to the low-cost group, which, under current payment rates, can be a difference of over $1,000 in the payment amount for the same procedure. In addition, these interested parties were concerned that the inclusion of cost data from skin substitutes with pass-through payment status in the MUC and PDC calculations would artificially inflate the thresholds. Skin substitute interested parties requested that CMS consider alternatives to the current methodology used to calculate the MUC and PDC thresholds and whether it might be appropriate to establish a new cost group in between the low-cost group and the high-cost group to allow for assignment of moderately priced skin substitutes to a newly created middle group.

We share the goal of promoting payment stability for skin substitute products and their related procedures as price stability allows hospitals using such products to more easily anticipate future payments associated with these products. We have attempted to limit year-to-year shifts for skin substitute products between the high-cost and low-cost groups through multiple initiatives implemented since CY 2014, including: establishing separate skin substitute application procedure codes for low-cost skin substitutes (78 FR 74935); using a skin substitute's MUC calculated from outpatient hospital claims data instead of an average of ASP plus 6 percent as the primary methodology to assign products to the high-cost or low-cost group (79 FR 66883); and establishing the PDC threshold as an alternate methodology to assign a skin substitute to the high-cost group (80 FR 70434 through 70435).

To allow additional time to evaluate concerns and suggestions from interested parties about the volatility of the MUC and PDC thresholds, in the CY 2018 OPPS/ASC proposed rule (82 FR 33627), we proposed that a skin substitute that was assigned to the high-cost group for CY 2017 would be assigned to the high-cost group for CY 2018, even if it did not exceed the CY 2018 MUC or PDC thresholds. We finalized this policy in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59347). For more detailed information and discussion regarding the goals of this policy and the subsequent comment solicitations in CY 2019 and CY 2020 regarding possible alternative payment methodologies for graft skin substitute products, please refer to the CY 2018 OPPS/ASC final rule with comment period (82 FR 59347); the CY 2019 OPPS/ASC final rule with comment period (83 FR 58967 and 58968); and the CY 2020 OPPS/ASC final rule with comment period (84 FR 61328 through 61331).

b. Proposals for Packaged Skin Substitutes for CY 2024

For CY 2024, consistent with our policy since CY 2016, we proposed to continue to determine the high-cost/low-cost status for each skin substitute product based on either a product's geometric MUC exceeding the geometric MUC threshold or the product's PDC (the total units of a skin substitute multiplied by the MUC and divided by the total number of days) exceeding the PDC threshold. Consistent with the methodology as established in the CY 2014 OPPS/ASC through CY 2018 OPPS/ASC final rules with comment period, we analyzed CY 2022 claims data to calculate the MUC threshold (a weighted average of all skin substitutes' MUCs) and the PDC threshold (a weighted average of all skin substitutes'

PDCs). The proposed CY 2024 MUC threshold was $47 per cm² (rounded to the nearest $1) and the proposed CY 2024 PDC threshold was $817 (rounded to the nearest $1). Also, the availability of a HCPCS code for a particular human cell, tissue, or cellular or tissue-based product (HCT/P) does not mean that that product is appropriately regulated solely under section 361 of the PHS Act and the FDA regulations in 21 CFR part 1271. Manufacturers of HCT/Ps should consult with the FDA Tissue Reference Group (TRG) or obtain a determination through a Request for Designation (RFD) on whether their HCT/Ps are appropriately regulated solely under section 361 of the PHS Act and the regulations in 21 CFR part 1271.

For CY 2024, as we did for CY 2023, we proposed to assign each skin substitute that exceeds either the MUC threshold or the PDC threshold to the high-cost group. In addition, we proposed to assign any skin substitute that does not exceed either the MUC threshold or the PDC threshold to the low-cost group except that we proposed that any skin substitute product that was assigned to the high-cost group in CY 2023 would be assigned to the high-cost group for CY 2024, regardless of whether it exceeds or falls below the CY 2024 MUC or PDC threshold. This policy was established in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59346 through 59348).

For CY 2024, we proposed to continue to assign skin substitutes with pass-through payment status to the high-cost category. We proposed to assign skin substitutes with pricing information but without claims data to calculate a geometric MUC or PDC to either the high-cost or low-cost category based on the product's ASP plus 6 percent payment rate as compared to the MUC threshold. If ASP is not available, we proposed to use WAC plus 3 percent to assign a product to either the high-cost or low-cost category. Finally, if neither ASP nor WAC is available, we proposed to use 95 percent of AWP to assign a skin substitute to either the high-cost or low-cost category. We proposed to continue to use WAC plus 3 percent instead of WAC plus 6 percent to conform to our proposed policy described in section V.B.2.b of the CY 2024 OPPS/ASC proposed rule to establish a payment rate of WAC plus 3 percent for separately payable drugs and biologicals that do not have ASP data available. We proposed that any skin substitute product that is assigned a code in the HCPCS A2XXX series would be assigned to the high-cost skin substitute group including new products without pricing information. New skin substitutes without pricing information that are not assigned a code in the HCPCS A2XXX series would be assigned to the low-cost category until pricing information is available to compare to the CY 2024 MUC and PDC thresholds. For a discussion of our existing policy under which we assign skin substitutes without pricing information that are not assigned a code in the HCPCS A2XXX series to the low-cost category until pricing information is available, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70436).

Comment: The HOP Panel recommended, and several commenters supported, ending the packaging of the graft skin substitute administration add-on codes (CPT codes 15272, 15274, 15276, and 15278; HCPCS codes C5272, C5274, C5276, and C5278). The HOP Panel and the commenters requested that these codes be assigned to APCs that reflect the estimated costs of these service codes. Commenters claim that packaging the graft skin substitute administration add-on codes eliminates the variation in payment for wound care treatments based on the size of the wound. They assert that providers are discouraged from treating wounds between 26 and 99 cm² and over 100 cm² in the outpatient hospital setting because of the financial losses they experience to provide such care. Commenters believe that packaging graft skin substitute administration add-on codes disrupts the methodology of how the American Medical Association (AMA), the organization that manages CPT service codes, intended graft skin substitute procedures to be paid. The CPT codes describe the actual amount of the graft skin substitute product that is used for an individual service when the amount of product used is 25 cm² or more. Commenters request that providers receive additive payment for the actual amount of skin substitute product used for the individual service as described by both the procedure code and the associated add-on code.

Response: We do not agree with the HOP Panel or the commenters that we should pay separately for graft skin substitute add-on codes under the OPPS. The OPPS is a prospective payment system and not a fee-for-service payment system. That means that we generally attempt to make one payment for all of the services billed with the primary medical procedure, including add-on procedures such as the ones described by CPT codes 15272, 15274, 15276, and 15278, and HCPCS codes C5272, C5274, C5276, and C5278.

More specifically, we calculate the OPPS payment rate by first calculating the geometric mean cost of the procedure. This calculation includes claims for individual services that used a lower level of resources and claims for individual services that used a higher level of resources. The resulting geometric mean cost will reflect the median service cost for a given medical procedure. Next, we group the medical procedure with other medical procedures with clinical and resource similarity in an APC and calculate the geometric mean of these related procedures to generate a base payment rate for all procedures assigned to the APC. Skin substitutes are surgical supplies and are packaged into the cost of the associated procedure. The application of graft skin substitutes cannot occur unless a graft skin substitute is used. So, the cost of the product will be reflected in the overall cost of the application procedure.

A prospective payment system like the OPPS is designed to pay providers the median cost of the primary service they provide, and such a system encourages efficiencies and cost-savings in the administration of health care. However, a prospective payment system is not intended to discourage providers from rendering medically necessary care to patients. For example, it is possible that a provider could experience a financial loss when they perform a service where a patient receives 85 cm² of a graft skin substitute product, but that same provider could see a financial gain when the next patient receives a skin graft where only 10 cm² of product is used. Paying separately for add-on codes for the administration of graft skin substitutes in a prospective payment system defeats the goals of such a payment system. Therefore, we will continue to package the add-on codes for the administration of graft skin substitutes in the OPPS to encourage cost-savings and efficiencies with wound care treatment. If providers are paid at cost or nearly at cost for each individual service they render, there is no incentive for them to control costs. Add-on codes for the administration of graft skin substitutes should be packaged with the primary medical service to be able to establish a median payment rate that gives providers incentives to keep their costs in line with typical providers throughout the Medicare program. The need for cost efficiencies in the application of graft skin substitutes to treat wounds is no different than need for cost efficiencies in other procedures administered in the outpatient hospital setting. Therefore, we believe that add-on codes, including the add-on codes for the administration

of graft skin substitutes, should remain packaged to maintain the integrity of the OPPS.

Comment: The HOP Panel recommended, and several commenters supported, ensuring that the payment rate for graft skin substitute procedures be the same no matter where on the body the graft skin substitute product is applied to the patient. There are four graft skin substitute application procedures for high-cost skin substitute products (CPT codes 15271, 15273, 15275, and 15277) and a similar four graft skin substitute application procedures for low-cost skin substitute products (HCPCS codes C5271, C5273, C5275, and C5277). Commenters claim that the cost to apply graft skin substitute products does not depend on the location of the wound because the same amount of product is used on the wound and the same clinical resources are used to treat the wound independent of the location of the wound.

Other commenters made a similar request, asking that CPT code 15277 (Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area greater than or equal to 100 sq cm; first 100 sq cm wound surface area, or 1 percent of body area of infants and children) that is currently assigned to APC 5054 (Level 4 Skin Procedures) be reassigned to APC 5055 (Level 5 Skin Procedures). That would mean that the two graft skin substitute application procedures for the application of high-cost skin substitute products for wounds greater than 100 cm^2 (CPT code 15273 and 15277) would be in the same APC.

Response: The reason there are four CPT codes describing graft skin substitute application services is that there are different CPT codes for applying graft skin substitutes for wounds up to 100 cm^2 and for wounds that are greater than 100 cm^2; and there are different CPT codes for applying graft skin substitutes to the trunk, arms, and legs as compared to the face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, fingers, and toes. We appreciate commenters' concerns and note that current codes describing the application of high-cost graft skin substitutes for wounds less than 100 cm^2 (CPT codes 15271 and 15275) have been assigned to the same APC (5054), and the current codes describing the application of low-cost graft skin substitutes for wounds less than 100 cm^2 (HCPCS codes C5271 and C5275) have been assigned to the same APC (5053). Because they are currently included in the same APC, the OPPS payment for them is the same; and this payment policy is consistent with the recommendation from the HOP Panel and other commenters. This means for the application of graft skin substitute products up to 100 cm^2, the location where the graft skin substitute is applied does not affect the payment rate for the service. We note that the code describing the application of high-cost products for wounds that are greater than 100 cm^2 on the trunk, arms, and legs (CPT code 15273) has been assigned to a higher-paying APC (APC 5055) than the APC assignment for the code describing the application of high-cost graft skin substitute products for wounds greater than 100 cm^2 on the face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hand, feet, fingers, and toes (CPT code 15277), which is assigned to APC 5054. Likewise, the code describing the application of low-cost products for wounds that are greater than 100 cm^2 on the trunk, arms, and legs (HCPCS code C5273) has been assigned to a higher-paying APC (APC 5054) than the code for the application of low-cost graft skin substitute products for wounds greater than 100 cm^2 on the face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hand, feet, fingers, and toes (HCPCS code C5277), which is assigned to APC 5054. The differences in costs that have determined APC assignments for these services for wounds greater than 100 cm^2 have been supported by historical cost data. We also note that none of these service codes are in violation of the 2 times rule, which requires that the geometric mean cost of significant items and services within an APC group to be no more than two-times the geometric mean cost of the lowest geometric mean cost for a significant item or service within the same APC group.

Comment: The HOP Panel recommended, and several commenters supported, having us realign both the high-cost and low-cost application procedure codes to potentially higher-paying APC groups that reflect the current average sales prices of graft skin substitute products as manufacturers now are required to submit average sales prices for graft skin substitute products. Commenters believe combining ASP prices for graft skin substitutes and the cost of the graft skin substitute application procedures would better reflect the costs of those procedures than our current methodology of using cost data from claims to assign application procedures to APCs. Commenters believe that the product cost information that is packaged into the graft skin substitute application procedures is lower than the ASP price for graft skin substitute products and leads to the graft skin substitute application procedures being assigned APCs with lower payment rates than the actual cost of the procedures. Commenters feel that this approach also may provide more cost stability to the APC assignments for the graft skin substitute application procedures.

Response: We disagree with the commenters that using ASP pricing instead of using claims cost data would be a preferrable method for estimating the graft skin substitute product cost of graft skin substitute application procedures. It is unclear from the commenters' suggestion how the product cost of the graft skin substitute would be calculated if not using the charges reported by providers. Presumably, their approach would involve extracting the units of graft skin substitute product used on a particular packaged service and then multiplying by an ASP on file to revise the cost of packaged procedure to reflect the ASP price of the graft skin substitute product units. We do not believe this is a feasible approach for CY 2024, and it appears to be a different approach to pricing one group of packaged supplies as compared to how all other packaged supplies are priced in the OPPS. We normally use a provider's reported charges for supplies and use the appropriate cost-to-charge ratio to estimate the contribution of the supply cost to the overall cost of the procedure. However, we remain open to new payment methodologies. We welcome feedback from interested parties in future rulemaking about how this payment approach could work and why it would improve the pricing of graft skin substitute application procedures.

Comment: Two commenters asked that we eliminate the high-cost and low-cost skin substitute groups for graft skin substitute products. Instead, the commenter requested that we no longer policy package skin substitute products in the OPPS. The commenter suggested we should pay for graft skin substitutes separate from the application procedure based on their ASP plus 6 percent price where available.

Response: A substantial portion of the cost of a skin substitute graft application procedure is the graft skin substitute product itself, and the cost of the skin substitute graft products is reflected in the cost of the overall procedure. Packaging the cost of graft skin substitute products into the affiliated procedures leads to cost savings and efficiencies in the use of graft skin substitute products. Providers have the opportunity to assess the value of products of varying costs. The payment

rates for the application procedures for graft skin substitute products reflect the decisions of providers across the United States between the costs and benefits of all available products and should limit the use of the highest-cost graft skin substitute products over lower-cost products unless the highest-cost products are found to be clinically superior. Packaging of graft skin substitute products helps to reduce costs for graft skin substitute procedures and allows more Medicare resources to be used for other categories of medical services.

Comment: The HOP Panel recommended, and several commenters supported, that all new graft skin substitute products be assigned to the low-cost group whether they have a Q-code or an A-code until cost data become available for the product. Commenters believe it is not appropriate that products assigned Q-codes are assigned to the low-cost group while products assigned A-codes are assigned to the high-cost group. Commenters note that A-codes are being assigned to graft skin substitute products that have FDA 510(k) clearance but are not synthetic products, which conflicts with the expectation that only graft skin substitute products that would have been described by the now-deleted HCPCS code C1849 (Skin substitute, synthetic, resorbable, per square centimeter) be assigned to the high-cost group. More broadly, commenters believed that no category of graft skin substitute products should be assigned to the high-cost group until there is cost data supporting that assignment.

Response: We appreciate the concerns of the commenters. However, we decided on an approach that would ensure that any graft skin substitute product that could potentially have been described by deleted HCPCS code C1849 be included in the high-cost group. As explained in the CY 2023 OPPS final rule (87 FR 71980 and 71981), we wanted to ensure that graft skin substitute products that were described by HCPCS code C1849 or could potentially be described by HCPCS code C1849 would be granted time to develop the cost data necessary to allow us to determine if the product should stay in the high-cost group, which provides stability for the payment of these graft skin substitute products. We wanted to avoid having products with less than two years of claims data that were originally in the high-cost group be reassigned to the low-cost group simply because of a lack of available data.

Also, as discussed in the CY 2023 OPPS final rule (87 FR 71981), the current categorization of skin substitutes as either synthetic or non-synthetic is not mutually exclusive given the expansion of skin substitute products that may contain both biological and synthetic elements. Having products with both biological and synthetic elements leads to difficulty defining which of the products assigned to the A2XXX series would be considered ''synthetic'' and described by HCPCS code C1849. Therefore, for CY 2023, we finalized a policy, which will continue for CY 2024, to assign to the high-cost group any skin substitute product that is assigned a code in the HCPCS A2XXX series including new products without pricing information. This policy gives the broadest definition of products that could have been described by HCPCS code C1849 and ensures that none of those graft skin substitute products would be assigned to the low-cost group until we receive cost data for them.

Comment: The HOP Panel recommended, and several commenters supported, our current policy not to assign graft skin substitute products that are not in sheet form (*e.g.,* gel, powder, ointment, foam, liquid, or injected) to any APC group, because these products cannot be reported with the graft skin substitute application codes of CPT codes 15271 through 15278 (the high-cost group) or with HCPCS codes C5271 through C5278 (the low-cost group). Commenters note that skin substitutes that are not in sheet form are used primarily for clinic visits and the debridement of chronic wounds. Also, according to the commenters, the use of skin substitutes that are not in sheet form does not conform to the AMA's directions for the application of skin substitute products.

Response: We appreciate the HOP Panel's and the commenters' support of our policy.

Comment: One commenter disagreed with the HOP Panel recommendation not to assign graft skin substitute products that are not in sheet form (*e.g.,* gel, powder, ointment, foam, liquid, or injected) to any APC group. The commenter understands that current coding guidelines for CPT codes 15271 through 15278 precludes products that are not in sheet form from being billed with these CPT codes. However, the commenter anticipates that in the future procedure codes for the application of non-sheet products will be created; and the commenter thinks it is best for us to prepare for the establishment of these new procedure codes.

Response: We appreciate the views of the commenter, but we did not make any proposals related to payment for application of non-sheet skin substitute products in this year's OPPS proposed rule. We may consider this topic for future rulemaking if CPT or HCPCS codes are established for the application of non-sheet skin substitute products.

Comment: Several commenters supported our current skin substitute payment policy to assign graft skin substitute products to either a high-cost or a low-cost group based on the product's cost. Likewise, commenters also supported our policy of keeping graft skin substitute products in the high-cost group once the cost of the product exceeds either the MUC or the PDC threshold for at least one year even if in future years the cost of the product is less than either the MUC or PDC threshold.

Response: We appreciate the commenters' support of our policies.

Comment: Manufacturers of two products that are not traditional graft skin substitute products requested that their products be assigned to either of the high-cost skin or low-cost skin substitute groups based on the cost of their products. One product is HCPCS code A2014 (Omeza collagen matrix, per 100 mg) that is an amorphous solid, which, according to its manufacturer, Omeza, is used to treat wounds similar to the wounds treated by graft skin substitute products. The second product is HCPCS code A2025 (Miro3d, per cubic centimeter) that is a dry, thick sheet of uncompressed decellularized porcine liver that has enough thickness for its base unit to be a cubic centimeter. According to its manufacturer, Reprise Biomedical, Miro3d must be rehydrated before being applied.

Response: We do not believe either HCPCS code A2014 (Omeza collagen matrix, per 100 mg) or HCPCS code A2025 (Miro3d, per cubic centimeter) should be assigned to either the high-cost or low-cost group. Regarding Omeza collagen matrix, an amorphous solid is not a graft skin substitute product even if the product forms a sheet-like layer after application. Therefore, we cannot assign the product to either the high-cost skin or the low-cost skin substitute group. For Miro3d, normally a product with a base unit of cubic centimeter is a liquid product. This is the first product with a base unit of a cubic centimeter that we are aware of to be in solid form. We request further information regarding this product to help us to determine whether Miro3d should be assigned to the high-cost or low-cost skin substitute group in a future OPPS quarterly update, including whether the product could be reported with either CPT codes 15271

through 15278 or HCPCS codes C5271 through C5278.

Comment: The manufacturer of the product described by HCPCS code Q4278 (Epieffect, per square centimeter) requested that the product be assigned to the high-cost skin substitute group based on its ASP as reported in a pricing compendium.

Response: We request that the manufacturer provide us with the pricing information that they have cited regarding HCPCS code Q4278. Once we receive this information, we will determine if HCPCS code Q4278 should be assigned to the high-cost group.

Comment: The manufacturer of the products described by HCPCS codes Q4122 (Dermacell, dermacell awm or dermacell awm porous, per square centimeter) and Q4150 (Allowrap dds or dry, per square centimeter) requested that these graft skin substitute products continue to be assigned to the high-cost skin substitute group for CY 2024.

Response: Based on their cost data and our policies, both HCPCS codes Q4122 (Dermacell, dermacell awm or dermacell awm porous, per square centimeter) and Q4150 (Allowrap dds or dry, per square centimeter) will remain in the high-cost group for CY 2024.

After consideration of the public comments we received, we are adopting our proposals without modification. Our final policies are to:

- Continue assign skin substitutes with pass-through payment status to the high-cost category.
- Assign skin substitutes with pricing information but without claims data to calculate a geometric MUC or PDC to either the high-cost or low-cost category based on the product's ASP plus 6 percent payment rate as compared to the MUC threshold. If ASP is not available for the product, we will use WAC plus 3 percent to assign a product to either the high-cost or low-cost category. Finally, if neither ASP nor WAC is available, we will use 95 percent of AWP to assign a skin substitute to either the high-cost or low-cost category.
- Continue to use WAC plus 3 percent instead of WAC plus 6 percent to conform to our policy described in section V.B.2.b of this final rule with comment period to establish a payment rate of WAC plus 3 percent for separately payable drugs and biologicals that do not have ASP data available.
- Assign any skin substitute product that is assigned a code in the HCPCS A2XXX series to the high-cost skin substitute group, including new products without pricing information. New skin substitutes without pricing information that are not assigned a code in the HCPCS A2XXX series would be assigned to the low-cost category until pricing information is available to compare to the CY 2024 MUC and PDC thresholds.

Finally, we have updated the MUC and PDC thresholds for CY 2024. The final MUC threshold will be $47 per cm^2 (rounded to the nearest $1) and the final PDC threshold will be $807 (rounded to the nearest $1). Table 95 includes the final CY 2024 cost category assignment for each skin substitute product.

BILLING CODE 4150–28–C

8. Radioisotopes Derived From Non-Highly Enriched Uranium (non-HEU) Sources

Radioisotopes are widely used in modern medical imaging, particularly for cardiac imaging and predominantly for the Medicare population. Some of the Technetium-99 (Tc-99m), the radioisotope used in the majority of such diagnostic imaging services, has been produced in legacy reactors outside of the United States using highly enriched uranium (HEU).

The United States wanted to eliminate domestic reliance on these reactors and has been promoting the conversion of all medical radioisotope production to non-HEU sources. Alternative methods for producing Tc-99m without HEU are technologically and economically viable, but it was expected that this change in the supply source for the radioisotope used for modern medical imaging would introduce new costs into the payment system that were not accounted for in the historical claims data.

Therefore, beginning in CY 2013, we finalized a policy to provide an additional payment of $10 for the marginal cost for radioisotopes produced by non-HEU sources (77 FR 68323). Under this policy, hospitals report HCPCS code Q9969 (Tc-99m from non-highly enriched uranium source, full cost recovery add-on per study dose) once per dose along with any diagnostic scan or scans furnished using Tc-99m as long as the Tc-99m doses used can be certified by the hospital to be at least 95 percent derived from non-HEU sources (77 FR 68323).

We stated in the CY 2013 OPPS/ASC final rule with comment period (77 FR 68321) that our expectation was that this additional payment would be needed for the duration of the industry's conversion to alternative methods of producing Tc-99m without HEU. We also stated that we would reassess, and propose, if necessary, on an annual basis whether such an adjustment continued to be necessary and whether any changes to the adjustment were warranted (77 FR 68321). A 2016 report from the National Academies of Sciences, Engineering, and Medicine anticipated the conversion of Tc-99m production from non-HEU sources would be completed at the end of 2019.[160] However, the Secretary of Energy issued a certification effective January 2, 2020, stating that there continued to be an insufficient global supply of molybdenum-99 (Mo-99), which is the source of Tc-99m, produced without the use of HEU, available to satisfy the domestic U.S. market (85 FR 3362). The January 2, 2020, certification was to remain in effect for up to 2 years.

The Secretary of Energy issued a new certification regarding the supply of non-HEU- sourced Mo-99 effective January 2, 2022 (86 FR 73270). This certification stated that there was a sufficient global supply of Mo-99 produced without the use of HEU available to meet the needs of patients in the United States. The Department of Energy also expected that the last HEU reactor that produces Mo-99 for medical providers in the United States would finish its conversion to a non-HEU reactor by December 31, 2022. In CY 2019, we stated that we would reassess the non-HEU incentive payment policy once conversion to non-HEU sources is closer to completion or has been completed (83 FR 58979). There is now a sufficient supply of non-HEU-sourced Mo-99 in the United States, and there is no available supply of HEU-sourced Mo-99 in the United States. In the CY 2023 OPPS/ASC final rule with comment period, we stated that we believed the conversion to non-HEU sources of Tc-99m had reached a point where it was necessary to reassess our policy of providing an additional payment of $10 for the marginal cost for radioisotopes produced by non-HEU sources (87 FR 71987).

In the OPPS, diagnostic radiopharmaceuticals are packaged into the cost of the associated diagnostic imaging procedure no matter the per day cost of the radiopharmaceutical. The cost of the radiopharmaceutical is included as a part of the cost of the diagnostic imaging procedure and is reported through Medicare claims data. Medicare claims data used to set payment rates under the OPPS generally is from 2 years prior to the payment year.

As we explained in the CY 2023 OPPS/ASC final rule with comment period (87 FR 71987), the claims data we would use to set payment rates for

[160] National Academies of Sciences, Engineering, and Medicine. 2016. Molybdenum-99 for Medical Imaging. Washington, DC: The National Academies Press. Available at: *https://doi.org/10.17226/23563.*

CY 2024 (likely CY 2022 claims data) contain claims for diagnostic radiopharmaceuticals that reflect both HEU-sourced Tc-99m and non-HEU-sourced Tc99m, rather than radiopharmaceuticals sourced solely from non-HEU Tc-99m. The cost of HEU-sourced Tc-99m is substantially lower than the cost of non-HEU-sourced Tc-99m. Therefore, we explained that providers who use radiopharmaceuticals in CY 2024 that contain only non-HEU-sourced Tc-99m might not receive a payment that is reflective of the radiopharmaceutical's current cost without the add-on payment. We believed that extending the additional $10 add-on payment described by HCPCS code Q9969 for non-HEU-sourced Tc-99m through the end of CY 2024 would ensure adequate payment for non-HEU-sourced Tc-99m. Starting in CY 2025, we believed the Medicare claims data utilized to set payment rates (likely CY 2023 claims data) would only include claims for diagnostic radiopharmaceuticals that utilized non-HEU-sourced Tc-99m, meaning the data would reflect the full cost of the Tc-99m diagnostic radiopharmaceuticals that would be used by providers in CY 2025. As a result, we believed there would no longer be a need for the additional $10 add-on payment for CY 2025 or future years.

This policy was based on the Secretary of Energy's certification that the last HEU reactor that produces Mo-99 for medical providers in the United States would finish its conversion to a non-HEU reactor by December 31, 2022, and that all Tc-99m used for radiopharmaceuticals in 2023 would be produced from non-HEU sources. However, we understand that the conversion of the last HEU reactor that produces Tc-99m to a non-HEU reactor did not occur until March 2023, so it is possible that some claims for diagnostic radiopharmaceuticals in CY 2023 would report the cost of HEU-sourced Tc-99m. This means that in CY 2025, as in CY 2024, there is the possibility that the payment rate for procedures using diagnostic radiopharmaceuticals could be lower than the costs providers will face for these procedures because providers will only have access to non-HEU-sourced Tc-99m.

We believe that extending the additional $10 add-on payment described by HCPCS code Q9969 for non-HEU-sourced Tc-99m through the end of CY 2025 rather than the end of CY 2024, as we previously finalized, would ensure adequate payment for non-HEU-sourced Tc-99m now that the conversion from HEU-sourced Tc-99m to non-HEU-sourced Tc-99m is complete. Starting in CY 2026, the Medicare claims data utilized to set payment rates (likely CY 2024 claims data) will only include claims for diagnostic radiopharmaceuticals that utilized non-HEU-sourced Tc-99m, which means the data will more closely reflect the cost of the Tc-99m diagnostic radiopharmaceuticals that will be used by providers in CY 2026. As a result, there will no longer be a need for the additional $10 add-on payment for CY 2026 or future years.

We proposed to continue the additional $10 payment through December 31, 2025, as, beginning in CY 2026, the Medicare claims data used to set payment rates will reflect the full cost of non-HEU-sourced Tc-99m.

Comment: Multiple commenters supported making the additional $10 payment permanent rather than ending it after December 31, 2025. Some of the commenters wanted a permanent $10 payment to help encourage the domestic production of Tc-99m starting in CY 2026. One of the commenters suggested adding a new claim edit to require providers to identify whether the Tc-99m radiopharmaceutical product they use is sourced from non-HEU or HEU reactors to confirm the transition from HEU-sourced to non-HEU-sourced Tc-99m products has been completed. Multiple commenters also requested that the $10 additional payment be increased to an amount that reflects what the payment would have been if it was adjusted annually by the hospital market basket since it was implemented in 2013. The commenters also requested that the copayment amount for HCPCS code Q9969 be eliminated because they are concerned that the administrative burden of handling the beneficiary copayment is discouraging providers from reporting the $10 additional payment.

Response: As stated in the CY 2023 OPPS final rule, the purpose of the $10 additional payment is limited to mitigating any adverse impact of transitioning to non-HEU sources (87 FR 71986). As the transition is now complete, we do not think it is necessary to increase the amount of the adjustment for its final two years. Once the transition is complete and payment rates reported for Tc-99m radiopharmaceuticals no longer include costs from HEU-sourced Tc-99m, the original purpose of the $10 additional payment to encourage the use of non-HEU-sourced Tc-99m will be achieved. We will take the comments regarding using the $10 additional payment to encourage the domestic production of Tc-99m into consideration for future rulemaking.

We also disagree with the request to waive the copayment for HCPCS code Q9969 as we do not believe the administrative burden associated with collecting copayments in this situation is unique or significant to justify such an action. Providers regularly collect copayments for services paid under the OPPS, and we do not believe that collecting a copayment for the additional $10 payment is a significant added burden for providers. Likewise, we do not agree with the suggestion to require a claim edit to identify a radiopharmaceutical as non-HEU or HEU sourced. We believe such a requirement would likely increase the administrative burden on providers unnecessarily, because the adjustment will only be in place for two more years and very few claims will report Tc-99m radiopharmaceuticals that are HEU sourced.

Comment: Multiple commenters supported the portion of our proposal that would continue the $10 additional payment for non-HEU sourced Tc-99m radiopharmaceuticals through December 31, 2025.

Response: We appreciate the support of the commenters.

After consideration of the public comments we received, we are finalizing without modification our proposal to continue the additional $10 payment for CYs 2024 and 2025 to ensure providers receive sufficient payment for diagnostic radiopharmaceuticals containing Tc99m until such time as the full cost of non-HEU-sourced Tc-99m is reflected in the Medicare claims data. We also are finalizing without modification our proposal that the additional $10 payment will end after December 31, 2025, as, beginning with CY 2026, the Medicare claims data used to set payment rates will reflect the full cost of non-HEU-sourced Tc-99m.

C. Requirement in the Physician Fee Schedule CY 2024 Proposed Rule for HOPDs and ASCs To Report Discarded Amounts of Certain Single-Dose or Single-Use Package Drugs

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) (''the Infrastructure Act'') amended section 1847A of the Act to redesignate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The CY 2024 PFS proposed rule

includes proposals to operationalize section 90004 of the Infrastructure Act, including a proposal that impacts hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs). Similar to our CY 2023 notice in the OPPS/ASC proposed rule (87 FR 71988), we wanted to ensure interested parties were aware of these proposals and knew to refer to the Physician Fee Schedule (PFS) proposed rule for a full description of the proposed policy. Interested parties were asked to submit comments on any proposals related to implementation of section 90004 of the Infrastructure Act on the CY 2024 PFS proposed rule. We stated that public comments on these proposals would be addressed in the CY 2024 PFS final rule with comment period. We note that this same notice appeared in section XIII.D.3 of the proposed rule.

As explained in the CY 2024 OPPS/ASC proposed rule (88 FR 49759), because the CY 2024 PFS proposed rule discussed and proposed to codify certain billing requirements for HOPDs and ASCs, we wanted to ensure interested parties were aware of them and knew to refer to that rule for a full description of the proposed policy. Interested parties were asked to submit comments on this and any other proposals to implement section 90004 of the Infrastructure Act in response to the CY 2024 PFS proposed rule. We stated public comments on these proposals would be addressed in the CY 2024 PFS final rule.

We thank commenters for their feedback on the proposal. For final details on this policy, we refer readers to the CY 2024 PFS final rule.

VI. Estimate of OPPS Transitional Pass-Through Spending for Drugs, Biologicals, Radiopharmaceuticals, and Devices

A. Amount of Additional Payment and Limit on Aggregate Annual Adjustment

Section 1833(t)(6)(E) of the Act limits the total projected amount of transitional pass-through payment for drugs, biologicals, and categories of devices for a given year to an ''applicable percentage,'' currently not to exceed 2.0 percent of total program payments estimated to be made for all covered services under the OPPS furnished for that year. If we estimate before the beginning of the calendar year that the total amount of pass-through payments in that year would exceed the applicable percentage, section 1833(t)(6)(E)(iii) of the Act requires a uniform prospective reduction in the amount of each of the transitional pass-through payments made in that year to ensure that the limit is not exceeded. We estimate the pass-through spending to determine whether payments exceed the applicable percentage and the appropriate pro rata reduction to the conversion factor for the projected level of pass-through spending in the following year to ensure that total estimated pass-through spending for the prospective payment year is budget neutral, as required by section 1833(t)(6)(E) of the Act.

For devices, developing a proposed estimate of pass-through spending in CY 2024 entails estimating spending for two groups of items. The first group of items consists of device categories that are currently eligible for pass-through payment and that will continue to be eligible for pass-through payment in CY 2024. The CY 2008 OPPS/ASC final rule with comment period (72 FR 66778) describes the methodology we have used in previous years to develop the pass-through spending estimate for known device categories continuing into the applicable update year. The second group of items consists of devices that we know are newly eligible, or project may be newly eligible, for device pass-through payment in the remaining quarters of CY 2023 or beginning in CY 2024. The sum of the proposed CY 2024 pass-through spending estimates for these two groups of device categories equals the proposed total CY 2024 pass-through spending estimate for device categories with pass-through payment status. We determined the device pass-through estimated payments for each device category based on the amount of payment as required by section 1833(t)(6)(D)(ii) of the Act, and as outlined in previous rules, including the CY 2014 OPPS/ASC final rule with comment period (78 FR 75034 through 75036). We note that, beginning in CY 2010, the pass-through evaluation process and pass-through payment methodology for implantable biologicals newly approved for pass-through payment beginning on or after January 1, 2010, that are surgically inserted or implanted (through a surgical incision or a natural orifice) use the device pass-through process and payment methodology (74 FR 60476). As has been our past practice (76 FR 74335), in the proposed rule, we proposed to include an estimate of any implantable biologicals eligible for pass-through payment in our estimate of pass-through spending for devices. Similarly, we finalized a policy in CY 2015 that applications for pass-through payment for skin substitutes and similar products be evaluated using the medical device pass-through process and payment methodology (76 FR 66885 through 66888). Therefore, as we did beginning in CY 2015, for CY 2024, we also proposed to include an estimate of any skin substitutes and similar products in our estimate of pass-through spending for devices.

For drugs and biologicals eligible for pass-through payment, section 1833(t)(6)(D)(i) of the Act establishes the pass-through payment amount as the amount by which the amount authorized under section 1842(o) of the Act (or, if the drug or biological is covered under a competitive acquisition contract under section 1847B of the Act, an amount determined by the Secretary equal to the average price for the drug or biological for all competitive acquisition areas and year established under such section as calculated and adjusted by the Secretary) exceeds the portion of the otherwise applicable fee schedule amount that the Secretary determines is associated with the drug or biological. Consistent with current policy, we proposed to apply a rate of ASP plus 6 percent to most drugs and biologicals for CY 2024, and therefore our estimate of drug and biological pass-through payment for CY 2024 for this group of items was $100 million.

Payment for certain drugs, specifically diagnostic radiopharmaceuticals and contrast agents without pass-through payment status, is packaged into payment for the associated procedures, and these products are not separately paid. In addition, we policy-package all non-pass-through drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure, drugs and biologicals that function as supplies when used in a surgical procedure, drugs and biologicals used for anesthesia, and other categories of drugs and biologicals, as discussed in section V.B.1.c of the CY 2024 OPPS/ASC proposed rule (88 FR 49678). Consistent with current policy, we proposed that all of these policy-packaged drugs and biologicals with pass-through payment status will be paid at ASP+6 percent, like other pass-through drugs and biologicals, for CY 2024, less the policy-packaged drug APC offset amount described below. Our estimate of pass-through payment for policy-packaged drugs and biologicals with pass-through payment status approved prior to CY 2024 is not $0. This is because the pass-through payment amount and the fee schedule amount associated with the drug or biological will not be the same, unlike for separately payable drugs and biologicals. In section V.A.6 of the CY

2024 OPPS/ASC proposed rule (88 FR 49675 and 49676), we discuss our policy to determine if the costs of certain policy-packaged drugs or biologicals are already packaged into the existing APC structure. If we determine that a policy-packaged drug or biological approved for pass-through payment resembles predecessor drugs or biologicals already included in the costs of the APCs that are associated with the drug receiving pass-through payment, we proposed to offset the amount of pass-through payment for the policy-packaged drug or biological. For these drugs or biologicals, the APC offset amount is the portion of the APC payment for the specific procedure performed with the pass-through drug or biological, which we refer to as the policy-packaged drug APC offset amount. Consistent with current policy, if we determine that an offset is appropriate for a specific policy-packaged drug or biological receiving pass-through payment, we proposed to reduce our estimate of pass-through payments for these drugs or biologicals by the APC offset amount.

Similar to pass-through spending estimates for devices, the first group of drugs and biologicals requiring a pass-through payment estimate consists of those products that were recently made eligible for pass-through payment and that will continue to be eligible for pass-through payment in CY 2024. The second group contains drugs and biologicals that we know are newly eligible, or project will be newly eligible, in the remaining quarters of CY 2023 or beginning in CY 2024. The sum of the CY 2024 pass-through spending estimates for these two groups of drugs and biologicals equals the total CY 2024 pass-through spending estimate for drugs and biologicals with pass-through payment status.

B. Estimate of Pass-Through Spending for CY 2024

For CY 2024, we proposed to set the applicable pass-through payment percentage limit at 2.0 percent of the total projected OPPS payments for CY 2024, consistent with section 1833(t)(6)(E)(ii)(II) of the Act and our OPPS policy from CY 2004 through CY 2023 (87 FR 71989). The pass-through payment percentage limit is calculated using pass-through spending estimates for devices and for drugs and biologicals.

For the first group of devices, consisting of device categories that are currently eligible for pass-through payment and will continue to be eligible for pass-through payment in CY 2024, there are 7 active categories for CY 2024. The active categories are described by HCPCS codes C1747, C1761, C1826, C1827, C1831, C1832, and C1833. Based on the information from the device manufacturers, we estimated that HCPCS code C1747 will cost $37.5 million in pass-through expenditures in CY 2024, HCPCS code C1761 will cost $19.6 million in pass-through expenditures in CY 2024, HCPCS code C1826 will cost $7.4 million in pass-through expenditures in CY 2024, HCPCS code C1827 will cost $28.8 million in pass-through expenditures in CY 2024, HCPCS code C1831 will cost $163,436 in pass-through expenditures in CY 2024, HCPCS code C1832 will cost $37,603 in pass-through expenditures in CY 2024, and HCPCS code C1833 will cost $281,238 in pass-through expenditures in CY 2024. Therefore, we proposed an estimate for the first group of devices of $93.7 million.

We did not receive any public comments on our proposal. Using our methodology for this final rule with comment period, we estimate that HCPCS code C1747 will cost $37.5 million in pass-through expenditures in CY 2024, HCPCS code C1761 will cost $19.4 million in pass-through expenditures in CY 2024, HCPCS code C1826 will cost $7.4 million in pass-through expenditures in CY 2024, HCPCS code C1827 will cost $28.8 million in pass-through expenditures in CY 2024, HCPCS code C1831 will cost $266,665 in pass-through expenditures in CY 2024, HCPCS code C1832 will cost $44,830 in pass-through expenditures in CY 2024, and HCPCS code C1833 will cost $278,751 in pass-through expenditures in CY 2024. Therefore, we have finalized the CY 2024 spending estimate for this first group of devices of approximately $93.7 million.

In estimating our proposed CY 2024 pass-through spending for device categories in the second group, we included the following: (1) device categories that we assumed at the time of the development of the proposed rule would be newly eligible for pass-through payment in CY 2024; (2) additional device categories that we estimated could be approved for pass-through status after the development of the CY 2024 OPPS/ASC proposed rule (88 FR 49696) and before January 1, 2024; and (3) contingent projections for new device categories established in the second through fourth quarters of CY 2024. For CY 2024, we proposed to use the general methodology described in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66778), while also taking into account recent OPPS experience in approving new pass-through device categories. For the CY 2024 OPPS/ASC proposed rule (88 FR 49696), the proposed estimate of CY 2024 pass-through spending for this second group of device categories was $40.4 million.

We did not receive any public comments on the proposal. As stated earlier in this final rule with comment period, we are approving four devices for pass-through payment status in the CY 2024 rulemaking cycle: Ambu® aScope™ 5 Broncho HD; FLEX Vessel Prep™ System; CavaClear Inferior Vena Cava (IVC) Filter Removal Laser Sheath; and CERAMENT® G. The manufacturers of these systems provided utilization and cost data that indicate the amount of spending for the devices would be approximately $14.4 million for Ambu® aScope™ 5 Broncho HD; $6.0 million for FLEX Vessel Prep™ System; $5.2 million for CavaClear Inferior Vena Cava (IVC) Filter Removal Laser Sheath; and $8.2 million for CERAMENT® G. Therefore, we are finalizing an estimate of $33.8 million for this second group of devices for CY 2024.

To estimate proposed CY 2024 pass-through spending for drugs and biologicals in the first group, specifically those drugs and biologicals recently made eligible for pass-through payment and continuing on pass-through payment status for at least one quarter in CY 2024, we proposed to use the CY 2022 Medicare hospital outpatient claims data regarding their utilization, information provided in their respective pass-through applications, other historical hospital claims data, pharmaceutical industry information, and clinical information regarding these drugs and biologicals to project the CY 2024 OPPS utilization of the products.

For the known drugs and biologicals (excluding policy-packaged diagnostic radiopharmaceuticals, contrast agents, drugs, biologicals, and radiopharmaceuticals that function as supplies when used in a diagnostic test or procedure, and drugs and biologicals that function as supplies when used in a surgical procedure) that will be continuing on pass-through payment status in CY 2024, we estimated the pass-through payment amount as the difference between the general payment rate of ASP+6 percent and the payment rate for non pass-through drugs and biologicals that would be separately paid. Because we proposed to utilize a payment rate of ASP plus 6 percent for most separately payable drugs and biologicals in the proposed rule, the proposed payment rate difference between the pass-through payment

amount and the non pass-through payment amount was $0 for this group of drugs.

We did not receive any comments on our proposal. Because payment for policy-packaged drugs and biologicals is packaged if the product is not paid separately due to its pass-through payment status, we proposed to include in the CY 2024 pass-through estimate the difference between payment for the policy-packaged drug or biological at ASP+6 percent (or WAC+6 percent, or 95 percent of AWP, if ASP or WAC information is not available) and the policy-packaged drug APC offset amount, if we determine that the policy-packaged drug or biological approved for pass-through payment resembles a predecessor drug or biological already included in the costs of the APCs that are associated with the drug receiving pass-through payment. For this first group of policy-packaged drugs and biologicals, we estimated a pass-through for CY 2024 spending of $90 million.

We did not receive any public comments on our proposal. Using our methodology for this final rule with comment period, we calculated the CY 2024 spending estimate for this first group of drugs and biologicals of approximately $90 million using a rate of ASP+6 percent, which remained unchanged from the proposed rule.

To estimate proposed CY 2024 pass-through spending for drugs and biologicals in the second group (that is, drugs and biologicals that we knew at the time of development of the CY 2024 OPPS/ASC proposed rule (88 FR 49696) were newly eligible or recently became eligible for pass-through payment in CY 2024, additional drugs and biologicals that we estimated could be approved for pass-through status subsequent to the development of the CY 2024 OPPS/ASC proposed rule (88 FR 49696) and before January 1, 2024, and projections for new drugs and biologicals that could be initially eligible for pass-through payment in the second through fourth quarters of CY 2024), we proposed to use utilization estimates from pass-through applicants, pharmaceutical industry data, clinical information, recent trends in the per unit ASPs of hospital outpatient drugs, and projected annual changes in service volume and intensity as our basis for making the CY 2024 pass-through payment estimate. We also proposed to consider the most recent OPPS experience in approving new pass-through drugs and biologicals. Using our proposed methodology for estimating CY 2024 pass-through payments for this second group of drugs, we calculated a proposed spending estimate for this second group of drugs and biologicals of approximately $10 million.

We did not receive any public comments on our proposal. Since the release of the CY 2024 OPPS/ASC proposed rule, we have identified two additional policy-packaged drugs in addition to the two policy-packaged drugs that had pass-through status when the proposed rule was released. Therefore, we have identified a total of four policy-packaged drugs that have pass-through status. Our original proposed estimate of $10 million of additional pass-through payments for the second group of drugs and biologicals did anticipate the approval of some of the additional policy-packaged drugs and biologicals with pass-through status, but not all of them. Therefore, for this final rule with comment period, we are revising our estimate of pass-through spending for the second group of drugs and biologicals to be $18.5 million.

We estimated for the CY 2024 OPPS/ASC proposed rule (88 FR 49696) that the amount of pass-through spending for the device categories and the drugs and biologicals that are continuing to receive pass-through payment in CY 2024 and those device categories, drugs, and biologicals that first become eligible for pass-through payment during CY 2024 would be approximately $234.1 million (approximately $134.1 million for device categories and approximately $100 million for drugs and biologicals) which represented 0.26 percent of total projected OPPS payments for CY 2024 (approximately $88.6 billion). Therefore, we estimated for the proposed rule that pass-through spending in CY 2024 would not amount to 2.0 percent of total projected OPPS CY 2024 program spending.

We estimate for this final rule with comment period that the amount of pass-through spending for the device categories and the drugs and biologicals that are continuing to receive pass-through payment in CY 2024 and the amount of pass-through spending for those device categories, drugs, and biologicals that first become eligible for pass-through payment during CY 2024 would be approximately $236 million (approximately $127.5 million for device categories and approximately $108.5 million for drugs and biologicals), which represents only 0.27 percent of total projected OPPS payments for CY 2024 (approximately $88.9 billion). Therefore, we estimate that pass-through spending in CY 2024 will not exceed the 2.0 percent of total projected OPPS CY 2024 program spending limit provided for in section 1833(t)(6)(E) of the Act.

VII. OPPS Payment for Hospital Outpatient Visits and Critical Care Services

For CY 2024, we proposed to continue our current clinic and emergency department (ED) hospital outpatient visits payment policies. For a description of these policies, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70448). We also proposed to continue our payment policy for critical care services for CY 2024. For a description of this policy, we refer readers to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70449), and for the history of this payment policy, we refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75043).

We did not receive any comments on our proposals to continue our current ED outpatient visits and critical care payment policies for CY 2024 and are finalizing our proposals without modification.

As we stated in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63663), the volume control method for clinic visits furnished by non-excepted off-campus provider-based departments (PBDs) applies for CY 2022 and subsequent years. More specifically, we finalized a policy to continue to utilize a PFS-equivalent payment rate for the hospital outpatient clinic visit service described by HCPCS code G0463 when it is furnished by these departments for CY 2022 and beyond. The PFS-equivalent rate for CY 2024 is 40 percent of the proposed OPPS payment. Under this policy, these departments will be paid approximately 40 percent of the OPPS rate for the clinic visit service in CY 2024.

The following is a summary of the comments we received and our responses to those comments.

Comment: We received several comments on our overall clinic visit payment policy. Many commenters continued to express the belief that this policy undermines Congressional intent and exceeds the agency's legal authority. As they have in previous years, commenters stated that the policy is based on flawed assumptions and urged CMS to eliminate it altogether. One of these commenters additionally requested that CMS immediately restore the higher payment rates for clinic visits furnished by excepted off-campus PBDs that existed before implementation of the clinic visit payment policy and promptly repay hospitals the difference between the amounts they would have received under those higher rates and

the amounts they were paid under the policy.

Response: We continue to believe that section 1833(t)(2)(F) of the Act gives the Secretary authority to develop a method for controlling unnecessary increases in the volume of covered OPD services, including a method that controls unnecessary volume increases by removing a payment differential that is driving a site-of-service decision, and as a result, is unnecessarily increasing service volume.[161] As we noted in the CY 2019 OPPS/ASC proposed rule (83 FR 37138 through 37143), ''[a] large source of growth in spending on services furnished in hospital outpatient departments (HOPDs) appears to be the result of the shift of services from (lower cost) physician offices to (higher cost) HOPDs.'' We continue to believe that these shifts in the sites of service are unnecessary if the beneficiary can safely receive the same services in a lower cost setting but instead receives care in a higher cost setting due to payment incentives. In most cases, the difference in payment is leading to unnecessary increases in the volume of covered outpatient department services, and we remain concerned that this shift in care setting increases beneficiary cost-sharing liability because Medicare payment rates for the same or similar services are generally higher in hospital outpatient departments than in physician offices. We continue to believe that our method addresses the concerns described in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59005).

Additionally, we note that this policy has been litigated. On July 17, 2020, the United States Court of Appeals for the District of Columbia Circuit (D.C. Circuit) ruled in our favor, holding that our regulation was a reasonable interpretation of the statutory authority to adopt a method to control for unnecessary increases in the volume of the relevant service. The appellees petitioned the United States Supreme Court for a writ of certiorari. On June 29, 2021, the Supreme Court denied the petition.

Comment: We received comments supporting CMS's efforts to continue implementing its method to control for unnecessary increases in the volume of outpatient services. These commenters asked that CMS continue to consider ways to expand the current site-neutral payment policies to other services and settings. Some of these commenters suggested that CMS apply the site-neutral payment policy to a list of 57 APCs for which MedPAC determined it would be reasonable and appropriate to align the OPPS and ASC payment rates with those set in the physician fee schedule (PFS).[162] Other commenters recommended that CMS consider expanding the site-neutral payment policy to all services provided by excepted, off-campus PBDs. Others suggested that the site-neutral policy be extended to on-campus PBDs, ASCs, and emergency departments.

Response: We appreciate the commenters' support and we will continue to monitor this policy and take commenters' suggestions into consideration for potential future rulemaking.

After consideration of the public comments, we are continuing the volume control method under which we utilize a PFS-equivalent payment rate for the hospital outpatient clinic visit service described by HCPCS code G0463 when it is furnished by excepted off-campus PBDs in CY 2024.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71748), we finalized a policy that excepted off-campus provider-based departments (PBDs) (departments that bill the modifier ''PO'' on claim lines) of rural Sole Community Hospitals (SCHs), as described under 42 CFR 412.92 and designated as rural for Medicare payment purposes, are exempt from the clinic visit payment policy that applies a Physician Fee Schedule-equivalent payment rate for the clinic visit service, as described by HCPCS code G0463, when provided at an off-campus PBD excepted from section 1833(t)(21) of the Act. For the full discussion of this policy, we refer readers to the CY 2023 OPPS/ASC final rule with comment period (87 FR 72047 through 72051). For CY 2024, we proposed to continue to exempt excepted off-campus PBDs of rural SCHs from the clinic visit payment policy. We stated that we will continue to monitor the effect of this change in Medicare payment policy, including on the volume of these types of OPD services.

The following is a summary of the comments we received and our responses to those comments.

Comment: All commenters supported our proposal to continue to exempt excepted off-campus PBDs of rural SCHs from the clinic visit payment policy for CY 2024. One commenter stated that the continuation of the exemption is an important step in maintaining access to care for a segment of the population that is underserved. This commenter additionally stated that the continuation will not only improve patient outcomes by allowing easily treatable conditions to be addressed in a timely manner but will also reduce total Medicare spending as these conditions will be treated in the most appropriate setting. Another commenter praised the continuation of the exemption as a recognition on CMS's part of the important role rural providers play in the delivery of care and the financial pressures they face.

Response: We thank the commenters for their support.

Comment: Several of these commenters requested that CMS consider expanding the exemption to excepted off-campus PBDs of rural hospitals with fewer than 100 beds, Medicare Dependent Hospitals (MDHs), and Low Volume Hospitals in a future rulemaking cycle, arguing that the same reasoning that led CMS to propose to exempt SCHs also applies to these hospitals. One commenter noted that MDHs have a larger percentage of inpatient days or discharges for Medicare patients and that they are therefore more vulnerable to inadequate Medicare payments than other hospitals because they are less able to cross-subsidize inadequate Medicare payments with more generous payments from private payers. The commenter expressed that this greater dependence on Medicare may make certain hospitals more financially vulnerable and thus, more worthy of being exempt from the clinic visit policy. This commenter also suggested that it would be appropriate to extend the exemption to urban SCHs and provided specific examples of instances where an SCH is designated urban by CMS, but the hospital is actually a considerable distance from the nearest urban area. This commenter expressed that there are many factors that underscore why urban SCHs and MDHs should also receive the payment exemption, including below-average patient care margins at these types of hospitals. The commenter also argued that extending this exemption to MDHs and urban SCHs would only add nominally to the cost of the proposed policy.

Response: In the CY 2006 OPPS final rule with comment period (70 FR 68556 through 68561) we uniquely identified rural SCHs as providers with demonstrated additional resource costs. We found that rural SCHs have significantly higher costs per unit than urban hospitals. We have continued to adjust payments for rural SCHs by 7.1 percent each year since 2006. Building upon that foundation, for CY 2018 we

[161] Available at: *https://www.ssa.gov/OP_Home/ssact/title18/1833.htm.*

[162] Found at *https://www.medpac.gov/wp-content/uploads/2022/06/Jun22_MedPAC_Report_to_Congress_v4_SEC.pdf.*

finalized a policy to exclude rural SCHs from our 340B drug payment policy and continued to do so until September 27, 2023, when the 340B drug payment policy ended and we resumed paying for 340B drugs and biologicals under the OPPS at the same rates we pay for non-340B drugs and biologicals (generally, ASP plus 6 percent)). We believe exempting rural SCHs, which have demonstrated additional resource costs, is appropriate to ensure these hospitals can remain open to serve the beneficiaries who rely on them for their care. We share commenters' concerns about the financial difficulties associated with maintaining access to care in medically vulnerable communities. However, in each of these cases, the Congress did not determine that any of these hospital types required additional payments for outpatient services. Section 1833(t)(13)(B) of the Act authorizes an appropriate adjustment for hospitals located in rural areas where the Secretary determines, based on a study, that the costs incurred by these hospitals by APC group exceed costs incurred by hospitals in urban areas. In the CY 2006 OPPS final rule with comment period (70 FR 68556 through 68561), we summarized our study of the cost of covered outpatient department services to hospitals in rural areas and found that rural SCHs were the only rural hospital type that had higher resource costs for covered outpatient department services. Rural SCHs demonstrated significantly higher cost per unit than urban hospitals after controlling for labor input prices, service-mix complexity, volume, facility size, and type of hospital. In the CY 2006 OPPS final rule with comment period (70 FR 68556 through 68561) we stated that we found no significant difference in cost between all small rural hospitals with 100 or fewer beds and urban hospitals. We found that there was insufficient evidence to conclude that rural hospitals with 100 or fewer beds have higher costs than urban hospitals. We proposed a narrow exception to our clinic visit policy largely based upon the historical treatment and documented additional resource costs of rural SCHs under the OPPS. We are only excepting rural SCHs because we continue to believe that the underlying principles of the clinic visit policy continue to justify application of the volume control method for clinic visits to the remaining hospital types, including most rural and safety-net providers. Where the difference in payment is leading to unnecessary increases in the volume of covered outpatient department services, we remain concerned that this shift in care setting increases beneficiary cost-sharing liability because Medicare payment rates for the same or similar services are generally higher in hospital outpatient departments than in physician offices. Further, we do not believe that commenters provided sufficient reasoning or data to show that the other provider types suggested (Medicare Dependent Hospitals, Urban Sole Community Hospitals, and Low-Volume Adjustment Hospitals) demonstrate the additional resource costs that rural SCHs do and should therefore also be exempted from this OPPS payment policy. We share commenters' concerns about maintaining access to care in urban and rural settings and enhancing access to care in medically vulnerable communities. We also share commenters' concerns about profit margins. However, we must balance the concerns of providers with the concerns of beneficiaries regarding the affordability of their care. For hospitals subject to the clinic visit policy, the proposed PFS-equivalent rate for a clinic visit brings the approximate average copayment down from $26 to $10. We will continue to study access and cost to see if further exemptions to the clinic visit policy are appropriate.

Comment: One commenter noted that, while it is necessary to distinguish between urban and rural hospitals for a number of payment and policy mechanisms, they believe the Metropolitan Statistical Areas (MSAs) CMS uses to delineate between these areas are not the most precise tool. This commenter argued that CMS should extend this exemption to urban SCHs because using MSAs to determine urban and rural areas is imprecise and unfairly disadvantages urban SCHs that may be the sole source of hospital services in their communities.

Response: We acknowledge the commenters' points about the important role that urban SCHs serve in their communities. However, we have not found that urban SCHs have the additional resource costs for covered outpatient department services that rural SCHs have, and as such, we are only applying the clinic visit policy exemption to rural SCHs.

Comment: A few commenters suggested extending the exemption to hospitals that provide a disproportionate share of the nation's uncompensated care, and serve high proportions of Medicaid, Medicare, and uninsured patients. The commenters argued that PBDs of these hospitals are disproportionately impacted by site-neutral payment policies and shielding these PBDs from the impact of these policies would ensure they can continue to cover the costs associated with providing comprehensive, coordinated care to complex patient populations in underserved areas. The commenters did acknowledge that CMS has not defined hospitals that meet these criteria and would need to do so in order to exempt associated PBDs from the clinic visit policy. They further recognized that rural SCHs are easily identified because there is an existing definition to capture the hospitals that fall into this group. They recommended that CMS first define a group of hospitals that meet these criteria and then exclude those hospitals' excepted PBDs from the clinic visit policy to ensure continued access for marginalized communities without other reliable sources of care.

Response: As the commenter stated, we have not created a definition for the group of hospitals the commenter cited and would need to do so in order use this definition to exempt associated PBDs from the clinic visit policy. We will continue to monitor this issue and revisit any additional exemptions in future rulemaking as appropriate.

Comment: One commenter presented data showing that 56 percent of rural SCHs, 73 percent of urban SCHs, and 60 percent of Medicare Dependent Hospitals (MDHs) are located in at least one type of medically underserved area (MUA) as designated by the Health Resources & Services Administration.

Response: We do not currently utilize MUA designations to determine payment for covered outpatient department services under the OPPS. We believe our policy to exempt rural SCHs is consistent with our other policies that target this hospital type, which we have determined have higher resource costs for covered outpatient department services, and therefore, that our policy to exempt them is appropriate from an OPPS perspective.

Comment: One commenter recommended that CMS broaden the scope of exempted hospitals to support patient access to care and encouraged CMS to work with interested parties to identify the additional types of hospitals that would be eligible to receive an exemption.

Response: We appreciate the commenter's suggestion and will consider it for future rulemaking.

After consideration of the public comments we received, we are finalizing our proposal to continue to exempt excepted off-campus PBDs of rural SCHs from the clinic visit payment policy in CY 2024.

VIII. Payment for Partial Hospitalization and Intensive Outpatient Services

This section discusses payment for partial hospitalization services as well as intensive outpatient services. Since CY 2000, Medicare has paid for partial hospitalization services under the OPPS. Beginning in CY 2024, as authorized by section 4124 of the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), Medicare will begin paying for intensive outpatient services furnished by hospital outpatient departments, community mental health centers, federally qualified health centers, and rural health clinics. Additional background on the partial hospitalization and intensive outpatient benefits is included in the following paragraphs.

A. Partial Hospitalization

1. Background

A partial hospitalization program (PHP) is an intensive outpatient program of psychiatric services provided as an alternative to inpatient psychiatric care for individuals who have an acute mental illness, which includes, but is not limited to, conditions such as depression, schizophrenia, and substance use disorders (SUD). Section 1861(ff)(1) of the Act defines partial hospitalization services as the items and services described in paragraph (2) prescribed by a physician and provided under a program described in paragraph (3) under the supervision of a physician pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan. Section 1861(ff)(2) of the Act describes the items and services included in partial hospitalization services. Section 1861(ff)(3)(A) of the Act specifies that a PHP is a program furnished by a hospital to its outpatients or by a community mental health center (CMHC), as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 1861(ff)(3)(B) of the Act defines a CMHC for purposes of this benefit. We refer readers to sections 1833(t)(1)(B)(i), 1833(t)(2)(B), 1833(t)(2)(C), and 1833(t)(9)(A) of the Act and 42 CFR 419.21, for additional information regarding PHP.

Partial hospitalization program policies and payment have been addressed under OPPS since CY 2000. In CY 2008, we began efforts to strengthen the PHP benefit through extensive data analysis, along with policy and payment changes by implementing two refinements to the methodology for computing the PHP median. For a detailed discussion on these policies, we refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66670 through 66676). In CY 2009, we implemented several regulatory, policy, and payment changes. For a detailed discussion on these policies, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68688 through 68697). In CY 2010, we retained the two-tier payment approach for partial hospitalization services and used only hospital-based PHP data in computing the PHP APC per diem costs, upon which PHP APC per diem payment rates are based (74 FR 60556 through 60559). In CY 2011 (75 FR 71994), we established four separate PHP APC per diem payment rates: two for CMHCs (APC 0172 and APC 0173) and two for hospital-based PHPs (APC 0175 and APC 0176) and instituted a 2-year transition period for CMHCs to the CMHC APC per diem payment rates. For a detailed discussion, we refer readers to section X.B of the CY 2011 OPPS/ASC final rule with comment period (75 FR 71991 through 71994). In CY 2012, we determined the relative payment weights for partial hospitalization services provided by CMHCs based on data derived solely from CMHCs and the relative payment weights for partial hospitalization services provided by hospital-based PHPs based exclusively on hospital data (76 FR 74348 through 74352). In the CY 2013 OPPS/ASC final rule with comment period, we finalized our proposal to base the relative payment weights that underpin the OPPS APCs, including the four PHP APCs (APCs 0172, 0173, 0175, and 0176), on geometric mean costs rather than on the median costs. For a detailed discussion on this policy, we refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68406 through 68412).

In the CY 2014 OPPS/ASC proposed rule (78 FR 43621 and 43622) and CY 2015 OPPS/ASC final rule with comment period (79 FR 66902 through 66908), we continued to apply our established policies to calculate the four PHP APC per diem payment rates based on geometric mean per diem costs using the most recent claims data for each provider type. For a detailed discussion on this policy, we refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75047 through 75050). In the CY 2016, we described our extensive analysis of the claims and cost data and ratesetting methodology, corrected a cost inversion that occurred in the final rule data with respect to hospital-based PHP providers and renumbered the PHP APCs. In CY 2017 OPPS/ASC final rule with comment period (81 FR 79687 through 79691), we continued to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs and finalized a policy to combine the Level 1 and Level 2 PHP APCs for CMHCs and for hospital-based PHPs. We also implemented an eight-percent outlier cap for CMHCs to mitigate potential outlier billing vulnerabilities. For a comprehensive description of PHP payment policy, including a detailed methodology for determining PHP per diem amounts, we refer readers to the CY 2016 and CY 2017 OPPS/ASC final rules with comment period (80 FR 70453 through 70455 and 81 FR 79678 through 79680, respectively).

In the CYs 2018 and 2019 OPPS/ASC final rules with comment period (82 FR 59373 through 59381, and 83 FR 58983 through 58998, respectively), we continued to apply our established policies to calculate the PHP APC per diem payment rates based on geometric mean per diem costs, designated a portion of the estimated 1.0 percent hospital outpatient outlier threshold specifically for CMHCs, and proposed updates to the PHP allowable HCPCS codes. We finalized these proposals in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61352).

In the CY 2020 OPPS/ASC final rule with comment period (84 FR 61339 through 61350), we finalized a proposal to use the calculated CY 2020 CMHC geometric mean per diem cost and the calculated CY 2020 hospital-based PHP geometric mean per diem cost, but with a cost floor equal to the CY 2019 final geometric mean per diem costs as the basis for developing the CY 2020 PHP APC per diem rates. Also, we continued to designate a portion of the estimated 1.0 percent hospital outpatient outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS, excluding outlier payments.

In the April 30, 2020 interim final rule with comment (85 FR 27562 through 27566), effective as of March 1, 2020, and for the duration of the COVID–19 Public Health Emergency (PHE), hospital and CMHC staff were

permitted to furnish certain outpatient therapy, counseling, and educational services (including certain PHP services), incident to a physician's services, to beneficiaries in temporary expansion locations, including the beneficiary's home, so long as the location meets all conditions of participation to the extent not waived. A hospital or CMHC can furnish such services using telecommunications technology to a beneficiary in a temporary expansion location if that beneficiary is registered as an outpatient. In the CY 2023 OPPS/ASC final rule (87 FR 72247), we confirmed these provisions as final, including that they apply only for the duration of the COVID–19 PHE. On May 11, 2023, the COVID–19 PHE ended, and accordingly, these flexibilities ended as well.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86073 through 86080), we continued our current methodology to utilize cost floors, as needed. Since the final calculated geometric mean per diem costs for both CMHCs and hospital-based PHPs were significantly higher than each proposed cost floor, a floor was not necessary at the time, and we did not finalize the proposed cost floors in the CY 2021 OPPS/ASC final rule with comment period.

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63665 and 63666), we explained that we observed a number of changes, likely as a result of the COVID–19 PHE, in the CY 2020 OPPS claims that we would have ordinarily used for CY 2022 ratesetting, and this included changes in the claims for partial hospitalization. We explained that significant decreases in utilization and in the number of hospital-based PHP providers who submitted CY 2020 claims led us to believe that CY 2020 data were not the best overall approximation of expected PHP services in CY 2022. Therefore, we finalized our proposal to calculate the PHP per diem costs using the year of claims consistent with the calculations that would be used for other OPPS services, by using the CY 2019 claims and the cost reports that were used for CY 2021 final rulemaking to calculate the CY 2022 PHP per diem costs. In addition, for CY 2022 and subsequent years, we finalized our proposal to use cost and charge data from the Hospital Cost Report Information System (HCRIS) as the source for the CMHC cost-to-charge ratios (CCRs), instead of using the Outpatient Provider Specific File (OPSF) (86 FR 63666).

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 71995), we explained that we continued to observe a decrease in the number of hospital-based and CMHC PHP days in our trimmed dataset due to the continued effects of COVID–19, however, the Medicare outpatient service volumes appeared to be returning to more normal, pre-pandemic levels. Therefore, we finalized our proposal to use the latest available CY 2021 claims, but use the cost information from prior to the COVID–19 PHE for calculating the CY 2023 CMHC and hospital-based PHP APC per diem costs. The application of the OPPS standard methodology, including the effect of budget neutralizing all other OPPS policy changes unique to CY 2023, resulted in the final calculated CMHC PHP APC payment rate being unexpectedly lower than the CY 2022 final CMHC PHP APC rate. Therefore, in the interest of accurately paying for CMHC PHP services, under the unique circumstances of budget neutralizing all other OPPS policy changes for CY 2023, and in keeping with our longstanding goal of protecting continued access to PHP services provided by CMHCs by ensuring that CMHCs remain a viable option as providers of mental health care in the beneficiary's own community, we finalized utilizing the equitable adjustment authority of section 1833(t)(2)(E) of the Act to appropriately pay for CMHC PHP services at the same payment rate as for CY 2022, that is, $142.70. In addition, we clarified the payment under the OPPS for new HCPCS codes that designate non-PHP services provided for the purposes of diagnosis, evaluation, or treatment of a mental health disorder and are furnished to beneficiaries in their homes by clinical staff of the hospital would not be recognized as PHP services, however, none of the PHP regulations would preclude a patient that is under a PHP plan of care from receiving other reasonable and medically necessary non-PHP services from a hospital (87 FR 72001 and 72002).

Section 4124(a) of Division FF of the CAA, 2023 amends section 1861(ff)(1) of the Act to modify the definition of partial hospitalization services furnished on or after January 1, 2024. Specifically, section 4124(a) of the CAA, 2023 amends section 1861(ff)(1) of the Act by adding to the current definition that partial hospitalization services are ''for an individual determined (not less frequently than monthly) by a physician to have a need for such services for a minimum of 20 hours per week.'' We discuss these revisions to the definition of partial hospitalization services in section VIII.A.2 of this CY 2024 OPPS/ASC final rule.

2. Revisions to PHP Physician Certification Requirements

As amended by section 4124(a) of the CAA, 2023, section 1861(ff)(1) requires that a physician determine that each patient needs a minimum of 20 hours of PHP services per week, and this determination must occur no less frequently than monthly. We proposed to codify this requirement in regulation as an additional requirement for the physician certification applicable for PHP services that we would add to § 424.24(e)(1)(i). We did not propose any changes to the existing physician certification requirements for PHP, including that the patient would require inpatient hospitalization if they did not receive PHP services, which will remain at § 424.24(e)(1)(i).

Existing regulations at § 410.43 set forth conditions and exclusions that apply for partial hospitalization services. Under § 410.43(a)(3), partial hospitalization services are services that are furnished in accordance with a physician certification and plan of care as specified under § 424.24(e). Additionally, current patient eligibility criteria at § 410.43(c)(1) state that partial hospitalization programs are intended for patients who require a minimum of 20 hours per week of therapeutic services as evidenced in their plan of care. Because partial hospitalization services are already required to be furnished in accordance with a physician certification and plan of care, we stated in the proposed rule that we believe it is appropriate to include this 20-hour minimum weekly requirement as a physician certification requirement at § 424.24(e)(1)(i). We noted that we do not believe the proposed change to the regulation would create a new requirement for PHPs from a practical perspective, as the change to the definition of partial hospitalization services made by the CAA, 2023 is consistent with the longstanding 20-hour minimum weekly regulatory requirement at § 410.43(c)(1) that Medicare has applied to PHP.

We proposed to modify the regulation at § 424.24(e)(1)(i) to require the physician certification for PHP services include a certification that the patient requires such services for a minimum of 20 hours per week. Current regulations at § 424.24(e)(3)(ii) require an initial recertification after 18 days, with subsequent recertifications of PHP services no less frequently than every 30 days. We stated that we believe this interval is consistent with the CAA, 2023 requirement that the physician's

determination of the need for PHP services at least 20 hours per week must occur no less frequently than monthly.

Comment: Overall, commenters agreed that the proposed modification to the regulation at § 424.24(e)(1)(i) is consistent with the CAA, 2023 requirement that the physician certifies the need for PHP services for at least 20 hours per week. One commenter recommended CMS consider allowing any addiction treatment professional operating within their scope of practice under state regulation to certify the need for PHP for SUD treatment.

Response: We appreciate the commenters' support. Section 4124(a) of the CAA, 2023 specifically states that the certification must be determined by a physician. Section 1861(r) of the Act defines ''physician'' as a doctor of medicine or osteopathy legally authorized to practice medicine and surgery by the State in which he performs such function or action. Therefore, we do not believe we are able to expand the certification of the need for PHP services to any addiction treatment professional.

Comment: Commenters recommended that CMS reconsider the timing associated with the initial PHP recertification requirement. Commenters noted section 1861(ff)(1) of the Act, as amended by section 4124(a) of the CAA, 2023, specifies that recertification should occur ''not less frequently than monthly''. The commenters further noted that the current regulation at § 424.24(e)(3)(ii) requires the initial PHP recertification as of the 18th day of partial hospitalization services, which is significantly earlier than one month after the patient begins receiving PHP services. The commenters stated it may be clinically beneficial for the PHP to have more days of furnishing partial hospitalization before determining whether recertification is warranted for the person.

Response: We appreciate the commenter's concerns regarding the timing of the first recertification of PHP services. We did not propose to modify the regulation at § 424.24(e)(3)(ii) which requires the first recertification of PHP services occur as of the 18th day of partial hospitalization services. As discussed in the April 2000 OPPS final rule with comment period (65 FR 18454), because partial hospitalization is the outpatient substitute for inpatient psychiatric care, we stated that we believed it was appropriate to adopt the standard used for inpatient psychiatric care at that time. The requirement for initial recertification by the 18th day of an inpatient psychiatric *stay* was codified in regulation at § 424.14(d)(2) in the March 1988 final rule with comment period (53 FR 6636 and 6637). We later modified the initial recertification interval from 18 days to 12 days. As we explained in the RY 2007 IPF PPS final rule (71 FR 27076 and 27077), the standard for IPF initial recertification was determined by the average length of stay (LOS) for inpatient psychiatric hospitalization in the 1980s, which was 18 days. For RY 2007, we amended the regulation at § 424.14(d)(2) to require the initial recertification for IPF patients as of the 12th day of hospitalization. This change was based on analysis of the MedPAR 2002 claims data for IPF services. Although the timing requirement for inpatient psychiatric hospitalization was shortened, we continue to believe that the current timing requirements for PHP initial recertification—that is, as of the 18th day of PHP services—is appropriate. We note that our analysis shows that 18 days generally corresponds to the median length of stay for PHP patients.

Final Decision: After consideration of the public comments we received, we are finalizing our proposed revision to the regulation at § 424.24(e)(1)(i) to require the physician certification for PHP services include a certification that the patient requires such services for a minimum of 20 hours per week.

B. Intensive Outpatient Program Services

1. Establishment of Intensive Outpatient Services Benefit by Section 4124 of the CAA, 2023

Section 4124(b) of the CAA, 2023 established Medicare coverage for intensive outpatient services effective for items and services furnished on or after January 1, 2024. Section 4124(b)(1)(A) of the CAA, 2023 amended section 1832(a)(2)(J) of the Act to add intensive outpatient services to the scope of covered benefits provided by CMHCs, and section 4124(b)(1)(B) amended section 1861(s)(2)(B) to add intensive outpatient services to the definition of ''medical and other health services'', specifically, as a service furnished ''incident to a physicians' services.''

Intensive outpatient services are furnished under an intensive outpatient program (IOP). Similar to PHP, an IOP is a distinct and organized outpatient program of psychiatric services provided for individuals who have an acute mental illness, which includes, but is not limited to, conditions such as depression, schizophrenia, and SUD. Generally speaking, an IOP is thought to be less intensive than a PHP, and the statutory definition of IOP services reflects this difference in intensity. Specifically, section 4124(b)(2)(B) of the CAA, 2023 amended section 1861(ff) of the Act to add a new paragraph (4) to define the term ''intensive outpatient services'' as having the same meaning as ''partial hospitalization services'' in paragraph (1). In particular, intensive outpatient services are the items and services described in paragraph (2) prescribed by a physician for an individual determined (not less frequently than once every other month) by a physician to have a need for such services for a minimum of 9 hours per week and provided under a program described in paragraph (3) under the supervision of a physician pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan. For patients of an IOP, section 1835(a)(2)(F)(i) of the Act does not apply, that is, individuals receiving IOP would not require inpatient psychiatric care in the absence of such services. Lastly, section 4124(b)(2)(B) of the CAA, 2023 further added to section 1861(ff)(4)(C), which cross-references paragraph (3), that an IOP is a program furnished by a hospital to its outpatients, or by a community mental health center (CMHC), a Federally qualified health center (FQHC), or a rural health clinic (RHC), as a distinct and organized intensive ambulatory treatment service, offering less than 24-hour-daily care, in a location other than an individual's home or inpatient or residential setting. Section 4124(c) of the CAA, 2023 amends section 1834 of the Act by adding a new paragraph (5) to subsection (o) and a new paragraph (3) to subsection (y), which include special payment rules for intensive outpatient services furnished in FQHCs and RHCs, which are discussed in greater detail in section VIII.F of this final rule with comment period.

This final rule establishes payment and program requirements for the IOP benefit in all of the above-described settings. Section VIII.B.2 of this final rule with comment period discusses the scope of benefits for IOP services, and section VIII.B.3 of this final rule with comment period discusses physician certification requirements. Section VIII.C of this final rule with comment period discusses coding and billing for

both PHP and IOP services under the OPPS beginning in CY 2024. Section VIII.D of this final rule with comment period discusses the payment methodology. Section VIII.E of this final rule with comment period discusses the outlier policy for CMHCs. Section VIII.F of this final rule with comment period discusses payment for IOP services in FQHCs and RHCs, and section VIII.G of this final rule with comment period discusses payment for IOP services in Opioid Treatment Programs (OTPs).

2. IOP Scope of Benefits

Section 1861(ff)(2) of the Act describes the items and services available under the IOP benefit. These items and services include: individual and group therapy with physicians or psychologists (or other mental health professionals to the extent authorized under State law); occupational therapy requiring the skills of a qualified occupational therapist; services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; drugs and biologicals furnished for therapeutic purposes (which cannot, as determined in accordance with regulations, be self-administered); individualized activity therapies that are not primarily recreational or diversionary; family counseling (the primary purpose of which is treatment of the individual's condition); patient training and education (to the extent that training and educational activities are closely and clearly related to individual's care and treatment); diagnostic services; and such other items and services as the Secretary may provide (excluding meals and transportation) that are reasonable and necessary for the diagnosis or active treatment of the individual's condition, reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization, and furnished pursuant to such guidelines relating to frequency and duration of services as the Secretary shall by regulation establish, taking into account accepted norms of medical practice and the reasonable expectation of patient improvement.

Consistent with the statutory definition of intensive outpatient services under section 1861(ff)(2) of the Act, we proposed to add regulations at 42 CFR 410.44 to set forth the conditions and exclusions that would apply for intensive outpatient services. Consistent with the existing regulations for partial hospitalization services, we proposed to require that intensive outpatient services must be furnished in accordance with a physician certification and plan of care. However, where partial hospitalization requires the physician to certify that the services are instead of inpatient hospitalization, intensive outpatient program services are not intended for those who otherwise need an inpatient level of care. That is, section 1861(ff)(4)(A) of the Act, as added by section 4124 of the CAA, 2023, states that for intensive outpatient services, section 1835(a)(2)(F)(i) of the Act shall not apply. As further discussed in section VIII.B.3 of this final rule with comment period, we proposed to add language to the regulation at § 424.24(d), which is currently reserved, that would set forth the physician certification and plan of care requirements for intensive outpatient services.

Additionally, we proposed to revise certain existing regulations at §§ 410.2, 410.3, 410.10, 410.27, 410.150, and 419.21 to add a regulatory definition of intensive outpatient services and to include intensive outpatient services in the regulations for medical and other health services paid for under Medicare Part B, and in the case of § 419.21, under the OPPS. We proposed to create regulations at § 410.111 to establish the requirements for coverage of IOP services furnished in CMHCs, and at § 410.173 to establish conditions of payment for IOP services furnished in CMHCs. Lastly, we proposed to revise § 410.155 to exclude IOP services from the outpatient mental health treatment limitation, consistent with the statutory requirement of section 1833(c)(2) of the Act, as amended by section 4124(b)(3) of the CAA, 2023. We discuss our proposals and the comments we received in the following paragraphs.

a. Definition of Intensive Outpatient Services

We proposed the following definition at § 410.2 for intensive outpatient services: *Intensive outpatient services* means a distinct and organized intensive ambulatory treatment program that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting and furnishes the services as described in § 410.44. Intensive outpatient services are not required to be provided in lieu of inpatient hospitalization. We noted that the proposed definition for intensive outpatient services is consistent with the statutory requirements of section 1861(ff)(3)(A), which apply to both IOP and PHP services. Accordingly, the proposed definition is largely consistent with the existing regulatory definition of partial hospitalization services. However, in accordance with section 1861(ff)(4)(A) of the Act, as added by the CAA, 2023, we included a clarification in the regulatory definition of ''intensive outpatient services'' that they are not required to be provided in lieu of inpatient hospitalization. We stated that we included this clarification in order to more clearly differentiate between the definitions of partial hospitalization and intensive outpatient at § 410.2.

Comment: Commenters were generally supportive of the proposed definition at § 410.2 for intensive outpatient services. However, commenters recommended that language specifying IOP represents a less intensive service than partial hospitalization be included in the definition. The commenters stated this addition could avoid any misconception that IOP is substantively different from PHP.

Response: We thank commenters for their suggestions. We proposed the regulations for IOP to be similar to PHP due to the similarities of both programs as enacted by section 4124(b) of the CAA, 2023. The key distinctions between IOP and PHP can be found in the proposed regulations at § 424.24(d). The proposed regulations at § 424.24(d) outline the content of certification and plan of treatment requirements for IOP, which differ from PHP requirements. Specifically, proposed regulations at § 424.24(d)(1) do not include a requirement that individuals receiving IOP would require inpatient psychiatric care in the absence of such services, which is required under PHP at § 424.24(e)(1)(i). Additionally, the proposed modification to the PHP regulation at § 424.24(e)(1)(i) requires individuals receiving PHP be certified by a physician to need a minimum of 20 hours per week of such services; while the proposed IOP regulation at § 424.24(d)(1)(i) requires individuals receiving IOP be certified by a physician to need a minimum of 9 hours per week of such services. Therefore, we believe the proposed definition at § 410.2 for intensive outpatient services sufficiently defines an intensive outpatient program.

Comment: A few commenters were concerned CMS did not propose to include IOP services furnished remotely. Commenters noted how the availability of remote PHP services during the COVID–19 public health emergency (PHE) has increased access to these services, especially in rural areas. The commenters stated remote IOP services would also be beneficial to increase access to the benefit.

Response: We appreciate the comments on how the availability of remote services increased access during the COVID–19 PHE. Section

1861(ff)(3)(A) of the Act does not allow Medicare to pay for partial hospitalization services furnished to beneficiaries in a home or residential setting. As discussed in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72000 through 72002), we did not propose to recognize OPPS remote services, as described in section X.A.5 of the CY 2023 OPPS/ASC final rule with comment period (87 FR 72014 through 72017), as PHP services, because we do not have statutory authority to pay for services furnished in a home or residential setting as partial hospitalization services. However, we clarified that none of the PHP regulations would preclude a patient that is under a PHP plan of care from receiving other reasonable and medically necessary non-PHP services from a hospital. This means that patients in a PHP are not precluded from receiving remote mental health services provided outside of the PHP by the same or another hospital, when such services are reasonable and medically necessary. In response to IOP services being furnished remotely to beneficiaries in their homes, we note that section 1861(ff) of the Act, as amended by section 4124(b)(2)(B) of the CAA, 2023 adopts much of the statutory definition for PHP and applies it to IOP. Specifically, section 1861(ff)(3)(A) prohibits both PHP and IOP services from being furnished other than in an individual's home or in an inpatient or residential setting. However, as we discussed in the CY 2023 OPPS/ASC final rule with comment period for PHP, we are clarifying in this final rule that none of the proposed IOP regulations would preclude a patient that is under an IOP plan of care from receiving other reasonable and medically necessary non-IOP services from a hospital.

Additionally, we are reiterating and clarifying in this final rule that we would expect that a physician would update the patient's PHP or IOP plan of care to appropriately reflect any change to the type, amount, duration, or frequency of the therapeutic services planned for that patient in circumstances when a PHP or IOP patient receives non-PHP/IOP remote mental health services from a hospital outpatient department. We also note that the medical documentation should continue to support the patient's eligibility for participation in a PHP or IOP.

Final Decision: After consideration of the public comments we received, we are finalizing the proposed definition at § 410.2 for intensive outpatient services: *Intensive outpatient services* means a distinct and organized intensive ambulatory treatment program that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting and furnishes the services as described in § 410.44.

The conditions and exclusions for partial hospitalization services are included in the regulation at § 410.43. We proposed that the conditions and exclusions for intensive outpatient services would be included in new regulations at § 410.44.

At new § 410.44, we proposed to establish regulatory language for intensive outpatient services that is consistent with the existing language for partial hospitalization conditions and exclusions and the statutory definition of intensive outpatient services. Specifically, under § 410.44(a) we proposed that IOP services are services that: (1) are reasonable and necessary for the diagnosis or active treatment of the individual's condition; (2) are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization; (3) are furnished in accordance with a physician certification and plan of care as specified under new regulations at § 424.24(d); and include any of the services listed in § 410.44(a)(4). Under § 410.44(a)(4), we include a list of the types of services that we proposed would be covered as intensive outpatient services:

- Individual and group therapy with physicians or psychologists or other mental health professionals to the extent authorized under State law.
- Occupational therapy requiring the skills of a qualified occupational therapist, provided by an occupational therapist, or under appropriate supervision of a qualified occupational therapist by an occupational therapy assistant as specified in part 484.
- Services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients.
- Drugs and biologicals furnished for therapeutic purposes, subject to the limitations specified in § 410.29.
- Individualized activity therapies that are not primarily recreational or diversionary.
- Family counseling, the primary purpose of which is treatment of the individual's condition.
- Patient training and education, to the extent the training and educational activities are closely and clearly related to the individual's care and treatment.
- Diagnostic services.

The proposed list at § 410.44(a)(4) is based on the list of items and services described in section 1861(ff)(2) of the Act. We note that 1861(ff)(2) of the Act also provides that intensive outpatient services may include such other items and services as the Secretary may provide (but in no event to include meals and transportation). As discussed in section VIII.C of this final rule with comment period, we solicited comments on whether additional codes should be added to the list of services recognized as appropriate for PHP and IOP. We discuss the comments we received and provide our responses in that section of this final rule with comment period, and we note that none of the codes we are adopting in that section of this final rule with comment period necessitate changes to the proposed list at § 410.44(a)(4).

In the proposed rule, we further noted that both the statute at section 1861(ff)(2)(C) of the Act and our proposed regulation at § 410.44(a)(4)(iii) refer to ''trained psychiatric nurses, and other staff trained to work with psychiatric patients.'' We explained that under our longstanding policy for partial hospitalization services, we have considered nurses and other staff trained to work with patients within their state scope of practice who are receiving treatment for SUD to be included under this statutory definition and the regulatory definition of PHP at § 410.43(a)(4). We stated that we have heard from interested parties that there could be a misconception that Medicare does not cover PHP for the treatment of SUD. We are clarifying that, in general, notwithstanding the requirement that PHP services are provided in lieu of inpatient hospitalization, Medicare covers PHP for the treatment of SUD, and we consider services that are for the treatment of SUD and behavioral health generally to be consistent with the statutory and regulatory definition of PHP. We clarified in the proposed rule that the terms ''trained psychiatric nurses, and other staff trained to work with psychiatric patients,'' as used in §§ 410.43(a)(4) and 410.44(a)(4) would include trained SUD nurses and other staff trained to work with SUD patients. Under § 410.44(b), we proposed that the following services are separately covered and not paid as intensive outpatient services: (1) physician services; (2) physician assistant services; (3) nurse practitioner and clinical nurse specialist services; (4) qualified psychologist services; and (5) services furnished to residents of a skilled nursing facility (SNF). We note that these proposed exclusions are consistent with the services excluded from payment as partial hospitalization

program services at § 410.43(b). The services listed under §§ 410.43(b) and 410.44(b) would be paid under the applicable systems for such services.

Lastly, under § 410.44(c), we proposed to establish patient eligibility criteria for intensive outpatient services. Specifically, we proposed that intensive outpatient services are intended for patients who: (1) require a minimum of 9 hours per week of therapeutic services as evidenced in their plan of care; (2) are likely to benefit from a coordinated program of services and require more than isolated sessions of outpatient treatment; (3) do not require 24-hour care; (4) have an adequate support system while not actively engaged in the program; (5) have a mental health diagnosis; (6) are not judged to be dangerous to self or others; and (7) have the cognitive and emotional ability to participate in the active treatment process and can tolerate the intensity of the intensive outpatient program.

We noted that these proposed patient eligibility criteria at § 410.44(c) are consistent with the existing partial hospitalization patient eligibility criteria at § 410.43(c). With respect to the proposed criterion of a ''mental health diagnosis'', we clarified that a mental health diagnosis would include SUD and behavioral health diagnoses generally under both the existing partial hospitalization regulation at § 410.43(c)(5) and the proposed intensive outpatient services regulation at § 410.44(c)(5). As discussed earlier in this section, this inclusion of SUD and behavioral health diagnoses as among the patient eligibility criteria for PHP services is consistent with our longstanding policy. However, we noted that interested parties have raised concerns that this policy may not be clear. Therefore, we clarified that the term ''mental health diagnosis'' as used at both §§ 410.43(c)(5) and 410.44(c)(5) would include SUD and behavioral health diagnoses.

Comment: Commenters suggested the proposed regulation at § 410.44(a)(2) codifying the condition that IOP services ''are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization'' be modified. Specifically, commenters suggested the regulation at § 410.44(a)(2) be modified to read as follows: ''Are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or worsening of the individual's condition.'' The commenters stated that as IOP is not provided in lieu of hospitalization, more expansive language may be appropriate.

Response: We appreciate the concern that commenters raised that more expansive language may be appropriate for patients of an IOP. As discussed above, at new § 410.44, we proposed to establish regulatory language for intensive outpatient services that is consistent with the existing language for partial hospitalization conditions and exclusions and the statutory definition of intensive outpatient services. The regulatory language for IOP and PHP is derived from the language of section 1861(ff)(2) of the Act. We do not believe it is appropriate to revise the language for IOP.

Comment: A majority of commenters appreciated the clarification that the terms ''trained psychiatric nurses, and other staff trained to work with psychiatric patients,'' as referenced in § 410.43(a)(4) and proposed § 410.44(a)(4) would include trained SUD nurses and other staff trained to work with SUD patients; however, they requested CMS codify this interpretation in the regulations. Specifically, commenters requested that CMS amend the regulations at § 410.43(a)(4)(i) and (iii), proposed § 410.44(a)(4)(i) and (iii) for PHP and IOP, respectively, to include services furnished by SUD counselors, and reference individuals with mental health or SUD diagnoses. In addition, commenters requested CMS amend § 410.43(c)(5) and proposed § 410.44(c)(5) to reference ''mental health or SUD diagnosis'' as acceptable for both the PHP and IOP benefits.

Response: As discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49700 and 49701) under our longstanding policy for partial hospitalization services, we have considered nurses and other staff trained to work with patients within their state scope of practice who are receiving treatment for SUD to be included under this statutory definition and the regulatory definition of PHP at § 410.43(a)(4). After consideration of the public comments received, and the misconception we have heard that Medicare does not cover PHP for the treatment of SUD, we are finalizing an amendment the PHP regulations at § 410.43(a)(4)(i) and (iii) to include references to SUD professionals and patients with SUD, respectively. Additionally, we are finalizing a modification to the proposed IOP regulations at §§ 410.44 (a)(4)(i) and 410.43(a)(4)(iii) to include references to SUD professionals and patients with SUD, respectively. Furthermore, we are finalizing a modification to the PHP regulation at § 410.43(c)(5), as well as the proposed IOP regulation at § 410.44(c)(5), to include references to SUD diagnoses.

We remind readers that the inclusion of SUD in these regulations does not change the applicability of any other existing PHP regulations or proposed IOP regulations. In all cases, these services must be reasonable and necessary, furnished in accordance with a physician certification and plan of treatment, and provided by an individual working within his or her scope of practice. Further, in the case of PHP services for the treatment of SUD, such services must be provided in lieu of inpatient hospitalization.

Comment: Some commenters requested that CMS amend the regulation at § 410.43(a)(4)(iii) to specifically reference that the services of marriage and family therapists (MFTs) and mental health counselors (MHCs) comprise a portion of partial hospitalization services; while other commenters requested CMS amend the regulatory exclusions at § 410.43(b) and proposed § 410.44(b) of PHP and IOP, respectively, to encompass the professional services of MFTs and MHCs.

Response: As we discussed in the 2000 OPPS final rule (65 FR 18452), payment for partial hospitalization services under the OPPS represents the provider's overhead costs, support staff, and the services of clinical social workers (CSWs) and occupational therapists (OTs), whose professional services are considered to be partial hospitalization services for which payment is made to the provider. These same components of cost discussed in that 2000 OPPS final rule were used to determine the per diem costs for both PHP and IOP for this CY 2024 OPPS/ASC final rule. Although we did not propose to name MHCs or MFTs in the regulatory language of § 410.43(a) or § 410.44(a), the services of these providers, when furnished to PHP or IOP patients, would constitute services of ''other mental health professionals'' under §§ 410.43(a)(4)(i) and 410.44(a)(4)(i). We did not propose to exclude MHCs or MFTs under § 410.43(b) or § 410.44(b), and in accordance with our longstanding policy, to maintain the historical patterns of treatment billed during the base year, we are clarifying that the services of MFTs and MHCs are considered to be partial hospitalization and intensive outpatient services. The services of MFTs and MHCs should not be billed separately when provided to PHP or IOP patients, because they are included within the overhead costs and costs for support staff which are made

to the provider through the per diem PHP or IOP payment.

Comment: Commenters requested CMS remove the proposed regulation at § 410.44(c)(4) which states an IOP is intended for patients who have an adequate support system while not actively engaged in the program. Commenters noted that while mental health outcomes are enhanced by a patient's support system, many IOP patients have housing insecurities or are at risk of being housing insecure. The commenters stated conditioning treatment on a patient's support system may prohibit patients from enrolling in an IOP.

Response: As discussed in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68695) our goal is to improve the level of service furnished in a PHP day, while also ensuring that the partial hospitalization benefit is being utilized by the appropriate population. In addition, for the program to be fully beneficial, a PHP participant should have a strong support system outside of the PHP program to help to ensure success. We also believe having a strong support system outside of the IOP program to help ensure success will further our goal to improve the level of service across the mental health continuum of care.

Final Decision: After consideration of the public comments we received, we are finalizing the proposed regulations at § 410.44 with modifications to include references to SUD. In addition, we are modifying the parallel existing regulations for PHP at § 410.43 to include the same references to SUD.

b. Coverage of IOP as Medical and Other Health Services Paid under Part B

We proposed to amend the regulation at § 410.10(c) to add a reference to ''intensive outpatient services'' to the list of services that are covered as medical and other health services under Part B, when furnished as hospital or CAH services incident to a physician's professional services. We believe this is consistent with section 1861(s)(2)(B) of the Act, as amended by section 4124(b)(1)(B) of the CAA, 2023 to include ''intensive outpatient services'' under the definition of medical and other health services; specifically, hospital services incident to a physicians' services. We note that the services described at § 410.10(c) are furnished by a hospital or CAH. Accordingly, we proposed conforming changes to the regulations at § 410.27(a)(2) and (e) introductory text to include references to intensive outpatient services.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification to amend the regulation at § 410.10(c) to add a reference to ''intensive outpatient services'' to the list of services that are covered as medical and other health services under Part B, when furnished as hospital or CAH services incident to a physician's professional services. Additionally, we are finalizing our proposal to codify conforming changes to the regulations at § 410.27(a)(2) and (e) introductory text to include references to intensive outpatient services.

c. Technical Changes to Codify Requirements for IOP at CMHCs

We proposed technical changes to the regulations at 42 CFR parts 488 and 489.

First, we proposed to add the statutory basis for IOP at CMHCs at § 488.2. The proposed technical revision would add section 1832(a)(2)(J) of the Act, which sets forth the statutory basis of intensive outpatient services provided by CMHCs at § 488.2.

We also proposed to revise the provision at 42 CFR 489.2(c)(2) so that CMHCs may enter into provider agreements to furnish intensive outpatient services. We proposed to revise the current requirement that allows for CMHCs to enter into provider agreements only for the provision of partial hospitalization services. The proposed revisions to this provision would allow CMHCs to enter into provider agreements only to furnish partial hospitalization services and intensive outpatient services.

Comment: Commenters expressed concern that there may be a mistaken impression that 42 CFR 489.2 means that the only clinical activities for which an entity enrolled as a CMHC may bill Medicare are PHP and IOP services. The commenters requested CMS clarify that nothing in the CMHC conditions for participation prevents or discourages entities enrolled as CMHCs from also being enrolled in Medicare as Part B suppliers (physician groups) furnishing outpatient behavioral health services covered under the Physician Fee Schedule (PFS).

Response: We thank the commenters for raising concerns about a potential misinterpretation of § 489.2 to mean that an entity enrolled as a CMHC may only bill Medicare for PHP and IOP services. In response to these concerns, we are clarifying that nothing in regulation, including the CMHC conditions of participation, prohibits an entity from enrolling as a CMHC and also enrolling in Medicare as a physician group to provide and bill for outpatient behavioral health services under Medicare Part B. In fact, CMHC conditions of participation at § 485.918(b) require CMHCs to provide a broad array of outpatient behavioral health services to the individuals they serve. When billing for PHP or IOP, the CMHC would submit a facility bill for payment under the OPPS at the applicable PHP or IOP per diem rate. When billing for other outpatient behavioral health services under Medicare Part B, including services for PHP and IOP patients that are excluded under §§ 410.43(b) and 410.44(b) and paid separately, the billing practitioner would bill for the services provided, subject to all applicable billing requirements under the PFS. We also note that CMHC conditions of participation under part 485, subpart J, apply to all patients of the CMHC, so if a patient is discharged from a PHP or IOP and begins receiving behavioral health services billed under Medicare Part B, the CMHC conditions of participation would continue to apply.

Final Decision: After consideration of the public comments we received, we are finalizing our proposals without modification to add the statutory basis for IOP at CMHCs at § 488.2 and to revise the provision at 42 CFR 489.2(c)(2) so that CMHCs may enter into provider agreements to furnish IOP services.

d. Technical Changes to Codify Coverage of IOP at CMHCs

We proposed several technical changes and additions to the regulations at §§ 410.2, 410.3, 410.111, 410.150, and 410.173.

First, we proposed to revise the definition of ''Community Mental Health Center (CMHC)'' at § 410.2 to refer to intensive outpatient services. Specifically, we proposed to revise the regulation to state that a CMHC is an entity that provides day treatment or other partial hospitalization services or intensive outpatient services, or psychosocial rehabilitation services. Second, we proposed to revise the definition of ''Participating'' at § 410.2 to refer to intensive outpatient services as services that CMHCs can provide. Specifically, we proposed that ''Participating'' refers to a CMHC that has in effect an agreement to participate in Medicare, but only for the purposes of providing partial hospitalization services and intensive outpatient services. We clarified that the proposed definition would allow a CMHC to be considered a participating provider of both partial hospitalization services and intensive outpatient services, but would not require a CMHC to provide both

types of services in order to be considered participating.

Comment: Commenters appreciated the clarification that organizations need not furnish both PHP and IOP in order to qualify as a CMHCs and were generally supportive of the proposed regulation at § 410.2 to refer to intensive outpatient services as part of the definition of ''Community Mental Health Center (CMHC)''. However, commenters requested clarification on why the reference to psychosocial rehabilitation is included in the definition of CMHC. The commenters stated their understanding that PHP and IOP are the only two discrete Medicare services for which CMHCs may bill the program under the CMHC enrollment.

Response: We appreciate commenters' support of the proposed definition of CMHC at regulation § 410.2. In response to the comments regarding CMHCs providing psychosocial rehabilitation, as discussed in the 1994 interim final rule with comment period (59 FR 6571) section 1916(c)(4) of the Public Health Service (PHS) Act (42 U.S.C. 300x-4(c)(4)) requires a CMHC to provide specialized outpatient services; 24-hour-a-day emergency care services; day treatment, other partial hospitalization services, or psychosocial rehabilitation services; screenings to determine appropriateness of admission to State mental health facilities; and consultation and education services. Accordingly, in that same interim final rule with comment period (59 FR 6577) CMS (formerly known as Health Care Financing Administration (HCFA)) finalized the definition of CMHC in regulation at § 410.2 to include an entity that provides psychosocial rehabilitation services.

In addition, we proposed to revise the scope of benefits provision at § 410.3(a)(2) to provide that the covered services for which the Medicare Part B supplementary medical insurance (SMI) program helps pay include partial hospitalization services and intensive outpatient services provided by CMHCs. We believe these proposed changes are consistent with the scope of benefits provision at section 1832(a)(2)(J) of the Act, as amended by section 4124(b)(1)(A) of the CAA, 2023 to include intensive outpatient services, as well as the proposed CMHC conditions of participation at § 485.918(b)(1)(iii). We refer readers to section XVII.B.5 of this final rule with comment period for discussion on the proposed amendments to regulations at § 485.918(b)(1)(iii).

We did not receive any public comments on our proposal and are finalizing a revision to the scope of benefits provision at § 410.3(a)(2) to provide that the covered services for which the Medicare Part B supplementary medical insurance (SMI) program helps pay include partial hospitalization services and intensive outpatient services provided by CMHCs.

In addition, subpart E of part 410 includes requirements for Community Mental Health Centers (CMHCs) Providing Partial Hospitalization Services. We proposed to modify the subpart E heading to include a reference to intensive outpatient services as well. Under subpart E, we proposed to add a new § 410.111 to set forth Requirements for coverage of intensive outpatient services furnished in CMHCs. We proposed that Medicare Part B would cover IOP services furnished by or under arrangements made by a CMHC if the CMHC has in effect a provider agreement and the services are prescribed by a physician and furnished under the general supervision of a physician, and subject to the proposed physician certification and plan of care requirements under § 424.24(d).

We did not receive any public comments on our proposals and are finalizing a modification to the subpart E heading to include a reference to intensive outpatient services, and the addition of a new § 410.111 to set forth Requirements for coverage of intensive outpatient services furnished in CMHCs.

Additionally, we proposed to revise § 410.150(b)(13) to include a reference to intensive outpatient services. Specifically, we proposed that payment would be made to a CMHC on an individual's behalf for partial hospitalization services or intensive outpatient services furnished by or under arrangements made by the CMHC.

We did not receive any public comments on our proposal and are finalizing a revision to § 410.150(b)(13) to include a reference to intensive outpatient services.

We also proposed to add a new § 410.173 to establish conditions of payment for IOP services furnished in CMHCs. We proposed to state that Medicare Part B pays for intensive outpatient services furnished in a CMHC on behalf of an individual only if the following conditions are met: (a) The CMHC files a written request for payment on the CMS form 1450 and in the manner prescribed by CMS; and (b) The services are furnished in accordance with the requirements described in § 410.111.

We did not receive any public comments on our proposal and are finalizing the addition of § 410.173 as proposed.

Lastly, we proposed to amend § 419.21(c) to refer to intensive outpatient services provided by CMHCs as services for which payment is made under the OPPS. The proposed amendment would be consistent with current regulations at § 419.21(c), which include partial hospitalization services provided by CMHCs. We note that further discussion of the payment methodology under the OPPS for intensive outpatient services is found in section VIII.D of this final rule with comment period.

Final Decision: After consideration of the public comments we received, we are finalizing the proposed technical changes and additions to the regulations at §§ 410.2, 410.3, 410.111, 410.150, and 419.21 as proposed.

e. Exclusion of Intensive Outpatient Services From the Outpatient Mental Health Treatment Limitation

Section 1833(c)(2) of the Act, as amended by section 4124(b)(3) of the CAA, 2023, excludes intensive outpatient services that are not directly provided by a physician from the term ''treatment'' for the purposes of the outpatient mental health treatment limitation under section 1833(c)(1) of the Act, similar to partial hospitalization services. Accordingly, we proposed to amend the regulations at § 410.155(b)(2)(iii) to state that intensive outpatient services not directly provided by a physician are not subject to the outpatient mental health treatment limitation.

Comment: Commenters were supportive of the proposal to amend the regulations at § 410.155(b)(2)(iii) to state that intensive outpatient services not directly provided by a physician are not subject to the outpatient mental health treatment limitation. However, commenters requested clarification whether the proposed regulation at 42 CFR 410.155(b)(2)(iii) means that the mental health treatment limitation does not apply to the professional services furnished to PHP or IOP participants, under the PHP or IOP plan of care, by clinicians other than physicians even though those services are billed under the Part B PFS rather than the OPPS.

Response: Under § 410.155(b)(1), services furnished by physicians and other practitioners, whether furnished directly or incident to those practitioners' services, are subject to the limitation if they are furnished in connection with the treatment of a mental, psychoneurotic, or personality disorder and are furnished to an individual who is not an inpatient of a hospital. This includes services furnished directly by physicians to PHP

and IOP patients. However, we are clarifying that since CY 2014, under current regulation at § 410.155(a)(5), 100 percent of the expenses incurred for such services during a calendar year are considered incurred expenses under Medicare Part B when determining the amount of payment and deductible.

Final Decision: After consideration of the public comments we received, we are finalizing without modification our proposed regulations at § 410.155(b)(2)(iii) to state that intensive outpatient services not directly provided by a physician are not subject to the outpatient mental health treatment limitation.

3. IOP Certification and Plan of Care Requirements

Section 4124(b)(2)(B) of the CAA, 2023 amended section 1861(ff) of the Act by adding a new paragraph (4) to define intensive outpatient services as the items and services prescribed by a physician for an individual determined (not less frequently than once every other month) by a physician to have a need for such services for a minimum of 9 hours per week. This certification must occur no less frequently than once every other month, and there is no requirement to certify that IOP patients would need inpatient hospitalization if they did not receive such services, which is required for PHP patients.

We proposed to codify the content of the certification and plan of treatment requirements for intensive outpatient services at § 424.24(d). Specifically, we proposed to mirror the PHP content of certification and plan of care treatment requirements at § 424.24(e), with the following exceptions: require the content of certification to include documentation that the individual requires such services for a minimum of 9 hours per week (with no requirement for the patient to need inpatient psychiatric care if the IOP services were not provided). The physician's certification of the patient's need for either IOP or PHP services should be based on the physician's determination of the patient's needs and whether the patient meets the IOP or PHP patient eligibility criteria under § 410.44(c) or § 410.43(c), respectively. We noted that the physician's certification should certify the patient's need for either IOP or PHP, and that patients participating in an IOP or PHP should not be under any other IOP or PHP plan of care for the same date of service. The patient's individualized plan of treatment should address all of the conditions that are being treated by the IOP or PHP.

Comment: Commenters disagreed that the certification for IOP services should be limited to a physician. Commenters requested that CMS explicitly allow psychiatric nurse practitioners to certify the need for IOP services and plan of care.

Response: We understand the commenter's request to expand the certification of IOP services to non-physician mental health professionals. However, section 1861(ff) of the Act, as amended by section 4124(b)(2)(B) of the CAA, 2023, specifically states the certification must be determined by a physician. Section 1861(r) of the Act defines ''physician'' as a doctor of medicine or osteopathy legally authorized to practice medicine and surgery by the State in which he performs such function or action. Therefore, we do not believe we have the ability to expand the certification of the need for IOP services to psychiatric nurse practitioners or other mental health professionals.

Comment: A few commenters requested that CMS revise the minimum hours per week for the IOP program from 9 hours per week to 6 hours per week. The commenters stated that IOPs should be highly flexible and reducing the number of required hours would allow a patient to ''step down'' within the confines of IOP treatment, without immediately jumping to individual mental health services.

Response: We appreciate the commenter's suggestions to provide greater flexibility within the mental health continuum of care. However, section 1861(ff) of the Act, as amended by section 4124(b)(2)(B) of the CAA, 2023 specifically states that a patient must require a minimum of 9 hours of IOP services per week. As discussed in section VIII.D.3 of this final rule with comment period, we proposed to apply the three-service payment rate (that is, payment for PHP APCs 5853 for CMHCs and 5863 for hospitals, and IOP APCs 5851 for CMHCs and 5861 for hospitals) for days with three or fewer services while we monitor the initial utilization of IOP services. In addition, patients who do not meet the requirement of needing at least 9 hours per week of IOP services may still receive individual mental health services under the OPPS.

Additionally, we proposed to require in the regulation at § 424.24(d)(3)(ii) that the recertification of IOP services occur no less frequently than every 60 days. We stated that we believe the IOP recertification timing of no less frequently than every 60 days is consistent with the requirement in the statute that an individual be determined by a physician to have a need for IOP services ''not less frequently than once every other month'' because the minimum number of days for two consecutive months is 59 days. We stated that we believe that a consistent 60-day interval would be the most appropriate way to implement the statutory recertification requirement for IOP.

We solicited public comments on whether it would be appropriate to consider finalizing a shorter interval for the first recertification and for subsequent recertification for IOP patients. For example, we requested comments on whether we should consider requiring an initial recertification by the 30th day of IOP services, and no less frequently than every 60 days thereafter. We requested that commenters provide as much detail as possible about the rationale for a shorter recertification interval, if appropriate.

Lastly, we proposed to make conforming changes to § 424.24(b) to add a reference to paragraph (d)(1) in the list of paragraphs that specify the content for which physician certification is required for medical and other health services furnished by providers (and not exempted under § 424.24(a)) which are paid for under Medicare Part B.

Comment: Most commenters supported the proposal to require in the regulation at § 424.24(d)(3)(ii) that the recertification of IOP services occur no less frequently than every 60 days. These commenters agreed that the proposal is consistent with the CAA, 2023 requirements and that a shorter than 60-day recertification interval for IOP patients would not be beneficial.

A few other commenters stated the recertification interval should be no less frequently than every 30 days. The commenters advocating for a 30-day recertification interval argued that patients at the IOP level of care should be in a significantly more stable condition than at the PHP level of care, and after 30 days of service, should continue to improve their stability. Further, the commenters stated a 60-day recertification interval may encourage a longer length of stay and go against the preference for always keeping the patient at the least restrictive level of care.

Response: We appreciate the input from commenters. As we stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49702) we believe that a consistent 60-day interval would be the most appropriate way to implement the statutory recertification requirement for IOP. We intend to monitor the provision of services and lengths of stay in the IOP program, and may consider changes to

the IOP recertification interval, if necessary, in future rulemaking.

Final Decision: After consideration of the public comments we received, we are finalizing, without modification, our proposal to codify the content of the certification and plan of treatment requirements for intensive outpatient services at § 424.24(d).

C. Coding and Billing for PHP and IOP Services Under the OPPS

1. Condition Code 41 and 92

In the CY 2024 OPPS/ASC proposed rule, we explained that we considered the similarities between the types of items and services covered by both PHP and IOP, and the larger continuum of care, when developing the proposed list of services that we believe would appropriately identify the range of services that IOPs provide to Medicare beneficiaries. Since the statutory definitions of both IOP and PHP generally include the same types of items and services covered, we stated that we believe it is appropriate to align the programs using a consistent list of services, so that level of intensity would be the only differentiating factor between partial hospitalization services and intensive outpatient services.

We noted that currently, hospital outpatient departments use condition code 41 to indicate that a claim is for partial hospitalization services. CMHCs do not currently use a condition code on the bill type used—that is, 76X—to indicate that a claim is for partial hospitalization services, because they are only considered a provider of services for partial hospitalization; and therefore, partial hospitalization services are identified by the 76X bill type. We explained that in order to differentiate between IOP and PHP for billing purposes, the National Uniform Billing Committee (NUBC) has approved a new condition code, condition code 92, to identify intensive outpatient claims. Therefore, we proposed to require hospitals and CMHCs to report condition code 92 on claims to indicate that a claim is for intensive outpatient services. We proposed to continue to require hospitals to report condition code 41 for partial hospitalization claims. Additionally, because CMHCs would be permitted to provide both PHP and IOP beginning January 1, 2024, we also proposed to require CMHCs to report condition code 41 for partial hospitalization claims. We stated that we believe this requirement would better allow us to identify which claims are for PHP and which are for IOP. We solicited comment on these proposed reporting requirements for PHP and IOP.

Comment: Commenters supported the proposal that hospitals and CMHCs report condition code 41 to identify partial hospitalization claims, and condition code 92 to identify intensive outpatient claims. The commenters agreed with the importance of distinguishing between PHP and IOP claims.

Response: We appreciate the commenters' support. Beginning January 1, 2024, we will require the use of condition code 41 on all PHP claims from hospitals and CMHCs and require the use of condition code 92 on all IOP claims from hospitals and CMHCs. We will issue operational guidance explaining the use of these condition codes in further detail.

2. Proposed HCPCS Coding for CY 2024

Under current policy, PHPs submit claims with HCPCS codes to identify the services provided during each PHP day. Therefore, we worked in conjunction with physicians to develop a consolidated list of all HCPCS codes that we believe would appropriately identify the full range of services that both IOPs and PHPs provide to Medicare beneficiaries. For reference, Table 42 includes the current list of HCPCS codes that are recognized for PHP payment. For CY 2024, we proposed to add certain codes to the list, change the descriptions of other codes, and remove one code from the list. The list of proposed consolidated HCPCS codes is included in Table 96.

We recognize that the level of intensity of mental health services a patient requires may vary over time; therefore, we believe utilizing a consolidated list of HCPCS codes to identify services under both the IOP and PHP benefits would ensure a smooth transition for patients when a change in the intensity or their services is necessary to best meet their needs. For example, a patient receiving IOP services may experience an acute mental health need that necessitates more intense services through a PHP. Alternatively, an IOP patient that no longer requires the level of intensity provided by the IOP can access less intense mental health services, such as individual mental health services. Therefore, we proposed to add several HCPCS codes that are currently recognized as mental health codes under the OPPS, but are not recognized as PHP codes, to the list of codes that would be recognized for PHP payment. We proposed to maintain all of the existing PHP codes, except for one. We proposed to remove 90865 Narcosynthesis, because we stated that we do not believe this code is widely used in the provision of PHP, and we do not anticipate it would be widely used in the provision of IOP in the future. We proposed that the HCPCS codes listed in Table 43 of the CY 2024 OPPS/ASC proposed rule (88 FR 49704 and 49705) would be payable when furnished by PHPs or IOPs. For reference, this list of codes is reproduced in Table 96 of this final rule with comment period.

BILLING CODE 4150–28–P

TABLE 96: PROPOSED HCPCS APPLICABLE FOR PHP AND IOP

G0451	Development test interpt&rep	Add

We proposed to add 18 codes to the list of recognized PHP/IOP codes, as shown in Table 96 of this final rule with comment period. These codes are currently recognized as mental health codes under the OPPS, and we stated we believe it would be appropriate to recognize them for PHP and IOP as well. Additionally, we proposed to update the descriptions of five existing Level II HCPCS codes that are currently recognized for PHP to also refer to IOP.

As shown in Table 96, we proposed to add CPT code 90853 Group psychotherapy to the list of service codes recognized for PHP and IOP. We stated we believe there could be overlap between 90853 and two existing Level II HCPCS codes for PHP group psychotherapy, specifically G0410 and G0411. We stated that we considered whether it would be appropriate to remove G0410 and G0411 from the list of recognized service codes for PHP and IOP, and retain only CPT code 90853. We solicited comments on this topic, and were interested in hearing specific reasons commenters believe support either keeping G0410 and G0411 on the list or removing them. We stated that we were particularly interested in understanding whether it would be appropriate to maintain these codes on a temporary basis to provide a transition for existing PHPs that are using these codes.

We proposed to use the list of HCPCS codes in Table 96 to determine the number of services per PHP or IOP day, and therefore to determine the APC per diem payment amount for each day, as discussed in section VIII.D of this final rule with comment period. In addition, as discussed in section VIII.D of this final rule with comment period, we proposed to calculate the costs for 3-service and 4-service days based on the list of HCPCS codes in Table 96. We reminded readers that currently, to qualify for payment at the applicable PHP APC (5853 or 5863) one service must be from the Partial Hospitalization Primary list, and we identified the services that are currently included in the Partial Hospitalization Primary list along with those which we proposed to add based on our analysis of the services included on days with three and four services from the proposed list shown in Table 96 of this final rule with comment period. We proposed to maintain this requirement for CY 2024 and subsequent years to qualify for payment at the PHP or IOP APC. Thus, we proposed that to qualify for payment for an IOP APC, at least one service must be from the Partial Hospitalization and Intensive Outpatient Primary list. Specifically, we proposed that to qualify for payment for the IOP APC (5851, 5852, 5861 or 5862) or the PHP APC (5853, 5854, 5863, or 5864) one service must be from the Partial Hospitalization and Intensive Outpatient Primary list, which is reproduced in Table 97 of this final rule with comment period for reference.

TABLE 97: PROPOSED PARTIAL HOSPITALIZATION AND INTENSIVE OUTPATIENT PRIMARY SERVICES

HCPCS/CPT	Short Descriptor	Proposed Action
90832	Psytx pt&/family 30 minutes	
90834	Psytx pt&/family 45 minutes	
90837	Psytx pt&/family 60 minutes	
90845	Psychoanalysis	Add
90846	Family psytx w/o patient	
90847	Family psytx w/patient	
90853	Group psychotherapy	Add
90865	Narcosynthesis	Remove
90880	Hypnotherapy	
96112	Devel tst phys/qhp 1st hr	Add
96116	Neurobehavioral status exam	Add
96130	Psychological testing evaluation by physician/qualified health care professional; first hour	Add
96132	Neuropsychological testing evaluation by physician/qualified health care professional; first hour	Add
96136	Psychological/neuropsychological testing by physician/qualified health care professional; first 30 minutes	Add
96138	Psychological/neuropsychological testing by technician; first 30 minutes	Add
G0410	Grp psych partial hosp/IOP 45-50	Update
G0411	Inter active grp psych PHP/IOP	Update

BILLING CODE 4150–28–C

Lastly, we proposed that in the future, in the event there are new codes that represent the PHP and IOP services described under §§ 410.43(a)(4) and 410.44(a)(4), respectively, we would add such codes to Table 96 through sub-regulatory guidance, and that these codes would be payable when furnished by a PHP or IOP. We note that coding updates frequently occur outside of the standard rulemaking timeline. We proposed this sub-regulatory process in order to pay expeditiously when new codes are created that describe any of the services enumerated at §§ 410.43(a)(4) and 410.44(a)(4), which PHPs and IOPs, respectively, would provide. We would identify codes to be added sub-regulatorily if a new code is cross-walked to a previously included code, or if the code descriptor is substantially similar to a descriptor for a code on the list or describes a service on the list. We proposed that any additional services not described at § 410.43(a)(4) or § 410.44(a)(4) would be added to the lists in regulation through notice and comment rulemaking.

We invited public comment on the proposed consolidated list of HCPCS codes that would be payable when furnished in a PHP and IOP. As discussed in the following section of this CY 2024 OPPS/ASC final rule, we also solicited comment on any additional codes that we should consider adding. Specifically, we stated that we were interested in hearing from commenters if there are any other existing codes that CMS should consider adding to the list, or new codes that CMS should consider creating, to describe specific services not appropriately described by the codes shown in Table 96 of this final rule with comment period.

Comment: Commenters supported the removal of 90865 Narcosynthesis and agreed this code is not widely used in the provision of PHP. The commenters also supported a consolidated list of HCPCS codes that would align both the PHP and IOP benefits.

Response: We appreciate the commenters' support. After consideration of the public comments we received, we are finalizing the removal of 90865 Narcosynthesis from the list of HCPCS codes applicable for PHP and IOP.

Comment: One commenter expressed support for adding 90839 (Psytx crisis initial 60 min) to the PHP and IOP code list, but also requested that CMS include 90840 (Psytx crisis ea addl 30 min) to recognize the time associated with additional crisis psychotherapy services.

Response: We appreciate the commenter's suggestion, and we agree that this code would be appropriate to recognize for PHP and IOP. We have

included 90840 (Psytx crisis ea addl 30 min) in Table 98 of this final rule with comment period.

Comment: Commenters supported adding 90853 (Group psychotherapy) as well as maintaining G0410 (Grp psych partial hosp/IOP 45–50) and G0411 (Inter active grp psych PHP/IOP) on the list of HCPCS codes applicable to PHP and IOP. The commenters stated there are differences in the application and descriptions between these codes. Accordingly, commenters stated including codes G0410, G0411, and 90853 on the list would avoid unintentional billing errors.

Response: We appreciate the commenters' input. After consideration of the public comments we received, we are finalizing adding code 90853 Group psychotherapy and maintaining G0410 and G0411 on the list of HCPCS codes applicable to PHP and IOP. We intend to monitor the utilization of these codes and may consider changes in future rulemaking, if necessary.

Comment: Commenters supported adding codes to the list of HCPCS applicable for PHP and IOP through a sub-regulatory process when the codes added describe a service already enumerated at § 410.43(a)(4) or § 410.44(a)(4).

Response: We appreciate the commenters' support. After consideration of the public comments we received, we are finalizing our proposal to add codes to the list of HCPCS applicable for PHP and IOP through a sub-regulatory process when the codes to be added describe a service already enumerated at § 410.43(a)(4) or § 410.44(a)(4).

Comment: Commenters did not support the proposal requiring that to qualify for payment for the IOP APC (5851, 5852, 5861 or 5862) one service must be from the Partial Hospitalization and Intensive Outpatient Primary list. The commenters stated that the requirement of a primary service may undermine the flexibility to provide the full scope of services within IOP. Commenters suggested CMS review utilization data to determine which services should be added or removed from the Partial Hospitalization and Intensive Outpatient Primary Services list.

Response: While we appreciate commenters' input, we disagree that requiring one service from the Partial Hospitalization and Intensive Outpatient Primary list in order to qualify for payment for under IOP may undermine the flexibility to provide the full scope of services. To ensure program integrity, we expect that at least one of the services on the Partial Hospitalization and Intensive Outpatient Primary list will be indicated per day for patients who need the level of care offered by a PHP or IOP program.

Final Decision: After consideration of the public comments we received, we are finalizing our proposal to add code 90853 Group psychotherapy, as well as to maintain G0410 and G0411 on the list of HCPCS codes applicable to PHP and IOP, as well as to add additional codes describing a service already enumerated at § 410.43(a)(4) or § 410.44(a)(4) through a sub-regulatory process.

Further, we are finalizing that at least one service must be from the Partial Hospitalization and Intensive Outpatient Primary Services list to qualify for payment for the PHP or IOP APC. The final list of Partial Hospitalization and Intensive Outpatient Primary Services is found in table 99 of this final rule with comment period.

3. Additional HCPCS Codes Considered for CY 2024 in Response to Comments

As we noted in the prior section, we solicited comment in the CY 2024 OPPS/ASC proposed rule on any additional codes that we should consider adding to the list of HCPCS Applicable for PHP and IOP. Specifically, we stated that we were interested in hearing from commenters if there are any other existing codes that CMS should consider adding to the list, or new codes that CMS should consider creating, to describe specific services not appropriately described by the codes shown in Table 96 of this final rule with comment period.

We provided some examples of such services for public consideration and comment, including caregiver-focused services, services of peer support specialists, and services related to discharge planning and care coordination. In addition, commenters suggested additional services for consideration, as discussed in the following sections.

a. Caregiver-Focused Services

In the proposed rule, we explained that we were particularly interested in whether it would be appropriate to include caregiver-focused services in the list of recognized services for PHP and IOP. We identified and solicited comment on including the following HCPCS codes describing services related to caregivers:

- 96202 multiple -family group behavior management/modification training for parents(s) guardians(s) caregivers(s) with a mental or physical health diagnosis, administered by a physician or other QHP without the patient present, face to face up to 60 minutes.
- 96203 each additional 15 minutes.
- 96161 administration of caregiver-focused health risk assessment instrument (that is, depression inventory) for the benefit of the patient, with scoring and documentation, per standardized instrument.
- 9X015 CAREGIVER TRAINING 1ST 30 MIN
- 9X016 CAREGIVER TRAINING EA ADDL 15
- 9X017 GROUP CAREGIVER TRAINING

We noted that the CMHC conditions of participation at § 485.916(b) and (c) already include references to the role of caregivers in the development and implementation of the individualized treatment plan for PHP patients, and we referred readers to section XVII.B.4 of the CY 2024 OPPS/ASC proposed rule for discussion of proposed amendments to the regulations at § 485.916(d). We solicited comments on whether it would be appropriate to include costs for such services in the calculation of PHP and IOP per diem payment rates. We noted that if we were to include such services, we believe it would be appropriate to exclude them from the determination of the number of services provided per day, but we could include such services in the calculation of cost per day for determining the PHP and IOP payment rates.

Comment: Many commenters supported the inclusion of caregiver-focused services, such as codes 96202, 96203, 96161, 9X015, 9X016, and 9X017, in the list of recognized services for PHP and IOP. A majority of commenters advocated for both including caregiver-focused services in the cost per day and in the determination of the number of services provided per day. One commenter supported including caregiver-focused services in the cost per day but excluding them from the determination of number of services provided per day.

Response: In light of commenters' input, we are adopting the identified codes for caregiver-focused services in the final consolidated list of HCPCs codes recognized for PHP and IOP. We note that placeholder codes 9X015, 9X016, and 9X017 have been replaced with CPT codes 97550, 97551, and 97552 respectively. We believe that including caregiver services as covered under the PHP and IOP benefits supports the directive to consider family caregivers across policies and programs under the Executive Order on Increasing

Access to High-Quality Care and Supporting Caregivers.[163]

We believe that these services can be appropriately considered patient training and education services under §§ 410.43(a)(4)(vii) and 410.44(a)(4)(vii), and therefore we are not making any changes to the conditions and exclusions for PHP or IOP in adopting these codes. When these codes are reported, they will not count toward payment for a 3-service or 4-service day; however, we will include the costs associated with providing such services when calculating the PHP and IOP payment rates in future years.

b. Discharge and Transition Planning

In addition, we solicited comments on whether it would be appropriate to add services related to coordinating a patient's discharge from a PHP or IOP, or their transition from one level of care to another. We note that current regulations require physicians, hospitals, and CMHCs to address discharge planning for PHP patients, and we proposed the same requirements for IOP patients. Specifically, physician recertification requirements for PHP at § 424.24(e)(3)(iii)(C) state that the physician's recertification must address treatment goals for coordination of services to facilitate discharge from the partial hospitalization program. We noted that we proposed the same requirement for IOP at § 424.24(d)(3)(iii)(C), which we are finalizing in this final rule. Additionally, hospital CoPs at § 482.43, which apply to hospital outpatient departments providing PHP and IOP, and CMHC CoPs at § 485.914(e), require appropriate discharge planning to meet each patient's needs. We solicited comments on whether the proposed codes shown in Table 96 of this final rule with comment period represent the services that PHPs and IOPs provide to support transition and discharge planning for their patients, or whether we should consider additional codes. We asked commenters to provide as much detail as possible about the nature of any additional services, and whether there are any existing codes that could describe such services.

Comment: Commenters supported the inclusion of services related to discharge and transition between one level of care to another. Specifically, commenters suggested codes for discharge-related services, care coordination, and case management services, such as 99484 (Coordinated care services/care coordination). One commenter suggested codes 99424–99427 (Principal care management services), 99437 and 99439 (Chronic care management services), and 99489–99491 (Complex chronic care management services). Commenters stated these services are especially important for patients with co-occurring conditions that are being treated in multiple settings simultaneously. Several commenters recommended that CMS recognize proposed coding for Principal Illness Navigation (PIN), social determinants of health (SDOH) risk assessment, and community health integration (CHI) under the Physician Fee Schedule as PHP and IOP codes.

Response: We thank commenters for their suggestions to consider adopting PIN, CHI, and SDOH risk assessment codes, which are described in the CY 2024 Physician Fee Schedule proposed rule (88 FR 52325 through 52336), for inclusion in the list of PHP and IOP codes. As discussed in the CY 2024 PFS proposed rule (88 FR 52325), the proposed PIN, CHI, and SDOH risk assessment codes are intended to better identify and value practitioners' work when they incur additional time and resources helping patients with serious illnesses navigate the healthcare system or removing health-related social barriers that are interfering with the practitioner's ability to execute a medically necessary plan of care.

CMS proposed the following descriptions for CHI codes:

GXXX1 Community health integration services performed by certified or trained auxiliary personnel, including a community health worker, under the direction of a physician or other practitioner; 60 minutes per calendar month, in the following activities to address social determinants of health (SDOH) need(s) that are significantly limiting ability to diagnose or treat problem(s) addressed in an initiating E/M visit:

- *Person-centered assessment, performed to better understand the individualized context of the intersection between the SDOH need(s) and the problem(s) addressed in the initiating E/M visit.*

++ *Conducting a person-centered assessment to understand patient's life story, strengths, needs, goals, preferences and desired outcomes, including understanding cultural and linguistic factors.*

++ *Facilitating patient-driven goalsetting and establishing an action plan.*

++ *Providing tailored support to the patient as needed to accomplish the practitioner's treatment plan.*

- *Practitioner, Home-, and Community-Based Care Coordination.*

++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; and from home- and community-based service providers, social service providers, and caregiver (if applicable).*

++ *Communication with practitioners, home- and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) to address the SDOH need(s).*

- *Health education—Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, and preferences, in the context of the SDOH need(s), and educating the patient on how to best participate in medical decision-making.*

- *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services addressing the SDOH need(s), in ways that are more likely to promote personalized and effective diagnosis or treatment.*

- *Health care access/health system navigation*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care and helping secure appointments with them.*

- *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

- *Facilitating and providing social and emotional support to help the patient cope with the problem(s) addressed in the initiating visit, the SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

[163] *https://www.whitehouse.gov/briefing-room/presidential-actions/2023/04/18/executive-order-on-increasing-access-to-high-quality-care-and-supporting-caregivers/.*

• *Leveraging lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX2—Community health integration services, each additional 30 minutes per calendar month (List separately in addition to GXXX1).

CMS proposed the following description for PIN codes:

GXXX3 Principal Illness Navigation services by certified or trained auxiliary personnel under the direction of a physician or other practitioner, including a patient navigator or certified peer specialist; 60 minutes per calendar month, in the following activities:

• *Person-centered assessment, performed to better understand the individual context of the serious, high-risk condition.*

++ *Conducting a person-centered assessment to understand the patient's life story, strengths, needs, goals, preferences, and desired outcomes, including understanding cultural and linguistic factors.*

++ *Facilitating patient-driven goal setting and establishing an action plan.*

++ *Providing tailored support as needed to accomplish the practitioner's treatment plan.*

• *Identifying or referring patient (and caregiver or family, if applicable) to appropriate supportive services.*

• *Practitioner, Home, and Community-Based Care Coordination*

++ *Coordinating receipt of needed services from healthcare practitioners, providers, and facilities; home- and community-based service providers; and caregiver (if applicable).*

++ *Communication with practitioners, home-, and community-based service providers, hospitals, and skilled nursing facilities (or other health care facilities) regarding the patient's psychosocial strengths and needs, functional deficits, goals, preferences, and desired outcomes, including cultural and linguistic factors.*

++ *Coordination of care transitions between and among health care practitioners and settings, including transitions involving referral to other clinicians; follow-up after an emergency department visit; or follow-up after discharges from hospitals, skilled nursing facilities or other health care facilities.*

++ *Facilitating access to community-based social services (e.g., housing, utilities, transportation, food assistance) as needed to address SDOH need(s).*

• *Health education—Helping the patient contextualize health education provided by the patient's treatment team with the patient's individual needs, goals, preferences, and SDOH need(s), and educating the patient (and caregiver if applicable) on how to best participate in medical decision-making.*

• *Building patient self-advocacy skills, so that the patient can interact with members of the health care team and related community-based services (as needed), in ways that are more likely to promote personalized and effective treatment of their condition.*

• *Health care access/health system navigation.*

++ *Helping the patient access healthcare, including identifying appropriate practitioners or providers for clinical care, and helping secure appointments with them.*

++ *Providing the patient with information/resources to consider participation in clinical trials or clinical research as applicable.*

• *Facilitating behavioral change as necessary for meeting diagnosis and treatment goals, including promoting patient motivation to participate in care and reach person-centered diagnosis or treatment goals.*

• *Facilitating and providing social and emotional support to help the patient cope with the condition, SDOH need(s), and adjust daily routines to better meet diagnosis and treatment goals.*

• *Leverage knowledge of the serious, high-risk condition and/or lived experience when applicable to provide support, mentorship, or inspiration to meet treatment goals.*

GXXX4—Principal Illness Navigation services, additional 30 minutes per calendar month (List separately in addition to GXXX3).

CMS proposed the following description for SDOH risk assessment:

GXXX5, Administration of a standardized, evidence-based Social Determinants of Health Risk Assessment, 5–15 minutes, not more often than every 6 months

We note that placeholder codes GXXX1 and GXXX2 have been replaced with GCPCS codes G0019 and G0022, respectively; placeholder codes GXXX3 and GXXX4 have been replaced with HCPCS codes G0023 and G0024 respectively; and placeholder code GXXX5 has been replaced with HCPCS code G0136.

As described above, all of these proposed codes include activities related to addressing social needs. Both PIN and CHI include certain care coordination activities and care transitions for the patient. However, there are distinct differences in the primary focus of PIN and CHI codes. As discussed in the CY 2024 PFS proposed rule (88 FR 52334), CMS proposed that in order to bill for PIN, time spent providing such services must be documented in the medical record in its relationship to the serious, high-risk illness. On the other hand, in the case of CHI services, CMS proposed that time spent providing such services must be documented in the patient's medical record in its relationship to the SDOH need(s) they are intended to address and the clinical problem(s) they are intended to help resolve (88 FR 52329).

As discussed in the CY 2024 Physician Fee Schedule proposed rule (88 FR 52335), CMS proposed that a practitioner could bill separately for other care management services during the same month as PIN or CHI, if time and effort are not counted more than once, requirements to bill the other care management services are met, and the services are medically reasonable and necessary. However, in the case of a patient participating in a PHP or IOP, we anticipate that the time and effort of facility staff in addressing the components of PIN services would generally be duplicative of the time and effort of providing CHI services. Furthermore, because PIN also includes an assessment of and activities related to addressing social needs, we believe that for PHP and IOP patients, the time and effort of facility staff associated with PIN services would generally be duplicative of the time and effort of providing SDOH risk assessment services.

We believe PIN would generally be the most appropriate code for patients participating in a PHP or IOP, because a patient's participation in one of these programs indicates the presence of a serious, high-risk mental health condition (inclusive of SUD). In addition, participation in a PHP or IOP requires certification and periodic recertification of the need for such services by a physician, which we believe is analogous to an initiating visit that is required for PIN services billed under the PFS. Therefore, after consideration of the public comments we received, we are adopting PIN services as applicable for PHP and IOP. We believe the PIN services described by codes G0023, G0024 appropriately describe the broad range of services that PHP and IOP staff provide to program participants each patient month, which include discharge and transition planning, care coordination, and case management services within PHPs and IOPs. We note that as discussed in the CY 2024 PFS final rule, CMS is removing references to peer support specialists from the final descriptions for G0023 and G0024, and is finalizing separate codes that better represent the

scope of practice for peer support specialists.

In addition, we note that these PIN services are reported monthly and represent time spent throughout the month; therefore, we will not count PIN services in the evaluation of whether a PHP or IOP day receives the 3-service or 4-service day for payment; however, we intend to analyze utilization and cost data for these services and consider any payment changes in future rulemaking to better recognize such costs.

We are not adopting SDOH risk assessment or CHI services described by G0136, G0019, and G0022 because we believe the inclusion of these codes would likely be duplicative of PIN services for a patient participating in a PHP or IOP. With respect to the principal care management, chronic care management, and complex chronic care management services that commenters suggested, we discussed these recommendations with CMS medical officers and have determined these services are more appropriate for the primary care setting, rather than a defined program of services like a PHP or IOP.

c. Peer Support Specialists

Additionally, we solicited comments in the proposed rule on peer services, and whether these would be appropriate to include for PHPs and IOPs. Peer support workers are people who have been successful in the recovery process who help others experiencing similar situations. Through shared understanding, respect, and mutual empowerment, peer support workers help people become and stay engaged in the recovery process and reduce the likelihood of relapse. Peer support services can effectively extend the reach of treatment beyond the clinical setting into the everyday environment of those seeking a successful, sustained recovery process. Peer support workers typically engage in a wide range of activities, including: advocating for people in recovery; sharing resources and building skills; building community and relationships; leading recovery groups; and mentoring and setting goals.[164] We stated in the CY 2024 OPPS/ASC proposed rule that we were interested in information about any available codes that would appropriately describe such services.

Comment: Commenters strongly supported the inclusion of peer support services in the list of codes recognized for PHP and IOP.

Response: As discussed above, we are adopting coding for PIN services. Additionally, as discussed in the CY 2024 PFS final rule, CMS is finalizing additional PIN codes which describe the set of services that are within the scope of practice of peer support specialists. As shown in Table 98 of this final rule with comment period, we are adopting these codes as applicable for PHP and IOP. We believe it is appropriate to recognize the services of peer support specialists working within the scope of practice for which they are licensed or certified under applicable State law, or meeting the requirements set forth in the CY 2024 PFS final rule if no applicable State requirements exist, as the services of staff trained to work with psychiatric patients, which is included under section 1861(ff)(2)(c) and which we have codified under the PHP benefit at § 410.43(a)(4)(iii) and are finalizing under the IOP benefit at § 410.44(a)(4)(iii) in this final rule.

As we noted above for PIN services, these peer support PIN service codes are reported monthly and represent time spent throughout the month; therefore, we will not count them in the evaluation of whether a PHP or IOP day receives the 3-service or 4-service day for payment; however, we intend to analyze utilization and cost data for these services and consider any payment changes in future rulemaking to better recognize such costs.

d. Testing and Diagnostic Services

We noted in the proposed rule that our analysis of PHP claims showed that the provision of testing and diagnostic services is very low among PHPs, although such services are covered under the PHP benefit. We included testing and diagnostic services in the proposed list of codes shown in Table 96 of this final rule with comment period, and we proposed to cover such services under the IOP benefit as well. We noted that our analysis of non-PHP days with 3 and 4 services, which we believe could represent IOP days in the future, shows a higher provision of testing and diagnostic services than is found among PHP days. We stated that we believe testing and diagnostic services would be included as component services of PHPs and IOPs, and we are interested in information from the public about why PHPs are not more frequently billing for these services. In particular, we welcomed information from commenters about whether there are specific challenges that PHPs face in providing these services, as well as whether there are different codes, other than those shown in Table 96 of this final rule with comment period, that could better describe the testing and diagnostic services that are provided to PHP patients. In addition, we stated that we are interested in understanding whether these services are typically provided by an entity other than the PHP, such as by a referring provider.

Comment: Commenters provided useful information about why PHPs are not more frequently billing for testing and diagnostic services. Specifically, the commenters stated that the vast majority of PHPs and IOPs are generally designed to treat common types of behavioral health issues and typically focus on depression, anxiety, bipolar disorder, and self-harm. Commenters stated that testing and diagnostic services are usually more common in specialty programs such as eating disorders, obsessive-compulsive disorders, anger management, and child/adolescent programs. Additionally, commenters stated that while diagnostic services are covered under the PHP benefit, since PHP is intended for patients who have a mental health diagnosis, patients that are admitted to a PHP typically have a mental health diagnosis from a referring provider.

Response: We appreciate the information that commenters provided regarding testing and diagnostic services. While we recognize that these may not be used in most programs, we note that section 1861(ff)(2)(H) specifically includes diagnostic services in the definition of partial hospitalization and intensive outpatient services. We continue to believe it is appropriate to include these codes in the available PHP and IOP code set for those programs that do provide these services. We intend to monitor the provision of these services for PHP and IOP patients and may consider coding changes in the future.

e. Other Categories of Services

Comment: One commenter suggested including a variety of codes commonly billed for occupational therapy. For example, codes 97165–97167 for low, moderate, and high complexity occupational therapy evaluations; and code 97168 Occupational therapy re-evaluation.

Response: We appreciate the commenter's recommendation to adopt more detailed coding for occupational therapy. We note that occupational therapy services are an important part of PHPs, specifically listed under 1861(ff)(2)(B) and § 410.43(a)(4)(ii). We also proposed to include occupational therapy services under § 410.44(a)(4). We proposed to include G0129, which is the currently recognized code for

[164] *https://www.samhsa.gov/brss-tacs/recovery-support-tools/peers.*

occupational therapy services provided for PHP patients, and we proposed to recognize this code for IOP patients beginning in CY 2024 as well. We are not including the more detailed list of CPT codes that the commenter recommended; however, we will take this comment into consideration to potentially inform future rulemaking.

Comment: Commenters suggested adding SUD screening and diagnostic evaluations (including G0396 and G0397), GXXX5 Social determinants of health assessment, and individual and group SUD counseling. Additionally, commenters suggested including codes 99446–99449 Interprofessional phone/internet/electronic health record consultation services, as well as withdrawal management, medication management, and psychoeducation services. One commenter advocated the creation of a new add-on code for psychoeducation services.

Response: After consideration of the public comments received, we do not believe SUD screening and diagnostic evaluations, social determinants of health assessment, individual and group SUD counseling, withdrawal management, medication management, or psychoeducation services are appropriate for the PHP or IOP benefits. We consulted with physicians and have determined these services are typically provided by a primary care provider for screening purposes.

Comment: A few commenters suggested including transportation and meals.

Response: While we appreciate the commenters' input, we remind readers that section 1861(ff)(2)(I) of the Act excludes transportation and meals from the items and services that may be offered provided under the PHP and IOP benefits.

Final Decision: After consideration of the public comments we received, we are adopting as final the following list of PHP and IOP codes for CY 2024, which is presented in Table 98.

BILLING CODE 4150–28–P

TABLE 98: FINAL HCPCS APPLICABLE FOR PHP AND IOP

HCPCS/CPT	Short Descriptor	Final Action
90785	Psytx complex interactive	
90791	Psych diagnostic evaluation	
90792	Psych diag eval w/med srvcs	
90832	Psytx pt&/family 30 minutes

BILLING CODE 4150–28–P

D. Payment Rate Methodology for PHP and IOP

In summary, we proposed for CY 2024 to revise our methodology for calculating PHP payment rates. We proposed to establish four separate PHP APC per diem payment rates: one for CMHCs for 3-service days and another for CMHCs for 4-service days (APC 5853 and APC 5854, respectively), and one for hospital-based PHPs for 3-service days and another for hospital-based PHPs for 4-service days (APC 5863 and APC 5864, respectively). In addition, for hospital-based PHPs, we proposed to calculate payment rates using the broader OPPS data set, instead of hospital-based PHP data only, because we believe using the broader OPPS data set would allow CMS to capture data from claims not identified as PHP, but that also include the service codes and intensity required for a PHP day. Because we proposed to establish consistent coding and payment between the PHP and IOP benefits, we proposed to consider all OPPS data for PHP days and non-PHP days that include 3 or more of the same service codes. We proposed to establish four separate IOP APC per diem payment rates at the same rates we proposed for PHP APCs: one for CMHCs for 3-service days and another for CMHCs for 4-service days (APC 5851 and APC 5852, respectively), and one for hospital-based IOPs for 3-service days and another for hospital-based IOPs for 4-service days (APC 5861 and APC 5862, respectively). We received public comments on these proposals, which we discuss and provide responses to in the following sections of this CY 2024 OPPS/ASC final rule.

1. Background

The standard PHP day is typically four services or more per day. We currently provide payment for three services a day for extenuating circumstances when a beneficiary would be unable to complete a full day of PHP treatment. As we stated in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66672), it was never our intention that days with only three units of service should represent the number of services provided in a typical PHP day. Our intention was to cover days that consisted of three units of service only in certain limited circumstances. For example, as we noted in the CY 2009 OPPS/ASC proposed rule (73 FR 41513), we believe 3-service days may be appropriate when a patient is transitioning towards discharge (or days when a patient who is transitioning at the beginning of his or her PHP stay). Another example of when it may be appropriate for a program to provide only three units of service in a day is when a patient is

required to leave the PHP early for the day due to an unexpected medical appointment.

2. Current Payment Rate Methodology for PHP

Since CY 2017, our longstanding policy has been to pay PHP on a per diem basis for days that include three or more PHP services, which are identified using a defined list of codes in the Healthcare Common Procedure Coding System (HCPCS). We currently (for CY 2023) utilize two separate PHP APC per diem payment rates: CMHC PHP APC 5853 (Partial Hospitalization (three or More Services Per Day)) using only CMHC data, and hospital-based PHP APC 8563 (Partial Hospitalization (three or More Services Per Day)) using only hospital-based PHP data.

Under longstanding OPPS policy, the hospital-based PHP APC per diem payment amount is also applied as a daily mental health cap, which serves as an upper limit on payment per day for individual OPPS mental health services. Under the current methodology, for CY 2023, hospital-based PHPs are paid a per diem rate of $268.22 for three or more PHP services per day, and CMHCs are paid a per diem rate of $142.70 for three or more PHP services per day. We refer readers to the PHP ratesetting methodology described in section VIII.B.2 of the CY 2016 OPPS/ASC final rule with comment period (80 FR 70462 through 70466) for information on the current calculation of geometric mean per diem costs and payment rates for PHP APCs 5853 and 5863, and the CY 2017 OPPS/ASC final rule with comment period (81 FR 79680 through 79687) and the CY 2022 OPPS/ASC final rule with comment period (86 FR 63665 and 63666) for information on modifications incorporated into the PHP ratesetting methodology.

We note that under our current methodology, we have historically prepared the data by first applying PHP-specific trims and data exclusions and assessing CCRs. We direct the reader to the CY 2016 OPPS/ASC final rule with comment period (80 FR 70463 through 70465) for a more complete discussion of these trims, data exclusions, and CCR adjustments. In prior rules, we have typically included a discussion of PHP-specific data trims, exclusions, and CCR adjustments; we are not including that discussion in this rule. These PHP-specific data trims and exclusions addressed limitations as well as anomalies in the PHP data. However, as discussed in the following section, we proposed for CY 2024 to calculate hospital-based PHP payment rates for 3 services per day and 4 services per day based on cost per day using the broader OPPS data set. Accordingly, we proposed not to apply PHP-specific trims and data exclusions, but rather to apply the same trims and data exclusions consistent with the OPPS.

We did not receive any public comments regarding the proposal, and we are finalizing it as proposed. Additional information about the data trims, data exclusions, and CCR adjustments applicable to the data used for this final rule can be found online at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/index.html*).[165]

3. CY 2024 Payment Rate Methodology for PHP and IOP

As we noted in the proposed rule, the CAA, 2023 established IOP within the continuum of care, and the statute makes reference to weekly hour requirements. Specifically, IOP patients are required to be certified by a physician as needing at least 9 hours of services per week; while PHP patients are required to be certified by a physician as needing at least 20 hours of services per week.

We stated in the proposed rule that while no IOP benefit existed prior to the CAA, 2023, the types of items and services included in IOP have been, and are, paid for by Medicare either as part of the PHP benefit or under the OPPS more generally. Additionally, we stated that prior to the CAA, 2023, CMS had begun gathering information from interested parties on IOP under Medicare. In the CY 2023 OPPS/ASC proposed rule (87 FR 44679), we issued a comment solicitation on intensive outpatient mental health treatment, including SUD treatment furnished by IOPs, to collect information regarding whether there are any gaps in coding that may be limiting access to needed levels of care for treatment of mental health disorders or SUDs for Medicare beneficiaries, and specific information about IOP services, such as the settings of care in which these programs typically furnish services, the range of services typically offered, and the range of practitioner types that typically furnish these services.

We explained that along with the requirements for IOP mandated by the CAA, 2023, we took into consideration information we received from the comment solicitation to construct an appropriate data set to develop proposed rates for IOP. Since IOPs furnish the same types of services as PHP, just at a lower intensity, we stated that we believe it is appropriate to use the same data and methodology for calculating payment rates for both PHP and IOP for CY 2024. We explained that although PHP claims can be specifically identified, there is no specific identifier or billing code to indicate IOP services. However, we noted that hospitals are permitted to furnish and bill for many of these services as outpatient services under the OPPS. Thus, we analyzed a broader set of data that includes both PHP and non-PHP days with 3 or more services in order to calculate proposed payment for PHP services. In order to establish consistent payment between PHP and IOP, we proposed to set IOP payment rates at the same rates as PHP. We stated that the primary goal in developing the proposed payment rate methodology for IOP and PHP services was to pay providers an appropriate amount relative to the patients' needs, and to avoid cost inversion in future years.

For CY 2024, we proposed to calculate hospital-based PHP payment rates for 3 services per day and 4 services per day based on cost per day using the broader OPPS data set, a change from the current methodology of using only PHP data. We stated that we believe using the broader OPPS data set would allow us to capture data from claims that are not identified as PHP, but that include the service codes and intensity required for a PHP day. We stated that the larger data set would expand the sample size to allow for more precise rate calculations. In addition, we proposed to calculate the 3 services per day and 4 services per day PHP rates for CMHCs and hospital-based programs separately.

We also proposed to set payment rates for IOP APCs at amounts equal to the payment rates for PHP APCs. We stated that setting the IOP payment rates equal to the PHP payments would be appropriate because IOP is a newly established benefit, and we do not have definitive data on utilization. However, we explained that both programs utilize the same services, but furnish them at different levels of intensity, with different numbers of services furnished per day and per week, depending on the program. Therefore, we stated that we expect it would be appropriate to pay the same per diem rates for IOP and PHP services unless future data analysis supports calculating rates independently. Table 100 below shows the proposed APCs and the calculated

[165] Click on the link labeled ''CY 2024 OPPS/ASC Notice of Final Rulemaking'', which can be found under the heading ''Hospital Outpatient Prospective Payment System Rulemaking'' and open the claims accounting document link at the bottom of the page, which is labeled ''2024 NFRM OPPS Claims Accounting (PDF)''.

geometric mean per diem costs for the CY 2024 OPPS/ASC proposed rule.

TABLE 100: PROPOSED CY 2024 PHP AND IOP APC GEOMETRIC MEAN PER DIEM COSTS

CY 2024 APC	Group Title	Proposed PHP and IOP APC Geometric Mean Per Diem Costs
5851	Intensive Outpatient (3 services per day) for CMHCs	$97.59
5852	Intensive Outpatient (4 or more services per day) for CMHCs	$153.09
5853	Partial Hospitalization (3 services per day) for CMHCs	$97.59
5854	Partial Hospitalization (4 or more services per day) for CMHCs	$153.09
5861	Intensive Outpatient (3 services per day) for hospital-based IOPs	$284.00
5862	Intensive Outpatient (4 or more services per day) for hospital-based IOPs	$368.18
5863	Partial Hospitalization (3 services per day) for hospital-based PHPs	$284.00
5864	Partial Hospitalization (4 or more services per day) for hospital-based PHPs	$368.18

For beneficiaries in a PHP or IOP, we proposed applying the four-service payment rate (that is, payment for PHP APCs 5854 for CMHCs and 5864 for hospitals, and IOP APCs 5852 for CMHCs and 5862 for hospitals) for days with 4 or more services. For days with three or fewer services, we proposed to apply the three-service payment rate (that is, payment for PHP APCs 5853 for CMHCs and 5863 for hospitals, and IOP APCs 5851 for CMHCs and 5861 for hospitals), which we noted would be a departure from our current policy. We explained that under our current policy, we do not make payment for any PHP days with fewer than three services. We stated that we have heard from interested parties that this policy could discourage treatment of PHP patients when, due to extenuating circumstances, they cannot complete a full day. We stated that we believe paying for a day with three or fewer services would allow us to more easily monitor the actual utilization of services, particularly IOP. Specifically, we stated that we believe utilizing the three-service payment rate (that is, payment for PHP APCs 5853 for CMHCs and 5863 for hospitals, and IOP APCs 5851 for CMHCs and 5861 for hospitals) for days with three or fewer service would accommodate occasional instances when a patient is unable to complete a full day of PHP or IOP. We stated that we expect days with fewer than three services would be very infrequent, and that we intend to monitor the provision of these days among providers and individual patients.

Additionally, we proposed that the 3 service per day hospital-based PHP APC per diem payment amount for APC 5863 would also be applied as the daily mental health cap, which serves as the upper limit on payment per day for individual OPPS mental health services. We explained that setting the 3 service per day hospital-based PHP APC per diem payment amount as the daily mental health cap would be appropriate because currently the daily mental health cap is equal to the payment amount for hospital-based PHP APC 5863, which is payment for 3 or more services per day. Therefore, we noted that consistency with the current daily mental health cap would be maintained. Additionally, we stated that PHP is meant to be the most intensive mental health services program, requiring inpatient care if PHP is not received, and the daily mental health cap is not expected to reach such level of intensity. We stated that we believe applying the 3 service per day hospital-based PHP APC per diem payment amount for APC 5863 as the daily mental health cap would preserve the difference of intensity between PHP and individual OPPS mental health services to not incentivize one over the other. We noted that the proposed CY 2024 payment amount for APC 5863 would be comparable to the CY 2023 payment amount for APC 5863, which is currently applied as the daily mental health cap.

Lastly, we noted that section 4124(c) of the CAA, 2023 requires that the payment amount for intensive outpatient services furnished in FQHCs and RHCs be equal to the payment amount that would have been paid for the same service furnished by a hospital outpatient department, thus establishing site-neutral payment for hospital outpatient departments, FQHCs, and RHCs. We explained that the CAA, 2023 is silent with respect to the payment methodology for IOP services provided by CMHCs. Based on our analysis of CMHC costs, we stated that we continue to observe that CMHCs incur significantly different costs than hospitals in the provision of PHP services, and stated that we anticipate in the future there will be significant differences between CMHCs' and hospitals' costs of furnishing IOP services as well. We explained that we believe it is appropriate to continue to recognize the differences in cost structures for different providers of PHP. We further explained that this is of particular importance not only to the Medicare program, but also for the Medicare beneficiaries that CMHCs serve, who incur a 20 percent copay on all PHP services under Part B. Therefore, we proposed to continue calculating CMHC payment rates based solely on CMHC claims. However, we stated that we were also considering whether establishing a site-neutral payment for all providers of IOP using data from all providers of IOP would be more appropriate in an effort to increase access to mental health services. In order to inform public awareness, we calculated combined payment rates for the proposed rule by using the broader OPPS data from both hospitals and CMHCs to estimate the costs associated

with providing days with three and four services from the proposed list of services, which is reproduced in Table 96 of this final rule with comment period. We provided these alternative cost calculations in Table 46 in section VIII.D.3.b of the CY 2024 OPPS/ASC proposed rule. We solicited comments on whether this approach would be more appropriate to consider for establishing payment beginning in CY 2024. Specifically, we stated that we were interested in any information from commenters on how IOPs may structure their service days, and how the differences in cost structures of CMHCs might affect a site-neutral payment for IOP services. We also solicited comments on any ways IOP days could differ from PHP days, and considerations that could affect payment.

We received a number of public comments on these proposals. Our summaries and responses to the comments we received are included in the following paragraphs.

Comment: Overall, commenters expressed support for the proposed methodology of calculating PHP and IOP rates using a broader set of OPPS data. Several commenters expressed support for the proposed payment for intensive outpatient services and the proposed increases to payment rates for partial hospitalization services for CY 2024. One commenter raised concerns that using a broader set of OPPS data may result in inadequate reimbursement for hospital-based PHPs that furnish IOPs, given the additional resource costs associated with these sites of care.

Response: We appreciate the support from commenters. As noted earlier, we proposed to use a broader set of OPPS data in order to capture data from claims that are not identified as PHP, but that include the service codes and intensity required for a PHP day. In general, our analysis finds that non-PHP days furnished in the hospital outpatient setting that include 3 services and 4 or more services generally have comparable costs to PHP days furnished in the hospital setting with a comparable number of services provided. As we have discussed in prior rulemaking (85 FR 86075; 84 FR 61343), data from a small number of providers with low service costs per day have driven fluctuations in PHP payment rates, which has necessitated certain policies to stabilize payment in the past. We believe that using a broader set of OPPS data for days with a similar type and number of services appropriately provides stability for the calculation of PHP and IOP payment rates for CY 2024.

Comment: Commenters strongly supported the proposal to stratify payment for PHP and IOP days into 3-service and 4-service days. Several commenters stated that bifurcating each service into two tiers takes into account the varying levels of need among individuals receiving services. Commenters also strongly supported our proposal to make payment at the applicable 3-service rate for PHP and IOP days with fewer than 3 services. Commenters expressed that this flexibility is particularly important for ensuring that the new IOP benefit is made available to patients.

Response: We appreciate the support for the proposal to stratify payment and to make payment for days with fewer than 3 services. We share the commenters' view that these proposed policies are important for supporting access to the new IOP benefit and appropriately matching payment to daily service intensity for patients participating in both PHPs and IOPs. We are reiterating our expectation that days with fewer than three services should be very infrequent, and we are reminding readers that we intend to monitor the provision of these days among providers and individual patients.

Comment: Commenters generally supported the proposal to calculate the per diem payment rates for IOP based on the proposed per diem payment rates for PHP. As noted earlier in this final rule, several commenters raised concerns that the proposal to pay the same rates for PHP and IOP may be driving the proposed requirement that a service from the ''primary list'' be provided for each day that received payment. These commenters encouraged CMS to revisit this question in future rulemaking as cost and claims data are available, to analyze the key differences between IOP and PHP, including the prevalence of certain services within the bundle.

Response: We appreciate the support from commenters regarding the proposal. As we stated in the proposed rule, we proposed to use the PHP rates, calculated using the broader OPPS data set, as the basis for the proposed CY 2024 IOP rates, because IOP is a newly established benefit for which we do not have definitive data on utilization.

Regarding the statement that the proposed payment policy is the reason for the proposal to require a primary service for each day that receives payment, we are clarifying that this is not the case. As we noted earlier in this CY 2024 OPPS/ASC final rule, the purpose of the primary list is to ensure that IOPs and PHPs are being provided with an appropriate level of intensity to ensure program integrity. Although we expect IOPs to be less intensive than PHPs and to involve fewer weekly hours, we nevertheless expect the services provided to be of an intensity that is commensurate with treating the patient's condition. Because we have proposed to pay IOP on a per diem basis, we believe it is important to ensure a minimum standard of program intensity for each date of service.

Comment: A few commenters expressed support for establishing separate payment rates that recognize the cost differences between hospital outpatient departments and CMHCs. These commenters agreed with CMS that hospitals and CMHCs have different cost structures, and encouraged CMS to finalize payment rates that reflect these differences.

In contrast, several commenters opposed the proposal to establish separate payment rates for hospital outpatient departments and CMHCs, advocating for the alternative combined site-neutral payment rates presented in the proposed rule. These commenters stated that the stark discrepancy in rates between HOPDs and CMHCs for partial hospitalization services may not be representative of these entities' true cost structures. These commenters further noted that the addition of IOP to the Medicare service array may encourage additional facilities around the country to elect to enroll in Medicare as CMHCs. Commenters advocating for site-neutral payment responded to CMS' concerns regarding coinsurance burdens for CMHC patients by stating a large percentage of the low-income patients served by community-based behavioral health providers are dual eligible beneficiaries, for whom Medicaid typically covers Medicare coinsurance costs.

Response: We appreciate the comments we received on this topic. As we noted in the proposed rule, the best available data that we have at this time for assessing the cost of IOP services comes from PHP and OPPS days with similar services provided at the expected intensity level. Current data for partial hospitalization do reflect significant cost structure differences between hospitals and CMHCs, and our longstanding payment policies reflect those differences. We have no factual basis at this time on which to assume, as many commenters suggest, that the stark difference between hospital and CMHC payment rates for PHP services indicate that such services do not reflect the actual cost structure differences between facility types.

We recognize that there is uncertainty about the cost structures of CMHCs that

may in the future enroll in Medicare to provide IOP services. As we noted in the proposed rule, we intend to analyze actual IOP utilization data beginning in CY 2024 to understand the actual structure and costs associated with these programs. We are not adopting the commenter's recommendation to finalize the alternative site neutral payment rates for this CY 2024 OPPS/ASC final rule, but we will take these comments into consideration to potentially inform future rulemaking.

Comment: Interested parties overwhelming advocated for establishing the OPPS daily mental health cap based on proposed APC 5864, rather than APC 5863 as proposed. Commenters stated that this would be consistent with CMS's historical use of the highest PHP per diem payment amount as the basis for the OPPS daily mental health cap.

Response: We appreciate the comments' feedback regarding the proposal. We agree with commenters that the proposed APC 5864 would be the most resource intensive mental health service and would be appropriate to finalize as the basis for the OPPS daily mental health cap in CY 2024. As discussed in section II.A.2.c.(1) of this CY 2024 OPPS/ASC final rule, we are finalizing the use of APC 5864 to establish the payment rate for APC 8010 in CY 2024, rather than using APC 5863 as proposed.

Final Decision: After consideration of the public comments we received, we are finalizing our proposal to establish separate APC per diem payment rates for PHP days with 3 services and 4 or more services and to establish separate APC per diem payment rates for CMHCs and hospital-based PHPs. We are also finalizing our proposal to set APC per diem payment rates for IOP days based on the APC per diem payment rates for PHP in CY 2024. Lastly, we are finalizing our proposal to make payment at the 3-service rate for PHP or IOP days that have fewer than 3 services.

a. PHP APC Changes and Effects on Geometric Mean Per Diem Costs

For CY 2024 and subsequent years, we are finalizing a revision to our existing methodology to calculate the CMHC and hospital-based PHP geometric mean per diem costs to incorporate the larger data set under the OPPS, including PHP and non-PHP hospital claims for mental health services. We are finalizing our proposal to use the latest available CY 2022 claims data, and CY 2021 cost data. This is consistent with the overall use of cost data for the OPPS, which is discussed in section II.A.1.a. of this final rule with comment period. In addition, we are establishing four separate PHP APC per diem payment rates: two for CMHCs (APC 5853 and APC 5854) and two for hospital-based PHPs (APC 5863 and APC 5864). Following this methodology, we will use the geometric mean per diem cost of $90.02 for CMHCs providing 3-service days (APC 5853), and the geometric mean per diem cost of $161.80 for CMHCs providing 4-service days (APC 5854), as the basis for developing the CY 2024 CMHC PHP APC per diem rates. Additionally, we will use the geometric mean per diem cost of $266.35 for hospital-based providers providing 3-service days (APC 5863), and the geometric mean per diem cost of $367.79 for hospital-based providers providing 4-service days (APC 5864) as the basis for developing the CY 2024 hospital-based PHP APC per diem rates. Lastly, we are establishing four separate IOP APC per diem payment rates: two for CMHCs (APC 5851 and APC 5852 for 3-service days and 4-service days, respectively) and two for hospital-based IOPs (APC 5861 and APC 5862 for 3-service days and 4-service days, respectively) using the same above 3-service day and 4-service day geometric mean per diem costs finalized for the PHP APC per diem rates.

b. Development of the PHP and IOP APC Geometric Mean Per Diem Costs

The types of items and services paid as PHP (and that will be paid as IOP) can also be provided outside of those benefits by hospitals; therefore, we sought to understand the costs of those services in our preliminary analysis to consider options for the proposed payment rates for IOP services. In preparation for this CY 2024 final rule, in collaboration with physicians, we developed a consolidated list of all HCPCS codes that would be appropriate for identifying IOP and PHP services for analytic purposes. We refer readers to section VIII.C of this final rule with comment period for more detailed information on the consolidated list of HCPCS codes applicable for IOP and PHP services.

We calculated the final payment rates for hospital-based providers based on costs for days with three services and days with four services using the data from all OPPS claims for hospitals and calculated the final payment rates for CMHCs based on costs for days with three services and days with four services using only the data from CMHC claims. As discussed in section VIII.B.1.a of the CY 2022 OPPS/ASC final rule with comment period (86 FR 63666 through 63668), the costs for CMHC service days are calculated using cost report information from HCRIS. Although we anticipate that IOP weeks would generally include 9–19 hours of services and PHP weeks would generally include 20 or more hours of services, we did not restrict the data for this analysis by weekly hours. Because IOP is a new benefit, we do not have definitive data on utilization. However, if IOP utilization is similar to the data we analyzed for beneficiary weeks with 9 to 19 hours of mental health services, then we expect that IOP days will mostly include three services or fewer but may sometimes include four or more. Given the uncertainty about how IOPs will structure their service days in the future, we proposed and believe it is appropriate to finalize 3-service day and 4-service day APCs for IOP with payment rates that are the same as the rates for the 3-service day and 4-service day APCs for PHP.

We analyzed all CMHC and hospital claims data under the OPPS used to set final rates for this CY 2024 final rule. We identified all patient days that included three or more services from the list in Table 98. As discussed in section VIII.D.3 of this final rule with comment period, we calculated PHP payment rates for days with three services and days with four or more services, and we utilized these PHP payment rates for the IOP APCs as well. We are finalizing our proposal to calculate separate rates for hospitals and CMHCs.

c. CY 2024 PHP and IOP APC Geometric Mean Per Diem Costs

Following this structure, the final calculated CY 2024 PHP geometric mean per diem cost for all CMHCs for providing 3 services per day is $90.02, which we will use for calculating the payment rate for the 3-service day APC, CMHC APC 5853. The final calculated CY 2024 geometric mean per diem cost for all CMHCs for providing four or more services per day is $161.80, which we will use for calculating the payment rate for the 4-service day APC, CMHC APC 5854. As noted, the calculated CY 2024 hospital-based PHP APC geometric mean per diem cost for hospital-based PHP providers that provide 3 services per service day is $266.35, which we will use for calculating the payment rate for the 3-service day hospital-based PHP APC 5863. The calculated CY 2024 hospital-based PHP APC geometric mean per diem cost for hospital-based PHP providers that provide 4 or more services per day is $367.79, which we will use for calculating the payment rate for the 4-service day hospital-based PHP APC 5864.

Similarly, the calculated CY 2024 IOP geometric mean per diem cost for all

CMHCs for providing 3 services per day is $90.02, which we will use for calculating the payment rate for the 3-service day APC, CMHC APC 5851. The calculated CY 2024 geometric mean per diem cost for all CMHCs for providing 4 or more services per day is $161.80, which we will use for calculating the payment rate for the 4-service day APC, CMHC APC 5852. The calculated CY 2024 hospital-based IOP APC geometric mean per diem cost for hospital-based IOP providers that provide 3 services per service day is $266.35, which we will use for calculating the payment rate for the 3-service day hospital-based IOP APC 5861. The calculated CY 2024 hospital-based IOP APC geometric mean per diem cost for hospital-based IOP providers that provide 4 services per day is $367.79, which we proposed to use for calculating the payment rate for the 4-service day hospital-based IOP APC 5862.

We intend to monitor the provision of services in both PHP and IOP programs to better understand utilization patterns, and we are finalizing our proposal to set equal payment rates for PHP and IOP services until actual IOP utilization data becomes available for CY 2026 ratesetting, at which point we anticipate reevaluating our payment rate methodology if necessary. In addition, we solicited comments on the service mix used to develop the per diem amounts for both PHP and IOP. We stated that we are interested in whether the proposed approach is appropriate, and any feedback commenters have on the service mix provided within each program.

The final CY 2024 PHP geometric mean per diem costs are shown in Table 101 and are used to derive the final CY 2024 PHP APC per diem rates for CMHCs and hospital-based PHPs-. As stated in section VIII.D.3 of this final rule with comment period, we are finalizing our proposal to use the same 3—service day and 4-service day geometric mean per diem PHP costs for the CY 2024 CMHC and hospital-based IOP APCs. The final CY 2024 PHP and IOP APC per diem rates are included in Addendum A to this final rule with comment period (which is available on our website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalOutpatientPPS/Hospital-Outpatient-Regulations-and-Notices.html*) and in Table 101.

TABLE 101: CY 2024 PHP AND IOP APC GEOMETRIC MEAN PER DIEM COSTS

CY 2024 APC	Group Title	Final PHP and IOP APC Geometric Mean Per Diem Costs
5851	Intensive Outpatient (3 services per day) for CMHCs	$90.02
5852	Intensive Outpatient (4 or more services per day) for CMHCs	$161.80
5853	Partial Hospitalization (3 services per day) for CMHCs	$90.02
5854	Partial Hospitalization (4 or more services per day) for CMHCs	$161.80
5861	Intensive Outpatient (3 services per day) for hospital-based IOPs	$266.35
5862	Intensive Outpatient (4 or more services per day) for hospital-based IOPs	$367.79
5863	Partial Hospitalization (3 services per day) for hospital-based PHPs	$266.35
5864	Partial Hospitalization (4 or more services per day) for hospital-based PHPs	$367.79

E. Outlier Policy for CMHCs

For CY 2024, we proposed to update the calculations of the CMHC outlier percentage, cutoff point and percentage payment amount, outlier reconciliation, outlier payment cap, and fixed dollar threshold according to previously established policies to include intensive outpatient services. These topics are discussed in more detail. We refer readers to section II.G.1 of this final rule with comment period for our general policies for hospital outpatient outlier payments.

1. Background

As discussed in the CY 2004 OPPS final rule with comment period (68 FR 63469 through 63470), we noted a significant difference in the amount of outlier payments made to hospitals and CMHCs for PHP services. Given the difference in PHP charges between hospitals and CMHCs, we did not believe it was appropriate to make outlier payments to CMHCs using the outlier percentage target amount and threshold established for hospitals. Therefore, beginning in CY 2004, we created a separate outlier policy specific to the estimated costs and OPPS payments provided to CMHCs. We designated a portion of the estimated OPPS outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS each year, excluding outlier payments, and established a separate outlier threshold for CMHCs. This separate outlier threshold for CMHCs resulted in $1.8 million in outlier payments to CMHCs in CY 2004 and $0.5 million in outlier payments to CMHCs in CY 2005 (82 FR 59381). In contrast, in CY 2003, more than $30 million was paid to CMHCs in outlier payments (82 FR 59381).

2. CMHC Outlier Percentage

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59267 and 59268), we described the current outlier policy for hospital outpatient payments and CMHCs. We note that we also discussed our outlier policy for CMHCs in more detail in section VIII.C of that same final rule (82 FR 59381). We set our projected target for all OPPS aggregate outlier payments at 1.0 percent of the estimated aggregate total payments under the OPPS (82 FR 59267). This same policy was also reiterated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58996), the CY 2020 OPPS/ASC final rule with comment period (84 FR 61350), and the CY 2021 OPPS/ASC final rule with comment period (85 FR 86082).

We estimated CMHC per diem payments and outlier payments for this rule by using the most recent available utilization and charges from CMHC claims, updated CCRs, and the proposed payment rates for PHP APCs 5853 and 5854. We recognize that CMHCs would be permitted to provide and bill for IOP beginning in CY 2024 and would be paid under IOP APCs 5851 and 5852. However, we have not included estimates of utilization for these APCs, because the latest available claims from CY 2022 do not reflect the provision of IOP services. For increased transparency, we are providing a more detailed explanation of the existing

calculation process for determining the CMHC outlier percentages. To calculate the CMHC outlier percentage, we follow three steps:

- Step 1: We multiply the OPPS outlier threshold, which is 1.0 percent, by the total estimated OPPS Medicare payments (before outliers) for the prospective year to calculate the estimated total OPPS outlier payments: (0.01 × Estimated Total OPPS Payments) = Estimated Total OPPS Outlier Payments.
- Step 2: We estimate CMHC outlier payments by taking each provider's estimated costs (based on their allowable charges multiplied by the provider's CCR) minus each provider's estimated CMHC outlier multiplier threshold (we refer readers to section VIII.C.3 of the CY 2022 OPPS/ASC proposed rule). That threshold is determined by multiplying the provider's estimated paid days by 3.4 times the total of CMHC PHP APC and CMHC IOP payment rates. If the provider's costs exceed the threshold, we multiply that excess by 50 percent, as described in section VIII.E.3 of this final rule with comment period, to determine the estimated outlier payments for that provider. CMHC outlier payments are capped at 8 percent of the provider's estimated total per diem payments (including the beneficiary's copayment), as described in section VIII.E.5 of this final rule with comment period, so any provider's costs that exceed the CMHC outlier cap will have its payments adjusted downward. After accounting for the CMHC outlier cap, we sum all of the estimated outlier payments to determine the estimated total CMHC outlier payments.

(Each Provider's Estimated Costs − Each Provider's Estimated Multiplier Threshold) = A. If A is greater than 0, then (A × 0.50) = Estimated CMHC Outlier Payment (before cap) = B. If B is greater than (0.08 × Provider's Total Estimated Per Diem Payments), then cap adjusted B = (0.08 × Provider's Total Estimated Per Diem Payments); otherwise, B = B. Sum (B or cap-adjusted-B) for Each Provider = Total CMHC Outlier Payments.

- Step 3: We determine the percentage of all OPPS outlier payments that CMHCs represent by dividing the estimated CMHC outlier payments from Step 2 by the total OPPS outlier payments from Step 1: (Estimated CMHC Outlier Payments/Total OPPS Outlier Payments).

We proposed to continue to calculate the CMHC outlier percentage according to previously established policies. However, beginning in CY 2024, CMHCs will be permitted to provide and bill for intensive outpatient services for Medicare patients. Therefore, we proposed to expand the calculation of the CMHC outlier percentage to include PHP and IOP, because we anticipate that total payments will increase for CMHCs in CY 2024. We proposed to maintain our current methodology for calculating the CMHC outlier percentage, but to apply it to payments for IOP services as well as PHP services beginning in CY 2024. Therefore, based on our CY 2024 payment estimates, including our estimates of both PHP and IOP services, CMHCs are projected to receive 0.01 percent of total hospital outpatient payments in CY 2024, excluding outlier payments. We proposed to designate approximately less than 0.01 percent of the estimated 1.0 percent hospital outpatient outlier threshold for CMHCs. This percentage is based upon the formula given in Step 3.

We did not receive any public comments on our proposal and are finalizing our proposal as proposed.

3. Cutoff Point and Percentage Payment Amount

As described in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59381), our policy has been to pay CMHCs for outliers if the estimated cost of the day exceeds a cutoff point. In CY 2006, we set the cutoff point for outlier payments at 3.4 times the highest CMHC PHP APC payment rate implemented for that calendar year (70 FR 68551). For CY 2018, the highest CMHC PHP APC payment rate was the payment rate for CMHC PHP APC 5853. In addition, in CY 2002, the final OPPS outlier payment percentage for costs above the multiplier threshold was set at 50 percent (66 FR 59889). In CY 2018, we continued to apply the same 50 percent outlier payment percentage that applies to hospitals to CMHCs and continued to use the existing cutoff point (82 FR 59381). Therefore, for CY 2018, we continued to pay for partial hospitalization services that exceeded 3.4 times the CMHC PHP APC payment rate at 50 percent of the amount of CMHC PHP APC geometric mean per diem costs over the cutoff point. For example, for CY 2018, if a CMHC's cost for partial hospitalization services paid under CMHC PHP APC 5853 exceeded 3.4 times the CY 2018 payment rate for CMHC PHP APC 5853, the outlier payment would be calculated as 50 percent of the amount by which the cost exceeds 3.4 times the CY 2018 payment rate for CMHC PHP APC 5853 [0.50 × (CMHC Cost − (3.4 × APC 5853 rate))]. This same policy was also reiterated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 58996 through 58997), CY 2020 OPPS/ASC final rule with comment period (84 FR 61351), the CY 2021 OPPS/ASC final rule with comment period (85 FR 86082 through 86083), the CY 2022 OPPS/ASC final rule with comment period (86 FR 63670), and the CY 2023 OPPS/ASC final rule with comment period (87 FR 72004). For CY 2024, we proposed to continue to pay for partial hospitalization services that exceed 3.4 times the proposed CMHC PHP APC payment rate at 50 percent of the CMHC PHP APC geometric mean per diem costs over the cutoff point. In addition, we proposed to extend this policy to intensive outpatient services. That is, for CY 2024, if a CMHC's cost for partial hospitalization services paid under CMHC PHP APCs 5853 or 5854 exceeds 3.4 times the payment rate for the APC (either CMHC APC 5853 or 5854), the outlier payment would be calculated as: [0.50 × (CMHC cost − (3.4 × (PHP APC payment)))].

Similarly, if a CMHC's cost for intensive outpatient services paid under CMHC IOP APCs 5851 or 5852 exceeds 3.4 times the payment rate for the APC (either CMHC APCs 5851 or 5852), the outlier payment would be calculated as: [0.50 × (CMHC cost − (3.4 × (IOP APC payment)))].

We did not receive any public comments on our proposal and are finalizing our proposed policy as proposed.

4. Outlier Reconciliation

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68594 through 68599), we established an outlier reconciliation policy to address charging aberrations related to OPPS outlier payments. We addressed vulnerabilities in the OPPS outlier payment system that led to differences between billed charges and charges included in the overall CCR, which are used to estimate cost and would apply to all hospitals and CMHCs paid under the OPPS. We initiated steps to ensure that outlier payments appropriately account for the financial risk when providing an extraordinarily costly and complex service but are only being made for services that legitimately qualify for the additional payment.

For a comprehensive description of outlier reconciliation, we refer readers to the CY 2023 OPPS/ASC and CY 2019 OPPS/ASC final rules with comment period (83 FR 58874 and 58875 and 81 FR 79678 through 79680).

We proposed to continue these policies for partial hospitalization services provided through PHPs for CY 2024. In addition, since CMHCs will be permitted to provide and bill for

intensive outpatient services for Medicare patients we proposed to extend these policies to include intensive outpatient services in order to encompass the full scope of services that CMHCs will be permitted to furnish. The current outlier reconciliation policy requires that providers whose outlier payments meet a specified threshold and whose overall ancillary CCRs change by plus or minus 10 percentage points or more, are subject to outlier reconciliation, pending approval of the CMS Central Office and Regional Office (as established in the CY 2009 OPPS/ASC final rule with comment period (73 FR 68596 through 68599)). We note that the current threshold for outlier reconciliation for hospitals is $500,000, and there is no threshold for CMHCs (that is, all outlier payments are subject to reconciliation for CMHCs whose overall ancillary CCRs change by plus or minus 10 percentage points or more). The policy also includes provisions related to CCRs and to calculating the time value of money for reconciled outlier payments due to or due from Medicare, as detailed in the CY 2009 OPPS/ASC final rule with comment period and in the Medicare Claims Processing Manual (73 FR 68595 through 68599 and Medicare Claims Processing internet Only Manual, Chapter 4, Section 10.7.2 and its subsections, available at: *https://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c04.pdf*).

We did not receive any public comments on our proposal and are finalizing our proposed policy as proposed.

5. Outlier Payment Cap

In the CY 2017 OPPS/ASC final rule with comment period, we implemented a CMHC outlier payment cap to be applied at the provider level, such that in any given year, an individual CMHC will receive no more than a set percentage of its CMHC total per diem payments in outlier payments (81 FR 79692 through 79695). Our analysis of CY 2014 claims data found that CMHC outlier payments began to increase similarly to the way they had prior to CY 2004. This was due to inflated cost from three CMHCs that accounted for 98 percent of all CMHC outlier payments that year and received outlier payments that ranged from 104 percent to 713 percent of their total per diem payments. To balance our concern about disadvantaging CMHCs with our interest in protecting the benefit from excessive outlier payments and to mitigate potential inappropriate outlier billing vulnerabilities, we finalized the CMHC outlier payment cap at 8 percent of the CMHC's total per diem payments (81 FR 79694 and 79695) to limit the impact of inflated CMHC charges on outlier payments. This outlier payment cap only affects CMHCs, it does not affect other provider types (that is, hospital-based PHPs), and is in addition to and separate from the current outlier policy and reconciliation policy in effect. In the CY 2020 OPPS/ASC final rule with comment period (84 FR 61351), we finalized a proposal to continue this policy in CY 2020 and subsequent years. We proposed to maintain the 8 percent outlier payment cap for CY 2024 and apply it to both PHP and IOP payments. We note that the 8 percent would be calculated as 8 percent of total per diem PHP and IOP payments for CY 2024. As discussed earlier in this rule, beginning in CY 2024, CMHCs will be permitted to provide and bill for intensive outpatient services for Medicare patients. Therefore, we proposed to expand the calculation of the CMHC outlier cap to include both PHP and IOP, because we anticipate that total payments will increase for CMHCs in CY 2024. Therefore, we proposed to calculate the 8 percent outlier payment cap for each CMHC in a way that would encompass the full scope of services that CMHCs will be permitted to furnish in CY 2024.

We did not receive any public comments on our proposal and therefore, we are finalizing as proposed.

6. Fixed-Dollar Threshold

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59267 and 59268), for the hospital outpatient outlier payment policy, we set a fixed-dollar threshold in addition to an APC multiplier threshold. Fixed-dollar thresholds are typically used to drive outlier payments for very costly items or services, such as cardiac pacemaker insertions. Currently, for CY 2023, CMHC PHP APC 5853 is the only APC for which CMHCs may receive payment under the OPPS and is for providing a defined set of services that are relatively low cost when compared to other OPPS services. Because of the relatively low cost of CMHC services that are used to comprise the structure of CMHC PHP APC 5853, it is not necessary to also impose a fixed-dollar threshold on CMHCs. Therefore, in the CY 2018 OPPS/ASC final rule with comment period, we did not set a fixed-dollar threshold for CMHC outlier payments (82 FR 59381). This same policy was also reiterated in the CY 2020 OPPS/ASC final rule with comment period (84 FR 61351), the CY 2021 OPPS/ASC final rule with comment period (85 FR 86083), the CY 2022 OPPS/ASC final rule with comment period (86 FR 63508), and the CY 2023 OPPS/ASC final rule with comment period (87 FR 72004). We proposed to continue this policy for CY 2024 and not set a fixed-dollar threshold for the CMHC PHP APCs (5853 or 5854) or IOP APCs (5851 or 5852).

Comment: Several commenters urged CMS to implement a site-neutral payment for CMHCs and hospital-based providers for PHP and IOP services. Commenters stated that a site-neutral payment would eliminate the need for a separate outlier policy for CMHCs.

Response: We disagree with commenters who believe that a site-neutral payment would eliminate the need for a separate outlier policy for CMHCs. As discussed in the CY 2004 OPPS final rule with comment period (68 FR 63469 and 63470), we noted a significant difference in the amount of outlier payments made to hospitals and CMHCs for PHP services. Given the difference in PHP charges between hospitals and CMHCs, we did not believe it was appropriate to make outlier payments to CMHCs using the outlier percentage target amount and threshold established for hospitals. Therefore, beginning in CY 2004, we created a separate outlier policy specific to the estimated costs and OPPS payments provided to CMHCs. We designated a portion of the estimated OPPS outlier threshold specifically for CMHCs, consistent with the percentage of projected payments to CMHCs under the OPPS each year, excluding outlier payments, and established a separate outlier threshold for CMHCs. Furthermore, to balance our concern about disadvantaging CMHCs with our interest in protecting the benefit from excessive outlier payments and to mitigate potential inappropriate outlier billing vulnerabilities, we finalized the CMHC outlier payment cap at 8 percent of the CMHC's total per diem payments (81 FR 79694 and 79695) to limit the impact of inflated CMHC charges on outlier payments. In conclusion, CMS does not believe payment methodology has any effect on outlier policy.

Final Decision: After consideration of the public comments we received, we are finalizing our proposed policy as proposed.

F. Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs)

1. Background

a. Statutory Background

The Rural Health Clinic Services Act of 1977 (Pub. L. 95–210, December 13, 1977), amended the Act by enacting section 1861(aa) of the Act to extend Medicare and Medicaid entitlement and payment for rural health clinics (RHCs), which are defined as being primarily engaged in furnishing outpatient services by physicians and certain nonphysician practitioners, and for services and supplies incidental to their services. ''Nonphysician practitioners'' included nurse practitioners and physician assistants. (Subsequent legislation extended the definition of covered RHC services to include the services of clinical psychologists, clinical social workers, certified nurse midwives, marriage and family therapist, and mental health counselors). The statutory payment requirements for RHC services are set forth at section 1833(a)(3) of the Act, which states that RHCs are paid reasonable costs, less the amount a provider may charge as described in clause of section 1866(a)(2)(A) of the Act, but in no case may the payment exceed 80 percent of such costs.

Section 1861(aa)(2) of the Social Security Act (42 U.S.C. 1395x(aa)(2)) defines the term ''rural health clinic'', in relevant part, as a facility that is located in an area that is not an urbanized area and in which there are insufficient numbers of needed health care practitioners and is not a rehabilitation agency or a facility primarily for the care and treatment of mental diseases. Additionally, the law includes a basic requirement that the facility is primarily engaged in providing health care services furnished by physicians, physician assistants, nurse practitioners, clinical psychologists, and clinical social workers to outpatients.

Section 4161 of the Omnibus Budget Reconciliation Act of 1990 (Pub. L. 101–508, November 5, 1990) (OBRA 90) established Federally Qualified Health Centers (FQHCs) in 1990 to be effective beginning on October 1, 1991. The law mandated that FQHCs furnish services that are typically furnished in an outpatient setting.

Section 1861(aa)(3) of the Act extends Medicare and Medicaid entitlement and payment for those services defined as RHC services under section 1861(aa)(1) of the Act, preventive services defined under section 1861(ddd)(3) of the Act, and preventive primary health services that a center is required to provide under section 330 of the Public Health Service Act furnished at a FQHC. Section 1861(aa)(4) of the Act describes the statutory requirements that FQHCs must meet to qualify for Medicare payment. Section 10501(i)(3)(A) of the Affordable Care Act (Pub. L. 111–148) added section 1834(o) of the Act to establish a new system of payment for the costs of FQHC services under Medicare Part B (Supplemental Medical Insurance) based on prospectively set rates. Section 1834(o)(2)(A) of the Act, the FQHC prospective payment system (PPS) was effective beginning on October 1, 2014. In addition, section 10501(i)(3)(B) of the Affordable Care Act added section 1833(a)(1)(Z) to the Act to specify that Medicare payment for FQHC services under section 1834(o) of the Act shall be 80 percent of the lesser of the actual charge or the amount determined under section 1834(o) of the Act.

Regulations pertaining to RHC and FQHC benefits are codified at 42 CFR part 405, subpart X.

b. Medicare Part B Payment of RHC and FQHC Services

As provided in 42 CFR part 405, subpart X, of our regulations, RHC and FQHC visits generally are face-to-face encounters between a patient and one or more RHC or FQHC practitioners during which one or more RHC or FQHC qualifying services are furnished. RHC and FQHC practitioners are physicians, NPs, PAs, certified nurse-midwife (CNMs), clinical psychologists (CPs), and clinical social workers, and under certain conditions, a registered nurse or licensed practical nurse furnishing care to a homebound RHC or FQHC patient in an area with a shortage of home health agencies. We note, effective January 1, 2024, marriage and family therapist and mental health counselor services are considered RHC services in accordance with section 1861(aa)(1)(B) of the Act as amended by section 4121(b) of CAA, 2023, which is incorporated into FQHC services through section 1861(aa)(3)(A) of the Act. In the CY 2024 PFS proposed rule, we propose to codify payment for MFTs and MHCs at § 405.2411 (88 FR 52398). Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment.

Section 130 of the Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116–260, December 27, 2020), updated section 1833(f) of the Act by restructuring the payment limits for RHCs beginning April 1, 2021. As of April 1, 2021, all RHCs are subject to payment limits on the all-inclusive rate (AIR), and this limit will be determined for each RHC in accordance with section 1833(f) of the Act. RHCs generally are paid an AIR for all medically necessary medical and mental health services and qualified preventive health services furnished on the same day (with some exceptions). The AIR is subject to a payment limit, meaning that an RHC will not receive any payment beyond the specified limit amount.

FQHCs were paid under the same AIR methodology until October 1, 2014. Subsequently, FQHCs began to transition to the FQHC PPS system, in which they are paid based on the lesser of the FQHC PPS rate or their actual charges. The FQHC PPS rate is adjusted for geographic differences in the cost of services by the FQHC PPS geographic adjustment factor (GAF). The rate is increased by 34 percent when an FQHC furnishes care to a patient that is new to the FQHC, or to a beneficiary receiving an initial preventive physical examination (IPPE) or has an annual wellness visit (AWV).

Both the RHC AIR and FQHC PPS payment rates were designed to reflect the cost of all services and supplies that an RHC or FQHC furnishes to a patient in a single day. The rates are not adjusted for the complexity of the patient health care needs, the length of the visit, or the number or type of practitioners involved in the patient's care. RHCs and FQHCs are required to file a cost report annually to determine their payment rate, which reflects adjustments for GME payments, bad debt, and influenza, pneumococcal and COVID–19 vaccines and covered monoclonal antibody products used as pre-exposure prophylaxis prevention of COVID–19 and their administration.

There are additional payments for non-face-to-face services for care management services including chronic care management (CCM), principal care management (PCM), chronic pain management (CPM), general behavior health integration (GBHI), psychiatric collaborative care model (CoCM), and virtual communications (§ 405.2464(c)).

Additionally, for FQHCs, § 405.2462(d) describes a ''grandfathered tribal FQHC'' as a FQHC that is operated by a tribe or tribal organization under the Indian Self-

Determination and Education Assistance Act (ISDEAA); was billing as if it were a provider-based to an Indian Health Service (IHS) hospital on or before April 7, 2000, and is not currently operating as a provider-based department of an IHS hospital. We refer to these tribal FQHCs as ''grandfathered tribal FQHCs'' to distinguish them from freestanding tribal FQHCs that are currently being paid the lesser of their charges or the adjusted national FQHC PPS rate, and from provider-based tribal clinics that may have begun operations subsequent to April 7, 2000.

Under the authority in section 1834(o) of the Act to include adjustments determined appropriate by the Secretary, we revised §§ 405.2462 and 405.2464 to pay these grandfathered tribal FQHCs on the Medicare outpatient per visit rate as set annually by the IHS, and not the FQHC PPS payment rates (80 FR 71089). Such payment rates for outpatient medical care (also referred to as outpatient hospital services) furnished by the IHS and tribal facilities is set annually by the IHS under the authority of sections 321(a) and 322(b) of the Public Health Service Act (the PHS Act) (42 U.S.C. 248 and 249(b)) (Pub. L. 83–568 (42 U.S.C. 2001(a)), and the IHCIA, based on the previous year cost reports from Federal and tribal hospitals. The outpatient per visit rate is only applicable for those IHS or tribal facilities that meet the definition of a provider-based department as described at § 413.65(m), or a ''grandfathered'' tribal FQHC as described at § 405.2462(d)(1). There is a higher outpatient per visit rate for IHS and tribal Medicare visits in Alaska and a lower general outpatient per visit rate for IHS/tribal Medicare visits in the lower 48 States (IHS does not operate any hospitals or facilities in Hawaii or the territories, and thus, no rates are set in those localities). For CY 2023, the outpatient per visit rate for Medicare visits in Alaska is $801 and $620 in the lower 48 States.

2. Establishment of Intensive Outpatient Services Benefit by Section 4124 of the CAA, 2023

a. Section 4124 of the Consolidated Appropriations Act of 2023

As we discuss in the CY 2024 OPPS proposed rule (88 FR 49714 and 49715) section 4124 of Division FF of the CAA, 2023 established Medicare coverage for intensive outpatient program (IOP) services furnished by a hospital to its outpatients, or by a community mental health center (CMHC)), a FQHC or a RHC, as a distinct and organized intensive ambulatory treatment service offering less than 24-hour daily care in a location other than an individual's home or inpatient or residential setting, effective January 1, 2024.

We explained that an IOP is a distinct and organized outpatient program of psychiatric services provided for individuals who have an acute mental illness, which includes, but is not limited to conditions such as depression, schizophrenia, and substance use disorders. We noted an IOP is thought to be less intensive than a partial hospitalization program (PHP).

This new provision mandated several changes to the RHC and FQHC policies, including scope of benefits and services, certification and plan of care requirements, and special payment rules for IOP services in RHCs and FQHCs, all of which are discussed in the paragraphs below.

3. IOP Scope of Benefits and Scope of Services in RHC and FQHC Settings

a. Background

As described in section 1861(aa) of the Act and codified under §§ 405.2411 and 405.2446, the current scope of benefits for RHC and FQHC services are those services covered in a RHC, FQHC, or other outpatient setting, including a patient's place of residence, or a Medicare-covered Part A skilled nursing facility (SNF) when provided by a physician, nurse practitioner, physician assistant, certified nurse midwife, clinical psychologist, or a clinical social worker. RHC/FQHC services may also be covered for individuals who have elected hospice when provided by an RHC/FQHC physician, nurse practitioner, or physician assistant employed or under contract with the RHC or FQHC at the time the services are furnished, who has been designated by the patient as his or her attending physician. Starting January 1, 2024, services of a marriage and family therapist (MFT) or mental health counselor (MHC) are covered under RHC/FQHC services if such MFT or MHC is employed or under contract with the RHC or FQHC at the time the services are furnished.

As defined in § 405.2415, RHCs and FQHCs furnish physicians' services; services and supplies ''incident to'' the services of physicians: Nurse practitioner (NP), physician assistant (PA), certified nurse-midwife (CNM), clinical psychologist (CP), and clinical social worker (CSW) services; and services and supplies incident to the services of NPs, PAs, CNMs, CPs, and CSWs. They may also furnish diabetes self-management training and medical nutrition therapy (DSMT/MNT), transitional care management (TCM) services, and in some cases, visiting nurse services furnished by a registered professional nurse or a licensed practical nurse.

Only medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. Services furnished by auxiliary personnel (for example, nurses, medical assistants, or other clinical personnel acting under the supervision of the RHC or FQHC practitioner) are considered incident to the visit and are included in the per-visit payment.

RHC and FQHC services also include certain preventive services when specified in statute or when established through the National Coverage Determination (NCD) process. RHCs and FQHCs are paid for the professional component of allowable preventive services when all of the program requirements are met and frequency limits (where applicable) have not been exceeded.

As discussed in the CY 2024 OPPS proposed rule (88 FR 49715), section 4124(b)(4) of the CAA, 2023, amended section 1861(aa)(1) of the Act by adding subparagraph (D) to establish Medicare Part B coverage for IOP services as defined in section 1861(ff)(4) of the Act when these services are furnished by RHCs, which is incorporated for FQHCs by reference in section 1861(aa)(3)(A) of the Act, effective January 1, 2024. We explained that, section 1861(ff)(2) of the Act describes the items and services available under the PHP and IOP benefits. These items and services include: individual and group therapy with physicians or psychologists (or other mental health professionals to the extent authorized under State law); occupational therapy requiring the skills of a qualified occupational therapist; services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; drugs and biologicals furnished for therapeutic purposes (which cannot, as determined in accordance with regulations, be self-administered); individualized activity therapies that are not primarily recreational or diversionary; family counseling (the primary purpose of which is treatment of the individual's condition); patient training and education (to the extent that training and educational activities are closely and clearly related to individual's care and treatment); diagnostic services; and such other items and services as the Secretary may provide (excluding meals and transportation) that are reasonable

and necessary for the diagnosis or active treatment of the individual's condition, reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization, and furnished pursuant to such guidelines relating to frequency and duration of services as the Secretary shall by regulation establish, taking into account accepted norms of medical practice and the reasonable expectation of patient improvement.

In the CY 2024 OPPS proposed rule (88 FR 49715), we stated that, in order to be consistent with the scope of benefits required for IOP services under section 1861(ff)(2) of the Act, we proposed to adopt the same standards for IOP services furnished in RHCs and FQHCs as they were proposed for the outpatient hospital setting. For the outpatient hospital setting, we proposed to add regulations at § 410.44 to set forth the conditions and exclusions that would apply for intensive outpatient services (88 FR 49700). Therefore, to be consistent with the statute, we proposed revisions to the RHC and FQHC regulations at 42 CFR part 405, subpart X, that would crosswalk to § 410.44. Specifically, we proposed the following conforming regulatory changes:

- At § 405.2401, Scope and definitions, we proposed to amend the section to add IOP services.
- At § 405.2411, Scope of benefits, we proposed to amend the section to include IOP services.
- At § 405.2446, Scope of services, we proposed to amend this section to include IOP services.

We noted that these proposals would expand access to behavioral health treatment for Medicare beneficiaries and to ensure continuity of care for IOP services to best meet patient needs.

The following is a summary of the public comments received on the scope of benefits for IOP services furnished in RHCs/FQHCs and our responses:

Comment: Many commenters supported our proposal to use the same standards for IOP services furnished in RHCs/FQHCs as in other settings. Commenters stated that these services would expand access to affordable and culturally competent services for the most vulnerable Medicare beneficiaries and hopefully increase rural uptake of this program. One commenter urged CMS to implement these proposals permanently as they will reduce barriers for patients, increase access to crucial services, and improve equity. One commenter encouraged CMS to continue to seek ways to clarify and enhance occupational therapy's role within FQHCs and RHCs. Other commenters urged CMS to provide additional guidance to health centers on classifying professional services furnished by physicians, NPs, PAs, and psychologists during an IOP service.

Response: We appreciate the commenters support. As we noted in the CY 2024 OPPS proposed rule (88 FR 49714) and as discussed in section VIII.B.2 of this final rule with comment period, section 4124 of the CAA, 2023 established Medicare coverage for IOP services to be furnished by FQHCs and RHCs, effective January 1, 2024. Therefore, beginning January 1, 2024, IOP is a permanent benefit that RHCs and FQHCs will be able to furnish in their respective settings.

Regarding occupational therapy's role within RHCs and FQHCs, we note the IOP benefit includes occupational therapy as part of its list of items and services. To reiterate, the types of services covered as intensive outpatient services and the classifications of the types of professional that can provide some of the services include: individual and group therapy with physicians or psychologists or other mental health professionals to the extent authorized under State law; occupational therapy requiring the skills of a qualified occupational therapist, provided by an occupational therapist, or under appropriate supervision of a qualified occupational therapist by an occupational therapy assistant; services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; drugs and biologicals furnished for therapeutic purposes; individualized activity therapies that are not primarily recreational or diversionary; family counseling, the primary purpose of which is treatment of the individual's condition; patient training and education, to the extent the training and educational activities are closely and clearly related to the individual's care and treatment; and diagnostic services. CMS is unclear about what the commenter meant by ''classifying professional services,'' but we note that physicians, NPs, PAs, and psychologists are practitioners in FQHCs and as such can furnish IOP services. As with any new benefit under Medicare for RHCs and FQHCs, we will be updating our sub-regulatory guidance and providing outreach and education.

After consideration of the public comments we received, we are finalizing our proposal to adopt the same standards for IOP services furnished in RHCs and FQHCs as in the outpatient hospital and CMHC settings, as proposed. That is, IOP services are services that: (1) are reasonable and necessary for the diagnosis or active treatment of the individual's condition; (2) are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization; (3) are furnished in accordance with a physician certification and plan of care as specified under new regulations at § 424.24(d); and can be individual and group therapy, occupational therapy, drugs and biologicals furnished for therapeutic purposes, which cannot be self-administered, family counseling, beneficiary education, and diagnostic services. Accordingly, we are finalizing our proposal to make conforming regulatory changes to §§ 405.2401, 405.2411, and 405.2446. We note a detailed discussion regarding the final policies under § 410.44 are available in section VIII.B.2 of this final rule with comment period.

b. Certification and Plan of Care Requirements for IOPs in RHC and FQHC Settings

Section 4124(b)(2)(B) of the CAA, 2023 amended section 1861(ff) of the Act to add paragraph (4) to define intensive outpatient services as the items and services prescribed by a physician for an individual determined (not less frequently than once every other month) by a physician to have a need for such services for a minimum of 9 hours per week and provided under a program described in paragraph (3) (that is, an outpatient program of mostly mental health related services and therapies provided by a hospital or CMHC on an outpatient basis) under the supervision of a physician. The services must be provided pursuant to an individualized, written plan of treatment established and periodically reviewed by a physician (in consultation with appropriate staff participating in such program), which sets forth the physician's diagnosis, the type, amount, frequency, and duration of the items and services provided under the plan, and the goals for treatment under the plan.

In the CY 2024 OPPS proposed rule (88 FR 49716), we stated to be consistent with physician certification and plan of care requirements required for IOP under section 1861(ff)(4) of the Act, we proposed to adopt the same standards for RHCs and FQHCs as they were proposed for the outpatient hospital setting. For the outpatient hospital setting, we proposed to codify the content of the certification and plan of treatment requirements for intensive outpatient services at § 424.24(d) (88 FR 49702). We explained that physicians would be required to certify that an

individual needs IOP services for a minimum of 9 hours per week and no more than 19 hours per week, as set out in section 4124 of CAA, 2023. This certification would require documentation to include that the individual requires such services for a minimum of 9 hours per week; require the first certification as of the 30th day of IOP services; and require that the certification of IOP services occur no less frequently than every other month. Therefore, to be consistent with the statute, we proposed to revise our regulations at 42 CFR part 405, subpart X, to specify that for the purpose of furnishing IOP services RHCs and FQHCs must similarly meet the certification and plan of care requirements at proposed § 424.24(d).

As discussed in the CY 2024 OPPS proposed rule (88 FR 49716), we also proposed to establish the same patient eligibility criteria for intensive outpatient services as described in proposed § 410.44(c). Specifically, we proposed that intensive outpatient services are intended for patients who: (1) require a minimum of 9 hours per week of therapeutic services as evidenced in their plan of care; (2) are likely to benefit from a coordinated program of services and require more than isolated sessions of outpatient treatment; (3) do not require 24-hour care; (4) have an adequate support system while not actively engaged in the program; (5) have a mental health diagnosis; (6) are not judged to be dangerous to self or others; and (7) have the cognitive and emotional ability to participate in the active treatment process and can tolerate the intensity of the intensive outpatient program.

The following is a summary of the public comments received on the certification and plan of care requirements for IOP services furnished in RHCs/FQHCs and our responses:

Comment: Commenters were supportive of CMS' proposal to adopt the same standards of physician certification and plan of care requirements for IOP services furnished in RHCs and FQHCs. One commenter recommended that CMS ensure that IOP certification appointments count as FQHC visits by amending the Medicare FQHC-specific payment codes to allow for a physician visit with the purpose of evaluating a patient for IOP (or recertifying the patient) to qualify as a billable mental health ''visit.''

Response: We appreciate the support received from commenters. In response to comments regarding the IOP certification appointments counting as an FQHC visit, we note that medically necessary medical, mental health, or qualified preventive health services that require the skill level of an RHC or FQHC practitioner are RHC or FQHC billable visits. We believe that the physician determination of the need for a patient to receive IOP services, certification for IOP services and recertification would generally be tied to an E/M visit and qualify as an RHC or FQHC billable visit. We believe that the FQHC Specific Payment Code list of qualifying visits under FQHC PPS [166] includes an array of services and appears to capture the type of visit, that is a medical or mental health service that could determine a patient's need for IOP and certification or recertification.

Comment: We received a comment from an RHC association in response to the comment solicitation in the CY 2024 OPPS proposed rule on peer services, and whether these would be appropriate to include for PHPs and IOPs (88 FR 49707). The commenter supports including services that are furnished by a peer support specialist as IOP services. They stated that rural areas are facing a dearth of behavioral health practitioners and oftentimes rely upon professionals with less intensive education and training requirements, like peer support specialists. The commenter further stated that peer support specialists also bring lived experience to their work, which can help them address the unique needs of rural beneficiaries with behavioral health diagnoses and that peer support specialists could be treated similarly to community health workers in CMS' proposed community health integration services.

Response: We thank the commenter for raising this concern. As discussed in section VIII.C of this final rule with comment period, CMS is adopting principal illness navigation (PIN) services as applicable to IOP to be included as IOP services after consideration of the comments received in support of the inclusion of peer support specialist services. Specifically, we discuss the appropriateness of the PIN services described by codes G0023, G0024, G0140, and G0146. Consequently, to the extent that such services are permissible under § 410.44, RHCs and FQHCs could provide them as part of the IOP benefit.

We believe peer support workers are people who have been successful in the recovery process who help others experiencing similar situations. Through shared understanding, respect, and mutual empowerment, peer support workers help people become and stay engaged in the recovery process and reduce the likelihood of relapse. Peer support services can effectively extend the reach of treatment beyond the clinical setting into the everyday environment of those seeking a successful, sustained recovery process. Peer support workers typically engage in a wide range of activities, including: advocating for people in recovery; sharing resources and building skills; building community and relationships; leading recovery groups; and mentoring and setting goals.

With regard to RHCs and FQHCs, we believe that peer support specialists are considered auxiliary personnel, and as such can provide RHC/FQHC services under the direct supervision of the RHC or FQHC practitioner, as long as the peer support specialists are certified or trained to provide all elements in the corresponding service and be authorized to perform them under applicable State law and regulations. A detailed discussion regarding PIN services is available in section II.E of the CY 2024 PFS final rule.

After consideration of the public comments we received, we are finalizing our proposal to adopt the same standards for physician certification and plan of care requirements for RHCs and FQHCs providing IOP services as in the outpatient hospital and CMHC settings. In summary, certification requirements include the physician certifying and documenting that the patient has a need for a minimum of 9 hours of IOP services and must occur at least once every other month.[167] The patient's individualized plan of treatment should address all of the conditions that are being treated by the IOP. Recertification of IOP should occur at least every 60 days.

Accordingly, we are finalizing that for the purpose of furnishing IOP services, RHCs and FQHCs must similarly meet the certification and plan of care requirements at § 424.24(d). This provision is codified in the RHC/FQHC regulations in the final revisions to §§ 405.2401, 405.2411, and 405.2446 by way of the crosswalk to § 410.44 as finalized above in section VIII.B.3. of this final rule with comment period. That is, in § 410.44(a)(3) we have finalized requirements that intensive outpatient services are furnished in

[166] *https://www.cms.gov/medicare/medicare-fee-for-service-payment/fqhcpps/downloads/fqhc-pps-specific-payment-codes.pdf.*

[167] We note in the CY 2024 OPPS proposed rule (88 FR 49716), we incorrectly summarized the proposed language for § 424.24(d), that is, (1) that the physician must also certify that an individual needs IOP services for no more than 19 hours per week and (2) that it is a requirement for the first certification take place as of the 30th day of IOP services.

accordance with a physician certification and plan of care as specified under § 424.24(d). We note a detailed discussion regarding the final policies under § 424.24(d) are available in section VIII.B.3 of this final rule with comment period.

In addition, we are finalizing the same patient eligibility criteria for intensive outpatient services as described § 410.44(c), as proposed. Specifically, we are finalizing requirements that intensive outpatient services are available for patients who meet the following criteria: (1) require a minimum of 9 hours per week of therapeutic services as evidenced in their plan of care; (2) are likely to benefit from a coordinated program of services and require more than isolated sessions of outpatient treatment; (3) do not require 24-hour care; (4) have an adequate support system while not actively engaged in the program; (5) have a mental health diagnosis; (6) are not judged to be dangerous to self or others; and (7) have the cognitive and emotional ability to participate in the active treatment process and can tolerate the intensity of the intensive outpatient program. We note a detailed discussion regarding the final policies under § 410.44(c) are available in section VIII.B.2.a. of this final rule with comment period.

4. Special Payment Rules for Intensive Outpatient Services

Under Medicare Part B, payment to RHCs for services (defined in § 405.2411) furnished to beneficiaries is made on the basis of an all-inclusive payment methodology subject to a maximum payment per-visit and annual reconciliation. Our regulations at § 405.2470 provide that RHCs are required to submit cost reports to allow the Medicare Administrative Contractor (MAC) to determine payment in accordance with 42 CFR part 405, subpart X, and instructions issued by CMS. The beneficiary is responsible for the Medicare Part B deductible and coinsurance amounts. Section 1866(a)(2)(A)(ii) of the Act and implementing regulations at § 405.2410(b) establish beneficiary coinsurance at an amount not to exceed 20 percent of the clinic's reasonable charges for covered services.

Under Medicare Part B, FQHCs are paid under the FQHC PPS for services (defined in § 405.2446) furnished to beneficiaries. The statutory payment requirements for FQHC services are set forth at section 1834(o) of the Act. In addition, section 1833(a)(1)(Z) of the Act requires Medicare payment for FQHC services, determined under section 1834(o) of the Act, to be 80 percent of the lesser of the actual charge or the amount determined under section 1834(o) of the Act. Under the FQHC PPS, FQHCs are paid based on the lesser of the FQHC's actual charge for the service or the PPS rate (§ 405.2462(g)(1)). The FQHC PPS rate is subsequently adjusted for certain circumstances as described under § 405.2464(b)(2). The Medicare Part B deductible does not apply to FQHC services. The beneficiary is responsible for a coinsurance amount of 20 percent of the lesser of the FQHC's actual charge for the service or the adjusted PPS rate.

As we discuss in the CY 2021 PFS final rule (85 FR 84699 through 84710), the FQHC PPS base payment is annually increased by the percentage increase in the FQHC market basket, which reflects the operating and capital cost structures for freestanding FQHC facilities. Beginning with CY 2017, FQHC PPS payments were updated using a 2013-based FQHC market basket. A complete discussion of the 2013-based FQHC market basket can be found in the CY 2017 PFS final rule (81 FR 80393 through 80403). In the CY 2021 PFS final rule, we finalized the rebasing and revising of the FQHC market basket to reflect a 2017 base year. The 2017-based FQHC market basket is primarily based on Medicare cost report data for freestanding FQHCs for 2017, which are for cost reporting periods beginning on and after October 1, 2016, and prior to September 31, 2017. We explained that we used data from cost reports beginning in FY 2017 because these data were the latest available, complete data for calculating the major cost weights for the market basket at the time of rulemaking. We also explained that CMS updates the market basket periodically so that the cost weights reflect a current mix of goods and services purchased in providing FQHC services.

Seven FQHCs that have been determined to be grandfathered tribal FQHCs and due to this designation are paid based on the lesser of the outpatient per visit rate or their actual charges, as set out at § 405.2462(f). These grandfathered tribal FQHCs are paid the outpatient per visit rate for furnishing FQHC services.

In addition to the normal package of services, RHCs and FQHCs receive payment for certain additional services. In the CY 2022 PFS final rule (86 FR 65205 and 65206), we implemented section 132 of CAA, 2021, which amended section 1834(o) of the Act and added a new section 1834(y) to the Act, to provide statutory authority for FQHCs and RHCs, respectively, to receive payment for hospice attending physician services. In the CY 2023 PFS final rule (87 FR 69463, 69737 through 69739) we implemented sections 304(b) and (c) of division P of the CAA, 2022 (Pub. L. 117–103, March 15, 2022). Those subsections modified sections 1834(y) and 1834(o)(4) of the Act, respectively, to delay in-person visit requirements in order to for RHCs and FQHCs to receive payment for mental health visits furnished via telecommunications technology.

As we discuss in the CY 2024 OPPS proposed rule (88 FR 49716 and 49717), section 4124(c) of the CAA, 2023 further amended section 1834(o) of the Act and section 1834(y) of the Act, to provide special payment rules for both FQHCs and RHCs, respectively, for furnishing intensive outpatient services. Section 4124(c)(1) of the CAA, 2023 amended section 1834(o) of the Act to add a new paragraph (5)(A) to require that payment for IOP services furnished by FQHCs be equal to the amount that would have been paid under Medicare for IOP services had they been covered outpatient department services furnished by a hospital. In addition, section 4124(c)(2) of the CAA, 2023 amended section 1834(y) of the Act to add a new paragraph (3)(A) to require that payment for IOP services furnished by RHCs be equal to the amount that would have been paid under Medicare for IOP services had they been covered outpatient department services furnished by a hospital.

In the CY 2024 OPPS proposed rule (88 FR 49707 through 49711), we provide a detailed discussion of the proposed CY 2024 payment rate methodology for IOP. We proposed to establish two IOP APC per diem payment rates for hospital-based IOPs (APC 5861 and APC 5862 for 3-service days and 4-service days, respectively).

Consequently, in the CY 2024 OPPS proposed rule (88 FR 49716 and 49717), we addressed our proposed payment policy for RHCs and FQHCs that furnish IOP services. We stated that we believe that it is appropriate to provide a payment structure that supports beneficiaries in an IOP where the utilization is typically structured to be days with three or fewer services. Therefore, we proposed that the rate determined for APC 5861 (Intensive Outpatient (3 services per day) for hospital-based IOPs) would be the payment rate for IOP services furnished in an RHC. For IOP services furnished in FQHCs, we proposed that payment be based on the lesser of a FQHC's actual charges or the rate determined for APC 5861. Additionally, we proposed that grandfathered tribal FQHCs will

continue to have their payment based on the outpatient per visit rate when furnishing IOP services. That is, payment is based on the lesser of a grandfathered tribal FQHC's actual charges or the outpatient per visit rate. We proposed to revise §§ 405.2410, 405.2462, and 405.2464 in the regulations to reflect the payment amount for IOP services and how the Medicare Part B deductible and coinsurance are applied.

In addition, we solicited comment on whether the payment rate for IOP services furnished in RHCs and FQHCs should be adjusted to reflect the variations in costs of furnishing services in different geographic areas and what approaches would be appropriate for determining the value of the adjustment. We also solicited comment on whether the hospital-based IOP APC 5862 for 4-service days would be appropriate for RHCs and FQHCs.

In the CY 2024 OPPS proposed rule (88 FR 49716 and 49717), we discussed the proposals for coding and billing for IOP services under the OPPS. We explained that beginning January 1, 2024, the hospital outpatient department and CMHCs would be able to furnish items and services of both PHPs and IOPs. We stated that we believed it was appropriate to align these programs by using a consolidated list of HCPCS codes would identify the full range of services that both IOPs and PHPs provide to Medicare beneficiaries for billing purposes. We explained that those settings are paid under the OPPS and since they can furnish either PHP or IOP, when submitting a claim to CMS for payment they would be required to report a new condition code 92 to differentiate between PHP and IOP.

We explained that, while RHCs and FQHCs are not authorized to furnish PHP services, we proposed to also require RHCs and FQHCs to report condition code 92 to identify intensive outpatient claims. Since RHCs and FQHCs are paid for IOP services outside of the RHC AIR methodology and FQHC PPS, we believe the condition code reporting approach would allow us to operationalize a 3 service per day payment amount using the final list of HCPCS codes used to identify the full range of services for IOP. In addition, we proposed to align with the requirement under the OPPS, which is in order to qualify for IOP payment, at least one service must be from the Intensive Outpatient Primary list.

We stated, section 4124(c)(1) of the CAA, 2023 amended section 1834(o) of the Act to add a new paragraph (5)(B) to require that costs associated with intensive outpatient services not be used to determine the amount of payment for FQHC services under the FQHC PPS. Likewise, section 4124(c)(2) of the CAA, 2023 amended section 1834(y) of the Act to add a new paragraph (3)(B) to require that costs associated with intensive outpatient services not be used to determine the amount of payment for RHC services under the methodology for all-inclusive rates (established by the Secretary) under section 1833(a)(3) of the Act. Therefore, we proposed conforming revisions under § 405.2468. In addition, we stated conforming revisions would be made to the cost reporting instructions to account for these changes.

We received many comments on our proposals to implement the special payment rule provisions required by section 4124(c)(1) and (2) of the CAA, 2023. The following is a summary of the public comments received on the special payment rules for IOP services furnished in RHCs/FQHCs and our responses:

Comment: Commenters were generally supportive of payment for IOP services furnished by RHCs/FQHCs to be paid outside of the RHC AIR and the FQHC PPS and be paid at the hospital outpatient department (HOPD) rate. Commenters were supportive of CMS' proposal for establishing an IOP APC per diem payment rates for hospital-based IOP for a 3-service day and the use of the condition code for IOP services and agreed with the applicability for RHCs and FQHCs. Commenters also supported CMS' calculation of the IOP payment methodology. Commenters stated that they understood that the statutory language is clear on RHC payment being ''equal to the amount that would have been paid under this title for such services had such services been covered HOPD services furnished by a hospital.''

Response: We appreciate the commenters support on the special payment rules as it relates to payment for IOP services at the HOPD rate.

Comment: One commenter stated that flexibilities granted within this new benefit for other providers should be extended to RHCs as well and asked CMS to allow RHCs to bill for the 3-service day, in the occasional instance when a patient completes three or fewer services in a day, as well.

Response: As we discuss above, in the CY 2024 OPPS proposed rule (88 FR 49717) we proposed to align with the requirement under the OPPS, that in order to qualify for IOP payment, at least one service must be from the Intensive Outpatient Primary list. We note Table 99 of this final rule with comment period identifies the list of intensive outpatient primary services. We believe that this policy is consistent with the commenter's request. In addition, since we otherwise did not receive comment on the proposal, we are finalizing it as proposed. We continue to believe that it is appropriate to provide a payment structure that supports beneficiaries in an IOP where the utilization is typically structured to be days with three or fewer services.

Comment: We received a few comments with respect to CMS' solicitation of comments on whether the hospital-based IOP APC 5862 for 4-service days would be appropriate for RHCs and FQHCs. Several commenters requested that CMS apply the hospital-based IOP rate for 4-service days to RHCs/FQHCs to account for any variations in the cost of furnishing these services in RHCs compared to other settings and geographic areas. One commenter stated that to help address disparities that hinders access to diagnosis and treatment for severe mental illness (SMI), major depressive disorder (MDD), and postpartum depression (PPD) due to severe mental health provider shortages, CMS should finalize an upward variation in the payment rate. The commenter stated that this issue disproportionately impacts rural communities and minorities. Another commenter stated that given IOP is an entirely new benefit and that there is no data on its utilization or cost, CMS should grant broad flexibilities to all providers eligible for the benefit so it can be used as necessary for patients whether three or four separate qualifying IOP services are reported on the claim with condition code 92, the RHC should be eligible to receive the associated payment, $284.00 or $368.18, respectively, similar to how the program will be structured for hospital-based IOPs.

Response: We appreciate feedback in response to our comment solicitation on whether the hospital-based IOP APC 5862 for 4-service days would be appropriate for RHCs and FQHCs. We did not propose the stratified payment rate structure in the initial year of this new benefit for a couple reasons. Section 1861(aa)(2)(K)(iv) of the Act describes an RHC and states that an RHC is not a rehabilitation agency or a facility which is primarily for the care and treatment of mental diseases. Given this statutory provision, we believe uptake will be slow since these settings currently focus on primary care service. We believe providing a single payment rate valued at 3 services is adequate in these settings since the expected acuity of the patients are such that they

typically do not need more than 3 services per day.

We do not believe that access would be hindered in these early stages of a new benefit. Considering a week's worth of care which is how the physician certifies the individual, RHCs and FQHCs will be paid each day an IOP service is furnished whether it is 1 or more so in the rare occasion someone is in the clinic and receives 4 services (but is paid for 3), there could be days that week where someone is in the clinic and receives 1 service (but is paid for 3).

Since this is a new program for these settings, we encourage RHCs and FQHCs to report all of the IOP services they furnish on the claim so that we can gather data. We are excited for RHCs and FQHCs to have the opportunity to furnish IOP services and we are interested to see these programs grow. We plan to monitor utilization of IOP services in these and other settings to inform refinements in the future.

Comment: A few commenters requested that CMS clarify that an FQHC's payment amount for IOP services would be the lesser of the FQHC's actual charges for IOP services or the payment amount for a hospital outpatient department providing IOP services.

Response: In response to commenters request that CMS clarify FQHC payment, we refer the commenter to the discussion in the proposed rule (88 FR 49716 and 49717), that the statutory payment requirements for FQHC services are set forth in section 1834(o) of the Act. In addition, section 1833(a)(1)(Z) of the Act requires Medicare payment for FQHC services, determined under section 1834(o) of the Act, to be 80 percent of the lesser of the actual charge or the amount determined under section 1834(o) of the Act.

When we apply this framework, section 1834(o)(5)(A) of the Act as amended by CAA, 2023 requires payment for IOP services furnished by FQHCs be equal to the amount that would have been paid under Medicare for IOP services had they been covered outpatient department services furnished by a hospital. Therefore, this payment amount determined under section 1834(o) of the Act, is subject to the lesser of provisions required under section 1833(a)(1)(Z) of the Act. To clarify, as we finalize above, an FQHC's payment amount for IOP services would be the lesser of the FQHC's actual charges for IOP services or the rate determined for APC 5861.

Comment: With respect to CMS' solicitation of comments on whether the payment rate for IOP services furnished in RHCs/FQHCs should be adjusted to reflect the variations in cost of furnishing services in different geographic areas, one commenter stated that to offer these services, RHCs may need to recruit and retain additional providers and staff or make additional investments in their clinics with associated expenses that may be higher due to their rural locations. The commenter further stated that many RHCs face challenges with reliable broadband connection, limited professional staff, etc. Therefore, they would support a payment adjustment of 5% for rural providers (practicing in areas of 50,000 or less) offering IOP services.

A few commenters did not support a geographic adjustment for reimbursement of IOP services furnished in RHCs because RHC reimbursement methodology for the Original Medicare program does not have a mechanism for applying a geographic adjustment, and adding the geographic adjustment as an additional factor will result in inconsistency and unnecessary complexity. Other commenters stated that they did not believe the application of a geographical adjuster is statutorily required or required by regulation since payment for IOP is not under the FQHC PPS and did not believe a geographical adjuster is necessary for the purposes of payment for IOP services. These commenters urged CMS adopt policies that ensure payments for IOP services are equal, no matter the location of the health center.

Response: We appreciate feedback in response to our comment solicitation on whether the payment rate for IOP services furnished in RHCs and FQHCs should be adjusted to reflect the variations in costs of furnishing services in different geographic areas and what approaches would be appropriate for determining the value of the adjustment and may take this information into consideration for future rulemaking.

Comment: There were a few comments related to billing for IOP services. Some commenters stated that the proposal did not mention whether RHCs/FQHCs will be required to use specific coding (*i.e.,* list each HCPCS code for each discreet service provided in an IOP service day) on IOP claims and think that doing so would be beneficial in that it would improve CMS' access to complete information on the provision of IOP across various settings. Other commenters stated that CMS should clarify if FQHCs should bill for professionals' services (*i.e.,* MD, NPs, PA, and psychologists) via the FQHC PPS or use their Part B enrollment. These commenters believe that health centers should be permitted to allocate the allowable costs like salary, contracting and/or benefits costs associated with these professionals' time under the ''FQHC services'' cost report, if it cannot be included under their IOP cost report. Some commenters requested that CMS provide operational clarifications on how it plans to require FQHCs to bill for IOP services.

Response: We thank the commenters for their questions on billing for IOP services. We agree that specific coding for IOP services will improve CMS access to complete information and provide us with more data with which to monitor IOP services. In response to comments on the use of specific coding on IOP claims, we stated in CY 2024 OPPS proposed rule (88 FR 49717), we proposed to also require RHCs and FQHCs to report condition code 92 to identify intensive outpatient claims. Since RHCs and FQHCs are paid outside of the RHC AIR methodology and FQHC PPS, respectively, for IOP services we believe the condition code reporting approach will allow us to operationalize a 3 service per day payment amount using the final list of HCPCS codes used to identify the full range of services for IOP and therefore we proposed to adopt the same list of services. The list of proposed HCPCS codes is included in Table 96 of this final rule with comment period for reference. In addition, we proposed to align with the requirement under the OPPS, which is in order to qualify for IOP payment, at least one service must be from the Intensive Outpatient Primary list. Table 97 of this final rule with comment period identifies the proposed list of intensive outpatient primary services. Regarding commenters' request for CMS to clarify if FQHCs should bill for professionals' services (*i.e.,* MD, NPs, PA, and psychologists) via the FQHC PPS or use their Part B enrollment, as IOP services are a new benefit for RHCs and FQHCs, the service is billed on the FQHC claim and not on a professional claim using the practitioners Part B enrollment. Therefore, we would like to reiterate that although RHCs and FQHCs are paid outside of the RHC AIR methodology and FQHC PPS, respectively, for IOP services, FQHCs should bill the same way that they currently bill today, that is, on the FQHC claim. We will be issuing sub regulatory guidance and billing instructions related to the RHC and FQHC IOP policies finalized in this final rule as is typically done with any new service.

Comment: One commenter agrees and supports the proposal to pay Grandfathered Tribal FQHCs that furnish IOP services based on the outpatient per visit rate via the IHS AIR.

Response: We appreciate the support received from the commenter.

After consideration of the public comments we received, we are finalizing our proposal to implement the special payment rules for IOP services as proposed. We are finalizing that the rate determined for APC 5861 (Intensive Outpatient (3 services per day) for hospital-based IOPs) is the payment rate for IOP services furnished in an RHC. For IOP services furnished in FQHCs, the payment is based on the lesser of a FQHC's actual charges or the rate determined for APC 5861. Additionally, grandfathered tribal FQHCs will continue to have their payment based on the outpatient per visit rate when furnishing IOP services. That is, payment is based on the lesser of a grandfathered tribal FQHC's actual charges or the outpatient per visit rate. Accordingly, we are finalizing revisions to §§ 405.2410, 405.2462, and 405.2464 in the regulations to reflect the payment amount for IOP services and how the Medicare Part B deductible and coinsurance are applied. Finally, we are finalizing to require RHCs and FQHCs to report condition code 92 to identify intensive outpatient claims. Tables 98 and 99 of this final rule with comment period display the final HCPCS applicable for IOP and the final IOP primary services, respectively.

c. FQHC Supplemental Payments

As discussed in the May 2, 2014 final rule with comment period (79 FR 25461), section 1833(a)(3)(B)(i)(II) of the Act requires that FQHCs that contract with MA organizations be paid at least the same amount they would have received for the same service under the FQHC PPS. This provision ensures FQHCs are paid at least the Medicare amount for FQHC services. Therefore, if the MA organization contract rate is lower than the amount Medicare would otherwise pay for FQHC services, FQHCs that contract with MA organizations would receive a wrap-around payment from Medicare to cover the difference (see § 422.316). If the MA organization contract rate is higher than the amount Medicare would otherwise pay for FQHC services, there is no additional payment from Medicare.

In the CY 2024 OPPS proposed rule (88 FR 49717), we stated that we believe the special payment rule, is also included in the FQHC PPS rate as described in section 1834(o) of the Act and therefore, IOP services are included in the wrap-around payment. We proposed to make revisions under § 405.2469 to reflect these changes.

The following is a summary of the public comments received on the FQHC supplemental payment for IOP services furnished in FQHCs and our responses:

Comment: Commenters were generally supportive of CMS' proposal on the FQHC supplemental payments. Some commenters stated that the proposed rule failed to acknowledge that health centers are reimbursed outside of the FQHC PPS rate for IOP, which requires a different supplemental payment rate methodology and strongly urged CMS to adopt a broader interpretation of the special payment rule to ensure health centers are paid up to the original Medicare amount that would be paid for IOP services, which is not FQHC PPS. Commenters requested that CMS clarify in the final rule that supplemental payments for Medicare Advantage (MA) beneficiaries cover the difference between the contract rate and the IOP service rate.

Response: We would like to reiterate that we stated in the CY 2024 OPPS proposed rule (88 FR 49717), that IOP services provided in an FQHC are also subject to the wrap-around payment. We stated that this provision ensures FQHCs are paid at least the Medicare amount for FQHC services, which includes FQHC PPS and now IOP services. Therefore, if the MA organization contract rate is lower than the amount Medicare would otherwise pay for FQHC IOP services, FQHCs that contract with MA organizations would receive a wraparound payment from Medicare to cover the difference (see § 422.316). We further stated that if the MA organization contract rate is higher than the amount Medicare would otherwise pay for FQHC IOP services, there is no additional payment from Medicare for IOP services.

After consideration of the public comments, we are finalizing our proposal as proposed, that is revising § 405.2469 to reflect that payment for IOP services are subject to the wrap-around payments.

5. Multiple Visits

a. Background

Currently, RHC and FQHC encounters with more than one health professional and multiple encounters with the same health professional that take place on the same day and a single location constitute a single visit, with the following exceptions:

- A patient has a medical visit and a mental health visit on the same day; or
- A patient has an initial preventive physical exam visit and a separate medical or mental health visit on the same day.

In the CY 2024 OPPS proposed rule (88 FR 49717), we explained that since IOP services are behavioral health services, we did not believe it would be appropriate to pay for a mental health visit and IOP services on the same day. In the case of a medical visit, an encounter can include a medical visit and a mental health visit or a medical visit and IOP services. An encounter cannot include two mental health visits on the same day. As such, we proposed to make amend § 405.2463(c) in the regulations to clarify that we will permit a mental health visit or IOP services on the same day as a medical visit.

The following is a summary of the public comments received on multiple visits for IOP services furnished in FQHCs and our responses:

Comment: We received a few comments on multiple visits. Commenters were generally supportive of CMS' proposal. Some commenters suggested that CMS allow, at a minimum, for an exception so that under emergency circumstances, an FQHC/RHC mental health visit could be furnished (and billable) on the same day that IOP services are provided. The commenters understood that that payment for IOP in FQHCs/RHCs, like IOP in other settings, will be subject to the clinician exclusions described in proposed 42 CFR 410.44(b) and that under this provision, the clinical services of various professionals, when delivered as part of an IOP care plan, are nonetheless unbundled and not paid for as IOP services under the OPPS, but instead, under the relevant Part B methodology. However, given that this provision will also apply to IOP furnished in FQHCs/RHCs, commenters stated that a prohibition on same-day payment for mental health visits in RHC/FQHC settings may be inappropriate. Other commenters strongly urged CMS to allow for a FQHC ''mental health visit'' to occur on the same day as IOP services. These commenters expressed concern that under the proposed rule, health centers risk providing a range of services to a patient without adequate reimbursement due to same-day billing restrictions and believe there could be instances where same-day IOP and mental health visits could occur. They stated as an example that when an IOP patient receives individual therapy sessions with physicians or psychologists as part of an IOP day, it appears that such a service would be billed separately under the relevant methodology (FQHC PPS). They further state that as patient centered medical homes, health centers should not be precluded from providing two different services to a patient on a single day and should be able to bill an FQHC PPS

mental health service and IOP service if delivered on the same day. Another commenter recommended CMS clarify that the IOP benefit does not preclude beneficiaries from receiving other services, including remote mental health services.

Response: We thank the commenters for raising these concerns. As we stated in the proposed rule (88 FR 49717), IOP services are behavioral health services, and we did not believe it would be appropriate to pay for a mental health visit and IOP services on the same day. We understand that in the HOPD setting, additional mental health services may be provided, but are capped at a payment amount not to exceed the IOP or PHP payment amounts. We did not intend to imply that additional services would not be reportable. Under the RHC AIR and FQHC PPS, when there are multiple visits on the same day, we permit those services to be reported, however, we only pay for one visit. We believe the same situation applies here, that is, if additional mental health visits are needed in addition of the 3–IOP services per day, we would expect an RHC or FQHC to report those services on the claim. Payment for the service would be included in the IOP rate similar to how the additional mental health services would be paid for under the OPPS.

After consideration of the public comments, we are finalizing our proposal with a clarification. We are amending § 405.2463(c) in the regulations to state that we will pay a mental health visit or IOP services on the same day as a medical visit. We are clarifying that if a mental health visit is furnished the same day as IOP services, all services are covered under Medicare Part B, however, we will only pay the IOP rate and the mental health visit will be considered packaged. While there could be emergency circumstances for which a mental health visit and IOP services are furnished, at this time we believe that it is unlikely that an FQHC or RHC would simultaneously have a specific patient enrolled in the IOP and need a separate and distinct mental health service delivered at the same FQHC or RHC, in a given day of service. In addition, we believe that the payment amount is adequate if these situations occur, since the rate is based on the costs associated with administering an IOP in the hospital setting which represent a resource intensive program and, therefore, we should not pay more for a day with individual services. As we mentioned above, we recognize that this is a new program for these settings, we encourage RHCs and FQHCs to report all of the services they furnish on the claim so that we can gather data. We plan to monitor utilization of IOP services in these and other settings to inform refinements in the future.

6. Other Regulatory Updates

In addition to the regulatory changes described in this section of the rule, we proposed a revision to § 405.2400 to reflect that 42 CFR part 405, subpart X, is based not only on the provisions of sections 1833, 1861(aa), 1834(o) of the Act, but also the provisions under section 1834(y) of the Act. We believed we inadvertently did not revise the regulations when the CAA, 2021 amended section 1834 of the Act to add new paragraph (y), as we discuss in the CY 2022 PFS final rule (86 FR 65205 through 65206).

We did not receive any comments on the proposal. Therefore, we are finalizing our proposal as proposed to revise § 405.2400 to reflect that 42 CFR part 405, subpart X, is not based only on the provisions of sections 1833, 1861(aa), 1834(o) of the Act, but also the provisions under section 1834(y) of the Act.

G. Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs)

1. Background

Section 2005 of the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271, October 24, 2018) established a new Medicare Part B benefit category for OUD treatment services furnished by OTPs during an episode of care beginning on or after January 1, 2020. In the CY 2020 Physician Fee Schedule (PFS) final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we implemented Medicare coverage and provider enrollment requirements and established a methodology for determining the bundled payments for episodes of care for the treatment of OUD furnished by OTPs. We established new codes and bundled payments for weekly episodes of care that include methadone, oral buprenorphine, implantable buprenorphine, injectable buprenorphine or naltrexone, and non-drug episodes of care, as well as add-on codes for intake and periodic assessments, take-home dosages for methadone and oral buprenorphine, and additional counseling. For CY 2024, we proposed modifications to the regulations and policies governing Medicare coverage and payment for OUD treatment services furnished by OTPs in both the CY 2024 OPPS proposed rule (88 FR 49717 through 49723) as well as the CY 2024 PFS proposed rule (88 FR 52413 through 52416).

2. Statutory Authority for Coverage of Opioid Use Disorder Treatment Service Provided by OTPs

Intensive outpatient programs (IOPs) [American Society of Addiction Medicine (ASAM) Level 2.1 of Care] are diverse and flexible programs that can provide both a step-up and step-down level of care for the treatment of substance use disorders (SUDs). IOPs may offer a step-down level of care in cases where a patient has been stabilized in a hospital facility or residential treatment program but continues to need services to maintain or achieve further treatment progress. IOPs also offer a step-up level of care in cases where a patient may need a higher level of care that is more structured or intensive than what can be provided in a typical outpatient treatment setting that offers care on a less frequent basis.[168] IOPs can be housed in an OTP, specialty addiction treatment facility, community mental health center (CHMC), or another setting.[169] According to the National Substance Use and Mental Health Services Survey, as of 2021, approximately 557 OTPs offer IOP services nationwide (30.1 percent of SUD treatment facilities offering OTPs).[170] Section 4124 of the Consolidated Appropriations Act (CAA), 2023, which was enacted on December 29, 2022, provides for Medicare coverage and payment for IOP services in hospital outpatient department (HOPDs), CMHCs, rural health clinics (RHCs), and federally qualified health centers (FQHCs). However, section 4124 of the CAA, 2023 did not address coverage for IOP services furnished in OTP settings.

Section 1861(jjj)(1) of the Act defines ''opioid use disorder (OUD) treatment services'' as items and services that are furnished by an OTP for the treatment of OUD, including FDA-approved opioid agonist and antagonist

medications, dispensing and administration of such medications, substance use counseling, individual and group therapy, toxicology testing, and other items and services that the Secretary determines are appropriate (not including meals or transportation). For matters related to payment for OUD treatment services, section 1834(w) of the Act establishes that the Secretary shall pay bundled payments to OTPs when they furnish OUD treatment services to an individual during an episode of care. Section 1834(w)(2) of the Act states that for purposes of making payments to OTPs, the Secretary may establish one or more bundles based on the type of medication provided (such as buprenorphine, methadone, naltrexone, or a new innovative drug), the frequency of services, the scope of services furnished, characteristics of the individuals furnished such services, or other factors as the Secretary determine[s] appropriate. We interpret the statutory language at sections 1861(jjj) and 1834(w) of the Act to grant the Secretary authority to establish more than one bundled payment to OTPs for OUD treatment services furnished during an episode of care provided that the scope of services is medically reasonable and necessary for the treatment of OUD. In the CY 2020 PFS final rule (84 FR 62644), we finalized a definition of OUD treatment services as those items and services that are specifically enumerated in section 1861(jjj)(1) of the Act and finalized the weekly bundled payment for an episode of care. After considering public comments, under the discretion granted to the Secretary under section 1861(jjj)(1)(F) of the Act, we also included additional items and services, including intake activities and periodic assessments within the definition of OUD treatment services specified in 42 CFR 410.67(b) (84 FR 62634). In addition, under our authority under section 1834(w)(2) to create one or more bundled payments, we finalized that we would utilize add-on codes as a way to operationalize the creation of more than one bundled payment by making payment adjustments to the weekly bundled payment for the additional items and services.

Furthermore, CMS aims to ensure that Medicare beneficiaries have appropriate access to high quality care for the treatment of OUD, and that services provided to treat SUD under the Medicare OTP benefit are consistent with the services that are available in other settings covered under Medicare Part B. For example, when CMS first established payment policy for OTPs under Medicare Part B in the CY 2020 PFS final rule (84 FR 62630 through 62677 and 84 FR 62919 through 62926), we considered the available benefits payable under Medicare at that time in determining what items to propose to include in the bundled payment for OUD treatment services furnished by OTPs. In light of new legislation (CAA, 2023) granting authority for Medicare payment of IOP services provided by other types of health care providers, we believe it is appropriate to revisit the range of services covered under the current benefit for OUD treatment services furnished by OTPs.

In the CY 2023 PFS proposed rule, we solicited comments on whether there is a gap in coding under the PFS or other Medicare payment systems that may be limiting access to needed levels of care for treatment of mental health or SUD treatment for Medicare beneficiaries (87 FR 45943 and 45944). Specifically, we sought information on multiple issues, including: whether there is a gap in coding under Medicare payment systems that may be limiting access to needed levels of care for treatment of SUD; the extent to which potential gaps would best be addressed by the creation of new codes or billing rules; additional information related to IOP services, including their settings, scope and types of offered services, and practitioners involved; and, other relevant information to the extent it would inform our ability to ensure Medicare beneficiaries have access to this care. In response, many commenters noted that IOPs serve as a ''step-up'' level of care for individuals in need of more services/supports, close monitoring, and structured therapy, but who cannot stabilize at a lower level of care provided in an office setting. Commenters also noted that IOPs simultaneously serve as a ''step-down'' level of care for individuals who have more stabilized biomedical conditions and may no longer need to be hospitalized but cannot be discharged safely. Commenters mentioned that IOPs are tailorable to patient characteristics and are often flexible in the length, frequency, and days of treatment, but that typically patients receive at least 9 hours a week of care. Moreover, commenters stated that IOPs may be provided at stand-alone IOP facilities, OTPs, partial hospitalization programs, residential treatment centers, detoxification centers, or within a private outpatient office setting. Commenters further encouraged CMS to allow coverage for IOP services across the full continuum of care settings so that patients can receive the care they need in the setting that is most clinically appropriate. Furthermore, several commenters emphasized the importance of ensuring access to care for IOP services provided in OTP settings. For example, one commenter recommended ''that CMS also consider whether the agency has regulatory authority to extend coverage of any new IOP billing codes to OTPs.'' Other commenters also preferred the IOP payment methodology to be amenable and complementary to the weekly bundled payment of OTPs, including a building block methodology with drug and non-drug components, and add-on codes for greater clinical complexity. As a whole, commenters were very receptive to expanding access to IOP services in multiple settings of care, including within OTPs.

Addressing the opioid crisis by expanding coverage for quality treatment options and reducing barriers to care continues to remain a high priority for CMS. Across the U.S., the rates of OUD have increased more than threefold and opioid-related mortality has increased by almost 18 percent amongst older adults in the past decade.[171] From 2015–2019, nearly 1.7 million (3 percent of all) Medicare beneficiaries had a SUD, though only 11 percent of those beneficiaries received treatment for their condition in a given year.[172] Among Medicare beneficiaries with a SUD, one-third reported that financial barriers were a reason for not receiving treatment. Research from the Office of the Assistant Secretary for Planning and Evaluation (ASPE) indicates that health plans that offer coverage for a greater number of IOP services per enrollee experience higher rates of SUD treatment initiation and continued engagement within their enrollee populations.[173] This suggests that IOP services could result in an increased rate of SUD treatment initiation and continued engagement. Therefore, expanding access to IOP services in other settings and reducing financial barriers to access to IOP services through coverage could potentially increase the number of Medicare beneficiaries seeking and completing treatment for a SUD, including among Medicare beneficiaries who are members of populations that have historically been less likely to receive such treatment. Studies have shown that among individuals in need of SUD treatment, Hispanic, Black, and

[171] *https://www.sciencedirect.com/science/article/pii/S0749379721000921?via%3Dihub.*

[172] *https://doi.org/10.15585/mmwr.mm675152e1.*

[173] *https://aspe.hhs.gov/sites/default/files/private/pdf/260791/BestSUD.pdf.*

Asian populations are less likely to receive outpatient SUD treatment for their condition than their White counterparts, suggesting greater barriers to treatment access for these populations.[174] Other evidence indicates that Black Americans significantly underutilize specialty SUD treatment and are also less likely to complete their SUD treatment programs compared to White Americans, but these disparities are reduced when Black Americans have access to health insurance.[175] This evidence suggests that financial barriers impede initiation and completion of SUD treatment; in turn, providing health insurance coverage for SUD treatment services (such as IOP services) may lessen the impact of these financial barriers for all Medicare beneficiaries, including those who are more likely to experience these barriers. Some evidence also shows that zip codes in the U.S. within which there is at least one OTP tend to have a higher proportion of residents who are minorities (Black and Hispanic) and a lower proportion of White residents, compared to zip codes in the U.S. without any OTPs,[176] and surveys of services provided by OTPs demonstrate that the majority of OTPs (82.6 percent) conduct community outreach services to those in need of treatment for OUD.[177] This suggests that OTPs may be uniquely positioned to reach minority populations in need of IOP services, which would improve their access to SUD treatment services. In addition, from 2015 to 2019 and prior to implementation of the OTP benefit, Medicare beneficiaries younger than 65 years old were more likely to receive SUD treatment than those aged 65 years old or greater, due to more beneficiaries over age 65 reporting they could not afford treatment or that the treatment was not covered by Medicare or other insurance.[178] Even after implementation of the OTP benefit, eliminating health disparities in access to SUD treatment for this older age bracket remains a priority. Therefore, we believe that expanding access to coverage and payment under Medicare for IOP services provided by OTPs may have a meaningful and positive impact on health equity, including for Medicare beneficiaries that may face barriers in accessing treatment, such as racial/ethnic minorities and/or beneficiaries aged 65 or older. Lastly, CMS' Behavioral Health Strategy includes multiple stated goals and objectives to promote person-centered behavioral health care.[179] Expanding access to coverage and payment under Medicare for IOP services provided by OTPs may help strengthen access to SUD prevention, evidence-based treatment, and recovery services, as well as advance the equity and quality of behavioral health services, which are consistent with the goals of CMS' Behavioral Health Strategy.

3. Coverage of IOP Services Furnished by OTPs

a. Inclusion of IOP Services Furnished by OTPs in the Definition of Opioid Use Disorder Treatment Service

In recognition of the evidence provided in the discussion above, we understand that some Medicare beneficiaries may continue to face barriers in accessing treatment for their OUD. Additionally, we note that many OTPs nationwide already provide IOP services and that IOP services can be effective in promoting greater treatment initiation and engagement, which may improve health outcomes. For these reasons, and in order to expand access to behavioral health treatment for Medicare beneficiaries with OUD and ensure continuity of care between different treatment settings and levels of care, in the CY 2024 OPPS/ASC proposed rule CMS proposed to establish payment under Part B for IOP services furnished by OTPs for the treatment of OUD for CY 2024 and subsequent years.

As explained previously, section 1861(jjj)(1) of the Act defines ''opioid use disorder treatment service'' as items and services that are furnished by an OTP for the treatment of OUD, including FDA-approved opioid agonist and antagonist medications, dispensing and administration of such medications, substance use counseling, individual and group therapy, toxicology testing, and other items and services that the Secretary determines are appropriate (not including meals or transportation). IOP services are intended to treat individuals with an acute mental illness and/or substance use disorder, including those with an OUD. We believe that IOP services are similar to the specific services enumerated in section 1861(jjj)(1) of the Act, and the services and intensity of care required to provide intensive outpatient services under Level 2.1 of the ASAM continuum of care are a step-up from the services within the existing OTP benefit. The ASAM criteria's strength-based multidimensional assessment takes into account a patient's needs, obstacles and liabilities, as well as their strengths, assets, resources, and support structure; this information is used to determine the appropriate level of care across a continuum.[180] OTP services that are currently covered under the OTP benefit are at the Outpatient (Level 1) level of care, whereas IOP services are classified as Level 2.1 on ASAM's continuum of care. Individuals who meet the criteria for IOP services generally require more frequent and intensive services.

Because the Secretary has discretion under section 1861(jjj)(1)(F) of the Act to add other items and services furnished by an OTP for the treatment of OUD, as appropriate, we proposed to add a new paragraph (ix) to the definition of ''opioid use disorder treatment service'' in § 410.67(b) defining a new category of services called ''OTP intensive outpatient services'' and incorporate OTP intensive outpatient services in the definition that are covered under the Part B OTP benefit. Specifically, we proposed to define OTP intensive outpatient services as those services specified in proposed 42 CFR 410.44(a)(4) when furnished by an OTP as part of a distinct and organized intensive ambulatory treatment program for the treatment of Opioid Use Disorder and that offers less than 24-hour daily care other than in an individual's home or in an inpatient or residential setting. OTP intensive outpatient services are services that are reasonable and necessary for the diagnosis or active treatment of the individual's condition; are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization; and are furnished in accordance with a physician certification and plan of care. We proposed that in order to qualify as ''OTP intensive outpatient services,'' a physician must certify that the individual has a need for such services for a minimum of 9 hours per week and requires a higher level of care intensity compared to existing OTP services. The specific services that we proposed to be considered OTP intensive outpatient services would include any of the following:

[180] *https://www.asam.org/asam-criteria/about-the-asam-criteria.*

- Individual and group therapy with physicians or psychologists or other mental health professionals to the extent authorized under State law.
- Occupational therapy requiring the skills of a qualified occupational therapist, provided by an occupational therapist, or under appropriate supervision of a qualified occupational therapist by an occupational therapy assistant as specified in part 484.
- Services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients.
- Drugs and biologicals furnished for therapeutic purposes, subject to the limitations specified in § 410.29, excluding opioid agonist and antagonist medications that are FDA-approved for use in treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose.
- Individualized activity therapies that are not primarily recreational or diversionary.
- Family counseling, the primary purpose of which is treatment of the individual's condition.
- Patient training and education, to the extent the training and educational activities are closely and clearly related to the individual's care and treatment.
- Diagnostic services that are reasonable and necessary for the diagnosis or active treatment of the individual's condition, with the exception of toxicology testing.

We proposed to exclude FDA-approved opioid agonist or antagonist medications for the treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose, specifically, methadone, buprenorphine, naltrexone and naloxone, from the definition of OTP intensive outpatient services because these medications are already included as part of the weekly bundled payment for an episode of care or as an adjustment to the bundled payment. However, we solicited comment on the types of drugs and biologicals that are furnished as part of an IOP program (for example, whether IOPs furnish drugs used for emergent interventions), and the extent to which these drugs overlap with medications included in the existing weekly bundles described by HCPCS codes G2067 through G2073 and/or add-on codes described by G2078 (take-home supply of methadone), G2079 (take-home supply of oral buprenorphine), G2215 (take-home supply of nasal naloxone), G2216 (take-home supply of injectable naloxone), and G1028 (take-home supply of nasal naloxone; 2-pack of 8mg per 0.1 mL nasal spray). We explained that this information would help to inform our consideration of the extent to which the drugs and biologicals furnished as part of an IOP program would already be covered under the drug component of the weekly bundled payment and the existing add-on payments or would need to be reflected in the proposed IOP add-on payment adjustment discussed in the next section. Similarly, we proposed to exclude toxicology testing from the types of diagnostic services that would be included in the definition of OTP intensive outpatient services because toxicology testing is already included within the definition of ''opioid use disorder treatment service'' and paid for as part of the weekly bundled payment for an episode of care.

We received many public comments from a variety of commenters on our proposal to establish coverage for IOP services provided by OTPs and to include IOP services furnished by OTPs in the definition of opioid use disorder treatment service. The comments and our responses to these comments are included below.

Comment: We received many comments in strong support of our proposal to establish coverage for IOP services provided by OTPs, with some commenters expressing appreciation specifically for the proposed inclusion of ''OTP intensive outpatient services'' under ''OUD treatment services'' at § 410.67(b). Commenters agreed with CMS exercising its authority under sections 1861(jjj)(1)(F) and 1834(w) of the Act to establish coverage and payment for IOP services furnished at OTPs for beneficiaries who have an OUD. Commenters expressed that the proposal would improve access to OUD treatment, enhance continuity of care for patients with an OUD who need more intensive support and services, ensure that OTPs are reimbursed by Medicare for the full range of services they provide to beneficiaries, and promote efforts to improve health equity for racial/ethnic populations and older beneficiaries. Commenters expressed that establishing coverage for IOP services at additional sites of care, like OTPs, would further drive value for patients and provide another tool for providers to fight the ongoing opioid epidemic. Another commenter expressed support for our proposal and stated that our proposal goes beyond what was required of CMS in the original provisions specified in the CAA, 2023, which first authorized coverage and payment for IOP services under Medicare in only hospital outpatient departments, CMHCs, RHCs, and FQHCs.

Response: We appreciate the support from commenters for our proposal to extend coverage for IOP services to OTPs for the treatment of OUD among Medicare beneficiaries and for recognition that our proposal would extend coverage for IOP services beyond the care settings addressed in the CAA, 2023 by allowing IOP services to be furnished in OTP settings. We agree that establishing coverage for IOP services at OTPs and including OTP intensive outpatient services under the definition of OUD treatment services could improve continuity of care between different treatment settings and levels of care, expand access to treatment for Medicare beneficiaries with an OUD, and further promote health equity among Medicare beneficiaries.

Comment: Several commenters agreed with the proposal to exclude FDA-approved opioid agonist or antagonist medications for the treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose (e.g, methadone, buprenorphine, naltrexone, and naloxone) from the definition of OTP intensive outpatient services since these medications are already included as part of the weekly bundled payment for an episode of care or as an adjustment to the bundled payment and since all necessary and appropriate Medications for Opioid Use Disorder (MOUD) should already be included in the bundle. Additionally, one commenter responded to our comment solicitation requesting additional details on the types of drugs or biologicals that can be provided within an IOP program, and if these drugs or biologicals overlap with existing medications included in the OTP weekly bundles or add-on codes for take-home medications. They stated that often medications administered as part of an IOP include drugs that cannot be self-administered such as extended-release formulations of buprenorphine and naltrexone used to treat OUD. The same commenter further requested that CMS provide clarification on whether the service associated with the administration of extended-release formulations of buprenorphine and naltrexone would be billed outside the add-on code for IOP services.

Response: We thank commenters for agreeing with our proposal to exclude FDA-approved opioid agonist or antagonist medications for the emergency treatment of known or suspected opioid overdose from the definition of OTP intensive outpatient services. We also thank the commenter

who submitted additional information on the types of medications that are typically administered under an IOP. We note that extended-release formulations of buprenorphine and naltrexone, which the commenter stated are common medications used in IOP settings, and their administration by a healthcare professional are already covered under the existing weekly bundles described by HCPCS codes G2069 (medication-assisted treatment, buprenorphine (injectable)) and G2073 (medication-assisted treatment, naltrexone). Therefore, these services should continue to be billed using the existing codes describing weekly bundled payments to OTPs and not by billing the add-on payment for IOP services furnished by OTPs.

Comment: One commenter stated that they supported CMS' proposal that would permit IOP and partial hospitalization program (PHP) services to be offered in OTPs.

Response: We would like to clarify that the CY 2024 OPPS/ASC proposed rule included a proposal to provide coverage for IOP services furnished at OTPs, but not a proposal to provide coverage for PHP services furnished at OTPs. PHPs provide services to patients needing higher levels of care, requiring 20 or more hours of services per week (ASAM Level of Care 2.5), compared to IOPs which consists of at least 9 hours and no more than 20 hours per week of treatment services (ASAM Level of Care 2.1).[181]

Comment: One commenter requested that the requirement for an ''adequate support system while not engaged in the program'' be removed, since this requirement is not reflected in the eligibility criteria for many other Medicare services and since individuals who need IOP services often do not have an adequate support system.

Response: We clarify here that the requirement for an ''adequate support system while not engaged in the program'' was not proposed as a requirement for beneficiaries in need of IOP services in OTP settings. Rather, we proposed requirements under paragraph (ix) of the definition of ''opioid use disorder treatment service'' in 42 CFR 410.67(b) that ''OTP intensive outpatient services'' must be ''reasonable and necessary for the diagnosis or active treatment of the individual's condition; are reasonably expected to improve or maintain the individual's condition and functional level and to prevent relapse or hospitalization; and are furnished in accordance with a physician certification and plan of care, in which a physician must certify that the individual has a need for at least a minimum of nine hours of services per week and requires a higher level of care intensity compared to other non-intensive outpatient OTP services.'' We note that this requirement for an ''adequate support system while not engaged in the program'' applies to PHP programs and for IOP services in other settings but not OTPs. For a discussion of this requirement and other conditions and exclusions pertaining to IOP services furnished in other settings, please reference section VIII.B.2.a of this final rule with comment period.

Comment: We received multiple comments encouraging CMS to allow IOP services furnished by OTPs under Medicare to be extended to individuals with mental health conditions and SUDs other than OUD. Another commenter recommended that CMS articulate these broader diagnostic eligibilities for OTP intensive outpatient services in regulation.

Response: We thank commenters for this feedback and acknowledge that OTPs may be treating individuals with a variety of mental health and SUD-related conditions, as well as co-occurring conditions in addition to OUD. However, section 1861(jjj)(1) of the Act, as added by section 2005 of the SUPPORT Act, established Medicare coverage for OUD treatment services furnished by OTPs and defined ''opioid use disorder treatment services'' as ''items and services that are furnished by an opioid treatment program for the treatment of opioid use disorder.'' Therefore, Medicare payment to OTPs must be for the purposes of treating OUD. When OTPs provide mental health and/or SUD services to individuals for primary conditions other than OUD, they would not be payable under Medicare. However, IOP services for the treatment of mental health and/or SUD services are payable under Medicare at hospital outpatient departments, CMHCs, FQHCs, and RHCs.

Comment: One commenter requested that CMS remove the requirement for a minimum of 9 hours per week to receive coverage for IOP services, since they believed that some patients may face challenges meeting these standards if they do not have adequate means or resources. In contrast, several other commenters stated that CMS' proposal to require nine hours of services per week is appropriate.

Response: We did not propose to require a minimum of 9 hours of services per week for IOP services furnished by an OTP, as the commenter suggests. Rather, we proposed, at paragraph (ix) of the definition of ''opioid use disorder treatment service'' in § 410.67(b) that ''a physician must certify that the individual has a need for a minimum of nine hours of services per week and requires a higher level of care intensity compared to other non-intensive outpatient OTP services.'' Requiring a physician to certify this level of need, that is, a minimum of 9 hours of IOP services per week, is consistent with existing clinical standards that describe the intensity of these services as specified under the Substance Abuse and Mental Health Services Administration's (SAMHSA) treatment guidance. Additionally, we proposed that by billing for IOP services, OTPs would be attesting to the fact that they have furnished at least nine services for that week that would otherwise qualify as OTP intensive outpatient services as discussed in section VIII.G.3.a of the CY 2024 OPPS proposed rule (88 FR 49720). We acknowledge that not all services will necessarily be 60 minutes in duration, therefore, if an OTP furnishes a minimum of nine services, regardless of the length of each service, these would meet the threshold to bill for IOP services for the treatment of OUD. We understand that there may be weeks where beneficiaries do not necessarily meet the minimum of 9 services per week for IOP services, and we note that if a beneficiary does not meet the minimum of 9 services per week of IOP services, an OTP can still continue to bill the weekly bundles and add-on codes described by G2067 through G2080, and G2115, G2216, and G1028, as long as all applicable requirements are met.

Comment: Several commenters requested additional services be considered for the purposes of payment for IOP services, including FDA-approved medical devices that aid in the reduction of withdrawal symptoms associated with SUDs, community health integration (CHI), social determinants of health, principal illness navigation services, and case management and care coordination services.

Response: We appreciate commenters raising awareness of other types of services that could be considered as potential IOP services furnished by an OTP. In the proposed rule, we proposed to include coverage for IOP services furnished by OTPs for the treatment of OUD in a manner that would be consistent with the scope of services proposed in other settings as specified in the proposed 42 CFR 410.44(a)(4). We

[181] *https://www.asam.org/asam-criteria/about-the-asam-criteria.*

believed this would help ensure Medicare beneficiaries have access to the same types of services across benefit categories and settings of care for IOP services. For a more in-depth discussion regarding the list of potential services for IOP payment, please see the discussion in section VIII.B.2.a of this final rule with comment period. We may consider future updates to this list of services for Medicare payment purposes, including to OTPs through future rulemaking.

Comment: Multiple commenters recommended that CMS specify the practitioners who would be permitted to deliver OTP IOP services. Other commenters requested that CMS ensure flexibility in the types of professionals that are able to provide counseling to patients as it does with the existing OTP benefit.

Response: We thank the commenters for this comment. In the proposed rule, we did not propose to limit the types of professionals that can provide IOP services. Instead, in section VIII.G.3.a of the CY 2024 OPPS proposed rule (88 FR 49720), as reflected in proposed paragraph (ix) of the definition of ''opioid use disorder treatment service'' in § 410.67(b) in the cross reference to § 410.44(a)(4), we listed examples of the types of professionals who could potentially provide OTP IOP services, such as physicians, psychologists, occupational therapists, social workers, trained psychiatrist nurses, or other mental health professionals to the extent authorized under State law and scope of practice requirements. However, this was not a comprehensive list. We additionally note that if any professionals are not authorized under state law or scope of practice requirements to furnish therapy and counseling services, the therapy or counseling services provided by these professionals would not be covered as OTP intensive outpatient services. This would also be consistent with existing guidance for counseling and therapy services under the non-drug component of the existing OTP weekly bundles.[182]

Comment: One commenter said they would appreciate if CMS could clarify any distinction between the existing scope of services included in the OTP benefit and the scope of services described under the proposed add-on payment adjustment for IOP services. They also stated they would appreciate learning how billing and coding requirements may differ under the proposed IOP add-on payment adjustment versus the existing OTP bundles and/or add-on codes.

Response: We appreciate this request for clarification. The existing OTP weekly bundled payment includes both non-drug and drug components for an episode of care, as well as add-on codes for additional services furnished and take-home medications, as specified in 42 CFR 410.67(d)(2) and (4). Specifically, these are described by HCPCS codes G2067 through G2080, and G2115, G2216, and G1028. OTP services that are currently covered under the OTP benefit are at the Outpatient (Level 1) level of care and typically require less than 9 hours of care per week, according to ASAM's criteria for the continuum of care.[183] The services included as part of the OTP bundles and/or add-on codes, which are specified at 42 CFR 410.67(b) in the definition of ''opioid use disorder treatment service,'' include FDA-approved opioid agonist and antagonist medications (buprenorphine, methadone, and naltrexone) or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose; overdose education; dispensing and administering of MOUD, if applicable; substance use counseling; individual and group therapy; toxicology testing; intake activities; and periodic assessments. For these services, at least one OUD treatment service must be furnished (from either the drug or non-drug component) to the patient in order to meet the threshold to bill for an episode of care.

Some of the services included in the non-drug component of the OTP bundled payments may be furnished via telecommunications technology. Individual and group therapy and substance use counseling may be furnished using audio-video technology, as clinically appropriate, and via audio-only technology if two-way audio/video communications technology is not available to the beneficiary, provided all other applicable requirements are met, as specified in paragraphs (iii) and (iv) of the definition of ''opioid use disorder treatment service'' in 42 CFR 410.67(b). Initiation of treatment with buprenorphine (but not methadone) via the OTP intake add-on code may be furnished via two-way audio-video communications technology, and via audio-only communication technology when audio-video technology is not available to the beneficiary, to the extent that the use of audio-video telecommunications technology to initiate treatment with buprenorphine is authorized by the Drug Enforcement Administration (DEA) and SAMHSA at the time the service is furnished, as specified in paragraph (vi) of the definition of ''opioid use disorder treatment service'' in 42 CFR 410.67(b). Additionally, as of CY 2023, these services furnished via OTP mobile units are considered for the purposes of determining Medicare payments to OTPs under the bundled payment codes and/or add-on codes to the extent that the services are medically reasonable and necessary and are furnished in accordance with SAMHSA and DEA guidance. Currently, periodic assessments are allowed to be furnished via audio-only telecommunication through CY 2023, and finalized in the CY 2024 PFS final rule (87 FR 69404; November 18, 2023) so that these services may be furnished audio-only through the end of CY 2024, to the extent that use of audio-only communications technology is permitted under the applicable SAMHSA and DEA requirements at the time the service is furnished, and all other applicable requirements are met. For additional details regarding existing flexibilities regarding use of telecommunications under the OTP benefit, commenters can also reference Chapter 17 of the Medicare Benefit Policy Manual for Opioid Treatment Programs.[184]

In contrast, IOP services correspond to Level 2.1 of ASAM's continuum of care and range between 9 hours or more per week and no more than 20 hours per week for adults requiring a higher acuity of care compared to those at the outpatient level of care (Level 1), which reflects the intensity of services currently described by the existing OTP benefit. The proposed adjustment for IOP services furnished at OTPs for the treatment of OUD would serve as an add-on code that can be billed in conjunction with the existing weekly bundles for medication assisted treatment, such as HCPCS codes G2067 through G2075, and would reflect additional services required for patients with an OUD who need more intensive and more frequent care than is typical at the outpatient level. The proposed list of services for IOP services furnished at OTPs, which is reflected in proposed paragraph (ix) of the definition of ''opioid use disorder treatment service'' in § 410.67(b) by the inclusion of the language, ''one or more services specified in § 410.44(a)(4),'' includes

[182] Page 5, 40.1.1 Aspects of the Bundle, Non-drug component: *https://www.cms.gov/files/document/chapter-17-opioid-treatment-programs-otps.pdf.*

[183] *https://www.asam.org/asam-criteria/about-the-asam-criteria.*

[184] *https://www.cms.gov/files/document/chapter-17-opioid-treatment-programs-otps.pdf.*

individual and group therapy with physicians or psychologists or other mental health professionals to the extent authorized under State law, which may be more intensive in nature than other therapy services delivered to patients at Level 1 of the ASAM continuum of care as in the existing OTP benefit; occupational therapy requiring the skills of a qualified occupational therapist, provided by an occupational therapist, or under appropriate supervision of a qualified occupational therapist by an occupational therapy assistant; services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; drugs and biologicals furnished for therapeutic purposes, subject to the limitations specified in § 410.29, excluding opioid agonist and antagonist medications that are FDA-approved for use in treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose; individualized activity therapies that are not primarily recreational or diversionary; family counseling, the primary purpose of which is treatment of the individual's condition; patient training and education, to the extent the training and educational activities are closely and clearly related to the individual's care and treatment; and, diagnostic services that are reasonable and necessary for the diagnosis or active treatment of the individual's condition, with the exception of toxicology testing. We proposed, at § 410.67(d)(4)(i)(F), that at least nine IOP services per week would need to be furnished by an OTP in order to reach the threshold to bill for IOP services.

Lastly, we note that while certain services under the existing OTP benefit have additional flexibilities for being furnished via audio-only/audio-video technologies, we did not propose similar telecommunications technology flexibilities for OTP intensive outpatient services and are not finalizing these type of flexibilities for intensive outpatient services at this time. Not extending telecommunications technology flexibilities to OTP intensive outpatient services is consistent with policies being finalized in HOPDs, CMHCs, RHCs, and FQHCs that are also not permitting these types of flexibilities for IOP services. This will also allow CMS additional time to examine the clinical evidence and guidance to ensure that any IOP services furnished to beneficiaries with an OUD can be conducted in a manner that maintains safety and a high quality of care for Medicare beneficiaries.

After consideration of the public comments we received, we are finalizing our proposal to add a new paragraph (ix) to the definition of ''opioid use disorder treatment service'' in § 410.67(b) defining a new category of services called ''OTP intensive outpatient services'' and incorporating ''OTP intensive outpatient services'' in the definition of OUD treatment services that are covered under the Part B OTP benefit. We are excluding FDA-approved opioid agonist or antagonist medications for the treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose, from the definition of ''OTP intensive outpatient services'' because these medications are already included as part of the weekly bundled payment for an episode of care or as an adjustment to the bundled payment. Additionally, we are finalizing our proposal to exclude toxicology testing from the types of diagnostic services that would be included in the definition of ''OTP intensive outpatient services'' because, similarly, toxicology testing is already included as part of the bundled payment for an episode of care.

b. Establishment of a Weekly Payment Adjustment for IOP Services Furnished by OTPs

Section 1834(w)(2) of the Act provides the Secretary discretion to implement one or more payment bundles based on the type of medication provided, frequency of services, scope of services furnished, characteristics of the individuals furnished such services, and other factors as the Secretary determines appropriate. Currently, ASAM classifies OTP services as outpatient treatment services (under Level 1 of the continuum of care), which are typically provided for less than 9 hours a week, or as a step-down from intensive outpatient services, whereas intensive outpatient services (under Level 2.1 of the continuum of care) are typically provided for more than 9 hours a week and no more than 20 hours a week for adults with more severe needs than those for whom treatment provided according to Level 1 of the continuum of care is clinically appropriate.[185] In order to appropriately reflect the more intensive treatment profile for those individuals receiving IOP services versus OTP services, we proposed to establish a weekly payment adjustment via an add-on code for OTP intensive outpatient services, which is consistent with the weekly bundled payment structure under the existing Medicare OTP benefit. We stated in the CY 2024 OPPS proposed rule that we believe that a code billed on a weekly basis would allow greater flexibility with respect to how IOP services are rendered and how service hours may be distributed over a given week to best meet patient needs. Under the proposal, we proposed that an OTP could bill for the weekly add-on code for OTP intensive services in the same week for the same beneficiary as the existing coding describing a weekly OTP bundle, so long as all applicable billing requirements for each code are met (88 FR 49720). However, we noted that under the proposal, each OTP intensive outpatient service must be medically reasonable and necessary and not duplicative of any service(s) for which OTPs received bundled payments for an episode of care in a given week.

For OTP intensive outpatient services, we proposed to permit OTPs to bill new HCPCS code GOTP1 (Intensive outpatient services; minimum of nine services over a 7-contiguous day period, which can include: individual and group therapy with physicians or psychologists (or other mental health professionals to the extent authorized under State law); occupational therapy requiring the skills of a qualified occupational therapist; services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; individualized activity therapies that are not primarily recreational or diversionary; family counseling (the primary purpose of which is treatment of the individual's condition); patient training and education (to the extent that training and educational activities are closely and clearly related to individual's care and treatment); diagnostic services; List separately in addition to code for primary procedure. (88 FR 49721)

We proposed to value HCPCS code GOTP1 based on an assumption of a typical case of three IOP services furnished per day for approximately 3 days per week. In response to the comment solicitation on IOP services in the CY 2023 PFS proposed rule, many commenters stated that a typical IOP treatment plan consists of at least 9 hours of skilled treatment services per week, which would follow both the treatment protocol advised by SAMHSA and ASAM level placement criteria.[186] Moreover, the definition of intensive outpatient services in section 4124(b)(2)(B) of the CAA, 2023 specifies

[185] *https://americanaddictioncenters.org/rehab-guide/asam-criteria-levels-of-care.*

[186] *https://www.ncbi.nlm.nih.gov/books/NBK64088/; https://store.samhsa.gov/product/TIP-47-Substance-Abuse-Clinical-Issues-in-Intensive-Outpatient-Treatment/SMA13-4182.*

that in community mental health centers, hospital-based IOPs, RHCs, and FQHCs, an individual in need of IOP services must be certified by a physician to have a need for such services for a minimum of 9 hours per week compared to a minimum of 20 hours per week in a partial hospitalization service treatment program. Therefore, we proposed to calculate the payment rate for add-on code GOTP1 based on 9 services per week. We welcomed comments on whether 9 services per week is representative of the typical number of services furnished to patients with an OUD who receive IOP services at OTPs. (88 FR 49721)

We proposed that by billing HCPCS code GOTP1, the OTP would be attesting to the fact that it has furnished at least nine services for that week that would otherwise qualify as OTP intensive outpatient services as discussed in section VIII.G.3.a of the CY 2024 OPPS proposed rule. We acknowledged that not all OTP intensive outpatient services will necessarily be 60 minutes in duration, or be a time-based service, therefore, we proposed that furnishing nine OTP intensive outpatient services, regardless of the length of each service, would meet the threshold to bill for HCPCS code GOTP1. We noted that this aspect of our proposal differs from the proposed requirement for physician certification, discussed in section VIII.G.3.c. of the CY 2024 OPPS proposed rule, pursuant to which a physician must certify that the individual requires nine hours of OTP intensive outpatient services, and not simply nine OTP intensive outpatient services.

Under the proposal to establish a weekly add-on payment for OTP intensive outpatient services, we stated that no single service could be counted more than once for the purpose of meeting the criteria for billing for any given code. In other words, the same service could not be used to qualify to bill both the weekly bundle and the add-on payment adjustment for OTP intensive outpatient services. Additionally, we recognized that some services furnished as part of OTP intensive outpatient services may be required multiple times a week (for example, occupational therapy, patient education, family counseling, activity therapies) to meet individual patient needs and varying clinical complexity. Such services of the same type would be allowable to meet the minimum of 9 services per week, provided that all services are medically reasonable and necessary.

We noted that the proposal for the calculation of the payment rate for HCPCS code GOTP1 is similar to the payment methodology proposed for IOP services furnished in other settings. We stated that we believed that calculating the payment rate for the proposed add-on payment adjustment for OTP intensive outpatient services based on the rate provided in a hospital setting would promote greater consistency, site neutrality, and parity with payment rates proposed for IOPs in a majority of other settings, including hospital-based IOPs, FQHCs, and RHCs. Please see a more detailed discussion regarding this payment methodology in section VIII.D of this final rule.

We acknowledged that, since IOP services have not been covered or paid under Medicare to date, CMS did not have direct data to estimate utilization and costs of IOP services. However, many of the items and services included in IOP services have been and are currently paid for by Medicare as part of the PHP benefit or under the OPPS more generally. Therefore, in our preliminary ratesetting exercise, we identified, in consultation with clinicians, a list of HCPCS codes for services that would be reasonably included as part of IOP services. Please see a more comprehensive list of these HCPCS codes used to inform the payment methodology during our preliminary ratesetting exercise in Table 43 within section VIII.C of the CY 2024 OPPS proposed rule (88 FR 49704 and 49705). The inclusion of many of these services was informed by comments we received in response to comment solicitations in the CY 2023 OPPS/ASC and PFS proposed rules. For example, some of these codes correspond to services for individual and group therapy, occupational therapy, individualized activity therapies, family counseling, and patient training and education.

For the majority of these identified HCPCS codes, the most recent utilization data available was for OPPS claims paid for dates of service in CY 2022, and the most recent cost data available was from the cost reports in CY 2021. Based on this cost and utilization data from CY 2021 and CY 2022, respectively, the estimated payment rate for 3 services per day based on APC 5861 (Intensive Outpatient (1–3 services) for Hospital-based IOPs) was $280.80, at the time of drafting the proposed rule; 3 services per day for 3 days a week would therefore be equal to $842.40. Because we proposed that OTP intensive outpatient services include individual and group therapy, which are also already included in the non-drug component of the OTP bundled payments for an episode of care, we proposed to subtract the amount that corresponds to the individual and group therapy rate in the non-drug component of the OTP bundled payment from our estimate of $842.40 in order to establish the amount of the OTP intensive outpatient services add-on payment. Specifically, in the CY 2020 PFS final rule (84 FR 62658), we finalized a building block methodology to calculate the rate for the non-drug component based on established non-facility rates for similar services under the Medicare PFS, the Medicare Clinical Laboratory Fee Schedule (CLFS), and state Medicaid programs. For group therapy, we used CPT code 90853 (Group psychotherapy (other than of a multiple-family group)) as a reference code, which at the time of drafting the CY 2020 PFS final rule, in CY 2019, was assigned a non-facility rate of $27.39. In order to account for the application of the annual update to the non-drug component, the adjusted amount for group psychotherapy was $28.36. For individual therapy, in the CY 2023 PFS final rule (87 FR 69773), we finalized an update to the reference code used in the non-drug component to be based on the CY 2019 non-facility rate for CPT code 90834 (Psychotherapy, 45 minutes with patient), which was $91.18, and which we adjusted to account for the application of the annual update in the intervening years, resulting in $94.37. Therefore, we proposed an add-on payment adjustment of approximately $719.67 for HCPCS code GOTP1 ($842.40 − ($28.36 + $94.37)). We sought comment on whether the proposed add-on payment adjustment accurately reflects the typical resource costs involved in furnishing IOP services at OTPs. We also sought comment on our proposal to adjust the proposed add-on payment adjustment to account for individual and group therapy included in the non-drug component of OTP bundled payments for an episode of care.

In accordance with the methodology used to update the payment rate for other services payable under the OTP benefit, we proposed to apply an annual update based on the percentage increase in the Medicare Economic Index (MEI) to the payment rate HCPCS code GOTP1, as described in § 414.30. Additionally, consistent with the methodology used to determine payment for non-drug services furnished under the OTP benefit, we proposed to apply a geographic adjustment to the payment for HCPCS

code GOTP1 based on the Geographic Adjustment Factor (GAF), as described in § 414.26. Furthermore, consistent with the policy that applies for other OUD treatment services furnished by OTPs, a beneficiary copayment amount of zero would apply for OTP intensive outpatient services. Lastly, we also sought comment on the impact the proposal may have on dually eligible individuals, specifically, the extent to which this expanded coverage and payment may supplant Medicaid coverage for dually eligible individuals, versus the extent to which it would supplement Medicaid if it were fundamentally different from what Medicaid covers in a given state.

We recognized in the CY 2024 OPPS proposed rule (88 FR 49722) that we proposed to adopt per diem rates for IOP services furnished in other settings, including CMHCs, hospital-based settings, FQHCs, and RHCs, and that per diem rates are used in the payment methodology for IOP services in some state Medicaid programs. Therefore, we also sought comment on whether a daily per diem rate based on 3 service hours per day would be more appropriate for OTP settings, especially if one payment methodology over the other would be less disruptive to OTPs as it relates to coordination of benefits. Lastly, we sought feedback about the experiences of furnishing IOP services within OTP settings, including the extent to which it is similar to or different than furnishing IOP services in other settings. We stated that we believed this additional information may be helpful to understand the clinical complexity of patients enrolled in OTPs who are in need of IOP services for OUD and to compare the level of care and type of services that may supplement and/or exceed those ordinarily provided under the existing OTP benefit, in order to help inform potential future rulemaking on this topic.

We proposed to add a new paragraph (d)(4)(i)(F) to § 410.67 in order to describe the new adjustment to the bundled payment for OTP intensive outpatient services. Additionally, we proposed to amend § 410.67(d)(4)(ii) to add that the payment amounts for OTP intensive outpatient services will be geographically adjusted using the Geographic Adjustment Factor described in § 414.26. Lastly, we proposed to amend § 410.67(d)(4)(iii) to add that payment for OTP intensive outpatient services will be updated annually using the Medicare Economic Index described in § 405.504(d).

We received many public comments on our proposal to establish a weekly payment adjustment for IOP services furnished by OTPs. These public comments and our responses to these comments are addressed in the section below.

Comment: We received a few comments regarding our proposal to apply a beneficiary copayment amount of zero for OTP intensive outpatient services, which is consistent with the policy for other OUD treatment services furnished by OTPs. Commenters were very supportive of this, since they stated patient out of pocket costs, even if they are small, are one of the largest deterrents for patients being able to access care.

Response: We thank commenters for expressing their support for this policy regarding beneficiary copayment amounts.

Comment: Many commenters submitted comments regarding the frequency of payment (per-diem or weekly) for the proposed payment rate methodology. The comments were mixed regarding whether a per-diem versus a weekly payment rate would be more appropriate in an OTP setting. Commenters in support of a per-diem approach raised that a beneficiary may need nine or more hours of IOP services per week but may not be able to always attend all the scheduled services each week due to extenuating circumstances. Commenters also noted that in these cases especially, a per diem rate may better approximate the actual number of services delivered in a given week. One commenter recommended a mixed approach, requesting that CMS make a per diem rate available for providers to bill in cases where patients are unable to receive all the scheduled services in a given week, but that CMS should also allow providers to bill the weekly rate when the minimum nine services requirement is met. This commenter also stated that providers should not be penalized if patients cannot attend the minimum number of nine services per week. Many other commenters supported the weekly billing approach. A few commenters stated that a weekly structure would be the easiest to implement, given that Medicare already pays OTPs on a weekly basis, as well as TRICARE, and many State Medicaid programs. One commenter encouraged CMS to allow some level of flexibility if a weekly payment is finalized, such as partial payment or allowing OTPs to average the number of service hours over multiple weeks, so that an OTP is not expected to go without payment for the week when less than nine services are furnished.

Response: We appreciate the comments related to the proposed frequency of payment for OTP intensive outpatient services. We understand that a beneficiary may have one or a number of extenuating circumstances, which may make it difficult in a given week to meet the weekly minimum nine services requirement for the weekly payment approach. However, in the CY 2024 OPPS/ASC proposed rule, we stated that a code billed on a weekly basis may allow greater flexibility than a per diem approach with respect to how IOP services are rendered. We believe that a weekly payment approach would allow more flexibility for how service hours could be distributed over a given week to best meet patient needs, including in a manner to balance frequent IOP treatment with other obligations such as work, childcare, school, household activities, etc., compared to a per-diem approach that would require a specific number of service hours per day. Furthermore, we believe that a weekly billing structure may allow OTPs to more easily verify that the required number of IOP services have been furnished. Statutory requirements, SAMHSA treatment guidance, and clinical standards from ASAM indicate that a minimum of nine skilled treatment services is standard for IOPs. The proposed payment amount for GOTP1 is based on nine services per week, which is consistent with these existing standards. Additionally, less than nine IOP services rendered per week would be consistent with the intensity of care at the outpatient level, which is already reflected in the existing OTP benefit. In response to commenters' who stated that OTPs should not be penalized if patients cannot attend the minimum number of nine services per week, we affirm that OTPs can continue to bill the weekly bundles and add-on codes described by G2067 through G2080, and G2115, G2216, and G1028, to receive payment for treating Medicare beneficiaries with an OUD, as long as all applicable requirements are met.

Finally, most comments in response to the CY 2023 PFS comment solicitation on IOPs and in response to the proposed rule indicated a preference for a weekly billing structure in OTP settings. We continue to believe that a weekly billing structure is appropriate at this time. However, we will continue to monitor the billing structure to ensure that Medicare beneficiaries with an OUD do not face barriers to accessing OTP intensive outpatient services and may consider adjustments as needed through future rulemaking.

Comment: Multiple commenters expressed concern regarding our proposal to subtract the payment rate for individual and group therapy when

calculating the weekly payment adjustment for IOP services furnished by OTPs. Commenters stated that OTPs who offer individual and group therapy services as part of an IOP conduct these services in a way that is separate and distinct from the therapy services they are already providing to Medicare beneficiaries under the existing OTP benefit. Commenters further explained that these individual and group therapy services are more intensive and would be additional, not duplicative services, compared to the existing covered therapy services built into the weekly bundled payment. Commenters also stated that an IOP is a critically important level of care for individuals who need more intensive and structured treatment than outpatient services, but who can live safely in their homes and communities without needing 24-hour treatment in residential or inpatient settings. Therefore, commenters requested that CMS not exclude the payment amount for individual and group counseling services from the payment methodology for the IOP payment adjustment.

Response: We appreciate commenters raising these concerns. We proposed to deduct the payment rates for individual and group therapy services from the payment rate for IOP services because we believed that these therapy services may be duplicative of services included in the non-drug component of the OTP bundled payment. However, we are persuaded by the public comments received that requested that we do not deduct the payment rate for individual and group therapy services from the payment methodology for the IOP payment adjustment. Commenters explained that the individual and group therapy services furnished as part of an IOP are more intensive in nature and may be furnished on a more frequent basis than those therapy services in the non-drug component of the OTP bundled payment, thus they would not be duplicative in nature. Additionally, we were persuaded by the rationale that IOP services are often more intense than at an outpatient level since they are often provided as a step-down from residential or inpatient settings, whereby patients may still need intensive therapy services at a higher acuity of care but may not necessarily require 24-hour treatment. Furthermore, in response to the comment solicitation for IOP services in the CY 2023 PFS proposed rule, commenters raised that therapy services furnished in IOP services are structured, goal-oriented, and often focus on social skill rehabilitation and ongoing engagement. We also note that IOP services are usually provided at Level 2.1 of the ASAM continuum of care, which is likely to reflect therapy services that are more intensive, compared to services provided at the outpatient level within the existing OTP benefit and that are described by Level 1 of the ASAM continuum of care. We understand that individual and group therapy services are fundamental to many IOPs. We do not want to disincentivize OTPs furnishing necessary care for Medicare beneficiaries with an OUD who need more intensive therapy, by establishing a payment rate that does not reflect the resources involved in furnishing these services. Therefore, in consideration of these comments, we are finalizing a payment methodology for the IOP payment adjustment that does not deduct the amount for individual therapy (based on the CY 2019 non-facility rate for CPT code 90834, which was $91.18) and for group therapy (based on the CY 2019 non-facility rate for CPT code 90853, which was $27.39) and their annual update adjustments. The finalized payment amount for GOTP1 for CY 2024 is $*778.20.* We are reflecting this policy change in new § 410.67(d)(4)(i)(F) by removing the proposed language, ''excluding an amount equivalent to the amount included in the OTP weekly bundled payment for individual and group therapy.''

Comment: We received a few comments regarding payment neutrality among multiple care settings. Specifically, commenters advocated that a site-neutral set of payment rates should be applied to all providers of IOP services, including hospital outpatient departments, CMHCs, FQHCs, RHCs, and OTPs. One commenter further noted that as additional claims and cost data become available in the years after the IOP benefit is implemented, CMS can then evaluate whether adjustments and different payment rates are appropriate for different settings.

Response: We thank the commenters for their feedback. As we stated in the proposed rule, we did not have direct data to estimate utilization and cost of IOP services at the time of setting proposed payment rates since IOP services have not been covered or paid under Medicare to date. We agree with the commenter that it would be appropriate to continue to monitor cost and utilization data over time, and if future adjustments are needed, we may consider these refinements to the payment rate for future rulemaking. Additionally, we note that by finalizing a policy to not deduct an amount for individual and group therapy from the adjustment for IOP services furnished by OTPs, as detailed in the discussion above, the payment rate for OTPs would be consistent with the payment rate for most other settings under Medicare. We would continue to base our payment rate for OTPs on APC 5861 (Intensive Outpatient (1–3 services) for Hospital-based IOPs), which is reflected in the payment methodologies for the other settings and would help promote site neutrality.

Comment: One commenter expressed appreciation that CMS clarified that OTP intensive outpatient services do not necessarily need to be one hour in duration and that the same IOP service can be performed more than once per week to meet the nine-services threshold per week. The commenter requested that CMS finalize these flexibilities.

Response: We thank the commenter for their support of these proposed flexibilities for OTPs furnishing intensive outpatient services.

Comment: One commenter expressed concern regarding the proposal to update the payment for OTP intensive outpatient services annually using the Medicare Economic Index (MEI). The commenter stated that the MEI reflects the cost of physician practices but does not adequately capture the cost and care delivery structures in the OTP setting. The commenter raised that OTPs are more similar to hospital outpatient departments because they include interdisciplinary teams, case management services, Clinical Laboratory Improvement Amendments (CLIA)-waived services, medication management and diversion control systems, and other services. The commenter further added that OTPs are subject to rigorous oversight, accreditation, and certification standards. For these reasons, and because the MEI mirrors general inflation more than medical inflation, the commenter contended that the MEI is not an appropriate update factor and suggested that instead the Inpatient Prospective Payment System (IPPS) market basket update would be a better indicator for annual price growth.

Response: We appreciate hearing from the commenter on this issue. However, we note that the payment amounts for other services under the existing OTP benefit are annually updated by the MEI, as described in 42 CFR 410.67(d)(4)(iii). We did not propose to modify the update factor for the non-drug component of the bundled payment for an episode of care, and we do not believe it would be appropriate to apply a different update factor for IOP

services furnished by OTPs without also adjusting the update factor for the non-drug component in the existing weekly bundle. However, we may consider this issue for future rulemaking.

Comment: One commenter did not object to the payment methodology for setting the weekly payment rate for IOP services furnished in OTPs or the actual payment amount, but pointed out that OTPs may be benefitting from a higher payment rate for IOP services than CMHCs. The same commenter believed it would be inequitable for CMS to provide the higher IOP rate to new entity types furnishing IOP services compared to CMHCs.

Response: We thank the commenter for their feedback. While we are uncertain how long OTPs have historically furnished IOP services, we do note that SAMHSA data suggests that approximately 557 OTPs offer IOP services nationwide as of 2021, thus we do not necessarily believe OTPs would be new entities furnishing intensive outpatient services.[187] In establishing payment to OTPs for these services, we are seeking to finalize a payment rate that would be consistent with the payment rate for IOP services in most other settings under Medicare, which would promote site neutrality. For additional information on the payment methodology for IOP services delivered in CMHCs, please reference section VIII.D.3. of this final rule with comment period.

Comment: In response to our request for comment regarding the experiences of furnishing IOP services within OTP settings, including to the extent to which it is similar to or different than furnishing IOP services in other settings, several commenters expressed that Medicare beneficiaries who need IOP services in addition to other traditional OTP services often have complex and co-occurring SUDs and/or mental health conditions. One commenter described that often patients in an OTP will have OUD in addition to co-occurring SUDs and or mental health conditions, where patients in other settings may not. Another commenter mentioned that some OTPs may be treating other individuals who only have a mental health condition and are receiving IOP treatment, but who do not receive other treatment at the OTP. Finally, one commenter urged CMS to develop payment policies or crosswalk codes that enable OTPs to deliver IOP services to patients who have mental health conditions or SUDs that are not just OUD.

Response: We appreciate commenters sharing this valuable information regarding various experiences of furnishing IOP services in an OTP setting. As previously stated, we note that section 1861 of the Act requires Medicare coverage for services furnished by OTPs to be for the treatment of OUD. However, we may consider these issues, including ways to further improve access to care for Medicare beneficiaries with an OUD who experience other co-occurring conditions, for future rulemaking.

After considering public comments, we are modifying our proposed payment methodology for calculating the payment adjustment for IOP services furnished by OTPs in one respect. We are finalizing our proposal to add a new paragraph (d)(4)(i)(F) to § 410.67 to describe the new adjustment to the bundled payment for OTP intensive outpatient services. However, we are not finalizing our proposal to deduct the amount for individual and group therapy that is included in the non-drug component of the OTP bundled rates. Accordingly, we are revising the proposed new § 410.67(d)(4)(i)(F) to strike ‘‘, excluding an amount equivalent to the amount included in the OTP weekly bundled payment for individual and group therapy,’’ in response to the public comments. We are finalizing that the adjustment will be made when at least nine services of OTP intensive outpatient services are furnished in a week. We are also finalizing a payment methodology to price HCPCS code GOTP1 based on the estimated payment rate of 3 services per day based on APC 5861 (Intensive Outpatient (1–3 services) for Hospital-based IOPs), which is $259.40, multiplied by 3 to reflect 3 days a week (for a weekly payment methodology), which results in a final payment rate of $778.20.[188] Additionally, we note that GOTP1 was a placeholder code for OTPs to bill for providing IOP services and that the final code is HCPCS code G0137 *(Intensive outpatient services; minimum of nine services over a 7-contiguous day period, which can include individual and group therapy with physicians or psychologists (or other mental health professionals to the extent authorized under State law); occupational therapy requiring the skills of a qualified occupational therapist; services of social workers, trained psychiatric nurses, and other staff trained to work with psychiatric patients; drugs and biologicals furnished for therapeutic purposes, excluding opioid agonist and antagonist medications that are FDA-approved for use in treatment of OUD or opioid antagonist medications for the emergency treatment of known or suspected opioid overdose; individualized activity therapies that are not primarily recreational or diversionary; family counseling (the primary purpose of which is treatment of the individual's condition); patient training and education (to the extent that training and educational activities are closely and clearly related to individual's care and treatment); diagnostic services (not including toxicology testing); (provision of the services by a Medicare-enrolled Opioid Treatment Program); List separately in addition to code for primary procedure, if applicable).*

We are also finalizing our proposal to amend § 410.67(d)(4)(ii) to add that the payment amount for OTP intensive outpatient services will be geographically adjusted using the Geographic Adjustment Factor (GAF) described in § 414.26. Lastly, we are finalizing our proposal to amend § 410.67(d)(4)(iii) to add that payment for OTP intensive outpatient services will be updated annually using the Medicare Economic Index described in § 405.504(d).

c. Certification and Plan of Care Requirements for IOPs in OTP Settings

In order to be consistent with physician certification and plan of care requirements for IOP services furnished in other settings of care and to ensure, to the extent possible, that IOP services are only provided and paid for when medically necessary and appropriate for the beneficiary, we proposed to adopt the same standards set forth in § 424.24(d)(1) through (3) for OTPs providing OTP intensive outpatient services (for more detailed discussions of these proposed standards, please see section VIII.B.3 of the CY 2024 OPPS proposed rule). Specifically, under the proposal, a physician would be required to certify that an individual needs OTP intensive outpatient services for a minimum of 9 hours per week, which is consistent with treatment standards specified by SAMHSA and minimum hour standards described by ASAM's

[187] Substance Abuse and Mental Health Services Administration, National Substance Use and Mental Health Services Survey (N–SUMHSS), 2021: Annual Detailed Tables. Rockville, MD: Substance Abuse and Mental Health Services Administration, 2023. Weblink: *https://www.samhsa.gov/data/sites/default/files/reports/rpt39450/2021%20N-SUMHSS%20Annual%20Detailed%20Tables_508_Compliant_2_8_2023.pdf.*

[188] We note that in the CY 2024 OPPS/ASC proposed rule, the payment rate of 3 services per day for APC 5861 (Intensive Outpatient (1–3 services) for Hospital-based IOPs) was $280.80. However, this payment rate has been updated to $259.40 following the publication of the proposed rule based on more recent cost data and is used as the base rate for IOP services furnished by OTPs.

Level 2.1 of care for IOP services.[189] This certification would require: documentation in the patient's medical record to include that the individual requires such services for a minimum of 9 hours of services per week; the first recertification as of the 30th day of IOP services; and that the certification of IOP services occur no less frequently than every other month. Accordingly, we proposed to revise § 410.67 of our regulations to add a paragraph (c)(5) to specify that OTPs must furnish OTP intensive outpatient services consistent with the requirements regarding content of certification, plan of care requirements, and recertification requirements as set forth under proposed § 424.24(d)(1) through (3).

Regarding the recertification requirements, given that OTP services are billed on a weekly basis, we proposed that the required recertification could occur any time during an episode of care in which the 30th day from the start of IOP services (and every other month thereafter) falls. We noted that in the CY 2020 PFS final rule (84 FR 62641), we defined an episode of care as a 1-week (contiguous 7-day) period at § 410.67(b). In the CY 2021 PFS final rule (85 FR 84691), we clarified that OTPs may choose to apply a standard billing cycle by setting a particular day of the week to begin all episodes of care, or they may choose to adopt weekly billing cycles that vary across patients, and we proposed to adopt the same approach here. We welcomed comments on these proposals.

We noted that the proposal requires that the physician certify a need for at least 9 hours of services per week, which differs from our proposal that in order to bill for the add-on payment adjustment for OTP intensive outpatient services, the OTP must attest that it provided 9 such services to the beneficiary in a week. Given that services can vary in duration and that some services are not time-based, we stated that we believed it would be administratively simpler for OTPs to count the number of services furnished rather than to count the number of hours for purposes of billing the add-on payment adjustment for OTP intensive outpatient services. Additionally, as described in section VIII.G.3.b. of this final rule with comment period, our proposed payment rate was based on the number of services furnished per day, rather than the number of hours, consistent with the proposals for IOP payment in other settings. In contrast, for the purposes of certification and plan of care requirements for IOPs in OTP settings, we stated that we believed that requiring a physician to certify that a beneficiary requires a minimum of 9 hours of services per week is consistent with existing clinical guidance describing the intensity of care for IOP services.[190] Additionally, a minimum of 9 hours of services per week is consistent with proposals for the certification and plan of care requirements for IOPs in other care settings. We welcomed comments on both of these proposals, including whether this distinction accurately reflects the practice patterns of OTPs furnishing IOP services.

We received multiple comments on our proposal for certification and plan of care requirements for IOPs in OTP settings. The comments and our responses to these commenters are included below.

Comment: A few commenters requested that CMS not finalize the proposed requirement for recertification for OTP intensive outpatient services ''as of the 30th day'' of IOP services as written in proposed paragraph (c)(5) to § 410.67. Commenters raised that they did not believe it is appropriate to consider finalizing a shorter interval for the first recertification or for the subsequent recertification. Instead, they suggested that the first recertification should be modified for OTPs to be consistent with the proposal for recertification in other settings at § 424.24(d)(3)(ii), which states, ''no less frequently than every 60 days.'' Commenters believed this may reduce burden and unnecessary documentation requirements on providers. Another commenter did not believe that recertification should be required every other month and instead recommended that a redetermination occur when it is clinically necessary according to the treatment plan, such as when a new episode of care begins. A different commenter urged CMS to consider extending recertification to every 90 days instead.

Response: We appreciate commenters raising these issues regarding the shorter interval for the first recertification in OTP settings. In the CY 2024 OPPS proposed rule (88 FR 49722), we stated that ''this certification would require documentation in the patient's medical record to include that the individual requires such services for a minimum of 9 hours per week; require the first recertification as of the 30th day of IOP services; and require that the certification of IOP services occur no less frequently than every other month.'' In the proposed regulatory text, we stated ''OTPs that provide OTP intensive outpatient services must meet the requirements set forth in § 424.24(d)(1) through (3) of this chapter related to content of certification, plan of treatment, and recertification for the purposes of furnishing OTP intensive outpatient services, except that the recertification required under § 424.24(d)(3)(ii) may occur any time during an episode of care in which the 30th day from the start of IOP services falls.'' We are persuaded by the majority of commenters who requested that we not require a recertification ''as of the 30th day of services,'' as we agree that the recertification requirements should be consistent with the other settings paying for IOP services under Medicare. Accordingly, we are not finalizing our proposal to require a recertification as of the 30th date of services, and are instead finalizing that recertification must occur no less frequently than every 60 days, which is consistent with the requirement at § 424.24(d)(3)(ii). We believe this change will promote consistency with the requirements for IOP services in other care settings under Medicare, as well as limit potential additional and unnecessary administrative requirements for OTPs. Accordingly, we are deleting the phrase '', except that the recertification required under § 424.24(d)(3)(ii) of this chapter may occur any time during an episode of care in which the 30th day from the start of IOP services falls'' from paragraph (c)(5) of § 410.67.

Comment: Multiple commenters requested that CMS modify the physician certification and plan of care requirements to include other behavioral health professionals. A few commenters recommended that CMS align these requirements for certification and plan of care with existing clinical standards of practice and state requirements to permit other non-physician professionals, including psychologists, clinical social workers, and other behavioral health professionals to perform eligibility assessments, develop treatment plans, and certify the need for services. Multiple commenters noted that requiring only a physician to complete these requirements would be a significant barrier to care and add additional burden on providers. Other commenters noted that ASAM level of

[189] *https://www.ncbi.nlm.nih.gov/books/NBK64088/; https://store.samhsa.gov/product/TIP-47-Substance-Abuse-Clinical-Issues-in-Intensive-Outpatient-Treatment/SMA13-4182.*

[190] *https://www.ncbi.nlm.nih.gov/books/NBK64088/;* https://store.samhsa.gov/product/TIP-47-Substance-Abuse-Clinical-Issues-in-Intensive-Outpatient-Treatment/SMA13-4182.

care determinations do not require a physician to complete the assessment and that anyone trained to do level of care determinations may complete them and that SUD counselors are certified and licensed differently at the state level and this should be explicitly permitted and addressed.

Response: We thank commenters for raising this important issue. After considering the public comments, we understand that requiring a physician to conduct certification and develop a plan of care may create additional issues for practices and regions that face a provider shortage and/or limited capacity to regularly complete these requirements. Evidence indicates that there is less access to OTPs in rural areas,[191] and also that nearly 60 percent of all mental health professional shortage areas are located in rural areas.[192] Additionally, we recognize that evidence has shown physicians spend up to one-fifth of working hours per week on administrative tasks with psychiatrists spending the highest proportion of their time on administration compared to other types of physicians.[193] We also understand that other non-physician practitioners, including but not limited to, clinical social workers, psychologists, nurse practitioners, mental health counselors, and marriage and family therapists, have increasingly played a critical role in interdisciplinary care teams and filling important gaps in care.

We note that section 4124 of the CAA, 2023 includes provisions for physician certification and plan of care requirements that require a physician to certify a need for IOP services. However, while the CAA, 2023 does not address IOP services furnished in OTP settings, our proposals to pay for IOP services in OTP settings were made under the statutory authority of sections 1861(jjj)(1) and 1834(w)(2) of the Act. We are persuaded by the commenters that practitioners other than physicians can appropriately conduct the certification, recertification, and plan of care requirements, and we agree that allowing additional practitioner types to perform the certification, recertification, and plan of care requirements will likely help to expand access to care. We believe we have statutory flexibility to finalize that the certification, recertification, and plan of care requirements may be performed by non-physician practitioners, as permitted by state law and consistent with scope of practice requirements. Additionally, we note that certain non-physician practitioners are authorized under Medicare to perform certification activities.[194] Therefore, we are finalizing that in addition to physicians, the following non-physician practitioners may perform the required certification and plan of care requirements for IOP services furnished in the OTP setting: nurse practitioners, physician assistants, clinical psychologists, clinical social workers, mental health counselors, marriage and family therapists, and any other non-physician practitioners as defined in section 1842(b)(18)(C) of the Act, as permitted by state law and consistent with scope of practice requirements. These flexibilities would also be extended to any physician requirements, pertaining to the individual being under the care of a physician and to a physician's diagnosis, as described in § 424.24(d)(1)(ii) and (d)(2)(A), so that they could also be performed by non-physician practitioners.

Comment: We received comments on several topics that were outside the scope of the proposed rule. Those topics included the following: a recommendation that CMS develop crosswalk codes that enable IOP to be delivered in freestanding community-based SUD treatment facilities; a request that CMS allow structured outpatient addiction programs to bill the add-on payment adjustment for OTP intensive outpatient services; and a request that CMS develop an add-on code for contingency management services in OTPs for individuals with a stimulant use disorder.

Response: While some of these comments are either outside of our statutory authority and/or out of scope for this final rule because they do not relate to the specific proposals included in the proposed rule, we appreciate the feedback and may consider these recommendations for future rulemaking.

After consideration of the public comments received, we are finalizing our proposed definition of OTP intensive outpatient services in paragraph (ix) of definition of ''opioid use disorder treatment service'' at 42 CFR 410.67(b), with modifications to specify that non-physician practitioners, in addition to physicians, may perform the required certification that the individual has a need for such services, plan of treatment requirements, and recertification requirements, as permitted by state law and consistent with scope of practice requirements. These non-physician practitioners may include, but are not limited to, nurse practitioners, physician assistants, clinical psychologists, clinical social workers, mental health counselors, licensed marriage and family therapists, and other non-physician practitioners, as defined in section 1842(b)(18)(C) of the Act.

We are finalizing a modification to our proposal for certification and plan of care requirements for OTP intensive outpatient services at proposed new paragraph (c)(5) at § 410.67 by specifying that, for the standards set forth in the proposed § 424.24(d)(1) through (3), a physician and/or non-physician practitioner could perform the requirements for certification, plan of care, and recertification for the purposes of furnishing OTP intensive outpatient services, as permitted by state law and scope of practice requirements. We are also striking language that states ''in which the 30th day from the start of IOP services falls'' for consistency with policies in other care settings under Medicare. We are finalizing that the first recertification and subsequent recertifications for OTP intensive outpatient services must occur no less frequently than every 60 days, consistent with § 424.24(d)(3)(ii). Accordingly, we are finalizing at § 410.67(c)(5) that OTPs that provide OTP intensive outpatient services must meet the requirements set forth in § 424.24(d)(1) through (3) related to content of certification, plan of treatment, and recertification for the purposes of furnishing OTP intensive outpatient services, except that the recertification required under § 424.24(d)(3)(ii) may occur any time during an episode of care.

d. Correction to the OTP Regulation Text

We also proposed to correct a typographical error at § 410.67(d)(3), which currently states ''At least one OUD treatment service described in paragraphs (b)(1) through (5) of this section must be furnished to bill for the bundled payment for an episode of care.'' This provision should refer to paragraphs (i) through (v) of the definition of OUD treatment service in paragraph (b). Accordingly, we propose to correct this sentence to read, ''At least one OUD treatment service described in paragraphs (i) through (v) of the definition of *opioid use disorder treatment service* in paragraph (b) of this section must be furnished to bill for the

bundled payment for an episode of care.''

We did not receive any public comments on our proposal to correct a typographical error at § 410.67(d)(3). We are finalizing our proposal to revise § 410.67(d)(3) to instead state ''At least one OUD treatment service described in paragraphs (i) through (v) of the definition of *opioid use disorder treatment service* in paragraph (b) of this section must be furnished to bill for the bundled payment for an episode of care.''

H. Payment Rates Under the Medicare Physician Fee Schedule for Nonexcepted Items and Services Furnished by Nonexcepted Off-Campus Provider-Based Departments of a Hospital

1. Background

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79727) in the discussion of the proposed implementation of section 603 of the Bipartisan Budget Act (BBA) of 2015 (Pub. L. 114–74, November 2, 2015), we established the PHP payment rate under the Medicare Physician Fee Schedule (MPFS) for nonexcepted off-campus PBDs as equivalent to the level of payment made to CMHCs for furnishing three or more PHP services per day. We noted that when a beneficiary received outpatient services in an off-campus department of a hospital, the total Medicare payment for those services is generally higher than when those same services are provided in a physician's office. Similarly, when partial hospitalization services are provided in a hospital-based PHP, Medicare pays more than when those same services are provided by a CMHC. Our rationale for adopting the CMHC per diem rate for APC 5853 as the MPFS payment amount for nonexcepted PBDs providing PHP services was because CMHCs are freestanding entities that are not part of a hospital, but they provide the same PHP services as hospital-based PHPs. This is similar to the differences between freestanding entities paid under the MPFS that furnish other services also provided by hospital-based entities. Similar to other entities currently paid for their technical component services under the MPFS, we believe CMHCs would typically have lower cost structures than hospital-based PHPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security. We explained that we believe that paying for nonexcepted hospital-based partial hospitalization services at the lower CMHC per diem rate aligns with section 603 of the BBA of 2015, while also preserving access to PHP services.

2. Payment for PHP and IOP Furnished by Nonexcepted Off-Campus Hospital Outpatient Departments

As discussed in section VIII.D of the CY 2024 OPPS/ASC proposed rule, we proposed to change our methodology for calculating PHP payment rates by establishing separate payment rates for 3-service and 4-service days. We also proposed to establish IOP payment rates for 3-service and 4-service days beginning in CY 2024. Because CMHCs have different cost structures than hospitals, we proposed to establish separate CMHC and hospital rates for 3-service and 4-service PHP and IOP days. We proposed to utilize the CMHC rates for PHP and IOP as the payment rates for PHP and IOP services furnished by nonexcepted off-campus hospital outpatient departments. Specifically, we proposed to utilize the separate CMHC rates for 3-service and 4-service PHP days as the MPFS rates, depending upon whether a nonexcepted off-campus hospital outpatient department furnishes 3 or 4 PHP services in a day. Similarly, we also proposed to utilize the CMHC rates for 3-service and 4-service IOP days as the MPFS rates, depending upon whether a nonexcepted hospital outpatient department furnishes 3 or 4 IOP services in a day.

As discussed in section VIII.D of the CY 2024 OPPS/ASC proposed rule, we solicited comment on our proposed payment rates for PHP and IOP services, as well as whether commenters believe it would be appropriate to consider establishing a combined rate for 3-service days in hospitals and CMHCs, and a combined rate for 4-service days in hospitals and CMHCs. We also considered whether it would be appropriate to apply a different methodology for calculating the PHP and IOP rates for nonexcepted off-campus hospital outpatient departments and we solicited comments on alternative methodologies commenters believed would be appropriate. For example, we considered whether it would be appropriate to apply the PFS Relativity Adjuster of 40 percent, which was established in the CY 2018 PFS rule (82 FR 53030) and which applies to most other nonexcepted OPPS services furnished by a nonexcepted off-campus hospital outpatient department.

Comment: Several commenters urged CMS to implement a site-neutral payment for nonexcepted off-campus provider-based hospital departments (PBDs). Commentors argued that Congress' goal for enacting section 603 of the Bipartisan Budget Act (BBA) of 2015 (Pub. L. 114–74, November 2, 2015) and CMS's 2017 transition to PFS payment rates for PBDs was motivated by a desire to move to a site-neutral payment methodology. Furthermore, commenters stated that providing reduced payment for PHP and IOP services furnished by excepted off-campus PBDs could reduce beneficiaries' access to behavioral health services.

Response: We appreciate the concerns that commenters raised about Medicare beneficiaries' access to behavioral and mental health services. We note that our longstanding policy to pay nonexcepted off-campus provider-based departments at the CMHC rate for PHP services aligns with section 603 of the BBA of 2015, while also preserving access to PHP services. We do not believe that this policy reduces access to behavioral health services, because similar to other entities currently paid for their technical component services under the MPFS, we believe CMHCs would typically have lower cost structures than hospital-based PHPs, largely due to lower overhead costs and other indirect costs such as administration, personnel, and security.

After consideration of the public comments we received, we are finalizing our proposal to apply the CMHC PHP and IOP per diem rates as the MPFS rates for PHP and IOP services furnished by nonexcepted off-campus PBDs.

IX. Services That Will Be Paid Only as Inpatient Services

A. Background

Established in rulemaking as part of the initial implementation of the OPPS, the inpatient only (IPO) list identifies services for which Medicare will only make payment when the services are furnished in the inpatient hospital setting because of the invasive nature of the procedure, the underlying physical condition of the patient, or the need for at least 24 hours of postoperative recovery time or monitoring before the patient can be safely discharged (70 FR 68695). The IPO list was created based on the premise (rooted in the practice of medicine at that time), that Medicare should not pay for procedures furnished as outpatient services that are performed on an inpatient basis virtually all of the time for the Medicare population, for the reasons described above, because performing these procedures on an outpatient basis would not be safe or appropriate, and therefore not reasonable and necessary under Medicare rules (63 FR 47571). Services

included on the IPO list were those determined to require inpatient care, such as those that are highly invasive, result in major blood loss or temporary deficits of organ systems (such as neurological impairment or respiratory insufficiency), or otherwise require intensive or extensive postoperative care (65 FR 67826). There are some services designated as inpatient only that, given their clinical intensity, would not be expected to be performed in the hospital outpatient setting. For example, we have traditionally considered certain surgically invasive procedures on the brain, heart, and abdomen, such as craniotomies, coronary-artery bypass grafting, and laparotomies, to require inpatient care (65 FR 18456). Designation of a service as inpatient only does not preclude the service from being furnished in a hospital outpatient setting but rather means that Medicare will not make payment for the service if it is furnished to a Medicare beneficiary in the hospital outpatient setting (65 FR 18443). Conversely, the fact that a procedure is not on the IPO list should not be interpreted to mean the procedure is only appropriately performed in the hospital outpatient setting (70 FR 68696).

As part of the annual update process, we have historically worked with interested parties, including professional societies, hospitals, surgeons, hospital associations, and beneficiary advocacy groups, to evaluate the IPO list and to determine whether services should be added to or removed from the list. Interested parties are encouraged to request reviews for a particular code or group of codes; and we have asked that their requests include evidence that demonstrates that the procedure was performed on an outpatient basis in a safe and appropriate manner in a variety of different types of hospitals—including but not limited to—operative reports of actual cases, peer-reviewed medical literature, community medical standards and practice, physician comments, outcome data, and post-procedure care data (67 FR 66740).

We traditionally have used five longstanding criteria to determine whether a procedure should be removed from the IPO list. As noted in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74353), we assessed whether a procedure or service met these criteria to determine whether it should be removed from the IPO list and assigned to an APC group for payment under the OPPS when provided in the hospital outpatient setting. We have explained that while we only require a service to meet one criterion to be considered for removal, satisfying only one criterion does not guarantee that the service will be removed; instead, the case for removal is strengthened with the more criteria the service meets. The criteria for assessing procedures for removal from the IPO list are as follows:

1. Most outpatient departments are equipped to provide the services to the Medicare population.

2. The simplest procedure described by the code may be furnished in most outpatient departments.

3. The procedure is related to codes that we have already removed from the IPO list.

4. A determination is made that the procedure is being furnished in numerous hospitals on an outpatient basis.

5. A determination is made that the procedure can be appropriately and safely furnished in an ASC and is on the list of approved ASC services or has been proposed by us for addition to the ASC covered procedures list.

In the past, we have requested that interested parties submit corresponding evidence in support of their claims that a code or group of codes met the longstanding criteria for removal from the IPO list and was safe to perform on the Medicare population in the hospital outpatient setting—including, but not limited to case reports, operative reports of actual cases, peer-reviewed medical literature, medical professional analysis, clinical criteria sets, and patient selection protocols. Our clinicians then thoroughly review all information submitted within the context of the established criteria and if, following this review, we determine that there is sufficient evidence to confirm that the code could be safely and appropriately performed on an outpatient basis, we assign the service to an APC and include it as a payable procedure under the OPPS (67 FR 66740). We determine the APC assignment for services removed from the IPO list by evaluating the clinical similarity and resource costs of the service compared to other services paid under the OPPS and by reviewing the Medicare Severity Diagnosis Related Groups (MS–DRG) rate for the service under the IPPS, though we note we would generally expect the cost to provide a service in the outpatient setting to be less than the cost to provide the service in the inpatient setting.

We stated in prior rulemaking that, over time, given advances in technology and surgical technique, we would continue to evaluate services to determine whether they should be removed from the IPO list. Our goal is to ensure that inpatient only designations are consistent with the current standards of practice. We have asserted in prior rulemaking that, insofar as advances in medical practice mitigate concerns about these procedures being performed on an outpatient basis, we would be prepared to remove procedures from the IPO list and provide for payment for them under the OPPS (65 FR 18443). Further, CMS has at times had to reclassify codes as inpatient only services with the emergence of new information.

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74352 and 74353) for a full discussion of our historic policies for identifying services that are typically provided only in an inpatient setting and that, therefore, will not be paid by Medicare under the OPPS, as well as the criteria we have used to review the IPO list to determine whether any services should be removed.

B. Changes to the Inpatient Only (IPO) List

As stated above, we encourage interested parties to request reviews for a particular code or group of codes for removal from the IPO list. For CY 2024, we received several requests from interested parties recommending particular services to be removed from the IPO list. Following our clinical review, we did not find sufficient evidence that, using the five criteria listed above, these services meet the criteria to be removed from the IPO list for CY 2024. Therefore, we did not propose to remove any services from the IPO list for CY 2024.

We proposed to add nine services for which codes were newly created by the AMA CPT Editorial Panel for CY 2024 to the IPO list. These new services are described by the CPT codes 0790T, 22836, 22837, 22838, 61889, 76984, 76987, 76988, and 76989 (described by placeholder codes X114T, 2X002, 2X003, 2X004, 619X1, 7X000, 7X001, 7X002, and 7X003 respectively in the CY 2024 OPPS/ASC proposed rule) which will be effective on January 1, 2024. After clinical review of these services, we found that they require a hospital inpatient admission or stay and thus, we believe they are not appropriate for payment under the OPPS. We proposed to assign these services to status indicator ''C'' (Inpatient Only) for CY 2024. Additionally, we proposed to reassign CPT code 0646T from status indicator ''E1'' (not payable by Medicare) to ''C,'' effective CY 2024. The CPT codes, long descriptors, and the proposed CY 2024

payment indicators are displayed in Table 102.

Table 102 below contains the proposed changes to the IPO list for CY 2024. The complete list of codes describing services that we proposed to designate as inpatient only services beginning in CY 2024 was also included as Addendum E to the CY 2024 OPPS/ASC proposed rule, which is available via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 102: PROPOSED CHANGES TO THE INPATIENT ONLY (IPO) LIST FOR CY 2024

CY 2024 CPT Code	CY 2024 Long Descriptor	Action	CY 2024 Proposed Status Indicator
0790T	Revision (e.g., augmentation, division of tether), replacement, or removal of thoracolumbar or lumbar vertebral body tethering, including thoracoscopy, when performed	Add to the IPO list	C
22836	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments	Add to the IPO list	C
22837	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments	Add to the IPO list	C
22838	Revision (e.g., augmentation, division of tether), replacement, or removal of thoracic vertebral body tethering, including thoracoscopy, when performed	Add to the IPO list	C
61889	Insertion of skull-mounted cranial neurostimulator pulse generator or receiver, including craniectomy or craniotomy, when performed, with direct or inductive coupling, with connection to depth and/or cortical strip electrode array(s)	Add to the IPO list	C
76984	Ultrasound, intraoperative thoracic aorta (e.g., epiaortic), diagnostic	Add to the IPO list	C
76987	Intraoperative epicardial cardiac (e.g., echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer, image acquisition, interpretation and report	Add to the IPO list	C
76988	Intraoperative epicardial cardiac ultrasound (ie, echocardiography) for congenital heart disease, diagnostic; placement, manipulation of transducer, and image acquisition only	Add to the IPO list	C
76989	Intraoperative epicardial cardiac ultrasound (ie, echocardiography) for congenital heart disease, diagnostic; interpretation and report only	Add to the IPO list	C
0646T	Transcatheter tricuspid valve implantation (ttvi)/replacement with prosthetic valve, percutaneous approach, including right heart catheterization, temporary pacemaker insertion, and selective right ventricular or right atrial angiography, when performed	Add to the IPO list	C

BILLING CODE 4150–28–C

Comment: We received several comments in support of our proposal to add the ten services listed in Table 102 above to the IPO list for CY 2024.

Response: We thank the commenters for their support.

Comment: We received one comment requesting that we remove CPT codes 49596 (Repair of anterior abdominal hernia(s) (*i.e.,* epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), initial, including placement of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, incarcerated or strangulated), 49616 (Repair of anterior abdominal hernia(s) (*i.e.,* epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis when performed, total length of defect(s); 3 cm to 10 cm, incarcerated or strangulated), 49617 (Repair of anterior abdominal hernia(s) (*i.e.,* epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, reducible), 49618 (Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (*i.e.,* open, laparoscopic, robotic), recurrent, including placement of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, incarcerated or strangulated), 49621 (Repair of parastomal hernia, any approach (*i.e.,* open, laparoscopic, robotic), initial or recurrent, including placement of mesh or other prosthesis, when performed; reducible), and 49622 (Repair of parastomal hernia, any approach (*i.e.,* open, laparoscopic, robotic), initial or recurrent, including placement of mesh or other prosthesis, when performed; incarcerated or strangulated) from the IPO list for CY 2024. The commenter stated that these codes were related to predecessor codes that were not on the IPO list. The commenter also stated that while patients will typically be admitted to the hospital as inpatients for these services, there are instances when it will be appropriate for the patient to undergo these procedures on an outpatient basis.

Response: We thank the commenter for their recommendation. Our clinical analysis of these services indicates that they require a hospital inpatient admission or stay. While these services are associated with predecessor codes that were not on the IPO list, our OPPS claims review found that many of those predecessor codes had lengths of stay greater than 2 days. Without further evidence that these procedures can be safely performed in the outpatient setting on the majority of the Medicare population, we do not believe that these services can be appropriately removed from the IPO list at this time. Additionally, as we stated in the CY 2022 OPPS/ASC final rule with comment period, while we recognize that there are services currently classified as inpatient only that may be appropriate in the hospital outpatient setting for some Medicare beneficiaries, we continue to strive to balance the goals of increasing physician and patient choice of setting of care with consideration for patient safety for all Medicare beneficiaries (86 FR 63673). Therefore, we are finalizing our proposal to continue to assign these services to status indicator ''C'' for CY 2024.

Comment: We received a few comments requesting that CMS consider reinstating the elimination of the IPO list that was halted in the CY 2022 OPPS/ASC final rule with comment period.

Response: We thank the commenters for their feedback. We are not considering eliminating the IPO list at this time. As stated in the CY 2022 OPPS/ASC final rule with comment period, we believe the IPO list is a valuable tool for ensuring that the OPPS only pays for services that can safely be performed in the hospital outpatient setting and remains a necessary safeguard. In that final rule, we explained that we recognized that while physicians are able to make safety determinations for a specific beneficiary, CMS is in the position to make safety determinations for the broader population of Medicare beneficiaries, that is, the typical Medicare beneficiary. Furthermore, we explained that while we want to afford physicians and hospitals the maximum flexibility in choosing the most clinically appropriate site of service for the procedure, as long as the characteristics of the procedure are consistent with the criteria listed above. For further discussion on our decision to halt the elimination of the IPO list, we refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63671 through 63711).

Comment: We received multiple comments requesting that we assign services newly removed from the IPO list to New Technology APCs until sufficient data is collected to assign these services to clinical APCs.

Response: We thank the commenters for their input. As we previously stated in the CY 2021 OPPS/ASC final rule with comment period (85 FR 86093), consistent with our regulation at 42 CFR 419.31(a)(1), we classify outpatient services and procedures that are comparable clinically and in terms of resource use into APC groups. As we stated in the CY 2012 OPPS/ASC final rule (76 FR 74224), the OPPS is a prospective payment system that provides payment for groups of services that share clinical and resource use characteristics. It should be noted that for all codes newly paid under the OPPS, including codes removed from the IPO list, our policy has been to assign the service or procedure to an APC based on feedback from a variety of sources, including but not limited to, review of the clinical similarity of the service to existing procedures; advice from CMS medical advisors; information from interested specialty societies; and review of all other information available to us, including information provided to us by the public, whether through meetings with stakeholders or additional information that is mailed or otherwise communicated to us (84 FR 61229). Therefore, we believe assigning procedures removed from the IPO list to existing clinical APCs that are similar in clinical characteristics and resource costs is appropriate. We note that procedures assigned to New Technology APCs cannot be placed in clinical APCs due to insufficient clinical and cost data, unlike the procedures transitioning from the IPO list.

Comment: One commenter wrote that the following statement in the CY 2024 OPPS/ASC proposed rule was incorrect: ''Designation of a service as inpatient only does not preclude the service from being furnished in a hospital outpatient setting but rather means that Medicare will not make payment for the service if it is furnished to a Medicare beneficiary in the hospital outpatient setting'' (65 FR 18443). The commenter stated that this was incorrect because in the Change Request 9097 published on March 13, 2015, CMS revised its billing instructions to allow payment for procedures on the IPO list that are provided to a patient in the outpatient setting on the date of the inpatient admission or during the 3-calendar days preceding the date of inpatient admission to be bundled into the billing of the inpatient admission.

Response: The commenter is correct services on the IPO list performed in the outpatient setting can receive IPPS payment if the patient is admitted on the day of the procedure or within the following 3-calendar days. However, services on the IPO list will not receive payment under the OPPS.

In summary, after consideration of the public comments we received, we are finalizing our proposal to assign CPT codes 0790T, 22836, 22837, 22838, 61889, 76984, 76987, 76988, 76989, and

0646T to status indicator ''C'' for CY 2024. Table 103 below contains the changes to the IPO list for CY 2024. The complete list of codes describing services that are designated as inpatient only services beginning in CY 2024 is also included as Addendum E to this final rule with comment period, which is available via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 103: CHANGES TO THE INPATIENT ONLY (IPO) LIST FOR CY 2024

CY 2024 CPT Code	CY 2024 Long Descriptor	Action	CY 2024 Final Status Indicator
0790T	Revision (e.g., augmentation, division of tether), replacement, or removal of thoracolumbar or lumbar vertebral body tethering, including thoracoscopy, when performed	Add to the IPO list	C
22836	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; up to 7 vertebral segments	Add to the IPO list	C
22837	Anterior thoracic vertebral body tethering, including thoracoscopy, when performed; 8 or more vertebral segments	Add to the IPO list	C
22838	Revision (e.g., augmentation, division of tether), replacement, or removal of thoracic vertebral body tethering, including thoracoscopy, when performed	Add to the IPO list	C
61889	Insertion of skull-mounted cranial neurostimulator pulse generator or receiver, including craniectomy or craniotomy, when performed, with direct or inductive coupling, with connection to depth and/or cortical strip electrode array(s)	Add to the IPO list	C
76984	Ultrasound, intraoperative thoracic aorta (e.g., epiaortic), diagnostic	Add to the IPO list	C
76987	Intraoperative epicardial cardiac (e.g., echocardiography) ultrasound for congenital heart disease, diagnostic; including placement and manipulation of transducer, image acquisition, interpretation and report	Add to the IPO list	C
76988	Intraoperative epicardial cardiac ultrasound (ie, echocardiography) for congenital heart disease, diagnostic; placement, manipulation of transducer, and image acquisition only	Add to the IPO list	C
76989	Intraoperative epicardial cardiac ultrasound (ie, echocardiography) for congenital heart disease, diagnostic; interpretation and report only	Add to the IPO list	C
0646T	Transcatheter tricuspid valve implantation (ttvi)/replacement with prosthetic valve, percutaneous approach, including right heart catheterization, temporary pacemaker insertion, and selective right ventricular or right atrial angiography, when performed	Add to the IPO list	C

BILLING CODE 4150–28–C

C. Solicitation of Public Comments on the Services Described by CPT Codes 43775, 43644, 43645, and 44204

We solicited comments regarding whether the services described by CPT codes 43775 (Laparoscopy, surgical, gastric restrictive procedure; longitudinal gastrectomy (*i.e.,* sleeve gastrectomy)), 43644 (Laparoscopy, surgical, gastric restrictive procedure; with gastric bypass and roux-en-y gastroenterostomy (roux limb 150 cm or less)), 43645 (Laparoscopy, surgical, gastric restrictive procedure; with gastric bypass and small intestine reconstruction to limit absorption), and 44204 (Laparoscopy, surgical; colectomy, partial, with anastomosis) are appropriate to be removed from the IPO list. At this time, we do not believe that we have adequate information to determine whether the services described by CPT codes 43775, 43644, 43645, and 44204 can be safely performed in the hospital outpatient department setting on the Medicare population. Therefore, we specifically requested information or evidence that these services can be performed safely on the Medicare population in the outpatient setting. We also sought public comments on whether the services described by CPT codes 43775, 43644, 43645, and 44204 specifically meet any of the five criteria to be removed from the IPO list mentioned above.

Comment: We received a significant number of comments in support of maintaining CPT codes 43775, 43644, 43645, and 44204 on the IPO list, many of which were from bariatric surgery healthcare providers and societies. Commenters strongly recommended keeping these four services on the IPO list, with safety being the primary concern. Some commenters noted that while these services can be safely performed in the outpatient setting, those patients are carefully selected and tend to be a younger and healthier population. Commenters had great concern about the safety of performing these services on the Medicare population in the outpatient setting, noting that Medicare beneficiaries tend to be an older population with more comorbidities, even among those younger than 65. Commenters noted that performing these procedures in the outpatient setting could lead to greater risks and complications following the procedures. Many commenters also noted logistical concerns. Commenters wrote that receiving these services in the outpatient setting often requires additional follow-up appointments and at-home care, which many Medicare beneficiaries may not have access to. Patients may need to travel extended distances to receive these surgeries and follow-up care, however transportation may be difficult for some beneficiaries, especially in rural areas. Access to these services for Medicare beneficiaries if they are removed from the IPO list was another major concern among commenters, stating that if these services are removed from the IPO list, access to these services at their facilities in the inpatient setting may be limited, affecting those who would require inpatient care. Additionally, several commenters agreed that these services did not meet the criteria to be removed from the IPO list.

Response: We thank the commenters for their feedback.

Comment: We received a few comments in support of removing the four laparoscopic services from the IPO list for CY 2024, with commenters stating that these procedures can be safely performed in the outpatient setting. The commenters noted that advances in medical technology and surgical techniques have increased the safety of these surgeries.

Response: We thank the commenters for their feedback. However, we did not receive additional literature or evidence that these services can be performed safely on the Medicare population in the outpatient setting. We continue to believe that these services do not meet the criteria to be removed from the IPO list. Therefore, after consideration of the public comments we received, we are maintaining CPT codes 43775, 43644, 43645, and 44204 on the IPO list for CY 2024.

X. Nonrecurring Policy Changes

A. Supervision by Nurse Practitioners, Physician Assistants, and Clinical Nurse Specialists of Cardiac Rehabilitation, Intensive Cardiac Rehabilitation, and Pulmonary Rehabilitation Services Furnished to Hospital Outpatients

1. Background

Section 51008(a) of the Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123) amended section 1861(eee)(1) and (2) of the Act to revise the definitions of cardiac rehabilitation (CR) program and intensive cardiac rehabilitation (ICR) program, respectively, to provide that services these programs furnish can be under the supervision of a physician assistant (PA), nurse practitioner (NP), or clinical nurse specialist (CNS). Section 51008(b) of the BBA of 2018 amended section 1861(fff)(1) of the Act similarly to revise the definition of a pulmonary rehabilitation (PR) program to provide that PR services can be furnished under the supervision of these same types of practitioners. Section 51008(c) of the BBA of 2018 provides that these amendments apply to items and services furnished on or after January 1, 2024. Before the effective date of these amendments, only physicians could supervise services furnished as part of CR, ICR, and PR programs.

To implement these amendments, we proposed in the CY 2024 PFS proposed rule to revise the regulations at 42 CFR 410.47 and 410.49, which describe the conditions of coverage for the CR, ICR and PR programs, to provide that physician assistants, nurse practitioners, and clinical nurse specialists can supervise CR, ICR and PR program services. Specifically, the CY 2024 PFS proposed rule proposed to amend §§ 410.47 and 410.49 to provide that supervision of PR, CR, and ICR services can be provided by a physician, PA, NP, or CNS.

2. Conforming Revisions to § 410.27

Correspondingly, to implement the amendments to section 1861(eee)(1) and (2) and (fff) of the Act, and to be consistent with the proposed revisions to §§ 410.47 and 410.49, we proposed to make conforming revisions to § 410.27, which describes the conditions for coverage for therapeutic outpatient hospital or CAH services and supplies provided incident to a physician's or nonphysician practitioner's service.

We explained that currently, § 410.27(a)(1)(iv)(B)(*1*) provides that for PR, CR, and ICR services, direct supervision must be furnished by a doctor of medicine or osteopathy as specified in §§ 410.47 and 410.49. We proposed to delete the reference to a doctor of medicine or osteopathy and retain the cross-reference to §§ 410.47 and 410.49. As the text remaining following this deletion would consist solely of cross-references to the newly revised §§ 410.47 and 410.49, we explained that this would have the effect of expanding who may provide supervision for CR, ICR and PR services under § 410.27 to include PAs, NPs, and CNSs under § 410.27.

In the interim final rule with comment period (IFC) titled ''Policy and Regulatory Provisions in Response to the COVID–19 Public Health Emergency,'' published on April 6, 2020 (the April 6th COVID–19 IFC) (85 FR 19230, 19246, 19286), we changed the regulation at 42 CFR 410.27(a)(1)(iv)(D) to provide that, during a Public Health Emergency as defined in 42 CFR 400.200, the presence of the physician for purposes of the direct supervision

requirement for PR, CR, and ICR services includes virtual presence through audio/video real-time communications technology when use of such technology is indicated to reduce exposure risks for the beneficiary or health care provider. Specifically, the required direct physician supervision can be provided through virtual presence using audio/video real-time communications technology (excluding audio-only) subject to the clinical judgment of the supervising practitioner. We further amended § 410.27(a)(1)(iv)(D) in the CY 2021 OPPS/ASC final rule with comment period to provide that this flexibility continues until the later of the end of the calendar year in which the PHE as defined in § 400.200 ends or December 31, 2021 (85 FR 86113 and 86299). In the CY 2021 OPPS/ASC final rule with comment period we also clarified that this flexibility excluded the presence of the supervising practitioner via audio-only telecommunications technology (85 FR 86113).

In the CY 2022 PFS final rule, CMS added CPT codes 93797 (Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)) and 93798 (Physician or other qualified health care professional services for outpatient cardiac rehabilitation; with continuous ECG monitoring (per session)) and HCPCS codes G0422 (Intensive cardiac rehabilitation; with or without continuous ecg monitoring with exercise, per session) and G0423 (Intensive cardiac rehabilitation; with or without continuous ecg monitoring; without exercise, per session) to the Medicare Telehealth Services List on a Category 3 basis (86 FR 65055).

In order to effectuate a similar policy under the OPPS, where PR, CR, and ICR rehabilitation services could be furnished during the PHE to beneficiaries in hospitals under direct supervision of a physician where the supervising practitioner is immediately available to be present via two-way, audio/video communications technology, in the CY 2023 OPPS/ASC final rule with comment period, we finalized a policy to extend the revised definition of direct supervision to include the presence of the supervising practitioner through two-way, audio/video telecommunications technology until December 31, 2023 (87 FR 72019 and 72020). Under the telehealth flexibilities extended in the CAA, 2023, these services will remain on the Medicare Telehealth Services List through the end of CY 2024. In the interest of maintaining similar policies for direct supervision of PR, CR, and ICR under the OPPS and PFS, we proposed to further revise § 410.27(a)(1)(iv)(B)(*1*) to allow for the direct supervision requirement for CR, ICR, and PR to include virtual presence of the physician through audio-video real-time communications technology (excluding audio-only) through December 31, 2024 and to extend this policy to the nonphysician practitioners, that is NPs, PAs, and CNSs, who are eligible to supervise these services in CY 2024. We solicited comments on whether there are safety and/or quality of care concerns regarding adopting this policy beyond the current or proposed extensions and what policies CMS could adopt to address those concerns if the policy were extended beyond 2023.

For the complete discussion of the final revisions to §§ 410.47 and 410.49, we refer readers to the CY 2024 PFS final rule.

The following is a summary of the comments we received and our responses to those comments.

Comment: All commenters supported our proposal to make conforming revisions to § 410.27 to expand who may provide supervision for CR, ICR, and PR to include Pas, NPs, and CNSs and to allow for the direct supervision requirement for CR, ICR, and PR to include the virtual presence of the physician/nonphysician practitioner through audio-video real-time communications technology (excluding audio-only) through December 31, 2024. These commenters indicated that these changes will improve patient access to historically underutilized services, reduce burden on providers, and be of particular value in rural and other underserved areas where workforce shortages remain acute.

Response: We thank commenters for their support.

Comment: Many of these commenters requested that the availability of virtual direct supervision of these services be made permanent. One of these commenters additionally requested that once the policy is made permanent that CMS retire the requirement for a service-level modifier to identify when direct supervision is provided via appropriate telehealth technology.

Response: We appreciate the commenters' suggestions to make the virtual direct supervision of ICR, CR, and PR permanent. One of our motives for extending the availability of virtual direct supervision of these services until the end of CY 2024 is to allow us to continue to evaluate safety, quality of care, and other considerations related to virtual direct supervision. As such, we will take commenter's suggestions into account in future rulemaking.

Comment: One commenter requested clarity as to how a hospital registered patient could continue to receive CR and PR remotely in their home. The commenter suggested that CMS create a separate HCPCS code for remote cardiac and/or remote pulmonary rehabilitation services, which would temporarily permit hospitals to continue to furnish these services remotely to patients in their homes and receive reimbursement under the OPPS. Another commenter requested that CMS reinstate the PHE flexibilities that allowed a beneficiary's home to serve as a provider-based department of a hospital for cardiac and pulmonary rehabilitation services. Acknowledging that the waiver related to the PHE allowing for this flexibility has ended, this commenter suggested that CMS rely on other waiver authority (such as section 402 demonstration authority) to ensure the continuation of the flexibility.

Response: We appreciate commenters' interest in providing cardiac and pulmonary rehabilitation services remotely to a patient in their home. However, a hospital registered patient cannot currently receive CR or PR remotely in their home. The flexibility to provide CR, PR, and ICR services remotely to a beneficiary in his or her home ended with the expiration of the PHE on May 11, 2023.

Comment: One commenter requested that CMS revise the definition of ''physician prescribed exercise'' under §§ 410.47(a) and 410.49(a) to include Pas. Citing the 2014 final decision memorandum for Cardiac Rehabilitation (CR) Programs—Chronic Heart Failure,[195] this commenter stated that CMS previously declined to modify language in this manner because the Act specifies that the program is under the supervision of a physician. This commenter believed that since this section of the Act has been revised to allow Pas to supervise these programs, CMS should now modify this language accordingly to ''provider prescribed exercise.'' This commenter further requested that if the exact wording cannot be modified due to statutory constraints, CMS should reinterpret the intent of this section to indicate that health professionals authorized to supervise may also prescribe exercise. Additionally, this commenter urged CMS to work with Congress to modify physician-centric language in U.S. Code that prohibits Pas and other health

[195] *https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=270.*

professionals from ordering PR, CR, and ICR. Another commenter noted that under the Accountable Care Organization Realizing Equity, Access, and Community Health (ACO REACH) model, NPs are allowed to establish, review and sign a written care plan for PR and CR and requested that this waiver be standardized across all relevant payment models and that CMS should explore regulatory avenues to remove the barrier for patients to be seen by NPs to increase PR and CR participation.

Response: In the 2014 final decision memorandum for Cardiac Rehabilitation (CR) Programs—Chronic Heart Failure [196] public comment section, CMS responded to a similar request that the language describing CR be changed from ''physician prescribed'' to ''provider prescribed.'' In response to this comment, CMS reiterated that per the Act a CR program (at the time) ''means a physician-supervised program'' at section 1861(eee)(1) of the Act. CMS then further explained that ''physician-prescribed exercise'' is one of the required items listed in section 1861(eee)(3). While the BBA of 2018 expanded the types of practitioners that may supervise PR in section 1861(fff)(1) and CR/ICR in section 1861(eee)(1), it did not amend the items and services that these programs must furnish to also include exercise prescribed by other practitioners in addition to physicians, as section 1861(fff)(2)(A) for PR and section 1861(eee)(3)(A) for CR/ICR were not amended. We understand commenters' requests to expand the role for NPPs in prescribing and ordering these services, and establishing, reviewing, and signing plans of care, however the statutory language does not support the requested changes and CMS does not interpret the statutory changes to allow for such modifications using only a regulatory pathway. We encourage interested parties to work with Congress to explore further statutory changes to support these requests.

Comment: One commenter objected to the term ''nonphysician provider'' and encouraged CMS to fully transition to the use of the practitioner's professional title or to utilize the term ''advanced practice providers'' (APPs) when necessary and to remove all references to ''nonphysician practitioner'' within regulations, guidance, and information collection instruments. The commenter argues that CMS should do so because the term ''nonphysician provider'' fails to recognize the established scope of practice for APPs and their authority to practice to the full extent of their education and clinical preparation.

Response: We appreciate the commenter's concerns and agree with the importance of employing the appropriate designations for practitioners. We note that § 410.27(g) specifically lists the individual practitioners (clinical psychologist, licensed clinical social worker, PA, NP, CNS, or certified nurse-midwife) that are included in the term ''nonphysician practitioner'' for purposes of § 410.27 and §§ 410.47(a) and 410.49(a), which § 410.27, as finalized, now cross-references, specifically lists the individual practitioners (PA, NP, and CNS) that are included in the term ''nonphysician practitioner'' for the purposes of the supervision of ICR, CR and PR. It is therefore unnecessary and would be impractical to replace all instances of ''nonphysician practitioner'' throughout each regulation with a list of each practitioner's professional titles. With respect to replacing ''nonphysician practitioner'' with ''advance practice providers,'' we understand the importance of using the most relevant and up to date terminology to describe these practitioners. However, as acknowledged by the commenter, ''nonphysician practitioner'' is used in multiple regulations, guidance, and other documents and any change in terminology would need to be considered in light of ensuring consistency across these authorities. We will take this suggestion into consideration for future rulemaking.

Comment: One commenter requested clarification as to whether the flexibility for Pas, NPs, and CNSs to directly supervise ICR, CR and PR applies to both PPS hospitals and CAHs.

Response: Yes, the flexibility for Pas, NPs, and CNSs to directly supervise ICR, CR and PR applies to ICR, CR and PR services furnished by CAHs.

Comment: One commenter requested that CMS not restrict direct supervision through virtual presence to a subset of services. In the commenter's view, the decision whether to provide direct supervision through virtual presence via real-time, two-way audio/virtual telecommunications should be left up to the practitioner overseeing the patient's care.

Response: We thank the commenter for their comment and note that for therapeutic services under § 410.27, ICR, CR and PR, are the only services that are subject to direct supervision requirements when furnished to hospital outpatients. For a full discussion of the change in the generally applicable minimum required level of supervision for hospital outpatient therapeutic services from direct supervision to general supervision for services furnished by hospitals and CAHs, we refer readers to the CY 2020 OPPS final rule (84 FR 61359 through 61363) and the CY 2021 OPPS final rule with comment period (85 FR 86110 and 86111).

Comment: Several commenters provided input in response to our comment solicitation as to the existence of safety and/or quality of care concerns regarding the adoption of virtual supervision beyond the current (end of 2023) or proposed (end of 2024) extensions and what policies CMS might adopt to address any such concerns if the policy were extended beyond 2023. One commenter opined that requiring the physician or other supervising professional to be physically present in the same building has negligible patient-safety benefits because a physician's office, clinic, or hospital outpatient department typically has many other practitioners on site who would be available to assist if a physical presence was required. This commenter further contended that a virtually available supervisor might actually enhance patient safety in an emergency because the most appropriate course of action in an emergency is to transfer the patient to an emergency department, not wait for the supervising physician or other practitioner to arrive. The commenter noted that a virtually available supervisor may facilitate a faster transfer of the patient to the emergency department.

Another commenter indicated that they and other interested parties had previously provided CMS with literature on the absence of safety issues when supervision is provided virtually and offered to provide additional information to this effect for CMS's consideration for 2025 rulemaking.

A third commenter stated that because the option to provide direct supervision virtually has only become available recently as a consequence of the PHE, it is unlikely there are any peer-reviewed studies that focus on this aspect of virtual care. However, the commenter indicated that they had included with their comment numerous studies demonstrating the effectiveness and safety of virtual CR and PR services. In the commenter's view, the studies demonstrate that virtual and hybrid delivery of CR and PR services provided by staff are safe, improve health outcomes and adherence, and address barriers to access.

[196] *https://www.cms.gov/medicare-coverage-database/view/ncacal-decision-memo.aspx?proposed=N&NCAId=270.*

Finally, a commenter, prefacing their remarks with a statement that they do not share CMS's concern that virtual supervision inherently gives rise to patient safety issues, indicated that in their experience, numerous clinical staff and auxiliary personnel perform a wide range of tasks easily supervised virtually. The commenter argues that such staff categorically do not perform ''complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures'' that CMS has described in the past to explain its concerns with virtual direct supervision and that nonphysician practitioners, to the extent that they assist with such procedures, are subject to higher standards, certifications, and oversight.

Response: We thank commenters for their input regarding safety and/or quality of care concerns related to virtual direct supervision. We will take these comments into consideration for future rulemaking.

Comment: Several commenters appeared to assume that our proposal to extend the availability of virtual direct supervision until the end of 2024 included both outpatient hospital therapeutic services (under § 410.27) and outpatient hospital diagnostic services (under § 410.28), in the same way that the PFS proposed rule proposed to extend the availability of virtual direct supervision to both therapeutic and diagnostic services (under § 410.32) furnished by physicians (88 FR 52302).

One commenter encouraged CMS to extend ''virtual direct supervision'' through the end of 2024, if not beyond, ''and in a manner comparable to the physician fee schedule,'' to ensure that patients continued to have access to robust healthcare choices.

Another commenter submitted complementary comments to both the CY 2024 proposed PFS rule and CY 2024 proposed OPPS rule, referring to the two rules' overlap with respect to certain policies and using nearly identical language to describe its endorsement of both rules' proposals relating to the extension of the availability of virtual direct supervision through 2024. In its comment to the CY 2024 proposed PFS rule, this commenter stated: ''The Agency proposes extending through CY2024 several PHE-era policies not directly addressed by CAA2023, including permitting virtual Direct Supervision of auxiliary personnel by physicians and/or non-physician practitioners. We support the Agency's proposal to extend the present Direct Supervision waiver policies through CY2024.'' In the commenter's corresponding comment to the CY 2024 proposed OPPS rule, they similarly stated: ''The Agency also proposes extending through CY2024 several PHE-era virtual care policies not directly addressed by The Consolidated Appropriations Act of 2023 (''CAA2023''), including permitting virtual Direct Supervision of auxiliary personnel by physicians and/or non-physician practitioners. . . [commenter] strongly supports extending all of those policies in their present state through CY2024. We direct the Agency to our public response to the 2024 MPFS proposed rule for a full discussion.''

Another commenter, in support of their suggestion to make the flexibility to provide direct supervision through real-time audio/video technology permanent, attested to their experience of successfully providing ''clinically appropriate supervision for impacted services such as diagnostic tests and incident-to services through synchronous audio-visual telehealth.''

Response: We appreciate commenters' support and would like to make a clarification with respect to the availability of the virtual direct supervision of hospital and CAH diagnostic services furnished to outpatients in CY 2024. Historically, our policy has been to require that all hospital diagnostic services that are provided directly or under arrangement, whether provided in the main buildings of the hospital, in a PBD of a hospital, or at a nonhospital location, follow the physician supervision requirements adopted in the annual PFS rulemaking (74 FR 60590). Consistent with this policy, until CY 2023 the regulation at 42 CFR 410.28 regarding diagnostic tests furnished to hospital outpatients cross-referenced the definition of supervision levels for diagnostic services in the regulation at 42 CFR 410.32(b)(3), thereby incorporating the definitions of levels of supervision for diagnostic tests for which payment is made under the PFS. This policy—to align the supervision levels for diagnostic services furnished to hospital outpatients with those provided for in the regulation at 42 CFR 410.32(b)(3)—is also reflected in section 20.4.4 of Chapter 6 of the Medicare Benefit Policy Manual,[197] which provides that the supervision levels listed in the quarterly updated Medicare PFS Relative File apply to individual outpatient diagnostic tests.

In the CY 2023 OPPS/ASC final rule with comment period, we revised the regulation at § 410.28 to remove the cross-reference to § 410.32 and include within the regulation text in that provision the definitions of different levels of supervision. Although we removed the cross-reference to section § 410.32, our intent was to continue to align the rules regarding the supervision levels for diagnostic services furnished to hospital outpatients with the rules for supervision levels for diagnostic services described in section § 410.32.

When we removed the cross-references in 42 CFR 410.28 to 42 CFR 410.32, we anticipated continuing to make changes to § 410.28 to ensure that the definitions of the supervision levels remained consistent between the two provisions. Consequently, when the CY 2024 PFS proposed rule proposed to revise § 410.32 to extend the availability of the virtual supervision of direct supervision until the end of 2024, we intended to propose a corresponding revision to § 410.28 in the proposed 2024 OPPS rule to provide for this flexibility for diagnostic services furnished to hospital outpatients. Unfortunately, we inadvertently failed to propose this revision.

Because until CY 2023, an update to the supervision requirements under § 410.32 applied to diagnostic services furnished to hospital outpatients because of the cross-reference to § 410.32 in the regulation at § 410.28, we believe it is possible that the public, long accustomed to section § 410.28 incorporating the definitions in § 410.32 through the cross-reference to that provision, did not realize that an update to § 410.28 had not been proposed and thus did not comment on our unintended failure to update § 410.28. This is supported by comments we received that suggested that commenters were unaware that we had not proposed a revision to the regulation at § 410.28 to extend the virtual supervision of outpatient diagnostic services through the end of 2024. Instead, commenters seemed to assume that our proposal to extend the ability of practitioners to meet the direct supervision requirement through virtual presence included all diagnostic services, whether furnished in a hospital outpatient department or otherwise. Because our intention was to propose a corresponding revision to the regulation text at § 410.28 for consistency with the proposed revision to § 410.27 and commenters supported such a policy, we are812inalizingg a revision to § 410.28(e)(2)(iii) to allow for the direct supervision of diagnostic services to include the virtual presence of the physician or nonphysician practitioner through audio/video real-time communications technology

[197] Available at *https://www.cms.gov/regulations-and-guidance/guidance/manuals/downloads/bp102c06.pdf.*

(excluding audio-only) through December 31, 2024.

After consideration of the public comments we received, we are also finalizing, without modification, our proposal to revise § 410.27(a)(1)(iv)(B)(*1*) to expand the practitioners who may supervise CR, ICR, and PR services to include NPs, Pas, and CNSs and to allow for the direct supervision requirement for CR, ICR, and PR to include the virtual presence of the physician, NP, PA or CNS through audio-video real-time communications technology (excluding audio-only) through December 31, 2024.

B. Payment for Intensive Cardiac Rehabilitation Services (ICR) Provided by an Off-Campus, Non-Excepted Provider Based Department (PBD) of a Hospital

1. Background on Intensive Cardiac Rehabilitation

Section 144(a) of the Medicare Improvements for Patients and Providers Act of 2008 (MIPPA) (Pub. L. 110–275) made a number of changes to the Act related to coverage and payment for pulmonary and cardiac rehabilitation services furnished to beneficiaries with chronic obstructive pulmonary disease and certain other conditions, effective January 1, 2010. Specifically, section 144(a)(1)(A) of MIPPA amended section 1861(s)(2) of the Act by adding new subparagraphs (CC) and (DD) to provide for Medicare Part B coverage of items and services furnished under a cardiac rehabilitation (CR) program (as defined in a new section 1861(eee)(1) of the Act); a pulmonary rehabilitation (PR) program (as defined in a new section 1861(fff)(1) of the Act); and an intensive cardiac rehabilitation (ICR) program (as defined in a new section 1861(eee)(4) of the Act). The amendments made by section 144(a) of MIPPA provide for coverage of CR, PR, and ICR program services provided in a physician's office, in a hospital on an outpatient basis, and in other settings determined appropriate by the Secretary.

Section 144(a)(2) of MIPPA amended section 1848(j)(3) of the Act to provide for payment for services furnished in an ICR program under the PFS and also added a new paragraph (5) to section 1848(b) of the Act. Section 1848(b)(5)(A) requires the Secretary for ICR program services to substitute the Medicare OPD fee schedule amount established under the OPPS for cardiac rehabilitation (under HCPCS codes 93797 and 93798 for calendar year 2007, or any succeeding HCPCS codes for cardiac rehabilitation). For a full discussion of implementation of the MIPPA amendments related to coverage and payment for PR, CR, and ICR programs under the OPPS, we refer readers to the CY 2010 OPPS/ASC final rule with comment period (74 FR 60566 through 60574).

2. Background on Section 603 of the Bipartisan Budget Act of 2015 and the PFS Relativity Adjuster

Section 603 of the Bipartisan Budget Act of 2015 (Pub. L. 114–74) (BBA, 2015) (hereinafter referred to as ''section 603'') amended section 1833(t) of the Act by adding a new clause (v) to paragraph (1)(B) and adding a new paragraph (21). As a general matter, under sections 1833(t)(1)(B)(v) and (t)(21) of the Act, applicable items and services furnished by certain off-campus outpatient departments of a provider on or after January 1, 2017, are not considered covered OPD services as defined under section 1833(t)(1)(B) of the Act for purposes of payment under the OPPS and are instead paid ''under the applicable payment system'' under Medicare Part B if the requirements for such payment are otherwise met. Section 603 amended section 1833(t)(1)(B) of the Act by adding a new clause (v), which excludes from the definition of ''covered OPD services'' applicable items and services (defined in paragraph (21)(A) of the section) that are furnished on or after January 1, 2017, by an off-campus PBD, as defined in paragraph (21)(B) of the section.

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699 through 79719), we adopted a number of policies to implement section 603. Broadly, we: (1) defined applicable items and services in accordance with section 1833(t)(21)(A) of the Act for purposes of determining whether such items and services are covered OPD services under section 1833(t)(1)(B)(v) of the Act or whether payment for such items and services will instead be made under the applicable payment system designated under section 1833(t)(21)(C) of the Act; (2) defined off-campus PBD for purposes of sections 1833(t)(1)(B)(v) and (t)(21) of the Act; and (3) established policies for payment for applicable items and services furnished by an off-campus PBD (nonexcepted items and services) under section 1833(t)(21)(C) of the Act. To do so, we finalized policies that define whether certain items and services furnished by a given off-campus PBD may be considered excepted and, thus, continue to be paid under the OPPS; established the requirements for the off-campus PBDs to maintain excepted status (both for the excepted off-campus PBDs and for the items and services furnished by such excepted off-campus PBDs); and described the applicable payment system for nonexcepted items and services (generally, the PFS).

To effectuate payment for nonexcepted items and services, in the CY 2017 interim final rule with comment period (81 FR 79720 through 79729), we established a new set of payment rates under the PFS that reflected the relative resource costs of furnishing the technical component of a broad range of services to be paid under the PFS specific to the nonexcepted off-campus PBDs of a hospital. Specifically, we established a PFS Relativity Adjuster that is applied to the OPPS rate for the billed nonexcepted items and services furnished in a nonexcepted off-campus PBD in order to calculate payment rates under the PFS. The PFS Relativity Adjuster reflects the estimated overall difference between the payment that would otherwise be made to a hospital under the OPPS for the nonexcepted items and services furnished in nonexcepted off-campus PBDs and the resource-based payment under the PFS for the technical aspect of those services with reference to the difference between the facility and nonfacility (office) rates and policies under the PFS. Nonexcepted items and services furnished by nonexcepted off-campus PBDs are generally paid under the PFS at the applicable OPPS payment rate adjusted by the PFS Relativity Adjuster of 40 percent (that is, 60 percent less than the OPPS rate) (82 FR 53030).

In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79719 and 79725), we created modifier ''PN'' to collect data for purposes of implementing section 603 but also to trigger payment under the newly adopted PFS-equivalent rates for nonexcepted items and services. Nonexcepted off-campus PBDs bill for nonexcepted items and services on the institutional claim utilizing modifier ''PN'' to indicate that an item or service is a nonexcepted item or service.

For a full discussion of our initial implementation of section 603, we refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79699 through 79719) and the interim final rule with comment period (79720 through 79729). For a detailed discussion of the current PFS Relativity Adjuster related to payments under section 603, we refer readers to the CY 2018 OPPS/ASC final rule with comment period (82 FR 52356 through 52637) and the CY 2019 PFS final rule with comment period (82 FR 59505 through 59513).

3. Proposal To Modify Claims Processing of HCPCs Codes G0422 and G0423 To Address an Unintended Payment Disparity Caused by Application of the PFS Relativity Adjuster to ICR Services Furnished by Off-Campus Non-Excepted PBDs Hospitals

Since 2010, ICR services provided in the physician's office have been paid at 100 percent of the OPPS rate for CR services as required by 1848(b)(5). Since 2017, ICR services provided by an off-campus, non-excepted PBD of a hospital have been paid at the above-described ''PFS-equivalent'' rate through application of the PFS Relativity Adjuster, which was 50 percent of the OPPS rate in CY 2017 and 40 percent of the OPPS rate in CY 2018 and thereafter, consistent with the above-described implementation of section 603.

This has produced an outcome inconsistent with the text of section 1848(a)(5)(A) and at odds with the intent of section 603, which was to remove the significant disparity in payment rates for the same services depending on whether they were furnished in a physician's office or an off-campus, non-excepted PBD of a hospital. When the PFS Relativity Adjuster was implemented in 2017, payment for the ICR service provided in a physician's office and a PBD of an off-campus, non-excepted hospital was already the same pursuant to section 1848(b)(5)(A), which requires ICR services provided in a physician's office to be paid at the OPPS rate for cardiac rehabilitation. Consequently, application of the 40 percent PFS Relativity Adjuster to payment for ICR provided by an off-campus, non-excepted PBD has resulted in an unintended reimbursement disparity between the two sites of the service, as shown in Table 104.

TABLE 104: 2023 REIMBURSEMENT FOR HCPCS CODES G0422 AND G0423 UNDER THE OPPS ON-CAMPUS RATE, OPPS NON-EXCEPTED RATE AND PFS RATE

HCPCS Code	2023 OPPS On-Campus Rate	2023 OPPS Non-Excepted Rate	2023 Medicare PFS Payment Rate
G0422 (intensive cardiac rehabilitation; with or without continuous ECG monitoring with exercise, per session)	$120.47	$48.03	$120.47
G0423 (intensive cardiac rehabilitation; with or without continuous ECG monitoring without exercise, per session)	$120.47	$48.03	$120.47

This disparity creates a significant barrier to beneficiary access to an already underutilized service. To eliminate this unintended outcome and for consistency with the requirement in section 1848(b)(5)(A) of the Act to substitute the OPPS rate for CR services for the PFS rate for ICR services, we proposed to pay for ICR services provided by an off-campus, non-excepted provider-based department of a hospital at 100 percent of the OPPS rate for CR services (which is also 100 percent of the PFS rate) rather than at 40 percent of the OPPS rate. Effective January 1, 2024, we proposed to exclude ICR from the 40 percent PFS Relativity Adjuster policy at the code level by modifying the claims processing of HCPCS codes G0422 (Intensive cardiac rehabilitation; with or without continuous ECG monitoring with exercise, per session) and G0423 (Intensive cardiac rehabilitation; with or without continuous ECG monitoring without exercise, per session) so that 100 percent of the OPPS rate for CR is paid irrespective of the presence of the ''PN'' modifier (signifying a service provided in a non-excepted off-campus provider-based department of a hospital) on the claim. We solicited comment on whether there are other services for which the OPPS rate is unconditionally used under the PFS, such that these services should be treated similarly for purposes of payment to off-campus, non-excepted provider-based departments of hospitals.

The following is a summary of the comments we received and our responses to those comments.

Comment: All commenters supported our proposal to exclude ICR from the 40 percent PFS Relativity Adjuster at the code level by modifying the claims processing of HCPCS codes G0422 and G0423 so that 100 percent of the OPPS rate for CR is paid irrespective of the presence of the ''PN'' modifier on the claim. These commenters indicated that this change will increase patient access to an underutilized program, particularly in rural and underserved areas.

Response: We thank commenters for their support.

Comment: Many commenters requested that we retroactively review payments made from CY 2017 through CY 2023 for ICR services (HCPCS codes G0422 and G0423) provided by a non-excepted, off-campus PBD and prospectively adjust payment rates to reimburse off-campus PBDs the difference between what was paid what should have been paid.

Response: We appreciate commenters' suggestion and will consider it for future rulemaking.

Comment: Several commenters provided input in response to our request for comment on whether there are other services for which the OPPS rate is unconditionally used under the PFS, such that these services should be treated similarly for purposes of payment to off-campus, non-excepted provider-based departments of hospitals.

One commenter stated that the OPPS rate is unconditionally used under the PFS for the technical component of all diagnostic services subject to the OPPS imaging cap mandated by section 1848(b)(4) of the Act, which limits the

PFS rate to no more than the OPPS rate. The commenter contends that it is illogical to apply a PFS Relative Adjustor to the OPPS rates for these services when doing so results in payment that is lower than what a physician's office would receive, particularly since the OPPS payment rates include packaging of drugs, devices, laboratory, and other ancillary services that are all separately billed by an office. This commenter requested that CMS exempt all imaging tests whereby the OPPS imaging cap is applied and pay these services at 100 percent of the OPPS rate when furnished in a non-excepted, off-campus location.

Response: We do not agree that the OPPS rate is unconditionally used under the PFS for the technical component of all diagnostic services subject to the OPPS imaging cap mandated by section 1848(b)(4), such that these services should be treated similarly for purposes of payment to off-campus, non-excepted provider-based departments of hospitals. There is a fundamental difference between section 1848(j)(3), which is intended to ensure site neutrality between the PFS and the OPPS for payment for ICR rehabilitation services, and section 1848(b)(4), which is intended to impose a limit on the PFS payment for certain imaging services if the payment rate for a particular imaging service exceeds the OPPS payment rate for the same service in a given year.

Comment: The remaining responses to our comment solicitation did not identify any other services for which the OPPS rate is unconditionally used under the PFS but instead suggested services that commenters believed should be excluded from the 40 percent PFS Relativity Adjuster based on payment rate comparisons and other considerations. One commenter, while acknowledging that CR services were not included in the original MIPPA statute that directs coverage and payment of ICR, argued that since CR services are clinically very similar to ICR services and are also underutilized services with a proven record of improving patient quality of life and rehospitalization outcomes, that it would be appropriate for CMS to also exclude CPT codes 93797 (Physician or other qualified health care professional services for outpatient cardiac rehabilitation; without continuous ECG monitoring (per session)) and 93798 (Physician or other qualified health care professional services for outpatient cardiac rehabilitation; with continuous ECG monitoring (per session)) from the 40 percent PFS Relativity Adjuster. Another commenter requested that CMS consider exempting both CR and PR. Two commenters referred CMS to a recent report by MedPAC which stated that some services are more safely provided in the PBD setting and that limiting payment for these services could limit beneficiary access. These commenters suggested that CMS identify the ambulatory payment classifications for these services and exclude them from the 40 percent PFS Relativity Adjuster. Additionally, these commenters requested that CMS identify payment codes for which payment to freestanding physician offices under the PFS is higher than 40 percent of the OPPS rate and exclude them from the 40 percent PFS Relativity Adjuster. One of these commenters also requested that CMS conduct a comprehensive review of services provided in the physician office and PBD settings to identify other services that should be paid at the OPPS rate to ''preserve beneficiary access.'' Finally, one commenter reported that they compared the non-facility practice expense (PE) national payment amounts to 40 percent of the OPPS rate for the service and discovered 602 HCPCS services for which 40 percent of the OPPS rate is less than the non-facility PE rate. Acknowledging that many of these codes are the imaging codes previously discussed, the commenter stated that the list also included codes for services that are not covered or allowed to be paid in the non-facility setting and for which facility resources are not included in the non-facility PE RVUs. The commenter stated that these procedures should be paid 100 percent of OPPS and not be subject to the PFS Relatively Adjustor because they are not allowed to be performed in physicians' offices. The commenter additionally requested that CMS review a selection of services included in an appendix to the comment, which highlights instances where 40 percent of the OPPS payment rate is less than the non-facility PE payment rate and requests that, where the PFS Relatively Adjustor is less than the non-facility PE payment rate from the MPFS, that CMS pay either 100 percent of the OPPS rate or, at a minimum, use the non-facility PE payment rate as a floor.

Response: We appreciate commenters' many thoughtful responses to our comment solicitation as well as their many nominations of services that they believe should be excluded from the 40 percent PFS Relativity Adjuster based on payment rate comparisons and other non-statutory considerations. While we will take these suggestions into consideration in future rulemaking, we emphasize that our primary rationale for making this change was adherence to the statute which explicitly requires the PFS rate for ICR services be the same as the OPPS rate for CR services.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to exclude ICR from the 40 percent PFS Relativity Adjuster at the code level by modifying the claims processing of HCPCS codes G0422 and G0423 so that 100 percent of the OPPS rate for CR is paid irrespective of the presence of the ''PN'' modifier on the claim.

C. OPPS Payment for Specimen Collection for COVID–19 Tests

In the May 8, 2020 COVID–19 interim final rule with comment period titled ''Additional Policy and Regulatory Revisions in Response to the COVID–19 Public Health Emergency and Delay of Certain Reporting Requirements for the Skilled Nursing Facility Quality Reporting Program'', we created a new E/M code to support COVID–19 testing during the PHE: HCPCS code C9803 (Hospital outpatient clinic visit specimen collection for severe acute respiratory syndrome coronavirus 2 (sars–cov–2) (coronavirus disease [covid–19]), any specimen source) (85 FR 27604). In our review of available HCPCS and CPT codes for the May 8, 2020 COVID–19 IFC, we did not identify a prior code that explicitly described the exact services of symptom assessment and specimen collection that HOPDs were undertaking to facilitate widespread testing for COVID–19. We believed that HCPCS code C9803 was necessary to meet the resource requirements for HOPDs to provide extensive testing for the duration of the COVID–19 PHE. This code was created only to meet the need of the COVID–19 PHE and we stated that we expected to retire this code at the conclusion of the COVID–19 PHE (85 FR 27604).

We assigned HCPCS code C9803 to APC 5731—Level 1 Minor Procedures effective March 1, 2020, for the duration of the COVID–19 PHE. In accordance with section 1833(t)(2)(B) of the Act, APC 5731—Level 1 Minor Procedures contains services similar to HCPCS code C9803. APC 5731—Level 1 Minor Procedures has a payment rate of $24.96 for CY 2023. HCPCS code C9803 was also assigned a status indicator of ''Q1.'' The Q1 status indicator indicates that the OPPS will package services billed under HCPCS code C9803 when billed with a separately payable primary service in the same encounter. When HCPCS code C9803 is billed without

another separately payable primary service, we explained that we will make separate payment for the service under the OPPS. The OPPS also makes separate payment for HCPCS code C9803 when it is billed with a clinical diagnostic laboratory test with a status indicator of ''A'' on Addendum B of the OPPS. On May 11, 2023, the COVID–19 PHE concluded.[198] As stated above, we created HCPCS code C9803 to meet the need of the COVID–19 PHE and the resource requirements for HOPDs during the PHE and planned to retire the code following the conclusion of the PHE. While the code will remain active for the remainder of CY 2023 for technical reasons, we do not believe it is necessary for the code remain active in CY 2024 now that the PHE has concluded. Therefore, we proposed to delete HCPCS code C9803 effective January 1, 2024; and we solicited comment on our proposal to delete this code for CY 2024.

We received two comments in support of maintaining the code for purposes of reporting and reimbursement. One commenter requested that if we do retire the code, that we implement a similar code for ongoing nasopharyngeal swab specimen collection. After consideration of the public comments we received, we do not believe it is necessary for the code to remain active in CY 2024 with the conclusion of the COVID–19 PHE. We continue to believe that the utility of HCPCS code C9803 ended when the COVID–19 PHE ended. Therefore, we believe it appropriate to delete HCPCS code C9803 effective January 1, 2024. However, we will continue to explore coding opportunities for nasopharyngeal swab specimen collection, where appropriate.

D. Remote Services

1. Mental Health Services Furnished Remotely by Hospital Staff to Beneficiaries in Their Homes

In the CY 2023 OPPS final rule with comment period (87 FR 72012 through 72017), we finalized creation of three HCPCS C-codes to describe mental health services furnished by hospital staff to beneficiaries in their homes through communications technology. See Table 105 for the C-code numbers and their descriptors.

TABLE 105: C-CODE NUMBERS AND LONG DESCRIPTORS

HCPCS Code	Long Descriptor
C7900	Service for diagnosis, evaluation, or treatment of a mental health or substance use disorder, initial 15-29 minutes, provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service
C7901	Service for diagnosis, evaluation, or treatment of a mental health or substance use disorder, initial 30-60 minutes, provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service
C7902	Service for diagnosis, evaluation, or treatment of a mental health or substance use disorder, each additional 15 minutes, provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service (List separately in addition to code for primary service)

When we created HCPCS codes C7900 through C7902, we did not specify whether they should be used for individual or group services, preferring to keep the coding more general while we gathered information about the use of these new codes. However, we have heard from interested parties that, in instances when a beneficiary is receiving multiple units of group therapy a day, it is administratively burdensome to report and document each unit of time using multiple codes. Instead, interested parties requested that we create a single, untimed code that can be reported when a beneficiary receives multiple hours of group therapy per day. In order to reduce administrative burden and enhance access to these services, we proposed to create a new, untimed, HCPCS C-code describing group therapy. Please see Table 106 for the proposed C-code and long descriptor.

[198] *https://www.hhs.gov/about/news/2023/05/11/hhs-secretary-xavier-becerra-statement-on-end-of-the-covid-19-public-health-emergency.html.*

TABLE 106: PROPOSED C-CODE NUMBER AND LONG DESCRIPTOR

HCPCS	Long Descriptor
C79XX	Group psychotherapy service for diagnosis, evaluation, or treatment of a mental health or substance use disorder provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service

As we stated in the CY 2023 OPPS final rule with comment period, when beneficiaries are in their homes and not physically within the hospital, the hospital is not accruing all the costs associated with an in-person service; and the full OPPS rate would not accurately reflect these reduced costs. We believe that the costs associated with hospital clinical staff remotely furnishing a mental health service to a beneficiary who is in their home using communications technology more closely resembles the PFS payment amount for similar services when performed in a facility, which reflects the time and intensity of the professional work associated with performing the mental health service but does not reflect certain practice expense costs, such as clinical labor, equipment, or supplies (87 FR 72015).

In keeping with that methodology, we proposed to assign HCPCS code C79XX to an APC based on the facility payment amount for a clinically similar service, CPT code 90853 (Group psychotherapy (other than of a multiple-family group)) under the PFS. See Table 107 for the proposed SI and APC assignments and payment rates for HCPCS code C79XX.

TABLE 107: PROPOSED CY 2023 SI, APC ASSIGNMENT, AND GEOMETRIC MEAN COST FOR HCPCS CODE C97XX

HCPCS	Short Descriptor	Proposed SI	Proposed Proxy Service	PFS Facility Rate	Proposed APC	APC GMC
C79XX	HOPD mntl hlt, grp	S	90853	$23.38	5821	$28.62

We sought comment on whether HCPCS code C79XX sufficiently describes group psychotherapy to the extent that group psychotherapy would no longer be reported with HCPCS codes C7900–C7902, in which case we would need to refine the code descriptors for HCPCS codes C7900–C7902 to stipulate that they are solely for services furnished to an individual beneficiary. Alternatively, we sought comment on whether or there are circumstances where interested parties believe it would be appropriate to bill for group services using HCPCS codes C7900–C7902. We also sought comment on any further refinements to the code descriptors, valuation, or billing guidance.

We have also heard from interested parties that there is confusion about the presence of the word ''initial'' in the descriptors for HCPCS codes C7900 and C7901 and that this is preventing billing for remote behavioral health services furnished subsequent to either the first 15 to 29 minutes or 30 to 60 minutes. In order to facilitate accurate billing, regardless of whether the remote mental health service is being furnished as an initial or subsequent service, we proposed to revise the code descriptors to remove the word ''initial.'' We also proposed to revise the descriptor for HCPCS code C7902 to limit billing with HCPCS code C7901. See Table 108 for revised code descriptors.

TABLE 108: PROPOSED DESCRIPTORS FOR HCPCS CODES C9700 AND C9701

HCPCS	Proposed Long Descriptor
C7900	Service for diagnosis, evaluation, or treatment of a mental health or substance use disorder, 15-29 minutes, provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service
C7901	Service for diagnosis, evaluation, or treatment of a mental health or substance use disorder, 30-60 minutes, provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service
C7902	Service for diagnosis, evaluation, or treatment of a mental health or substance use disorder, each additional 15 minutes, provided remotely by hospital staff who are licensed to provide mental health services under applicable State law(s), when the patient is in their home, and there is no associated professional service (List separately in addition to HCPCS code C9701)

The following is a summary of the comments we received and our responses to those comments.

Comment: Most commenters supported our proposal to create to a new, untimed, HCPCS C-code (C79XX) describing group therapy, citing reduced confusion and administrative burden, and ensuring appropriate patient access to the services.

Response: We thank commenters for their support.

Comment: Several commenters opposed the creation of the group therapy code, objecting to our proposal to assign the code to an APC based on the facility payment amount for a similar service (CPT code 90853 Group Psychotherapy (other than of a multiple-family group)) under the PFS. Several other commenters neither supported nor objected to the creation of the group therapy code but expressed concern with basing reimbursement on the facility PFS payment for remote mental health services generally. These commenters disagreed with CMS's assumption that when beneficiaries are in their homes and not physically within the hospital, the hospital is not accruing all the costs associated with an in-person service. These commenters pointed to many factors in support of their contention, including investments in infrastructure, equipment, and technology to provide remote services, the clinical and administrative staff necessary to provide remote services while maintaining access to in-person care, the staff time and resources necessary to make the remote visit run smoothly (scheduling and setting up the appointment, assisting patients with connecting to the appointment, screening patients, making referrals and scheduling follow ups), the fact that salaries and operating costs do not decrease simply because some services are provided remotely and that the only cost savings are for supplies, which are negligible because the services being provided remotely are mental health services. In recognition of these costs, these commenters requested payment for remote mental health services at the full OPPS rate. One commenter supported CMS's conclusion that mental health services provided remotely cost less than mental health services provided in-person, noting that even though the work RVU remains the same, the practice expenses are significantly reduced.

Response: We continue to believe that when beneficiaries are in their homes and not physically within the hospital, that the hospital is not accruing all the costs associated with an in-person service and as such the full OPPS rate would not accurately reflect these costs. However, we do agree that the non-facility payment rate is likely a better reflection of the resources associated with furnishing these services than the facility payment rate. However, as demonstrated in Table 109 below, using the non-facility rate to inform the APC assignment still results in assignment to the same APCs.

TABLE 109: FINAL CY 2024 SI AND APC FOR C7900, C7901, AND C7903

HCPCS	Short Descriptor	Final SI	Final Proxy Code	PFS NF Rate	Final CY 2024 APC	Final CY 2024 APC GMC	Final CY 2024 OPPS Payment Rate
C7900	Hopd mntl hlt, 15-29 min	S	96159	$21.61	5821	$28.08	Refer to OPPS Addendum B
C7901	Hopd mntl hlt, 30-60 min	S	95158	$62.88	5822	$87.30	Refer to OPPS Addendum B
C7903 (placeholder C79XX)	HOPD mntl hlt, grp	S	90853	$25.87	5821	$28.08	Refer to OPPS Addendum B

We appreciate commenters insights and will consider further updates to the payment rates as needed in future rulemaking.

Comment: All commenters supported our proposal to revise the code descriptors C7900 and C7901 to remove the word ''initial.''

Response: We thank commenters for their support.

Comment: One commenter, in response to CMS's request for comment on the HCPCS codes C7900–7902, stated that because the nomenclature and minutes in these codes are similar to other HCPCS codes, the commenter would support keeping the codes as currently written.

Response: We thank the commenter for this input.

Comment: One commenter encouraged CMS to clearly define a beneficiary's home as broadly as possible, in recognition that not all beneficiaries own, rent, or occupy a space that might traditionally be considered a ''home.'' This commenter points out that shelters, tents, parked vehicles, and other settings may well be considered a ''home'' to some or might offer a safe environment that is necessary for the beneficiary to openly engage with their clinician during a mental health disorder, or other, visit.

Response: We appreciate commenter's suggestion and agree that one's home can cover a wide breadth of settings and arrangements. As we have previously explained, our definition of ''home,'' both in general and in terms of a mental healthcare delivery site, is broad and includes temporary lodging such as hotels and homeless shelters (86 FR 65048 and 65049).

Comment: One commenter stated that the new remote mental health services are not fully understood by many providers and therefore not utilized as often as they could be. The commenter expressed concern that there will be significant confusion in the community between these services (which are sometimes used to bill for remote IOP services) and the new IOS services covered by Medicare. The commenter requests that CMS issue informational materials to smaller rural providers (like CAHs) to help them to understand the circumstances under which each service is appropriate and how each option would help them to meet the needs of their patient populations.

Response: We appreciate the commenter's suggestion and will consider the creation of additional informational materials related to remote mental health services.

Comment: One commenter emphasized the importance of CMS providing explicit billing guidance when clinicians in hospitals furnish telehealth services to patients in their homes. The commenter requested that CMS confirm the appropriate billing and payment for telehealth services when the clinician is in the hospital and the patient is in the home and asked several specific billing questions.

Response: We direct the commenter to the CY 2024 PFS final rule for specific information relating to billing for telehealth services furnished to patients in their homes. We will consider additional sub-regulatory clarifications, as needed, in the future.

Comment: One commenter emphasized that remote monitoring tools must play a central role in CMS's efforts to make its OPPS more efficient and effective and encouraged CMS to fully support the use of remote monitoring (both physiologic and therapeutic) through its OPPS policies. This commenter also requested that CMS ensure that critical access hospitals (CAHs) and REHs be able to provide services via the most appropriate and accessible modality, whether live voice/video or asynchronous modalities, including remote monitoring. The commenter

argued that CAHs and REHs should enjoy the same fee-for-service carve out that FQHCs and RHCs already enjoy for Chronic Care Management (CCM), Transitional Care Management (TCM), and Behavioral Health Integration (BHI) services. The commenter urged CMS to act to support the use of Remote Patient Monitoring (RPM) and Remote Therapeutic Management (RTM) by CAHs and REHs. Finally, the commenter notes that CMS has proposed to provide new support for RPM and RTM to FQHCs and RHCs, and requests that the OPPS rules provide similar support for CAHs and REHs.

Response: We appreciate the commenter's input and recommendations with respect to remote monitoring tools and we will consider them for future rulemaking. After consideration of the public comments we received, we are finalizing, without modification, our proposal to create a new, untimed, HCPCS C-code, specifically, C7903, describing group therapy and to assign that code to an APC based on the facility payment amount for a clinically similar service, CPT code 90853 (Group psychotherapy (other than of a multiple-family group)) under the PFS. We are also finalizing our proposal to revise the code descriptors for HCPCS codes C7900 and C7901 to remove the word ''initial'' and HCPCS code C7902 to limit billing with HCPCS code C7901.

2. Periodic In-Person Visits

In the CY 2023 OPPS final rule with comment period (87 FR 72017), we finalized a requirement that payment for mental health services furnished remotely to beneficiaries in their homes using telecommunications technology may only be made if the beneficiary receives an in-person service within 6 months prior to the first time the hospital clinical staff provides the mental health services remotely; and that there must be an in-person service without the use of telecommunications technology within 12 months of each mental health service furnished remotely by the hospital clinical staff. We also finalized that we would permit exceptions to the requirement that there be an in-person service without the use of communications technology within 12 months of each remotely furnished mental health service when the hospital clinical staff member and beneficiary agree that the risks and burdens of an in-person service outweigh the benefits of it. We stated that exceptions to the in-person visit requirement should involve a clear justification documented in the beneficiary's medical record including the clinician's professional judgement that the patient is clinically stable and/or that an in-person visit has the risk of worsening the person's condition, creating undue hardship on the person or their family, or would otherwise result in disengaging with care that has been effective in managing the person's illness. We also finalized that hospitals must document that the patient has a regular source of general medical care and has the ability to obtain any needed point of care testing, including vital sign monitoring and laboratory studies. We finalized that these requirements would not go into effect until the 152nd day after the PHE for COVID–19 ends to maintain consistency with similar policies implemented for professional services paid under the PFS, and for RHCs/FQHCs (87 FR 72018).

Section 4113(d) of the Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), extended the delay in implementing the in-person visit requirements until January 1, 2025, for both professionals billing for mental health services via Medicare telehealth and for RHCs/FQHCs furnishing remote mental health visits. As previously stated, we believe it is important to maintain consistent requirements for these policies across payment systems; therefore, we proposed to delay the in-person visit requirements for mental health services furnished remotely by hospital staff to beneficiaries in their homes until January 1, 2025. The following is a summary of the comments we received and our responses to those comments.

Comment: All commenters supported our proposal to delay the in-person requirements and the majority of those commenters requested that CMS work with Congress to eliminate the in-person requirements altogether. These commenters stated that the in-person requirements should be eliminated because the requirements are arbitrary and not based upon any clinical guidelines or evidence, they create logistical hurdles for patients and providers, they perpetuate stigma related to receiving mental health care, they are problematic for those in rural communities and those with inconsistent transportation accessibility, remote mental health services were overwhelmingly successful during the PHE when there were no in-person visit requirements, and clinicians, rather than the government, should make the determination of the need for an in-person visit on a patient-by-patient basis.

Response: We thank commenters for their support and appreciate their concerns related to the in-person requirements. As acknowledged by commenters, Congressional legislation would be required to eliminate these requirements.

Comment: One of these commenters requested that in future rulemaking CMS consider changing the in-person visit requirements to allow a broader array of practitioners to fulfill the in-person obligation. Another commenter requested that CMS implement a broad exception to the in-person visit requirements criteria based on clinical discretion, as well as an expansive view of the types of in-person visits that can meet the requirements.

Response: We thank commenters for their suggestions and will take them into consideration for future rulemaking. We note, however, that in the CY 2023 final OPPS rule (87 FR 72017), we finalized an exception to the requirement that there be an in-person service within 12 months of each remotely furnished mental health service. This exception may be exercised when the hospital clinical staff member and beneficiary agree that the risks and burdens of an in-person service outweigh the benefits of it and a clear justification for the exception is documented in the beneficiary's medical record, including the clinician's professional judgement that the patient is clinically stable and/or that an in-person visit has the risk of worsening the person's condition, creating undue hardship on the person or their family, or would otherwise result in disengaging with care that has been effective in managing the person's illness. Hospitals must also document that the patient has a regular source of general medical care and has the ability to obtain any needed point of care testing, including vital sign monitoring and laboratory studies.

After consideration of the public comments we received, we are finalizing, without modification, our proposal to delay the in-person visit requirements for mental health services furnished remotely by hospital staff to beneficiaries in their homes until January 1, 2025.

3. Payment for Outpatient Therapy Services, Diabetes Self-Management Training, and Medical Nutrition Therapy When Furnished by Hospital Staff to Beneficiaries in Their Homes Through Communication Technology

The CAA, 2023 extended most flexibilities for Medicare telehealth services, including retention of physical and occupational therapists and speech-language pathologists as telehealth distant site practitioners, through the end of CY 2024. In the CY 2024 PFS proposed rule, we proposed to continue

to make payment for outpatient therapy (physical therapy (PT), occupational therapy (OT), and speech-language pathology (SLP)) services, Diabetes Self-Management Training (DSMT), and Medical Nutrition Therapy (MNT) when furnished via telehealth by qualified employed staff of institutional providers through the end of CY 2024. We note that the proposal includes outpatient therapy, DSMT, and MNT services furnished via telehealth by staff of hospital outpatient departments. For further discussion, please see the CY 2024 PFS final rule. The following is a summary of the comments we received and our responses to those comments.

Comment: All commenters supported our proposal to make payment for outpatient therapy, DSMT, and MNT when furnished via telehealth by qualified employed staff of institutional providers, including staff of hospital outpatient departments, through the end of 2024. One commenter stated that the extension would provide the flexibility needed to offer these outpatient therapy services to patients, especially those who have difficulty traveling to a hospital and otherwise would not have access to these critical services. Another commenter opined that enabling Medicare beneficiaries to engage with their hospital's dietary/nutrition staff from the comfort of their homes allows more frequent and productive communication that helps ensure patients persevere through the difficult dietary and lifestyle changes necessary to manage endemic chronic conditions associated with obesity and malnutrition alike, diabetes in particular. The commenter further stated that permitting hospitals to bill for these services delivered via telehealth helps ensure their availability, especially in rural communities where the local hospital may be the only available provider. Another commenter stated that it finds the inclusion of these therapists as eligible telehealth provider types to be particularly representative of CMS's stated goals of building in health equity and access measures to its program offerings.

Response: We thank commenters for their support and note that additional comments on the proposal to make payment for PT, OT, SLP, DSMT, and MNT when furnished via telehealth by qualified employed staff of institutional providers, including staff of hospital outpatient departments, through the end of 2024 are discussed in the CY 2024 PFS final rule.

Comment: One commenter requested that CMS provide billing instructions to hospitals about how PT, OT, SLP, DSMT, and MNT therapists are allowed to furnish rehabilitation and that hospitals can receive Part B MPFS payment.

Response: We direct the commenter to the CY 2024 PFS final rule for specific information relating to billing for telehealth services furnished to patients in their homes. We will consider additional sub-regulatory clarifications, as needed, in the future.

We refer readers to the CY 2024 PFS final rule for details relating to the final policy for payment for outpatient therapy (PT, OT, and SLP) services, DSMT, and MNT when furnished via telehealth by qualified employed staff of institutional providers, including staff of hospital outpatient departments, through the end of CY 2024.

E. OPPS Payment for Dental Services

1. Background

Section 1862(a)(12) of the Act generally precludes payment under Medicare Parts A or B for any expenses incurred for services in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth. (Collectively here, we will refer to ''the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth'' as ''dental services.'') In the CY 2023 Physician Fee Schedule (PFS) final rule (87 FR 69663), we explained that we believe there are instances where dental services are so integral to other medically necessary services that they are not in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth within the meaning of section 1862(a)(12) of the Act. Rather, such dental services are inextricably linked to the clinical success of an otherwise covered medical service, and therefore, are instead substantially related and integral to that primary medical service. To provide greater clarity to our current policies and respond to issues raised by interested parties, in the CY 2023 PFS final rule, we finalized: (1) a clarification of our interpretation of section 1862(a)(12) of the Act to permit payment for dental services that are inextricably linked to, and substantially related and integral to the clinical success of, other covered medical services (hereafter in this discussion, ''inextricably linked to other covered services''); (2) clarification and codification of certain longstanding Medicare Fee-For-Service (FFS) payment policies for inextricably linked dental services; (3) that, beginning for CY 2023, Medicare Parts A and B payment can be made for certain dental services inextricably linked to Medicare-covered organ transplant, cardiac valve replacement, or valvuloplasty procedures; (4) for CY 2024, that Medicare Part A and B payment can be made for certain dental services inextricably linked to Medicare-covered services for treatment of head and neck cancers; and (5) beginning for CY 2023, the establishment of a process to submit for our consideration and review additional dental services that are inextricably linked to other covered medical services (87 FR 69670 and 69671). The CY 2023 PFS final rule specified that Medicare payment for these dental services may be made regardless of whether the services are furnished in an inpatient or outpatient setting. We directed readers to the CY 2023 PFS final rule (87 FR 69663 through 69688) for a full discussion of these policies as well as to the CY 2024 PFS proposed rule for proposals related to dental services.

In the CY 2023 PFS final rule, CMS identified various examples of HCPCS codes, mostly Current Dental Terminology (CDT®) codes, that could be used to describe the types of dental services identified in the CY 2023 PFS final rule for which Medicare payment can be made when coverage and payment policy requirements are met (87 FR 69667). We refer readers to the PFS Relative Value Files that are released quarterly on the CMS website for a comprehensive list of HCPCS codes, including D-codes, that may be payable under the PFS, available at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/physicianfeesched/pfs-relative-value-files.*

We explained that the policies adopted in the CY 2023 PFS final rule allow payment for certain dental services performed in outpatient settings. However, the current dental codes assigned to APCs for CY 2023 do not fully describe the dental services that may be inextricably linked to covered medical services and payable under Medicare Part B. Specifically, for the OPPS for CY 2023, only 57 CDT codes are assigned to APCs and payable under the OPPS when coverage and payment conditions are met. In addition to the small number of CDT codes assigned to APCs for CY 2023, there is also a limited number of CPT codes that may describe dental services, including CPT code 41899 (Unlisted px dentalvlr strux), that are currently assigned to APCs and payable under the OPPS.

In the CY 2023 OPPS/ASC final rule with comment period, we created HCPCS code G0330 to describe facility

services for dental rehabilitation procedure(s) furnished to patients who require monitored anesthesia (*e.g.,* general, intravenous sedation (monitored anesthesia care)) and use of an operating room. We finalized this code based on extensive public comments expressing the need for a coding and payment mechanism to improve access to covered dental procedures under anesthesia, especially dental rehabilitation procedures, an issue that commenters to the CY 2023 OPPS proposed rule explained is caused by barriers to securing sufficient operating room time to furnish these services. We further noted that HCPCS code G0330 must only be used to describe facility fees for dental rehabilitation services that meet Medicare payment and coverage requirements as interpreted in the CY 2023 PFS final rule. We explained that HCPCS code G0330 cannot be used to describe or bill the facility fee for noncovered dental professional services. We assigned HCPCS code G0330 to APC 5871 (Dental Procedures) for CY 2023. We directed readers to the CY 2023 OPPS/ASC final rule with comment period for a full discussion on HCPCS code G0330 (87 FR 71882 and 71883). For CY 2024, we proposed to continue to assign HCPCS code G0330 to APC 5871 (Dental Procedures).

Comment: We received several comments requesting clarification on the billing of HCPCS code G0330 in light of our proposal to price additional dental codes. Commenters stated that CMS should provide guidance as to whether HCPCS code G0330 should also be reported when one or more of the 229 dental codes are performed in an operating room under anesthesia. A few commenters asked whether G0330 should be billed under the OPPS similarly to how we proposed for the code to be billed when the service is performed in an ASC setting.

Response: We appreciate the opportunity to provide clarification regarding billing of HCPCS code G0330 under the OPPS. Under the OPPS, HCPCS code G0330 is payable without requiring the billing of any other code on the same day, so long as the service performed meets all Medicare coverage and payment requirements. We are clarifying that providers should bill any other more specific CPT and/or CDT codes assigned to APCs that describe the service performed, instead of HCPCS code G0330, whenever possible. HCPCS code G0330 should only be billed when no other, more specific code is available to describe the service performed. For instance, if a dentist performs a prophylactic cleaning (CPT code D1110), several imaging services (*e.g.,* D705–D709), and alveoloplasty with extraction (D7310), each of these codes are assigned to APCs, and, therefore, even if the services meet the description of HCPCS code G0330, hospital outpatient departments should only bill the more specific codes without HCPCS code G0330. We believe that as we continue to price additional codes describing dental services, the situations where it is necessary to bill HCPCS code G0330 will be increasingly limited. However, we believe HCPCS code G0330 is still necessary to fill the need for a billing and payment mechanism for dental rehabilitation services performed under monitored anesthesia in an operating room that meets Medicare coverage and payment requirements, but has not been assigned to an APC. Finally, the clarification regarding billing of HCPCS code G0330 provided here only applies to billing and payment under the OPPS. For information regarding the billing and payment for HCPCS code G0330 in the ASC setting, we refer readers to our discussion on this issue in section XIII.D of this final rule with comment period.

Comment: We received several comments expressing concern over the impact of the proposed payment rate for HCPCS code G0330 for CY 2024. One commenter requested that we recalculate the payment rate for the APC. Another commenter stated that because the proposed G0330 payment rate for HCPCS code G0330 is 45 percent lower than the CY 2023 payment rate, and even lower for the ASC payment, the payment rate may be insufficient in light of specialized dental equipment and personnel required to furnish these services in hospital outpatient departments and ASCs. Another commenter stated that the inadequacy of the proposed payment rates for HCPCS code G0330 for both hospital and ASC settings is likely to stymie use of the code. Several commenters urged CMS to not finalize our proposal to continue to assign HCPCS code G0330 to APC 5871 due to concerns over the APC's payment rate. Some commenters requested that CMS finalize an APC reassignment for HCPCS code G0330 from APC 5871 to APC 5164 (Level 4 ENT Procedures) with a proposed payment rate of $3,087.88 for CY 2024. One commenter stated that reassignment to APC 5164 would be consistent with available cost and charge data for dental procedures likely to be reported using HCPCS code G0330. To support their request for reassignment to APC 5164, commenters stated that prior to CMS's establishment of HCPCS code G0330, these same dental rehabilitation procedures were reported using unlisted CPT code 41899, with a geometric mean cost of approximately $2,200, which is within the range of costs for procedures classified into APC 5164. Another commenter stated that CMS's proposal to allow for multiple procedure discounting for HCPCS code G0330 by proposing to assign status indicator ''T'' to the code would further lower the payment rate for services described by the code.

Response: We thank the commenters for their input. First, we note that APC geometric mean costs can change from year to year as a result of data updates and policy changes. In this case, we proposed to assign 229 dental procedures to APCs, with many proposed for assignment to APC 5871, the same APC to which HCPCS code G0330 was proposed to be assigned. Additionally, we proposed to change the APC assignments of some codes that were previously paid under the OPPS based on clinical similarity, including codes describing dental imaging services. We also note, APC 5871 is an APC with a low volume of claims and, therefore, is more prone to volatility in its geometric mean cost and payment rate changes from year to year based on the claims data available for ratesetting. The proposed coding changes, as well as the fact that APC 5871 has a low volume of claims, resulted in an unintentional reduction to APC 5871's geometric mean cost and payment rate for CY 2024. As we explained in our proposal for CY 2024, we encountered various challenges in securing accurate cost information for the hospital outpatient setting for the dental codes we proposed to assign to APC payment rates. We believe that as utilization increases and we receive claims data on the codes that we proposed to assign to various APCs for CY 2024, we will make changes to APC assignments and APC groups, including considering creating additional APC levels and new clinical APCs in future rulemaking, based on clinical and resource needs.

We reiterate that the proposed payment rate for the services assigned to the Dental Procedures APC was the result of our ratesetting process, which we apply consistently to set the payment rates for other clinical APCs. With that said, we are sympathetic to commenters' concerns regarding the reduction in the proposed payment rate for HCPCS code G0330 from CY 2023 to CY 2024, especially without having claims data for the code that would indicate that the proposed payment rate

is appropriate. Based on comments received stating that CPT code 41899 was used to describe the services currently described by HCPCS code G0330 prior to the code's effective date of January 1, 2023, we analyzed the available claims data for surgical claims for CPT code 41899 in CY 2021 to get a benchmark for the geometric mean costs of services that are described by HCPCS code G0330. While CPT code 41899 is an unlisted code describing unlisted procedures on the dentoalveolar structures that may or may not be surgical in nature and performed under the same conditions as described by HCPCS code G0330, we ran a study to isolate the claims performed with monitored anesthesia codes to more closely mimic the conditions required for services billed under HCPCS code G0330. Based on this analysis, we believe that the proposed APC assignment for HCPCS code G0330 for CY 2024 would be inappropriate in terms of estimated resource costs. Therefore, for CY 2024, we are not finalizing the APC assignment of HCPCS code G0330 to APC 5871 as proposed.

Although we believe isolating the surgical claims gives us a better idea of the geometric mean costs of HCPCS code G0330, we also believe that the approximation using surgical services billed with CPT code 41899 will not be as accurate as the claims information we will receive for HCPCS code G0330 in future years. We also note the crosswalk to CPT code 41899 is not a perfect comparator given that it is an unlisted code, which, per our billing instructions, should only be used when there is no other more specific code available. Therefore, we will determine whether the APC assignment we are finalizing for HCPCS code G0330 is appropriate based on claims data received in future years and consider further APC assignment changes in future rulemaking. However, based on the comments received, the fact that we do not have existing claims data for HCPCS code G0330 at this time, and our analysis of surgical claims using CPT code 41899, which demonstrate that the geometric mean costs for surgical claims for CPT code 41899 are notably higher than the proposed payment rate for procedures assigned to APC 5871 for CY 2024, we believe reassigning HCPCS code G0330 from APC 5871 to APC 5164 is appropriate for CY 2024.

After consideration of the public comments we received, we are finalizing an APC reassignment for HCPCS code G0330 from APC 5871 to APC 5164 with status indicator ''J1'' for CY 2024. We refer readers to Addendum B to this final rule with comment period rule for the final CY 2024 APC assignment and associated payment rate for HCPCS code G0330. Addendum B is available via the internet on the CMS website. We also refer readers to Addendum D1 for a definition of status indicators including ''J1.''

2. OPPS Payment for Additional Dental Codes Beginning in CY 2024

To ensure that dental services can be paid under the OPPS when consistent with the policies and clarifications included in the CY 2023 PFS final rule, we proposed to assign additional dental codes to APCs for CY 2024. Specifically, for CY 2024, we proposed to assign 229 additional dental codes to clinical APCs to enable them to be paid for under the OPPS when payment and coverage requirements are met. We explained that assigning additional dental codes to clinical APCs would result in greater consistency in Medicare payment for different sites of service and help ensure patient access to dental services for which payment can be made when performed in the hospital outpatient setting.

Prior to detailing our proposals, we noted two things for readers' awareness. First, OPPS payment will only be made for a dental code that we proposed to assign to an APC for CY 2024 if it is among the types of dental services for which payment can be made as described in the regulation at § 411.15(i)(3)(i). As we have consistently stated in past rules (87 FR 71879) and quarterly change requests to assign new codes to APCs (see, *e.g.,* Pub 100–04 Medicare Claims Processing, Transmittal 11937), the fact that a drug, device, procedure or service is assigned a HCPCS code and a payment rate under the OPPS does not imply coverage by the Medicare program, but indicates only how the product, procedure, or service may be paid if covered by the program. Medicare Administrative Contractors (MACs) determine whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. Accordingly, we emphasize that HOPDs would only receive payment for a dental service assigned to an APC when the appropriate MAC determines that the service meets the relevant conditions for coverage and payment.

Second, we anticipate that we would continue to assess our policies for OPPS payment for dental services in future rulemaking. We believe that as we collect claims data, gather input from the public and interested parties, and learn more about the services performed in the HOPD setting, we will be able to make more informed decisions regarding payment rates, APC assignments, and status indicators for dental services.

The dental services for which we proposed APC assignments in the CY 2024 OPPS/ASC proposed rule are those dental services described in the CY 2023 PFS final rule for which Medicare Part B payment can be made when they are inextricably linked to other covered services. Based on the dental services identified in that final rule, we generated a list of codes that describe those services for which we believed we needed to propose APC assignments to ensure payment is available under the OPPS. To generate this list, we reviewed the dental codes that were specifically listed as examples of payable dental services in the CY 2023 PFS final rule (87 FR 69676). We also reviewed the clinical vignettes provided in the CY 2023 PFS final rule to identify whether there are other dental codes in addition to the dental code examples already identified for which we should propose APC assignments.

The CY 2023 PFS final rule amended § 411.15(i)(3)(i) to allow for payment under Medicare Part A and Part B for dental services, furnished in an inpatient or outpatient setting, that are inextricably linked to, and substantially related and integral to the success of, certain other covered medical services, including, but not limited to: (1) dental or oral examination as part of a comprehensive workup prior to a Medicare covered organ transplant, cardiac valve replacement, or valvuloplasty procedures; and the necessary diagnostic and treatment services to eliminate an oral or dental infection prior to, or contemporaneously with, the organ transplant, cardiac valve replacement, or valvuloplasty procedure; (2) reconstruction of a dental ridge performed as a result of, and at the same time as, the surgical removal of a tumor; (3) the stabilization or immobilization of teeth in connection with the reduction of a jaw fracture, and dental splints only when used in conjunction with covered treatment of a covered medical condition such as dislocated jaw joints; and (4) the extraction of teeth to prepare the jaw for radiation treatment of neoplastic disease. For CY 2024, we established that Medicare Parts A and B payment may also be made for dental services, such as dental examinations, including necessary treatments, performed as part of a comprehensive workup prior to treatment for head and neck cancers. We included a proposal in the CY 2024 PFS proposed rule to codify this example

under § 411.15(i)(3)(i). We identified dental services described in the regulation at § 411.15(i)(3)(i) and those that may be part of a comprehensive workup prior to treatment for head and neck cancers that could be payable under the OPPS if payment and coverage requirements are met. For example, consistent with § 411.15(i)(3)(i)(A), which describes dental or oral examinations as part of a comprehensive workup prior to a Medicare covered organ transplant, cardiac valve replacement, or valvuloplasty procedure, we identified several codes describing dental examinations for which we proposed APC assignments (*e.g.,* D0120, D0140, D0150, D0160, D0170, D0180, D0191, D0171). Section 411.15(i)(3)(i)(C) describes services for the stabilization or immobilization of the teeth in connection with the reduction of a jaw fracture, and dental splints only when used with a covered treatment of a covered medical condition. We identified an additional 16 dental codes (*e.g.,* D7670–D7671; D4322; D5988) that we believe identify these services and for which we proposed APC assignments.

While it is appropriate for CMS to assign certain dental codes to APCs for payment under the OPPS, we explained that we do not believe that every dental code should be assigned to an APC and made payable under the OPPS. For instance, there are services described by CDT codes that may already be described by existing CPT codes assigned to clinical APCs. When this is the case, we proposed that HOPDs would use the existing CPT codes to bill for the services performed. We also did not propose APC assignments for all dental codes, even if they describe dental services that are payable consistent with the policies and clarifications included in the CY 2023 PFS final rule. This is because under our regulation at 42 CFR 419.22, the following services are not paid under the OPPS (except when packaged as part of a bundled payment): physician services that meet the requirements of 42 CFR 415.102(a); nurse practitioner or clinical nurse specialist services, as defined in section 1861(s)(2)(K)(ii) of the Act; physician assistant services, as defined in section 1861(s)(2)(K)(i) of the Act; and services of an anesthetist as defined in § 410.9. We note that dentists are considered physicians for purposes of Medicare payment policy, including this regulation. There are a number of existing CDT codes that describe the professional services of dentists that could be paid under the PFS (*e.g.,* D9990–D9997), but that we do not believe are appropriate for payment under the OPPS. Therefore, we did not propose to assign CDT codes that describe professional services of dentists and other dental professionals to clinical APCs.

Finally, there are dental codes that we believe would not meet our current interpretation of dental services that may be inextricably linked to other covered medical services. For instance, there are CDT codes that describe removable prosthodontic procedures, including codes that describe complete or partial denture procedures (*e.g.,* D5110; D5120; D5211–D5214). Because denture procedures are not covered medical procedures under Medicare, we did not propose to assign any dental codes describing denture procedures to clinical APCs.

In sum, in consultation with medical experts, we identified 229 dental codes as appropriate for payment under the OPPS when relevant conditions for payment and coverage are met. In addition to the dental codes already assigned to APCs, we proposed to assign the 229 additional dental codes listed in Table 110 below to various clinical APCs for CY 2024:

BILLING CODE 4150–28–P

TABLE 110: DENTAL CODES PROPOSED FOR ASSIGNMENT TO CLINICAL APCS IN CY 2024

HCPCS Code	Description
D0120	Periodic oral evaluation
D0140	Limit oral eval problem focus
D0160	Extensv oral eval prob focus
D0170	Re-eval,est pt,problem focus
D0180	Comp periodontal evaluation
D0191	Assessment of a patient
D0171	Re-eval post-op visit
D1110	Dental prophylaxis adult
D7950	Mandible graft
D7340	Vestibuloplasty ridge extens
D7350	Vestibuloplasty exten graft
D7485	Surg reduct osseoustuberosit
D7310	Alveoplasty w/ extraction
D7311	Alveoloplasty w/extract 1-3
D7510	I&d absc intraoral soft tiss
D7473	Remove torus mandibularis
D7472	Removal of torus palatinus
D7520	I&d abscess extraoral
D7521	Incision/drain abscess extra
D7511	Incision/drain abscess intra
D7550	Removal of sloughed off bone
D7460	Rem nonodonto cyst to 1.25cm
D7461	Rem nonodonto cyst > 1.25 cm
D7272	Tooth transplantation
D7270	Tooth reimplantation
D7670	Closd rductn splint alveolus
D7671	Alveolus open reduction
D7770	Open reduc compd alveolus fx
D7771	Alveolus clsd reduc stblz te
D7874	Tmj arthroscopy disc reposit
D7922	Place intra-socket bio dress
D4323	Splint extra-coronal
D4322	Splint intra-coronal
D5988	Surgical splint

We requested comments on the list of 229 dental codes that we proposed to assign to APCs for OPPS payment for CY 2024. We also requested comments on any additional dental codes that may fall within the scope of dental services for which payment is permitted as explained in the CY 2023 PFS final rule and provided in § 411.14(i)(3)(i), and for which payment should be made available under the OPPS when payment and coverage requirements are met.

Comment: Commenters supported our proposal to assign 229 dental codes to various APCs and considered it a positive step towards increased access to dental services for Medicare beneficiaries. Commenters requested that CMS continue to expand Medicare coverage of dental services. Many commenters expressed support for the dental proposals regarding Medicare payment for dental services in the CY 2024 PFS proposed rule. Other commenters suggested additional covered medical services for which they believe Medicare should pay for dental care.

Response: We appreciate the support from commenters but want to make a few clarifications on the policy proposal. First, we are clarifying that our proposal to assign additional dental codes to APCs is not a coverage determination. Billed services will only be paid under the OPPS when the applicable payment and coverage requirements are met. That said, we appreciate commenters' support for our proposal to assign additional dental codes to APCs, to enable payment when Medicare coverage and payment requirements are met. The comments received on the payment proposals in the CY 2024 PFS proposed rule are outside of the scope of this final rule with comment period. We direct readers to the discussion of dental services in the CY 2024 PFS proposed and final rules (88 FR 52371 through 52384) for more information on Medicare payment for dental services.

Comment: We received one comment requesting CMS assign an additional 18 CDT codes to APCs for CY 2024. The commenter explained that it would be appropriate to assign the 18 additional codes to APCs because they may be necessary to treat oral or dental infections for patients with certain acute conditions.

Response: We thank the commenter for their suggestion. We reviewed the list of codes recommended and believe some of the codes commenters suggested identify services that would be payable consistent with the dental payment policies specified in the CY 2023 PFS final rule, provided conditions for payment and coverage are met. Specifically, we believe some of the codes recommended for APC assignment describe dental services that may be considered medically necessary diagnostic and treatment services immediately necessary to eliminate or eradicate an oral or dental infection prior to, or contemporaneously with, certain Medicare-covered medical services specified in the CY 2023 PFS final rule, including organ transplant, cardiac valve replacement, or valvuloplasty procedures (42 CFR 411.15). The recommended codes that we believe are consistent with the dental payment policies specified in the CY 2023 PFS final rule are the following: CDT codes D7251 (Coronectomy), D7280 (Exposure of unerupted tooth), D7410 (Rad exc lesion up to 1.25 cm), D7411 (Excision benign lesion>1.25c), D7412 (Excision benign lesion compl), D7413 (Excision malig lesion≤1.25c), D7414 (Excision malig lesion>1.25cm), D7415 (Excision malig les complicat), D7440 (Malig tumor exc to 1.25 cm), D7441 (Malig tumor >1.25 cm), D7450 (Rem odontogen cyst to 1.25cm), D7451 (Rem odontogen cyst >1.25 cm), D7530 (Removal fb skin/areolar tiss), and D7540 (Removal of fb reaction). We note that Medicare would only pay for these services when all payment and coverage requirements are met but we are finalizing APC assignments for these codes to make payment available in circumstances when those requirements are met. We would need additional information on how certain codes the commenter recommended for APC assignment, including CDT codes D7471 (Rem exostosis any site), D7283 (Place device impacted tooth), D7320 (Alveoplasty w/o extraction), and D7321 (Alveoloplasty not w/extracts), are consistent with the dental payment policies provided in the CY 2023 PFS final rule, and will revisit the issue in future rulemaking. We refer readers to Addendum B to this final rule with comment period for the finalized CY 2024 APC assignments and associated payment rates for the dental codes. Addendum B is available via the internet on the CMS website.

Comment: Some commentors requested additional information regarding how CMS arrived at its dental proposal. One commenter stated that CMS did not specify the criteria used to determine which dental procedures to assign to APCs.

Response: We thank the commenters for their feedback but disagree that we did not specify how we determined which dental procedures to assign to APCs for CY 2024. The dental services we proposed to assign to APCs in the CY 2024 OPPS/ASC proposed rule are those dental services described in the CY 2023 PFS final rule for which Medicare Part B payment can be made when they are inextricably linked to

other covered services. As we stated in our proposal, we generated a list of codes to assign to APCs based on the specific dental services and clinical vignettes provided in the CY 2023 PFS final rule. This list was reviewed by our medical experts to ensure that the codes identified would be appropriate for payment under the OPPS when relevant conditions for payment and coverage are met.

After consideration of the public comments we received, we are finalizing our initial list of proposed dental codes for assignment to clinical APCs as well as assigning additional dental codes to APCs for CY 2024. Specifically, we are assigning the following CDT codes to APCs for CY 2024: D7251, D7280, D7410, D7411, D7412, D7413, D7414, D7415, D7440, D7441, D7450, D7451, D7530, and D7540. Table 111 contains the list of dental codes assigned to a clinical APC for CY 2024. We note that the assignment of these codes to APCs is not a determination of Medicare coverage or payment. We refer readers to Addendum B to this final rule with comment period for the finalized CY 2024 APC assignments and associated payment rates for the dental codes. Addendum B is available via the internet on the CMS website.

BILLING CODE 4150–28–P

TABLE 111: DENTAL CODES FINALIZED FOR ASSIGNMENT TO CLINICAL APCS IN CY 2024

BILLING CODE 4150–28–C

3. APC Assignments for Additional Dental Codes

In accordance with section 1833(t)(2)(B) of the Act, services classified within each APC must be comparable clinically and with respect to the use of resources. Accordingly, when considering the appropriateness of an APC assignment for a code, we consider the clinical characteristics and resource costs of the service described by the code compared to other services in a clinical APC.

Consistent with our existing processes, we were able to crosswalk many of the dental codes to existing CPT codes assigned to APCs for purposes of assessing clinical similarity. For instance, we crosswalked certain tissue graft procedures (*e.g.,* D4270) to CPT code 41870 (gum graft). Because both are surgical procedures where gum tissue near the area of recession is used to cover and protect the exposed tooth root, the codes are clinically similar and we believe are appropriate for grouping within the same clinical APC (that is, APC 5163 (Level 3 ENT Procedures)). We also found clinical similarities between several dental imaging services and the services assigned to the various levels of the Imaging without Contrast APC series (that is, APCs 5521 (Level 1, Imaging without Contrast); 5522 (Level 2, Imaging without Contrast); and 5523 (Level 3, Imaging without Contrast)). For example, we crosswalked D0210 (Intraor complete film series) to CPT code 70320 (Full mouth x-ray of teeth) and therefore proposed to assign D0210 to APC 5523 based on the crosswalk analysis.

With regard to resource similarity, because the 229 dental codes we proposed to assign to APCs for CY 2024 were not previously paid under the OPPS, we do not have existing claims information to inform proposed APC placements based on resource costs. We considered gathering cost information from several non-Medicare data sources to aid in assigning the dental codes to APCs. For instance, we considered requesting cost information from the Department of Veterans Affairs (VA). However, the VA's dental reimbursement rates are proprietary and are not publicly available.

We also considered requesting data from State Medicaid agencies but found the available data too inconsistent and limited to be useful given that payment rates vary between states. Additionally, not every State Medicaid Agency provides the same dental benefits, so not every state would have cost information for each of the dental codes we propose for OPPS payment. Lastly, while many State Medicaid Agencies provide robust information on the dental benefits covered for Medicaid beneficiaries in their state, the fee schedules published by State Medicaid Agencies most likely include payments to practitioners only and would not be informative for our purposes of assigning payment rates under the OPPS.

Finally, we considered analyzing private insurance claims from third-party databases but determined that the

cost information available would also not be relevant for OPPS ratesetting. For example, because most dental services covered by private insurance are provided in the office setting, there is a very limited number of claims that would be relevant for OPPS ratesetting purposes. Of the limited dental claims performed in the hospital setting, we learned that many of the dental services are performed in combination with several other services; therefore, it would be extremely difficult to isolate the facility fee payment for the dental services performed.

Although specific cost information is informative for making proposed APC assignments, it is not essential. For example, each quarter, after consultation with clinical experts, CMS assigns new CPT codes for which no cost information is available to APCs using crosswalk code analyses. Similar to our process for assigning new codes to APCs, we used a crosswalk code analysis and consulted with clinical experts to propose appropriate APC assignments for the 229 dental codes. In our conversations with the clinical experts, we discussed the clinical aspects of each dental service and learned about the resources, including supplies, used to perform each dental service, in order to more accurately identify crosswalk codes and propose APC assignments for them. We solicited comments regarding the proposed APC assignments for the dental codes for CY 2024. We refer readers to Addendum B to the CY 2024 OPPS/ASC proposed rule for the proposed CY 2024 APC assignments and associated payment rates for the dental codes. Addendum B is available via the internet on the CMS website.

Comment: One commenter asked for clarification on which crosswalks were used to determine the proposed APC assignments, and for data validation on these crosswalks. The commenter provided two examples of proposed APC assignments that they believed did not reflect relative clinical complexity and resource use. Specifically, the commenter disagreed with the proposed APC assignment for CDT code D4240 (Gingival flap proc w/planin) because they believed that the clinical intensity, resource utilization, and supply costs for CDT code D4240 would be expected to be greater than CDT code D4210 (Gingivectomy/plasty 4 or mor), which was proposed to be assigned to a higher paying APC. Similarly, the commenter disagreed with the proposed APC assignment for CDT code D7210 (Rem imp tooth w mucoper flp) because they believed that the clinical intensity, and resource use would be similar to those for CDT code D7310 (Alveoplasty w/ extraction), which was proposed to be assigned to a higher paying APC.

Response: We appreciate the opportunity to provide additional information on our proposed APC assignments for dental services for CY 2024. Our proposals for APC assignments for the 229 dental codes were made using a process that is consistent with our processes for assigning non-dental codes and services for which we do not have pricing information to clinical APCs. As we stated in our proposal, we do not yet have claims data or pricing information available for the dental codes we proposed to assign to APCs for CY 2024. As is our policy for all new HCPCS codes for which we lack pricing information, we proposed to assign the dental codes to existing APCs based on input from a variety of sources, including, but not limited to, review of the clinical similarity of the service to existing procedures including by using CPT crosswalk analyses, input from CMS medical advisors, and review of all other information available to us. The OPPS is a prospective payment system that provides payment for groups of services that share clinical and resource use characteristics. Therefore, we proposed to assign the dental codes to various APCs based on our evaluation of their clinical and resource similarities to other codes using the information available to us. Regarding releasing the crosswalks for all 229 dental codes we proposed to assign to APCs for CY 2024, it is not our policy to release crosswalks for every single code we assign to APCs in either our quarterly updates or in annual rulemaking. Additionally, as we have stated, CPT crosswalk analyses are just one method we use to assign codes to APCs for which we have no pricing information, and therefore, releasing CPT crosswalk codes would not fully explain our reasons for proposing to assign every dental code to a clinical APC.

Regarding the specific examples of inaccurate proposed APC assignments and the explanations provided by the commenter regarding resource and clinical similarities to codes in different clinical APCs than proposed, we agree with the commenter's concerns. Therefore, based on the commenter's arguments explaining the clinical and resource similarities to codes assigned to other clinical APCs than what was proposed we will finalize APC assignments according to the commenter's suggestions.

Comment: We received comments requesting that a dentist or dental specialist serve on the Advisory Panel on Hospital Outpatient Payment to be able to issue recommendations to CMS on dental issues brought forth to the Panel, including the appropriate APC assignments for dental services.

Response: We welcome nominations for representatives of providers to serve on the Advisory Panel on Hospital Outpatient Payment through the MEARIS™ module. We direct readers and interested parties to the CMS website for additional information regarding the purpose, responsibilities of the Advisory Panel on Hospital Outpatient Payment, and member requirements at: *https://www.cms.gov/medicare/regulations-guidance/advisory-committees/hospital-outpatient-payment.*

Comment: We received a comment from an organization representing the interests of people with disabilities expressing concern that our CY 2024 dental proposal may have the impact of ultimately prohibiting people with disabilities, particularly those residing in rural communities or who are otherwise unable to access a hospital outpatient department, from getting the dental procedures they need for their health and wellbeing.

Response: We appreciate the comment. It is unclear whether the commenter's concern was that the proposal to assign additional dental codes to APCs or the proposed payment rates for certain dental codes would have the negative effects described in their comment. Nonetheless, we take the concerns raised by the commenter seriously but reiterate that we believe our proposal to set payment rates for over 200 dental services, which would allow for payment under the OPPS when Medicare payment and coverage requirements are met, will improve access to dental services for Medicare beneficiaries, including beneficiaries with disabilities. As we stated in the CY 2023 PFS final rule (87 FR 69675), the policy changes for payment under Medicare Parts A and B for dental services that meet the conditions specified in that rule have the potential to advance health equity for people who are medically underserved. Finally, CMS will continue to consider how our dental policies may impact beneficiaries with disabilities.

Comment: We received two comments requesting that we remain vigilant and aware of unintended consequences that may occur if we were to finalize the proposed APC assignments for dental codes in the CY 2024 OPPS proposed rule. One commenter stated that CMS should diligently monitor the impacts the proposed APC assignments would have on APCs. Another commenter

cautioned CMS that if the OPPS payment rate for dental services is higher than other settings of care, our policies may have the unintended effect of shifting procedures that have traditionally been done in a dentist's office to the hospital outpatient setting. The commenter encouraged CMS to ensure that we are not creating a financial incentive to shift dental care services to the hospital outpatient department.

Response: We understand and appreciate the commenters' concerns and agree that the potential for higher payments in the hospital outpatient setting may incentivize providing dental care in the hospital outpatient department setting rather than dental offices. In an effort to control costs and promote more efficient care, our proposal for CY 2024 would package payment and implement multiple procedure discounting for almost every code that was proposed to be assigned to an APC. As we do every year, we will review the APC assignments for all services and items paid under the OPPS, including dental services, and make changes as appropriate. We anticipate that we will make adjustments in APC code assignments and APC groups to more accurately pay for dental services in future rulemaking based on claims data we collect. Finally, we encourage interested parties to continue to communicate their concerns and ideas with CMS so that we may address adverse incentives.

Comment: We received one comment requesting additional changes to the proposed APC assignments for dental codes. The commenter submitted a list of over 40 dental codes for which they requested different APC assignments than the ones we proposed. The commenter included CPT crosswalks for some of the dental codes to justify their suggested APC assignment changes, but not all. The commenter also did not provide a justification or their reasoning for why their suggested APC assignments were appropriate.

Response: We thank the commenter for their suggestions. However, based on the comment received, we do not have sufficient information to make the suggested APC assignment changes because minimal or sometimes no justification for the changes was provided. For example, additional information, including why a certain CPT crosswalk was chosen as well as the clinical or resource appropriateness of the suggested APC assignment change is necessary for us to assess the suggested APC assignments.

After consideration of the public comments we received, we are finalizing our proposed APC assignments for the dental codes as proposed with slight modifications. Specifically, for CY 2024, we are reassigning CDT code D7210 from APC 5871 to APC 5163, and CDT code D4240 to APC 5164. We refer readers to Addendum B to this final rule with comment period for the finalized CY 2024 APC assignments and status indicators for the dental codes. Addendum B is available via the internet on the CMS website.

4. Packaged Payment and Associated Status Indicators for Dental Codes

For CY 2024, we proposed to package payments for dental services when they are performed with another covered dental or medical service to promote clinical resource efficiencies, a strategic goal of the OPPS. Given our understanding of the nature of dental practice and in consultation with our clinical experts, we explained that we believe packaged payments are appropriate for dental services paid under the OPPS. We noted that we are aware that it is common for several dental services to be performed together, or alongside other medical services, and submitted on one claim. Unlike medical specialties where often only one procedure is performed at a time, it is our understanding that it is common for a patient to undergo several surgical and non-surgical dental procedures on multiple teeth in one day, or for dental services to be performed contemporaneously with other medical services. For example, there are several non-invasive, non-surgical dental services, including a dental exam or X-ray, which would most likely be performed together with other more invasive dental services in the HOPD setting, rather than on their own. Because a dental exam or X-ray is likely to be performed in addition to other more invasive dental services in the HOPD setting, we stated we believe packaging payment for dental codes describing dental exams and X-rays (*e.g.,* D0380–D0386) when performed with another service is appropriate and would further our strategic goal of encouraging hospitals to furnish services most efficiently and to manage their resources with maximum flexibility. We explained that we also are aware that there are several dental services that are performed as part of a primary service, and therefore, we believe would also result in resource efficiencies if paid under the OPPS as a packaged payment. For example, CDT codes D3110 (pulp cap-direct (excluding final restoration)) and D3120 (pulp cap-indirect (excluding final restoration)) are typically performed as part of a restorative procedure (*e.g.,* a crown or amalgam). Thus, we stated that we believe it is appropriate to propose to package payment for CDT codes D3110 and D3120 with payment for the associated restorative procedures.

We believe our proposal to package payment for dental services under the OPPS is consistent with existing packaging payment principles in the OPPS. The OPPS regularly packages payments for multiple interrelated items and services into a single payment to create incentives for hospitals to furnish services most efficiently and to manage their resources with maximum flexibility. We believe applying these principles to the furnishing of dental services in the OPPS is appropriate and would incentivize clinical resource efficiencies.

In addition to proposing to package payment for dental services to promote clinical resource efficiencies, there are also several dental services that would nevertheless be packaged under our regulation at 42 CFR 419.2(b). For example, payment for dental services described by add-on codes, like CDT code D2953 (each addtnl cast post) would be packaged under the OPPS consistent with § 419.2(b)(18). Therefore, we proposed to package payment for CDT code D2953 with the procedures with which it is performed. We refer readers to the regulation at § 419.2(b) for a full list of items and services for which payment is packaged or conditionally packaged.

For CY 2024, we proposed packaging payment for dental services under the OPPS by assigning the dental codes to packaged status indicators. We believe there are clinical resource efficiencies to be gained by packaging payments rather than separately paying for each dental service performed. We refer readers to Addendum B to the CY 2024 OPPS/ASC proposed rule for the proposed CY 2024 status indicators for the dental codes. Addendum B is available via the internet on the CMS website. For more information on all of the proposed status indicators for CY 2024, including explanations of the payment status for each proposed status indicator, we refer readers to Addendum D1 to the CY 2024 OPPS/ASC proposed rule.

Comment: We received one comment supporting the proposal to assign ''N'' and ''Q1'' status indicators for certain dental services. The commenter stated that they believed the codes identified to be packaged with a primary service were appropriate.

Response: We thank the commenter for their support of our proposal to

assign ''N'' and ''Q1'' status indicators to certain dental codes.

Comment: We received one comment regarding finalizing proposed status indicator ''T'' for HCPCS code G0330. The commenter stated that since HCPCS code G0330 is used to report the performance of multiple procedures that otherwise would be separately billable, it is inappropriate to apply the multiple surgical procedure discount by assigning status indicator ''T'' to hospital dental rehabilitation claims.

Response: For CY 2024, we are not finalizing the APC assignment for HCPCS code G0330 as proposed. Based on our discussion of the final policy in this final rule with comment period, we are assigning HCPCS code G0330 to APC 5164 with status indicator ''J1.'' As stated in Addendum D1 to this final rule with comment period, services that are assigned a status indicator ''J1'' are paid under the OPPS. All covered Part B services on the same claim as a service with status indicator ''J1'' are packaged with the primary ''J1'' on the claim, with certain exceptions. We direct readers to Addendum D1 to this final rule with comment period for more information on the ''J1'' status indicator.

Comment: A few commenters stated that they did not support assigning status indicators that would package payments for any of the dental codes we proposed to assign to APCs due to concerns that packaged payments may not be appropriate for dental services and may result in lower payments.

Response: We disagree with commenters and continue to believe that packaging payment for certain dental services is appropriate. As stated in our proposal, there are certain packaging principles that are applied to all services paid under the OPPS, whether dental or medical. Additionally, we believe packaging payments will promote clinical resource efficiencies. We direct readers to our discussion on packaged payments for dental services in this final rule with comment for more information.

Comment: One commenter stated that there may be significant room for interpretation in terms of packaging. The commenter also stated they did not believe that when a dentist performs dental procedures described by add-on codes, like CPT code D2953 (each addtnl cast post), on the same patient that other dentists are similarly engaging in the same activity.

Response: We believe that the commenter is trying to explain that they do not believe providing a single payment for multiple services, including those described by add-on codes, would be appropriate because when multiple services are performed by multiple dentists on the same patient, the dentists are furnishing separate services, which should be paid for individually. First, we are clarifying that the OPPS is the Medicare payment system for hospital outpatient department services, not for the services of individual physicians, dentists, or other practitioners. Medicare payment for physicians' services is made through the PFS to the physicians, health care practitioners, and other suppliers that furnish these services. Second, we reiterate that it is our policy to package payment for most add-on codes, whether dental or medical, as these are codes that describe a procedure or service always performed in addition to a primary service or procedure. Since whenever CPT code D2953 is performed, it would always be performed with a primary service, its payment would always be packaged even though it may not be furnished every time the primary service is performed. Finally, we direct the commenter to section XI ''CY 2024 Payment Status and Comment Indicators'' of this final rule with comment period for a discussion of the various status indicators, including the packaged status indicator ''N,'' used under the OPPS. The complete list of the final status indicators and their definitions is provided in Addendum D1 to this final rule with comment period.

After consideration of the public comments we received, we are finalizing our proposal to package payment for certain dental services under the OPPS. We refer readers to Addendum B to this final rule with comment period for the finalized CY 2024 APC assignments and status indicators for the dental codes. Addendum B is available via the internet on the CMS website.

In summary, we are finalizing the following dental policy changes for CY 2024. First, after consideration of the public comments we received, we are finalizing the proposed list of dental codes for assignments to APCs for CY 2024 as well as some of the additional codes commenters suggested we make payable under the OPPS when coverage and payment requirements are met. Specifically, in addition to the codes we proposed to assign to APCs for CY 2024, we are assigning the following additional CDT codes to APCs for CY 2024: D7251, D7280, D7410, D7411, D7412, D7413, D7414, D7415, D7440, D7441, D7450, D7451, D7530, and D7540. We note that the assignment of these codes to APCs is not a determination of coverage or Medicare payment.

Second, we are finalizing our proposed APC assignments for the dental codes as proposed with slight modifications. Specifically, for CY 2024, we are assigning CDT code D7210 to APC 5163 and assigning CDT code D4240 to APC 5164, rather than finalizing their proposed APC assignments. Additionally, we are finalizing an APC reassignment for HCPCS code G0330 from APC 5871 to APC 5164 for CY 2024. We refer readers to Addendum B to this final rule with comment period for the finalized CY 2024 APC assignments and status indicators for the dental codes. Addendum B is available via the internet on the CMS website.

Finally, we are finalizing our proposal to package payments for certain dental services under the OPPS. We refer readers to Addendum B to this final rule with comment period for the specific finalized CY 2024 APC assignments and status indicators for the dental codes. Addendum B is available via the internet on the CMS website.

F. Use of Claims and Cost Report Data for CY 2024 OPPS and ASC Payment System Ratesetting Due to the PHE

As described in section I.A of the CY 2024 OPPS/ASC proposed rule, section 1833(t) of the Act requires the Secretary to annually review and update the payment rates for services payable under the Hospital OPPS. Specifically, section 1833(t)(9)(A) of the Act requires the Secretary to review not less often than annually and to revise the groups, the relative payment weights, and the wage and other adjustments described in paragraph (2) of the Act to take into account changes in medical practice, changes in technology, the addition of new services, new cost data, and other relevant information and factors.

When updating the OPPS payment rates and system for each rulemaking cycle, we primarily use two sources of information: the outpatient Medicare claims data and Healthcare Cost Report Information System (HCRIS) cost report data. The claims data source is the Outpatient Standard Analytic File, which includes final action Medicare outpatient claims for services furnished in a given calendar year. For the OPPS ratesetting process, our goal is to use the best available data for ratesetting to accurately estimate the costs associated with furnishing outpatient services and to set appropriate payment rates. Ordinarily, the best available claims data are the data from 2 years prior to the calendar year that is the subject of rulemaking. For the CY 2024 OPPS/ASC

proposed rule ratesetting, the best available claims data would typically be the CY 2022 calendar year outpatient claims data processed through December 31, 2022. The cost report data source is typically the Medicare hospital cost report data files from the most recently available quarterly HCRIS file as we begin the ratesetting process. The best available cost report data used in developing the OPPS relative weights would ordinarily be from cost reports beginning three fiscal years prior to the year that is the subject of the rulemaking. For CY 2024 OPPS ratesetting, that would be cost report data from HCRIS extracted in December 2022, which would contain many cost reports ending in FY 2020 and 2021 based on each hospital's cost reporting period.

As discussed in the CY 2022 OPPS/ASC final rule with comment period, the standard hospital data we would have otherwise used for purposes of CY 2022 ratesetting included significant effects from the COVID–19 PHE, which led to a number of concerns with using this data for CY 2022 ratesetting (86 FR 63751 through 63754). In section X.E of the CY 2022 OPPS/ASC proposed rule (86 FR 42188 through 42190), we noted a number of changes in the CY 2020 OPPS claims data we would ordinarily have used for ratesetting, likely as a result of the PHE. These changes included overall aggregate decreases in claims volume (particularly those associated with visits); significant increases in HCPCS code Q3014 (Telehealth originating site facility fee) in the hospital outpatient claims; and increases in certain PHE-related services, such as HCPCS code C9803, which describes COVID–19 specimen collection, and services assigned to APC 5801 (Ventilation Initiation and Management). As a result of the effects, we observed from COVID–19 PHE-related factors in our claims and cost report data, as well as the increasing number of Medicare beneficiaries vaccinated against COVID–19, which we believed might make the CY 2022 outpatient experience closer to CY 2019 rather than CY 2020, we believed that CY 2020 data were not the best overall approximation of expected outpatient hospital services in CY 2022. Instead, we believed that CY 2019 data, as the most recent complete calendar year of data prior to the COVID–19 PHE, were a better approximation of expected CY 2022 hospital outpatient services. Therefore, in the CY 2022 OPPS/ASC final rule with comment period, we established a policy of using CY 2019 claims data and cost reports prior to the PHE in ratesetting for the CY 2022 OPPS with certain limited exceptions, such as where CY 2019 data were not available (86 FR 63753 and 63754).

For the CY 2023 OPPS proposed rule ratesetting, we conducted a review similar to the one we conducted for the CY 2022 OPPS ratesetting to determine the degree to which the effects of the COVID–19 PHE had continued or subsided in our claims data as well as what claims and cost report data would be appropriate for CY 2023 OPPS ratesetting. In general, we saw that the PHE had limited effect on the service and aggregate levels of volume as well as changes in the site of service of care, suggesting that, while clinical and billing patterns had not quite returned to their pre-PHE levels, they were beginning to do so.

For the CY 2023 OPPS/ASC final rule, while the effects of the COVID–19 PHE remained at both the aggregate and service levels for certain services, as discussed in that final rule with comment period (87 FR 48795 through 48798) and in FY 2023 IPPS proposed rule (87 FR 28123 through 28125), we recognized that future COVID–19 variants may have potentially varying effects. Therefore, we explained that we believed it was reasonable to assume that there would continue to be some effects of the COVID–19 PHE on the outpatient claims that we use for OPPS ratesetting, similar to the CY 2021 claims data. As a result, we proposed and finalized the use of CY 2021 claims for CY 2023 OPPS ratesetting.

We also used cost report data for the CY 2023 OPPS/ASC final rule (87 FR 72021) from the same set of cost reports we originally used in the CY 2021 OPPS/ASC final rule for ratesetting, which included cost reporting periods beginning in CY 2018 in most cases. We typically would have used the most updated available cost reports available in HCRIS in determining the CY 2023 OPPS/APC relative weights, which would have included cost reports with reporting periods that overlap with parts of CY 2020. However, noting that we observed significant impact at the service level when incorporating these cost reports into ratesetting and the effects on billing/clinical patterns, we finalized a policy to continue to use the same set of cost reports that we used in developing CY 2022 OPPS ratesetting.

For CY 2024 OPPS rulemaking, we continue to observe some differences at the aggregate and service level volumes in the CY 2022 claims data, relative to the pre-PHE period. However, we believe that it is reasonable to assume that there will be minor variations as a result of the COVID–19 PHE in claims data we use for ratesetting for the foreseeable future. As we have found that the effects are less pronounced, even relative to CY 2021 claims data used in CY 2023 OPPS ratesetting, we anticipate that most of the changes we observe represent a moderate continued return to pre-PHE volume and ongoing changes in clinical practice. As a result, we believe the CY 2022 claims data are appropriate for setting CY 2024 OPPS rates.

For CY 2024, we also evaluated the impact of using our standard update for cost reports. If we were to resume our typical process of using the most updated cost reports available, we would predominantly use cost report data from CY 2021, with some portion of the cost reports including cost reporting periods from prior years. While there are some differences compared to pre-PHE data, we generally observed limited impacts. Similar to the claims data approach, we believe it is reasonable to assume there will continue to be a limited influence of the COVID–19 PHE on the cost report data. However, as we continue to receive more updated cost report data, we believe that data will better reflect changes in provider charge and cost reporting structures. Given these factors, we believe that using the most recent cost report data available and resuming our regular cost report update process is appropriate for CY 2024 OPPS ratesetting.

As a result of our expectation that the CY 2022 claims that we would typically use are appropriate for establishing the CY 2024 OPPS rates, we proposed to use the CY 2022 claims for the CY 2024 OPPS/ASC ratesetting process. In addition, we proposed to resume our typical cost report update process of including the most recently available cost report data (primarily including cost reports with cost reporting periods including CY 2021). For the reasons previously discussed, we generally do not propose any modifications to our usual OPPS ratesetting methodologies with regard to the use of updated claims and cost report data to account for the impact of COVID–19 on the ratesetting data.

We did not receive any public comments on our proposal, and we are finalizing our proposal without modification to resume our typical data update process, using CY 2022 claims data and the most recently available cost report data, in the CY 2024 OPPS ratesetting process.

G. Comment Solicitation on Payment for High-Cost Drugs Provided by Indian Health Service and Tribal Facilities

In the CY 2000 OPPS final rule (65 FR 18433), CMS implemented the prospective payment system for hospital outpatient services furnished to Medicare beneficiaries, as set forth in section 1833(t) of the Act. In this rule, we noted that the Outpatient Prospective Payment System (OPPS) applies to covered hospital outpatient services furnished by all hospitals participating in the Medicare program with a few exceptions. We identified one of these exceptions as ''outpatient services provided by hospitals of the Indian Health Service (IHS).'' While we stated that these services would ''continue to be paid under separately established rates which are published annually in the **Federal Register**,'' we indicated that our intent was ''to develop a plan that will help these facilities transition to the [O]PPS and will consult with the IHS to develop this plan.'' In the CY 2002 OPPS final rule (66 FR 59855), we finalized our revision to § 419.20 (Hospitals subject to the hospital outpatient prospective payment system) by adding paragraph (b)(4), which specifies that hospitals of the IHS are excluded from the OPPS. However, we reiterated that this exclusion would only be in place until we developed a plan to include IHS hospitals under the OPPS.

In the intervening years, IHS and tribal facilities have been paid under the separately established All-Inclusive Rate (AIR). On an annual basis, the IHS calculates and publishes, in the **Federal Register**, calendar year reimbursement rates. Due to the higher cost of living in Alaska, separate rates are calculated for Alaska and the lower 48 States. For CY 2023, the Medicare Outpatient per Visit Rate is $620 for the lower 48 States and $801 for Alaska.

IHS and tribal facilities have continued to expand the breadth of services that they provide to their communities. Increasingly, this has meant providing higher-cost drugs along with more complex and expensive services. While the majority of IHS and tribal facilities appear to be well served by the AIR, there are specialty facilities where the AIR might not be an adequate representation of the Medicare share of costs. If providing a drug or service costs a specialty facility exponentially more than the payment they receive through the AIR, it may not be financially feasible for these facilities to provide that drug or service. For example, the cost of providing expensive cancer drugs or oncology services could greatly exceed payment a specialty IHS facility receives through the AIR. We are concerned that, if payments under the AIR are inadequate for high-cost drugs, this could potentially threaten the viability of the few IHS and tribal hospital outpatient specialty programs currently in operation and provide less incentive to IHS hospitals and tribal facilities not currently offering specialty services to begin doing so.

Consequently, we sought comment on a number of potential policies to address payment to IHS and tribal facilities for certain high-cost drugs and services. We sought comment on whether Medicare should pay separately for high-cost drugs provided by IHS and tribal facilities. We requested input on the following:

- What universe of drugs would be appropriate for separate payment? How could CMS maintain that list and add or remove drugs from it?
- Would paying separately for all drugs over a certain cost threshold be easier to operationalize than paying separately for a specified list of drugs, while achieving the same policy objective? If so, what would be an appropriate cost threshold and how should it be updated?
- What would be the appropriate payment rate for any separately paid drugs? How should these rates be updated and should these rates be updated on an annual basis?
- Would the standard Average Sales Price (ASP) plus 6 percent payment methodology rate be too high of a payment rate if tribal and IHS facilities are able to acquire drugs at a discounted rate through the Federal Supply Schedule? Would a payment rate equivalent to the acquisition cost of the drug through the Federal Supply Schedule be a more appropriate approximation of the cost of these drugs?
- Should IHS remove the cost of any separately paid drugs from the calculation of the AIR? If the cost of these drugs was not removed from the AIR, would the government be paying twice for these drugs?
- How would IHS and tribal facilities bill for separately paid drugs? Could they use the UB–04 form like standard OPPS hospitals?

The OPPS provides outlier payments to hospitals to help mitigate the financial risk associated with high-cost and complex procedures, where a very costly service could present a hospital with significant financial loss. We sought comment on whether an outlier policy might be an appropriate mechanism for addressing high-cost drugs and services provided by IHS and tribal facilities.

We welcomed input from interested parties on these policy ideas and any additional payment approaches that would enhance our ability to provide equitable payment for high-cost drugs and services provided by IHS and tribal facilities.

Comment: We received a total of nine comments in response to this comment solicitation, including from a tribal facility, organizations representing IHS and tribal healthcare providers, pharmaceutical companies, and other interested parties. All of the commenters supported establishing a payment methodology that would allow IHS and Tribal healthcare facilities to receive separate payment outside of the AIR for oncology drugs and services whose costs exceed the AIR.

Commenters discussed the different payment approaches that would cover the cost of oncology drugs and services above the AIR payment rate. The preferred approach of the commenters was to treat the AIR payment amount as a payment threshold. If the cost of a drug or service is less than the AIR, the provider would be paid the AIR. If the cost of the drug or service is more than the AIR, then the provider would receive separate payment for the drug or service. Commenters noted that this payment approach is currently being used for drugs receiving payment through Arizona Medicaid (AHCCCS) for IHS and tribal facilities located in Arizona. The commenters explained that the AHCCCS payment methodology was established through a state plan amendment to the AHCCCS program that was approved by CMS.

There was less enthusiasm for other possible payment approaches to cover the costs of high-cost oncology drugs and services. One commenter opposed establishing a fixed list of medications that would be eligible for separate payment because of frequent changes in treatment and therapy approaches and the entry of new drugs onto the market. Instead, the commenter would support separate payment for defined classes of drugs using HCPCS coding that would remain stable over several years. The commenter noted that this payment approach would not accommodate separate payment for radiation oncology services. The commenter also was skeptical about using outlier payments for high-cost oncology drugs and services. They stated that while this approach may cover costs that are not currently covered by the AIR, the high threshold to initiate an outlier payment and the limited additional payment would still leave IHS and Tribal

facilities who provide high-cost oncology drugs and other high-cost services with significant uncompensated expenditures.

Multiple commenters requested that separately payable drugs furnished by IHS and tribal facilities be paid at a rate of ASP + 6 percent rather than using the Federal Supply Schedule rate. Commenters assert that the IHS is chronically underfunded and that paying ASP + 6 percent for high-cost drugs could help with remedying those funding issues.

Commenters also wanted to ensure the integrity of the AIR if there is separate payment for high-cost oncology drugs and other high-cost services. They did not support applying offsets to the AIR to avoid double payment to IHS and tribal healthcare providers for separately payable high-cost oncology drugs or for high-cost services that may receive separate payment.

Response: We appreciate the suggestions and feedback from the interested parties who responded to this comment solicitation. We will consider the public comments for potential future rulemaking.

H. Technical Changes to Hospital Billing for Marriage and Family Therapist Services and Mental Health Counselor Services

Section 4121(a) of Division FF, Title IV, Subtitle C of the Consolidated Appropriations Act of 2023 (CAA, 2023) (Pub. L. 117–328, December 29, 2022), Coverage of Marriage and Family Therapist Services and Mental Health Counselor Services under Part B of the Medicare Program, provides for Medicare coverage of and payment for the services of mental health care professionals who meet the qualifications for marriage and family therapists (MFTs) and mental health counselors (MHCs) when billed by these professionals.

Specifically, section 4121(a)(1) of the CAA, 2023 amended section 1861(s)(2) of the Act by adding a new benefit category under Medicare Part B in new subparagraph (II) to include marriage and family therapist services (as defined in an added section 1861(lll)(1) of the Act) and mental health counselor services (as defined in an added section 1861(lll)(3) of the Act).

Section 4121(a)(2) of the CAA, 2023 added a new subsection (lll) to section 1861 of the Act, which defines marriage and family therapist services, marriage and family therapist (MFT), mental health counselor services, and mental health counselor (MHC). Section 1861(lll)(1) of the Act defines ''marriage and family therapist services'' as services furnished by an MFT for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MFT is legally authorized to perform under State law (or the State regulatory mechanism provided by State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as an incident to a physician's professional service. Section 1861(lll)(2) of the Act defines the term MFT to mean an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a MFT pursuant to State law of the State in which such individual furnishes marriage and family therapist services;
- Is licensed or certified as a MFT by the State in which such individual furnishes such services;
- After obtaining such degree has performed at least 2 years of clinical supervised experience in marriage and family therapy; and
- Meets such other requirements as specified by the Secretary.

Section 1861(lll)(3) of the Act defines ''mental health counselor services'' as services furnished by a mental health counselor (MHC) for the diagnosis and treatment of mental illnesses (other than services furnished to an inpatient of a hospital), which the MHC is legally authorized to perform under State law (or the State regulatory mechanism provided by the State law) of the State in which such services are furnished, as would otherwise be covered if furnished by a physician or as incident to a physician's professional service. Section 1861(lll)(4) of the Act defines MHC as an individual who:

- Possesses a master's or doctor's degree which qualifies for licensure or certification as a mental health counselor, clinical professional counselor, or professional counselor under State law of the State in which such individual furnishes MHC services;
- Is licensed or certified as a mental health counselor, clinical professional counselor, or professional counselor by the State in which the services are furnished;
- After obtaining such degree has performed at least 2 years of clinical supervised experience in mental health counseling; and
- Meets such other requirements as specified by the Secretary.

In the CY 2024 Physician Fee Schedule proposed rule, we proposed to create two new regulation sections at §§ 410.53 and 410.54 to codify the coverage provisions for MFTs and MHCs, respectively. We proposed a number of changes (88 FR 52361 through 52364) to implement the amendments made by section 4121 of CAA, 2023. Generally, these amendments added MFTs and MHCs as types of non-physician practitioners who can enroll in Medicare and bill for their professional services to diagnose and treat mental illnesses and specified that payment is made for these services at 80 percent of the lesser of the actual charges for the services or 75 percent of the amount determined under the PFS for services of a clinical psychologist (CP).

We received public comments in response to the OPPS proposed rule regarding section 4121 of the CAA, 2023. The following is a summary of the comments we received and our responses.

Comment: Several commenters requested that CMS amend the regulations at § 419.22 to add the services of MFTs and MHCs to the list of services that are not paid for under the Hospital Outpatient Prospective Payment System (OPPS) (except when packaged as part of a bundled payment) in order to clarify that MHC and MFT services are excluded from payment under the OPPS. This subject regulation at § 419.22 lists those services that are authorized by Medicare law to be paid under payment systems other than the OPPS, such as the Physician Fee Schedule (PFS), the Skilled Nursing Facility Prospective Payment System (SNF PPS), and the End Stage Renal Disease Prospective Payment System (ESRD PPS).

Response: We thank the commenters for bringing this inadvertent omission to our attention. As noted above, we proposed a number of changes (88 FR 52361 through 52364) to implement the amendments made by section 4121 of the CAA, 2023. Generally, these amendments added MFTs and MHCs as types of non-physician practitioners who can enroll in Medicare and bill for their professional services to diagnose and treat mental illnesses and specified that payment is made for these services at 80 percent of the lesser of the actual charges for the services or 75 percent of the amount determined under the PFS for services of a clinical psychologist (CP).

In proposing to implement section 4121, we inadvertently did not discuss excluding MFT and MHC services from payment under the hospital outpatient prospective payment system (OPPS). Services paid under fee schedules or other payment systems, including the professional services of physicians or nonphysician practitioners, are not paid

under the OPPS (69 FR 65685). The regulation at 42 CFR 419.22 lists the services excluded from payment under the OPPS and includes services of qualified psychologists, as defined in section 1861(ii) of the Act. Because MHC and MFT services are professional services of nonphysician practitioners for which payment is made under the PFS at 75 percent of the amount of payment for services of a psychologist, we believe that in implementing the amendments to the Act made by section 4121 of the CAA, 2023, we must also exclude these services from payment under the OPPS. Accordingly, we are amending the regulation at 42 CFR 419.22 to add the services of MFTs as defined in 1861(lll)(1) and the services of MHCs as defined in section 1861(lll)(3) to the list of hospital services excluded from payment under the OPPS, at new sections (w) and (x), respectively.

Comment: A few commenters requested that the regulation at 42 CFR 410.27, which permits certain hospital services to be furnished incident to a physician or nonphysician practitioner's service, be updated to expand the definition of ''nonphysician practitioner'' to include MFTs and MHCs.

Response: We thank the commenters for bringing this inadvertent omission to our attention. We are amending the regulation at 42 CFR 410.27(g) to revise the definition of ''nonphysician practitioner'' to include MFTs and MHCs, consistent with section 4121 of the CAA, 2023, and the amendments to the regulations at §§ 410.53 and 410.54 that we are adopting in the CY 2024 PFS final rule.

After consideration of the public comments, we are amending the regulations at §§ 410.27 and 419.22, as described above.

XI. CY 2024 OPPS Payment Status and Comment Indicators

A. CY 2024 OPPS Payment Status Indicator Definitions

Payment status indicators (SIs) that we assign to HCPCS codes and APCs serve an important role in determining payment for services under the OPPS. They indicate whether a service represented by a HCPCS code is payable under the OPPS or another payment system and whether particular OPPS policies apply to the code.

For CY 2024, we proposed to change the definition of status indicator ''P'' from ''Partial Hospitalization'' to ''Partial Hospitalization or Intensive Outpatient Program'' in order to account for the proposed payment of intensive outpatient services beginning January 1, 2024, as discussed in section VIII.B of the CY 2024 OPPS/ASC proposed rule. We did not propose to make any other changes to the existing definitions of status indicators that were listed in Addendum D1 to the CY 2023 OPPS/ASC final rule with comment period, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

We solicited public comments on the proposed definitions of the OPPS payment status indicators for 2024. We did not receive any public comments on our proposal, and we are finalizing our proposal to change the definition of status indicator ''P'' from ''Partial Hospitalization'' to ''Partial Hospitalization or Intensive Outpatient Program''.

The complete list of CY 2024 payment status indicators and their definitions is displayed in Addendum D1 to this final rule with comment period, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

The CY 2024 payment status indicator assignments for APCs and HCPCS codes are shown in Addendum A and Addendum B, respectively, to this final rule with comment period, which are available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

B. CY 2024 Comment Indicator Definitions

We proposed to use four comment indicators for the CY 2024 OPPS/ASC. These comment indicators, ''CH,'' ''NC,'' ''NI,'' and ''NP,'' are in effect for CY 2023; and we proposed to continue their use in CY 2024. The proposed CY 2024 OPPS comment indicators are as follows:

- ''CH''—Active HCPCS code in current and next calendar year, status indicator and/or APC assignment has changed; or active HCPCS code that will be discontinued at the end of the current calendar year.
- ''NC''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year for which we requested comments in the CY 2024 OPPS/ASC proposed rule, final APC assignment; comments will not be accepted on the final APC assignment for the new code.
- ''NI''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year, interim APC assignment; comments will be accepted on the interim APC assignment for the new code.
- ''NP''—New code for the next calendar year or existing code with substantial revision to its code descriptor in the next calendar year, as compared to current calendar year, proposed APC assignment; comments will be accepted on the proposed APC assignment for the new code.

The definitions of the OPPS comment indicators for CY 2024 are listed in Addendum D2 to this final rule with comment period, which is available on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices.*

We explained that we believe that the existing CY 2024 definitions of the OPPS/ASC comment indicators continue to be appropriate for CY 2024. Therefore, we proposed to use those definitions without modification for CY 2024. We solicited public comments on our proposed definitions of the OPPS/ASC comment indicators for 2024.

We did not receive any public comments on our proposal and are finalizing those definitions without modification for CY 2024.

XII. MedPAC Recommendations

The Medicare Payment Advisory Commission (MedPAC) was established under section 1805 of the Act in large part to advise the U.S. Congress on issues affecting the Medicare program. As required under the statute, MedPAC submits reports to the Congress no later than March and June of each year that present its Medicare payment policy recommendations. The March report typically provides discussion of Medicare payment policy across different payment systems and the June report typically discusses selected Medicare issues. We are including this section to make stakeholders aware of certain MedPAC recommendations for the OPPS and ASC payment systems as discussed in its March 2023 report.

A. OPPS Payment Rates Update

The March 2023 MedPAC ''Report to the Congress: Medicare Payment Policy,'' recommended that Congress update Medicare OPPS payment rates by the amount specified in current law plus 1 percent. We refer readers to the March 2023 report for a complete discussion of this recommendation.[199]

[199] Medicare Payment Advisory Committee. March 2023 Report to the Congress. Chapter 3: Hospital inpatient and outpatient services, p.57. Available at: *https://www.medpac.gov.*

We appreciate MedPAC's recommendation and, as discussed further in section II.B of the CY 2024 OPPS/ASC proposed rule, we proposed to increase the OPPS payment rates by the amount specified in current law. Comments received from MedPAC for other OPPS policies are discussed in the applicable sections of this final rule with comment period.

B. Medicare Safety Net Index

The March 2023 MedPAC ''Report to the Congress: Medicare Payment Policy,'' recommended that Congress should begin a transition to redistribute disproportionate share hospital and uncompensated care payments through the Medicare Safety-Net Index (MSNI). Additionally, MedPAC recommended that Congress add $2 billion to the MSNI pool of funds and distribute such funds through a percentage add-on to payments under the IPPS and OPPS.

In light of these recommendations, and in particular those concerning safety net hospitals, in the CY 2024 OPPS/ASC proposed rule, we stated that we look forward to working with Congress and sought comments on approaches CMS could take. We did not receive any public comments in response to our comment solicitation regarding MedPAC's MSNI recommendation.

C. ASC Cost Data

In the March 2023 MedPAC ''Report to the Congress: Medicare Payment Policy,'' MedPAC reiterated its longstanding recommendation that Congress require ASCs to report cost data to enable the Commission to examine the growth of ASCs' costs over time and analyze Medicare payments relative to the costs of efficient providers. MedPAC suggested that such cost data would allow CMS to examine whether an existing Medicare price index is an appropriate proxy for ASC costs or whether an ASC-specific market basket should be developed, stating both the CPI–U and hospital market basket update likely do not reflect an ASC's cost structure. MedPAC contended that it is feasible for small facilities, such as ASCs, to provide cost information since other small facilities, such as home health agencies, hospices, and rural health clinics, currently furnish cost data to CMS. Further, ASCs in Pennsylvania submit cost and revenue data annually to a state agency to estimate margins for those ASCs, and that, as businesses, ASCs keep records of their costs for filing taxes and other purposes.[200]

While we recognize that the submission of cost data could place additional administrative burden on most ASCs, and we did not propose any cost reporting requirements for ASCs in the CY 2024 OPPS/ASC proposed rule, as in previous years, we sought public comment on methods that would mitigate the burden of reporting costs on ASCs while also collecting enough data to reliably use such data in the determination of ASC costs. Such cost data would be beneficial in establishing an ASC-specific market basket index for updating payment rates under the ASC payment system. We did not receive any public comments on our comment solicitation regarding methods to mitigate the burden of ASC cost reporting and data collection. Comments received from MedPAC for other ASC payment system policies are discussed in the applicable sections of this final rule with comment period.

XIII. Updates to the Ambulatory Surgical Center (ASC) Payment System

A. Background, Legislative History, Statutory Authority, and Prior Rulemaking for the ASC Payment System

For a detailed discussion of the legislative history and statutory authority related to payments to ASCs under Medicare, we refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74377 and 74378) and the June 12, 1998 proposed rule (63 FR 32291 through 32292). For a discussion of prior rulemaking on the ASC payment system, we refer readers to the CYs 2012 to 2023 OPPS/ASC final rules with comment period (76 FR 74378 and 74379; 77 FR 68434 through 68467; 78 FR 75064 through 75090; 79 FR 66915 through 66940; 80 FR 70474 through 70502; 81 FR 79732 through 79753; 82 FR 59401 through 59424; 83 FR 59028 through 59080; 84 FR 61370 through 61410; 85 FR 86121 through 86179; 86 FR 63761 through 63815; and 87 FR 72054 through 72096).

B. ASC Treatment of New and Revised Codes

1. Background on Process for New and Revised HCPCS Codes

We update the lists and payment rates for covered surgical procedures and covered ancillary services in ASCs in conjunction with the annual proposed and final rulemaking process to update the OPPS and the ASC payment systems (§ 416.173; 72 FR 42535). We base ASC payment and policies for most covered surgical procedures, drugs, biologicals, and certain other covered ancillary services on the OPPS payment policies and we use quarterly change requests (CRs) to update services paid for under the OPPS. We also provide quarterly update CRs for ASC covered surgical procedures and covered ancillary services throughout the year (January, April, July, and October). We release new and revised Level II HCPCS codes and recognize the release of new and revised CPT codes by the American Medical Association (AMA) and make these codes effective (that is, the codes are recognized on Medicare claims) via these ASC quarterly update CRs. We recognize the release of new and revised Category III CPT codes in the July and January CRs. These updates implement newly created and revised Level II HCPCS and Category III CPT codes for ASC payments and update the payment rates for separately paid drugs and biologicals based on the most recently submitted ASP data. New and revised Category I CPT codes, except vaccine codes, are released only once a year, and are implemented only through the January quarterly CR update. New and revised Category I CPT vaccine codes are released twice a year and are implemented through the January and July quarterly CR updates. We refer readers to Table 41 in the CY 2012 OPPS/ASC proposed rule for an example of how this process is used to update HCPCS and CPT codes, which we finalized in the CY 2012 OPPS/ASC final rule with comment period (76 FR 42291; 76 FR 74380 through 74384).

In our annual updates to the ASC list of, and payment rates for, covered surgical procedures and covered ancillary services, we undertake a review of excluded surgical procedures, new codes, and codes with revised descriptors, to identify any that we believe meet the criteria for designation as ASC covered surgical procedures or covered ancillary services. Updating the lists of ASC covered surgical procedures and covered ancillary services, as well as their payment rates, in association with the annual OPPS rulemaking cycle, is particularly important because the OPPS relative payment weights and, in some cases, payment rates, are used as the basis for the payment of many covered surgical procedures and covered ancillary services under the revised ASC payment system. This joint update process ensures that the ASC

[200] Medicare Payment Advisory Committee. March 2023 Report to the Congress. Chapter 5: Ambulatory surgical center services, p.163. Available at: *https://www.medpac.gov/wp-content/uploads/2023/03/Ch5_Mar23_MedPAC_Report_To_Congress_SEC.pdf.*

updates occur in a regular, predictable, and timely manner.

Payment for ASC procedures, services, and items are generally based on medical billing codes, specifically, HCPCS codes, that are reported on ASC claims. The HCPCS is divided into two principal subsystems, referred to as Level I and Level II. Level I is comprised of CPT (Current Procedural Terminology) codes, a numeric and alphanumeric coding system maintained by the AMA, and includes Category I, II, and III CPT codes. Level II of the HCPCS, which is maintained by CMS, is a standardized coding system that is used primarily to identify products, supplies, and services not included in the CPT codes. Together, Level I and II HCPCS codes are used to report procedures, services, items, and supplies under the ASC payment system. Specifically, we recognize the following codes on ASC claims:

- Category I CPT codes, which describe surgical procedures, diagnostic and therapeutic services, and vaccine codes;
- Category III CPT codes, which describe new and emerging technologies, services, and procedures; and
- Level II HCPCS codes (also known as alpha-numeric codes), which are used primarily to identify drugs, devices, supplies, temporary procedures, and services not described by CPT codes.

We finalized a policy in the August 2, 2007 final rule (72 FR 42533 through 42535) to evaluate each year all new and revised Category I and Category III CPT codes and Level II HCPCS codes that describe surgical procedures, and to make preliminary determinations during the annual OPPS/ASC rulemaking process regarding whether or not they meet the criteria for payment in the ASC setting as covered surgical procedures and, if so, whether or not they are office-based procedures. In addition, we identify new and revised codes as ASC covered ancillary services based upon the final payment policies of the revised ASC payment system. In prior rulemakings, we refer to this process as recognizing new codes. However, this process has always involved the recognition of new and revised codes. We consider revised codes to be new when they have substantial revision to their code descriptors that necessitate a change in the current ASC payment indicator. To clarify, we refer to these codes as new and revised in this CY 2024 OPPS/ASC proposed rule.

We have separated our discussion below based on when the codes are released and whether we propose to solicit public comments in the proposed rule (and respond to those comments in this final rule with comment period) or whether we will be soliciting public comments in this CY 2024 OPPS/ASC final rule with comment period (and responding to those comments in the CY 2025 OPPS/ASC final rule with comment period).

2. April 2023 HCPCS Codes Proposed Rule Comment Solicitation

For the April 2023 update, there were no new CPT codes; however, there were several new Level II HCPCS codes. In the April 2023 ASC quarterly update (Transmittal 11927, dated March 24, 2023, CR 13143), we added several new Level II HCPCS codes to the list of covered ancillary services. Table 54 (New Level II HCPCS Codes for Ancillary Services Effective April 1, 2023) of the CY 2024 OPPS/ASC proposed rule (88 FR 49745) displayed the new Level II HCPCS codes that were implemented April 1, 2023. These new codes that were effective April 1, 2023, were assigned to comment indicator ''NP'' in Addendum BB to the proposed rule to indicate that the codes were assigned to an interim APC assignment and that comments would be accepted on their interim APC assignments. In addition, we note that the entire ASC addenda, which consist of the addenda listed below, are available via the internet on the CMS website, specifically, at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices:*

- ASC Addendum AA: ASC Covered Surgical Procedures (Including Surgical Procedures for Which Payment is Packaged)
- ASC Addendum BB: Covered Ancillary Services Integral to Covered Surgical Procedures (Including Ancillary Services for Which Payment is Packaged)
- ASC Addendum DD1: ASC Payment Indicators (PI)
- ASC Addendum DD2: ASC Comment Indicators (CI)
- ASC Addendum EE: Surgical Procedures Excluded from Payment in ASCs
- ASC Addendum FF: ASC Device Offset Percentages
- Addendum O: Long Descriptors for New Category I CPT Codes, Category III CPT Codes, C-codes, and G-Codes Effective January 1, 2024

We invited public comments on the proposed payment indicators for the new HCPCS codes that were recognized as ASC covered ancillary services in April 2023 through the quarterly update CRs, and as listed in Table 112 (New Level II HCPCS Codes for Ancillary Services Effective April 1, 2023). The new codes that were effective April 1, 2023, were assigned to comment indicator ''NP'' in ASC Addendum BB to the CY 2024 OPPS/ASC proposed rule to indicate that the codes are assigned to interim payment indicators and comments would be accepted on their interim assignments. We proposed to finalize the payment indicators in this CY 2024 OPPS/ASC final rule with comment period. We did not receive any comments on the proposed ASC payment indicator assignments for the new Level II HCPCS codes implemented in April 2023 and are finalizing the proposed ASC payment indicator assignments for these codes.

We note that several of the temporary drug HCPCS C-codes have been replaced with permanent drug HCPCS J-codes. Their replacement codes are also listed in Table 112. In addition, although in prior years we included the final ASC payment indicators in the coding tables in the preamble, because we include the same information in the ASC addenda, we have not included them in Table 112. Therefore, readers are advised to refer to the ASC addenda for the final ASC payment indicators and payment rates for all codes reported under the ASC payment system. The list of ASC payment indicators and definitions used under the ASC payment system can be found in the ASC addenda. We note that the ASC addenda (AA, BB, DD1, DD2, EE, and FF) are available via the internet on the CMS website.

TABLE 112: NEW LEVEL II HCPCS CODES FOR ASC COVERED ANCILLARY SERVICES EFFECTIVE APRIL 1, 2023

April 2023 HCPCS Code	CY2024 HCPCS Code	CY 2024 Long Descriptor
C9145	C9145	Injection, aprepitant, (aponvie), 1 mg
C9146	J9063	Injection, mirvetuximab soravtansine-gynx, 1 mg
C9147	J9347	Injection, tremelimumab-actl, 1 mg
C9148	J9380	Injection, teclistamab-cqyv, 0.5 mg
C9149	J9381	Injection, teplizumab-mzwv, 5 mcg
J0208	J0208	Injection, sodium thiosulfate, 100 mg
J0218	J0218	Injection, olipudase alfa-rpcp, 1 mg
J1449	J1449	Injection, eflapegrastim-xnst, 0.1 mg
J1747	J1747	Injection, spesolimab-sbzo, 1 mg
J2403	J2403	Chloroprocaine hcl ophthalmic, 3% gel, 1 mg
J9294	J9294	Injection, pemetrexed (hospira) not therapeutically equivalent to j9305, 10 mg
J9296	J9296	Injection, pemetrexed (accord) not therapeutically equivalent to j9305, 10 mg
J9297	J9297	Injection, pemetrexed (sandoz), not therapeutically equivalent to j9305, 10 mg
Q4265	Q4265	Neostim tl, per square centimeter
Q4266	Q4266	Neostim membrane, per square centimeter
Q4267	Q4267	Neostim dl, per square centimeter
Q4268	Q4268	Surgraft ft, per square centimeter
Q4269	Q4269	Surgraft xt, per square centimeter
Q4270	Q4270	Complete sl, per square centimeter
Q4271	Q4271	Complete ft, per square centimeter
Q5127	Q5127	Injection, pegfilgrastim-fpgk (stimufend), biosimilar, 0.5 mg
Q5128	Q5128	Injection, ranibizumab-eqrn (cimerli), biosimilar, 0.1 mg
Q5130	Q5130	Injection, pegfilgrastim-pbbk (fylnetra), biosimilar, 0.5 mg

3. July 2023 HCPCS Codes Proposed Rule Comment Solicitation

In the July 2023 ASC quarterly update (Transmittal 12099, Change Request 13216, dated June 22, 2023, which was subsequently rescinded and replaced with Transmittal 12122, Change Request 13216, dated July 5, 2023), we added several separately payable CPT and Level II HCPCS codes to the list of covered surgical procedures and covered ancillary services. Table 55 (New HCPCS Codes for Covered Surgical Procedures and Covered Ancillary Services Effective July 1, 2023) of the CY 2024 OPPS/ASC proposed rule (88 FR 49746) displayed the new HCPCS codes that were effective July 1, 2023. We invited public comments on the proposed payment indicators for these Level II HCPCS codes, and indicated that the proposed comment indicators, payment indicators, and payment rates for these codes were listed in Addendum AA and Addendum BB of the proposed rule. These new codes that were effective July 1, 2023, were assigned to comment indicator ''NP'' in ASC Addendum AA and Addendum BB to the CY 2024 OPPS/ASC proposed rule to indicate that the codes were assigned to an interim payment indicators and

comments would be accepted on their interim assignments. We further stated that we proposed to finalize the payment indicators in this CY 2024 OPPS/ASC final rule with comment period. We note that several of the temporary drug HCPCS C-codes have been replaced with HCPCS J-codes and HCPCS Q-codes. Their replacement codes are also listed in Table 113. In addition, in prior years we included the final ASC payment indicators the coding preamble tables, however, because the same information can be found in Addendum AA and Addendum BB, we are no longer including them in Table 113. Therefore, readers are advised to refer to the ASC addenda for the final ASC payment indicators and payment rates for all codes reported under the ASC payment system.

We did not receive any comments on the proposed ASC payment indicator assignments for the new Level II HCPCS codes that were added to the list of covered surgical procedures and ancillary services implemented in July 2023. Therefore, we are finalizing the proposed ASC payment indicator assignments for the codes.

BILLING CODE 4150–28–P

TABLE 113: NEW HCPCS CODES FOR COVERED SURGICAL PROCEDURES AND COVERED ANCILLARY SERVICES EFFECTIVE JULY 1, 2023

July 2023 HCPCS Code	CY2024 HCPCS Code	CY 2024 Long Descriptor
0793T	0793T	Percutaneous transcatheter thermal ablation of nerves innervating the pulmonary arteries, including right heart catheterization, pulmonary artery angiography, and all imaging guidance
0797T	0797T	Transcatheter insertion of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)
0800T	0800T	Transcatheter removal of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)
0803T	0803T	Transcatheter removal and replacement of permanent dual-chamber leadless pacemaker, including imaging guidance (eg, fluoroscopy, venous ultrasound, right atrial angiography, right ventriculography, femoral venography) and device evaluation (eg, interrogation or programming), when performed; right ventricular pacemaker component (when part of a dual-chamber leadless pacemaker system)
0809T	0809T	Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, placement of transfixing device(s) and intra-articular implant(s), including allograft or synthetic device(s)
C9151	J2781	Injection, pegcetacoplan, intravitreal,1 mg
J1440	J1440	Fecal microbiota, live - jslm, 1 ml
J1576	J1576	Injection, immune globulin (panzyga), intravenous, non-lyophilized (e.g., liquid), 500 mg
J1961	J1961	Injection, lenacapavir, 1 mg
J2329	J2329	Injection, ublituximab-xiiy, 1mg
J2427	J2427	Injection, paliperidone palmitate extended release (invega hafyera, or invega trinza), 1 mg
J7213	J7213	Injection, coagulation factor ix (recombinant), ixinity, 1 i.u.
J9056	J9056	Injection, bendamustine hydrochloride (vivimusta), 1 mg
J9058	J9058	Injection, bendamustine hydrochloride (apotex), 1 mg
J9059	J9059	Injection, bendamustine hydrochloride (baxter), 1 mg
J9063	J9063	Injection, mirvetuximab soravtansine-gynx, 1 mg

J9259	J9259	Injection, paclitaxel protein-bound particles (american regent) not therapeutically equivalent to j9264, 1 mg
J9322	J9322	Injection, pemetrexed (bluepoint) not therapeutically equivalent to J9305, 10 mg
J9323	J9323	Injection, pemetrexed ditromethamine, 10 mg
J9347	J9347	Injection, tremelimumab-actl, 1 mg
J9350	J9350	Injection, mosunetuzumab-axgb, 1 mg
J9380	J9380	Injection, teclistamab-cqyv, 0.5 mg
J9381	J9381	Injection, teplizumab-mzwv, 5 mcg
Q5129	Q5129	Injection, bevacizumab-adcd (vegzelma), biosimiliar, 10 mg

BILLING CODE 4150–28–C

4. October 2023 HCPCS Codes Final Rule Comment Solicitation

For CY 2024, consistent with our established policy, we proposed in the CY 2024 OPPS/ASC proposed rule (88 FR 49747) that the Level II HCPCS codes that would be effective October 1, 2023, would be flagged with comment indicator ''NI'' in Addendum BB in the CY 2024 OPPS/ASC final rule with comment period to indicate that we have assigned the codes to interim ASC payment indicators for CY 2024. In the October 2023 ASC quarterly update (Transmittal 12229, Change Request 13353, dated August 31, 2023), we added several separately payable Level II HCPCS codes to the list of covered surgical procedures and covered ancillary services. Table 114 below list the codes that were effective October 1, 2023. We note that several of the temporary C-codes have been replaced with permanent J-codes effective January 1, 2024. We are inviting public comments on this final rule with comment period on the interim payment indicators, which would be finalized in the CY 2025 OPPS/ASC final rule with comment period. We note these same codes will be subject to comment in the CY 2025 OPPS/ASC proposed rule with comment period, which would be finalized in the CY 2025 OPPS/ASC final rule with comment period.

TABLE 114: NEW HCPCS CODES FOR COVERED SURGICAL PROCEDURES AND COVERED ANCILLARY SERVICES EFFECTIVE OCTOBER 1, 2023

October 2023 HCPCS Code	CY 2024 HCPCS Code	CY 2024 Long Descriptor
C9152	J0402	Injection, aripiprazole, (abilify asimtufii), 1 mg
C9153	J0184	Injection, amisulpride, 1 mg
C9154	J0576	Injection, buprenorphine extended-release (brixadi), 1 mg
C9155	J9321	Injection, epcoritamab-bysp, 0.16 mg
C9156	A9608	Flotufolastat F 18, diagnostic, 1 millicurie
C9157	J1304	Injection, tofersen, 1 mg
C9158	J2799	Injection, risperidone, (uzedy), 1 mg
C9789	C9789	Instillation of anti-neoplastic pharmacologic/biologic agent into renal pelvis, any method, including all imaging guidance, including volumetric measurement if performed
C9790	C9790	Histotripsy (ie, non-thermal ablation via acoustic energy delivery) of malignant renal tissue, including image guidance
J0349	J0349	Injection, rezafungin, 1 mg
J0801	J0801	Injection, corticotropin (acthar gel), up to 40 units
J0802	J0802	Injection, corticotropin (ani), up to 40 units
J2781	J2781	Injection, pegcetacoplan, intravitreal, 1 mg
J7519	J7519	Injection, mycophenolate mofetil, 10 mg
J9345	J9345	Injection, retifanlimab-dlwr, 1 mg

5. January 2024 HCPCS Codes

a. New Level II HCPCS Codes Final Rule Comment Solicitation

As has been our practice in the past, we incorporate those new Level II HCPCS codes that are effective January 1 in the final rule with comment period, thereby updating the ASC payment system for the calendar year. We note that, unlike the CPT codes that are effective January 1 and are included in the OPPS/ASC proposed rules, and except for the C and G-codes listed in Addendum O to the CY 2024 OPPS/ASC proposed rule, most Level II HCPCS codes are not released until sometime around November to be effective January 1. Because these codes are not available until November, we were unable to include them in the OPPS/ASC proposed rule; however, the codes are flagged with comment indicator ''NI'' in ASC Addendum AA and Addendum BB to this final rule with comment period to indicate that we are assigning them an interim payment status, which is subject to public comment. Therefore, as we stated in the CY 2024 OPPS/ASC proposed rule, these Level II HCPCS codes that will be effective January 1, 2024 are included in this final rule with comment period and will also be released to the public through in the January 2024 ASC Update CR and the CMS HCPCS website. We are inviting public comments in this final rule with comment period on the payment indicator assignments, which would be finalized in the CY 2025 OPPS/ASC final rule with comment period. Similar to the codes effective October 1, 2023, these new Level II HCPCS codes that will be effective January 1, 2024, will be subject to comment in the CY 2025 OPPS/ASC proposed rule with comment period, which would be finalized in the CY 2025 OPPS/ASC final rule with comment period.

b. New CY 2024 CPT Codes Proposed Rule Comment Solicitation

For the CY 2024 ASC update, we received the CPT codes that will be effective January 1, 2024, from the AMA in time to be included in the CY 2024 OPPS/ASC proposed rule. The new, revised, and deleted CPT codes were included in Addendum AA and Addendum BB to the CY 2024 OPPS/

ASC proposed rule, which is available via the internet on the CMS website. We note that the new and revised CPT codes were assigned to comment indicator ''NP'' in ASC Addendum AA and Addendum BB of the CY 2024 OPPS/ASC proposed rule to indicate that the code is new for the next calendar year, or the code is an existing code with substantial revision to its code descriptor in the next calendar year as compared to the current calendar year with a proposed payment indicator assignment. We stated that we would accept comments and finalize the payment indicators in this CY 2024 OPPS/ASC final rule with comment period. Further, we reminded readers that the CPT code descriptors that appeared in Addendum AA and Addendum BB are short descriptors and do not describe the complete procedure, service, or item described by the CPT code. Therefore, we include the 5-digit placeholder codes and their long descriptors for the new CY 2024 CPT codes in Addendum O to the CY 2024 OPPS/ASC proposed rule so that the public could comment on our proposed payment indicator assignments. The 5-digit placeholder codes were listed in Addendum O to the CY 2024 OPPS/ASC proposed rule, specifically under the column labeled ''CY 2024 OPPS/ASC Proposed Rule 5-Digit Placeholder Code.'' We also stated that we would include the final CPT code numbers in this CY 2024 OPPS/ASC final rule with comment period.

We did not receive any comments on the proposed ASC payment indicators for the new CPT codes effective January 1, 2024, so we are finalizing these codes as proposed.

Finally, in Table 115, we summarize our process for updating codes through our ASC quarterly update CRs, seeking public comments, and finalizing the treatment of these new codes under the ASC payment system.

TABLE 115: COMMENT AND FINALIZATION TIMEFRAMES FOR NEW AND REVISED ASC-RELATED HCPCS CODES

ASC Quarterly Update CR	Type of Code	Effective Date	Comments Sought	When Finalized
April 2023	HCPCS (CPT and Level II codes)	April 1, 2023	CY 2024 OPPS/ASC proposed rule	CY 2024 OPPS/ASC final rule with comment period
July 2023	HCPCS (CPT and Level II codes)	July 1, 2023	CY 2024 OPPS/ASC proposed rule	CY 2024 OPPS/ASC final rule with comment period
October 2023	HCPCS (CPT and Level II codes)	October 1, 2023	CY 2024 OPPS/ASC final rule with comment period	CY 2025 OPPS/ASC final rule with comment period
January 2024	CPT Codes	January 1, 2024	CY 2024 OPPS/ASC proposed rule	CY 2024 OPPS/ASC final rule with comment period
	Level II HCPCS Codes	January 1, 2024	CY 2024 OPPS/ASC final rule with comment period	CY 2025 OPPS/ASC final rule with comment period

6. ASC Payment and Comment Indicators

a. Background

In addition to the payment indicators that we introduced in the August 2, 2007 ASC final rule, we created final comment indicators for the ASC payment system in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66855). We created Addendum DD1 to define ASC payment indicators that we use in Addenda AA and BB to provide payment information regarding covered surgical procedures and covered ancillary services, respectively, under the revised ASC payment system. The ASC payment indicators in Addendum DD1 are intended to capture policy-relevant characteristics of HCPCS codes that may receive packaged or separate payment in ASCs, such as whether they were on the ASC CPL prior to CY 2008; payment designation, such as device-intensive or office-based, and the corresponding ASC payment methodology; and their classification as separately payable ancillary services, including radiology services, brachytherapy sources, OPPS pass-through devices, corneal tissue acquisition services, drugs or biologicals, or NTIOLs.

We also created Addendum DD2 that lists the ASC comment indicators. The ASC comment indicators included in Addenda AA and BB to the proposed rules and final rules with comment period serve to identify, for the revised ASC payment system, the status of a specific HCPCS code and its payment indicator with respect to the timeframe when comments will be accepted. The comment indicator ''NI'' is used in the OPPS/ASC final rule with comment period to indicate new codes for the next calendar year for which the interim payment indicator assigned is subject to comment. The comment indicator ''NI'' also is assigned to existing codes with substantial revisions to their descriptors such that we consider them to be describing new services, and the interim payment indicator assigned is subject to comment, as discussed in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60622).

The comment indicator ''NP'' is used in the OPPS/ASC proposed rule to indicate new codes for the next calendar year for which the proposed payment indicator assigned is subject to comment. The comment indicator ''NP'' also is assigned to existing codes with substantial revisions to their descriptors, such that we consider them to be describing new services, and the proposed payment indicator assigned is subject to comment, as discussed in the CY 2016 OPPS/ASC final rule with comment period (80 FR 70497).

The ''CH'' comment indicator is used in Addenda AA and BB to the proposed rule (these addenda are available via the internet on the CMS website) to indicate that the payment indicator assignment has changed for an active HCPCS code in the current year and the next calendar year, for example, if an active HCPCS code is newly recognized as payable in ASCs or an active HCPCS code is discontinued at the end of the current calendar year. The ''CH'' comment indicators that are published in the final rule are provided to alert readers that a change has been made from one calendar year to the next, but do not indicate that the change is subject to comment.

In the CY 2021 OPPS/ASC final rule with comment period, we finalized the addition of ASC payment indicator ''K5''—Items, Codes, and Services for which pricing information and claims data are not available. No payment made.—to ASC Addendum DD1 (which is available via the internet on the CMS website) to indicate those services and procedures that CMS anticipates will become payable when claims data or payment information becomes available.

b. Final ASC Payment and Comment Indicators for CY 2024

For CY 2024, we proposed new and revised Category I and III CPT codes as well as new and revised Level II HCPCS codes. Final Category I and III CPT codes that are new and revised for CY 2024 and any new and existing Level II HCPCS codes with substantial revisions to the code descriptors for CY 2024, compared to the CY 2023 descriptors, are included in ASC Addenda AA and BB to the proposed rule and labeled with comment indicator ''NP'' to indicate that these CPT and Level II HCPCS codes were open for comment as part of the CY 2024 OPPS/ASC proposed rule.

For CY 2024, we proposed to add two ASC payment indicators for new proposed dental codes. Section XIII.D of the proposed rule described the proposed addition of dental codes to the ASC CPL and ancillary services list for CY 2024. We proposed to add specific dental payment indicators for more streamlined claims processing of the new dental codes, as these codes would require different billing mechanisms than non-dental procedures currently on the CPL. Separate payment indicators would allow MACs to more quickly and easily distinguish how these codes need to be processed. Proposed ASC payment indicators ''D1'' and ''D2'' are for the new dental codes that would be paid in CY 2024 and subsequent calendar years and would be added to Addendum DD1 (which is available via the internet on the CMS website) to indicate potentially payable dental services and procedures in the ASC setting. The first proposed payment indicator is ''D1''—''Ancillary dental service/item; no separate payment made.'' The ''D1'' indicator would indicate an ancillary dental procedure that would be performed integral to a separately payable dental surgical procedure with a payment indicator of ''D2.'' The second proposed payment indicator is ''D2''—''Non office-based dental procedure added in CY 2024 or later.'' The ''D2'' payment indicator would indicate a separately payable dental surgical procedure that would be subject to the multiple procedure reduction but would not be designated as an office-based covered surgical procedure. Section XIII.D.2 of the proposed rule described how these payment indicators would be used in claims processing for dental services. We solicited comment on these proposed new payment indicators, including whether their descriptors are appropriate, and any considerations interested parties believe we should consider when structuring payment for the procedures for which we propose to use payment indicators D1 and D2.

We did not receive any public comments on our proposals, and we are finalizing them as proposed without modification. We refer readers to Addenda DD1 and DD2 of this CY 2024 OPPS/ASC final rule (these addenda are available via the internet on the CMS website) for the complete list of ASC payment and comment indicators finalized for the CY 2024 update.

C. Payment Policies Under the ASC Payment System

1. Final ASC Payment for Covered Surgical Procedures

a. Background

Our ASC payment policies for covered surgical procedures under the revised ASC payment system are described in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66828 through 66831). Under our established policy, we use the ASC standard ratesetting methodology of multiplying the ASC relative payment weight for the procedure by the ASC conversion factor for that same year to calculate the national unadjusted payment rates for procedures with payment indicators ''G2'' and ''A2.'' Payment indicator ''A2'' was developed to identify procedures that were included on the list of ASC covered surgical procedures in CY 2007 and, therefore, were subject to transitional payment prior to CY 2011. Although the 4-year transitional period has ended and payment indicator ''A2'' is no longer required to identify surgical procedures subject to transitional payment, we have retained payment indicator ''A2'' because it is used to identify procedures that are exempted from the application of the office-based designation.

Payment rates for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') are the lower of the PFS nonfacility PE RVU-based amount or the amount calculated using the ASC standard rate setting methodology for the procedure. As detailed in section XIII.C.3.b of this CY 2024 OPPS/ASC final rule, we update the payment amounts for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') using the most recent available MPFS and OPPS data. We compare the estimated current year rate for each of the office-based procedures, calculated according to the ASC standard rate setting methodology, to the PFS nonfacility PE RVU-based amount to determine which is lower and, therefore, would be the current year payment rate for the procedure under

our final policy for the revised ASC payment system (§ 416.171(d)).

The rate calculation established for device-intensive procedures (payment indicator ''J8'') is structured so only the service (non-device) portion of the rate is subject to the ASC conversion factor. We update the payment rates for device-intensive procedures to incorporate the most recent device offset percentages calculated under the ASC standard ratesetting methodology, as discussed in section XIII.C.4 of this final rule.

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75081), we finalized our proposal to calculate the CY 2014 payment rates for ASC covered surgical procedures according to our established methodologies, with the exception of device removal procedures. For CY 2014, we finalized a policy to conditionally package payment for device removal procedures under the OPPS. Under the OPPS, a conditionally packaged procedure (status indicators ''Q1'' and ''Q2'') describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a covered surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are always packaged (payment indicator ''N1'') under the ASC payment system. Under the OPPS, device removal procedures are conditionally packaged and, therefore, would be packaged under the ASC payment system. There is no Medicare payment made when a device removal procedure is performed in an ASC without another surgical procedure included on the claim; therefore, no Medicare payment would be made if a device was removed but not replaced. To ensure that the ASC payment system provides separate payment for surgical procedures that only involve device removal—conditionally packaged in the OPPS (status indicator ''Q2'')—we have continued to provide separate payment since CY 2014 and assign the current ASC payment indicators associated with these procedures.

b. Update to ASC Covered Surgical Procedure Payment Rates for CY 2024

We proposed to update ASC payment rates for CY 2024 and subsequent years using the established rate calculation methodologies under § 416.171 and using our definition of device-intensive procedures, as discussed in section XIII.C.4 of this final rule. As the proposed OPPS relative payment weights are generally based on geometric mean costs, we proposed that the ASC payment system will generally use the geometric mean cost to determine proposed relative payment weights under the ASC standard methodology. We proposed to continue to use the amount calculated under the ASC standard ratesetting methodology for procedures assigned payment indicators ''A2'' and ''G2.''

We proposed to calculate payment rates for office-based procedures (payment indicators ''P2,'' ''P3,'' and ''R2'') and device-intensive procedures (payment indicator ''J8'') according to our established policies and to identify device-intensive procedures using the methodology discussed in section XIII.C.4 of this final rule. Therefore, we proposed to update the payment amount for the service portion (the non-device portion) of the device-intensive procedures using the standard ASC ratesetting methodology and the payment amount for the device portion based on the proposed CY 2024 device offset percentages that have been calculated using the standard OPPS APC ratesetting methodology. We proposed that payment for office-based procedures would be at the lesser of the proposed CY 2024 MPFS nonfacility PE RVU-based amount or the proposed CY 2024 ASC payment amount calculated according to the ASC standard ratesetting methodology.

As we did for CYs 2014 through 2023, for CY 2024, we proposed to continue our policy for device removal procedures, such that device removal procedures that are conditionally packaged in the OPPS (status indicators ''Q1'' and ''Q2'') will be assigned the current ASC payment indicators associated with those procedures and will continue to be paid separately under the ASC payment system.

We did not receive any comments on the broader rate calculation methodologies for these procedures and we are finalizing our proposed policies without modification to calculate the CY 2024 payment rates for ASC covered surgical procedures according to our established rate calculation methodologies under § 416.171 and our device-intensive payment policy, as discussed in section XIII.C.4. of this CY 2024 OPPS/ASC final rule with comment period. For covered office-based surgical procedures, the payment rate is the lesser of the final CY 2024 MPFS nonfacility PE RVU-based amount or the final CY 2024 ASC payment amount calculated according to the ASC standard ratesetting methodology. The final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the PFS PE RVUs and the conversion factor effective January 1, 2024. For a discussion of the PFS rates, we refer readers to the CY 2024 PFS final rule with comment period.

c. Final Payment for ASC Add-On Procedures Eligible for Complexity Adjustments Under the OPPS

In this section, we discuss the policy to provide increased payment under the ASC payment system for combinations of certain ''J1'' service codes and add-on procedure codes that are eligible for a complexity adjustment under the OPPS.

(1) OPPS C–APC Complexity Adjustment Policy

Under the OPPS, complexity adjustments are utilized to provide increased payment for certain comprehensive services. As discussed in section II.A.2.b of this final rule, we apply a complexity adjustment by promoting qualifying paired ''J1'' service code combinations or paired code combinations of ''J1'' services and add-on codes from the originating Comprehensive APC (C–APC) (the C–APC to which the designated primary service is first assigned) to the next higher paying C–APC in the same clinical family of C–APCs. A ''J1'' status indicator refers to a hospital outpatient service paid through a C–APC. We package payment for all add-on codes, which are codes that describe a procedure or service always performed in addition to a primary service or procedure, into the payment for the C–APC. However, certain combinations of primary service codes and add-on codes may qualify for a complexity adjustment.

We apply complexity adjustments when the paired code combination represents a complex, costly form or version of the primary service when the frequency and cost thresholds are met. The frequency threshold is met when there are 25 or more claims reporting the code combination, and the cost threshold is met when there is a violation of the 2 times rule, as specified in section 1833(t)(2) of the Act and described in section III.A.2.b of this final rule, in the originating C–APC. These paired code combinations that meet the frequency and cost threshold criteria represent those that exhibit materially greater resource requirements than the primary service. After designating a single primary service for a claim, we evaluate that service in combination with each of the other procedure codes reported on the claim that are either assigned to status indicator ''J1'' or add-on codes to determine if there are paired code

combinations that meet the complexity adjustment criteria. Once we have determined that a particular combination of ''J1'' services, or combinations of a ''J1'' service and add-on code, represents a complex version of the primary service because it is sufficiently costly, frequent, and a subset of the primary comprehensive service overall according to the criteria described above, we promote the claim to the next higher cost C–APC within the clinical family unless the primary service is already assigned to the highest cost APC within the C–APC clinical family or assigned to the only C–APC in a clinical family. We do not create new C–APCs with a comprehensive geometric mean cost that is higher than the highest geometric mean cost (or only) C–APC in a clinical family just to accommodate potential complexity adjustments. Therefore, the highest payment for any claim including a code combination for services assigned to a C–APC would be the highest paying C–APC in the clinical family (79 FR 66802).

As previously stated, we package payment for add-on codes into the C–APC payment rate. If any add-on code reported in conjunction with the ''J1'' primary service code does not qualify for a complexity adjustment, payment for the add-on service continues to be packaged into the payment for the primary service and the primary service code reported with the add-on code is not reassigned to the next higher cost C–APC. We list the final complexity adjustments for ''J1'' and add-on code combinations for CY 2024, along with all of the other final complexity adjustments, in Addendum J to this final rule (which is available via the internet on the CMS website at *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/regulations-notices*).

(2) CY 2024 ASC Special Payment Policy for OPPS Complexity-Adjusted C–APCs

Comprehensive APCs cannot be adopted in the ASC payment system due to limitations of the ASC claims processing systems. Thus, we do not use the OPPS comprehensive services ratesetting methodology in the ASC payment system. Under the standard ratesetting methodology used for the ASC payment system, comprehensive ''J1'' claims that exist under the OPPS are treated the same as other claims that contain separately payable procedure codes. As comprehensive APCs do not exist under the ASC payment system, there is not a process similar to the OPPS complexity adjustment policy in the ASC payment system to provide higher payment for more complex code combinations. In the ASC payment system, when multiple procedures are performed together in a single operative session, most covered surgical procedures are subject to a 50-percent reduction for the lower-paying procedure (72 FR 66830). This multiple procedure reduction gives providers additional payment when they perform multiple procedures during the same session, while still encouraging providers to provide necessary services as efficiently as possible. Add-on procedure codes are not separately payable under the ASC payment system and are always packaged into the ASC payment rate for the procedure. Unlike the multiple procedure discounting process used for other surgical procedures in the ASC payment system, providers do not receive any additional payment when they perform a primary service with a service corresponding to an add-on code in the ASC payment system.

Before CY 2023 rulemaking, we received suggestions from commenters requesting that we explore ways to increase payment to ASCs when services corresponding to add-on codes are performed with procedures, as certain code combinations may represent increased procedure complexity or resource intensity when performed together. For example, in the CY 2022 OPPS/ASC final rule with comment period, one commenter suggested that we modify the device-intensive criteria to allow packaged procedures that trigger a complexity adjustment under the OPPS to be eligible for device-intensive status under the ASC payment system (86 FR 63775). Based on our internal data review and assessment at that time, our response to that comment noted that we did not believe any changes were warranted to our packaging policies under the ASC payment system but that we would consider it in future rulemaking.

In the CY 2023 OPPS/ASC final rule with comment period, we evaluated the differences in payment in the OPPS and ASC settings for code pairs that included a primary procedure and add-on codes that were eligible for complexity adjustments under the OPPS and also performed in the ASC setting. When we compared the OPPS complexity-adjusted payment rate of these primary procedure and add-on code combinations to the ASC payment rate for the same code combinations, we found that the average rate of ASC payment as a percent of OPPS payment for these code combinations was significantly lower than 55 percent. We recognized that this payment differential between the C–APC-assigned code combinations eligible for complexity adjustments under the OPPS and the same code combinations under the ASC payment system could potentially create financial disincentives for providers to offer these services in the ASC setting, which could potentially result in Medicare beneficiaries encountering difficulties accessing these combinations of services in ASC settings. As noted above, our policy did not include additional payment for services corresponding to add-on codes, unlike our payment policy for multiple surgical procedures performed together, for which we provide additional payment under the multiple procedure reduction. However, these primary procedure and add-on code combinations that would be eligible for a complexity adjustment under the OPPS represented a more complex and costly version of the service, and we believed that providers not receiving additional payment under the ASC payment system to compensate for that increased complexity could lead to providers not being able to provide these services in the ASC setting, which could result in barriers to beneficiary access.

In order to address this issue, in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72079 and 72080), we finalized a new ASC payment policy that would apply to certain code combinations in the ASC payment system where CMS would pay for those code combinations at a higher payment rate to reflect that the code combination is a more complex and costlier version of the procedure performed, similar to the way in which the OPPS APC complexity adjustment is applied to certain paired code combinations that exhibit materially greater resource requirements than the primary service. We finalized adding new regulatory text at § 416.172(h) to codify this policy.

We finalized that combinations of a primary procedure code and add-on codes that are eligible for a complexity adjustment under the OPPS (as listed in OPPS Addendum J) would be eligible for this payment policy in the ASC setting. Specifically, we finalized that the ASC payment system code combinations eligible for additional payment under this policy would consist of a separately payable surgical procedure code and one or more packaged add-on codes from the ASC Covered Procedures List (CPL) and ancillary services list. Add-on codes were assigned payment indicator ''N1''

(Packaged service/item; no separate payment made), as listed in the ASC addenda.

Regarding eligibility for this special payment policy, we finalized that we would assign each eligible code combination a new C-code, which we will refer to as an ''ASC complexity adjustment code,'' that describes the primary and the add-on procedure(s) performed. C-codes are unique temporary codes and are only valid for claims for HOPD and ASC services and procedures. Under our policy, we add these ASC complexity adjustment codes to the ASC CPL and the ancillary services list, and when ASCs bill an ASC complexity adjustment code, they receive a higher payment rate that reflects that the code combination is a more complex and costlier version of the primary procedure performed. We anticipated that the ASC complexity adjustment codes eligible for this payment policy would change slightly each year, as the complexity adjustment assignments change under the OPPS; and we expect we would add new ASC complexity adjustment codes each year accordingly. In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72079 and 72080), we finalized new ASC complexity adjustment codes to add to the ASC CPL, which were listed in the ASC addenda. We also finalized adding new regulatory text at § 416.172(h)(1), titled ''Eligibility,'' to codify this policy.

We finalized the following payment methodology for this policy, which we reflected in new § 416.172(h)(2), titled ''Calculation of payment.'' The ASC complexity adjustment codes are subject to all ASC payment policies, including the standard ASC payment system ratesetting methodology, meaning, they are treated the same way as other procedure codes in the ASC setting. For example, the multiple procedure discounting rules would apply to the primary procedure in cases where the services corresponding to the ASC complexity adjustment code are performed with another separately payable covered surgical procedure in the ASC setting. We finalized using the OPPS complexity-adjusted C–APC rate to determine the ASC payment rate for qualifying code combinations, similar to how we use OPPS APC relative weights in the standard ASC payment system ratesetting methodology. Under the ASC payment system, we used the OPPS APC relative payment weights to update the ASC relative payment weights for covered surgical procedures since ASCs do not submit cost reports. We then scaled those ASC relative weights for the ASC payment system to ensure budget neutrality. To calculate the ASC payment rates for most ASC covered surgical procedures, we multiplied the ASC conversion factor by the ASC relative payment weight. A more detailed discussion of this methodology is provided in the in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66828 through 66831).

We also finalized using the OPPS complexity-adjusted C–APC rate for each corresponding code combination to calculate the OPPS relative weight for each corresponding ASC complexity adjustment code, which we believed would appropriately reflect the complexity and resource intensity of these ASC procedures being performed together. For ASC complexity adjustment codes that are not assigned device-intensive status (discussed below), we multiply the OPPS relative weight by the ASC budget neutrality adjustment (or ASC weight scalar) to determine the ASC relative weight. We then multiply the ASC relative weight by the ASC conversion factor to determine the ASC payment rate for each ASC complexity adjustment code. In short, we apply the standard ASC ratesetting process to the ASC complexity adjustment codes. We finalized adding new § 416.172(h)(2)(i) to codify this policy.

As discussed in section XIII.C.1.b of the CY 2023 OPPS/ASC final rule with comment period (87 FR 44708), certain ASC complexity adjustment codes under our policy may include a primary procedure that also qualifies for device-intensive status under the ASC payment system. For primary procedures assigned device-intensive status that are a component of an ASC complexity adjustment code created under the proposal, we believe it is appropriate for the ASC complexity adjustment code to retain the device-intensive status of the primary procedure as well as the device portion (or device offset amount) of the primary procedure and not the device offset percentage. For example, if the primary procedure has a device offset percentage of 31 percent (a device offset percentage of greater than 30 percent would be needed to qualify for device-intensive status) and a device portion (or device offset amount) of $3,000, ASC complexity adjustment codes that included this primary procedure would be assigned device-intensive status and a device portion of $3,000 to be held constant with the OPPS. We apply our standard ASC payment system ratesetting methodology to the non-device portion of the OPPS complexity-adjusted APC rate of the ASC complexity adjustment codes; that is, we apply the ASC budget neutrality adjustment and ASC conversion factor. We believe assigning device-intensive status and transferring the device portion from the primary procedure's ASC payment rate to the ASC complexity adjustment code's ASC payment rate calculation is consistent with our treatment of device costs and determining device-intensive status under the ASC payment system and is an appropriate methodology for determining the ASC payment rate. The non-device portion would be the difference between the device portion of the primary procedure and the OPPS complexity-adjusted APC payment rate for the ASC complexity adjustment code based on the ASC standard ratesetting methodology. Although this may yield results where the device offset percentage is not greater than 30 percent of the OPPS complexity-adjusted APC payment rate, we believe this is an appropriate methodology to apply where primary procedures assigned device-intensive status are a component of an ASC complexity adjustment code. As is the case for all device-intensive procedures, we apply the ASC standard ratesetting methodology to the OPPS relative weights of the non-device portion for any ASC complexity adjustment code eligible for payment under the proposal. That is, we would multiply the OPPS relative weight by the ASC budget neutrality adjustment and the ASC conversion factor and sum that amount with the device portion to calculate the ASC payment rate. We finalized adding new § 416.172(h)(2)(ii) to codify this policy.

In order to include these ASC complexity adjustment codes in the budget neutrality calculations for the ASC payment system, we estimated the potential utilization for these ASC complexity adjustment codes. We do not have claims data for packaged codes in the ASC setting because ASCs do not report packaged codes under the ASC payment system. Therefore, we finalized estimating CY 2023 ASC utilization based upon how often these combinations are performed in the HOPD setting. Specifically, we used the ratio of the primary procedure volume to add-on procedure volume from CY 2021 OPPS claims and applied that ratio against ASC primary procedure utilization to estimate the increased spending as a result of our proposal for budget neutrality purposes. We believed this method would provide a reasonable estimate of the utilization of these code combinations in the ASC setting, as it is based on the specific code combination utilization in the OPPS. We anticipated that we would continue this estimation

process until we have sufficient claims data for the ASC complexity adjustment codes that can be used to more accurately calculate code combination utilization in ASCs, likely for the CY 2025 rulemaking.

For CY 2024, we proposed to continue the special payment policy and methodology for OPPS complexity-adjusted C–APCs that was finalized in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72078 through 72080). The full list of the final ASC complexity adjustment codes for CY 2024 can be found in the ASC addenda and the supplemental policy file, which also includes both the existing ASC complexity adjustment codes and proposed additions, is published on the CMS website at *https://www.cms.gov/medicare/medicare-fee-for-service-payment/ascpayment/asc-regulations-and-notices.* Because the complexity adjustment assignments change each year under the OPPS, the proposed list of ASC complexity adjustment codes eligible for the proposed payment policy has changed slightly from the previous year.

Comment: Commenters who commented on to this policy were supportive of continuing the ASC complexity adjustment policy and urged CMS to finalize the proposal for CY 2024. They noted this policy was important in mitigating financial disincentives to perform critical services in the ASC and improving patient access.

Response: We thank the commenters for their support.

Comment: Several commenters disagreed with the C-code creation and descriptors and requested CMS delete these codes or change the descriptors to be consistent with the current CPT code descriptors. Commenters stated this could cause inaccurate reporting, inconvenience, and safety risk to patients in the OPPS setting.

Response: We note that there appears to be a misunderstanding. We created these C-codes solely for the ASC setting to allow for special complexity adjustments in this setting due to the limitations of the ASC claims processing systems. These codes cannot be billed in the OPPS setting, as they are assigned status indicator ''E1'' (Not paid by Medicare when submitted on outpatient claims (any outpatient bill type)).

Comment: Some commenters were concerned that the CY 2024 OPPS/ASC final rule would have fewer ASC complexity adjustment codes, relative to CY 2023. They recommended CMS continue to explore how the inherent costs of add-on services provided in the ASC could be more appropriately reflected in reimbursement, where add-on procedures could be unpackaged for clinical reasons, and how the ASC complexity adjustment policy can be applied more broadly to ensure appropriate payment in the ASC.

Response: We thank the commenters for their input. We will take these suggestions into consideration for future rulemaking.

After consideration of the public comments we received, we are finalizing the ASC special payment policy for OPPS complexity-adjusted C–APCs, as proposed. The final C codes for CY 2024 can be found in ASC Addendum AA.

d. Final Low Volume APCs and Limit on ASC Payment Rates for Procedures Assigned to Low Volume APCs

As stated in section XIII.D.1.b of the CY 2024 OPPS/ASC proposed rule, the ASC payment system generally uses OPPS geometric mean costs under the standard methodology to determine proposed relative payment weights under the standard ASC ratesetting methodology. In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63743 through 63747), we adopted a universal Low Volume APC policy for CY 2022 and subsequent calendar years. Under our policy, we expanded the low volume adjustment policy that is applied to procedures assigned to New Technology APCs to also apply to clinical and brachytherapy APCs. Specifically, a clinical APC or brachytherapy APC with fewer than 100 claims per year would be designated as a Low Volume APC. For items or services assigned to a Low Volume APC, we use up to 4 years of claims data to establish a payment rate for the APC as we currently do for low volume services assigned to New Technology APCs. The payment rate for a Low Volume APC or a low volume New Technology procedure would be based on the highest of the median cost, arithmetic mean cost, or geometric mean cost calculated using multiple years of claims data.

Based on claims data available for the CY 2024 OPPS/ASC proposed rule, we proposed to designate four clinical APCs and five brachytherapy APCs as Low Volume APCs under the ASC payment system (88 FR 49753). The four clinical APCs and five brachytherapy APCs shown in Table 57 of the CY 2024 OPPS/ASC proposed rule (88 FR 49753) met our criteria of having fewer than 100 single claims in the claims year (CY 2022 for the CY 2024 OPPS/ASC proposed rule) and therefore, we proposed that they would be subject to our universal Low Volume APC policy and the APC cost metric would be based on the greater of the median cost, arithmetic mean cost, or geometric mean cost using up to 4 years of claims data. Eight of the nine APCs were designated as low volume APCs in CY 2023. In addition, based on data for the CY 2024 OPPS/ASC proposed rule, APC 2642 (Brachytx, stranded, C–131) met our criteria to be designated a Low Volume APC, and we proposed to designate it as such for CY 2024.

We did not receive any public comments on our proposal to assign the 4 clinical APCs and 5 brachytherapy APCs as Low Volume APCs under the ASC payment system. Based on claims data available for this final rule with comment period, we are finalizing our proposal to designate the 4 clinical APCs and 5 brachytherapy APCs shown in Table 116 as Low Volume APCs under the ASC payment system, because they continue to meet our criteria of having fewer than 100 single claims in the relevant claims year (2022). The APC cost metric for these APCS is based on the greatest of the median cost, arithmetic mean cost, or geometric mean cost using up to 4 years of claims data, as proposed.

TABLE 116: COST STATISTICS FOR FINAL LOW VOLUME APCS STANDARD (ASC) RATESETTING METHODOLOGY FOR CY 2024

APC	APC Description	CY 2022 Claims Available for Ratesetting	Geometric Mean Cost without Low Volume APC Designation	Final Median Cost	Final Arithmetic Mean Cost	Final Geometric Mean Cost	Final CY 2024 APC Cost
2632	Iodine I-125 sodium iodide	0	---*	$31.74	$61.83	$41.06	$61.83
2635	Brachytx, non-str, HA, P-103	21	$97.56	$58.38	$60.78	$54.74	$60.78
2636	Brachy linear, non-str, P-103	1	$60.16	$22.17	$55.57	$32.95	$55.57
2642	Brachytx, stranded, C-131	82	$121.08	$76.36	$100.23	$79.27	$100.23
2647	Brachytx, NS, Non-HDRIr-192	2	$415.40	$201.69	$358.12	$166.75	$358.12
5244	Level 4 Blood Product Exchanges and Related Services	2	$9,420.45	$41,345.37	$37,634.66	$30,857.68	$41,345.37
5494	Level 4 Intraocular Procedures	8	$12,945.59	$12,458.11	$12,279.01	$11,685.91	$12,458.11
5495	Level 5 Intraocular Procedures	70	$3,463.28	$3,241.74	$3,813.82	$3,160.33	$3,813.82
5496	Level 6 Intraocular Procedures	12	$12,351.69	$17,388.10	$16,543.62	$14,492.80	$17,388.10

* For this CY 2024 OPPS/ASC final rule, there were no CY 2022 claims that contain the HCPCS code assigned to APC 2632 (HCPCS code A9527) that were available for CY 2024 OPPS/ASC ratesetting.

2. Payment for Covered Ancillary Services

a. Background

Our payment policies under the ASC payment system for covered ancillary services generally vary according to the particular type of service and its payment policy under the OPPS. Our overall policy provides separate ASC payment for certain ancillary items and services integrally related to the provision of ASC covered surgical procedures that are paid separately under the OPPS and provides packaged ASC payment for other ancillary items and services that are packaged or conditionally packaged (status indicators ''N,'' ''Q1,'' and ''Q2'') under the OPPS.

In the CY 2013 OPPS/ASC rulemaking (77 FR 45169 and 77 FR 68457 and 68458), we further clarified our policy regarding the payment indicator assignment for procedures that are conditionally packaged in the OPPS (status indicators ''Q1'' and ''Q2''). Under the OPPS, a conditionally packaged procedure describes a HCPCS code where the payment is packaged when it is provided with a significant procedure but is separately paid when the service appears on the claim without a significant procedure. Because ASC services always include a surgical procedure, HCPCS codes that are conditionally packaged under the OPPS are generally packaged (payment indictor ''N1'') under the ASC payment system (except for device removal procedures, as discussed in the CY 2022 OPPS/ASC proposed rule (86 FR 42083)). Thus, our policy generally aligns ASC payment bundles with those under the OPPS (72 FR 42495). In all cases, in order for ancillary items and services also to be paid, the ancillary items and services must be provided integral to the performance of ASC covered surgical procedures for which the ASC bills Medicare.

Our ASC payment policies generally provide separate payment for drugs and biologicals that are separately paid under the OPPS at the OPPS rates and package payment for drugs and biologicals for which payment is packaged under the OPPS. However, as discussed in the CY 2022 OPPS/ASC final rule with comment period, for CY 2022, we finalized a policy to unpackage and pay separately at ASP plus 6 percent for the cost of non-opioid pain management drugs and biologicals that function as a supply when used in a surgical procedure as determined by CMS under § 416.174 (86 FR 63483).

We generally pay for separately payable radiology services at the lower of the PFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (72 FR 42497). However, as finalized in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72050), payment indicators for all nuclear medicine procedures (defined as CPT codes in the range of 78000 through 78999) that are designated as radiology services that are paid separately when provided integral to a surgical procedure on the ASC list are set to ''Z2'' so that payment is made based on

the ASC standard ratesetting methodology rather than the MPFS nonfacility PE RVU amount (''Z3''), regardless of which is lower (§ 416.171(d)(1)).

Similarly, we also finalized our policy to set the payment indicator to ''Z2'' for radiology services that use contrast agents so that payment for these procedures will be based on the OPPS relative payment weight using the ASC standard ratesetting methodology and, therefore, will include the cost for the contrast agent (§ 416.171(d)(2)).

ASC payment policy for brachytherapy sources mirrors the payment policy under the OPPS. ASCs are paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS or, if OPPS rates are unavailable, at contractor-priced rates (72 FR 42499). Since December 31, 2009, ASCs have been paid for brachytherapy sources provided integral to ASC covered surgical procedures at prospective rates adopted under the OPPS.

Our ASC policies also provide separate payment for: (1) certain items and services that CMS designates as contractor-priced, including, but not limited to, the procurement of corneal tissue; and (2) certain implantable items that have pass-through payment status under the OPPS. These categories do not have prospectively established ASC payment rates according to ASC payment system policies (72 FR 42502, 42508, and 42509; § 416.164(b)). Under the ASC payment system, we have designated corneal tissue acquisition and hepatitis B vaccines as contractor-priced. Corneal tissue acquisition is contractor-priced based on the invoiced costs for acquiring the corneal tissue for transplantation. Hepatitis B vaccines are contractor-priced based on invoiced costs for the vaccine.

Devices that are eligible for pass-through payment under the OPPS are separately paid under the ASC payment system and are contractor-priced. Under the revised ASC payment system (72 FR 42502), payment for the surgical procedure associated with the pass-through device is made according to our standard methodology for the ASC payment system, based on only the service (non-device) portion of the procedure's OPPS relative payment weight if the APC weight for the procedure includes other packaged device costs. We also refer to this methodology as applying a ''device offset'' to the ASC payment for the associated surgical procedure. This ensures that duplicate payment is not provided for any portion of an implanted device with OPPS pass-through payment status.

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66933 and 66934), we finalized that, beginning in CY 2015, certain diagnostic tests within the medicine range of CPT codes for which separate payment is allowed under the OPPS are covered ancillary services when they are integral to an ASC covered surgical procedure. We finalized that diagnostic tests within the medicine range of CPT codes include all Category I CPT codes in the medicine range established by CPT, from 90000 to 99999, and Category III CPT codes and Level II HCPCS codes that describe diagnostic tests that crosswalk or are clinically similar to procedures in the medicine range established by CPT. In the CY 2015 OPPS/ASC final rule with comment period, we also finalized our policy to pay for these tests at the lower of the PFS nonfacility PE RVU-based (or technical component) amount or the rate calculated according to the ASC standard ratesetting methodology (79 FR 66933 and 66934). We finalized that the diagnostic tests for which the payment is based on the ASC standard ratesetting methodology be assigned to payment indicator ''Z2'' and revised the definition of payment indicator ''Z2'' to include a reference to diagnostic services and those for which the payment is based on the PFS nonfacility PE RVU-based amount be assigned payment indicator ''Z3,'' and revised the definition of payment indicator ''Z3'' to include a reference to diagnostic services.

b. Final Payment for Covered Ancillary Services for CY 2024

We did not receive any public comments on and are finalizing our proposal to update the ASC payment rates and to make changes to ASC payment indicators, as necessary, to maintain consistency between the OPPS and ASC payment system regarding the packaged or separately payable status of services and the final CY 2024 OPPS and ASC payment rates and subsequent years' payment rates. We did not receive any public comments on and are also finalizing our proposal to continue to set the CY 2024 ASC payment rates and subsequent years' payment rates for brachytherapy sources and separately payable drugs and biologicals equal to the OPPS payment rates for CY 2024 and subsequent years' payment rates.

Covered ancillary services and their final payment indicators for CY 2024 are listed in Addendum BB of this final rule (which is available via the internet on the CMS website). For those covered ancillary services where the payment rate is the lower of the rate under the ASC standard rate setting methodology and the PFS proposed rates (similar to our office-based payment policy), the final payment indicators and rates set forth in this final rule with comment period are based on a comparison using the final PFS rates effective January 1, 2024. For a discussion of the PFS rates, we refer readers to the CY 2024 PFS final rule.

3. Covered Surgical Procedures Designated as Office-Based Procedures

a. Background

In the August 2, 2007 ASC final rule, we finalized our policy to designate as ''office-based'' those procedures that are added to the ASC Covered Procedures List (CPL) in CY 2008 or later years that we determine are furnished predominantly (more than 50 percent of the time) in physicians' offices based on consideration of the most recent available volume and utilization data for each individual procedure code and/or, if appropriate, the clinical characteristics, utilization, and volume of related codes. In that rule, we also finalized our policy to exempt all procedures on the CY 2007 ASC list from application of the office-based classification (72 FR 42512). The procedures that were added to the ASC CPL beginning in CY 2008 that we determined were office-based were identified in Addendum AA to that rule with payment indicator ''P2'' (Office-based surgical procedure added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight); ''P3'' (Office-based surgical procedures added to ASC list in CY 2008 or later with MPFS nonfacility PE RVUs; payment based on MPFS nonfacility PE RVUs); or ''R2'' (Office-based surgical procedure added to ASC list in CY 2008 or later without MPFS nonfacility PE RVUs; payment based on OPPS relative payment weight), depending on whether we estimated the procedure would be paid according to the ASC standard ratesetting methodology based on its OPPS relative payment weight or at the MPFS nonfacility PE RVU-based amount.

Consistent with our final policy to annually review and update the ASC CPL to include all covered surgical procedures eligible for payment in ASCs, each year we identify covered surgical procedures as either temporarily office-based (these are new procedure codes with little or no utilization data that we have determined are clinically similar to other procedures that are permanently office-

based), permanently office-based, or nonoffice-based, after taking into account updated volume and utilization data.

b. CY 2024 Final Office-Based Procedures

In developing this CY 2024 OPPS/ASC proposed rule, we followed our policy to annually review and update the covered surgical procedures for which ASC payment is made and to identify new procedures that may be appropriate for ASC payment (described in detail in section XIII.C.1.d of this rule), including their potential designation as office-based. Historically, we would also review the most recent claims volume and utilization data (CY 2022 claims) and the clinical characteristics for all covered surgical procedures that are currently assigned a payment indicator in CY 2023 of ''G2'' (Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight) as well as for those procedures assigned one of the temporary office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2'' in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63769 through 63773).

In our CY 2022 OPPS/ASC final rule with comment period (86 FR 63770), we discussed that we, historically, review the most recent claims volume and utilization data and clinical characteristics for all covered surgical procedures that were assigned a payment indicator of ''G2'' for CY 2021. For the CY 2022 OPPS/ASC final rule with comment period, the most recent claims volume and utilization data was CY 2020 claims. However, given our concerns with the use of CY 2020 claims data as a result of the COVID–19 PHE as further discussed in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63751 through 63754), we adopted a policy to not review CY 2020 claims data and did not assign permanent office-based designations to covered surgical procedures that were assigned a payment indicator of ''G2'' in CY 2021 (86 FR 63770 and 63771).

As discussed further in section X.D of the CY 2023 OPPS/ASC proposed rule (87 FR 44680 through 44682), in our review of the CY 2021 outpatient claims available for ratesetting for this CY 2023 OPPS proposed rule, we observed that many outpatient service volumes have partially returned to their pre-PHE levels; and it is reasonable to assume that there will continue to be some effects of the COVID–19 PHE on the outpatient claims that we use for OPPS ratesetting. As a result, we proposed to use the CY 2021 claims for CY 2023 OPPS ratesetting. Similarly, in the CY 2023 OPPS/ASC proposed rule (87 FR 44705 through 44708), we proposed to resume our historical practice and review the most recent claims and utilization data, in this case data from CY 2021 claims, for determining office-based assignments under the ASC payment system.

Our review of the CY 2022 volume and utilization data of covered surgical procedures currently assigned a payment indicator of ''G2'' (Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight) resulted in the identification of two surgical procedures that we believed met the criteria for designation as permanently office-based. The data indicate that these procedures are performed more than 50 percent of the time in physicians' offices, and the services are of a level of complexity consistent with other procedures performed routinely in physicians' offices. The CPT codes that we proposed to permanently designate as office-based for CY 2024 are listed in Table 117.

TABLE 117: ASC COVERED SURGICAL PROCEDURES PROPOSED TO BE NEWLY DESIGNATED AS PERMANENTLY OFFICE-BASED FOR CY 2024

CY 2023 CPT/HCPCS Code	Long Descriptor	Final CY 2023 ASC Payment Indicator	Proposed CY 2024 ASC Payment Indicator*
0448T	Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation	G2	P2*
38232	Bone marrow harvesting for transplantation; autologous	G2	R2*

* Payment indicators were based on a comparison of the proposed rates according to the ASC standard ratesetting methodology and the CY 2024 PFS proposed rates. For a discussion of the proposed PFS rates, we refer readers to the CY 2024 PFS proposed rule.

Comment: A few commenters do not support the assignment of CPT code 15275 ((Application of skin substitute graft to face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, total wound surface area up to 100 sq cm; first 25 sq cm or less wound surface area)) to a permanent office-based designation. Commenters did not believe was appropriate to assign office-based status to a code in which items are packaged in the OPPS and ASC but not packaged in the physician office, as payment is typically less in the physician office setting. Commenters requested CMS assign CPT code 15275 to a non office-based surgical procedure payment indicator ''G2''.

Response: We are not accepting the commenters' recommendation. We assign procedures to be permanently designated as office-based based on physician claims that report the procedure across all settings of care, both inpatient and outpatient. If the office-based utilization exceeds 50

percent of total utilization across all settings of care and total utilization exceeds 50 claims, we propose such procedures be permanently designated as office-based unless the procedure otherwise may be designated as device-intensive. As we stated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72060), the volume for this procedure in the physician office setting was more than sufficient to make a permanent office-based designation to CPT code 15275 under our current policy.

After consideration of the comments we received, we are finalizing our proposal, without modification, to permanently designate the procedures in Table 118 as office-based procedures.

TABLE 118: ASC COVERED SURGICAL PROCEDURES TO BE NEWLY DESIGNATED AS PERMANENTLY OFFICE-BASED FOR CY 2024

CY 2024 CPT/HCPCS Code	Long Descriptor	Final CY 2023 ASC Payment Indicator	Final CY 2024 ASC Payment Indicator*
0448T	Removal of implantable interstitial glucose sensor with creation of subcutaneous pocket at different anatomic site and insertion of new implantable sensor, including system activation	G2	P2*
38232	Bone marrow harvesting for transplantation; autologous	G2	R2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2024 PFS final rates. For a discussion of the final PFS rates, we refer readers to the CY 2024 PFS final rule.

As discussed in the August 2, 2007 ASC final rule (72 FR 42533 through 42535), we finalized our policy to designate certain new surgical procedures as temporarily office-based until adequate claims data are available to assess their predominant sites of service, whereupon if we confirm their office-based nature, the procedures are permanently assigned to the list of office-based procedures. In the absence of claims data, we use other available information, including our clinical advisors' judgment, predecessor CPT and Level II HCPCS codes, information submitted by representatives of specialty societies and professional associations, and information submitted by commenters during the public comment period.

We reviewed CY 2022 volume and utilization data for nine surgical procedures designated as temporarily office-based in the CY 2023 OPPS/ASC final rule with comment period and temporarily assigned one of the office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2.'' As shown in Table 119, for four of the nine surgical procedures, there were greater than 50 claims available and the volume and utilization data indicated these four procedures were performed predominantly in the office setting. Therefore, we proposed to no longer designate the four procedures as temporarily office-based but to permanently designate these procedures as office-based and assign one of the office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2.''

Additionally, for one of the nine surgical procedures, there were greater than 50 claims available; and the volume and utilization data indicated that this procedure—CPT code 64454 (Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches, including imaging guidance, when performed)—is not performed predominantly in the office setting. Therefore, as shown in Table 59, we proposed to no longer designate this procedure as temporarily office-based. For CY 2024, we proposed to assign this procedure a payment indicator of ''G2'' (Non office-based surgical procedure added in CY 2008 or later; payment based on OPPS relative payment weight).

BILLING CODE 4150–28–P

TABLE 119: ASC COVERED SURGICAL PROCEDURES PROPOSED TO BE NO LONGER DESIGNATED AS TEMPORARILY OFFICE-BASED FOR CY 2024

CY 2024 CPT/HCPCS Code	Long Descriptor	Final CY 2023 ASC Payment Indicator	Proposed CY 2024 ASC Payment Indicator*
0402T	Collagen cross-linking of cornea, including removal of the corneal epithelium, when performed, and intraoperative pachymetry, when performed	R2	R2*
0512T	Extracorporeal shock wave for integumentary wound healing, including topical application and dressing care; initial wound	R2	R2*
64454	Injection(s), anesthetic agent(s) and/or steroid; genicular nerve branches, including imaging guidance, when performed	P3	G2
93985	Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study	P2	P2*
93986	Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study	P2	P2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2024 PFS final rates. For a discussion of the final PFS rates, we refer readers to the CY 2024 PFS final rule.

We did not receive any public comments on our proposal to no longer designate the procedures listed in Table 120 as temporarily office-based and permanently designate these procedures as office-based procedures. Therefore, we are finalizing our proposal, without modification, to designate the procedures shown in Table 120 as permanently office-based for CY 2024.

TABLE 120: CY 2024 PAYMENT INDICATORS FOR ASC COVERED SURGICAL PROCEDURES DESIGNATED AS PERMANENTLY OFFICE-BASED

CY 2024 CPT/HCPCS Code	Long Descriptor	Final CY 2023 ASC Payment Indicator	Final CY 2024 ASC Payment Indicator*
0402T	Collagen cross-linking of cornea, including removal of the corneal epithelium, when performed, and intraoperative pachymetry, when performed	R2	R2*
0512T	Extracorporeal shock wave for integumentary wound healing, including topical application and dressing care; initial wound	R2	R2*
93985	Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete bilateral study	P2	P2*
93986	Duplex scan of arterial inflow and venous outflow for preoperative vessel assessment prior to creation of hemodialysis access; complete unilateral study	P2	P2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2024 PFS final rates. For a discussion of the final PFS rates, we refer readers to the CY 2024 PFS final rule.

BILLING CODE 4150–28–C

For four of the nine procedures that were designated as temporarily office-based in the CY 2023 OPPS/ASC final rule with comment period and temporarily assigned one of the office-based payment indicators, specifically ''P2,'' ''P3,'' or ''R2,'' there were fewer than 50 claims; therefore, there was an insufficient amount to determine if the office setting was the predominant setting of care for these procedures. Therefore, as shown in Table 121, we proposed to continue to designate such procedures as temporarily office-based for CY 2024 and assign one of the office-based payment indicators.

For CY 2024, we proposed to designate three new CY 2024 CPT codes for ASC covered surgical procedures as temporarily office-based—CPT codes 67516 (CPT placeholder code 6X000), 64598 (CPT placeholder code 64XX4), and 0864T (CPT placeholder code X170T). After reviewing the clinical characteristics, utilization, and volume of related procedure codes or predecessor codes, we determined that the predecessor code for CPT placeholder code 67516 (Suprachoroidal space injection of pharmacologic agent (separate procedure)) is CPT code 0465T (Suprachoroidal injection of a pharmacologic agent (does not include supply of medication)), which was designated as an office-based procedure. Additionally, CPT placeholder code 64598 (Revision or removal of neurostimulator electrode array, peripheral nerve, with integrated neurostimulator) is most similar to CPT code 0588T (Revision or removal of integrated single device neurostimulation system including electrode array and receiver or pulse generator, including analysis, programming, and imaging guidance when performed, posterior tibial nerve), which is also designated as temporarily office-based. Lastly, CPT placeholder code 0864T (Low-intensity extracorporeal shock wave therapy involving corpus cavernosum, low energy) is most similar to CPT code 0101T (Extracorporeal shock wave involving musculoskeletal system, not otherwise specified) which is designated as an office-based surgical procedure. Therefore, as shown in Table 121, we proposed to designate these three new CPT codes as temporarily office-based for CY 2024.

BILLING CODE 4150–28–P

TABLE 121: PROPOSED CY 2024 PAYMENT INDICATORS FOR NEW AND EXISTING ASC COVERED SURGICAL PROCEDURES DESIGNATED AS TEMPORARILY OFFICE-BASED

CY 2024 CPT/HCPCS Code	Long Descriptor	Final CY 2023 ASC Payment Indicator	Proposed CY 2024 ASC Payment Indicator*
0581T	Ablation, malignant breast tumor(s), percutaneous, cryotherapy, including imaging guidance when performed, unilateral	R2	R2*
67516	Suprachoroidal space injection of pharmacologic agent (separate procedure)	NA	P3*
64598	Revision or removal of neurostimulator electrode array, peripheral nerve, with integrated neurostimulator	NA	R2*
65785	Implantation of intrastromal corneal ring segments	P2	P3*
67229	Treatment of extensive or progressive retinopathy, 1 or more sessions, preterm infant (less than 37 weeks gestation at birth), performed from birth up to 1 year of age (e.g., retinopathy of prematurity), photocoagulation or cryotherapy	R2	R2*
0588T	Revision or removal of integrated single device neurostimulation system including electrode array and receiver or pulse generator, including analysis, programming, and imaging guidance when performed, posterior tibial nerve	R2	R2*
0864T	Low-intensity extracorporeal shock wave therapy involving corpus cavernosum, low energy	NA	R2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2024 PFS final rates. For a discussion of the final PFS rates, we refer readers to the CY 2024 PFS final rule.

Comment: One commenter supported our proposal to assign a temporary office-based designation to CPT code 0864T (Low-intensity extracorporeal shock wave therapy involving corpus cavernosum, low energy).

Response: We appreciate the commenter's support of our office-based designation for CPT code 0864T.

After consideration of the public comment we received, we are finalizing our proposal to designate the procedures shown in Table 122 as temporarily office-based for CY 2024.

The procedures for which the final office-based designation for CY 2024 is temporary are indicated by an asterisk in Addendum AA to this final rule (which is available via the internet on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/ASC-Regulations-and-Notices).*

BILLING CODE 4150–28–C

0864T	Low-intensity extracorporeal shock wave therapy involving corpus cavernosum, low energy	NA	R2*

* Payment indicators were based on a comparison of the final rates according to the ASC standard ratesetting methodology and the CY 2024 PFS final rates. For a discussion of the final PFS rates, we refer readers to the CY 2024 PFS final rule.

4. Device-Intensive ASC Covered Surgical Procedures

a. Background

We refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 59040 through 59041), for a summary of our existing policies regarding ASC covered surgical procedures that are designated as device-intensive.

b. CY 2024 Final Device Intensive Procedures

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59040 through 59043), for CY 2019, we modified our criteria for device-intensive procedures to better capture costs for procedures with significant device costs. We adopted a policy to allow procedures that involve surgically inserted or implanted, high-cost, single-use devices to qualify as device-intensive procedures. In addition, we modified our criteria to lower the device offset percentage threshold from 40 percent to 30 percent. The device offset percentage is the percentage of device costs within a procedure's total costs. Specifically, for CY 2019 and subsequent years, we adopted a policy that device-intensive procedures would be subject to the following criteria:

- All procedures must involve implantable or insertable devices assigned a CPT or HCPCS code;
- The required devices (including single-use devices) must be surgically inserted or implanted; and
- The device offset amount must be significant, which is defined as exceeding 30 percent of the procedure's mean cost. Corresponding to this change in the cost criterion, we adopted a policy that the default device offset for new codes that describe procedures that involve the implantation of medical devices will be 31 percent beginning in CY 2019. For new codes describing procedures that are payable when furnished in an ASC and involve the implantation of a medical device, we adopted a policy that the default device offset would be applied in the same manner as the policy we adopted in section IV.B.2 of the CY 2019 OPPS/ASC final rule with comment period (83 FR 58944 through 58948). We amended § 416.171(b)(2) of the regulations to reflect these new device criteria.

In addition, as also adopted in section IV.B.2 of the CY 2019 OPPS/ASC final rule with comment period, to further align the device-intensive policy with the criteria used for device pass-through status, we specified, for CY 2019 and subsequent years, that for purposes of

satisfying the device-intensive criteria, a device-intensive procedure must involve a device that:

- Has received FDA marketing authorization, has received an FDA investigational device exemption (IDE) and has been classified as a Category B device by FDA in accordance with 42 CFR 405.203 through 405.207 and 405.211 through 405.215, or meets another appropriate FDA exemption from premarket review;
- Is an integral part of the service furnished;
- Is used for one patient only;
- Comes in contact with human tissue;
- Is surgically implanted or inserted (either permanently or temporarily); and
- Is not any of the following:

++ Equipment, an instrument, apparatus, implement, or item of this type for which depreciation and financing expenses are recovered as depreciable assets as defined in Chapter 1 of the Medicare Provider Reimbursement Manual (CMS Pub. 15–1); or

++ A material or supply furnished incident to a service (for example, a suture, customized surgical kit, scalpel, or clip, other than a radiological site marker).

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63773 through 63775), we modified our approach to assigning device-intensive status to surgical procedures under the ASC payment system. First, we adopted a policy of assigning device-intensive status to procedures that involve surgically inserted or implanted, high-cost, single-use devices if their device offset percentage exceeds 30 percent under the ASC standard ratesetting methodology, even if the procedure is not designated as device-intensive under the OPPS. Second, we adopted a policy that if a procedure is assigned device-intensive status under the OPPS, but has a device offset percentage below the device-intensive threshold under the standard ASC ratesetting methodology, the procedure will be assigned device-intensive status under the ASC payment system with a default device offset percentage of 31 percent. The policies were adopted to provide consistency between the OPPS and ASC payment system and provide a more appropriate payment rate for surgical procedures with significant device costs under the ASC payment system.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72078 through 72080), we finalized our policy to create certain C-codes, or ASC complexity adjustment codes that describe certain combinations of a primary covered surgical procedure as well as a packaged (payment indicator = ''N1'') procedure that are otherwise eligible for a complexity adjustment under the OPPS (as listed in Addendum J). Each ASC complexity adjustment code's APC assignment is based on its corresponding OPPS complexity adjustment code's APC assignment. In the CY 2023 OPPS/ASC final rule with comment period, we stated our belief that it would be appropriate for these ASC complexity adjustment codes to qualify for device-intensive status under the ASC payment system if the primary procedure of the code was also designated as device-intensive. Under our current policy, the ASC complexity adjustment code would retain the device portion of the primary procedure (also called the ''device offset amount'') and not the device offset percentage. Therefore, for device-intensive ASC complexity adjustment codes, we set the device portion of the combined procedure equal to the device portion of the primary procedure and calculate the device offset percentage by dividing the device portion by the ASC complexity adjustment code's APC payment rate. Further, we apply our standard ASC payment system ratesetting methodology to the non-device portion of the ASC complexity adjustment code's APC payment rate; that is, we multiply the OPPS relative weight by the ASC budget neutrality adjustment and the ASC conversion factor and sum that amount with the device portion to calculate the ASC payment rate.

We did not propose any changes related to designating surgical procedures as device-intensive under the ASC payment system for CY 2024.

Comment: Some commenters recommended that we refrain from wage-adjusting the device portion of device-intensive procedures by the wage index for that particular area and only wage-adjust non device portions of the ASC payment rate. The commenters contend that wage-adjusting 50 percent of the ASC payment rate by the wage index for a particular area can reduce ASC payment rates below the cost of certain devices.

Response: We appreciate the commenters' recommendation. We did not propose such a change to our application of the ASC wage index but, as we stated in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59042), such a policy would increase payment for providers with a relatively low wage index (that is, a wage index value of less than 1) and decrease it for providers with a relatively high wage index (that is, a wage index value of greater than 1). We will consider the feasibility of this change and take this comment into consideration for future rulemaking.

Comment: One commenter requested that we consider a modification to our established policy that would allow the continuation of the default device offset of 31 percent for procedures for which there were fewer than 100 claims used to calculate the device offset percentage.

Response: We appreciate the commenter's request. We are concerned that such a policy would inaccurately assign device-intensive status to procedures that would otherwise consistently be ineligible for device-intensive assignment. While we do not believe at this time that continuing the default device offset percentage over available claims data for procedures for which there are fewer than 100 claims would be an improvement to our methodology for determining device offset amounts and device-intensive status for such procedures; however, we will take this comment into consideration for future rulemaking.

Comment: Commenters requested that we assign device-intensive status to the following procedures:

- CPT code 0581T (Ablation, malignant breast tumor(s), percutaneous, cryotherapy, including imaging guidance when performed, unilateral)
- CPT code 31242 (Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve)
- CPT code 52284 (Cystourethroscopy, with mechanical urethral dilation and urethral therapeutic drug delivery by drug-coated balloon catheter for urethral stricture or stenosis, male, including fluoroscopy, when performed)
- CPT code 53854 (Transurethral destruction of prostate tissue; by radiofrequency generated water vapor thermotherapy)
- HCPCS code C9757 (Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and excision of herniated intervertebral disc, and repair of annular defect with implantation of bone anchored annular closure device, including annular defect measurement, alignment and sizing assessment, and image guidance; 1 interspace, lumbar);
- HCPCS code C9761 (Cystourethroscopy, with ureteroscopy and/or pyeloscopy, with lithotripsy, and ureteral catheterization for steerable vacuum aspiration of the kidney, collecting system, ureter, bladder, and urethra if applicable (must use a steerable ureteral catheter)

Response: Based on CY 2022 claims data available for this final rule, the procedures requested by commenters do not have device offset percentages that exceed the 30-percent threshold required for device-intensive status under the OPPS or ASC payment system and, therefore, are not eligible to be assigned device-intensive status.

Comment: Commenters supported the proposed device offset percentages for the following procedures:

- CPT code 0627T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with fluoroscopic guidance, lumbar; first level)
- CPT code 0671T (Insertion of anterior segment aqueous drainage device into the trabecular meshwork, without external reservoir, and without concomitant cataract removal, one or more)
- CPT code 66989 (Extracapsular cataract removal with insertion of intraocular lens prosthesis (1-stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification), complex, requiring devices or techniques not generally used in routine cataract surgery (*e.g.,* iris expansion device, suture support for intraocular lens, or primary posterior capsulorrhexis) or performed on patients in the amblyogenic developmental stage; with insertion of intraocular (*e.g.,* trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more)
- CPT code 66991(Extracapsular cataract removal with insertion of intraocular lens prosthesis (1 stage procedure), manual or mechanical technique (*e.g.,* irrigation and aspiration or phacoemulsification); with insertion of intraocular (*e.g.,* trabecular meshwork, supraciliary, suprachoroidal) anterior segment aqueous drainage device, without extraocular reservoir, internal approach, one or more)
- CPT code 58356 (Endometrial cryoablation with ultrasonic guidance, including endometrial curettage, when performed)
- CPT code 31242 (Nasal/sinus endoscopy, surgical; with destruction by radiofrequency ablation, posterior nasal nerve)
- CPT code 31243 (Nasal/sinus endoscopy, surgical; with destruction by cryoablation, posterior nasal nerve)
- CPT code 31295 (Nasal/sinus endoscopy, surgical, with dilation (*e.g.,* balloon dilation); maxillary sinus ostium, transnasal or via canine fossa)
- HCPCS code C9757 (Laminotomy (hemilaminectomy), with decompression of nerve root(s), including partial facetectomy, foraminotomy and excision of herniated intervertebral disc, and repair of annular defect with implantation of bone anchored annular closure device, including annular defect measurement, alignment and sizing assessment, and image guidance; 1 interspace, lumbar);
- HCPCS code C9781 (Arthroscopy, shoulder, surgical; with implantation of subacromial spacer (*e.g.,* balloon), includes debridement (*e.g.,* limited or extensive), subacromial decompression, acromioplasty, and biceps tenodesis when performed)

Response: We appreciate the commenters' support. We are finalizing our proposed device offset amounts for CPT codes 0627T, 0671T, 66989, 66991, 58356, 31242, 31243, 31295 and HCPCS codes C9757 and C9781. For final CY 2024 device offset percentages based on available claims data for this final rule with comment period, we refer readers to Addendum FF of this final rule with comment period.

Comment: Two commenters requested that we increase the device offset for CPT code 0629T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with ct guidance, lumbar; first level) to be in alignment with CPT code 0627T (Percutaneous injection of allogeneic cellular and/or tissue-based product, intervertebral disc, unilateral or bilateral injection, with fluoroscopic guidance, lumbar; first level) as both procedures use the same device.

Response: We thank the commenters for their suggestion. We stated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 71941) that we did not have any claims data for CPT code 0629T to determine a device offset percentage. Under our current policy, we may assign an alternative device offset percentage if we have claims data from a clinically similar procedure code that uses the same device; however, since we have claims data for CPT code 0629T to determine a device offset percentage under the ASC payment system, we are not accepting the commenters' recommendation.

Comment: One commenter requested that we increase the device offset amount for CPT code 30469 (Repair of nasal valve collapse with low energy, temperature-controlled (*i.e.,* radiofrequency) subcutaneous/submucosal remodeling), and asked that we align the device offset amount with the valuation that CMS has adopted for the cost of the VivAer Stylus device under the 2024 Physician Fee Schedule.

Response: We are not accepting the commenter's recommendation. While we do not have claims data to determine a device offset percentage for CPT code 30469, in the absence of available claims data, predecessor code data, or a clinically similar code that utilizes the same device, our established policy is to assign a default device offset percentage of 31 percent for procedures that we believe have significant device costs and that otherwise meet our device-intensive criteria. We believe our proposed default device offset percentage of 31 percent for CPT code 30469 for CY 2024 provides a reasonable and appropriate device offset amount until claims data become available.

Comment: Several commenters requested that we assign the new CPT codes 0816T (Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (*e.g.,* array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subcutaneous) and 0817T (Open insertion or replacement of integrated neurostimulation system for bladder dysfunction including electrode(s) (*e.g.,* array or leadless), and pulse generator or receiver, including analysis, programming, and imaging guidance, when performed, posterior tibial nerve; subfascial) to the same device offset percentage as CPT code 64590, instead of the default 31 percent. The commenters state that the services described by these codes were previously billed using CPT code 64590 (Insertion or replacement of peripheral or gastric neurostimulator pulse generator or receiver, direct or inductive coupling).

Response: We are not accepting the commenters' recommendation. While we may assign device-intensive status to new procedures that have significant device costs, we generally assign the default device offset percentage of 31 percent of total procedure costs until such claims data becomes available. However, if there is available claims data from the predecessor code of a new procedure or claims data from a clinically similar procedure that uses the same device, our current policy allows us to use this proxy claims data to establish a device offset percentage in lieu of the default 31 percent. We do not agree that CPT code 64590 was the predecessor code for either CPT code 0816T and 0817T and believe that CPT code 64999 (Unlisted procedure,

nervous system) was the CPT code previously used when reporting the procedures described by the new CPT codes 0816T and 0817T. CPT code 64999 does not exceed our device-intensive threshold under the OPPS or ASC payment system, and, since this CPT code can be used for various types of unlisted surgical procedures of the nervous system, we do not believe this procedure would be an accurate reflection of the device costs of CPT code 0816T and 0817T. Since 0816T and 0817T do not have claims data from a predecessor code or a similar code that uses the same device, we are finalizing our proposal to assign the default 31 percent device offset percentage for CY 2024.

Comment: One commenter requested that we assign HCPCS code C9734 (Focused ultrasound ablation/therapeutic intervention, other than uterine leiomyomata, with magnetic resonance (mr) guidance) to payment indicator ''J8'' and the default device offset of 31 percent.

Response: We are finalizing the addition of HCPCS code C9734 to the ASC CPL for CY 2024. After reviewing the clinical characteristics of the procedure, we agree with the commenter that HCPCS C9734 meets the requirements to be assigned device-intensive status. Therefore, we are accepting the commenter's recommendation and are assigning device-intensive status with a default device offset percentage of 31 percent to HCPCS code C9734 and assigning a payment indicator of ''J8,'' which indicates a device-intensive procedure, for CY 2024.

c. Adjustment to ASC Payments for No Cost/Full Credit and Partial Credit Devices

Our ASC payment policy for costly devices implanted or inserted in ASCs at no cost/full credit or partial credit is set forth in § 416.179 of our regulations and is consistent with the OPPS policy that was in effect until CY 2014. We refer readers to the CY 2008 OPPS/ASC final rule with comment period (72 FR 66845 through 66848) for a full discussion of the ASC payment adjustment policy for no cost/full credit and partial credit devices. ASC payment is reduced by 100 percent of the device offset amount when a hospital furnishes a specified device without cost or with a full credit and by 50 percent of the device offset amount when the hospital receives partial credit in the amount of 50 percent or more of the cost for the specified device.

Effective CY 2014, under the OPPS, we finalized our proposal to reduce OPPS payment for applicable APCs by the full or partial credit a provider receives for a device, capped at the device offset amount. Although we finalized our proposal to modify the policy of reducing payments when a hospital furnishes a specified device without cost or with full or partial credit under the OPPS, in the CY 2014 OPPS/ASC final rule with comment period (78 FR 75076 through 75080), we finalized our proposal to maintain our ASC policy for reducing payments to ASCs for specified device-intensive procedures when the ASC furnishes a device without cost or with full or partial credit. Unlike the OPPS, there is currently no mechanism within the ASC claims processing system for ASCs to submit to CMS the amount of the actual credit received when furnishing a specified device at full or partial credit. Therefore, under the ASC payment system, we finalized our proposal for CY 2014 to continue to reduce ASC payments by 100 percent or 50 percent of the device offset amount when an ASC furnishes a device without cost or with full or partial credit, respectively.

Under current ASC policy, all ASC device-intensive covered surgical procedures are subject to the no cost/full credit and partial credit device adjustment policy. Specifically, when a device-intensive procedure is performed to implant or insert a device that is furnished at no cost or with full credit from the manufacturer, the ASC appends the HCPCS ''FB'' modifier on the line in the claim with the procedure to implant or insert the device. The contractor reduces payment to the ASC by the device offset amount that we estimate represents the cost of the device when the necessary device is furnished without cost or with full credit to the ASC. We continue to believe that the reduction of ASC payment in these circumstances is necessary to pay appropriately for the covered surgical procedure furnished by the ASC.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59043 and 59044) we adopted a policy to reduce the payment for a device-intensive procedure for which the ASC receives partial credit by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the new device. The ASC will append the HCPCS ''FC'' modifier to the HCPCS code for the device-intensive surgical procedure when the facility receives a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device. To report that the ASC received a partial credit of 50 percent or more (but less than 100 percent) of the cost of a new device, ASCs have the option of either: (1) submitting the claim for the device-intensive procedure to their Medicare contractor after the procedure's performance, but prior to manufacturer acknowledgment of credit for the device, and subsequently contacting the contractor regarding a claim adjustment, once the credit determination is made; or (2) holding the claim for the device implantation or insertion procedure until a determination is made by the manufacturer on the partial credit and submitting the claim with the ''FC'' modifier appended to the implantation procedure HCPCS code if the partial credit is 50 percent or more (but less than 100 percent) of the cost of the device. Beneficiary coinsurance would be based on the reduced payment amount. As finalized in the CY 2015 OPPS/ASC final rule with comment period (79 FR 66926), to ensure our policy covers any situation involving a device-intensive procedure where an ASC may receive a device at no cost or receive full credit or partial credit for the device, we apply our ''FB''/''FC'' modifier policy to all device-intensive procedures.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59043 through 59044) we stated we would reduce the payment for a device-intensive procedure for which the ASC receives partial credit by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit, if the credit to the ASC is 50 percent or more (but less than 100 percent) of the cost of the device. In the CY 2020 OPPS/ASC final rule with comment period, we finalized continuing our existing policies for CY 2020. We note that we inadvertently omitted language that this policy would apply not just in CY 2019 but also in subsequent calendar years. We intended to apply this policy in CY 2019 and subsequent calendar years. Therefore, we finalized our proposal to apply our policy for partial credits specified in the CY 2019 OPPS/ASC final rule with comment period (83 FR 59043 through 59044) in CY 2022 and subsequent calendar years (86 FR 63775 through 63776). Specifically, for CY 2022 and subsequent calendar years, we would reduce the payment for a device-intensive procedure for which the ASC receives partial credit by one-half of the device offset amount that would be applied if a device was provided at no cost or with full credit, if the credit to the ASC is 50 percent or more (but less

than 100 percent) of the cost of the device. To report that the ASC received a partial credit of 50 percent or more (but less than 100 percent) of the cost of a device, ASCs have the option of either: (1) submitting the claim for the device intensive procedure to their Medicare contractor after the procedure's performance, but prior to manufacturer acknowledgment of credit for the device, and subsequently contacting the contractor regarding a claim adjustment, once the credit determination is made; or (2) holding the claim for the device implantation or insertion procedure until a determination is made by the manufacturer on the partial credit and submitting the claim with the ''FC'' modifier appended to the implantation procedure HCPCS code if the partial credit is 50 percent or more (but less than 100 percent) of the cost of the device. Beneficiary coinsurance would be based on the reduced payment amount. We did not receive any comments on our policies related to no/cost full credit or partial credit devices, and we are continuing our existing policies for CY 2024.

5. Requirement in the Physician Fee Schedule CY 2024 Proposed Rule for HOPDs and ASCs To Report Discarded Amounts of Certain Single-Dose or Single-Use Package Drugs

Section 90004 of the Infrastructure Investment and Jobs Act (Pub. L. 117–9, November 15, 2021) (''the Infrastructure Act'') amended section 1847A of the Act to re-designate subsection (h) as subsection (i) and insert a new subsection (h), which requires manufacturers to provide a refund to CMS for certain discarded amounts from a refundable single-dose container or single-use package drug. The CY 2024 PFS proposed rule includes proposals to operationalize section 90004 of the Infrastructure Act, including a proposal that impacts hospital outpatient departments (HOPDs) and ambulatory surgical centers (ASCs). Similar to our CY 2023 notice in the OPPS/ASC proposed rule (87 FR 71988), we wanted to ensure interested parties were aware of these proposals and knew to refer to the CY 2024 Physician Fee Schedule proposed rule for a full description of the proposed policy. Interested parties were asked to submit comments on any proposals to implement section 90004 of the Infrastructure Act to the CY 2024 PFS proposed rule. Public comments on these proposals are addressed in the CY 2024 PFS final rule with comment period. We note that this same notice appears in section V.C of this final rule.

As explained in the CY 2024 OPPS/ASC proposed rule (88 FR 49759), because the CY 2024 PFS proposed rule discussed and proposed to codify certain billing requirements for HOPDs and ASCs, we explained that we wanted to ensure interested parties were aware of them and knew to refer to that rule for a full description of the proposed policy. Interested parties were asked to submit comments on this and any other proposals to implement section 90004 of the Infrastructure Act in response to the CY 2024 PFS proposed rule. We stated that public comments on the proposals would be addressed in the CY 2024 PFS final rule.

We thank commenters for their feedback. For final details on this policy, we refer readers to the CY 2024 PFS final rule.

6. Payment Amount and Beneficiary Coinsurance for Part B Rebatable Drugs

On August 16, 2022, the Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169) was signed into law. Section 11101 of the IRA requires a Part B inflation rebate for a Part B rebatable drug if the Medicare payment amount, which is generally ASP plus 6 percent, if the drug rises at a rate that is faster than the rate of inflation. It also establishes changes to the Medicare payment rate and beneficiary coinsurance for such drugs under the ASC payment system. We refer the reader to the discussion of this policy and changes to the regulatory text, which are discussed in further detail in section II.H.I of this final rule.

D. Additions to ASC Covered Surgical Procedures and Covered Ancillary Services Lists

1. Additions to the List of ASC Covered Surgical Procedures

Section 1833(i)(1) of the Act requires us, in part, to specify, in consultation with appropriate medical organizations, surgical procedures that are appropriately performed on an inpatient basis in a hospital but that can also be safely performed in an ASC, a CAH, or an HOPD, and to review and update the list of ASC covered surgical procedures at least every two years. We evaluate the ASC covered procedures list (ASC CPL) each year to determine whether procedures should be added to or removed from the list, and changes to the list are often made in response to specific concerns raised by stakeholders.

Under our regulations at §§ 416.2 and 416.166, covered surgical procedures furnished on or after January 1, 2022, are surgical procedures that meet the general standards specified in § 416.166(b) and are not excluded under the general exclusion criteria specified in § 416.166(c). Specifically, under § 416.166(b), the general standards provide that covered surgical procedures are surgical procedures specified by the Secretary and published in the **Federal Register** and/or via the internet on the CMS website that are separately paid under the OPPS, that would not be expected to pose a significant safety risk to a Medicare beneficiary when performed in an ASC, and for which standard medical practice dictates that the beneficiary would not typically be expected to require active medical monitoring and care at midnight following the procedure.

Section 416.166(c) sets out the general exclusion criteria used under the ASC payment system to evaluate the safety of procedures for performance in an ASC. The general exclusion criteria provide that covered surgical procedures do not include those surgical procedures that: (1) generally result in extensive blood loss; (2) require major or prolonged invasion of body cavities; (3) directly involve major blood vessels; (4) are generally emergent or life-threatening in nature; (5) commonly require systemic thrombolytic therapy; (6) are designated as requiring inpatient care under § 419.22(n); (7) can only be reported using a CPT unlisted surgical procedure code; or (8) are otherwise excluded under § 411.15.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59029 and 59030), we defined a surgical procedure under the ASC payment system as any procedure described within the range of Category I CPT codes that the CPT Editorial Panel of the AMA defines as ''surgery'' (CPT codes 10000 through 69999) (72 FR 42476), as well as procedures that are described by Level II HCPCS codes or by Category I CPT codes or by Category III CPT codes that directly crosswalk or are clinically similar to procedures in the CPT surgical range that we determined met the general standards established in previous years for addition to the ASC CPL.

For a detailed discussion of the history of our policies for adding surgical procedures to the ASC CPL, we refer readers to the CY 2021, CY 2022, and CY 2023 OPPS/ASC final rules with comment period (85 FR 86143 through 86145; 86 FR 63777 through 63805, 87 FR 72068 through 72076).

2. Final Changes to the List of ASC Covered Surgical Procedures for CY 2024

Our current policy, which includes consideration of the general standards and exclusion criteria we have historically used to determine whether a surgical procedure should be added to the ASC CPL, is intended to ensure that surgical procedures added to the ASC CPL can be performed safely in the ASC setting on the typical Medicare beneficiary. In the CY 2023 OPPS/ASC final rule with comment period, we received requests to add dental surgeries furnished in the ASC setting to the ASC CPL (87 FR 71882). In response to these public comments, we noted that if a dental service is covered under Medicare Part B and meets the criteria for the ASC CPL (set forth at 42 CFR 416.166), then it could be added to the ASC CPL, and that we would take additional dental procedures into consideration for future rulemaking. For CY 2024, we conducted a review of procedures that currently are paid under the OPPS and not included on the ASC CPL. We also assessed procedures against our regulatory safety criteria at § 416.166. Based upon this review, we proposed to update the ASC CPL by adding 26 dental surgical procedures to the list for CY 2024, as shown in Table 123 below.

After reviewing the clinical characteristics of these procedures, as well as consulting with stakeholders and multiple clinical advisors, we determined that these procedures are separately paid under the OPPS, would not be expected to pose a significant risk to beneficiary safety when performed in an ASC, and would not be expected to require active medical monitoring and care of the beneficiary at midnight following the procedure. These procedures are clinically similar to procedures in the CPT surgical range that we determined met the general standards for addition to the ASC CPL. These procedures are not excluded from being included on the ASC CPL because they do not generally result in extensive blood loss, require major or prolonged invasion of body cavities, commonly require systemic thrombolytic therapy, or directly involve major blood vessels; are not generally emergent or life-threatening in nature or designated as requiring inpatient care; or can only be reported using a CPT unlisted surgical procedure code or are otherwise excluded under Medicare. Therefore, we believed these procedures may all be appropriately performed in an ASC and proposed to include them on the ASC CPL for CY 2024.

We note that there are statutory and regulatory limitations regarding Medicare coverage and payment for dental services. Section 1862(a)(12) of the Act generally precludes Medicare Part A or Part B payment for services in connection with the care, treatment, filling, removal, or replacement of teeth or structures directly supporting teeth (collectively referred to in this section as ''dental services''). The regulation at § 411.15(i) similarly prohibits payment for dental services. In the CY 2023 PFS final rule (87 FR 69663), we explained that there are certain instances where dental services are so integral to other medically necessary services that they are not in connection with dental services within the meaning of section 1862(a)(12) of the Act. Rather, such dental services are inextricably linked to, and substantially related to the clinical success of, other covered services (hereafter in this section, ''inextricably linked''). To provide greater clarity to current policies, the CY 2023 PFS final rule finalized: (1) a clarification of our interpretation of section 1862(a)(12) of the Act to permit payment for dental services that are inextricably linked to other covered services; (2) clarification and codification of certain longstanding Medicare FFS payment policies for dental services that are inextricably linked to other covered services; (3) that, beginning for CY 2023, Medicare Parts A and B payment can be made for certain dental services inextricably linked to Medicare-covered organ transplant, cardiac valve replacement, or valvuloplasty procedures; and, (4) beginning for CY 2024, that Medicare Parts A and B payment can be made for certain dental services inextricably linked to Medicare-covered services for treatment of head and neck cancers (87 FR 69670 and 69671). For the ASC setting, services must meet all applicable Medicare conditions for coverage and payment to be paid by Medicare, including those as specified under the CY 2023 PFS final rule (87 FR 69687 and 69688) and § 411.15(i)(3). Medicare payment may be made in the ASC setting for dental services for which payment may be made under Medicare Part B, paid under the OPPS, and that meet the ASC CPL criteria. The fact that a drug, device, procedure, or service is assigned a HCPCS code and a payment rate under the ASC payment system indicates only how the product, procedure, or service may be paid if covered by the program. MACs will be involved in the final decision regarding whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. Therefore, even if a code describing a dental service has an associated payment rate on the ASC CPL, Medicare will only make payment for the service if it meets applicable requirements. We also clarify that adding dental procedures to the ASC CPL does not serve as a coverage determination for dental services under general anesthesia. We direct readers to the CY 2024 PFS proposed rule for additional discussion of Medicare coverage and payment for dental services, which is available on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

HCPCS code G0330 covers facility services for dental rehabilitation procedure(s) performed on a patient who requires monitored anesthesia (*e.g.,* general, intravenous sedation (monitored anesthesia care)) and use of an operating room. While G0330 has a broader code descriptor than most of the dental codes proposed to be added to the ASC CPL, we proposed to add G0330 to the ASC CPL. We also proposed that it can only be billed when accompanied by at least one covered ancillary dental service on a specific and definitive list of CDT codes, which can be found in ASC Addendum BB with payment indicator ''D1.'' [201] Performance of at least one of these covered ancillary services is integral to each of the surgical procedures that correspond to G0330. For example, if a patient requires a full mouth debridement to enable a comprehensive periodontal evaluation and diagnosis on a subsequent visit, as described by covered ancillary code CDT code D4355 (Full mouth debridement to enable a comprehensive periodontal evaluation and diagnosis on a subsequent visit), or to enable excision of a gum lesion, as described by CPT 41827 (Excision of lesion or tumor (except listed above), dentoalveolar structures; with complex repair), and this procedure needs to be performed under anesthesia due to patient-specific circumstances, the ASC would bill G0330 with covered ancillary code D4355 to perform the debridement under anesthesia or G0330 with covered ancillary code 41827 to perform the excision service under anesthesia. Additionally, as previously noted, when G0330 is billed on a claim, MACs would determine whether payment can be made for the procedure under § 411.15(i)(3), and whether the procedure was reasonable and

[201] See section XIII.B.6.b for a detailed discussion of payment indicators ''D1'' and ''D2.''

medically necessary before providing payment for the procedure. This claims processing mechanism is discussed in further detail in the covered ancillary services section (section XIII.D.2 of this final rule). Procedures assigned to payment indicator ''D2,'' other than HCPCS code G0330, are not required to be billed with a covered ancillary procedure assigned to payment indicator ''D1'' in order to receive payment for the procedure.

We continue to focus on maximizing patient access to care by adding procedures to the ASC CPL when appropriate. While expanding the ASC CPL offers benefits, such as preserving the capacity of hospitals to treat more acute patients and promoting site neutrality, we also believe that any additions to the CPL should be added in a carefully calibrated fashion to ensure that the procedure is safe to be performed in the ASC setting for a typical Medicare beneficiary. We expect to continue to gradually expand the ASC CPL, as medical practice and technology continue to evolve and advance in future years. We encourage stakeholders to submit procedure recommendations to be added to the ASC CPL, particularly if there is evidence that these procedures meet our criteria and can be safely performed in the ASC setting.

Comment: Commenters supported the proposed addition of 26 dental procedures, noting that access to medically necessary oral health care may be critical to successful outcomes for patients with certain acute conditions. A subset of these commenters requested that CMS extend payment to all inextricably linked and medically necessary dental surgical services paid under the PFS and OPPS to the ASC CPL to better ensure access across settings and reduce administrative burden. One commenter requested that non-surgical dental procedures be added to the CPL to increase access.

Response: We thank commenters for their support and their feedback. We anticipate that we will continue to assess our policies for ASC payment for dental services in future rulemaking. We believe that as we collect data, gather input from the public and interested parties, and learn more about the services performed in the ASC setting, we will be able to make more informed decisions regarding policies for dental services. We encourage interested parties to continue to communicate their concerns and ideas with CMS so that we may address adverse incentives in the health care system.

Comment: A few interested parties expressed disappointment that CMS did not propose any surgical codes suggested by ASCs prior to proposed rulemaking. These commenters felt there was ambiguity and a lack of transparency in the addition of procedures, with CMS not required to provide specific rationales, guidance around supporting documentation, or more clarity on the typical Medicare beneficiary definition. These commenters also requested more information on the pre-proposed rule recommendation process, asking for supporting information and guidance to be published as soon as possible.

Response: We appreciate this input from commenters. After evaluating the procedure recommendations and supporting evidence received during the public comment period, we are adding 11 additional surgical codes to the ASC CPL, as reflected in the Table 123 below. As part of our evaluation process, we assess recommended procedures against the specific list of ASC CPL criteria at 42 CFR 416.166, examining clinical data on these procedures from multiple sites of services, reviewing the literature and experiential data provided in public comments, and examining claims volume to ensure that procedures are not expected to pose a significant risk to beneficiary safety when performed in an ASC. We also provide rationales for codes we do not add to the CPL by procedure category in the final rule each year. We will continue to monitor clinical data on these services in the ASC setting and address any new trends in future rulemaking. We remain open to engaging with interested parties on ways we can make the ASC CPL evaluation process more transparent.

Regarding the pre-proposed rule recommendation process, we have fully developed an online module, which is currently undergoing the Paperwork Reduction Act (PRA) process.[202] [203] We anticipate that this module will be live on January 1, 2024, as discussed in the CY 2023 OPPS/ASC final rule (87 FR 72076).

Comment: Most commenters on this policy recommended specific codes to be added to the ASC CPL including total shoulder arthroplasty, prostate ablations, cardiac ablations, endoscopic sleeve gastroplasty, and dental procedures. We received over 200 procedure recommendations for the CPL, listed in Table 124, below. There were multiple letters from orthopedic providers requesting total shoulder arthroplasty be added to the CPL, based on claims of safe and routine performance in ASCs with good outcomes, high patient satisfaction, and financial savings.

Response: We thank commenters for their recommendations. We individually assessed each of the recommended procedures, evaluating clinical data on these procedures from multiple sites of service, reviewing the literature and experiential data provided in public comments, and examining claims volume to determine whether these procedures meet each of the regulatory criteria at 42 CFR 416.166.

Based on our review of the clinical characteristics of the procedures and their similarity to other procedures that are currently on the ASC CPL, we believe that 11 procedures (HCPCS code C9734 and CPT codes 21194, 21195, 23470, 23472, 27702, 27006, 29868, 33289, 37192, 60260) out of the 235 procedure recommendations we received can be safely performed for the typical beneficiary in the ASC setting and meet the general standards and exclusion criteria for the ASC CPL as set forth in 42 CFR 416.166(b) and (c), respectively. These 11 codes correspond to procedures that are frequently performed in outpatient settings and increasingly show lower risks of serious complications and inpatient admissions. We agree with commenters who provided support and evidence stating that these procedures can be safely performed in an ASC setting. We will continue to monitor clinical data on these services in the ASC setting and address any new trends in future rulemaking These procedures, listed in Table 123 below, are:

- 21194 (Reconstruction of mandibular rami, horizontal, vertical, c, or l osteotomy; with bone graft (includes obtaining graft))
- 21195 (Reconstruction of mandibular rami and/or body, sagittal split; without internal rigid fixation)
- 23470 (Arthroplasty, glenohumeral joint; hemiarthroplasty)
- 23472 (Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))
- 27006 (Tenotomy, abductors and/or extensor(s) of hip, open (separate procedure))
- 27702 (Arthroplasty, ankle; with implant (total ankle))

[202] 88 FR 57462 (August 23, 2023); *https://www.federalregister.gov/documents/2023/08/23/2023-18154/agency-information-collection-activities-submission-for-omb-review-comment-request.*

[203] 88 FR 39255 (June 15, 2023); *https://www.federalregister.gov/documents/2023/06/15/2023-12773/agency-information-collection-activities-proposed-collection-comment-request.*

- 29868 (Arthroscopy, knee, surgical; meniscal transplantation (includes arthrotomy for meniscal insertion), medial or lateral)
- 33289 (Transcatheter implantation of wireless pulmonary artery pressure sensor for long-term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed)
- 37192 (Repositioning of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed)
- 60260 (Thyroidectomy, removal of all remaining thyroid tissue following previous removal of a portion of thyroid)
- C9734 (Focused ultrasound ablation/therapeutic intervention, other than uterine leiomyomata, with magnetic resonance (mr) guidance)

Due to patient safety concerns, we believe the remaining recommended procedures should not be added to the ASC CPL. Below, we explain our rationale for not including the 224 remaining recommended procedures, organized by category.

- *10 cardiovascular codes,* including arterial revascularization, coronary atherectomies, cardioversion, and echocardiography. The coronary intervention codes have associated inpatient admissions, where the beneficiary requires active medical monitoring and care at midnight following the procedure. Additionally, these procedures would pose a significant safety risk to beneficiaries without post-operative inpatient care and because patients requiring these procedures are often higher risk at baseline. The cardioversion and echocardiography codes are non-surgical procedures, which means they would not qualify for addition to the ASC CPL, and most of these codes are not integral to a covered surgical procedure.
- *77 dental codes,* including resin composites, amalgam, porcelain crowns, prefabricated crows, pulpal therapy, endodontic therapy, gingivectomy, and lesion excision codes. Many of the codes recommended, including the gingivectomies, periodontal scaling, and impacted tooth removal, are already on the ASC CPL as separately payable surgical procedures. A subset of these procedures, including coronectomies and lesion excisions, are not currently separately paid in the OPPS and would not be eligible to be added to the ASC CPL. The remaining dental recommendations are ancillary codes that are currently on the covered ancillary services list, and we believe they are appropriately placed as integral to the G0330 code for CY 2024.
- *3 endocrine codes,* including thyroidectomy and parathyroidectomy procedures. While these procedures have increasing outpatient volume, there are inpatient admissions associated with these procedures, indicating the beneficiary would be expected to stay past midnight following the procedure. Additionally, the intraservice time for these procedures can vary greatly, often becoming a prolonged invasion of body cavities.
- 23 *gastrointestinal codes,* including appendectomy, proctectomy, hernia repairs, gastric motility studies, and laparoscopic gastric restrictive procedures. Several of the hernia repair and protectomy procedures are still on the inpatient only list and would not be eligible for the ASC CPL. For other surgical procedures, while some of these procedures show increasing outpatient volume, many still have inpatient admissions and potential procedure risks, indicating that the beneficiary would require active monitoring and care past midnight following the procedure. Additionally, these procedures can involve prolonged invasion of body cavities, and be life-threatening or emergent in nature. Additionally, several of these procedures are less commonly done in Medicare patients and more frequently performed in a younger population. The study and imaging codes are non-surgical and not eligible for addition to the CPL.
- *8 genitourinary codes,* including hysterectomy, cystectomy, and prostatectomy codes. Several of these codes are not commonly done in Medicare populations. Additionally, these procedures would require active medical monitoring and care at midnight following the procedure and pose a significant safety risk to beneficiaries when performed in an ASC, as some require major or prolonged invasion of body cavities.
- *19 medicine codes,* including esophageal recordings, intra-atrial and intra-ventricular recordings, comprehensive electrophysiologic evaluations. These codes are inherently non-surgical and would not qualify for the ASC CPL.
- *17 musculoskeletal codes,* including total ankle arthroplasty procedures, mandibular reconstruction, osteotomy, and midface reconstruction. Several of these procedures are inpatient only and would not qualify for the ASC CPL. Although a few of these procedures have some claims volume in the outpatient setting, many are mostly performed in the inpatient setting. These are complex procedures with inpatient admissions and multiple post-operative inpatient days, indicating that the beneficiary would require active monitoring and care past midnight following the procedure.
- *1 nervous system code,* which is a laminectomy procedure. This code has associated inpatient admissions and multiple post-operative days, indicating that the beneficiary would require active monitoring and care past midnight following the procedure. This procedure could also pose a significant safety risk to the beneficiary when close post-operative surveillance is not provided.
- *22 radiology codes,* including angiography, aortography, venography, and computed tomography. Most of these codes are currently on the covered ancillary services list. As they are non-surgical, they would not qualify as separately payable surgical procedures on the ASC CPL.
- *8 unlisted codes.* Unlisted codes are not eligible to be added to the ASC CPL.
- *35 vascular codes,* including catheter placements. Nearly all the catheter placement codes recommended are already on the ASC CPL as packaged procedures. We believe this placement is appropriate, given that these procedures are in support of a service. The remaining vascular codes related to atherectomies and revascularization directly involve major blood vessels and many of these procedures have associated inpatient admissions, where the beneficiary requires active medical monitoring and care at midnight following the procedure.

Given these considerations, we believe that these 224 codes do not meet the criteria to be included on the ASC CPL due to the following factors: likelihood of inpatient admissions, the need for multiple-day stays past midnight, safety risks posed to the typical beneficiary without active post-operative monitoring, involvement of major blood vessels, prolonged invasion of a body cavity, the risk of being life-threatening or emergent, less commonly performed in Medicare beneficiaries, or are non-surgical.

Therefore, in this CY 2023 OPPS/ASC final rule with comment period, we are finalizing 37 procedures, 26 proposed dental procedures and 11 additional

procedures evaluated during the public comment period, to be added to the ASC CPL. These procedures are listed below in Table 123 of this CY 2024 OPPS/ASC final rule with comment period.

Comment: Commenters also offered suggestions on different approaches for CMS to consider for the ASC CPL, including standardizing CPL additions by covering all surgical procedures paid separately under the OPPS, unless the procedure meets the exclusionary criteria, and allowing clinicians to decide whether their patients are eligible for care in an ASC.

Response: We thank the commenters for their suggestions. We believe that standardizing this process by adding all eligible procedures paid separately under the OPPS and excluding certain procedures for safety risks would not produce a different outcome than our current review process, since we are already adding procedures that meet these criteria to the CPL. As we previously discussed in the CY 2022 OPPS/ASC final rule (86 FR 63779), we believe that reviewing procedures against the general standards and exclusion criteria before adding them to the ASC CPL is the most appropriate way to ensure that procedures that cannot be safely performed on an ambulatory basis for Medicare beneficiaries are not added to the ASC CPL and payable under the ASC payment system. We will take these suggestions into consideration for future rulemaking.

BILLING CODE 4120–01–P

TABLE 123: SURGICAL PROCEDURES ADDED TO THE ASC CPL IN CY 2024

CY 2024 CPT/HCPCS/CDT Code	CY 2024 Long Descriptor	Final CY 2024 ASC Payment Indicator
D4210	Gingivectomy or gingivoplasty - four or more contiguous teeth or tooth bounded spaces per quadrant	D2
D4211	Gingivectomy or gingivoplasty - one to three contiguous teeth or tooth bounded spaces per quadrant	D2
D4212	Gingivectomy or gingivoplasty to allow access for restorative procedure, per tooth	D2
D4260	Osseous surgery (including elevation of a full thickness flap entry and closure) - four or more contiguous teeth or tooth bounded spaces per quadrant	D2
D4263	Bone replacement graft - retained natural tooth - first site in quadrant	D2
D4270	Pedicle soft tissue graft procedure	D2
D4273	Autogenous connective tissue graft procedure (including donor and recipient surgical sites) first tooth, implant, or edentulous tooth position in graft	D2
D7111	Extraction, coronal remnants - primary tooth	D2
D7140	Extraction – erupted tooth or exposed root (elevation and/or forcep removal)	D2
D7210	Surgical removal of an erupted tooth requiring removal of bone and/or sectioning of tooth and including elevation of mucoperiosteal flap if indicated	D2
D7220	Removal of impacted tooth – soft tissue	D2
D7230	Removal of impacted tooth – partially bony	D2
D7240	Removal of impacted tooth – completely bony	D2
D7241	Removal of impacted tooth – completely bony, with unusual surgical complications	D2
D7250	Surgical removal of residual tooth roots (cutting procedure)	D2
D7270	Tooth reimplantation and/or stabilization of accidentally evulsed or displaced tooth	D2
D7310	Alveoloplasty in conjunction with extractions - four or more teeth or tooth spaces, per quadrant	D2
D7311	Alveoloplasty in conjunction with extractions - one to three teeth or tooth spaces, per quadrant	D2

CY 2024 CPT/HCPCS/CDT Code	CY 2024 Long Descriptor	Final CY 2024 ASC Payment Indicator
D7472	Removal of torus palatinus	D2
D7473	Removal of torus mandibularis	D2
D7510	Incision and drainage of abscess-intraoral soft tissue	D2
D7511	Incision and drainage of abscess - intraoral soft tissue - complicated (includes drainage of multiple fascial spaces)	D2
D7520	Incision and drainage of abscess-extraoral soft tissue	D2
D7550	Partial ostectomy/sequestrectomy for removal of non-vital bone	D2
D7950	Osseous, osteoperiosteal, or cartilage graft of the mandible or maxilla - autogenous or nonautogenous, by report	D2
G0330	Facility services for dental rehabilitation procedure(s) performed on a patient who requires monitored anesthesia (e.g., general, intravenous sedation (monitored anesthesia care) and use of an operating room	D2
33289	Transcatheter implantation of wireless pulmonary artery pressure sensor for long-term hemodynamic monitoring, including deployment and calibration of the sensor, right heart catheterization, selective pulmonary catheterization, radiological supervision and interpretation, and pulmonary artery angiography, when performed	J8
60260	Thyroidectomy, removal of all remaining thyroid tissue following previous removal of a portion of thyroid	G2
C9734	Focused ultrasound ablation/therapeutic intervention, other than uterine leiomyomata, with magnetic resonance (mr) guidance	G2
21194	Reconstruction of mandibular rami, horizontal, vertical, c, or l osteotomy; with bone graft (includes obtaining graft)	G2
21195	Reconstruction of mandibular rami and/or body, sagittal split; without internal rigid fixation	J8
23472	Arthroplasty, glenohumeral joint; total shoulder (glenoid and proximal humeral replacement (eg, total shoulder))	J8
27006	Tenotomy, abductors and/or extensor(s) of hip, open (separate procedure)	G2

CY 2024 CPT/HCPCS/CDT Code	CY 2024 Long Descriptor	Final CY 2024 ASC Payment Indicator
29868	Arthroscopy, knee, surgical; meniscal transplantation (includes arthrotomy for meniscal insertion), medial or lateral	G2
23470	Arthroplasty, glenohumeral joint; hemiarthroplasty	J8
27702	Arthroplasty, ankle; with implant (total ankle)	J8
37192	Repositioning of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed	J8

TABLE 124: SURGICAL PROCEDURES RECOMMENDATIONS RECEIVED FROM COMMENTERS

CY 2024 CPT/HCPCS/CDT Code	CY 2024 Long Descriptor	Final CY 2024 ASC Payment Indicator
23473	Revision of total shoulder arthroplasty, including allograft when performed; humeral or glenoid component	X5
21141	Reconstruction midface, lefort i; single piece, segment movement in any direction (eg, for long face syndrome), without bone graft	X5
21142	Reconstruction midface, lefort i; 2 pieces, segment movement in any direction, without bone graft	X5
21143	Reconstruction midface, lefort i; 3 or more pieces, segment movement in any direction, without bone graft	X5
21193	Reconstruction of mandibular rami, horizontal, vertical, c, or l osteotomy; without bone graft	X5
21196	Reconstruction of mandibular rami and/or body, sagittal split; with internal rigid fixation	X5
21422	Open treatment of palatal or maxillary fracture (lefort i type);	X5
21470	Open treatment of complicated mandibular fracture by multiple surgical approaches including internal fixation, interdental fixation, and/or wiring of dentures or splints	X5
22558	Arthrodesis, anterior interbody technique, including minimal discectomy to prepare interspace (other than for decompression); lumbar	C5
22633	Arthrodesis, combined posterior or posterolateral technique with posterior interbody technique including laminectomy and/or discectomy sufficient to prepare interspace (other than for decompression), single interspace; lumbar	X5
23474	Revision of total shoulder arthroplasty, including allograft when performed; humeral and glenoid component	C5
23929	Unlisted procedure, shoulder	U5
24999	Unlisted procedure, humerus or elbow	U5
26989	Unlisted procedure, hands or fingers	U5
27235	Percutaneous skeletal fixation of femoral fracture, proximal end, neck	X5
27299	Unlisted procedure, pelvis or hip joint	U5
27450	Osteotomy, femur, shaft or supracondylar; with fixation	C5

27485	Arrest, hemiepiphyseal, distal femur or proximal tibia or fibula (eg, genu varus or valgus)	X5
27486	Revision of total knee arthroplasty, with or without allograft; 1 component	C5
27535	Open treatment of tibial fracture, proximal (plateau); unicondylar, includes internal fixation, when performed	C5
27599	Unlisted procedure, femur or knee	U5
28805	Amputation, foot; transmetatarsal	X5
28899	Unlisted procedure, foot or toes	U5
36005	Injection procedure for extremity venography (including introduction of needle or intracatheter)	N1
36010	Introduction of catheter, superior or inferior vena cava	N1
36011	Selective catheter placement, venous system; first order branch (eg, renal vein, jugular vein)	N1
36012	Selective catheter placement, venous system; second order, or more selective, branch (eg, left adrenal vein, petrosal sinus)	N1
36100	Introduction of needle or intracatheter, carotid or vertebral artery	N1
36120	Introduction of needle or intracatheter; retrograde brachial artery	N/A
36140	Introduction of needle or intracatheter, upper or lower extremity artery	N1
36200	Introduction of catheter, aorta	N1
36215	Selective catheter placement, arterial system; each first order thoracic or brachiocephalic branch, within a vascular family	N1
36216	Selective catheter placement, arterial system; initial second order thoracic or brachiocephalic branch, within a vascular family	N1
36217	Selective catheter placement, arterial system; initial third order or more selective thoracic or brachiocephalic branch, within a vascular family	N1
36218	Selective catheter placement, arterial system; additional second order, third order, and beyond, thoracic or brachiocephalic branch, within a vascular family (list in addition to code for initial second or third order vessel as appropriate)	N1
36221	Non-selective catheter placement, thoracic aorta, with angiography of the extracranial carotid, vertebral, and/or intracranial vessels, unilateral or bilateral, and all associated radiological supervision and interpretation, includes angiography of the cervicocerebral arch, when performed	N1

36222	Selective catheter placement, common carotid or innominate artery, unilateral, any approach, with angiography of the ipsilateral extracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the cervicocerebral arch, when performed	N1
36223	Selective catheter placement, common carotid or innominate artery, unilateral, any approach, with angiography of the ipsilateral intracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the extracranial carotid and cervicocerebral arch, when performed	N1
36224	Selective catheter placement, internal carotid artery, unilateral, with angiography of the ipsilateral intracranial carotid circulation and all associated radiological supervision and interpretation, includes angiography of the extracranial carotid and cervicocerebral arch, when performed	N1
36225	Selective catheter placement, subclavian or innominate artery, unilateral, with angiography of the ipsilateral vertebral circulation and all associated radiological supervision and interpretation, includes angiography of the cervicocerebral arch, when performed	N1
36226	Selective catheter placement, vertebral artery, unilateral, with angiography of the ipsilateral vertebral circulation and all associated radiological supervision and interpretation, includes angiography of the cervicocerebral arch, when performed	N1
36227	Selective catheter placement, external carotid artery, unilateral, with angiography of the ipsilateral external carotid circulation and all associated radiological supervision and interpretation (list separately in addition to code for primary procedure)	N1
36228	Selective catheter placement, each intracranial branch of the internal carotid or vertebral arteries, unilateral, with angiography of the selected vessel circulation and all associated radiological supervision and interpretation (eg, middle cerebral artery, posterior inferior cerebellar artery) (list separately in addition to code for primary procedure)	N1
36245	Selective catheter placement, arterial system; each first order abdominal, pelvic, or lower extremity artery branch, within a vascular family	N1
36246	Selective catheter placement, arterial system; initial second order abdominal, pelvic, or lower extremity artery branch, within a vascular family	N1

36247	Selective catheter placement, arterial system; initial third order or more selective abdominal, pelvic, or lower extremity artery branch, within a vascular family	N1
36248	Selective catheter placement, arterial system; additional second order, third order, and beyond, abdominal, pelvic, or lower extremity artery branch, within a vascular family (list in addition to code for initial second or third order vessel as appropriate)	N1
36251	Selective catheter placement (first-order), main renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture and catheter placement(s), fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; unilateral	N1
36252	Selective catheter placement (first-order), main renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture and catheter placement(s), fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; bilateral	N1
36253	Superselective catheter placement (one or more second order or higher renal artery branches) renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture, catheterization, fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; unilateral	N1
36254	Superselective catheter placement (one or more second order or higher renal artery branches) renal artery and any accessory renal artery(s) for renal angiography, including arterial puncture, catheterization, fluoroscopy, contrast injection(s), image postprocessing, permanent recording of images, and radiological supervision and interpretation, including pressure gradient measurements when performed, and flush aortogram when performed; bilateral	N1
37183	Revision of transvenous intrahepatic portosystemic shunt(s) (tips) (includes venous access, hepatic and portal vein catheterization, portography with hemodynamic evaluation, intrahepatic tract	X5

	recannulization/dilatation, stent placement and all associated imaging guidance and documentation)	
37191	Insertion of intravascular vena cava filter, endovascular approach including vascular access, vessel selection, and radiological supervision and interpretation, intraprocedural roadmapping, and imaging guidance (ultrasound and fluoroscopy), when performed	X5
41899	Unlisted procedure, dentoalveolar structures	U5
44180	Laparoscopy, surgical, enterolysis (freeing of intestinal adhesion) (separate procedure)	X5
44970	Laparoscopy, surgical, appendectomy	X5
45120	Proctectomy, complete (for congenital megacolon), abdominal and perineal approach; with pull-through procedure and anastomosis (eg, swenson, duhamel, or soave type operation)	C5
46999	Unlisted procedure, anus	U5
49596	Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), initial, including implantation of mesh or other prosthesis when performed, total length of defect(s); greater than 10 cm, incarcerated or strangulated	C5
49616	Repair of anterior abdominal hernia(s) (ie, epigastric, incisional, ventral, umbilical, spigelian), any approach (ie, open, laparoscopic, robotic), recurrent, including implantation of mesh or other prosthesis when performed, total length of defect(s); 3 cm to 10 cm, incarcerated or strangulated	C5
50543	Laparoscopy, surgical; partial nephrectomy	X5
50544	Laparoscopy, surgical; pyeloplasty	X5
51990	Laparoscopy, surgical; urethral suspension for stress incontinence	X5
54332	1-stage proximal penile or penoscrotal hypospadias repair requiring extensive dissection to correct chordee and urethroplasty by use of skin graft tube and/or island flap	X5
55866	Laparoscopy, surgical prostatectomy, retropubic radical, including nerve sparing, includes robotic assistance, when performed	X5
58270	Vaginal hysterectomy, for uterus 250 g or less; with repair of enterocele	X5
58740	Lysis of adhesions (salpingolysis, ovariolysis)	C5

58925	Ovarian cystectomy, unilateral or bilateral	X5
60252	Thyroidectomy, total or subtotal for malignancy; with limited neck dissection	X5
60254	Thyroidectomy, total or subtotal for malignancy; with radical neck dissection	C5
60502	Parathyroidectomy or exploration of parathyroid(s); re-exploration	X5
63267	Laminectomy for excision or evacuation of intraspinal lesion other than neoplasm, extradural; lumbar	X5
75571	Computed tomography, heart, without contrast material, with quantitative evaluation of coronary calcium	N1
75572	Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology (including 3d image postprocessing, assessment of cardiac function, and evaluation of venous structures, if performed)	Z2
75573	Computed tomography, heart, with contrast material, for evaluation of cardiac structure and morphology in the setting of congenital heart disease (including 3d image postprocessing, assessment of left ventricular [lv] cardiac function, right ventricular [rv] structure and function and evaluation of vascular structures, if performed)	Z2
75574	Computed tomographic angiography, heart, coronary arteries and bypass grafts (when present), with contrast material, including 3d image postprocessing (including evaluation of cardiac structure and morphology, assessment of cardiac function, and evaluation of venous structures, if performed)	Z2
75600	Aortography, thoracic, without serialography, radiological supervision and interpretation	N1
75605	Aortography, thoracic, by serialography, radiological supervision and interpretation	N1
75625	Aortography, abdominal, by serialography, radiological supervision and interpretation	N1
75630	Aortography, abdominal plus bilateral iliofemoral lower extremity, catheter, by serialography, radiological supervision and interpretation	N1
75658	Angiography, brachial, retrograde, radiological supervision and interpretation	N1
75710	Angiography, extremity, unilateral, radiological supervision and interpretation	N1
75716	Angiography, extremity, bilateral, radiological supervision and interpretation	N1
75726	Angiography, visceral, selective or supraselective (with or without flush aortogram), radiological supervision and interpretation	N1

75736	Angiography, pelvic, selective or supraselective, radiological supervision and interpretation	N1
75756	Angiography, internal mammary, radiological supervision and interpretation	N1
75774	Angiography, selective, each additional vessel studied after basic examination, radiological supervision and interpretation (list separately in addition to code for primary procedure)	N1
75820	Venography, extremity, unilateral, radiological supervision and interpretation	N1
75822	Venography, extremity, bilateral, radiological supervision and interpretation	Z3
75825	Venography, caval, inferior, with serialography, radiological supervision and interpretation	N1
75827	Venography, caval, superior, with serialography, radiological supervision and interpretation	N1
75831	Venography, renal, unilateral, selective, radiological supervision and interpretation	N1
75833	Venography, renal, bilateral, selective, radiological supervision and interpretation	N1
75860	Venography, venous sinus (eg, petrosal and inferior sagittal) or jugular, catheter, radiological supervision and interpretation	N1
75970	Transcatheter biopsy, radiological supervision and interpretation	N1
91010	Esophageal motility (manometric study of the esophagus and/or gastroesophageal junction) study with interpretation and report;	S1
91013	Esophageal motility (manometric study of the esophagus and/or gastroesophageal junction) study with interpretation and report; with stimulation or perfusion (eg, stimulant, acid or alkali perfusion) (list separately in addition to code for primary procedure)	S1
91020	Gastric motility (manometric) studies	S1
91022	Duodenal motility (manometric) study	S1
91030	Esophagus, acid perfusion (bernstein) test for esophagitis	S1
91034	Esophagus, gastroesophageal reflux test; with nasal catheter ph electrode(s) placement, recording, analysis and interpretation	S1
91037	Esophageal function test, gastroesophageal reflux test with nasal catheter intraluminal impedance electrode(s) placement, recording, analysis and interpretation;	S1
91038	Esophageal function test, gastroesophageal reflux test with nasal catheter intraluminal impedance electrode(s) placement, recording, analysis and	S1

	interpretation; prolonged (greater than 1 hour, up to 24 hours)	
91040	Esophageal balloon distension study, diagnostic, with provocation when performed	S1
91110	Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus through ileum, with interpretation and report	S1
91111	Gastrointestinal tract imaging, intraluminal (eg, capsule endoscopy), esophagus with interpretation and report	S1
91112	Gastrointestinal transit and pressure measurement, stomach through colon, wireless capsule, with interpretation and report	S1
91117	Colon motility (manometric) study, minimum 6 hours continuous recording (including provocation tests, eg, meal, intracolonic balloon distension, pharmacologic agents, if performed), with interpretation and report	S1
91120	Rectal sensation, tone, and compliance test (ie, response to graded balloon distention)	S1
91122	Anorectal manometry	S1
92924	Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; single major coronary artery or branch	S1
92925	Percutaneous transluminal coronary atherectomy, with coronary angioplasty when performed; each additional branch of a major coronary artery (list separately in addition to code for primary procedure)	S1
92937	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	S1
92938	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of intracoronary stent, atherectomy and angioplasty, including distal protection when performed; each additional branch subtended by the bypass graft (list separately in addition to code for primary procedure)	S1
92960	Cardioversion, elective, electrical conversion of arrhythmia; external	S1
92961	Cardioversion, elective, electrical conversion of arrhythmia; internal (separate procedure)	S1
93306	Echocardiography, transthoracic, real-time with image documentation (2d), includes m-mode recording, when performed, complete, with	S1

	spectral doppler echocardiography, and with color flow doppler echocardiography	
93312	Echocardiography, transesophageal, real-time with image documentation (2d) (with or without m-mode recording); including probe placement, image acquisition, interpretation and report	S1
93318	Echocardiography, transesophageal (tee) for monitoring purposes, including probe placement, real time 2-dimensional image acquisition and interpretation leading to ongoing (continuous) assessment of (dynamically changing) cardiac pumping function and to therapeutic measures on an immediate time basis	S1
93600	Bundle of his recording	S1
93602	Intra-atrial recording	S1
93603	Right ventricular recording	S1
93610	Intra-atrial pacing	S1
93612	Intraventricular pacing	S1
93615	Esophageal recording of atrial electrogram with or without ventricular electrogram(s);	S1
93616	Esophageal recording of atrial electrogram with or without ventricular electrogram(s); with pacing	S1
93618	Induction of arrhythmia by electrical pacing	S1
93619	Comprehensive electrophysiologic evaluation with right atrial pacing and recording, right ventricular pacing and recording, his bundle recording, including insertion and repositioning of multiple electrode catheters, without induction or attempted induction of arrhythmia	S1
93620	Comprehensive electrophysiologic evaluation including insertion and repositioning of multiple electrode catheters with induction or attempted induction of arrhythmia; with right atrial pacing and recording, right ventricular pacing and recording, his bundle recording	S1
93623	Programmed stimulation and pacing after intravenous drug infusion (list separately in addition to code for primary procedure)	N1
93624	Electrophysiologic follow-up study with pacing and recording to test effectiveness of therapy, including induction or attempted induction of arrhythmia	S1
93642	Electrophysiologic evaluation of single or dual chamber transvenous pacing cardioverter-defibrillator (includes defibrillation threshold	S1

	evaluation, induction of arrhythmia, evaluation of sensing and pacing for arrhythmia termination, and programming or reprogramming of sensing or therapeutic parameters)	
93650	Intracardiac catheter ablation of atrioventricular node function, atrioventricular conduction for creation of complete heart block, with or without temporary pacemaker placement	S1
93653	Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and his bundle recording, when performed; with treatment of supraventricular tachycardia by ablation of fast or slow atrioventricular pathway, accessory atrioventricular connection, cavo-tricuspid isthmus or other single atrial focus or source of atrial re-entry	S1
93654	Comprehensive electrophysiologic evaluation with insertion and repositioning of multiple electrode catheters, induction or attempted induction of an arrhythmia with right atrial pacing and recording and catheter ablation of arrhythmogenic focus, including intracardiac electrophysiologic 3-dimensional mapping, right ventricular pacing and recording, left atrial pacing and recording from coronary sinus or left atrium, and his bundle recording, when performed; with treatment of ventricular tachycardia or focus of ventricular ectopy including left ventricular pacing and recording, when performed	S1
93655	Intracardiac catheter ablation of a discrete mechanism of arrhythmia which is distinct from the primary ablated mechanism, including repeat diagnostic maneuvers, to treat a spontaneous or induced arrhythmia (list separately in addition to code for primary procedure)	S1
93656	Comprehensive electrophysiologic evaluation including transseptal catheterizations, insertion and repositioning of multiple electrode catheters with intracardiac catheter ablation of atrial fibrillation by pulmonary vein isolation, including intracardiac electrophysiologic 3-dimensional mapping, intracardiac echocardiography including imaging supervision and interpretation, induction or attempted induction of an arrhythmia including left or right atrial pacing/recording, right ventricular	S1

	pacing/recording, and his bundle recording, when performed	
93657	Additional linear or focal intracardiac catheter ablation of the left or right atrium for treatment of atrial fibrillation remaining after completion of pulmonary vein isolation (list separately in addition to code for primary procedure)	S1
93660	Evaluation of cardiovascular function with tilt table evaluation, with continuous ECG monitoring and intermittent blood pressure monitoring, with or without pharmacological intervention	S1
0780T	Instillation of fecal microbiota suspension via rectal enema into lower gastrointestinal tract	S1
C9602	Percutaneous transluminal coronary atherectomy, with drug eluting intracoronary stent, with coronary angioplasty when performed; single major coronary artery or branch	X5
C9603	Percutaneous transluminal coronary atherectomy, with drug-eluting intracoronary stent, with coronary angioplasty when performed; each additional branch of a major coronary artery (list separately in addition to code for primary procedure)	X5
C9604	Percutaneous transluminal revascularization of or through coronary artery bypass graft (internal mammary, free arterial, venous), any combination of drug-eluting intracoronary stent, atherectomy and angioplasty, including distal protection when performed; single vessel	X5
C9607	Percutaneous transluminal revascularization of chronic total occlusion, coronary artery, coronary artery branch, or coronary artery bypass graft, any combination of drug-eluting intracoronary stent, atherectomy and angioplasty; single vessel	X5
C9780	Insertion of central venous catheter through central venous occlusion via inferior and superior approaches (e.g., inside-out technique), including imaging guidance	X5
C9784	Gastric restrictive procedure, endoscopic sleeve gastroplasty, with esophagogastroduodenoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components	X5
C9785	Endoscopic outlet reduction, gastric pouch application, with endoscopy and intraluminal tube insertion, if performed, including all system and tissue anchoring components	X5
D2140	Amalgam-one surface, primary or permanent	D1
D2150	Amalgam-two surfaces, primary or permanent	D1

D2160	Amalgam-three surfaces, primary or permanent	D1
D2161	Amalgam-four or more surfaces, primary or permanent	D1
D2330	Resin-one surface, anterior	D1
D2331	Resin-two surfaces, anterior	D1
D2332	Resin-three surfaces, anterior	D1
D2335	Resin-four or more surfaces or involving incisal angle (anterior)	D1
D2390	Resin-based composite crown, anterior	D1
D2391	Resin-based composite - one surface, posterior	D1
D2392	Resin-based composite - two surfaces, posterior	D1
D2393	Resin-based composite - three surfaces, posterior	D1
D2394	Resin-based composite - four or more surfaces, posterior	D1
D2740	Crown - porcelain/ceramic	D1
D2750	Crown-porcelain fused to high noble metal	D1
D2751	Crown-porcelain fused to predominantly base metal	D1
D2752	Crown-porcelain fused to noble metal	D1
D2791	Crown-full cast predominantly base metal	D1
D2799	Interim crown - further treatment or completion of diagnosis necessary prior to final impression	D1
D2920	Re-cement or re-bond crown	D1
D2929	Prefabricated porcelain/ceramic crown - primary tooth	D1
D2930	Prefabricated stainless steel crown-primary tooth	D1
D2931	Prefabricated stainless steel crown-permanent tooth	D1
D2932	Prefabricated resin crown	D1
D2933	Prefabricated stainless steel crown with resin window	D1
D2934	Prefabricated esthetic coated stainless steel crown - primary tooth	D1

D2940	Protective restoration	D1
D2941	Interim therapeutic restoration - primary dentition	D1
D2950	Core build-up, including any pins when required	D1
D2951	Pin retention-per tooth, in addition to restoration	D1
D2952	Post and core in addition to crown, indirectly fabricated	D1
D2954	Prefabricated post and core in addition to crown	D1
D3220	Therapeutic pulpotomy (excluding final restoration) removal of pulp coronal to the dentinocemental junction and application of medicament	D1
D3222	Partial pulpotomy for apexogenesis - permanent tooth with incomplete root development	D1
D3230	Pulpal therapy (resorbable filling)-anterior, primary tooth (excluding final restoration)	D1
D3240	Pulpal therapy (resorbable filling)-posterior, primary tooth (excluding final restoration)	D1
D3310	Endodontic therapy, anterior tooth (excluding final restoration)	D1
D3320	Endodontic therapy, premolar tooth (excluding final restoration)	D1
D3330	Endodontic therapy, molar tooth (excluding final restoration)	D1
D3460	Endodontic endosseous implant	D1
D3910	Surgical procedure for isolation of tooth with rubber dam	D1
D4210	Gingivectomy or gingivoplasty - four or more contiguous teeth or tooth bounded spaces per quadrant	D2
D4211	Gingivectomy or gingivoplasty - one to three contiguous teeth or tooth bounded spaces per quadrant	D2
D4212	Gingivectomy or gingivoplasty to allow access for restorative procedure, per tooth	D2
D4260	Osseous surgery (including elevation of a full thickness flap entry and closure) - four or more contiguous teeth or tooth bounded spaces per quadrant	D2
D4263	Bone replacement graft - retained natural tooth - first site in quadrant	D2
D4270	Pedicle soft tissue graft procedure	D2

D4273	Autogenous connective tissue graft procedure (including donor and recipient surgical sites) first tooth, implant, or edentulous tooth position in graft	D2
D4341	Periodontal scaling and root planing - four or more teeth per quadrant	D1
D4342	Periodontal scaling and root planing - one to three teeth, per quadrant	D1
D4346	Scaling in presence of generalized moderate or severe gingival inflammation - full mouth, after oral evaluation	D1
D4355	Full mouth debridement to enable a comprehensive periodontal evaluation and diagnosis on a subsequent visit	D1
D4910	Periodontal maintenance	D1
D7111	Extraction, coronal remnants - primary tooth	D2
D7140	Extraction – erupted tooth or exposed root (elevation and/or forcep removal)	D2
D7210	Surgical removal of an erupted tooth requiring removal of bone and/or sectioning of tooth and including elevation of mucoperiosteal flap if indicated	D2
D7220	Removal of impacted tooth – soft tissue	D2
D7230	Removal of impacted tooth – partially bony	D2
D7240	Removal of impacted tooth – completely bony	D2
D7251	Coronectomy - intentional partial tooth removal, impacted teeth only	M6
D7280	Exposure of an unerupted tooth	M6
D7283	Placement of device to facilitate eruption of impacted tooth	B5
D7320	Alveoloplasty not in conjunction with extractions - four or more teeth or tooth spaces, per quadrant	M6
D7321	Alveoloplasty not in conjunction with extractions - one to three teeth or tooth spaces, per quadrant	B5
D7410	Excision of benign lesion up to 1.25 cm	M6
D7411	Excision of benign lesion greater than 1.25 cm	M6
D7412	Excision of benign lesion, complicated	M6
D7413	Excision of malignant lesion up to 1.25 cm	M6
D7414	Excision of malignant lesion greater than 1.25 cm	M6

D7415	Excision of malignant lesion, complicated	M6
D7440	Excision of malignant tumor-lesion diameter up to 1.25 cm	M6
D7441	Excision of malignant tumor-lesion diameter greater than 1.25 cm	M6
D7450	Removal of benign odontogenic cyst or tumor-lesion diameter up to 1.25 cm	M6
D7451	Removal of benign odontogenic cyst or tumor-lesion diameter greater than 1.25 cm	M6
D7471	Removal of lateral exostosis (maxilla or mandible)	M6
D7530	Removal of foreign body from mucosa, skin, or subcutaneous alveolar tissue	M6
D7540	Removal of reaction-producing foreign bodies-musculoskeletal system	M6

BILLING CODE 4120–01–C

3. Covered Ancillary Services

Covered ancillary services are specified in § 416.164(b) and, as stated previously, are eligible for separate ASC payment. As provided at § 416.164(b), we make separate ASC payments for ancillary items and services when they are provided integral to ASC covered surgical procedures that include the following: (1) brachytherapy sources; (2) certain implantable items that have pass-through payment status under the OPPS; (3) certain items and services that we designate as contractor-priced, including, but not limited to, procurement of corneal tissue; (4) certain drugs and biologicals for which separate payment is allowed under the OPPS; (5) certain radiology services for which separate payment is allowed under the OPPS; and (6) non-opioid pain management drugs that function as a supply when used in a surgical procedure. Payment for ancillary items and services that are not paid separately under the ASC payment system is packaged into the ASC payment for the covered surgical procedure.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59062 and 59063), consistent with the established ASC payment system policy (72 FR 42497), we finalized the policy to update the ASC list of covered ancillary services to reflect the payment status for the services under the OPPS and to continue this reconciliation of packaged status for subsequent calendar years. As discussed in prior rulemaking, maintaining consistency with the OPPS may result in changes to ASC payment indicators for some covered ancillary services. For example, if a covered ancillary service was separately paid under the ASC payment system in CY 2023, but will be packaged under the CY 2024 OPPS, we would also package the ancillary service under the ASC payment system for CY 2024 to maintain consistency with the OPPS. Comment indicator ''CH'' is used in Addendum BB (which is available via the internet on the CMS website) to indicate covered ancillary services for which we proposed a change in the ASC payment indicator to reflect a proposed change in the OPPS treatment of the service for CY 2024.

In the CY 2022 OPPS/ASC final rule with comment period, we finalized our proposal to revise 42 CFR 416.164(b)(6) to include, as ancillary items that are integral to a covered surgical procedure and for which separate payment is allowed, non-opioid pain management drugs and biologicals that function as a supply when used in a surgical procedure as determined by CMS (86 FR 63490).

New CPT and HCPCS codes for covered ancillary services for CY 2024 can be found in section XIII.B of this final rule. All ASC covered ancillary services and their final payment indicators for CY 2024 are also included in Addendum BB to this final rule (which is available via the internet on the CMS website).

Claims Processing Limitations for Covered Ancillary Procedures Performed with G0330

HCPCS code G0330 (*Facility services for dental rehabilitation procedure(s) performed on a patient who requires monitored anesthesia (e.g., general, intravenous sedation (monitored anesthesia care) and use of an operating room)*) is an addition to the ASC CPL for CY 2024, as discussed in section XIII.D.1 of this final rule. In ASC Addendum BB, there is a specific and definitive list of covered ancillary dental services with proposed payment indicator of ''D1.'' For CY 2024, we proposed that code G0330 could only be billed with a covered ancillary procedure that has the proposed payment indicator of ''D1,'' indicating an ancillary dental service or item with no separate payment made. This limitation would ensure that only covered ancillary services we have evaluated for safety in the ASC setting can be performed with code G0330. While HCPCS code G0330 must be billed with a covered ancillary procedure with a proposed payment indicator of ''D1,'' these covered ancillary procedures can be billed with procedures other than G0330. When billed with procedures other than code G0330, these procedures would be packaged in accordance with our policy for covered ancillary procedures. The fact that a drug, device, procedure, or service is assigned an HCPCS code and a payment rate under the ASC payment system indicates only how the product, procedure, or service may be paid if covered by the program. MACs will be involved in the final decision regarding whether a drug, device, procedure, or other service meets all program requirements and conditions for coverage and payment. Therefore, even if a code describing a dental service has an associated payment rate on the ASC CPL, Medicare will only make payment for the service if it meets applicable requirements. More detail on the final ASC dental indicators can be found in section XIII.B.6 of this final rule.

Comment: Several commenters requested guidance on hospital outpatient reporting of HCPCS code G0330. Since CMS proposed to require that code G0330 be reported in addition

to one or more of the ancillary dental codes with payment indicator ''D1'' when performed in an operating room under anesthesia in the ASC setting, hospitals expected the same explicit guidance.

Response: The claims processing limitations around code G0330, for example, the requirement that code G0330 must be billed with a covered dental ancillary procedure with payment indicator ''D1,'' are only applicable in the ASC setting, allowing us to ensure that only covered ancillary services we have evaluated for safety in the ASC setting can be performed with code G0330.

After consideration of the public comments we received, we are finalizing this policy as proposed.

E. ASC Payment Policy for Non-Opioid Post-Surgery Pain Management Drugs, Biologicals, and Devices

1. Background on OPPS/ASC Non-Opioid Pain Management Packaging Policies

On October 24, 2018, the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities (SUPPORT) Act (Pub. L. 115–271) was enacted. Section 1833(t)(22)(A)(i) of the Act, as added by section 6082(a) of the SUPPORT Act, states that the Secretary must review payments under the OPPS for opioids and evidence based non-opioid alternatives for pain management (including drugs and devices, nerve blocks, surgical injections, and neuromodulation) with a goal of ensuring that there are not financial incentives to use opioids instead of non-opioid alternatives. As part of this review, under section 1833(t)(22)(A)(iii) of the Act, the Secretary must consider the extent to which revisions to such payments (such as the creation of additional groups of covered outpatient department (OPD) services to separately classify those procedures that utilize opioids and non-opioid alternatives for pain management) would reduce the payment incentives for using opioids instead of non-opioid alternatives for pain management. In conducting this review and considering any revisions, the Secretary must focus on covered OPD services (or groups of services) assigned to C–APCs, APCs that include surgical services, or services determined by the Secretary that generally involve treatment for pain management. If the Secretary identifies revisions to payments pursuant to section 1833(t)(22)(A)(iii) of the Act, section 1833(t)(22)(C) of the Act requires the Secretary to, as determined appropriate, begin making revisions for services furnished on or after January 1, 2020. Revisions under this paragraph are required to be treated as adjustments for purposes of paragraph (9)(B) of the Act, which requires any adjustments to be made in a budget neutral manner. Section 1833(i)(8) of the Act, as added by section 6082(b) of the SUPPORT Act, requires the Secretary to conduct a similar type of review as required for the OPPS and to make revisions to the ASC payment system in an appropriate manner, as determined by the Secretary.

For a detailed discussion of rulemaking on non-opioid alternatives prior to CY 2020, we refer readers to the CYs 2018 and 2019 OPPS/ASC final rules with comment period (82 FR 59345; 83 FR 58855 through 58860).

For the CY 2020 OPPS/ASC proposed rule (84 FR 39423 through 39427), as required by section 1833(t)(22)(A)(i) of the Act, we reviewed payments under the OPPS for opioids and evidence-based non-opioid alternatives for pain management (including drugs and devices, nerve blocks, surgical injections, and neuromodulation) with a goal of ensuring that there are not financial incentives to use opioids instead of non-opioid alternatives. For the CY 2020 OPPS/ASC proposed rule (84 FR 39423 through 39427), we proposed to continue our policy to pay separately at ASP plus 6 percent for non-opioid pain management drugs that function as surgical supplies in the performance of surgical procedures when they are furnished in the ASC setting and to continue to package payment for non-opioid pain management drugs that function as surgical supplies in the performance of surgical procedures in the hospital outpatient department setting.

In the CY 2020 OPPS/ASC final rule with comment period (84 FR 61173 through 61180), after reviewing data from stakeholders and Medicare claims data, we did not find compelling evidence to suggest that revisions to our OPPS payment policies for non-opioid pain management alternatives were necessary for CY 2020. We finalized our proposal to continue to unpackage and pay separately at ASP plus 6 percent for non-opioid pain management drugs that function as surgical supplies when furnished in the ASC setting for CY 2020. Under this policy, for CY 2020, the only drug that qualified for separate payment in the ASC setting as a non-opioid pain management drug that functions as a surgical supply was Exparel.

In the CY 2021 OPPS/ASC final rule with comment period (85 FR 85896 through 85899), we continued the policy to pay separately at ASP plus 6 percent for non-opioid pain management drugs that function as surgical supplies in the performance of surgical procedures when they were furnished in the ASC setting and to continue to package payment for non-opioid pain management drugs that function as surgical supplies in the performance of surgical procedures in the hospital outpatient department setting for CY 2021. For CY 2021, only Exparel and Omidria met the criteria as non-opioid pain management drugs that function as surgical supplies in the ASC setting, and received separate payment under the ASC payment system.

In the CY 2022 OPPS/ASC final rule with comment period (86 FR 63483), we finalized a policy to unpackage and pay separately at ASP plus 6 percent for non-opioid pain management drugs that function as surgical supplies when they are furnished in the ASC setting, are FDA-approved, have an FDA-approved indication for pain management or as an analgesic, and have a per-day cost above the OPPS/ASC drug packaging threshold; and we finalized our proposed regulation text changes at 42 CFR 416.164(a)(4) and (b)(6), 416.171(b)(1), and 416.174 as proposed.

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72089), we determined that five products were eligible for separate payment in the ASC setting under our final policy for CY 2022. We noted that future products, or products not discussed in that rulemaking that may be eligible for separate payment under this policy, would be evaluated in future rulemaking (86 FR 63496). In the CY 2023 final rule with comment period, we finalized that five drugs would receive separate payment in the ASC setting for CY 2023 under the policy for non-opioid pain management drugs and biologicals that function as surgical supplies (86 FR 63496). These drugs are described by HCPCS code C9290 (*Injection, bupivacaine liposome, 1 mg*), J1096 (*Dexamethasone, lacrimal ophthalmic insert, 0. mg*), HCPCS code J1097 (*Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml*), HCPCS code C9089 (*Bupivacaine, collagen-matrix implant, 1 mg*), and HCPCS code C9144 *(Injection, bupivacaine (posimir), 1 mg*)) (86 FR 63496).

2. CY 2024 Qualification Evaluation for Separate Payment of Non-Opioid Pain Management Drugs and Biologicals That Function as a Surgical Supply

As noted above, in the CY 2022 OPPS/ASC final rule with comment period, we finalized a policy to

unpackage and pay separately at ASP plus 6 percent for non-opioid pain management drugs that function as surgical supplies when they are furnished in the ASC setting, are FDA-approved, have an FDA-approved indication for pain management or as an analgesic, and have a per-day cost above the OPPS drug packaging threshold beginning on or after January 1, 2022. For CY 2024, the OPPS drug packaging threshold was proposed to be $140. However, based on updated data, we are finalizing a threshold of $135 for CY 2024. For more information on the drug packaging threshold, see section V.B.1.a of this CY 2024 OPPS/ASC final rule with comment period.

In the CY 2023 OPPS/ASC final rule, we finalized a clarification of our policy by codifying the two additional criteria for separate payment for non-opioid pain management drugs and biologicals that function as surgical supplies in the regulatory text at § 416.174 as a technical change. First, we finalized at new § 416.174(a)(3) that non-opioid pain management drugs or biologicals that function as a supply in a surgical procedure are eligible for separate payment if the drug or biological does not have transitional pass-through payment status under § 419.64. In the case where a drug or biological otherwise meets the requirements under § 416.174 and has transitional pass-through payment status that will expire during the calendar year, the drug or biological would qualify for separate payment under § 416.174 during such calendar year on the first day of the next calendar year quarter after its pass-through status expires. Second, we finalized that new § 416.174(a)(4) would reflect that the drug or biological must not already be separately payable in the OPPS or ASC payment system under a policy other than the one specified in § 416.174.

The following sections include the non-opioid alternatives of which we are aware and our evaluations, including consideration of comments, of whether these non-opioid alternatives meet the criteria established at § 416.174 for CY 2024.

(a) Finalized Annual Eligibility Re-Evaluations of Non-Opioid Alternatives That Were Separately Paid in the ASC Setting During CY 2023

In the CY 2023 final rule with comment period, we finalized that five drugs would receive separate payment in the ASC setting for CY 2023 under the policy for non-opioid pain management drugs and biologicals that function as surgical supplies (86 FR 63496). These drugs are described by HCPCS code C9290 (*Injection, bupivacaine liposome, 1 mg*), J1096 (*Dexamethasone, lacrimal ophthalmic insert, 0. mg*), HCPCS code J1097 (*Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml*), HCPCS code C9089 (*Bupivacaine, collagen-matrix implant, 1 mg*), and HCPCS code C9144 (*Injection, bupivacaine (posimir), 1 mg*).

In the CY 2024 (88 FR 49763) proposed rule, we re-evaluated these products outlined in the previous paragraph against the criteria specified in § 416.174, including the technical clarifications we proposed to that section, to determine whether they continue to qualify for separate payment in CY 2024. Based on our evaluation, we proposed that the drugs described by HCPCS codes C9290, J1096, J1097, and C9089 continue to meet the required criteria and should receive separate payment in the ASC setting. We proposed that the drug described by HCPCS code C9144 would not receive separate payment in the ASC setting under this policy, as this drug will be separately payable during CY 2024 under OPPS transitional pass-through status. Please see section V.A of this CY 2024 OPPS/ASC final rule for additional details on the pass-through status of HCPCS code C9144. We welcomed comment on our evaluations in the proposed rule, and below is our finalized policy for CY 2024.

Comment: There was overall general support for our proposal to pay separately in the ASC setting for the four drugs proposed in the proposed rule.

Response: We thank the commenters for their support.

(b) Finalized Eligibility Evaluation for the Separate Payment of Exparel

Based on our internal review as described in the proposed rule, we believe that Exparel, described by HCPCS code C9290 (*Injection, bupivacaine liposome, 1 mg*), meets the criteria described at § 416.174; and we proposed to continue paying separately for it under the ASC payment system for CY 2024. Exparel was approved by the FDA with a New Drug Application (NDA #022496) under section 505(c) of the Federal Food, Drug, and Cosmetic Act on October 28, 2011.[204] Exparel's FDA-approved indication is ''in patients 6 years of age and older for single-dose infiltration to produce postsurgical local analgesia'' and ''in adults as an interscalene brachial plexus nerve block to produce postsurgical regional analgesia.'' [205] No component of Exparel is opioid-based. Accordingly, we proposed that Exparel meets the criterion described at § 416.174(a)(1). Under the methodology described at V.B.1.a. of the proposed rule (88 FR 49676), the per-day cost of Exparel exceeded the proposed $140 per-day cost threshold. Therefore, we proposed that Exparel meets the criterion described at § 416.174(a)(2). Additionally, Exparel will not have transitional pass-through payment status under § 419.64 in CY 2024, nor will it be otherwise separately payable in the OPPS or ASC payment system in CY 2024 under a policy other than the one specified in § 416.174. Therefore, we proposed that Exparel meets the criteria in the regulation text at § 416.174(a)(3) and (4).

Based on the above discussion, we believed that Exparel meets the criteria described at § 416.174; and we proposed to continue making separate payment for it as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

Comment: We received general support on our proposal to continue making separate payment for Exparel as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

Response: We thank commenters for their support on our proposal to pay separately for Exparel in the ASC setting as a non-opioid pain management drug that functions as a surgical supply. After consideration of the public comments we received, we believe that Exparel, described by HCPCS code C9290 (Injection, bupivacaine liposome, 1 mg), continues to meet the criteria described at § 416.174. We note that our proposed rule evaluation continues to be accurate. We note that the per-day cost of Exparel exceeded the proposed $140 per-day cost threshold and continues to exceed the finalized $135 per-day cost threshold, so Exparel continues to meet the criterion described at § 416.174(a)(2). We are finalizing that we will continue to pay separately for Exparel as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

[204] Exparel. FDA Letter. 28 October 2011. *https://www.accessdata.fda.gov/drugsatfda_docs/appletter/2011/022496s000ltr.pdf.*

(c) Finalized Eligibility Evaluation for the Separate Payment of Omidria

Based on our internal review as described in the proposed rule, we believe that Omidria, described by HCPCS code J1097 (*Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml*), meets the criteria described at § 416.174(a), and we proposed to continue paying separately for it under the ASC payment system for CY 2024. Omidria was approved by the FDA with a New Drug Application (NDA #205388) under section 505(c) of the Federal Food, Drug, and Cosmetic Act on May 30, 2014.[206] Omidria's FDA-approved indication is as ''an alpha 1-adrenergic receptor agonist and nonselective cyclooxygenase inhibitor indicated for: Maintaining pupil size by preventing intraoperative miosis; Reducing postoperative pain.'' [207] No component of Omidria is opioid-based. Accordingly, we propose that Omidria meets the criterion described at § 416.174(a)(1). Under the methodology described at section V.B.1.a. of the proposed rule (88 FR 49676), the per-day cost of Omidria exceeds the proposed $140 per-day cost threshold. Therefore, we proposed that Omidria meets the criterion described at § 416.174(a)(2). Additionally, we believed that Omidria will not have transitional pass-through payment status under § 419.64 in CY 2024, nor will it be otherwise separately payable in the OPPS or ASC payment system in CY 2024 under a policy other than the one specified in § 416.174. Therefore, we proposed that Omidria meets the criteria in the regulation text at § 416.174(a)(3) and (4).

Based on the above discussion, we proposed that Omidria meets the criteria described at § 416.174 and should receive separate payment as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

Comment: We received general support on our proposal to continue making separate payment for Omidria as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. A commenter also provided updated clinical information regarding the use of Omidria and demonstrated how separate payment of Omidria in the ASC setting has supported utilization of the drug.

Response: We thank commenters for their support and for their helpful comments and data analysis regarding the use of Omidria across different settings of care. We will continue to consider this information for future policy development.

After consideration of the public comments we received, we believe that Omidria, described by HCPCS code J1097 (*Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml*), continues to meet the criteria described at § 416.174. We note that our proposed rule evaluation continues to be accurate. We note that the per-day cost of Omidria exceeded the proposed $140 per-day cost threshold and continues to exceed the finalized $135 per-day cost threshold, so Omidria continues to meet the criterion described at § 416.174(a)(2). We are finalizing that we will continue to pay separately for Omidria as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

(d) Finalized Eligibility Evaluation for the Separate Payment of Xaracoll

Based on our internal review as described in the proposed rule, we believe Xaracoll, described by C9089 (*Bupivacaine, collagen-matrix implant, 1 mg*), meets the criteria described at § 416.174(a), and we proposed to continue paying separately for it under the ASC payment system for CY 2023. Xaracoll was approved by the FDA with a New Drug Application (NDA # 209511) under section 505(c) of the Federal Food, Drug, and Cosmetic Act on August 28, 2020.[208] Xaracoll is ''indicated in adults for placement into the surgical site to produce postsurgical analgesia for up to 24 hours following open inguinal hernia repair.'' [209] No component of Xaracoll is opioid-based. Accordingly, we proposed that Xaracoll meets the criterion described at § 416.174(a)(1). Under the methodology described at section V.B.1.a. of the proposed rule (88 FR 49676), the per-day cost of Xaracoll exceeds the proposed $140 per-day cost threshold. Therefore, we proposed that Xaracoll meets the criterion described at § 416.174(a)(2). Additionally, at this time we do not believe that Xaracoll will have transitional pass-through payment status under § 419.64 in CY 2024, nor do we believe it will otherwise be separately payable in the OPPS or ASC payment system under a policy other than the one specified in § 416.174. Therefore, we proposed that Xaracoll meets the criteria in the regulation text at § 416.174(a)(3) and (4).

Based on the above discussion, we proposed that Xaracoll meets the criteria described at § 416.174 and should receive separate payment as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

Comment: We received general support on our proposal to continue making separate payment for Xaracoll as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

Response: We thank commenters for their support on our proposal to pay separately for Xaracoll in the ASC setting as a non-opioid pain management drug that functions as a surgical supply.

After consideration of the public comments we received, we believe that Xaracoll, described by C9089 (*Bupivacaine, collagen-matrix implant, 1 mg*), continues to meet the criteria described at § 416.174. We note that our proposed rule evaluation continues to be accurate. We note that the per-day cost of Xaracoll exceeded the proposed $140 per-day cost threshold and continues to exceed the finalized $135 per-day cost threshold, so Xaracoll continues to meet the criterion described at § 416.174(a)(2). We are finalizing that we will continue to pay separately for Xaracoll as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

(e) Finalized Eligibility Evaluation for the Separate Payment of Dextenza

Based on our internal review as described in the proposed rule, we believe Dextenza, described by HCPCS code J1096 (*Dexamethasone, lacrimal ophthalmic insert, 0.1 mg*), meets the criteria described at § 416.174; and we proposed to provide separate payment for it under the ASC payment system for CY 2024. Dextenza was approved by the FDA with a New Drug Application (NDA # 208742) under section 505(c) of the Federal Food, Drug, and Cosmetic Act on November 30, 2018.[210] Dextenza's FDA-approved indication is

[206] Omidria. FDA Letter. 30 May 2014. *https://www.accessdata.fda.gov/drugsatfda_docs/appletter/2014/205388Orig1s000ltr.pdf.*

[207] Omidria. FDA Package Insert. December 2017. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2017/205388s006lbl.pdf.*

[208] Xaracoll. FDA Letter. August 2020. *https://www.accessdata.fda.gov/drugsatfda_docs/appletter/2020/209511Orig1s000ltr.pdf.*

[209] Xaracoll. FDA Labeling. August 2020. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2020/209511s000lbl.pdf.*

[210] Dextenza. FDA Letter. November 2018. *https://www.accessdata.fda.gov/drugsatfda_docs/nda/2018/208742Orig1s000Approv.pdf.*

as ''a corticosteroid indicated for the treatment of ocular pain following ophthalmic surgery'' and ''the treatment of ocular itching associated with allergic conjunctivitis.'' [211] No component of Dextenza is opioid-based. Accordingly, we proposed that Dextenza meets the criterion described at § 416.174(a)(1). Under the methodology described at section V.B.1.a. of the proposed rule, the per-day cost of Dextenza exceeds the proposed $140 per-day cost threshold (88 FR 49676). Therefore, we proposed that Dextenza meets the criterion described at § 416.174(a)(2). Additionally, we believed that Dextenza will not have transitional pass-through payment status under § 419.64 in CY 2024, nor do we believe it will otherwise be separately payable in the OPPS or ASC payment system under a policy other than the one specified in § 416.174. Therefore, we proposed that Dextenza meets the criteria in the regulation text at § 416.174(a)(3) and (4).

Based on the above discussion, we proposed that Dextenza meets the criteria described at § 416.174 and should receive separate payment as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024.

Comment: We received general support on our proposal to continue making separate payment for Dextenza as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. We received many comments indicating the clinical benefit of Dextenza, and many of these comments requested separate payment for Dextenza.

Response: We thank commenters for their support on our proposal to pay separately for Dextenza in the ASC setting as a non-opioid pain management drug that functions as a surgical supply.

Comment: One commenter made a general statement regarding the use of Dextenza within their practice and stated that, in their view, the drug does not have the value that is currently assigned to it. Meaning, in their view, there are other options that give the same clinical results at a fraction of the cost.

Response: We thank this commenter for their input; however, it is not directly relevant to our analysis of whether Dextenza meets the criteria outlined in § 416.174. We may, however, take this input into consideration for future policy consideration.

After consideration of the public comments we received, we believe that Dextenza, described by HCPCS code J1096 (*Dexamethasone, lacrimal ophthalmic insert, 0.1 mg*), continues to meet the criteria described at § 416.174. We note that our proposed rule evaluation continues to be accurate. We note that the per-day cost of Dextenza exceeded the proposed $140 per-day cost threshold and continues to exceed the finalized $135 per-day cost threshold, so Dextenza continues to meet the criterion described at § 416.174(a)(2). We are finalizing that we will continue to pay separately for Dextenza as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. Also, please see section III.E.2 of this final rule with comment period for details on the status of HCPCS code J1096 in the HOPD, as well as CPT code 68841.

(f) Finalized Eligibility Evaluation for the Separate Payment of Posimir

Based on our internal review as described in the proposed rule, we do not believe that Posimir, described by HCPCS code C9144 (*Injection, bupivacaine (Posimir), 1 mg*), meets the criteria described at § 416.174(a); and we did not propose to continue paying separately for it under the ASC payment system for CY 2024. Posimir was approved by the FDA with a New Drug Application (NDA #204803) under section 505(c) of the Federal Food, Drug, and Cosmetic Act on February 1, 2021.[212] Posimir contains an amide local anesthetic and is indicated in adults for administration into the subacromial space under direct arthroscopic visualization to produce post-surgical analgesia for up to 72 hours following arthroscopic subacromial decompression.'' [213]

No component of Posimir is opioid-based. Accordingly, we proposed that Posimir meets the criterion described at § 416.174(a)(1). Under the methodology described at V.B.1.a. of the proposed rule (88 FR 49676), the per-day cost of Posimir exceeds the proposed $140 per-day cost threshold. Therefore, we proposed that Posimir meets the criterion described at § 416.174(a)(2). However, Posimir will have transitional pass-through payment status under § 419.64 in CY 2024, and it will be otherwise separately payable in the OPPS or ASC payment system in CY 2024 under a policy other than the one specified in § 416.174. Therefore, we proposed that Posimir does not meet the criteria at the regulation text at § 416.174(a)(3) and (4).

Based on the above discussion, we proposed that Posimir does not meet the criteria in the regulation text at § 416.174(a)(3) and (4) and should not receive separate payment as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. However, we stated that HCPCS code C9144 will continue to receive separate payment under its pass-through status as outlined in section V of the proposed rule (88 FR 49674).

We did not receive any public comments on our proposal and are finalizing our proposal that Posimir does not meet the criteria in the regulation text at § 416.174(a)(3) and (4) and should not receive separate payment as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system for CY 2024. However, HCPCS code C9144 will continue to receive separate payment under its pass-through status as outlined in section V of this final rule.

Comment Solicitation on New Products That Meet the Criteria Specified in § 416.174

We solicited comment on additional non-opioid pain management drugs and biologicals that function as surgical supplies that may meet the criteria specified in § 416.174 and qualify for separate payment under the ASC payment system. We encouraged commenters to include an explanation of how the drug or biological meets the eligibility criteria in § 416.174. We stated if we found that any additional drugs or biologicals described by commenters do satisfy the criteria established at § 416.174, we would finalize their separate payment status for CY 2024 in the ASC setting in the CY 2024 OPPS/ASC final rule with comment period.

We did not receive any public comments detailing additional new products that may meet the criteria specified at § 416.174 and therefore, we are not finalizing any additional new drugs or biologicals as meeting the criteria at § 416.174 to receive separate payment in the ASC setting.

Comment: Some commenters supported CMS continuing the objective criteria outlined at § 416.174 as they believe this policy has proven effective

[211] Dextenza. FDA Labeling. October 2021. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2021/208742s007lbl.pdf.*

[212] Posimir. FDA Approval Letter. *https://www.accessdata.fda.gov/drugsatfda_docs/appletter/2021/204803Orig1s000ltr.pdf.*

[213] Posimir. FDA Package Insert. *https://www.accessdata.fda.gov/drugsatfda_docs/label/2022/204803Orig1s001lbl.pdf.*

in expanding patient access to alternatives of opioids.

Response: We thank commenters for their support.

Comment: One commenter suggested that certain drugs should be grandfathered into this policy for a period of two to three years in order to allow them adequate time to receive an FDA indication for pain management or analgesia. These commenters believed that a temporary grandfathering policy would provide manufacturers the time and opportunity to complete new clinical trials in order to allow their products to apply for the necessary FDA approved indications. These commenters thought this was appropriate as they believed drugs, such as Dexycu, were already being used as pain management alternatives to opioids, despite not yet having FDA indications for pain management or analgesia.

Response: We thank the commenter for this feedback. We remind interested parties that we did not propose any modifications to our policy at § 416.174 but may consider this feedback in future rulemaking.

Comment: Many commenters encouraged CMS to consider a policy that unpackages non-opioid pain management drugs in the HOPD setting for CY 2024 in order to align with the current ASC payment policy for non-opioid pain management drugs that function as a surgical supply and to pay for the four separately payable drugs in the ASC setting in the HOPD setting as well. These commenters stated that the same reasons underlying separate payment for drugs in the ASC setting support separate payment for drugs in the HOPD setting. Many stated that utilization in the HOPD has decreased as a result of packaged payment and could be higher with separate payment and that they believed opioid alternatives serve a valuable clinical purpose and their use should be encouraged in all settings of care. Several commenters provided data regarding how packaging negatively impacted the utilization of their products in the HOPD setting. We note that many commenters were non-specific as to whether their request was for CMS to expand the policy outlined at § 416.174 to include payment in the HOPD setting or whether their request was for CMS to enact section 4135 of the Consolidated Appropriations Act a year earlier, which is discussed in the next section of this rule.

Similarly, one commenter stated that CMS has failed to conduct any review of payments in OPPS for these non-opioid drugs or provide justification for continuing to package payment for non-opioid pain management drugs in the HOPD. The commenter urged CMS to take a more comprehensive look at whether its OPPS drug packaging policies are negatively impacting quality of care for Medicare beneficiaries.

Response: We thank commenters for their input, and we appreciate the comments urging expansion of this policy to the HOPD setting. We will take these comments into consideration for future rulemaking. We remind interested parties that we did not propose to modify, and we are not modifying our policy at § 416.174 or creating new policies in response to these comments at this time.

Comment: We received comments from interested parties who advocated for payment changes. Many commenters were non-specific as to whether their request was for CMS to expand the policy outlined at § 416.174 or whether their comment was in response to CMS' comment solicitation on enacting section 4135 of the Consolidated Appropriations Act, 2023. Specifically, however, some commenters expressed their support for CMS for unpackaging and paying separately for non-opioid alternative devices and claimed that assessing utilization of a product is not appropriate in determining whether there is an access issue. These commenters requested that CMS revise the current eligibility criteria to permit medical devices to be eligible for separate payment under § 416.174. Some commenters recommended CMS implement a peer review literature requirement for such devices. Other commenters recommended a longer-term solution, such as a finalization of policy for several years to provide stability. Similarly, commenters requested CMS educate providers on the availability of the various opioid alternative modalities available to them.

Response: We thank commenters for these policy suggestions. We may take these comments into consideration for future rulemaking. We remind interested parties that we did not propose to modify, and we are not modifying our policy at § 416.174 at this time.

We note that the current policy outlined at § 416.174 is different from the policy contained within section 4135 of the Consolidated Appropriations Act, 2023 and we intend to make a proposal for the implementation of section 4135 in the CY 2025 OPPS/ASC proposed rule. We also intend to discuss the interaction of such proposal and our current policy outlined at § 416.174 in the CY 2025 OPPS/ASC proposed rule.

In summary, after consideration of the public comments received, we are finalizing without modification, that the drugs described by HCPCS code C9290 (*Injection, bupivacaine liposome, 1 mg*), J1096 (*Dexamethasone, lacrimal ophthalmic insert, 0. mg*), HCPCS code J1097 (*Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml*), HCPCS code C9089 (*Bupivacaine, collagen-matrix implant, 1 mg*), continue to function as non-opioid pain management drugs and biologicals that function as surgical supplies and meet the criteria at § 416.174. Similarly, we are finalizing our proposal that HCPCS code C9144 (*Injection, bupivacaine (posimir), 1 mg*), no longer meets all of the criteria at § 416.174 and will not receive separate payment in the ASC setting under that policy.

Table 125 below lists the four drugs that we proposed and are finalizing as eligible to receive separate payment as a non-opioid pain management drug that functions as a supply in a surgical procedure under the ASC payment system and meets the criteria at § 416.174(a) for CY 2024.

TABLE 125: SUMMARY OF PRODUCTS PROPOSED AND FINALIZED TO MEET CMS'S CRITERIA FOR SEPARATE PAYMENT IN THE ASC SETTING UNDER THE NON-OPIOID PAIN MANAGEMENT DRUGS THAT FUNCTION AS A SURGICAL SUPPLY PACKAGING POLICY FOR CY 2024

HCPCS Code	Brand Name	Long Descriptor	CY 2024 OPPS Status Indicator (SI)*	CY 2024 ASC Payment Indicator (PI)*
C9290	Exparel	Injection, bupivacaine liposome, 1 mg	N	K2
J1097	Omidria	Phenylephrine 10.16 mg/ml and ketorolac 2.88 mg/ml ophthalmic irrigation solution, 1 ml	N	K2
J1096	Dextenza	Dexamethasone, lacrimal ophthalmic insert, 0.1 mg	N	K2
C9089	Xaracoll	Bupivacaine, collagen-matrix implant, 1 mg	N	K2

*Please see ASC Addendum BB for applicable payment rates, OPPS Addendum D1 for SI definitions, and

F. Comment Solicitation on Access to Non-Opioid Treatments for Pain Relief Under the OPPS and ASC Payment System

1. Background on Access to Non-Opioid Treatments for Pain Relief

The Consolidated Appropriations Act (CAA), 2023 (Pub. L. 117–328), was signed into law on December 29, 2022. Section 4135(a) and (b) of the CAA, 2023, titled ''Access to Non-Opioid Treatments for Pain Relief,'' amended section 1833(t)(16) and section 1833(i) of the Social Security Act, respectively, to provide for temporary additional payments for non-opioid treatments for pain relief (as that term is defined in section 1833(t)(16)(G)(i) of the Act). In particular, section 1833(t)(16)(G) provides that with respect to a non-opioid treatment for pain relief furnished on or after January 1, 2025, and before January 1, 2028, the Secretary shall not package payment for the non-opioid treatment for pain relief into payment for a covered OPD service (or group of services) and shall make an additional payment for the non-opioid treatment for pain relief as specified in clause (ii) of that section. Clauses (ii) and (iii) of section 1833(t)(16)(G) of the Act provide for the amount of additional payment and set a limitation on that amount.

Paragraph (10) of section 1833(i) of the Act cross-references the OPPS provisions about the additional payment amount and payment limitation for non-opioid treatments for pain relief and applies them to payment under the ASC payment system. In particular, subparagraph (A) of paragraph (10) of section 1833(i) of the Act, as added by section 4135(b) of the CAA, 2023, provides that in the case of surgical services furnished on or after January 1, 2025, and before January 1, 2028, additional payments shall be made under the ASC payment system for non-opioid treatments for pain relief in the same amount provided in clause (ii) and subject to the limitation in clause (iii) of section 1833(t)(16)(G) of the Act for the OPPS. Subparagraph (B) of section 1833(i)(10) of the Act provides that a drug or biological that meets the requirements of 42 CFR 416.174 and is a non-opioid treatment for pain relief shall also receive additional payment in the amount provided in clause (ii) and subject to the limitation in clause (iii) of section 1833(t)(16)(G) of the Act.

Because the additional payments are required to begin on January 1, 2025, we stated in the proposed rule (88 FR 49767) that we plan to include our proposals to implement the section 4135 amendments in the CY 2025 OPPS/ASC proposed rule. We specifically sought comment on the issues discussed in the following sections, as well as comments on the implementation of all facets of this provision.

2. Comment Solicitation for CY 2025 Implementation

a. Potential Qualifying Drugs, Biologicals, and Devices

In preparation for implementing section 4135 of the CAA, 2023, for CY 2025, we sought comment on any drug, biological, or medical device that a commenter believes would meet the definition of a non-opioid treatment for pain relief under section 1833(t)(16)(G)(iv) of the Act. We encouraged commenters to submit appropriate FDA documentation, published peer-reviewed literature, or other evidence-based support, if applicable, to illustrate why the commenters believe the drug, biological, or medical device meets the definition of a non-opioid treatment for pain relief. For these products, we also solicited comment on appropriate codes and descriptors if no HCPCS codes currently exist for the product. We noted that we will evaluate these products, including the information submitted by commenters, and proposed additional payments, subject to the payment limitation, for those that meet the definition of a non-opioid treatment for pain relief in the CY 2025 OPPS/ASC rulemaking cycle, rather than during the CY 2024 OPPS/ASC final rule with comment period.

b. Evidence Requirement for Medical Devices

Section 1833(t)(16)(G)(iv)(II)(bb) of the Act specifies an additional requirement for medical devices to meet the definition of non-opioid treatment for pain relief. This section requires that a medical device demonstrate the ability to replace, reduce, or avoid intraoperative or postoperative opioid use or the quantity of opioids prescribed in a clinical trial or through data published in a peer-reviewed journal.

As the statute requires information from a clinical trial or data published in a peer-reviewed journal, we seek comment on the best way to obtain and evaluate that information. We also sought comment on how we should assess information from a clinical trial or data published in a peer-reviewed journal, including how to assess for conflicts of interest or integrity concerns, whether to focus on outcomes rather than surrogate endpoints, and whether to require that all decreases in opioid use be statistically and clinically significant compared to the usual standard of care (rather than placebo).

c. Amount of Payment

Section 1833(t)(16)(G)(ii)(I) of the Act states that, subject to the limitation in clause (iii), the amount of payment for a non-opioid treatment for pain relief that is a drug or biological product is the amount of payment for such drug or biological determined under section 1847A of the Act that exceeds the portion of the otherwise applicable Medicare OPD fee schedule that the Secretary determines is associated with the drug or biological. As this language is very similar to the transitional pass-through language at section 1833(t)(6)(D)(i) of the Act, we anticipate implementing a similar payment methodology for drugs and biologicals under this future policy.

Section 1833(t)(16)(G)(ii)(II) of the Act states that the amount of payment for a non-opioid treatment for pain relief that is a medical device is the amount of the hospital's charges for the device, adjusted to cost, that exceeds the portion of the otherwise applicable Medicare OPD fee schedule that the Secretary determines is associated with the device. As this language is very similar to the transitional pass-through language at section 1833(t)(6)(D)(ii) of the Act, we anticipate implementing a similar payment methodology for medical devices under this future policy.

Section 1833(i)(10) of the Act provides that the same payment rate shall apply in the ASC setting as the rates described in section 1833(t)(16)(G)(ii) of the Act for hospital outpatient departments, subject to the limitation in section 1833(t)(16)(G)(iii) of the Act.

d. Payment Limitation

Section 1833(t)(16)(G)(iii) of the Act states that the additional payment amount specified in clause (ii), and as described in the previous section, shall not exceed the estimated average of 18 percent of the OPD fee schedule amount for the OPD service (or group of services) with which the non-opioid treatment for pain relief is furnished, as determined by the Secretary. We sought comment on how we should determine the OPD service or groups of services with which non-opioid treatments for pain relief are furnished for purposes of calculating the payment limitation for each treatment. Specifically, we sought comment on the scenarios outlined below. Additionally, we welcomed other recommendations from interested parties consistent with the statutory requirements.

Scenario 1: Payment Limitation Based on the Top Five Services by Volume with Known Claims Data

As demonstrated in this example (Table 126), one possible approach is to use the top five services associated with a hypothetical drug, biological, or medical device, to determine the volume-weighted payment rate and the payment limit, based on the most recent claims data available. For the non-opioids that are currently separately paid, we predict that the majority of utilization is focused in the top five mostly frequently performed services, thus using the top five services would provide a representative estimate for the payment limit. However, we solicit comment on this prediction and welcome input from commenters if they believe another number of procedures, or another metric, would be appropriate to determine the list of procedures in which the payment limitation would be calculated.

For this example, we would begin by identifying the top five services by volume that package this drug, biological, or device into their payment rate. Second, we would calculate the volume-weighted payment rate per claim, which would be $700 in the example below. Third, we would apply the 18 percent payment limit per clinical dose, rather than per HCPCS dosage unit, which is $126 in the case below. We note that we have rounded these numbers for ease of illustration for this example. We would apply this payment limit to the clinical dose received by the beneficiary as the payment limit applies to the total amount of payment, rather than the HCPCS dosage unit payment, which may only represent a small fraction of the total amount of payment. This means that even if the non-opioid treatment for pain relief had an amount of additional payment under section 1833(t)(16)(G)(ii) of the Act that was greater than $126 per dose, it would be limited to $126 by 1833(t)(16)(G)(iii) of the Act. In this example, this non-opioid treatment for pain relief would not be subject to the threshold packaging policy in section V.B.1.a. of the proposed rule (88 FR 49676) even though its payment falls below the proposed CY 2024 drug packaging threshold of $140, per section 1833(t)(16)(G)(i) of the Act, and would also be separately paid when used during a comprehensive APC (C–APC) procedure in the HOPD setting. We note, for CY 2024, the OPPS drug packaging threshold was proposed to be $140. However, based on updated data, we are finalizing a threshold of $135 for CY 2024. For more information on the drug packaging threshold, see section V.B.1.a of this CY 2024 OPPS/ASC final rule with comment period.

TABLE 126: Example of Payment Limitation Based on the Top Five Services by Volume

Service	Volume (claims)	Payment	Total Payment (volume * claims)	Volume Weighted Payment per claim (total payment / total volume)	Payment Limit
1	100	1000	100,000	$\frac{(100{,}000 + 4{,}000 + 1{,}000 + 1{,}000 + 1{,}000)}{100 + 20 + 10 + 10 + 10}$ = $700	$700 * 0.18 = $126
2	20	200	4,000		
3	10	100	1,000		
4	10	100	1,000		
5	10	100	1,000		

We welcomed comments on this approach. We sought comment on whether utilizing the top five services by volume is an appropriate method by which to establish this payment limit. We also sought comment on additional methodologies, such as determining the payment limit based on the top 10 services by volume, by total payment rather than volume, or any number of services with more than a certain percentage of overall utilization, such as 10 percent.

Scenario 2: Payment Limit Without Claims Data

Additionally, we sought comment on the best approach for determining a payment limit, pursuant to section 1833(t)(16)(G)(iii) of the Act for drugs, biologicals, and devices when there are no known claims data, such as for newly FDA-approved and marketed products. CMS could propose the services with which a product would be expected to be furnished and would typically be packaged absent this policy during calendar year rulemaking, based on expected clinical use patterns. Determining the service, or group of services, to use to calculate the payment limit could be accomplished through engagement with interested parties and a review by CMS Medical Officers and clinical staff. Absent engagement from interested parties, CMS could make its determination of the service, or group of services, to use to calculate the payment limit based on expected clinical use patterns. CMS could then adjust the services that are used to calculate the payment limit as claims data becomes available in subsequent years. We sought comment on this approach as well as other approaches of interest to commenters.

We welcomed comment from interested parties on the implementation of all facets of section 4135.

Comment: We received a significant number of comments in response to our comment solicitation and we are including a high-level overview of the comments we received. Many of the comments we received focused on opioids broadly, some comments addressed future policy implementing section 4135 of the Consolidated Appropriations Act of 2023, and others addressed the policy authorized under the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT) Act (Pub. L. 115–271) as described in the previous section.

Response: We thank the numerous commenters for their significant interest on the topic of non-opioid pain management and CMS's role in addressing the opioid epidemic. We will not be responding directly to all of these comments because, as we stated in the proposed rule (88 FR 49767), we plan to include our proposals to implement the section 4135 amendments in the CY 2025 OPPS/ASC proposed rule. These comments will be taken into account when crafting that proposed policy and discussed in the CY 2025 OPPS/ASC proposed rule.

Comment: We received a number of comments urging CMS to expedite the implementation timeline for the section 4135 amendments from CY 2025 to CY 2024. One commenter suggested that CMS use all measures at its disposal, including certain waivers available under the ongoing opioid public health emergency, in order to accomplish this request. Commenters generally spoke of the severity of the opioid epidemic and its harmful effects. A couple commenters specifically requested an additional comment period for CMS to gather thorough input from all interested stakeholders. One commenter expressed concern that the proposed rule did not more aggressively seize the opportunity to prevent opioid addiction by increasing access to non-opioid pain management approaches across outpatient surgical settings. Another commenter stated that the existing separate payment policies for non-opioid pain management approaches did not adequately incentivize facilities to use these alternative methods for pain management.

Response: We thank the commenters for expressing their concerns on this important issue. Section 4135 of the CAA, 2023 requires separate payments to begin on January 1, 2025, and we will undertake notice and comment rulemaking to implement it. As such, we will include our implementation proposal in the CY 2025 OPPS/ASC proposed rule. We note that we agree with commenters on the importance of this issue.

It is a top priority of CMS to address the opioid misuse epidemic and its impact on communities. CMS is committed to a comprehensive and multi-pronged strategy to combat this public health emergency. Please see our Roadmap Strategy to Fight the Opioid Crisis.[214]

Although not a component of the OPPS/ASC payment policies, we note that through the CMS Behavioral Health Strategy,[215] CMS seeks to remove barriers to care and services, and to adopt a data-informed approach to evaluate our behavioral health programs and policies. CMS is working to improve access to substance use disorder (SUD) prevention, treatment and recovery services. As of January 1, 2020, CMS makes bundled payments for opioid use disorder treatment services provided by Opioid Treatment Programs under with Medicare Part B.[216] Additionally, CMS covers a monthly bundle service for the treatment of OUD and other SUDs in office-based settings,[217] as well as screenings for OUD.

We thank commenters again for their insightful comments that will assist us in crafting well informed future policy.

Comment: We received several comments supporting the existing efforts CMS has taken to reduce the financial incentives that may exist as a result of OPPS packaging policies to use opioids over non-opioid alternatives for pain relief in surgical settings. Several commenters expressed appreciation that CMS is engaging stakeholders in advance of the implementation of this statutory provision. One commenter stated that unbundling and stand-alone payment for these alternative medications and treatment plans will ensure a change in pain management practices, prescription patterns, and ultimately improve patient care.

Response: We thank commenters for their support.

Comment: We received very broad support for extending our current policy under § 416.174(a) to encompass payment in the HOPD setting, and to include payment for expanded drugs, biologicals, devices, and procedures. Specifically, we received a significant number of comments that suggested drugs, biologicals, medical devices, and other modalities that could be utilized as non-opioid alternatives for pain management as well as the criteria CMS should employ to evaluate these requests, including evidence requirements for medical devices. The non-opioid alternatives that were suggested in the comment solicitation include, but are not limited to the following: enhanced recovery after surgery protocols; ultrasound equipment when it is used to guide the injection of non-opioid treatments for pain relief; certain PNS systems such as Sprint; oral drugs; IV acetaminophen; IV NSAIDS such as Caldolor; massage therapy; acupuncture; chiropractic services; osteopathic manipulation; cognitive behavioral therapy; physical therapy; neurological devices such as pain pumps; spinal cord stimulators; cold therapy devices; cryoablation; local anesthetics via pump; ON–Q pump; interspinous spacers; Polar ice devices; NerveCap; THC oil; acupuncture; and more drugs, biologicals, items, services, and devices.

We received a couple of comments that supported continuing to make separate payments for Exparel, Omidria, Xaracoll, and Dextenza as non-opioid management drugs. These are the 4 drugs that will be paid separately in the ASC setting in CY 2024 under the policy described at § 416.174(a).

We also received a comment requesting that CMS designate the Addinex System as a non-opioid pain management drug technology. We also received a comment asking for the ioversa system, a medical device with 510(k) pre-market clearance, to receive separate payment. One commenter requested separate payment be made for Zynrelef under the non-opioid pain management payment policy for CY 2025, effective once its pass-through status expires in CY 2025.

For many of the suggested items listed above, commenters provided current HCPCS codes, suggested possible new HCPCS coding, or suggested that CMS create appropriate new coding for the new items paid under this policy.

Another commenter suggested that CMS examine and alleviate barriers to appropriate treatment options that can reduce the duration or impact of acute pain experienced with some diseases such as sickle cell anemia. Similarly, one commenter recommended that we provide education and outreach to ensure providers and patients are aware of and can access non-opioid therapies to manage acute and chronic pain in these settings. Another commenter suggested that CMS create separate billing codes for non-opioid anesthesia services and treatments for pain.

Finally, we received several comments regarding the criteria used to determine if a drug, device, or treatment modality qualifies as a non-opioid pain management alternative. One comment supported maintaining the existing criteria that CMS has outlined for determining FDA-approved non-opioid pain management drugs for separate payment in the ASC setting and further recommended extending these determinations on a longer-term basis.

Response: We appreciate all of the comments received suggesting additional therapeutic modalities for which CMS should consider paying under this policy for CY 2025. We will take these suggestions into consideration as we develop our proposal for CY 2025.

Comment: A few commenters discussed their views on evidence requirements for medical devices that CMS should impose. Many commenters believed that CMS should follow the clinical evidence requirement set out in the statute when evaluating eligibility for medical devices as non-opioid treatments. They believed that CMS should implement this requirement of the statute to include only those devices that replace or reduce the use of opioids, as demonstrated through a clinical trial or data published in a peer review journal. Many of these commenters did not believe CMS should set additional specific trial design or outcomes criteria not found in the Act. Another commenter suggested that CMS create a transparent process for evaluating the clinical evidence that indicate certain technologies reduce opioid use. The commenter specifically stated that CMS should utilize a p-value of 0.10 for statistical significance when device safety has been established and provide payment for these devices using CMS existing pass-through policies.

Alternatively, some commenters recommend a more stringent evaluation process. One commenter stated that CMS should focus on outcomes, not surrogate endpoints. The commenter stated specifically that CMS should assess whether the medical device (1) reduced the percentage of patients using opioids or (2) reduced morphine milligram equivalents (MMEs). The reduction in opioid use should be of a duration that is clinically appropriate for the patient's condition.

Response: We appreciate all of the comments received on evidence requirements for medical devices that CMS should impose. We will take these into consideration as we develop our proposal for CY 2025.

Comment: Regarding payment, commenters generally felt that the CMS

[214] *https://www.cms.gov/about-cms/agency-information/emergency/downloads/opioid-epidemic-roadmap.pdf.*

[215] *https://www.cms.gov/cms-behavioral-health-strategy.*

[216] *https://www.cms.gov/medicare/payment/opioid-treatment-program.*

[217] *https://www.cms.gov/medicare/payment/fee-schedules/physician/opioid-use-disorder-screening-treatment.*

methodology outlined in the comment solicitation was appropriate for determining the payment limitation, particularly the payment limitation based on the top five services by volume with known claims data and payment limit without claims data. Other commenters suggested alternative methodologies such as developing a non-claims data-based approach for payment of non-opioid alternatives, which relied on available clinical data. Some commenters felt the ASP approach for setting the payment amount is appropriate, given how CMS reimburses for other separately paid drugs and biologicals. Many commenters requested that CMS be consistent with the transitional pass-through status payment methodology for drugs and devices. One commenter was concerned that reducing the payment amount by some portion of the associated procedure APC may lead to improper and inconsistent payment for non-opioid treatments. One commenter urged CMS to provide additional clarification and work to ensure that there is transparency on the potential methodology to be used to calculate the specific payments for qualifying non-opioid treatments, particularly in the case of treatments with multiple applicable procedures and, thus, potentially varying payments as well as how CMS intends to define clinical dose as discussed in the proposed rule.

Response: We appreciate all of the comments received on the topic of payment. We will take these into consideration as we develop our proposal for CY 2025.

Comment: One commenter requested CMS amend its non-opioid pain management drug policies to permit temporary ''grandfathering'' of certain drugs approved before CY 2022 that have relevant and documentable clinical support for their pain management attributes but do not have current FDA label indication for pain management or analgesia.

Response: We thank the commenter for their comment. We are currently unaware of any authority that would allow us to implement this recommendation, but we will consider that point for future rulemaking.

Comment: Other commenters continued to express more general concerns with opioid use and access to non-opioid alternatives. For example, one commenter stated that beneficiaries in rural regions lack access to adequate healthcare, reliable transportation to health programs, and insurance coverage.

Response: While we recognize some of the concerns presented by commenters fall outside of the scope of our OPPS and ASC Medicare payment policies, we appreciate these comments and learning more about how we can structure policies to address this multifaceted issue.

We sincerely thank commenters for their responses on this important issue. We encourage further engagement from interested parties on this issue. As previously mentioned, we will take all of these comments into consideration in order to create an informed policy proposal to implement the section 4135 of the CAA, 2023, in the CY 2025 OPPS/ASC proposed rule.

G. New Technology Intraocular Lenses (NTIOLs)

New Technology Intraocular Lenses (NTIOLs) are intraocular lenses that replace a patient's natural lens that has been removed in cataract surgery and that also meet the requirements listed in § 416.195.

1. NTIOL Application Cycle

Our process for reviewing applications to establish new classes of NTIOLs is as follows:

- Applicants submit their NTIOL requests for review to CMS by the annual deadline. For a request to be considered complete, we require submission of the information requested in the guidance document titled ''Application Process and Information Requirements for Requests for a New Class of New Technology Intraocular Lenses (NTIOLs) or Inclusion of an IOL in an Existing NTIOL Class'' posted on the CMS website at: *https://www.cms.gov/medicare/payment/prospective-payment-systems/ambulatory-surgical-center-asc/new-technology-intraocular-lenses-ntiols.*
- We announce annually, in the proposed rule updating the ASC and OPPS payment rates for the following calendar year, a list of all requests to establish new NTIOL classes accepted for review during the calendar year in which the proposal is published. In accordance with section 141(b)(3) of Public Law 103–432 and our regulations at § 416.185(b), the deadline for receipt of public comments is 30 days following publication of the list of requests in the proposed rule.
- In the final rule with comment period updating the ASC and OPPS payment rates for the following calendar year, we—

++ Provide a list of determinations made as a result of our review of all new NTIOL class requests and public comments.

++ When a new NTIOL class is created, identify the predominant characteristic of NTIOLs in that class that sets them apart from other IOLs (including those previously approved as members of other expired or active NTIOL classes) and that is associated with an improved clinical outcome.

++ Set the date of implementation of a payment adjustment in the case of approval of an IOL as a member of a new NTIOL class prospectively as of 30 days after publication of the ASC payment update final rule, consistent with the statutory requirement.

++ Announce the deadline for submitting requests for review of an application for a new NTIOL class for the following calendar year.

2. Requests to Establish New NTIOL Classes for CY 2024

We did not receive any requests for review to establish a new NTIOL class for CY 2024 by March 1, 2023, the due date published in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72091).

3. Payment Adjustment

The current payment adjustment for a 5-year period from the implementation date of a new NTIOL class is $50 per lens. Since implementation of the process for adjustment of payment amounts for NTIOLs in 1999, we have not revised the payment adjustment amount, and we do not propose to revise the payment adjustment amount for CY 2024.

The comments and our responses to the comments are set forth below:

Comment: Some commenters requested we re-evaluate our payment adjustment for a new NTIOL class. Commenters noted that our $50 payment adjustment has not been adjusted since CY 1999, the payment has lagged behind the overall economic inflation rate, and that the stagnant payment adjustment has been a barrier to intraocular lens innovation. Commenters recommended that we set the $50 payment adjustment at $91.04 and update this payment annually.

Response: At the inception of the ASC benefit on September 7, 1982, Medicare paid 90 percent of the reasonable charge for intraocular lenses (IOLs) inserted concurrent with or following cataract surgery performed in an ASC. The Omnibus Budget Reconciliation Act of 1987 (Pub. L. 100–203) mandated that we include payment for an IOL furnished by an ASC for insertion during or following cataract surgery as part of the facility fee. Section 141(b)(1) of the Social Security Amendments of 1994 required us to develop and implement a process under which interested parties may request a review

of the appropriateness of the payment amount for an IOL to ensure that the facility fee for the procedure is reasonable and related to the cost of acquiring a lens that belongs to a class of NTIOLs. In response, in June 1999, CMS established the payment adjustment for NTIOLs at $50 per lens (with the beneficiary responsible for a 20 percent coinsurance). In light of the commenters' recommendation but in the absence of cost and volume data for potential forthcoming NTIOLs, we performed an analysis to determine if the cost of IOLs has significantly changed and if the $50 payment adjustment is no longer reasonable and appropriate as the commenters suggest.

For our analysis, we looked at the change in the median cost, mean cost, and geometric mean cost of the most commonly-billed intraocular lens HCPCS code—HCPCS code V2632 (Posterior chamber intraocular lens) from CY 2010 (the furthest year back we could readily retrieve hospital outpatient claims data) to CY 2022 (the most recently available full year of claims data). In CY 2010, over 162,000 units of HCPCS code V2632 were reported on hospital outpatient claims at a median cost of $204.34, mean cost of $259.32, and geometric mean cost of $199.84. For CY 2022, over 220,000 units of HCPCS code V2632 were reported on hospital outpatient claims at a median cost $189.26, mean cost of $230.18, and a geometric mean cost of $184.10. Interestingly, we did not observe a strong increase, or any increase at all, in the cost of IOLs since CY 2010 but a noticeable decline (between 8 and 12 percent depending on the cost metric) in the cost of an IOL. Therefore, given the decline in the cost of IOLs we observed from CY 2010 to CY 2022, we do not accept the commenters' suggestion that the $50 payment adjustment has been a barrier to intraocular lens innovation, and we continue to believe the $50 per lens payment adjustment is a reasonable and appropriate payment adjustment for NTIOLs.

4. Announcement of CY 2024 Deadline for Submitting Requests for CMS Review of Applications for a New Class of NTIOLs

In accordance with 42 CFR 416.185(a) of our regulations, CMS announces that in order to be considered for payment effective beginning in CY 2025, requests for review of applications for a new class of new technology IOLs must be received by 5:00 p.m. EST, on March 1, 2024. Send requests via email to *outpatientpps@cms.hhs.gov* or by mail to ASC/NTIOL, Division of Outpatient Care, Mailstop C4–05–17, Centers for Medicare and Medicaid Services, 7500 Security Boulevard, Baltimore, MD 21244–1850. To be considered, requests for NTIOL reviews must include the information requested on the CMS website at: *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/ASCPayment/*NTIOLs.

H. Calculation of the ASC Payment Rates and the ASC Conversion Factor

1. Background

In the August 2, 2007, ASC final rule (72 FR 42493), we established our policy to base ASC relative payment weights and payment rates under the revised ASC payment system on APC groups and the OPPS relative payment weights. Consistent with that policy and the requirement at section 1833(i)(2)(D)(ii) of the Act that the revised payment system be implemented so that it would be budget neutral, the initial ASC conversion factor (CY 2008) was calculated so that estimated total Medicare payments under the revised ASC payment system in the first year would be budget neutral to estimated total Medicare payments under the prior (CY 2007) ASC payment system (the ASC conversion factor is multiplied by the relative payment weights calculated for many ASC services in order to establish payment rates). That is, application of the ASC conversion factor was designed to result in aggregate Medicare expenditures under the revised ASC payment system in CY 2008 being equal to aggregate Medicare expenditures that would have occurred in CY 2008 in the absence of the revised system, taking into consideration the cap on ASC payments in CY 2007, as required under section 1833(i)(2)(E) of the Act (72 FR 42522). We adopted a policy to make the system budget neutral in subsequent calendar years (72 FR 42532 and 42533; § 416.171(e)).

We note that we consider the term ''expenditures'' in the context of the budget neutrality requirement under section 1833(i)(2)(D)(ii) of the Act to mean expenditures from the Medicare Part B Trust Fund. We do not consider expenditures to include beneficiary coinsurance and copayments. This distinction was important for the CY 2008 ASC budget neutrality model that considered payments across the OPPS, ASC, and MPFS payment systems. However, because coinsurance is almost always 20 percent for ASC services, this interpretation of expenditures has minimal impact for subsequent budget neutrality adjustments calculated within the revised ASC payment system.

In the CY 2008 OPPS/ASC final rule with comment period (72 FR 66857 through 66858), we set out a step-by-step illustration of the final budget neutrality adjustment calculation based on the methodology finalized in the August 2, 2007, ASC final rule (72 FR 42521 through 42531) and as applied to updated data available for the CY 2008 OPPS/ASC final rule with comment period. The application of that methodology to the data available for the CY 2008 OPPS/ASC final rule with comment period resulted in a budget neutrality adjustment of 0.65.

For CY 2008, we adopted the OPPS relative payment weights as the ASC relative payment weights for most services and, consistent with the final policy, we calculated the CY 2008 ASC payment rates by multiplying the ASC relative payment weights by the final CY 2008 ASC conversion factor of $41.401. For covered office-based surgical procedures, covered ancillary radiology services (excluding covered ancillary radiology services involving certain nuclear medicine procedures or involving the use of contrast agents, as discussed in section XIII.D.2 of the CY 2023 OPPS/ASC proposed rule (87 FR 44715 and 44716)), and certain diagnostic tests within the medicine range that are covered ancillary services, the established policy is to set the payment rate at the lower of the MPFS unadjusted nonfacility PE RVU-based amount or the amount calculated using the ASC standard ratesetting methodology. Further, as discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66841 through 66843), we also adopted alternative ratesetting methodologies for specific types of services (for example, device-intensive procedures).

As discussed in the August 2, 2007 ASC final rule (72 FR 42517 and 42518) and as codified at § 416.172(c) of the regulations, the revised ASC payment system accounts for geographic wage variation when calculating individual ASC payments by applying the pre-floor and pre-reclassified IPPS hospital wage indexes to the labor-related share, which is 50 percent of the ASC payment amount based on a GAO report of ASC costs using 2004 survey data. Beginning in CY 2008, CMS accounted for geographic wage variation in labor costs when calculating individual ASC payments by applying the pre-floor and pre-reclassified hospital wage index values that CMS calculates for payment under the IPPS, using updated Core Based Statistical Areas (CBSAs) issued by OMB in June 2003.

The reclassification provision in section 1886(d)(10) of the Act is specific

to hospitals. We believe that using the most recently available pre-floor and pre-reclassified IPPS hospital wage indexes result in the most appropriate adjustment to the labor portion of ASC costs. We continue to believe that the unadjusted hospital wage indexes, which are updated yearly and are used by many other Medicare payment systems, appropriately account for geographic variation in labor costs for ASCs. Therefore, the wage index for an ASC is the pre-floor and pre-reclassified hospital wage index under the IPPS of the CBSA that maps to the CBSA where the ASC is located.

Generally, OMB issues major revisions to statistical areas every 10 years, based on the results of the decennial census. On February 28, 2013, OMB issued OMB Bulletin No. 13–01, which provides the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the United States and Puerto Rico based on the standards published on June 28, 2010, in the **Federal Register** (75 FR 37246 through 37252) and 2010 Census Bureau data. (A copy of this bulletin may be obtained at: *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/bulletins/2013/b13-01.pdf.*) In the FY 2015 IPPS/LTCH PPS final rule (79 FR 49951 through 49963), we implemented the use of the CBSA delineations issued by OMB in OMB Bulletin 13–01 for the IPPS hospital wage index beginning in FY 2015.

OMB occasionally issues minor updates and revisions to statistical areas in the years between the decennial censuses. On July 15, 2015, OMB issued OMB Bulletin No. 15–01, which provides updates to and supersedes OMB Bulletin No. 13–01 that was issued on February 28, 2013. OMB Bulletin No. 15–01 made changes that are relevant to the IPPS and ASC wage index. We refer readers to the CY 2017 OPPS/ASC final rule with comment period (81 FR 79750) for a discussion of these changes and our implementation of these revisions. (A copy of this bulletin may be obtained at *https://www.bls.gov/bls/omb-bulletin-15-01-revised-delineations-of-metropolitan-statistical-areas.pdf.*)

On August 15, 2017, OMB issued OMB Bulletin No. 17–01, which provided updates to and superseded OMB Bulletin No. 15–01 that was issued on July 15, 2015. We refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 58864 through 58865) for a discussion of these changes and our implementation of these revisions. (A copy of this bulletin may be obtained at *https://www.whitehouse.gov/wp-content/uploads/legacy_drupal_files/omb/bulletins/2017/b-17-01.pdf.*)

On April 10, 2018, OMB issued OMB Bulletin No. 18–03, which superseded the August 15, 2017 OMB Bulletin No. 17–01. On September 14, 2018, OMB issued OMB Bulletin 18–04, which superseded the April 10, 2018 OMB Bulletin No. 18–03. A copy of OMB Bulletin No. 18–03 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/04/OMB-BULLETIN-NO.-18-03-Final.pdf.* A copy of OMB Bulletin No. 18–04 may be obtained at *https://www.whitehouse.gov/wp-content/uploads/2018/09/Bulletin-18-04.pdf.*

On March 6, 2020, OMB issued Bulletin No. 20–01, which provided updates to and superseded OMB Bulletin No. 18–04 that was issued on September 14, 2018. (For a copy of this bulletin, we refer readers to the following website: *https://www.whitehouse.gov/wp-content/uploads/2020/03/Bulletin-20-01.pdf.*)

The final CY 2024 ASC wage indexes fully reflect the OMB labor market area delineations (including the revisions to the OMB labor market delineations discussed above, as set forth in OMB Bulletin Nos. 13–01, 15–01, 17–01, 18–03, 18–04, and 20–01). We note that, in certain instances, there might be urban or rural areas for which there is no IPPS hospital that has wage index data that could be used to set the wage index for that area. For these areas, our policy has been to use the average of the wage indexes for CBSAs (or metropolitan divisions as applicable) that are contiguous to the area that has no wage index (where ''contiguous'' is defined as sharing a border). For example, for CY 2024, we are applying a proxy wage index based on this methodology to ASCs located in CBSA 25980 (Hinesville-Fort Stewart, GA).

When all of the areas contiguous to the urban CBSA of interest are rural and there is no IPPS hospital that has wage index data that could be used to set the wage index for that area, we determine the ASC wage index by calculating the average of all wage indexes for urban areas in the State (75 FR 72058 and 72059). In other situations, where there are no IPPS hospitals located in a relevant labor market area, we apply our current policy of calculating an urban or rural area's wage index by calculating the average of the wage indexes for CBSAs (or metropolitan divisions where applicable) that are contiguous to the area with no wage index.

2. Calculation of the ASC Payment Rates

a. Updating the ASC Relative Payment Weights for CY 2024 and Future Years

We update the ASC relative payment weights each year using the national OPPS relative payment weights (and PFS nonfacility PE RVU-based amounts, as applicable) for that same calendar year and uniformly scale the ASC relative payment weights for each update year to make them budget neutral (72 FR 42533). The OPPS relative payment weights are scaled to maintain budget neutrality for the OPPS. We then scale the OPPS relative payment weights again to establish the ASC relative payment weights. To accomplish this, we hold estimated total ASC payment levels constant between calendar years for purposes of maintaining budget neutrality in the ASC payment system. That is, we apply the weight scalar to ensure that projected expenditures from the updated ASC payment weights in the ASC payment system are equal to what would be the current expenditures based on the scaled ASC payment weights. In this way, we ensure budget neutrality and that the only changes to total payments to ASCs result from increases or decreases in the ASC payment update factor.

Where the estimated ASC expenditures for an upcoming year are higher than the estimated ASC expenditures for the current year, the ASC weight scalar is reduced, in order to bring the estimated ASC expenditures in line with the expenditures for the baseline year. This frequently results in ASC relative payment weights for surgical procedures that are lower than the OPPS relative payment weights for the same procedures for the upcoming year. Therefore, over time, even if procedures performed in the HOPD and ASC receive the same update factor under the OPPS and ASC payment system, payment rates under the ASC payment system would increase at a lower rate than payment for the same procedures performed in the HOPD as a result of applying the ASC weight scalar to ensure budget neutrality.

As discussed in section II.A.1.a of this final rule, we are using the CY 2022 claims data to be consistent with the OPPS claims data for this rule. Consistent with our established policy, we proposed to scale the CY 2024 relative payment weights for ASCs according to the following method. Holding ASC utilization, the ASC conversion factor, and the mix of services constant from CY 2022, we proposed to compare the estimated total payment using the CY 2023 ASC

relative payment weights with the estimated total payment using the CY 2024 ASC relative payment weights to take into account the changes in the OPPS relative payment weights between CY 2023 and CY 2024.

Additionally, in light of our policy to provide a higher ASC payment rate through the use of ASC complexity adjustment codes for certain primary procedures when performed with add-on packaged services, we incorporate estimated total spending and estimated utilization for these codes in our budget neutrality calculation. We estimated in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72094) that the impact on CY 2023 estimated total payments from our proposed CY 2023 ASC complexity adjustment codes would be $5 million in spending and we propose to incorporate this $5 million in estimated CY 2023 total payments for the budget neutrality calculation of this final rule. For estimated CY 2024 total payments, we proposed to incorporate the estimated total spending and estimated utilization related to our proposed CY 2024 ASC complexity adjustment codes. In this final rule with comment period, we estimate the additional CY 2024 spending related to our proposed ASC complexity adjustment codes will be approximately $5 million.

We proposed to use the ratio of estimated CY 2023 to estimated CY 2024 total payments (the weight scalar) to scale the ASC relative payment weights for CY 2024. The proposed CY 2024 ASC weight scalar was 0.8649. Consistent with historical practice, we proposed to scale, using this method, the ASC relative payment weights of covered surgical procedures, covered ancillary radiology services, and certain diagnostic tests within the medicine range of CPT codes, which are covered ancillary services for which the ASC payment rates are based on OPPS relative payment weights.

We proposed that we would not scale ASC payment for separately payable covered ancillary services that have a predetermined national payment amount (that is, their national ASC payment amounts are not based on OPPS relative payment weights), such as drugs and biologicals that are separately paid or services that are contractor-priced or paid at reasonable cost in ASCs. Any service with a predetermined national payment amount would be included in the ASC budget neutrality comparison, but scaling of the ASC relative payment weights would not apply to those services. The ASC payment weights for those services without predetermined national payment amounts (that is, those services with national payment amounts that would be based on OPPS relative payment weights) would be scaled to eliminate any difference in the total payment between the current year and the update year.

For any given year's ratesetting, we typically use the most recent full calendar year of claims data to model budget neutrality adjustments. We proposed to use the CY 2022 claims data to model our budget neutrality adjustment for CY 2024.

Comment: Many commenters reiterated their past recommendation that we discontinue applying the ASC weight scalar to achieve budget neutrality and greater parity between the OPPS and ASC. Commenters were concerned that the ASC weight scalar has decreased overall since the implementation of the revised ASC payment system for CY 2008 and stated that relative weights have already been scaled for budget neutrality and do not require secondary rescaling to achieve budget neutrality under the ASC payment system. Commenters proposed that CMS combine the OPPS and ASC utilization and mixes of services to establish a single weight scalar, applying a single budget neutrality calculation to the OPPS and ASC payment systems, which commenters felt would align the payment systems and more accurately scale for outpatient volume across both sites of service.

Response: We disagree with commenters' assessment and are not accepting the recommendation to discontinue applying the ASC weight scalar. As we have stated in past rulemaking (82 FR 59421), applying the ASC weight scalar, which is 0.8881 for this final rule with comment period and an increase from the CY 2023 ASC weight scalar of 0.8594, ensures that the ASC payment system remains budget neutral. This annual budget neutrality adjustment is performed similarly to updates for the IPPS, OPPS, PFS, and other Medicare payment systems. We apply the ASC weight scalar to scaled OPPS relative weights to ensure that current Medicare payments under the ASC payment system do not increase as a result of newer data used to determine the cost relativity between surgical procedures. The scaled prospective OPPS relative weights that are used to determine scaled prospective ASC relative weights have not, as commenters suggest, been adjusted to achieve budget neutrality within the ASC payment system prior to the application of the ASC weight scalar. We also note that no stakeholder presented empirical evidence that the budget neutrality adjustment under the ASC payment system has impacted beneficiary access to surgical procedures in the ASC setting.

After consideration of the public comments we received, we are finalizing our proposal to use the ratio of CY 2023 to CY 2024 total payments (the weight scalar) to scale the ASC relative payment weights for CY 2024. The final CY 2024 ASC weight scalar is 0.8881. Consistent with historical practice, we are finalizing our proposal to scale the ASC relative payment weights of covered surgical procedures, covered ancillary radiology services, and certain diagnostic tests within the medicine range of CPT codes, which are covered ancillary services for which the ASC payment rates are based on OPPS relative payment weights. Additionally, CY 2024 total payments will include additional spending and utilization related to these ASC complexity adjustment C codes, which we estimate to be approximately $5 million for CY 2024.

b. Updating the ASC Conversion Factor

Under the OPPS, we typically apply a budget neutrality adjustment for provider-level changes, most notably a change in the wage index values for the upcoming year, to the conversion factor. Consistent with our final ASC payment policy, for the CY 2017 ASC payment system and subsequent years, in the CY 2017 OPPS/ASC final rule with comment period (81 FR 79751 through 79753), we finalized our policy to calculate and apply a budget neutrality adjustment to the ASC conversion factor for supplier-level changes in wage index values for the upcoming year, just as the OPPS wage index budget neutrality adjustment is calculated and applied to the OPPS conversion factor. For CY 2024, we calculated the proposed adjustment for the ASC payment system by using the most recent CY 2022 claims data available and estimating the difference in total payment that would be created by introducing the proposed CY 2024 ASC wage indexes. Specifically, holding CY 2022 ASC utilization, service-mix, and the proposed CY 2024 national payment rates after application of the weight scalar constant, we calculated the total adjusted payment using the CY 2023 ASC wage indexes and the total adjusted payment using the proposed CY 2024 ASC wage indexes. We used the 50 percent labor-related share for both total adjusted payment calculations. We then compared the total adjusted payment calculated with the CY 2023 ASC wage indexes to the total adjusted payment calculated with

the proposed CY 2024 ASC wage indexes and applied the resulting ratio of 1.0017 (the proposed CY 2024 ASC wage index budget neutrality adjustment) to the CY 2023 ASC conversion factor to calculate the proposed CY 2024 ASC conversion factor.

Section 1833(i)(2)(D)(v) of the Act requires that the ASC conversion factor be reduced by a productivity adjustment in each calendar year. Section 1886(b)(3)(B)(xi)(II) of the Act defines the productivity adjustment to be equal to the 10-year moving average of changes in annual economy-wide private nonfarm business multifactor productivity (MFP). We finalized the methodology for calculating the productivity adjustment in the CY 2011 PFS final rule with comment period (75 FR 73394 through 73396) and revised it in the CY 2012 PFS final rule with comment period (76 FR 73300 through 73301) and the CY 2016 OPPS/ASC final rule with comment period (80 FR 70500 through 70501). The proposed productivity adjustment for CY 2024 was projected to be 0.2 percentage point, as published in the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 27005) based on IGI's 2022 fourth quarter forecast.

Section 1833(i)(2)(C)(i) of the Act requires that, if the Secretary has not updated amounts established under the revised ASC payment system in a calendar year, the payment amounts shall be increased by the percentage increase in the Consumer Price Index for all urban consumers (CPI–U), U.S. city average, as estimated by the Secretary for the 12-month period ending with the midpoint of the year involved. The statute does not mandate the adoption of any particular update mechanism, but it requires the payment amounts to be increased by the CPI–U in the absence of any update. Because the Secretary updates the ASC payment amounts annually, we adopted a policy, which we codified at § 416.171(a)(2)(ii)), to update the ASC conversion factor using the CPI–U for CY 2010 and subsequent calendar years.

In the CY 2019 OPPS/ASC final rule with comment period (83 FR 59075 through 59080), we finalized a policy to apply the productivity-adjusted hospital market basket update to ASC payment system rates for an interim period of 5 years (CY 2019 through CY 2023), during which we would assess whether there is a migration of the performance of procedures from the hospital setting to the ASC setting as a result of the use of a productivity-adjusted hospital market basket update, as well as whether there are any unintended consequences, such as less than expected migration of the performance of procedures from the hospital setting to the ASC setting. The most recent available full year of claims data to assess the expected migration applying the productivity-adjusted hospital market basket update during the interim period would fall within the period from CY 2019 through CY 2022. However, the impact of the COVID–19 PHE on health care utilization, in particular in CY 2020, was tremendously profound, particularly for elective surgeries, because many beneficiaries avoided healthcare settings when possible, to avoid possible infection from the SARS–CoV–2 virus. As a result, it is nearly impossible to disentangle the effects from the COVID–19 PHE in our analysis of whether the higher update factor for the ASC payment system caused increased migration to the ASC setting. To analyze whether procedures migrated from the hospital setting to the ASC setting, we need to use claims data from a period during which the COVID–19 PHE had less of an impact on health care utilization. Therefore, for the CY 2024 OPPS/ASC proposed rule, we proposed to extend the 5-year interim period an additional 2 years, that is, through CY 2024 and CY 2025. We believe hospital outpatient and ASC utilization data from CYs 2023 and 2024 will enable us to more accurately analyze whether the application of the productivity-adjusted hospital market basket update to the ASC payment system had an effect on the migration of services from the hospital setting to the ASC setting. We proposed to revise our regulations at 42 CFR 416.171(a)(2)(iii) and (iv), which establish the annual update to the ASC conversion factor, to reflect this 2-year extension. We also proposed to revise our regulations at § 416.171(a)(2)(vi) and (vii), which establish the 2.0 percentage point reduction for ASCs that fail to meet the standards for reporting ASC quality measures, and § 416.171(a)(2)(viii)(B) and (C), which establish the productivity adjustment, to reflect this 2-year extension.

For CY 2024, in accordance with our proposed revisions to § 416.171(a)(2)(iii) and (vi) and (a)(2)(viii)(B), we proposed to utilize the hospital market basket update of 3.0 percent reduced by the productivity adjustment of 0.2 percentage point, resulting in a proposed productivity-adjusted hospital market basket update factor of 2.8 percent for ASCs meeting the quality reporting requirements. Therefore, we proposed to apply a 2.8 percent productivity-adjusted hospital market basket update factor to the CY 2023 ASC conversion factor for ASCs meeting the quality reporting requirements to determine the CY 2024 ASC payment amounts. The ASCQR Program affected payment rates beginning in CY 2014 and, under this program, there is a 2.0 percentage point reduction to the productivity-adjusted hospital market basket update factor for ASCs that fail to meet the ASCQR Program requirements. We refer readers to section XIV.E of the CY 2019 OPPS/ASC final rule with comment period (83 FR 59138 and 59139) and section XIV.E of this final rule for a detailed discussion of our policies regarding payment reduction for ASCs that fail to meet ASCQR Program requirements. We proposed to utilize the inpatient hospital market basket percentage increase of 3.0 percent reduced by 2.0 percentage points for ASCs that do not meet the quality reporting requirements and then reduced by the 0.2 percentage point productivity adjustment. Therefore, we proposed to apply a 0.8 percent productivity-adjusted hospital market basket update factor to the CY 2023 ASC conversion factor for ASCs not meeting the quality reporting requirements. We also proposed that if more recent data are subsequently available (for example, a more recent estimate of the inpatient hospital market basket percentage increase or productivity adjustment), we would use such data, if appropriate, to determine the CY 2024 ASC update for the CY 2024 OPPS/ASC final rule with comment period.

For CY 2024, we proposed to adjust the CY 2023 ASC conversion factor ($51.854) by the proposed wage index budget neutrality factor of 1.0017 in addition to the productivity-adjusted hospital market basket update of 2.8 percent discussed above, which results in a proposed CY 2024 ASC conversion factor of $53.397 for ASCs meeting the quality reporting requirements. For ASCs not meeting the quality reporting requirements, we proposed to adjust the CY 2023 ASC conversion factor ($51.854) by the proposed wage index budget neutrality factor of 1.0017 in addition to the quality reporting/productivity-adjusted hospital market basket update of 0.8 percent discussed above, which results in a proposed CY 2024 ASC conversion factor of $52.358.

Comment: Most commenters supported our proposed increase to the CY 2024 ASC payment rates. These commenters supported the continued use of the hospital market basket update for the ASC payment system, due to better alignment with the OPPS, and were supportive of extending the five-

year interim period for an additional two years. Several of these commenters suggested the use of the hospital market basket update should become a permanent update for ASCs.

However, a subset of commenters, including MedPAC, were against the extension proposal. MedPAC was opposed to extending the interim period, citing evidence that the hospital market basket index does not accurately reflect ASC costs and that surgical procedure migration was occurring before this update factor was used in ASCs. MedPAC did not support CMS collecting additional data on the effects of using the hospital market basket update on ASC volume. (As discussed in section XII.C., MedPAC has suggested that neither the hospital market basket update nor CPI–U likely reflect an ASC's cost structure and recommended collecting cost data to establish an appropriate price index for ASCs.) Several other commenters also recommended that CMS allow the proposal to expire after CY 2023, as hospitals and ASC have different costs and patient populations. They suggested CMS work with ASCs to develop and implement a minimally burdensome way to collect ASC costs that could be used to finalize an appropriate update mechanism in the future, if necessary.

Response: We appreciate the feedback from commenters. As we stated above, the profound impact of the COVID–19 PHE on health care utilization, particularly for elective surgeries, makes it difficult to clarify whether the higher update factor for the ASC payment system caused increased migration to the ASC setting. We believe using the additional two years of data, CY2024 and CY 2025, will enable us to more accurately analyze the impact of the hospital market basket update on the ASC payment system; and we do not believe we should make any determination regarding the most appropriate update mechanism until we perform such analysis.

After consideration of the public comments we received, for CY 2024, we are finalizing temporarily extending a CY 2019 ASC payment system policy that implemented a five-year interim period using the productivity-adjusted hospital market basket, instead of the CPI–U to update ASC payment rates.

For CY 2024, we are also finalizing the hospital market basket update of 3.3 percent reduced by the productivity adjustment of 0.2 percentage point, resulting in a productivity-adjusted hospital market basket update factor of 3.1 percent for ASCs meeting the quality reporting requirements. Therefore, we apply a 3.1 percent productivity-adjusted hospital market basket update to the CY 2023 ASC conversion factor for ASCs meeting the quality reporting requirements to determine the CY 2024 ASC payments. We are finalizing the hospital market basket update of 3.3 percent reduced by 2.0 percentage points for ASCs that do not meet the quality reporting requirements and an additional reduction of 0.2 percentage point for the productivity adjustment. Therefore, we apply a 1.1 percent productivity-adjusted hospital market basket update to the CY 2023 ASC conversion factor for ASCs not meeting the quality reporting requirements.

For CY 2024, we are adjusting the CY 2023 ASC conversion factor ($51.854) by a wage index budget neutrality factor of 1.0010 in addition to the productivity-adjusted hospital market basket update of 3.1 percent, discussed above, which results in a final CY 2024 ASC conversion factor of $53.514 for ASCs meeting the quality reporting requirements. For ASCs not meeting the quality reporting requirements, we are adjusting the CY 2023 ASC conversion factor ($51.854) by the wage index budget neutrality factor of 1.0010 in addition to the reduced productivity-adjusted hospital market 1.1 percent, discussed above, which results in a final CY 2024 ASC conversion factor of $52.476 for ASCs not meeting the quality reporting requirements.

3. Display of the Final CY 2024 ASC Payment Rates

Addenda AA and BB to this final rule (which are available on the CMS website) display the proposed ASC payment rates for CY 2024 for covered surgical procedures and covered ancillary services, respectively. The final payment rates included in Addenda AA and BB to this final rule reflect the full ASC payment update and not the reduced payment update used to calculate payment rates for ASCs not meeting the quality reporting requirements under the ASCQR Program.

These Addenda contain several types of information related to the proposed CY 2024 payment rates. Specifically, in Addendum AA, a ''Y'' in the column titled ''To be Subject to Multiple Procedure Discounting'' indicates that the surgical procedure would be subject to the multiple procedure payment reduction policy. As discussed in the CY 2008 OPPS/ASC final rule with comment period (72 FR 66829 and 66830), most covered surgical procedures are subject to a 50 percent reduction in the ASC payment for the lower-paying procedure when more than one procedure is performed in a single operative session.

For CY 2021, we finalized adding a new column to ASC Addendum BB titled ''Drug Pass-Through Expiration during Calendar Year'' where we flag through the use of an asterisk each drug for which pass-through payment is expiring during the calendar year (that is, on a date other than December 31st).

The values displayed in the column titled ''Final CY 2024 Payment Weight'' are the proposed relative payment weights for each of the listed services for CY 2024. The proposed relative payment weights for all covered surgical procedures and covered ancillary services where the ASC payment rates are based on OPPS relative payment weights were scaled for budget neutrality. Therefore, scaling was not applied to the device portion of the device-intensive procedures; services that are paid at the MPFS nonfacility PE RVU-based amount; separately payable covered ancillary services that have a predetermined national payment amount, such as drugs and biologicals and brachytherapy sources that are separately paid under the OPPS; or services that are contractor-priced or paid at reasonable cost in ASCs. This includes separate payment for non-opioid pain management drugs.

To derive the final CY 2024 payment rate displayed in the ''Final CY 2024 Payment Rate'' column, each ASC payment weight in the ''Final CY 2024 Payment Weight'' column was multiplied by the final CY 2024 conversion factor. The conversion factor includes a budget neutrality adjustment for changes in the wage index values and the annual update factor as reduced by the productivity adjustment. The final CY 2024 ASC conversion factor uses the CY 2024 productivity-adjusted hospital market basket update factor of 3.1 percent (which is equal to the inpatient hospital market basket percentage increase of 3.3 percent reduced by the productivity adjustment of 0.2 percentage point).

In Addendum BB, there are no relative payment weights displayed in the ''Final CY 2024 Payment Weight'' column for items and services with predetermined national payment amounts, such as separately payable drugs and biologicals. The ''Final CY 2024 Payment'' column displays the final CY 2024 national unadjusted ASC payment rates for all items and services. The final CY 2024 ASC payment rates listed in Addendum BB for separately payable drugs and biologicals are based on the most recently available data used for payment in physicians' offices.

Addendum EE to this final rule provides the HCPCS codes and short descriptors for surgical procedures that are finalized to be excluded from payment in ASCs for CY 2024.

Addendum FF to this final rule displays the OPPS payment rate (based on the standard ratesetting methodology), the device offset percentage for determining device-intensive status (based on the standard ratesetting methodology), and the device portion of the ASC payment rate for CY 2024 for covered surgical procedures.

XIV. Requirements for the Hospital Outpatient Quality Reporting (OQR) Program

A. Background

We seek to promote higher quality, more efficient, and equitable healthcare for patients. Consistent with these goals, we have implemented quality reporting programs for multiple care settings, including the Hospital Outpatient Quality Reporting (OQR) Program for hospital outpatient care.

We refer readers to the CY 2011 Outpatient Prospective Payment System (OPPS) and Ambulatory Surgical Center (ASC) payment system final rule (75 FR 72064 and 72065) for a detailed discussion of the statutory history of the Hospital OQR Program. We refer readers to the CYs 2008 through 2023 OPPS/ASC final rules for detailed discussions of the regulatory history of the Hospital OQR Program (72 FR 66860 through 66875; 73 FR 68758 through 68779; 74 FR 60629 through 60656; 75 FR 72064 through 72110; 76 FR 74451 through 74492; 77 FR 68467 through 68492; 78 FR 75090 through 75120; 79 FR 66940 through 66966; 80 FR 70502 through 70526; 81 FR 79753 through 79797; 82 FR 59424 through 59445; 83 FR 59080 through 59110; 84 FR 61410 through 61420; 85 FR 86179 through 86187; 86 FR 63822 through 63875; and 87 FR 72096 through 72117).

We have codified certain requirements under the Hospital OQR Program at 42 CFR 419.46. We refer readers to section XIV.F of this final rule with comment period for a detailed discussion of the payment reduction for hospitals that fail to meet Hospital OQR Program requirements.

B. Hospital OQR Program Quality Measures

1. Retention, Removal, Replacement, or Suspension of Quality Measures from the Hospital OQR Program Measure Set

We refer readers to § 419.46(i) for our policies regarding: (1) measure retention; (2) immediate measure removal; and (3) measure removal, suspension, or replacement through the rulemaking process.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49774), we proposed to amend our immediate measure removal policy codified at § 419.46(i)(2) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

a. Removal of the Left Without Being Seen Measure Beginning with the CY 2024 Hospital OQR Reporting Period

We refer readers to the CY 2011 OPPS/ASC final rule (75 FR 72088 and 72089) where we adopted the Left Without Being Seen (LWBS) measure beginning with the CY 2013 payment determination. The LWBS measure was initially endorsed by a consensus-based entity (CBE) in 2008. This process measure assesses the percent of patients who leave the emergency department (ED) without being evaluated by a physician, advanced practice nurse, or physician assistant. Our rationale for adopting the LWBS measure was that patients leaving without being seen was an indicator of ED overcrowding (75 FR 72089).

Endorsement of the measure was removed in 2012 because the measure steward did not choose to resubmit the measure to maintain endorsement. We continued to retain the LWBS measure because our data showed variation/gap in performance and improvement. However, as we described in the CY 2024 OPPS/ASC proposed rule (88 FR 49774), over the last few years, our routine measure monitoring and evaluation indicated: (1) limited evidence linking the measure to improved patient outcomes; (2) that increased LWBS rates may reflect poor access to timely clinic-based care rather than intrinsic systemic issues within the ED; [218] and (3) unintended effects on LWBS rates caused by other policies, programs, and initiatives may lead to skewed measure performance.[219] [220] [221]

We recognized that LWBS performance issues could be due to inefficient patient flow in the ED for a variety of reasons or due to insufficient community resources, which result in higher ED patient volumes that lead to long wait times and patients deciding to leave without being seen. These patients' reasoning for visiting the ED is often not severe enough that they would want to wait if the ED is crowded. Additionally, we stated that we did not believe the LWBS measure provides enough specificity to give value because it does not provide granularity for actionable meaningful data toward quality improvement. Based on these findings during the development of the CY 2024 OPPS/ASC proposed rule, we identified measure removal factor 2 as applicable (that is, performance or improvement on a measure does not result in better patient outcomes), as codified under § 419.46(i)(3)(i)(B).

ED performance and care continues to be an important topic area of the Hospital OQR Program. In the CY 2024 OPPS/ASC proposed rule, we discussed the Median Time from ED Arrival to ED Departure for Discharged ED Patients measure (Median Time for Discharged ED Patients measure) as a better measure for measuring ED performance and care. In our discussion, we stated that the Median Time for Discharged ED Patients measure, adopted for reporting in the Hospital OQR Program, provides more meaningful data compared to the LWBS measure because the measure presents more granular data on length of time of ED throughput. Additionally, we stated that the Median Time for Discharged ED Patients measure provides useful information to facilities for improvement efforts because the measure is stratified, showing the median time from ED departure for discharged ED patients in four different strata in the Hospital Outpatient Department (HOPD) setting. These improvement efforts by facilities could ultimately reduce the number of patients who leave without being seen.

Based on the above assessment and rationale, in the CY 2024 OPPS/ASC proposed rule (88 FR 49774), we stated our belief that the LWBS measure does

[221] Yoo MJ, Schauer SG, & Trueblood WE. (2022). 'Swab and Go' Impact on Emergency Department Left without Being Seen Rates.'' *The American Journal of Emergency Medicine,* 57(July): 164–65. *https://doi.org/10.1016/J.AJEM.2021.11.043.*

not provide enough evidence to promote quality of care and improved patient outcomes to justify retaining the measure in the Hospital OQR Program. Therefore, we proposed to remove the LWBS measure from the program beginning with the CY 2024 reporting period/CY 2026 payment determination.

We invited public comment on our proposal.

Comment: Many commenters supported CMS's proposal to remove the LWBS measure beginning with the CY 2024 reporting period/CY 2026 payment determination. Several of these commenters noted that high LWBS rates may reflect factors beyond the control of HOPDs rather than intrinsic systemic issues within the ED. A few of these commenters further stated that there are more meaningful measures, such as Median Time for Discharged ED Patients, in the Hospital OQR Program that are better for measuring ED performance and care. A few of these commenters concurred with the rationale in the CY 2024 OPPS/ASC proposed rule to remove the LWBS measure based on measure removal factor 2. These commenters specifically stated that they supported CMS's proposal to remove the LWBS measure because the LWBS measure does not provide actionable data toward quality improvement and lacks sufficient evidence that the measure promotes quality of care and improved patient outcomes.

Response: We thank commenters for their feedback. After consideration of public comments and assessment of the latest monitoring and evaluation data, we are not finalizing our proposal to remove the LWBS measure at this time. While our routine monitoring and evaluation of this measure initially indicated lack of variation among hospital performance as well as limited evidence linking the measure to improved patient outcomes, since publication of the CY 2024 OPPS/ASC proposed rule we have received new data indicating an increase (worsening) in LWBS rates that we believe warrants further investigation before potentially removing the LWBS measure under measure removal factor 2—performance or improvement on a measure does not result in better patient outcomes.

Comment: Some commenters disagreed that the measure had met the criteria to qualify for measure removal factor 2. One of these commenters cited evidence from Gravel, Smalley, and Mataloni indicating that people who leave without being seen are at higher risk of poor outcomes, higher readmission rates, and increased mortality, and recommended retaining the LWBS measure.[222] [223] [224] According to this commenter, leaving the ED without receiving a medical opinion from the visit is sub-optimal care that should be accounted for. Another commenter provided evidence [225] to support its belief that patients might leave the ED because they are too sick to stay, not because they were not sick enough, and that CMS cannot presume that the only reason patients left without being seen was because they did not need to be in the ED to begin with.

Response: We appreciate the commenters' feedback regarding the LWBS measure and note that we are not finalizing our proposal to remove the LWBS measure. More recent data in the evaluation of this measure have indicated an increase in LWBS rates that we believe warrants further investigation before potentially removing the LWBS measure under measure removal factor 2—performance or improvement on a measure does not result in better patient outcomes.

Comment: Some commenters opposed the removal of the measure as they believe it helps capture ''ED boarding,'' which one commenter defined as a concept where patients are held in the ED awaiting admission to an inpatient bed or transfer elsewhere.[226] These commenters believe that ED wait times and boarding reflect the overall issue of ED overcrowding, and that CMS should retain this measure to keep tracking and reporting these important data. One commenter stated that information from this measure could help incentivize investments in more targeted solutions to the issue of ED overcrowding. Another commenter stated that removing this measure would signal that CMS does not recognize or acknowledge the seriousness of the negative effects of ED wait times, overcrowding, and boarding.

Response: We acknowledge the commenters' concerns regarding the lack of ED measures in the Hospital OQR Program and emphasize that ED performance and care, including overcrowding and boarding, continue to be important topic areas of the Hospital OQR Program. After consideration of public comments and assessment of recent LWBS rates, which indicate a worsening in LWBS rates, we believe that the LWBS measure may provide meaningful information about patient patterns in EDs and that, prior to potentially removing this measure from the Hospital OQR Program, additional examination of the measure's utility is warranted. We are also committed to conducting a broader re-examination of how to improve measurement of quality of care in the ED setting that could help address gaps not directly measured by the Median Time for Discharged ED Patients and LWBS measures.

Comment: A few commenters suggested that CMS explore an alternative measure for access to care to ensure patients have access to timely emergency care. One commenter additionally suggested that CMS adopt the Median Admit Decision Time to ED Departure Time for Admitted Patients eCQM and noted that, while the Hospital Inpatient Quality Reporting (IQR) Program is removing this eCQM in 2024, several state quality reporting programs wish to continue to report the measure. This commenter further stated that adoption of the Median Admit Decision Time to ED Departure Time for Admitted Patients eCQM in the Hospital OQR Program would allow hospitals already familiar with the measure to continue to report this measure and reduce reporting burden while also monitoring ED wait times until admission.

Response: We thank the commenters for their recommendations. We agree that we should continue to prioritize ED measures in the Hospital OQR Program and will continue to assess and develop relevant measures for future rulemaking. We note that proposal and adoption of the Median Admit Decision Time to ED Departure Time for Admitted Patients eCQM would address the National Quality Strategy goal of ''Interoperability'' under the priority area ''Interoperability and Scientific Advancement.'' We will take this recommendation into consideration.

We believe that it is important to evaluate a measure's effectiveness based on its capacity to deliver better patient outcomes and remove measures that show limited evidence in improving patient outcomes. As stated above, our routine monitoring and evaluation of this measure has indicated a recent increase in LWBS rates that we believe warrants further investigation before potentially removing the LWBS measure under measure removal factor 2—performance or improvement on a measure does not result in better patient outcomes. Several commenters emphasized the importance of quality measurement for the ED care setting, particularly to address persistent problems of ED overcrowding and boarding. We agree with commenters who noted the benefits of retaining the LWBS measure in order to identify and inform quality improvement efforts or beneficiary care decision-making and using that information to identify a more granular measure that could potentially replace the LWBS measure. Therefore, after considering the concerns raised by commenters, we are not finalizing our proposal to remove the LWBS measure beginning with the CY 2024 reporting period/CY 2026 payment determination.

2. Modifications to Previously Adopted Measures

In the CY 2024 OPPS/ASC proposed rule (88 FR 49774), we proposed to modify three previously adopted measures beginning with the CY 2024 reporting period/CY 2026 payment determination: (1) COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure; (2) Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure; and (3) Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure. We discuss each of these measures, along with the public comments that we received on them, in subsequent sections.

a. Modification of the COVID–19 Vaccination Coverage Among Health Care Personnel (HCP) Measure Beginning with the CY 2024 Reporting Period/CY 2026 Payment Determination

(1) Background

On January 31, 2020, the Secretary of the Department of Health and Human Services (HHS) declared a public health emergency (PHE) for the United States in response to the global outbreak of SARS–CoV–2, a then novel coronavirus that causes a disease named ''coronavirus disease 2019'' (COVID–19).[227] Subsequently, the COVID–19 Vaccination Coverage Among Health Care Personnel (HCP) measure was adopted across multiple quality reporting programs, including the Hospital OQR Program (86 FR 63824 through 63833).[228] The Secretary renewed the PHE on April 21, 2020, and then every 3 months thereafter, with the final renewal on February 9, 2023.[229] The PHE expired on May 11, 2023; however, the public health response to COVID–19, which includes vaccination efforts, remains a public health priority.[230] As we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49776), there had been more than 102.7 million COVID–19 cases and 1.1 million COVID–19 deaths in the United States as of February 13, 2023; in reviewing these numbers for this final rule, as of September 15, 2023 there have been more than 103.4 million COVID–19 cases and 1.1 million COVID–19 deaths in the United States.[231] [232]

We stated in the CY 2022 OPPS/ASC final rule (86 FR 63825), and in our ''Revised Guidance for Staff Vaccination Requirements,'' that vaccination is a critical part of the Nation's strategy to effectively counter the spread of COVID–19.[233] [234] [235] We continue to believe it is important to incentivize and track HCP vaccination through quality measurement across care settings, including the HOPD setting, to protect health care workers, patients, and caregivers, and to help sustain the ability of HCP in each of these care settings to continue serving their communities. Studies indicate higher levels of population-level vaccine effectiveness in preventing COVID–19 infection among HCP and other frontline workers in multiple industries, with vaccines having a 90 percent effectiveness in preventing symptomatic and asymptomatic infection from December 2020 through August 2021.[236] Since the Food and Drug Administration (FDA) issued emergency use authorizations (EUAs) for selected initial and primary vaccines for adults, vaccines have been highly effective in real-world conditions at preventing COVID–19 in HCP with up to 96 percent efficacy for fully vaccinated HCP, including those at risk for severe infection and those in racial and ethnic groups disproportionately affected by COVID–19.[237] [238] [239] [240] Overall, data

demonstrate that COVID–19 vaccines are effective and prevent severe disease, hospitalization, and death from COVID–19 infection.[241]

When we adopted the COVID–19 Vaccination Coverage Among HCP measure in the CY 2022 OPPS/ASC final rule (86 FR 63824 through 63833), we acknowledged that the measure did not address booster shots for COVID–19 vaccination (86 FR 63829) although the FDA authorized, and the Centers for Disease Control and Prevention (CDC) recommended additional doses and booster doses of the COVID–19 vaccine for certain individuals, particularly those who are immunocompromised due to age or condition or who are living or working in high-risk settings, such as HCP (86 FR 63829). However, we also stated that we believed the numerator of the measure was sufficiently broad to include potential future boosters as part of a ''complete vaccination course'' (86 FR 63829).

Since then, new variants of SARS–CoV–2 have emerged around the world and within the United States. Specifically, the Omicron variant (and its related subvariants) is listed as a ''variant of concern'' by the CDC because it spreads more easily than earlier variants.[242] Vaccine manufacturers have responded to the Omicron variant by developing bivalent COVID–19 vaccines, which include a component of the original virus strain to provide broad protection against COVID–19 and a component of the Omicron variant to provide better protection against COVID–19 caused by the Omicron variant.[243] Booster doses of the bivalent COVID–19 vaccine have proven effective at increasing immune response to SARS–CoV–2 variants, including Omicron, particularly in individuals who are more than six months removed from receipt of their primary series.[244] Updated COVID–19 vaccine booster doses are associated with a greater reduction in infections among HCP and their patients relative to those who only received primary series vaccination, with a rate of breakthrough infections among HCP who received only the two-dose regimen of 21.4 percent compared to a rate of 0.7 percent among boosted HCP.[245] [246] [247] In the CY 2024 OPPS/ASC proposed rule (88 FR 49774 through 49776), we stated that data from the existing COVID–19 Vaccination Coverage Among HCP measure demonstrate clinically significant variation in booster dose vaccination rates across HOPDs, but are clarifying here that literature has indicated disparities in COVID–19 booster vaccine uptakes across healthcare personnel irrespective of specific care setting.[248]

We believe that vaccination remains the most effective means to prevent the worst consequences of COVID–19, including severe illness, hospitalization, and death. Given the availability of vaccine efficacy data, EUAs, and Biologics License Application approvals issued by the FDA for updated 2023–2024 formulations of the vaccine bivalent boosters, continued presence of SARS–CoV–2 in the United States, and variance among rates of updated vaccinations, we believe it is important to modify the COVID–19 Vaccination Coverage Among HCP measure for HCP to receive primary series and updated vaccine doses in a timely manner per CDC's recommendation that bivalent COVID–19 vaccine booster doses might improve protection against SARS–CoV–2 Omicron sublineages, including the most recent September 2023 Omicron variant that came to light after the publication of the CY 2024 OPPS/ASC proposed rule.[249] [250]

In the CY 2024 OPPS/ASC proposed rule (88 FR 49774 through 49776), we proposed to modify the COVID–19 Vaccination Coverage Among HCP measure to utilize the term ''up to date'' in the HCP vaccination definition. We also proposed to update the numerator to specify the timeframes within which an HCP is considered up to date with CDC recommended COVID–19 vaccines, including updated vaccine doses, beginning with CY 2024 reporting period/CY 2026 payment determination for the Hospital OQR Program.

(2) Overview of Measure

The COVID–19 Vaccination Coverage Among HCP measure is a process measure developed by the CDC to track COVID–19 vaccination coverage among HCP in various settings and is reported via the CDC's National Healthcare Safety Network (NHSN). We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63827 and 63828) for more information on the initial review of the measure by the Measure Applications Partnership (MAP).[251]

We included an updated version of the measure on the Measures Under Consideration (MUC) list for the 2022–2023 pre-rulemaking cycle for consideration by the MAP. We note that when reviewed by the MAP, reporting for contract personnel providing care or services not specifically included in the measure denominator was fully optional, whereas this reporting is now required to complete NHSN data entry but is not included in the measure calculation. In December 2022, during the MAP's Hospital Workgroup discussion, the workgroup stated that the revision of the current measure captures up to date vaccination information in accordance with the CDC's updated recommendations for additional and booster doses since the measure's initial development. Additionally, the Hospital Workgroup

[251] Interested parties convened by the consensus-based entity will provide input and recommendations on the Measures Under Consideration (MUC) list as part of the pre-rulemaking process required by section 1890A of the Act. We refer readers to *https://p4qm.org/PRMR-MSR* for more information.

appreciated that the re-specified measure's target population is broader and simplified from seven categories of HCP to four.[252] During the MAP's Health Equity Advisory Group review, the group highlighted the importance of COVID–19 vaccination measures and questioned whether the proposed revised measure excludes individuals with contraindications to FDA authorized or approved COVID–19 vaccines, and if the measure would be stratified by demographic factors. The measure developer confirmed that HCP with contraindications to the vaccines are excluded from the measure denominator but stated that the measure would not be stratified since the data are submitted at an aggregate rather than an individual level. The MAP Rural Health Advisory Group expressed concerns about data collection burden, citing that collection is performed manually.[253] We note that when reviewed by the MAP, reporting for contract personnel providing care or services not specifically included in the measure denominator was fully optional, whereas this reporting is now required to complete NHSN data entry but is not included in the measure calculation.

The developer noted that the model used for this measure is based on the Influenza Vaccination Coverage Among HCP measure (CBE #0431).[254] We refer readers to sections XXIV.B and XXVI of this final rule with comment period for additional detail on the burden and impact of this measure modification.

The proposed revised measure received conditional support for rulemaking from the MAP pending (1) testing indicating the measure is reliable and valid, and (2) endorsement by the CBE. The MAP noted that the previous version of the measure received endorsement from the CBE (CBE #3636)[255] and that the measure steward (CDC) intends to submit the updated measure for endorsement.[256]

(a) Measure Specifications

This measure is calculated quarterly by averaging the hospital's most recently submitted and self-selected one week of data. The measure includes at least one week of data collection a month for each of the three months in a quarter. The denominator is calculated as the aggregated number of HCP eligible to work in the hospital for at least one day during the week of data collection, excluding denominator-eligible individuals with contraindications as defined by the CDC for all three months in a quarter.[257] Facilities report the following four categories of HCP to the NHSN:

- *Employees:* This includes all persons who receive a direct paycheck from the reporting facility (that is, on the facility's payroll), regardless of clinical responsibility or patient contact.)
- *Licensed independent practitioners (LIPs):* This includes only physicians (MD, DO), advanced practice nurses, and physician assistants who are affiliated with the reporting facility but are not directly employed by it (that is, they do not receive a paycheck from the reporting facility), regardless of clinical responsibility or patient contact. Post-residency-fellows are also included in this category if they are not on the facility's payroll.
- *Adult students/trainees and volunteers:* This includes medical, nursing, or other health professional students, interns, medical residents, or volunteers aged 18 or older who are affiliated with the facility but are not directly employed by it (that is, they do not receive a paycheck from the facility), regardless of clinical responsibility or patient contact.
- *Other contract personnel:* Contract personnel are defined as persons providing care, treatment, or services at the facility through a contract who do not fall into any of the previously discussed denominator categories. This also includes vendors providing care, treatment, or services at the facility who may or may not be paid through a contract. Facilities are required to enter data on other contract personnel for submission in the NHSN application, but data for this category are not included in the HCP COVID–19 Vaccine measure.[258]

As stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49777), we did not propose to modify the denominator exclusions. The numerator is calculated as the cumulative number of HCP in the denominator population who are considered up to date with CDC recommended COVID–19 vaccine. Guidance issued by the CDC defines the term ''up to date'' as meeting the CDC's criteria on the first day of the applicable reporting quarter. The current definition of ''up to date'' can be found at: *https://www.cdc.gov/nhsn/pdfs/hps/covidvax/UpToDateGuidance-508.pdf*.

As proposed in the CY 2024 OPPS/ASC proposed rule (88 FR 49777), public reporting of the modified version of the COVID–19 Vaccination Coverage Among HCP measure for the Hospital OQR Program would begin with the Fall 2024 Care Compare refresh, or as soon as technically feasible.

(b) CBE Endorsement

The current version of the measure in the Hospital OQR Program received CBE endorsement (CBE #3636) on July 26, 2022.[259] The measure steward (CDC) is pursuing endorsement for the modified version of this measure.

(3) Data Submission and Reporting

We refer readers to the CY 2022 OPPS/ASC final rule (86 FR 63828 through 63833) for information on data submission and reporting of this measure. We did not propose any changes to the data submission or reporting process in the CY 2024 OPPS/ASC proposed rule (88 FR 49777). However, we did propose that reporting of the updated, modified version of this measure would begin with the CY 2024 reporting period for the Hospital OQR Program. Under the data submission and reporting process, which would remain unchanged under these proposals, hospitals collect the numerator and denominator for the COVID–19 Vaccination Coverage Among HCP measure for at least one self-selected week during each month of the reporting quarter and submit the data to the NHSN Healthcare Personnel Safety (HPS) Component before the quarterly deadline to meet Hospital

[259] Centers for Medicare & Medicaid Services. Measure Specifications for Hospital Workgroup for the 2022 MUC List. Available at: *https://mmshub.cms.gov/sites/default/files/map-hospital-measure-specifications-manual-2022.pdf*.

OQR Program requirements. If a hospital submits more than one week of data in a month, the most recent week's data are used to calculate the measure. For example, if both the first- and third-week of data for a facility are submitted, the third week data will be used for measure calculation and public reporting. Each quarter, the CDC calculates a single quarterly COVID–19 HCP vaccination coverage rate for each hospital, which is then calculated by taking the average of the data from the three weekly rates submitted by the hospital for that quarter. CMS publicly reports each quarterly COVID–19 HCP vaccination coverage rate as calculated by the CDC (86 FR 63878).

We refer readers to section XV.B.4.a of this final rule with comment period for the same proposal for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program.

We invited public comment on the proposal.

Comment: Some commenters supported the proposed modification to the COVID–19 Vaccination Coverage Among HCP measure and noted the importance of maintaining alignment across programs and with current CDC guidelines. A few commenters highlighted the significance of vaccination in preventing greater spread of COVID–19 and the potential for continued vaccination to prevent future large-scale outbreaks. One commenter expressed the importance of ''up to date'' guidelines to ensure patients have accurate information to support their choice of provider.

Response: We thank commenters for their support. We agree that maintaining alignment across programs and current CDC guidelines is important, as is the new definition of ''up to date'' due to the changing nature of the virus's transmission and community spread. We agree that vaccination plays a critical part of the HHS's strategy to effectively counter the spread of COVID–19 and will continue to support it as the most effective means to prevent the worst consequences of COVID–19, including severe illness, hospitalization, and death. Additionally, we continue to believe it is important to incentivize and track HCP vaccination through quality measurement across care settings, including the outpatient and ASC settings. We believe that HCP vaccinations will protect healthcare workers, patients, and caregivers and help sustain the ability of HCP in each of these care settings to continue serving their communities.

Comment: Many commenters did not support modifying the COVID–19 Vaccination Coverage Among HCP measure due to concerns that the frequent changes to the CDC's definition of ''up to date'' combined with uncertainty around future vaccination schedules creates unnecessary burden for facilities. Many commenters expressed concern that changing definitions and guidance exacerbates staffing and resource challenges and requires updates to facility or system-level vaccination policies, adding burden and confusion. One commenter recommended that CMS educate stakeholders on the evolving COVID–19 vaccination requirements.

Response: We acknowledge commenters' concerns around data collection, burden, and staffing and resource challenges for reporting the COVID–19 Vaccination Coverage Among HCP measure. As evidenced by the increased cases and hospitalizations in September 2023 due to new variants, we believe that COVID–19 remains a relevant and evolving situation requiring monitoring of vaccination rates to ensure the safety of patients, caregivers, and providers, and that the burden of reporting is outweighed by the benefits of collecting and regularly publishing this data to inform care decision-making. Additionally, the data submission and reporting requirements provide flexibility for hospitals with staffing and resource challenges as this measure only requires hospitals to collect data for one self-selected week during each month of the reporting quarter at minimum.

When we finalized the adoption of the COVID–19 Vaccination Coverage Among HCP measure in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63875), we received several comments encouraging us to update the measure as new evidence on COVID–19 is identified. While we acknowledge that the definition of ''up to date'' may change in the future, our intention is to continue to work with partners, including the FDA and CDC, to consider and align any updates to the measure specifications in future rulemaking as appropriate to ensure the safety of patients, providers, and caregivers in facilities of care.

Comment: Many commenters recommended that CMS reduce the required reporting frequency from quarterly to annually to reduce reporting burden for facilities. Many of these commenters observed that annual reporting would mirror the reporting schedule for the Influenza Vaccination Coverage Among HCP measure, which has been adopted into some quality reporting programs. Several commenters recommended that the COVID–19 Vaccination Coverage Among HCP measure be voluntary and not publicly reported. Other commenters recommended clear communication in what the publicly reported data for the measure reflects. A few commenters recommended changes to the data collection methods for the measure; one commenter recommended that the chosen week for data reporting be determined by individuals unaffiliated with the HOPD to avoid bias, while another commenter recommended using fewer specific criteria for the numerator and denominator to provide flexibility for hospitals.

Response: We thank commenters for their recommendations on data collection, reporting frequency, and measure criteria for the COVID–19 Vaccination Coverage Among HCP measure. As stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49806), the measure developer based this measure on the Influenza Vaccination Coverage Among HCP measure (CBE #0431), which is reported annually. The measure developer (the CDC) intends to adopt a similar approach to the modified COVID–19 Vaccination Coverage Among HCP measure if vaccination strategy becomes seasonal. While monitoring and surveillance are ongoing, we do not currently have data demonstrating seasonal trends in the circulation of SARS–CoV–2. Additionally, these are different public health initiatives and vaccines, and therefore, the measure specifications are not in complete alignment (86 FR 45379). In addition, we do not believe that hospital-selection of the week for reporting on this measure introduces significant bias as the sampling is taken from within the same facility over time.

With regard to public reporting, the intent of the measure is to capture the vaccination rate within hospitals so that patients have information available on HCP vaccination to inform their health care decisions. We continue to believe that it is appropriate and important to collect and report these data and to make the data publicly available.

Comment: Several commenters did not support the measure due to concern of a time lag between data collection and public reporting. Commenters observed that publicly reporting these data may not be meaningful to consumers due to the changing definitions of vaccine guidance.

Response: We thank the commenters for their concern. Since the adoption of the current version of the measure, the public health response to COVID–19 has adapted to respond to the changing nature of the virus's transmission and community spread. When we finalized the adoption of the COVID–19

Vaccination Coverage Among HCP measure in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63824), we received several comments encouraging us to update the measure as we learn more about COVID–19. Our intention is to continue to work with partners, including the FDA and CDC, to consider and align any updates to the measure specifications in future rulemaking as appropriate to ensure the safety of patients, providers, and caregivers in facilities of care.

While we understand that there is a delay between data collection and public reporting for this measure, we note that such a delay exists for all measures in the Hospital OQR Program. As with other measures, we believe that the data will provide meaningful information to consumers in making healthcare decisions because the data will be able to reflect differences between facilities in COVID–19 vaccination coverage among HCP within a relatively short timeframe.

Comment: A few commenters did not support updating the specifications for the COVID–19 Vaccination Coverage Among HCP measure because the PHE has expired and the Conditions of Participation (CoPs) for hospitals have been revised to no longer require reporting of this data. One commenter recommended removal of the measure for this reason. One commenter recommended that in addition to CoP alignment, the measure should capture individuals who decline vaccination. One commenter recommended removing non-clinical staff from the measure.

Response: We note that CoPs are a set of health and safety standards that health care organizations must meet to begin or continue participation in Medicare and Medicaid programs. As we acknowledged in the CY 2024 OPPS/ASC proposed rule (88 FR 49775), the PHE expired on May 11, 2023. While some state and Federal reporting requirements have since changed, the expiration of the PHE for COVID–19 has no bearing on the use of this measure for quality reporting because vaccination continues to be an essential tool in preventing COVID–19 transmission and that monitoring and surveillance of vaccination rates through measure performance is important as it provides patients, beneficiaries, and their caregivers with information to support informed decision-making.

While CMS requirements for Medicare and Medicaid-certified providers and suppliers to ensure that their staff were fully vaccinated for COVID–19 have ended with the expiration of the PHE, hospitals will continue to report on a reduced number of COVID–19 data elements through April 30, 2024 (FY 2023 IPPS/LTCH PPS final rule; 87 FR 48787).

We believe this measure continues to align with our goals to promote wellness and disease prevention, especially in light of new variants and an increase in COVID–19 infection and hospitalizations as of September 2023. Under CMS' Meaningful Measures Framework 2.0, the COVID–19 Vaccination Coverage Among HCP measure addresses the quality priorities of ''Immunizations'' and ''Public Health'' through the Meaningful Measures Area of ''Wellness and Prevention.'' Under the National Quality Strategy, the measure addresses the goal of Safety under the priority area Safety and Resiliency. As part of the Administration's continued response to COVID–19, and in light of the presence of new variants that have resulted in higher rates of infection and hospitalizations as of September 2023, we will continue to work to protect individuals and communities from the virus and its worst impacts.[260]

Comment: A few commenters expressed concern that the COVID–19 Vaccination Coverage Among HCP measure has not been endorsed by the CBE and recommended endorsement. One commenter recommended the continual monitoring of the measure for unintended consequences since it has not undergone full validity and reliability testing.

Response: The current version of the measure received CBE endorsement (CBE #3636, ''Quarterly Reporting of COVID–19 Vaccination Coverage among Healthcare Personnel'') on July 26, 2022. As stated when we first adopted CBE #3636 in the CY 2022 OPPS/ASC final rule (86 FR 63828), we prefer to adopt measures that have been endorsed by the entity with a contract under section 1890(a) of the Act; however, the requirement that measures reflect consensus among affected parties can be achieved in other ways, including through the measure development process, through broad acceptance, use of the measure(s), and through public comment. Although the COVID–19 Vaccination Coverage Among HCP measure was not CBE-endorsed, the measure steward, CDC, submitted the measure for consideration in the Fall 2021 measure cycle. Additionally, we considered whether there are other available measures that assessed COVID–19 vaccination rates among HCP and found no other feasible and practical measures on the topic of COVID–19 vaccination among HCP. The CDC intends to submit the modified measure for endorsement as the current version of the measure has already received endorsement.

Comment: A few commenters recommended that HOPDs stratify the measure data to identify sub-populations of HCP that have lower vaccine uptake.

Response: We thank the commenters for their recommendation; however, as we stated in the CY 2024 OPPS/ASC proposed rule, the measure cannot be stratified since the data are submitted at an aggregate rather than an individual level (88 FR 49776).

Comment: One commenter did not support inclusion of the measure in the Hospital OQR Program measure set due to conflict between state and local mandates and Federal quality reporting requirements. Another commenter recommended that the measure specifications have proper exclusion criteria in alignment with Federal and state vaccination exemption policies. Another commenter requested clarification on how the elimination of the vaccine mandate will impact the adoption or use of the measure.

Response: We reiterate that the Hospital OQR Program is a CMS quality reporting program separate from state, local, and Federal policies, including policies surrounding vaccination exemption. We note that neither the proposed modified measure nor the current version of the measure mandates vaccines, and the elimination of the Federal vaccine mandate is immaterial to the adoption and use of the measure.

Comment: One commenter expressed concern on how the measure may result in unintended consequences of exacerbating workforce shortages.

Response: We note that neither the proposed modified measure nor the current version of the measure mandates vaccines, nor do they reward or penalize HOPDs for the rate of HCP who have received a COVID–19 vaccine. Therefore, we believe it is unlikely that the measure will have any bearing on existing or future workforce shortages. For successful program participation, the COVID–19 Vaccination Coverage Among HCP measure only requires HOPDs to collect and report COVID–19 vaccination data that would support public health surveillance and provide beneficiaries and their caregivers information to support informed decision-making.

Comment: One commenter did not support the measure because it did not

[260] Centers for Disease Control and Prevention (August 23, 2023). Risk Assessment Summary for SARS CoV–2 Sublineage BA.2.86 Available at: *https://www.cdc.gov/respiratory-viruses/whats-new/covid-19-variant.html.*

consider those who opted out of receiving the vaccine due to religious or medical reasons. A few commenters recommended that CMS include an exclusion for sincerely held religious beliefs to adhere to HHS Office for Civil Rights Guidance. Some of these commenters also requested the measure be updated to track the number of HCP who decline vaccination. A few commenters observed that there are many factors beyond a facility's control that may affect performance on this measure.

Response: We recognize that there are many reasons, including religious objections and health concerns which may lead individual HCP to decline vaccination. The CDC's NHSN tool allows facilities to report on the number of HCP who were offered a vaccination but declined for religious or philosophical objections. We emphasize that neither the proposed modified measure nor the current version of the measure mandate vaccines, and that the COVID–19 Vaccination Coverage Among HCP measure only requires reporting of vaccination rates for successful program participation. We understand the commenters' concern that there are many factors outside of a facility's control that could affect vaccination coverage; however, we believe that all facilities face such concerns, and that public reporting of these data can help patients and their caregivers identify which HOPDs have better vaccination coverage among their HCP.

Comment: A commenter requested clarification on whether NHSN data submission for the measure meets all requirements for the measure under the Hospital OQR Program.

Response: The data for this measure can only be reported through NHSN, and no separate reporting to CMS is required. We refer readers to the Successful Reporting in the Hospital OQR Program guide for more information on how to register and submit data using NHSN, available at: *https://www.qualityreportingcenter.com/globalassets/2023/02/oqr/py-2024-hospital-oqr-successful-reporting-guide-final508.pdf.*

After consideration of the public comments we received, we are finalizing our proposed modification to the COVID–19 Vaccination Coverage Among HCP Measure in the Hospital OQR Program as proposed.

b. Modification of Survey Instrument Use for the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure Beginning With the Voluntary CY 2024 Reporting Period

(1) Background

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75102 through 75103), we finalized the adoption of the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery (the Cataracts Visual Function) measure, beginning with the CY 2014 reporting period/CY 2016 payment determination. This measure assesses the percentage of patients aged 18 years and older who had cataract surgery and had improvement in visual function within 90 days following the cataract surgery via the administration of pre-operative and post-operative survey instruments (78 FR 75102). A ''survey instrument'' is an assessment tool that has been appropriately validated for the population for which it is being used.[261] For purposes of this modification to the Cataracts Visual Function measure, the survey instruments we considered and proposed assess the visual function of a patient pre- and post-operatively to determine whether the patient's visual function changed within 90 days of cataract surgery. Examples of survey instruments assessing visual function include, but are not limited to, the National Eye Institute Visual Function Questionnaire (NEI–VFQ), the Visual Function (VF–14), the modified (VF–8), the Activities of Daily Vision Scale (ADVS), the Catquest, and the modified Catquest-9. While the measure has been available for voluntary reporting in the Hospital OQR Program since the CY 2015 reporting period, a number of facilities have reported data consistently using the survey instrument-collection method of their choice (87 FR 72098). We refer readers to the Hospital OQR Program Specifications Manual for additional detail, which is available at: *https://qualitynet.cms.gov/outpatient/specifications-manuals.*

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66947), we expressed concerns that clinicians' use of varying survey instruments would lead to inconsistent measure results. However, a comparison study conducted of the 16 survey instruments that are currently accepted for use in collecting data for this measure by HOPDs found them to be scientifically valid, able to detect clinically important changes, and provide comparable results.[262] While all 16 survey instruments demonstrate usefulness for detecting clinically important changes in cataract patients, some survey instruments' detection sensitivity scored higher than others.[263]

Several commenters responding to the CY 2022 OPPS/ASC proposed rule (86 FR 63846) requested additional guidance from CMS regarding measure specifications and survey instruments. We agree that the use of survey instruments for the assessment of visual function pre- and post-cataract surgery should be clarified. The use of survey instruments should be standardized across HOPDs to minimize collection and reporting burden, as well as to improve measure reliability. Thus, in the CY 2024 OPPS/ASC proposed rule (88 FR 49777 through 49779), we proposed to clarify which specific survey instruments may be used for the assessment of visual function pre- and post-cataract surgery for the Cataracts Visual Function measure in both the Hospital OQR Program and the ASCQR Program, to ensure alignment of this measure's specifications across our quality reporting programs. We proposed to limit the allowable survey instruments that an HOPD may use to assess changes in patient's visual function for the purposes of the Cataracts Visual Function measure to those listed below:

- The National Eye Institute Visual Function Questionnaire–25 (NEI VFQ–25)
- The Visual Functioning Patient Questionnaire (VF–14)
- The Visual Functioning Index Patient Questionnaire (VF–8R)

(2) Considerations for the Standardization of Survey Instruments Assessing Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery

We considered several factors when identifying which specific survey instruments would be acceptable for HOPDs to use when collecting data for the Cataracts Visual Function measure, such as comprehensiveness, validity, reliability, length, and burden. We stated our belief that the three survey instruments listed above would allow HOPDs to select the length of the survey to be administered while ensuring

[261] Centers for Medicare & Medicaid Services (2023). Hospital OQR Specification Manual Version 16.0. Available at: *https://qualitynet.cms.gov/outpatient/specifications-manuals#tab1.*

[262] McAlinden C, Gothwal VK, Khadka J, et al. (2011). A head-to-head comparison of 16 cataract surgery outcome questionnaires. *Ophthalmology,* 118(12), 2374–81. *https://doi.org/10.1016/j.ophtha.2011.06.008.*

[263] *Ibid.*

adequate validity and reliability.[264] [265] [266] All three of the survey instruments are based upon the 51-item National Eye Institute Visual Function Questionnaire (NEI VFQ–51) survey instrument, which was the first survey instrument originally developed for assessing a patient's visual function before and after cataract surgery. Each of the three survey instruments have progressively fewer numbers of questions than the NEI VFQ–51: 25 questions for the NEI VFQ–25, 14 questions for the VF–14, and eight questions for the VF–8R. Even with fewer numbers of questions, all three of the survey instruments have been validated as providing results comparable to the NEI VFQ–51. In addition, all three of the survey instruments are readily available for hospitals to access and use.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49778) we proposed to allow HOPDs to use the NEI VFQ–25 for administering and calculating the Cataracts Visual Function measure due to its comprehensiveness, its adequate validity and reliability, as well as its potential to reduce language barriers for patients. The NEI VFQ–25 is a shorter version of the NEI VFQ–51, being comprised of 25 items across 12 vision-specific domains (general health, general vision, ocular pain, near activities, distance activities, social functioning, mental health, role difficulties, dependency, driving, color vision, and peripheral vision).[267]

The NEI VFQ–25, similar to the VF–14 and VF–8R, displays adequate reliability and validity.[268] The NEI VFQ–25 composite, near activities, and distance activities subscales demonstrated good internal consistency reliability, test-retest reliability, convergent validity, and known-groups validity.[269] Furthermore, the NEI VFQ–25's high internal consistency, indicates that items of the NEI VFQ–25 are highly related to each other and to the scale as a whole.[270]

In addition, the survey instrument is publicly available on the RAND website at no cost and has been translated to many languages, which is a valuable benefit for patients with limited English proficiency. The NEI VFQ–25 was chosen over other survey instruments to reduce potential language barriers, as, for example, the currently available Activities of Daily Vision Scale (ADVS) is dependent on English language skills.[271] More information on the NEI VFQ–25 can be found at: *https://www.rand.org/health-care/surveys_tools/vfq.html.*

While the NEI VFQ–25 was shortened significantly from the original NEI VFQ–51, it has been criticized for its still lengthy test-time. However, the inclusion of this survey instrument in this measure's specifications would allow for a more detailed assessment of cataract surgery outcomes, as it was designed to include questions which are most important for persons who have chronic eye diseases.[272] Further, if a hospital finds the NEI VFQ–25 particularly burdensome to administer, the hospital may choose from the other two survey instruments proposed for inclusion in this measure's specifications, as both of these have even fewer survey questions to administer.

We also proposed to allow HOPDs to use the 14-item VF–14 and the 8-item VF–8R for administering and calculating the Cataracts Visual Function measure, which each can be administered in a shorter timeframe than the NEI VFQ–25 with high precision.[273] [274] Thus, the succinct formats of the VF–14 and VF–8R may ease HOPD's burden in administering the survey instruments and potentially increase the rate of patient responses for this measure, as compared with other survey instrument options we considered. We believe these survey instruments achieve comparable results with the longer NEI VFQ–25 and NEI VFQ–51 survey instruments with substantially fewer questions to administer.

Furthermore, we proposed inclusion of the VF–14 because currently it is the most commonly used survey instrument and we believe it would be beneficial to allow the majority of physicians who have already been using VF–14 to continue to have the option to do so.[275] The VF–14 is comprised of 14 items relating to daily living activities and function, such as reading, writing, seeing steps, stairs or curbs, and operating a motor vehicle.[276] Studies using this survey instrument generally report significant and clinically important improvement following cataract surgery.[277] The VF–14 additionally has achieved adequate reliability and validity, proving it to be a dependable survey instrument for cataract outcomes.[278] [279]

In the CY 2024 OPPS/ASC proposed rule (88 FR 49809), we also proposed the VF–8R as it is the most concise of the three survey instruments while still achieving adequate validity and reliability.[280] The VF–8R consists of questions related to reading, fine handwork, writing, playing board games, and watching television.[281] Given its conciseness compared to the majority of currently available survey instruments and its adequate psychometric properties, we stated our belief that the VF–8R would be beneficial for measuring cataract surgery outcomes without prompting further patient survey fatigue.[282]

[281] Pre-Cataract Surgery—Visual Functioning Index (VF–8R) Available at: *https://www.aao.org/practice-management/coding/updates-resources.* (In the CY 2024 OPPS/ASC proposed rule, we cited this information to: *https://eyecaresite.com/wp-content/uploads/2020/02/Visual-Functioning-Index-Pre-Cat-SX.pdf.* However, after review, the information appears to have moved. Thus, we have updated the citation in this final rule.)

[282] Ibid.

For these reasons, we believe that the NEI VFQ–25, VF–14, and VF–8R are the most appropriate survey instruments for HOPDs to use to assess a patient's visual function pre- and post-cataract surgery for purposes of calculating and submitting data for the Cataracts Visual Function measure in the Hospital OQR Program.

In response to commenters' concerns as summarized in the CY 2023 OPPS/ASC final rule (87 FR 72097 through 72099) regarding the lack of specificity around survey instrument administration for the Cataracts Visual Function measure, we proposed to limit the survey instruments that can be used to administer this measure, beginning with the voluntary CY 2024 reporting period, to these three survey instruments: (1) NEI VFQ–25; (2) VF–14; and (3) VF–8R. We believe the use of these three survey instruments to report data on the Cataracts Visual Function measure will allow for a more standardized approach to data collection. Having a limited number of allowable survey instruments would also address commenters' requests for additional guidance on survey instruments as well as improve measure reliability.

(3) Considerations for Data Collection Modes for the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure Beginning With the Voluntary CY 2024 Reporting Period

As summarized in the CY 2023 OPPS/ASC final rule (87 FR 72104 and 72105), many commenters expressed concern about the high administrative burden of reporting the Cataracts Visual Function measure, as the measure uniquely requires coordination among clinicians of different specialties (that is, opticians and ophthalmologists). In an effort to decrease administrative burden surrounding in-office time constraints, we reiterate that, while we recommend the patient's physician or optometrist administer, collect, and report the survey instrument results to the HOPD, the survey instruments required for this measure can be administered by the HOPD itself via phone, by the patient via regular or electronic mail, or during clinician follow-up.

Scientific literature supports the conclusion that self-administered survey instruments produce statistically reliable results.[283] [284] Furthermore, scientific literature indicates that regular mail and electronic mail surveys respectively, are preferred by varying subgroups of patients. The inclusion of both options ensures that patients will be able to respond to surveys in their preferred format.[285] [286] These findings support the inclusion of varying survey instrument-collection methods for patient and provider convenience.

We invited public comment on the proposal.

Comment: Many commenters supported our proposal to modify the survey instruments allowable for the Cataracts Visual Function measure beginning with the voluntary CY 2024 reporting period. Several commenters concurred with CMS that this modification would standardize data collection and ensure comparability of the measure across HOPDs. Several commenters also expressed support for the modification because the three survey instruments demonstrate adequate reliability and validity.

Response: We thank commenters for their support. We agree that limiting the allowable survey instruments used to report on the Cataracts Visual Function measure to three survey instruments of different lengths will allow for a more standardized approach to data collection and improve measure reliability. We emphasize that all three surveys demonstrate adequate reliability and validity, which demonstrates that they are dependable survey instruments for measuring cataract outcomes. Further, by adopting this modification for this measure, we will be promoting alignment with the ASCQR Program.

Comment: Several commenters did not support modification of the survey instruments allowable for the Cataracts Visual Function measure and recommended that the measure be removed altogether from the Hospital OQR Program measure set, stating that the modification does little to address reporting burden, which they believe outweighs the measure's utility in improving care for patients undergoing cataract procedures.

Response: We acknowledge the commenters' concerns regarding burden but respectfully disagree that this measure should be removed from the Hospital OQR Program as we believe the benefits of the measure outweigh the reporting burden. Cataract surgery is one of the most commonly performed procedures in HOPDs, and there are currently no other measures assessing the quality of care provided for this procedure for the Hospital OQR Program. As a patient reported outcome measure, this measure aligns with the CMS National Quality Strategy (NQS) ''Foster Engagement'' goal, which seeks to increase engagement between individuals and their care teams to improve quality, establish trusting relationships, and bring the voices of people and caregivers to the forefront. The Meaningful Measures 2.0 goals also prioritize patient-reported measures and promoting better collection and integration of patient voices across CMS' quality programs.

We believe that the value of the information the measure provides to consumers about quality of care justifies the potential administrative burden for facilities reporting on it. As some HOPDs have been voluntarily reporting this measure successfully, we believe this indicates the measure is not overly burdensome, and that standardizing the allowable survey instruments will further improve its usability and reliability in this setting. We wish to reiterate that when selecting allowable surveys, we considered a variety of factors, including accessibility and prevalence, and that we proposed to limit the allowable surveys to the NEI–VFQ–25, VF–14, and VF–8R as they are commonly adopted survey instruments that are readily available online for entities to access and use. We also note that, in accordance with CMS standards,[287] hospitals failing to reach established thresholds will not be publicly reported but can still receive data through their Preview Reports which can drive quality improvement efforts.

Comment: A few commenters did not support this measure because it was unclear to them if the revisions have been tested to ensure performance scores are reliable and valid. One commenter recommended further reliability and validity testing, as well as CBE endorsement, before adoption into the Hospital OQR Program.

Response: We stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49778)

[283] Bhandari NR, Kathe N, Hayes C, & Payakachat N. (2018). Reliability and validity of SF–12V2 among adults with self-reported cancer. *Research in Social and Administrative Pharmacy, 14*(11), 1080–1084. *https://doi.org/10.1016/j.sapharm.2018.01.007.*

[287] CMS does not report measures publicly unless measures are the result of an analysis of more than 10 cases. See CMS Policy for Privacy Act Implementation & Breach Notification, July 23, 2007, Document Number: CMS–CIO–POL–PRIV01–01, p 4.

our belief that the three proposed survey instruments (NEI VFQ–25, VF–14, and VF–8R) will allow HOPDs to select the length of the survey to be administered while ensuring adequate validity and reliability, and cited literature to support this belief.[288] [289] [290] We also emphasize that all three surveys demonstrate adequate reliability and validity, which demonstrates that they are dependable survey instruments for measuring cataract outcomes. Additionally, we wish to reiterate that scientific literature demonstrates that self-administered surveys can produce statistically reliable results.[291] [292] Regarding CBE endorsement, the current version of the measure in the Hospital OQR Program received CBE endorsement (CBE #3636) on July 26, 2022. The measure steward (CDC) is pursuing endorsement for the modified version of this measure.

Comment: Many commenters provided recommendations regarding reporting requirements of the Cataracts Visual Function measure. Some of these commenters believed that the measure should remain voluntary in the Hospital OQR Program. One commenter recommended that the measure remain voluntary until a digital version is developed, in order to support the transition away from chart-abstracted measures. A couple of commenters conversely requested to make this measure mandatory to boost reporting, citing concerns that only a handful of facilities are voluntarily collecting these data and publicly reporting their performance.

Response: We appreciate commenters' input regarding maintaining this measure as voluntary. We are committed to having a cataract surgery, patient-reported outcome measure for the Hospital OQR Program, and our intent is to maintain this measure as voluntary while we consider mandatory reporting in future rulemaking. We will continue to evaluate the status of this measure moving forward. We also acknowledge that this measure requires cross-setting coordination among clinicians of different specialties (surgeons and ophthalmologists), increasing burden. If we determine that the value of mandatory reporting justifies increased burden on HOPDs, we will propose to transition the measure to mandatory reporting through rulemaking. Regarding the commenter's request to maintain the measure as voluntary until a digital version is available, we agree that moving from chart-abstracted measures to digital measures is an important step in working toward interoperability as well as reducing reporting burden, goals we outlined in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45342 and 45343) and the FY 2023 IPPS/LTCH PPS final rule (87 FR 49181), and intend to take into consideration when making measure decisions in the future.

Comment: One commenter recommended removing the Cataracts Visual Function measure and adopting the Toxic Anterior Segment Syndrome (TASS) measure instead. Another commenter recommended the addition of Catquest 9 Short Form (Catquest-9SF) as an acceptable alternative to the proposed NEI VFQ–25, the VF–14, and VF–8R. One commenter recommended that CMS publicly report trends on HOPDs' choices of survey instruments. One commenter recommended CMS provide additional best practices as more facilities adopt the use of these three surveys during the voluntary measurement period.

Response: Although we are not currently considering the adoption of the TASS measure, we will continue to monitor the effects of the Cataracts Visual Function measure and will consider the adoption of new measures in future rulemaking. We note that the TASS measure is used to assess the number of ophthalmic anterior segment surgery patients diagnosed with TASS within 2 days of surgery. The Cataracts Visual Function measure assesses the percentage of patients aged 18 years and older who had cataract surgery and had improvement in visual function achieved within 90 days following the cataract surgery. Therefore, the TASS measure could not seamlessly replace the Cataracts Visual Function measure, as they measure two different outcomes. Similarly, we will monitor the impact of the three survey options (NEI VFQ–25, the VF–14, and VF–8R) and consider adjusting the chosen standardized surveys as needed in future rulemaking. We will also consider the value of reporting HOPD's choices of survey instruments in future rulemaking, as well as developing best practices based on facility use of these surveys during the voluntary measurement period.

Comment: One commenter, while supportive of limiting the survey instruments and allowing flexible administration to simplify data collection, expressed concerns about the complexity and burden of cross-setting coordination among clinicians of different specialties.

Response: We believe hospitals, facilities, ophthalmologists, and other clinicians should actively and routinely engage in exchanging information to better communicate and coordinate patient care to ensure and improve quality of care. We note that while it is recommended that the HOPD obtain the survey results from the appropriate physician or optometrist, in an effort to reduce administrative burden, the surveys can be administered by the HOPD via phone, mail, email, or during clinician follow-up. Patients can also self-administer the surveys and submit them directly to the HOPD via mail or email. Due to commenter concerns on complexity and burden of cross-setting coordination among clinicians of different specialties, we maintain this measure as voluntary.

Comment: A few commenters recommended exploring whether this measure is best captured under the Quality Payment Program, because patients likely receive ongoing care following the procedure from an ophthalmologist and not the hospital outpatient department or ambulatory surgical center. Commenters further recommended exploring adoption of this measure as part of its development of specialist-focused Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs) around ophthalmology care. One commenter noted that this measure was not originally developed for use at the HOPD level.

Response: This measure is already included in the Quality Payment Program's Merit-based Incentive Payment System (MIPS) (Measure #303) for MIPS eligible clinicians (as defined in 42 CFR 414.1305) to report. Even though individual clinicians may report this measure in MIPS, we continue to view this measure as appropriate for assessing hospital-level of care as the procedures are provided in a hospital.

We appreciate the commenter's suggestion to include this measure in a

potential future ophthalmology care MVP. We will consider this suggestion in future rulemaking.

Furthermore, we continue to view this measure as appropriate for assessing hospital-level of care as the procedures are provided in HOPDs. We emphasize the importance of measuring cataract outcomes in all procedural settings.

After consideration of the public comments we received, we are finalizing our proposal to modify the Cataracts Visual Function measure as proposed. We also refer readers to the discussion of a similar proposal for the same measure as used in the ASCQR Program in section XV.B.4.b of this final rule with comment period.

c. Modification of the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients Measure Denominator Change to Align With Current Clinical Guidelines Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

(1) Background

In 2019, colorectal cancer (CRC) accounted for the 4th highest rate of new cancer cases and the 4th highest rate of cancer deaths in the United States.[293] The American Cancer Society (ACS) estimates that in 2023, 153,020 individuals will be newly diagnosed with CRC and 52,550 individuals will die from CRC in the United States.[294] The CDC advises, ''[c]olorectal cancer almost always develops from precancerous polyps (abnormal growths) in the colon or rectum. Screening tests can find precancerous polyps, so that they can be removed before they turn into cancer. Screening tests can also find colorectal cancer early, when treatment works best. Regular screening, beginning at age 45, is the key to preventing colorectal cancer and finding it early.'' [295]

In May 2021, the United States Preventive Services Task Force (USPSTF) issued a revised Final Recommendation Statement on CRC Screening.[296] This replaced the prior USPSTF 2016 Final Recommendation Statement and included a number of updated policy recommendations based on new evidence and understandings of CRC and CRC screening. The USPSTF recommended that adults who do not have signs or symptoms of CRC and who are at average risk for CRC begin screening at age 45 instead of the previous recommendation of age 50.[297] In addition, multiple professional organizations, including the ACS, American Society of Colon and Rectal Surgeons, and the U.S. Multi-Society Task Force on Colorectal Cancer (which represents the American College of Gastroenterology, the American Gastroenterological Association, and the American Society for Gastrointestinal Endoscopy), recommend that people of average risk of CRC start regular screening at age 45.[298] [299] [300] Based on the recent changes in clinical guidelines to begin CRC screening at age 45 instead of age 50, in the CY 2024 OPPS/ASC proposed rule (88 FR 49779 and 49780), we proposed to modify the Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients (the Colonoscopy Follow-Up Interval) measure to follow these clinical guideline changes.

(2) Overview of Measure

We refer readers to the CMS Measures Inventory Tool (CMIT) and the Hospital OQR Program specification manual for more information on the Colonoscopy Follow-Up Interval measure, including background on the measure and a complete summary of measure specifications.[301] [302] Currently, the Colonoscopy Follow-Up Interval measure assesses the ''percentage of patients aged 50 years to 75 years receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.'' [303] In the CY 2024 OPPS/ASC proposed rule (88 FR 49780), we proposed to amend the measure's denominator language by replacing the phrase ''aged 50 years'' with the phrase ''aged 45 years.'' Under the proposal, the measure denominator would be modified to ''all patients aged *45 years to 75 years* receiving screening colonoscopy without biopsy or polypectomy'' from ''all patients aged *50 years to 75 years* receiving screening colonoscopy without biopsy or polypectomy.'' [304] We did not propose any changes to the measure numerator, other measure specifications, exclusions, or data collection for the Colonoscopy Follow-Up Interval measure.

In the CY 2023 Physician Fee Schedule final rule (87 FR 69760 through 69767), we adopted the modified Colonoscopy Follow-Up Interval measure (which we proposed here for the Hospital OQR Program) for the Merit-based Incentive Payment System (MIPS). We have considered the importance of aligning the minimum age requirement for CRC screening across quality reporting programs and clinical guidelines. As a result, in the CY 2024 OPPS/ASC proposed rule (88 FR 49779 and 49780), we proposed to modify the Colonoscopy Follow-Up Interval measure denominator to ''all patients aged 45 to 75 years'' for the Hospital OQR Program. We proposed the modification of the Colonoscopy Follow-Up Interval measure beginning with the CY 2024 reporting period/CY 2026 payment determination.

We invited public comment on the proposal.

Comment: Many commenters supported the modification of the Colonoscopy Follow-Up Interval measure beginning with the CY 2024 reporting period/CY 2026 payment determination. Many commenters stated that the modification to the denominator aligns with clinical guidelines. Some of these commenters noted the modification to the denominator provides alignment across quality programs. Other commenters supported the proposal because commenters believe that the measure will ensure appropriate patient access to recommended cancer screening and prevention services. Another

[304] Ibid.

commenter expressed that the measure modification will enable CMS to measure appropriate care more meaningfully and to better differentiate facilities with successful preventive care efforts. Another commenter supported the proposal because the commenter believes the measure modification could be key to mitigating disparities in CRC screening and early detection among different sociodemographic groups and, therefore, is supportive of CMS' health equity goals. Another commenter supported the proposal because the commenter believes the measure modification will promote timely and connected patient care.

Response: We thank commenters for supporting our proposal to modify the Colonoscopy Follow-Up Interval measure denominator to ''all patients aged 45 to 75 years'' for the Hospital OQR Program. We agree that it is important to align requirements across quality reporting programs and clinical guidelines when relevant. We believe that consistent policy across programs in terms of minimum age limits for CRC screening tests is critical to the public's understanding of evolving CRC screening recommendations. We also agree that CRC screening plays a key role in the prevention and early detection of cancer.

Comment: One commenter suggested that CMS remove the measure from the Hospital OQR Program because the commenter believes the measure should not be tracked by hospitals, but instead should be tracked by the patient's primary care physician.

Response: We support the inclusion of the Colonoscopy Follow-up Interval measure in the Hospital OQR Program and reiterate that, while this measure is suitable for clinician office settings, we continue to believe that the measure is also suitable for settings, such as HOPDs, that provide the same types of services to the same target populations for the measure. The intent of the measure is to improve the coordination of services, reduce fragmented care, encourage redesigned care processes for high quality and efficient service delivery, and incentivize higher value care. Additionally, we continue to believe this measure aligns with our goals to promote wellness and disease prevention. Under CMS' Meaningful Measures Framework 2.0, the Colonoscopy Follow-up Interval measure addresses the Meaningful Measures Area of ''Wellness and Prevention.'' Under the National Quality Strategy, the measure addresses the goals of Outcomes and Alignment under the priority area Outcomes and Alignment.

Comment: A few commenters noted that the modification to this measure would increase the patient population that is eligible for the measure and recommended that CMS maintain the same sample size to prevent increased administrative burden.

Response: The only change proposed to this measure was a change in the measure denominator to ''all patients aged 45 to 75 years.'' We understand that the measure would increase the patient population that is eligible for the measure, however, we did not propose any other changes to the measure specifications or sampling methodology for the measure, including any changes to minimum sampling size requirements. Therefore, we do not believe that the modification to the denominator increases the burden on hospitals. We refer readers to the Population and Sampling Specifications section of the Hospital OQR Program Specifications Manual for additional detail, which is available at *https://qualitynet.cms.gov/outpatient/specifications-manuals.*

After consideration of the public comments we received, we are finalizing our proposal to modify the Colonoscopy Follow-Up Interval measure as proposed. We also refer readers to the discussion of a similar proposal for the same measure as used in the ASCQR Program in section XV.B.4.c of this final rule with comment period.

3. Adoption of New Measures for the Hospital OQR Program Measure-Set

Section 1833(t)(17)(C)(i) of the Act requires the Secretary to develop measures appropriate for the measurement of the quality of care (including medication errors) furnished by hospitals in outpatient settings, that these measures reflect consensus among affected parties and, to the extent feasible and practicable, that these measures include measures set forth by one or more national consensus-based entities. We have noted in previous rulemaking, the requirement that measures reflect consensus among affected parties can be achieved in other ways aside from CBE endorsement, including through the measure development process, through broad acceptance, use of the measure(s), and through public comment (75 FR 72064).

Section 1890A of the Act requires that we establish and follow a pre-rulemaking process for selecting quality and efficiency measures for our programs, including taking into consideration input from multi-stakeholder groups. As part of this pre-rulemaking process, the CBE, with which we contract under section 1890 of the Act, convened these groups under the Measure Applications Partnership (MAP). The MAP is a public-private partnership created for the primary purpose of providing input to HHS on the selection of measures as required by section 1890(b)(7)(B) of the Act. We followed this pre-rulemaking process for the measures we proposed for adoption in the CY 2024 OPPS/ASC proposed rule (88 FR 49780 and 49790) for the Hospital OQR Program. Specifically, we proposed to: (1) re-adopt the Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures with modification, beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination; (2) adopt the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting (THA/TKA PRO–PM), beginning with the voluntary CYs 2025 and 2026 reporting periods followed by mandatory reporting beginning with the CY 2027 reporting period/CY 2030 payment determination; and (3) adopt the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults measure, beginning with the voluntary CY 2025 reporting period and mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. We discuss each of these measures, along with the public comments that we received on them, in subsequent sections.

a. Proposed Re-Adoption of the Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures Measure with Modification Beginning with the Voluntary CY 2025 Reporting Period Followed by Mandatory Reporting Beginning with the CY 2026 Reporting Period/CY 2028 Payment Determination

(1) Background

Hospital care has been gradually shifting from inpatient to outpatient settings.[305] Research indicates that volume of services performed in HOPDs will continue to grow, with some estimates projecting a 19 percent increase in patients between 2019 and

[305] Medicare Payment Advisory Commission. March 2021 Report to the Congress: Medicare Payment Policy. Chapter 3. Available at: *https://www.medpac.gov/wp-content/uploads/2021/10/mar21_medpac_report_ch3_sec.pdf.*

2029.[306] In light of this trend, it has become even more important to track volume within HOPDs. Larger facility surgical procedure volume may be associated with better outcomes due to having characteristics that improve care, such as efficient teamwork and increased surgical experience, discussed in more detail below.[307] Given the association between volume and outcomes, this information could provide valuable insight to patients when choosing a HOPD.

Although measuring the volume of procedures and other services has a long history as a quality metric, quality measurement efforts had moved away from collecting and analyzing data on volume because some considered volume simply a proxy for quality compared to directly measuring outcomes.[308] However, experts on quality and safety have recently suggested that while volume alone may not indicate or lead to better outcomes, it is still an important component of quality.[309] [310] [311] Specifically, larger facility surgical procedure volume may be associated with better outcomes due to having characteristics that improve care.[312] For example, high-volume facilities may have teams that work more effectively together, or have superior systems or programs for identifying and responding to complications.[313] This association between volume and patient outcomes may be attributable to greater experience or surgical skill, greater comfort with and, hence, likelihood of application of standardized best practices, and increased experience in monitoring and management of surgical patients for the particular procedure.

The Hospital OQR Program does not currently include a quality measure for facility-level volume data, including surgical procedure volume data, but it did so previously. In the CY 2012 OPPS/ASC final rule (76 FR 74466 through 74468), we adopted the Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures (HOPD Procedure Volume) measure beginning with the CY 2014 payment determination. This structural measure of facility capacity collected surgical procedure volume data on nine categories [314] of procedures frequently performed in the hospital outpatient setting: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, Skin, and Other.[315] We adopted the HOPD Procedure Volume measure based on evidence that the volume of surgical procedures, particularly of high-risk surgical procedures, is related to better patient outcomes, including decreased mortality (76 FR 74466).[316] [317] We further stated our belief that publicly reporting volume data would provide patients with beneficial information to use when selecting a care provider (76 FR 74467).

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59429 and 59430), we removed the HOPD Procedure Volume measure, citing a lack of evidence to support this specific measure's link to improved clinical quality. Although there is currently increased evidence of a link between patient volume and better patient outcomes, we previously stated that we believed that there was a lack of evidence that this link was reflected in the HOPD Procedure Volume measure. At the time, we stated that measuring the number of surgical procedures did not offer insight into the facilities' overall performance or quality improvement regarding surgical procedures (82 FR 59429). Thus, we removed the HOPD Procedure Volume measure beginning with the CY 2020 payment determination based on measure removal factor 2 (that is, performance or improvement on a measure does not result in better patient outcomes), as codified under § 419.46(i)(3)(i)(B).

In the CY 2023 OPPS/ASC proposed rule (87 FR 44730 through 44732), we stated that we have been considering re-adopting the HOPD Procedure Volume measure with modification for two reasons. First, since the removal of the HOPD Procedure Volume measure, scientific literature has concluded that volume metrics serve as an indicator of which facilities are experienced with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care.[318] Further supporting this position that volume metrics are an indicator of quality, one study found an inverse volume–mortality relationship related to transfemoral transcatheter aortic-valve replacement (TAVR) procedures performed from 2015 through 2017.[319] Second, as discussed above, the recent shift of more surgical procedures being performed in outpatient settings has placed greater importance on tracking the volume of outpatient procedures in different settings, including HOPDs. Given these developments, we believe that patients may benefit from the public reporting of facility-level volume measure data that reflect the procedures performed across hospitals, provide the ability to track volume changes by facility and procedure category, and can serve as an indicator for patients of which facilities are experienced with certain outpatient procedures.

In response to our request for comment in the CY 2023 OPPS/ASC proposed rule (87 FR 44730 through 44732), regarding the potential re-adoption of the Hospital Outpatient Surgical measure, several commenters expressed concern that the burden of collecting and reporting data for the

[314] At the time of this measure's initial adoption in the CY 2012 OPPS/ASC final rule (76 FR 74468), we finalized that HOPDs would report all-patient volume data with respect to the following eight categories: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, and Skin. The category ''other'' was added following this measure's adoption. This measure collected data ranging from eight to nine procedural categories while incorporated in the OQR Program.

measure outweighs its value (87 FR 72104 and 72105). Before its removal from the Hospital OQR Program, the HOPD Procedure Volume measure was the only measure that captured facility-level volume within HOPDs and volume for Medicare and non-Medicare patients. As a result, the Hospital OQR Program currently does not capture surgical procedure volume in HOPDs. We recognize that we can determine facility volumes for procedures performed using Medicare Fee-For-Service (FFS) claims. However, the specifications for the HOPD Procedure Volume measure also include reporting data for non-Medicare patients; thus, relying solely on the use of Medicare FFS claims data to simplify reporting would limit a future volume measure to only the Medicare program payer, leading to an incomplete representation of procedural volume.[320]

In addition, in response to our request for comment in the CY 2023 OPPS/ASC proposed rule (87 FR 44730 through 44732), some commenters expressed their belief that volume is not a clear indicator of care quality and therefore procedure volume data would not be useful to consumers (87 FR 72104 and 72105). However, many studies in recent years have shown that volume does serve as an indicator of quality of care.[321] [322] For example, studies published since the CY 2018 OPPS/ASC final rule found that patients at high volume hospitals for a specific procedure had lower rates of surgical site infections, complications, and mortality compared to patients at low-volume hospitals.[323] [324] We reiterate our belief, grounded in this published scientific literature, that volume metrics serve as an indicator of which facilities have experience with certain outpatient procedures and assist consumers in making informed decisions about where they receive care, acknowledging that many studies in recent years have shown that volume does serve as an indicator of quality of care.[325] [326]

(2) Overview of Measure

(a) Data Collection, Submission, Reporting, and Measure Specifications

The HOPD Procedure Volume measure, if re-adopted with the modifications discussed below, would collect data regarding the aggregate count of selected surgical procedures. The most frequent outpatient procedures fall into one of eight categories: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, and Skin.[327] Under the proposed measure, data surrounding the top five most frequently performed procedures among HOPDs in each category would be collected and publicly displayed. The top five procedures in each category would be assessed and updated annually as needed to ensure data collection of most accurate and frequently performed procedures.[328]

We also proposed that hospitals would submit aggregate-level data through the CMS web-based tool (currently, the Hospital Quality Reporting (HQR) system), consistent with what was required during the measure's initial adoption (76 FR 74467). Data received through the HQR system would then be publicly displayed on Care Compare or another CMS website. We refer readers to the CY 2009, CY 2014, and CY 2017 OPPS/ASC final rules (73 FR 68777 through 68779, 78 FR 75092, and 81 FR 79791, respectively) for our previously finalized policies regarding public display of quality measures.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49782), we proposed to re-adopt the HOPD Procedure Volume measure with modification, with voluntary reporting beginning with the CY 2025 reporting period and mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. At the time of this measure's initial adoption in the CY 2012 OPPS/ASC final rule with comment period, (76 FR 74468) we finalized that HOPDs would report all-patient volume data with respect to the eight categories mentioned prior. In response to commenter concerns regarding potential difficulty detecting procedural volume differentiation among these broad-based categories (76 FR 74467), the sole modification to this measure is that instead of collecting and publicly displaying data surrounding these eight broad categories, we would more granularly collect and publicly display data reported for the top five most frequently performed procedures among HOPDs within each category. We refer readers to the Center for Medicare and Medicaid Services Inventory Tool for more information on this measure: *https://cmit.cms.gov/cmit/#/*.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49782), we also proposed that HOPDs submit these data to CMS during the time period of January 1 through May 15 in the year prior to the affected payment determination year. For example, for the CY 2028 payment determination, the data submission period would be January 1, 2027, to May 15, 2027, covering the performance period of January 1, 2026, to December 31, 2026. We refer readers to section XIV.E.5 of this final rule with comment period for a more detailed discussion of the requirements for data submitted via a CMS Web-based tool. We previously codified our existing policies regarding data collection and submission under the Hospital OQR Program at § 419.46.

(b) Review by the Measure Applications Partnership (MAP)

The MAP conditionally supported the HOPD Procedure Volume measure for rulemaking, pending testing indicating that the measure is reliable and valid, and endorsement by the CBE.[329] The MAP acknowledged that the measure reports the volume of procedures performed at HOPDs in select categories reflecting typical high-volume categories of procedures and stated that the measure would capture the volume for many procedures not currently monitored by the Hospital OQR Program measure set. Furthermore, the MAP expressed its belief that measuring the

volume of procedures would relate to the program's goals of improving the safety and quality of outpatient procedures in HOPDs.[330] The MAP added that electronic reporting of procedure volumes based on code lists should not be overly burdensome to hospitals, and the public reporting of specific procedure volumes may be useful to patients.[331]

The MAP described that there is a well-established positive correlation between the volume of procedures performed at a facility and the clinical outcomes resulting from that procedure. One systematic review highlighted by the MAP found a significant volume-outcome relationship in the vast majority (87 percent) of the 403 included studies.[332] Furthermore, the MAP included a similar review in their analysis of the HOPD Procedure Volume measure that also focused on outpatient surgeries, which found a significant volume-outcome relationship across eight studies.[333]

The MAP stated that this measure addresses a national trend where even complex surgeries are moving from inpatient to outpatient settings, and that public reporting of this measure could help CMS and the public better understand possible quality differences between settings.[334] The MAP reported that the HOPD Procedure Volume measure data from 2015 and 2016 demonstrates that the number of procedures performed by facilities in the 25th and 75th percentiles varied across the condition categories.[335] These findings support our belief that volume metrics serve as an indicator of which facilities are experienced with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care.[336] [337]

In addition, the MAP noted the concurrent submission of MUC 2022–028: ASC Facility Volume Data on Selected Surgical Procedures for inclusion in the ASCQR Program. The MAP highlighted that the specifications of the volume measure proposal for the ASCQR Program are aligned with the volume measure we proposed for the Hospital OQR Program and, therefore would facilitate comparisons of equivalent procedure volumes across ambulatory surgical centers (ASCs) and HOPDs, one of the key goals of the programs.[338]

(c) Measure Endorsement

As discussed in the previous subsection of this final rule with comment period, the MAP reviewed and conditionally supported the HOPD Procedure Volume measure pending testing indicating the measure is reliable and valid, and endorsement by a national CBE as the measure was not submitted for endorsement. As we noted in previous rulemaking (75 FR 72064), the requirement that measures reflect consensus among affected parties can be achieved in ways other than from endorsement by a national CBE, including the measure development process, broad acceptance of the measure(s), use of the measure(s), and public comment.

We proposed to re-adopt the measure because we did not find any other measures of procedure volume. Additionally, this measure was previously in the Hospital OQR Program with supporters of its use. Given the support from the MAP and feedback from public comment, as well as the increasing shift from inpatient to outpatient surgical procedures and evidence that volume metrics can promote higher quality healthcare for patients, in the CY 2024 OPPS/ASC proposed rule (88 FR 49780 through 49783), we proposed the re-adoption of this measure in the Hospital OQR Program pending endorsement by a national CBE.

We invited public comment on the proposal.

Comment: Several commenters expressed support for our proposal to re-adopt with modification the HOPD Procedure Volume measure beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. Some of these commenters expressed that this measure provides valuable insights about quality of care and supports consumer decision-making. These commenters also expressed support for the measure's more granular reporting at the procedure level for the five most frequently occurring procedures in each of the clinical categories. One commenter expressed their support of this measure's likelihood to reduce administrative burden.

Response: We thank the commenters for their support. Although we are not re-adopting the HOPD Procedure Volume measure at this time, we agree that this measure provides valuable insights into care quality and is supportive of consumer decision-making.

Comment: Many commenters did not support our proposal to re-adopt with modification the HOPD Procedure Volume measure. Some of these commenters believe there is a lack of evidence that surgical volume is an indicator of quality, specifically in the outpatient setting, and a few commenters stated that the measure does not align with CMS' Meaningful Measures 2.0 framework for this reason. Furthermore, a few commenters believe that CMS has not provided evidence for a threshold to determine at what particular volume patient outcomes improve for specific procedures. A few commenters expressed concern that procedural volume is impacted by factors outside of the hospital's control. Additionally, a few commenters cited evidence which indicates higher volume for transcatheter aortic valve replacement (TAVR) procedures is not an indicator of superior care quality.[339] [340]

Response: We disagree with commenters that volume cannot serve as an indicator of care quality along with other quality information. We reiterate

that recently published scientific literature supports the position that volume metrics can serve as an indicator of quality, denoting which facilities have experience with certain outpatient procedures and assist consumers in making informed decisions about where they receive care. Furthermore, a study found that congestive heart failure (CHF) patients who stayed in hospitals with more experience in managing CHF received higher quality care and experienced better outcomes.[341] Referencing commenter concern of a lack of evidence that surgical volume is an indicator of quality, specifically in the outpatient setting, in the CY 2024 OPPS/ASC proposed rule (88 FR 49782), we cited one study which found that patients who had total hip arthroplasties performed at high-volume hospitals had lower rates of surgical site infections, complications, and mortality compared to patients at low-volume hospitals.[342] Although we are not re-adopting the HOPD Procedure Volume measure at this time for the reasons discussed below, we will continue to assess the evidence linking volume to quality of care to ensure alignment with the Meaningful Measures 2.0 Framework goal to use ''only high-quality measures impacting key quality domains.''

With respect to the determination of volume thresholds indicating improved outcomes, while the scientific literature points to an association between volume and outcomes, we do not intend to designate volume thresholds indicating proven desired outcomes. We believe it is important for patients to have the ability to access information that can inform their decision-making when choosing a hospital. Furthermore, we acknowledge that procedural volume can be impacted by factors outside of the hospital's control. We want to provide transparency to patients and consumers with respect to volume, in the case that it helps inform patient decision-making.

We acknowledge the publication of recent research indicating that when patients were treated in high-volume hospitals versus those with best historical outcomes, there was no significant reduction in observed versus modeled adverse events.[343] [344] We believe these recent studies indicate that hospital variation in care metrics is important, but that it does not discount the conclusions of the studies mentioned above or address instances where facility volume is low. Given the potential association between volume and outcomes, we believe volume information can be useful to patients and consumers. Although we are not re-adopting the HOPD Procedure Volume measure at this time, given that there is a potential association between volume and outcome, we believe this measure provides transparency, including information about volume that may be informative to patients.

Comment: Some commenters did not support our proposal because the HOPD Procedure Volume measure was previously removed from the Hospital OQR Program measure set due to CMS' stated belief at that time that there is a lack of evidence to support this measure's link to improved clinical quality.

Response: When we removed the HOPD Procedure Volume measure from the Hospital OQR Program measure set in the CY 2018 OPPS/ASC final rule with comment period, we stated our belief at the time that performance or improvement on this measure did not result in better patient outcomes (82 FR 59429). This belief was due to the lack of evidence supporting the measure's link to improved clinical quality at the time the CY 2018 OPPS/ASC final rule (82 FR 59429) with comment period was published. As discussed in the CY 2024 OPPS/ASC proposed rule (88 FR 49781), since the measure removal, scientific literature shows that volume metrics can serve as an indicator of which facilities are experienced with certain outpatient procedures and can assist consumers in making informed decisions. More recent literature supports the use of volume as a quality-of-care indicator and we continue to believe that this information can be of benefit to Medicare beneficiaries and other consumers, especially when case volume is low. Therefore, although we are not re-adopting the HOPD Procedure Volume measure at this time, we recognize the increasing importance of volume in the HOPD setting.

Comment: Many commenters did not support our proposal because they stated that they believe the potential administrative burden of the HOPD Procedure Volume measure outweighs its potential value.

Response: The MAP noted that electronic reporting of procedure volumes based on code lists should not be overly burdensome to hospitals, and the public reporting of specific procedure volumes may be useful to patients. Furthermore, our estimates of burden indicate that each participating hospital would spend 10 minutes per year to submit the data for this measure to CMS, as noted in section XXIV.B.7 of this final rule with comment period. Although we are not re-adopting the HOPD Procedure Volume measure at this time, we believe these collection efforts would not impose undue burden on hospitals.

In addition, this measure would further advance CMS' goal of transitioning to a fully digital quality measurement landscape and promoting interoperability while helping to decrease reporting burden in the long-term. We therefore believe that the value of the measure would outweigh potential reporting burden.

Comment: A few commenters did not support our proposal because they believe adoption of the HOPD Procedure Volume measure would drive business away from high-risk public hospitals or rural care.

Response: Although we are not re-adopting the HOPD Procedure Volume measure at this time, we do not agree with the commenters' concern that public reporting of procedure volume would affect providers' business. We have not found, to date, that public reporting associated with this measure affects hospitals' service lines in any significant way. For this measure, only aggregate data is reported. We do not intend to include any qualifiers with publicly displayed data. We believe this measure provides transparency to patients, including information about volume that may be informative to patients.

Comment: Several commenters did not support our proposal because they believe the HOPD Procedure Volume measure would lead to potential misuse through ''perverse incentives'' for providers to perform non-indicated procedures to increase procedural volume.

Response: We disagree that the volume measure creates an incentive for providers to perform non-indicated procedures. The HOPD Procedure

[341] Joynt, K.E., Orav, E.J., & Jha, A.K. (2011). The association between hospital volume and processes, outcomes, and costs of care for congestive heart failure. Annals of internal medicine, 154(2), 94–102. *https://doi.org/10.7326/0003-4819-154-2-201101180-00008.*

[342] Mufarrih, S.H., Ghani, M.O.A., Martins, R.S. et al. Effect of hospital volume on outcomes of total hip arthroplasty: a systematic review and metaanalysis. J Orthop Surg Res 14, 468 (2019). Available at: *https://doi.org/10.1186/s13018-019-1531-0.*

[343] Nelson AJ, Wegermann ZK, Gallup D, et al. Modeling the Association of Volume vs Composite Outcome Thresholds With Outcomes and Access to Transcatheter Aortic Valve Implantation in the US. JAMA Cardiol. 2023;8(5):492–502. *https://doi.org/10.1001/jamacardio.2023.0477.*

[344] Russo MJ, McCabe JM, Thourani VH, et al. Case Volume and Outcomes After TAVR With Balloon-Expandable Prostheses: Insights From TVT Registry. J Am Coll Cardiol. 2019;73(4):427–440. Available at: *https://doi.org/10.1016/j.jacc.2018.11.031.*

Volume measure tracks the top five procedures performed in the outpatient setting using CPT codes. The procedures posted by volume change yearly; thus, the volume measure could not lead to potential misuse through ''perverse incentives'' for providers to perform non-indicated procedures to increase procedural volume. Furthermore, we did not identify significant changes in reported volume information that would indicate this measure engendered ''perverse incentives'' for providers to perform non-indicated procedures simply to increase reported numbers of procedures.

Comment: Several commenters did not support our proposal to adopt with modification the HOPD Procedure Volume measure because they believe volume data will be confusing to Medicare patients. Commenters explained their belief that such data are limited in value due to lack of context related to the clinical appropriateness of the procedure for each specific patient as well as the risk profile for the volume of patients. Commenters added that the measure does not provide context related to overall procedural outcomes.

Response: We disagree with the commenter's assertion that volume data will be confusing to Medicare patients. As we explained in the CY 2024 OPPS/ASC proposed rule (88 FR 49782), if the proposal was adopted in future rulemaking, we intended to publish the measure's results on the Care Compare website, which is designed to be a consumer-friendly portal for quality information on Medicare providers. We interpret commenters' concern about the clinical appropriateness of the procedure for each specific patient to indicate concern that the volume measure's calculation may appear to be inflated by medically unnecessary procedures. We disagree with this concern. We believe the HOPD Procedure Volume measure provides fundamental information to patients about the frequency with which a procedure is performed in a given HOPD. We do not believe that this information is harmful for patients, and we believe strongly that equipping patients with as much meaningful information as possible about their care builds a stronger health care system. We also do not agree that the measure lacks risk profile context. As we stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49781), volume metrics serve as an indicator of which facilities have experience with certain outpatient procedures, likely leading to higher quality outcomes, and assist consumers in making informed decisions about where they receive care. We do agree that other dimensions of quality are also important to patients' outcomes in the hospital outpatient department, but we believe that the information provided through the HOPD Procedure Volume measure results provides transparency into volume as a dimension of quality, which may be informative to patients. The HOPD Procedure Volume measure is intended to be one of many metrics for determining care.

Although we are not re-adopting the HOPD Procedure Volume measure at this time, we continue to believe there is significant evidence linking volume to quality of care, and that volume metrics serve as an indicator of which facilities have experience with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care. Based on comments received, we intend to reassess the measure's methodology and reconsider how the data may be publicly displayed in the most meaningful manner for consumers.

Comment: A few commenters did not support our proposal to adopt the HOPD Procedure Volume measure over challenges related to reporting volume by procedure type. One commenter raised concern over a lack of consistency in data obtained, as the measure assesses the top five most frequently performed surgical procedures, which will change from year to year. One commenter raised concern over many services and diagnoses distributed over large groups of procedures or diagnostic codes, so even if a facility regularly performs a service, a volume measure may incorrectly identify it as having little to no experience if no single code exceeds a minimum threshold. One commenter expressed concern, stating CMS only has access to Medicare/Medicaid claims populations, which will likely result in skewed data for surgical procedure volumes and outcomes. One commenter expressed that it is unclear how the measure provides meaningful information for all patients when the categories, as well as the top five procedures per category, are based upon Medicare FFS frequency and not frequency across all patients and payers. This commenter added that when utilizing claims data, reporting is delayed, making it challenging for hospitals to identify gaps and improve performance. Another commenter expressed that CMS already has access to this data through claims.

Response: To address commenter concerns over a lack of consistency in procedural data obtained year to year, we reiterate that the top five procedures in each category would be assessed and updated annually to ensure accurate data collection of the most frequently performed procedures. Instead of tracking a fixed list of a greater number of procedures, we intended to choose the methodology of tracking the top five procedures in each category to decrease reporting burden while maximizing the usefulness of the reported data. Responding to commenter's concerns over the distribution of services over large groups of procedural codes, our method is applied consistently across all medical providers. As such, all medical providers are equally likely to have procedural volume distributed over a large number of procedural codes. For this reason, this measure groups some procedural codes together within specific procedure categories.[345] We reiterate that the proposal is not being finalized for CY 2024. We will further consider this concern in future rulemaking.

We acknowledge that relying solely on the use of Medicare FFS claims data to simplify reporting would limit the measure to only this payer, which may bias the data, misrepresenting the volume of procedures performed at a given HOPD. As we note in section XIV.B.3.a(1) of this final rule with comment period, the specifications for the HOPD Procedure Volume measure include reporting data for non-Medicare patients. We would like to clarify that hospital procedural volume submitted to the CMS web-based tool would be determined by CPT codes rather than Medicare and Medicaid claims. The chosen categories and top five procedures within each category are intended to be informed by recent Medicare claims because we believe they likely mirror procedural trends in non-Medicare populations. We would like to further investigate procedural frequency trends which may mirror that of non-Medicare populations by including both FFS and Medicare Advantage data when evaluating categories and most frequently performed procedures. We are concerned that not including Medicare Advantage data in our sampling estimates could potentially imperil their accuracy, particularly as these measures are meant to show procedure volume for all patients. We intend to address this measurement subject in the future after determining the best way to accurately predict which reporting categories would be most useful to hospitals, as

[345] The specifications for the removed HOPD Procedure Volume measure are available in the Hospital Outpatient Specifications Manuals version 9.1 available at *https://qualitynet.cms.gov/outpatient/specifications-manuals#tab9.*

well as the top five most frequently performed procedures in each category.

Comment: A few commenters did not support our proposal to re-adopt with modification the HOPD Procedure Volume measure because it is not CBE endorsed. These commenters raised concern over the measure's lack of validity and reliability testing.

Response: As we noted in the CY 2011 OPPS/ASC final rule with comment period (75 FR 72064), the requirement that measures reflect consensus among affected parties can be achieved in ways other than from endorsement by a national consensus-based entity, including the measure development process, broad acceptance of the measure(s), use of the measure(s), and public comment. While the HOPD Procedure Volume measure is not CBE-endorsed, we believe this measure reflects consensus among affected parties, because the CBE, which represents interested parties, reviews and conditionally supported the measure for use in the Hospital OQR Program.

Comment: A few commenters expressed concern that if this measure is adopted into the Hospital OQR Program, it could be used in the calculation of Star Rating performance. One commenter noted the importance of lower-volume sites in providing services to underserved populations, such as Black, Hispanic, and rural patients. Another commenter raised concern that the cardiovascular procedure studies cited by CMS are outdated or inapplicable to their patient population.

Response: We acknowledge the commenter's concern over the HOPD Procedure Volume measure being used in the calculation of Star Rating performance. We reiterate that we are not finalizing our proposal to adopt this measure currently and there are currently no plans to include this measure in Star Rating calculations. Furthermore, we agree with the importance of lower-volume sites in providing services to patients, including historically underserved populations and will keep this in consideration if we re-propose this measure in the future.

We respectfully disagree that the studies cited in the CY 2024 OPPS/ASC proposed rule are outdated or inapplicable. One cardiovascular study (Saito et al. 2022) was published within the past two years and adequately shows that volume at hospitals for this procedure was inversely associated with in-hospital mortality. We would like to reiterate our belief, given the potential association between volume and outcome, that it is our duty to provide transparency to patients, rather than withhold information that may be informative.

Comment: Many commenters provided recommendations in response to our proposal to re-adopt with modification the HOPD Procedure Volume measure. A few commenters recommended that CMS work with interested parties to identify additional measures that would be useful or complementary in evaluating the shift in procedures from inpatient to outpatient setting that would be an appropriate indicator of quality of care. A few commenters recommended adoption of a quality metric that addresses equity, low-value procedures, or prevention of ambulatory care sensitive conditions that are known to result in inpatient utilization instead of the HOPD Procedure Volume measure. Furthermore, a few commenters recommended reporting all procedures in a specific category, rather than the top five performed annually. Another commenter recommended a phased-in approach, where we gradually introduce new procedure reporting categories each year. One commenter recommended only confidential-level feedback than publicly reporting this data and tying it to payment. One commenter recommended delaying re-adoption of the Volume Indicator measure in favor of more targeted quality metrics that do not discourage patients from seeking new and innovative procedures.

Response: We thank commenters for these recommendations. We agree that collaboration with interested parties, attention to advancing health equity, and refining measure specifications are important when identifying useful measures for evaluating the shift in procedures from the inpatient to outpatient setting, and will consider these recommendations in future rulemaking. We would like to clarify that the OQR Program is a pay-for-reporting program and not a value-based payment program.

After consideration of the public comments we received, we are not finalizing our proposal to re-adopt with modification the Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures measure beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. We will not finalize this measure at this time, as we would like to investigate procedural frequency trends which may mirror that of non-Medicare populations by conducting analysis that includes FFS and Medicare Advantage data when evaluating categories and the most frequently performed procedures. Based on comments received, we are reassessing the measure's methodology and reconsidering how the data may be publicly displayed. We continue to believe there is significant evidence linking volume to quality of care, and that volume serves as an indicator of which facilities have experience with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care. We also refer readers to the discussion of a similar proposal for the same measure as used in the ASCQR Program in section XV.B.5.a of this final rule with comment period.

b. Adoption of the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting (THA/TKA PRO–PM) Beginning With Voluntary CYs 2025 and 2026 Reporting Periods Followed by Mandatory Reporting Beginning With the CY 2027 Reporting Period/CY 2030 Payment Determination

(1) Background

In the FY 2023 IPPS/LTCH PPS final rule (87 FR 49246 through 49257), we adopted the THA/TKA PRO–PM in the Hospital Inpatient Quality Reporting (IQR) Program beginning with voluntary reporting periods in CY 2025 and 2026,[346] followed by mandatory reporting for eligible elective procedures occurring July 1, 2024, through June 30, 2025, for the FY 2028 payment determination. In the CY 2024 OPPS/ASC proposed rule (88 FR 49783 through 49787), we proposed the adoption of the THA/TKA PRO–PM into the Hospital OQR Program using the same specifications as finalized for the hospital-level measure adopted into the Hospital IQR Program (87 FR 49246 through 49257), with modifications to include procedures performed in the HOPD setting.

Approximately 6 million adults aged 65 or older suffer from osteoarthritis in the United States.[347] In 2013, there were approximately 568,000 hospitalizations

[346] In the CY 2024 OPPS/ASC proposed rule (88 FR 49813 and 49814), we stated these reporting periods as FY. The IQR voluntary reporting periods for the THA/TKA PRO–PM are October 23, 2022, through June 30, 2023, for 2025 voluntary reporting and April 2, 2023, through June 30, 2024, for 2026 voluntary reporting.

[347] Arthritis Foundation (2018). Arthritis By the Numbers Book of Trusted Facts and Figures. Accessed March 8, 2019. Available at: *https://www.arthritis.org/getmedia/e1256607-fa87-4593-aa8a-8db4f291072a/2019-abtn-final-march2019.pdf.*

billed to Medicare for osteoarthritis.[348] Hip and knee osteoarthritis is one of the leading causes of disability among non-institutionalized adults,[349] [350] and roughly 80 percent of patients with osteoarthritis have some limitation in mobility.[351] [352] Elective THA and TKA are most commonly performed for degenerative joint disease or osteoarthritis, which affects more than 30 million Americans.[353] THA and TKA offer the potential for significant improvement in quality of life by decreasing pain and improving function in a majority of patients, without resulting in a high risk of complications or death.[354] [355] [356] However, not all patients experience benefit from these procedures.[357] Many patients note that their pre-operative expectations for functional improvement have not been met.[358] [359] [360] [361] In addition, clinical practice variation has been well documented in the United States,[362] [363] [364] [365] [366] readmission and complication rates vary across hospitals,[367] and international experience documents wide hospital-level variation in patient-reported outcome measure results following THA and TKA.[368]

Due to the absence of recently conducted large scale and uniformly collected patient-reported outcome (PRO) data available from patients undergoing elective primary THA/TKA, we established an incentivized, voluntary PRO data collection opportunity within the Comprehensive Care for Joint Replacement (CJR) model to support measure development.[369] Elective THA/TKAs are important, effective procedures performed on a broad population, and the patient outcomes for these procedures (such as pain, mobility, and quality of life) can be measured in a scientifically sound way,[370] [371] are influenced by a range of improvements in care,[372] and demonstrate hospital-level variation even after patient case mix adjustment.[373] [374] Further, THA/TKA procedures are specifically intended to improve function and reduce pain, making PROs a meaningful outcome metric to assess.[375]

In the CY 2021 OPPS/ASC final rule (85 FR 86146), we announced that THA and TKA procedures were removed from the Inpatient Only Procedures (IPO) list and added to the ASC covered procedures list (CPL).[376] As a result, the volume of THA and TKA procedures for Medicare beneficiaries aged 65 years and older have been increasing in outpatient settings.

We analyzed Part B Medicare FFS claims data for the number of HOPD claims with THA/TKA procedures during CY 2020, 2021, and 2022 (Table 127).

In CY 2022 OPPS/ASC proposed rule (86 FR 42251 and 42252), we requested comment on the potential future adoption of the THA/TKA PRO–PM into the Hospital OQR Program. We refer readers to the CY 2022 OPPS/ASC final rule (86 FR 63851 through 63854) for a complete summary of feedback from interested parties.

Many commenters supported inclusion of the THA/TKA PRO–PM to the Hospital OQR Program as procedures move from inpatient to outpatient settings. Commenters noted it was important to monitor quality outcomes and publicly report results. Additionally, commenters stated that the measure is aligned with patient values, being presented in a manner that is easy to understand.

Other commenters did not support expansion of the measure to the Hospital OQR Program, and expressed concern with data collection burden, patient survey fatigue, and reporting thresholds. In response, we stated that while we recognize that PRO–PMs require providers to integrate data collection into clinical workflows, this integration provides opportunity for PROs to inform clinical decision-making and benefits patients by engaging them in discussions about potential outcomes. Furthermore, we did not expect this measure to contribute to survey fatigue as the PRO instruments used to calculate pre- and post-operative scores for this THA/TKA PRO–PM were carefully selected, with extensive input from interested parties, to be low burden for patients. We refer readers to the CY 2022 OPPS/ASC final with comment period (86 FR 63851 through 63854) for a complete summary of feedback.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49785), we proposed to adopt the THA/TKA PRO–PM into the

Hospital OQR Program beginning with two voluntary reporting periods, followed by mandatory reporting. The first voluntary reporting period would begin with the CY 2025 reporting period for eligible elective outpatient procedures between January 1, 2025, through December 31, 2025, and the second would begin with the CY 2026 reporting period for eligible elective outpatient procedures between January 1, 2026, through December 31, 2026. Mandatory reporting would begin with the CY 2027 reporting period/CY 2030 payment determination for eligible elective outpatient procedures occurring January 1, 2027, through December 31, 2027, impacting the CY 2030 payment determination and subsequent years. Because the proposed measure required collection of data during the 3-month pre-operative period and the greater than 1-year post-operative period, there would be a delay between when the elective THA/TKA procedures actually occur, when the results would be reported under the Hospital OQR Program, and when payment determinations occur. Therefore, we proposed a 3-year gap between the reporting period and the payment determination year (for example, CY 2027 reporting period for the CY 2030 payment determination) for the Hospital OQR Program. We refer readers to section XIV.E.7.a of this final rule with comment period for more information on the reporting requirements.

(2) Overview of Measure

(a) Data Collection, Submission, Reporting, and Measure Specifications

This measure reports the facility-level risk-standardized improvement rate (RSIR) in PROs following elective primary THA/TKA for Medicare FFS beneficiaries aged 65 years and older who were enrolled in Medicare FFS Part A and B for the 12 months prior to the date of the procedure and in Medicare Part A and B during the procedure. The measure includes only elective primary outpatient THA/TKA procedures (patients with fractures and revisions are not included) performed in HOPDs and does not include any inpatient procedures. The measure excludes patients with staged procedures (multiple elective primary THA or TKA procedures performed on the same patient during distinct encounter) that occur during the measurement period and excludes discontinued procedures (that is, procedures that were started but not completed).[377]

Substantial clinical improvement is measured by achieving a pre-defined improvement in score on one of the two validated joint-specific PRO instruments measuring hip or knee pain and functioning: (1) The Hip dysfunction and Osteoarthritis Outcome Score for Joint Replacement (HOOS, JR) for completion by THA recipients; or (2) the Knee injury and Osteoarthritis Outcome Score for Joint Replacement (KOOS, JR) for completion by TKA recipients. Improvement is measured from the pre-operative assessment (data collected 90 to 0 days before surgery) to the post-operative assessment (data collected 300 to 425 days following surgery). Improvement scores are risk-adjusted to account for differences in patient case-mix. The measure, if adopted into the Hospital OQR Program as proposed, would account for potential non-response bias through inverse probability weighting based on likelihood of response.

We refer readers to the FY 2023 IPPS/LTCH PPS final rule (87 FR 49246 through 49257), for more information on the development of the hospital-level THA/TKA PRO–PM, including background on the measure and a complete summary of measure specifications, data sources, and measure calculation.

For additional details regarding the measure specifications, we also refer readers to the Hip and Knee Arthroplasty Patient-Reported Outcomes file, available at *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.*

(i) Data Sources

The THA/TKA PRO–PM uses four sources of data for the calculation of the measure: (1) PRO data; (2) claims data; (3) Medicare enrollment and beneficiary data; and (4) U.S. Census Bureau survey data. As described in section XIV.B.3.b(1) of this final rule with comment period, the measure uses PRO data directly reported by the patient regarding their health, quality of life, or functional status associated with health care or treatment. These patient-reported data are collected by facilities pre-operatively and post-operatively, and limited patient-level risk factor data are collected with PRO data and identified in claims as detailed in this section of this final rule with comment period.[378] The measure includes PRO data collected with the PRO instruments described in this section of this final rule with comment period, including two joint-specific PRO instruments—the HOOS, JR for completion by THA recipients and the KOOS, JR for completion by TKA recipients—from which scores are used to assess substantial clinical improvement. For risk-adjustment by pre-operative mental health score, HOPDs would submit one of two additional PRO instruments: (1) Patient-Reported Outcomes Measurement Information System (PROMIS)-Global Mental Health subscale; or (2) Veterans RAND 12-Item Health Survey (VR–12) Mental Health subscale. The risk model also includes a one-question patient-reported assessment of health literacy—the Single Item Literacy Screener questionnaire.

Furthermore, the following data would be collected for identification of the measure cohort, for risk-adjustment purposes, and for the statistical approach to potential non-response bias. Claims data billed under OPPS would be used to identify eligible elective primary outpatient THA/TKA procedures for the measure cohort to which submitted PRO data can be matched, and to identify additional variables for risk-adjustment and in the statistical approach to account for response bias, including patient demographics and clinical co-morbidities up to 12 months prior to surgery. The Medicare Enrollment Database (EDB) identifies Medicare FFS enrollment and patient-identified race, and the Master Beneficiary Summary File allows for determination of Medicare and Medicaid dual eligibility enrollment status. Demographic information from the U.S. Census Bureau's American Community Survey allows for derivation of the Agency for Healthcare Research and Quality (AHRQ) Socioeconomic Status (SES) Index score. Race, dual eligibility, and AHRQ SES Index score are used in the statistical approach to account for potential non-response bias in the outcome calculation. We refer readers to section XIV.B.3.b(2)(a)(iii) of this final rule with comment period for further details regarding the variables required for data collection and submission.

(ii) Measure Calculation

The HOPD facility-level THA/TKA PRO–PM result would be calculated by

[377] U.S. Department of Health and Human Services (2021). Hospital Outpatient Prospective Payment System (OPPS): Use of Modifiers –52, –73, and –74 for Reduced or Discontinued Services. Available at: *https://www.hhs.gov/guidance/document/hospital-outpatient-prospective-payment-system-opps-use-modifiers-52-73-and-74-reduced-or.*

[378] Higgins JP, Thomas J, Chandler J, et al. (2019). *Cochrane handbook for systematic reviews of interventions.* John Wiley & Sons. *https://doi.org/10.1002/9781119536604.*

aggregating all patient-level results across the facility. This measure would be calculated and presented as a RSIR, producing a performance measure per facility which accounts for patient case-mix, addresses potential non-response bias, and represents a measure of quality of care following elective primary outpatient THA/TKA. Response rates for PRO data would be calculated as the percentage of elective primary THA or TKA procedures performed at HOPDs for which complete and matched pre- and post-operative PRO data have been submitted, divided by the total number of eligible THA or TKA procedures performed at each facility.

(iii) Data Submission and Reporting

In response to feedback received from interested parties in the requests for comments (RFCs) on this measure in the FY 2022 IPPS/LTCH PPS proposed rule (86 FR 25588 through 25592) (as summarized in the FY 2022 IPPS/LTCH PPS final rule (86 FR 45408 through 45414)) and the CY 2022 OPPS/ASC proposed rule (FR 86 42251 and 42252), and as discussed in the Hospital IQR Program in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49246 through 49257), we proposed to adopt the THA/TKA PRO–PM in the Hospital OQR Program utilizing flexible data submission approaches.

Under the proposal, HOPDs would submit the following variables collected pre-operatively between 90 and zero days prior to the THA/TKA procedure for each patient: Medicare provider number; Medicare health insurance claim (HIC) number/Medicare beneficiary identifier (MBI); date of birth; date of procedure; date of PRO data collection; procedure type; mode of collection; person completing the survey; facility admission date; patient reported outcome measure version; PROMIS Global (mental health subscale items) or VR–12 (mental health subscale items); HOOS, JR (for THA patients) or KOOS, JR (for TKA patients); Single-Item Health Literacy Screening (SILS2) questionnaire; BMI or weight (kg)/height (cm); chronic (≥90 day) narcotic use; total painful joint count (patient reported in non-operative lower extremity joint); and quantified spinal pain (patient-reported back pain, Oswestry index question.[379] [380])

Under the proposal, HOPDs would also submit the following variables collected post-operatively between 300 and 425 days following the THA/TKA procedure for each patient: Medicare provider number; Medicare HIC number/MBI; date of birth; procedure date, date of PRO data collection; procedure type; mode of collection; person completing the survey; facility admission date; KOOS, JR (TKA patients) or HOOS, JR (THA patients). The data submission period for the THA/TKA PRO–PM would also serve as the review and correction period, and there would be no opportunity to correct the data following the submission deadline.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49787), following the two voluntary reporting periods, we proposed mandatory reporting of the THA/TKA PRO–PM beginning with the CY 2027 reporting period/CY 2030 payment determination. Under the proposal, for each voluntary and subsequent mandatory reporting period, we would collect data on the THA/TKA PRO–PM in accordance with the Health Insurance Portability and Accountability Act of 1996 (HIPAA), Privacy and Security Rules (45 CFR parts 160 and 164, subparts A, C, and E), and other applicable law.

(b) Review by Measure Applications Partnership (MAP)

We included the THA/TKA PRO–PM for the Hospital OQR in the publicly available ''2022 Measures Under Consideration List'' (MUC 2022–026).[381] The MAP Coordinating Committee supported the measure, as referenced in the 2022–2023 Final Recommendations report to HHS and CMS.[382]

The MAP members noted that a similar version of this measure has been adopted for use in the Hospital IQR Program, however, there currently is no measure that assesses PROs among THA/TKA patients in HOPDs for the Hospital OQR Program. The MAP highlighted that the key strategy for the Hospital OQR Program is to ensure that procedures done in any type of facility, including HOPDs, have equivalent quality. As such, the MAP members agreed that measures of quality of procedures in hospital settings should extend to HOPDs, to the extent feasible and appropriate, so that consumers can compare quality of a specific procedure across different facility types.[383]

In addition, the MAP members stated that the goal of the PRO–PM is to capture the full spectrum of care to incentivize collaboration and shared responsibility for improving patient health and reducing the burden of their disease. They agreed that this measure aligns with the goal of patient-centered approaches to health care quality improvement and addresses the high priority areas of patient and family engagement and communication/care coordination for the Hospital OQR Program.[384]

(c) Measure Endorsement

The CBE endorsed the hospital-level version of the THA/TKA PRO–PM (CBE #3559) in November 2020.[385] We note that the HOPD version of the THA/TKA PRO–PM would use the same specifications as the CBE-endorsed hospital-level THA/TKA PRO–PM that is currently implemented in the Hospital IQR program with modifications to capture procedures for the HOPDs. We intend to seek CBE endorsement for the HOPD version of the THA/TKA PRO–PM in a future measure endorsement cycle.

We have noted in previous rulemaking (75 FR 72064) the requirement that measures reflect consensus among affected parties can be achieved in other ways aside from CBE endorsement, including through the measure development process, through broad acceptance, use of the measure(s), and through public comment. In the CY 2024 OPPS/ASC proposed rule (88 FR 49787), we proposed this measure without CBE endorsement based upon strong MAP and public support combined with the importance of the measure for Medicare beneficiaries. In addition, there are two existing, CBE-endorsed versions of this measure, one at the clinician-group level (CBE #3639) and one for the hospital level (CBE #3559). We expect that the measure will perform similarly in the HOPD setting, and we intend on submitting the measures for CBE endorsement following data collection during voluntary reporting.

We refer readers to section XIV.E.7.a of this final rule with comment period for a discussion on the THA/TKA PRO–PM form, manner, and timing submission requirements.

We invited public comment on the proposal.

Comment: Several commenters supported the use of the THA/TKA PRO–PM in the Hospital OQR Program, as well as general support for PRO–PMs in CMS quality programs that are valid, reliable, and capable of informing performance improvement.

Response: We thank commenters for their support of the THA/TKA PRO–PM for the Hospital OQR Program.

Comment: Many commenters expressed support for this measure, but recommended changes to the proposed voluntary and mandatory reporting timelines for the THA/TKA PRO–PM adoption into the Hospital OQR Program. A few commenters suggested that CMS extend the voluntary reporting timelines to support hospitals' learning and their incorporation of this PRO–PM into their workflows, and to support patients in making informed care decisions based on quality. One commenter suggested a partial year reporting before an entire year reporting requirement is instituted and suggested four years of voluntary reporting. One commenter suggested a delay of reporting timelines by a year. One commenter supported the proposed voluntary and mandatory reporting timelines but urged CMS to consider adjusting the HOPD reporting and submission deadlines to align with inpatient requirements adopted in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49246 through 49257) for the Hospital IQR Program. The commenter noted that when implementing the PRO surveys, hospitals will not make a distinction between inpatient or outpatient services because tracking one set of patients on a fiscal year timeline (for the Hospital IQR Program) and another set of patients on a calendar year timeline (for the Hospital OQR Program) will be an administrative burden. Several commenters supported only the voluntary reporting timeline without mandatory reporting, citing undue burden for hospitals participating in both the Hospital IQR and Hospital OQR Programs to collect data and respond to differing measurement and reporting periods. These commenters urged CMS to not mandate THA/TKA PRO–PM measure reporting in the Hospital OQR Program until testing and consensus-based endorsement in the HOPD setting has been completed or until CMS has sufficient information from the use of this measure in the Hospital IQR Program, to ensure this measure operates as intended and is useful for providers and patients. Commenters suggested this would allow CMS to assess feasibility, validity, and response rates, particularly in light of certain patient-level characteristics that may influence response rates of this measure.

Response: We thank commenters for their support of adopting the THA/TKA PRO–PM in the Hospital OQR Program. In response to interested party feedback to revise the measure reporting timelines, we are finalizing the measure with modification by delaying implementation of mandatory reporting by one year, such that voluntary reporting would begin with the CY 2025 reporting period and continue through the CY 2027 reporting period, and mandatory reporting would begin with the CY 2028 reporting period for CY 2031 payment determination.

In response to commenters' recommendations to align performance and reporting timelines of the Hospital OQR Program with the Hospital IQR Program, we will explore the feasibility of this approach within the HQR system, but do not want to delay the start of voluntary reporting with the CY 2025 reporting period so that HOPDs and their vendors can gain experience with the measure. Any further changes to the reporting requirements would be proposed through future rulemaking.

Regarding commenters' recommendation to delay mandatory reporting until CBE endorsement, given the increasing volume of THA and TKA procedures occurring in the outpatient setting, we believe it is important to adopt this PRO–PM in Hospital OQR Program as soon as possible and intend to submit the outpatient version of this measure for CBE endorsement in a future measure cycle. We refer readers to section XIV.E.7.a of this final rule with comment period where we discuss in more detail the form, manner, and timing of reporting the THA/TKA PRO–PM.

Comment: One commenter supported the adoption of this measure into the Hospital OQR Program but recommended that CMS analyze hip and knee arthroplasty procedures separately. Specifically, this commenter noted that THA procedures have a high success rate as measured by improvement in Quality Adjusted Life Years (QALYs), while TKA does not always reach the same levels of patient satisfaction.

Response: While we acknowledge that THA and TKA procedures can have varying recovery times and may differ somewhat in anticipated patient outcomes, we developed this measure to include both THA and TKA procedures for several reasons: (1) to align with other claims-based measures that combine THA/TKA procedures; (2) to increase the number of hospitals performing enough procedures and obtaining enough completed pre- and post-operative patient-reported outcome measures (PROMs) to be included in the measure; and (3) because surgeons and their hospital care teams often provide care for patients receiving both types of procedures.

Comment: Many commenters expressed concern that the inclusion of the THA/TKA PRO–PM in the Hospital OQR Program could create financial burden at the hospital level and require additional staff resources, and impact clinical workflows at the provider level. Several commenters expressed concern that the post-operative data collection timeframe of 300 to 425 days would be costly, time consuming, and difficult to implement because many patients miss follow-up appointments or do not require follow-up care this long after their procedure. One commenter noted concern for possible bias that may arise from events outside of the provider's control during the long post-operative assessment window. Another commenter noted that many clinicians participating in The Joint Commission Advanced Total Hip and Knee Replacement Certification, which calls for 90 day pre- and post-operative (+/− 2 months) PROMs reporting, have expressed challenges with a 1-year data capture. A few commenters expressed concern that EHRs are not integrated with patient portals that would allow hospitals to collect patient-reported information. Additionally, commenters noted that many small, rural, and medically underserved hospitals exist in areas where patient portal use is unreliable, requiring infrastructure investments and adding manual burden to extrapolate data. One commenter suggested CMS institute technical support and incentives like the facility bonus used in the Quality Payment Program for smaller health systems and for those with limited infrastructure and resources and encouraged CMS to consider reimbursing hospitals for data collection.

Response: We acknowledge that collecting PROMs data may involve more burden and initial implementation resources compared to some other types of quality measures, and that small hospitals, particularly in rural areas, may lack the necessary infrastructure to collect data on this measure. However, we believe the benefit of collecting direct functional improvement information from the patients outweighs the burden. We believe that measuring patient-reported outcomes is an important aspect of patient-centered healthcare and continue to emphasize, as highlighted in our Meaningful Measures 2.0 Framework, that the

patient voice should be prioritized across healthcare systems and providers. While PRO–PMs require providers to integrate data collection into clinical workflows, this integration provides an important opportunity for patient-reported outcomes to inform clinical decision-making and benefits patients by engaging them in discussions about potential outcomes. To allow more time for initial implementation, we are extending the voluntary reporting period by an additional year and delaying implementation of mandatory reporting by one year. We believe that the additional year of voluntary reporting and delaying mandatory reporting will allow time for HOPDs to integrate data collection into their clinical workflows, as well as for CMS to monitor implementation progress with regards to data collection burden, and time for rulemaking should any improvements for mandatory reporting need to be made. Additionally, to provide more flexibility, we are not requiring HOPDs to collect data in a standardized way. HOPDs may use a variety of data collection, storage, and submission approaches, and we encourage HOPDs to use processes best suited to them. We will monitor data collection burden during the voluntary reporting period and carefully consider public comments to advance patient-centered measurement with as little burden as possible to both providers and patients.

We also acknowledge commenters' concerns about the long post-operative data collection timeline of 300 to 425 days, and the concern about potential bias that could occur due to events following the procedure to the post-operative data collection window. In developing the THA/TKA PRO–PM, the measure developer reviewed registry data capture to inform the post-operative assessment window (initially 270 to 365 days) for capture of full recovery from both THA and TKA, and to align the post-operative assessment with the typically scheduled one-year post-surgery appointments so that the collection of the post-operative data collection would not require an additional appointment. Following several years of PRO data collection through the CJR Model, clinical experts expressed concern that the initial 365-day upper limit missed patients who were scheduled or rescheduled for this one-year follow-up beyond 365 days, and they strongly advocated for shifting the post-operative data collection window to better align with clinical practice and increase PRO data collection. For additional details we refer readers to the Patient-Reported Outcomes (PROs) Following Elective Primary Total Hip and/or Total Knee Arthroplasty: Hospital-Level Performance Measure—Measure Methodology Report, available in Hip and Knee Arthroplasty Patient-Reported Outcomes folder at: *https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/HospitalQualityInits/Measure-Methodology.*

Regarding the commenter's concern that the long-term results of care may be connected to factors outside the facility's control, it is our belief that quality procedures, efficient processes, and best practices (such as discharge education), and care coordination are critical aspects of care directly in purview of the facility.

Regarding commenters' recommendations concerning reimbursement and incentives for reporting the THA/TKA PRO–PM data, we are not able to provide incentive payments or reimburse hospitals for data collection under the Hospital OQR Program. We note that the Hospital OQR Program is a pay-for-reporting program, and hospitals will receive credit for reporting their measure data regardless of their performance on a measure.

Comment: A few commenters expressed concern that data is not collected in a standardized way and suggested that CMS consider reducing the number of risk variables required. These commenters also suggested that CMS shorten the pre- and post-operative data collection window and propose an alternative timeframe. A commenter urged CMS to consider reducing the Hospital OQR Program measure reporting requirement of 50 percent for completed PRO data for the first two years of collection to reduce financial penalties associated with incomplete data collection. A few commenters noted that the extensive data collection required by the measure would rarely be used to guide patient care decisions and incomplete reporting penalties would require diversion of staff effort away from direct patient care toward PRO collection. One commenter urged CMS to also monitor and evaluate patient willingness to respond to requests for patient-reported information and to assist providers in best practices to improve and maintain patient responsiveness to these data collection requests.

Response: We emphasize that allowing hospitals to use a variety of data collection, storage, and submission approaches ensures flexibility and reduces burden, and we encourage hospitals to use processes best suited to their care setting and patient populations. We note that while we are not requiring hospitals to collect data in a standardized way, we are standardizing the specific data elements that need to be collected and reported to us. Further, we believe that clinicians, providers, and hospitals should determine practices that avoid duplication across care settings. We will evaluate data collection burden associated with the THA/TKA PRO–PM to inform future changes to measure specifications or reporting process improvements.

In regards to reporting thresholds requirements, we selected the 50 percent reporting threshold after considering numerous factors and the experience of the Comprehensive Care for Joint Replacement (CJR) Model participants. The proposed reporting threshold for adoption of the measure into the Hospital OQR Program is based on average response rates for both pre-operative and post-operative surveys collected by participating hospitals in the CJR Model. We note that the proposed reporting threshold for adoption of the measure into the Hospital OQR Program is lower than that currently used in the CJR Model (50 percent versus 85 percent) since hospitals participating in the CJR Model had difficulty meeting the threshold requirement. Additionally, hospitals are not held to reporting thresholds until mandatory reporting; therefore, we believe hospitals will have time to develop their data collection and reporting processes. We reiterate that hospitals in the Hospital IQR Program will already have the necessary infrastructure and several years of experience collecting measure data to meet this threshold. Lastly, we are providing three years of voluntary reporting for hospitals to integrate data collection into their workflows. We will continue to consider the appropriate pre- and post-operative matched survey response rate and reporting thresholds, evaluate our proposed approach during voluntary reporting, and consider adjustments based on feedback prior to mandatory reporting.

We also acknowledge commenters' concerns with evaluating patient willingness to respond to the PRO surveys. We anticipate data collection for this measure to present a low burden to patients thereby fostering receptiveness to survey participation. We will evaluate data collection burden and response rates associated with the THA/TKA PRO–PM and will also consider this information in future measure reevaluation.

Comment: A few commenters requested CMS explore data collection through providers because surgeons' offices or other settings commonly administer PRO surveys and suggested adoption of the measure into the Quality Payment Program as part of its specialty care-focused Merit-based Incentive Payment System (MIPS) Value Pathways (MVPs) Program, given that patient follow-up is more likely to occur through the orthopedic/surgeon practice. One commenter supported the adoption of the measure into the Hospital OQR Program if the measure is removed from the Hospital IQR Program, citing that duplicative processes would create burden. One commenter recommended streamlining or eliminating duplicative existing measures as the number of overall measures in the Hospital OQR Program increases.

Response: We agree that there is value in measurement at the clinician level; however, the hospital outpatient measure helps capture the quality of care provided in the HOPD setting and provides the opportunity for more entities to have sufficient case volume to be included in the measure. We highlight that THA/TKA procedures performed in the hospital inpatient or outpatient departments would be counted only either in the Hospital IQR Program or the Hospital OQR Program. Additionally, implementation of this measure in the HOPD setting has been recommended by interested parties as summarized in the FY 2023 IPPS/LTCH PPS final rule (87 FR 49254) and supported by interested parties as summarized in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63851 and 63852).

After considering the comments received, we are finalizing adoption of the THA/TKA PRO–PM into the Hospital OQR Program with modification. In response to interested party feedback, we are delaying implementation of mandatory reporting by one year, such that voluntary reporting would begin with the CY 2025 reporting period and continue through the CY 2027 reporting period, and mandatory reporting would begin with the CY 2028 reporting period for CY 2031 payment determination. The additional year of voluntary reporting would allow time to monitor implementation progress with regards to data collection burden and response rates, as well as time for rulemaking should any improvements for mandatory reporting need to be made.

c. Adoption of the Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) Measure Beginning With the Voluntary CY 2025 Reporting Period Followed by Mandatory Reporting Beginning With the CY 2026 Reporting Period/CY 2028 Payment Determination

(1) Background

The use of computed tomography (CT) scans has greatly improved the diagnosis and treatment of many conditions, and as such, over 80 million CT scans are performed each year in the U.S.[386] Most CT scans are performed as outpatient procedures.[387] CT scans expose patients to low-dose ionizing radiation which is known to contribute to the development of cancer.[388] The Biological Effects of Ionizing Radiation (BEIR) VII report by the United States National Academy of Sciences defined low-dose radiation as doses up to 100 millisieverts (mSv).[389] A low dose CT scan of the chest delivers 1.5 mSv of radiation, while a regular-dose CT chest scan delivers 7 mSv of radiation.[390] In comparison, a conventional chest x-ray delivers about 0.1 mSv of radiation.[391]

There is a large body of research that suggests that exposure to ionizing radiation within the same range that is routinely delivered by CT scans increases a person's risk of developing cancer.[392] [393] [394] [395] One study found that patients who received CT scans, particularly women and adults aged 45 years or younger, had an elevated risk of developing thyroid cancer and leukemia.[396] Another study found that patients who received CT scans had a 0.7 percent higher risk of developing cancer in their lifetime compared to the general United States population.[397] Cancer risk increased for patients who underwent multiple CT scans, ranging from 2.7 to 12 percent.[398] While the likelihood of developing cancer from a CT scan is small on an individual level, it has been estimated that the percentage of cancers attributable to CT scans in the United States may be as high as 2 percent.[399]

CT image quality and radiation dose are related; as radiation dose increases, image quality increases until a diagnostic threshold is reached, at which point no further diagnostic benefit from image quality occurs.[400] [401] Conversely, too little radiation dose can produce inadequate image quality. Research suggests that current radiation doses utilized for CT scans may be lowered between 50 percent and 90 percent without impacting image diagnostic utility.[402] [403] [404] [405] [406] Based on the evidence of harm from excessive radiation and evidence that radiation doses could be lowered in many patients' situation without deteriorating image diagnostic utility to the point of rendering exams unacceptable, we believe it is important to promote patient safety by ensuring that patients are exposed to the lowest possible level of radiation while preserving image quality. Therefore, in the CY 2024 OPPS/ASC proposed rule, (88 FR 49789), we proposed the adoption of the Excessive Radiation eCQM as a voluntary measure for the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination.

(2) Overview of Measure

The Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults (Hospital Level—Outpatient) electronic clinical quality measure (eCQM) (the Excessive Radiation eCQM), which was developed by the University of California San Francisco and is stewarded by Alara Imaging, Inc., provides a standardized method for monitoring the performance of diagnostic CT to discourage unnecessarily high radiation doses while preserving image quality. The measure calculates the percentage of eligible CT scans that are out-of-range based on having either excessive radiation dose or inadequate image quality, relative to evidence-based thresholds based on the clinical indication for the exam.[407] This measure provides a metric toward reducing unintentional harm to patients from CT scans. Setting a standard for diagnostic CT scans to prevent unnecessarily high radiation doses while preserving image quality provides hospitals with a reliable method to assess harm reduction efforts and modify their improvement efforts. This measure also addresses high priority areas as stated in our Meaningful Measures Framework, including the transition to digital quality measures and the adoption of high-quality measures that improve patient outcomes and safety.[408] Additionally, the Excessive Radiation eCQM supports the National Quality Strategy goal of promoting safety because it works to reduce preventable harm to patients.[409] The measure was developed according to evidence and consensus-based clinical guidelines for optimizing CT radiation doses, including guidelines developed by the American College of Radiology, American College of Cardiology, Image Wisely 2020, and the American Association of Physicists in Medicine.[410] [411] [412] [413] [414]

Measure testing by the measure developer across a total of 16 inpatient and outpatient hospitals and a large system of outpatient radiology practices revealed that availability, accuracy, validity, and reproducibility were high for all of the measure's required data elements and the variables that were calculated by the translation software. The measure developer further assessed the reporting burden by administering surveys to each of the participating hospitals and outpatient groups. The measure developer found the burden to be small to moderate, comparable to the burden of measure reporting for other measures. Additionally, the measure developer noted that the burden of reporting the Excessive Radiation eCQM fell to information technology personnel rather than physicians.

Measure testing found that assessing radiation doses and providing audit feedback to radiologists resulted in significant reductions in dose levels. The testing sites also noted that the assessment of their doses as specified in the measure was helpful for identifying areas for quality improvement. According to the measure developer, over 40 letters were submitted in support of the measure, including several from radiologists and medical physicists who serve as leaders of the testing sites, that confirmed the measure was feasible and that data assembly would not pose a large burden.

The Excessive Radiation eCQM was submitted to the CBE for endorsement review in the Fall 2021 cycle (CBE #3663e) and was endorsed on August 2, 2022. The measure was also included in the 2022 MUC List.[415] The MAP Hospital Workgroup reviewed the MUC List on December 13–14, 2022. The Workgroup noted that the Hospital OQR Program currently does not have any measures assessing the risk of radiation exposure from CT scans. The Workgroup also noted that the measure

addresses the ''Safety'' Meaningful Measures 2.0 Healthcare Priority and would encourage shared decision-making between providers and patients.[416] The MAP's Final Report on February 1, 2023, supported the Excessive Radiation eCQM for rulemaking in the Hospital OQR Program.[417]

(3) Data Sources

The Excessive Radiation eCQM uses hospitals' electronic health record (EHR) data and radiology electronic clinical data systems, including the Radiology Information System (RIS) and the Picture Archiving and Communication System (PACS). Medical imaging information such as Radiation Dose Structured Reports and image pixel data are stored according to the universally adopted Digital Imaging and Communications in Medicine (DICOM) standard. Currently, eCQMs cannot access and process data elements in their original DICOM formats.

Hospitals may choose to use any available software that performs the necessary functions to comply with measure requirements. One such example is the Alara Imaging software,[418] which fulfills these requirements by linking primary data elements, assessing CT scans for eligibility for inclusion in the measure, and generating three data elements mapped to clinical terminology for EHR consumption (CT Dose and Image Quality Category, Calculated CT Size-Adjusted Dose, and Calculated CT Global Noise) within the hospital's firewall.[419] While the Alara Imaging software and the necessary updates to the software are proprietary, these would be available to all reporting entities free of charge and accessible by creating a secure account through the measure steward's website. Alara Imaging also provides free of charge necessary education materials including step-by-step instructions on creating an account and linking their EHR and PACS data to the software. Hospitals and their vendors will be able to use the data elements created by this software to calculate the eCQM and to submit results to the Hospital OQR Program via Quality Reporting Document Architecture (QRDA) Category I files as they do for all other eCQMs.

(4) Measure Specifications

The measure numerator is diagnostic CT scans that have a size-adjusted radiation dose greater than the threshold defined for the specific CT category. The threshold is determined by the body region being imaged and the reason for the exam, which affects the radiation dose and image quality required for that exam. The numerator also includes CT scans with a noise value greater than a threshold specific to the CT category.[420]

The measure denominator is all diagnostic CT scans performed on patients ages 18 and older during the one-year measurement period which have an assigned CT category, a size-adjusted- radiation dose value, and a global noise value.[421]

The measure excludes CT scans that cannot be categorized by the area of the body being imaged or reason for imaging. These include scans that are simultaneous exams of multiple body regions outside of four commonly performed multiple region exams defined by the measure, or scans that cannot be classified based on diagnosis and procedure codes. Exams that cannot be classified are specified as LOINC code 96914–7, CT Dose and Image Quality Category, Full Body. The measure also has technical exclusions for CT scans missing information on the patient's age, Calculated CT Size-Adjusted Dose, or Calculated CT Global Noise. We refer readers to the eCQI Resource Center (*https://ecqi.healthit.gov/ecqm/oqr/pre-rulemaking/2024/cms1206v1#quicktabs-tab-tabs_pre_rule_measure-0*) for more details on the measure specifications.

(5) Data Submission and Reporting

In the CY 2024 OPPS/ASC proposed rule, we proposed the adoption of the Excessive Radiation eCQM as a voluntary measure for the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. We stated that we would utilize the voluntary period to monitor the implementation and operationalization of the measure. We refer readers to section XIV.E.6.b of this final rule with comment period for a discussion of the Excessive Radiation eCQM reporting and data submission requirements. We refer readers to section XIV.E.6 of this final rule with comment period for a discussion of our previously finalized eCQM reporting and submission policies.

We invited public comment on the proposal.

Comment: Many commenters supported our proposal to adopt the Excessive Radiation eCQM, believing that the measure will increase patient safety by reducing unnecessary exposure to harmful radiation. Several commenters expressed their belief that the measure will mitigate risks of cancer within patients who rely on CT to monitor health conditions. Several of these commenters noted that the measure was designed with stakeholder feedback from a diverse Technical Expert Panel, was tested in diverse settings, and was endorsed by the CBE on both scientific merit and feasibility. Several of these commenters highlighted the lack of standardization in CT application that leads to using a higher radiation dose than necessary. Commenters noted that the Excessive Radiation eCQM provides a guide for acceptable dose limits.

Response: We thank commenters for their support. We agree that this measure will increase patient safety by reducing unnecessary exposure to harmful radiation.

Comment: A few commenters supported the adoption of the Excessive Radiation eCQM because they believed it aligns with the priority CMS identified in the Meaningful Measures 2.0 initiative to transition to digital quality measures. One commenter supported our proposal, citing alignment with other CMS quality programs. The commenter noted that implementing this measure will encourage synergy across entities and advance quality improvement efforts.

Response: We thank commenters for their support. We agree that adoption of the Excessive Radiation eCQM aligns with our Meaningful Measures 2.0 initiative to transition to digital quality measures. We further note the Excessive Radiation eCQM addresses the goal of Alignment under the priority area Outcomes and Alignment in CMS's National Quality Strategy.

Comment: A few commenters supported adoption of the Excessive Radiation eCQM and recommended CMS implement mandatory reporting beginning with the CY 2024 reporting period/CY 2026 payment determination.

Response: We thank commenters for their support and recommendation. When proposing this measure for adoption, we sought to balance quickly addressing the patient safety concerns presented by exposure to excessive radiation while still providing hospitals

[421] Ibid.

with enough time to implement the measure. To ensure this balance remains, we are not accelerating the adoption timeline.

Comment: A few commenters stated that they were implementation testing centers and supported adoption of the Excessive Radiation eCQM. Commenters noted that the measure was highly feasible for reporting and was able to appropriately identify CT exams that were significantly above diagnostic reference level doses. One commenter indicated that the measure would significantly reduce the use of excessive radiation doses as well as inadequate, suboptimal low doses by identifying outliers and thereby increasing the awareness and importance of CT protocol optimization. Another commenter noted the successful implementation of the measure within their institution and stated that they had received, from Alara Imaging, information on their measure performance that brought to their attention some areas of opportunity to decrease radiation dose. Several commenters noted that the measure removed burden from their institutions in terms of identifying areas of improvement to reduce CT radiation dose, including the detection of outliers.

Response: We thank commenters for their support.

Comment: One commenter supported the adoption of the Excessive Radiation eCQM because the commenter believed that the measure will disincentivize use of technical parameters that are inappropriate based on a given patient's condition. Another commenter supported the adoption of the Excessive Radiation eCQM because the commenter believed that the Alara Imaging software bridges the gap between data stored outside of the EHR and eCQMs and aligns with the CMS's goals of digital quality measurement. The commenter noted that the software uses widespread standards including DICOM, HL7 v2.x and/or FHIR to minimize reporting burden. The commenter further noted that HOPDs can choose between Alara Imaging's measure calculation product or import the intermediate variables into an existing EHR for eCQM calculation. Another commenter supported the adoption of the Excessive Radiation eCQM because the commenter stated that the image noise algorithm for this measure is statistically robust and appropriately specified. Commenters noted that testing of the data in diverse settings resulted in accessible data elements that contained very little missing data.

Response: We thank commenters for their support.

Comment: Many commenters opposed the proposal's mandatory reporting requirement, stating that the software integration, maintenance, and management would impose a significant burden on HOPDs (specifically, implementation challenges with integration of the Alara Imaging software into facility EHR or EMR systems, the additional processes needed to aggregate data components, and the financial and administrative burden as a result of the implementation challenges and aggregation of data components). Another commenter noted that implementing this measure in rural hospitals and those treating underserved communities may prove insurmountable due to implementation challenges. Many of these commenters supported voluntary reporting of the measure.

Several commenters suggested that CMS delay implementation of mandatory reporting to give HOPDs additional time to integrate, appropriately test, and gain experience from the software. One commenter stated that the eCQM, once cybersecurity due diligence surrounding integration of software is completed, will take up to 18 months to build and test. Another commenter recommended that voluntary reporting be implemented sooner than 2024.

Response: We acknowledge the concerns regarding the potential issues with measure implementation. As discussed further below, we are delaying implementation of mandatory reporting as a logical outgrowth of public comments on this subject. We will continue to monitor implementation of the measure during the voluntary period and make any future adjustments to the requirement as needed in future rulemaking.

Regarding commenters' concerns about the burdens associated with the measure and software; while this measure in its current form requires the reporting of data that eCQMs cannot process directly through the software of their choice, the Alara Imaging software provided by the measure developer would address this gap. As stated in the CY 2024 OPPS/ASC proposed rule, the Alara Imaging software meets CMS compliance and security standards. Educational materials will also be made available to provide step-by-step instructions for creating secure accounts and linking hospital EHRs and PACS data to the translation software (88 FR 49789). We will take the commenters' concerns into account during the voluntary reporting period as we continue to evaluate the measure and its accompanying translation software for policy consideration in future rulemaking.

We also reiterate that the Hospital OQR Program introduced the ST-Segment Elevation Myocardial Infraction (STEMI) eCQM previously, such that HOPDs already have the capability and the knowledge to submit eCQM data. To help alleviate potential burden, this measure has been proposed in a phased approach after a period of voluntary reporting. During this time, we will continue to monitor and evaluate measure implementation and adjust as necessary in future rulemaking.

Comment: Several commenters expressed concern about the set thresholds for both ''Calculated CT Global Noise'' and ''Calculated CT Size-Adjusted Dose.'' One commenter stated their belief that Calculated CT Global Noise is not a meaningful indicator of quality, is not defined by any international or national standards organizations, and greatly oversimplifies the nature of image noise in clinical examinations. The commenter notes that the International Electrotechnical Commission has clearly defined measures for noise and dose in CT imaging, of which ''Calculated CT Global Noise'' and ''Calculated CT Size-Adjusted Dose'' are not among the definitions. The commenter further states that noise levels may vary substantially depending upon the parameters of the CT procedure. Another commenter notes that ''Calculated CT Size-Adjusted Dose'' and ''Calculated CT Global Noise'' are not widely accepted image quality measurements and have not been widely tested and validated. One commenter noted that the proposed measure does not seem to have referred to appropriate peer reviewed literature on CT dose in an earnest effort to address patient imaging concerns.

Response: We respectfully disagree that the thresholds have not been adequately tested. The data elements are scientifically and practically valid. The measure's thresholds for noise and radiation dose were developed with close input from an experienced and diverse Technical Expert Panel (TEP), which included representation from radiologists and physicists in medicine and were informed by an image quality study.[422] The measure also relies on evidence and consensus-based clinical guidelines for optimizing CT radiation doses. These include guidelines

[422] Smith-Bindman R, Yu S, Wang Y, et al. (2022). An Image Quality-informed Framework for CT Characterization. Radiology, 302(2), 380–389. *https://doi.org/10.1148/radiol.2021210591.*

developed by the American College of Radiology,[423] The Society of Interventional Radiology,[424] The Society of Cardiovascular CT,[425] cardiovascular imaging societies,[426] Image Wisely 2020,[427] and the FDA.[428] Measure testing by the measure developer across 16 inpatient and outpatient hospitals showed that availability, accuracy, validity, and reproducibility were high for all of the measure's required data elements and the variables that were calculated by the translation software. The testing sites reported that the assessment of their radiation doses as specified in the measure was helpful for identifying areas for quality improvement, and the measure received support from radiologists and medical physicists who serve as leaders of the testing sites (88 FR 49789). We also reiterate that this measure was submitted to the CBE by the measure developer for endorsement review (CBE #3663e) and was endorsed on August 2, 2022. The Excessive Radiation eCQM (MUC 2022–018) was submitted to the CBE-convened MAP for the 2022–2023 pre-rulemaking cycle and received support for rulemaking (88 FR 49789).

Comment: Another commenter asked how good image quality will be determined, and that CMS identify the threshold values for image quality and provide additional information about how they were derived. One commenter asked if the one-year measurement period is a cumulative dose for all patients, or individual patients, and if it is standardized over a year. One commenter noted their opposition to finalizing the measure until further testing in oncology settings can be conducted since the measure does not consider cumulative radiation exposure over a lifespan, as well as prior or anticipated radiation exposure history, including therapeutic irradiation for malignancies.

Response: Regarding the commenter's question about how good image quality would be determined, we wish to clarify that the image quality component, as measured by noise, was included to ensure that CT image quality does not decrease as an unintended consequence of lowering radiation doses. Noise was selected as the metric for measuring image quality because it is the most widely used measure of image quality for CT. Because the image quality component is not meant to be a comprehensive measure of image quality that can assess nuanced differences in quality across all CT scans, it does not take into account variables beyond noise.

Regarding the measure's threshold values and approach for deriving them, this information can be found in the materials that the measure developer submitted to the National Quality Forum (NQF) for endorsement review.[429] The thresholds were derived in part using data from the ACR Dose Index Registry and University of California San Francisco (UCSF) International CT Dose Registry.

With regard to the commenter's question about what the one-year measurement period is measuring, each CT scan in the one-year period is evaluated against size-adjusted dose and permissible image noise thresholds set for each CT category. There is no assessment that combines dose across time and there are no cumulative dose calculations.

We refer commenters to the measure specifications listed in measure submission materials on the NQF[430] and the eCQI Resource Center at *https://ecqi.healthit.gov/ecqm/eh/pre-rulemaking/2024/cms1074v1* for additional information on the measure's technical specifications. The framework for classifying CT scans into CT categories was published in ''An Image Quality-informed Framework for CT Characterization''.[431]

Comment: A few commenters expressed various concerns about the measure software vendor and pilot. Commenters expressed concerns about the ability of a single vendor to handle multiple organizations onboarding this measure and challenges associated with quality reporting. One commenter expressed concern about other services or features the vendor may provide outside of the free software and asked if there are any other vendors who offer software specific to the needs of this measure. One commenter expressed a belief that CMS lacks authority to require users to purchase software from a single supplier to meet Federal quality requirements associated with reimbursement. Another had questions about the survey conducted by the vendor about the pilot, including whether it was a conflict of interest for the vendor to conduct a survey about their own pilot. A few commenters expressed concern that the software has not been released for public review.

Response: In regard to the ability of a single vendor to handle multiple organizations onboarding, we acknowledge that onboarding of the measure may take time for both hospitals and vendors. In response to commenters' concerns about implementing the measure, we are delaying mandatory reporting of the measure by extending voluntary reporting by an additional year. Additionally, we are using a phased approach to mandatory reporting. This will allow the hospitals and vendors time to successfully implement the measure.

In regard to the use of Alara Imaging software and other vendor software, hospitals are not required to use the Alara Imaging software for CMS Measure Compliance. They may choose to use any software(s) that performs the necessary functions to generate the same standardized data elements necessary to calculate the measure consistent with the measure's specifications. The Alara Imaging software for CMS Measure Compliance was created under a CMS-funded grant. At this time, the Alara Imaging software is the only vendor to offer translation software that specifically performs all the necessary functions, in one software package, to generate the data elements necessary for the measure specifications. Because the software is not required and the software is free of charge, we disagree that the Federal quality requirements associated with reimbursement are relevant in this situation.

J., Flynn, M., Romano, P., Seibert, J. A., Westphalen, A. C., & Bindman, A. (2022). An Image Quality-informed Framework for CT Characterization. Radiology, 302(2), 380–389. *https://doi.org/10.1148/radiol.2021210591.*

Regarding commenter's concerns about a conflict of interest, we do not believe that a vendor conducting a survey on their own pilot poses a conflict of interest. Further, the pilot conducted was reviewed during the MAP selection process by a TEP. The TEP found that the pilot conducted met the CBE evaluation criteria for testing (reliability testing and validity testing) standards. For more information on the Excessive Radiation eCQM pilot, we refer readers to the measure submission materials on the NQF [432] and the eCQI Resource Center at *https://ecqi.healthit.gov/ecqm/eh/pre-rulemaking/2024/cms1074v1.*

Regarding commenters' concerns that the software has not been released for public review, we acknowledge that the Alara Imaging software for CMS Measure Compliance is proprietary. However, it will be available to all reporting entities free of charge and accessible by creating a secure account through the Alara Imaging website. Additionally, by delaying mandatory reporting of this measure, we are providing more opportunity for the Alara Imaging software to be publicly released and available for reporting entities prior to mandatory reporting.

Comment: Several commenters expressed concerns about software technical issues. A few commenters expressed concerns about how the measure is reported and what EHR formats are accepted. One commenter asked CMS to identify the specific requirements, if any, for maintaining the data over time, including where the information should be stored over the years. A few commenters expressed concern about data breaches and security protocols. One commenter asked if hospitals would sign into Alara Imaging and be protected by the Alara Imaging firewall thus requiring a business agreement, or if the hospital would run Alara Imaging software on their own hospital systems.

Response: The Alara Imaging software accepts a wide range of FHIR, HL7 formats for EHR data, and DICOM CT radiation dose and image data to decrease burden. Similar to other eCQMs, the measure has also been developed using proven formats: Quality Data Model (QDM) for immediate implementation and FHIR when adopted in the future, in accordance with our aim of encouraging interoperability based on the FHIR Application Programming Interface (API).

While the Alara Imaging software for CMS Measure Compliance is proprietary, it will be available to all reporting entities free of charge and accessible by creating a secure account through the Alara Imaging website. To clarify the reporting process, we note that a hospital can log in through the measure developer's secure portal and run the Alara Imaging software for CMS Measure Compliance inside the firewall. The software runs automatically to create the three intermediate data elements needed for the measure: CT Dose and Image Quality Category, Calculated CT Size-Adjusted Dose, and Calculated CT Global Noise. Once the software finishes creating these intermediate variables, hospitals can send the data to its EHR for measure calculation and reporting. The software allows additional options such as the ability to send the data to other business associates of the hospital if needed. No manual data entry is required.

We anticipate that some EHR vendors may develop solutions to ingest these calculated variables and calculate the eCQM, as they have done for other eCQMs. This burden to EHR developers should be similar to any other new eCQM adopted into the Hospital OQR Program.

The Alara Imaging software for CMS Measure Compliance has security protocols to safeguard sensitive patient information. It is installed and computes the measure within a hospital's firewall to be used for measure-related activities, including calculation, and reporting. The measure steward's security aligns with industry standards, including HIPAA and Systems and Organization Controls (SOC) 2 certification verified via ongoing third-party audits. As noted previously, while the Alara Imaging software for CMS Measure Compliance is proprietary, it will be available to all reporting entities free of charge and accessible by creating a secure account through the Alara Imaging website.

Additionally, regarding the question about requirements for data maintenance, the Excessive Radiation eCQM uses data from radiology electronic clinical data systems, including the Radiology Information System (RIS) and the Picture Archiving and Communication System (PACS), and medical imaging information such as Radiation Dose Structured Reports and image pixel data are stored according to the universally adopted DICOM standard, as described in the proposed rule (88 FR 27084). These data will need to be available at the time the hospital and/or its vendor calculates the eCQM for quality improvement and monitoring purposes as well reporting to CMS.

Further, we will post information about the software's specifications as it becomes available through routine communication channels to hospitals, vendors, and other interested parties, including but not limited to issuing memos, emails, and notices on QualityNet and the eCQI Resource Center websites.

Comment: One commenter suggested that the measure should be classified as a hybrid measure, not an eCQM.

Response: This measure is suitable for eCQM reporting. As set forth in the CMS' eCQI Resource Center at *https://ecqi.healthit.gov/glossary,* we define an eCQM as a measure specified in a standard electronic format that uses data electronically extracted from EHRs and/or health IT systems to measure the quality of health care provided. By using patients' radiology data that exist in a structured and standard electronic format that can be electronically extracted from radiology IT data systems, this measure meets the definition of an eCQM. And while radiology data are stored in health IT systems, we understand that for many hospitals the radiology data system may not be fully integrated or interoperable with the EHRs. To address this gap, the measure developer created the Alara Imaging software for CMS Measure Compliance. This software links primary data elements, assesses CT scans for eligibility for inclusion in the measure, and generates three data elements mapped to a clinical terminology for eCQM consumption: CT Dose and Image Quality Category, Calculated CT Size-Adjusted Dose, and Calculated CT Global Noise (88 FR 27084).

Comment: Several commenters expressed concern that the measure does not take the individual patient's needs into consideration, such as the type and reason for the scan, the size of the patient, etc. One commenter suggested this will require the operator to turn down the dose to an unacceptable level for high-BMI patients who often also suffer most from negative Social Determinants of Health and other challenges. A few commenters recommended that CMS reconsider the proposed measure and instead work with the medical imaging community to adopt a reference value approach—based on distributions of patients—and not a per-patient limit-based approach. One commenter commented on the lifespan accumulation of radiation exposure on the individual and

[432] Measure 3663e Information Form. Available at: *https://www.qualityforum.org/ProjectMeasures.aspx?projectID=86057&cycleNo=2&cycleYear=2021.*

suggested that this also be taken into consideration before finalizing the measure. One commenter noted that patient-centered care should encompass appropriate imaging—the right test for the right patient, and thus at times a higher radiation dose will provide greater test accuracy. This commenter expressed concern that this measure may result in unintended consequences and that those be monitored over time, such as the inappropriate shifting of care or coding/billing practices, or increased patient morbidity and mortality.

Response: We disagree that the measure does not take the individual patient's needs into consideration. The measure assesses radiation doses by clinical indication, thereby allowing consideration for the reason of imaging. Similarly, it assesses radiation dose according to thresholds determined by the underlying clinical indication for imaging. The denominator for this measure is all diagnostic CT exams performed on adults during the measurement period of one year that have an assigned CT category, a size-adjusted radiation dose value, and a global noise value. Thus, the measure considers the clinicians choice of imaging protocol (for example, whether to assign a patient to a single or multi-phase abdomen exam).

We wish to clarify that the purpose of the Excessive Radiation eCQM is to ensure that radiation dose and image quality fall within thresholds that are safe and appropriate, and it is not intended to oversimplify the relationship between noise and radiation. The image quality component is included in the measure as a balancing component to the radiation dose thresholds, to ensure that CT image quality does not decrease as an unintended consequence of the measure. We reiterate that the thresholds for radiation doses are size-adjusted to accommodate patients of all sizes. We would like to further emphasize that hospitals should use the measure as a guideline for conducting CT scans while also adjusting noise and radiation doses when necessary to provide quality patient care in special circumstances. The measure seeks to reduce harm from excessive radiation for most patients and should not replace appropriate clinical judgement if adjustments need to be made in select circumstances.

Comment: Several commenters recommended that CMS integrate reporting requirements of this measure between the Hospital OQR Program and the Hospital IQR Program, including considering a single hospital-wide rate rather than distinct inpatient and outpatient measures. A few commenters had concerns about the burden associated with reporting this eCQM as part of the Hospital OQR Program, as HOPDs do not participate individually in the Promoting Interoperability Program and thus do not have options of measures to report. Commenters noted that integrating reporting requirements between programs would reduce burden.

Response: We thank commenters for their recommendations. One of the Meaningful Measures 2.0 goals is to address measurement gaps, reduce burden, and increase efficiency by aligning measures across value-based programs and across partners, including CMS, Federal, and private entities. We note that the Act established the Hospital OQR Program as distinct from the Hospital IQR Program. While measure alignment and coordination between programs remains a priority, the Hospital OQR Program, consistent with specific statutory requirements, measures outpatient department services separate from other hospital services. We will continue to assess our measures to promote alignment between programs.

As we stated previously, the Hospital OQR Program already introduced the STEMI eCQM, and as such, HOPDs already have the capability and the knowledge to submit eCQM data. To help alleviate potential burden, this measure has been proposed in a phased approach after a period of voluntary reporting. During this time, we will continue to monitor and evaluate measure implementation and adjust as necessary in future rulemaking.

Comment: One commenter stated that CMS did not adequately consider references that express concern with the measure's benchmarking approach such as ''Benchmarking CT Radiation Doses Based on Clinical Indications: Is Subjective Image Quality Enough?'' by Mahadevappa Mahesh in Radiology.

Response: We note that this publication is an editorial and not a peer-reviewed source. Additionally, we note that the measure developer, while developing the Excessive Radiation eCQM, reviewed and considered interested party feedback. The measure developer then rigorously tested the measure across 16 inpatient and outpatient hospitals and a large system of outpatient radiology practices (88 FR 27084).

Comment: Two commenters expressed concern with the terminology used in the measure name and believe ''excessive radiation dose'' may raise undue alarm. One commenter recommended renaming the measure to avoid potential misinformation.

Response: We are not planning to change the measure's name. Keeping the measure's name as proposed will allow facilities and consumers to find information about the measure throughout the measure's life, such as the initial proposal to the MUC list.

Comment: A few commenters expressed their belief that the proposal should not be finalized because it is unnecessary due to other regulations and accreditation programs that exist to monitor radiation dose and optimize scanning protocols, including the ACR accreditation, the Joint Commission QC program, and state health department monitoring programs.

Response: We respectfully disagree that the measure is unnecessary. Other regulations and accreditation programs that exist are not standard among outpatient facilities. For example, facilities elect to become accredited by the ACR or Joint Commission QC program, etc. while each state has varying standards. Further, this measure provides additional information not contained in regulations and programs that exist to monitor radiation dose and optimize scanning protocols. First, the measure would allow consumers to compare hospital performance nationwide because the information would be available on the Care Compare website. Second, the Excessive Radiation eCQM, through the Alara Imaging software, is designed to not only monitor performance but also provide feedback to achieve a meaningful reduction in radiation doses.

After considering commenter's recommendations regarding voluntary and mandatory reporting timelines, we are finalizing our proposal to adopt the Excessive Radiation eCQM with modification to extend the Excessive Radiation voluntary reporting period by an additional year such that voluntary reporting would begin with the CY 2025 reporting period, as proposed, and mandatory reporting would begin one year later than proposed with the CY 2027 reporting period/CY 2029 payment determination. The additional year of voluntary reporting would allow time to monitor implementation progress with regards to data collection burden and response rates.

4. Previously Finalized and Newly Finalized Hospital OQR Program Measure Sets

a. Summary of Finalized Hospital OQR Program Measure Set for the CY 2026 Payment Determination

We refer readers to the CY 2023 OPPS/ASC final rule (87 FR 72100 through 72102) for a summary of the previously finalized Hospital OQR Program measure set for the CY 2025 payment determination. Table 128 summarizes the finalized Hospital OQR Program measures for the CY 2026 payment determination:

BILLING CODE 4150–28–P

TABLE 128: FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2026 PAYMENT DETERMINATION

CBE #	Measure Name
0514	MRI Lumbar Spine for Low Back Pain†
None	Abdomen CT – Use of Contrast Material
0669	Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low-Risk Surgery
0496	Median Time for Discharged ED Patients (Previously referred to as Median Time from ED Arrival to ED Departure for Discharged ED Patients)
0499	Left Without Being Seen†
0661	Head CT or MRI Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke who Received Head CT or MRI Scan Interpretation Within 45 minutes of ED Arrival
0658	Colonoscopy Follow-Up Interval (Previously referred to as Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients)*
1536	Cataracts Visual Function (Previously referred to as Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery)**
2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy
3490	Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy
2687	Hospital Visits after Hospital Outpatient Surgery
None	Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) – About Facilities and Staff***
None	OAS CAHPS – Communication About Procedure***
None	OAS CAHPS – Preparation for Discharge and Recovery***
None	OAS CAHPS – Overall Rating of Facility***
None	OAS CAHPS – Recommendation of Facility***
3636	COVID–19 Vaccination Coverage Among Health Care Personnel****
None	Breast Cancer Screening Recall Rates
None	ST-Segment Elevation Myocardial Infraction (STEMI) electronic clinical quality measure (eCQM)*****

†We note that CBE endorsement for this measure was removed.

* In this final rule, we are finalizing our proposal to modify the Colonoscopy Follow-Up Interval measure beginning with the CY 2024 reporting period/CY 2026 payment determination.

** In the CY 2023 OPPS/ASC final rule (87 FR 72097 through 72099), we finalized keeping data collection and submission voluntary for the Cataracts Visual Function measure for the CY 2025 reporting period and subsequent years. In this final rule, we are finalizing our proposal to standardize the surveys offered to patients pre- and post-surgery beginning with the CY 2024 reporting period.

*** In the CY 2022 OPPS/ASC final rule (86 FR 63840), we finalized voluntary reporting beginning with the CY 2023 reporting period and mandatory reporting beginning with the CY 2024 reporting period/CY 2026 payment determination.

**** In this final rule, we are finalizing our proposal to modify the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination.

***** The STEMI eCQM was adopted in the CY 2022 OPPS/ASC final rule (86 FR 63837 through 63840), beginning with voluntary reporting for the CY 2023 reporting period and mandatory reporting beginning with the CY 2024 reporting period/CY 2026 payment determination.

b. Summary of Finalized Hospital OQR Program Measure Set for the CY 2027 Payment Determination and Subsequent Years

Table 129 summarizes the previously finalized and newly finalized Hospital OQR Program measures beginning with the CY 2027 payment determination and subsequent years:

TABLE 129: FINALIZED HOSPITAL OQR PROGRAM MEASURE SET FOR THE CY 2027 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

CBE #	Measure Name
0514	MRI Lumbar Spine for Low Back Pain†
None	Abdomen CT – Use of Contrast Material
0669	Cardiac Imaging for Preoperative Risk Assessment for Non-Cardiac, Low-Risk Surgery
0496	Median Time for Discharged ED Patients (Previously referred to as Median Time from ED Arrival to ED Departure for Discharged ED Patients)
0499	Left Without Being Seen†
0661	Head CT or MRI Scan Results for Acute Ischemic Stroke or Hemorrhagic Stroke who Received Head CT or MRI Scan Interpretation Within 45 minutes of ED Arrival
None	HOPD Procedure Volume (Previously referred to as Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures)*
0658	Colonoscopy Follow-Up Interval (Previously referred to as Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients)
1536	Cataracts Visual Function (Previously referred to as Cataracts: Improvement in Patient's Visual Function within 90 Days Following Cataract Surgery)**
2539	Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy
3490	Admissions and Emergency Department (ED) Visits for Patients Receiving Outpatient Chemotherapy
2687	Hospital Visits after Hospital Outpatient Surgery
None	OAS CAHPS – About Facilities and Staff
None	OAS CAHPS – Communication About Procedure
None	OAS CAHPS – Preparation for Discharge and Recovery
None	OAS CAHPS – Overall Rating of Facility
None	OAS CAHPS – Recommendation of Facility
3636	COVID–19 Vaccination Coverage Among Health Care Personnel
None	Breast Cancer Screening Recall Rates
None	ST-Segment Elevation Myocardial Infarction (STEMI) eCQM
None	Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting (THA/TKA PRO–PM)***
3663e	Excessive Radiation eCQM (Previously referred to as Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults eCQM)****

†We note that CBE endorsement for this measure was removed.

* In this final rule, we are finalizing our proposal to re-adopt the HOPD Procedure Volume measure with modification beginning with the voluntary CY 2025 reporting period and mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination.

** In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72097 through 72099), we finalized keeping data collection and submission voluntary for this measure for the CY 2025 reporting period and subsequent years.

***In this final rule, we are finalizing our proposal to adopt the THA/TKA PRO–PM beginning with the voluntary CY 2025 reporting period and with delayed implementation of mandatory reporting beginning with the CY 2028 reporting period/CY 2031 payment determination.

****In this final rule, we are finalizing our proposal to adopt the Excessive Radiation eCQM beginning with the voluntary CY 2025 reporting period and with delayed implementation of mandatory reporting beginning with the CY 2027 reporting period/CY 2029 payment determination.

BILLING CODE 4150–28–C

5. Maintenance of Technical Specifications for Quality Measures

We refer readers to the CY 2019 OPPS/ASC final rule (83 FR 59104 and 59105) and the CY 2022 OPPS/ASC final rule (86 FR 63861) for our policies regarding maintenance of technical specifications for quality measures. We maintain technical specification manuals that can be found on the CMS website at: *https://qualitynet.cms.gov/outpatient/specifications-manuals.* Technical specifications for eCQMs used in the Hospital OQR Program are contained in the CMS Annual Update for the Hospital Quality Reporting Programs (Annual Update), which are available, along with implementation guidance documents, on the eCQI Resource Center website at: *https://ecqi.healthit.gov/.*

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

6. Public Display of Quality Measures

We refer readers to the CY 2009, CY 2014, CY 2017, and CY 2021 OPPS/ASC final rules (73 FR 68777 through 68779, 78 FR 75092, 81 FR 79791, and 85 FR 86193 through 86236 respectively) for our previously finalized policies regarding public display of quality measures.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

a. Public Reporting of Median Time for Discharged ED Patients—Transfer Patients and Median Time for Discharged ED Patients—Overall Rate

The Median Time from Emergency Department (ED) Arrival to ED Departure for Discharged ED Patients (Median Time for Discharged ED Patients) measure was adopted for reporting in the Hospital OQR Program beginning with the CY 2013 payment determination (75 FR 72086). The Median Time for Discharged ED Patients measure is a chart-abstracted measure that evaluates the time between the arrival to and departure from the ED, also known as ED throughput time. The Median Time for Discharged ED Patients measure is calculated in stratified subsections for certain types of patients: (1) Median Time for Discharged ED Patients-Reported Measure, which excludes psychiatric/mental health and transferred patients; (2) Median Time for Discharged ED Patients-Psychiatric/Mental Health Patients, which includes information only for psychiatric/mental health patients; and (3) Median Time for Discharged ED Patients-Transfer Patients, which includes information only for patients transferred from the ED; and (4) the Median Time for Discharged ED Patients-Overall Rate. The measure excludes patients who expired in the ED, left against medical advice, or whose discharge was not documented or unable to be determined.

In the CY 2011 OPPS/ASC final rule with comment period (75 FR 72086), we considered publicly displaying all strata; however, due to input from interested parties, we did not finalize public display of Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate. Currently, measure data for the Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate are not reported publicly on the Care Compare site. Measure data for the Median Time for Discharged ED Patients-Reported Measure is currently publicly displayed on the Care Compare site and in the corresponding downloadable data file for the Hospital OQR Program. We also collect and report Median Time for Discharged ED Patients—Psychiatric/Mental Health Patients for public awareness of behavioral health gaps in the transfer of such patients, and per the CY 2018 OPPS/ASC final rule with comment period (82 FR 59437), we adopted a policy to publicly report these stratified behavioral health data beginning in July 2018 using data from patient encounters during the third quarter of 2017. We now believe displaying all strata will highlight and prioritize various issues in the health care system, specifically behavioral health and continuum of care.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49792), we proposed publicly reporting measure data for Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate. Publicly reporting these measure stratifications can elucidate ED throughput performance gaps for patients requiring higher levels of specialized care above what a facility is able to or provide. Data for these measure stratifications are not currently being reported publicly on the Care Compare site.

Under the proposal, beginning with the CY 2024 reporting period, we would make data publicly available on our Care Compare website and in downloadable data files found at *data.cms.gov* for the following chart-abstracted measure strata: Median Time for Discharged ED Patients-Transfer Patients and the Median Time for Discharged ED Patients-Overall Rate which contains data for all patients.

We invited public comment on the proposal.

Comment: One commenter supported public reporting of Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate stating that the measure stratifications can elucidate ED throughput performance gaps for patients requiring higher levels of specialized care above what a facility is able to or provide. The commenter further stated that facilities have begun to see more mental health and substance use disorder patients in relation to overall volume of patients and publicly reporting the measure gives visibility to issues in the ED.

Response: We thank the commenter for their support. We agree that public reporting of the Median Discharge Time for Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate will bring to light any existing performance gaps for this patient population. We believe displaying all strata will highlight and prioritize various issues in the health care system.

Comment: Several commenters did not support Public Reporting of Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate. A few of these commenters stated that the measure could be affected by many factors (such as ED boarding) which are outside the control of ED, and therefore Median Time for Discharged ED Patients-Transfer Patients and the Median Time for Discharged ED Patients-Overall Rate should not be publicly reported. One commenter stated that CMS should not finalize the proposal to publicly report Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate because essential hospitals may lack the reporting infrastructure and staff needed to track and submit the measure accurately and therefore these hospitals need more time to properly develop systems to collect and verify these data points before publicly reporting them on Care Compare.

Response: We thank commenters for their concern. We disagree that Median Time for Discharged ED Patients-Transfer Patients and Median Time for Discharged ED Patients-Overall Rate should not be publicly displayed on the Care Compare website and in the downloadable files. For one, HOPDs are already collecting and reporting this data. Prior to our proposal to publicly report all strata in this measure, HOPDs

had not presented CMS with this issue of lacking reporting infrastructure and staff needed to track and submit the measure accurately. Furthermore, we believe that displaying all strata will highlight and prioritize various issues in the health care system. We believe patients should have access to this data when making decisions about their care.

Comment: A few commenters suggested that CMS remove the Median Time for Discharged ED Patients measure. Commenters stated that Median Time for Discharged ED Patients should be removed due to the influence of factors beyond the control of HOPDs.

Response: One of the Meaningful Measures 2.0 goals is to address measurement gaps, reduce burden, and increase efficiency by using only high-value quality measures impacting key quality domains. As we stated in the CY 2024 OPPS/ASC proposed rule, ED performance and care continues to be a key quality domain of the Hospital OQR Program. Removal of the Median Time for Discharged ED Patients measure would result in an incomplete measure set because there would be no measures that review ED throughput. We continue to believe that the Median Time for Discharged ED Patients measure supports our Meaningful Measures 2.0 goals.

Comment: One commenter suggests that CMS provide context with public reporting of Median Time for Discharged ED Patients about ED discharge delays due to persistent lack of care options, growing workforce shortages, an inability to pay for post-discharge care and administrative delays.

Response: We thank the commenter for their recommendations and will take them into consideration.

After consideration of the public comments we received, we are finalizing our proposal as proposed.

b. Overall Hospital Star Ratings

In the CY 2021 OPPS/ASC final rule (85 FR 86193 through 86236), we finalized a methodology to calculate the Overall Hospital Quality Star Rating (Overall Star Ratings). The Overall Star Ratings utilizes data collected on hospital inpatient and outpatient measures that are publicly reported on a CMS website. We refer readers to the CY 2021 OPPS/ASC final rule (85 FR 86193 through 86236) for our previously finalized policies regarding the Overall Star Ratings.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

C. Hospital OQR Program Quality Measure Topics for Potential Future Consideration

1. Summary

In the CY 2024 OPPS/ASC proposed rule (88 FR 49792), we sought public comment on potential measurement topic areas for the Hospital OQR Program. The request for comment (RFC) sought input on innovative measurement approaches and data sources for use in quality measurement to inform our work and, more specifically, the focus of measure development within the Hospital OQR Program. We identified three potential priority areas and we encouraged the public to review and provide comment.

2. Background

In the CY 2024 OPPS/ASC proposed rule (88 FR 49792), we sought public comment to address: (1) quality measurement gaps in the HOPD setting, including the ED; (2) changes in outpatient care (such as shifts in volume, technology use, and case complexity); (3) growth of concerns around workforce and patient safety; (4) the transition to digital quality measurement; and (5) interest in patient-reported outcomes.

Specifically, we sought comment on quality measurement topics for the Hospital OQR Program that include:

- Promoting Safety (Patient and Workforce);
- Behavioral Health; and
- Telehealth.

We sought input on the specific questions posed in this RFC.

3. Summary of Comments on Patient and Workforce Safety as a Measurement Topic Area in the Hospital OQR Program

Launched in April 2022, the CMS National Quality Strategy outlines CMS' aim to shape a resilient, high-value healthcare system through quality outcomes, safety, equity, and accessibility for all.[433] Improving safety through levers such as quality measurement is a critical objective of the National Quality Strategy. We acknowledge that promoting safety in order to achieve zero preventable harm requires developing measures that assess and hold healthcare systems accountable to keep individuals safe through preventative and treatment processes. Therefore, in the CY 2024 OPPS/ASC proposed rule, we sought public comment on patient and workforce safety measures. We are particularly interested in sepsis care for potential future inclusion in the Hospital OQR Program as a patient safety measure.

Sepsis is a life-threatening condition which can arise from simple infections (such as pneumonia or a urinary tract infection) and requires prompt recognition and early intervention, which can often occur in an ED.[434] [435] Although sepsis can affect anyone at any age, it is more common in infants, older adults, and patients with chronic health conditions such as diabetes and immunosuppressive disorders.[436] The Centers for Disease Control and Prevention (CDC) estimates annually that there are approximately 1.7 million adults diagnosed with sepsis with 270,000 resulting deaths.[437] Therefore, preventing, diagnosing, and treating sepsis effectively has been a focus of patient safety in recent years.[438] [439]

HOPDs may play a critical role in the initial assessment and evaluation of suspected sepsis patients through lab tests, diagnostic imaging, and collection of sepsis biomarkers.[440] Timely and accurate sepsis diagnosis is essential to effective care. Research shows that performance of evidence-based time-sensitive therapies in EDs can lower the risk of organ dysfunction, reduce mortality, and mitigate the need for mechanical ventilation.[441] [442] [443] In

[441] Arabi YM, Al-Dorzi HM, Alamry A, et al. (2017). The Impact of a Multifaceted Intervention Including Sepsis Electronic Alert System and Sepsis Response Team on the Outcomes of Patients with Sepsis and Septic Shock. *Annals of intensive care,* 7(1), 57. *https://doi.org/10.1186/s13613-017-0280-7.*

addition, using an interdisciplinary sepsis-response team to coordinate care in the ED shows potential in improving sepsis care management and enhancing patient outcomes.[444] These findings highlight the role of HOPDs and EDs in the timely diagnosis and treatment of sepsis. Therefore, we believe the Hospital OQR Program may benefit from quality measures centered around sepsis care.

We also believe quality measures should align, to the extent possible, across CMS programs to minimize reporting burden. In the FY 2015 IPPS/LTCH PPS final rule (79 FR 50236 through 50241), we adopted the Severe Sepsis and Septic Shock: Management Bundle measure (CBE #0500) [445] (the Sepsis measure) into the Hospital Inpatient Quality Reporting (IQR) Program beginning with the FY 2015 reporting period/FY 2017 payment determination. In the FY 2024 IPPS/LTCH PPS proposed rule (88 FR 27027 through 27030), we proposed to adopt the Sepsis measure into the Hospital Value-Based Purchasing (HVBP) Program beginning with the FY 2026 program year. The Sepsis measure supports the efficient, effective, and timely delivery of high-quality sepsis care by providing a standard operating procedure for the early risk stratification and management of a patient with severe infection. When the care interventions in the measure are provided as a composite, health systems observe significant reductions in hospital length of stay, readmission rates, and mortality.[446] [447]

In the CY 2024 OPPS/ASC proposed rule (88 FR 49793), we requested comment on whether this measure would be appropriate and feasible for use in the Hospital OQR Program, as well as whether CMS should consider adopting an alternative measure that assesses the quality of sepsis care in the hospital outpatient setting.[448]

Additional safety measures may be needed to adequately monitor and maintain safety in the Hospital OQR Program, such as measurement of system-wide all-cause harm, in addition to the safety of observation care, procedures and services, medication errors, technology, and workforce. Patient and workforce safety are interconnected, as the safety of healthcare workers is critical to maintaining a safe and effective healthcare environment.[449]

We requested input from interested parties on the following topics: (1) safety outcome priorities specific to settings, services, transitions and transfers, and access to care; (2) general cross-outpatient setting outcomes; (3) individual harms, including methodological approaches to patient identification and data collection, technological-derived harm, and use of electronic resources to mitigate potential for harm; and (4) workforce safety. Specifically, we requested comment on the following questions:

- What are interested parties' highest priority outcomes for ensuring safety in the outpatient setting, not limited to the following: overall priorities; priorities for specific settings (for example, EDs, HOPDs) and services (for example, observation care, emergent and non-emergent surgeries, procedures, and imaging); safety related to transitions between care settings; and safety around access to care (for example, a patient who lacks access to life-saving medications such as insulin, epinephrine, albuterol)?
- What outcomes should be measured across all settings within the Hospital OQR Program?
- Individual harms (such as wrong-site surgery) occur at low frequencies, presenting a challenge for the development of risk-adjusted quality measures that can be used to compare facilities. Existing measures in the Hospital OQR Program have used approaches such as the capture of utilization (for example, the Hospital Visits After Hospital Outpatient Surgery Measure (CBE #2687)) to indicate potential harm and longer measurement periods to improve measurement reliability.

++ Are there other methodological approaches or data that we could use to identify harm to patients receiving care in the outpatient setting?

++ What approaches could we use to capture harms associated with outpatient services (HOPD procedures, ED visits, outpatient clinic visits, outpatient imaging)?

++ How could electronic data sources or monitoring systems be leveraged to gather timely data on such errors?

- What aspects of workforce safety are important for us to consider for the Hospital OQR Program?
- As new technology becomes available and is used more widely (such as artificial intelligence (AI) for diagnoses, robotic surgery, and electronic health records (EHRs)), there is a potential for these technologies or their application to cause harm to patients. For example, AI algorithms trained on data that is under representative of certain racial, ethnic, or gender groups may misdiagnosis these same populations.[450] At the same time, technology could also be leveraged to mitigate AI risks, improve safety, or facilitate quality measurement.

++ Which technologies are of the most concern in terms of potential for harm?

++ What measurable safety-related outcomes should CMS consider for the Hospital OQR Program?

++ What technologies could be leveraged to improve safety or facilitate its measurement?

We received comments on this topic.

Comment: Many commenters provided feedback and recommendations to measure and assess the quality of sepsis care in the hospital outpatient setting that could potentially support the foundation of patient safety established in the Hospital OQR Program. While these commenters did not specifically reference implementation of the Severe Sepsis and Septic Shock: Management Bundle measure (CBE #0500) in the Hospital OQR Program, commenters generally supported the intent of this measure and believed increased focus on sepsis care will help patient safety in the outpatient program.

Several commenters expressed concerns regarding the administrative burden related to chart abstraction. A few commenters stated their belief that the Sepsis measure contributes to antibiotic overuse. Other commenters noted that certain elements of the Sepsis measure are not appropriate for the outpatient setting. One commenter specifically noted that the denominator population would be too small. Another commenter opposed the measure, expressing their belief that hospitals participating in the Hospital Value-Based Purchasing program may deliberately designate some inpatient sepsis cases as outpatient to avoid incurring monetary penalties. Another commenter noted that the measure requires adherence to a standardized protocol and may not provide flexibility for individually tailored care. One commenter questioned how stays would be characterized or attributed to a setting for quality reporting purposes if hospitals were required to report on the Sepsis measure for both their inpatient and outpatient care.

A few commenters shared recommendations of alternative sepsis care measures. These recommendations included measures targeted at prevention of sepsis onset, as well as early and accurate sepsis identification. One commenter recommended that CMS more broadly measure healthcare associated infections and encouraged analysis to identify the infections most pertinent to the HOPD setting, noting that given the high volume of surgical procedures in this setting, surgical site infections may be a suitable candidate topic for a quality metric.

A few commenters shared general considerations when assessing the quality of sepsis care in the hospital outpatient setting. One commenter encouraged CMS to gather sufficient evidence from use of the Sepsis measure under the Hospital IQR Program prior to adopting the measure in the outpatient setting. Another commenter requested that CMS pay particular attention to racial disparities in regard to sepsis care. One commenter urged CMS to consider other targeted solutions that better addresses current patient safety challenges, including those exposed during the recent Public Health Emergency.

Response: We thank commenters for their input and acknowledge their concerns and recommendations. We will take commenters' feedback into consideration in future rulemaking related to quality measurement of sepsis care, including the importance of addressing health equity in the Hospital OQR Program.

Comment: Many commenters supported efforts to address patient and workforce harms through data-driven and actionable quality measurement. Commenters shared their highest priorities in developing measures targeted at patient harm in the outpatient setting, including harms associated with ED boarding, radiation exposure, and preventing low-value care. Highlighted outcomes for workforce safety included work-related illness, injury, and workplace violence. A few commenters recommended that CMS support research to better understand the implications of the COVID–19 pandemic on safety in the healthcare system overall.

Commenters also shared recommendations for potential measures to advance patient safety. A few commenters recommended measures that assess avoidable readmissions, repeat visits, and use of inappropriate services. One commenter recommended adoption of Hospital Visits after Orthopedic ASC Procedures (CBE #3470) and Hospital Visits after Urology ASC Procedures (CBE #3366). Another commenter recommended measures of DVT prophylaxis, medical errors, and in-facility accidents, such as patient falls.

In addition, commenters provided recommendations for methodological approaches to identifying patient harm in the outpatient setting. A few commenters recommended that CMS leverage the CDC's National Healthcare Safety Network (NHSN) to accurately measure hospital-acquired infection at the HOPD level. A few commenters also encouraged CMS to utilize all-payer data for more accurate measurement of patient harms. One commenter suggested capturing harm via a claims-based measure, while another commenter advocated for additional PRO–PMs. As a means of examining disparities in patient safety, one recommended stratifying patient safety measures by social risk factors.

Several commenters acknowledged harms resulting from the proliferation of AI in the healthcare space. A few commenters highlighted the potential risk of AI bias, which commenters believed can lead to improper diagnosis or inappropriate care delivery in underserved populations, further exacerbating disparities in patient outcomes. One commenter suggested that CMS dedicate more resources to understanding these disparities. In addition, several commenters suggested increased stakeholder engagement efforts, such as multi-disciplinary panels to fully consider the potential harms and benefits associated with high impact technologies. Other commenters acknowledged the role AI technology can play in improving safety and creating a more equitable system. One commenter noted that AI has been demonstrated to reduce time to care. A few comments highlighted AI's potential to offer accuracy that may reduce repeat and inappropriate care.

A few commenters urged that, when possible, CMS align its work with other proponents of patient safety and collaborate with Federal partners on safety-focused measures. A few commenters recommended that CMS explore measurement approaches in line with the Joint Commission's National Patient Safety Goals. Other commenters encouraged CMS to coordinate with the Centers for Disease Control and Prevention (CDC) and the Occupational Safety and Health Administration (OSHA) to align quality measurement efforts and advance the well-being of the healthcare workforce.

Several commenters highlighted barriers to developing and implementing quality measurement of workforce safety, including the potential administrative burden to report and track workforce safety metrics, the dearth of workplace violence data, the potential interplay of measures with Federal policies, and factors outside of the hospital's control that may contribute to workplace violence.

Response: We thank the commenters for their input and recommendations. We believe efforts to mitigate patient and workforce harms are critical to achieving our vision of shaping a high-value health care system that delivers high-quality, safe,andequitable care for all. We acknowledge the critical but complicated nature of AI technology and appreciate all input on this topic. We will consider all comments in any future rulemaking related to safety quality measurement in the Hospital OQR Program.

4. Summary of Comments on Behavioral Health and Suicide Prevention in the Hospital OQR Program

Behavioral healthcare in the outpatient setting comprises a vast array of services for patients with a wide range of conditions. Behavioral health services are delivered in multiple settings by multiple types of providers, including but not limited to HOPDs, through partial observation, and in the ED.

Quality gaps in the area of hospital outpatient behavioral health include care coordination across settings, availability of services, and barriers to accessing services. In this RFC, we are seeking comment from interested parties

on behavioral health topics based in part on work by the National Quality Forum (NQF), The National Committee for Quality Assurance (NCQA), and the CMS Behavioral Health Strategy.[451] [452] [453] Behavioral health topics under consideration for measure development in the hospital outpatient setting include: availability and access, coordination of care, patient experience, patient-centered clinical care, prevention and treatment of chronic conditions, prevention of iatrogenic harm (that is, harm resulting from medical care), equity across all domains, and suicide prevention. We are particularly interested in measuring suicide screening in the hospital outpatient setting to improve early risk detection and facilitate appropriate behavioral health treatment.

Suicide is a serious but preventable public health threat and is one of the leading causes of death in the United States.[454] In 2020, about 46,000 Americans died as a result of suicide and 12.2 million adults experienced suicidal ideation.[455] Individuals with a recorded depressive disorder are about five times more likely to die by suicide after adjusting for sociodemographic factors and other mental health diagnoses than individuals without a recorded mental health condition.[456] Many factors contribute to suicide risk, including Major Depressive Disorder (MDD) diagnosis.[457] [458] MDD is a significant risk factor for suicide, indicating that patients with MDD are a critical population for intervention efforts.[459]

Research shows that in the weeks, months, and year prior to suicide, individuals significantly utilized healthcare services, providing an opportunity for assessment and prevention in the clinical setting.[460] Nineteen percent of individuals who died by suicide with a recorded mental health diagnosis visited the ED within one year prior to their death while 7.5 percent visited the ED within 1 month.[461] HOPDs may be an opportune setting for detecting suicide risk in persons with mental health diagnoses, such as MDD, and reducing the overall suicide rate. ED-initiated suicide prevention efforts can meaningfully reduce suicide attempts in individuals that are screened and receive evidence-based care.[462]

Under the Merit-based Incentive Payment System (MIPS), we adopted the Adult Major Depressive Disorder (MDD): Suicide Risk Assessment measure (CBE #0104). This measure aims to improve clinical assessment of suicide risk where a new or recurrent episode of MDD is identified and may be beneficial in the Hospital OQR Program. In the CY 2024 OPPS/ASC proposed rule (88 FR 49795), we requested comment on this specific measure example, including whether interested parties believe this measure would be appropriate and feasible for use in the Hospital OQR Program, as well as other measures, such as a universal screening measure. More than half of those who die by suicide do not have a recorded mental health diagnosis.[463] Universal suicide screening may improve identification of individuals who may not otherwise have been identified as at risk.[464]

Additional measures may be needed to adequately promote screening and treatment of behavioral health disorders in the outpatient setting. For example, measures geared towards prevention and treatment of substance use disorders. In 2021, 17.3 percent of adults over the age of 18 met the criteria for substance use disorder for drugs or alcohol.[465] Outpatient screening of substance use disorders through tools such as SAMHSA's Screening, Brief Intervention, and Referral to Treatment (SBIRT) may aid the early intervention and treatment for persons with substance use disorders and help identify those at risk of developing such disorders.[466] [467] We sought comment on whether screening for substance use disorders would be an appropriate measure topic for the Hospital OQR Program.

Furthermore, we sought broad input on behavioral health as a measurement topic area in the Hospital OQR Program based on, but not limited to, the following matters: (1) priorities for measuring outcomes of outpatient behavioral health services, particularly by setting within the HOPD; and (2) quality measure approaches to improve behavioral health access in outpatient settings. Specifically, we requested comment from interested parties on the following questions:

- Are there additional behavioral health topic areas that we should prioritize? Of the topics outlined in this RFC (availability and access, coordination of care, patient experience, patient-centered clinical care, prevention and treatment of chronic conditions, prevention of iatrogenic harm, equity across all domains, and

suicide prevention), which are the highest priority? What are the most relevant quality gaps and outcomes related to behavioral health for hospital outpatient settings and services?

- Access is one of the biggest challenges around improving behavioral health outcomes. What measurement approaches could be used to drive improvements in access to services?
- Should CMS consider substance use disorder-related screening and counseling measures in regards to behavioral health outcomes for the outpatient setting, and, if so, what specific quality measures should CMS include?
- Should CMS consider a measure related to universal suicide risk in the ED? Are there other interventions or measurement approaches targeted at suicide prevention that CMS should consider?

We received comments on this topic.

Comment: Many commenters supported efforts to expand screening and treatment of behavioral health in the outpatient setting. Priority areas included suicide screening and prevention, access to medication assisted treatment for substance use disorder patients, referrals to appropriate follow-up care, crisis care, and patient-centered, interdisciplinary management of patients with psychiatric disorders. A few commenters underscored barriers to behavioral healthcare, such as cost, insurance coverage, and mental health provider shortages. To address these barriers to patient care, commenters recommended that CMS partner with policymakers for broader intervention.

Commenters also shared recommendations for potential measures that assess behavioral health quality. One commenter suggested that CMS monitor whether patients are referred to appropriate follow-up care. A few commenters recommended measures of patient experience and suggested that CMS convene stakeholders from all domains to inform measure development. One commenter urged CMS to focus its development on outcomes measures, including patient-reported outcome measures, rather than patient experience measures.

Commenters generally supported efforts to expand suicide screening. A few commenters believed universal suicide screening to be clinically appropriate and logistically feasible for the HOPD setting. One commenter noted their belief that the ED is often the main avenue of care for patients without primary care providers, thus a universal screening measure could improve identification and treatment of behavioral health conditions within this patient population. Another commenter recommended two suicide assessment tools believed to be clinically effective and low burden: the Safety Planning Intervention (SPI) and the Post-Discharge Telephonic Follow-up Contacts Intervention (FCI).

A few commenters recommended that CMS examine existing reporting requirements related to behavioral health to avoid duplication and advance alignment across programs. Suggestions for alignment included the National Committee for Quality Assurance's (NCQA) Healthcare Effectiveness Data and Information Set (HEDIS) and the Core Quality Measures Collaborative (CQMC). One commenter suggested research to understand how behavioral healthcare delivery has changed, so as to better tailor development of measures. The commenter recommended only adopting measures that are CBE-approved.

Regarding substance use disorder screening and counseling for the outpatient setting, one commenter expressed their belief that these measure topics are more appropriate in inpatient and primary care settings. The commenter also noted that if CMS is to further explore a disorder-related screening measure, they suggested using the Alcohol Use Disorders Identification Test (AUDIT) or AUDIT–C tool and the Drug Abuse Screening Test (DAST).

A few commenters did not believe a universal suicide screening measure to be appropriate for the HOPD setting due to commenters' desires for a more patient-specific screening approach, claims of limited evidence pointing to the measure's success, and concerns that universal screening would heighten strains in the ED. One commenter recommended that CMS narrow its detection and prevention efforts to patients for whom the Joint Commission requires such screening.

A few commenters did not believe the MDD: Suicide Risk Assessment measure to be appropriate for the HOPD setting, due to concerns of the measure's lack of CBE endorsement and beliefs that the measure is more appropriate for the ASC setting.

Response: We thank the commenters for their meaningful input and commitment to addressing quality gaps in the area of hospital outpatient behavioral health. We believe these approaches to continually improve behavioral health in outpatient settings will drive improvements in behavioral health outcomes. We will consider these comments in any future rulemaking related to outpatient behavioral health quality measurement in the Hospital OQR Program.

5. Summary of Comments on Telehealth as a Measurement Topic Area in the Hospital OQR Program

We define telehealth as the provision of healthcare services through two-way, real-time interactive telecommunications technology between patients and providers who are located at a distant site.[468] Telemedicine has the potential to improve patient experience, outcomes, and access to healthcare.[469] Telemedicine is also associated with cost-savings for both patients and healthcare systems.[470] [471] Telehealth utilization expanded greatly in the outpatient setting during the early months of the SARS–CoV–2 pandemic.[472] The number of outpatient visits conducted via telehealth has since declined but remains higher than pre-pandemic levels.[473]

While telehealth provides a variety of benefits to patients and health systems, there is variability in telehealth's effectiveness across different outpatient services as some conditions may necessitate in-person physical examination or diagnostic testing.[474] [475] There are also known disparities in the effectiveness of telehealth and its impact on outcomes as certain populations lack access to internet and digital devices, or lack familiarity with technology.[476] [477]

[476] Ibid.

For the Hospital OQR Program, we are considering a measure focused on telehealth quality based on a framework developed by the CBE.[477] [478] This framework was chosen because it offers a comprehensive guide for developing telehealth measures under four domains: access, effectiveness, experience, and equity. In the CY 2024 OPPS/ASC proposed rule (88 FR 49795), we sought input from interested parties on the following topics: (1) inclusion and prioritization of areas of telehealth-related care, and in particular those priority topic areas discussed above; (2) addressing quality gaps in outpatient telehealth-related care, including across HOPD settings and services; (3) capturing utilization, and disparities resulting from utilization, of telehealth-related care for outpatient settings and services; and (4) understanding patient experience with outpatient telehealth services. Specifically, we requested comment from interested parties on the following questions:

- In reference to the telehealth-related topics outlined above, are there additional matters that we should prioritize for the Hospital OQR Program? Which subjects are of the highest priority?
- What do commenters believe are the most relevant clinical issues addressable through telehealth in outpatient settings, and gaps in care that telehealth can address?
- What are the highest priority concerns regarding disparities in access, use, or outcomes related to telehealth in the outpatient setting? Are there any settings or services that should be prioritized?
- Which existing outpatient quality measures should be stratified by telehealth as the mode of delivery?
- What are the most relevant patient-experience-related telehealth outcomes that should be measured?

We received comments on this topic.

Comment: Many commenters supported further development of measures that assess telehealth care quality in the Hospital OQR Program. Commenters believed advancing and evaluating healthcare outcomes and effectiveness of telehealth quality of care will inform broader adoption of telehealth to meet its potential to transform the health care delivery system and access to care. Priority areas highlighted by commenters included check-ins following surgery, follow-up appointments that do not require physical ''laying of hands'' via an in-person visit, remote patient monitoring, management of chronic conditions, and virtual behavioral health and substance use treatment.

Commenters also provided many recommendations for focus areas for a potential measure that assesses telehealth care quality in the Hospital OQR Program. These included recommendations regarding understanding patient experience with telehealth, including measurement of patient-centeredness of care, ease of use, timeliness, and shared decision-making. One commenter recommended that, since patient experience evaluation of telehealth should be treated the same as other care settings, the same questions on patients' experience should be asked. Additional recommendations focused on technical delivery aspects such as quality measurement of platforms used and connection issues.

Commenters additionally provided recommendations for stratifying outpatient quality measures by telehealth as mode of delivery. These included outpatient quality measures for required follow-up appointments, antibiotic prescription rates, and screening tools such as Patient Health Questionnaire-9 (PHQ9) and Generalized Anxiety Disorder-7 (GAD–7). A few commenters recommended focusing evaluation efforts on the influence of telehealth on ED visits and readmissions, wait times, time spent with providers, intermediate patient outcomes, such as rates of complications, and concordance with treatment plans.

Many commenters highlighted priority concerns regarding disparities in access, use, or outcomes related to telehealth in the outpatient setting. These focused on areas to close gaps in care using telehealth and included prioritizing access to quality maternal health during the perinatal period to decrease the number of maternal deaths among all women, addressing the variance in accessibility (internet, appropriate devices) and telehealth treatment options, focusing on rural and rural emergency settings, and addressing low digital health literacy, particularly among older adults. Other commenters encouraged focusing on utilizing frameworks and guidance available from the Americans with Disabilities Act (ADA) and the HHS Office for Civil Rights to ensure equitable care for those in need of interpretive services and ADA compliance services.

Commenters provided recommendations to address quality gaps in outpatient telehealth-related care, including across HOPD settings and services. Gaps in care highlighted included expanding access to continuous glucose monitors to patients and the supportive elements that ensure interoperability between patient devices and EHRs, as well as development of a payment structure that provides a bridge for young adults to obtain telehealth services for mental health and substance use disorders. A few commenters highlighted the ways in which telehealth closes gaps in care for their outpatient systems such as tele-stroke services, as well as how it allows facilities to scale across geography. Commenters also noted that virtual care supports rural and smaller facilities that do not have the volume or budget to support many specialty services.

Response: We thank the commenters for their input and appreciate the many thoughtful responses on practices being utilized in facilities across our nation and the commitment to delivering high quality care using telehealth in outpatient settings. We believe these efforts to continually improve access to the highest quality of care through all modes of care delivery will help inform improvements to achieve our vision of being a high-value American health care system that delivers high-quality, safe, and equitable care for all. We will consider these comments in any future rulemaking related to telehealth quality measurement in the Hospital OQR Program.

D. Administrative Requirements

1. Requirements Regarding Hospital OQR Program Participation Status

We refer readers to § 419.46(b) for our current policies regarding participation in the Hospital OQR Program, including security official and system registration requirements. In the CY 2024 OPPS/ASC proposed rule (88 FR 49796), we proposed to amend our participation regulation codified at § 419.46(b)(1) and (2) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

[477] Roberts ET & Mehrotra A (2020). Assessment of Disparities in Digital Access Among Medicare Beneficiaries and Implications for Telemedicine. *JAMA internal medicine,* 180(10), 1386–1389. *https://doi.org/10.1001/jamainternmed.2020.2666.*

[478] National Quality Forum (2021). Rural Telehealth and Healthcare System Readiness Measurement Framework—Final Report. Available at: *https://www.qualityforum.org/Publications/2021/11/Rural_Telehealth_and_Healthcare_System_Readiness_Measurement_Framework_-_Final_Report.aspx.*

2. Modified Requirements Regarding Hospital OQR Program Withdrawal

We refer readers to § 419.46(c) for our policies regarding requirements for withdrawal from the Hospital OQR Program. In the CY 2024 OPPS/ASC proposed rule (88 FR 49796), we proposed to amend our withdrawal policy codified at § 419.46(c) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

E. Form, Manner, and Timing of Data Submitted for the Hospital OQR Program

Previously finalized quality measures and information collections discussed in this section were approved by the Office of Management and Budget (OMB) under control number 0938–1109 (expiration date February 28, 2025).[479] An updated PRA package reflecting the updated information collection requirements related to the finalized proposals set forth in this final rule will be submitted for approval under the same OMB control number.

1. Hospital OQR Program Annual Submission Deadlines

We refer readers to § 419.46(d) for our policies regarding clinical data submission deadlines. In the CY 2023 OPPS/ASC final rule (87 FR 72110 through 72112), we finalized alignment of the patient encounter quarters for chart-abstracted measures with the calendar year beginning with the CY 2024 reporting period/CY 2026 payment determination. To facilitate this process, we finalized transitioning to the new timeframe for the CY 2026 payment determination and subsequent years and use only three quarters of data for chart-abstracted measures in determining the CY 2025 payment determination as illustrated in the Tables 130 and 131 (87 FR 44734).

TABLE 130: FINALIZED CY 2025 PAYMENT DETERMINATION*(FUTURE STATE—TRANSITION PERIOD)

Patient Encounter Quarter	Clinical Data Submission Deadline
Q2 2023 (April 1 - June 30)	11/1/2023**
Q3 2023 (July 1 – September 30)	2/1/2024**
Q4 2023 (October 1 - December 31)	5/1/2024**

* All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a nonwork day for Federal employees by statute or Executive order would be extended to the first day thereafter.

**The August 1st, November 1st, February 1st, and May 1st deadlines are recurring.

TABLE 131: FINALIZED CY 2026 PAYMENT DETERMINATION* (FUTURE STATE)

Patient Encounter Quarter	Clinical Data Submission Deadline
Q1 2024 (January 1 - March 31)	8/1/2024**
Q2 2024 (April 1 - June 30)	11/1/2024**
Q3 2024 (July 1 – September 30)	2/1/2025**
Q4 2024 (October 1 - December 31)	5/1/2025**

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a nonwork day for Federal employees by statute or Executive order would be extended to the first day thereafter.

**The August 1st, November 1st, February 1st, and May 1st deadlines are recurring.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49797), we proposed to amend our submission deadline codified at § 419.46(d)(2) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

2. Requirements for Chart-Abstracted Measures Where Patient-Level Data are Submitted Directly to CMS

We refer readers to the CY 2013 OPPS/ASC final rule (77 FR 68481 through 68484) and the CMS website, currently available at *https://qualitynet.cms.gov,* for a discussion of

[479] Office of Management and Budget. Office of Information and Regulatory Affairs. Available at: *https://www.reginfo.gov/public/do/PRAOMBHistory?ombControlNumber=0938-1109.*

the requirements for chart-abstracted measure data submitted via the HQR System (formerly referred to as the QualityNet Secure Portal) for the CY 2014 payment determination and subsequent years.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

3. Claims-Based Measure Data Requirements

We refer readers to the CY 2019 OPPS/ASC final rule with comment period (83 FR 59106 and 59107), where we established a 3-year reporting period for the Facility 7-Day Risk-Standardized Hospital Visit Rate after Outpatient Colonoscopy measure beginning with the CY 2020 payment determination. We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63863) where we finalized a 3-year reporting period for the Breast Cancer Screening Recall Rates measure.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

4. Data Submission Requirements for the Outpatient and Ambulatory Surgery Consumer Assessment of Healthcare Providers and Systems (OAS CAHPS) Survey-Based Measure

We refer readers to the CYs 2017, 2018, and 2022 OPPS/ASC final rules with comment period (81 FR 79792 through 79794; 82 FR 59432 and 59433; and 86 FR 63863 through 63866, respectively) for a discussion of the previously finalized requirements related to survey administration and vendors for the OAS CAHPS Survey-based measure. For more information about the modes of administration, we refer readers to the OAS CAHPS Survey website: *https://oascahps.org/.*

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

5. Data Submission Requirements for Measures Submitted via a Web-Based Tool

a. Background

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75112 through 75115), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70521), and the CMS website, currently at available at *https://qualitynet.cms.gov,* for a discussion of the requirements for measure data submitted via the HQR System (formerly referred to as the QualityNet Secure Portal) for the CY 2017 payment determination and subsequent years. The information collections finalized in the aforementioned final rules were approved under OMB control number 0938–1109 (expiration date February 28, 2025).[480] The HQR System is safeguarded in accordance with the HIPAA Privacy and Security Rules to protect submitted patient information. See 45 CFR parts 160 and 164, subparts A, C, and E, for more information.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

b. HOPD Procedure Volume Measure Reporting and Data Submission Requirements

In section XIV.B.3.a of this final rule with comment period, we did not finalize our proposal to re-adopt the HOPD Procedure Volume measure with modification, beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. We proposed that hospitals would submit these data to CMS during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the CY 2025 reporting period, the submission period to report the data to CMS through the HQR System would be January 1, 2026, to May 15, 2026, covering the performance period of January 1, 2025, to December 31, 2025. Following a 30-day preview period, CMS would publicly display data surrounding the top five most frequently performed procedures among HOPDs in each of the following eight categories: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, and Skin.[481] This data would be publicly displayed on the Care Compare website or another CMS website. We would assess and update the top five procedures in each category annually, as needed. We proposed that hospitals would submit aggregate-level data through the CMS web-based tool within the HQR System. We refer readers to the CY 2009, CY 2014, and CY 2017 OPPS/ASC final rules (73 FR 68777 through 68779, 78 FR 75092, and 81 FR 79791, respectively) for our previously finalized policies regarding public display of quality measures. We previously codified our existing policies regarding data collection and submission under the Hospital OQR Program at § 419.46.

We invited public comment on the proposal.

We refer readers to section XIV.B.3.a of this final rule with comment period received on the Re-adoption with Modification of the Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures measure. Based on comments received, we are reassessing the measure's methodology and reconsidering how the data is publicly displayed. Furthermore, we plan to update and refine procedural categories to ensure data collection of the most accurate and frequently performed procedures.

c. Proposed Modification of Survey Instrument Use for the Cataracts Visual Function Measure Reporting and Data Submission Requirements

In section XIV.B.2.b of this final rule with comment period, we finalized our proposal to modify the Cataracts Visual Function measure survey instrument use, beginning with the voluntary CY 2024 reporting period. The modified measure will refine data collection by standardizing survey instruments that HOPDs can use, which will limit the allowable survey instruments to those listed below:

- The National Eye Institute Visual Function Questionnaire-25 (NEI VFQ–25)
- The Visual Functioning Patient Questionnaire (VF–14)
- The Visual Functioning Index Patient Questionnaire (VF–8R)

Hospitals will submit data from the above three survey instrument options to CMS during the time period of January 1 to May 15 in the year prior to the affected payment determination year. For example, for the voluntary CY 2024 reporting period, the data submission period would be January 1, 2025, to May 15, 2025, covering the performance period of January 1, 2024, to December 31, 2024. Specifically, for data collection, we finalized our proposal that hospitals submit aggregate-level data through the CMS web-based tool within the HQR System. We previously codified our existing policies regarding data collection and submission under the Hospital OQR Program at § 419.46.

We invited public comment on the proposal.

We refer readers to section XIV.B.2.b of this final rule with comment period regarding our discussion of the Cataracts Visual Function measure, including summaries of the comments we received on our proposal and our responses

[480] Ibid.

[481] Centers for Medicare & Medicaid Services (2016). Hospital Outpatient Specifications Manuals version 9.1. Available at: *https://qualitynet.cms.gov/outpatient/specifications-manuals#tab9.*

thereto. We did not receive public comments on the form, manner, and timing for the Cataracts Visual Function measure; as such, we are finalizing our proposal to begin collection of the modified Cataracts Visual Function measure beginning with the voluntary CY 2024 reporting period and subsequent years.

d. Data Submission Requirements for Measures Submitted via the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN) Website

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75097 through 75100) for a discussion of the previously finalized requirements for measure data submitted via the CDC NHSN website. In addition, we refer readers to the CY 2022 OPPS/ASC final rule (86 FR 63866), where we finalized the adoption of the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2022 reporting period/CY 2024 payment determination. In section XIV.B.2.a of this final rule with comment period, we discuss the modification of the COVID–19 Vaccination Coverage Among HCP measure beginning with the CY 2024 reporting period/CY 2026 payment determination. The requirements for measure data submitted via the CDC NHSN website will remain as previously finalized.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

6. eCQM Reporting and Submission Requirements

a. Background

We refer readers to the CY 2014 OPPS/ASC final rule with comment period (78 FR 75106 and 75107), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66956 through 66961), the CY 2016 OPPS/ASC final rule (80 FR 70516 through 70518), the CY 2017 OPPS/ASC final rule with comment period (81 FR 79785 through 79790), the CY 2018 OPPS/ASC final rule with comment period (82 FR 59435 through 59438), the CY 2022 OPPS/ASC final rule with comment period (86 FR 63867 through 63870), and the CY 2023 OPPS/ASC final rule with comment period (87 FR 72113 through 72114) for more details on previous discussion regarding future measure concepts related to eCQMs and electronic reporting of data for the Hospital OQR Program, including support for the introduction of eCQMs into the Program.

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63867 and 63868), where we finalized the adoption of the STEMI eCQM reporting and data submission requirements. For the CY 2024 reporting period/CY 2026 payment determination, hospitals must submit one self-selected quarter of STEMI eCQM data.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

b. Excessive Radiation Dose or Inadequate Image Quality for Diagnostic Computed Tomography (CT) in Adults eCQM Reporting and Data Submission Requirements

In section XIV.B.3.c of the CY 2024 OPPS/ASC proposed rule (88 FR 49787 through 49790), we discuss the adoption of the Excessive Radiation eCQM beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. In the CY 2024 OPPS/ASC proposed rule (88 FR 49798), we proposed a progressive increase in the number of quarters for which hospitals report Excessive Radiation eCQM data. We proposed that hospitals that submit Excessive Radiation eCQM data during the CY 2025 voluntary period may submit up to all four quarter(s) of data.

Under our proposal, beginning with the CY 2026 mandatory reporting period/CY 2028 payment determination, we proposed that hospitals report two self-selected calendar quarters of data for the Excessive Radiation eCQM. Beginning with the CY 2027 reporting period/CY 2029 payment determination, we proposed to require hospitals to report all four calendar quarters (one calendar year) of data for the Excessive Radiation eCQM. We believe that a phased implementation approach would allow facilities the ability to make the necessary adjustments for data submission over time and would produce more comprehensive and reliable quality measure data for patients and providers. Furthermore, we believe that aligning the schedule with the STEMI measure will allow for a seamless transition from voluntary to mandatory reporting of all calendar quarters.

We also refer readers to Table 132 for a summary of the proposed quarterly data increase in eCQM reporting beginning with the CY 2025 reporting period.

TABLE 132: PROPOSED PROGRESSIVE INCREASE IN ECQM REPORTING BEGINNING WITH THE CY 2025 REPORTING PERIOD AND FOR SUBSEQUENT YEARS

Calendar Year Period	Calendar Quarters of Reporting	Reporting Requirement
CY 2025 Reporting Period	Any quarter(s)	Voluntary
CY 2026 Reporting Period/CY 2028 Payment Determination	Two self-selected quarters	Mandatory
CY 2027 Reporting Period/CY 2029 Payment Determination	Four quarters (one calendar year)	Mandatory

We also proposed to require Excessive Radiation eCQM data submission by May 15 in the year prior to the affected payment determination year. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive Order would be extended to the first day thereafter. For example, for the CY 2026 reporting period/CY 2028 payment determination, hospitals must report two self-selected quarters of data and would be required to submit eCQM data by May 15, 2027. This data submission deadline will follow our policies on submission deadlines for eCQM data defined in section XIV.E.6.e of this final rule with comment period.

We invited public comment on our proposals.

We refer readers to section XIV.B.3.c of this final rule with comment period for the discussion of public comments received regarding the reporting and submission requirements for the Excessive Radiation eCQM. After consideration of public comments, we are finalizing our proposal to begin voluntary reporting of the Excessive Radiation eCQM beginning with the CY 2025 reporting period. We are finalizing our proposal with modification to begin mandatory reporting of the Excessive Radiation eCQM beginning with the CY 2027 reporting period/CY 2029 payment determination.

Under our finalized proposal, beginning with the CY 2027 mandatory reporting period/CY 2029 payment determination, hospitals will report two self-selected calendar quarters of data for the Excessive Radiation eCQM. Beginning with the CY 2028 reporting period/CY 2030 payment determination, hospitals will be required to report all four calendar quarters (one calendar year) of data for the Excessive Radiation eCQM.

Data submission for the Excessive Radiation eCQM is required by May 15 in the year prior to the affected payment determination year. For example, for the CY 2027 reporting period/CY 2029 payment determination, hospitals must report two self-selected quarters of data and would be required to submit eCQM data by May 15, 2028. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive Order would be extended to the first day thereafter. The data submission deadline will follow our policies on submission deadlines for eCQM data defined in section XIV.E.6.e of this final rule with comment period.

We also refer readers to Table 133 for a summary of the finalized quarterly data increase in eCQM reporting beginning with the CY 2025 reporting period.

TABLE 133: FINALIZED PROGRESSIVE INCREASE IN ECQM REPORTING BEGINNING WITH THE CY 2025 REPORTING PERIOD AND FOR SUBSEQUENT YEARS

Calendar Year Period	Calendar Quarters of Reporting	Reporting Requirement
CY 2025 Reporting Period	Any quarter(s)	Voluntary
CY 2026 Reporting Period	Any quarter(s)	Voluntary
CY 2027 Reporting Period/CY 2029 Payment Determination	Two self-selected quarters	Mandatory
CY 2028 Reporting Period/CY 2030 Payment Determination	Four quarters (one calendar year)	Mandatory

c. Electronic Clinical Quality Measure Certification Requirements for eCQM Reporting

(1) Use of the 2015 Edition Cures Update Certification Criteria

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63868 and 63869) for our policies regarding the requirement that hospitals participating in the Hospital OQR Program utilize certified technology updated consistent with the 2015 Edition Cures Update as finalized in the Office of the National Coordinator for Health Information Technology (ONC) 21st Century Cures Act final rule (85 FR 25642 through 25961) beginning with the CY 2023 reporting period/CY 2025 payment determination.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

d. File Format for eCQM Data, Zero Denominator Declarations, and Case Threshold Exemptions

(1) File Format for eCQM Data

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 42262) for our policies regarding the file format for eCQM data.

We did not propose any changes to these policies in the proposed rule.

(2) Zero Denominator Declarations

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63869) for our policies regarding zero denominator declarations.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

(3) Case Threshold Exemptions

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63869) for our policies regarding case threshold exemptions.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

e. Submission Deadlines for eCQM Data

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63870) for our policies regarding submission deadlines for eCQM data.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

7. Data Submission and Reporting Requirements for Patient-Reported Outcome-Based Performance Measures (PRO–PMs)

In section XIV.B.3.b of this final rule with comment period, we finalized our proposal to adopt the hospital-level THA/TKA PRO–PM into the Hospital OQR Program measure set. In this section of this final rule with comment period, we are finalizing our proposal of the reporting and submission requirements for PRO–PM as a new type of measure to the Hospital OQR Program.

a. Submission of PRO–PM Data

(1) Data Submission Generally

In section XIV.B.3.b of the CY 2024 OPPS/ASC proposed rule (88 FR 49799 through 49801), we proposed to adopt the THA/TKA PRO–PM into the Hospital OQR Program beginning with voluntary CYs 2025 and 2026 reporting periods and mandatory reporting period beginning with the CY 2027/CY 2030 payment determination. We proposed that hospitals and vendors use the HQR System for data submission for the THA/TKA PRO–PM, which would enable us to incorporate this new requirement into the infrastructure we have developed and use to collect other quality data. HOPDs may choose to: (1) send their data to CMS directly; or (2) utilize an external entity, such as through a vendor or registry, to submit data on behalf of the facility to CMS. We would provide hospitals with additional detailed information and instructions for submitting data using the HQR System through CMS' existing websites, through outreach, or both. Use of the HQR system leverages existing CMS infrastructure already utilized for other quality measures. The HQR System allows for data submission using multiple file formats (such as CSV, XML) and a manual data entry option, allowing facilities and vendors additional flexibility in data submission.

(2) Data Submission Reporting Requirements

(a) Voluntary Reporting Requirements for the Proposed THA/TKA PRO–PM

In the CY 2024 OPPS/ASC proposed rule (88 FR 49800), for hospitals participating in voluntary reporting for the THA/TKA PRO–PM, we proposed that hospitals submit preoperative PRO data, as well as matching post-operative PRO data, for at least 50 percent of their eligible elective primary THA/TKA procedures.

For the THA/TKA PRO–PM, we proposed that the first voluntary reporting period for CY 2025 would include pre-operative PRO data collection from 90 to 0 days before the procedure (for eligible elective THA/TKA procedures performed from January 1, 2025, through December 31, 2025) and post-operative PRO data collection from 300 to 425 days after the procedure. Therefore, during the first voluntary reporting period for CY 2025, hospitals would submit pre-operative data by May 15, 2026, and post-operative data by May 15, 2027, and we intend to provide hospitals with their results in confidential feedback reports in CY 2028. All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive order would be extended to the first day thereafter. After the initial submission of pre-operative data for the first voluntary period, hospitals would submit both pre-operative data for the second voluntary period and post-operative data for the first voluntary period by the same data submission deadline, but for the different voluntary reporting periods. For example, hospitals would need to submit: (1) post-operative data for the first voluntary reporting (for procedures performed between January 1, 2025, and December 31, 2025); and (2) pre-operative data for the second voluntary reporting (for procedures performed between January 1, 2026, and December 31, 2026) of the THA/TKA PRO–PM by May 15, 2027.

For the THA/TKA PRO–PM, we proposed that the second voluntary reporting period for the CY 2026 reporting period would include pre-operative PRO data collection from 90 to 0 days before the procedure (for eligible elective THA/TKA procedures performed from January 1, 2026, through December 31, 2026) and post-operative PRO data collection from 300 to 425 days after the procedure. Hospitals would submit pre-operative data for the second voluntary reporting period by May 15, 2027, and post-operative data for the second voluntary reporting period by May 15, 2028. We intend to provide hospitals with their results in confidential feedback reports in CY 2029. HOPDs that voluntarily submit data for this measure would receive confidential feedback reports that detail submission results from the reporting period. Results of voluntary reporting would not be made publicly available. If feasible, we would calculate and provide each participating facility with their RSIR as part of the confidential feedback reports. This would provide each facility with an indication of their performance relative to the other facilities that participate in the voluntary reporting period.

While we did not propose to publicly report the data we receive during the voluntary reporting periods for the THA/TKA PRO–PM facility-level RSIR, we proposed to publicly report which facilities choose to participate in voluntary reporting and/or the percent of pre-operative data submitted by participating facilities for the first voluntary reporting period, and their percent of pre-operative and post-operative matched PRO data submitted for subsequent voluntary reporting periods. For example, if out of 100 eligible procedures a facility submits 45 pre-operative cases that match to post-operative cases, then we would report that the facility submitted 45 percent of matched pre-operative and post-operative PRO surveys during voluntary reporting.

We refer readers to Table 134 for an overview of the proposed performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the voluntary reporting periods for THA/TKA PRO–PM.

TABLE 134: PROPOSED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO–PM VOLUNTARY REPORTING

Reporting Cycle	THA/TKA Procedures Performed	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission	Preview/ Public Reporting
Voluntary Reporting CY 2025	January 1, 2025-December 31, 2025	October 3, 2024-December 31, 2025	May 15, 2026	October 28, 2025-February 28, 2027	May 15, 2027*	CY 2028
Voluntary Reporting CY 2026	January 1, 2026-December 31, 2026	October 3, 2025-December 31, 2026	May 15, 2027	October 28, 2026-February 28, 2028	May 15, 2028	CY 2029

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive Order would be extended to the first day thereafter.

**Public reporting of information on facility participation in the voluntary reporting periods would occur in CY 2028 for the CY 2025 reporting period and CY 2029 for the CY 2026 reporting period.

(b) Mandatory Reporting

Following the voluntary reporting periods, we proposed that mandatory reporting of the THA/TKA PRO–PM would begin with reporting PRO data for eligible elective THA/TKA procedures from January 1, 2027, through December 31, 2027 (the CY 2027 performance period), impacting the CY 2030 payment determination. This initial mandatory reporting would include pre-operative PRO data collection from 90 days preceding the applicable performance period and from 300 to 425 days after the performance period. For example, pre-operative data from October 3, 2026, through December 31, 2027 (for eligible elective primary THA/TKA procedures from January 1, 2027, through December 31, 2027) and post-operative PRO data collection from October 28, 2027, to February 28, 2029. Pre-operative data submission would occur by May 15, 2028, and post-operative data submission would occur by May 15, 2029.

We intend to provide hospitals with their results in CY 2030 before publicly reporting results on the Compare tool hosted by HHS, currently available at *https://www.medicare.gov/care-compare,* or its successor website. We will provide confidential feedback reports during the voluntary period which would include the risk-standardized improvement rate (RSIR); as well as other results that support understanding of their performance prior to public reporting. For this first mandatory reporting period, hospitals that fail to meet the reporting requirements would receive a reduction of their Annual Payment Update (APU) in the CY 2030 payment determination. We proposed that hospitals would be required to submit 50 percent of eligible, complete pre-operative data with matching eligible, complete post-operative data as a minimum amount of data for mandatory reporting in the Hospital OQR Program.

We refer readers to Table 135 for an overview of the proposed performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the first year of mandatory reporting.

TABLE 135: PROPOSED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO–PM FOR MANDATORY REPORTING

Reporting Cycle	THA/TKA Procedures Performed	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission	Preview and Public Reporting
Mandatory Reporting CY 2027	January 1, 2027-December 31, 2027	October 3, 2026-December 31, 2027	May 15, 2028	October 28, 2027-February 28, 2029	May 15, 2029	2030*

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive order would be extended to the first day thereafter.

*Public reporting of information on facility results in the Mandatory Reporting periods would occur in CY 2030 for CY 2027 reporting period/CY2030 payment determination.

We invited comment on these proposals.

We refer readers to section XIV.B.3.b of this final rule with comment period received on the Adoption of the Risk Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the HOPD Setting (THA/TKA PRO–PM) regarding the reporting and submission requirements for the THA/TKA PRO–PM. After considering commenter's recommendation regarding voluntary and mandatory reporting timelines received in section XIV.B.3.b of this final rule with comment period, we note that we have extended the voluntary reporting period for the THA/TKA PRO–PM by an additional year. We are finalizing our proposal to begin voluntary reporting beginning with CY 2025 as proposed. We are finalizing with delayed implementation mandatory reporting beginning with the CY 2028 reporting period/CY 2031 payment determination.

We refer readers to Table 136 for an overview of the finalized performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the voluntary reporting periods for THA/TKA PRO–PM.

TABLE 136: FINALIZED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO–PM VOLUNTARY REPORTING

Reporting Cycle	THA/TKA Procedures Performed	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date *	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission *
Voluntary Reporting CY 2025	January 1, 2025-December 31, 2025	October 3, 2024-December 31, 2025	May 15, 2026	October 28, 2025-March 1, 2027	May 15, 2027*
Voluntary Reporting CY 2026	January 1, 2026-December 31, 2026	October 3, 2025-December 31, 2026	May 15, 2027	October 28, 2026- February 29, 2028	May 15, 2028
Voluntary Reporting CY 2027	January 1, 2027-December 31, 2027	October 3, 2026-December 31, 2027	May 15, 2028	October 28, 2027- February 28, 2029	May 15, 2029

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive Order would be extended to the first day thereafter.

Following the voluntary reporting periods, we are finalizing that mandatory reporting of the THA/TKA PRO–PM would begin with reporting PRO data for eligible elective THA/TKA procedures from January 1, 2028, through December 31, 2028 (the CY 2028 performance period), impacting the CY 2031 payment determination. This initial mandatory reporting would include pre-operative PRO data collection from 90 days preceding the applicable performance period and from 300 to 425 days after the performance period. For example, pre-operative data from October 3, 2027, through December 31, 2028 (for eligible elective primary THA/TKA procedures from January 1, 2028, through December 31, 2028) and post-operative PRO data collection from October 27, 2028 to March 1, 2030. Pre-operative data submission would occur by May 15, 2029, and post-operative data submission would occur by May 15, 2030.

We refer readers to Table 137 for an overview of the finalized performance period, pre- and post-operative data collection timeframes, and data submission deadlines during the mandatory reporting periods for THA/TKA PRO–PM.

TABLE 137: FINALIZED PRE-OPERATIVE AND POST-OPERATIVE PERIODS FOR THA/TKA PRO–PM FOR MANDATORY REPORTING

Reporting Cycle	THA/TKA Procedures Performed	Pre-Procedure Data Collection (0 to 90 days before the procedure)	Pre-Procedure Data Submission Date *	Post-Procedure Data Collection (300 to 425 days after the procedure)	Post-Procedure Data Submission *	Preview and Public Reporting
Mandatory Reporting CY 2028	January 1, 2028- December 31, 2028	October 3, 2027- December 31, 2028	May 15, 2029	October 27, 2028- March 1, 2030	May 15, 2030	2031**

*All deadlines occurring on a Saturday, Sunday, or legal holiday, or on any other day all or part of which is declared to be a non-workday for Federal employees by statute or Executive order would be extended to the first day thereafter.

**Public reporting of information on facility results in the Mandatory Reporting periods would occur in CY 2031 for CY 2028 reporting period/CY2031 payment determination.

8. Population and Sampling Data Requirements for the CY 2023 Payment Determination and Subsequent Years

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72100 through 72103) and the CY 2012 OPPS/ASC final rule with comment period (76 FR 74482 and 74483) for our policies regarding population and sampling data requirements.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

9. Review and Corrections Period for Measure Data Submitted to the Hospital OQR Program

a. Chart-Abstracted Measures

We refer readers to the CY 2015 OPPS/ASC final rule with comment period (79 FR 66964 and 67014) for our policies regarding a review and corrections period for chart-abstracted-measures in the Hospital OQR Program.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

b. Web-Based Measures

We refer readers to the CY 2021 OPPS/ASC final rule with comment period (85 FR 86184) for our policies regarding a review and corrections period for web-based measures in the Hospital OQR Program.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

c. Electronic Clinical Quality Measures (eCQMs)

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63870) for our policies regarding a review and corrections period for eCQMs in the Hospital OQR Program. We refer readers to the CMS website (currently available at: *https://qualitynet.cms.gov/outpatient/measures/eCQM*) and the eCQI Resource Center (available at: *https://ecqi.healthit.gov/*) for more resources on eCQM reporting.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

d. OAS CAHPS Measures

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63870) and the CY 2017 OPPS/ASC final rule with comment period (81 FR 79793) for our policies regarding a review and corrections period for OAS CAHPS measures in the Hospital OQR Program.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

10. Hospital OQR Program Validation Requirements

a. Background

We refer readers to the CY 2011 OPPS/ASC final rule with comment period (75 FR 72105 and 72106), the CY 2013 OPPS/ASC final rule with comment period (77 FR 68484 through 68487), the CY 2015 OPPS/ASC final rule with comment period (79 FR 66964 and 66965), the CY 2016 OPPS/ASC final rule with comment period (80 FR 70524), the CY 2018 OPPS/ASC final rule with comment period (82 FR 59441 through 59443), the CY 2022 OPPS/ASC final rule with comment period (86 FR 63870 through 63873), the CY 2023

OPPS/ASC final rule with comment period (87 FR 72115 and 72116), and § 419.46(f) for our policies regarding validation.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

b. Use of Electronic File Submissions for Chart-Abstracted Measure Medical Records Requests

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63870) for additional information on the use of electronic file submissions for chart-abstracted measure medical records requests.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

c. Time Period for Chart-Abstracted Measure Data Validation

We refer readers to the chart-abstracted validation requirements and methods we adopted in the CY 2014 OPPS/ASC final rule (78 FR 75117 and 75118) and codified at § 419.46(f)(1) for the CY 2025 payment determination and subsequent years. We refer readers to § 419.46(f)(1) for our policies regarding the time period for chart-abstracted measure data validation.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

d. Targeting Criteria

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74485), where we finalized a validation selection process in which we select a random sample of 450 hospitals for validation purposes and select an additional 50 hospitals based on specific criteria; the CY 2013 OPPS/ASC final rule (77 FR 68485 and 68486), where we finalized that a hospital will be preliminarily selected for validation based on targeting criteria if it fails the validation requirement that applies to the previous year's payment determination, and for a discussion of finalized policies regarding our medical record validation procedure requirements; the CY 2018 OPPS/ASC final rule with comment period (82 FR 59441), where we clarified that an ''outlier value'' for purposes of the targeting criterion; the CY 2022 OPPS/ASC final rule with comment period (86 FR 63872), where we finalized the addition of two targeting criteria: (1) any hospital that has not been randomly selected for validation in any of the previous three years; or (2) any hospital that passed validation in the previous year and had a two-tailed confidence interval that included 75 percent; and the CY 2023 OPPS/ASC final rule with comment period (87 FR 72115 and 72116), where we finalized an additional targeting criteria: any hospital with a two-tailed confidence interval that is less than 75 percent, and that had less than four quarters of data due to receiving an ECE for one or more quarters. We refer readers to § 419.46(f)(3) for our policies regarding the validation selection process and targeting criteria.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

e. Educational Review Process and Score Review and Correction Period for Chart-Abstracted Measures

We refer readers to § 419.46(f)(4) for our policies regarding the educational review process, including validation score review and correction, for chart-abstracted measures.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

11. Extraordinary Circumstances Exception (ECE) Process

We refer readers to § 419.46(e) for our policies regarding the extraordinary circumstances exception (ECE) process under the Hospital OQR Program. In the CY 2024 OPPS/ASC proposed rule (88 FR 49802), we proposed to amend our exception policy codified at § 419.46(e)(1) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website.'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

12. Hospital OQR Program Reconsideration and Appeals Procedures

We refer readers to § 419.46(g) for our policies regarding reconsideration and appeals procedures. In the CY 2024 OPPS/ASC proposed rule (88 FR 49802), we proposed to amend our submission deadline codified at § 419.46(g)(1) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

F. Payment Reduction for Hospitals That Fail To Meet the Hospital OQR Program Requirements for the CY 2024 Payment Determination

1. Background

Section 1833(t)(17) of the Act, which applies to subsection (d) hospitals (as defined under section 1886(d)(1)(B) of the Act), states that hospitals that fail to report data required to be submitted on measures selected by the Secretary, in the form and manner, and at a time, specified by the Secretary will incur a 2.0 percentage point reduction to their Outpatient Department (OPD) fee schedule increase factor; that is, the annual payment update factor. Section 1833(t)(17)(A)(ii) of the Act specifies that any reduction applies only to the payment year involved and will not be taken into account in computing the applicable OPD fee schedule increase factor for a subsequent year.

The application of a reduced OPD fee schedule increase factor results in reduced national unadjusted payment rates that apply to certain outpatient items and services provided by hospitals that are required to report outpatient quality data in order to receive the full payment update factor and that fail to meet the Hospital OQR Program requirements. Hospitals that meet the reporting requirements receive the full OPPS payment update without the reduction. For a more detailed discussion of how this payment reduction was initially implemented, we refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68769 through 68772).

The national unadjusted payment rates for many services paid under the OPPS equal the product of the OPPS conversion factor and the scaled relative payment weight for the APC to which the service is assigned. The OPPS conversion factor, which is updated annually by the OPD fee schedule increase factor, is used to calculate the OPPS payment rate for services with the following status indicators (listed in Addendum B to the proposed rule, which is available via the internet on the CMS website): ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''R,'' ''S,'' ''T,'' ''V,'' or ''U.'' In the CY 2017 OPPS/ASC final rule with comment period (81 FR 79796), we clarified that the reporting ratio does not apply to codes with status indicator ''Q4'' because services and procedures coded with status indicator ''Q4'' are either packaged or paid through the Clinical Laboratory Fee

Schedule and are never paid separately through the OPPS. Payment for all services assigned to these status indicators will be subject to the reduction of the national unadjusted payment rates for hospitals that fail to meet Hospital OQR Program requirements, with the exception of services assigned to New Technology APCs with assigned status indicator ''S'' or ''T.'' We refer readers to the CY 2009 OPPS/ASC final rule with comment period (73 FR 68770 and 68771) for a discussion of this policy.

The OPD fee schedule increase factor is an input into the OPPS conversion factor, which is used to calculate OPPS payment rates. To reduce the OPD fee schedule increase factor for hospitals that fail to meet reporting requirements, we calculate two conversion factors—a full market basket conversion factor (that is, the full conversion factor), and a reduced market basket conversion factor (that is, the reduced conversion factor). We then calculate a reduction ratio by dividing the reduced conversion factor by the full conversion factor. We refer to this reduction ratio as the ''reporting ratio'' to indicate that it applies to payment for hospitals that fail to meet their reporting requirements. Applying this reporting ratio to the OPPS payment amounts results in reduced national unadjusted payment rates that are mathematically equivalent to the reduced national unadjusted payment rates that would result if we multiplied the scaled OPPS relative payment weights by the reduced conversion factor. For example, to determine the reduced national unadjusted payment rates that applied to hospitals that failed to meet their quality reporting requirements for the CY 2010 OPPS/ASC final rule with comment period, we multiplied the final full national unadjusted payment rate found in Addendum B of the CY 2010 OPPS/ASC final rule with comment period by the CY 2010 OPPS final rule with comment period reporting ratio of 0.980 (74 FR 60642).

We note that the only difference in the calculation for the full conversion factor and the calculation for the reduced conversion factor is that the full conversion factor uses the full OPD update and the reduced conversion factor uses the reduced OPD update. The baseline OPPS conversion factor calculation is the same since all other adjustments would be applied to both conversion factor calculations. Therefore, our standard approach of calculating the reporting ratio as described earlier in this section is equivalent to dividing the reduced OPD update factor by that of the full OPD update factor. In other words:

Full Conversion Factor = Baseline OPPS conversion factor * (1 + OPD update factor)

Reduced Conversion Factor = Baseline OPPS conversion factor * (1 + OPD update factor − 0.02)

Reporting Ratio = Reduced Conversion Factor/Full Conversion Factor

Which is equivalent to:

Reporting Ratio = (1 + OPD Update factor − 0.02)/(1 + OPD update factor)

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68771 and 68772), we established a policy that the Medicare beneficiary's minimum unadjusted copayment and national unadjusted copayment for a service to which a reduced national unadjusted payment rate applies would each equal the product of the reporting ratio and the national unadjusted copayment or the minimum unadjusted copayment, as applicable, for the service. Under this policy, we apply the reporting ratio to both the minimum unadjusted copayment and national unadjusted copayment for services provided by hospitals that receive the payment reduction for failure to meet the Hospital OQR Program reporting requirements. This application of the reporting ratio to the national unadjusted and minimum unadjusted copayments is calculated according to § 419.41 of our regulations, prior to any adjustment for a hospital's failure to meet the quality reporting standards according to § 419.43(h). Beneficiaries and secondary payers thereby share in the reduction of payments to these hospitals.

In the CY 2009 OPPS/ASC final rule with comment period (73 FR 68772), we established the policy that all other applicable adjustments to the OPPS national unadjusted payment rates apply when the OPD fee schedule increase factor is reduced for hospitals that fail to meet the requirements of the Hospital OQR Program. For example, the following standard adjustments apply to the reduced national unadjusted payment rates: the wage index adjustment, the multiple procedure adjustment, the interrupted procedure adjustment, the rural sole community hospital adjustment, and the adjustment for devices furnished with full or partial credit or without cost. Similarly, OPPS outlier payments made for high cost and complex procedures will continue to be made when outlier criteria are met. For hospitals that fail to meet the quality data reporting requirements, the hospitals' costs are compared to the reduced payments for purposes of outlier eligibility and payment calculation. We established this policy in the OPPS beginning in the CY 2010 OPPS/ASC final rule with comment period (74 FR 60642). For a complete discussion of the OPPS outlier calculation and eligibility criteria, we refer readers to section II.G of the CY 2023 OPPS/ASC proposed rule (87 FR 44533 and 44534).

2. Reporting Ratio Application and Associated Adjustment Policy for CY 2024

We proposed to continue our established policy of applying the reduction of the OPD fee schedule increase factor through the use of a reporting ratio for those hospitals that fail to meet the Hospital OQR Program requirements for the full CY 2024 annual payment update factor. For the CY 2024 OPPS/ASC proposed rule, the proposed reporting ratio was 0.9805, which, when multiplied by the proposed full conversion factor of $87.488, equals a proposed conversion factor for hospitals that fail to meet the requirements of the Hospital OQR Program (that is, the reduced conversion factor) of $85.782. We proposed to continue to apply the reporting ratio to all services calculated using the OPPS conversion factor. We proposed to continue to apply the reporting ratio, when applicable, to all HCPCS codes to which we have proposed status indicator assignments of ''J1,'' ''J2,'' ''P,'' ''Q1,'' ''Q2,'' ''Q3,'' ''R,'' ''S,'' ''T,'' ''V,'' and ''U'' (other than New Technology APCs to which we have proposed status indicator assignments of ''S'' and ''T''). We proposed to continue to exclude services paid under New Technology APCs. We proposed to continue to apply the reporting ratio to the national unadjusted payment rates and the minimum unadjusted and national unadjusted copayment rates of all applicable services for those hospitals that fail to meet the Hospital OQR Program reporting requirements. We also proposed to continue to apply all other applicable standard adjustments to the OPPS national unadjusted payment rates for hospitals that fail to meet the requirements of the Hospital OQR Program. Similarly, we proposed to continue to calculate OPPS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements. In addition to our proposal to implement the policy through the use of a reporting ratio, we also proposed to calculate the reporting ratio to four decimals (rather than the previously used three decimals) to more

precisely calculate the reduced adjusted payment and copayment rates.

For CY 2024, the proposed reporting ratio was 0.9805, which, when multiplied by the proposed full conversion factor of $87.488, equaled a proposed conversion factor for hospitals that fail to meet the requirements of the Hospital OQR Program (that is, the reduced conversion factor) of $85.782.

We did not receive any public comments on our proposal. For this final rule with comment period, the final reporting ratio is 0.9806, which, when multiplied by the final full conversion factor of $87.382, equals a final conversion factor for hospitals that fail to meet the requirements of the Hospital OQR Program (that is, the reduced conversion factor) of $85.687. We are finalizing our proposal to continue to calculate OPPS outlier eligibility and outlier payment based on the reduced payment rates for those hospitals that fail to meet the reporting requirements. We are also finalizing our proposals to implement the policy through the use of a reporting ratio, and to calculate the reporting ratio to four decimals (rather than the previously used three decimals) to more precisely calculate the reduced adjusted payment and copayment rates for hospitals that fail to meet the Hospital OQR Program requirements for CY 2024 payment.

XV. Requirements for the Ambulatory Surgical Center Quality Reporting (ASCQR) Program

A. Background

1. Overview

We seek to promote higher quality, more efficient, and equitable healthcare for Medicare beneficiaries. Consistent with these goals, we have implemented quality reporting programs for multiple care settings, including the Ambulatory Surgical Center Quality Reporting (ASCQR) Program for ambulatory surgical center care.

2. Statutory Authority for the ASCQR Program

Section 1833(i)(7)(A) authorizes the Secretary to reduce any annual increase under the revised ambulatory surgical center (ASC) payment system by 2.0 percentage points for such year that an ASC that fails to submit required data on quality measures specified by the Secretary in accordance with section 1833(i)(7)(B) of the Act. Section 1833(i)(7)(B) of the Act states that, except as the Secretary may otherwise provide, several of the statutory provisions governing the Hospital Outpatient Quality Reporting (OQR) Program, specifically section 1833(t)(17)(B) through (E) of the Act, also apply to the services of ASCs under the ASCQR Program in a similar manner to the manner in which they apply to the services of hospital outpatient departments under the Hospital OQR Program. Sections 1833(t)(17)(B) through (E) of the Act generally govern the development and replacement of quality measures, the form and manner of submission of data to CMS, and procedures for making the data submitted to CMS available to the public.

We refer readers to the CY 2012 OPPS/ASC final rule with comment period (76 FR 74492 through 74494) for a detailed discussion of the statutory authority of the ASCQR Program.

3. Regulatory History of the ASCQR Program

We refer readers to the following final rules for detailed discussions of the regulatory history of the ASCQR Program:

- CY 2012 OPPS/ASC final rule (76 FR 74492 through 74517);
- FY 2013 IPPS/LTCH PPS final rule (77 FR 53637 through 53644);
- CY 2013 OPPS/ASC final rule (77 FR 68492 through 68500);
- CY 2014 OPPS/ASC final rule (78 FR 75122 through 75141);
- CY 2015 OPPS/ASC final rule (79 FR 66966 through 66987);
- CY 2016 OPPS/ASC final rule (80 FR 70526 through 70538);
- CY 2017 OPPS/ASC final rule (81 FR 79797 through 79826);
- CY 2018 OPPS/ASC final rule (82 FR 59445 through 59476);
- CY 2019 OPPS/ASC final rule (83 FR 59110 through 59139);
- CY 2020 OPPS/ASC final rule (84 FR 61420 through 61434);
- CY 2021 OPPS/ASC final rule (85 FR 86187 through 86193);
- CY 2022 OPPS/ASC final rule (86 FR 63875 through 63911); and
- CY 2023 OPPS/ASC final rule (87 FR 72117 through 72136).

We have codified certain requirements under the ASCQR Program at 42 CFR part 416, subpart H (§§ 416.300 through 416.330). We refer readers to section XV.E of this final rule with comment period for a detailed discussion of the payment reduction for ASCs that fail to meet program requirements.

B. ASCQR Program Quality Measures

1. Considerations in the Selection of ASCQR Program Quality Measures

We refer readers to the CY 2013 OPPS/ASC final rule with comment period (77 FR 68493 and 68494) for a detailed discussion of the priorities we consider for quality measure selection for the ASCQR Program.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

2. Retention of Previously Adopted ASCQR Program Measures

We previously finalized and codified at § 416.320(a) our policy regarding retention of quality measures adopted for the ASCQR Program. Specifically, our regulation at § 416.320(a) provides that we will retain quality measures previously adopted for the ASCQR Program as part of its measure set unless we remove, suspend, or replace the measure.

We did not propose any changes to this policy in the CY 2024 OPPS/ASC proposed rule.

3. Removal, Replacement, or Suspension of Quality Measures

a. Immediate Removal of Program Measures

We refer readers to § 416.320(b) for our policies regarding immediate removal of a measure for the ASCQR Program based on evidence that the continued use of the measure as specified raises patient safety concerns. In the CY 2024 OPPS/ASC proposed rule (88 FR 49804), we proposed to amend our measure removal policy codified at § 416.320(b) to replace references to ''QualityNet'' with ''CMS-designated information system'' or ''CMS website,'' and to make other conforming technical edits, to accommodate recent and future systems requirements and mitigate confusion for program participants.

We invited public comment on the proposal.

We received no comments on the proposal. We are finalizing our proposal as proposed.

b. Removal, Replacement, or Suspension of Program Measures

We previously finalized and codified at § 416.320(c) our policies regarding removal of quality measures adopted for the ASCQR Program. Specifically, our regulation at § 416.320(c) provides that, unless a measure raises specific safety concerns, we will use the regular rulemaking process, allowing public comment, to remove, suspend, or replace quality measures in the ASCQR Program. Our regulation at § 416.320(c)(2) further provides that we will weigh whether to remove measures based on eight factors, including whether a measure is ''topped-out'' (§ 416.320(c)(2)(i)), based on criteria set forth in our regulation at § 416.320(c)(3).

However, as provided in our regulation at § 416.320(c)(4), we will assess the benefits of removing a measure on a case-by-case basis and will not remove a measure solely on the basis of it meeting any of specific factor or criterion.

We did not propose any changes to these policies in the CY 2024 OPPS/ASC proposed rule.

4. Modifications to Previously Adopted Measures

In the CY 2024 OPPS/ASC proposed rule (88 FR 49804 through 49810), we proposed to modify three previously adopted measures beginning with the CY 2024 reporting period/CY 2026 payment determination: (1) COVID–19 Vaccination Coverage Among Healthcare Personnel (HCP) measure; (2) Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery measure survey instrument use; and (3) Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients measure. We discuss each of these measures, along with the public comments that we received on them, in subsequent sections.

a. Modification of the COVID–19 Vaccination Coverage Among Health Care Personnel (HCP) Measure Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

(1) Background

On January 31, 2020, the Secretary of the Department of Health and Human Services (HHS) declared a public health emergency (PHE) for the United States in response to the global outbreak of SARS–CoV–2, a then novel coronavirus that causes a disease named ''coronavirus disease 2019'' (COVID–19).[482] Subsequently, the COVID–19 Vaccination Coverage Among Health Care Personnel (HCP) measure was adopted across multiple quality reporting programs, including the ASCQR Program (86 FR 63875 through 63883).[483] The Secretary renewed the PHE on April 21, 2020 and then every 3 months thereafter, with the final renewal on February 9, 2023.[484] The PHE ended on May 11, 2023; however, the public health response to COVID–19, which includes vaccination efforts, remains a public health priority.[485] As we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49805), there had been more than 102.7 million COVID–19 cases and 1.1 million COVID–19 deaths in the United States as of February 13, 2023; in reviewing these numbers for this final rule, as of September 15, 2023 there have been more than 103.4 million COVID–19 cases and 1.1 million COVID–19 deaths in the United States.[486] [487]

As stated in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63876) and in our ''Revised Guidance for Staff Vaccination Requirements,'' vaccination is a critical part of the nation's strategy to effectively counter the spread of COVID–19.[488] [489] [490] We continue to believe it is important to incentivize and track HCP vaccination through quality measurement across care settings, including the ASC setting, to protect health care workers, patients, and caregivers, and to help sustain the ability of HCP in each of these care settings to continue serving their communities. Studies indicate higher levels of population-level vaccine effectiveness in preventing COVID–19 infection among HCP and other frontline workers in multiple industries, with vaccines having a 90 percent effectiveness in preventing symptomatic and asymptomatic infection from December 2020 through August 2021.[491] Since the Food and Drug Administration (FDA) issued emergency use authorizations (EUAs) for selected initial and primary vaccines for adults, vaccines have been highly effective in real-world conditions at preventing COVID–19 in HCP with up to 96 percent efficacy for fully vaccinated HCP, including those at risk for severe infection and those in racial and ethnic groups disproportionately affected by COVID–19.[492] [493] [494] [495] Overall, data demonstrate that COVID–19 vaccines are effective and prevent severe disease, hospitalization, and death from the COVID–19 infection.[496]

When we adopted the COVID–19 Vaccination Coverage Among HCP measure in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63875 through 63883), we acknowledged that the measure did not address booster shots for COVID–19 vaccination (86 FR 63881), although the FDA authorized, and the Centers for Disease Control and Prevention (CDC) recommended, additional doses and booster doses of

the COVID–19 vaccine for certain individuals, particularly those who are immunocompromised due to age or condition or who are living or working in high-risk settings, such as HCP (86 FR 63881). However, we also stated that we believed the numerator of the measure was sufficiently broad to include potential future boosters as part of a ''complete vaccination course'' (86 FR 63881).

Since then, new variants of SARS–CoV–2 have emerged around the world and within the United States. Specifically, the Omicron variant (and its related subvariants) is listed as a ''variant of concern'' by the CDC because it spreads more easily than earlier variants.[497] Vaccine manufacturers have responded to the Omicron variant by developing bivalent COVID–19 vaccines, which include a component of the original virus strain to provide broad protection against COVID–19 and a component of the Omicron variant to provide better protection against COVID–19 caused by the Omicron variant.[498] Booster doses of the bivalent COVID–19 vaccine have proven effective at increasing immune response to SARS–CoV–2 variants, including Omicron, particularly in individuals who are more than 6 months removed from receipt of their primary series.[499] Updated COVID–19 vaccines are associated with a greater reduction in infections among HCP and their patients relative to those who only received primary series vaccination, with a rate of breakthrough infections among HCP who received only the two-dose regimen of 21.4 percent compared to a rate of 0.7 percent among boosted HCP.[500] [501] In the CY 2024 OPPS/ASC proposed rule (88 FR 49774 through 49776), we stated that data from the existing COVID–19 Vaccination Coverage Among HCP measure demonstrate clinically significant variation in booster dose vaccination rates across ASCs, but are clarifying here that literature has indicated disparities in COVID–19 booster vaccine uptakes across healthcare personnel irrespective of specific care setting.[502]

We believe that vaccination remains the most effective means to prevent the worst consequences of COVID–19, including severe illness, hospitalization, and death. Given the availability of vaccine efficacy data, EUAs, and Biologics License Application approvals issued by the FDA for updated 2023–2024 formulations of the vaccine, the continued presence of SARS–CoV–2 in the United States, and variance among rates of updated vaccinations, we believe it is important to modify the COVID–19 Vaccination Coverage Among HCP measure for HCP to receive primary series and updated vaccine doses in a timely manner per the CDC's recommendation that bivalent COVID–19 vaccine booster doses might improve protection against SARS–CoV–2 Omicron sublineages, including the most recent September 2023 Omicron variant that came to light after the publication of the CY 2024 OPPS/ASC proposed rule.[503] [504]

In the CY 2024 OPPS/ASC proposed rule (88 FR 49805 through 49807), we proposed to modify the COVID–19 Vaccination Coverage Among HCP measure to utilize the term ''up to date'' in the HCP vaccination definition. We also proposed to update the numerator to specify the timeframes within which an HCP is considered up to date with CDC recommended COVID–19 vaccines, including updated vaccine doses, beginning with the CY 2024 reporting period/CY 2026 payment determination for the ASCQR Program.

As noted in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63877), the COVID–19 Vaccination Coverage Among HCP measure is a process measure that assesses HCP vaccination coverage rates and not an outcome measure for which ASCs are held responsible for a particular outcome. We adopted the same modification to versions of the measure that we have adopted for other quality reporting programs.[505]

(2) Overview of Measure

The COVID–19 Vaccination Coverage Among HCP measure is a process measure developed by the CDC to track COVID–19 vaccination coverage among HCP in various settings. ASCs report the required data for this measure via the CDC's National Healthcare Safety Network (NHSN). We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63877 through 63878) for more information on the initial review of the measure by the Measure Applications Partnership (MAP).[506]

We included an updated version of the measure on the Measures Under Consideration (MUC) list for the 2022–2023 pre-rulemaking cycle for consideration by the MAP. In the CY 2024 OPPS/ASC proposed rule (88 FR 49806), we noted that when reviewed by the MAP, reporting for contract personnel providing care or services not specifically included in the measure denominator was fully optional, whereas this reporting is now required to complete NHSN data entry, but is not included in the measure calculation.

In December 2022, during the MAP's Hospital Workgroup discussion, the workgroup stated that the revision of the current measure captures up to date vaccination information in accordance

[506] Interested parties convened by the consensus-based entity will provide input and recommendations on the Measures under Consideration (MUC) list as part of the pre-rulemaking process required by section 1890A of the Act. We refer readers to *https://p4qm.org/PRMR-MSR* for more information.

with the CDC's updated recommendations for additional and booster doses since the measure's initial development. Additionally, the Hospital Workgroup appreciated that the revised measure's target population is broader and simplified from seven categories of HCP to four.[507] During the MAP's Health Equity Advisory Group review, the group highlighted the importance of COVID–19 vaccination measures and questioned whether the proposed revised version of the measure excludes individuals with contraindications to FDA authorized or approved COVID–19 vaccines, and if the measure would be stratified by demographic factors. The measure developer confirmed that HCP with contraindications to the vaccines are excluded from the measure denominator, but stated that the measure would not be stratified since the data are submitted at an aggregate rather than an individual level. The MAP Rural Health Advisory Group expressed concerns about data collection burden, citing that collection is performed manually.[508] In the CY 2024 OPPS/ASC proposed rule (88 FR 49806), we noted that, when reviewed by the MAP, reporting for contract personnel providing care or services not specifically included in the measure denominator was fully optional, whereas this reporting is now required to complete NHSN data entry, but is not included in the measure calculation.

The developer also noted that the model used for this measure is based on the Influenza Vaccination Coverage Among HCP measure (CBE #0431).[509] We refer readers to sections XXIV.C and XXVI of this final rule with comment period for additional detail on the burden and impact of this finalized proposal.

The proposed revised measure received conditional support for rulemaking from the MAP pending (1) testing indicating the measure is reliable and valid, and (2) endorsement by the consensus-based entity (CBE). The MAP noted that the previous version of the measure received endorsement from the CBE (CBE #3636)[510] and that the measure steward (CDC) intends to submit the updated measure for endorsement.[511]

(a) Measure Specifications

This measure is calculated quarterly by averaging the ASC's most recently submitted and self-selected one week of data. The measure includes at least one week of data collection a month for each of the three months in a quarter. The denominator is calculated as the aggregated number of HCP eligible to work in the ASC for at least one day during the week of data collection, excluding denominator-eligible individuals with contraindications as defined by the CDC for all three months in a quarter.[512] Facilities report vaccination information for the following four, separate categories of HCP to NHSN:

- *Employees:* This includes all persons who receive a direct paycheck from the reporting facility (that is, on the facility's payroll), regardless of clinical responsibility or patient contact.
- *Licensed independent practitioners (LIPs):* This includes only physicians (MD, DO), advanced practice nurses, and physician assistants who are affiliated with the reporting facility, but are not directly employed by it (that is, they do not receive a paycheck from the reporting facility), regardless of clinical responsibility or patient contact. Post-residency fellows are also included in this category if they are not on the facility's payroll.
- *Adult students/trainees and volunteers:* This includes medical, nursing, or other health professional students, interns, medical residents, or volunteers aged 18 or older who are affiliated with the facility but are not directly employed by it (that is, they do not receive a paycheck from the facility), regardless of clinical responsibility or patient contact.
- *Other contract personnel:* Contract personnel are defined as persons providing care, treatment, or services at the facility through a contract who do not fall into any of the previously discussed denominator categories.[513] This also includes vendors providing care, treatment, or services at the facility who may or may not be paid through a contract. We note that the other contract personnel category is required for data submission to NHSN but is not included as part of the proposed COVID–19 Vaccination Coverage Among HCP measure.[514]

As stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49807), we did not propose to modify the denominator exclusions. The numerator is calculated as the cumulative number of HCP in the denominator population who are considered up to date with CDC recommended COVID–19 vaccines. The term ''up to date'' is defined as meeting the CDC's set of criteria on the first day of the applicable reporting quarter. The current definition of ''up to date'' for COVID–19 vaccination can be found at: *https://www.cdc.gov/nhsn/pdfs/hps/covidvax/UpToDateGuidance-508.pdf.*

As proposed in the CY 2024 OPPS/ASC proposed rule (88 FR 49807), public reporting of the modified version of the COVID–19 Vaccination Coverage Among HCP measure for the ASCQR Program would begin with the Fall 2024 Care Compare refresh, or as soon as technically feasible.

(b) CBE Endorsement

The current version of the measure in the ASCQR Program received CBE endorsement (CBE #3636) on July 26, 2022.[515] The measure steward (CDC) intends to pursue CBE endorsement for the modified version of this measure.

(3) Data Submission and Reporting

We refer readers to the CY 2022 OPPS/ASC final rule with comment period (86 FR 63879 through 63883) for information on data submission and reporting of this measure. We did not propose any changes to the data submission or reporting process in the CY 2024 OPPS/ASC proposed rule (88 FR 49807). However, we did propose that reporting of the updated, modified version of this measure would begin with the CY 2024 reporting period for the ASCQR Program. Under the data submission and reporting process, which would remain unchanged under these proposals, ASCs collect the numerator and denominator for the COVID–19 Vaccination Coverage

[513] For more details on the reporting of other contract personnel, we refer readers to the NHSN COVID–19 Vaccination Protocol, Weekly COVID–19 Vaccination Module for Healthcare Personnel available at: *https://www.cdc.gov/nhsn/pdfs/hps/covidvax/protocol-hcp-508.pdf.*

[514] Ibid.

[515] Centers for Medicare & Medicaid Services. Measure Specifications for Hospital Workgroup for the 2022 MUC List. Available at: *https://mmshub.cms.gov/sites/default/files/map-hospital-measure-specifications-manual-2022.pdf.*

Among HCP measure for at least one self-selected week during each month of the reporting quarter and submit the data to the NHSN Healthcare Personnel Safety (HPS) Component before the quarterly deadline to meet ASCQR Program requirements. If an ASC submits more than one week of data in a month, the most recent week's data are used to calculate the measure. For example, if both the first- and third-weeks of data for an ASC are submitted, the third week data will be used for measure calculation and public reporting. Each quarter, the CDC calculates a single quarterly COVID–19 HCP vaccination coverage rate for each ASC, which is then calculated by taking the average of the data from the three weekly rates submitted by the ASC for that quarter. We publicly report each quarterly COVID–19 HCP vaccination coverage rate as calculated by the CDC (86 FR 63878).

We refer readers to section XIV.B.2.a of this final rule with comment period for the same proposal for the Hospital OQR Program.

We invited public comment on the proposal.

Comment: Some commenters supported the proposed modification to the COVID–19 Vaccination Coverage Among HCP measure and noted the importance of maintaining alignment across programs and with current CDC guidelines. A few commenters highlighted the significance of vaccination in preventing greater spread of COVID–19 and the potential for continued vaccination to prevent future large-scale outbreaks. One commenter expressed the importance of ''up to date'' guidelines to ensure patients have accurate information to support their choice of provider.

Response: We thank commenters for their support. We agree that maintaining alignment across programs and the current CDC guideline is important, as is the new definition of ''up to date'' due to the changing nature of the virus's transmission and community spread. We agree that vaccination plays a critical part of HHS's strategy to effectively counter the spread of COVID–19 and will continue to support it as the most effective means to prevent the worst consequences of COVID–19, including severe illness, hospitalization, and death. Additionally, we continue to believe it is important to incentivize and track HCP vaccination through quality measurement across care settings, including the outpatient and ASC settings. We believe that HCP vaccinations will protect healthcare workers, patients, and caregivers and help sustain the ability of HCP in each of these care settings to continue serving their communities.

Comment: Many commenters did not support modifying the COVID–19 Vaccination Coverage Among HCP measure due to concerns that the frequent changes to the CDC's definition of ''up to date'' combined with uncertainty around future vaccination schedules creates unnecessary burden for facilities. Many commenters expressed concern that changing definitions and guidance exacerbates staffing and resource challenges and requires updates to facility or system-level vaccination policies, adding burden and confusion.

Response: We acknowledge commenters' concerns around data collection, burden, and staffing and resource challenges for reporting the COVID–19 Vaccination Coverage Among HCP measure. As evidenced by the increased cases and hospitalizations in August 2023 due to new variants, we believe that COVID–19 remains a relevant and evolving situation requiring monitoring of vaccination rates to ensure the safety of patients, caregivers and providers, and that the burden of reporting is outweighed by the benefits of collecting and regularly publishing these data to inform care decision-making. Additionally, the data submission and reporting requirements provide flexibility for facilities with staffing and resource challenges as this measure only requires facilities to collect data for one self-selected week during each month of the reporting quarter at minimum.

When we finalized the adoption of the COVID–19 Vaccination Coverage Among HCP measure in the CY 2022 OPPS/ASC final rule with comment period (86 FR 63875), we received several comments encouraging us to update the measure as new evidence on COVID–19 is identified. While we acknowledge that the definition of ''up to date'' may change in the future, our intention is to continue to work with partners, including the FDA and CDC, to consider and align any updates to the measure specifications in future rulemaking as appropriate to ensure the safety of patients, providers, and caregivers in facilities of care.

Comment: Many commenters recommended that CMS reduce the required reporting frequency from quarterly to annually to reduce reporting burden for facilities. Some of these commenters observed that annual reporting would mirror the reporting schedule for the Influenza Vaccination Coverage Among HCP measure, which has been adopted into some quality reporting programs. One commenter recommended that the chosen week for data reporting be determined by individuals unaffiliated with the ASC to avoid bias. One commenter recommended that CMS educate stakeholders on the evolving COVID–19 vaccination requirements.

Response: We thank commenters for their recommendations on data collection reporting frequency, and support for the COVID–19 Vaccination Coverage Among HCP measure. As stated in the CY 2024 OPPS/ASC proposed rule (88 FR 49806), the measure developer based this measure on the Influenza Vaccination Coverage Among HCP measure (CBE #0431), which is reported annually. The measure developer (the CDC) intends to adopt a similar approach to the modified COVID–19 Vaccination Coverage Among HCP measure if vaccination strategy becomes seasonal. While monitoring and surveillance are ongoing, we do not currently have data demonstrating seasonal trends in the circulation of SARS–CoV–2. In addition, we do not believe that ASC-selection of the week for reporting on this measure introduces significant bias as the sampling is taken from within the same facility over time.

Comment: Several commenters did not support updating the specifications for the COVID–19 Vaccination Coverage Among HCP measure because the PHE has expired. Several commenters expressed their opinion that the end of Federal vaccination requirements does not justify the continued data collection for this measure. Several of these commenters recommended the removal of the measure for these reasons.

Response: As we acknowledged in the CY 2024 OPPS/ASC proposed rule (88 FR 49805), the PHE expired on May 11, 2023. While some state and Federal reporting requirements have since changed, the expiration of the PHE for COVID–19 has no bearing on the use of this measure for quality reporting because vaccination continues to be an essential tool in preventing COVID–19 transmission. Monitoring and surveillance of vaccination rates through measure performance is important as it provides patients, beneficiaries, and their caregivers with information to support informed decision-making.

We believe this measure continues to align with our goals to promote wellness and disease prevention, especially in light of new variants and an increase in COVID–19 infection and hospitalizations as of September 2023. Under CMS' Meaningful Measures Framework 2.0, the COVID–19 Vaccination Coverage Among HCP

measure addresses the quality priorities of ''Immunizations'' and ''Public Health'' through the Meaningful Measures Area of ''Wellness and Prevention.'' Under the National Quality Strategy, the measure addresses the goal of Safety under the priority area Safety and Resiliency. As part of the Administration's continued response to COVID–19, and in light of the presence of new variants that have resulted in higher rates of infection and hospitalizations as of September 2023,[516] we will continue to work to protect individuals and communities from the virus and its worst impacts.

Comment: A few commenters did not support inclusion of the COVID–19 Vaccination Coverage Among HCP measure in the ASCQR Program measure set due to conflict between state and local mandates and Federal quality reporting requirements. One commenter recommended that the measure specifications have proper exclusion criteria in alignment with Federal and state vaccination exemption policies.

Response: We recognize commenters' concerns regarding potential discrepancies between local, state, and Federal requirements for COVID–19 vaccination. However, we reiterate that the ASCQR Program is a quality reporting program, separate from state and local policies as well as other Federal policies, including those related to vaccination exemption. We also note that neither the proposed modified measure nor the current version of the measure mandates vaccination, and the elimination of the Federal vaccine mandate is immaterial to the adoption and use of the measure for quality reporting purposes.

Comment: One commenter recommended that we continually monitor this measure for unintended consequences since it has not undergone full validity and reliability testing. Another commenter recommended that ASCs stratify the measure data to identify sub-populations of HCP that have lower vaccine uptake.

Response: As part of the MAP review process, all MUC list measures were required to submit testing results and be subject to review by workgroup and MAP members, as well as be open for public commentary. The current version of the measure received CBE endorsement (CBE #3636, ''Quarterly Reporting of COVID–19 Vaccination Coverage among Healthcare Personnel'') on July 26, 2022. While the modified measure has not undergone this endorsement process, the measure steward, CDC, has signaled intention to submit the modified measure for CBE endorsement, which we believe will support the appropriateness of this measure for the ASC setting, similar to the current measure. In addition, though the modified measure was not explicitly tested in this setting, it was considered a reliable and valid measurement for other care settings, and the MAP recommended its use for ensuring quality care within the ASC setting. We thank the commenters for their recommendations regarding monitoring and use of measure information. Regarding the recommendation to stratify this measure, as we stated in the CY 2024 OPPS/ASC proposed rule, the measure cannot be stratified since the data are submitted at an aggregate rather than an individual level (86 FR 49806).

After consideration of the public comments we received, we are finalizing our proposed modification to the COVID–19 Vaccination Coverage Among HCP Measure in the ASCQR Program as proposed.

b. Modification of the Survey Instrument Used for the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure Beginning With the Voluntary CY 2024 Reporting Period

(1) Background

In the CY 2014 OPPS/ASC final rule with comment period (78 FR 75129), we finalized the adoption of the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery (Cataracts Visual Function) measure beginning with the CY 2014 reporting period/CY 2016 payment determination. This measure assesses the percentage of patients aged 18 years and older who had cataract surgery and had improvement in visual function within 90 days following the cataract surgery via the administration of pre-operative and post-operative survey instruments (78 FR 75129). A ''survey instrument'' is an assessment tool that has been appropriately validated for the population for which it is being used.[517] For purposes of this modification to the Cataracts Visual Function measure, the survey instruments we considered and proposed assess the visual function of a patient pre- and post-operatively to determine whether the patient's visual function changed within 90 days of cataract surgery. Examples of survey instruments assessing visual function include, but are not limited to, the National Eye Institute Visual Function Questionnaire (NEI–VFQ), the Visual Function (VF–14), the modified (VF–8R), the Activities of Daily Vision Scale (ADVS), the Catquest, and the modified Catquest-9. While the measure has been available for voluntary reporting in the ASCQR Program since the CY 2015 reporting period, a number of ASCs have reported data consistently using the survey instrument of their choice (87 FR 72119). We refer readers to the Cataracts Visual Function measure's section of the ASCQR Program Specifications Manual for additional detail, which is available at: *https://qualitynet.cms.gov/asc/specifications-manuals.*

In the CY 2015 OPPS/ASC final rule with comment period (79 FR 66984), we expressed concerns that clinicians' use of varying survey instruments would lead to inconsistent measure results. However, a study conducted a comparison among the 16 survey instruments currently accepted for use by ASCs in collecting data for this measure and found them to be scientifically valid, detected clinically important changes, and provided comparable results.[518] While all 16 survey instruments in this study demonstrate usefulness for detecting clinically important change in cataract patients, some survey instruments had detection sensitivity scores higher than others.[519]

Several commenters responding to the CY 2022 OPPS/ASC proposed rule (86 FR 63846) requested additional guidance from CMS regarding measure specifications and survey instruments for this Cataracts Visual Function measure in the Hospital OQR Program. We have considered this comment on this measure, and we agree that survey instruments for the assessment of visual function pre- and post-cataract surgery should be clarified to standardize acceptable survey instruments, while minimizing collecting and reporting burden, and to improve measure reliability. Thus, in the CY 2024 OPPS/ASC proposed rule (88 FR 49807 through 49809), we proposed to clarify which specific survey instruments may be used for the assessment of visual function pre- and post-cataract surgery

[516] Centers for Disease Control and Prevention (August 23, 2023). Risk Assessment Summary for SARS CoV–2 Sublineage BA.2.86 Available at: *https://www.cdc.gov/respiratory-viruses/whats-new/covid-19-variant.html.*

[517] Ambulatory Surgical Center Specification Manual. (n.d.). Qualitynet. Retrieved March 21, 2023, from *https://qualitynet.cms.gov/asc/specifications-manuals.*

[518] McAlinden C, Gothwal VK, Khadka J, et al. (2011). A head-to-head comparison of 16 cataract surgery outcome questionnaires. *Ophthalmology.*118(12):2374–81. *https://doi.org/10.1016/j.ophtha.2011.06.008.*

[519] Ibid.

for the Cataracts Visual Function measure in both the Hospital OQR Program and the ASCQR Program, to ensure alignment of this measure's specifications across our quality reporting programs. We proposed to limit the survey instruments that an ASC may use to assess changes in a patient's visual function for purposes of the Cataracts Visual Function measure to those listed below:

- The National Eye Institute Visual Function Questionnaire-25 (NEI VFQ–25)
- The Visual Functioning Patient Questionnaire (VF–14)
- The Visual Functioning Index Patient Questionnaire (VF–8R)

(2) Considerations for the Standardization of Survey Instruments Assessing Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery

We considered several factors when identifying which specific survey instruments would be acceptable for ASCs to use when collecting data for the Cataracts Visual Function measure, such as comprehensiveness, validity, reliability, length, and burden. We stated our belief that the three survey instruments listed above would allow ASCs to select the length of the survey instrument to be administered while ensuring adequate validity and reliability.[520] [521] [522] All three of the survey instruments are based upon the 51-item National Eye Institute Visual Function Questionnaire (NEI VFQ–51) survey instrument, which was the first survey instrument originally developed for assessing a patient's visual function before and after cataract surgery. Each of the three survey instruments have progressively fewer numbers of questions than the NEI VFQ–51: 25 questions for the NEI VFQ–25, 14 questions for the VF–14, and eight questions for the VF–8R. Even with fewer questions, all three of the survey instruments have been validated as providing results comparable to the NEI VFQ–51. In addition, all three of the survey instruments are readily available for ASCs to access and use.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49808), we proposed to allow ASCs to use the NEI VFQ–25 for administering and calculating this Cataracts Visual Function measure due to its comprehensiveness, its adequate validity and reliability, as well as its potential to reduce language barriers for patients. The NEI VFQ–25 is a shorter version of the NEI VFQ–51, being comprised of 25 items across 12 vision-specific domains (general health, general vision, ocular pain, near activities, distance activities, social functioning, mental health, role difficulties, dependency, driving, color vision, and peripheral vision).[523]

The NEI VFQ–25, similar to the VF–14 and VF–8R, has adequate reliability and validity.[524] The NEI VFQ–25 composite, near activities, and distance activities subscales demonstrated good internal consistency reliability, test-retest reliability, convergent validity, and known-groups validity.[525] Furthermore, the NEI VFQ–25's high internal consistency, indicates that items of the NEI VFQ–25 are highly related to each other and to the scale as a whole.[526]

In addition, the survey instrument is publicly available on the RAND website at no cost and has been translated to many languages, which is a valuable benefit for patients with limited English proficiency. The NEI VFQ–25 was chosen over other survey instruments to reduce potential language barriers, as, for example, the currently available Activities of Daily Vision Scale (ADVS) is dependent on English language skills.[527] More information on the NEI VFQ–25 can be found at: *https://www.rand.org/health-care/surveys_tools/vfq.html.*

While the NEI VFQ–25 was shortened significantly from the original NEI VFQ–51, it has been criticized for its still lengthy test-time. However, the inclusion of this survey instrument in this measure's specifications would allow for a more detailed assessment of cataract surgery outcomes as it was designed to include questions which are most important for persons who have chronic eye diseases.[528] Further, if an ASC finds the NEI VFQ–25 particularly burdensome to administer, the ASC may choose from the other two survey instruments proposed for inclusion in this measure's specifications for ASCs to use for this measure, as both of these have even fewer survey questions to administer.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49809), we also proposed to allow ASCs to use the 14-item VF–14 and the 8-item VF–8R for administering and calculating this Cataracts Visual Function measure. Each can be administered in a shorter timeframe than the NEI VFQ–25 with high precision.[529] [530] Thus, the succinct formats of the VF–14 and VF–8R may ease ASCs' burden in administering the survey instruments, and potentially increase the rate of patient responses for this measure, as compared with other survey instrument options we considered. We believe these survey instruments achieve results comparable with the longer NEI VFQ–25 and NEI VFQ–51 survey instruments with substantially fewer questions to administer.

Furthermore, in the CY 2024 OPPS/ASC proposed rule (88 FR 49809), we proposed inclusion of the VF–14 because currently it is the most commonly used survey instrument and we believe it would be beneficial to allow the majority of physicians who have already been using the VF–14 to continue to have the option to do so.[531] The VF–14 is comprised of 14 items relating to daily living activities and function, such as reading, writing, seeing steps, stairs or curbs, and operating a motor vehicle.[532] Studies using this survey instrument generally

[532] Ibid.

report significant and clinically important improvement following cataract surgery.[533] The VF–14 additionally has achieved adequate reliability and validity, proving it to be a dependable survey instrument for cataract outcomes.[534] [535]

In the CY 2024 OPPS/ASC proposed rule (88 FR 49809), we also proposed the VF–8R, as it is the most concise of the three survey instruments, while still achieving adequate validity and reliability.[536] The VF–8R consists of questions related to reading, fine handwork, writing, playing board games, and watching television.[537] Given its conciseness compared to the majority of currently available survey instruments and its adequate psychometric properties, we stated our belief that the VF–8R would be beneficial for measuring cataract surgery outcomes without prompting further patient survey fatigue.[538]

For these reasons, we believe that the NEI VFQ–25, VF–14, and VF–8R are the most appropriate survey instruments for ASCs to use to assess a patient's visual function pre- and post-cataract surgery for purposes of calculating and submitting data for the Cataracts Visual Function measure in the ASCQR Program.

To standardize survey instrument administration for the Cataracts Visual Function measure, in the CY 2024 OPPS/ASC proposed rule (88 FR 49807 through 49809), we proposed to limit the survey instruments that can be used to administer this measure, beginning with the voluntary CY 2024 reporting period, to these three survey instruments: (1) NEI VFQ–25; (2) VF–14; and (3) VF–8R. We believe the use of these three survey instruments to report data on the Cataracts Visual Function measure will allow for a more standardized approach to data collection. Having a limited number of allowable survey instruments would also address several commenters' request for additional guidance on survey instruments as well as improve measure reliability.

(3) Considerations for Data Collection Modes for the Cataracts: Improvement in Patient's Visual Function Within 90 Days Following Cataract Surgery Measure Beginning With the Voluntary CY 2024 Reporting Period

As summarized in the CY 2023 OPPS/ASC final rule with comment period (87 FR 72118 through 72120), many commenters expressed concern about the high administrative burden of reporting the Cataracts Visual Function measure, as the measure uniquely requires coordination among clinicians of different specialties (that is, opticians and ophthalmologists). In an effort to decrease administrative burden surrounding in-office time constraints, we reiterate that, while we recommend the patient's physician or optometrist administer, collect, and report the survey results to the ASC, the survey instruments required for this measure can be administered by the ASC itself via phone, by the patient via regular or electronic mail, or during clinician follow-up.

Scientific literature supports the conclusion that self-administered survey instruments produce statistically reliable results.[539] [540] Furthermore, scientific literature indicates that regular mail and electronic mail surveys respectively, are preferred by varying subgroups of patients. The inclusion of both options ensures that patients will be able to respond to survey instruments in their preferred format.[541] [542] These findings support the inclusion of varying survey instrument-collection methods for patient and provider convenience.

We invited public comment on the proposal.

Comment: Many commenters supported our proposal to modify the survey instruments allowable for the Cataracts Visual Function measure beginning with the voluntary CY 2024 reporting period. Several commenters concurred with CMS that this modification would standardize data collection and ensure comparability of the measure across ASCs. Several commenters also expressed support for the modification because the three survey instruments demonstrate adequate reliability, validity, and decrease burden. One commenter believed this modification would facilitate better comparability across providers and support care decision-making. Another commenter expressed support for CMS' efforts to create program alignment.

Response: We thank commenters for their support. We agree that limiting the allowable survey instruments used to report on the Cataracts Visual Function measure to three survey instruments of different lengths will allow for a less burdensome, and more standardized approach to data collection and improve measure reliability. We emphasize that all three surveys demonstrate adequate reliability and validity, which demonstrates that they are dependable survey instruments for measuring functionality following cataract surgery. Further, by adopting this modification for this measure, we will be promoting alignment with the Hospital OQR Program.

Comment: Several commenters recommended that the Cataracts Visual Function measure either remain voluntary or be removed from the program due to the high administrative burden. One commenter believed the measure should remain voluntary until a digital version is developed. Another commenter recommended that, in addition to removing the Cataracts Visual Function measure, CMS instead adopt the Toxic Anterior Segment Syndrome (TASS) measure.[543] One commenter recommended CMS provide additional best practices as more facilities adopt the use of these three surveys during the voluntary measurement period.

Response: We are retaining this measure as voluntary for the CY 2024 reporting period/CY 2026 payment determination. We will continue to evaluate this measure moving forward. We respectfully disagree that this measure should be removed from the ASCQR Program as we believe the benefits of the measure outweigh the reporting burden.

Cataract surgery is one of the most commonly performed procedures in

ASCs and there is currently no other patient-reported outcome measure for this procedure for the ASCQR Program. As a patient reported outcome measure, this measure aligns with the CMS National Quality Strategy (NQS) ''Foster Engagement'' goal, which seeks to increase engagement between individuals and their care teams to improve quality, establish trusting relationships, and bring the voices of people and caregivers to the forefront. The Meaningful Measures 2.0 goals also prioritize patient-reported measures and promoting better collection and integration of patient voices across CMS' quality programs.

We believe that the value of the information this measure provides to consumers about quality of care justifies the potential administrative burden for ASCs that voluntarily report on it. As some facilities have been voluntarily reporting this measure successfully while it has not been required, we believe this indicates that the measure is not overly burdensome, and that standardizing the allowable survey instruments will further improve its usability and reliability in the ASC setting. We wish to reiterate that when selecting allowable surveys, we considered a variety of factors, such as accessibility, feasibility, and prevalence. We also reiterate that we proposed to limit the allowable surveys to the NEI–VFQ–25, VF–14, and VF–8R as they are commonly adopted survey instruments that are readily available online for entities to access and use.

We note that while it is recommended that the facility obtain the survey results from the appropriate physician or optometrist, the surveys can be administered by the facility via phone, mail, email, or during clinician follow-up. Patients can also self-administer the surveys and submit them directly to the facility via mail or email.

Finally, we appreciate the commenter's suggestion to adopt the Toxic Anterior Segment Syndrome (TASS) measure. We note that the TASS measure is used to assess the number of ophthalmic anterior segment surgery patients diagnosed with TASS within 2 days of surgery. The Cataracts Visual Function measure assesses the percentage of patients aged 18 years and older who had cataract surgery and had improvement in visual function achieved within 90 days following the cataract surgery. Therefore, the TASS measure could not seamlessly replace the Cataracts Visual Function measure, as they measure two different outcomes. We will consider the adoption of new measures in future rulemaking.

Additionally, we will consider developing best practices based on facility use of these surveys during the voluntary measurement period.

Comment: Some commenters suggested that the Cataract Visual Function measure be made mandatory.

Response: We have continued to evaluate and consider community feedback on this measure's specifications and implementation since the measure was originally adopted in CY 2014. As previously noted, we are retaining this measure as voluntary for the CY 2024 reporting period/CY 2026 payment determination. We acknowledge that this measure requires cross-setting coordination among clinicians of different specialties (that is, surgeons and ophthalmologists), increasing burden. If we determine that the value of mandatory reporting justifies increased burden on ASCs, we will propose to transition the measure to mandatory reporting through rulemaking.

Comment: One commenter recommended that the Cataracts Visual Function measure be included instead under the Quality Payment Program, as patients are likely to receive ongoing care following the procedure outside of the facility where the surgery was performed.

Response: This measure is already included under the Quality Payment Program's Merit-based Incentive Payment System (MIPS) (Measure #303) for MIPS eligible clinicians (as defined in 42 CFR 414.1305) to report. Even though individual clinicians may report this measure in MIPS, we continue to view this measure as appropriate for assessing facility-level of care as the procedures are provided in a facility.

After consideration of the public comments we received, we are finalizing our proposal to modify the Cataracts Visual Function measure as proposed. We also refer readers to the discussion of a similar proposal for the same measure as used in the Hospital OQR Program in section XIV.B.2.b of this final rule with comment period.

c. Modification of Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients Measure Denominator Change To Align With Current Clinical Guidelines Beginning With the CY 2024 Reporting Period/CY 2026 Payment Determination

(1) Background

In 2019, colorectal cancer (CRC) accounted for the 4th highest rate of new cancer cases and 4th highest rate of cancer deaths in the United States.[544] The American Cancer Society (ACS) estimates that in 2023, 153,020 individuals will be newly diagnosed with CRC and 52,550 individuals will die from CRC in the United States.[545] The CDC advises, ''[c]olorectal cancer almost always develops from precancerous polyps (abnormal growths) in the colon or rectum. Screening tests can find precancerous polyps, so that they can be removed before they turn into cancer. Screening tests can also find colorectal cancer early, when treatment works best. Regular screening, beginning at age 45, is the key to preventing colorectal cancer and finding it early.'' [546]

In May 2021, the United States Preventive Services Task Force (USPSTF) issued a revised Final Recommendation Statement on CRC Screening.[547] This replaced the prior USPSTF 2016 Final Recommendation Statement and included a number of updated policy recommendations based on new evidence and understandings of CRC and CRC screening. The USPSTF recommended that adults who do not have signs or symptoms of CRC and who are at average risk for CRC begin screening at age 45 instead of the previous recommendation of age 50.[548] In addition, multiple professional organizations, including the ACS, American Society of Colon and Rectal Surgeons, and the U.S. Multi-Society Task Force on Colorectal Cancer (which represents the American College of Gastroenterology, the American Gastroenterological Association, and the American Society for Gastrointestinal Endoscopy), recommend that people of average risk of CRC start regular screening at age 45.[549] [550] [551] Based on

the recent changes in clinical guidelines to begin CRC screening at age 45 instead of age 50, in the CY 2024 OPPS/ASC proposed rule (88 FR 49809 and 49810), we proposed to modify the Endoscopy/Polyp Surveillance: Appropriate Follow-Up Interval for Normal Colonoscopy in Average Risk Patients (the ''Colonoscopy Follow-Up Interval'') measure to follow these clinical guideline changes.

(2) Overview of Measure

We refer readers to the CMS Measures Inventory Tool (CMIT) and the ASCQR Specification Manual for more information on the Colonoscopy Follow-Up Interval measure, including background on the measure and a complete summary of measure specifications.[552] [553] Currently, the Colonoscopy Follow-Up Interval measure assesses the ''percentage of patients aged 50 years to 75 years receiving a screening colonoscopy without biopsy or polypectomy who had a recommended follow-up interval of at least 10 years for repeat colonoscopy documented in their colonoscopy report.'' [554] In the CY 2024 OPPS/ASC proposed rule (88 FR 49810), we proposed to amend the measure's denominator language by replacing the phrase ''aged 50 years'' with the phrase ''aged 45 years.'' Under the proposal, the measure denominator would be modified to ''all patients aged *45 years to 75 years* receiving screening colonoscopy without biopsy or polypectomy'' from ''all patients aged *50 years to 75 years* receiving screening colonoscopy without biopsy or polypectomy.'' [555] We did not propose any changes to the measure numerator, other measure specifications, exclusions, or data collection for the Colonoscopy Follow-Up Interval measure.

In the CY 2023 Physician Fee Schedule final rule with comment period (87 FR 69760 through 69767), we adopted the modified Colonoscopy Follow-Up Interval measure, which we proposed for the ASCQR Program, for the Merit-based Incentive Payment System (MIPS). We have considered the importance of aligning the minimum age requirement for CRC screening across quality reporting programs and clinical guidelines, and as a result, in the CY 2024 OPPS/ASC proposed rule (88 FR 49810), we proposed to modify the Colonoscopy Follow-Up Interval measure denominator to ''all patients aged 45 to 75 years'' for the ASCQR Program. We proposed the modification of the Colonoscopy Follow-Up Interval measure beginning with the CY 2024 reporting period/CY 2026 payment determination.

We invited public comment on the proposal.

Comment: Many commenters supported CMS's proposal to modify the Colonoscopy Follow-Up Interval measure beginning with the CY 2024 reporting period/CY 2026 payment determination. Some commenters supported the proposal because the modification to the denominator aligns with clinical guidelines. Some of these commenters supported the proposal because the modification to the denominator provides alignment across quality programs. One commenter supported the proposal, noting that rates of CRC have been increasing in people under 50 years of age and stating a belief that the denominator change will promote appropriate and important preventative services. Another commenter supported the proposal stating a belief that the change in denominator will have far-reaching impacts on improving access to CRC screening and reduce CRC mortality.

Response: We thank commenters for supporting our proposal to modify the Colonoscopy Follow-Up Interval measure denominator to ''all patients aged 45 to 75 years'' for the ASCQR Program. We agree that it is important to align requirements across quality reporting programs and clinical guidelines when relevant. We believe that establishing consistent policy across our programs in terms of minimum age limits for CRC screening tests is critical to the public's understanding of evolving CRC screening recommendations.

Comment: One commenter noted that the modification to this measure would increase the patient population that is eligible for the measure and recommended that CMS maintain the same sample size to prevent increased administrative burden.

Response: We clarify that the only change proposed to this measure was a change in the measure denominator to ''all patients aged 45 to 75 years.'' We understand that the measure would increase the patient population that is eligible for the measure, however, we did not propose any other changes to the measure specifications or sampling methodology for the measure, including any changes to minimum sampling size requirements. Therefore, we do not believe that the modification to the denominator increases the burden on ASCs. We refer readers to the Sampling Specifications section of the ASCQR Program Specifications Manual for additional detail, which is available at: *https://qualitynet.cms.gov/asc/specifications-manuals.*

After consideration of the public comments we received, we are finalizing our proposal to modify the Colonoscopy Follow-Up Interval measure as proposed. We also refer readers to the discussion of a similar proposal for the same measure as used in the Hospital OQR Program in section XIV.B.2.c of this final rule with comment period.

5. Adoption of New Measures for the ASCQR Program Measure-Set

Section 1833(i)(7)(B) of the Act states that, except as the Secretary may otherwise provide, the provisions of section 1833(t)(17)(B) through (E) of the Act apply with respect to ASC services in a similar manner to the manner in which they apply to hospitals for the Hospital OQR Program. Section 1833(t)(17)(C)(i) of the Act requires the Secretary to develop measures appropriate for the measurement of the quality of care (including medication errors) furnished by hospitals in outpatient settings, that these measures reflect consensus among affected parties and, to the extent feasible and practicable, that these measures include measures set forth by one or more national consensus-based entities. We have noted in previous rulemaking (76 FR 74494) the requirement that measures reflect consensus among affected parties can be achieved in other ways aside from CBE endorsement, including through the measure development process, through broad acceptance, use of the measure(s), and through public comment.

Section 1890A of the Act requires that we establish and follow a pre-rulemaking process for selecting quality and efficiency measures for our programs, including taking into consideration input from multi-stakeholder groups. As part of this pre-rulemaking process, the CBE, with which we contract under section 1890 of the Act, convened these groups under the Measure Applications Partnership

(MAP). The MAP is a public-private partnership created for the primary purpose of providing input to HHS on the selection of measures as required by section 1890(b)(7)(B) of the Act, including measures for the ASCQR Program. We followed this pre-rulemaking process for the measures we proposed for adoption in the CY 2024 OPPS/ASC proposed rule for the ASCQR Program as detailed therein (88 FR 49810 through 49818) and under this section of this final rule with comment period.

Specifically, in the CY 2024 OPPS/ASC proposed rule (88 FR 49810 through 49818), we proposed to: (1) re-adopt with modification the ASC Facility Volume Data on Selected ASC Surgical Procedures measure, with voluntary reporting in the CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination; and (2) adopt the Risk-Standardized Patient-Reported Outcome-Based Performance Measure (PRO–PM) Following Elective Primary Total Hip Arthroplasty (THA) and/or Total Knee Arthroplasty (TKA) in the ASC Setting (THA/TKA PRO–PM), with voluntary reporting beginning with the CYs 2025 and 2026 reporting periods followed by mandatory reporting beginning with the CY 2027 reporting period/CY 2030 payment determination.

We discuss each of these measures, along with the public comments that we received on them, in subsequent sections.

a. Proposed ASC Facility Volume Data on Selected ASC Surgical Procedures Measure With Modification Beginning With the Voluntary CY 2025 Reporting Period Followed by Mandatory Reporting Beginning With the CY 2026 Reporting Period/CY 2028 Payment Determination

(1) Background

Hospital care has been gradually shifting from inpatient to outpatient settings.[556] Further, research indicates that volume of services performed in ASCs will continue to grow, with some estimates projecting a 25 percent increase in patients between 2019 and 2029.[557] In addition, as further discussed herein, larger facility surgical procedure volume may be associated with better outcomes due to having characteristics that improve care, such as efficient team work and increased surgical experience.[558] In light of these trends in facility volume and more recent studies finding that volume is an indicator of quality, it is now especially important to track volume within ASCs, as it could provide valuable insight into the quality of ASCs' services for CMS and patients.

Although measuring the volume of procedures and other services has a long history as a quality metric, quality measurement efforts had moved away from collecting and analyzing data on volume because some considered volume simply a proxy for quality compared to directly measuring outcomes.[559] However, experts on quality and safety have recently suggested that, while volume may not alone indicate better outcomes, it is still an important component of quality.[560] [561] [562] Specifically, larger facility surgical procedure volume may be associated with better outcomes due to having characteristics that improve care.[563] For example, high-volume facilities may have teams that work more effectively together, or have superior systems or programs for identifying and responding to complications.[564] This association between volume and patient outcomes may be attributable to greater experience or surgical skill, greater comfort with and, hence, higher likelihood of application of standardized best practices, and increased experience in monitoring and management of surgical patients for the particular procedure.

The ASCQR Program does not currently include a quality measure for facility-level volume data, including surgical procedure volume data, but did so previously. In the CY 2012 OPPS/ASC final rule with comment period (76 FR 74507 through 74509), we adopted the ASC Facility Volume Data on Selected ASC Surgical Procedures (ASC Procedure Volume) measure beginning with the CY 2015 payment determination. This structural measure of facility capacity collected surgical procedure volume data on seven categories [565] of procedures frequently performed in the ASC setting: Gastrointestinal, Eye, Nervous System, Musculoskeletal, Skin, Respiratory, and Genitourinary.[566] We adopted the ASC Procedure Volume measure based on evidence that the volume of surgical procedures, particularly of high-risk surgical procedures, is related to better patient outcomes, including decreased mortality (76 FR 74507).[567] [568] We further stated our belief that publicly reporting volume data would provide patients with beneficial information to use when selecting a care provider (76 FR 74507).

In the CY 2018 OPPS/ASC final rule with comment period (82 FR 59449 and 59450), we stated our belief at that time that other measures in the ASCQR Program on specific procedure types, such as the Unplanned Anterior Vitrectomy measure, could provide patients with more valuable ASC quality of care information than the ASC Procedure Volume measure. Thus, we removed the ASC Procedure Volume measure beginning with the CY 2019 payment determination based on the availability of other measures that are ''more strongly associated with desired patient outcomes for the particular topic'' (currently Factor 6 in our regulation at § 416.320(c)(2)(vi)) (82 FR 59449).

[565] At the time of this measure's initial adoption in the CY 2012 OPPS/ASC final rule (76 FR 74509), we finalized that ASCs would report all-patient volume data with respect to six categories: Gastrointestinal, Eye, Nervous System, Musculoskeletal, Skin, and Genitourinary. The seventh category ''Respiratory'' was added following this measure's adoption. This measure collected data ranging from six to eight procedural categories while incorporated in the ASCQR Program.

However, a commenter who opposed the removal of the ASC Procedure Volume measure at the time emphasized the measure data's usefulness for comparative research, outcomes research, immediate consumer value, and strategic planning (82 FR 59449). One commenter also expressed concern that non-availability of these data would interfere with the acceptance of ASC-based procedures, asserting that this measure helps to demonstrate the value of ASC-based procedures (82 FR 59449). These commenters further noted that the measure was not overly burdensome and, therefore, should not be removed (82 FR 59449). At the time, while we recognized the value of the measure and these concerns, we believed, overall, that the administrative burden and maintenance costs associated with this measure outweighed the benefits of keeping the measure in the ASCQR Program (82 FR 59449 and 59450).

In the CY 2023 OPPS/ASC final rule with comment period (87 FR 72127 through 72130), we stated that we have been considering re-adopting the ASC Procedure Volume measure for two reasons. First, since the removal of the ASC Procedure Volume measure, scientific literature has concluded that volume serves as an indicator of which facilities are experienced with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care.[569] Further supporting this position that volume metrics are an indicator of quality, one study found an inverse volume–mortality relationship related to transfemoral transcatheter aortic-valve replacement (TAVR) procedures performed from 2015 through 2017.[570] Second, as discussed above, the recent shift of more surgical procedures being performed in outpatient settings has placed greater importance on tracking the volume of outpatient procedures in different settings, including ASCs. We believe that patients and their caregivers may benefit from the public reporting of facility-level volume measure data because the volume data illuminate which procedures are performed across ASCs, provide the ability to track volume changes by facility and procedure category, and can serve as an indicator for patients of which facilities are experienced with certain outpatient procedures. The ASC Procedure Volume measure was the only measure in the ASCQR Program measure set that captured facility-level volume within ASCs for both Medicare beneficiaries and non-Medicare patients. As a result of this measure's removal in the CY 2018 OPPS/ASC final rule, the ASCQR Program currently does not capture outpatient surgical procedure volume in ASCs.

In response to our request for comment in the CY 2023 OPPS/ASC proposed rule (87 FR 44748 through 44750) regarding the potential inclusion of a volume measure in the ASCQR Program, a few commenters suggested that we can determine facility volumes for procedures performed using Medicare Fee-For-Service (FFS) claims (87 72129 and 72130). However, we note that the ASC Procedure Volume measure included the submission of both Medicare and non-Medicare volume data; thus, relying solely on the use of Medicare FFS claims data to simplify reporting would limit a future volume measure to only the Medicare program payer, leading to an incomplete representation of ASCs' procedural volume.[571]

Additionally, in response to our request for comment in the CY 2023 OPPS/ASC proposed rule (87 FR 44748 through 44750), a few commenters stated that they believe there is a lack of evidence supporting the correlation between volume and quality as meaningful (87 FR 72129 and 72130). However, many studies in recent years have shown that volume does serve as an indicator of quality of care.[572] [573] For example, studies published since the CY 2018 OPPS/ASC final rule with comment period found that patients at high volume hospitals for a specific procedure had lower rates of surgical site infections, complications, and mortality compared to patients at low-volume hospitals.[574] [575] We reiterate our belief, grounded in this published scientific literature, that volume metrics serve as an indicator of which facilities are experienced with certain outpatient procedures and assist consumers in making informed decisions about where they receive care.[576] [577]

(2) Overview of Measure

(a) Data Collection, Submission, Reporting, and Measure Specifications

In the CY 2024 OPPS/ASC proposed rule (88 FR 49812), we noted that the ASC Procedure Volume measure, if re-adopted with the modifications discussed below, would collect data regarding the aggregate count of selected surgical procedures. Most ASC procedures fall into one of eight categories: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, and Skin.[578] Under the proposed measure, data surrounding the top five most frequently performed procedures among ASCs in each category would be collected and publicly displayed. The top five procedures in each category would be assessed and updated annually as needed to ensure data collection of most accurate and frequently performed procedures.[579]

We also proposed that ASCs would submit aggregate-level data through the CMS web-based tool (currently the Hospital Quality Reporting (HQR) system), consistent with what was required during the measure's initial adoption (76 FR 74508). Data received through the HQR system would then be publicly displayed on the *data.cms.gov* website or another CMS website. We refer readers to § 416.315 for our codified policies regarding public

reporting of data under the ASCQR Program.

In the CY 2024 OPPS/ASC proposed rule (88 FR 49812), we proposed to re-adopt the ASC Procedure Volume measure with modification, with voluntary reporting beginning with the CY 2025 reporting period followed by mandatory reporting beginning with CY 2026 reporting period/CY 2028 payment determination. At the time of this measure's initial adoption in the CY 2012 OPPS/ASC final rule with comment period (76 FR 74509), we finalized that ASCs would report all-patient volume data with respect to six categories: Gastrointestinal, Eye, Nervous System, Musculoskeletal, Skin, and Genitourinary. The first modification of this previously adopted measure that we proposed is that the ASC Procedure Volume measure data collection will cover eight categories: Cardiovascular, Eye, Gastrointestinal, Genitourinary, Musculoskeletal, Nervous System, Respiratory, and Skin. Furthermore, in response to commenter concerns regarding potential difficulty detecting procedural volume differentiation among these broad-based categories (76 FR 74508), the second modification to this measure that we proposed is that, instead of collecting and publicly displaying data surrounding these eight broad categories, we would more granularly collect and publicly display data reported for the top five most frequently performed procedures among ASCs within each category. We refer readers to the Center for Medicare and Medicaid Services Inventory Tool for more information on this measure: *https://cmit.cms.gov/cmit/#/MeasureView?variantId=11740&sectionNumber=1.*

In the CY 2024 OPPS/ASC proposed rule (88 FR 49813), we also proposed that ASCs submit these data to CMS during the time period of January 1 through May 15 in the year prior to the affected payment determination year. For example, for the CY 2028 payment determination, the data submission period would be January 1, 2027, to May 15, 2027, covering the performance period of January 1, 2026, to December 31, 2026. We refer readers to section XV.D.1.c of this final rule with comment period for a more detailed discussion of the requirements for data submitted via a CMS online web-based tool. We previously codified our existing policies regarding data collection and submission under the ASCQR Program at § 416.310.

(b) Review by the Measure Applications Partnership (MAP)

The MAP conditionally supported the ASC Procedure Volume measure for rulemaking, pending testing indicating that the measure is reliable and valid, and endorsement by a CBE.[580] Additionally, the MAP noted that electronic reporting of procedure volumes based on code lists should not be overly burdensome to ASCs, and the public reporting of specific procedure volumes may be useful to patients.

The MAP members expressed differing views on the value of volume data to patients. Specifically, the MAP members representing patients stated the measure would be useful to patients as they decide where to seek care, as one data point along with others (for example, advice from providers). However, other MAP members expressed concern about the value of volume data for informing patient decisions without other context and encouraged the use of outcome measures instead.[581]

As discussed above, we reiterate that various studies have found that there is a well-established positive correlation between the volume of procedures performed at a facility and the clinical outcomes resulting from that procedure. For instance, a recent systematic review highlighted by the MAP found a significant volume-outcome relationship in the vast majority (87 percent) of the 403 studies analyzed.[582] The MAP noted a similar review focused on outpatient surgeries that similarly found a significant volume-outcome relationship across eight studies.[583]

The MAP stated that this measure addresses a national trend in which surgeries are moving from hospital inpatient settings to ASCs, and that public reporting of this measure could help CMS and the public better understand differences in the quality of care provided at facilities.[584] The MAP reported that ASC Procedure Volume measure data from 2015 and 2016 demonstrates variation in performance in the number of procedures performed by facilities in the 25th and 75th percentiles across the condition categories.[585] These findings support our belief, grounded in additional published scientific literature, that volume metrics serve as an indicator of which facilities are experienced with certain outpatient procedures and can assist consumers in making informed decisions about where they receive care.[586] [587]

In addition, the MAP noted the concurrent submission of MUC (Measures Under Consideration) 2022–030: Hospital Outpatient Department Volume Data on Selected Outpatient Surgical Procedures for inclusion in the Hospital Outpatient Quality Reporting (OQR) Program.[588] The MAP highlighted that the specifications of the volume measure proposed for the Hospital OQR Program are aligned with the volume measure we proposed for the ASCQR Program and, therefore, would facilitate comparisons of equivalent procedure volumes across ASCs and hospital outpatient departments (HOPDs), one of the key goals of the Hospital OQR and ASCQR Programs.

(c) Measure Endorsement

As discussed in the previous subsection of this final rule with comment period, the MAP reviewed and conditionally supported the ASC Procedure Volume measure pending testing indicating the measure is reliable and valid, and endorsement by a national CBE as the measure was not submitted for endorsement. We have noted in previous rulemaking (76 FR

74494) the requirement that measures reflect consensus among affected parties can be achieved in other ways aside from endorsement by a national CBE, including through the measure development process, through broad acceptance, use of the measure(s), and through public comment.

We considered the MAP's recommendation and proposed to re-adopt the measure because we did not find any other measures of procedure volume and this measure was previously used in the ASCQR Program, with supporters of its use. Given the support from the MAP and feedback from public comment, as well as the increasing shift from inpatient to outpatient surgical procedures and evidence that volume metrics can promote higher quality healthcare for patients, in the CY 2024 OPPS/ASC proposed rule (88 FR 49811 through 49813), we proposed the re-adoption of this measure, with modification, in the ASCQR Program pending endorsement from a national CBE.

We invited public comment on the proposal.

Comment: Several commenters expressed support for our proposal to re-adopt with modification the ASC Procedure Volume measure beginning with the voluntary CY 2025 reporting period followed by mandatory reporting beginning with the CY 2026 reporting period/CY 2028 payment determination. Some of these commenters expressed that this measure provides valuable insights about quality of care and supports consumer decision-making. Some commenters expressed support for the measure's more granular reporting at the procedure level for the five most frequently occurring procedures in each of the clinical categories.

Response: We thank the commenters for their support. Although we are not re-adopting the ASC Procedure Volume measure at this time, we agree that this measure provides valuable insights into care quality and is supportive of consumer decision-making.

Comment: Many commenters did not support our proposal to re-adopt with modification the ASC Procedure Volume measure. Some of these commenters stated that there is a lack of evidence that surgical volume is an indicator of quality, specifically in the outpatient setting, and a few commenters stated that the measure does not align with CMS' Meaningful Measures 2.0 Framework for this reason. A few commenters cited evidence to support these beliefs, which indicates higher volume for transcatheter aortic valve replacement (TAVR) procedures is not an indicator of superior care quality.[589] [590]

Response: We disagree with these comments regarding whether volume can serve as an indicator of quality along with other quality information. We reiterate that recently published scientific literature supports the position that volume metrics can serve as an indicator of quality, denoting which facilities have experience with certain outpatient procedures, and can assist consumers in making informed decisions about where they receive care. Furthermore, a study found that congestive heart failure (CHF) patients who stayed in hospitals with more experience in managing CHF received higher quality care and experienced better outcomes.[591] Referencing commenter concern of a lack of evidence that surgical volume is an indicator of quality, specifically in the outpatient setting, in the CY 2024 OPPS/ASC proposed rule (88 FR 49812), we cited a study, which found that patients who had total hip arthroplasties performed at high-volume hospitals had lower rates of surgical site infections, complications, and mortality compared to patients at low-volume hospitals.[592] In the CY 2021 OPPS/ASC final rule (85 FR 86146), we announced that THA and TKA procedures were removed from the Inpatient Only Procedures (IPO) list, leading to a shift in THA procedures in ASCs. We believe these studies, linking volume to quality of care, aligns with the Meaningful Measures 2.0 Framework goal to use ''only high-quality measures impacting key quality domains.'' Although we are not re-adopting the ASC Procedure Volume measure at this time for the reasons discussed below, we will continue to assess such evidence to ensure alignment with our goals set forth in the Meaningful Measures 2.0 Framework.

We acknowledge the publication of recent research indicating that when patients were treated in high-volume hospitals versus those with best historical outcomes, there was no significant reduction in observed versus modeled adverse events.[593] [594] We believe these recent studies indicate that hospital variation in care metrics is important, but that it does not discount the conclusions of the studies mentioned above or address instances where facility volume is low. Given the potential association between volume and outcomes, we believe that volume information can be useful to patients and consumers. Although we are not re-adopting the ASC Procedure Volume measure at this time, given that there is a potential association between volume and outcome, we believe this measure provides transparency, including information about volume that may be informative to patients.

Comment: Some commenters did not support our proposal to re-adopt with modification the ASC Procedure Volume measure stating that there is a lack of evidence to support volume as a measure of quality in low-risk procedures. This commenter stated that volume literature focuses on high-risk surgical procedures, which are often not performed at ASCs.

Response: We acknowledge that much of the literature addresses the relationship of volume to outcomes in high-risk surgeries, which are less likely to be performed in ASCs. However, a recent meta-analysis showed that low volume hospitals were associated with higher surgical site infection rates, longer length of stay, higher 90-day complication rates, and higher 1-year mortality rates compared with high volume hospitals following Total Hip Arthroplasty (THA) procedures.[595] THA is considered a lower risk procedure and is often performed in ASCs. We note that while this study takes place in the hospital setting, the volume of THA and Total Knee Arthroplasty (TKA) procedures for Medicare beneficiaries aged 65 years and older have been increasing in ASCs. In the CY 2021 OPPS/ASC final rule with comment period (85 FR 86146), we announced

[595] Mufarrih, S.H., Ghani, M.O.A., Martins, R.S. et al. (2019) Effect of hospital volume on outcomes of total hip arthroplasty: a systematic review and meta-analysis. J Orthop Surg Res 14, 468. *https://doi.org/10.1186/s13018-019-1531-0.*

that THA and TKA procedures were removed from the Inpatient Only Procedures (IPO) list and added to the ASC covered procedures list (CPL), leading to a shift in THA procedures in both hospitals and ASCs.

Comment: Some commenters did not support our policy to re-adopt the ASC Procedure Volume measure due to the previous rationale for removing this measure: the availability of other measures that are ''more strongly associated with desired patient outcomes for the particular topic'' (currently Factor 6 in our regulation at § 416.320(c)(2)(vi)) (82 FR 59449).

Response: We acknowledge that, in the CY 2018 OPPS/ASC final rule with comment period (82 FR 59449 and 59450), we stated our belief, based on the then-available literature, that measures on specific procedure types would provide patients with more valuable ASC quality of care information as these types of measures are more strongly associated with desired patient outcomes. Thus, we removed the ASC Facility Volume measure under our second criterion for removal from the program; specifically, that there are other measures available that are more strongly associated with desired patient outcomes for the particular topic (82 FR 59449 and 59450). However, as we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49811 through 49813) and section XV.B.5.a(1) of this final rule with comment period, more recent studies support the use of volume as a quality-of-care indicator and we continue to believe that this information can be of benefit to Medicare beneficiaries and other consumers, especially when case volume is low.

Also, as we noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49811 through 49813) and section XV.B.5.a(1) of this final rule with comment period, the migration of procedures from the inpatient to the outpatient setting has since placed greater importance on tracking the volume of outpatient procedures. As we noted in the CY 2023 OPPS/ASC final rule, forty-five percent of percutaneous coronary intervention (PCI) procedures shifted from the inpatient to outpatient setting from 2004 to 2014, and more than 70 percent of patients who undergo thoracoscopic surgery can be discharged on the day of surgery itself due to the use of innovative techniques and technologies available in the outpatient setting (87 FR 72128). Given the relatively small number of HCPCS codes utilized by most ASCs, we believe that patients may benefit from the public reporting of facility-level volume measure data that illuminates which procedures are performed across ASCs, provides the ability to track volume changes by facility and procedure category, and can serve as an indicator for patients of which facilities are experienced with certain outpatient procedures. We believe that the increasing importance of volume metrics in the outpatient setting supports our proposal to re-adopt this measure with modification. Although we are not re-adopting the ASC Procedure Volume measure at this time, we recognize the increasing importance of volume in the ASC setting.

Comment: Many commenters did not support our proposal because they stated that they believe the potential administrative burden of the ASC Procedure Volume measure outweighs its potential value.

Response: The MAP noted that electronic reporting of procedure volumes based on code lists should not be overly burdensome to ASCs, and the public reporting of specific procedure volumes may be useful to patients. Furthermore, our estimates of burden indicated that each participating ASC would spend 10 minutes per year to submit the data for this measure to CMS, as noted in the CY 2024 OPPS/ASC proposed rule (88 FR 49875). We believe these collection efforts would not impose undue burden on ASCs.

In addition, this measure would further advance CMS' goal of transitioning to a fully digital quality measurement landscape and promoting interoperability while helping to decrease reporting burden in the long-term. We believe that the value of the measure would outweigh potential reporting burden. Although we are not re-adopting the ASC Procedure Volume measure at this time, we believe these collection efforts would not impose undue burden on ASCs.

Comment: Several commenters did not support our proposal because they believe the ASC Procedure Volume measure would lead to potential misuse through ''perverse incentives'' for providers to perform non-indicated procedures to increase procedural volume.
