

services, overdose cases, and driving under the influence of drugs (DUID) cases. Information provided by HHS-certified laboratories in 2023 indicated that a majority (84%) of the laboratories analyzed non-regulated workplace specimens for fentanyl and/or norfentanyl, and that all had the ability to analyze urine specimens for fentanyl with sufficiently sensitive detection limits using commercially available immunoassay kits and confirmatory test instrumentation commonly used in HHS-certified laboratories.

Proposed addition to HHS Drug Testing Panels as listed below:

Urine analyte	Initial test cutoff	Confirmation cutoff
Fentanyl	1 ng/mL	1.0 ng/mL.
Norfentanyl	1.0 ng/mL.
Oral fluid analyte	Initial test cutoff	Confirmation cutoff
Fentanyl	1 ng/mL	1.0 ng/mL.

The Department plans to remove MDA and methylenedioxy-methamphetamine (MDMA) from the drug testing panel, because the number of positive specimens reported by HHS-certified laboratories does not support testing all specimens for MDA and MDMA in Federal workplace drug testing programs. Information provided to the Department through the NLCP in 2021 and 2022 shows the positivity rate for MDMA ranges from 0.001 to 0.003%, and a review of the results indicate that >25% of the positive specimens are likely agency blind samples. MDA has a lower positivity rate than MDMA and both have lower positivity rates than phencyclidine (PCP). SAMHSA also considered removing PCP but decided against this change. While PCP has an overall positivity rate nearly as low as MDMA, there are regional differences in positivity, with some areas of the country having much higher rates, so PCP remains a regulated test analyte. Because MDA and MDMA are Schedule I drugs, a Federal agency may test specimens for these analytes in accordance with Section 3.2 of the UrMG and OFMG (*i.e.*, on a case-by-case basis for reasonable suspicion or post-accident testing, or routinely with a waiver from the Secretary).
