DEPARTMENT OF JUSTICE

28 CFR Part 35
(CRT Docket No. 144; AG Order No. 5919–2024)
RIN 1190–AA79

Nondiscrimination on the Basis of Disability; Accessibility of Web Information and Services of State and Local Government Entities

AGENCY: Civil Rights Division, Department of Justice.

ACTION: Final rule.

SUMMARY: The Department of Justice (“Department”) issues its final rule revising the regulation implementing title II of the Americans with Disabilities Act (“ADA”) to establish specific requirements, including the adoption of specific technical standards, for making accessible the services, programs, and activities offered by State and local government entities to the public through the web and mobile applications (“apps”).

DATES:
Effective date: This rule is effective June 24, 2024.

Compliance dates: A public entity, other than a special district government, with a total population of 50,000 or more shall begin complying with this rule April 26, 2026. A public entity with a total population of less than 50,000 or any public entity that is a special district government shall begin complying with this rule April 26, 2027.

Incorporation by reference: The incorporation by reference of certain material listed in the rule is approved by the Director of the Federal Register as of June 24, 2024.

FOR FURTHER INFORMATION CONTACT:
Rebecca B. Bond, Chief, Disability Rights Section, Civil Rights Division, U.S. Department of Justice, at (202) 307–0663 (voice or TTY). This is not a toll-free number. Information may also be obtained from the Department’s toll-free ADA Information Line at (800) 514–0301 (voice) or 1–833–610–1264 (TTY). You may obtain copies of this rule in an alternative format by calling the ADA Information Line at (800) 514–0301 (voice) or 1–833–610–1264 (TTY). This rule is also available on www.ada.gov.

SUPPLEMENTARY INFORMATION:

I. Executive Summary

A. Purpose of and Need for the Rule

Title II of the ADA provides that no qualified individual with a disability shall, by reason of such disability, be excluded from participation in or denied the benefits of the services, programs, or activities of a public entity. The Department has consistently made clear that the title II nondiscrimination requirements apply to all services, programs, and activities of public entities (also referred to as “government services”), including those provided via the web. It also includes those provided via mobile apps. In this rule, the Department establishes technical standards for web content and mobile app accessibility to give public entities greater clarity in exactly how to meet their ADA obligations and to help ensure equal access to government services for individuals with disabilities.

Public entities are increasingly providing the public access to government services through their web content and mobile apps. For example, government websites and mobile apps often allow the public to obtain information or correspond with local officials without having to wait in line or be placed on hold. Members of the public can also pay fines, apply for State benefits, renew State-issued identification, register to vote, file taxes, obtain up-to-date health and safety resources, request copies of vital records, access mass transit schedules, and complete numerous other tasks via government websites. Individuals can perform many of these same functions on mobile apps. Often, however, State and local government entities’ web- and mobile app-based services are not designed or built accessibly and as a result are not equally available to individuals with disabilities. Just as stairs can exclude people who use wheelchairs from accessing government buildings, inaccessible web content and mobile apps can exclude people with a range of disabilities from accessing government services.

It is critical to ensure that individuals with disabilities can access important web content and mobile apps quickly, easily, independently, privately, and equally. Accessible web content and mobile apps help to make this possible. By allowing individuals with disabilities to engage more fully with their governments, accessible web content and mobile apps also promote the equal enjoyment of fundamental constitutional rights, such as rights with respect to speech, assembly, association, petitioning, voting, and due process of law.

Accordingly, the Department is establishing technical requirements to provide concrete standards to public entities on how to fulfill their obligations under title II to provide equal access to all of their services, programs, and activities that are provided via the web and mobile apps. The Department believes, and public comments have reinforced, that the requirements described in this rule are necessary to assure “equality of opportunity, full participation, independent living, and economic self-sufficiency” for individuals with disabilities, as set forth in the ADA.

B. Legal Authority

On July 26, 1990, President George H.W. Bush signed into law the ADA, a comprehensive civil rights law prohibiting discrimination on the basis of disability. Title II of the ADA, which this rule addresses, applies to State and local government entities. Title II extends the prohibition on discrimination established by section 504 of the Rehabilitation Act of 1973 (“Rehabilitation Act”), as amended, 29 U.S.C. 794 (“section 504”), to all activities of State and local government entities regardless of whether the entities receive Federal financial assistance. Part A of title II protects qualified individuals with disabilities from discrimination on the basis of disability in services, programs, and activities of State and local government entities. Section 204(a) of the ADA directs the Attorney General to issue regulations implementing part A of title II but exempts matters within the scope of the authority of the Secretary of Transportation under section 223, 229, or 244.

The Department is the only Federal agency with authority to issue regulations under title II, part A, of the ADA regarding the accessibility of State and local government entities’ web content and mobile apps. In addition, under Executive Order 12250, the Department is responsible for ensuring consistency and effectiveness in the implementation of section 504 across the Federal Government (aside from provisions relating to equal
employment). Given Congress’s intent for parity between section 504 and title II of the ADA, the Department must also ensure the consistency of any related agency interpretations of those provisions. The Department, therefore, also has a lead role in coordinating interpretations of section 504 (again, aside from provisions relating to equal employment), including its application to web content and mobile apps, across the Federal Government.

**C. Organization of This Rule**

Appendix D to 28 CFR part 35 provides a section-by-section analysis of the Department’s changes to the title II regulation and the reasoning behind those changes, in addition to responses to public comments received on the notice of proposed rulemaking (“NPRM”). The section of appendix D entitled “Public Comments On Other Issues in Response to NPRM” discusses public comments on several issues that are not otherwise specifically addressed in the section-by-section analysis. The Final Regulatory Impact Analysis (“FRIA”) and Final Regulatory Flexibility Analysis (“FRFA”) accompanying this rulemaking both contain further responses to comments relating to those analyses.

**D. Overview of Key Provisions of This Final Rule**

In this final rule, the Department adds a new subpart H to the title II ADA regulation, 28 CFR part 35, that sets forth technical requirements for ensuring that web content that State and local government entities provide or make available, directly or through contractual, licensing, or other arrangements, is readily accessible to and usable by individuals with disabilities. Web content is defined by § 35.104 to mean the information and sensory experience to be communicated to the user by means of a user agent (e.g., a web browser), including code or markup that defines the content’s structure, presentation, and interactions. This includes text, images, sounds, videos, controls, animations, and conventional electronic documents. Subpart H also sets forth technical requirements for ensuring the accessibility of mobile apps that a public entity provides or makes available, directly or through contractual, licensing, or other arrangements.

The Department adopts an internationally recognized accessibility standard for web access, the Web Content Accessibility Guidelines (“WCAG”) 2.1 published in June 2018, https://www.w3.org/TR/2018/REC-WCAG21-20180605/ and https://perma.cc/UBBA-GG2F, as the technical standard for web content and mobile app accessibility under title II of the ADA. As will be explained in more detail, the Department is requiring that public entities comply with the WCAG 2.1 Level AA success criteria and conformance requirements. The applicable technical standard will be referred to hereinafter as “WCAG 2.1.” The applicable conformance level will be referred to hereinafter as “Level AA.”

### TABLE 1—COMPLIANCE DATES FOR WCAG 2.1 LEVEL AA

<table>
<thead>
<tr>
<th>Public entity size</th>
<th>Compliance date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fewer than 50,000 persons/special district governments</td>
<td>Three years after publication of the final rule.</td>
</tr>
<tr>
<td>50,000 or more persons</td>
<td>Two years after publication of the final rule.</td>
</tr>
</tbody>
</table>

In addition, the Department has set forth exceptions from compliance with the technical standard required under § 35.200 for certain types of content, which are described in detail below in the section-by-section analysis. If the content falls under an exception, that means that the public entity generally does not need to make the content conform to WCAG 2.1 Level AA. To the extent there are differences between WCAG 2.1 Level AA and the standards articulated in this rule, the standards articulated in this rule prevail. As noted below, WCAG 2.1 Level AA is not restated in full in this final rule but is instead incorporated by reference.

In recognition of the challenges that small public entities may face with respect to resources for implementing the new requirements, the Department has staggered the compliance dates for public entities according to their total population. This final rule in § 35.200(b)(1) specifies that a public entity, other than a special district government, with a total population of 50,000 or more must ensure that web content and mobile apps that the public entity provides or makes available, directly or through contractual, licensing, or other arrangements, comply with WCAG 2.1 Level AA success criteria and conformance requirements beginning two years after the publication of this final rule. Under § 35.200(b)(2), a public entity with a total population of less than 50,000 must comply with these requirements beginning three years after the publication of this final rule. In addition, under § 35.200(b)(2), all special district governments have three years following the publication of this final rule before they must begin complying with these requirements. After the compliance date, ongoing compliance with this final rule is required.

As will be explained more fully, the Department has set forth five specific exceptions from compliance with the technical standard required under § 35.200: (1) archived web content; (2) labeled Level A as well as those labeled Level AA, in addition to satisfying the relevant conformance requirements.

---

7 E.O. 12250 secs. 1–201(c), 1–503 (Nov. 2, 1980), 45 FR 72989, 72995, 72997 (Nov. 4, 1980).
10 Copyright© 2023 W3C®. This document includes material copied from or derived from https://www.w3.org/TR/2018/REC-WCAG21-20180605/ and https://perma.cc/UBBA-GG2F. As explained elsewhere, WCAG 2.1 was updated in 2023, but this rule requires conformance to the 2018 version.
11 The Permalink used for WCAG 2.1 throughout this rule states the 2018 version of WCAG 2.1 as it appeared on W3C’s website at the time the NPRM was published.
12 As explained in more detail under “WCAG Conformance Level” in the section-by-section analysis of § 35.200 in appendix D, conformance to Level AA requires satisfying the success criteria.
WCAG 2.1 defines it, a conforming alternate version is a separate version of web content that is accessible, up to date, contains the same information and functionality as the inaccessible web content, and can be reached in particular ways, such as through a conforming page or an accessibility-supported mechanism. However, the Department is concerned that WCAG 2.1 could be interpreted to permit a segregated approach and a worse experience for individuals with disabilities. The Department also understands that, in practice, it can be difficult to maintain conforming alternate versions because it is often challenging to keep two different versions of web content up to date. For these reasons, as discussed in the section-by-section analysis of § 35.202, conforming alternate versions are permissible only when it is not possible to make web content directly accessible due to technical or legal limitations. Also, under § 35.203, the final rule allows a public entity flexibility to show that its use of other designs, methods, or techniques as alternatives to WCAG 2.1 Level AA provides substantially equivalent or greater accessibility and usability of the web content or mobile app. Nothing in this final rule prohibits an entity from going above and beyond the minimum accessibility standards this rule sets out.

Additionally, the final rule in §§ 35.200(b)(1) and (2) and 35.204 explains that conformance to WCAG 2.1 Level AA is not required under title II of the ADA to the extent that such conformance would result in a fundamental alteration in the nature of a service, program, or activity of the public entity or in undue financial and administrative burdens.

The final rule also explains in § 35.205 the limited circumstances in which a public entity that is not in full compliance with the technical standard will be deemed to have met the requirements of § 35.200. As discussed further in the section-by-section analysis of § 35.205, a public entity will be deemed to have satisfied its obligations under § 35.200 in the limited circumstances in which the public entity can demonstrate that its nonconformance to the technical standard has such a minimal impact on access that it would not affect the ability of individuals with disabilities to use the public entity’s web content or mobile app to access the same information, engage in the same interactions, conduct the same transactions, and otherwise participate in or benefit from the same services, programs, and activities as individuals without disabilities, in a manner that provides substantially equivalent timeliness, privacy, independence, and ease of use.

More information about these provisions is provided in the section-by-section analysis.

E. Summary of Costs and Benefits

To estimate the costs and benefits associated with this rule, the Department conducted a FRIA. This analysis is required for significant regulatory actions under Executive Order 12866, as amended. The FRIA serves to inform the public about the rule’s costs and benefits to society, taking into account both quantitative and qualitative costs and benefits. A detailed summary of the FRIA is included in Section IV of this preamble. Table 2 below shows a high-level overview of the Department’s monetized findings. Further, this rule will benefit individuals with disabilities uniquely and in their day-to-day lives in many ways that could not be quantified due to unavailable data. Non-monetized costs and benefits are discussed in the FRIA.

Comparing annualized costs and benefits of this rule, monetized benefits to society outweigh the costs. Net annualized benefits over the first 10 years following publication of this rule total $1.9 billion per year using a 3 percent discount rate and $1.5 billion per year using a 7 percent discount rate (Table 2). Additionally, beyond this 10-year period, benefits are likely to continue to accrue at a greater rate than costs because many of the costs are upfront costs and the benefits tend to have a delay before beginning to accrue.

To consider the relative magnitude of the estimated costs of this regulation, the Department compares the costs to revenues for public entities. Because calculating this ratio for every public entity would be impractical, the Department used the estimated average annualized cost compared to the average annual revenue by each public entity type. The costs for each public entity type and size are generally estimated to be below 1 percent of revenues (the one exception is small independent community colleges, for which the cost-to-revenue ratio is 1.05 percent and 1.10 percent using a 3 percent and 7 percent
II. Relationship to Other Laws

The ADA and the Department’s implementing regulation state that except as otherwise provided, the ADA shall not be construed to apply a lesser standard than title V of the Rehabilitation Act (29 U.S.C. 791) or its accompanying regulations.18 They further state that the ADA does not invalidate or limit the remedies, rights, and procedures of any other laws that provide greater or equal protection for the rights of individuals with disabilities or individuals associated with them.19

The Department recognizes that entities subject to title II of the ADA may also be subject to other statutes that prohibit discrimination on the basis of disability. Compliance with the Department’s title II regulation does not necessarily ensure compliance with other statutes and their implementing regulations. Title II entities are also obligated to fulfill the ADA’s title I requirements in their capacity as employers,20 and those requirements are distinct from the obligations under this rule.

Education is another context in which entities have obligations to comply with other laws imposing affirmative obligations regarding individuals with disabilities. The Department of Education’s regulations implementing the Individuals with Disabilities Education Act ("IDEA") and section 504 of the Rehabilitation Act include long-standing, affirmative obligations for covered schools to identify children with disabilities, and both require covered schools to provide a free appropriate public education.21 This final rule builds on, and does not supplant, those preexisting requirements. A public entity must continue to meet all of its existing obligations under other laws.

III. Background

A. ADA Statutory and Regulatory History

The ADA broadly protects the rights of individuals with disabilities in important areas of everyday life, such as in employment (title I), State and local government entities’ services, programs, and activities (title II, part A), transportation (title II, part B), and places of public accommodation (title III). The ADA requires newly designed and constructed or altered State and local government entities’ facilities, public accommodations, and commercial facilities to be readily accessible to and usable by individuals with disabilities.22 Section 204(a) of title II and section 306(b) of title III of the ADA direct the Attorney General to promulgate regulations to carry out the provisions of titles II and III, other than certain provisions dealing specifically with transportation.23 Title II, part A, applies to State and local government entities and protects qualified individuals with disabilities from discrimination on the basis of disability in services, programs, and activities of State and local government entities.

On July 26, 1991, the Department issued its final rules implementing title II and title III, which are codified at 28 CFR part 35 (title II) and part 36 (title III).24 and include the ADA Standards for Accessible Design ("ADA Standards").25 At that time, the web was in its infancy—and mobile apps did not exist—so State and local government entities did not use either the web or mobile apps as a means of providing services to the public. Thus, web content and mobile apps were not mentioned in the Department’s title II regulation. Only a few years later, however, as web content of general interest became available, public entities began using web content to provide information to the public. Public entities and members of the public also now rely on mobile apps for critical government services.

B. History of the Department’s Title II Web-Related Interpretation and Guidance

The Department first articulated its interpretation that the ADA applies to websites of covered entities in 1996.26 Under title II, this includes ensuring that individuals with disabilities are
not, by reason of such disability, excluded from participation in or denied the benefits of the services, programs, or activities offered by State and local government entities, including those offered via the web, such as education services, voting, town meetings, vaccine registration, tax filing systems, applications for housing, and applications for benefits.\(^{27}\)

The Department has since reiterated this interpretation in a variety of online contexts.\(^{28}\) Title II of the ADA also applies when public entities use mobile apps to offer their services, programs, or activities.

As with many other statutes, the ADA’s requirements are broad and its implementing regulations do not include specific standards for every obligation under the statute. This has been the case in the context of web accessibility under the ADA. Because the Department had not previously adopted specific technical requirements for web content and mobile apps through rulemaking, public entities have not had specific direction on how to comply with the ADA’s general requirements of nondiscrimination and effective communication. However, public entities still must comply with these ADA obligations with respect to their web content and mobile apps, including before this rule’s effective date.

The Department has consistently heard from members of the public—including public entities and individuals with disabilities—that there is a need for additional information on how to specifically comply with the ADA in this context. In June 2003, the Department published a document entitled “Accessibility of State and Local Government websites to People with Disabilities,” which provides tips for State and local government entities on ways they can make their websites accessible so that they can better ensure that individuals with disabilities have equal access to the services, programs, and activities that are provided through those websites.\(^{29}\)

In March 2022, the Department released additional guidance addressing web accessibility for individuals with disabilities.\(^{30}\) This guidance expanded on the Department’s previous ADA guidance by providing practical tips and resources for making websites accessible for both title II and title III entities. It also reiterated the Department’s longstanding interpretation that the ADA applies to all services, programs, and activities of covered entities, including when they are offered via the web.

The Department’s 2003 guidance on State and local government entities’ websites noted that “an agency with an inaccessible website may also meet its legal obligations by providing an alternative accessible way for citizens to use the programs or services, such as a staffed telephone information line,” while also acknowledging that this is unlikely to provide an equal degree of access.\(^{31}\) The Department’s March 2022 guidance did not include 24/7 staffed telephone lines as an alternative to accessible websites. Given the way the modern web has developed, the Department no longer believes 24/7 staffed telephone lines can realistically provide equal opportunity to individuals with disabilities. Websites—and often mobile apps—allow members of the public to get information or request a service within just a few minutes, and often to do so independently. Getting the same information or requesting the same service using a staffed telephone line takes more steps and may result in wait times or difficulty getting the information.

For example, State and local government entities’ websites may allow members of the public to quickly review large quantities of information, like information about how to register for government services, information on pending government ordinances, or instructions about how to apply for a government benefit. Members of the public can then use government websites to promptly act on that information by, for example, registering for programs or activities, submitting comments on pending government ordinances, or filling out an application for a government benefit. A member of the public could not realistically accomplish these tasks efficiently over the phone.

Additionally, a person with a disability who cannot use an inaccessible online tax form might have to call to request assistance with filling out either online or mailed forms, which could involve significant delay, added costs, and could require providing private information such as banking details or Social Security numbers over the phone without the benefit of certain security features available for online transactions. A staffed telephone line also may not be accessible to someone who is deafblind, or who may have combinations of other disabilities, such as a coordination issue impacting typing and an audio processing disability impacting comprehension over the phone. Finally, calling a staffed telephone line lacks the privacy of looking up information on a website. A caller needing public safety resources, for example, might be unable to access a private location to ask for help on the phone, whereas an accessible website would allow users to privately locate resources. For these reasons, the Department does not now believe that a staffed telephone line—even if it is offered 24/7—provides equal opportunity in the way that an accessible website can.

C. The Department’s Previous Web Accessibility-Related Rulemaking Efforts

The Department has previously pursued rulemaking efforts regarding web accessibility under title II. On July 26, 2010, the Department’s advance notice of proposed rulemaking (“ANPRM”) entitled “Non-Discrimination on the Basis of Disability; Accessibility of Web Information and Services of State and Local Government Entities and Public Accommodations” was published in the Federal Register.\(^{32}\) The ANPRM

\(^{27}\) See 42 U.S.C. 12112.

\(^{32}\) 75 FR 43460 (July 26, 2010).
announced that the Department was considering revising the regulations implementing titles II and III of the ADA to establish specific requirements for State and local government entities and public accommodations to make their websites accessible to individuals with disabilities.33 In the ANPRM, the Department sought information on various topics, including what standards, if any, it should adopt for web accessibility; whether the Department should adopt coverage limitations for certain entities, like small businesses; and what resources and services are available to make existing websites accessible to individuals with disabilities.34 The Department also requested comments on the costs of making websites accessible; whether there are effective and reasonable alternatives to make websites accessible that the Department should consider permitting; and when any web accessibility requirements adopted by the Department should become effective.35 The Department received approximately 400 public comments addressing issues germane to both titles II and III in response to the ANPRM. The Department later announced that it had decided to pursue separate rulemakings addressing web accessibility under titles II and III.36

On May 9, 2016, the Department followed up on its 2010 ANPRM with a detailed Supplemental ANPRM that was published in the Federal Register.37 The Supplemental ANPRM solicited public comment about a variety of issues regarding establishing technical standards for access under title II.38 The Department received more than 200 public comments in response to the title II Supplemental ANPRM.

On December 26, 2017, the Department published a document in the Federal Register withdrawing four rulemakings actions, including the titles II and III web rulemakings, stating that it was evaluating whether promulgating specific web accessibility standards through regulations was necessary and appropriate to ensure compliance with the ADA.39 The Department has also previously stated that it would continue to review its entire regulatory landscape and associated agenda, pursuant to the regulatory reform provisions of Executive Order 13771 and Executive Order 13777.40 Those Executive orders were revoked by Executive Order 13992 in early 2021.41

The Department is now reengaging in efforts to promulgate regulations establishing technical standards for web accessibility as well as mobile app accessibility for public entities. On August 4, 2023, the Department published an NPRM in the Federal Register as part of this rulemaking effort.42 The NPRM set forth the Department’s specific proposals and sought public feedback. The NPRM included more than 60 questions for public input.43 The public comment period closed on October 3, 2023.44 The Department received approximately 345 comments from members of the public, including individuals with disabilities, public entities, disability advocacy groups, members of the accessible technology industry, web developers, and many others. The Department also published a fact sheet describing the NPRM’s proposed requirements in plain language to help ensure that members of the public understood the rule and had an opportunity to provide feedback.45 In addition, the Department attended listening sessions with various stakeholders while the public comment period was open. Those sessions provided important opportunities to receive through an additional avenue the information that members of the public wanted to share about the proposed rule. The three listening sessions that the Department attended were hosted by the U.S. Small Business Administration (“SBA”) Office of Advocacy, the Association on Higher Education and Disability (“AHEAD”), and the Great Lakes ADA Center at the University of Illinois at Chicago, in conjunction with the ADA National Network. The sessions convened by the SBA Office of Advocacy and the Great Lakes ADA Center were open to members of the public. There were approximately 200 attendees at the SBA session and 380 attendees at the Great Lakes ADA Center session.46 The session with AHEAD included two representatives from AHEAD along with five representatives from public universities. The Department welcomed the opportunity to hear from public stakeholders. However, the Department informed attendees that these listening sessions did not serve as a substitute for submitting written comments during the notice and comment period.

D. Need for Department Action

1. Use of Web Content by Title II Entities

As public comments have reinforced, public entities regularly use the web to offer services, programs, or activities to the public.47 The web can often help public entities streamline their services, programs, or activities and disseminate important information quickly and effectively. For example, members of the public routinely make online service requests—from requesting streetlight repairs and bulk trash pickups to reporting broken parking meters—and can often check the status of those service requests online. Public entities’ websites also offer the opportunity for people to, for example, renew their vehicle registrations, submit complaints, purchase event permits, reserve public facilities, sign up for recreational activities, and pay traffic fines and property taxes, making some of these

otherwise time-consuming tasks relatively easy and expanding their availability beyond regular business hours. Access to these services via the web can be particularly important for those who live in rural communities and might otherwise need to travel long distances to reach government buildings.48

Many public entities use online resources to promote access to public benefits. People can use websites of public entities to file for unemployment or other benefits and find and apply for job openings. Applications for many Federal benefits, such as unemployment benefits and food stamps, are also available through State websites. Through the websites of State and local government entities, business owners can register their businesses, apply for occupational and professional licenses, bid on contracts to provide products and services to public entities, and obtain information about laws and regulations with which they must comply. The websites of many State and local government entities also allow members of the public to research and verify business licenses online and report unsavory business practices. People also rely on public entities’ websites to engage in civic participation. People can frequently watch local public hearings, find schedules for community meetings, or take part in live chats with government officials on the websites of State and local government entities. Many public entities allow voters to begin the voter registration process and obtain candidate information on their websites. Individuals interested in running for local public offices can often find pertinent information concerning candidate qualifications and filing requirements on these websites as well. The websites of public entities also include information about a range of issues of concern to the community and about how people can get involved in community efforts to improve the administration of government services.

Public entities are also using websites as an integral part of public education.49

Public schools at all levels, including public colleges and universities, offer programs, reading material, and classroom instruction through websites. Most public colleges and universities rely heavily on websites and other online technologies in the application process for prospective students; for housing eligibility and on-campus living assignments; for course registration and assignments; and for a wide variety of administrative and logistical functions in which students must participate. Similarly, in many public elementary and secondary school settings, teachers and administrators communicate via the web to parents and students about grades, assignments, and administrative matters.

As public comments on the NPRM have reinforced, access to the web has become increasingly important as a result of the COVID–19 pandemic, which shut down workplaces, schools, and in-person services, and forced millions of Americans to stay home for extended periods. In response, the American public increasingly turned to the web for work, activities, and learning.51 A study conducted in April 2021 found that 90 percent of adults reported the web was essential or important to them.52 Several commenters on the NPRM specifically highlighted challenges underscored by the COVID–19 pandemic such as the denial of access to safety information and pandemic-related services, including vaccination appointments. While important for everyone during the pandemic, access to web-based services took on heightened importance for people with disabilities, many of whom face a greater risk of COVID–19 exposure, serious illness, and death.53 A report by the National Council on Disability indicated that COVID–19 has had a disproportionately negative impact on the ability of people with disabilities to access healthcare, education, and employment, among other areas, making access to these opportunities via the web even more important.54 The Department believes that although many public health measures addressing the COVID–19 pandemic are no longer in place, there have been durable changes to State and local government entities’ operations and public preferences that necessitate greater access to online services, programs, and activities.

As discussed at greater length below, many public entities’ content is not fully accessible, which often means that individuals with disabilities are denied equal access to important services, programs, or activities.

2. Use of Mobile Applications by Title II Entities

This rule also covers mobile apps because public entities often use mobile apps to offer their services, programs, or activities to the public. Mobile apps are software applications that are downloaded and designed to run on mobile devices, such as smartphones and tablets.55 Many public entities use

---

52 According to the CDC, some people with disabilities “might be more likely to get infected or have severe illness because of underlying medical conditions, congregate living settings, or systemic health and social inequities. All people with serious underlying chronic medical conditions like chronic lung disease, a serious heart condition, or a weakened immune system seem to be more likely to get severely ill from COVID–19.” See Ctrs. for Disease Control and Prevention, People with Disabilities, https://www.cdc.gov/nhcddd/humandevelopment/covid-19/people-with-disabilities.html?CDC_AA_refVal=https%3A%2F%2Fwww.cdc.gov%2Fcoronavirus%2F2019-ncov%2Fprevention-extras%2Fpeople-with-disabilities.html [https://perma.cc/W7ZU-2EQ8].

54 Mobile apps are distinct from a website that can be accessed by a mobile device because, in part, mobile apps are not directly accessible on the web; they are often downloaded on a mobile device.

mobile apps to provide services and reach the public in various ways, including the purposes for which public entities use websites, in addition to others. For example, as with websites, residents can often use mobile apps provided or made available by public entities to submit service requests, such as requests to clean graffiti or repair a street-light outage, and track the status of these requests. Public entities’ apps often take advantage of common features of mobile devices, such as camera and Global Positioning System (“GPS”) functions, so individuals can provide public entities with a precise description and location of issues. These may include issues such as potholes, physical barriers created by illegal dumping or parking, or curb ramps that need to be fixed to ensure accessibility for some people with disabilities. Some public transit authorities have transit apps that use a mobile device’s GPS function to provide bus riders with the location of nearby bus stops and real-time arrival and departure times. In addition, public entities are also using mobile apps to assist with emergency planning for natural disasters like wildfires; provide information about local schools; and promote tourism, civic culture, and community initiatives. During the COVID–19 pandemic, when many State and local government entities’ offices were closed, public entities used mobile apps to inform people about benefits and resources, to provide updates about the pandemic, and as a means to show proof of vaccination status, among other things.

can be accessed on a desktop computer. Id. Both mobile apps and mobile websites are covered by this rule. 58 See IBM Ctr. for the Bus. of Gov’t, Using Mobile Apps in Government, at 11 (2015), https://www.businessofgovernment.org/sites/default/files/Using%20Mobile%20Apps%20In%20Government.pdf [https://perma.cc/248X-SA6C]. 57 Id. at 32. 56 See id. at 28–30–31. 55 See id. at 7–8. 59 See Roh Pegoraro, COVID–19 Tracking Apps, Supported by Apple and Google, Begin Showing Up in App Stores, USA Today, Aug. 25, 2020, https://www.usatoday.com/story/tech/columnist/2020/08/25/google-and-apple-supported-coronavirus-tracking-apps-land-states/3435214001 [https://perma.cc/YH8C-K2F9] (Aug. 26, 2020) (describing how various states’ apps allow contact tracing through anonymized data and can provide information about testing and other COVID–19 safety practices); Chandra Streile, Does My State Have a COVID–19 Vaccine App, PCMag, https://www.pcmag.com/how-to/does-my-state-have-a-covid-19-vaccine-app [https://perma.cc/H33B-MCWJ] (Feb. 27, 2023). 60 Id. See Section 2.2, “Number of Individuals with Disabilities,” in the accompanying FRIA for more information on the estimated prevalence of individuals with certain disabilities. 61 See W3C, Diverse Abilities and Barriers, https://www.w3.org/WAI/people-use-web/abilities-barriers [https://perma.cc/DXJ3-BTFW] (May 15, 2017). 62 See Large-Scale Analysis Finds Many Mobile Apps Are Inaccessible, Univ. of Washington CREATE (Mar. 1, 2021), create.uw.edu/initiatives/large-scale-analysis-finds-many-mobile-apps-are-inaccessible/ [https://perma.cc/44ZK-SBGC]. 63 Id. 64 Id. 65 This rule, the functionality of those buttons is not accessible for people who use screen readers. Additionally, other mobile apps may be inaccessible if they do not allow text resizing, which can provide larger text for people with vision disabilities. Furthermore, many websites and mobile apps provide information visually, without features that allow screen readers or other assistive technology to retrieve the information so it can be presented in an accessible manner. A common barrier to accessing assistive technology is an image or photograph without corresponding text ("alternative text" or "alt text") describing the image. Generally, a screen reader or similar assistive technology cannot "read" an image, leaving individuals who are blind with no way of independently knowing what information the image conveys (e.g., a simple icon or a detailed graph). Similarly, if websites lack headings that facilitate navigation using assistive technology, they may be difficult or impossible for someone using assistive technology to navigate. Additionally, websites or mobile apps may fail to present tables in a way that allows the information in the table to be interpreted by someone who is using assistive technology. Web-based forms, which are an essential part of accessing government services, are often inaccessible to individuals with disabilities who use assistive technology. For example, field elements on forms, which are the empty boxes on forms that receive input for specific pieces of information, such as a last name or telephone number, may lack clear labels that can be read by assistive technology. Inaccessible form fields make it difficult for people using assistive technology to fill out online forms, pay fees and fines, or otherwise participate in government services, programs, or activities using a website. Some governmental entities use inaccessible third-party websites and mobile apps to accept online payments, while others request public input through their own inaccessible websites and mobile apps. As commenters have emphasized, these barriers greatly impede the ability of individuals with
disabilities to access the services, programs, or activities offered by public entities via the web and mobile apps.

In many instances, removing certain web content and mobile app accessibility barriers is neither difficult nor especially costly. For example, the addition of invisible attributes known as alt text or alt tags to an image helps orient an individual using a screen reader and allows them to gain access to the information on the website.69 Alt text can be added to the coding of a website without any specialized equipment.70 Similarly, adding headings, which facilitate page navigation for those using screen readers, can often be done easily as well.71

Public comments on the NPRM described the lack of independence, and the resulting lack of privacy, that can stem from accessibility barriers. These commenters noted that without full and equal access to digital spaces, individuals with disabilities must constantly rely on support from others to perform tasks they could complete themselves if the online infrastructure enabled accessibility. Commenters noted that when using public entities’ inaccessible web content or mobile apps for interactions that involve confidential information, individuals with disabilities must forfeit privacy and independence to seek assistance. Commenters pointed out that constantly needing assistance from others not only impacts self-confidence and perceptions of self-worth, but also imposes a costly and burdensome “time tax” because it means that individuals with disabilities must spend more time and effort to gain access than individuals without disabilities.

Commenters also pointed out that accessible digital spaces benefit everyone. Just as the existence of curb cuts benefits people in many different scenarios—such as those using wheelchairs, pushing strollers, and using a trolley to deliver goods—accessible web content and mobile apps are generally more user friendly. For example, captioning is often used by individuals viewing videos in quiet public spaces and sufficient color contrast makes it generally easier to read text.

4. Inadequacy of Voluntary Compliance With Technical Standards

The web has changed significantly, and its use has become far more prevalent, since Congress enacted the ADA in 1990. The Department subsequently promulgated its first ADA regulations. Neither the ADA nor the Department’s regulations specifically addressed public entities’ use of web content and mobile apps to provide their services, programs, or activities. Congress contemplated, however, that the Department would apply title II, part A.72 Consistent with this approach, the Department stated in the preamble to the original 1991 ADA regulations that the regulations should be interpreted to keep pace with developing technologies.73

Since 1996, the Department has consistently taken the position that the ADA applies to the web content of State and local government entities. This interpretation comes from title II’s application to “all services, programs, and activities provided or made available by public entities.”74 The Department has affirmed the application of the statute to websites in multiple technical assistance documents over the past two decades.75 Further, the Department has repeatedly enforced this obligation and worked with State and local government entities to make their websites accessible, such as through Project Civic Access, an initiative to promote local governments’ compliance with the ADA by eliminating physical and communication barriers impeding full participation by people with disabilities in community life.76

State and local government entities have increasingly turned to mobile apps to offer services, programs, or activities, the Department has enforced those entities’ title II obligations in that context as well.77 A variety of voluntary standards and structures have been developed for the web through nonprofit organizations using multilateral collaborative efforts. For example, domain names are issued and administered through the Internet Corporation for Assigned Names and Numbers, the Internet Society publishes computer security policies, and the World Wide Web Consortium (‘‘W3C’’) develops a variety of technical standards and guidelines ranging from issues related to mobile devices and privacy to internationalization of technology. In the area of accessibility, the Web Accessibility Initiative (‘‘WAI’’) of W3C created the WCAG.

Many organizations, however, have indicated that voluntary compliance with these accessibility guidelines has not resulted in equal access for individuals with disabilities; accordingly, they have urged the Department to take regulatory action to ensure web content and mobile app accessibility.78 The National Council on Disability, an independent Federal agency that advises the President, Congress, and other agencies about programs, policies, practices, and procedures affecting people with disabilities, has similarly emphasized the need for regulatory action on this issue.79 The Department has also heard...
from State and local government entities and businesses asking for clarity on the ADA’s requirements for websites through regulatory efforts. Public commenters responding to the NPRM have also emphasized the need for regulatory action on this issue to ensure that public entities’ services, programs, and activities offered via the web and mobile apps are accessible, and have expressed that this rule is long overdue. In light of the long regulatory history and the ADA’s current general requirement to make all services, programs, and activities accessible, the Department expects that public entities have made strides to make their web content and mobile apps accessible since the 2010 ANPRM was published. Such strides have been supported by the availability of voluntary web content and mobile app accessibility standards, as well as by the Department’s clearly stated position—supported by judicial decisions—that all services, programs, and activities of public entities, including those available on websites, must be accessible. Still, as discussed above, individuals with disabilities continue to struggle to obtain access to

2006.pdf [https://perma.cc/7HW5-NF7P] (discussing how competitive market forces have not proven sufficient to provide individuals with disabilities access to telecommunications and information services); see also, e.g., Nat’l Council on Disability, National Disability Policy: A Progress Report: Executive Summary (Oct. 7, 2016), https://fileseric.ed.gov/fulltext/ED571832.pdf [https://perma.cc/Z93P-8LCZ] (urging the Department to adopt a web accessibility regulation).

81 See, e.g., Meyer v. Walthall, 528 F. Supp. 3d 928, 933 (S.D. S.D. 2017) (“The Court finds that Defendants’ websites constitute services or activities within the purview of Title II and section 504, requiring Defendants to provide effective access that individuals with a disability;”); Price v. City of Ocala, Fla., 375 F. Supp. 3d 1264, 1271 (M.D. Fla. 2019) (“Title II undoubtably applies to websites.”); Payan v. Los Angeles City. Coll. Dist., No. 2:17-CV-01697-SMW-SK, 2019 WL 9047062, at *12 (C.D. Cal. Apr. 23, 2019) (“The ability to sign up for classes on the website and to view important enrollment information is itself a service’ warranting protection under Title II and Section 504.”); Eason v. New York State Bd. of Educ., 16–CV–4292 (KBF), 2017 WL 6514837, at *1 (S.D.N.Y. Dec. 20, 2017) (stating, in a case involving a State’s website, that “Section 504 of the Rehabilitation Act and Title II of the Americans with Disabilities Act . . . long ago provided that the disabled are entitled to meaningful access to a public entity’s programs and services, just as buildings have architecture that can prevent meaningful access, so too can software.”); Hindert v. City of Denver, 835 F.3d 1063, 1067 (10th Cir. 2016) (“The Court finds that Plaintiffs have sufficiently established that Secretary Husted’s website violates Title II of the ADA because it is not accessible to all individuals, especially blind individuals like the Individual Plaintiffs whose screen access software cannot be used on the website.”).

87 Paperwork Reduction Act (“PRA”), 44 U.S.C. 3501 et seq.

89 See Office of Mgmt. and Budget, Circular A–4 (Sept. 17, 2003) (superseded by Office of Mgmt. and Budget, Circular A–4 (of Nov. 9, 2023)).
dates by which such web content and mobile apps must meet those standards. This rule is necessary to help public entities understand how to ensure that individuals with disabilities will have equal access to the services, programs, and activities that public entities provide or make available through their web content and mobile apps.

The Department has carefully crafted this final rule to better ensure the protections of title II of the ADA, while at the same time doing so in an economically efficient manner. After reviewing the Department’s assessment of the likely costs of this regulation, the Office of Management and Budget (“OMB”) has determined that it is a significant regulatory action within the meaning of Executive Order 12866, as amended. As such, the Department has undertaken a FRIA pursuant to Executive Order 12866. The Department has also undertaken a FRFA as specified in section 604(a) of the Regulatory Flexibility Act. The results of both of these analyses are summarized below. Lastly, the Department does not believe that this regulation will have any significant impact relevant to the Paperwork Reduction Act, the Unfunded Mandates Reform Act, or the federalism principles outlined in Executive Order 13132.

A. Final Regulatory Impact Analysis Summary

The Department has prepared a FRIA for this rulemaking. This rulemaking also contains a FRFA. The Department contracted with Eastern Research Group Inc. (“ERG”) to prepare this economic assessment. This summary provides an overview of the Department’s economic analysis and key findings in the FRIA. The full FRIA will be made available at https://www.justice.gov/crt/disability-rights-section.

Requiring State and local government entity web content and mobile apps to conform to WCAG 2.1 Level AA will result in costs for State and local government entities to remediate and maintain their web content and mobile apps to meet this standard. The Department estimates that 109,893 State and local government entity websites and 8,805 State and local government mobile apps will be affected by the rule. These websites and mobile apps provide services on behalf of and are managed by 91,489 State and local government entities that will incur these costs. These costs include one-time costs for familiarization with the requirements of the rule; testing, remediation, and operating and maintenance (“O&M”) costs for websites; testing, remediation, and school course remediation costs. The remediation costs include both time and software components.

Initial familiarization, testing, and remediation costs of the rule are expected to occur over the first two or three years until compliance is required and are presented in Table 3 (two years for large governments and three years for small governments). Annualized recurring costs after implementation are shown in Table 4. These initial and recurring costs are then combined to show total costs over the 10-year time horizon (Table 5 and Table 6) and annualized costs over the 10-year time horizon (Table 7 and Table 8).

Annualized costs over this 10-year period are estimated at $3.3 billion assuming a 3 percent discount rate and $3.5 billion assuming a 7 percent discount rate. This includes $16.9 billion in implementation costs accruing during the first three years (the implementation period), undiscounted, and $2.0 billion in annual O&M costs during the next seven years. All values are presented in 2022 dollars as 2023 data were not yet available.

Benefits will generally accrue to all individuals who access State and local government entity websites and mobile apps, and additional benefits will accrue to individuals with certain types of disabilities. The WCAG 2.1 Level AA standards for web content and mobile app accessibility primarily benefit individuals with vision, hearing, cognitive, and manual dexterity disabilities because accessibility standards are intended to address barriers that often impede access for people with these disability types.

Using the U.S. Census Bureau’s Survey of Income and Program Participation ("SIPP") 2022 data, the Department estimates that 5.5 percent of adults in the United States have a vision disability, 7.6 percent have a hearing disability, 11.3 percent have a cognitive disability, and 5.8 percent have a manual dexterity disability. Due to the incidence of multiple disabilities, the total share of people with one or more of these disabilities is 23.3 percent.

The Department monetized benefits for both people with these disabilities and people without disabilities. There are many additional benefits that have not been monetized due to lack of data availability. Benefits that cannot be monetized are discussed qualitatively. These non-quantified benefits are central to this rule’s potential impact as they include concepts inherent to any civil rights law—such as equality and dignity. Other impacts to individuals include increased independence, increased flexibility, increased privacy, reduced frustration, decreased reliance on companions, and increased program participation.

To consider the relative magnitude of the estimated costs of this regulation, the Department compares the costs to revenues for public entities. Because these individuals may have other types of disabilities, or they may be individuals without any disabilities at all.

calculating this ratio for every public entity would be impractical. The Department used the estimated average annualized cost compared to the average annual revenue by each government entity type. The costs for each government entity type and size are generally estimated to be below 1 percent of revenues (the one exception is small independent community colleges, for which the cost-to-revenue ratio is 1.05 percent and 1.10 percent using a 3 percent discount rate and a 7 percent discount rate, respectively), so the Department does not believe the rule will be unduly burdensome or costly for public entities. The Department received some comments on the proposed rule’s estimated costs and benefits. These comments are discussed throughout the FRIA. One methodological change was made from the analysis performed for the NPRM on the timing of compliance for making password-protected course content accessible by public educational entities, which is discussed further in the FRIA. However, the numbers in the FRIA also differ from the proposed rule because data have been updated to reflect the most recently available data and because monetary values are now reported in 2022 dollars (whereas the analysis performed for the NPRM presented values in 2021 dollars).

---

93 However, the Department notes that revenue for small independent community colleges was estimated using the 2012 Census of Governments, so revenue for small independent community colleges would likely be underestimated if small independent community colleges had a greater share of total local government revenue in 2022 than in 2012. If this were true, the Department expects that the cost-to-revenue ratio for small independent community colleges would be lower.

94 As a point of reference, the United States Small Business Administration advises agencies that a potential indicator that the impact of a regulation may be “significant” is whether the costs exceed 1 percent of the gross revenues of the entities in a particular sector, although the threshold may vary based on the particular types of entities at issue. See U.S. Small Bus. Admin., A Guide for Government Agencies: How To Comply with the Regulatory Flexibility Act, at 19 (Aug. 2017), https://advocacy.sba.gov/wp-content/uploads/2019/07/HOW-TO-COMPLY-WITH-THE-RFA.pdf [https://perma.cc/9XFZ-3EVA] (providing an illustrative example of a hypothetical analysis under the RFA in which, for certain small entities, economic impact of “[l]ess than 1% for all affected small entities” may be “[p]resumed” to have “no significant economic impact on a substantial number of small entities”).

B. Final Regulatory Flexibility Analysis Summary

The Department has prepared a FRFA to comply with its obligations under the Regulatory Flexibility Act and related laws and Executive Orders requiring executive branch agencies to consider the effects of regulations on small entities.95 The Department’s FRFA includes an explanation of steps that the Department has taken to minimize the impact of this rule on small entities, responses to a comment by the Chief Counsel for Advocacy of the Small Business Administration, a description of impacts of this rule on small entities, alternatives the Department considered related to small entities, and other information required by the RFA. The Department includes a short summary of some monetized cost and benefit findings made in the FRFA below, but the full FRFA will be published along with the Department’s FRIA, and it will be made available to the public at https://www.justice.gov/crt/disability-rights-section.

The Department calculated both costs and benefits to small government entities as part of its FRFA. The Department also compared costs to revenues for small government entities to evaluate the economic impact to these small government entities. The costs for each small government entity type and size are generally estimated to be below 1 percent of revenues (the one exception is small independent community colleges, for which the cost-to-revenue ratio is 1.05 percent and 1.10 percent using a 3 percent and 7 percent discount rate, respectively),96 so the Department does not believe the rule will be unduly burdensome or costly for public entities.97 These costs include one-time costs for familiarization with the requirements of the rule, the purchase of software to assist with remediation of web content or mobile apps, the time spent testing and remediating web content and mobile apps to comply with WCAG 2.1 Level AA, and elementary, secondary, and postsecondary education course content remediation. Annual costs include recurring costs for software licenses and remediation of future content.

Costs to small entities are displayed in Table 13 and Table 14; Table 15 contains the costs and revenues per government type and cost-to-revenue percent of the gross revenues of the entities in a particular sector, although the threshold may vary based on the particular types of entities at issue. See U.S. Small Bus. Admin., A Guide for Government Agencies: How To Comply with the Regulatory Flexibility Act, at 19 (Aug. 2017), https://advocacy.sba.gov/wp-content/uploads/2019/07/How-to-Comply-with-the-RFA-WEB.pdf [https://perma.cc/PW9L-Z7WE]; see also U.S. Env’t Prot. Agency, EPA’s Action Dev. Process: Final Guidance for EPA Rulewriters: Regulatory Flexibility Act, at 24 (Nov. 2006), https://www.epa.gov/sites/default/files/2015-06/documents/guidance-regflexact.pdf [https://perma.cc/NXFZ-3EVA] (providing an illustrative example of a hypothetical analysis under the RFA in which, for certain small entities, economic impact of “[l]ess than 1% for all affected small entities” may be “[p]resumed” to have “no significant economic impact on a substantial number of small entities”).

96 However, the Department notes that revenue for small independent community colleges was estimated using the 2012 Census of Governments, so revenue for small independent community colleges would likely be underestimated if small independent community colleges had a greater share of total local government revenue in 2022 than in 2012. If this were true, the Department expects that the cost-to-revenue ratio for small independent community colleges would be lower.
97 As a point of reference, the United States Small Business Administration advises agencies that a potential indicator that the impact of a regulation may be “significant” is whether the costs exceed 1 percent of the gross revenues of the entity in a particular sector, although the threshold may vary based on the particular types of entities at issue.
ratios using a 3 percent and 7 percent discount rate. Because the Department’s estimators take into account different small entity types and sizes, the Department believes the estimates in this analysis are generally representative of what smaller entities of each type should expect to pay. This is because the Department’s methodology generally estimated costs based on the sampled baseline accessibility to full accessibility in accordance with this rule, which provides a precise estimate of the costs within each government type and size. While the Department recognizes that there may be variation in costs for differently sized small entity types, the Department’s estimates are generally representative given the precision in our methodology within each stratified group. The Department received several comments on its estimates for small government entity costs. A summary of those comments and the Department’s responses are included in the accompanying FRFA.

</table>

Though not included in the Department’s primary benefits analysis due to methodological limitations, the Department estimated time savings for State and local government entities from reduced contacts (i.e., fewer interactions assisting residents). Improved web accessibility will lead some individuals who accessed government services via the phone, mail, or in person to begin using the public entity’s website to complete the task. This will generate time savings for government employees. In the Department’s FRFA, the Department estimates that this will result in time savings to small governments of $192.6 million per year once full implementation is complete. Assuming lower benefits during the implementation period results in average annualized benefits of $162.5 million and $158.1 million to small governments using a 3 percent and 7 percent discount rate, respectively. The Department notes that these benefits rely on assumptions for which the Department could not find reliable data, and stresses the uncertainty of these estimates given the strong assumptions made.

The Department explains in greater detail its efforts to minimize the economic impact on small entities, as well as estimates of regulatory alternatives that the Department considered to reduce those impacts in
the full FRFA accompanying this rule. The FRFA also includes other information such as the Department’s responses to the comment from the Chief Counsel for Advocacy of the Small Business Administration and responses to other comments related to the rule’s impact on small entities. Finally, the Department will issue a small entity compliance guide, which should help public entities better understand their obligations under this rule.

C. Executive Order 13132: Federalism

Executive Order 13132 requires executive branch agencies to consider whether a proposed rule will have federalism implications. That is, the rulemaking agency must determine whether the rule is likely to have substantial direct effects on State and local governments, on the relationship between the Federal Government and the States and localities, or on the distribution of power and responsibilities among the different levels of government. If an agency believes that a proposed rule is likely to have federalism implications, it must consult with State and local government entity officials about how to minimize or eliminate the effects.

Title II of the ADA covers State and local government entity services, programs, and activities, and, therefore, has federalism implications. State and local government entities have been subject to the ADA since 1991, and the many State and local government entities that receive Federal financial assistance have also been required to comply with the requirements of section 504 of the Rehabilitation Act. Hence, the ADA and the title II regulation are not novel for State and local government entities.

In crafting this regulation, the Department has been mindful of its obligation to meet the objectives of the ADA while also minimizing conflicts between State law and Federal interests. Since the Department began efforts to issue a web accessibility regulation more than 13 years ago, the Department has received substantial feedback from State and local government entities about the potential impacts of rulemaking on this topic. In the NPRM, the Department solicited comments from State and local officials and their representative national organizations on the rule’s effects on State and local government entities, and on whether the rule may have direct effects on the relationship between the Federal Government and the States, or the distribution of power and responsibilities among the various levels of government. The Department also attended three listening sessions on the NPRM hosted by the SBA’s Office of Advocacy, the Association on Higher Education and Disability, and the Great Lakes ADA Center at the University of Illinois at Chicago, in conjunction with the ADA National Network. These sessions were cumulatively attended by more than 500 members of the public, including representatives from public entities, and the Department received feedback during these sessions about the potential impacts of the rule on public entities.

In response to the NPRM, the Department received written comments from members of the public about the relationship between this rule and State and local laws addressing public entities’ web content and mobile apps. Some commenters asked questions and made comments about how this rule would interact with State laws providing greater or less protection for the rights of individuals with disabilities. The Department wishes to clarify that, consistent with 42 U.S.C. 12201, this final rule will preempt State laws affecting entities subject to the ADA only to the extent that those laws provide less protection for the rights of individuals with disabilities. This rule does not invalidate or limit the remedies, rights, and procedures of any State laws that provide greater or equal protection for the rights of individuals with disabilities. Moreover, the Department’s provision on equivalent facilitation at § 35.203 provides that nothing in this rule, provided that such alternatives result in substantially equivalent or greater accessibility and usability. Accordingly, for example, if a State law requires public entities in that State to conform to WCAG 2.2, nothing in this rule would prevent a public entity from complying with that standard.

The Department also received comments asking how this rule will interact with State or local laws requiring public entities to post certain content online. The Department notes that this rule does not change public entities’ obligations under State and local laws governing the types of content that public entities must provide or make available online. Instead, this rule simply requires that when public entities provide or make available web content or mobile apps, they must ensure that that content and those apps comply with the requirements set forth in this rule. This is consistent with the remainder of the title II regulatory framework, under which public entities have been required to ensure that their services, programs, and activities comply with specific accessibility requirements since 1991, even for services, programs, or activities that are otherwise governed by State and local laws.

D. National Technology Transfer and Advancement Act of 1995

The National Technology Transfer and Advancement Act of 1995 (‘‘NTTAA’’) directs that, as a general matter, all Federal agencies and departments shall use technical standards that are developed or adopted by voluntary consensus standards bodies, which are private—generally nonprofit—organizations that develop technical standards or specifications using well-defined procedures that require openness, balanced participation among affected interests and groups, fairness and due process, and an opportunity for appeal, as a means to carry out policy objectives or activities. In addition, the NTTAA directs agencies to consult with voluntary, private sector, consensus standards bodies and requires that agencies participate with such bodies in the development of technical standards when such participation is in the public interest and is compatible with agency and departmental missions, authorities, priorities, and budget resources.

The Department is adopting WCAG 2.1 Level AA as the accessibility standard to apply to web content and mobile apps of title II entities. WCAG 2.1 Level AA was developed by W3C, which has been the principal international organization involved in developing protocols and guidelines for the web. W3C develops a variety of technical standards and guidelines, including ones relating to privacy, internationalization of technology, and accessibility. Thus, the Department is complying with the NTTAA by adopting WCAG 2.1 Level AA as the applicable accessibility standard.

E. Plain Language Instructions

The Department makes every effort to promote clarity and transparency in its rulemaking. In any regulation, there is a tension between drafting language that is simple and straightforward and

100 Public Law 104–113, sec. 12(d)(2).
drafting language that gives full effect to issues of legal interpretation. The Department operates a toll-free ADA Information Line at (800) 514–0301 (voice); 1–833–610–1264 (TTY) that the public is welcome to call for assistance understanding anything in this rule. In addition, the ADA.gov website strives to provide information in plain language about the law, including this rule. The Department will also issue a small entity compliance guide,102 which should help public entities better understand their obligations under this rule.

F. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (“PRA”), no person is required to respond to a “collection of information” unless the agency has obtained a control number from OMB.103 This final rule does not contain any collections of information as defined by the PRA.

G. Unfunded Mandates Reform Act

Section 4(2) of the Unfunded Mandates Reform Act of 1995104 excludes from coverage under the Act any proposed or final Federal regulation that “establishes or enforces any statutory rights that prohibit discrimination on the basis of race, color, religion, sex, national origin, age, handicap, or disability.” Accordingly, this rulemaking is not subject to the provisions of the Unfunded Mandates Reform Act.

H. Incorporation by Reference

As discussed above, through this rule, the Department is adopting the internationally recognized accessibility standard for web access, WCAG 2.1 Level AA, published in June 2018, as the technical standard for web and mobile app accessibility under title II of the ADA. WCAG 2.1 Level AA, published by W3C WAI, specifies success criteria and requirements that make web content more accessible to all users, including individuals with disabilities. The Department incorporates WCAG 2.1 Level AA by reference into this rule, instead of restating all of its requirements verbatim. To the extent there are distinctions between WCAG 2.1 Level AA and the standards articulated in this rule, the standards articulated in this rule prevail.

The Department notes that when W3C publishes new versions of WCAG, those versions will not be automatically incorporated into this rule. Federal agencies do not incorporate by reference into published regulations future versions of standards developed by bodies like W3C. Federal agencies are required to identify the particular version of a standard incorporated by reference in a regulation.105 When an updated version of a standard is published, an agency must revise its regulation if it seeks to incorporate any of the new material.

WCAG 2.1 Level AA is reasonably available to interested parties. Free copies of WCAG 2.1 Level AA are available online on W3C’s website at https://www.w3.org/TR/2018/REC-WCAG21-20180605/ and https://perma.cc/UB8A-GG2F. In addition, a copy of WCAG 2.1 Level AA is also available for inspection by appointment at the Disability Rights Section, Civil Rights Division, U.S. Department of Justice, 150 M St. NE, 9th Floor, Washington, DC 20002.

I. Congressional Review Act

In accordance with the Congressional Review Act, the Department has determined that this rule is a major rule as defined by 5 U.S.C. 804(2). The Department will submit this final rule and other appropriate reports to Congress and the Government Accountability Office for review.

List of Subjects for 28 CFR Part 35

Administrative practice and procedure, Civil rights, Communications, Incorporation by reference, Individuals with disabilities, State and local requirements.

PART 35—NONDISCRIMINATION ON THE BASIS OF DISABILITY IN STATE AND LOCAL GOVERNMENT SERVICES

§ 35.104 Definitions.

§ 35.104 Definitions.

* * * * *

Archived web content means web content that—

(1) Was created before the date the public entity is required to comply with subpart H of this part, reproduces paper documents created before the date the public entity is required to comply with subpart H, or reproduces the contents of other physical media created before the date the public entity is required to comply with subpart H;

(2) Is retained exclusively for reference, research, or recordkeeping;

(3) Is not altered or updated after the date of archiving; and

(4) Is organized and stored in a dedicated area or areas clearly identified as being archived.

* * * * *

Conventional electronic documents means web content or content in mobile apps that is in the following electronic file formats: portable document formats (“PDF”), word processor file formats, presentation file formats, and spreadsheet file formats.

Mobile applications (“apps”) means software applications that are downloaded and designed to run on mobile devices, such as smartphones and tablets.

Special district government means a public entity—other than a county, municipality, township, or independent school district—authorized by State law to provide one function or a limited number of designated functions with sufficient administrative and fiscal autonomy to qualify as a separate government and whose population is not calculated by the United States Census Bureau in the most recent decennial Census or Small Area Income and Poverty Estimates.

* * * * *

Total population means—

(1) If a public entity has a population calculated by the United States Census Bureau in the most recent decennial Census, the population estimate for that public entity as calculated by the United States Census Bureau in the most recent decennial Census; or

103 44 U.S.C. 3501 et seq.

104 2 U.S.C. 1503(2).

105 See, e.g., 1 CFR 51.1(f) (“Incorporation by reference of a publication is limited to the edition of the publication that is approved [by the Office of the Federal Register]. Future amendments or revisions of the publication are not included.”).
(2) If a public entity is an independent school district, or an instrumentality of an independent school district, the population estimate for the independent school district as calculated by the United States Census Bureau in the most recent Small Area Income and Poverty Estimates; or

(3) If a public entity, other than a special district government or an independent school district, does not have a population estimate calculated by the United States Census Bureau in the most recent decennial Census, but is an instrumentality or a commuter authority of one or more State or local governments that do have a population estimate, the combined decennial Census population estimates for any State or local governments of which the public entity is an instrumentality or commuter authority; or

(4) For the National Railroad Passenger Corporation, the population estimate for the United States as calculated by the United States Census Bureau in the most recent decennial Census.

User agent means any software that retrieves and presents web content for users.

* * * * *

Web content means the information and sensory experience to be communicated to the user by means of a user agent, including code or markup that defines the content’s structure, presentation, and interactions.

Examples of web content include text, images, sounds, videos, controls, animations, and conventional electronic documents.

3. Add subpart H to read as follows:

Subpart H—Web and Mobile Accessibility

Sec. 35.200 Requirements for web and mobile accessibility.

35.201 Exceptions.

35.202 Conforming alternate versions.

35.203 Equivalent facilitation.

35.204 Duties.

35.205 Effect of noncompliance that has a minimal impact on access.

35.206–35.209 [Reserved]
§ 35.203 Equivalent facilitation.

Nothing in this subpart prevents the use of designs, methods, or techniques as alternatives to those prescribed, provided that the alternative designs, methods, or techniques result in substantially equivalent or greater accessibility and usability of the web content or mobile app.

§ 35.204 Duties.

Where a public entity can demonstrate that compliance with the requirements of § 35.200 would result in a fundamental alteration in the nature of a service, program, or activity, or in undue financial and administrative burdens, compliance with § 35.200 is required to the extent that it does not result in a fundamental alteration or undue financial and administrative burdens. In those circumstances where personnel of the public entity believe that the proposed action would fundamentally alter the service, program, or activity or would result in undue financial and administrative burdens, a public entity has the burden of proving that compliance with § 35.200 would result in such alteration or burdens. The decision that compliance would result in such alteration or burdens must be made by the head of a public entity or their designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. If an action would result in such an alteration or such burdens, a public entity shall take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity to the maximum extent possible.

§ 35.205 Effect of noncompliance that has a minimal impact on access.

A public entity that is not in full compliance with the requirements of § 35.200(b) will be deemed to have met the requirements of § 35.201 in the limited circumstance in which the public entity can demonstrate that the noncompliance has such a minimal impact on access that it would not affect the ability of individuals with disabilities to use the public entity’s web content or mobile app to do any of the following in a manner that provides substantially equivalent timeliness, privacy, independence, and ease of use:

(a) Access the same information as individuals without disabilities;
(b) Engage in the same interactions as individuals without disabilities;
(c) Conduct the same transactions as individuals without disabilities;
(d) Otherwise participate in or benefit from the same services, programs, and activities as individuals without disabilities.

§§ 35.206–35.209 [Reserved]

4. Add appendix D to part 35 to read as follows:

Appendix D to Part 35—Guidance to Revisions to ADA Title II Regulation on Accessibility of Web Information and Services of State and Local Government Entities

Note: This appendix contains guidance providing a section-by-section analysis of the revisions to this part published on April 24, 2024.

Section-by-Section Analysis and Response to Public Comments

This appendix provides a detailed description of the Department’s changes to this part (the title II regulation), the reasoning behind those changes, and responses to public comments received in connection with the rulemaking. The Department made changes to subpart A of this part and added subpart H to this part. The section-by-section analysis addresses the changes in the order they appear in the title II regulation.

Subpart A—General

Section 35.104 Definitions

“Archived Web Content”

The Department is including in § 35.104 a definition for “archived web content.” “Archived web content” is defined as web content that was created before the date the public entity is required to comply with subpart H of this part, reproduces paper documents created before the date the public entity is required to comply with subpart H, or reproduces the contents of other physical media created before the date the public entity is required to comply with subpart H. Second, the web content is retained exclusively for reference, research, or recordkeeping. Third, the web content is not altered or updated after the date of archiving. Fourth, the web content is organized and stored in a dedicated area or areas clearly identified as being archived. The definition is meant to capture historic web content that, while outdated or superfluous, is maintained unaltered in a dedicated archived area for reference, research, or recordkeeping. The term is used in the exception set forth in § 35.210(a). The Department provides a more detailed explanation of the application of the exception in the section-by-section analysis of § 35.210(a).

The Department made several revisions to the definition of “archived web content” from the notice of proposed rulemaking (“NPRM”). The Department added a new part to the definition to help clarify the scope of content covered by the definition and associated exception. The new part of the definition, the first part, specifies that archived web content is limited to three types of historic content: web content that was created before the date the public entity is required to comply with subpart H of this part; web content that reproduces paper documents created before the date the public entity is required to comply with subpart H; and web content that reproduces the contents of other physical media created before the date the public entity is required to comply with subpart H.

Web content that was created before the date a public entity is required to comply with subpart H of this part satisfies the first part of the definition. In determining the date web content was created, the Department does not intend to prohibit public entities from making minor adjustments to web content that was initially created before the relevant compliance dates specified in § 35.200(b), such as by redacting personally identifying information from web content as necessary before it is posted to an archive, even if the adjustments are made after the compliance date. In contrast, if a public entity makes substantial changes to web content after the date the public entity is required to comply with subpart H, such as by adding, updating, or rearranging content before it is posted to an archive, the content would likely no longer meet the first part of the definition. If the public entity later alters or updates the content after it is posted in an archive, the content would no longer meet the third part of the definition of “archived web content” and it would generally need to conform to WCAG 2.1 Level AA.

Web content that reproduces paper documents or that reproduces the contents of other physical media would also satisfy the first part of the definition if the paper documents or the contents of the other physical media were created before the date the public entity is required to comply with subpart H of this part. Paper documents include various records that may have been printed, typed, handwritten, drawn, painted, or otherwise marked on paper. Videotapes, audiotapes, film negatives, CD–ROMs, and DVDs are examples of physical media. The Department anticipates that public entities may identify or discover historic paper documents or historic content contained on physical media that they wish to post in an online archive following the time they are required to comply with subpart H. For example, a State agricultural agency might move to a new building after the date it is required to comply with subpart H and discover a box in storage that contains...
The Department explained that the definition of "archived web content" and the associated exception were intended to cover historic content that is outdated or superfluous. The definition in § 35.104, which is based on whether the relevant content was created before the date the public entity is required to comply with subpart H of this part, is now more aligned with, and better situated to implement, the Department's intent to cover historic content. The Department believes it is appropriate to include a time-based limitation in its definition, rather than to add new criteria stating that content must be historic, outdated, or superfluous, because it is more straightforward to differentiate content based on the date the content was created. Therefore, there will be greater predictability for individuals with disabilities and public entities as to which content is covered by the exception.

The Department declines to establish time-based limitations for when content may be posted to an archive or to otherwise set an expiration date for the exception. As discussed elsewhere in this appendix, the Department recognizes that many public entities will need to carefully consider the design and structure of their web content before dedicating a certain area or areas for archived content, and that, thereafter, it will take time for public entities to identify all content that meets the definition of "archived web content" and post it in the newly created archived area or areas. The archived web content exception thus provides public entities flexibility as to when they will archive web content, so long as the web content was created before the date the public entity was required to comply with subpart H of this part or the web content reproduces paper documents or the contents of other physical media created before the date the public entity was required to comply with subpart H. In addition, the Department does not believe it is necessary to establish a waiting period before newly created web content can be posted in an archive. New content created after the date a public entity is required to comply with subpart H will generally not meet the first part of the definition of "archived web content." In the limited circumstances in which newly created web content could meet the first part of the definition because it reproduces paper documents or the contents of other physical media created before the date the public entity is required to comply with subpart H, the Department believes the scope of content covered by the exception is sufficiently limited by the second part of the definition: whether the content is retained exclusively for reference, research, or recordkeeping.

In addition to adding a new first part to the definition of "archived web content," the Department made one further change to the definition from the NPRM. In the NPRM, what is now subpart H of the Department's intent to define web content that is "maintained" exclusively for reference, research, or recordkeeping. The word "maintained" is now replaced with "retained." The revised language is not intended to change or limit the coverage of the definition. Rather, the Department recognizes that the word "maintain" can have multiple relevant meanings. In some circumstances, "maintain" may mean "to continue in possession" of property, whereas in other circumstances it might mean "to employ in general repair and upkeep." The Department uses the word "maintain" elsewhere in the title II regulation, at § 35.133(a), consistent with the latter definition. In contrast, the third part of the definition for "archived web content" specifies that content must not be altered or updated after the date the content is created or posted. Alterations or updates could be construed as repair or upkeep, but that is not what the Department intended to convey with its use of the word "maintained" in this provision. To avoid confusion about whether a public entity can alter or update web content after it is archived, the Department instead uses the word "retained," which has a definition synonymous with the Department's intended use of "maintain" in the NPRM.

Commenters raised concerns about several aspects of the definition of "archived web content." With respect to the second part of the definition, commenters stated that the definition does not clearly articulate when content is retained exclusively for reference, research, or recordkeeping. Commenters stated that the definition could be interpreted inconsistently, and it could be understood to cover important information that should be accessible. For example, commenters were concerned that web content containing public entities' past meeting minutes where key decisions were made would qualify as archived content, as well as web content containing laws, regulations, court decisions, or prior legal interpretations that are still relevant. Therefore, commenters suggested that the definition should not cover recordkeeping documents, agendas, meeting minutes, and other related documents at all. One commenter recommended adding to the definition to clarify that it does not apply to content a public entity uses to offer a current service, program, or activity, and another commenter suggested that content should be archived depending on how frequently members of the public review the content. One commenter also stated that the Department is left with the responsibility to determine whether web content is appropriately designated as archived when enforcing subpart H of this part in the future, and the commenter believed that this enforcement may be insufficient to avoid public entities evading their responsibilities under subpart H. Another commenter recommended that the Department should conduct random audits to determine if public entities are properly designating archived web content.

The Department's revised definition of "archived web content," and specifically the new first part of the definition, make clear that the definition only pertains to content created before the date the public entity is...
required to comply with subpart H of this part. Therefore, new content such as agendas, meeting minutes, and other documents related to meetings that take place after the public entity is required to comply with subpart H would likely not meet all parts of the definition of web content.” This revision to the regulatory text is responsive to comments raising the concern that current and newly created content might be erroneously labeled as archived based on perceived ambiguity surrounding when content is solely for “reference, research, or recordkeeping.” Given the wide variety of web content that public entities provide or make available, the Department does not believe it is advisable to add additional, more specific language in the definition about what types of content are covered. The Department also believes it would be difficult to create a more specific and workable definition for “archived web content” based on how frequently members of the public view certain content given the wide variation in the types and sizes of public entities and the volume of their web traffic. Whether web content is retained exclusively for reference, research, or recordkeeping, and whether it depends on the facts of the particular situation. Based on some of the examples of web content that commenters discussed in connection with the definition, the Department notes that if a public entity posts web content that identifies the current policies or procedures of the public entity, or posts web content containing or interpreting applicable laws or regulations related to the public entity, that web content is unlikely to be covered by the exception. This is because the content is notifying members of the public of their legal rights and responsibilities. It therefore is not, as the definition requires, being used exclusively for reference, research, or recordkeeping.

Commenters also raised concerns about the fourth part of the definition of “archived web content” that archived web content to be stored in a dedicated area or areas clearly identified as being archived. Some commenters did not believe public entities should be required to place archived web content in a dedicated area or areas clearly identified as being archived in order to be covered by the exception at § 35.201(a). Commenters stated that public entities should retain flexibility in organizing and storing files according to how their web content is designed and structured, and it might not be clear to members of the public to look for content in an archive depending on the overall makeup of the web content. Commenters also stated that it would be burdensome to create an archive area, identify web content for the archive, and move the content into the archive. One commenter stated that public entities might remove content rather than move it to a dedicated archive. Commenters instead suggested that the web content itself could be individually marked as archived regardless of where it is posted. One commenter also requested the Department clarify that the term “area” includes “websites” and “repositories” where archived web content is stored.

After carefully weighing these comments, the Department has decided not to change the fourth part of the definition for “archived web content.” The Department believes storing archived web content in a dedicated area or areas clearly identified as being archived will result in the greatest predictability for individuals with disabilities. However, even with content they can expect to conform to WCAG 2.1 Level AA. However, the Department notes that it did not identify specific requirements about the structure of an archived area, or how to clearly identify an area as being archived, in order to provide the greatest flexibility when complying with subpart H of this part. For example, in some circumstances a public entity may wish to create separate web pages or websites to store archived web content. In other circumstances, a public entity may wish to clearly identify that a specific section on a specific web page contains archived web content, even if the web page also contains non-archived content in other separate sections. However public entities ultimately decide to store content, the Department reiterates that predictability for individuals with disabilities is paramount. To this end, the label or other identification for a dedicated archived area or areas must be clear so that individuals with disabilities are able to detect when there is content they may not be able to access. Whether a particular dedicated area is clearly identified as being archived will, of course, depend on the facts of the particular situation. The Department also emphasizes that the existence of a dedicated area or areas for archived content need not interfere with the accessibility of other web content that is not archived.

Some commenters also recommended an alternative definition of “archived web content” that does not include the second or fourth parts of the definition. Commenters proposed that archived web content should be defined as web content that (1) was provided or made available prior to the effective date of the final rule and (2) is not altered or updated after the effective date of the final rule. While commenting that a time-based distinction is appropriate and has therefore added the first part to the definition, the Department does not believe the commenters’ approach suggested here is advisable because it has the potential to cause a significant accessibility gap for individuals with disabilities if public entities rely on web content that is not regularly updated or changed. Under the commenters’ proposed definition, the exception for archived web content might cover important web content used for reasons other than research, reference, or recordkeeping if the content has not been updated or altered. As discussed in more detail in the section-by-section analysis of § 35.201(a), the purpose of the exception for archived web content is to help public entities focus their resources on making accessible important materials that people use most widely and consistently, rather than historic or outdated web content that is only used for reference, research, or recordkeeping. Furthermore, as discussed in the preceding paragraph, the Department believes the fourth part of the definition is necessary to ensure the greatest predictability for individuals with disabilities about which web content they can expect to conform to WCAG 2.1 Level AA.

Commenters made other suggestions related to the definition of and exception for “archived web content.” The Department has addressed these comments in the discussion of the § 35.201(a) archived web content exception in the section-by-section analysis.

“Conventional Electronic Documents”

The Department is including in § 35.104 a definition for “conventional electronic documents.” “Conventional electronic documents” are defined as web content or content in mobile apps that is in the following electronic file formats: portable document formats, word processor file formats, presentation file formats, and spreadsheet file formats. The definition thus provides an exhaustive list of electronic file formats that constitute conventional electronic documents. Examples of conventional electronic documents include: Adobe PDF files (i.e., portable document formats), Microsoft Word files (i.e., word processor files), Apple Keynote or Microsoft PowerPoint files (i.e., presentation files), and Microsoft Excel files (i.e., spreadsheet files). The term “conventional electronic documents” is used in § 35.201(b) to provide an exception for certain such documents that are available as part of a public entity’s web content or mobile apps before the compliance date of subpart H of the final rule. Under such documents are currently used to apply for, gain access to, or participate in the public entity’s services, programs, or activities. The term is also used in § 35.201(d) to provide an exception for certain individualized, password-protected or otherwise secured conventional electronic documents, and is addressed in more detail in the discussion in the section-by-section analysis of § 35.201(b) and (d). The definition of “conventional electronic documents” covers documents created or saved as electronic files that are commonly available in an electronic form on public entities’ web content or mobile apps and that would have been traditionally available as physical printed output.

In the NPRM, the Department asked whether it should craft a more flexible definition of “conventional electronic documents” instead of a definition based on an exhaustive list of file formats. In response, the Department heard a range of views from commenters. Some commenters favored a broader and more generalized definition instead of an exhaustive list of file formats. For example, commenters suggested that the Department could describe the properties of conventional electronic documents and provide a non-exhaustive list of examples of such documents, or the definition could focus on the importance of the content contained in a document rather than the file format. Some commenters favoring a broader definition reasoned that technology evolves rapidly, and the exhaustive list of file formats the Department
identified might not keep pace with technological advancements.

Other commenters preferred the Department’s approach of identifying an exhaustive list of file formats. Some commenters noted that an exhaustive list provided greater clarity and predictability, which assists public entities in identifying their obligations under subpart H of this part. Some commenters suggested that the Department could provide greater clarity by identifying specific file types in the regulation rather than listing file formats (e.g., the Department might specify the Microsoft Word “.docx” file type rather than “word processor file formats”).

After considering all the comments, the Department declines to change its approach to defining conventional electronic documents. The Department expects that a more flexible definition would result in less predictability for both public entities and individuals with disabilities, especially because the Department does not currently have a prediction about how technology will develop in the future. The Department seeks to avoid such uncertainty because the definition of “conventional electronic documents” sets the scope of two exceptions, § 35.201(b) and (d). The Department carefully balanced benefits for individuals with disabilities with the challenges public entities face in making their web content and mobile apps accessible in compliance with subpart H of this part when crafting these exceptions, and the Department does not want to inadvertently expand or narrow the exceptions with a less predictable definition of “conventional electronic documents.”

Unlike in the NPRM, the definition of “conventional electronic documents” does not include database file formats. In the NPRM, the Department solicited comments about whether it should add any file formats to, or remove any file formats from, the definition of “conventional electronic documents.” While some commenters supported keeping the list of file formats in the NPRM, as is, the Department also heard a range of views from other commenters. Some commenters, including public entities and trade groups representing public accommodations, urged the Department to add additional file formats to the definition of “conventional electronic documents.” For example, commenters recommended adding image files, video files, audio files, and electronic books such as EPUB (electronic publications) or DAISY (Digital Accessible Information System) files. Commenters noted that files in such other formats are commonly made available by public entities and they can be burdensome to remediate. Commenters questioned whether there is a basis for distinguishing between the file formats included in the definition and other file formats not included in the definition.

Other commenters believed the list of file formats included in the proposed definition of “conventional electronic documents” was too broad. A number of disability advocacy groups stated that certain document formats included in the definition are generally easily made accessible. Therefore, commenters did not believe such documents should generally fall within the associated exceptions under § 35.201(b) and (d). Some commenters also stated that there could be confusion about accessibility requirements for database files because database files and some spreadsheet files may be not primarily intended to be human-readable. The commenters stated that in many cases such content is instead intended to be opened and analyzed with other special software tools. The commenters pointed out that data that is not primarily intended to be human-readable is equally accessible for individuals with disabilities and individuals without disabilities, and they recommended clarifying that the accessibility requirements do not apply to such data.

Some commenters suggested that certain file formats not included in the definition of “conventional electronic documents,” such as images or videos, may warrant different treatment altogether. For example, one public entity stated that it would be better to place images and multimedia in a separate and distinct category with a separate definition and relevant technical standards where needed to improve clarity. In addition, a disability advocacy organization stated that images do not need to be included in the definition and covered by the associated exceptions because public entities can already uniquely exempt this content in some circumstances by marking it as decorative, and it is straightforward for public entities to add meaningful alternative text to important images and photos that are not decorative.

After considering all the comments, the Department agrees that database file formats should not be included in the definition of “conventional electronic documents.” The Department now understands that database files may be less commonly available through public entities’ web content and mobile apps than other types of documents. To the extent such files are provided or made available by public entities, the Department understands that they would not be readable by either individuals with disabilities or individuals without disabilities if they only contain data that are not primarily intended to be human-readable. Therefore, there would be limited accessibility concerns, if any, that fall within the scope of subpart H of this part associated with documents that contain data that are not primarily intended to be human-readable. Accordingly, the Department believes it could be confusing to include database file formats in the definition. However, the Department notes that while there may be limited accessibility concerns, if any, related to database files containing data that are not primarily intended to be human-readable, public entities may utilize these data to create outputs for web content or mobile apps, such as tables, charts, or graphs posted on a web page, and those outputs would be covered by subpart H unless they fall into another exception.

The Department declines to make additional changes to the list of file formats included in the definition of “conventional electronic documents.” After reviewing the range of different views expressed by commenters, the Department believes the current list strikes the appropriate balance between ensuring access for individuals with disabilities and feasibility for public entities so that they can comply with subpart H of this part. The list included in the definition is also aligned with the Department’s intentions to cover documents that public entities commonly make available in either an electronic form or that would have been traditionally available as physical printed output. If public entities provide and make available files in formats not included in the list, the Department believes those other files may qualify for the exception in § 35.201(a) if they meet the definition for “archived web content,” or the exception in § 35.201(e) for certain preexisting social media posts if they are covered by that exception’s description. To the extent those other files are not covered by one of the exceptions in § 35.201, the Department also notes that public entities would not be required to make changes to those files that would result in a fundamental alteration in the nature of a service, program, or activity, or impose undue financial and administrative burdens, as discussed in the section-by-section analysis of § 35.204.

With respect to the comment suggesting that it would be better to place images and multimedia in a separate and distinct category with a separate definition and relevant technical standards where needed to improve clarity, the Department notes that the WCAG standards were designed to be “technology neutral.” This means that they are designed to be broad and applicable to current and future web technologies. Accordingly, the Department believes WCAG 2.1 Level AA is the appropriate standard for other file formats not included in the definition of “conventional electronic documents” because WCAG 2.1 was crafted to address those other file formats as well.

The Department also recognizes that, as some commenters pointed out, this part treats conventional electronic documents differently than WCAG 2.1, in that conventional electronic documents are included in the definition of “web content” in § 35.104, while WCAG 2.1 does not include those documents in its definition of “web content.” The Department addresses these comments in its analysis of the definition of “web content.” As discussed in the preceding paragraphs, the scope of the associated exception for preexisting conventional electronic documents, at § 35.201(b), is based on the definition of “conventional electronic documents.” The definition of “conventional electronic documents” that are part of a public entity’s web content or mobile apps. The exception also applies to “conventional electronic documents” that are part of a public entity’s web content or mobile apps, but only if the documents were provided or made available before the date

the public entity is required to comply with 
subpart H of this part. The Department 
received a comment indicating there may not 
be a logical connection between conventional 
electronic documents and mobile apps; 
therefore, according to the comment, the 
exception should not apply to conventional 
electronic documents that appear in mobile 
apps. However, the Department also received 
comments from disability advocacy 
organizations and public entities confirming 
the connection between the two technologies 
and stating that some mobile apps allow 
users to access conventional electronic 
documents. The Department will retain its 
approach of including “content in mobile 
apps” in the definition of “conventional 
electronic documents” given that the 
Department agrees that some mobile apps 
already use conventional electronic 
documents.

“Mobile Applications (‘apps’)”

Section 35.104 defines “mobile apps” as software applications that are downloaded and designed to run on mobile devices, such as smartphones and tablets. For purposes of this part, mobile apps include, for example, native apps built for a particular platform (e.g., Apple iOS, Google Android) or device and hybrid apps using web components inside native apps. This part will retain the definition of “mobile apps” from the NPRM without revision.

The Department received very few comments on this definition. One commenter noted that the Department does not appear to consider other technologies that may use mobile apps such as wearable technology. The Department notes that the definition’s examples of devices that use mobile apps (i.e., smartphones and tablets) is a non-exhaustive list. Subpart H of this part applies to all mobile apps that a public entity provides or makes available, regardless of the devices on which the apps are used. The definition therefore may include mobile apps used on wearable technology. Accordingly, the proposed rule’s definition of “mobile apps” will remain unchanged in this part.

“Special District Government”

The Department has added a definition for “special district government.” The term “special district government” is used in § 35.200(b) and is defined in § 35.104 to mean a public entity—other than a county, municipality, township, or independent school district—authorized by State law to provide one function or a limited number of designated functions with sufficient administrative and fiscal autonomy to qualify as a separate government and whose population is not calculated by the United States Census Bureau in the most recent decennial Census or Small Area Income and Poverty Estimates. Because special district governments do not have populations calculated by the United States Census Bureau and are not necessarily affiliated with public entities that do have such populations, their population sizes are unknown. A special district government may include, for example, a mosquito abatement district, utility district, transit authority, water and sewer board, zoning district, or other similar governmental entity that may operate with administrative and fiscal independence. This definition is drawn in part from the U.S. Census Bureau definition for purposes of setting a compliance time frame for a subset of public entities. It is not meant to alter the definition of “public entity” in § 3.104 in any way. The Department made one grammatical correction in this part to remove an extra “or” from the definition as proposed in the NPRM. However, the substance of the definition is unchanged from the Department’s proposal in the NPRM.

“Total Population”

Section 35.200 provides the dates by which public entities must begin complying with the technical standard. The compliance dates are generally based on a public entity’s total population, as defined in this part. The Department has added a definition for “total population” in § 35.104. A public entity has a population calculated by the United States Census Bureau in the most recent decennial Census, the public entity’s total population as defined in this part is the population estimate for that public entity as calculated by the United States Census Bureau in the most recent decennial Census. If a public entity is an independent school district, or an instrumentality of an independent school district, the entity’s total population as defined in this part is the population estimate for the independent school district as calculated by the United States Census Bureau in the most recent decennial Census, but is an instrumentality or a commuter authority of one or more State or local governments that do have such a population estimate, the entity’s total population as defined in this part is the combined decennial Census population estimates for any State or local governments of which the public entity is an instrumentality or commuter authority. The total population for the National Railroad Passenger Corporation in this part is the population estimate for the United States as calculated by the United States Census Bureau in the most recent decennial Census. The terminology used in the definition of “total population” draws from the terminology used in the definition of “public entity” in title II of the ADA and the existing title II regulation, and all public entities covered under title II of the ADA are covered by subpart H of this part. This part does not provide a method for calculating the total population of special district governments, because § 35.200 provides that all special district governments have three years following the publication of the final rule to begin complying with the technical standard, without reference to their population.

The regulatory text of this definition has been revised from the NPRM for clarity. The regulatory text of this definition previously provided that “total population” generally means the population estimate for a public entity as calculated by the United States Census Bureau in the most recent decennial Census. Because the decennial Census does not include population estimates for public entities that are independent school districts, the regulatory text in the NPRM made clear that for independent school districts, “total population” would be calculated by reference to the population estimates as calculated by the United States Census Bureau in the most recent Small Area Income and Poverty Estimates. In recognition of the fact that some public entities do not have population estimates calculated by the United States Census Bureau, the preamble to the NPRM stated that if a public entity does not have a specific Census-defined population, but belongs to another governmental jurisdiction that does, the population of the entity is determined by the population of the jurisdiction to which the entity belongs.

Although the preamble included this clarification, the Department received feedback that the regulatory text of this definition did not make clear how to calculate total population for public entities that do not have population estimates calculated by the United States Census Bureau.

Accordingly, the Department has revised the regulatory text of the definition for clarity.

The revised regulatory text of this definition retains the language from the definition in the NPRM with respect to public entities that have populations calculated in the decennial Census and independent school districts that have populations calculated in the Small Area Income and Poverty Estimates. However, the revised regulatory text of this definition incorporates the approach described in the preamble of the NPRM with respect to how public entities that do not have population estimates calculated by the United States Census Bureau in the most recent decennial Census can determine their total populations as defined in this part. As the revised definition states, if a public entity, other than a special district government or independent school district, does not have a population estimate calculated by the United States Census Bureau in the most recent decennial Census, but is an instrumentality or a commuter authority of one or more State or local governments that do have such a population estimate, the total population for the public entity is determined by reference to the combined decennial Census population estimates for any State or local governments of which the public entity is an instrumentality or commuter authority. For example, the total population estimate for a public library is the population of the county of which the library is an instrumentality. The revised definition also makes clear that if a public entity is an instrumentality of an independent school district, the instrumentality’s population is determined...
by reference to the population estimate for the independent school district as calculated in the most recent Small Area Income and Poverty Estimates. The revised definition also states that the total population of the National Railroad Passenger Corporation is determined by reference to the population estimate for the United States as calculated by the United States Census Bureau in the most recent decennial Census. The revisions to the definition do not change the scope of this part or the time frames that public entities must comply with subpart H of this part; they simply provide additional clarity for public entities on how to determine which compliance time frame applies. The Department expects that these changes will help public entities better understand the time frame in which they must begin complying with the technical standard. Further discussion of this topic, including discussion of comments, can be found in the section-by-section analysis of §35.200, under the heading “Requirements by Entity Size.”

"User Agent"  
"The Department has added a definition for "user agent." The definition exactly matches the definition in WCAG 2.1.13 WCAG 2.1 includes an accompanying illustration, which clarifies that the definition of "user agent" means web browsers, media players, plug-ins, and other programs—including assistive technologies—that help in retrieving, rendering, and interacting with web content.14 The Department added this definition to this part to ensure clarity of the term "user agent," now that the term appears in the definition of "web content." As the Department explains further in discussing the definition of "web content" in this section-by-section analysis, the Department has more closely aligned the definition of "web content" in this part with the definition in WCAG 2.1. Because this change introduces the term "user agent" into the title II regulation, and the Department does not believe this is a commonly understood term, the Department has added the definition of "user agent" provided in WCAG 2.1 to this part. One commenter suggested that the Department add this definition in this part, and the Department also believes that adding this definition in this part is consistent with the suggestions of many commenters who proposed aligning the definition of "web content" with the definition in WCAG 2.1, as explained further in the following section.

"WCAG 2.1"  
The Department is including a definition of "WCAG 2.1." The term "WCAG 2.1" refers to the 2018 version of the voluntary guidelines for web accessibility, known as the Web Content Accessibility Guidelines 2.1 ("WCAG 2.1"). W3C, the principal international organization involved in developing standards for the web, published WCAG 2.1 in June 2018, and it is available at https://www.w3.org/TR/2018/REC-WCAG21-20180605/ and https://perma.cc/UB8A-GG2F. WCAG 2.1 is discussed in more detail in the section-by-section analysis of §35.200.

"Web Content"  
Section 35.104 defines "web content" as the information and sensory experience to be communicated to the user by means of a user agent, including code or markup that defines the content’s structure, presentation, and interactions. Examples of web content include text, images, sounds, videos, controls, animations, and conventional electronic documents. The first sentence of the Department’s definition of "web content" is aligned with the definition of "web content" in WCAG 2.1.15 The second sentence of the definition gives examples of some of the different types of information and experiences available on the web. However, these are intended to illustrate the definition and not be exhaustive. The Department also notes that subpart H of this part covers the accessibility of public entities’ web content regardless of whether the web content is viewed on desktop computers, laptops, smartphones, or elsewhere.

The Department slightly revised its definition from the proposed definition in the NPRM, which was based on the WCAG 2.1 definition but was slightly less technical and intended to be more easily understood by the public generally. The Department’s proposed rule defined "web content" as information or sensory experience—including the encoding that defines the content’s structure, presentation, and interactions—that is communicated to the user by a web browser or other software. Examples of web content include text, images, sounds, videos, controls, animations, and conventional electronic documents.16 In this part, the first sentence of this definition is revised to provide the definition of "web content" as the information and sensory experience to be communicated to the user by means of a user agent, including code or markup that defines the content’s structure, presentation, and interactions. The sentence is now aligned with the WCAG 2.1 definition of web content (sometimes referred to as "content" by WCAG).17 The Department has also added a definition of "user agent" in this part, as explained in the section-by-section analysis.

The Department decided to more closely align the definition of "web content" in this part with the definition in WCAG 2.1 to avoid confusion, to ensure consistency in the application of WCAG 2.1, and to assist technical experts in implementing subpart H of this part. Consistent with the suggestion of several commenters, the Department believes that the approach minimizing inadvertent conflicts between the type of content covered by the Department’s regulatory text and the content covered by WCAG 2.1. Further, the Department believes it is prudent to more closely align these definitions because the task of identifying relevant content to be made accessible will often fall on technical experts. The Department believes technical experts will be familiar with the definition of "web content" in WCAG 2.1, and creating a modified definition will unnecessarily increase effort by requiring technical experts to familiarize themselves with a modified definition. The Department also understands that there are likely publicly available accessibility guidance documents and toolkits on the WCAG 2.1 definition that could be useful tools, and using a different definition of "web content" could call into question public entities’ ability to rely on those tools, which would create unnecessary work for public entities. To incorporate this change, the Department removed language from the proposed rule addressing the encoding that defines the web content’s structure, presentation, and interactions, because the Department believed the more prudent approach was to more closely align this definition with the definition in WCAG 2.1. However, the Department maintains its final definition an additional sentence providing examples of web content to aid in the public’s understanding of this definition. This may be particularly useful for members of the public without a technical background.

The Department received many comments supporting the Department’s proposed definition of “web content” from public entities, disability advocates, individuals, and technical and other organizations. Many of these commenters indicated that the Department’s definition is overly generic and familiar to the public. The Department believes that the definition in this part aligns with these comments, since it is intended to mirror the definition in WCAG 2.1 and cover the same types of content.

Some commenters raised concerns that the scope of the definition should be broader, arguing that the definition should be extended to include “closed” systems such as kiosks, printers, and point-of-sale devices. Another organization mistakenly believed that the examples listed in the definition of “web content” were meant to be exhaustive. The Department wishes to clarify that this list is not intended to be exhaustive. The Department declines to broaden the definition of “web content” beyond the definition in this part. However, the Department seeks in its rulemaking to be responsive to calls from the public for the Department to provide certainty by adopting a technical standard State and local government entities must adhere to for their web content and mobile apps. The Department thus is limiting its rulemaking
Some commenters argued that the non-exhaustive list of examples of web content in this part would include web content that would not be considered web content under WCAG 2.1. In particular, some commenters noted that conventional electronic documents’ views and determined that conventional electronic documents should still be considered web content for purposes of this part. The Department has found that public entities frequently provide their services, programs, or activities using conventional electronic documents, and the Department believes this approach will enhance those documents’ accessibility, improving access for individuals with disabilities. The Department understands commenters’ concerns to mean that, in applying WCAG 2.1 to conventional electronic documents, the success criteria may be applicable directly as written. Although the Department understands that some WCAG 2.1 Level AA success criteria may not apply as written to conventional electronic documents, when public entities provide or make available web content and content in mobile apps, public entities generally must ensure conformance to the WCAG 2.1 Level AA success criteria to the extent those criteria can be applied. In determining how to make conventional electronic documents conform to WCAG 2.1 Level AA, public entities may find it helpful to consult W3C’s guidance on non-web information and communications technology, which explains how the WCAG success criteria can be applied to conventional electronic documents. The Department will continue to monitor developments in the accessibility of conventional electronic documents and issue further guidance as appropriate.

Finally, several commenters asked whether this definition would cover internal, non-public applications, such as web content used solely by employees. The Department reiterates that subpart H of this part includes requirements for the web content and mobile apps provided or made available by public entities within the scope of title II. While subpart H is not promulgated under title I of the ADA, it is important to note that compliance with subpart H will not relieve title II entities of their distinct employment-related obligations under title I of the ADA, which could include, for example, accommodations for a web developer with a disability working for a public entity.

Subpart H—Web and Mobile Accessibility

The Department is creating a new subpart in its title II regulation. Subpart H of this part addresses the accessibility of public entities’ web content and mobile apps.

Section 35.200—Requirements for Web and Mobile Accessibility

General

Section 35.200 sets forth specific requirements for the accessibility of web content and mobile apps of public entities. Section 35.200(a) requires a public entity to ensure that the following are readily accessible to and usable by individuals with disabilities: (1) web content that a public entity provides or makes available, directly

22 W3C explains in its guidance on non-web information and communications technology that “While WCAG 2.2 was designed to be technology-neutral, it assumes the presence of a ‘user agent’ such as a browser, media player, or assistive technology as a means to access web content. Therefore, the application of WCAG 2.2 to documents and software in non-web contexts requires some interpretation in order to determine how the intent of each WCAG 2.2 success criterion could be met in these different contexts of use.” W3C, Guidance on Applying WCAG 2.2 to Non-Web Information and Communications Technologies (WCAG2ICT); Group Draft Note [Aug. 15, 2023].
or through contractual, licensing, or other arrangements; and (2) mobile apps that a public entity provides or makes available, directly or through contractual, licensing, or other arrangements. As detailed in this section, the remainder of §35.200 sets forth the specific standards that public entities are required to meet to make their web content and mobile apps accessible and the timelines for compliance.

Web Content and Mobile Apps That Public Entities Provide or Make Available

Section 35.200(a) identifies the scope of content covered by subpart H of this part. Section 35.200(a)(1) and (2) applies to web content and mobile apps that a public entity provides or makes available. The Department intends the scope of §35.200 to be consistent with the “Application” section of the existing title II regulation at §35.102, which states that this part applies to all services, programs, and activities provided or made available by public entities. The Department therefore made minor changes to the language of §35.200(a)(1) and (2) to make the section more consistent with §35.102. In the NPRM, §35.200(a)(1) and (2) applied to web content and mobile apps that a public entity makes available to members of the public or uses to offer services, programs, or activities to members of the public. The Department revised §35.200(a)(1) and (2) to apply to web content and mobile apps that a public entity provides or makes available. The Department also made corresponding revisions to the language of §35.200(b)(1) and (2). The Department expects that public entities will be familiar with the revised language used in §35.200(a) because it is similar to the language used in §35.102, and that such familiarity and consistency will result in less confusion and more predictable access for individuals with disabilities to the web content and mobile apps of public entities.

The Department notes that the revised language does not change or limit the coverage of subpart H as compared to the NPRM. Both the revised language and the NPRM are consistent with the broad coverage of §35.102.

Contractual, Licensing, and Other Arrangements

The general requirements in subpart H of this part apply to web content or mobile apps that a public entity provides or makes available directly, as well as those the public entity provides or makes available “through contractual, licensing, or other arrangements.” The Department expects that the phrase “directly or through contractual, licensing, or other arrangements” will be familiar to public entities because it comes from existing regulatory language in title II of the ADA. The section on general prohibitions against discrimination in the existing title II regulation says that a public entity, in providing any aid, benefit, or service, may not, directly or through contractual, licensing, or other arrangements, on the basis of disability engage in various forms of discrimination. The Department intentionally used the same phrasing in subpart H because here too, where public entities act through third parties using contractual, licensing, or other arrangements, they are not relieved of their obligations under subpart H. For example, when public educational institutions arrange for third parties to post educational content on their behalf, public entities will still be responsible for the accessibility of that content under the ADA.

Further, the Department emphasizes that the phrase “provides or makes available” in §35.200 is not intended to mean that §35.200 only applies when the public entity creates or owns the web content or mobile app. The plain meaning of “make available” includes situations where a public entity relies on a third party to operate or furnish content. Section 35.200 means that public entities provide or make available web content and mobile apps even where public entities do not design or own the web content or mobile app, if there is a contractual, licensing, or other arrangement under which the public entity uses the web content or mobile app to provide a service, program, or activity. For example, even when a city does not design, create, or own a mobile app allowing the public to pay for parking, when a contractual, licensing, or other arrangement exists between the city and the mobile app enabling the public to use the mobile app to pay for parking in the city, the mobile app is covered under §35.200. This is because the public entity has contracted with the mobile app to provide access to the public entity’s service, program, or activity (i.e., public parking) using a mobile app. The Department believes this approach will be familiar to public entities, as it is consistent with the existing framework in title II of the ADA.

The Department received many public comments in response to the NPRM expressing confusion about the extent to which content created by third parties on behalf of public entities must be made accessible. Many commenters pointed out that public entities can enter into contracts with vendors or other third parties to produce web content and mobile apps, such as for websites and apps used to pay fines and parking fees. Commenters were particularly concerned because the NPRM contained exceptions for third-party content, which they thought could indicate that the Department did not intend to cover any content created by third parties even when it was created on behalf of public entities. Commenters urged the Department to make clear in the NPRM that content created or provided by third-party entities is still covered by this part where those third parties are acting on behalf of a public entity.

The Department agrees with these commenters’ concerns, so the Department has modified the language in subpart H of this part to make clear that content created or provided by third-party entities is still covered by this part. The Department also made minor changes to the general requirements for web content and mobile app accessibility apply when the public entity provides or makes available web content or mobile apps directly or through contractual, licensing, or other arrangements. The Department inserted this language in §35.200(a)(1) and (2) and (b)(1) and (2). The Department notes that this modification does not change the coverage of §35.200 from the NPRM. The Department recognizes that throughout the proposal, a public entity’s “website” is intended to include not only the websites hosted by the public entity, but also websites operated on behalf of a public entity by a third party. For example, public entities sometimes use vendors to create and host their web content. The Department clarified that such content would also be covered by the proposed rule. The language the Department added to the general requirements provisions in §35.200(a)(1) and (2) and (b)(1) and (2) does not change the meaning of the provisions, but rather ensures clarity about public entities’ obligations when they are acting through a third party, such as when they contract with a vendor. Many commenters stated their concern that public entities lack control over third-party content, even where they contract with third parties to provide that content. These commenters, generally from public entities and trade groups representing public accommodations, argued that seeking to obtain accessible third-party content provided on behalf of public entities would be challenging. Some of these commenters said that in theory this type of content could be controlled by procurement, but that this has not been realized in practice. While the Department is sympathetic to these concerns, the Department also received many comments from disability advocates and individuals with disabilities pointing out the crucial nature of services provided by third parties on behalf of public entities. For example, some disability advocates argued that State and local government entities increasingly rely on third parties to provide services such as the mapping of zoning areas and city council districts, fine payment systems, applications for reserving and paying for public parking, websites to search for available public housing, and many other examples. The Department believes individuals with disabilities should not be excluded from these government services because the services are inaccessible and are currently being provided by third parties on behalf of a public entity, rather than being provided directly by the public entity. Indeed, public entities have a responsibility to comply with their ADA obligations even when their services, programs, or activities are being offered through contractors. Further, while the Department understands the concerns raised by commenters that current market options make it challenging for public entities to procure accessible services, the Department expects that options for accessible third-party products will grow in response to the requirements for web content and mobile apps. The Department believes that more accessible options will be readily available by the time public entities are required to comply with subpart H, which will make it less difficult for public entities to procure accessible

26See §35.130(b)(1) and (3).
services from contractors. The Department also notes that public entities will be able to rely on the fundamental alteration and undue burdens limitations in this part in § 35.204 where they can satisfy the requirements of that provision.

Further, the Department believes that when public entities engage in contractual, licensing, or other arrangements with third parties to provide or make available web content and mobile apps, public entities can choose to work with providers who can ensure accessibility, and public entities can also include contract stipulations that ensure accessibility in third-party services. This is consistent with the existing obligations public entities face in other title II contexts where they choose to contract, license, or otherwise arrange with third parties to provide services, programs, or activities. The Department acknowledges that some commenters argued that they face limited existing options in procurement for accessible third-party services. However, where such circumstances warrant, public entities can adopt a consensus standard in provision when they can satisfy its requirements. In addition, the Department expects that options for procuring accessible third-party services will grow in response to its rulemaking.

**Background on WCAG**

Since 1994, W3C has been the principal international organization involved in developing protocols and guidelines for the web.28 W3C develops a variety of voluntary technical standards and guidelines, including ones relating to privacy, internationalization of technology, and—relevant here—accessibility. W3C’s Web Accessibility Initiative (“WAI”) has developed voluntary guidelines for web accessibility, known as WCAG, to help web developers create web content that is accessible to individuals with disabilities.29

The first version of WCAG, WCAG 1.0, was published in 1999. WCAG 2.0 was published in December 2008, and is available at http://www.w3.org/TR/2008/REC-WCAG21-20081211/ and http://www.w3.org/TR/2008/REC-WCAG21-20081211/#comparison-with-wcag-2-0. WCAG 2.0 was approved as an international standard by the International Organization for Standardization (“ISO”) and the International Electrotechnical Commission (“IEC”) in October 2012.30 WCAG 2.1 was published in June 2018, and is available at https://www.w3.org/TR/2018/REC-WCAG21-20180605/ and https://perma.cc/UB8A-GG2F. WCAG 2.1 was built on and is backwards compatible with WCAG 2.0.31 In fact, 38 of the 68 AA success criteria in WCAG 2.1 are also included in WCAG 2.0.32 WCAG 2.1 contains four principles that provide the foundation for web accessibility: the web content must be perceivable, operable, understandable, and robust.33 Testable success criteria (i.e., requirements for web accessibility that are measurable) are provided “to be used where requirements and conformance testing are necessary such as in design specification, purchasing, regulation and contractual agreements.”34 Thus, WCAG 2.1 contemplates establishing testable success criteria that could be used in regulatory efforts such as this one.

**Technical Standard—WCAG 2.1 Level AA**

Section 35.200 requires that public entities’ web content and mobile apps conform to WCAG 2.1 Level AA unless compliance would result in a fundamental alteration or undue financial and administrative burdens. As previously mentioned, WCAG 2.1 was published in June 2018 and is available at https://www.w3.org/TR/2018/REC-WCAG21-20180605/ and https://perma.cc/UB8A-GG2F. To the extent there are differences between WCAG 2.1 Level AA and the standards articulated in this part, the standards articulated in this part prevail. WCAG 2.1 Level AA is not restated in full in this part but is instead incorporated by reference.

In the NPRM, the Department solicited feedback on the appropriate technical standard for accessibility for public entities’ web content and mobile apps. The Department received many public comments from a variety of interested parties in response. After consideration of the public comments and after its independent assessment, the Department determined that WCAG 2.1 Level AA is the appropriate technical standard for accessibility to adopt in subpart H of this part. WCAG 2.1 Level AA includes success criteria that are especially helpful for people with disabilities using mobile devices, people with low vision, and people with cognitive or learning disabilities.35 Support for WCAG 2.1 Level AA as the appropriate technical standard came from a variety of commenters. Commenters supporting the adoption of WCAG 2.1 Level AA noted that it is a widely used and accepted industry standard. At least one such commenter noted that requiring conformance to WCAG 2.1 Level AA would result in a significant step forward in ensuring access for individuals with disabilities to State and local government entities’ web content and mobile apps. Commenters noted that WCAG 2.1 Level AA has been implemented, tested, and shown to be a sound and comprehensive threshold for public agencies. In addition, because WCAG 2.1 Level AA was published in 2018, web developers and public entities have had time to familiarize themselves with it. The WCAG standards were designed to be “technology neutral.”36 This means that they are designed to be broadly applicable to current and future web technologies.37 Thus, WCAG 2.1 also allows web and mobile app developers flexibility and potential for innovation.

The Department expects that adopting WCAG 2.1 Level AA as the technical standard will have benefits that are important to ensuring access for individuals with disabilities to public entities’ services, programs, and activities. For example, WCAG 2.1 Level AA allows text to be formatted so that it is easier to read when magnified.38 This is important, for example, for people with low vision who use magnifying tools. Without the formatting that WCAG 2.1 Level AA requires, a person magnifying the text might find reading the text disorienting because they might have to scroll horizontally on every line.39 WCAG 2.1 Level AA also includes success criteria addressing the accessibility of mobile apps or web content viewed on a mobile device. For example, WCAG 2.1 Level AA Success Criterion 1.4.3 states “Text orientation (i.e., portrait or landscape) not be restricted to just one orientation, unless a specific display orientation is essential.”40

31 The WAI also published some revisions to WCAG 2.1 on September 21, 2023. W3C, Web Content Accessibility Guidelines (WCAG) 2.1 (Sept. 21, 2023), https://www.w3.org/TR/WCAG21/ [https://perma.cc/4VF2-NSF5]; see infra note 47. The WAI also published a working draft of WCAG 3.0 in December 2021. W3C, W3C/WCAG 3.0 Accessibility Guidelines (WCAG) 3.0, https://www.w3.org/TR/wcag-30/ [July 24, 2023] [https://perma.cc/FPQ8-EB7I].
32 W3C, Web Content Accessibility Guidelines (WCAG) 2.1, 0.5 Comparison with WCAG 2.0 (June 5, 2018), https://www.w3.org/TR/2018/REC-WCAG21-20180605/#comparison-with-wcag-2-0 [https://perma.cc/H76F-6L27].

39 See id.
This feature is important, for example, for someone who uses a wheelchair with a tablet attached to it such that the tablet cannot be rotated. If web content or mobile apps only work in one orientation, they will not always work for this individual depending on how the table is oriented, which could render that content or app unusable for the person. Another WCAG 2.1 success criterion requires, in part, that if a function in an app can be operated by motion—for example, shaking the device to undo typing—that there be an option to turn off that motion sensitivity. This is important, for example, for someone who has tremors, so that they do not accidentally undo their typing.

Such accessibility features are critical for individuals with disabilities to have equal access to their State or local government entity’s services, programs, and activities. This is particularly true given that using mobile devices to access government services is commonplace. For example, one source notes that mobile traffic generally accounts for 56% of all internet usage. In addition, WCAG 2.1 Level AA’s incorporation of mobile-related criteria is important because of public entities’ increasing use of mobile apps in offering their services, programs, or activities. Public entities are using mobile apps to offer a range of critical government services—from providing traffic information, to scheduling trash pickup, to making vaccination appointments.

The Department believes that if public entities and associated web developers are not already familiar with WCAG 2.1 Level AA, they are at least likely to be familiar with WCAG 2.0 and will be able to become acquainted quickly with WCAG 2.1’s 12 additional Level A and AA success criteria. The Department believes that resources, like trainings and checklists, exist to help public entities implement or understand how to implement not only WCAG 2.0 Level AA, but also WCAG 2.1 Level AA. Additionally, public entities will have two or three years, depending on population size, to come into compliance with subpart H of this part. Therefore, public entities and web professionals who are not already familiar with WCAG 2.1 will have time to familiarize themselves and plan to ensure that they will be in compliance with the rule when required.

Alternative Approaches Considered

WCAG 2.2

Commenters suggested that the Department adopt WCAG 2.2 as the technical standard. WCAG 2.2 was published and after the comment period closed—a prefinalization stage—in May 2023, and was published in final form on October 5, 2023, which was after the NPRM associated with the final rule was published and after the comment period closed. Commenters who supported the adoption of WCAG 2.2 noted that it was likely to be finalized before the final rule would be published. All of the WCAG 2.0 and WCAG 2.1 success criteria except for one are included in WCAG 2.2.54 WCAG 2.2 also includes six additional Level A and AA success criteria beyond those included in WCAG 2.1. Commenters supporting the adoption of WCAG 2.2 noted that WCAG 2.2’s additional success criteria are important for ensuring accessibility; for example, WCAG 2.2 includes additional criteria that are important for people with cognitive disabilities or for those accessing content via mobile apps. Like WCAG 2.1, WCAG 2.2’s additional success criteria offer particular benefits for individuals with low vision, limited manual dexterity, and cognitive disabilities. For example, Success Criterion 3.8, which is a new criterion under WCAG 2.2, improves access for people with cognitive disabilities by limiting the use of cognitive function tests, like solving puzzles, in authentication processes. Some commenters also suggested that the few additional criteria in WCAG 2.2 would not pose a substantial burden for web developers, who are likely already familiar with WCAG 2.1. 
Some commenters suggested that WCAG 2.1 would become outdated once WCAG 2.2 was finalized. And because WCAG 2.2 was adopted more recently than WCAG 2.1, some commenters noted that the adoption of WCAG 2.2 would be more likely to help subparts H of this part keep pace with changes in technology. The Department understands and appreciates the concerns commenters raised.

The Department believes that adopting WCAG 2.1 as the technical standard rather than WCAG 2.2 is the most prudent approach at this time. W3C, while recommending the use of the most recent recommended standard, has made clear that WCAG 2.2 does not “deprecate or supersede” WCAG 2.1 and has stated that WCAG 2.1 is still an existing standard.54 The Department recognizes that WCAG 2.2 is a newer standard, but in crafting subpart H of this part the Department sought to balance benefits for individuals with disabilities with feasibility for public entities making their content accessible in compliance with subpart H. Because WCAG 2.2 has been adopted so recently, web professionals have had less time to become familiar with the additional success criteria that have been incorporated in WCAG 2.2. The Department believes there will be fewer resources and less guidance available to web professionals and public entities on the new success criteria in WCAG 2.2. Additionally, the Department appreciates the concerns expressed by at least one commenter with adopting any standard that was not finalized before the NPRM’s comment period—as was the case with WCAG 2.2—because interested parties would not have had an opportunity to understand and comment on the finalized standard.

Given the benefits of WCAG 2.2 highlighted by commenters, some public entities might choose to implement WCAG 2.2 to provide an even more accessible experience for individuals with disabilities and to increase customer service satisfaction. The Department notes that subpart H of this part provides for equivalent facilitation in §35.203. Public entities could choose to comply with subpart H by conforming their web content to WCAG 2.2 Level AA because WCAG 2.2 Level AA provides substantially equivalent or greater accessibility and usability as compared to WCAG 2.1 Level AA. This would be sufficient to meet the standard for equivalent facilitation in §35.203, which is discussed in more detail later in the section-by-section analysis.

WCAG 2.0 and Section 508 of the Rehabilitation Act

Alternatively, the Department considered adopting WCAG 2.0. This change was suggested by the Small Business Administration, which argued that public entities should not have to comply with a more rigorous standard for online accessibility than the Federal Government, which is required to conform to WCAG 2.0 under section 508 of the Rehabilitation Act. In 2017, when the Architectural and Transportation Barriers Compliance Board (“Access Board”) adopted WCAG 2.0 as the technical standard for Federal Government’s web content under section 508, WCAG 2.1 had not been finalized.55 And although WCAG 2.0 is the standard adopted by the Department of Transportation in its regulations implementing the Air Carrier Access Act, airlines’ websites and kiosks,56 those regulations—like the section 508 rule—were promulgated before WCAG 2.1 was published.

The Department believes that adopting WCAG 2.1 as the technical standard for subpart H of this part is more appropriate than adopting WCAG 2.0. WCAG 2.1 provides for important accessibility features that are not included in WCAG 2.0, and an increasing number of governmental entities are using WCAG 2.1. A number of countries that have adopted WCAG 2.0 as their standard are now making efforts to move or have moved to WCAG 2.1.57 In countries that are part of the European Union, public sector websites and mobile apps generally must meet a technical standard that requires conformance to the WCAG 2.1 success criteria.58 And WCAG 2.0 is likely to become outdated or less relevant more quickly than WCAG 2.1. As discussed previously in this appendix, WCAG 2.2 was recently published and includes even more success criteria for accessibility.

The Department expects that the wide usage of WCAG 2.0 lays a solid foundation for public entities to become familiar with and implement WCAG 2.1’s additional Level A and AA criteria. According to the Department’s research, dozens of States either use or strive to use WCAG 2.0 or greater—either on their own or by way of implementing the section 508 technical standards—for at least some of their web content. It appears that at least ten States—

55 See 14 CFR 382.43(c) through (e) and 382.57.
57 Section 35.160.

Alaska, Delaware, Georgia, Louisiana, Massachusetts, Oregon, Pennsylvania, South Dakota, Utah, and Washington—already either use WCAG 2.1 or strive to use WCAG 2.1 for at least some of their web content. Given that WCAG 2.1 is a more recent standard than WCAG 2.0, adds important criteria for accessibility, and has been in existence for long enough for web developers and public entities to get acquainted with it, the Department views it as more appropriate for adoption in subpart H of this part than WCAG 2.0. In addition, even to the extent public entities are not already acquainted with WCAG 2.1, those entities will have two or three years to come into compliance with subpart H, which should also provide sufficient time to become familiar with and implement WCAG 2.1. The Department also declines to adopt the Access Board’s section 508 standards, which are harmonized with WCAG 2.0, for the same reasons it declines to adopt WCAG 2.0. Effective Communication and Performance Standards

Some commenters suggested that the Department should require public entities to ensure that they are meeting title II’s effective communication standard—which requires that public entities ensure that their communications with individuals with disabilities are as effective as their communications with others59—rather than requiring compliance with a specific technical standard for accessibility. One such commenter also suggested that the Department should require public entities to voluntarily comply with a specific technical standard for accessibility. As previously mentioned, WCAG 2.1 Level AA provides specific, testable success criteria. As noted in section III.D.4 of the preamble to the final rule, relying solely on the existing title II obligations and expecting entities to voluntarily comply has proven insufficient. In addition, using the technical standard only as a safe harbor would pose similar issues in terms of clarity and would not result in reliability and predictability for individuals with disabilities seeking to access, for example, critical government services that public entities have as part of their web content and mobile apps.

Commenters also suggested that manual testing by individuals with disabilities be required to ensure that content is accessible to them. Although subpart H of this part does not specifically require manual testing by individuals with disabilities because requiring such testing could pose logistical or other hurdles, the Department recommends that public entities seek and incorporate
feedback from individuals with disabilities on their web content and mobile apps. Doing so will help ensure that everyone has access to critical government services.

The Department received some comments recommending that the Department adopt a performance standard instead of a specific technical standard for accessibility of web content and mobile apps. Performance standards establish general expectations or goals for web and mobile app accessibility and allow for compliance via a variety of unspecified methods. As commenters explained, performance standards could provide greater flexibility in ensuring accessibility as web and mobile app technologies change. However, as the Department noted in the NPRM, the Department believes that performance standards are too vague and subjective and could be insufficient to provide consistent and testable requirements for web and mobile app accessibility. Additionally, the Department expects that performance standards would not result in predictability of whether public entities or individuals with disabilities in the way that a more specific technical standard would. Further, similar to a performance standard, WCAG has been designed to allow for flexibility and innovation as technology evolves. The Department recognizes the importance of adopting a standard for web and mobile app accessibility that provides not only specific and testable requirements, but also sufficient flexibility to develop accessibility solutions for new technologies. The Department believes that WCAG achieves this balance because it provides flexibility similar to a performance standard, but it also provides more clarity, consistency, predictability, and objectivity. Using WCAG also enables public entities to know precisely what is expected of them under Title II, which may be of particular benefit to entities with less technological experience. This will assist public entities in identifying and addressing accessibility errors, which may reduce costs they would incur without clear expectations.

Evolving Standard

Other commenters suggested that the Department take an approach in the final rule whereby public entities would be required to comply with whatever is the most recent version of WCAG at the time. Under that approach, the required technical standard would automatically update as new versions of WCAG are published in the future. These commenters generally argued that such an approach “future proofs” WCAG by reference to subpart H and must abide by the Office of the Federal Register’s regulation regarding incorporation by reference. The regulation states that incorporation by reference of a publication is limited to the edition of the publication that is approved by the Office of the Federal Register. Future amendments or revisions of the publication are not included. Accordingly, the Department only incorporates a particular version of the technical standard and does not state that future versions of WCAG could be automatically incorporated into subpart H. In addition, the Department has concerns about regulating to a future standard of WCAG that has yet to be created, of which the Department has no knowledge, and for which compatibility with the ADA and covered entities’ content is uncertain.

Relatedly, the Department also received comments suggesting that it institute a process for reviewing and revising its regulation every several years to ensure that subpart H of this part is up to date and effective for current technology. Pursuant to Executive Order 13563, the Department is already required to do a periodic retrospective review of its regulations to determine whether any such regulations should be modified, streamlined, expanded, or repealed so as to make the agency’s regulatory program more effective or less burdensome in achieving the regulatory objectives. Consideration of the effectiveness of subpart H of this part in the future would fall within Executive Order 13563’s purview, such that building a mechanism into subpart H is not necessary at this time.

Alternative Approaches Considered for Mobile Apps and Conventional Electronic Documents

Section 35.200 adopts WCAG 2.1 Level AA as the technical standard for mobile apps. This approach will ensure the accessibility standards for mobile apps in subpart H of this part are consistent with the accessibility standards for web content in subpart H. The NPRM asked for feedback on the appropriate technical standard for mobile apps, including specific accessibility guidelines for mobile apps. The Department received several comments on the technical standard that should apply to mobile apps. Some commenters supported adopting WCAG 2.1 Level AA, some suggested adopting other technical standards or requirements, and others suggested that some WCAG success criteria may not apply to mobile apps.

Some commenters had concerns about the costs and burdens associated with applying any technical standard to content on mobile apps, including to content in mobile apps that public entities already provide on the web. One commenter requested that the Department apply WCAG 2.0 to the extent that a public entity’s mobile app provides different content than is available online.

However, many commenters expressed strong support for applying the same technical standard to mobile and web content and shared that web content and mobile apps generally should not be treated differently. These commenters emphasized the importance of mobile app accessibility, explaining that many individuals rely on mobile apps to get information about State or local government services, programs, or activities, including transportation information, emergency alerts or special news bulletins, and government appointments. Some commenters further clarified that adopting different standards for mobile apps than web content could cause confusion. They also stated that adopting the same standard would ensure a uniform experience and expectations for users with disabilities.

Some commenters, including disability advocacy organizations, individuals, and public entities, supported the use of WCAG 2.1 Level AA as the technical standard for mobile apps. These commenters explained that WCAG 2.1 is more recent and includes newer guidelines based on accessibility issues found in smartphones. Commenters further shared that WCAG 2.2 can better ensure adequate button size and spacing to accommodate users with varying degrees of motor skills in their fingers.

In addition, other commenters recommended that the Department adopt the Section 508 Standards, either independently or together with WCAG 2.1 or WCAG 2.2. Some of these commenters shared their belief that WCAG was developed more for web content than for mobile apps. These commenters stated that while many of WCAG’s principles and guidelines can be applied to mobile apps, mobile apps have unique characteristics and interactions that may require additional considerations and depend on the specific requirements and goals of the mobile app in question. For example, commenters indicated that mobile apps may also need to adhere to platform-specific accessibility guidelines for iOS (Apple) and Android (Google). In addition, commenters noted that the Section 508 Standards include additional requirements applicable to mobile apps that are not included in WCAG 2.1 Level AA, such as interoperability requirements to ensure that a mobile app does not disrupt a mobile device’s internal assistive technology for individuals with disabilities (e.g., screen readers for people who are blind or have low vision).
Multiple Ways, 3.2.3 Consistent Navigation, and 3.2.4 Consistent Identification.\(^70\) W3C has provided guidance on how these and other WCAG success criteria can be applied to non-web information and communications technologies, including conventional electronic documents and mobile apps.\(^71\)

The Department understands that some WCAG 2.1 Level AA success criteria may not apply to conventional electronic documents and mobile apps directly as written, but the Department declines to set forth exceptions to the standard in subpart H of this part. As discussed, the Department believes it is important to apply one consistent standard to web content and mobile apps to ensure clarity and reduce confusion. Public entities generally must ensure that the web content and content in mobile apps they provide or make available conform to the WCAG 2.1 Level AA success criteria, to the extent those criteria can be applied. In determining how to make conventional electronic documents and mobile apps conform to WCAG 2.1 Level AA, public entities may wish to consult W3C’s guidance on non-web information and communications technology, which explains how the WCAG success criteria can be applied to conventional electronic documents and mobile apps.\(^72\)

The Department believes the compliance dates discussed in §35.200 will provide public entities sufficient time to understand how WCAG 2.1 Level AA applies to their conventional electronic documents and mobile apps, especially because WCAG 2.1 has been in final form since 2018, which has provided time for familiarity and resources to develop. Further, the Department will continue to monitor developments in the accessibility of conventional electronic documents and mobile apps and may issue further guidance as appropriate.

### Alternative Approaches Considered for PDF Files and Digital Textbooks

The Department also received a comment suggesting that subpart H of this part reference PDF/UA-1 for standards related to PDF files or W3C’s EPUB Accessibility 1.1 standard for digital textbooks. The Department declines to adopt additional technical standards for these specific types of content. As discussed, the WCAG standards were designed to be “technology neutral”\(^74\) and are designed to be broadly applicable to current and future web technologies.\(^75\) The Department is concerned that adopting multiple technical standards related to different types of web content and content in mobile apps could lead to confusion. However, the Department notes that subpart H allows for equivalent facilitation in §35.203, meaning that public entities could still choose to comply with WCAG 2.1 standards or guidance related to PDFs or digital textbooks to the extent that the standard or technique used provides substantially equivalent or greater accessibility and usability.

In summary, the Department believes that adopting WCAG 2.1 Level AA as the technical standard strikes the appropriate balance of ensuring access for individuals with disabilities and feasibility of implementation because there is a baseline of familiarity with the standard. In addition, for the reasons discussed previously in this appendix, the Department believes that WCAG 2.1 Level AA is an effective standard that sets forth clear, testable success criteria that will provide important benefits to individuals with disabilities.

### WCAG Conformance Level

For web content and mobile apps to conform to WCAG 2.1, they must satisfy the success criteria under one of three levels of conformance: A, AA, or AAA. As previously mentioned, the Department is adopting Level AA as the conformance level under subpart H of this part. In the regulatory text at §35.200(b)(1) and (2), the Department provides that public entities must comply with Level A and Level AA success criteria and conformance requirements specified in WCAG 2.1. As noted in the NPRM,\(^76\) WCAG 2.1 provides that for Level AA conformance, the web page must satisfy all the Level A and Level AA Success Criteria.\(^77\) However, individual success criteria in WCAG 2.1 are labeled only as Level A or Level AA. Therefore, a person reviewing individual requirements in WCAG 2.1 may not understand that both Level A and Level AA success criteria must be met to attain Level AA conformance. Accordingly, the Department has made explicit in subpart H that both Level A and Level AA success criteria must be met.

---

\(^{70}\)Id. at 5799.

criteria and conformance requirements must be met in order to comply with subpart H’s requirements.

By way of background, the three levels of conformance indicate a measure of accessibility and feasibility. Level A, which is the minimum level of accessibility, contains criteria that provide basic web accessibility and are the least difficult to achieve for web developers. Level AA, which is the intermediate level of accessibility, includes all of the Level A criteria and also contains other criteria that provide more comprehensive web accessibility, and yet are still achievable for most web developers. Level AAA, which is the highest level of conformance, includes all of the Level A and Level AA criteria and also contains additional criteria that can provide a more enriched user experience, but are the most difficult to achieve for web developers. W3C does not recommend that Level AAA conformance be required as a general policy for entire websites because it is not possible to satisfy all Level AAA criteria for some content.

Based on public feedback and independent research, the Department believes that WCAG 2.1 Level AA is the appropriate conformance level because it includes criteria that provide web and mobile app accessibility to individuals with disabilities—including those with visual, auditory, physical, speech, cognitive, and neurological disabilities—and yet is feasible for public entities’ web developers to implement. Commenters who spoke to this issue generally seemed supportive of this approach. As discussed in the NPRM, Level AA conformance is widely used, making it more likely that web developers are already familiar with its requirements. Though many of the entities that conform to Level AA do so under WCAG 2.0, not WCAG 2.1, this still suggests a widespread familiarity with most of the Level AA success criteria, given that 38 of the 50 Level A and AA success criteria in WCAG 2.1 are also included in WCAG 2.0. The Department believes that Level A conformance is a general policy not appropriate because it does not include criteria for providing web accessibility that the Department understands are critical, such as a minimum level of color contrast so that items like text boxes or icons are easier to see, which is important for individuals with vision disabilities.

Some commenters suggested that certain Level AAA criteria or other unique accessibility requirements be added to the technical standard in subpart H of this part. However, the Department believes it would be confusing and difficult to implement certain Level AAA or other unique criteria when such criteria are not required under WCAG 2.1 Level AA. Adopting WCAG 2.1 Level AA to the Flexibility Act would prolong the exclusion of many individuals with disabilities from public entities’ web content.

In addition to setting forth a technical standard with which public entities must comply, § 35.200(b) also establishes dates by which a public entity must comply. The compliance time frames set forth in § 35.200(b) are generally delineated by the population of the public entity, as defined in § 35.104. Larger public entities—those with populations of 50,000 or more—will have two years before compliance is first required. For the reasons discussed in the section-by-section analysis of § 35.200(b)(2), small public entities—those with total populations under 50,000—and special district governments will have an additional year, totaling three years, before compliance is first required. The 50,000 population threshold was chosen because it corresponds with the definition of “all government jurisdictions” as defined in the Regulatory Flexibility Act. After the compliance date, ongoing compliance with subpart H of this part is required.

Commenters expressed a wide range of views about how long public entities should be given to bring their web content and mobile apps into compliance with subpart H of this part. Some commenters expressed concern that public entities would need more time to comply, while others expressed concern that a delayed compliance date would prolong the exclusion of individuals with disabilities from public entities’ online services, programs, or activities. Suggestions for the appropriate compliance time frame ranged from six months to six years. There were also some commenters who suggested a phased approach where a public entity would need to periodically meet certain compliance milestones over time by prioritizing certain types of content or implementing certain aspects of the technical standard. The Department believes these compliance dates should be kept the same, shortened, or designed to phase in certain success criteria or focus on certain content, the Department has decided that the compliance dates in subpart H of this part—two years for large public entities and three years for small public entities and special district governments—strike the appropriate balance between the various interests at stake. Shortening the compliance dates would likely result in increased costs and practical difficulties for public entities, especially small public entities. Lengthening the compliance dates would prolong the exclusion of many individuals with disabilities from public entities’ web content and mobile apps. The Department believes these compliance dates balance the need for public entities to reduce burdens for public entities and mobile apps. Other commenters argued that the compliance dates for mobile apps should be shortened or kept as proposed.

The Department believes that the balance struck in the compliance time frame proposed in the NPRM was appropriate, and that there are no overriding reasons to shorten or lengthen these dates given the important and competing considerations involved by stakeholders. Some commenters suggested the Department should not require compliance with technical standards for mobile apps until at least two years after the compliance deadline for web content. These commenters asserted that having different compliance dates for web content and mobile apps would allow entities to learn how to apply accessibility techniques to their web content and then apply that experience to mobile apps. Other commenters argued that the compliance dates for mobile apps should be shortened or kept as proposed.

The Department has considered these comments and subpart H of this part implements the same compliance dates for mobile apps and web content, as proposed in the NPRM. Because users can often access the same information from both web content and mobile apps, it is important that both platforms are subject to the standard at the same time to ensure consistency in accessibility and to reduce confusion. The Department believes these compliance dates strike the appropriate balance between reducing burdens for public entities and ensuring accessibility for individuals with disabilities.

Some commenters stated that it would be helpful to clarify whether subpart H of this part establishes a one-time compliance requirement or instead establishes an ongoing compliance obligation for public entities. The Department wishes to clarify that under subpart H, public entities have an ongoing obligation to ensure that their web content and mobile apps comply with subpart H’s requirements, which would include content that is newly added or
discrimination on the basis of disability.88

the requirements to ensure equal access,
the date they must initially come into
existing requirements both before and after
addition, commenters emphasized—and the
prepare for compliance during the two or
expects that public entities will need to
applicable compliance date, the Department
helpful in ensuring compliance.

Additionally, some commenters suggested that public entities be required to review their content for accessibility every few years. The Department does not view this as necessary given the ongoing nature of subpart H’s requirements. However, public entities might find that conducting such reviews is helpful in ensuring compliance.

Of course, while public entities must begin complying with subpart H of this part on the applicable compliance date, the Department expects that public entities will need to prepare for compliance during the two or three years before the compliance date. In addition, commenters emphasized—and the Department agrees—that public entities still have an obligation to meet all of title II’s existing requirements both before and after the date they must initially come into compliance with subpart H. These include the requirements to ensure equal access, ensure effective communication, and make reasonable modifications to avoid discrimination on the basis of disability.86

The requirements of § 35.200(b) are generally delineated by the size of the total population of the public entity. If a public entity has a population calculated by the United States Census Bureau in the most recent decennial Census, then the United States Census Bureau’s population estimate for that entity in the most recent decennial Census is the entity’s total population for purposes of this part. If a public entity is an independent school district, then the district’s total population for purposes of this part is determined by reference to the district’s population estimate as calculated by the United States Census Bureau in the most recent Small Area Income and Poverty Estimates.

The Department recognizes that some public entities, like libraries or public colleges and universities, do not have population data associated with them in the most recent decennial Census conducted by the United States Census Bureau. As noted in the section-by-section analysis of § 35.104, the Department has inserted a clarification that was previously found in the preamble of the NPRM into the regulatory text of the definition of “total population” in this part to make it clear that public entities like these to determine their total population size for purposes of identifying the applicable compliance date. As the definition of “total population” makes clear, if a public entity, other than a special district government or an independent school district, does not have a population calculated by the United States Census Bureau in the most recent decennial Census, but is an instrumentation or a public entity is an instrumentation or a public entity’s student bodies, but rather by reference to the Census-calculated total population of the jurisdiction in which the educational entity is an institution.

Other commenters suggested that although public entities without a Census-defined population may be instrumentalities of public entities that do have such a population, those entities do not always reliably receive funding from the public entities of which they are instrumentalities. The Department understands that the financial relationships between these entities may vary, but the Department believes that the method of calculating population it has adopted will generally be the clearest and most effective way for public entities to determine the applicable compliance time frame.

Some commenters associated with educational entities suggested that the Department use the Carnegie classification system for purposes of determining when they must first comply with subpart H of this part. The Carnegie classification system takes into account factors that are not relevant to subpart H, such as the nature of the degrees offered (e.g., baccalaureate versus associate’s degrees).89 Subpart H treats educational entities the same as other public entities for purposes of determining the applicable compliance time frame, which promotes consistency and reliability.

Other commenters suggested that factors such as number of employees, budget, number and type of services provided, and web presence be used to determine the appropriate compliance time frame. However, the Department believes that using population as determined by the Census Bureau is the clearest, most predictable, and most reliable factor for determining the compliance time frame. At least one commenter highlighted that population size often relates to the number of people with disabilities that a public entity serves through its web content and mobile apps. In addition, the Regulatory Flexibility Act uses population size to define what types of governmental jurisdictions qualify as “small.” So this concept, therefore, should be familiar to public entities. Additionally, using population allows the Department to account for the unique challenges faced by small public entities, as discussed in the section-by-section analysis of § 35.200(b)(2).

The Department also received comments asserting that the threshold for being considered “small” should be changed and that the Department should create varying compliance dates based on additional gradations of public entity size. The Department believes it is most appropriate to rely on the 50,000 threshold—which is

89 5 U.S.C. 601(5).

31352 Federal Register / Vol. 89, No. 80 / Wednesday, April 24, 2024 / Rules and Regulations
As discussed previously in this appendix, the Department received varied feedback from the public regarding an appropriate time frame for requiring public entities to begin complying with subpart H of this part. Individuals with disabilities and disability advocacy organizations tended to prefer a shorter time frame, often arguing that web accessibility has long been required by the ADA and that extending the deadline for compliance rewards entities that have not made efforts to make their websites accessible. Such an approach would place an undue burden on smaller public entities with limited resources. Commenters noted that delays in compliance may be particularly problematic in contexts such as voting and education, where delays could be particularly impactful given the time-sensitive nature of these programs. Another commenter who is a professional who is proficient in training staff or contract with qualified personnel to implement WCAG 2.0. The Department believes these 12 additional success criteria of WCAG 2.1 would be more appropriate for small public entities and has provided or made available compliant with Level A and Level AA success criteria. These entities have been particularly concerned—now and in the past—about shorter compliance deadlines, often citing budgets and staffing as major limitations. For example, as noted in the NPRM, when WCAG 2.0 was relatively new, many public entities noted that they lacked qualified personnel to implement that standard. They told the Department that in addition to needing time to implement the changes to their websites, they also needed time to train staff or contract with professionals who are proficient in developing accessible websites. Considering all these factors, as well as the fact that over a decade has passed since the Department started receiving feedback and that there is now more available technology to make web content and mobile apps accessible, the Department believes a two-year compliance time frame for public entities with a total population of 50,000 or more is appropriate.
questions about the impact of the rulemaking on small public entities, including about the compliance costs and challenges that small entities might face in complying with the rulemaking, the current level of accessibility of small public entities’ web content and mobile apps, and whether it would be appropriate to adopt different technical standards or compliance time frames for small public entities.

The Department has reviewed public comments, including a comment from the Small Business Administration Office of Advocacy held during a virtual roundtable session hosted by the Small Business Administration at which approximately 200 members of the public were present, and carefully considered this topic. In light of its review and consideration, the Department believes that the most appropriate means of reducing burdens for small public entities is to give small public entities an extra year to comply with subpart H of this part. Accordingly, under §35.200(b)(2), small public entities, like all other public entities, need to comply with WCAG 2.1 Level AA, but small public entities have three years, instead of the two years provided to larger public entities, to come into compliance. In addition, small public entities (like all public entities) can rely on the five exceptions set forth in §35.201, in addition to the other mechanisms that are designed to make it feasible for all public entities to comply with subpart H of this part, as set forth in §§35.202, 35.203, 35.204 and 35.205.

Many commenters emphasized the challenges that small public entities may face in making their web content and mobile apps accessible. For example, some commenters reported that small public entities often have restricted, inflexible budgets, and might need to divert funds away from other government services in order to comply with subpart H of this part. Commenters also asserted that the Department underestimated the costs that might be associated with bringing small public entities’ web content and mobile apps into compliance. Some commenters noted that small public entities may lack technical expertise and dedicated personnel to work on accessibility issues. Commenters expressed opposition to creating different standards based on the size of the public entity, as this would create additional administrative burdens.

As a result of these concerns, some commenters suggested that the Department should develop different technical standards or compliance time frames for small public entities. For example, some commenters suggested that the Department should set different standards for small public entities that conform to the guidelines of WCAG 2.1, to match the standards that are applicable to the Federal Government under section 508. One commenter suggested that the Department should require small public entities to comply only with WCAG 2.0 Level A, not Level AA. Other commenters advocated for small public entities suggested that those entities should have more time than larger public entities to comply with subpart H of this part, with suggested compliance time frames ranging from three to six years. One commenter suggested the Department should adopt extended compliance dates for certain requirements of subpart H that may be more onerous.

Commenters noted that having additional time to comply would help public entities allocate financial and personnel resources to bring their websites into compliance. A commenter stated that additional compliance time would also allow more web developers to become familiar with accessibility issues and more digital accessibility consultants to emerge, thereby lowering the cost of testing and consulting services. A commenter noted that some rural public entities may need extra time to bring their content into compliance but asserted that the Department should avoid adopting a compliance date so distant that it does not provide sufficient urgency to motivate those entities to address the issue.

Although many commenters expressed concerns about the impact of subpart H of this part on small public entities, many other commenters expressed opposition to creating different standards or compliance time frames for small public entities. Commenters emphasized that people in rural areas might need to travel long distances to access in-person services and that such areas may lack public transportation or rideshare services. Given those considerations, commenters suggested that people with disabilities in small jurisdictions need access to web-based local government services just as much as, and sometimes more than, their counterparts in larger jurisdictions. Some commenters contended that it may benefit small public entities to use a more recent version of WCAG because doing so may provide a better fit for those small and rural governments to have accessible web content and mobile apps. One commenter indicated that rural residents are 14.7 percent more likely than their urban counterparts to have a disability. Other commenters emphasized the problems that may be associated with imposing different technical standards based on the size of the entity, including a lack of predictability with respect to which public entities would be accessible. Commenters also noted that people with disabilities have the right to equal access to their government’s services, regardless of where they live, and stated that setting different standards for small public entities would undermine that right. One commenter stated that, although each small public entity may have only a small population, there are a large number of small public entities, meaning that any lowering of the standards for small public entities would cumulatively affect a large number of people.

Some commenters argued that setting different substantive standards for small public entities could make it challenging to enforce subpart H. Some commenters argued that setting different technical standards for small public entities would be inconsistent with title II of the ADA, which does not set different standards based on the size of the entity. One commenter argued that requiring small public entities to comply only with Level A success criteria would be inadequate and inconsistent with international standards.

Commenters also noted that there are many factors that may make it easier for small public entities to comply. For example, some commenters suggested that small entities may have smaller or less complex websites than larger entities. Commenters noted that public entities may be able to make use of free, publicly available resources for checking accessibility and to save money by incorporating accessibility early in the development process. Commenters also noted that public entities can avoid taking actions that are unduly burdensome by claiming the fundamental alteration or undue burdens limitations where appropriate.

One commenter argued that, because there are a limited number of third-party vendors that provide web content for public entities, a few major third-party vendors shifting towards accessibility as a result of increased demand stemming from subpart H of this part could have a cascading effect. This could make the content of many entities that use those vendors or their templates accessible by default. Commenters also noted that setting different technical standards for small public entities would create confusion for those attempting to implement needed accessibility changes. Commenters also contended that it may benefit small public entities to use a more recent version of WCAG because doing so may provide a better experience for all members of the public.

Some commenters pointed out that the challenges small public entities may face are not necessarily unique, and that many public entities, regardless of size, face budgetary constraints, staffing issues, and a need for training. In addition, some commenters noted that the size of a public entity may not
always be a good proxy for the number of people who may need access to an entity’s website.

Having carefully considered these comments, the Department believes that subpart H of this part strikes the appropriate balance between small public entities to comply with the same technical standard as larger public entities while giving small public entities additional time to do so. The Department believes this longer compliance time frame is prudent in recognition of the additional challenges that small public entities may face in complying, such as limited budgets, lack of technical expertise, and lack of personnel. The Department believes that providing an extra year for small public entities to comply will give those entities sufficient time to properly allocate their personnel and financial resources to make their web content and mobile apps conform to WCAG 2.1 Level AA, without providing so much additional time that individuals with disabilities have a reduced level of access to their State and local government entities’ resources for an extended period.

The Department believes that having provided an additional year for small public entities to comply with subpart H of this part, it is appropriate to require those entities to comply with the same technical standard and conformance level as all other public entities. This approach ensures consistent levels of accessibility for public entities of all sizes in the long term, which will promote predictability and reduce confusion about which standard applies. It will allow for individuals with disabilities to know what they can expect when navigating a public entity’s web content; for example, it will be helpful for individuals with disabilities to know that they can expect to be able to navigate any public entity’s web content independently using their assistive technology. It also helps to ensure that individuals with disabilities who reside in rural areas have comparable access to their counterparts in urban areas, which is critical given the transportation and other barriers that people in rural areas may face. In addition, for the reasons discussed elsewhere in this appendix, the Department believes that WCAG 2.1 Level AA contains success criteria that are critical to accessing services, programs, and activities of public entities, which may not be included under a lower standard. The Department notes that under appropriate circumstances, small public entities may rely on exceptions, flexibilities, and other mechanisms described in the section-by-section analysis of §§ 35.201, 35.202, 35.203, 35.204, and 35.205, which the Department believes should help make compliance feasible for those entities.

Some commenters suggested that the Department should provide additional exceptions or flexibilities to small public entities. For example, the Small Business Administration suggested that the Department explore developing a wholesale exception to subpart H of this part for certain small public entities. The Department does not believe that setting forth a wholesale exception for small public entities would be appropriate for the same reasons that it would be inappropriate to adopt a different technical standard for those entities. Such an exception would mean that an individual with a disability who lives in a small, rural area, might not have the same level of access to their local government’s web-based services, programs, and activities as an individual with a disability in a larger, urban area. This would significantly undermine consistency and predictability in web accessibility. It would also be particularly problematic given the interconnected nature of many different websites. Furthermore, an exception for small public entities would reduce the benefits of subpart H of this part for those entities. The Department has heard from public entities seeking clarity about how to comply with their nondiscrimination obligations under the ADA when offering services via the web. Promulgating an exception for small public entities from the technical standard described in subpart H would not only hinder access for individuals with disabilities but would also leave those entities with no clear standard for how to satisfy their existing obligations under the ADA and the title II regulation.

Other commenters made alternative suggestions, such as making WCAG 2.1 Level AA compliance recommended but not required. The Department does not believe this suggestion is workable or appropriate. As discussed in the section entitled, “Inadequacy of Voluntary Compliance with Technical Standards,” and as the last few decades have shown, the absence of a mandatory technical standard for web content and mobile apps has not resulted in widespread equal access for people with disabilities. For subpart H of this part to have a meaningful effect, the Department believes it must set forth specific requirements so that both individuals with disabilities and public entities have clarity and predictability in terms of what the law requires. The Department believes that creating a recommended, non-mandatory technical standard would not provide this clarity or predictability and would instead largely maintain the status quo.

Some commenters suggested that the Department should allow small public entities to avoid making their web content and mobile apps accessible by instead offering services to individuals with disabilities via the phone, providing an accessibility disclaimer or statement, or offering services to individuals with disabilities through other alternative methods that are not web-based. As discussed in the section entitled “History of the Department’s Title II Web-Relocation and Guidance” and in the NPRM, the way the modern web has developed, the Department no longer believes 24/7 staffed telephone lines can realistically provide equal opportunity to individuals with disabilities in the way that web content and mobile apps can. If a public entity provides services, programs, or activities to the public via the web or mobile apps, it generally needs to ensure that those services, programs, or activities are accessible. The Department also does not believe that the requirement is met by a public entity merely providing an accessibility disclaimer or statement explaining how members of the public can request accessible web content or mobile apps. If none of a public entity’s web content or mobile apps were to conform to the technical standard adopted in subpart H of this part, individuals with disabilities would need to request access each and every time they attempted to interact with the public entity’s services, programs, or activities, which would not provide equal opportunity. Similarly, it would not provide equal opportunity to offer services, programs, or activities via the web or mobile apps to individuals without disabilities but require individuals with disabilities to rely exclusively on other methods to access those services, programs, or activities.

Many commenters also asked the Department to provide additional resources and guidance to help small entities comply. The Small Business Administration Office of Advocacy also highlighted the need for the Department to produce a small entity compliance guide. The Department plans to issue the required small entity compliance guide. The Department is also issuing a Final Regulatory Flexibility Analysis as part of this rulemaking, which explains the impact of subpart H of this part on small public entities. In addition, although the Department does not currently operate a grant program to assist public entities in complying with the ADA, the Department will consider offering additional technical assistance and guidance in the future to help entities better understand their obligations. The Department also operates a toll-free ADA Information Line at (800) 514–0301 (voice) or 1–833–610–1264 (TTY), which public entities can call to get technical assistance about the ADA, including information about subpart H.

Many commenters also expressed concern about the potential for an increase in litigation for small public entities as a result of subpart H of this part. Some commenters asked the Department to create a safe harbor or other flexibilities to protect small public entities from frivolous litigation. In part to address these concerns, subpart H includes a new section, at § 35.205, which states that a public entity that is not in full compliance with the requirements of § 35.200(b) will be deemed to have met the requirements of § 35.200(b) in the limited circumstance in which the public entity can demonstrate that the noncompliance has such a minimal impact on access that it would not affect the ability of individuals with disabilities to use the public entity’s web content or mobile app in a substantially equal manner as individuals without disabilities. As discussed at more length in the section-by-section analysis of § 35.205, the Department
believes this provision will reduce the risk of litigation for public entities while ensuring that individuals with disabilities have substantially equivalent access to public entities’ services, programs, and activities. Section 35.205 will allow public entities to avoid noncompliance with § 35.200 if they are not exactly in conformance to WCAG 2.1 Level AA, but the nonconformance would not affect the ability of individuals with disabilities to use the public entity’s web content or mobile app with substantially equivalent timeliness, privacy, independence, and ease of use. The Department believes that this will afford more flexibility for all public entities, including small ones, while simultaneously ensuring access for individuals with disabilities.

One commenter asked the Department to state that public entities, including small ones, that are working towards conformance to WCAG 2.1 Level AA before the compliance dates are in compliance with the ADA and the Department in unlawful discrimination. The Department notes that while the requirement to comply with the technical standard set forth in subpart H of this part is new, the underlying obligation to ensure that all services, programs, and activities, including those provided via the web and mobile apps, are accessible is not. Title II currently requires public entities to, for example, provide equal opportunity to participate in or benefit from services, programs, or activities; make reasonable modifications to policies, practices, or procedures; and ensure that communications with people with disabilities are as effective as communications with others, which includes considerations of timeliness, privacy, and independence. Accordingly, although public entities do not need to comply with subpart H until two or three years after the publication of the final rule, they will continue to have to take steps to ensure accessibility in the meantime, and will generally have to achieve compliance with the technical standard by the date specified in subpart H.

Some commenters asked the Department to provide additional flexibility for small public entities with respect to captioning requirements. A discussion of the approach to captioning in subpart H of this part can be found in the section entitled “Captions for Live-Audio and Prerecorded Content.” Some commenters also expressed that it would be helpful for small entities if the Department could provide additional guidance on how the undue burden limitation operates in practice. Additional information on this issue can be found in the section-by-section analysis of § 35.204, entitled “Duties.” Some commenters asked the Department to add a notice-and-cure provision to subpart H to help public entities avoid noncompliance from liability. For the reasons discussed in the section-by-section analysis of § 35.205, entitled “Effect of noncompliance that has a minimal impact on access,” the Department does not believe this approach is appropriate.

Special District Governments
In addition to small public entities, § 35.200(b)(2) also covers public entities that are special district governments. As previously noted, special district governments are governments that are authorized to provide a single function or a limited number of functions, such as a zoning or transit authority. As discussed elsewhere in this appendix, § 35.200 proposes different compliance dates according to the size of the Census-defined population of the public entity, or, for public entities without Census-defined populations, the Census-defined population of any State or local governments of which the public entity is an instrumentality or commuter authority. The Department believes applying to special district governments the same compliance standards as public entities (i.e., compliance in three years) is appropriate for two reasons. First, because the Census Bureau does not provide population estimates for special district governments, these limited-purpose public entities might find it difficult to make population estimates that are objective and reliable in order to determine their duties under subpart H of this part. Though some special district governments may estimate their total populations, these entities may use varying methodology to calculate population estimates, which may lead to confusion and inconsistency in the application of the compliance dates in § 35.200. Second, although special district governments may sometimes serve a large population, unlike counties, cities, or townships with large populations that provide a wide range of online government services and programs and often have large and varying budgets, special district governments are authorized to provide a single function or a limited number of functions (e.g., mosquito abatement or water and sewer services). Therefore, they may have more limited or specialized budgets. Therefore, § 35.200(b)(2) extends the deadline for compliance for special district governments to three years, as it does for small public entities.

The Department notes that some commenters opposed giving special district governments three years to comply with subpart H of this part. One commenter asserted that most special district governments are aware of the size of the regions they serve and would be able to determine whether they fall within the threshold for small entities. One commenter noted that some special district governments serve larger populations, such as school districts, that should therefore be treated like large public entities. Another commenter argued that a public entity that has sufficient administrative and fiscal autonomy to qualify as a separate government should have the means to comply with subpart H in a timely manner. However, as noted in the preceding paragraph, the Department is concerned that, because these special district governments do not have a population calculated by the Census Bureau and may not be instrumentalities of a public entity that does have a Census-calculated population, it is not clear that there is a straightforward way for these governments to calculate their precise population. The Department also understands that these governments have limited functions and may have particularly limited or constrained budgets in some cases. The Department therefore continues to believe it is appropriate to give these governments three years to comply.

Compliance Time Frame Alternatives
In addition to asking that the compliance time frames be lengthened or shortened, commenters also suggested a variety of other alternatives and models regarding how § 35.200’s compliance time frames could be structured. Commenters proposed that existing content be treated differently than new content by, for example, requiring that new content be made accessible first and setting delayed or deferred compliance time frames for existing content. Other commenters suggested that the Department use a “runway” or “phase in” model. Under this model, commenters noted, the Department could require conformance to some WCAG success criteria sooner than others. Commenters also suggested a phase-in model where public entities would be required to prioritize certain types of content, such as making all frequently used content conform to WCAG 2.1 Level AA first. Because § 35.200 gives public entities two or three years to come into compliance depending on entity size, public entities have the flexibility to structure their compliance efforts in the manner that works best for them. This means that these entities can prioritize certain success criteria or content during the two or three years before the compliance date—while still complying with their existing obligations under title II—they have the flexibility to do so. The Department believes that this flexibility appropriately acknowledges that different public entities might have unique needs based on the type of content they provide, users that they serve, and resources that they have or procure. The Department, therefore, is not specifying certain criteria or types of content that should be prioritized. Public entities have the flexibility to determine how to make sure they comply with § 35.200 in the two- or three-year period before which compliance with § 35.200 is first required. After the compliance date, ongoing compliance is required.

In addition, the Department believes that requiring only new content to be accessible or using another method for prioritization could lead to a significant accessibility gap for individuals with disabilities if public entities rely on content that is not regularly updated or changed. The Department notes that unless otherwise covered by an exception, subpart H of this part requires that new and existing content be made accessible within the meaning of § 35.200 after the date initial compliance is required. Because some exceptions in § 35.201 only apply to preexisting content, the Department believes it is likely that public entities’ own newly created or added content will largely need to comply with § 35.200 because such content may not qualify for exceptions. For more information about how the exceptions under
§ 35.201 function and how they will likely apply to existing and new content, please review the analysis of § 35.201 in this section-by-section analysis.

Commenters also suggested that public entities be required to create transition plans like those provided in the existing title II regulation at §§ 35.105 and 35.150(d). The Department does not believe it is appropriate to require transition plans as part of subpart H of this part for several reasons. Public entities are already required to ensure that their new content and activities, including those provided via the web or mobile apps, meet the requirements of the ADA. The Department expects that many entities already engage in accessibility planning and self-evaluation to ensure compliance with title II. By not being prescriptive about the type of planning required, the Department will allow public entities flexibility to build on existing systems and processes or develop new ones in ways that work for each entity. Moreover, the Department has not adopted new self-evaluation and transition plan requirements in other sections in this part in which it adopted additional technical requirements, such as in the entity needs to meet ADA Standards for Accessible Design.110 Finally, the Department believes that public entities’ resources may be better spent making their web content and mobile apps accessible under § 35.200, instead of drafting required self-evaluation and transition plans. The Department notes that public entities can still engage in self-evaluation and create transition plans, and would likely find it helpful, but they are not required to do so under § 35.200.

Fundamental Alteration or Undue Financial and Administrative Burdens

As discussed at greater length in the section-by-section analysis of § 35.204, subpart H of this part provides that where a public entity can demonstrate that compliance with the requirements of § 35.200 would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens, compliance with § 35.200 is only required to the extent that it does not result in a fundamental alteration or undue financial and administrative burdens. For example, where it would impose undue financial and administrative burdens to conform to WCAG 2.1 Level AA (or part of WCAG 2.1 Level AA), public entities would not be required to remove their web content and mobile apps, forfeit their web presence, or otherwise undertake changes that would be unduly financially and administratively burdensome. These limitations on a public entity’s duty to comply with the regulatory provisions in subpart H of this part mirror the fundamental alteration or undue burdens limitations currently provided in the title II regulation in §§ 35.105(a)(5) (existing facilities) and 35.164 (effective communication) and the fundamental alteration limitation currently provided in the title II regulation in § 35.130(b)(7) (reasonable modifications in policies, practices, or procedures).

If a public entity believes that a proposed action would fundamentally alter a service, program, or activity or would result in undue financial and administrative burdens, the public entity has the burden of proving that compliance would result in such an alteration or such burdens. The decision that compliance would result in such an alteration or such burdens must be made by the head of the public entity or their designee after considering all resources available for use in the funding and operation of the service, program, or activity, and must be accompanied by a written statement of the reasons for reaching that conclusion. As set forth in § 35.200(b)(1) and (2), if an action required to comply with the accessibility standard in subpart H of this part would result in such an alteration or such burdens, a public entity must take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that, to the maximum extent possible, individuals with disabilities receive the benefits or services provided by the public entity. Section 35.204, entitled “Duties,” lays out the circumstances in which an alteration or such burdens can be claimed. For more information, see the discussion regarding limitations on obligations in the section-by-section analysis of § 35.204.

Requirements for Selected Types of Content

In the NPRM, the Department asked questions about the standards that should apply to two particular types of content: social media postings for live audio content.111 In this section, the Department includes information about the standards that subpart H of this part applies to these types of content and responds to the comments received on these topics.

Public Entities’ Use of Social Media Platforms

Public entities are increasingly using social media platforms to provide information and communicate with the public about their services, programs, or activities in lieu of or in addition to those provided on the public entities’ own websites. Consistent with the NPRM, the Department is using the term “social media platforms” to refer to websites or mobile apps of third parties whose primary purpose is to enable users to create and share content in order to participate in social networking (i.e., the creation and maintenance of personal and business relationships online through websites and mobile apps like Facebook, Instagram, X (formerly Twitter), and LinkedIn).

Subpart H of this part requires that web content and mobile apps that public entities provide or make available, directly or through contractual, licensing, or other arrangements, be made accessible within the meaning of § 35.130. This requirement applies regardless of whether that content is located on the public entity’s own website or mobile app or elsewhere on the web or in mobile apps. The requirement therefore covers web content or content in a mobile app that a public entity makes available via a social media platform. With respect to social media posts that are posted before the compliance date, however, the Department has decided to add an exception, which is explained more in the section-by-section analysis of § 35.201(e), “Preexisting Social Media Posts”.

Many social media platforms that are widely used by members of the public are available to members of the public separate and apart from any arrangements with public entities to provide a service, program, or activity as a result of this part does not require public entities to ensure that such platforms themselves conform to WCAG 2.1 Level AA. However, because the posts that public entities disseminate through those platforms are provided or made available by the public entities, the posts generally must conform to WCAG 2.1 Level AA. The Department understands that social media platforms often make available certain accessibility features like the ability to add captions or alt text. It is the public entity’s responsibility to use these features when it makes web content available on social media platforms.112 For example, if a public entity posts an image to a social media platform that allows users to include alt text, the public entity needs to ensure that the appropriate alt text accompanies that image so that screen-reader users can access the information.

The Department received many comments explaining the importance of social media to accessing public entities’ services, programs, or activities. Both public entities and disability advocates shared many examples of public entities using social media to transmit time-sensitive and emergency information, among other information, to the public. The vast majority of these commenters supported covering social media posts in subpart H of this part. Commenters specifically pointed to examples of communications designed to help the public understand what actions to take during and after public emergencies. Commenters pointed out that these types of communications need to be accessible to individuals with disabilities. Commenters from public entities and trade groups representing public accommodations opposed the coverage of social media posts in subpart H, arguing that social media is more like advertising. These commenters also said it is difficult to make social media content accessible because the platforms sometimes do not enable accessibility features.

The Department agrees with the many commenters who opined that social media posts should be covered by subpart H of this part. The Department believes public entities should not be relieved from their duty under subpart H to provide accessible content to the public simply because that content is being provided through a social media platform. The Department was particularly persuaded by the many examples that commenters shared of emergency and time-sensitive communications that public entities share

110 Section 35.151.

111 86 FR 51958, 51962–51963, 51965–51966.

through social media platforms, including emergency information about toxic spills and wildfire smoke, for example. The Department believes that this information must also be accessible to individuals with disabilities. The fact that public entities use social media platforms to disseminate this type of crucial information also belies any analogy to advertising. And even to the extent that information does not rise to the level of an emergency, if an entity believes information is worth posting on social media for members of the public without disabilities, it is no less important for that information to reach members of the public with disabilities. Therefore, the entity cannot deny individuals with disabilities equal access to that content, even if it is not about an emergency.

The Department received several comments explaining that social media platforms sometimes have limited accessibility features, which can be out of public entities’ control. Some of these commenters suggested that the Department should impose a legal limit on a public entity’s use of inaccessible social media platforms when the public entity cannot ensure accessibility of the platform. Other commenters shared that even where there are accessibility features available, public entities frequently do not use them. The most common example of this issue was public entities failing to use alt text, and some commenters also shared that public entities use inaccessible links. Several commenters also suggested that the Department should provide that where the same information is available on a public entity’s own accessible website, public entities should be considered in compliance with this part even if their content on social media platforms cannot be made entirely accessible.

The Department declines to modify subpart H of this part in response to these commenters, because the Department believes the framework in subpart H balances the appropriate considerations to ensure equal access to public entities’ postings to social media. Public entities must use available accessibility features on social media platforms to ensure that their social media posts comply with subpart H. However, where public entities do not provide social media platforms as part of their services, programs, or activities, they do not need to ensure the accessibility of the platform as a whole. Finally, the Department is declining to adopt the alternative suggested by some commenters that where the same information is available on a public entity’s own accessible website, the public entity should be considered in compliance with subpart H. The Department heard concerns from many commenters about allowing alternative accessible versions when the original content itself can be made accessible. Disability advocates and individuals with disabilities shared that this approach has historically resulted in inconsistent and dated information on the accessible version and that this approach also creates unnecessary segregation between the content available for individuals with disabilities and the original content. The Department agrees with these concerns and therefore declines to adopt this approach. Social media posts enable effective outreach from public entities to the public, and in some cases social media posts may reach many more people than a public entity’s own website. The Department sees no acceptable reason why social media posts should be excluded from this outreach.

The Department received a few other comments related to social media, suggesting for example that the Department adopt guidance on making social media accessible instead of making alternative accessible versions in subpart H of this part, and suggesting that the Department require inclusion of a disclaimer with contact information on social media platforms so that the public can notify a public entity about inaccessible content. The Department believes that these proposals would be difficult to implement in a way that would ensure content is proactively made accessible, rather than reactively corrected after it is discovered to be inaccessible, and thus the Department declines to adopt these proposals.

Captions for Live-Audio and Prerecorded Content

WCAG 2.1 Level AA Success Criterion 1.2.4 requires captions for live-audio content in synchronized media. The intent of this success criterion is to “enable people who are deaf or hard of hearing to watch real-time presentations. Captions provide the content of the content available via the audio track. Captions can only include dialogue, but also identify who is speaking and note sound effects and other significant audio.”

Modern live captioning often can be created with the assistance of technology, such as by assigning captioners through Zoom or other conferencing software that integrates real-time captioning with the content. As proposed in the NPRM, subpart H of this part applies the same compliance dates (determined primarily by size of public entity) to all of the WCAG 2.1 Level AA success criteria, including live-audio captioning requirements. As stated in § 35.200(b), this provides three years after publication of the final rule for small public entities and special district governments to comply, and two years for large public entities. Subpart H takes this approach for several reasons. First, the Department understands that live-audio captioning technology has developed in recent years and continues to develop. In addition, the COVID–19 pandemic moved a significant number of formal meetings, activities, and other gatherings to online settings, many of which incorporated live-audio captioning. As a result of these developments, live-audio captioning has become even more critical for individuals with certain types of disabilities to participate fully in civic life. Further, the Department believes that requiring conformance to all success criteria by the same date (according to entity size) will address the need for both clarity for public entities and predictability for individuals with disabilities. As with any other success criterion, public entities would not be required to satisfy Success Criterion 1.2.4 if they can demonstrate that doing so would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens.

The Department solicited comments to inform this approach, seeking input on the proposed compliance timeline for the type of live-audio content that contains captions. The public entity’s own accessible website, the public entity’s use of inaccessible social media platforms, and the cost of providing captioning for live-audio content for entities of all sizes.

Commenters expressed strong support for requiring captions as a general matter, noting that they benefit people with a variety of disabilities, including those who are deaf, deafblind, or neurodivergent, or have auditory processing disabilities. No commenters argued for an outright exception to captioning requirements for public entities. The vast majority of commenters who responded to these questions, including disability advocates, public entities, and accessible technology industry members, agreed with the Department’s proposal to require compliance with requirements for captioning live-audio content on the same timeline as all other WCAG 2.1 Level AA success criteria. Such commenters noted that a different compliance timeline for live-audio captioning would unfairly burden people who are deaf or have hearing loss and would limit their access to a wide swath of content. One commenter who had worked in higher education, for instance, noted challenges of providing live-audio captioning, including the limited number of captioners available and resulting need for lead time to reserve one, but nonetheless stated that entities should strive for the same compliance date.

A smaller number of commenters urged the Department to adopt a longer compliance time frame in order to allow live-captioning technology to develop further. Some of these commenters supported a longer time frame for smaller entities in particular, which may have fewer resources or budgetary flexibility to comply. Others supported a longer time frame for larger entities because they are likely to have more content to caption. Commenters also noted the difficulty that public entities sometimes encounter in the availability of quality professional live captioners and the lead time necessary to reserve those services, but at the same time noted that public entities do not necessarily want to rely on automatically generated captioning in all scenarios because it may be insufficient for an individual’s needs.

Commenters shared that public entities make many types of live-audio content available, including town hall meetings, board meetings, and other public events; emergency-related and public-service announcements or information; special events like graduations, conferences, or symposia; online courses; and press conferences. Commenters also posed questions about whether Success Criterion
1.2.4 would apply to particular situations and types of media. The Department suggests referring to the explanation and definitions of the terms in Success Criterion 1.2.4 in WCAG 2.1 to determine the live-audio web content and content in mobile apps that must have captioning.

Success Criterion 1.2.4 is crucial for individuals with disabilities to access State and local government entities’ live services, programs, or activities. The Department believes that setting a different compliance date in WCAG 2.1 was also part of WCAG 2.0, which was finalized in 2008. As a result, the Department expects that public entities and associated web developers will be able to become familiar with it, if they are not already familiar. Additionally, setting a separate compliance date for one success criterion could result in confusion and additional difficulty, as covered entities would need to separately keep track of when they need to meet the live-audio captioning success criterion in WCAG 2.1 and the other requirements in their compliance planning. The Department also does not see a sufficient reason to distinguish this success criterion from others as meriting a separate default with human-generated captions when an individual with a disability requests them; or human-generated captions as a default for events with a wide audience like graduations, but automatic captions as a default for private meetings and courses, unless human-generated captions are requested. An accessible technology industry member urged the Department to require captions that provide “equivalent access” to live-audio content that cannot mandate a particular type of captioning.

Commenters also expressed a range of opinions about whether using automatically generated captions instead of professional live-captioning services would be sufficient to comply with Success Criterion 1.2.4. These commenters noted that automatic captions are a widely available option that is low cost for public entities and will likely continue to improve, perhaps eventually surpassing the quality of professional live-captioning services. However, commenters also pointed out that automatic captions may not be sufficient in many contexts such as virtual classrooms, where mistakes in identifying a speaker, word, or punctuation can significantly change the meaning and the participant with a disability needs to be able to respond in real time. Commenters also argued, though, that requiring human captioners in all circumstances public entities making fewer meetings, hearings, courses, and other live-audio content available online due to cost and availability of captioners, which could have a detrimental effect on overall access to these services for people with mobility and other disabilities. Public entities noted that automatic captioning as part of services like Zoom does not cost them anything beyond the Zoom license, but public entities and the Small Business Administration reported that costs can be much higher for human-generated captions for different types of content over the course of a year.

Department declines to establish a different compliance time frame for Success Criterion 1.2.4 for other reasons as well. This success criterion in WCAG 2.1 was also part of WCAG 2.0, which was finalized in 2008. As a result, the Department expects that public entities and associated web developers will be able to become familiar with it, if they are not already familiar. Additionally, setting a separate compliance date for one success criterion could result in confusion and additional difficulty, as covered entities would need to separately keep track of when they need to meet the live-audio captioning success criterion in WCAG 2.1 and the other requirements in their compliance planning. The Department also does not see a sufficient reason to distinguish this success criterion from others as meriting a separate default with human-generated captions when an individual with a disability requests them; or human-generated captions as a default for events with a wide audience like graduations, but automatic captions as a default for private meetings and courses, unless human-generated captions are requested. An accessible technology industry member urged the Department to just require captions that provide “equivalent access” to live-audio content that cannot mandate a particular type of captioning.

After consideration of commenters’ concerns and its independent assessment, the Department does not believe it is prudent to prescribe captioning requirements beyond the WCAG 2.1 requirements, regardless of whether by specifying a numerical accuracy standard, a method of captioning that public entities must use to satisfy this success criterion, or other measures. The Department recognizes commenters’ concerns that automatic captions are currently not sufficiently accurate in many contexts, including contexts involving technical or complex issues. The Department also notes that informal guidance from W3C provides that automatic captions are not sufficient on their own unless they are confirmed to be fully accurate, and that they generally require editing to reach the requisite level of accuracy. On the other hand, the Department recognizes the significant costs and supply challenges that can accompany use of professional live-captioning services, and the pragmatic concern that a requirement to use these services for all events could discourage public entities from conducting services, programs, or activities online, which could have unintended detrimental consequences for people with and without disabilities who benefit from online offerings. Further, it is the Department’s understanding supported by comments, that captioning technology is rapidly evolving and any additional specifications regarding how to meet WCAG 2.1’s live-audio captioning requirements could quickly become outdated. Therefore, the Department does not believe this criterion should be specified as a particular accuracy level or method of satisfying Success Criterion 1.2.4 at this time, as part H of this part provides public entities with the flexibility to determine the best way to comply with this success criterion based on current technology. The Department further encourages public entities to make use of W3C’s and others’ guidance documents available on captioning, including the informal guidance mentioned in the previous paragraph. In response to commenters’ concerns that captioning requirements could lead to fewer online events, the Department reminds public entities that, under § 35.204, they are not required to take any action that would result in a fundamental alteration to their services, programs, or activities or undue financial and administrative burdens; but even in those circumstances, public entities must comply with § 35.200 to the maximum extent possible. The Department believes the approach in part H strikes the appropriate balance of accessibility for individuals with disabilities, keeping pace with evolving technology, and providing a workable standard for public entities.

Some commenters expressed similar concerns related to captioning requirements for prerecorded (i.e., non-live) content under Success Criterion 1.2.2, including concerns that public entities may choose to remove recordings of past events such as public hearings and local government sessions rather than comply with captioning requirements in the recording. The Department recommends that public entities consider other options that may alleviate costs, such as evaluating whether any exceptions apply, depending on the particular circumstances. And as with live-audio captioning, public entities can rely on the fundamental alteration or undue burdens provisions in § 35.204 where they can satisfy the requirements of those provisions. Even where a public entity can demonstrate that conformance to Success Criterion 1.2.2 would result in a fundamental alteration or undue financial and administrative burdens, the Department believes public entities may often be able to take other actions that do not result in such an alteration or such burdens; if they can, § 35.204 requires them to do so.

The same reasoning discussed regarding Success Criterion 1.2.4 also applies to...
Success Criterion 1.2.2. The Department declines to adopt a separate timeline for this success criterion or to prescribe captioning requirements beyond those in WCAG 2.1 due to rapidly evolving technology, the importance of these success criteria, and the other issues generally noted. After full consideration of all the comments received, subpart H of this part requires conformance to WCAG 2.1 Level AA as a whole on the same compliance time frame, for all of the reasons stated in this section.

Section 35.201 Exceptions

Section 35.200 requires public entities to make their web content and mobile apps accessible by complying with a technical standard for accessibility—WCAG 2.1 Level AA. However, some types of content do not have to comply with the technical standard in certain situations. The Department’s aim in setting forth exceptions was to make sure that individuals with disabilities have ready access to public entities’ web content and mobile apps, especially those that are current, commonly used, or otherwise widely needed, while also ensuring that practical compliance with subpart H of this part is feasible and sustainable for public entities. The exceptions help to ensure that compliance with subpart H is feasible by enabling public entities to focus their resources on making frequently used or high impact content WCAG 2.1 Level AA compliant first.

Under §35.201, the following types of content generally do not need to comply with the technical standard for accessibility—WCAG 2.1 Level AA: (1) archived web content; (2) preexisting conventional electronic documents, unless they are currently used to apply for, gain access to, or participate in the public entity’s services, programs, or activities; (3) content posted by a third party; (4) individualized, password-protected or otherwise secured conventional electronic documents; and (5) preexisting social media posts. The Department notes that if web content or content in mobile apps is covered by an exception, the content does not need to conform to WCAG 2.1 Level AA to comply with subpart H of this part, even if the content fails to qualify for another exception.

However, as discussed in more detail later in this section-by-section analysis, there may be situations in which the content otherwise covered by an exception must still be made accessible to meet the needs of an individual with a disability under existing title II requirements.120 Because these exceptions are specifically tailored to address what the Department understands to be existing areas where compliance might be particularly difficult based on current content types and technologies, the Department also expects that these exceptions may become less relevant factors already noted content is added and technology changes.

The previously listed exceptions are those included in §35.201. They differ in some respects from those exceptions proposed in the NPRM. The Department made changes to the proposed exceptions identified in the NPRM after consideration of the public comments and its own independent assessment. Notably, §35.201 does not include exceptions for password-protected course content in elementary, secondary, and postsecondary schools, which had been proposed in the NPRM.121 As will be discussed in more detail, it also does not include an exception for linked third-party content because that proposed exception would have been redundant and could have caused confusion. In the NPRM, the Department discussed the possibility of including an exception for public entities’ preexisting social media posts.122 After consideration of public feedback, §35.201 includes such an exception. In addition, the Department made some technical tweaks and clarifications to the exceptions.123

The Department heard a range of views from public commenters on the exceptions proposed in the NPRM. The Department heard from some commenters that exceptions are necessary to avoid substantial burdens on public entities or to help public entities determine how to allocate their limited resources in terms of which content to make accessible more quickly, especially when initially determining how best to ensure they can start complying with §35.200 by the compliance date. The Department heard that public entities often have large volumes of content that are archived, or documents or social media posts that existed before subpart H of this part was promulgated. The Department also heard that although much of this content available online is important for transparency and ease of access, this content is typically not frequently used and is likely to be of interest only to a discrete population. Such commenters also emphasized that making such content, like old PDFs, accessible by the compliance date would be quite difficult and time consuming. Some commenters also expressed that the exceptions may help public entities avoid uncertainty about whether they need to ensure accessibility in situations where it might be extremely difficult to decide what to do with sets of archived materials retained only for research purposes or where they have little control over content posted to their website by unaffiliated third parties. Another commenter noted that public entities may have individualized documents that apply only to individual members of the public and that in most cases do not need to be accessed by a person with a disability.

On the other hand, the Department has also heard from commenters who objected to the inclusion of exceptions. Many commenters who objected to the inclusion of exceptions cited the need for all of public entities’ web content and mobile apps to be accessible to better ensure predictability and access for individuals with disabilities to critical government information. Some commenters who opposed including exceptions also asserted that a title II regulation need not include any exceptions to its specific requirements because the compliance limitation for undue financial and administrative burdens would suffice to protect public entities from any overly burdensome requirements. Some commenters argued that the exceptions would create loopholes that would result in public entities not providing sufficient access for individuals with disabilities, which could undermine the purpose of subpart H of this part.

Commenters also contended that the proposed exceptions create confusion about what is covered and needs to conform to WCAG 2.1, which could create challenges with compliance for public entities and barriers for individuals with disabilities seeking to access public entities’ web content or mobile apps. Some commenters also noted that there are already tools that can help public entities make web content and mobile apps accessible, such that setting forth exceptions for certain content is not necessary to help public entities comply.

After consideration of the various public comments and after its independent assessment, the Department, working with some refinements, five exceptions in §35.201. As noted in the preceding paragraphs and as will be discussed in greater detail, the Department is not including in the final regulations three of the exceptions that were proposed in the NPRM, but the Department is also adding an exception for preexisting social media posts that it previewed in the NPRM. The five particular exceptions included in §35.201 were crafted with careful consideration of which discrete types of content would promote as much clarity and certainty as possible for individuals with disabilities as well as for public entities when determining which content must conform to WCAG 2.1 Level AA, while also still promoting accessibility of web content and mobile apps overall. The limitations for actions that would require fundamental alterations or result in undue burdens would not provide, on their own, the same level of clarity and certainty. The rationales with respect to each individual exception are discussed in more detail in the section-by-section analysis of each exception. The Department believes that including these five exceptions, and clarifying situations in which content covered by an exception might still need to be made accessible, strikes the appropriate balance between ensuring access for individuals with disabilities and feasibility for public entities so that they can comply with §35.200, which will ensure greater accessibility moving forward.

The Department was mindful of the pragmatic concern that, should subpart H of this part require actions that are likely to result in fundamental alterations or undue burdens for large numbers of public entities or large swaths of their content, subpart H could in practice lead to fewer impactful improvements for accessibility across the board as public entities meet those limitations. The Department believes that such a rule could result in public entities’ prioritizing accessibility of content that is “easy” to make accessible, rather than content that is essential, despite the spirit and letter of the rule. The Department agrees with commenters that clarifying that public

Archived Web Content

Public entities may retain a significant amount of archived web content, which may contain information that is outdated, superfluous, or replicated elsewhere. The Department’s understanding is that, generally, this historic information is of interest only to a small segment of the general population. The Department is aware and concerned, however, that based on current technologies, public entities would need to expend considerable resources to retroactively make accessible the large quantity of historic or otherwise outdated information that public entities created in the past and that they may need or want to make available on their websites. Thus, § 35.201(a) provides an exception from the requirements of § 35.200 for web content that meets the definition of “archived web content” in § 35.104. As mentioned previously, the definition of “archived web content” in § 35.104 has four parts. First, the web content was created before the date the public entity is required to comply with subpart H of this part, reproduces paper documents created before the date the public entity is required to comply with subpart H, or reproduces the contents of other physical media created before the date the public entity is required to comply with subpart H. Second, the web content is retained exclusively for reference, research, or recordkeeping. Third, the web content is not altered or updated after the date of archiving. Fourth, the web content is organized and stored in a dedicated area or areas clearly identified as being archived.

The archived web content exception allows public entities to retain historic web content, while utilizing their resources to make accessible the most widely and consistently used content that people need to access public services or to participate in or benefit from the entity’s services, programs, and activities. For example, a public entity might need to provide a large print version or a version of an archived document that implements some WCAG criteria—such as a document explaining park shelter options and rental prices from 2013—to a person with vision loss who relies on that document even though this content would fall within the archived web content exception. Thus, § 35.201’s exceptions for certain categories of content are layering exceptions and do not function as permanent or blanket exceptions to the ADA’s nondiscrimination mandate. They also do not add burdens on individuals with disabilities that did not already exist as part of the existing title II regulatory framework. As explained further, nothing in this part prohibits an entity from going beyond § 35.200’s requirements to make content covered by the exceptions fully or partially compliant with WCAG 2.1 Level AA.

The following discussion provides information on each of the exceptions, including a discussion of public comments.

124 See §§ 35.130(b)(1)(i)(ii) and (b)(7) and 35.160. For more information about public entities’ existing obligation to ensure that communications with individuals with disabilities are as effective as communications with others, see U.S. Dep’t of Just., ADA Requirements: Effective Communication, ada.gov (Feb 28, 2020), https://www.ada.gov/resources/effective-communication/ (https://perma.cc/CL17-SPNQ).

125 In the NPRM, § 35.201(a) referred to archived web content as defined in § 35.104 “of this chapter.” 88 FR 52019. The Department has removed the language “of this chapter” because it was unnecessary.

download PDF documents that contain a photo and short biography of past judges who are retired. If the PDF documents were created before the date the public entity is required to comply with subpart H, are reproductions of paper documents created before the date the public entity is required to comply with subpart H, or are reproductions of the contents of other physical media created before the date the public entity is required to comply with subpart H, they are only used for reference, research, or recordkeeping. They are not altered or updated after they are posted; and the web page with the links to download the documents is clearly identified as being an archive, the documents would likely be covered by the exception. The Department reiterates that these examples are meant to be illustrative and that the analysis of whether a given piece of web content meets the definition of “archived web content” depends on the specific circumstances.

The Department recognizes, and commenters emphasized, that archived information may be of interest to some members of the public, including some individuals with disabilities, who are conducting research or are otherwise interested in these historic documents. Furthermore, some commenters expressed concerns that public entities would begin (or already are in some circumstances) improperly moving content into an archive.

The Department emphasizes that under this exception, public entities may not circumvent their accessibility obligations by merely labeling their web content as “archived” or by refusing to make accessible any content that is old. The exception focuses narrowly on content that satisfies all four of the criteria necessary to qualify as “archived web content,” namely web content that was created before the date the public entity is required to comply with subpart H of this part, reproduces paper documents created before the date the public entity is required to comply with subpart H, or reproduces the contents of other physical media created before the date the public entity is required to comply with subpart H; is retained exclusively for reference, research, or recordkeeping; is not altered or updated after the date of archiving; and is organized and stored in a dedicated area or areas clearly identified as being archived. If any one of those criteria is not met, the content does not qualify as “archived web content.” For example, if an entity maintains content for any purpose other than reference, research, or recordkeeping, then that content would not fall within the exception regardless of the date it was created, even if an entity labeled it as “archived” or stored it in an area clearly identified as being archived. Similarly, an entity would not be able to circumvent its accessibility obligations by moving web content containing meeting agendas related to meetings that take place after the date the public entity is required to comply with subpart H from a non-archived section of its website to an archived section, because such newly created content would likely not satisfy the first part of the definition based on the date it was created. Instead, such
newly created documents would generally need to conform to WCAG 2.1 Level AA for their initial intended purpose related to the meetings, and they would need to remain accessible if they were later added to an area clearly identified as being archived.

The Department received comments both supporting and opposing the exception. In support of the exception, commenters highlighted various benefits. For example, commenters noted that remediating archived web content can be very burdensome, and the exception for public entities to retain content they might otherwise remove if they had to make the content conform to WCAG 2.1 Level AA. Some commenters also agreed that public entities should prioritize making current and future web content accessible.

In opposition to the exception, commenters highlighted various concerns. For example, some commenters stated that the exception perpetuates unequal access to information for individuals with disabilities, and it continues to inappropriately place the burden on individuals with disabilities to identify themselves to public entities, request access to content covered by the exception, and wait for the request to be processed. Some commenters also noted that the exception is not necessary because the compliance limitations for fundamental alteration and undue financial and administrative burdens would protect public entities from any unrealistic requirements under subpart H.

The Department received comments both supporting and opposing the exception. In support of the exception, commenters highlighted various benefits. For example, commenters noted that remediating archived web content can be very burdensome, and the exception for public entities to retain content they might otherwise remove if they had to make the content conform to WCAG 2.1 Level AA. Some commenters also agreed that public entities should prioritize making current and future web content accessible.

In opposition to the exception, commenters highlighted various concerns. For example, some commenters stated that the exception perpetuates unequal access to information for individuals with disabilities, and it continues to inappropriately place the burden on individuals with disabilities to identify themselves to public entities, request access to content covered by the exception, and wait for the request to be processed. Some commenters also noted that the exception is not necessary because the compliance limitations for fundamental alteration and undue financial and administrative burdens would protect public entities from any unrealistic requirements under subpart H. In addition, commenters stated that the exception covers HTML content, which is easier to make accessible than other types of web content; and it might cover archived web content posted by public entities in accordance with other laws.

The Department decided to keep the exception in § 35.201. After reviewing the range of different views expressed by commenters, the Department continues to believe that the exception appropriately encourages public entities to utilize their resources to make accessible the critical up-to-date materials that are most consistently used to access public entities’ services, programs, or activities. The Department believes the exception provides a measure of clarity and certainty for public entities about what is required of archived web content. Therefore, resources that might otherwise be spent on making accessible large quantities of historic or otherwise outdated information available on some public entities’ websites are freed up to focus on important current and future web content that is widely and frequently used by members of the public. However, the Department emphasizes that the exception is not without bounds. As discussed in the preceding paragraphs, archived web content must meet all four parts of the archived web content definition in order to qualify for the exception. Content must meet the time-based criteria specified in the first part of the definition. The Department believes the addition of the first part of the definition will lead to greater predictability about the application of the exception for individuals with disabilities and public entities about web content that is used for something other than reference, research, or recordkeeping and is not covered by the exception. The Department understands the concerns raised by commenters about the burdens that individuals with disabilities may face because archived web content is not required to conform to WCAG 2.1 Level AA. The Department emphasizes that even if certain content does not have to conform to the technical standard, public entities still need to ensure that archived documents and programs, and activities offered using web content are accessible to individuals with disabilities on a case-by-case basis in accordance with their existing obligations under title II. These obligations include making reasonable modifications to avoid discrimination on the basis of disability, ensuring that communications with people with disabilities are as effective as communications with people without disabilities, and providing people with disabilities an opportunity to participate in or benefit from the entity’s services, programs, or activities.

The Department suggested that the Department should specify that if a public entity makes archived web content conform to WCAG 2.1 Level AA in response to a request from an individual with a disability, such as by remediating a PDF stored in an archived area on the public entity’s website, the public entity should replace the inaccessible version in the archive with the updated accessible version that was sent to the individual. The Department agrees that this is a best practice public entities could implement, but did not add this to the text of this part because of the importance of providing public entities flexibility to meet the needs of individuals with disabilities on a case-by-case basis.

Some commenters suggested that the Department should require public entities to adopt procedures and timelines for how individuals with disabilities may face could request access to inaccessible archived web content covered by the exception. The Department declines to make specific changes to the exception in response to these comments. The Department reiterates that, even if content is covered by this exception, public entities still need to ensure that their services, programs, and activities offered using web content are accessible to individuals with disabilities on a case-by-case basis in accordance with their existing obligations under title II. The Department notes that it is helpful to provide individuals with disabilities with information about how to obtain the reasonable modifications or auxiliary aids and services they may need.

Public entities can help to facilitate effective communication by providing notice to the public on how an individual who cannot access archived web content covered by the exception because of a disability can request other means of effective communication or reasonable modifications in order to access the public entity’s services, programs, or activities with respect to the archived content. Public entities can also help to facilitate effective communication by providing an email address, accessible link, accessible web page, or other accessible means of contacting the public entity to provide information about issues that individuals with disabilities may encounter accessing web content or mobile app accessibility problems to the public entities’ attention, and developing and implementing a procedure for reviewing and addressing any such issues raised. For example, a public entity could help to facilitate effective communication by providing an email address, accessible link, accessible web page, or other accessible means of contacting the public entity to provide information about issues that individuals with disabilities may encounter accessing web content or mobile app accessibility problems to the public entities’ attention, and developing and implementing a procedure for reviewing and addressing any such issues raised. For example, a public entity could help to facilitate effective communication by providing an email address, accessible link, accessible web page, or other accessible means of contacting the public entity to provide information about issues that individuals with disabilities may encounter accessing web content.

Some commenters suggested that this part should require a way for users to search through archived web content, or information about the contents of the archive should otherwise be provided, so individuals with disabilities can identify if content is contained in an archive. Some other commenters noted that searching through an archive is inherently imprecise and involves sifting through many documents, but the exception places the burden on individuals with disabilities to know exactly which archived documents to request in accessible formats. After carefully considering these comments, the Department decided not to change the text of this part. The Department emphasizes that web content that is not archived, but instead notifies users about the existence of archived web content and provides users access to archived web content, generally must still conform to WCAG 2.1 Level AA. Therefore, the Department anticipates that members of the public will have information about what content is contained in any archive. For example, a public entity’s archive may include a list of links to download archived documents. Under WCAG 2.1 Success Criterion 2.4.4, a public entity would generally have to provide sufficient information in the text of the link alone, or

126 A discussion of the relationship between these limitations and the exception in § 35.201 is also provided in the general explanation at the beginning of the discussion of § 35.201 in the section-by-section analysis.
127 The section-by-section analysis of § 35.200 includes a discussion of the Department’s obligation to do a periodic retrospective review of its regulations pursuant to Executive Order 13563.
128 See §§ 35.130(b)(1)(i) and (b)(7) and 35.160.
129 Id.
in the text of the link together with the link’s programmatically determined link context, so users could understand the purpose of each link and determine whether they want to access a given document in the archive.130

Some commenters suggested that public entities believe that the systems they use to retain and store archived web content do not convert the content into an inaccessible format. The Department does not believe it is necessary to make updates to this part in response to these commenters. Content that does not meet the definition of “archived web content” must generally conform to WCAG 2.1 Level AA, unless it qualifies for another exception, so public entities would not be in compliance with subpart H of this part if they stored such content using a system that converts accessible web content into an inaccessible format. The Department anticipates that public entities will still move certain newly created web content into an archive alongside historic content after the date it is required to comply with subpart H, even though the newly created content will generally not meet the definition of “archived web content.” For example, after the time a city is required to comply with subpart H, the city might post a PDF flyer on its website identifying changes to the dates its sanitation department will pick up recycling around a holiday. After the date of the holiday passes, the city might move the flyer to an archive along with other similar historic flyers. Because the newly created flyer would not meet the first part of the definition of “archived web content,” it would generally need to conform to WCAG 2.1 Level AA even after it is moved into an archive. Therefore, the city would need to ensure its system for retaining and storing archived web content does not convert the flyer into an inaccessible format.

Some commenters also suggested that the exception should not apply to public entities whose primary function is to provide or make available what commenters perceived as archived web content, such as some libraries, museums, scientific research organizations, or state or local government agencies that provide birth or death records. Commenters expressed concern that the exception could be interpreted to cover the entirety of such entities’ web content. The Department reiterates that whether archived web content is retained exclusively for reference, research, or recordkeeping depends on the particular circumstances. For example, a city’s research library may have both archived web content related to a city park. If the library’s collection included a current map of the park that was created by the city, that map would likely not be retained exclusively for reference, research, or recordkeeping, as it is a current part of the city’s program of providing and maintaining a park. Furthermore, if the map was newly created after the date the public entity was required to comply with subpart H of this part, and it does not reproduce paper documents or the contents of other physical media created before the date the public entity was required to comply with subpart H, the map would likely not meet the first part of the definition of “archived web content.” In addition, the library may decide to curate and host an exhibition on its website about the history of the park, which refers to and analyzes historic web content pertaining to the park that otherwise meets the definition of “archived web content.” All content used to deliver the online exhibition likely would not be used solely for reference, research, or recordkeeping, as the library is using the materials to create and provide a new educational program for the members of the public. The Department believes the exception, including the definition of “archived web content,” provides a workable framework for determining whether all types of public entities properly designate web content as archived.

In the NPRM, the Department asked commenters about the relationship between the content covered by the archived web content exception and the exception for preexisting conventional electronic documents set forth in §35.201(b).131 In response, some commenters sought clarification about the connection between the exceptions or recommended that there should only be one exception. The Department believes both exceptions are warranted because they play different roles in freeing up public entities’ personnel and financial resources to make accessible the most significant content that they provide or make available. As discussed in the preceding paragraphs, the archived web content exception provides a framework for public entities to prioritize their resources on making accessible the up-to-date materials that people use most widely and consistently, rather than historic or outdated web content. However, public entities cannot disregard such content entirely. Instead, historic or outdated web content that entities intend to treat as archived web content must be located and archived in a manner that clearly designates it as being archived. The Department recognizes that creating an archive area or areas and moving content into the archive will take time and resources. As discussed in the section-by-section analysis of §45.201(b), the preexisting conventional electronic documents exception provides an important measure of clarity and certainty for public entities as they initially consider how to address all the various conventional electronic documents available through their web content and mobile apps. Public entities will not have to immediately focus their time and resources on remediating or archiving less significant preexisting documents that are covered by the exception. Instead, public entities can focus their time and resources elsewhere and attend to preexisting documents consisting of conventional electronic documents exception in the future as their resources permit, such as by adding them to an archive.

The Department recognizes that there may be some overlap between the content covered by the archived web content exception and the exception for preexisting conventional electronic documents set forth in §35.201(b). The Department notes that if web content is covered by the archived web content exception, it does not need to conform to WCAG 2.1 Level AA to comply with subpart H of this part, even if the content fails to qualify for another exception, such as the preexisting conventional electronic document exception. For example, after the date a public university is required to comply with subpart H, its athletics website may still include PDF documents containing the schedules for sports teams from academic year 2017–2018 that were posted in non-archived areas of the website in the summer of 2017. Those PDFs may be covered by the preexisting conventional electronic documents exception because they were available on the university’s athletics website prior to the date it was required to comply with subpart H, unless they are currently used to apply for, gain access to, or participate in a public entity’s services, programs, or activities, in which case, as discussed in more detail in the section-by-section analysis of §35.201(b), they would generally need to conform to WCAG 2.1 Level AA. However, if the university moved the PDFs to an archived area of its athletics site and the PDFs satisfied all parts of the definition of “archived web content,” the documents would not need to conform to WCAG 2.1 Level AA, regardless of how the preexisting conventional electronic document exception might otherwise have applied, because the content would fall within the archived web content exception.

Some commenters also made suggestions about public entities’ practices and procedures related to archived web content, but these suggestions fall outside the scope of this part. For example, some commenters stated that public entities’ websites should not contain archived materials, or that all individuals should have to submit request forms to access archived materials. The Department did not make any changes to this part in response to these comments because this part is not intended to control whether public entities can choose to make archived material in the first instance, or whether members of the public must follow certain steps to access archived web content.

Preexisting Conventional Electronic Documents

Section 35.201(b) provides that conventional electronic documents that are available as part of a public entity’s web content or mobile apps before the date the public entity is required to comply with subpart H of this part do not have to comply with the accessibility requirements of §35.200, unless such documents are currently used to apply for, gain access to, or participate in a public entity’s services, programs, or activities. As discussed in the section-by-section analysis of §35.104, the term “conventional electronic documents” is defined in §35.104 to mean web content or mobile apps that is in the following electronic file formats: portable document formats, word processor file formats, presentation file formats, and spreadsheet file formats. This list of 130 See W3C, Understanding SC 2.4.4.: Link Purpose (In Context) [June 20, 2023], https://www.w3.org/WAI/WCAG21/Understanding/link-purpose-in-context.html [https://perma.cc/REST-79FN].
131 88 FR 51968.
conventional electronic documents is an exhaustive list of file formats, rather than an open-ended list. The Department understands that many websites of public entities contain a significant number of conventional electronic documents that may contain text, images, charts, graphs, and maps, such as comprehensive reports on water quality. The Department also understands that many of these conventional electronic documents are in PDF format, but many conventional electronic documents may also be found in word processor files (e.g., Microsoft Word files), presentation files (e.g., Apple Keynote or Microsoft PowerPoint files), and spreadsheet files (e.g., Microsoft Excel files).

Because of the substantial number of conventional electronic documents that public entities make available through their web content and mobile apps, and because of the personnel and financial resources that would be required for public entities to remediate all preexisting conventional electronic documents to make them accessible after the fact, the Department believes public entities should generally focus their personnel and financial resources on developing new conventional electronic documents that are accessible and remediating existing conventional electronic documents that are currently used to access the public entity’s services, programs, or activities. For example, if before the date a public entity is required to comply with subpart H of this part the entity’s website contains a series of out-of-date PDF reports on local COVID–19 statistics, those reports generally need not conform to WCAG 2.1 Level AA. Similarly, if a public entity maintains decades’ worth of water quality reports in conventional electronic documents on the same web page as its current water quality report, the old reports that were posted before the date the entity was required to comply with subpart H generally do not need to conform to WCAG 2.1 Level AA. As the public entity posts new reports going forward, however, those reports generally must comply with subpart H.

The Department modified the language of this exception from the NPRM. In the NPRM, the Department specified that the exception applied to conventional electronic documents “created by or for a public entity” that are available “on a public entity’s website or mobile app.” The Department believes the language “created by or for a public entity” is no longer necessary in the regulatory text of the exception itself because the Department updated the language of § 35.200 to clarify the overall scope of content generally covered by subpart H of this part. In particular, the text of § 35.200(a)(1) and (2) now states that subpart H applies to all web content and mobile apps that a public entity provides or makes available either directly or through contractual, license, or other arrangements. Section 35.201(b), which is an exception to the requirements of § 35.200, is therefore limited by the new language added to the general section. In addition, the Department changed the language “that are available on a public entity’s website or mobile app” to “that are available as part of a public entity’s web content or mobile apps” to ensure consistency with other parts of the regulatory text by referring to “web content” rather than “websites.” Finally, the Department removed the phrase “members of the public” from the language of the exception in the proposed rule for consistency with the edits to § 35.200 aligning the scope of subpart H with the scope of title II of the ADA, as described in the explanation of § 35.200 in the section-by-section analysis.

Some commenters sought clarification about how to determine whether a conventional electronic document is “preexisting.” They pointed out that the date a public entity posted or last modified a document may not necessarily reflect the actual date the document was first made available to members of the public. For example, a commenter noted that a public entity may copy its existing documents unchanged into a new content management system after the date the public entity is required to comply with subpart H of this part. In contrast, if the public entity posts all of the documents that will reflect the date they were copied rather than the date they were first made available to the public. Another commenter recommended that the exception should refer to the date a document was “originally” posted to account for circumstances in which there is an interruption to the time the document is provided or made available to members of the public, such as when a document is temporarily not available due to technical glitches or server problems.

The Department modified the language of the exception from the NPRM in § 35.200(b) to clarify that conventional electronic documents are preexisting if a public entity provides them or makes them available prior to the date the public entity is required to comply with subpart H of this part. While one commenter recommended that the exception should not apply to documents provided or made available during the two- or three-year compliance timelines specified in § 35.200(b), the Department believes the timelines specified in that section are the appropriate baselines for assessing whether a document is preexisting and requiring compliance with subpart H. If a public entity changes or revises a preexisting document following the date it is required to comply with subpart H, the document would no longer be “preexisting” for the purposes of the exception. Whether documents would still be preexisting if a public entity generally modifies or updates the entirety of its web content or mobile apps after the date it is required to comply with subpart H would depend on the particular facts and circumstances. For example, if a public entity moved all of its web content, including preexisting conventional electronic documents, to a new content management system, but did not change or revise any of the preexisting documents when doing so, the documents would likely still be covered by the exception. In contrast, if the public entity decided to edit the content of certain preexisting documents in the process of moving them to the new content management system, such as by updating the header of a benefits application form to reflect the public entity’s new mailing address, the updated documents would no longer be preexisting for the purposes of the exception. The Department emphasizes that the purpose of the exception is to free up public entities’ resources that would otherwise be spent focusing directly on preexisting documents covered by the exception.

Because the exception only applies to preexisting conventional electronic documents, it would not cover documents that are open for editing if they are changed or revised after the date a public entity is required to comply with subpart H. For example, a town may post a link to the document on its website so members of the public can view the document online in a web browser, and it may update the contents of the document over time after additional meetings take place. If the document was posted to the town’s website prior to the date it was required to comply with subpart H, it would be a preexisting conventional electronic document unless the town added new dates to the document after the date it was required to comply with subpart H. If the town made such additions to the document, the town would no longer be preexisting. Nevertheless, there are some circumstances where conventional electronic documents may be covered by the exception even if copies of the documents can be edited after the date the public entity is required to comply with subpart H. For example, a public entity may post a version of a flyer on its website prior to the date it is required to comply with subpart H. A member of the public could technically download and edit that Word document after the date the public entity is required to comply with subpart H, but their edits would not impact the “official” posted version. Therefore, the official version would still qualify as preexisting under the exception. Similarly, PDF files that include fillable form fields (e.g., areas for a user to input their name and address) may be covered by the exception so long as members of the public do not edit the content contained in the official posted version of the document.

However, as discussed in the following paragraph, the exception does not apply to documents that are currently used to apply for, gain access to, or participate in the public entity’s services, programs, or activities. The Department notes that whether a PDF document is fillable may be relevant in considering whether the document is currently used to apply for, gain access to, or participate in a public entity’s services, programs, or activities. For example, a PDF form that must be filled out and submitted when renewing a driver’s license is currently used to apply for, gain access to, or participate in a public entity’s services, programs, or activities. The Department recommends that the public entity clarify in the text of the regulation that conventional electronic documents include only those documents that are not open for editing by
the public. The Department believes this point is adequately captured by the requirement that conventional electronic documents must be preexisting to qualify for the exception. This exception is not without bounds: it does not apply to preexisting documents that are currently used to apply for, gain access to, or participate in the public entity’s services, programs, or activities. In referencing “documents that are currently used,” the Department intends to cover documents that are used at any given point in the future, not just at the moment in time when the final rule is published. For example, a public entity generally must make a preexisting PDF application for a business license conform to WCAG 2.1 Level AA if the document is still currently used. The Department notes that preexisting documents are also not covered by the exception if they provide instructions or guidance related to other documents that are directly used to apply for, gain access to, or participate in the public entity’s services, programs, or activities. Therefore, in addition to making the aforementioned preexisting PDF application for a business license conform to WCAG 2.1 Level AA, public entities generally must also make other preexisting documents conform to WCAG 2.1 Level AA if they may be needed to obtain the license, complete the application, understand the process, or otherwise take part in the program, such as business license application instructions, manuals, sample knowledge tests, and guides, such as “Questions and Answers” and “Facts.”

Various commenters sought additional clarification about what it means for conventional electronic documents to be “used” in accordance with the limited scope of the exception. In particular, commenters questioned whether informational documents are used by members of the public to apply for, gain access to, or participate in a public entity’s services, programs, or activities. Some commenters expressed concern that the scope of the exception would be interpreted inconsistently, including with respect to documents posted by public entities in accordance with other laws. Some commenters also urged the Department to add additional language to the exception, such as specifying that documents would not be covered by the exception if they are used by members of the public to “enable or assist” them to apply for, gain access to, or participate in a public entity’s services, programs, or activities.

Whether a document is currently used to apply for, gain access to, or participate in a public entity’s services, programs, or activities is a fact-specific analysis. For example, one commenter questioned whether a document containing a city’s description of a public park and its accessibility provisions would be covered by the exception if the document did not otherwise discuss a particular event or program. The Department anticipates that the exception would likely not cover such a document. One of the city’s services, programs, or activities is providing and maintaining a public park and its accessibility features. An individual with a disability who accesses the document before visiting the park to understand the park’s accessibility features would be currently using the document to gain access to the park.

One commenter suggested that if a public entity cannot change preexisting conventional electronic documents due to legal limitations or other similar restrictions, then the public entity should not have to make the document accessible under subpart H of this part, even if they are currently used by members of the public to apply for, gain access to, or participate in a public entity’s services, programs, or activities. The Department did not make changes to the exception because subpart H already includes a provision that addresses such circumstances in §35.202. Namely, public entities are permitted to use conforming alternate versions of web content where it is not possible to make web content compliant with subpart H. These alternate versions may be technically or legally different.

One commenter expressed concern that public entities might convert large volumes of web content to formats covered by the exception, if they are currently used by members of the public. The Department emphasizes that a public entity may not rely on the exception to circumvent its accessibility obligations under subpart H, when converting all of its web content to conventional electronic document formats and posting those documents before the date the entity must comply with subpart H. Even if a public entity did convert various web content to preexisting conventional electronic documents before the date it was required to comply with subpart H, the date the documents were posted is only one part of the analysis under the exception. If any of the converted documents are currently used to apply for, gain access to, or participate in the public entity’s services, programs, or activities, they would not be covered by the exception and would generally need to conform to WCAG 2.1 Level AA, even if those documents were posted before the date the entity was required to comply with subpart H. Furthermore, if the entity revises a conventional electronic document after the date the entity must comply with subpart H, that document would no longer qualify as “preexisting” and would thus need to be made accessible as defined in §35.200.

The Department received comments both supporting and opposing the exception. In support of the exception, commenters highlighted various benefits. For example, commenters noted that the exception would help public entities preserve resources because remediating preexisting documents is time consuming and expensive. Commenters also noted that the exception would focus public entities’ resources on current and future content rather than preexisting documents that may be old, rarely accessed, or of little benefit. Commenters stated that in the absence of this exception, public entities might remove preexisting documents from their websites.

In opposition to the exception, commenters highlighted various concerns. For example, commenters argued that the exception is inconsistent with the ADA’s goal of equal access for individuals with disabilities because it perpetuates unequal access to information available through public entities’ web content and mobile apps, and it is unnecessary because the compliance limitations for fundamental alteration and unduly burdensome requirements in §35.201 would protect public entities from any unrealistic requirements under subpart H of this part. Commenters also asserted that the exception excludes relevant and important content from becoming accessible, and it unnecessarily continues to place the burden on individuals with disabilities to identify themselves to public entities, request access to the content covered by the exception, and wait for the request to be processed. In addition, commenters argued that the exception covers files formats that do not need to be covered by an exception because they can generally be remediated easily; it is not timebound; it does not account for technology that exists, or might develop in the future, that may allow for easy and reliable wide-scale remediation of conventional electronic documents; and it might deter development of technology to reliably remediate conventional electronic documents.

After reviewing the comments, the Department has decided to keep the exception in §35.201. The Department continues to believe that the exception provides an important measure of clarity and certainty for public entities as they initially consider how to address all the various conventional electronic documents provided and made available through their web content and mobile apps. The exception will allow public entities to primarily focus their resources on developing new conventional electronic documents that are accessible as documented under subpart H of this part and remediating preexisting conventional electronic documents that are currently used to apply for, gain access to, or participate in their services, programs, or activities. In contrast, public entities will not have to expend their resources on identifying, cataloguing, and remediating preexisting
conventional electronic documents that are not currently used to apply for, gain access to, or participate in the public entity’s services, programs, or activities. Based on the exception, public entities may thereby make more efficient use of the resources available to them and allow access to their services, programs, or activities for all individuals with disabilities.

The Department understands the concerns raised by commenters about the potential burdens that individuals with disabilities may face with accessing conventional electronic documents covered by the exception are not accessible. The Department emphasizes that even if certain content does not have to conform to the technical standard, public entities still need to ensure that their services, programs, and activities offered using web content and mobile apps are accessible to individuals with disabilities on a case-by-case basis in accordance with their existing obligations under title II of the ADA. These obligations include making reasonable modifications to avoid discrimination on the basis of disability, ensuring that communications with people with disabilities are as effective as communications with people without disabilities, and providing people with disabilities an equal opportunity to participate in or benefit from the entity’s services, programs, or activities.132

Some commenters suggested that the Department should require public entities to adopt procedures and timelines for how individual with disabilities could request access to inaccessible conventional electronic documents covered by the exception. One commenter also suggested that subpart H of this part should require the ongoing provision of accessible materials to an individual with a disability if a public entity is on notice that the individual needs access to preexisting conventional electronic documents covered by the exception. The Department declines to make specific changes to the exception in response to these comments and reiterates that public entities must determine on a case-by-case basis how best to meet the needs of those individuals who cannot access the content contained in documents that are covered by the exception. It is helpful to provide individuals with disabilities with information about how to obtain the modifications or auxiliary aids and services they may need. Public entities can help to facilitate effective communication by providing notice to the public on how an individual who cannot access preexisting conventional electronic documents covered by the exception because of a disability can request access to the content contained in documents that are covered by the exception. It is helpful to provide individuals with disabilities with information about how to obtain the modifications or auxiliary aids and services they may need. Public entities can help to facilitate effective communication by providing notice to the public on how an individual who cannot access preexisting conventional electronic documents covered by the exception because of a disability can request access to the content contained in documents that are covered by the exception. It is helpful to provide individuals with disabilities with information about how to obtain the modifications or auxiliary aids and services they may need. It is helpful to provide individuals with disabilities with information about how to obtain the modifications or auxiliary aids and services they may need. Public entities can help to facilitate effective communication by providing notice to the public on how an individual who cannot access preexists:...
Section 35.201(c) provides an exception to the web and mobile app accessibility requirements of § 35.200 for content posted by a third party, unless the third party is posting due to contractual, licensing, or other arrangements with the public entity. Section 35.201 includes this exception in recognition of the fact that individuals other than a public entity’s agents sometimes post content on a public entity’s website or app contextually. For example, members of the public may sometimes post on a public entity’s online message boards, wikis, social media, or other web forums, many of which are unmonitored, interactive spaces designed to promote the sharing of ideas and information. Members of the public may post frequently, at all hours of the day or night, and a public entity may have little or no control over the content posted. In some cases, a public entity’s website may include posts from third parties dating back many years, which are likely of limited, if any, relevance today. Because public entities often lack control over this third-party content, it may be challenging (or impossible) for them to make it accessible. Moreover, because this third-party content is frequently accessed than other content, there may be only limited benefit to requiring public entities to make this content accessible. Accordingly, the Department believes an exception for this content is appropriate. However, while this exception applies to web content or content in mobile apps posted by third parties, it does not apply to the tools or platforms the public uses to post third-party content on a public entity’s web content or content in mobile apps, such as message boards—these tools and platforms generally must conform to the technical standard in subpart H of this part.

This exception applies to, among other third-party content, documents filed by independent third parties in administrative, judicial, and other legal proceedings that are available on a public entity’s web content or mobile apps. This example helps to illustrate why the Department believes this exception is necessary. Many public entities have either implemented or are developing an automated process for electronic filing of documents in administrative and legal proceedings in order to improve efficiency in the collection and management of these documents. Courts and other public entities receive high volumes of filings in these sorts of proceedings each year. Documents are often submitted by third parties—such as a private attorney in a legal case or other members of the public—and those documents often include appendices, exhibits, or other similar supplementary materials that may be difficult to make accessible.

However, the Department notes that public entities have existing obligations under title II of the ADA to ensure the accessibility of their services, programs, or activities. Accordingly, for example, if a person with a disability is a party to a case and requests access to inaccessible content, the Department notes that public entities have a duty to ensure that such content is provided in an accessible format. Similarly, public entities generally must provide reasonable modifications to ensure that individuals with disabilities have access to the public entities’ services, programs, or activities. For example, if a hearing had been scheduled in the proceeding referenced in this paragraph, the person with a disability was not provided filings in an accessible format before the scheduled hearing.

Sometimes a public entity itself chooses to post content created by a third party on its website. The exception as originally proposed could have applied in the context of third-party vendors and other entities acting on behalf of the public entity. The language in § 35.201(c) provides that the exception does not apply if the third party is posting on behalf of the public entity itself, or posted on behalf of the public entity due to contractual, licensing, or other arrangements, even if the content was originally created by a third party. For example, many public entities post third-party content on their websites, such as calendars, scheduling tools, maps, reservations systems, and payment systems that were developed by an outside technology company. Sometimes a third party might even build a public entity’s website template on the public entity’s behalf. To the extent a public entity chooses to rely on third-party content on its website in these ways, it must select third-party content that meets the requirements of § 35.200. This is because a public entity may not delegate away its obligations under the ADA. If a public entity relies on a contractor or another third party to post content on the public entity’s behalf, the public entity retains responsibility for ensuring the accessibility of that content. To provide another example, if a public housing authority relies on a third-party contractor to collect online applications on the third-party contractor’s website for placement on a waitlist for housing, the public housing authority must ensure that this content is accessible.

The Department has added language to the third-party posted exception in § 35.201(c) to make clear that the exception does not apply where a third party is posting on behalf of the public entity. The language in § 35.201(c) provides that the exception does not apply if the third party is posting due to contractual, licensing, or other arrangements with the public entity. The Department received many comments expressing concern with how this exception as originally proposed could have applied in the context of third-party vendors and other entities acting on behalf of the public entity. The Department added language to make clear that the exception only applies where the third-party posted content is independent from the actions of the public entity—that is, where there is no arrangement under which the third party is acting on behalf of the public entity. If such an arrangement exists, the third-party content is not covered by the exception and must be made accessible in accordance with subpart H of this part. This point is also made clear in language the Department added to the general requirements of § 35.200, which provides that public entities shall ensure web

133 See, e.g., §§ 35.130(b)(1)(ii) and (b)(7) and 35.160.
content and mobile apps that the public entities provide or make available, directly or through contractual, licensing, or other arrangements, are readily accessible to and usable by individuals with disabilities. The Department decided to add the same clarification for third-party posted content because this is the only exception in §35.201 that applies solely based upon the identity of the poster (whereas the other exceptions identify the type of content at issue), and the Department believes clarification about the meaning of “third party” in the context of this exception is critical to avoid the exception being interpreted overly broadly. The Department believes this clarification is justified by the concerns raised by commenters.

On another point, some commenters expressed confusion about when authoring tools and other embedded content that enables third-party postings would need to be made accessible. The Department wishes to clarify that while the exception for third-party posting applies to that content which is posted by an independent third party, the exception does not apply to the authoring tools and embedded content provided by the public entity, directly or through contractual, licensing, or other arrangements. Because of this, authoring tools, embedded content, and other similar functions provided by the public entity that facilitate third-party postings are not covered by this exception and must be made accessible in accordance with part H of this part. Further, public entities should consider the ways in which they can facilitate accessible output of third-party content through authoring tools and guidance. Some commenters suggested that the Department should add regulatory text requiring public entities to use authoring tools that generate compliant third-party posted content. The Department declines to adopt this approach at this time because the technical standard adopted by subpart H is WCAG 2.1 Level AA, and the Department believes the commenters’ proposed approach would clarify the technical standard. The Department believes going beyond the requirements of WCAG 2.1 Level AA in this way would undermine the purpose of relying on an existing technical standard that web developers are already familiar with, and for which guidance is readily available, which could prove confusing for public entities.

The Department received many comments either supporting or opposing the exception for content posted by a third party. Public entities and trade groups representing public accommodation generally supported the exception, while disability advocates generally opposed the exception. Commenters supporting the exception argued that the content covered by this exception would not be possible for public entities to remediate since they lack control over unaffiliated third-party commenters in support of the exception also shared that requiring public entities to remediate this content would stifle engagement between public entities and members of the public, because requiring review and updating of third-party postings would take time. Further, public entities shared that requiring unaffiliated third-party web content to be made accessible would in many cases either be impossible or require the public entity to make changes to third-party content in a way that could be problematic.

Commenters opposing the exception argued that unaffiliated third-party content should be accessible so that individuals with disabilities can engage with their State or local government entities. Some commenters shared examples of legal proceedings, development plans posted by third parties for public feedback, and discussions of community grievances or planning. Some of the commenters writing in opposition to the exception expressed concern that content provided by vendors and posted by third parties on behalf of the public entity would also be covered by this exception. The Department emphasizes in response to these commenters that this exception does not apply to contractual, licensing, or other arrangements. The Department added language to ensure this point is clear in regulatory text, as explained previously.

After reviewing the comments, the Department emphasizes that the exception applies to content that is posted due to contractual, licensing, or other arrangements with the public entity would not be covered by this exception. The Department sometimes referred to this exception as “independent” or “unaffiliated” content to emphasize that this exception only applies to content that the public entity has not contracted, licensed, or otherwise arranged with the third party to post. This exception would generally apply, for example, where the public entity enables comments from members of the public on its social media page and third-party individuals independently comment on that post, or where a public entity allows for legal filings through a third-party attorney independently submits a legal filing on behalf of their private client (which is then available on the public entity’s web content or mobile apps).

The Department has determined that maintaining this exception is appropriate because of the unique considerations relevant to this type of content. The Department takes seriously public entities’ concerns that they will often be unable to ensure independent third-party content is accessible because it is outside of their control, and that if they were to attempt to control this content it could stifle communication between the public and State or local government entities. The Department further believes there are unique considerations that could prove problematic with public entities editing or requiring third-party postings. For example, if public entities were required to add alt text to images or maps in third parties’ legal or other filings, it could require the public entity to make decisions about how to describe images or maps in a way that could be problematic from the perspective of the third-party filer. Alternatively, if the public entity were to place this burden on the third-party filer, it could lead to different problematic outcomes. For example, if a public entity rejects a posting from an unaffiliated third party (someone who does not have obligations under subpart H of this part) and requires the third party to update it, the result could be a delay of an emergency or time-sensitive filing or even impeding access to the forum if the third party is unable or does not have the resources to remediate the filing.

The Department understands the concerns raised by the commenters who oppose this exception, and the Department appreciates that the inclusion of this exception means web content posted by third parties may not consistently be accessible by default. The Department emphasizes that even if certain content does not have to conform to the technical standard, public entities still need to ensure that their services, programs, and activities offered using web content and mobile apps are accessible to individuals with disabilities, and that content is accessible in accordance with their existing obligations under title II of the ADA. These obligations include making reasonable modifications to avoid discrimination on the basis of disability, ensuring that communications with people with disabilities are as effective as communications with people without disabilities, and providing people with disabilities an equal opportunity to participate in or benefit from the entity’s services, programs, or activities. The Department believes the balance this exception strikes ensures accessibility to the extent feasible without requiring public entities to take actions that may be impossible or lead to problematic outcomes as described previously. These problematic outcomes include public entities needing to characterize independent third-party content by adding image descriptions, for example, and stifling engagement between public entities and the public due to public entities’ need to review and potentially update independent third-party postings, which could delay posting of independent third-party content should still be made accessible upon request when required under the existing obligations within title II of the ADA. However, public entities are not required to ensure the accessibility at the outset of independent third-party content. The Department believes, consistent with commenters’ suggestions, that reliance solely on the fundamental alteration or undue burdens provisions discussed in the “Duties” section of the section-by-section analysis of §35.204(b) would not avoid these problematic outcomes. This is because, for example, even where the public entity may have the resources to make the third-party content accessible (such as by making changes to the postings or blocking posting until the third party makes changes), the public entity does not believe modifying the postings would result in a fundamental alteration in the nature of the service, program, or activity at issue, the problematic outcomes described previously would likely persist. The Department thus believes that

135 See supra section-by-section analysis of §35.200(a)(1) and (2) and (b)(1) and (2).

136 See §§35.130(b)(1)(ii) and (b)(7) and 35.160.
this exception appropriately balances the relevant considerations while ensuring access for individuals with disabilities.

Some commenters suggested alternative formulations that would narrow or expand the exception. For example, commenters suggested that the Department limit the exception to advertising and marketing or activities not used to access government services, programs, or activities; mandate that third-party postings providing official comment on government actions still be required to be accessible; provide for alternative means of access as permissible ways of achieving compliance; and require that public entities post guidance on making third-party postings accessible. The Department has considered these alternative formulations, and with each proposed alternative the Department found that the proposal would not avoid the problematic outcomes described previously, would result in practical difficulties to implement and define, or would be too expansive of an exception that in too much content would be inaccessible to individuals with disabilities.

Commenters also suggested that the Department include a definition of “third party.” The Department is declining to add this definition because the critical factor in determining whether this exception applies is whether the third party is posting due to contractual, licensing, or other arrangements, which the public entity, and the Department believes the changes to the regulatory text provide the clarity commenters sought. For example, the Department has included language making clear that public entities are responsible for the content of third parties acting on behalf of State or local government entities through the addition of the “contractual, licensing, or other arrangements” clauses in the general requirements exception. One commenter also suggested that subpart H of this part should cover third-party creators of digital apps and content regardless of whether the apps and content are used by public entities. Independent third-party providers unaffiliated with public entities are not covered by the scope of subpart H, as they are not title II entities.

Finally, the Department made a change to the exception for third-party posted content from the NPRM to make the exception more technology neutral. The NPRM provided that the exception applies only to “web content” posted by a third party. The Department received a comment suggesting that third-party posted content be covered by the exception regardless of whether the content is posted on web content or mobile apps, and several commenters indicated that subpart H of this part should apply the same exceptions across these platforms to ensure consistency in user experience and reduce confusion. For example, if a third party posts information on a public entity’s social media page, that information would be available on both the web and on a mobile app. However, without a technology-neutral exception for third-party posted content, that same information would be subject to different requirements on different platforms, which could create perverse incentives for public entities to only make certain content available on certain platforms. To address these concerns, § 35.201(c) includes a revised exception for third-party posted content to make it more technology neutral by clarifying that the exception applies to “content” posted by a third party. The Department believes this will ensure consistent application of the exception whether the third-party content is posted on web content or mobile apps.

Previously Proposed Exception for Third-Party Content Linked From a Public Entity’s Website

In the NPRM, the Department proposed an exception for third-party content linked from a public entity’s website. After reviewing public comments on this proposed exception, the Department has decided not to include it in subpart H of this part. The Department agrees with commenters who shared that the exception is unnecessary and would only create confusion. Further, the Department believes that the way the exception was framed in the NPRM is consistent with the way subpart H would operate in the absence of this exception (with some clarifications to the regulatory text), so the fact that this exception is not included in subpart H will not change what content is covered by subpart H. Under subpart H, consistent with the approach in the NPRM, public entities are not responsible for making linked third-party content accessible where they do not provide or make available that content, directly or through contractual, licensing, or other arrangements.

Exception Proposed in the NPRM

The exception for third-party-linked content that was proposed in the NPRM provided that a public entity would not be responsible for the accessibility of third-party web content linked from the public entity’s website unless the public entity uses the third-party web content to allow members of the public to participate in or benefit from the public entity’s services, programs, or activities. Many public entities’ websites include links to other websites that contain maps, and other services provided by third-parties, including public entities, even demonstrated this confusion through their comments. For example, commenters believed that web content like fine payment websites, zoning maps, and other services provided by third-party vendors would be accessible under this exception. This misinterprets the proposed exception as originally drafted because third-party web content that is used to participate in or benefit from the public entity’s services, programs, or activities would have still been required to be accessible as defined under proposed § 35.201 due to the limitation to the exception. But the Department noted that many commenters from disability advocacy groups, public entities, and trade groups representing public accommodations either expressed concern with or confusion about the exception, or demonstrated confusion through inaccurate statements about what content would fall into this exception to the requirements in subpart H of this part.

Further, commenters also expressed concern with relieving public entities of the responsibility to ensure that the links they provide lead to accessible content.

---

137 FR 52019.

138 88 FR 52019; see also id. at § 51969 (preamble text).
Commenters stated that when public entities provide links, they are engaging in activities that would be covered by subpart H of this part. In addition, commenters said that public entities might provide links to places where people can get vaccinations or collect information for tourists, and that these constitute the activities of the public entity. Also, commenters opined that when public entities engage in these activities, they should not be absolved of the responsibility to provide information presented in a non-discriminatory manner.

Some commenters said that public entities have control over which links they use when they organize these pages, and that public entities can and should take care to only provide information leading to accessible web content. Commenters stated that in many cases public entities benefit from providing these links, as do the linked websites, and that public entities should thus be responsible for ensuring the accessibility of the linked content. Some commenters added that this exception would be implied that title III entities are permitted to discriminate by keeping their web content inaccessible, though the Department emphasizes in response to these commenters that subpart H does not alter the responsibilities title III entities have with regard to the goods, services, privileges, or activities offered by public accommodations on the web.140

Commenters universally expressed their concern that the content at issue is often inaccessible, accentuating this problem. Some supported the exception, generally including individuals, public entities, and trade groups representing public accommodations. These commenters contended that the content at issue in this exception should properly be considered “fluft,” and that it would be unrealistic to expect tourist or small business promotion to exist through only accessible websites. The Department also received some examples from commenters who supported the exception of web content the commenters inaccurately believed would be covered by the exception, such as highway toll management account websites. The Department would have likely considered that type of content to be required to comply with §35.200, even with the exception, due to the limitation to the third-party-linked exception as proposed in the NPRM. Many of the comments the Department received on this proposed exception demonstrated confusion with how the third-party-linked exception and its limitation as proposed in the NPRM is in practice, which would lead to misconceptions in terms of when public entities must ensure conformance to WCAG 2.1 and what kinds of content individuals with disabilities can expect to be accessible.

Approach to Linked Third-Party Content in Subpart H of This Part

After reviewing public comments, the Department believes that inclusion of this exception is unnecessary, would result in confusion, and that removing the exception more consistently aligns with the language of title II of the ADA and the Department’s intent in proposing the exception in the NPRM.

Consistent with what many commenters opined, the Department believes that the proper analysis is whether an entity has directly, or through contractual, licensing, or other arrangements, provided or made available the third-party content. This means that, for example, when a public entity posts links to third-party web content on the public entity’s website, the links located on the public entity’s website and the organization of the public entity’s website must comply with §35.200. Further, when a public entity links to third-party web content that is provided by the public entity, directly or through contractual, licensing, or other arrangements, the public entity is also responsible for ensuring the accessibility of that linked content. However, when public entities link to third-party websites, unless the public entity is in order for contractual, licensing, or other arrangement with the website to provide or make available content, those third-party websites are not covered by title II of the ADA, because they are not services, programs, or activities provided or made available by public entities, and thus public entities are not responsible for the accessibility of that content.

Rather than conduct a separate analysis under the proposed exception in the NPRM, the Department believes the simpler and more legally consistent approach is for public entities to assume that the linked third-party content reflects content that is covered under subpart H of this part to determine their responsibility to ensure the accessibility of that content. If that content is covered, it must be made accessible in accordance with the requirements of §35.200. For example, if a public entity allows the public to pay for highway tolls using a third-party website, that website would be a service that the public entity provides through arrangements with a third party, and the toll payment website would need to be accessible consistent with subpart H. However, if the content is not provided or made available by a public entity, directly or through contractual, licensing, or other arrangements, even though the public entity linked to that content, the public entity would not be responsible for making that content accessible. The public entity would still need to ensure the links themselves are accessible, but not the unaffiliated linked third-party content.

For example, if a public entity has a tourist information website that provides a link to a private hotel’s website, then the public entity would need to ensure the link to that hotel is accessible, because the link is part of the web content of the public entity. The public entity would, for example, need to ensure that the link does not violate the minimum color contrast ratio by being too light of a color blue against a light background, which would make it inaccessible to certain individuals with disabilities.141 However, because the hotel website itself is private and is not being provided on behalf of the public entity due to a contractual, licensing, or other arrangement, the public entity would not be responsible for ensuring the hotel website’s ADA compliance.142

The Department believes that this approach is consistent with what the Department sought to achieve by including the exception in the NPRM, so this modification to subpart H of this part from the proposal in the NPRM does not change the public entity content that is ultimately covered by subpart H. Rather, the Department believes that removing the exception will alleviate the confusion expressed by many commenters and allow public entities to make a more straightforward assessment of the coverage of the web content they provide to the public under subpart H. For example, a public entity that links to online payment processing websites offered by third parties to accept the payment of fees, parking tickets, or taxes must ensure that the third-party web content links to content that is ultimately covered by subpart H. The public entity is using the third party’s linked web content as part of the public entity’s services, programs, or activities, and the public entity must ensure that it links to only third-party web content that complies with the requirements of §35.200. Similarly, if a public entity links to a third-party website that processes applications for benefits or requests to sign up for classes or programs the public entity offers, the public entity is using the third party’s linked web content as part of the public entity’s services, programs, or activities, and the public entity must ensure that it links to only third-party web content that complies with the requirements of §35.200.

The Department considered addressing commenters’ confusion by providing more guidance on the proposed exception, rather than removing the exception. However, the Department believes that the concept of an exception for this type of content, when that content would not be covered by title II in the first place, would make the exception especially prone to confusion, such that including it in subpart H of this part even with further explanation would be insufficient to avoid confusion. The Department believes that because the content at issue would generally not be covered by title II in the first place, including this exception could inadvertently cause public entities to assume that the exception is broader than it is, which could result in the inaccessibility of content that is critical to accessing public entities’ services, programs, or activities.

The Department also reviewed proposals by commenters to both narrow and expand the language of the exception proposed in the NPRM. Commenters suggested narrowing the exception by revising the limitation to cover information that “enables or assists” members of the public to participate in or

142 The Department reminds the public, however, that the hotel would still have obligations under title II of the ADA. See U.S. Dep’t of Just., Guidance on Web Accessibility and the ADA, ADA.gov [Mar. 18, 2022], https://www.ada.gov/resources/web-guidance/ [https://perma.cc/W9E2-VTCY].
benefit from services, programs, or activities. Commenters also proposed expanding the exception by allowing third-party web content to remain inaccessible if there is no feasible manner for the content to be made compliant with the requirements of § 35.200 or by exception. Several of the commenters added that “third-party content” should also mean content that is provided by third parties, such as private companies, to allow the public to access the public entity’s services, programs, or activities. This part of the section-by-section analysis refers to mobile apps that are developed, owned, and operated by third parties and are provided by third parties as “external mobile apps.”

For example, members of the public use external mobile apps to pay for parking in a city (e.g., “ParkMobile”) or to submit non-emergency service requests such as fixing a pothole or a streetlight (e.g., “SeeClickFix”). In subpart H of this part, external mobile apps are subject to § 35.200 in the same way as mobile apps that are developed, owned, and operated by a public entity. The Department is taking this approach because such external apps are generally made available through contractual, licensing, or other means, and this approach ensures consistency with existing ADA requirements that apply to other services, programs, and activities that a public entity provides in this manner.

Consistent with these principles, a public entity, directly or through contractual, licensing, or other arrangements, provides or makes available an external mobile app, that mobile app must comply with § 35.200 unless it is subject to one of the exceptions outlined in § 35.201.

The Department requested feedback on the external mobile apps that public entities use to offer their services, programs, or activities and received comments on its approach to external mobile apps. Commenters pointed out that external mobile apps are used for a variety of purposes by public entities, including for public information, updates on road conditions, transportation purposes, information on recreation, class information, road conditions, transportation purposes, and public reliance on many public entities’ services, programs, or activities inaccessible in practice for many individuals with disabilities. The Department believes that individuals with disabilities should not be excluded from these government services because the external mobile apps on which public entities rely are inaccessible. In addition, this approach of applying ADA requirements to services, programs, or activities that a public entity provides through a contractual, licensing, or other arrangement with a third party is consistent with the existing framework in title II of the ADA. Under this framework, public entities have obligations in other title II contexts where they choose to contract, license, or otherwise arrange with third parties to provide services, programs, or activities.

With respect to concerns about an appropriate compliance date, the section-by-section analysis of § 35.200 addresses this issue. The Department believes the compliance dates in subpart H of this part will provide sufficient time for public entities to ensure they are in compliance with the requirements in this part. Further lengthening the compliance dates would only extend the time that individuals with disabilities remain excluded from the same level of access to public entities’ services, programs, and activities through mobile apps.

Previously Proposed Exceptions for Password-Protected Class or Course Content of Public Educational Institutions

In the NPRM, the Department proposed exceptions to the requirements of § 35.200 for certain password-protected class or course content of public elementary, secondary, and postsecondary institutions. For the reasons discussed in this section, the Department has decided not to include these exceptions in subpart H of this part. Accordingly, under subpart H, password-protected course content will be treated like any other content and public educational institutions will generally need to ensure that that content complies with WCAG 2.1 Level AA starting two or three years after the publication of the final rule, depending on whether the public educational institution is covered by § 35.200(b)(1) or (2).

143 The Department does not use the term “third-party” to make sure that the services, programs, or activities activities operated by a State park inn that is operated by a private entity under contract with the State comply with title II. See 56 FR 53564, 53566 (July 26, 1991).

144 See § 35.130(b)(1) and (3).

145 For example, under title II, a State is required to make sure that the services, programs, or activities offered by a State park inn that is operated by a private entity under contract with the State comply with title II. See 56 FR 53564, 53566 (July 26, 1991).

146 See 88 FR 52019.

147 Some commenters asked for clarification about how the proposed course content exceptions would operate in practice. For example, one commenter asked for clarification about what it would mean for a public educational institution to be “on notice” about the need to make course content accessible for a particular student, one of the limitations proposed in the NPRM. Because the Department is eliminating the course content exceptions from subpart H of this part, these questions about how the exceptions would have operated are moot and are not addressed in subpart H.
Course Content Exceptions Proposed in the NPRM

The NPRM included two proposed exceptions for password-protected class or course content of public educational institutions. The first proposed exception, which was included in the NPRM as proposed § 35.201(e), stated that the requirements of § 35.200 would not apply to course content available on a public entity’s password-protected or otherwise secured website for admitted students enrolled in a specific course offered by a public postsecondary institution. Although the proposed exception applied to password-protected course content, it did not apply to the Learning Management System platforms on which public educational institutions make content available.

This proposed exception was cabined by two proposed limitations, which are scenarios under which the proposed exception would not apply. The first such limitation provided that the proposed exception would apply if a public entity is on notice that an admitted student with a disability is pre-registered in a specific course offered by a public postsecondary institution and that the student, because of a disability, would be unable to access the content available on the public entity’s password-protected or otherwise secured website for the specific course. In those circumstances, the NPRM proposed, all content available on the public entity’s password-protected or otherwise secured website for course content must comply with the requirements of § 35.200 by the date the academic term begins for that course offering, and new content added throughout the term for the course must also comply with the requirements of § 35.200 at the time it is added to the website.

The second limitation to the proposed exception for public postsecondary institutions’ course content provided that the exception would not apply once a public entity is on notice that an admitted student with a disability is enrolled in a specific course offered by a public postsecondary institution after the start of the academic term and that the student, because of a disability, would be unable to access the content available on the public entity’s password-protected or otherwise secured website for the specific course. In those circumstances, the NPRM proposed, all content available on the public entity’s password-protected or otherwise secured website for course content must comply with the requirements of § 35.200 within five business days of such notice, and new content added throughout the term for the course must also comply with the requirements that would be in effect at the time it is added to the website.

The second proposed course content exception, which was included in the NPRM as § 35.201(f), proposed the same exception as proposed § 35.201(e), but for public elementary and secondary schools. The proposed exception also contained the same limitations and timing requirements as the proposed exception for public postsecondary schools, but the limitations to the exception would have applied not only when there was an admitted student with a disability enrolled in the course whose disability made them unable to access the course content, but also when there was a parent with a disability whose child was enrolled in the course and whose disability made them unable to access the course content.

The Department proposed these exceptions in the NPRM based on its initial assessment that it might be too burdensome to require public educational institutions to make accessible all of the course content that is available on password-protected websites, particularly given that content can be voluminous and that some courses in particular terms may not include any students with disabilities or students whose parents have disabilities. However, the Department recognized in the NPRM that it is critical for students with disabilities to have access to course content for the courses in which they are enrolled; the same is true for parents with disabilities in the context of public elementary and secondary schools. The Department therefore proposed procedures that a public educational institution could follow to make course content accessible on an individualized basis once the institution was on notice that there was a student or parent who needed accessible course content because of a disability. Because of the need to ensure prompt access to course content, the Department proposed to require public educational institutions to act quickly upon being on notice of the need for accessible content; public entities would have been required to provide accessible course content either by the start of the term if the institution was on notice before the date the term began, or within five business days if the institution was on notice after the start of the term.

The Department stated in the NPRM that it believed the proposed exceptions for password-protected course content struck the proper balance between meeting the needs of students and parents with disabilities while crafting a workable standard for public entities, but it welcomed public feedback on whether alternative approaches might strike a more appropriate balance.

The Department also asked a series of questions about whether these exceptions were necessary or appropriate. For example, the Department asked how difficult it would be for public educational institutions to comply with the limitations included in the absence of these exceptions, what the impact of the exceptions would be on individuals with disabilities, how long it takes to make course content accessible, and whether the Department should consider an alternative approach.

Public Comments on Proposed Course Content Exceptions

The overwhelming majority of comments on this topic expressed opposition to the course content exceptions as proposed in the NPRM. Many commenters suggested that the Department should take an alternative approach on this issue; namely, the exceptions should not be included in subpart H of this part. Having reviewed the public comments and given careful additional consideration to this issue, the Department has decided not to include these exceptions in subpart H. The public comments supported the conclusion that the exceptions would exacerbate existing educational inequities for students and parents with disabilities without serving their intended purpose of meaningfully alleviating burdens for public educational institutions.

Infeasibility for Public Educational Institutions

Many commenters, including some commenters affiliated with public educational institutions, asserted that the course content exceptions and limitations as proposed in the NPRM would not be workable for schools, and would almost inevitably result in delays in access to course content for students and parents with disabilities. Commenters provided varying reasons for these conclusions.

Some commenters argued that because making course content accessible often takes time and intentionality to implement, it is more efficient and effective for public educational institutions to create policies and procedures to make course content accessible proactively, without waiting for a student with a disability (or student with a parent with a disability) to enroll and then making content accessible reactively. Some commenters pointed out that although the Department proposed the course content exceptions in an effort to make it easier for public educational institutions to comply with subpart H of this part, the exceptions would in fact likely result in more work for entities struggling to remediate content on the back end.

Commenters noted that in many cases, public educational institutions do not generate course content themselves, but instead procure such content through third-party vendors. As a result, some commenters stated, public educational institutions may be dependent on vendors to make their course content accessible, many of which are unable or unwilling to respond to ad hoc requests for accessibility within the expedited time required to comply with the limitations to the proposed exceptions. Some commenters argued that it is more efficient and effective to incentivize third-party vendors to make course content produced for public educational institutions accessible on the front end. Otherwise, some commenters contended, it may fall to
individual instructors to scramble to make course content accessible at the last minute, regardless of those instructors’ background or training on making content accessible, and despite the fact that many instructors already have limited time to devote to teaching and preparing course materials. Some commenters noted that public educational institutions can leverage their contracting power to choose to work with third-party vendors that can offer accessible content. This commenter noted that there is precedent for this approach, as many universities and college stores already leverage their contracting power to limit participation in certain student discount programs to third-party publishers that satisfy accessibility requirements. Some commenters suggested that rulemaking in this area will spur vendors, publishers, and creators to improve the accessibility of their offerings.

Some commenters also observed that even if public educational institutions might be able to make a subset of content accessible within the five-day time frame provided under the proposed exceptions, it could be close to impossible for institutions to do so for all course content for all courses, given the wide variation in the size and type of course content. Some commenters noted that content for science, technology, engineering, and mathematics courses may be especially difficult to remediate under the expedited time frames provided under the proposed exceptions. Some commenters indicated that it is more effective for public educational institutions to conduct preparations in advance to ensure materials accessible from the start. One commenter asserted that remediating materials takes, on average, twice as long as developing materials that are accessible from the start. Some commenters also pointed out that it might be confusing for public educational institutions to have two separate standards for the accessibility of course content depending on whether there is a student (or student with a parent) with a disability in a particular course.

Many commenters took particular issue with the five-day remediation time frame for course content when a school becomes on notice after the start of the term that there is a student or parent with a disability who needs accessible course content. Some commenters argued that this time frame was too short for public entities to ensure the accessibility of all course content for a particular course, while simultaneously being too long to avoid students with disabilities falling behind. Some commenters noted that the five-day time frame would be particularly problematic for short courses that occur during truncated academic terms, which may last only a small number of days or weeks.

Some commenters also argued that the course content exceptions would create a series of perverse incentives for public educational institutions and the third-party vendors with whom they work, such as incentivizing institutions to neglect accessibility until the last minute and attempt to rely on the fundamental alteration or undue burdens limitations more frequently when they are unable to comply as quickly as required under subpart H of this part. Some commenters also contended that the course content exceptions would undermine public educational institutions’ settled expectations about what level of accessibility is required for course content and would cause the institutions that already think of accessibility proactively to regress to a more reactive model. Some commenters asserted that because the course content exceptions would cover only password-protected or otherwise secured content, the exceptions would also incentivize public educational institutions to place course content behind a password-protected wall, thereby making less content available to the public as a whole.

Some commenters asserted that if the exceptions were not included in subpart H of this part, the existing fundamental alteration and undue burdens limitations would provide sufficient protection for public educational institutions. One commenter also suggested that making all course content accessible would offer benefits to public educational institutions. Some commenters contended that accessibility of content often requires less maintenance than inaccessible content and can more readily be transferred between different platforms or accessed using different tools. This commenter contended that by relying on accessible content, public educational institutions would be able to offer better services to all students, because accessible content is more user friendly and provides value for all users.

Some commenters pointed out that there are other factors that will ease the burden on public educational institutions of complying with subpart H of this part without the course content exceptions proposed in the NPRM. For example, one commenter reported that elementary and secondary curriculum materials are generally procured at the district level. Thus, course content is generally the same for all schools in a given district. This commenter asserted that school districts could therefore address the accessibility of course content materials for all schools in their district at once by making digital accessibility an evaluation criterion in their procurement process.

Impact on Individuals With Disabilities

As noted elsewhere in this appendix, many commenters asserted that the course content exceptions proposed in the NPRM could result in an untenable situation in which public educational institutions would likely be unable to fully respond to individualized requests for accessible materials, potentially leading to widespread noncompliance with the technical standard and delays in access to course content for students and parents with disabilities. Many commenters emphasized the negative impact that this situation would have on individuals with disabilities.

Some commenters highlighted the pervasive discrimination that has affected generations of students with disabilities and prevented them from obtaining equal access to education, despite existing statutory and regulatory obligations. As one recent example, some commenters cited studies conducted during the COVID–19 pandemic that demonstrated inequities in access to education for students with disabilities, particularly in the use of web-based educational materials. Commenters stated that due to accessibility issues, students with disabilities have sometimes been unable to complete required assignments, needed continuous support from others to complete their coursework, and as a result felt frustrated, discouraged, and excluded. Some commenters also reported that some students with disabilities have dropped a class, taken an incomplete, or left their academic program altogether because of the accessibility of their coursework. Some commenters also argued that the proposed course content exceptions would exacerbate this discouraging issue and would continue to exclude students with disabilities from equally accessing an education and segregate them from their classmates.

Some commenters contended that the proposed exceptions would perpetuate the status quo by inappropriately putting the onus on students (or parents) with disabilities to request accessible materials on an individualized basis. Some commenters asserted that this can be problematic because some individuals may not recognize that they have an accessibility need that their school could accommodate and because requesting accessible materials is at times burdensome and results in unfair stigma or invasions of privacy. Some commenters noted that this may result in students or parents with disabilities not requesting accessible materials. Some commenters also argued that because the course content exceptions would put public educational institutions in a reactionary posture and place burdens on already-overburdened instructors, some instructors and institutions might view requesting students as an inconvenience, in spite of their obligations not to discriminate against those students.

One commenter noted that constantly having to advocate for accessibility for years on end can be exhausting for students with disabilities and damaging to their self-esteem, sense of belonging, and ability to engage in academic exploration. Some commenters also noted that the structure of the proposed exceptions would be in significant tension with the typical structure of a public educational institution’s academic term. For example, some...
Some commenters noted that students, particularly students at public postsecondary institutions, often have the opportunity to electronically review course syllabi and materials and “shop” the first session(s) of a particular course to determine whether they wish to enroll, enroll late, or drop the course. Commenters stated that because these processes typically unfold quickly and early in the academic term, the proposed course content exceptions would make it hard or impossible for students with disabilities to take advantage of those options that are available to other students. Commenters also noted that the course content exceptions could interfere with students’ ability to transfer to a new school in the middle of a term.

Some commenters also stated many other ways in which the delays in access to course content likely resulting from these exceptions could disadvantage students with disabilities. Some commenters noted that even if public educational institutions were able to make accessible materials within the compressed time frames provided under the proposed exceptions—an unlikely result, for the reasons noted elsewhere in this appendix—students with disabilities still might be unable to access course materials as quickly as would be needed to fully participate in their courses. For example, some commenters stated that because students are often expected to complete reading assignments before the first day of class, it is problematic that the proposed exceptions did not require public educational institutions to make course content accessible before the first day of class for students who preregister. Some commenters also observed that because some students with disabilities do not file accessibility requests until after the start of the academic term, it would be impossible to avoid delays in access to course materials under the exceptions. Some commenters also noted that students are often expected to collaborate on assignments, and even a brief delay in access to course material could make it challenging or impossible for students with disabilities to participate in that collaborative process.

Some commenters argued that the likely outcome that schools are unable to provide accessible course content as quickly as the proposed limitations to the exceptions would require, the resulting delays could cause students with disabilities to fall behind in course readings and assignments, sometimes forcing them to withdraw from or fail the course. Some commenters noted that even if students were able to rely on others to assist them in reviewing inaccessible course materials, doing so is often slower and less effective, and can have a negative emotional effect on students, undermining their senses of independence and self-sufficiency.

Some commenters took particular issue with the proposed exception for postsecondary course content. For example, some commenters asserted that it is often more onerous and complicated for students with disabilities to obtain accessible materials upon request in the postsecondary context, given that public postsecondary schools are not subject to the same obligations as public elementary and secondary institutions to identify students with disabilities under other laws addressing disability rights in the educational context. Accordingly, those commenters argued, the proposed exceptions might be especially harmful for postsecondary students with disabilities.

Other commenters argued that the proposed exception for elementary and secondary course content was especially problematic because it would affect virtually every child with a disability in the country. Some commenters opined that the proposed course content exceptions could make it hard or impossible for parents with disabilities to be involved in their children’s education in an effective manner. Some commenters also contended that the proposed course content exceptions would be problematic in the wake of the COVID–19 pandemic, which has led to a rise in purely online courses. Some commenters had concerns that students may be more likely to enroll in purely online courses for a variety of reasons, including that digital content tends to be more flexible and operable with assistive devices, and it is therefore especially important to ensure that online courses are fully accessible. At least one commenter also stated that the proposed course content exceptions would have treated students—some of whom pay tuition—less favorably than the general public with regard to the accessible materials.

Although the Department anticipated that the limitations to the proposed course content exceptions would naturally result in course materials becoming accessible over time, some commenters took issue with that prediction. Some commenters argued that because there is significant turnover in instructors and course content, and because the proposed limitations to the exceptions did not require content to remain accessible once a student with a disability was no longer in a particular course, the limitations to the exceptions as drafted in the NPRM would not be likely to ensure a fully accessible future in this area.

Limited Support for Course Content Exceptions

Although many commenters expressed opposition to the course content exceptions, some commenters, including some commenters with respect to accessible public educational institutions, expressed support for some form of exception for course content. Some commenters argued that it would be very challenging or infeasible for public educational institutions to comply with subpart H of this part in the absence of an exception, particularly when much of the content is controlled by third-party vendors. Some commenters also noted that public educational institutions may be short-staffed and have limited resources to devote towards accessibility. Some commenters stated that frequent turnover in faculty may make it challenging to ensure the accessibility of materials that are trained on accessibility issues. One commenter pointed out that requiring schools to make all course content accessible may present challenges for professors, some of whom are accustomed to being able to select course content without regard to its accessibility. Notably, however, even among those commenters who supported the concept of an exception, many did not support the exceptions as drafted in the NPRM, in part because they did not believe the proposed remediation time frames were realistic.

Approach to Course Content in Subpart H of This Part

Having reviewed the public comments, the Department believes it is appropriate to, as many commenters suggested, not include the previously proposed course content exceptions in subpart H of this part. For many of the reasons noted by commenters, the Department has concluded that the proposed exceptions would not meaningfully ease the burden on public educational institutions and would significantly exacerbate educational inequities for students with disabilities. The Department has concluded that the proposed exceptions would have led to an unsustainable and infeasible framework for course content that would make course content accessible, which would not have resulted in reliable access to course content for students with disabilities. As many commenters noted, it would have been extremely burdensome and sometimes even impossible for public educational institutions to comply consistently with the rapid remediation time frames set forth in the limitations to the proposed exceptions in the NPRM, which would likely have led to widespread delays in access to course content for students with disabilities. While extending the remediation time frames might have made it more feasible for public educational institutions to comply under some circumstances, this extension would have commensurately delayed access for students with disabilities, which would have been harmful for the many reasons noted by commenters. The Department believes that it is more efficient and effective for public educational institutions to use the two- or three-year compliance time frame to prepare to make course content accessible proactively, instead of having to scramble to remediate content reactively.

Accordingly, under subpart H of this part, password-protected course content will be treated like any other content and will generally need to conform to WCAG 2.1 Level AA. To the extent it is burdensome for public educational institutions to make all of their content, including course content, accessible, the Department believes subpart H contains a series of mechanisms that are designed to make it feasible for these institutions to comply, including the delayed compliance dates discussed in § 35.200, the
other exceptions discussed in § 35.201, the provisions relating to conforming alternate versions and equivalent facilitation discussed in §§ 35.202 and 35.203, the fundamental alteration and undue burdens limitations discussed in § 35.204, and the approach to measuring compliance with § 35.200 discussed in § 35.205.

**Alternative Approaches Considered**

There were some commenters that supported retaining the proposed course content exceptions with revisions. Commenters suggested a wide range of specific revisions, examples of which are discussed in this section. The Department appreciates the variety of thoughtful approaches that commenters proposed in trying to address the concerns that would arise under the previously proposed course content exceptions. However, for the reasons noted in this section, the Department does not believe that the commenters’ proposed alternatives would avoid the issues associated with proposals presented in the NPRM. In addition, although many commenters suggested requiring public entities to follow specific procedures to comply with subpart H of this part, the sheer variety of proposals the Department received from commenters indicates the harm from being overly prescriptive in how public educational institutions comply with subpart H. Subpart H provides educational institutions with the flexibility to determine how best to bring their content into compliance within the two or three years they have to begin complying with subpart H.

Many commenters suggested that the Department should require all new course content to be made accessible more quickly, while providing a longer time period for public entities to remediate existing course content. There were a wide range of proposals from commenters about how this could be implemented. Some commenters suggested that the Department could set up a prioritization structure for existing content, requiring public educational institutions to prioritize the content. For example, entry-level course content: content for required courses; content for high-enrollment courses; content for courses with high rates of droppage, withdrawal, and failing grades; content for the first few weeks of all courses; or, in the postsecondary context, content in academic departments in which students with disabilities have decided to major.

The Department does not believe this approach would be feasible. Treating new course content differently than existing course content could result in particular courses being partially accessible and partially inaccessible, which could be confusing for both educational institutions and students, and make it challenging for students with disabilities to have full and timely access to their courses. Moreover, even with this approach, the Department would presumably need to retain remediation time frames for entities to meet upon receiving a request to make existing course content accessible. For the reasons discussed in this section, it would be virtually impossible to set forth a remediation time frame that would provide public educational institutions sufficient time to make content accessible without putting students with disabilities too far behind their peers. In addition, given the wide variation in types of courses and public educational institution structures, it would be difficult to come up with an expedited structure for existing content that would be workable across all such institutions.

Some commenters suggested that the Department should set an expiration date for the course content exceptions. The Department does not believe this would be a desirable solution because the problems associated with the proposed exceptions—namely the harm to individuals with disabilities stemming from delayed access to course content and the likely infeasibility of complying with the expedited time frames set forth in the limitations to the exceptions—would likely persist during the lifetime of the exceptions.

Some commenters suggested that the Department could require the exceptions and accompanying limitations but revise their scope. For example, commenters suggested that the Department could revise the limitations to the exceptions to require public educational institutions to comply only with the WCAG 2.1 success criteria relevant to the particular student requesting accessible materials. Although this might make it easier for public educational institutions to comply in the short term, this approach would still leave public entities in the reactionary posture that so many other commenters criticized in this context and would dramatically reduce the speed at which course content would become accessible to all students. As another example, some commenters recommended that instead of creating exceptions for all password-protected course content, the Department could create exceptions from complying with particular WCAG 2.1 success criteria that may be especially onerous. The Department does not believe this piecemeal approach is advisable, because it would result in course content being only partially accessible, which would reduce predictability for individuals with disabilities. This approach could also make it confusing for public entities to determine the applicable technical standard. Some commenters suggested that the Department should require public entities to prioritize certain types of content that are simpler to remediate. Others suggested that the Department should require certain introductory course documents, like syllabi, to be accessible across the board. One commenter suggested that the Department require public educational institutions to make 20 percent of their course materials accessible each semester. The Department believes that these types of approaches would present similar issues as those discussed in this paragraph and would result in courses being only partially accessible, which would reduce predictability for individuals with disabilities and clarity for public entities. These approaches would also limit the flexibility that public entities have to bring their content into compliance in the order that works best for them during the two or three years they have to begin complying with subpart H of this part.

Some commenters suggested that the Department should revise the remediation timelines in the limitations to the course content exceptions. For example, one commenter suggested that the five-day remediation time frame should be reduced to three days. Another commenter suggested that the five-day remediation time frame could be expanded to 10 to 15 days. Some commenters suggested that the time frame should be fact-dependent and should vary depending on factors such as how often the class meets and the type of content. Others suggested that the Department not adopt a specific required remediation time frame, but instead provide that a 10-business-day remediation time frame would be presumptively permissible.

The conflicting comments on this issue illustrate the challenges associated with setting remediation time frames in this context. If the Department were to shorten the remediation time frames, it would make it even harder for public educational institutions to comply and commenters have already indicated that the previously proposed remediation time frames would not be workable for those institutions. If the Department were to lengthen the remediation time frames, it would further exacerbate the inequities for students with disabilities that were articulated by commenters. The Department believes the better approach is to not include the course content exceptions in subpart H of this part to avoid the need for public educational institutions to make content accessible on an expedited time frame. On the back end, the Department could require public entities to treat course content like any other content covered by subpart H.

Some commenters suggested that the Department should take measures to ensure that once course content is accessible, it stays accessible, including by requiring institutions to regularly conduct course accessibility checks. Without the course content exceptions proposed in the NPRM, the Department believes these commenters’ concerns are addressed because course content will be treated under § 35.200, which requires public entities to ensure on an ongoing basis that the web content and mobile apps they provide or make available are readily accessible to and usable by individuals with disabilities.

Some commenters suggested that the Department should provide additional time to comply with § 35.200(b). The Department does not believe this would be appropriate. Although the requirement for public educational institutions to provide accessible course content and comply with title II is not new, this requirement has not resulted in widespread equal access for individuals with disabilities to public entities’ web content and mobile apps. Giving public educational institutions an additional time beyond the two- to three-year compliance time frames specified in § 35.200(b) would potentially prolong the exclusion of individuals with disabilities from certain educational programs, which would be especially problematic given that some of those programs last only a few years.
in total, meaning that individuals with disabilities might, for example, be unable to access their public university’s web content and mobile apps for the entire duration of their postsecondary career. While access to public entities’ web content and mobile apps is important for individuals with disabilities in all contexts, it is uniquely critical to the public educational experience for students with disabilities, because exclusion from that content and those apps would make it challenging or impossible for those individuals to participate in their courses, which could have lifelong effects on career outcomes. In addition, the Department received feedback indicating that the course content offered by many public educational institutions is frequently changing. The Department is therefore not convinced that giving public educational institutions additional time to comply with subpart H would provide meaningful relief to those entities. Public educational institutions will continually need to make or change course content accessible after the compliance date. Extending the compliance date would, therefore, provide limited relief while having a significant negative impact on individuals with disabilities. Moreover, regardless of the compliance date of subpart H, public educational institutions have an ongoing obligation to ensure that their services, programs, and activities offered using web content and mobile apps are accessible to individuals with disabilities on a case-by-case basis in accordance with their existing obligations under title II of the ADA.163 Accordingly, even if the Department were to further delay the compliance time frames for public educational institutions, those institutions would not be able to simply defer all accessibility efforts in this area. The Department also believes it is appropriate to treat public educational institutions the same as other public entities with respect to compliance time frames, which will promote consistency and predictability for individuals with disabilities. Under this approach, some public educational institutions will qualify as small public entities and will be entitled to an extra year to comply, while other public educational institutions in larger jurisdictions will need to comply within two years.

Some commenters recommended that the Department give public educational institutions more flexibility with respect to their compliance with subpart H of this part. For example, some commenters suggested that the Department should give public educational institutions additional time to conduct an assessment of their web content and mobile apps and develop a plan for achieving compliance. Some commenters suggested the Department should give public educational institutions flexibility to stagger their compliance for individuals who fit certain criteria and to focus on the accessibility of those materials that they consider most important. The Department does not believe such deference is appropriate. As history has demonstrated, requiring entities to comply with their nondiscrimination obligations without setting clear and predictable standards for when content must be made accessible has not resulted in widespread web and mobile app accessibility. The Department therefore believes it is critical to establish clear and consistent requirements for public entities to follow. The Department believes it is appropriate to be overly prescriptive with respect to the procedures that those institutions must follow to comply with subpart H of this part. Some commenters suggested that the Department should require public educational institutions to take particular steps to comply with subpart H, such as by holding certain trainings for faculty and staff and dedicating staff positions and funding to accessibility. The Department believes it is appropriate to allow public educational institutions to determine how best to allocate their resources, so long as they satisfy the requirements of subpart H.

Some commenters suggested that the Department should adopt a more permissive approach to conforming alternate versions for public educational institutions. Commenters also suggested that the Department allow public educational institutions to provide an equally effective method of alternative access in lieu of directly accessible, WCAG 2.1 Level AA-conforming versions of materials. For the reasons noted in the discussion of §35.202 in this appendix, the Department believes that permitting public entities to rely exclusively on conforming alternate versions when doing so is not necessary for technical or legal reasons could result in segregation of people with disabilities, which would be inconsistent with the ADA’s core principles of inclusion and integration.164 The same rationale would apply to public educational institutions that wish to provide an equally effective method of alternative access to individuals with disabilities.

Some commenters argued that the Department should provide additional resources, funding, and guidance to public educational institutions to help them comply with subpart H of this part. The Department notes that it will issue a small entity compliance guide,165 which should help public educational institutions better understand their obligations under subpart H. The Department also notes that there are free and low-cost training materials available that would help public entities to produce content compliant with WCAG 2.1 Level AA. In addition, although the Department does not currently operate a grant program to assist public entities in complying with the ADA, the Department will consider offering additional technical assistance and guidance in the future to help entities better understand their obligations.

One commenter suggested that the Department should create a list of approved third-party vendors for public educational institutions to use to obtain accessible content. Any such specific list that the Department could provide is unlikely to be helpful given the rapid pace at which software and contractors’ availability changes. Public entities may find it useful to consult other publicly available resources that can assist in selecting accessibility evaluation tools and experts.166 Public entities do not need to wait for the Department’s guidance before consulting with technical experts and using resources that already exist.

One commenter suggested that the Department should require public educational institutions to offer mandatory courses on accessibility as part of degrees in certain fields, such as computer science, information technology, or computer information systems. This commenter argued that this approach would increase the number of information technology professionals in the future who have the skills to make content accessible. The Department believes this suggestion is outside of the scope of subpart H of this part, which focuses on web and mobile app accessibility under title II. The Department notes that public educational institutions are free to offer such courses if they so choose.

One commenter suggested that if the course content exceptions were retained, the Department should explicitly require public educational institutions to provide clear notice to students with disabilities on whether a particular piece of course content is accessible and how to request accessible materials. The Department believes these concerns are addressed by the decision not to include the course content exceptions in subpart H of this part, which should generally obviate the need for students with disabilities to make content accessibility requests for course content that complies with WCAG 2.1 Level AA.

Many commenters expressed concern about the extent to which public educational institutions are dependent on third parties to ensure the accessibility of course content, and some commenters suggested that instead of or in addition to regulating public educational institutions, the Department should also regulate the third parties with which those institutions contract to provide course materials. Because subpart H of this part is issued under title II of the ADA, it does not apply to private third parties, and the ultimate responsibility for complying with subpart H rests with public entities. However, the Department appreciates the concerns expressed by commenters that public educational institutions may have limited power to require third-party vendors to make content accessible on an expedited.

---

**Notes:**

163 See §§ 35.130(b)(1)(i)(ii) and (7) and 35.160.

164 See, e.g., 42 U.S.C. 12101(a)(2) (finding that society has tended to isolate and segregate individuals with disabilities); 504(g) (stating that public entities generally may not provide different or separate aids, benefits, or services to individuals with disabilities than is provided to others; exception is necessary); id. § 35.130(d) (requiring that public entities administer services, programs, and activities in the most integrated setting appropriate).

165 See Public Law 104–121, sec. 212, 110 Stat. at 858.

last-minute basis. The Department believes that not including the course content exceptions in subpart H—coupled with the delayed compliance dates in subpart H—will put public educational institutions in a better position to establish contracts with third-party vendors with sufficient lead time to enable the production of materials that are accessible upon being created. One commenter pointed out that, currently, much of the digital content for courses for public educational institutions is created by a small number of digital publishers. Accordingly, if the rulemaking incentives those publishers to produce accessible content, that decision may enable hundreds of public educational institutions to obtain accessible content. The Department also expects that as a result of the rulemaking, there will be an increase in demand for accessible content from third-party vendors, and therefore a likely increase in the number of third-party vendors that are equipped to provide accessible content.

Some commenters also expressed views about whether public educational institutions should be required to make posts by third parties on password-protected course websites accessible. The Department wishes to clarify that, because content on password-protected course websites will be treated like any other content under subpart H of this part, posts by third parties on course websites may be covered by the exception for content posted by a third party. However, that exception only applies where the third party is not posting due to contractual, licensing, or other arrangements with the public entity. Accordingly, if the third party is acting on behalf of the public entity, the third-party posted content exception would not apply. The Department believes that whether particular third-party content qualifies for this exception will involve a fact-specific inquiry.

Other Issues Pertaining to Public Educational Entities and Public Libraries

In connection with the proposed exceptions for password-protected course content, the Department also asked if there were any particular issues the Department should consider regarding digital books, textbooks, or libraries. The Department received a variety of comments that addressed these topics.

Some commenters raised issues pertaining to intellectual property law. In particular, commenters expressed different views about whether public entities can alter or change inaccessible electronic books created by third-party vendors to make them accessible for individuals with disabilities. Several commenters requested that the Department clarify how intellectual property law applies to subpart H of this part. Subpart H is not intended to interpret or clarify issues related to intellectual property law. Accordingly, the Department declines to make changes to subpart H in response to commenters or otherwise opin about public entities’ obligations with respect to intellectual property law. However, as discussed with respect to § 35.202, “Conforming Alternate Versions,” there may be some instances in which a public entity is permitted to make a conforming alternate version of web content where it is not possible to make the content directly accessible due to legal limitations.

Some commenters also discussed the EPUB file format. EPUB is a widely adopted format for digital books. Commenters noted that EPUBs are often future-proof, that they can be read by the visually impaired, and that they should be accessible. Commenters also stated that the exceptions for archived web content and preexisting conventional electronic documents at § 35.201(a) and (b), should specifically cover EPUBs should fall within the meaning of the PDF file format with respect to the definition of “conventional electronic documents” at § 35.104. Commenters also suggested that other requirements should apply to EPUBs, including W3C’s EPUB Accessibility 1.1 standard and Editor’s Draft on EPUB Fixed Layout Accessibility.

As discussed with respect to § 35.104, the Department did not change the definition of “conventional electronic documents” because it believes the current exhaustive list strikes the appropriate balance between ensuring access for individuals with disabilities and feasibility for public entities so that they can comply with subpart H of this part. The Department declines to adopt additional technical standards or guidance specifically related to EPUBs. The WCAG standards were designed to be “technology neutral.” This means that they are designed to be broadly applicable to current and future technologies.

The Department is concerned that adopting multiple technical standards related to various different types of web content could lead to confusion. However, the Department notes that subpart H allows for equivalent facilitation in § 35.203, meaning that public entities could still choose to apply additional standards specifically related to EPUBs to the extent that the additional standards provide substantially equivalent or greater accessibility and usability as compared to WCAG 2.1 Level AA.

Some commenters also addressed public educational entities’ use of digital textbooks in general. Commenters stated that many educational courses use digital materials, including digital textbooks, created by third-party vendors. Consistent with many commenters’ emphasis that all educational course materials must be accessible under subpart H of this part, commenters also stated that digital textbooks need to be accessible under subpart H. Commenters stated that third-party vendors that create digital textbooks are in the best position to make that content accessible, and it is costly and burdensome for public entities to remediate inaccessible digital books. While one commenter stated that there are currently many examples of accessible digital textbooks, other commenters stated that many digital textbooks are currently inaccessible. A commenter also pointed out that certain aspects of digital textbooks and textbooks cannot be made accessible where the layout and properties of the content cannot be changed without changing the meaning of the content, and they recommended that the Department create exceptions for certain aspects of digital books.

After weighing all the comments, the Department believes the most prudent approach is to treat digital textbooks, including EPUBs, the same as all other educational course materials. The Department believes that treating digital textbooks, including EPUBs, in any other way would lead to the same problems commenters identified with respect to the proposed exceptions for password-protected class or course content. For example, if the Department created a similar exception for digital textbooks, it could result in courses being partially accessible and partially inaccessible for certain time periods while books are remade to meet the needs of an individual with a disability, which could be confusing for both educators and students with disabilities. Furthermore, as discussed elsewhere in this appendix, it would be virtually impossible to set forth a remediation time frame that would provide public educational institutions sufficient time to make digital textbooks accessible without putting students with disabilities too far behind their peers. Accordingly, the Department did not make any changes to subpart H of this part to specifically address digital textbooks. The Department notes that if there are circumstances in which certain aspects of digital textbooks cannot conform to WCAG 2.1 Level AA without changing the meaning of the content, public entities may assess whether the fundamental alteration or undue financial or administrative burdens limit accessibility, as discussed in § 35.204. As noted elsewhere in this appendix, the Department also expects that as a result of the rulemaking, there will be an increase in demand for accessible content from third-party vendors, and therefore a likely increase in the number of third-party vendors that are equipped to provide accessible digital textbooks.

Some commenters also discussed circumstances in which public entities seek to modify particular web content to meet the specific needs of individuals with disabilities. One commenter suggested that the Department should provide public entities flexibility to focus on meeting the individual needs of students, rather than simply focusing on satisfying the requirements of WCAG 2.1 Level AA. The Department believes that the title II regulation provides public entities sufficient
flexibility to meet the needs of all individuals with disabilities.

The Department also recognizes that IDEA established the National Instructional Materials Access Center (“NIMAC”) in 2004, to assist State educational agencies and local educational agencies with producing accessible instructional materials to meet the specific needs of certain eligible students with disabilities.172 The NIMAC maintains a catalog of source files for K–12 instructional materials saved in the National Instructional Materials Access Center Standard (“NIMAS”) format, and certain authorized users and accessible media producers may download the NIMAS files and produce accessible instructional materials that are distributed to eligible students with disabilities through State systems and other organizations.173 The Department believes subpart H of this part is complementary to the NIMAC framework. In particular, if a public entity provides or makes available digital textbooks or other course content that conforms to WCAG 2.1 Level AA, an individual with a disability still does not have equal access to the digital textbooks or other course content, the public entity may wish to assess on a case-by-case basis whether materials derived from NIMAS files can be used to best meet the needs of the individual. Alternatively, a public entity may wish to use materials derived from NIMAS files in a conforming alternate version where it is not possible to make the digital textbook or other course content directly accessible due to technical or legal limitations.

Some commenters also raised issues relating to public libraries. Commenters stated that libraries have varying levels of resources. Some commenters noted that libraries need additional accessibility training. The commenter requested that the Department identify appropriate accessibility resources and training, and another commenter recommended that the Department should consider allowing variations in compliance time frames for libraries and educational institutions based on their individual needs and circumstances. Commenters noted that digital content available through libraries is often hosted, controlled, or provided by third-party vendors, and libraries purchase subscriptions or licenses to use the material. Commenters stated that it is costly and burdensome for public libraries to remediate inaccessible third-party vendor content. However, one commenter highlighted a number of examples in which libraries at public educational institutions successfully negotiated licensing agreements with third-party vendors that included requirements related to accessibility. Several commenters pointed out that some public libraries also produce content themselves. For example, some libraries participate in the open educational resource movement, which promotes open and free digital educational materials, and some libraries either operate publishing programs or have a relationship with university presses.

After weighing all the comments, the Department believes the most appropriate approach is to treat public libraries the same as other public entities in subpart H of this part. The Department is concerned that treating public libraries in any other way would lead to similar problems commenters identified with respect to the proposed exceptions for password-protected class or course public, especially because some public libraries are connected with public educational entities. With respect to comments about the resources available to libraries and the time frame for libraries to comply with subpart H, the Department also emphasizes that it is sensitive to the need to set a workable standard for all different types of public entities. The Department recognizes that public libraries can vary as much as any other group of public entities covered by subpart H, from small town libraries to large research libraries as part of public educational institutions. Under § 35.200(b)(2), as under the NPRM, some public libraries will qualify as small public entities and will have an extra year to comply. Subpart H also includes exceptions that are intended to help ensure feasibility for public entities so that they can comply with subpart H and, as discussed in § 35.204, public entities are not required to undertake actions that would represent a fundamental alteration in the nature of a service, program, or activity or impose undue financial and administrative burdens. The Department also notes there that there are free and low-cost training materials available that would help public entities to produce content compliant with WCAG 2.1 Level AA. Accordingly, the Department has not made any changes to subpart H to specifically address public libraries.

Some commenters also noted that public libraries may have collections of materials that are archival in nature, and discussed whether such materials should be covered by an exception. This part contains an exception for archived web content that (1) was created before the date the public entity is required to comply with subpart H; (2) reproduces paper documents created before the date the public entity is required to comply with subpart H, or reproduces the contents of other physical media created before the date the public entity is required to comply with subpart H; (2) is retained exclusively for reference, research, or recordkeeping; (3) is not altered or updated after the date of archiving; and (4) is organized and stored in a dedicated area or areas clearly identified as being archived. In addition, subpart H contains an exception for preexisting conventional electronic documents, unless such documents are currently used to apply for, gain access to, or participate in a public entity’s services, programs, or activities. The Department addressed these exceptions in more detail in the section-by-section analysis of § 35.104, containing the definitions of “archived web content” and “conventional electronic documents.” § 35.201(a), the exception for archived web content; and § 35.201(b), the exception for preexisting conventional electronic documents.

Individualized, Password-Protected or Otherwise Secured Conventional Electronic Documents

In § 35.201(d), the Department has set forth an exception to the requirements of § 35.200 for conventional electronic documents that are: (1) about a specific individual, their property, or their account; and (2) password-protected or otherwise secured. The Department believes the most appropriate approach is to treat such documents, which may include web content and mobile apps, to provide access to conventional electronic documents for their customers and other members of the public. For example, some public utility companies provide a website where customers can log in and view a PDF version of their latest bill. Similarly, many public hospitals offer a virtual platform where healthcare providers can send conventional electronic document versions of test results and scanned medical records to their patients. Unlike many other types of content covered by subpart H of this part, these documents are relevant only to an individual member of the public, and in many instances, the individuals who are entitled to view a particular individualized conventional electronic document will not need an accessible version.

While public entities, of course, have existing title II obligations to provide accessible versions of individualized, password-protected or otherwise secured conventional electronic documents in a timely manner when these documents pertain to individuals with disabilities, or otherwise provide the information contained in the documents to the relevant individual,174 the Department recognizes that it may be too burdensome for some public entities to make all such documents conform to WCAG 2.1 Level AA, regardless of whether the individual to whom the document pertains needs such access. The goal of this exception is to give public entities flexibility to provide such documents, or the information contained within such documents, to the individuals with disabilities to whom they pertain in the manner that the entities determine will be most efficient. Many public entities may retain and produce a large number of individualized, password-protected or otherwise secured conventional electronic documents, and may find that remediating these documents—particularly ones that have been scanned from paper copies—involves a more time- and resource-intensive process than remediating other types of web content. In that scenario, the Department believes that it would be most impactful for public entities to focus their resources on making versions that are accessible to those individuals who need them. However, some public entities may conclude that it is most efficient or otherwise effective to make all individualized, password-protected or otherwise secured conventional electronic documents accessible by using, for example, an accessible template to generate such documents, and subpart H of this part preserves flexibility for public entities that...

---

174 See §§ 35.130(b)(1)(ii) and (b)(7) and 35.160.
wish to take that approach. This approach is consistent with the broader title II regulatory framework. For example, public utility companies are not required to affirmatively mail accessible bills to all customers. Instead, the companies need only provide accessible bills to customers who need them because of a disability.

This exception is limited to “conventional electronic documents” as defined in § 35.104. This exception would, therefore, not apply in a case where a public entity makes individually addressed information available in formats other than a conventional electronic document. For example, if a public medical provider makes individually addressed medical records available on a password-protected web platform as HTML content (rather than as a PDF), that content would not be subject to this exception. Those HTML records, therefore, would need to be made accessible in accordance with § 35.200. On the other hand, if a public entity makes individually addressed medical records available on a password-protected web platform as PDF documents, those documents would fall under this exception. In addition, although the exception would apply to individualized, password-protected or otherwise secured conventional electronic documents, it does not apply to the platform on which the public entity makes those documents available. The public entity would need to ensure that that platform complies with § 35.200. Further, web content and content in mobile apps that does not take the form of individually addressed, password-protected or otherwise secured conventional electronic documents but instead notifies users about the existence of such documents must still conform to WCAG 2.1 Level AA unless it is covered by another exception.

This exception also only applies when the content is individualized for a specific person or their property or account. Examples of individualized documents include medical records or notes about a specific patient, receipts for purchases (like a receipt from a restaurant or a recreational sports league), utility bills concerning a specific residence, or Department of Motor Vehicles records for a specific person or vehicle. Content that is broadly applicable or otherwise for the general public (i.e., not individualized) is not subject to this exception. For instance, a PDF notice that explains an upcoming rate increase for all utility customers and does not address a specific customer’s particular circumstances would not be subject to this exception. Such a general notice would not be subject to this exception even if it were attached to or sent with an individualized letter, like a bill, that does address a specific customer’s circumstances.

This exception applies only to password-protected or otherwise secured conventional electronic documents that are on a public entity’s general, public web platform and not be subject to this exception. Those HTML records, therefore, would need to be made accessible in accordance with § 35.200. On the other hand, if a public entity makes individually addressed medical records available on a password-protected web platform as PDF documents, those documents would fall under this exception. In addition, although the exception would apply to individualized, password-protected or otherwise secured conventional electronic documents, it does not apply to the platform on which the public entity makes those documents available. The public entity would need to ensure that that platform complies with § 35.200. Further, web content and content in mobile apps that does not take the form of individually addressed, password-protected or otherwise secured conventional electronic documents but instead notifies users about the existence of such documents must still conform to WCAG 2.1 Level AA unless it is covered by another exception.

This exception is limited to “conventional electronic documents” as defined in § 35.104. This exception would, therefore, not apply in a case where a public entity makes individually addressed information available in formats other than a conventional electronic document. For example, if a public medical provider makes individually addressed medical records available on a password-protected web platform as HTML content (rather than as a PDF), that content would not be subject to this exception. Those HTML records, therefore, would need to be made accessible in accordance with § 35.200. On the other hand, if a public entity makes individually addressed medical records available on a password-protected web platform as PDF documents, those documents would fall under this exception. In addition, although the exception would apply to individualized, password-protected or otherwise secured conventional electronic documents, it does not apply to the platform on which the public entity makes those documents available. The public entity would need to ensure that that platform complies with § 35.200. Further, web content and content in mobile apps that does not take the form of individually addressed, password-protected or otherwise secured conventional electronic documents but instead notifies users about the existence of such documents must still conform to WCAG 2.1 Level AA unless it is covered by another exception. It does not apply to the platform on which the public entity makes those documents available. The public entity would need to ensure that that platform complies with § 35.200. Further, web content and content in mobile apps that does not take the form of individually addressed, password-protected or otherwise secured conventional electronic documents but instead notifies users about the existence of such documents must still conform to WCAG 2.1 Level AA unless it is covered by another exception.

This exception is limited to “conventional electronic documents” as defined in § 35.104. This exception would, therefore, not apply in a case where a public entity makes individually addressed information available in formats other than a conventional electronic document. For example, if a public medical provider makes individually addressed medical records available on a password-protected web platform as HTML content (rather than as a PDF), that content would not be subject to this exception. Those HTML records, therefore, would need to be made accessible in accordance with § 35.200. On the other hand, if a public entity makes individually addressed medical records available on a password-protected web platform as PDF documents, those documents would fall under this exception. In addition, although the exception would apply to individualized, password-protected or otherwise secured conventional electronic documents, it does not apply to the platform on which the public entity makes those documents available. The public entity would need to ensure that that platform complies with § 35.200. Further, web content and content in mobile apps that does not take the form of individually addressed, password-protected or otherwise secured conventional electronic documents but instead notifies users about the existence of such documents must still conform to WCAG 2.1 Level AA unless it is covered by another exception.

This exception applies only to password-protected or otherwise secured conventional electronic documents. This exception may be otherwise secured if it requires a member of the public to use some process of authentication or login to access the content. Unless subject to another exception, conventional electronic documents that are on a public entity’s general, public web platform would not be subject to this exception. The Department recognizes that there may be some overlap between the content covered by this exception and the exception for certain preexisting conventional electronic documents, § 35.201(b). The Department notes that if web content is covered by the exception for individualized, password-protected or otherwise secured conventional electronic documents, it does not need to conform to WCAG 2.1 Level AA to comply with subpart H of this part, even if the content fails to qualify for another exception, such as the preexisting conventional electronic document exception. For example, a public entity might retain on its website an individualized, password-protected unpaid water bill in a PDF format that was posted before the date the entity was required to comply with subpart H. Because the PDF would fall within the exception for individualized, password-protected or otherwise secured conventional electronic documents, the documents would not need to conform to WCAG 2.1 Level AA, regardless of how the preexisting conventional electronic documents exception might otherwise have applied.

As noted elsewhere in this appendix, while the exception is meant to alleviate the potential burden on public entities of making all individualized, password-protected or otherwise secured conventional electronic documents generally accessible, individualized documents with disabilities that still be able to access information under WCAG 2.1 Level AA to comply with subpart H of this part, even if the content fails to qualify for another exception, such as the preexisting conventional electronic document exception. For example, a public entity might retain on its website an individualized, password-protected unpaid water bill in a PDF format that was posted before the date the entity was required to comply with subpart H. Because the PDF would fall within the exception for individualized, password-protected or otherwise secured conventional electronic documents, the documents would not need to conform to WCAG 2.1 Level AA, regardless of how the preexisting conventional electronic documents exception might otherwise have applied. The Department emphasizes that even if certain content does not have to conform to the technical standard, public entities still need to ensure that their services, programs, and activities offered using web content and mobile apps are accessible to individuals with disabilities on a case-by-case basis in accordance with their existing obligations under title II of the ADA. These obligations include making reasonable modifications to avoid discrimination on the basis of disability, ensuring that communications with people with disabilities are as effective as communications with people without disabilities, and providing people with disabilities an equal opportunity to participate in the public entity’s services, programs, or activities.

The Department received comments expressing both support for and opposition to this exception. A supporter of the exception observed that, because many individualized, password-protected or otherwise secured conventional electronic documents do not pertain to a person with a disability and would never be accessed by a person with a disability, it is unnecessary to require public entities to devote resources to making all of those documents accessible. Some commenters suggested that it could be burdensome for public entities to make all of those documents accessible, regardless of whether they pertain to a person with a disability. Some commenters noted that even if some public entities might find it more efficient to make all individualized, password-protected or otherwise secured conventional electronic documents accessible from the outset, this exception is valuable because it gives entities flexibility to select the most efficient option to meet the needs of individuals with disabilities.

The Department also received many comments opposing this exception. Commenters pointed out that it is often critical for individuals, including individuals with disabilities, to have timely access to individualized, password-protected or otherwise secured conventional electronic documents, because those documents may contain sensitive, private, and urgently needed information, such as medical test results, educational transcripts, or tax documents. Commenters emphasized the negative consequences that could result from an individual being unable to access these documents in a timely fashion, from missed bill payments to delayed or missed medical treatments. Commenters expressed concern that this exception could exacerbate existing inequities in access to government services for people with disabilities. Commenters argued that it is ineffective and inappropriate to continue to put the burden on individuals with disabilities to request accessible versions of individualized documents, particularly given that many individuals with disabilities may have repeated interactions with different public entities that generate a large number of individualized, password-protected or otherwise secured conventional electronic documents. Commenters contended that the inclusion of this exception is in tension with other statutes and Federal initiatives that are designed to make it easier for individuals to access electronic health information and other digital resources. Commenters contended that public entities often do not have robust, effective procedures under which people can make such requests and obtain accessible versions quickly without incurring invasions of privacy. Commenters argued that it can be cheaper and easier to make individualized conventional electronic documents accessible at the time they are created, instead of on a case-by-case basis, particularly given that many such documents are generated from templates, which can be made accessible relatively easily.

Commenters argued that public entities already make these sorts of documents accessible, pursuant to their longstanding ADA obligations, so introducing this exception might lead some entities to regress toward less overall accessibility. Some commenters suggested that if the exception is retained in subpart H of this part, the

---

176 See §§ 35.130(b)(1)(i) and (b)(7) and 35.160.

177 See id.
Department should set forth specific procedures for public entities to follow when they are on notice of the need to make individualized documents accessible for a particular individual with a disability. After reviewing the comments, the Department has decided to retain this exception in subpart H of this part. The Department continues to believe that public entities often provide or make available a large volume of individualized, password-protected or otherwise secured conventional electronic documents, many of which do not pertain to individuals with disabilities, and it may be difficult to make all such documents accessible. Therefore, the Department believes it is sensible to permit public entities to focus their resources on ensuring accessibility for the specific individuals who need accessible versions of those documents. If, as many commenters suggested, it is in fact more efficient and less expensive for some public entities to make all such documents accessible by using a template, there is nothing in subpart H that prevents public entities from taking that approach. The Department understands the concerns raised by commenters about the potential burdens that individuals with disabilities may face if individualized password-protected or otherwise secured documents are not made accessible at the time they are created and about the potential negative consequences for individuals with disabilities who do not have timely access to the documents that pertain to them. The Department recognizes that, even when documents are covered by this exception, the existing title II obligations require public entities to furnish appropriate auxiliary aids and services where necessary to ensure an individual with a disability has, for example, an equal opportunity to enjoy the benefits of a service. Such auxiliary aids and services could include, for example, providing PDFs that are accessible. In order for such an auxiliary aid or service to ensure effective communication, it must be provided “in a timely manner, and in such a way as to protect the independence of the individual with a disability.” Whether a particular solution provides effective communication depends on circumstances in the interaction, including the nature, length, complexity, and context of the communication. For example, the presence of an emergency situation or a situation in which information is otherwise urgently needed would impact what it would mean for a public entity to ensure it is meeting its effective communication obligations. Public entities can help to facilitate effective communication by providing individuals with disabilities with notice about how to request accessible versions of their individualized documents. The Department also notes that, for example, a public entity is on notice that an individual with a disability needs accessible versions of an individualized, password-protected PDF water bill, that public entity is generally required to continue to provide information from that water bill in an accessible format in the future, and the public entity generally may not require the individual with a disability to make repeated requests for accessibility. Moreover, while individualized, password-protected or otherwise secured conventional electronic documents are subject to this exception, any public-facing, web- or mobile app-based system or platform that a public entity uses to provide or make available those documents, or to allow the public to make accessibility requests, must itself be accessible under §35.200 if it is not covered by another exception.

The Department also reiterates that a public entity might also need to make reasonable modifications to ensure that a person with a disability has equal access to its services, programs, and activities. For example, if a public medical provider has a policy under which administrative support staff are in charge of uploading PDF versions of X-ray images into patients’ individualized accounts after medical appointments, but the provider knows that a particular patient is blind, the provider may need to modify its policy to ensure that a staffer with the necessary expertise provides an accessible version of the information the patient needs from the X-ray.

Some commenters suggested that the Department should require public entities to adopt specific procedures when they are on notice of an individual’s need for accessible individualized, password-protected or otherwise secured conventional electronic documents. For example, some commenters suggested that public entities should be required to establish a specific process through which individuals with disabilities can “opt in” to receiving accessible documents; to provide instructions for how to request accessible versions of documents in specific, prominent places on their websites; to make documents accessible within a specified time frame after being on notice of the need for accessibility (suggested time frames ranged from 5 to 30 business days); or to remediate all documents that are based on a particular template upon receiving a request for remediation of an individualized document based on that template. Although the Department appreciates the need to ensure that individuals with disabilities can obtain easily accessible versions of individualized, password-protected or otherwise secured conventional electronic documents, the Department believes it is appropriate to provide flexibility for a public entity in how it reaches that particular goal on a case-by-case basis, so long as the entity’s process satisfies the requirements of title II. Moreover, because the content and quantity of individualized, password-protected documents or otherwise secured may vary widely, from a one-page utility bill to thousands of pages of medical records, the Department does not believe it is workable to prescribe a set number of days under which a public entity must make individualized documents accessible. The wide range of possible time frames that commenters suggested, coupled with the comments the Department received on the remediation time frames that were associated with the previously proposed course content exceptions, helps to illustrate the challenges associated with selecting a specific number of days for public entities to remediate content.

Some commenters suggested other revisions to the exception. For example, some commenters suggested that the Department could limit the exception to existing individualized, password-protected or otherwise secured conventional electronic documents, while requiring newly created documents to be automatically accessible. The Department does not believe it is advisable to adopt this revision. A central rationale of this exception—the fact that many individuals to whom individualized documents pertain do not need those documents in an accessible format—remains regardless of whether the documents at issue are existing or newly created.

One commenter suggested the Department could create an expiration date for the exception. The Department does not believe this would be workable, because the challenges that public entities might face in making all individualized, password-protected or otherwise secured conventional electronic documents accessible across the board would likely persist even after any expiration date. One commenter suggested that the exception should not apply to large public entities, such as States. The Department believes that the rationales underlying this exception would apply to both large and small public entities. The Department also believes that the inconsistent application of this exception could create unpredictable access to individuals with disabilities. Other commenters suggested additional revisions, such as limiting the exception to documents that are not based on templates; requiring public entities to remove inaccessible documents from systems of records once accessible versions of those documents have been created; and requiring public entities to use HTML pages, which may be easier to make accessible than conventional electronic documents, to deliver individualized information in the future. The Department believes it is more appropriate to give public entities flexibility in how they provide or make available individualized, password-protected or otherwise secured conventional electronic documents to the public, so long as those entities ensure that individuals with disabilities have timely access to the information in those documents in an accessible format that protects the privacy and independence of the individual with a disability.

Some commenters asked the Department for additional clarification about how the exception would operate in practice. One commenter asked for clarification about how
this exception would apply to public hospitals and healthcare clinics, and whether the exception would apply when a patient uses a patient portal to schedule an appointment with their provider. The Department wishes to clarify that this exception is not intended to apply to all content or functionality that a public entity offers that is password-protected. Instead, this exception is intended to narrowly apply to individualized, password-protected or otherwise secured conventional electronic documents, which are limited to the following electronic file formats: PDFs, word processor file formats, presentation file formats, and spreadsheet file formats. Content that is provided in any other format is not subject to this exception. In addition, while individualized, password-protected or otherwise secured conventional electronic documents would be subject to the exception, the platform on which those documents are provided would not be subject to the exception and would need to conform to WCAG 2.1 Level AA. The benefits of making all preexisting social media posts accessible will likely be limited as these posts are generally intended to provide timely updates on social media platforms that are frequented with new information. The Department believes public entities will likely need to use resources that are better spent ensuring that current web content and content in mobile apps are accessible, rather than reviewing all preexisting social media posts for compliance or possibly deleting public entities’ previous posts if remediation is impossible.

The Department believes the approach provided in subpart H of this part appropriately balances a variety of competing concerns. In particular, the Department is choosing not to single out social media platforms or subsets of platforms in subpart H for unique treatment, the Department understands many public entities have posted on social media platforms continually evolve. The Department emphasizes, however, that the Department wishes to clarify that this exception is not intended to apply to all content or functionality that a public entity offers that is password-protected. Instead, this exception is intended to narrowly apply to individualized, password-protected or otherwise secured conventional electronic documents, which are limited to the following electronic file formats: PDFs, word processor file formats, presentation file formats, and spreadsheet file formats. Content that is provided in any other format is not subject to this exception. In addition, while individualized, password-protected or otherwise secured conventional electronic documents would be subject to the exception, the platform on which those documents are provided would not be subject to the exception and would need to conform to WCAG 2.1 Level AA. The benefits of making all preexisting social media posts accessible will likely be limited as these posts are generally intended to provide timely updates on social media platforms that are frequented with new information. The Department believes public entities will likely need to use resources that are better spent ensuring that current web content and content in mobile apps are accessible, rather than reviewing all preexisting social media posts for compliance or possibly deleting public entities’ previous posts if remediation is impossible.

In the NPRM, the Department did not propose any regulatory text specific to the web content and content in mobile apps that public entities make available via social media platforms. However, the Department requested feedback on adding an exception from coverage under subpart H of this part for a public entity’s social media posts if they were posted before the compliance date of subpart H. After reviewing public comment on this proposed exception, the Department has decided to include an exception in subpart H, which will apply to preexisting social media posts posted before the compliance date of subpart H.

The Department emphasizes that even if preexisting social media posts do not conform to the current standard, public entities still need to ensure that their services, programs, and activities offered using web content and mobile apps are accessible to people with disabilities on a case-by-case basis in accordance with their existing obligations under title II of the ADA. These obligations include making reasonable modifications to avoid discrimination on the basis of disability, ensuring that communications with people with disabilities are as effective as communications with people without disabilities, and providing people with disabilities an equal opportunity to participate in or benefit from the entity’s services, programs, and activities.

Most commenters supported an exception for preexisting social media posts, including commenters representing public entities and disability advocates. Commenters shared that making preexisting social media posts accessible would require a massive allocation of resources, and that in many cases these posts would be difficult or impossible to remediate. Commenters shared that in practice, public entities may need to delete preexisting social media posts to comply with subpart H of this part in the absence of this exception, which could result in a loss of historical information about public entities’ activities.

A few commenters shared alternative approaches to this exception. One commenter suggested that highlighted or so-called “pinned” posts (e.g., social media posts saved at the top of a page) be required public entities to be made accessible regardless of the posting date. Other commenters suggested that the exception should be limited so as not to cover emergency information or information pertinent to accessing core functions, expressing concern that these posts would continue to be inaccessible between publication of the final rule and the date that public entities are required to be in compliance with subpart H of this part.

The Department agrees with many of the concerns of commenters who supported the exception as well as concerns with inaccessible postings made after publication of the final rule but before the compliance date. However, the Department believes the approach provided in subpart H of this part appropriately balances a variety of competing concerns. In particular, the Department is choosing not to single out social media platforms or subsets of platforms in subpart H for unique treatment, the Department encourages public entities to err on the side of ensuring accessibility where there are doubts about coverage, to maximize access for people with disabilities.

Commenters also suggested other ways to address social media, such as providing that
public entities must create a timeline to incorporate accessibility features into their social media or providing that public entities can use separate accessible pages with all of their social media posts. The Department believes the balance struck with this exception covered by subpart H is appropriate and gives public entities sufficient time to prepare to make all of their new social media posts accessible in accordance with subpart H after the compliance date, consistent with the other content covered by subpart H. One commenter also requested clarification on when social media posts with links to third-party content would be covered by subpart H. The Department notes that social media posts posted after the compliance date are treated consistent with all other web content and content in mobile apps, and the relevant exceptions may apply depending on the content at issue.

Section 35.202—Conforming Alternate Versions

Section 35.202 sets forth the approach to “conforming alternate versions.” Under WCAG, a “conforming alternate version” is a separate web page that, among other things, is accessible, up to date, contains the same information and functionality as the inaccessible web page, and can be reached via a conforming page or an accessibility-supported mechanism. Conforming alternate versions are allowable under WCAG. For reasons explained in the following paragraphs, the Department believes it is important to put guardrails on when public entities may use conforming alternate versions under subpart H of this part. Section 35.202, therefore, specifies that the use of conforming alternate versions is permitted only in limited, defined circumstances, which represents a slight departure from WCAG 2.1. Section 35.202(a) states that a public entity may use conforming alternate versions of web content to comply with §35.200 only where it is not possible to make web content directly accessible due to technical or legal limitations.

Generally, to conform to WCAG 2.1, a web page must be directly accessible in that it satisfies the success criteria for one of the defined levels of conformance—in the case of subpart H of this part, Level AA. However, as noted in the preceding paragraph, WCAG 2.1 also allows for the creation of a “conforming alternate version.” The purpose of a “conforming alternate version” is to provide individuals with relevant disabilities access to the information and functionality provided to individuals without relevant disabilities, albeit via a separate vehicle. The Department believes that having direct access to accessible web content provides the best user experience for many individuals with disabilities, and it may be difficult to reliably maintain conforming alternate versions, which must be kept up to date. WCAG explains that providing a conforming alternate version is intended to be an option for conformance to WCAG and the preferred method of conformance is to make all content directly accessible. However, WCAG 2.1 does not explicitly limit the circumstances under which an entity may choose to create a conforming alternate version of a web page instead of making the web page directly accessible.

The Department is concerned that WCAG 2.1 can be interpreted to permit the development of two separate versions of a public entity’s web content—one for individuals with relevant disabilities and another for individuals without relevant disabilities—even when doing so is unnecessary and when users with disabilities would have a better experience using the main web content. Such an approach would result in segregated access for individuals with disabilities and be inconsistent with how the ADA’s core principles of inclusion and integration have historically been interpreted. The Department is also concerned that the frequent or unbounded creation of separate web content for individuals with disabilities may, in practice, result in unequal access to information and functionality. For example, and as discussed later in this section, the Department is concerned that an inaccessible conforming alternate version may provide information that is outdated or conflicting due to the maintenance burden of keeping the information updated and consistent with the main web content. As another example, use of a conforming alternate version may provide a fragmented, separate, or less interactive experience for people with disabilities because public entities may assume that interactive features are not financially worthwhile or otherwise necessary to incorporate in conforming alternate versions. Ultimately, as discussed later in this section, the Department believes there are particular risks associated with permitting the creation of conforming alternate versions where not necessitated by the presence of technical or legal limitations. Due to the concerns about user experience, segregation of users with disabilities, unequal access to information, and maintenance burdens mentioned in the preceding paragraph, the Department is adopting a slightly different approach to conforming alternate versions than that provided under WCAG 2.1. Instead of permitting entities to adopt conforming alternate versions whenever they believe it is appropriate, §35.202(a) states that a public entity may use conforming alternate versions of web content for reasons that are not possible to make web content directly accessible due to technical limitations (e.g., technology is not yet capable of being made accessible) or legal limitations (e.g., web content that cannot be changed due to legal reasons). The Department believes that conforming alternate versions should be used rarely—when it truly is not possible to make the content accessible for reasons beyond the public entity’s control. However, §35.202 does not prohibit public entities from providing alternate versions of web pages in addition to their WCAG 2.1 Level AA compliant main web page to possibly provide users with certain types of disabilities a better experience.

The Department slightly revised the text that was proposed in the NPRM for this provision. To ensure consistency with other provisions of subpart H of this part, the previously proposed text for §35.202 was revised to refer to “web content” instead of “websites and web content.” WCAG’s discussion of conforming alternate versions generally refers to “web pages” and “content.” Other provisions of subpart H also refer to “web content.” Introducing the concept of “websites” in this section when the term is not used elsewhere in subpart H could cause unnecessary confusion, so the Department revised this language for consistency. This change is non-substantive, as “web content” encompasses “websites.” In the NPRM, the Department requested comments on its approach to conforming alternate versions. In response, the Department received comments from a variety of commenters. Some commenters supported the Department’s proposed approach of permitting the use of conforming alternate versions only when there are technical or legal limitations. Commenters believed these limitations would prevent public entities from using conforming alternate versions frequently and for reasons that do not seem appropriate, such as creating a conforming alternate version for a web page that is less accessible because of the public entity’s aesthetic preferences. Some commenters suggested that the Department should permit conforming alternate versions under a broader range of circumstances. For example, some commenters indicated that a conforming alternate version could provide an equal or superior version of web content for people with disabilities. Other commenters noted that some private companies can provide manual alternate versions that look the same as the original web page but that have invisible coding and are accessible. One commenter stated that the transition from a
public entity’s original website to an accessible version can be made seamless. Another commenter noted that WCAG 2.1 permits entities to adopt conforming alternate versions under broader circumstances and argued that the Department should adopt this approach rather than permitting conforming alternate versions only where there are technical or legal limitations. One commenter argued that it could be challenging for public entities that already offer conforming alternate versions more broadly to adopt this approach to comply with subpart H of this part. Some commenters gave examples of scenarios in which they found it helpful or necessary to provide conforming alternate versions.

A few commenters expressed serious concerns about the use of conforming alternate versions. These commenters stated that conforming alternate versions often result in two separate and unequal websites. Commenters indicated that some entities’ conforming alternate versions neither conform to WCAG standards nor contain the same functionality and content and therefore provide fragmented, separate experiences that are less useful for people with disabilities. Other commenters shared that these alternate versions are designed in a way that assumes users are people who are blind and thus do not want visual presentation, when other people with disabilities rely on visual presentations to access the web content. Further, one group shared that many people with disabilities may be skeptical of conforming alternate versions because historically they have not been updated, have been unequal in quality, or have separated users by disability. Another commenter argued that unlimited use of conforming alternate versions could lead to errors and conflicting information because there are two versions of the same content. One commenter suggested prohibiting conforming alternate versions when interaction is a part of the online user experience. Another commenter suggested permitting conforming alternate versions only when a legal limitation makes it impossible to make content accessible, such as a specific kind of technical limitation under § 35.202 for which a conforming alternate version can only be reached from a conforming page that also provides a mechanism to reach the conforming version. The Department believes these requirements will help to ensure that where a conforming alternate version is permissible, people with disabilities will be able to locate that page.

Some commenters recommended that the Department provide additional guidance and examples of when conforming alternate versions would be permissible, or asked the Department to clarify whether conforming alternate versions would be permissible, or asked the Department to clarify whether conforming alternate versions would be permissible under particular circumstances. The determination of when conforming alternate versions are needed or permitted varies depending on the facts. For example, a conforming alternate version would not be permissible just because a town’s website developer lacked the knowledge or training needed to make content accessible; that would not be a technical limitation within the meaning of § 35.202. By contrast, the town could use a conforming alternate version if its web content included a new type of technology that it is not yet possible to make accessible, such as a specific kind of immersive virtual reality environment. Similarly, a town would not be permitted to claim a legal limitation because its general counsel failed to approve contracts for a web developer with accessibility experience. Instead, a legal limitation would apply when the inaccessible content itself could not be modified for legal reasons specific to that content. The Department believes that this approach is appropriate because it ensures that, whenever possible, people with disabilities have access to the same web content that is available to people without disabilities.

One commenter stated that school districts and public postsecondary institutions currently provide accessible alternative content to students with disabilities that is equivalent to the content provided to students without disabilities and that is responsive to the individual student’s needs. The commenter argued that public educational institutions should continue to be able to provide these alternative resources to students with disabilities. The Department reiterates that although public educational institutions, like all other public entities, will only be able to provide conforming alternate versions in lieu of directly accessible versions of web content under the circumstances specified in § 35.202, nothing prevents a public educational institution from providing a conforming alternate version in addition to the accessible main version of its web content.

Other commenters requested that the Department impose deadlines or time restrictions on how long a public entity can use a conforming alternate version. However, the Department believes that doing so would conflict with the rationale for permitting conforming alternate versions. Where the technical limitations and legal limitations are truly outside the public entity’s control, the Department believes it would be unreasonable to require the public entity to surmount those limitations after a certain period of time, even if they are still in place. However, once a technical limitation no longer exists, a public entity must ensure their web content is directly accessible in accordance with subpart H of this part.

A few commenters also sought clarification on, or broader language to account for, the interaction between the allowance of conforming alternate versions under § 35.202 and the general limitations provided in § 35.204. These two provisions are applicable in separate circumstances. If there is a technical or legal limitation that prevents an entity from complying with § 35.200 for certain content, § 35.202 is applicable. The entity can create a conforming alternate version for that content and, under § 35.202, that entity will be in compliance with subpart H of this part. Separately, if a fundamental alteration or undue burden is due to financial and administrative burdens prevent a public entity from complying with § 35.200 for content, § 35.204 is applicable. As set forth in § 35.204, the public entity must still take any other action that would not result in such an alteration or such burdens, but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity to the maximum extent possible. A public entity’s legitimate claim of fundamental alteration or undue burdens does not constitute a legal limitation under § 35.202 for which a conforming alternate version automatically suffices to comply with subpart H. Rather, the public entity must ensure access “to the maximum extent possible” under the specific facts and circumstances of the situation. Under the specific facts a public entity is facing, the public entity’s best option to ensure maximum access may be an alternate version of its content, but the public entity also may be required to do something more or something different. Because the language of § 35.204 already allows for alternate versions if appropriate for the facts of public entity’s fundamental alteration or undue burdens, the Department does not see a need to expand the language of § 35.202 to address commenters’ concerns.

---

192 See id.
193 Id.
The Department also wishes to clarify the relationship between §§ 35.202 and 35.205, which are analyzed independently of each other. Section 35.202 provides that a public entity may use conforming alternate versions of web content, as defined by WCAG 2.1, to comply only when it is not possible to make web content directly accessible due to technical or legal limitations. Accordingly, if a public entity does not make its web content directly accessible and instead provides a conforming alternate version that is not required by technical or legal limitations, the public entity may not use that conforming alternate version to comply with its obligations under subpart H of this part, either by relying on § 35.202 or by invoking § 35.205.

Section 35.203 Equivalent Facilitation

Section 35.203 provides that nothing prevents a public entity from using designs, methods, or techniques as alternatives to those prescribed in the regulation, provided that such alternatives result in substantially equivalent or greater accessibility and usability. The 1991 and 2010 ADA Standards for Accessible Design both contain an equivalent facilitation provision. The reason for allowing for equivalent facilitation in subpart H of this part is to encourage flexibility and innovation by public entities while still ensuring equal or greater access to web content and mobile apps. Especially in light of the rapid pace at which technology changes, this provision is intended to clarify that public entities can use methods or techniques that provide equal or greater accessibility than subpart H would require. For example, if a public entity wanted to conform its web content or mobile app to a future web content and mobile app accessibility standard that expands accessibility requirements beyond WCAG 2.1 Level AA, this provision makes clear that the public entity could comply with subpart H by conforming their web content to WCAG 2.2 Level AA because WCAG 2.2 Level AA provides substantially equivalent or greater accessibility to WCAG 2.1 Level AA; in particular, WCAG 2.2 Level AA includes additional success criteria not found in WCAG 2.1 Level AA and every success criterion in WCAG 2.1 Level AA, with the exception of one success criterion that is obsolete. Similarly, a public entity could comply with subpart H by conforming its web content and mobile apps to WCAG 2.1 Level AAA, which is the same version of WCAG and includes all the WCAG 2.1 Level AA requirements, but includes additional requirements not found in WCAG 2.1 Level AA for even greater accessibility. For example, WCAG 2.1 Level AAA includes Success Criterion 2.4.10 for section headings used to organize content and Success Criterion 3.1.4 that includes a mechanism for identifying the expanded form or meaning of abbreviations, among others. The Department believes that this provision offers needed flexibility for entities to provide usability and accessibility that meet or exceed what subpart H of this part would require, and it continues to develop. The responsibility for demonstrating equivalent facilitation rests with the public entity. Subpart H adopts the approach as proposed in the NPRM, but the Department edited the regulatory text to fix a grammatical error by adding a comma in the original sentence in the provision.

The Department received a comment arguing that providing phone support in lieu of a WCAG 2.1-compliant website should constitute equivalent facilitation. As discussed in this section entitled “History of the Department’s Title II Web-Related Interpretation and Guidance,” the Department no longer believes telephone lines can realistically provide equal access to people with disabilities. Websites—and often mobile apps—allow members of the public to get information or request a service within just a few minutes, and often to do so independently. Getting the same information or requesting the same service through a staffed telephone line takes more steps and may result in wait times or difficulty getting the information.

For example, State and local government entities’ web content and mobile apps may allow members of the public to quickly review large quantities of information, like information about how to register for government services, information on pending government ordinances, or instructions about how to apply for a government benefit. Members of the public can then use government web content or mobile apps to promptly act on that information by, for example, registering for programs or activities, submitting comments on pending government ordinances, or filling out an application for a government benefit. A member of the public could not realistically accomplish these tasks efficiently over the phone.

Additionally, a person with a disability who cannot use an inaccessible online tax form might have to call to request assistance with filling out either online or mailed forms, which could involve significant delay, added costs, and could require providing private information such as banking details or Social Security numbers over the phone without the benefit of certain security features available for online transactions. A staffed telephone line also may not be accessible to someone who is deafblind, or who may have combinations of other disabilities, such as a coordination issue impacting typing, and an audio processing disability impacting comprehension over the phone. However, such individuals may be able to use accessible web content and mobile apps that are accessible. Finally, calling a staffed telephone line lacks the privacy of looking up information on a public entity’s web content or mobile app. A caller needing public safety resources, for example, might be unable to access a private location to ask for help on the phone, whereas accessible web content or mobile apps would allow users to privately locate resources. For these reasons, the Department does not now believe that a staffed telephone line—even if it is offered 24/7—provides equal opportunity in the face of accessible web content or mobile apps would.

Section 35.204 Duties

Section 35.204 sets forth the general limitations on the obligations under subpart H of this part. Section 35.204 provides that in meeting the accessibility requirements set out in subpart H, a public entity is not required to take any action that would result in a fundamental alteration in the nature of a service, program, or activity, or in undue financial and administrative burdens. These limitations on a public entity’s duty to comply with the regulatory provisions mirror the fundamental alteration and undue burdens compliance limitations currently provided in the title II regulation in §§ 35.150(a)(3) (existing facilities) and 35.164 (effective communication), and the fundamental alteration compliance limitation currently provided in the title II regulation in § 35.130(b)(7) (reasonable modifications in policies, practices, or procedures). These limitations are thus familiar to public entities.

The word “full” was removed in § 35.204 so that the text reads “compliance” rather than “full compliance.” The Department made this change because § 35.200(b)(1) and (2) clarifies that compliance with subpart H of this part includes complying with the success criteria and conformance requirements under Level A and Level AA specified in WCAG 2.1. This minor revision does not affect the meaning of § 35.204, but rather removes an extraneous word to avoid redundancy and confusion.

In determining whether an action would result in undue financial and administrative burdens, all of a public entity’s resources available for use in the funding and operation of the service, program, or activity should be considered. The burden of proving that compliance with the requirements of § 35.200 would fundamentally alter the nature of a service, program, or activity, or would result in undue financial and administrative burdens, rests with the public entity. As the Department has consistently maintained since promulgation of the title II regulation
in 1991, the decision that compliance would result in a fundamental alteration or impose undue burdens must be made by the head of the public entity or their designee, and must be memorialized with a written statement of the reasons for reaching that conclusion. The Department has recognized the difficulty public entities have in identifying the official responsible for this determination, given the variety of organizational structures within public entities and their components.

The Department has made clear that the determination must be made by a high level official, no lower than a Department head, having budgetary authority and responsibility for making spending decisions.

The Department believes, in general, it would not constitute a fundamental alteration of a public entity’s services, programs, or activities to modify web content or mobile apps to make them accessible within the meaning of subpart H of this part. However, there may be specific inquiries, and the Department provides some examples later in this section of when a public entity may be able to claim a fundamental alteration. Moreover, like the fundamental alteration or undue burdens provisions in the title II regulation referenced in the preceding paragraphs, § 35.204 does not relieve a public entity of all obligations to individuals with disabilities. Although a public entity under this part is not required to take actions that would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens, it nevertheless must comply with the requirements of subpart H of this part to the extent that compliance does not result in a fundamental alteration or undue financial and administrative burdens. For instance, a public entity might determine that complying with all of the success criteria under WCAG 2.1 Level AA would result in a fundamental alteration or undue financial and administrative burdens. However, the public entity must then determine whether it can take any other action that would result in such an alteration or such burdens, but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity to the maximum extent possible. To the extent that the public entity can, it must do so. This may include the public entity’s bringing its web content into conformance to some of the WCAG 2.1 Level A or Level AA success criteria.

It is the Department’s view that most entities that choose to assert a claim that complying with all of the requirements under WCAG 2.1 Level AA would result in undue financial and administrative burdens will be able to attain at least partial compliance in many circumstances. The Department believes that there are many steps a public entity can take to conform to WCAG 2.1 Level AA that will not result in undue financial and administrative burdens, depending on the particular circumstances.

Complying with the web and mobile app accessibility requirements set forth in subpart H means that a public entity is not required by title II of the ADA to make any further modifications to the web content or content in mobile apps that it makes available to the public. However, it is important to note that compliance with subpart H of this part will not relieve any of their distinct employment-related obligations under title I of the ADA. The Department realizes that the regulations in subpart H are not going to meet the needs of and provide access to every individual with a disability, but believes that setting a comparable web accessibility standard that meets the needs of a majority of individuals with disabilities will provide greater predictability for public entities, as well as added assurance of accessibility for individuals with disabilities. This approach is consistent with the approach the Department has taken in the context of physical accessibility under title II. In that context, a public entity is not required to exceed the applicable design requirements of the ADA Standards even if certain wheelchairs or other power-driven mobility devices require a greater degree of accessibility than the ADA Standards provide. The entity may still be required, however, to make other modifications to how it provides a program, service, or activity, where necessary to provide access for a specific individual. For example, where an individual with a disability cannot physically access a program provided in a building that complies with the ADA Standards, the public entity does not need to make physical alterations to the building but may need to take other steps to ensure that the individual has an equal opportunity to participate in and benefit from that program. Similarly, just because an entity is in compliance with the web content or mobile app accessibility standard in subpart H of this part does not mean it has met all of its obligations under the ADA or other applicable laws—it means only that it is not required to make further changes to the web content or content in mobile apps that it makes available. If an individual with a disability, on the other hand, cannot access or does not have equal access to a service, program, or activity through a public entity’s web content or mobile app that conforms to WCAG 2.1 Level AA, the public entity is still obligated under § 35.200(a) to provide the individual an alternative method of access to that service, program, or activity unless the public entity can demonstrate that alternative methods of access would result in a fundamental alteration in the nature of a service, program, or activity or in undue financial and administrative burdens.

The entity also must still satisfy its general obligations to provide effective communication, reasonable modifications, and an equal opportunity to participate in or benefit from the entity’s services, programs, or activities. The public entity must determine on a case-by-case basis how best to meet the needs of those individuals who cannot access a service, program, or activity that the public entity provides through web content or mobile apps that comply with all of the requirements under WCAG 2.1 Level AA. A public entity should refer to § 35.130(b)(1)(ii) to determine its obligations to provide individuals with disabilities an equal opportunity to participate in and enjoy the benefits of the public entity’s services, programs, or activities. A public entity should refer to § 35.160 (effective communication) to determine its obligations to provide individuals with disabilities with the appropriate auxiliary aids and services necessary to afford them an equal opportunity to participate in, and enjoy the benefits of, the public entity’s services, programs, or activities. A public entity should refer to § 35.130(b)(7) (reasonable modifications) to determine its obligations to provide reasonable modifications in policies, practices, or procedures to avoid discrimination on the basis of disability. It is helpful to provide individuals with disabilities with information about how to obtain the modifications or auxiliary aids and services they may need. For example, while not required in subpart H of this part, a public entity is encouraged to provide an email address, accessible link, accessible web page, or other accessible means of contacting the public entity to provide information about issues individuals with disabilities may encounter accessing web content or mobile apps or to request assistance.

Providing this information will help public entities ensure that they are satisfying their obligations to provide equal access, effective communication, and reasonable modifications.

The Department also clarifies that a public entity’s requirement to comply with existing ADA obligations remains true for content that fits under one of the exceptions under § 35.201. For example, in the appropriate circumstances, an entity may be obligated to add captions to a video that falls within the archived content exception and provide the captioned video file to the individual with a disability who needs access to the video, or edit an individualized password-protected PDF to be usable with a screen reader and provide it via a secure method to the individual with a disability. Of course, an entity may also choose to further modify the web content or content in mobile apps it makes available to make that content more accessible or usable than subpart H of this part requires. In the context of the preceding examples, for instance, the Department believes it will often be more economical and logical for an entity to post the captioned video, once modified, as part of web content made available to the public, or to modify the individualized PDF template so that it is used for all members of the public going forward.

The Department received comments indicating that the fundamental alteration or undue burdens limitations as discussed in

the “Duties” section of the NPRM. are appropriate and align with the framework of the ADA. The Department also received comments expressing concern that there are no objective standards to help public entities understand when the fundamental alteration and undue burdens limitations will apply. Accordingly, some commenters asked the Department to make clearer when public entities can and cannot raise these limitations. Some of these commenters said that the lack of clarity about these limitations could provide a higher litigation costs or frivolous lawsuits. The Department acknowledges these concerns and notes that fundamental alteration and undue burdens are longstanding limitations under the ADA, and therefore the public should already be familiar with these limitations in other contexts. The Department has provided guidance that addresses the fundamental alteration and undue burdens limitations and will consider providing additional guidance in the future.

The Department received some comments suggesting that the Department should state whether certain examples amount to a fundamental alteration or undue burdens or amend the text to address the examples. For example, one commenter indicated that some digital content cannot be made accessible and therefore technical infeasibility should be considered an undue burden. Another commenter asserted that it may be an undue burden to require large documents that are 300 pages or more to be accessible under the final regulations; therefore, the final regulations should include a rebuttable presumption that public entities do not have to make these larger documents accessible. In addition, one commenter said they believe that testing the accessibility of web content and mobile apps imposes an undue burden. However, another commenter opined that improving web code is unlikely to pose a fundamental alteration in most cases.

Whether the undue burdens limitation applies is a fact-specific assessment that involves considering a variety of factors. For example, some small towns have minimal operating budgets in the thousands or tens of thousands of dollars. If such a town had an archive section of its website with a large volume of material gathered by the town’s historical society (such as old books and library covers, such as the title of the book or the author’s name, satisfies the color contrast requirements in the technical standard. Even so, the library would still be required to take any other action that would not result in such an alteration but would nevertheless ensure that individuals with disabilities could participate in the contest to the maximum extent possible.

Because each assessment of whether the fundamental alteration or undue burdens limitations apply will vary depending on the entity, the time of the assessment, and various other facts and circumstances, the Department declines to adopt any rebuttable presumptions about when the fundamental alteration or undue burdens limitations would apply.

One commenter proposed that the fundamental alteration and undue burdens limitations apply, however, would depend, among other things, on how large the town’s operating budget is and how much it would cost to make the materials in question accessible. Whether the limitation applies will also vary in size. Increases in town budget, or changes in technology that reduce the cost of making the historical materials accessible, may make the limitation inapplicable. Lastly, even where it would impose an undue burden on the town to make its materials accessible within a certain time frame, the town would still need to take any other action that would not result in such a burden but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the town to the maximum extent possible.

Application of the fundamental alteration limitation is similarly fact specific. For example, a county library might hold an art contest in which elementary school students submit alternative covers for their favorite books and library goers view and vote on the submissions on the library website. It would likely be a fundamental alteration to require the library to modify each piece of artwork so that any text drawn on the alternative covers, such as the title of the book or the author’s name, satisfies the color contrast requirements in the technical standard. Even so, the library would still be required to take any other action that would not result in such an alteration but would nevertheless ensure that individuals with disabilities could participate in the contest to the maximum extent possible.

Because each assessment of whether the fundamental alteration or undue burdens limitations apply will vary depending on the entity, the time of the assessment, and various other facts and circumstances, the Department declines to adopt any rebuttable presumptions about when the fundamental alteration or undue burdens limitations would apply.

One commenter proposed that the fundamental alteration and undue burdens limitations apply, however, would depend, among other things, on how large the town’s operating budget is and how much it would cost to make the materials in question accessible. Whether the limitation applies will also vary in size. Increases in town budget, or changes in technology that reduce the cost of making the historical materials accessible, may make the limitation inapplicable. Lastly, even where it would impose an undue burden on the town to make its materials accessible within a certain time frame, the town would still need to take any other action that would not result in such a burden but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the town to the maximum extent possible.

The Department believes it is important to apply these longstanding limitations in the same way to web content and mobile apps to ensure clarity for public entities and consistent enforcement of the ADA. In addition, implementing the commenter’s suggested approach would create additional costs for public entities. The Department nevertheless encourages public entities to make their web content and mobile apps accessible and ensure transparency when public entities seek to invoke the fundamental alteration or undue burdens limitations. For example, a public entity can provide an accessibility notice that informs the public how to bring web content or mobile app accessibility problems to the public entity’s attention, and it can also develop and implement a procedure for reviewing and addressing any such issues raised.

Some commenters raised concerns about the requirement in § 35.204 that the decision that compliance with part H of this part would result in a fundamental alteration or in undue financial or administrative burdens must be made by the head of a public entity or their designee. These commenters wanted more clarity about who is the head of a public entity. They also expressed concern that this requirement may be onerous for public entities. The Department notes in response to these commenters that this approach is consistent with the existing title II framework in §§ 35.150(a)(3) (service, program, or activity accessibility) and 35.164 (effective communication). With respect to the commenters’ concern that only the head of a public entity or their designee, the Department recognizes the difficulty of identifying the official responsible for this determination given the variety of organizational forms of public entities and their components. The Department has made clear that “the determination must be made by a high level official, no lower than a Department head, having budgetary authority and responsibility for making spending decisions.” The Department reiterates that this is an existing concept in title II of the ADA, so public entities should be familiar with this requirement. The appropriate relevant official may vary depending on the public entity.

Section 35.205 Effect of Noncompliance That Has a Minimal Impact on Access

Section 35.205 sets forth when a public entity will be deemed to have complied with remediation of the inaccessible content. The Department declines to take this suggested approach because it would be a departure from how the limitation generally applies in other contexts covered by title II of the ADA. In these other contexts, if an action results in a fundamental alteration or undue burdens, a public entity must still take any other action that would not result in such an alteration or such burdens but would nevertheless ensure that individuals with disabilities receive the benefits or services provided by the public entity to the maximum extent possible. The Department believes it is important to apply these longstanding limitations in the same way to web content and mobile apps to ensure clarity for public entities and consistent enforcement of the ADA. In addition, implementing the commenter’s suggested approach would create additional costs for public entities. The Department nevertheless encourages public entities to make their web content and mobile apps accessible and ensure transparency when public entities seek to invoke the fundamental alteration or undue burdens limitations. For example, a public entity can provide an accessibility notice that informs the public how to bring web content or mobile app accessibility problems to the public entity’s attention, and it can also develop and implement a procedure for reviewing and addressing any such issues raised.

Some commenters raised concerns about the requirement in § 35.204 that the decision that compliance with part H of this part would result in a fundamental alteration or in undue financial or administrative burdens must be made by the head of a public entity or their designee. These commenters wanted more clarity about who is the head of a public entity. They also expressed concern that this requirement may be onerous for public entities. The Department notes in response to these commenters that this approach is consistent with the existing title II framework in §§ 35.150(a)(3) (service, program, or activity accessibility) and 35.164 (effective communication). With respect to the commenters’ concern that only the head of a public entity or their designee, the Department recognizes the difficulty of identifying the official responsible for this determination given the variety of organizational forms of public entities and their components. The Department has made clear that “the determination must be made by a high level official, no lower than a Department head, having budgetary authority and responsibility for making spending decisions.” The Department reiterates that this is an existing concept in title II of the ADA, so public entities should be familiar with this requirement. The appropriate relevant official may vary depending on the public entity.
§ 35.200 despite limited nonconformance to the technical standard. This provision adopts one of the possible approaches to compliance discussed in the NPRM. As discussed in this section, public comments indicated that the final rule needed to account for the increased nonconformance to WCAG 2.1 Level AA is the only definitive way to demonstrate that the public entity has met its obligations under § 35.200 despite its nonconformance to WCAG 2.1 Level AA.

Discussion of Regulatory Text

Section 35.205 describes a particular, limited circumstance in which a public entity may make this showing, it will be deemed to have met its obligations under § 35.200 despite its nonconformance to WCAG 2.1 Level AA. Section 35.205 does not alter a public entity’s general obligations under subpart H of this part nor is it intended as a blanket justification for a public entity to avoid conformance with WCAG 2.1 Level AA from the outset. Rather, § 35.205 is intended to apply in rare circumstances and will require a detailed analysis of the specific facts surrounding the impact of each alleged instance of nonconformance. The Department does not expect or intend that § 35.205 will excuse most nonconformance to the technical standard. Under § 35.200(b), a public entity must typically ensure that the web content or mobile apps provides that nonconformance to the technical standard set forth in § 35.200(b).

With respect to the particular criteria that a public entity must satisfy, § 35.205 describes both what people with disabilities must be able to use the public entity’s web content or mobile apps to do and the manner in which people with disabilities must be able to do it. As to manner of use, § 35.205 provides that nonconformance to WCAG 2.1 Level AA must not affect the ability of individuals to use the public entity’s web content or mobile apps in a manner that provides substantially equivalent timeliness, privacy, and independence, and ease of use. The Department believes that § 35.205 meets this need, and full conformance to WCAG 2.1 Level AA is the only definitive way to demonstrate that the public entity has met its obligations under § 35.200 despite its nonconformance to WCAG 2.1 Level AA.
satisfied if certain web content could not be accessed using a keyboard because the content was coded in a way that caused the keyboard to skip over some content. In this example, an individual who relies on a screen reader would not be able to access the same information as an individual without a disability because all of the information could not be selected with their keyboard so that it would be read aloud by their screen reader. However, § 35.205(a) might be satisfied if the color contrast ratio for some section of text as required by WCAG 2.1 Success Criterion 1.4.3.

Similarly, this provision might apply if the spacing between words is only 0.15 times the font size instead of 0.16 times as required by WCAG 2.1 Success Criterion 1.4.12.

Such slight deviations from the specified requirements are unlikely to affect the ability of, for example, most people with vision disabilities to access information that they would be able to access if the content fully conformed with the technical standard. However, the entity must always demonstrate that this element is met with respect to the specific facts of the nonconformance at issue.

Second, § 35.205(b) states that individuals with disabilities must be able to engage in the same transactions as individuals without disabilities. This means that people with disabilities can interact with the web content or mobile app in all of the same ways that people without disabilities can. For example, § 35.205(b) would not be satisfied if people with disabilities could not interact with all of the different components of the web content or mobile app, such as chat functionality, messaging, calculators, calendars, and search functions. However, § 35.205(b) might be satisfied if the time limit for an interaction, such as a chat response, expires at exactly 20 hours, even though Success Criterion 2.2.1 generally requires certain safeguards to prevent time limits from expiring, has an exception that only applies when the time limit is 20 hours. People with certain types of disabilities, such as cognitive disabilities, may need more time than people without disabilities to engage in interactions. A slight deviation in timing, especially when the time limit is long and the intended interaction is brief, is unlikely to affect the ability of people with these types of disabilities to engage in interactions. Still, the public entity must always demonstrate that this element is met with respect to the specific facts of the nonconformance at issue.

Third, pursuant to § 35.205(c), individuals with disabilities must be able to conduct the same transactions as individuals without disabilities. This means that people with disabilities can complete all of the same transactions on the web content or mobile app that people without disabilities can. For example, § 35.205(c) would not be satisfied if people with disabilities could not submit a form or process their payment. However, § 35.205(c) would likely be satisfied if web content does not conform to Success Criterion 4.1.1 about parsing. This Success Criterion requires that information is coded properly so that tools like browsers and screen readers can accurately interpret the content and, for instance, deliver that content to a user correctly so that they can complete a transaction, or avoid crashing in the middle of the transaction.

However, according to W3C, this Success Criterion is no longer needed to ensure accessibility because of improvements in browsers and assistive technology.

Thus, although conformance to this Success Criterion is required by WCAG 2.1 Level AA, a failure to conform to this Success Criterion is unlikely to affect the ability of people with disabilities to conduct transactions. However, the entity must always demonstrate that this element is met with respect to the specific facts of the nonconformance at issue.

Fourth, § 35.205(d) requires that individuals with disabilities must be able to otherwise participate in or benefit from the same services, programs, and activities as individuals without disabilities. Section 35.205(d) is intended to address anything else within the scope of title II, i.e., any service, program, or activity that cannot fairly be characterized as accessing information, engaging in an interaction, or conducting a transaction for which someone who does not have a disability could use the public entity’s web content or mobile app. Section 35.205(d) should be construed broadly to ensure that the ability of individuals with disabilities to use any part of the public entity’s web content or mobile app that individuals without disabilities are able to use is not affected by nonconformance to the technical standard.

Explanation of Changes From Language Discussed in the NPRM

The regulatory language codified in § 35.205 is very similar to language discussed in the NPRM’s preamble.

However, the Department believes it is helpful to explain differences between that discussion in the NPRM and the final rule. The Department has only made three substantive changes to the NPRM’s relevant language.

First, though the NPRM discussed excusing nonconformance that “does not prevent” equal access, § 35.205 excuses nonconformance that “would not affect” such access. The Department was concerned that the use of “does not” could have been incorrectly read to require a showing that a specific individual did not have substantially equivalent access to the web content or mobile app. In changing the language to “would not,” the Department clarifies that the threshold requirements for bringing a challenge to compliance under subpart H of this part are the same as under any other provision of the ADA. Except as otherwise required by existing law, a rebuttal of a public entity’s invocation of this provision would not need to show that a specific individual did not have substantially equivalent access to the web content or mobile app. Rather, the issue would be whether the nonconformance is the type of barrier that would affect the ability of individuals with pertinent disabilities to access the web content or mobile app in a substantially equivalent manner. The same principles would apply to informal dispute resolution or agency investigations resolved outside of court, for example. Certainly, the revised standard would encompass a barrier that actually does affect an individual’s access, so this revision does not narrow the provision.

Second, the Department originally proposed considering whether nonconformance “prevent[s] a person with a disability” from using the web content or mobile app, but § 35.205 instead considers whether nonconformance would “affect the ability of individuals with disabilities” to use the web content or mobile app. This revision is intended to clarify what a public entity would need to demonstrate. The Department explained in the NPRM that the purpose of this approach was to provide equal access to people with disabilities, and limit violations to those that affect access.

But even when not entirely prevented from using web content or mobile app, an individual with disabilities can still be denied equal access by impediments falling short of that standard. The language now used in this provision more accurately reflects this reality and achieves the objective proposed in the NPRM.

As explained earlier in the discussion of § 35.205, under the language in this provision, it would not be sufficient for a public entity to show that nonconformance would not completely block people with disabilities from using the public entity’s web content or a mobile app as described in § 35.206(a) through (d). In other words, someone would not need to be entirely prevented from using the web content or mobile app before an entity could be considered out of compliance. Instead, the effect of the nonconformance must be considered. This does not mean that any effect on usability, however slight, is sufficient to prove a violation. Only nonconformance that would affect the ability of individuals with disabilities to do the activities in § 35.205(a) through (d) in a way that actually does affect a specific individual’s ability to engage in a transaction outside of court, for example. Certainly, the revised standard would encompass a barrier that actually does affect an individual’s access, so this revision does not narrow the provision.

Third, the language proposed in the NPRM considered whether a person with a disability would have substantially
equivalent “ease of use.” The Department believed that timeliness, privacy, and independence were all components that affected whether ease of use was substantially equivalent. Because several commenters proposed explicitly specifying these dimensions, Federal agencies, Federal agencies, and courts have argued about how to analyze an entity’s invocation of this provision.

Therefore, the Department has added additional language to clarify that timeliness, privacy, and independence are all important concepts to consider when evaluating whether this provision applies. If a person with a disability would need to take significantly more time to successfully navigate web content or a mobile app that does not conform to the technical standard because of the content or app’s nonconformance, that person is not being provided with a substantially equivalent experience to that of people without disabilities. A person with a disability would need to spend substantially more time to do something is placing an additional burden on them that is not imposed on others. Privacy and independence are also crucial components that can affect whether a person with a disability will be prevented from having a substantially equivalent experience. Adding this language to § 35.205 ensures consistency with the effective communication provision of the ADA. The Department includes timeliness, privacy, and independence in this provision for clarity and to avoid unintentionally narrowing what should be a fact-intensive analysis. However, “ease of use” may also encompass other aspects of a user’s experience that are not expressly specified in the regulatory text, such as safety risks incurred by people with disabilities as a result of nonconformance.

As such, the Department believes that if it does not implement a tailored approach to compliance under subpart H of this part, the burden of litigation under subpart H could become particularly challenging for public entities, enforcement agencies, and the courts. Though many comments about litigation risk were received, the Department also agreed with the Department’s understanding that the prevalence of automated web accessibility testing could enable any individual to find evidence of nonconformance to WCAG 2.1 Level AA even where that individual has not experienced any impact on access and the nonconformance would not affect others’ access, with the result that identifying instances of merely technical noncompliance from web content and mobile apps may be more likely than identifying merely technical nonconformance to the ADA Standards.

Based on the comments it received, the Department believes that if it does not implement a tailored approach to compliance under subpart H of this part, the burden of litigation under subpart H could become particularly challenging for public entities, enforcement agencies, and the courts.

The Department has carefully considered many different approaches to defining when a State or local government entity has met its obligations under subpart H of this part. Of all the approaches considered—including those discussed in the NPRM as well as those

The Need To Tailor a Compliance Approach for the Digital Space

Most of the commenters who addressed the question of what approach subpart H of this part should take to assessing compliance provided information that supported the Department’s decision to tailor an approach for measuring compliance that is specific to the digital space (i.e., an approach that differs from the approach that the Department has taken for physical access). Only a few commenters believed that the Department should require 100 percent conformance to WCAG 2.1 Level AA, as is generally required for newly constructed facilities. Commenters generally discussed two reasons why a different approach was appropriate: differences between the physical and digital space and increased litigation risk.

First, many commenters, including commenters from State and local government entities and trade groups representing public accommodations, emphasized how the built environment differs from the digital environment. These commenters agreed with the Department’s suggestion in the NPRM that the dynamic and interconnected nature of the mobile app made it more likely that a substantial number of compliance issues would be unique. This specificity ensures clarity for public entities, individuals with disabilities, and courts.

Additionally, the digital space is more likely than the physical space to be difficult. Conformance to the technical standard would likely much easier than identifying merely technical noncompliance under subpart H of this part. The Department believes that it is likely to be more difficult for State and local government entities to maintain perfect conformance to the technical standard set forth in subpart H than it is to conform with the ADA Standards.

Second, many commenters raised concerns about the litigation risk that requiring perfect conformance to WCAG 2.1 Level AA would pose. Commenters feared being subjected to a flood of legal claims based on any failure to conform to the technical standard, however minor, and regardless of the impact—or lack thereof—the nonconformance has on accessibility. Commenters agreed with the Department’s suggestion that due to the dynamic, complex, and interconnected nature of web content and mobile apps, a public entity’s web content and mobile apps may be more likely to be out of conformance to WCAG 2.1 Level AA than its buildings are to be out of compliance with the ADA Standards, leading to increased legal risk. Some commenters even stated that 100 percent conformance to WCAG 2.1 Level AA would be unattainable or impossible to maintain. Commenters also agreed with the Department’s understanding that the prevalence of automated web accessibility testing could enable any individual to find evidence of nonconformance to WCAG 2.1 Level AA even where that individual has not experienced any impact on access and the nonconformance would not affect others’ access, with the result that identifying instances of merely technical nonconformance from web content and mobile apps may be more likely than identifying merely technical nonconformance to the ADA Standards.

Based on the comments it received, the Department believes that it is likely to be more difficult for State and local government entities to maintain perfect conformance to the technical standard set forth in subpart H than it is to conform with the ADA Standards. Commenters agreed that maintaining perfect conformance to the technical standard would be difficult. Web content and content in mobile apps are also more likely to be interconnected, such that updating one component may affect the conformance of other content in unexpected ways, including in ways that may lead to technical nonconformance without affecting the user experience for individuals with disabilities. Thus, to

225 Section 35.160(b)(2).

proposed by commenters—the Department believes the compliance approach set forth in §35.205 strikes the most appropriate balance between providing equal access to people with disabilities and ensuring feasibility for public entities, courts, and Federal agencies. The Department believes that the approach set forth in subpart H is preferable to all other approaches because it emphasizes actual access, is consistent with existing legal frameworks, and was supported by a wide range of commenters.

Primarily, the Department has selected this approach because it appropriately focuses on the experience of individuals with disabilities who are trying to use public entities’ web content or mobile apps. By looking at the effect of any nonconformance to the technical standard, this approach will most successfully implement the ADA’s goals of “equality of opportunity” and “full participation.” This approach ensures that nonconformance to the technical standard can be addressed when it affects these core promises of equal access.

The Department heard strong support from the public for ensuring that people with disabilities have equal access to the same services, programs, and activities as people without disabilities, with equivalent timeliness, privacy, independence, and ease of use. Similarly, many commenters from disability advocacy organizations stated that the goal of subpart H of this part should be to provide access to people with disabilities that is functionally equivalent to the access experienced by people without disabilities. Other disability advocates stressed that technical compliance should not be prioritized over effective communication. Section 35.205 will help to achieve these goals.

The Department believes that this approach will not have a detrimental impact on the experience of people with disabilities who are trying to use web content or mobile apps. By its own terms, §35.205 would require a public entity to demonstrate that any nonconformance would not affect the ability of individuals with disabilities to use the public entity’s web content or mobile app in a manner that provides substantially equivalent timeliness, privacy, independence, and ease of use. As discussed earlier in the analysis of §35.205, it is likely that this will be a high hurdle to clear. If nonconformance to the technical standard would affect people with disabilities’ ability to use the web content or mobile app in this manner, this provision will not apply, and a public entity will not have met its obligations under subpart H of this part. As noted earlier in this discussion, full conformance to WCAG 2.1 Level AA is the only definitive way for a public entity to avoid reliance on §35.205.

This provision would nonetheless provide public entities who have failed to conform to WCAG 2.1 Level AA with a way to avoid the prospect of liability for an error that is purely technical in nature and would not affect accessibility in practice. This will help to curtail the specter of potential liability for every minor technical error, no matter how insignificant. However, §35.205 is intended to apply in rare circumstances and will require a detailed analysis of the specific facts surrounding the impact of each alleged instance of nonconformance. As noted earlier, the Department does not expect or intend that §35.205 would excuse most nonconformance to the technical standard.

The Department also believes this approach is preferable to the other approaches considered because it is likely to be familiar to people with disabilities and public entities, and this general consistency with title II’s regulatory framework (notwithstanding some necessary differences from the physical context as noted earlier in this discussion) has important benefits. The existing regulatory framework similarly provides equal opportunity to participate in and benefit from services, programs, or activities; equal opportunity to obtain the same result; full and equal enjoyment of services, programs, and activities; and communications with people with disabilities that are as effective as communications with others, which includes consideration of timeliness, privacy, and independence.

The 1991 and 2010 ADA Standards also allow designs or technologies that result in substantially equivalent accessibility and usability. Because of the consistency between §35.205 and existing law, the Department does not anticipate that the requirements for bringing challenges to compliance with subpart H of this part will be radically different than the framework that currently exists. Subpart H adds certainty by establishing that conformance to WCAG 2.1 Level AA is generally sufficient for a public entity to meet its obligations to ensure accessibility of web content and mobile apps. However, in the absence of perfect conformance to WCAG 2.1 Level AA, the compliance approach established by the focus on equal access, as it is under current law. Section 35.205 provides a limited degree of flexibility to public entities without displacing this part’s guarantee of equal access for individuals with disabilities or upsetting the existing legal framework.

Finally, this approach to compliance is preferable to the other approaches the Department considered because there was a notable consensus among public commenters supporting it. A wide range of commenters, including disability advocacy organizations, trade groups representing public accommodations, accessibility experts, and State and local government entities submitted supportive comments. Even some of the commenters who opposed this approach noted that it would be helpful if it was combined with a clear technical standard, which the Department has done. Commenters representing a broad spectrum of interests seem to agree with this approach, with several commenters supporting similar regulatory language. After considering the relative consensus among commenters, together with the other factors discussed herein, the Department has decided to adopt the approach to defining compliance that is set forth in §35.205.

Alternative Approaches Considered

In addition to the approach set forth in §35.205, the Department also considered compliance approaches that would have allowed isolated or temporary interruptions to conformance; required a numerical percentage of conformance to the technical standard; or allowed public entities to demonstrate compliance either by establishing and following certain specified accessibility policies or practices or by showing organizational maturity (i.e., that the entity has a sufficiently robust accessibility program to consistently produce accessible web content and mobile apps). The Department also considered the approaches that other States, Federal agencies, and countries have taken, and other approaches suggested by commenters. After carefully weighing all of these alternatives, the Department believes the compliance approach adopted in §35.205 is the most appropriate framework for determining whether a State or local government entity has met its obligations under §35.206.

Isolated or Temporary Interruptions

As the Department noted in the NPRM, the current title II regulation does not prohibit isolated or temporary interruptions in service or access to facilities due to maintenance or repairs. In response to the Department’s question about whether it should add a similar provision in subpart H of this part, commenters generally supported including an analogous provision in subpart H. They noted that some difficulties are inevitable, especially when updating web content or mobile apps. Some commenters elaborated that noncompliance with the technical standard should be excused if it is an isolated incident, as in one page out of many; temporary, as in an issue with an update that is promptly fixed; or through other approaches to measuring compliance addressed in this section. A few commenters stated that due to the continuously evolving nature of web content and mobile apps, there is even more need to include a provision regarding isolated or temporary interruptions than there is in the physical space. Another commenter suggested that entities should prioritize emergency-related information by making sure they have alternative methods of communication in place in anticipation of isolated or temporary interruptions that prevent access to this content.

The Department has considered all of the comments it received on this issue and,
based on those comments and its own independent assessment, decided not to separately excuse an entity’s isolated or temporary noncompliance with §35.205(b) due to maintenance or repairs in subpart H of this part. Rather, as stated in §35.205, an entity with the ability for an isolated or temporary instance of nonconformance to WCAG 2.1 Level AA will depend on whether the isolated or temporary instance of nonconformance— as with any other nonconformance—would affect the ability of individuals with disabilities to use the public entity’s web content or mobile app in a substantially equivalent way.

The Department believes it is likely that the approach set forth in §35.205 reduces the need for a provision that would explicitly allow for instances of isolated or temporary noncompliance due to maintenance or repairs, while simultaneously limiting the negative impact of such a provision on individuals with disabilities. The Department believes this is true for two reasons. First, isolated or temporary noncompliance due to maintenance or repairs occur that affect web content or mobile apps, it logically follows from the requirements in subpart H of this part that these interruptions should generally result in the same impact on individuals with and without disabilities after the compliance date because, in most cases, all users would be relying on the same content, and so interruptions to that content would impact all users. From the compliance date onward, accessible web content and mobile apps and the web content and mobile apps used by people without disabilities should be one and the same (with the rare exception of conforming alternate versions provided for in §35.202). Therefore, the Department expects that isolated or temporary noncompliance due to maintenance or repairs generally will affect the ability of people with disabilities to use web content or mobile apps to the same extent it will affect the experience of people without disabilities. For example, if a website is undergoing overnight maintenance and so is temporarily unavailable, the form would already conform to WCAG 2.1 Level AA, and so there would be no separate feature or form for individuals with disabilities that would be affected while a form for people without disabilities is functioning. In such a scenario, individuals with and without disabilities would both be unable to access web content, such that there would be no violation of subpart H of this part.

Thus, the Department believes that a specific provision regarding isolated or temporary noncompliance due to maintenance or repairs is less necessary than it is for physical access. When there is maintenance to a feature that provides physical access, such as a broken elevator, access for people with disabilities is particularly important. In contrast, when there is maintenance to web content or mobile apps, people with and without disabilities will generally both be denied access, such that no one is denied access on the basis of disability. Second, even to the extent isolated or temporary noncompliance due to maintenance or repairs affects only an accessibility feature, that noncompliance may fit the parameters laid out in §35.205 such that an entity will be deemed to have complied with its obligations under §35.200. Section 35.205 does not provide a blanket limitation that would excuse all isolated or temporary noncompliance due to maintenance or repairs, however. The provision’s applicability would depend on the particular circumstances of the interruption and its impact on people with disabilities. It is possible that an interruption that only affects an accessibility feature will not satisfy the elements of §35.205 and an entity will not be deemed in compliance with §35.200. Even one temporary or isolated instance of nonconformance could affect the ability of individuals with disabilities to use the web content with substantially equivalent ease of use, depending on the circumstances. As discussed in this section, this will necessarily be a fact-specific analysis.

In addition to being less necessary than in the physical world, the Department also believes a specific provision regarding isolated or temporary interruptions due to maintenance or repairs would have more detrimental incentives in the digital space by discouraging public entities from adopting practices that would reduce or avert the disruptions caused by maintenance and repair that affect accessibility. Isolated or temporary noncompliance due to maintenance or repairs of features that provide physical access would be necessary regardless of what practices public entities put in place to avert interruptions and maintenance to those features often cannot be done without interrupting access specifically for individuals with disabilities. For example, curb ramps will need to be repaved and elevators will need to be repaired because physical materials break down. In contrast, the Department believes that, despite the dynamic nature of web content and mobile apps, incorporating accessible design principles and best practices will generally enable public entities to anticipate and avoid many instances of isolated or temporary noncompliance due to maintenance or repairs—including many isolated or temporary instances of nonconformance that would have such a significant impact that they would affect people with disabilities’ ability to use web content or mobile apps in a substantially equivalent way. Some of these best practices, such as regular accessibility testing and remediation, would likely be needed for public entities to comply with subpart H of this part regardless of whether the Department incorporated a provision regarding isolated or temporary interruptions. And practices like testing content before it is made available will frequently allow maintenance and repairs that affect accessibility to occur without interruption, which is often impossible in physical spaces.

The Department declines to adopt a limitation for isolated or temporary interruptions due to

\[239\text{See 28 CFR part 35, appendix B, at 705 (2022) (providing that it is impossible to guarantee that mechanical devices will never fail to operate).}\]

**Numerical Approach**

The Department considered requiring a certain numerical percentage of conformance to the technical standard. This percentage could be a simple numerical calculation based on the number of instances of nonconformance across the public entity’s web content or mobile app, or the percentage could be calculated by weighting different instances of nonconformance differently. Weighted percentages of many different types, including giving greater weight to more important content, more frequently accessed content, or more severe access barriers, were considered.

When discussing a numerical approach in the NPRM, the Department noted that the approach seemed unlikely to ensure access.\[239\] Even if only a very small percentage of content does not conform to the technical standard, that would still block an individual with a disability from accessing a service, program, or activity. For example, even if there was only one instance of nonconformance, that single error could prevent an individual with a disability from submitting an application for public benefits. Commenters agreed with this concern. As such, the Department continues to believe that a percentage-based approach would not be sufficient to advance the objective of subpart H of this part to ensure equal access to State and local government entities’ web content and mobile apps. Commenters also agreed with the Department that a percentage-based standard would be difficult to implement because percentages would be challenging to calculate.

Based on the public comments it received about this framework, which overwhelmingly agreed with the concept, and the Department raised in the NPRM, the Department continues to believe that adopting a percentage-based approach is not feasible. The Department received a very small number of comments advocating for this approach, which were all from State and local government entities. Even fewer commenters suggested a framework for implementing this approach (i.e., the percentage of conformance that should be adopted or how that percentage should be calculated). Based on the very limited information provided in support of the percentage-based approach submitted from commenters, as well as the Department’s independent assessment, it would be challenging for the Department to articulate a sufficient rationale for choosing a particular percentage of conformance or creating a specific conformance formula. Nothing submitted in public comments meaningfully changed the Department’s previous concerns about calculating a percentage or specifying a formula. For all of the reasons discussed, the Department declines to adopt this approach.
Policies that would have been deemed sufficient under this approach,\(^{246}\) though many commenters supported the idea of a policy-based approach, they suggested a plethora of policies that should be required by subpart H of this part. Commenters disagreed about what type of testing should be required (i.e., automated, manual, or both), who should conduct testing, how frequently testing should be conducted, and how promptly any nonconformance should be remediated. As just one example of the broad spectrum of policies proposed, the frequency of accessibility testing commenters suggested ranged from every 30 days to every five years. A few commenters suggested that no time frames for testing or remediation should be specified in subpart H; rather, they proposed that the frequency of certain policies should depend on the covered entity’s resources, the characteristics of the content, and the complexity of remediating the nonconformance. Commenters similarly disagreed about whether, when, and what kind of training should be required. Commenters also suggested requiring many additional policies and practices, including mechanisms for providing accessibility feedback; accessibility statements; third-party audits; certifications of conformance; documentation of contracting and procurement practices; adopting specific procurement practices; setting certain budgets or staffing requirements; developing statewide panels of accessibility experts; and making accessibility policies, feedback, reports, or scorecards publicly available.

The Department declines to adopt a policy-based approach because, based on the wide range of policies and practices proposed by commenters, there is not a sufficient rationale that would justify adopting any specific set of accessibility policies in the generally applicable regulation in subpart H of this part. Many of the policies commenters suggested would require the Department to dictate particular details of all public entities’ day-to-day operations in a way the Department believes is inappropriate or sufficiently justified to do in subpart H. There was no consensus among commenters about what policies would be sufficient, and most commenters did not articulate a specific basis supporting why their preferred policies were more appropriate than any other policies. In the absence of more specific rationales or a clearer consensus among commenters or experts in the field about what policies would be sufficient, the Department does not believe it is appropriate to prescribe what specific accessibility testing and remediation policies all State and local government entities must adopt to comply with their obligations under subpart H. Based on the information available to the Department at this time, the Department’s adoption of any such specific policies would be unsupported by sufficient evidence that these policies will ensure accessibility, which could cause significant harm. It would allow public entities to comply with their legal obligations under subpart H based on policies alone, even though those policies may fail to provide equal access to online services, programs, or activities.

The Department also declines to adopt a policy-based approach that would rely on the type of general, flexible policies supported by some commenters. Although the sufficiency of public entities’ policies would vary depending on the factual circumstances, the Department does not believe that such an approach would give individuals with disabilities sufficient certainty about what policies and accessibility they could expect. Such an approach would also fail to give public entities sufficient certainty about how they should meet their legal obligations under subpart H of this part. If it adopted a flexible approach suggested by commenters, the Department might not advance the current state of the law, because every public entity could choose any accessibility testing and remediation policies it believed would be sufficient to meet its general obligations, without conforming to the technical standard or ensuring access. The Department has heard State and local government entities’ desire for increased clarity about their legal obligations, and adopting a flexible standard would not address that need.

### Organizational Maturity

Another compliance approach that the Department considered would allow an entity to demonstrate compliance with subpart H of this part by showing organizational maturity (i.e., that the organization has a sufficiently robust program for web and mobile app accessibility). As the Department explained in the NPRM, while accessibility conformance testing evaluates the accessibility of a particular website or mobile app at a specific point in time, organizational maturity evaluates whether an entity has developed the infrastructure needed to produce accessible web content and mobile apps consistently.\(^{247}\)

Commenters, including disability advocacy organizations, State and local government entities, trade groups representing public accommodations, and accessibility experts were largely opposed to using an organizational maturity approach to evaluate compliance. Notably, one of the companies that developed an organizational maturity model the Department discussed in the NPRM did not believe that an organizational maturity model was an appropriate way to assess compliance. Other commenters who stated that they supported the organizational maturity approach also seemed to be endorsing organizational maturity as a best practice rather than a legal framework, expressing that it was not an appropriate substitute for conformance to a technical standard.

Misunderstandings about what an organizational maturity framework is and how the Department was proposing to use it thereby were evident in some comments also demonstrated that the organizational maturity approach raised in the NPRM was not sufficiently clear to the public. For example, at least one commenter conflated organizational maturity with the approach the Department considered that would assess an organization’s policies, which, in the commenter’s view, seemed to understand the Department’s consideration of organizational maturity as only recommending a best practice, even though the Department was considering it as legal requirement. Comments like these indicate that the organizational maturity approach the Department considered to measure compliance would be confusing to the public if adopted.

Among commenters that supported the organizational maturity approach, there was no consensus about how organizational maturity should be defined or assessed, or what level of organizational maturity should be sufficient to demonstrate compliance with subpart H of this part. There are many ways to measure organizational maturity, and it is not clear to the Department that one organizational maturity model is more appropriate or more effective than any other. The Department therefore declines to adopt an organizational maturity approach in subpart H because any organizational maturity model for compliance with web accessibility that the Department could develop or incorporate would not have sufficient justification based on the facts available to the Department at this time. As with the policy-based approach discussed previously in this appendix, if the Department were to allow public entities to define their own organizational maturity approach rather than adopting one specific model, this would not provide sufficient predictability or certainty for people with disabilities or public entities.

The Department also declines to adopt this approach because commenters did not provide—and the Department is not aware of—information or data to suggest that increased organizational maturity reliably resulted in increased conformance to W3C 2.1 Level AA. Like the policy-based approach discussed previously in this appendix, if the Department were to adopt an organizational maturity approach that was not sufficiently rigorous, public entities would be able to comply with subpart H of this part without providing equal access. This would undermine the purpose of the part.

\(^{246}\) Id. at 51983–51984. See also W3C, Accessibility Maturity Model: Group Draft Note, § 1.1: About the Accessibility Maturity Model (Dec. 15, 2023), https://www.w3.org/TR/maturity-model/ [https://perma.cc/UXAV-J4MP].
Other Federal, International, and State Approaches

The Department also considered approaches to measuring compliance that have been used by other agencies, other countries or international organizations, and States, as discussed in the NPRM. As to other Federal agencies’ approaches, the Department has decided not to adopt the Access Board’s standards for section 508 compliance for the reasons discussed in § 35.200 of the section-by-section analysis regarding the technical standard. The Section 508 Standards require full conformance to WCAG 2.0 Level AA, but the Department has determined that requiring perfect conformance to the technical standard set forth in subpart H of this part would not be appropriate for the reasons discussed elsewhere in this appendix. Perfect conformance is less appropriate in subpart H than under section 508 given the wide variety of public entities covered by title II of the ADA, many of which have varying levels of resources compared to the relatively limited number of Federal agencies that must follow section 508. For the reasons stated in the section-by-section analysis of § 35.200 regarding compliance time frame alternatives, the Department also declines to adopt the tiered approach that the Department of Transportation took in its regulation on accessibility of air carrier websites, which required certain types of content to be remediated more quickly.

The Department has also determined that none of the available approaches to evaluating compliance with web accessibility laws that were discussed in the NPRM are currently feasible to adopt in the United States. The methodologies used by the European Union and Canada require reporting to government agencies. This would pose counterproductive logistical and administrative difficulties for regulated entities and the Department. The Department believes that the resources public entities would need to collect and data collection and reporting would detract from efforts to increase the accessibility of web content and mobile apps. Furthermore, reporting to Federal agencies is not required under other subparts of the ADA, and it is not clear to the Department why such reporting would be more appropriate under subpart H of this part than under others. New Zealand’s approach, which requires testing and remediation, is similar to the policy-based approach already discussed in this section, and the Department declines to adopt that approach for the reasons stated in that discussion. The approach taken in the United Kingdom, where a government agency audits websites and mobile apps, sends a report to the public entity, and the entity to fix accessibility issues, is similar to one method the Department currently uses to enforce title II of the ADA, including title II web and mobile app accessibility. Though the Department will continue to investigate complaints and enforce the ADA, given constraints on its resources and the large number of entities within its purview to investigate, the Department is unable to guarantee that it will conduct a specific amount of enforcement under subpart H of this part on a particular schedule.

The Department has considered many States’ approaches to assessing compliance with their web accessibility laws and declines to adopt them at the Federal level. States such as California, Illinois, and Massachusetts, which do not specify how compliance will be measured or how entities can demonstrate compliance, are essentially requiring 100 percent compliance with a technical standard. This approach is not feasible for the reasons discussed earlier in this section. In addition, this approach is not feasible because of the large number and wide variety of public entities covered by the ADA, as compared with the relatively limited number of State agencies in a given State. Laws like California’s, which require entities covered by California’s law to certify or post evidence of compliance, would impose administrative burdens on public entities similar to those imposed by the international approaches discussed in the preceding paragraph. Some State agencies, including in California, Minnesota, and Texas, have developed assessment checklists, trainings, testing tools, and other resources. The Department will issue a small entity compliance guide, which should help public entities better understand their obligations. As discussed elsewhere in this appendix, the Department may also provide further guidance about best practices for an entity to meet its obligations under subpart H of this part. However, such resources are not substitutes for clear and achievable regulatory requirements. Some commenters stated that regulations should not be combined with best practices or guidance, and further stated that testing methods are more appropriate for guidance. The Department agrees and believes State and local government entities are best suited to determine how they will comply with the technical standard, depending on their needs and resources. The Department also declines to adopt a model like the one used in Texas, which requires State agencies to, among other steps, conduct tests with one or more accessibility validation tools, establish an accessibility policy that includes criteria for compliance monitoring, and mediation of noncompliant items, and establish goals and progress measurements for accessibility. This approach is one way States and other public entities may choose to ensure that they comply with subpart H of this part. However, as noted in the discussion of the policy-based approach, the Department is unable to calibrate requirements that provide sufficient predictability and certainty for every public entity while maintaining sufficient flexibility. The Department declines to adopt an approach like Texas’s for the same reasons it declined to adopt a policy-based approach.

Commenters suggested a few additional State and international approaches to compliance that were not discussed in the NPRM. Though the Department reviewed and considered each of these approaches, it finds that they are not appropriate to adopt in subpart H of this part. First, Washington’s accessibility policy and associated standard require agencies to develop policies and processes to ensure compliance with the technical standard, including implementing and maintaining accessibility plans. As with Texas’s law and a more general policy-based approach, which are both discussed elsewhere in this appendix, Washington’s approach would not provide sufficient specificity and certainty to ensure conformance to a technical standard in the context of the title II regulatory framework that applies to a wide range of public entities; however, this is one approach to achieving conformance that entities could consider.

Additionally, one commenter suggested that the Department look to the Accessibility for Ontarians with Disabilities Act and consider taking some of the steps to ensure compliance that the commenter states Ontario has taken. Specifically, the commenter suggested requiring training on how to create accessible content and creating an advisory council that makes suggestions on how to increase public education about the law’s requirements. Though the Department will consider providing additional guidance to the public about how to comply with subpart H of this part, it declines to require State and local government entities to provide training to their employees. This would be part of a policy-based compliance approach, which the Department has decided not to adopt for the reasons discussed. However, the Department notes that public entities will likely find that some training is necessary and helpful to achieve compliance. The Department also declines to require State and local government entities to adopt accessibility advisory councils because, like training, this would be part of a policy-based compliance approach. However, public entities remain free to do so if they choose.

Finally, a coalition of State Attorneys General described how their States’ agencies currently determine whether State websites and other technology are accessible, and suggested that the Department incorporate

243 FF FR 51980–51981.
244 36 CFR 1194.1; id. at 1194, appendix A, section E205.4.
245 See 14 CFR 382.43.
246 FF FR 51980.
247 See § 35.172(b) and (c) (describing the process for compliance reviews). As noted, however, the Department is unable to guarantee that it will conduct a specific amount of enforcement under subpart H of this part on a particular schedule.
248 See Public Law 104–121, sec. 212, 110 Stat. at 858.
similar practices into its compliance framework. Some of these States have designated agencies that conduct automated testing, manual testing, or both, while others offer online tools or require agencies to conduct their own manual testing. Though some of these States have not already discussed, including Hawaii, New Jersey, and New York, the approaches commented on from these States discussed are similar to other approaches the Department has considered. These States have essentially adopted a policy-based approach. As noted elsewhere in this appendix, the Department believes that it is more appropriate for States and other regulated entities to develop their own policies to ensure compliance than it would be for the Department to establish one set of compliance policies for all public entities. Several State agencies conduct regular audits, but as noted previously in this appendix, the Department lacks the capacity to guarantee it will conduct a specific number of enforcement actions under subpart H of this part on a particular schedule. And as an agency whose primary responsibility is law enforcement, the Department is not currently equipped to develop and distribute accessibility testing software like some States have done. State and local government entities may wish to consider adopting practices similar to the ones commenters described even though subpart H does not require them to do so.

Other Approaches Suggested by Commenters

Commenters also suggested many other approaches the Department should take to assess and ensure compliance with subpart H of this part. The Department has considered all of the commenters’ suggestions and declines to adopt them at this time. First, commenters suggested that public entities should be permitted to provide what they called an “accommodation” or an “equally effective alternative method of access” when web content or mobile apps are not accessible. Under the approach these commenters envisioned, people with disabilities would need to pursue an interactive process where they discussed their access needs with the public entity and the public entity would determine how those needs would be met. The Department believes that adopting this approach would undermine a core premise of subpart H of this part, which is that web content and mobile apps will generally be accessible by default. That is, people with disabilities typically will not need to make a request to gain access to services, programs, or activities offered online, nor will they typically need to receive information in a different format. If the Department were to adopt the commenters’ suggestion, the Department believes that subpart H would not address the gaps in accessibility highlighted in the need of the rulemaking discussed in section III.D.4 of the preamble to the final rule, as the current state of the law already requires public entities to provide reasonable modifications and effective communication to people with disabilities.253 Under title II, individuals with disabilities cannot be, by reason of such disability, excluded from participation in or denied the benefits of the services, programs, or activities offered by State and local government entities, including those offered via the web and mobile apps.254 One of the goals of the ADA also includes being an aggregation process, which is sometimes referred to as “notice and cure,” by which a person with a disability who cannot access web content or a mobile app would need to notify the public entity that their web content or mobile app was not accessible and give the public entity a certain period of time to remediate the inaccessibility before the entity could be considered out of compliance with subpart H of this part. The Department is not adopting this framework for reasons similar to those discussed in relation to the “equally effective alternative” approach rejected in the previous paragraph. With subpart H, the Department is ensuring that people with disabilities generally will not have to request access to public entities’ web content and mobile apps, nor will they typically need to wait to obtain that access. Given the Department’s longstanding position on the accessibility of online content, discussed in section III.B and C of the preamble to the final rule, public entities should already be on notice of their obligations. If they are not, the final rule unquestionably puts them on notice.

Third, commenters suggested a flexible approach to compliance that would only require substantial compliance, good faith effort, reasonable efforts, or some similar concept that would allow the meaning of compliance to vary too widely depending on the circumstances, and without a clear connection to whether those efforts result in actual improvements to accessibility for people with disabilities. The Department declines to adopt this approach because it does not believe such an approach would provide sufficient certainty or predictability to State and local government entities or individuals with disabilities. Such an approach would undermine the benefits of adopting a technical standard.

The Department has already built a series of mechanisms into subpart H of this part that are designed to make it feasible for public entities to comply, including the delayed compliance dates in § 35.200(b), the exception in § 35.201, the conforming alternate version provision in § 35.202, the fundamental alteration or undue burdens limitations in § 35.204, and the compliance approach discussed here. In doing so, the Department has allowed for several approaches to a single standard, but only under clearly defined and uniform criteria, well-established principles in the ADA or WCAG, or circumstances that would not affect substantially equivalent access. Many of the approaches that commenters proposed are not similarly cabins. Those approaches would often allow public entities’ mere attempts to achieve compliance to substitute for access. The Department declines to adopt more flexibility than it already has because it finds that doing so would come at too great a cost to accessibility and to the clarity of the obligations in subpart H.

Fourth, several commenters proposed a multi-factor or tiered approach to compliance. For example, one commenter suggested a three-tiered system where after one failed accessibility test the public entity would investigate the problem, after multiple instances of noncomformance they would enter into a voluntary compliance agreement with the Department, and if there were widespread inaccessibility, the Department would issue a finding of noncompliance and impose a deadline for remediation. Similarly, another commenter proposed that enforcement occur only when two of three criteria are met: errors are inherent to the content itself; entity is not compliant; or widely prevalent, and the entity shows no evidence of measurable institutional development regarding accessibility policy or practice within a designated time-frame. The Department believes that these and other similar multi-factor approaches to compliance would be too complex for public entities to understand and for the Department to administer. It would also be extremely challenging for the Department to define the parameters for such an approach with an appropriate level of precision and a sufficiently well-reasoned justification.

Finally, many commenters proposed approaches to compliance that would expand the Department’s role. Commenters suggested that the Department grant exceptions to the requirements in subpart H of this part on a case-by-case basis; specify escalating penalties; conduct accessibility audits, testing, or monitoring; provide grant funding; develop accessibility advisory councils; provide accessibility testing tools; specify acceptable accessibility testing software, resources, or methodologies; provide a list of accessibility contractors; provide guidance, technical assistance, or training.

With the exception of guidance and continuing to conduct accessibility testing as part of compliance reviews or other enforcement activities, the Department is not currently in a position to take any of the actions commenters requested. As described in this section, the Department has limited enforcement resources. It is not able to review requests for exceptions on a case-by-case basis, nor is it able to conduct accessibility testing or monitoring outside of compliance reviews, settlement agreements, or consent decrees. Civil penalties for noncompliance with the ADA are set by statute and are not permitted under title II.256 Though the Department sometimes seeks monetary relief for individuals affected under title II in its enforcement actions, the appropriate amount of relief is determined on a case-by-case basis and would be

253 See 35 U.S.C. 12133(b)(7) and 35.160.
254 See 32 U.S.C. 12102(2)(A) and (5).
256 See 32 U.S.C. 12188(b)(2)(C) (allowing civil penalties under title III); see also 28 CFR 36.504(a)(3) (updating the civil penalty amounts).
challenging to establish in a generally applicable rule. The Department does not currently operate a grant program to assist public entities in complying with the ADA, and, based on the availability and allocation of the Department’s current resources, it does not believe that administering advisory committees would be the best use of its resources. The Department also lacks the resources and technical expertise to develop and distribute accessibility testing software. The Department will issue a small entity compliance guide and will continue to consider what additional guidance or training it can provide that will assist public entities in complying with their obligations. However, the Department believes that so long as public entities satisfy the requirements of subpart H of this part, it is appropriate to allow public entities flexibility to select accessibility tools and contractors that meet their individualized needs. Any specific list of tools or contractors that the Department could provide is unlikely to be helpful given the rapid pace at which software and contractor availability changes. Public entities may find it useful to consult other publicly available resources that can assist in selecting accessibility evaluation tools and experts.258 Resources for training are also already available.259 State and local government entities do not need to wait for the Department’s guidance before consulting with technical experts and using resources that already exist.

Public Comments on Other Issues in Response to the NPRM

The Department received comments on a variety of other issues in response to the NPRM. The Department responds to the remaining issues not already addressed in this section-by-section analysis.

Scope

The Department received some comments that suggested that the Department should take actions outside the scope of the rulemaking to improve accessibility for people with disabilities. For example, the Department received comments suggesting that the rulemaking should: apply to all companies or entities covered under title II of the ADA; prohibit public entities from making information or communication available only via internet means; revise other portions of the title II regulation like subpart B of this part (general requirements); require accessibility of all documents behind of the scope of subpart H of this part, which focuses on web and mobile app accessibility under title II. Accordingly, these issues are not addressed in detail in subpart H. The Department also received comments recommending that this part cover a broader range of technology in addition to web content and mobile apps, including technologies that may be developed in the future. The Department declines to broaden this part in this way. If, for example, the Department were to broaden the scope of the rulemaking to cover an open-ended range of technology, it would undermine one of the major goals of the rulemaking, which is to adopt a technical standard State and local government entities must adhere to and clearly specify which content must comply with that standard. In addition, the Department does not currently have sufficient information about how technology will develop in the future, and how WCAG 2.1 Level AA will (or will not) apply to that technology. The Department believes that it was appropriate to prioritize regulating in that area. However, State and local government entities have existing obligations under title II of the ADA with respect to services, programs, and activities offered through other types of technology.260

Another commenter suggested that the rulemaking should be expanded to include preexisting technology. The commenter also suggested clarifying that public entities are required to ensure web content and mobile apps are accessible, usable, and interoperable with assistive technology. The Department understands this commenter to be requesting that the Department establish additional technical standards in this part beyond WCAG 2.1 Level AA, such as technical standards related to software. As discussed in this section and the section-by-section analysis of § 35.104, subpart H of this part focuses on web content and mobile apps. The Department also clarified in the section-by-section analysis of § 35.203 why it believes WCAG 2.1 Level AA is the appropriate technical standard for subpart H.

Coordination With Other Federal and State Entities

One commenter asked if the Department could coordinate with State governments and other Federal agencies that are working to address web and mobile app accessibility to ensure there is consistency with other government accessibility requirements. Subpart H of this part is being promulgated under part A of title II of the ADA. The Department’s analysis and equities may differ from State governments and other Federal entities that may also interpret and enforce other laws addressing the rights of people with disabilities. However, through the NPRM process, the Department received feedback from the public, including public entities, through written comments and listening sessions. In addition, the final rule and associated NPRM were circulated to other Federal Government agencies as part of the Executive Order 12866 review process. In addition, under Executive Order 12250, the Department also coordinates with other Federal agencies to ensure consistent and effective implementation of section 504 of the Rehabilitation Act, which prohibits discrimination on the basis of disability, and to ensure that such implementation is consistent with title II of the ADA across the Federal Government.261 The Department will continue to work with other Federal agencies to ensure consistency with its interpretations in the final rule, in accordance with Executive Order 12250.

Impact on State Law

Some commenters discussed how this part might impact State law, including one comment that asked how a public entity should proceed if it is subject to a State law that provides greater protections than this part. This part will preempt State laws affecting entities subject to title II of the ADA only to the extent that those laws provide less protection for the rights of individuals with disabilities.262 This part does not establish or limit the definition and procedures of any State laws that provide greater or equal protection for the rights of individuals with disabilities. Moreover, the Department’s provision on equivalent facilitation at § 35.203 provides that nothing prevents a public entity from using designs, methods, or techniques as alternatives to those prescribed in subpart H of this part, provided that such alternatives result in substantially equivalent or greater accessibility and usability. Accordingly, for example, if a State law requires public entities in that State to conform to WCAG 2.2, nothing in subpart H would prevent a public entity from conforming with that standard.

Preexisting Technology

One public entity said that the Department should permit public entities to continue to use certain older technologies, because some public entities have systems that were developed several years ago with technologies that may not be able to comply with this part. The commenter also added that if a public entity is aware of the technical difficulties or need for remediation in relation to recent maintenance, updates, or repairs, more leniency should be given to the

257 See Public Law 104–121, sec. 212, 110 Stat. at 858.

260 See §§ 35.130(b)(1)(i) and (b)(7) and 35.160.

262 See 42 U.S.C. 12201.
public entity with respect to the compliance time frame.

The Department believes it has balanced the need to establish a workable standard for public entities with the need to ensure accessibility for people with disabilities in many ways, such as by establishing delayed compliance dates to give public entities time to ensure their technologies can comply with subpart H of this part. In addition, subpart H provides some exceptions addressing older content, such as the exceptions for archived web content, preexisting conventional electronic documents, and preexisting social media posts. The Department believes that these exceptions will assist covered entities in using their resources more efficiently. Also, the Department notes that public entities will be able to rely on the fundamental alteration or undue burdens and limitations in subpart H where they can satisfy the requirements of those provisions. Finally, the Department discussed isolated or temporary interruptions in § 35.205 of the section-by-section analysis, where it explained its decision not to separately excuse an entity’s isolated or temporary noncompliance with § 35.200 due to maintenance or repairs.

Overlays

Several comments expressed concerns about public entities using accessibility overlays and automated checkers. Subpart H of this part sets forth a technical standard for public entities’ web content and mobile apps. Subpart H does not address the internal policies or procedures that public entities might implement to conform to the technical standard under subpart H.

\[\text{ADA Coordinator}\]

At least one commenter suggested that the Department should require public entities to hire an ADA Coordinator devoted specifically to web accessibility, similar to the requirement in the existing title II regulation at § 35.107(a). The Department believes it is important for public entities to have flexibility in deciding how to internally oversee their compliance with subpart H of this part. However, nothing in subpart H would prohibit a public entity from appointing an ADA coordinator for web content and mobile apps if the public entity believes taking such an action would help it comply with subpart H.

Dated: April 8, 2024.

Merrick B. Garland,
Attorney General.
