**SUPPLEMENTARY INFORMATION:**

**I. Background**

The Department of Labor, as part of the continuing effort to reduce paperwork and respondent (i.e., employer) burden, conducts a preclearance consultation program to provide the public with an opportunity to comment on proposed and continuing information collection requirements in accordance with the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, the collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651 *et seq.*) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires

that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of effort in obtaining information (29 U.S.C. 657).

The following provisions are a description of the collection of information requirements contained in the Steel Erection Standard. The purpose of these requirements is to reduce employees' risk of death or serious injury while working under hazardous conditions.

**Section 1926.752(a)(1)**

Based on the results of a specified method for testing field-cured samples, the controlling contractor must provide the steel erector with written notification that the concrete in the footings, piers, and walls, or the mortar in the masonry piers and walls, is at 75 percent of the minimum compressive-design strength or has sufficient strength to support loads imposed during steel erection. **Note:** This is not and will not be enforced for mortar in piers and walls until such time as OSHA is able to define an appropriate substitute or until an appropriate American Society for Testing and Materials (ASTM) test method is developed.

**Sections 1926.752(a)(2) and 1926.755(b)(1)**

Under § 1926.752(a)(2), the controlling contractor, before it authorizes commencement of steel erection, must notify the steel erector in writing that any repairs, replacements, and modifications to anchor bolts (rods) have been made in accordance with § 1926.755(b)(1) which requires the controlling contractor to obtain approval from the project structural engineer of record for the repairs, replacements, and modifications.

**Section 1926.753(c)(5)**

Employers must not deactivate safety latches on hooks or make them inoperable except for the situation when: a qualified rigger determines that it is safer to hoist and place purlins and single joists by doing so; or except when equivalent protection is provided in the site-specific erection plan.

**Section 1926.753(e)(2)**

Employers must have maximum capacity of the total multiple-lift rigging assembly, as well as each of the individual attachment points, certified by the manufacturer, or a qualified rigger.
