FEDERAL REGISTER

Vol. 89 Wednesday,
No. 147 July 31, 2024

Book 1 of 2 Books
Pages 61341–61594

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097–6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Publishing Office, is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see *www.federalregister.gov.*

The seal of the National Archives and Records Administration authenticates the Federal Register as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at *www.govinfo.gov*, a service of the U.S. Government Publishing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 1, 1 (March 14, 1936) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Publishing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, *gpocusthelp.com.*

The annual subscription price for the **Federal Register** paper edition is $860 plus postage, or $929, for a combined **Federal Register, Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is $330, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register,** including postage, is based on the number of pages: $11 for an issue containing less than 200 pages; $22 for an issue containing 200 to 400 pages; and $33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for $3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Publishing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see *bookstore.gpo.gov.*

There are no restrictions on the republication of material appearing in the **Federal Register.**

How To Cite This Publication: Use the volume number and the page number. Example: 89 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Publishing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Title 3—

The President

Memorandum of July 26, 2024

Deferred Enforced Departure for Certain Lebanese Nationals

Memorandum for the Secretary of State [and] the Secretary of Homeland Security

Humanitarian conditions in southern Lebanon have significantly deteriorated due to tensions between Hezbollah and Israel. While I remain focused on de-escalating the situation and improving humanitarian conditions, many civilians remain in danger; therefore, I am directing the deferral of removal of certain Lebanese nationals who are present in the United States.

Pursuant to my constitutional authority to conduct the foreign relations of the United States, I have determined that it is in the foreign policy interest of the United States to defer for 18 months the removal of any Lebanese national subject to the conditions and exceptions provided below.

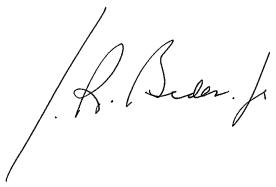
Accordingly, I hereby direct the Secretary of Homeland Security to take appropriate measures to defer for 18 months the removal of any Lebanese national who is present in the United States on the date of this memorandum, except for those:

(1) who have voluntarily returned to Lebanon after the date of this memorandum;

(2) who have not continuously resided in the United States since the date of this memorandum;

(3) who are inadmissible under section 212(a)(3) of the Immigration and Nationality Act (INA) (8 U.S.C. 1182(a)(3)) or deportable under section 237(a)(4) of the INA (8 U.S.C. 1227(a)(4));

(4) who have been convicted of any felony or two or more misdemeanors committed in the United States, or who meet any of the criteria set forth in section 208(b)(2)(A) of the INA (8 U.S.C. 1158(b)(2)(A));



(5) who are subject to extradition;

(6) whose presence in the United States the Secretary of Homeland Security has determined is not in the interest of the United States or presents a danger to public safety; or

(7) whose presence in the United States the Secretary of State has reasonable grounds to believe would have potentially serious adverse foreign policy consequences for the United States.

I further direct the Secretary of Homeland Security to take appropriate measures to authorize employment for noncitizens whose removal has been deferred, as provided by this memorandum, for the duration of such deferral, and to consider suspending regulatory requirements with respect to F–1 nonimmigrant students who are Lebanese nationals as the Secretary of Homeland Security determines to be appropriate.

The Secretary of Homeland Security is authorized and directed to publish this memorandum in the *Federal Register*.

26 CFR Part 1

[TD 10005]

RIN 1545–BQ67

Plan-Specific Substitute Mortality Tables for Determining Present Value

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Final regulations.

SUMMARY: This document sets forth final regulations that update the requirements that a plan sponsor of a single-employer defined benefit plan must meet to obtain IRS approval to use mortality tables specific to the plan in calculating present value for minimum funding purposes (as a substitute for the generally applicable mortality tables). These regulations affect participants in, and beneficiaries of, certain retirement plans and employers maintaining those plans.

DATES:

Effective date: These regulations are effective July 31, 2024.

Applicability date: These regulations apply for plan years beginning on or after January 1, 2025.

FOR FURTHER INFORMATION CONTACT: Arslan Malik or Linda S.F. Marshall, Office of Associate Chief Counsel (Employee Benefits, Exempt Organizations, and Employment Taxes) at (202) 317–6700 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background

Section 412 of the Internal Revenue Code (Code) prescribes minimum funding requirements for defined benefit pension plans. Section 430 specifies the minimum funding requirements that apply generally to defined benefit plans that are single-employer plans (that is, not multiemployer plans).[1] For a plan subject to section 430, section 430(a) defines the minimum required contribution for a plan year by reference to the plan's funding target for the plan year. Under section 430(d)(1), a plan's funding target for a plan year generally is the present value of all benefits accrued or earned under the plan as of the first day of that plan year.

Section 430(h)(3) provides rules regarding the mortality tables to be used under section 430. Under section 430(h)(3)(A), except as provided in section 430(h)(3)(C) or (D), the Secretary is to prescribe by regulation mortality tables to be used in determining any present value or making any computation under section 430. Section 430(h)(3)(C) prescribes rules for a plan sponsor's use of substitute mortality tables reflecting the specific mortality experience of a plan's population instead of using the generally applicable mortality tables. Under section 430(h)(3)(C), the plan sponsor may request the Secretary's approval to use plan-specific substitute mortality tables that meet requirements specified in section 430(h)(3)(C)(iii). If the Secretary determines that the proposed tables meet the statutory standards and approves the request, the substitute mortality tables are used to determine present values and make computations under section 430 during the period of consecutive plan years (not to exceed 10) specified in the request.

Under section 430(h)(3)(C)(iii), a substitute mortality table may be used for a plan only if: (1) the plan has a sufficient number of plan participants and has been maintained for a sufficient period of time to have credible mortality information necessary to create a substitute mortality table; and (2) the table reflects the actual mortality experience of the plan's participants and projected trends in general mortality experience. Except as provided by the Secretary, a plan sponsor may not use substitute mortality tables for any plan unless substitute mortality tables are established and used for each plan maintained by the plan sponsor or a member of its controlled group.

Final regulations (TD 9826) under section 430(h)(3) were published in the **Federal Register** on October 5, 2017 (82 FR 46388). The final regulations issued in 2017 include rules regarding generally applicable mortality tables under section 430(h)(3)(A), which are set forth in § 1.430(h)(3)–1, as well as rules regarding substitute mortality tables under section 430(h)(3)(C), which are set forth in § 1.430(h)(3)–2. Section 1.430(h)(3)–2(d)(2) provides that substitute mortality tables must be based on the plan's mortality experience during an experience study period that consists of 2, 3, 4, or 5 consecutive 12-month periods. In conjunction with the 2017 issuance of § 1.430(h)(3)–2, the Department of the Treasury (Treasury Department) and the IRS issued Rev. Proc. 2017–55, 2017–43 IRB 373, which sets forth the procedure by which a plan sponsor of a defined benefit plan may request and obtain approval for the use of plan-specific substitute mortality tables.

Beginning in 2020 and extending into the first part of 2023, for many defined benefit pension plans, the mortality experience of the plan participants was significantly higher than expected due to the COVID–19 pandemic. The Treasury Department and the IRS are concerned that, if a plan sponsor applied for approval of plan-specific substitute mortality tables using an experience study period that reflects the actual mortality experience for the plan's population during those years, then unless there is a change in the rules that are used for generating those tables, the resulting plan-specific substitute mortality tables would overstate the expected future mortality for the plan's population. This is because § 1.430(h)(3)–2(d)(4)(i) provides that substitute mortality tables are constructed using a mortality ratio calculated for the plan's population, which is determined by dividing the amounts-weighted number of actual deaths for plan participants during the experience study period by the amounts-weighted number of expected

[1] Section 302 of the Employee Retirement Income Security Act of 1974, Public Law 93–406, 88 Stat. 829 (1974), as amended (ERISA), sets forth funding rules that are parallel to those in section 412 of the Code, and section 303 of ERISA sets forth additional funding rules for defined benefit plans (other than multiemployer plans) that are parallel to those in section 430 of the Code. Pursuant to section 101 of Reorganization Plan No. 4 of 1978, 5 U.S.C. App., as amended, the Secretary of the Treasury has interpretive jurisdiction over the subject matter addressed in these regulations for purposes of ERISA, as well as the Code. Thus, these regulations issued under section 430 of the Code also apply for purposes of section 303 of ERISA.

deaths for those participants under the generally applicable mortality tables. In the absence of any changes to the rules and procedures for generating plan-specific substitute mortality tables, a mortality ratio developed using an experience study period that includes the period in which the COVID–19 pandemic occurred (COVID–19 pandemic period) will likely be unusually high, as the numerator of the mortality ratio will reflect the actual number of deaths for the plan population during this period, while the denominator of that ratio will be based on the expected number of deaths from the generally applicable mortality tables (which reflect only a small fraction of the significant short-term increase in mortality rates that occurred during the COVID–19 pandemic period). The Treasury Department and the IRS are concerned that if a substitute mortality table constructed using that mortality ratio is used for a plan's actuarial valuation, then the plan's liabilities will be understated.

To address this concern, proposed regulations that provide rules regarding the use of mortality experience data for the COVID–19 pandemic period in the construction of substitute mortality tables were published in the **Federal Register** on October 20, 2023 (88 FR 72409) (the proposed regulations). On the same date that the proposed regulations were issued, the Treasury Department and the IRS issued final regulations amending § 1.430(h)(3)–1 to update the generally applicable mortality tables under section 430(h)(3)(A) (88 FR 72357) (2023 final mortality regulations).

Under § 1.430(h)(3)–2(c)(6)(ii)(E), approval to use a previously approved substitute mortality table terminates in conjunction with the replacement of the generally applicable mortality tables under section 430(h)(3)(A) and § 1.430(h)(3)–1 as of the date specified in guidance published in the Internal Revenue Bulletin. The preamble to the 2023 final mortality regulations indicated that the Treasury Department and the IRS will not require that the use of any previously approved plan-specific substitute mortality tables be terminated in conjunction with the replacement of the generally applicable mortality tables until amendments to the substitute mortality regulations are finalized and an updated revenue procedure that reflects those final regulations is issued.

Four comments on the proposed regulations were received. No commenters requested to speak at a public hearing. The Treasury Department and IRS considered the comments that were received and are finalizing the proposed regulations with certain revisions, as explained in the following summary of comments and explanation of revisions. In addition, the Treasury Department and IRS are issuing Rev. Proc. 2024–32, 2024–34 IRB ____, which updates the procedures set forth in Rev. Proc. 2017–55 to reflect the amendments to § 1.430(h)(3)–2 made by this Treasury decision.

Summary of Comments and Explanation of Revisions

These regulations provide rules regarding the use of mortality experience data for the COVID–19 pandemic period that supplement the methodology for developing substitute mortality tables provided in § 1.430(h)(3)–2. These rules have the same structure as the rules that were included in the proposed regulations (under which the expected probability of death must be adjusted to reflect the generally higher mortality that occurred during the COVID–19 pandemic period) but eliminate the adjustment for 2023 and provide for a different adjustment for 2022.

To develop a mortality ratio that is more accurately predictive of future mortality experience for a plan population, these regulations provide that the expected deaths for the plan population used in determining the denominator in the mortality ratio are calculated by adjusting the mortality rates in the generally applicable mortality tables. Specifically, the regulations provide that, for each 12-month period that is included in the experience study period and that begins after 2019 and before 2023, the expected mortality rate for an individual is determined by multiplying the expected mortality rate for that individual from the standard mortality tables by an adjustment factor.

The proposed regulations provided for an adjustment factor for each 12-month period that is included in the experience study period and that began after 2019 and before 2024. The proposed adjustment factor for each of those years approximated the ratio (as reported by the National Center for Health Statistics, which is part of the Centers for Disease Control and Prevention) of (1) the actual number of deaths for the general population for the year to (2) the expected number of deaths for the general population for that year.[2] Under the proposed regulations, the adjustment factor for a 12-month period beginning in 2020 or 2021 was 1.15, for a 12-month period beginning in 2022 was 1.10, and for a 12-month period beginning in 2023 was 1.05.

The Treasury Department and IRS received four comments regarding the adjustment factors set forth in the proposed regulations. The four commenters stated that a single adjustment factor for each year inadequately captured the age, gender, and regional variances in excess mortality during the COVID–19 pandemic. In addition, three commenters suggested that the adjustment factor for 2023 be eliminated (because preliminary data from 2023 showed a decline in excess mortality such that no adjustment may be needed for 2023), and that the adjustment factor for 2022 be reduced. After considering these comments and the most recent mortality data available, the Treasury Department and IRS are eliminating the adjustment for 2023 and reducing the adjustment for 2022. However, the Treasury Department and IRS concluded that providing adjustment factors based on age would be inconsistent with the overall model for developing substitute mortality tables, and that providing separate adjustment factors based on gender or geography would add a degree of complexity that would outweigh any potential increase in precision that these adjustment factors may provide.

The four commenters also suggested that, as an alternative to applying the adjustment factors, plan sponsors be permitted to construct substitute mortality tables without taking into account any mortality experience from the COVID–19 pandemic period. The Treasury Department and IRS have considered this approach but rejected it because providing for such an approach would mean that the mortality experience used to construct the substitute mortality table could be so out of date that it would be less reliable in predicting future mortality for the plan population. For example, if a plan sponsor was applying for approval of a substitute mortality table in 2024 using calendar year mortality experience without taking into account mortality experience for 2020, 2021, and 2022, the most recent mortality experience would be from 2019, which is more than 4 years prior to the application for approval.

Under a transition rule in the proposed regulations, substitute mortality tables that were previously approved for use for a plan year beginning in 2025 would be treated as satisfying the rules for developing

[2] *See* Excess Deaths Associated with Covid–19 at *https://www.cdc.gov/nchs/nvss/vsrr/covid19/excess_deaths.htm.*

substitute mortality tables that apply for that plan year. This transition rule, which is included in these regulations, addresses plans with previously approved substitute mortality tables that were based on a mortality experience study that included data from the COVID–19 pandemic period (and therefore do not satisfy the requirements specified in these regulations).

One commenter requested clarification as to the extent to which other previously approved substitute mortality tables may continue to be used for the remainder of their approval period even if that approval period extends beyond 2025. The Treasury Department and IRS considered this comment and decided to continue to allow the use of previously approved substitute mortality tables that were developed based on an experience study that did not include data from the COVID–19 pandemic period for the original duration of the approval, provided that there has not been a significant change in plan coverage, as described in the first sentence of § 1.430(h)(3)–2(c)(6)(iii)(A).[3] Thus, if the experience study for a substitute mortality table that has been approved for use for a plan year beginning in 2025 includes mortality data from 2020, 2021, or 2022 (or the number of individuals covered by the substitute mortality table is less than 80 percent or more than 120 percent of the average number of individuals in that population over the years covered by the experience study), then the substitute mortality table may be used for a plan year beginning in 2025 (but may not be used for later years).

These regulations also include a transition rule that applies to requests for approval to use substitute mortality tables for a plan year beginning in 2025. Under that rule, a request for approval to use substitute mortality tables for that plan year will be considered timely if it is submitted on or before October 31, 2024, provided that the plan sponsor agrees to a 90-day extension under § 1.430(h)(3)–2(b)(2)(iv) of the 180-day review period under § 1.430(h)(3)–2(b)(2)(iii).

Applicability Date

These regulations apply for plan years beginning on or after January 1, 2025.

[3] The termination of the use of previously approved substitute mortality tables is described in section 12 of Rev. Proc. 2024–32. Under that revenue procedure, if there has been a significant change in plan coverage, a previously approved substitute mortality table cannot be used for a plan year that begins on or after January 1, 2026, even if the plan actuary certifies that the table continues to be accurately predictive of future mortality of the plan population.

Statement of Availability of IRS Documents

IRS Revenue Rulings, Revenue Procedures, and Notices cited in this document are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at *www.irs.gov.*

Special Analyses

I. Regulatory Planning and Review

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Regulatory Flexibility Act

Pursuant to the Regulatory Flexibility Act (5 U.S.C. chapter 6), it is hereby certified that this rule will not have a significant economic impact on a substantial number of small entities. Small employers generally cannot use plan-specific substitute mortality tables because their defined benefit pension plans do not have credible mortality experience (which is defined as a minimum number of deaths during the experience study period) as is required to use substitute mortality tables. Therefore, a regulatory flexibility analysis under the Regulatory Flexibility Act is not required.

Pursuant to section 7805(f), the notice of proposed rulemaking preceding these regulations was submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small business, and no comments were received.

III. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of $100 million in 1995 dollars, updated annually for inflation. These regulations do not include any rule that include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

IV. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. These regulations do not include rules that have federalism implications, impose substantial direct compliance costs on State and local governments, or preempt State law within the meaning of the Executive order.

V. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), the Office of Information and Regulatory Affairs designated this rule as not a major rule, as defined by 5 U.S.C. 804(2).

Drafting Information

The principal authors of these regulations are Arslan Malik and Linda S.F. Marshall of the Office of Associate Chief Counsel (Employee Benefits, Exempt Organizations, and Employment Taxes). However, other personnel from Treasury and the IRS participated in the development of these regulations.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Amendments to the Regulations

Accordingly, the Treasury Department and the IRS amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read, in part, as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.430(h)(3)–2 is amended by:

■ a. In paragraph (a), removing the language ''§ 601.601(d)(2)(ii)(b)'' and adding the language ''§ 601.601(d)(2)'' in its place;

■ b. In paragraph (d)(2)(ii)(B), removing the language ''January 1, 2019 year is'' and adding the language ''January 1, 2019 is'' in its place;

■ c. Revising paragraphs (d)(4)(iii) and (g).

The revisions read as follows:

§ 1.430(h)(3)–2 Plan-specific substitute mortality tables used to determine present value.

* * * * *

(d) * * *

(4) * * *

(iii) *Standard mortality table*—(A) *Projection of base table.* Except as otherwise provided in this paragraph (d)(4)(iii), the standard mortality table for a year is the mortality table determined by applying cumulative mortality improvement factors determined under § 1.430(h)(3)–1(b)(2)(ii) to the base mortality table under § 1.430(h)(3)–1(d) for the period beginning with the base year for that mortality table and ending in the base year for the base substitute mortality table determined under paragraph (c)(3)(ii) of this section. For purposes of the preceding sentence, the cumulative mortality improvement factors are determined using the mortality improvement rates described in § 1.430(h)(3)–1(b)(1)(iii) that apply for the calendar year during which the plan sponsor submits the request for approval to use substitute mortality tables.

(B) *Adjustments to standard mortality table for 2020, 2021, and 2022.* If a 12-month period in the experience study period begins after December 31, 2019, and before January 1, 2023, the probability of death for an individual under paragraph (d)(4)(ii)(A)(*2*)(*i*) of this section is determined as the mortality rate for the individual's age (at the beginning of the year) and gender from the standard mortality table determined under paragraph (d)(4)(iii)(A) of this section multiplied by the adjustment factor in Table 1 for the calendar year that includes the first day of the 12-month period. For example, for an experience study period that begins April 1, 2019, and ends March 31, 2023, the probability of death for the year beginning April 1, 2022, for a male annuitant who is age 65 as of that date is the probability of death from the base mortality table (0.01087), multiplied by the cumulative mortality improvement factor for the period from 2012 to 2021 (1.02292) and by the adjustment factor for the 2022 calendar year of 1.075, resulting in a probability of death of 0.01195.

TABLE 1 TO PARAGRAPH (d)(4)(iii)(B)

Calendar year	*Adjustment factor*
2020	1.15
2021	1.15
2022	1.075

(C) *Selection of base table.* If the population consists solely of annuitants, the annuitant base mortality table set forth in § 1.430(h)(3)–1(d) must be used for purposes of paragraph (d)(4)(iii)(A) of this section. If the population consists solely of nonannuitants, the nonannuitant base mortality table set forth in § 1.430(h)(3)–1(d) must be used for that purpose. If the population includes both annuitants and nonannuitants, a combination of the annuitant and nonannuitant base tables set forth in § 1.430(h)(3)–1(d) must be used for that purpose. The combined table is constructed using the weighting factors for small plans that are set forth in § 1.430(h)(3)–1(d). The weighting factors are applied to develop the combined table using the following equation:

Combined mortality rate = [nonannuitant rate * (1 − weighting factor)] + [annuitant rate * weighting factor].

* * * * *

(g) *Applicability date*—(1) *General rule.* This section applies for plan years beginning on or after January 1, 2025. Except as provided in paragraph (g)(2) or (3) of this section, the substitute mortality table used for a plan for such a plan year must comply with the rules of paragraphs (a) through (f) of this section.

(2) *Transition rule for previously approved substitute mortality tables.* If a plan sponsor has received approval from the Commissioner to use substitute mortality tables for a plan year beginning in 2025, then the plan's base substitute mortality tables that were approved are treated as satisfying the requirements of paragraph (d) or (e) of this section, as applicable, for that plan year.

(3) *Transition rule for requests for approval to use substitute mortality tables.* A written request described in paragraph (b)(1)(i) of this section to use substitute mortality tables for a plan year that begins during 2025 does not fail to satisfy the timing requirement of paragraph (b)(1)(ii) of this section if it is submitted no later than October 31, 2024, provided that the plan sponsor agrees to a 90-day extension of the 180-day review period in accordance with paragraph (b)(2)(iv) of this section.

Douglas W. O'Donnell,

Deputy Commissioner.

Approved: July 8, 2024

Aviva R. Aron-Dine,

Acting Assistant Secretary of the Treasury (Tax Policy).

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0023]

RIN 1625–AA11

Safety Zone; Sea Otter Point, Port of Valdez, AK

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is amending the regulation titled Safety Zone; City of Valdez July 4th Fireworks, Port Valdez; Valdez, AK. The City of Valdez has changed the annual firework displays from July 4th to December 31st each year. It is therefore necessary to amend the CFR to reflect the correct date of the fireworks display.

DATES: rule is effective August 30, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0023 in the search box and click ''Search.'' Next, in the Document Type column, select ''Supporting & Related Material.''

FOR FURTHER INFORMATION CONTACT: If you have questions about this rule, call or email LT Abigail Ferrara, Marine Safety Unit Valdez, US Coast Guard. Telephone 907–835–7209, email *Abigail.C.Ferrara@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
COTP Captain of the Port Prince William Sound
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard began issuing temporary final rules establishing safety zones during the Valdez July 4th fireworks display beginning in 2014. The Coast Guard received no comments or concerns from the public when the temporary safety zones were in place. Due to the repeating nature of the event, on February 28, 2017, the Coast Guard published a notice of proposed rulemaking (NPRM) titled Safety Zone; City of Valdez July 4th Fireworks, Port Valdez; Valdez, AK (82 FR 12076). There we stated why we issued the NPRM and invited comments on our

proposed regulatory action related to this fireworks display. Since then, the City of Valdez has changed the firework display from July 4th to December 31st. The Coast Guard again began issuing temporary final rules annually for the new date. Again, due to the repeating nature of the event, we are issuing this final rule to change the date and time to reflect the correct event details.

On May 21, 2024, the Coast Guard published a notice of proposed rulemaking (NPRM) titled Safety Zone; Sea Otter Point, Port of Valdez, AK (89 FR 44945). There we stated why we issued the NPRM and invited comments on our proposed regulatory action related to this fireworks display. During the comment period that ended June 21, 2024, we received one comment.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034. The Captain of the Port Prince William Sound (COTP) has determined that it is necessary to amend the CFR to reflect the correct date of the fireworks display.

IV. Discussion of Comments, Changes, and the Rule

As noted above, we received one comment on our NPRM published May 21, 2024. The comment supported this change, stating that fireworks do not occur in Valdez on July 4th because the sky does not get dark. The commenter claimed to be the City of Valdez events coordinator who has managed the December 31st fireworks for seven years. There are no changes in the regulatory text of this rule from the proposed rule in the NPRM.

The COTP is amending the current safety zone found in 33 CFR 165.1713 to reflect the correct date of the City of Valdez's annual fireworks display. The date will change from July 4th to December 31st. The regulatory text we are amending appears at the end of this document.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on extremely limited vessel traffic in the winter months, as well as the size, location, time of day, and duration of the safety zone. Furthermore, vessels may request authorization to transit through the safety zone with the permission of the COTP, Prince William Sound, Alaska. The Coast Guard will still issue a Broadcast Notice to Mariners via VHF–FM marine channel 16 about the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section IV.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a

significant effect on the human environment. This rule involves changing the date and shortening the duration of an existing safety zone, which prohibits traffic within 200 yards of a firework display. It is categorically excluded from further review under paragraph L60(a) of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051, 70124; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, Revision No. 01.3.

■ 2. Revise § 165.1713 as follows:

§ 165.1713 Safety Zone; City of Valdez Annual Fireworks Display within the Captain of the Port, Prince William Sound Zone, Port Valdez; Valdez, AK.

(a) *Regulated area.* The following area is a safety zone: All waters of Port Valdez, from surface to bottom, within a 200-yard radius from a position of 61°07′22″ N and 146°21′13″ W. These coordinates are based on the 1984 World Geodetic System (WGS 84). This includes the entrance to the Valdez small boat harbor.

(b) *Definitions.* As used in this section, *designated representative* means any Coast Guard commissioned, warrant or petty officer of the U.S. Coast Guard and a Federal, State, and local officer designated by or assisting the Captain of the Port Prince William Sound (COTP) in the enforcement of the safety zone. The term ''official patrol vessel'' may consist of any Coast Guard, Coast Guard Auxiliary, State, or local law enforcement vessels assigned or approved by the COTP Prince William Sound.

(c) *Regulations.* (1) The general safety zone regulations contained in subpart C of this part, as well as the following regulations, apply.

(2) The safety zone is closed to all vessel traffic, except as may be permitted by the COTP or the designated representative during periods of enforcement.

(3) All persons and vessels shall comply with the instructions of the COTP or the designated representative. Upon being hailed by a designated representative by siren, radio, flashing light, or other means, the operator of the vessel shall proceed as directed.

(4) Anyone desiring to enter or operate within the regulated area may request permission from the COTP via VHF Channel 16 or (907) 835–7205 (Prince William Sound Vessel Traffic Center) to request permission to do so.

(5) The COTP may be aided by other Federal, State, borough, and local law enforcement officials in the enforcement of this section.

(d) *Enforcement period.* This section will be enforced from 7:30 p.m. until 9 p.m. on December 31st of each year, or during the same time frame on specified weather delay dates January 1st through January 5th each year.

Dated: July 24, 2024.

S.K. Rousseau,

Commander, U.S. Coast Guard, Captain of the Port Prince William Sound.

[FR Doc. 2024–16821 Filed 7–30–24; 8:45 am]

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2024–0649]

Regulated Navigation Area; Lake Washington, Seattle, WA

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notification of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a regulated navigation area on Lake Washington, Seattle Washington immediately before and after Seafair events from 8 a.m. through 8 p.m. each day from August 1, 2024, through August 4, 2024. This action is being taken to provide for the safety of life on navigable waterways throughout the duration of this 4-day event. The location of this regulated navigation area on portions of Lake Washington, Seattle, Washington is specified in the regulation. During the enforcement periods all vessels and persons transiting the regulated navigation area must proceed at a speed which creates minimum wake, 7 miles per hour or less, unless a higher minimum speed is necessary to maintain bare steerageway.

DATES: The regulation in 33 CFR 165.1341 will be enforced immediately before and after Seafair events from 8 a.m. through 8 p.m. each day from August 1, 2024, through August 4, 2024.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of enforcement, call or email Lieutenant Commander John Robertson, U.S. Coast Guard, Sector Puget Sound, Waterways Management Division; by telephone 206–217–6051, or email *SectorPugetSoundWWM@uscg.mil.*

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the regulated navigation area in 33 CFR 165.1341 immediately before and after Seafair events from 8 a.m. through 8 p.m. each day from August 1, 2024, through August 4, 2024. This action is being taken to provide for the safety of life on navigable waterways during this 4-day event. Seafair will be having several events sporadically throughout the day. Before and after these events, the Coast Guard will be enforcing the regulated navigation area in order to protect the public from the potential hazards of excessive vessel traffic associated with these events. The regulation, § 165.1341(a), specifies the location of the regulated navigation area encompassing portions of Lake Washington, Seattle, Washington. During the enforcement periods, as reflected in § 165.1341(c), all vessels and persons transiting the regulated navigation area must proceed at a speed which creates minimum wake, 7 miles per hour or less, unless a higher minimum speed is necessary to maintain bare steerageway.

In addition to this notification of enforcement in the **Federal Register**, the Coast Guard plans to provide notification of the enforcement period via marine information broadcast and Local Notice to Mariners.

Dated: July 24, 2024.

Mark A. McDonnell,

Captain, U.S. Coast Guard, Captain of the Port, Sector Puget Sound.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0626]

RIN 1625–AA00

Safety Zone; Sunsation Powerboats Fireworks, Lake St. Clair; New Baltimore, MI

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone for navigable waters on Lake St. Clair, New Baltimore, MI. The safety zone is necessary and intended to protect personnel, vessels, and the marine environment from potential hazards associated with fireworks displays created by Sunsation Powerboats Inc. Entry of vessels or persons into this zone is prohibited unless specifically authorized by the Captain of the Port Detroit, or his designated representative.

DATES: This rule is effective from 9:30 p.m. through 10:30 p.m. on August 1, 2024, and in the case of inclement weather from 10 p.m. through 10:30 p.m. on August 2, 2024.

ADDRESSES: To view documents mentioned in this preamble as being available in the docket, go to *https://www.regulations.gov,* type USCG–2024–0626 in the ''SEARCH'' box and click ''SEARCH.'' Click on Open Docket Folder on the line associated with this rule.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Tracy Girard, Waterways Department, Sector Detroit, Coast Guard; telephone (313) 568–9564, email *Tracy.M.Girard@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
§ Section
U.S.C. United States Code

II. Background Information and Regulatory History

The Coast Guard is issuing this temporary rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are ''impracticable, unnecessary, or contrary to the public interest.'' Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the event sponsor notified the Coast Guard with insufficient time to publish an NPRM and immediate action is necessary to protect personnel, vessels, and the marine environment on Lake St. Clair. It is impracticable and contrary to the public interest to publish a NPRM because we must establish this safety zone by August 1, 2024.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. For the same reasons discussed in the preceding paragraph, delaying the effective date of this rule would be impracticable because immediate action is needed to respond to the potential safety hazards associated with a fireworks display.

III. Legal Authority and Need for Rule

The Coast Guard is issuing this rule under authority in 46 U.S.C. 70034 (previously 33 U.S.C. 1231). The Captain of the Port Detroit (COTP) has determined that potential hazards associated with fireworks displays will be a safety concern for anyone within a 200-yard radius of the launch site. The likely combination of recreational vessels, darkness punctuated by bright flashes of light, and fireworks debris falling into the water presents risks of collisions which could result in serious injuries or fatalities. This rule is necessary to protect personnel, vessels, and the marine environment in the navigable waters within the safety zone during the fireworks display.

IV. Discussion of the Rule

This rule establishes a safety zone from 9:30 p.m. through 10:30 p.m. on August 1, 2024. In the case of inclement weather on August 1, 2024, this safety zone will be enforced from 10 p.m. through 10:30 p.m. on August 2, 2024. The safety zone will encompass all U.S. navigable waters of Lake St. Clair within a 200-yard radius of the fireworks launch site located 42°39′55.69″ N, 082°45′23.58″ W, in New Baltimore, MI. The duration of the zone is intended to protect personnel, vessels, and the marine environment in these navigable waters during the fireworks display. Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Detroit or his designated representative. The Captain of the Port Detroit or his designated representative may be contacted via VHF Channel 16.

V. Regulatory Analyses

We developed this rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes and Executive orders, and we discuss First Amendment rights of protestors.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This rule has not been designated a ''significant regulatory action,'' under Executive Order 12866. Accordingly, this rule has not been reviewed by the Office of Management and Budget (OMB).

This regulatory action determination is based on the size, location, and duration of the safety zone. Vessel traffic will be able to safely transit around this safety zone which would impact a small, designated area of Lake St. Clair one hours during the evening when vessel traffic is normally low. Moreover, the Coast Guard would issue a Broadcast Notice to Mariners via VHF–FM Marine Channel 16 about the zone, and the rule would allow vessels to seek permission to enter the zone.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the safety zone may be small entities, for the reasons stated in section V.A above, this rule will not have a significant economic impact on any vessel owner or operator.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business,

organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

C. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

D. Federalism and Indian Tribal Governments

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

This rule does not have Tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

F. Environment

We have analyzed this rule under Department of Homeland Security Directive 023–01, Rev. 1, associated implementing instructions, and Environmental Planning COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves a safety zone lasting only 1 hour that will prohibit entry within 200-yard radius of where the fireworks display will be conducted. It is categorically excluded from further review under paragraph L[60] of Appendix A, Table 1 of DHS Instruction Manual 023–01–001–01, Rev. 1. A Record of Environmental Consideration supporting this determination is available in the docket. For instructions on locating the docket, see the **ADDRESSES** section of this preamble.

G. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to call or email the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—Regulated Navigation Areas and Limited Access Areas

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 46 U.S.C. 70034, 70051; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Department of Homeland Security Delegation No. 00170.1, *Revision No. 01.3.*

■ 2. Add § 165.T09–0626 to read as follows:

§ 165.T09–0626 Safety Zone; Sunsation Fireworks display, Lake St. Clair; Chesterfield, MI.

(a) *Location.* The following area is a temporary safety zone: all U.S. navigable waters of Lake St. Clair within a within a 200-yard radius of the fireworks launch site located at position 42°39′55.69″ N, 082°45′23.58″ W. All geographic coordinates are North American Datum of 1983 (NAD 83).

(b) *Enforcement period.* This regulation will be enforced from 9:30 p.m. through 10:30 p.m. on August 1, 2024. In the case of inclement weather on August 1, 2024, this safety zone will be enforced from 10 p.m. through 10:30 p.m. on August 2, 2024. The Captain of the Port Detroit, or a designated representative may suspend enforcement of the safety zone at any time.

(c) *Definitions.* As used in this section, *designated representative* means a Coast Guard Patrol Commander, including a Coast Guard coxswain, petty officer, or other officer operating a Coast Guard vessel and a Federal, State, and local officer designated by or assisting the Captain of the Port Detroit (COTP) in the enforcement of the safety zone.

(d) *Regulations.* (1) In accordance with the general regulations in § 165.23, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port Detroit or his designated representative.

(2) Vessel operators desiring to enter or operate within the safety zone shall contact the Captain of the Port Detroit or his designated representative to obtain permission to do so. Vessel operators given permission to enter or operate in the safety zone must comply with all directions given to them by the Captain of the Port Detroit or his designated representative. The COTP Detroit or his designated representative may be contacted via VHF Channel 16.

Dated: July 24, 2024.

Richard P. Armstrong,

Captain, U.S. Coast Guard, Captain of the Port Sector Detroit.

BILLING CODE 9110–04–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 180

[EPA–HQ–OPP–2023–0308; FRL–12049–01–OCSPP]

Pendimethalin; Pesticide Tolerance

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes tolerances for residues of pendimethalin in or on fig and fig, dried. BASF Corporation has requested these tolerances under the Federal Food, Drug, and Cosmetic Act (FFDCA).

DATES: This regulation is effective July 31, 2024. Objections and requests for hearings must be received on or before September 30, 2024 and must be filed in accordance with the instructions provided in 40 CFR part 178 (see also Unit I.C. of the **SUPPLEMENTARY INFORMATION**).

ADDRESSES: The docket for this action, identified by docket identification (ID) number EPA–HQ–OPP–2023–0308, is available at *https://www.regulations.gov* or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW, Washington, DC 20460–0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room, and for the OPP Docket is (202) 566–1744. Please review the visitor instructions and additional information about the docket available at *https://www.epa.gov/dockets.*

FOR FURTHER INFORMATION CONTACT: Charles Smith, Director, Registration Division (7505T), Office of Pesticide Programs, Environmental Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001; main telephone number: (202) 566–1030; email address: *RDFRNotices@epa.gov.*

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

You may be potentially affected by this action if you are an agricultural producer, food manufacturer, or pesticide manufacturer. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Crop production (NAICS code 111).
- Animal production (NAICS code 112).
- Food manufacturing (NAICS code 311).
- Pesticide manufacturing (NAICS code 32532).

B. How can I get electronic access to other related information?

You may access a frequently updated electronic version of EPA's tolerance regulations at 40 CFR part 180 through the Office of the Federal Register's e-CFR site at *https://www.ecfr.gov/current/title-40.*

C. How can I file an objection or hearing request?

Under FFDCA section 408(g), 21 U.S.C. 346a(g), any person may file an objection to any aspect of this regulation and may also request a hearing on those objections. You must file your objection or request a hearing on this regulation in accordance with the instructions provided in 40 CFR part 178. To ensure proper receipt by EPA, you must identify docket ID number EPA–HQ–OPP–2023–0308, in the subject line on the first page of your submission. All objections and requests for a hearing must be in writing and must be received by the Hearing Clerk on or before September 30, 2024. Addresses for mail and hand delivery of objections and hearing requests are provided in 40 CFR 178.25(b).

In addition to filing an objection or hearing request with the Hearing Clerk as described in 40 CFR part 178, please submit a copy of the filing (excluding any Confidential Business Information (CBI)) for inclusion in the public docket. Information not marked confidential pursuant to 40 CFR part 2 may be disclosed publicly by EPA without prior notice. Submit the non-CBI copy of your objection or hearing request, identified by docket ID number EPA–HQ–OPP–2023–0308, by one of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be CBI or other information whose disclosure is restricted by statute.
- *Mail:* OPP Docket, Environmental Protection Agency Docket Center (EPA/DC), (28221T), 1200 Pennsylvania Ave. NW, Washington, DC 20460–0001.

Additional instructions on commenting or visiting the docket, along with more information about dockets generally, is available at *https://www.epa.gov/dockets.*

- *Hand Delivery:* To make special arrangements for hand delivery or delivery of boxed information, please follow the instructions at *https://www.epa.gov/dockets/where-send-comments-epa-dockets.*

II. Summary of Petitioned-For Tolerance

In the **Federal Register** of December 19, 2023 (88 FR 87733) (FRL–10579–11), EPA issued a document pursuant to FFDCA section 408(d)(3), 21 U.S.C. 346a(d)(3), announcing the filing of a pesticide petition (PP 2F9038) by BASF Corporation, 26 Davis Drive, Research Triangle Park, NC 27709. The petition requested that 40 CFR part 180 be amended by establishing tolerances for residues of the herbicide pendimethalin, including its metabolites and degradates, in or on the raw agricultural commodities fig at 0.1 parts per million (ppm) and fig, dried at 3.0 ppm. That document referenced a summary of the petition prepared by BASF, the registrant, which is available in the docket at *https://www.regulations.gov.*

The December 19, 2023, notice of filing supersedes a notice of filing published in the **Federal Register** of July 26, 2023 (88 FR 48179) (FRL–10579–06), which was based on an earlier version of the same petition (2F9038) requesting tolerances for tropical and subtropical fruit, medium to large fruit, edible peel subgroup 23B at 0.1 ppm and fig, dried fruit at 3.0 ppm; and an inadvertent tolerance for cilantro, fresh leaves at 0.1 ppm. Following that July 2023 publication, BASF amended its petition to request tolerances only for fig and fig, dried, as noticed in the December 2023 publication.

No comments were received in response to the December 19, 2023, and the July 26, 2023, notices of filing.

Based upon review of the data supporting the petition and in accordance with its authority under FFDCA section 408(d)(4)(A)(i), EPA has modified the level at which one of the tolerances is being established. The reason for this change is explained in Unit IV.D.

III. Aggregate Risk Assessment and Determination of Safety

Section 408(b)(2)(A)(i) of FFDCA allows EPA to establish a tolerance (the legal limit for a pesticide chemical residue in or on a food) only if EPA determines that the tolerance is ''safe.'' Section 408(b)(2)(A)(ii) of FFDCA defines ''safe'' to mean that ''there is a reasonable certainty that no harm will

result from aggregate exposure to the pesticide chemical residue, including all anticipated dietary exposures and all other exposures for which there is reliable information.'' This includes exposure through drinking water and in residential settings but does not include occupational exposure. Section 408(b)(2)(C) of FFDCA requires EPA to give special consideration to exposure of infants and children to the pesticide chemical residue in establishing a tolerance and to ''ensure that there is a reasonable certainty that no harm will result to infants and children from aggregate exposure to the pesticide chemical residue . . . .''

Consistent with FFDCA section 408(b)(2)(D), and the factors specified therein, EPA has reviewed the available scientific data and other relevant information in support of this action. EPA has sufficient data to assess the hazards of and to make a determination on aggregate exposure for pendimethalin including exposure resulting from the tolerances established by this action. EPA's assessment of exposures and risks associated with pendimethalin follows.

In an effort to streamline its publications in the **Federal Register**, EPA is not reprinting sections that repeat what has been previously published for tolerance rulemakings for the same pesticide chemical. Where scientific information concerning a particular chemical remains unchanged, the content of those sections would not vary between tolerance rulemakings, and EPA considers referral back to those sections as sufficient to provide an explanation of the information EPA considered in making its safety determination for the new rulemaking.

In the **Federal Register** of February 16, 2018 (83 FR 6975) (FRL–9973–03) and October 25, 2019 (84 FR 57336) (FRL–10000–06), EPA published tolerance rulemakings for pendimethalin in which EPA concluded, based on the available information, that there is a reasonable certainty that no harm would result from aggregate exposure to pendimethalin and established tolerances for residues of that chemical. EPA is incorporating previously published sections from these rulemakings as described further in this rulemaking, as they remain unchanged.

Toxicological profile. For a discussion of the Toxicological Profile of pendimethalin, see Unit III.A. of the October 25, 2019, rulemaking.

Toxicological points of departure/Levels of concern. For a summary of the Toxicological Points of Departure/Levels of Concern for pendimethalin used for human health risk assessment, please reference Unit III.B. of the February 16, 2018, rulemaking.

Exposure assessment. Much of the exposure assessment for pendimethalin remains unchanged from the discussion in Unit III.C. of the October 25, 2019, rulemaking, except as described below.

Dietary exposure from food and feed uses. EPA's dietary exposure assessments have been updated to include the additional exposure from the proposed new uses on fresh and dried fig. The acute and chronic dietary (food and drinking water) exposure assessments in support of the proposed fresh and dried fig uses were conducted using the Dietary Exposure Evaluation Model software with the Food Commodity Intake Database (DEEM–FCID) Version 4.02. This software uses 2005–2010 food consumption data from the United States Department of Agriculture's (USDA's) National Health and Nutrition Examination Survey, What We Eat in America (NHANES/WWEIA). The unrefined acute and chronic dietary exposure assessments assumed 100 percent crop treated (PCT), tolerance-level residues for all crops, and maximum anticipated residues to address all residues of concern in ruminant commodities.

Drinking water and non-occupational exposures. The drinking water numbers have not changed as a result of the proposed fresh and dried fig uses. For a detailed summary of the drinking water analysis for pendimethalin used for the human health risk assessment, please reference Unit III.C.2. of the October 25, 2019, rulemaking.

There are no residential exposures expected from the currently proposed uses; however, pendimethalin is currently registered for residential usage on gardens, golf course turf, lawns, and ornamentals. The highest anticipated short-term aggregate exposure scenarios for children and adults did not present risks of concern (*i.e.,* margins of exposure (MOEs) are > the level of concern (LOC) of 30). Intermediate-term exposures to pendimethalin are not likely because of the intermittent nature of applications by homeowners (*e.g.,* garden sprays). Long-term aggregate exposure is not anticipated for residential uses.

Cumulative exposure. Section 408(b)(2)(D)(v) of FFDCA requires that, when considering whether to establish, modify, or revoke a tolerance, the Agency consider ''available information'' concerning the cumulative effects of a particular pesticide's residues and ''other substances that have a common mechanism of toxicity The Agency has utilized this framework for pendimethalin and determined that although pendimethalin shares some chemical and/or toxicological characteristics (*e.g.,* chemical structure or apical endpoint) with other pesticides, the toxicological database does not support a testable hypothesis for a common mechanism of action. No further data are required to determine that no common mechanism of toxicity exists for pendimethalin, and other pesticides and no further cumulative evaluation is necessary for pendimethalin.

Safety factor for infants and children. EPA continues to conclude that there are reliable data to support the reduction of the Food Quality Protection Act (FQPA) safety factor from 10X to 1X. See Unit III.D. of the October 25, 2019, rulemaking for a discussion of the Agency's rationale for that determination.

Aggregate risks and determination of safety. EPA determines whether acute and chronic dietary pesticide exposures are safe by comparing aggregate exposure estimates to the acute population adjusted dose (aPAD) and chronic population adjusted dose (cPAD). For linear cancer risks, EPA calculates the lifetime probability of acquiring cancer given the estimated aggregate exposure. Short-, intermediate-, and chronic-term risks are evaluated by comparing the estimated aggregate food, water, and residential exposure to the appropriate points of departure (PODs) to ensure that an adequate MOE exists.

The results of the acute dietary analysis for food and drinking water at the 95th percentile of exposure shows that the acute dietary risk estimates are below the Agency's level of concern (<100% of the aPAD) for all population subgroups and were estimated at <1% of the aPAD for the U.S. general population and 2.1% of the aPAD for the most highly exposed population subgroup (infants <1 years old). The results of the chronic dietary analysis for food and drinking water indicate that the chronic dietary risk estimates are below the Agency's level of concern (<100% of the cPAD) for all population subgroups and were estimated at <1% of the cPAD for the U.S. general population and 2.3% of the cPAD for the most highly exposed population subgroup (children 1 to 2 years old).

Acute aggregate exposure is anticipated to occur from dietary exposure in food and drinking water only. There are no risks of concern for acute dietary exposure and thus no risks of concern for acute aggregate exposure. Short-term aggregate risk assessment was performed since there is potential

for post-application exposure from the existing uses in residential settings. The highest anticipated short-term aggregate exposure scenarios for children and adults did not present risks of concern (*i.e.,* MOEs are >LOC of 30). Intermediate-term exposures to pendimethalin are not likely because of the intermittent nature of applications by homeowners (*e.g.,* garden sprays). Long-term aggregate exposure is not anticipated for residential uses. Therefore, chronic aggregate risk estimates for pendimethalin include food and drinking water only, and are equivalent to the chronic dietary risk estimates, and are below HED's LOC. Pendimethalin is classified as a ''possible human carcinogen.'' However, the chronic dietary risk assessment is considered to be protective of any cancer effects; therefore, a separate quantitative cancer dietary risk assessment is not required. The chronic reference dose (cRfD)/cPAD is considered to be protective of all chronic toxicity, including carcinogenicity, that could result from exposure to pendimethalin. Since there are no chronic aggregate risks of concern, there are no cancer aggregate risks of concern.

Therefore, based on the risk assessments and information described above, EPA concludes there is a reasonable certainty that no harm will result to the general population, or to infants and children, from aggregate exposure to pendimethalin residues. More detailed information on the subject action to establish tolerances in or on fig commodities can be found in the document titled ''Pendimethalin—Human Health Risk Assessment to Support the Proposed New Use on Fig.'' available at *https://www.regulations.gov* in docket ID number EPA–HQ–OPP–2023–0308.

IV. Other Considerations

A. Analytical Enforcement Methodology

Adequate analytical enforcement methodology, gas chromatography with electron capture detection (GC/ECD), is available to enforce the tolerance expression. The method may be requested from: Chief, Analytical Chemistry Branch, Environmental Science Center, 701 Mapes Rd., Ft. Meade, MD 20755–5350; telephone number: (410) 305–2905; email address: *residuemethods@epa.gov.*

B. International Residue Limits

In making its tolerance decisions, EPA seeks to harmonize U.S. tolerances with international standards whenever possible, consistent with U.S. food safety standards and agricultural practices. EPA considers the international maximum residue limits (MRLs) established by the Codex Alimentarius Commission (Codex), as required by FFDCA section 408(b)(4). Codex Alimentarius is a joint United Nations Food and Agriculture Organization/World Health Organization food standards program, and it is recognized as an international food safety standards-setting organization in trade agreements to which the United States is a party. EPA may establish a tolerance that is different from a Codex MRL; however, FFDCA section 408(b)(4) requires that EPA explain the reasons for departing from the Codex level. The Codex has not established any MRLs for pendimethalin for the crops covered by this action.

C. Revisions to Petitioned-For Tolerances

EPA is establishing the tolerance for fig, dried at 3 ppm rather than 3.0 ppm to be consistent with Organisation for Economic Cooperation and Development (OECD) rounding class practices.

V. Conclusion

Therefore, tolerances are established for residues of pendimethalin in or on the raw agricultural commodities fig at 0.1 parts per million (ppm) and fig, dried at 3 ppm.

VI. Statutory and Executive Order Reviews

This action establishes tolerances under FFDCA section 408(d) in response to a petition submitted to the Agency. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866, entitled ''Regulatory Planning and Review'' (58 FR 51735, October 4, 1993). Because this action has been exempted from review under Executive Order 12866, this action is not subject to Executive Order 13211, entitled ''Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use'' (66 FR 28355, May 22, 2001), or Executive Order 13045, entitled ''Protection of Children from Environmental Health Risks and Safety Risks'' (62 FR 19885, April 23, 1997). This action does not contain any information collections subject to OMB approval under the Paperwork Reduction Act (PRA) (44 U.S.C. 3501 *et seq.*), nor does it require any special considerations under Executive Order 12898, entitled ''Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations'' (59 FR 7629, February 16, 1994).

Since tolerances and exemptions that are established on the basis of a petition under FFDCA section 408(d), such as the tolerances in this final rule, do not require the issuance of a proposed rule, the requirements of the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), do not apply.

This action directly regulates growers, food processors, food handlers, and food retailers, not States or Tribes, nor does this action alter the relationships or distribution of power and responsibilities established by Congress in the preemption provisions of FFDCA section 408(n)(4). As such, the Agency has determined that this action will not have a substantial direct effect on States or Tribal governments, on the relationship between the National Government and the States or Tribal governments, or on the distribution of power and responsibilities among the various levels of government or between the Federal Government and Indian tribes. Thus, the Agency has determined that Executive Order 13132, entitled ''Federalism'' (64 FR 43255, August 10, 1999), and Executive Order 13175, entitled ''Consultation and Coordination with Indian Tribal Governments'' (65 FR 67249, November 9, 2000), do not apply to this action. In addition, this action does not impose any enforceable duty or contain any unfunded mandate as described under Title II of the Unfunded Mandates Reform Act (UMRA) (2 U.S.C. 1501 *et seq.*).

This action does not involve any technical standards that would require Agency consideration of voluntary consensus standards pursuant to section 12(d) of the National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note).

VII. Congressional Review Act

Pursuant to the Congressional Review Act (5 U.S.C. 801 *et seq.*), EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. This action is not a ''major rule'' as defined by 5 U.S.C. 804(2).

List of Subjects in 40 CFR Part 180

Environmental protection, Administrative practice and procedure, Agricultural commodities, Pesticides, and pests, Reporting and recordkeeping requirements.

Dated: July 19, 2024.

Charles Smith,

Director, Registration Division, Office of Pesticide Programs.

Therefore, for the reasons stated in the preamble, EPA is amending 40 CFR chapter I as follows:

PART 180—TOLERANCES AND EXEMPTIONS FOR PESTICIDE CHEMICAL RESIDUES IN FOOD

■ 1. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 321(q), 346a and 371.

■ 2. In § 180.361, amend paragraph (a)(1) by designating the table as ''Table 1 to Paragraph (a)(1)'' and adding to newly designated table 1, in alphabetical order, the entries ''Fig'' and ''Fig, dried'' to read as follows:

§ 180.361 Pendimethalin; tolerances for residues.

BILLING CODE 6560–50–P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 24–112; RM–11981; DA 24–720; FR ID 235234]

Television Broadcasting Services Jacksonville, Florida

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: The Video Division, Media Bureau (Bureau), has before it a Notice of Proposed Rulemaking issued in response to a Petition for Rulemaking filed by Multimedia Holdings Corporation (Petitioner or Multimedia), the licensee of WTLV (Station or WTLV), channel 13, Jacksonville, Florida (Jacksonville). The Petitioner has requested the substitution of UHF channel 33 for VHF channel 13 in the Table of TV Allotments. TEGNA Inc., on behalf of its wholly owned subsidiary, Multimedia, filed comments in support of the Petition, as required by the Commission's rules (rules), reaffirming Multimedia's commitment to apply for channel 33 and, if authorized, to promptly implement the facilities modifications necessary for the Station to operate on channel 33.

DATES: Effective July 31, 2024.

FOR FURTHER INFORMATION CONTACT: Joyce Bernstein, Media Bureau, at (202) 418–1647 or *Joyce.Bernstein@fcc.gov*, or Mark Colombo, Media Bureau, at (202) 418–7611 or *Mark.Colombo@fcc.gov*.

SUPPLEMENTARY INFORMATION: The proposed rule was published at 89 FR 31125 on April 24, 2024. The Petitioner filed comments in support of the petition reaffirming its commitment to apply for channel 33. No other comments were filed.

The Bureau believes the public interest would be served by substituting channel 33 for channel 13 at Jacksonville. According to the Petitioner, the Station has received persistent reception complaints from viewers, many of whom state that they can receive signals from other local stations on UHF channels, but not WTLV on VHF channel 13. The Petitioner states that the Commission has recognized that VHF channels have certain characteristics that pose challenges for their use in providing digital television service, including propagation characteristics that allow undesired signals and noise to be receivable at relatively far distances, and that although VHF reception issues are not universal, ''environmental noise blockages affecting [VHF] signal strength and reception exist'' and ''[vary] widely from service area to service area. Additionally, the Petitioner notes that the Commission has observed the large variability in the performance of indoor antennas available to consumers, with most antennas receiving ''fairly well at UHF and . . . not so well to very poor at high-VHF.'' WTLV is an NBC network affiliate and while an analysis provided by the Petitioner indicates that the Station's move to channel 33 will result in 274,303 persons no longer being located within the Station's noise limited service contour (NLSC), all but 16,737 persons in the predicted loss area are within the NLSC of three other NBC affiliated TV stations. Further, when the Commission's *TVStudy* software is run for the Station's licensed and proposed facility with the ''Study Area Mode'' set to ''unrestricted'' to predict coverage outside the proposed channel 33 NLSC, all viewers in the remaining predicted loss area would continue to receive over-the-air NBC network programming from WTLV on channel 33. Thus, once service provided by other NBC stations and the terrain-limited coverage predictions are taken into account, we find that the proposed channel 33 facility will result in no loss of NBC service to existing viewers within the Station's current NLSC.

We also find that the proposal complies with all relevant technical requirements for amendment of the Table of TV Allotments, including the interference protection requirements of § 73.622(a) of the rules, and further demonstrates that the proposed channel 33 facility will provide full principal community coverage to Jacksonville as required by § 73.618 of the rules. In fact, this channel substitution from VHF to UHF will help improve service to existing viewers, including those in the Station's principal community of license, by eliminating reception issues related to the Station's current operation on a high-VHF channel. As proposed, channel 33 can be substituted for channel 13 at Jacksonville in compliance with the principal community coverage requirements of § 73.618(a) of the rules, at coordinates 30–16′–25″ N. and 81–33′–12″ W. In addition, we find that this channel change meets the technical requirements set forth in § 73.622(a) of the rules.

This is a synopsis of the Commission's *Report and Order,* MB Docket No. 24–112; RM–11981; DA 24–720, adopted July 24, 2024, and released July 24, 2024. The full text of this document is available for download at *https://www.fcc.gov/edocs.* To request materials in accessible formats for people with disabilities (braille, large print, electronic files, audio format), send an email to *fcc504@fcc.gov* or call the Consumer & Governmental Affairs Bureau at 202–418–0530 (voice), 202–418–0432 (tty).

This document does not contain information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104–13. In addition, therefore, it does not contain any proposed information collection burden ''for small business concerns with fewer than 25 employees,'' pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107–198, *see* 44 U.S.C. 3506(c)(4). Provisions of the Regulatory Flexibility Act of 1980, 5 U.S.C. 601–612, do not apply to this proceeding.

The Commission will send a copy of the *Report and Order* in a report to be sent to Congress and the Government Accountability Office pursuant to the

Congressional Review Act, *see* 5 U.S.C. 801(a)(1)(A).

List of Subjects in 47 CFR Part 73 Television.

Federal Communications Commission.

Thomas Horan,

Chief of Staff, Media Bureau.

Final Rule

For the reasons discussed in the preamble, the Federal Communications Commission amends 47 CFR part 73 as follows:

PART 73—RADIO BROADCAST SERVICES

■ 1. The authority citation for part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 155, 301, 303, 307, 309, 310, 334, 336, 339.

■ 2. In § 73.622(j), amend the Table of TV Allotments, under Florida, by revising the entry for ''Jacksonville'' to read as follows:

§ 73.622 Digital television table of allotments.

BILLING CODE 6712–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 660

[Docket No. 240514–0137; RTID 0648–XE075]

Fisheries Off West Coast States; Modification of the West Coast Salmon Fisheries; Inseason Actions #1 Through #3

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Inseason modification of 2024–2025 management measures.

SUMMARY: NMFS announces three inseason actions for the 2024–2025 ocean salmon fishing season. These inseason actions modify the commercial salmon troll fisheries in the area from the U.S./Canada border to the Oregon/California border.

DATES: The effective dates for these inseason actions are set out in this document under the heading ''Inseason Actions'' and the actions remain in effect until the dates identified or until superseded.

FOR FURTHER INFORMATION CONTACT: Anna Heeter, 425–606–1814, *Anna.Heeter@noaa.gov*.

SUPPLEMENTARY INFORMATION:

Background

The annual management measures for the 2024 and early 2025 ocean salmon fisheries (89 FR 44553, May 21, 2024) govern the commercial and recreational fisheries in the area from the U.S./Canada border to the U.S./Mexico border, effective from 0001 hours Pacific Daylight Time (PDT), May 16, 2024, until the effective date of the 2025 management measures, as published in the **Federal Register**. NMFS is authorized to implement inseason management actions to modify fishing seasons and quotas as necessary to provide fishing opportunity while meeting management objectives for the affected species (50 CFR 660.409). Inseason actions in the salmon fishery may be taken directly by NMFS (50 CFR 660.409(a)—Fixed inseason management provisions) or upon consultation with the Chairman of the Pacific Fishery Management Council (Council), and the appropriate State Directors (50 CFR 660.409(b)—Flexible inseason management provisions).

Management of the salmon fisheries is divided into two geographic areas: north of Cape Falcon (NOF) (U.S./Canada border to Cape Falcon, OR), and south of Cape Falcon (SOF) (Cape Falcon, OR, to the U.S./Mexico border). The action described in this document affects the NOF commercial salmon troll fisheries and SOF recreational fisheries, as set out under the heading ''Inseason Actions'' below.

Consultation with the Council Chairperson on these inseason actions occurred on May 16, 2024, and on June 18, 2024. These consultations included representatives from NMFS, Washington Department of Fish and Wildlife, Oregon Department of Fish and Wildlife, and California Department of Fish and Wildlife. Representatives from the Salmon Advisory Subpanel and Salmon Technical Team were also present. A Council representative was present on May 16, 2024, and June 18, 2024.

These inseason actions were announced on NMFS' telephone hotline and U.S. Coast Guard radio broadcast on the date of the consultations (50 CFR 660.411(a)(2)).

Inseason Actions

Inseason Action #1

Description of the action: Inseason action #1 modifies the NOF ocean salmon troll commercial fishery from the U.S./Canada border to Cape Falcon, OR.

Effective dates: Inseason action #1 takes effect for the following areas and dates, and remains in effect until superseded.

- Effective 12:30 p.m. Thursday, May 16, 2024, for the ocean salmon troll commercial fishery, the landing and possession limit for the entire area between Cape Falcon and the U.S./Canada border is increased from 150 Chinook salmon per vessel per landing week (Thursday through Wednesday) to 225 Chinook salmon per vessel per landing week (Thursday through Wednesday).
- Effective 12:30 p.m. Thursday, May 16, 2024, for the ocean salmon troll commercial fishery, the landing and possession limit in the area between the U.S./Canada border and the Queets River is increased from 60 Chinook salmon per vessel per landing week (Thursday–Wednesday) to 70 Chinook salmon per vessel per landing week (Thursday through Wednesday).
- Effective 12:30 p.m. Thursday, May 16, 2024, for the ocean salmon troll commercial fishery, the landing and possession limit in the area between the Queets River and Leadbetter Point is increased from 150 Chinook salmon per vessel per landing week (Thursday through Wednesday) to 225 Chinook salmon per vessel per landing week (Thursday through Wednesday).
- Effective 12:30 p.m. Thursday, May 16, 2024, for the ocean salmon troll commercial fishery, the landing and possession limit in the area between Leadbetter Point and Cape Falcon is increased from 60 Chinook salmon per vessel per landing week (Thursday through Wednesday) to 80 Chinook salmon per vessel per landing week (Thursday through Wednesday).

Reason and authorization for the action: Due to lower than anticipated catch rates, this action will result in increased fishing interest and allow greater access to the quota for the area without exceeding it.

The NMFS West Coast Regional Administrator (RA) considered the 2024

abundance forecasts for Chinook salmon stocks, the timing of the actions relative to the length of the season, and determined that this inseason action is necessary to meet management and conservations goals for the 2024–2025 management measures. This inseason action modified quotas and/or fishing seasons under 50 CFR 660.409(b)(1)(i).

Inseason Action #2

Description of the action: Inseason action #2 modifies the SOF recreational ocean salmon fishery in the Klamath Management Zone (KMZ) between Humbug Mountain and the Oregon/California border. All salmon harvested in the recreational ocean salmon fishery between Humbug Mountain and the Oregon/California border through October 31, 2024, must be landed north of the Oregon/California border.

Effective dates: Inseason action #2 takes effect at 12:30 p.m. on Thursday, May 16, 2024, and remains in effect through October 31, 2024.

Reason and authorization for the action: The closure of commercial and recreational ocean salmon fisheries in California in 2024 presented a scenario in the KMZ between Humbug Mountain and Latitude 40°10′ N (California KMZ) where recreational fishing opportunity is open on the Oregon side of the KMZ but not on the California side of the KMZ, in order to protect California Chinook salmon and coho salmon. An enforcement concern was subsequently identified, in that the original 2024–2025 rules do not expressly prohibit landing salmon in the closed area. Allowing California vessels to land salmon in California would hinder enforcement efforts, as it might not be possible to determine whether landed fish were caught legally in Oregon or caught unlawfully within the closed area, thereby undermining the original intent of the closure. This inseason action clarifies that salmon may not be caught or landed within the closed area. With full closures in California there are not sufficient monitoring programs in place to adequately sample and estimate salmon landings brought into California from Oregon which could compromise managers ability to assess fishing impacts against conservation objectives. This inseason action would clarify that landing of salmon in California is prohibited to address the enforcement and monitoring concerns discussed above.

The RA considered port access issues and the need to monitor landings to assess fishing impacts, and determined that this inseason action was necessary to meet management and conservation objectives. These inseason action clarifies landing boundaries under 50 CFR 660.409(b)(1)(v).

Inseason Action #3

Description of the action: Inseason action #3 modifies the NOF commercial ocean salmon fishery. The area between the U.S./Canada border and Cape Falcon is closed.

Effective dates: Inseason action #3 takes effect at 11:59 p.m. on Wednesday, June 19, 2024, and remains in effect through June 30, 2024, at 11:59 p.m.

Reason and authorization for the action: Inseason action #3 is necessary to avoid exceeding the NOF quota for Chinook salmon. The RA considered the 2024 abundance forecasts for Chinook salmon stocks, the catch rates and anticipated effort relative to the remaining quota, and determined that this inseason action is necessary to meet management and conservations goals for the 2024–2025 management measures. This inseason action modifies fishing seasons under 50 CFR 660.409(b)(1)(i).

All other restrictions and regulations remain in effect as announced for the 2024 ocean salmon fisheries (89 FR 44553, May 21, 2024).

The states and tribes manage the fisheries in state waters adjacent to the areas of the U.S. exclusive economic zone (3–200 nautical miles; 5.6–370.4 kilometers) off the coasts of the States of Washington, Oregon, and California consistent with these Federal actions. As provided by the inseason notice procedures at 50 CFR 660.411, actual notice of the described regulatory actions was given, prior to the time the actions became effective, by telephone hotline numbers 206–526–6667 and 800–662–9825, and by U.S. Coast Guard Notice to Mariners broadcasts on Channel 16 VHF–FM and 2182 kHz.

Classification

NMFS issues these actions pursuant to section 305(d) of the Magnuson-Stevens Fishery Conservation and Management Act (MSA). These actions are authorized by 50 CFR 660.409, which was issued pursuant to section 304(b) of the MSA, and is exempt from review under Executive Order 12866.

Pursuant to 5 U.S.C. 553(b)(3)(B), there is good cause to waive prior notice and an opportunity for public comment on this action, as notice and comment would be impracticable and contrary to the public interest. Prior notice and opportunity for public comment on this action was impracticable because NMFS had insufficient time to provide for prior notice and the opportunity for public comment between the time Chinook and coho salmon abundance, catch, and effort information were developed and fisheries impacts were calculated, and the time the fishery modifications had to be implemented in order to ensure that fisheries are managed based on the best scientific information available and consistent with the conservation objectives. As previously noted, actual notice of the regulatory action was provided to fishers through telephone hotlines and radio notifications. These actions comply with the requirements of the annual management measures for ocean salmon fisheries (88 FR 30235, May 11, 2023), the Pacific Salmon Fishery Management Plan (FMP), and regulations implementing the FMP under 50 CFR 660.409 and 660.411.

There is good cause under 5 U.S.C. 553(d)(3) to waive the 30-day delay in effective date, as a delay in effectiveness of this action would allow fishing at levels inconsistent with the goals of the FMP and the current management measures.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: July 26, 2024.

Lindsay Fullenkamp,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

50 CFR Part 665

[Docket No. 240725–0204]

RIN 0648–BM76

Pacific Island Fisheries; Annual Catch Limit and Accountability Measure for the Commonwealth of the Northern Mariana Islands Bottomfish in 2024–2025

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Final rule.

SUMMARY: This final rule implements an annual catch limit (ACL) and annual catch target (ACT) for bottomfish in the Commonwealth of the Northern Mariana Islands (CNMI) for fishing years 2024 and 2025. This rule does not revise, add, or remove the most recent current accountability measure (AM) in NOAA's regulations. Under that AM, NMFS will reduce the ACL and ACT in the following fishing year by the amount of the overage if the average catch from the most recent 3 years exceeds the ACL.

This final rule supports the long-term sustainability of the CNMI bottomfish fishery.

DATES: This rule is effective August 30, 2024.

ADDRESSES: Background information on the bottomfish fishery in the Commonwealth of the Northern Mariana Islands is found in the Fishery Ecosystem Plan for the Mariana Archipelago (FEP) available from the Western Pacific Regional Fishery Management Council, 1164 Bishop St., Suite 1400, Honolulu, HI 96813, telephone 808–522–8220, fax 808–522–8226, or *https://www.wpcouncil.org.* Copies of supporting documents for this action are available at *https://www.regulations.gov/docket/NOAA-NMFS-2024-0002,* or from Sarah Malloy, Acting Regional Administrator, NMFS Pacific Islands Regional Office (PIRO), 1845 Wasp Blvd., Bldg. 176, Honolulu, HI 96818.

FOR FURTHER INFORMATION CONTACT: Keith Kamikawa, NMFS Pacific Islands Regional Office, Sustainable Fisheries, 808–725–5177.

SUPPLEMENTARY INFORMATION: NMFS and the Western Pacific Regional Fishery Management Council (Council) manage the bottomfish fishery in the U.S. Exclusive Economic Zone (*i.e.,* Federal waters, generally 3–200 nautical miles (nmi) (345 kilometers (km)) around the CNMI under the Fishery Ecosystem Plan for the Mariana Archipelago (FEP), as authorized by the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act). Consistent with the process in the FEP, the Council and NMFS must specify ACLs, ACTs, and AMs for each stock and stock complex of each management unit species (MUS), as recommended by the Council, and must consider the best available scientific, commercial, and other information about the fishery. If a fishery exceeds an ACL, regulations require the Council to act (*e.g.,* enactment of an AM reducing the ACL for the subsequent fishing year by the amount of the overage). ACTs can be used as an additional management measure to help ensure catch does not exceed the ACL.

NMFS is implementing for the CNMI bottomfish fishery an ACL of 82,000 pounds (lb) (37,195 kilograms (kg)) and an ACT of 75,000 lb (34,019 kg) (Table 1). The fishing year begins on January 1 and ends on December 31, and catch from both territorial waters (generally from the shoreline to 3 nmi, (5.6 km offshore)) and Federal waters will be counted towards the ACL and ACT.

TABLE 1—ANNUAL CATCH LIMITS AND ANNUAL CATCH TARGETS FOR THE CNMI BOTTOMFISH COMPLEX

	2024	2025
ACL (lb)	82,000	82,000
ACT (lb)	75,000	75,000

The rule will not change the current AM for the CNMI bottomfish fishery: if the average catch of the three most recent years exceeds the specified ACL in a fishing year, NMFS will reduce the ACL and the ACT for the subsequent year by the amount of the overage in a separate rulemaking. If the average catch from the most recent 3-year period exceeds the ACT, but is below the ACL, NMFS will not apply a post-season correction.

This rule is consistent with recommendations made by the Council at its 195th meeting in June 2023. Additional background information on this action is in the preamble to the proposed rule (89 FR 45623, May 23, 2024).

Comments and Responses

On May 23, 2024, NMFS published a proposed rule and request for public comments (89 FR 45623). The comment period ended on June 24, 2024. NMFS received one public comment about offshore wind and the North Atlantic right whale, which is not related to the proposed rule or any other relevant topic. Therefore, NMFS made no changes to the final rule based on the public comment received.

Changes From the Proposed Rule

This final rule contains no changes from the proposed rule.

Classification

Pursuant to section 304(b)(1)(A) of the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that this proposed rule is consistent with the FEP, other provisions of the Magnuson-Stevens Act, and other applicable law.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No relevant comments were received regarding this certification. As a result, a final regulatory flexibility analysis was not required and none was prepared.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

This final rule contains no information collection requirements under the Paperwork Reduction Act of 1995.

List of Subjects in 50 CFR Part 665

Fisheries, Fishing, Commonwealth of the Northern Mariana Islands, Bottomfish management unit species, Annual catch limit, Accountability measure, Pacific Islands, Western Pacific.

Dated: July 25, 2024.

Kimberly Damon-Randall,

Acting Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, NMFS amends 50 CFR part 665 as follows:

PART 665—FISHERIES IN THE WESTERN PACIFIC

■ 1. The authority citation for 50 CFR part 665 continues to read as follows:

Authority: 16 U.S.C. 1801 *et seq.*

■ 2. In § 665.408, revise paragraph (a) to read as follows:

§ 665.408 CNMI Annual Catch Limits (ACL) and Annual Catch Targets (ACT).

(a) In accordance with § 665.4, the ACL and ACT for Mariana bottomfish MUS in the CNMI Management Subarea for each fishing year are as follows:

TABLE 1 TO PARAGRAPH (a)

	2024	2025
ACL (lb)	82,000	82,000
ACT (lb)	75,000	75,000

Vol. 89, No. 147
Wednesday, July 31, 2024

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

CONSUMER FINANCIAL PROTECTION BUREAU

12 CFR Part 1026

[Docket No. CFPB–2024–0032]

Truth in Lending (Regulation Z); Consumer Credit Offered to Borrowers in Advance of Expected Receipt of Compensation for Work

AGENCY: Consumer Financial Protection Bureau.

ACTION: Notice of proposed interpretive rule; request for comment.

SUMMARY: The Consumer Financial Protection Bureau (CFPB) is charged with promoting competition and innovation in consumer financial products and services. After careful study of emerging offerings in the paycheck advance marketplace, including those marketed as ''earned wage advances'' and ''earned wage access,'' the CFPB is proposing this interpretive rule to help market participants determine when certain existing requirements under Federal law are triggered. The proposed interpretive rule would also address certain costs that are in substantial connection with extensions of such credit, such as expedited delivery fees and costs marketed as ''tips.''

DATES: Comments must be received by August 30, 2024.

ADDRESSES: You may submit comments, identified by Docket No. CFPB–2024–0032, by any of the following methods:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments.
- *Email: 2024-Paycheck-Advance-Interpretive-Rule@cfpb.gov.* Include Docket No. CFPB–2024–0032 in the subject line of the message.
- *Mail/Hand Delivery/Courier:* Comment Intake—2024 Paycheck Advance Interpretive Rule, c/o Legal Division Docket Manager, Consumer Financial Protection Bureau, 1700 G Street NW, Washington, DC 20552. Because paper mail in the Washington, DC area and at the CFPB is subject to delay, commenters are encouraged to submit comments electronically.

Instructions: The CFPB encourages the early submission of comments. All submissions must include the document title and docket number. In general, all comments received will be posted without change to *https://www.regulations.gov.* All submissions, including attachments and other supporting materials, will become part of the public record and subject to public disclosure. Proprietary information or sensitive personal information, such as account numbers or Social Security numbers, or names of other individuals, should not be included. Submissions will not be edited to remove any identifying or contact information.

FOR FURTHER INFORMATION CONTACT: George Karithanom, Regulatory Implementation & Guidance Program Analyst, Office of Regulations, at 202–435–7700 or at: *https://reginquiries.consumerfinance.gov/.* If you require this document in an alternative electronic format, please contact *CFPB_Accessibility@cfpb.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

One major source of demand for consumer credit is derived from the mismatch of when American workers receive compensation for their labor and when they incur expenses. While there have long been sources of credit for consumers to pay expenses in advance of receiving their compensation, there are a number of new offerings that seek to provide additional choices for consumers.

Instead of being paid daily or upfront, American workers generally provide services before employers pay for those services some time later—typically on a biweekly or semi-monthly wage cycle.[1] Employers have a strong incentive to delay payment, since these delays reduce working capital needs. Nearly three-quarters of non-farm payroll employees remain paid biweekly or even less frequently, and the remainder are generally paid their wages weekly. To address liquidity challenges, many consumers therefore turn to third-party credit products, such as payday loans, personal installment loans, and credit cards. In recent years, American consumers have significantly expanded their use of products sometimes marketed as ''earned wage access'' or ''earned wage advance.'' [2] As these paycheck advance products generally have features that make them subject to the CFPB's jurisdiction, the CFPB has sought to understand these and other products, particularly those offered online, by engaging in ongoing monitoring of the market, including, for example, collecting and analyzing data, engaging with stakeholders (*e.g.,* market participants, consumer groups, and States), tracking and studying market developments, and conducting market research, among other things.

While many of these products have similarities to payday loans, there are important distinctions. The CFPB has found that there are two emerging models of earned wage products: employer-partnered and direct-to-consumer.

For ''employer-partnered'' products, providers contract with employers to offer funds in amounts not exceeding accrued wages. Those funds are recovered via one or more payroll deductions, lowering the consumer's paychecks accordingly, with other recourse options generally unavailable to the third-party provider. In contrast, ''direct-to-consumer'' products provide funds to employees in amounts that they estimate to be below accrued wages; funds are then recovered via automated withdrawal from the consumer's bank account,[3] and generally without limit to the provider's ability to seek further recourse as necessary.[4]

Some of the significant differences between these two types of earned wage products, however, are starting to erode.

[1] While the terms ''employer'' and ''employee'' are used throughout, the proposed interpretive rule would apply more broadly to situations where consumers receive payment for work performed.

[2] A CFPB report describes rapid recent growth in one part of this developing market. *See* CFPB, *Developments in the Paycheck Advance Market,* at 3 (July 2024) (hereinafter *2024 Paycheck Advance Report*).

[3] This includes, without limitation, *e.g.,* prepaid and payroll card accounts.

[4] As described, direct-to-consumer products lie outside the scope of the ''wage advance'' (12 CFR 1041.3(d)(7)) and ''no cost advance'' (12 CFR 1041.3(d)(8)) exclusions from the CFPB's 2017 Payday Rule. Employer-partnered products, however, may be (but are not necessarily) within the scope of one exclusion or both, with their revenue model particularly relevant to that determination. *See* 12 CFR 1041.3(d)(7)(ii)(A), (d)(8).

For example, some direct-to-consumer providers are now connecting directly to payroll records and recouping funds from payroll deductions, and ongoing State legal developments may cause them to limit their recourse options as well.[5]

Before the CFPB's market monitoring of these products intensified, the CFPB issued an advisory opinion in November 2020,[6] that described how one particular type of earned wage product does not involve the offering or extension of ''credit'' as that term is defined in Regulation Z (12 CFR part 1026) and the Truth in Lending Act (TILA).[7] The opinion explained that an earned wage product is not TILA or Regulation Z credit if it meets *all* of several identified conditions, including: providing the consumer with no more than the amount of accrued wages earned; provision by a third party fully integrated with the employer; no consumer payment, voluntary or otherwise, beyond recovery of paid amounts via a payroll deduction from the next paycheck, and no other recourse or collection activity of any kind; and no underwriting or credit reporting.

The 2020 advisory opinion was silent about whether earned wage products that do not meet all of these conditions are credit under TILA and Regulation Z.[8] The opinion did not address what counts under TILA and Regulation Z as a finance charge with respect to any such product that is credit. As the CFPB has acknowledged, the 2020 advisory opinion appears to have caused significant regulatory uncertainty.[9]

The CFPB is taking a number of steps to spur greater competition in markets for consumer financial products, including to address the credit needs of households who incur costs due to a mismatch in the timing of their income and expenses. In addition, some market participants and investors seek to better understand the applicability of existing federal law in these emerging business models. To provide greater clarity, the CFPB is proposing to replace the 2020 advisory opinion with a new interpretive rule. In light of the uncertainty caused by the 2020 advisory opinion as noted above and the fact that the CFPB is proposing to overturn and replace that opinion, the CFPB is opting to publish this proposed interpretive rule to solicit public comment. The proposed interpretive rule is informed by the CFPB's extensive study of this market, including data collection, continuous monitoring, investigation, coordination with states, and engagement with market participants. The CFPB is seeking comment on any aspect of this this proposed interpretive rule. The CFPB intends to publish a final interpretive rule after considering comments received.

II. Proposed Interpretive Rule

The text of the proposed interpretive rule is as follows.

A. Coverage

1. Earned Wage Products

This interpretive rule applies to products that involve both: (1) the provision of funds to the consumer in an amount that is based, by estimate or otherwise, on the wages that the consumer has accrued in a given pay cycle; and (2) repayment to the third-party provider via some automatic means, like a scheduled payroll deduction or a preauthorized account debit,[10] at or after the end of the pay cycle. Many payday loans would also meet this definition where the lender or State law restricts the amount of the loan based on accrued wages.[11]

2. Other Products and Other Laws

This interpretive rule only addresses the application of certain Regulation Z and TILA provisions; it does not address the application of any other laws that concern ''credit.'' Because the rule explains the applicability of Regulation Z, the rule may be useful to designers and creators of other financial products, including those relying on ''tips'' and other related payment mechanisms.

B. Legal Analysis

1. The Truth in Lending Act and Regulation Z Cover Products Where There Is an Obligation to Repay Debt

Section 1026.2(a)(14) of Regulation Z defines ''credit'' as ''the right to defer payment of debt or to incur debt and defer its payment.'' [12] TILA defines ''credit'' virtually identically as ''the right granted by a creditor to a debtor to defer payment of debt or to incur debt

[5] *See 2024 Paycheck Advance Report, supra* note 2, at 4 n.7. Several recently enacted State laws prohibit providers of earned wage products, including direct-to-consumer products, from compelling consumer repayment of earned wage amounts and fees through various means, such as lawsuits or third-party debt collection. *See, e.g.,* 24 Mo. Rev. Stat. sec. 361.749(5)(6); Wis. Stat. sec. 203.04(2)(f); *cf.* Montana Op. Att'y Gen., Vol. 59, Op. 2 (Dec. 22, 2023) (finding earned wage products do not meet the state law definitions of ''consumer loan'' or ''deferred deposit loan'' when they are ''fully non-recourse,'' among other criteria).

[6] CFPB, *Truth in Lending (Regulation Z); Earned Wage Access Programs* (Nov. 2020), *https://files.consumerfinance.gov/f/documents/cfpb_advisory-opinion_earned-wage-access_2020-11.pdf* (hereinafter *2020 Advisory Opinion*).

[7] Regulation Z defines credit at § 1026.2(a)(14).

[8] The opinion stated that it had no application to such products. *See 2020 Advisory Opinion, supra* note 6, at 3–7.

[9] *See, e.g.,* Nat'l Consumer L. Ctr., Ctr. for Responsible Lending, *Concern About Prior Leadership's Finding that Certain Earned Wage Access Products Are Not ''Credit'' Under TILA,* Nat'l Consumer L. Ctr., Ctr. for Responsible Lending, at 36–37 (Oct. 12, 2021), *https://www.responsiblelending.org/sites/default/files/nodes/files/research-publication/crl-nclc-ewa-letter-to-cfpb-oct2021.pdf* (noting ''chaos'' and ''further questions'' caused by advisory opinions); U.S. Gov't Accountability Off., *GAO–23–105536, Financial Technology: Products Have Benefits and Risks to Underserved Consumers, and Regulatory Clarity is Needed,* at 36–37 (Mar. 2023), *https://www.gao.gov/assets/gao-23-105536.pdf* (citing industry requests for clarification). The CFPB has acknowledged the need for clarification in this area. *See, e.g.,* Letter from CFPB Director Rohit Chopra (Feb. 13, 2023) in U.S. Gov't Accountability Off., *supra,* at 51; Letter from CFPB Acting General Counsel to N.J. Citizen Action, *et al.,* at 2 (Jan. 18, 2022).

Problematically, the 2020 advisory opinion has been widely cited in support of legal conclusions that it did not reach. For example, it has erroneously been cited for the general propositions that no-fee earned wage products are not credit, *see, e.g.,* Ariz. Op. Att'y Gen. No. I22–005 (Dec. 16, 2022), *https://www.azag.gov/sites/default/files/2022-12/I22-005.pdf,* and that employer-partnered earned wage products are also not credit, *see, e.g.,* ZayZoon, Comment Letter on Cal. Dep't of Fin. Prot. & Innovation re: Notice of Proposed Rulemaking [PRO 01–21], at 4 (May 17, 2023), *https://dfpi.ca.gov/wp-content/uploads/sites/337/2023/08/46-PRO-01-21-ZayZoon-US-Inc.-5.17.23_Redacted.pdf;* Innovative Payments Ass'n, Comment Letter on Cal. Dep't of Fin. Prot. & Innovation re: Notice of Proposed Rulemaking [PRO 01–21], at 4 (May 11, 2023), *https://dfpi.ca.gov/wp-content/uploads/sites/337/2023/08/10-PRO-01-21-Innovative-Payments-Association-5.11.23_Redacted.pdf.* Some regulatory uncertainty may have resulted from the near-contemporaneous issuance of a ''Sandbox Approval Order'' that gave one provider a temporary safe harbor from liability under TILA and Regulation Z with respect to a specific product that did not satisfy all the conditions that the 2020 advisory opinion identified as taking such a product outside the reach of TILA and Regulation Z. *See* CFPB, *Payactiv Approval Order,* at 5 (Dec. 30, 2020), *https://files.consumerfinance.gov/f/documents/cfpb_payactiv_approval-order_2020-12.pdf.* The 2020 advisory opinion applied only to products that had all of a number of characteristics, including that they were free to consumers. In contrast, the approval order encompassed earned wage transactions in connection with which the consumer incurred fees. *See id.* The approval order was issued under a CFPB policy that is no longer in effect. *See generally* CFPB, *Statement on Competition and Innovation* (Sept. 30, 2022), *https://files.consumerfinance.gov/f/documents/cfpb_statement-on-competition-innovation_2022-09.pdf.* However, that approval order was never of general interpretative applicability, *see Payactiv Approval Order, supra,* at 4 n.15, and was terminated even before its temporary status expired, CFPB, *CFPB Rescinds Special Regulatory Treatment for Payactiv* (June 30, 2022), *https://www.consumerfinance.gov/about-us/newsroom/cfpb-rescinds-special-regulatory-treatment-for-payactiv/.*

[10] This includes repayment via ACH, check, or any other preauthorized repayment.

[11] This interpretive rule does not apply to an employer's actual payment of wages. Note that while the terms ''employer'' and ''employee'' are used throughout, this interpretive rule applies more broadly to situations where consumers receive payment for work performed.

[12] 12 CFR 1026.2(a)(14).

and defer its payment.'' [13] As described further below, earned wage products are consumer credit for purposes of TILA and Regulation Z.

TILA and Regulation Z do not define ''debt.'' Used infrequently in the statute and the regulation, ''debt'' for the most part only appears in the definition of ''credit.'' The term ''debt'' in ordinary usage means simply ''something owed,'' without any obvious limitation.[14] Legal dictionaries, including those dating to the enactment of TILA,[15] similarly describe debt as a ''sum of money due by certain and express agreement'' or ''a financial liability or obligation owed by one person, the debtor, to another, the creditor.'' [16] If Congress had intended to substantially narrow the types of transactions that could constitute ''debt,'' it could have done so by defining the term in TILA.[17] In light of this precedent, and the context in which the term ''debt'' appears in TILA, ''debt'' in TILA and Regulation Z includes any obligation by a consumer to pay another party.

This commonsense understanding of debt is reflected in State laws [18] defining the term, which also tend to use very broad language to describe debt to mean an obligation by the consumer to pay.[19] Bankruptcy law also uses a broad definition—''liability on a claim,'' where a ''claim'' is ''the right to payment, whether or not such right is reduced to judgment, liquidated, unliquidated, fixed, contingent, matured, unmatured, disputed, undisputed, legal, equitable, secured, or unsecured.'' [20]

The only enumerated consumer financial law identified in the Consumer Financial Protection Act [21] that defines ''debt,'' the Fair Debt Collection Practices Act (FDCPA), broadly states that debt encompasses ''any obligation or alleged obligation of a consumer to pay money arising out of a transaction in which the money, property, insurance, or services which are the subject of the transaction are primarily for personal, family, or household purposes, whether or not such obligation has been reduced to judgment.'' [22] The main limiting feature in the definition of ''debt'' in the FDCPA is that it is limited to transactions for personal, family, or household purposes, a limitation already imposed elsewhere in TILA.[23] The FDCPA definition, therefore, also supports a broad reading of ''debt'' under TILA and Regulation Z in this context, consistent with ordinary usage that includes all obligations to pay another.

In an earned wage transaction, the consumer incurs an obligation to pay money at a future date. For some earned wage products, the specific amount of money that the consumer is obligated to pay at a future date has an element of contingency; for example, the obligation may be limited by whether funds available from the next payroll event (or events) are sufficient to cover the amount of earned wage funds the consumer received. But that is still an obligation to pay money at a future date. TILA has long been understood to cover contingent obligations.[24]

Earned wage products provide consumers with ''the right to defer payment of debt or to incur debt and defer its payment'' because they incur a ''debt'' when they obtain money with an obligation to repay via an authorization to debit a bank account or using one or more payroll deductions.[25] It does not matter that the obligation to repay is sometimes satisfied via payroll deduction.[26] It is still an act of repayment. In contrast, when an employer pays wages, no later act of repayment is required, by deduction or otherwise.

This interpretive rule replaces the advisory opinion the CFPB issued in November 2020, which stated that some earned wage products are not ''credit'' because they would not constitute a ''debt.'' [27] A primary justification for this statement, based on a legal dictionary definition of ''debt'' requiring a ''liability,'' was that the narrow type of earned wage products covered by that opinion—which, among other characteristics, were administered through the employer and cost-free to the consumer—were ''effectively'' providing earned wages to consumers early and, therefore, were not debts. Per the analysis above, the 2020 advisory opinion—narrowly focused as it was on one unique type of product—did not consider the full scope of available precedent and definitions in common legal usage when reaching its narrow conclusion.[28] Many credit products are used to gain liquidity in advance of receipt of a paycheck and thus will have some *de facto* resemblance to early payment of wages, but that does not take them outside the definition of credit. Earned wage products, as distinct from an employer's actual payment of wages, are no exception.[29]

Moreover, because the 2020 advisory opinion only addressed one particular type of product, its analysis does not shed light on how TILA and Regulation Z apply to new offerings on the market. The 2020 advisory opinion found that the products it addressed ''functionally operate[ ] like an employer that pays its employees earlier than the scheduled payday,'' but earned wage products in which, for example, consumers make a payment in connection with receiving funds do *not* leave consumers in the same position that they would be if their employer just paid them earlier. While the 2020 advisory opinion emphasized the absence of fees or charges to support its conclusion that covered products were different in kind from the credit covered by TILA and Regulation Z, except on a small number of employer-specific products, the vast majority of earned wage transactions involve consumer payment.[30]

2. Finance Charge Disclosures Include Consumer Payments That Are Made Incident to the Extension of Credit and Imposed by the Creditor Directly or Indirectly on the Consumer

a. General

In general, the obligations of Regulation Z apply to any credit provider that regularly offers or extends consumer credit subject to a finance charge.[31] The finance charge is ''the cost of consumer credit as a dollar amount.'' [32] Unless specifically excluded by the regulation, this includes ''any charge payable directly or indirectly by the consumer and imposed directly or indirectly by the creditor as an incident to or a condition of the extension of credit.'' [33] If providers do not disclose finance charges properly, they violate Regulation Z.

Neither Regulation Z nor TILA further explains the meaning of ''incident to the extension of credit.'' The statute's history and context indicate that Congress intended this term to be interpreted expansively. When TILA was enacted in 1968, Black's Law Dictionary defined ''incident'' to mean ''anything which is usually connected with another, or connected for some purposes, though not inseparably.'' [34] The phrase ''incident to the extension of credit'' thus did not require that the degree of connection be significant. The Supreme Court, in a unanimous decision by Justice Thomas, noted in the context of TILA's finance charge

exchange for a specific portion of the merchant's proceeds from future sales of goods and services—are credit, notwithstanding that the repayment obligation may be contingent on the merchant's future sales); Consent Order, *In re Better Future Forward, Inc.,* Admin. Proceeding No. 2021–CFPB–005 (Sept. 7, 2021) (identifying as credit income share agreements, which ''finance postsecondary education'' whereby ''[i]n exchange for money up front, students agree that once their income exceeds an income threshold, they will make payments based on a percentage of their income until either: (i) they meet a payment cap or (ii) a period of years elapses.'').

[25] Earned wage products are offered or extended to consumers primarily for personal, family, or household purposes, so they also meet the Regulation Z definition of ''consumer credit.'' 12 CFR 1026.2(a)(12).

[26] It is not uncommon for credit providers to compel repayment of debt using wage garnishment automatically deducted from consumer paychecks. Payday lenders are sometimes repaid through court-ordered wage garnishment. *See* CFPB, *Ask CFPB: Can a Payday Lender Garnish My Bank Account or My Wages?* (last reviewed Sept. 23, 2022), *https://www.consumerfinance.gov/ask-cfpb/can-a-payday-lender-garnish-my-wages-en-1609/.* Consumers may pay some lenders directly by paycheck allotment. *Cf.* 12 CFR part 1026, supplement I, comment 2(a)(14)–2 (''Credit includes a transaction in which a cash advance is made to a consumer . . . in exchange for the consumer's authorization to debit the consumer's deposit account, and where the parties agree . . . that the consumer's deposit account will not be debited, until a designated future date.'').

[27] *See 2020 Advisory Opinion, supra* note 6.

[28] The 2020 advisory opinion stated that there would not be a ''liability.'' That word is not used in all dictionary definitions of the term ''debt,'' and regardless, the earned wage product did require repayment.

[29] The CFPB also noted that the 2020 advisory opinion would be consistent with 12 CFR part 1026, supplement I, comment 2(a)(14)–A31JY2.1.v. *See 2020 Advisory Opinion, supra* note 6, at 9. However, that comment was promulgated as an exclusion from the definition of ''credit'' after notice and comment, which suggests that the product would be subject to TILA and Regulation Z but for the exclusion. Products similar to products in the exclusion, but not covered by the exclusion, should therefore be presumed to be ''credit.''

In the 2020 advisory opinion, the CFPB also noted that its interpretation was consistent with certain statements in the CFPB's 2017 Payday Lending Rule. However, the Payday Rule did not make a determination as to whether earned wage products are credit, stating only that some product constructs ''may not be.'' The CFPB declined to perform the more detailed analysis necessary to come to a considered conclusion on the boundaries of TILA and Regulation Z at that time because that was not necessary for the rulemaking exercise. It is performing that analysis now, in this interpretive rule. Some earned wage products may not be covered by the Payday Rule because of its ''wage advance'' and ''no cost advance'' exclusions. *See* 12 CFR 1041.3(d)(7) and (8). However, these exclusions can only apply to earned wage products to the extent that such products are TILA and Regulation Z credit. As a result, the CFPB's earlier decision to exclude certain earned wage product constructs from the Payday Rule has no impact on the credit status of such products under TILA or Regulation Z.

[30] *See, e.g., 2024 Paycheck Advance Report, supra* note 2, at 11 (''Without employer subsidization, across both years in our [employer-partnered earned wage] sample, around 90% of workers paid at least one fee and approximately 82% of transactions incurred a fee.''); Cal. Dep't of Fin. Prot. & Innovation, *2021 Earned Wage Access Data Findings,* at 7 (2023), *https://dfpi.ca.gov/wp-content/uploads/sites/337/2023/03/2021-Earned-Wage-Access-Data-Findings-Cited-in-ISOR.pdf* (''In 2021, for the 5,827,120 transactions completed by tip-based companies, providers received tips 73% of the time.''). To the extent the interpretation underlying the 2020 Payactiv approval order articulated a different rationale regarding fees or charges for earned wage transactions, the CFPB no longer believes that interpretation is correct.

[31] *See* 12 CFR 1026.1(c)(1)(iii). Note that finance charges are not a necessary precondition for the obligations of Regulation Z to apply to a provider of Regulation Z credit. For example, the requirements of Regulation Z will apply where the provider regularly offers or extends consumer credit that is payable by a written agreement in more than four installments, even if the credit provided is not subject to finance charges. *See id.* As another example, certain Regulation Z requirements apply when the offering or extension of consumer credit involves a credit card, even if the credit is not subject to a finance charge. *See* 12 CFR 1026.1(c)(2). This interpretive rule does not state any view about grounds on which an earned wage provider of Regulation Z credit might be subject to Regulation Z obligations other than due to their provision of credit subject to a finance charge.

[32] 12 CFR 1026.4(a).

[33] *Id.*

[34] *Incident,* Black's Law Dictionary (4th ed. 1968).

provision that while ''the phrase 'incident to or in conjunction with' implies some necessary connection between the antecedent and its object . . . the phrase 'incident to' does not make clear whether a substantial (as opposed to a remote) connection is required.'' [35] Thus, while a substantial connection may not be the minimum degree of connection required under Regulation Z and TILA for a payment to be part of the consumer's cost of credit, as an interpretive matter, any payment exacted by the creditor that *is* substantially connected must be part of the finance charge.[36]

In addition, a payment may be ''imposed directly or indirectly by the creditor'' and hence part of the finance charge even if the credit can be obtained without making such payment. Regulation Z includes in the cost of credit payments imposed by the creditor that are ''conditions of'' the extension of credit and that are ''incident to'' it.[37] By the same token, a creditor can ''impose'' a cost on a consumer—in the sense of exacting it from them—''directly or indirectly'' even if that payment is not required for the extension of credit.[38] The non-exhaustive list of finance charges provided in Regulation Z includes consumer payments that, even when they are not a condition of the extension of credit, are nonetheless finance charges because the creditor exacts them in connection with the extension of credit.[39]

Two costs that consumers may incur in connection with particular extensions of earned wage credit are ''tips'' (and other similarly labeled payments, like ''gratuities'') and expedited funds delivery fees. When incurred, these payments are substantially connected to the extension of credit. Each happens because of the associated extension of credit, and the connection between each type of payment and that extension is close and clear. Thus, each is incident to the extension of credit. Expedited funds delivery fees are also ''imposed directly or indirectly by the creditor'' and so should be included as part of the ''cost of consumer credit as a dollar amount.'' Under certain circumstances, discussed further below, ''tips'' and similarly styled consumer payments may similarly be ''imposed directly or indirectly by the creditor'' such that they are a part of the finance charge.

b. Expedited Funds Delivery Fees

Speed of access to funds is an integral and defining aspect of earned wage products. They are designed to address—and marketed as addressing—the liquidity problem that arises between the accrual of wages and their actual payment. That problem necessarily occurs in a very short period,[40] so the value of this type of credit to the consumer includes the rapid availability of funds. Thus, when earned wage product providers offer two speeds for delivering funds (which they typically do), consumers predominantly opt for the faster.[41] That option typically involves direct imposition of an expedited delivery or ''instant funds'' fee that the creditor does not impose on the slower form of credit.

Availability of a slower speed does not control the cost of credit for the faster form of credit. Though consumers may not have to opt for faster funds, when they do so, the resulting speed is a feature of the credit extended, so the resulting fee is part of the cost of credit. As observed by the Board of Governors of the Federal Reserve System, ''even though a lender may not require a particular loan feature, the feature may become a term of the credit if it is included.'' [42] The speed with which earned wage credit provides liquidity to the consumer is an integral feature of such credit, which is why consumers tend to opt for faster delivery when it is available. Thus, when the consumer pays for that faster delivery, the associated fee is immediately and directly connected to the particular extension of credit. That substantial connection makes this ''a fee imposed as an incident to that particular extension of credit,'' and accordingly one that must be disclosed as part of the finance charge.[43]

---

[35] *Household Credit Servs., Inc.* v. *Pfennig,* 541 U.S. 232, 240–41 (2004). In *Pfennig,* the Supreme Court held that an overlimit fee was not unambiguously imposed as an incident to the extension of credit because it could reasonably be seen as a penalty for violation of the credit agreement instead. *See id.* at 239–41. The Court recognized that ''regardless of how the fee is characterized,'' there was ''at least some connection'' between the fee and credit extension, but that was not enough to conclude that the fee was necessarily imposed as an ''incident to'' credit because the term ''does not make clear whether a substantial (as opposed to a remote) connection is required.'' *Id.* at 241.

[36] This interpretive rule does not seek to establish the degree of connection required beyond interpreting ''incident to'' to cover charges that are substantially connected to a particular extension of credit.

[37] TILA's definition of finance charge only references charges imposed ''as an incident to the extension of credit.'' 15 U.S.C. 1605(a). The Board's implementing regulation then interprets the statutory term ''incident to'' as encompassing—while not being limited to—payments that are conditions of the extension of credit. *See* 12 CFR 1026.4(a). This interpretation has been in uninterrupted effect since the Board first adopted TILA regulations on point.

[38] TILA's history and context indicate that Congress intended the word ''imposed'' to be interpreted broadly to encompass a variety of charges the creditor might seek to have a consumer pay in connection with the extension of credit. The finance charge definition uses parallel language: the charges are ''payable directly or indirectly by'' the consumer, and ''imposed directly or indirectly by'' the creditor. The structure of the provision thus uses ''imposed'' as a counterpoint to ''payable,'' so as to identify the party doing the charging as opposed to the party being charged. Similarly, the 1968 Black's Law Dictionary definition of ''impose''—''to levy or exact as by authority; to lay as a burden, tax, duty, or charge''—emphasizes the deployment of power by the party doing the imposing. *Impose,* Black's Law Dictionary (4th ed. 1968). As the Board previously noted, ''the term 'imposed' is understood broadly, to include any cost charged by the creditor (unless otherwise excluded).'' 60 FR 66179, 66180 (Dec. 21, 1995). *See also, e.g., Impose,* Merriam-Webster, *https://www.merriam-webster.com/dictionary/impose* (last updated Feb. 9, 2024) (defining ''impose'' with a range of meanings, from ''to establish or apply by authority'' to ''to establish or bring about *as if* by force'' to simply ''pass off'' (emphasis added)).

[39] *See* 12 CFR 1026.4(b); *see also* 61 FR 49237, 49239 (Sept. 19, 1996) (explaining that payments for services that the creditor does not require can still be finance charges when the payment is ''imposed as an incident to that particular extension of credit''); *cf. Incident,* Black's Law Dictionary (11th ed. 2019) (defining ''incident'' as ''[d]ependent upon, subordinate to, arising out of, or otherwise connected with (something else, usu. of greater importance)'').

[40] To obtain earned wage credit, consumers must first accrue wages within a given pay period. Repayment then occurs at or very shortly after the conclusion of that same pay period. As a result, the duration of any particular earned wage credit extension has to be very brief.

[41] *See 2024 Paycheck Advance Report, supra* note 2, at 11. For the sample of employer-partnered providers covered in the CFPB's 2024 Report, expedited delivery fees accounted for more than 96.6 percent of all consumer-paid fee revenue by dollar value. *See id.* Public data also indicates that earned wage advance providers relying on a tipping revenue model obtain more than 25 percent of the dollar value of consumer payments as expedited delivery fees. *See* Cal. Dep't of Fin. Prot. & Innovation, *supra* note 30, at 6 n.11, 7.

[42] 61 FR 49237, 49239 (Sept. 19, 1996). The expedite fee at issue here differs in kind from the two types of expedite fees previously considered by the Board of Governors of the Federal Reserve System in the context of credit cards accessing home equity lines of credit: a fee for expediting delivery of the physical card, and a fee for expediting a consumer's payment. *See* 12 CFR part 1026, supplement I, comments 6(a)(2)–2(ix) and (x). The Board determined that fees for those services did not need to be included in account opening disclosures as ''other charges'' or ''finance charges.'' *See* 68 FR 16185, 16186–87 (Apr. 3, 2003). Neither of those services—faster possession of a physical card or faster payments of amounts outstanding—are as closely and integrally connected to the extension of credit as faster funds access is to obtaining an earned wage product.

[43] *Cf.* 61 FR 49237, 49239 (Sept. 19, 1996) (noting with respect to debt cancellation fees that ''[a]lthough the same loan may be available without that feature, with respect to a loan that has been structured in this manner, the . . . fee is one that has been imposed as an incident to that particular extension of credit''). Before this clarification from the Board, the Eleventh and Seventh Circuits had held that charges for optional services should not be considered finance charges because the consumer assumed their payment voluntarily. *See Veale* v. *Citibank,* 85 F.3d 577, 579–81 (11th Cir. 1996); *McGee* v. *Kerr-Hickman,* 93 F.3d 380, 381–86 (7th Cir. 1996). The CFPB sees no textual basis

Regulation Z also covers expedited delivery fees as finance charges because such a fee is a ''condition'' of an extension of credit. As noted above, when an earned wage product provider offers a slower and faster loan, and the faster loan requires payment of an expedited delivery fee, the expedited delivery fee is a ''condition'' of the extension of that type of credit.

c. ''Tips'' and Similarly Labeled Payments

In connection with the extension of earned wage credit, some providers solicit consumers for what they variously describe as ''tips,'' ''gratuities,'' ''donations,'' ''voluntary contributions,'' or the like. The CFPB is aware of a wide range of practices used by credit providers to solicit these kinds of payments from consumers, including: default ''tip'' amounts that the consumer must remove each time to avoid being charged; suggesting particular ''tip'' amounts or percentages; suggesting or stating that ''tips'' serve to ensure the future supply of credit to the individual or other users; and including multiple prompts to ''tip'' throughout the process of receiving credit.

Whatever the exact practice used, when such ''tip'' payments are solicited and then paid in connection with the extension of credit, there is a clear and close connection between the ''tip'' and the associated extension of credit. In such circumstances, consumers pay the ''tip'' for the credit extended, and the credit is the direct and proximate cause of the ''tip.'' [44] That substantial connection between payment and associated extension of credit means that the payment is ''incident to . . . the extension of credit.'' [45] Indeed, as a practical matter, tips are a central source of revenue for the earned wage product providers that solicit them. For such providers, public data shows that consumers made ''tip'' payments in connection with about 73 percent of all such credit extensions, with such payments representing roughly the same share of consumer-side revenue for these providers.[46]

As explained above, a payment may be ''imposed directly or indirectly by the creditor'' and hence may be part of the finance charge even if the credit can be obtained without making the payment.[47] Under certain circumstances, ''tips'' and similarly styled consumer payments may be ''imposed directly or indirectly by the creditor'' such that they are part of the finance charge. A provider using its authority—real or implied—to exact a ''tip'' from a consumer in connection with an earned wage transaction has ''imposed'' the resulting consumer payment.[48] Relevant considerations when determining whether a ''tip'' or similar payment is imposed by the creditor as part of the finance charge include but are not limited to: soliciting a ''tip'' before or at the time of a credit extension (rather than some significant time after it); labeling the solicited payment with a term (such as ''tip'') that carries an expectation that the consumer will make such a payment in the normal course; setting default ''tip'' amounts or otherwise making it practically more difficult for the consumer to avoid leaving a ''tip''; suggesting ''tip'' amounts or percentages to the consumer; repeatedly soliciting ''tips,'' even in the course of a single transaction; and stating or otherwise implying, directly or indirectly, truthfully or otherwise, that ''tipping'' may impact subsequent access to or use of the product.[49]

III. Regulatory Matters

This is a proposed interpretive rule issued under the CFPB's authority to interpret TILA and Regulation Z, including under section 1022(b)(1) of the Consumer Financial Protection Act of 2010, which authorizes guidance as may be necessary or appropriate to enable the CFPB to administer and carry out the purposes and objectives of Federal consumer financial laws.[50] While not required under the Administrative Procedure Act (APA), the CFPB is soliciting comments on the proposal and may make revisions when it issues a final interpretive rule as appropriate in light of feedback received.

By operation of TILA section 130(f), no provision of TILA sections 130, 108(b), 108(c), 108(e), or section 112 imposing any liability would apply to any act done or omitted in good faith in conformity with the final interpretive rule, notwithstanding that after such act or omission has occurred, the final interpretive rule is amended, rescinded, or determined by judicial or other authority to be invalid for any reason.[51]

The CFPB has determined that this proposed interpretive rule, if finalized, would not impose any new or revise any existing recordkeeping, reporting, or disclosure requirements on covered entities or members of the public that would be collections of information requiring approval by the Office of Management and Budget under the Paperwork Reduction Act.[52]

Rohit Chopra,

Director, Consumer Financial Protection Bureau.

[FR Doc. 2024–16827 Filed 7–30–24; 8:45 am]

BILLING CODE 4810–AM–P

in the regulation (or statute) to disagree with the Board's considered 1996 position on payment for voluntary services. As the Board discerned, it does not matter that it is possible to obtain credit without the relevant service if the service is a feature of the loan affecting the total price paid for the credit.

[44] Such payments are not tips or gratuities in any traditional sense. Consumers generally pay tips to individual workers in the service industry, not to firms (whether partnered with the employer or otherwise) for lending them money. Providers should exercise care in ensuring that the language they use here is not deceptive.

[45] *See supra* note 35.

[46] *See* Cal. Dep't of Fin. Prot. & Innovation, *supra* note 30, at 1, 7.

[47] As explained above, payments that are not required as a condition of the credit but are nonetheless incident to it can be ''imposed directly or indirectly by the creditor.'' Including only ''conditions of'' the extension of credit in the finance charge would improperly read ''incident to'' out of Regulation Z's definition of finance charge, and a creditor can ''impose'' a cost on a consumer even if the cost is not required for the extension of credit.

[48] A consumer's reasonable understanding that a provider expects a ''tip'' in connection with a transaction is evidence that the provider exacts it as if by authority. This kind of reasonable understanding does not depend on whether ''tipping'' impacts the supply of credit to the consumer now or in the future.

[49] The presence or absence of one or all of these considerations may not be determinative. The importance and relevance of these and other considerations will vary in the context of a particular product and how it is offered or provided to consumers.

CONSUMER PRODUCT SAFETY COMMISSION

16 CFR Part 1500

[CPSC Docket No. CPSC–2021–0015]

Banned Hazardous Substances: Aerosol Duster Products Containing More Than 18 mg in Any Combination of HFC–152a and/or HFC–134a

AGENCY: Consumer Product Safety Commission.

ACTION: Notice of proposed rulemaking.

SUMMARY: The U.S. Consumer Product Safety Commission (Commission or CPSC) is proposing to declare that any aerosol duster products that contain more than 18 mg in any combination of HFC–152a and/or HFC–134a are banned hazardous substances under the Federal Hazardous Substances Act (FHSA). For the ten-year period from 2012 to 2021, CPSC is aware of more than 1,000 deaths, and estimates 21,700 treated injuries involving the inhalation of aerosol duster products. The proposed

rule addresses deaths and injuries associated with the propellants HFC–152a and HFC–134a used in aerosol duster products. The Commission is providing an opportunity for interested parties to submit written comments on this notice of proposed rulemaking (NPR).

DATES: Written comments must be received by September 30, 2024.

ADDRESSES:

Written Comments:

Comments related to the Paperwork Reduction Act aspects of the proposed rule should be directed to the Office of Information and Regulatory Affairs, OMB, Attn: CPSC Desk Officer, FAX: 202–395–6974, or emailed to *oira_submission@omb.eop.gov.*

Other written comments in response to the proposed rule, identified by Docket No. CPSC–2021–0015 may be submitted by any of the following methods:

Electronic Submissions: Submit electronic comments to the Federal eRulemaking Portal at: *www.regulations.gov.* Follow the instructions for submitting comments. CPSC typically does not accept comments submitted by email, except as described below. CPSC encourages you to submit electronic comments by using the Federal eRulemaking Portal, as described above.

Mail/Hand Delivery/Courier/Written Submissions: Submit comments by mail/hand delivery/courier to: Office of the Secretary, Consumer Product Safety Commission, 4330 East West Highway, Bethesda, MD 20814; telephone: (301) 504–7479. If you wish to submit confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public, you may submit such comments by mail, hand delivery, courier, or you may email them to: *cpsc-os@cpsc.gov*.

Instructions: All submissions must include the agency name and docket number. CPSC may post all comments without change, including any personal identifiers, contact information, or other personal information provided to: *www.regulations.gov.* Do not submit through this website: confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If you wish to submit such information, please submit it according to the instructions for mail/hand delivery/courier/written submissions.

Docket for NPR: For access to the docket to read background documents or comments received, go to: *www.regulations.gov,* insert the docket number CPSC–2021–0015 into the ''Search'' box, and follow the prompts.

FOR FURTHER INFORMATION CONTACT: Mary Kelleher, Directorate for Health Sciences, Consumer Product Safety Commission, National Product Testing and Evaluation Center, 5 Research Place, Rockville, MD 20850; telephone: 240–429–4894; *mkelleher@cpsc.gov.*

SUPPLEMENTARY INFORMATION: In this NPR, the Commission proposes to declare any aerosol duster canisters containing more than 18 mg of the hazardous chemicals HFC–152a and/or HFC–134a to be banned hazardous substances under the FHSA. From 2012 to 2021, inhalation of these products resulted in 1,039 known deaths and an estimated 21,700 emergency department (ED) treated injuries in the United States. Although aerosol duster products that do not contain these hazardous substances would likely be more expensive, over 30 years the proposed rule is projected to yield net benefits of nearly $2 billion, with more than 16 dollars of benefit for every dollar of cost. Furthermore, aerosol duster products will remain available and affordable alternatives such as electric dusters are also available.

I. Background

On April 2, 2021, Families United Against Inhalant Abuse (FUAIA) submitted a petition requesting that the Commission initiate rulemaking to adopt a mandatory safety standard to address the hazards associated with aerosol duster products used for cleaning electronics and other items containing the chemical 1,1-difluorethane, or any derivative thereof. The petition requested CPSC conduct rulemaking to address the numerous deaths and injuries associated with inhalant abuse of aerosol duster products. Specifically, the petition requested a performance standard requiring that manufacturers add an aversive agent (bitterant other than denatonium benzoate) to all duster aerosol products at a level of 30–40 ppm, and it requested a required warning stating: ''DANGER: DEATH—This product can kill you if you breath [sic] it.'' [1]

On June 29, 2021, the Commission published in the **Federal Register** a request for comments on the petition. 86 FR 34171. On July 20, 2022, staff submitted a briefing package to the Commission regarding the petition.[2] On July 26, 2022, the Commission voted to defer action on the petition to allow staff to conduct further research.[3] On July 26, 2023, staff submitted an updated briefing package to the Commission regarding the petition.[4] The Commission granted the petition on August 1, 2023, directing staff to initiate rulemaking to address the inhalation hazard associated with aerosol duster products.[5]

II. Statutory Authority

This rulemaking is conducted under the provisions of the FHSA and the Consumer Product Safety Act (CPSA). 15 U.S.C. 1261–1278; 15 U.S.C. 2058. The rulemaking proposal involves two elements. First, pursuant to sections 2(f)(1)(A), 2(q)(1)(B), and 3 of the FHSA, the Commission is proposing to ban any aerosol duster product containing more than 18 mg of either of two hydrofluorocarbon propellants—1,1-difluoroethane (HFC–152a, CAS # 75–37–6) and 1,1,1,2-tetrafluoroethane (HFC–134a, CAS # 811–97–2)—or of a combination of these propellants. 15 U.S.C. 1261(f)(1)(A), (q)(1)(B), 1262 (proposed 16 CFR 1500.17(a)(14)). Second, to prevent circumvention of the proposed ban, pursuant to section 9(g)(2) of the CPSA, the Commission is proposing a stockpiling prohibition that would prohibit a manufacturer from stockpiling banned aerosol duster products containing above the specified amount of HFC–152a and/or HFC–134a that are subject to the proposed ban. 15 U.S.C. 2058(g)(2).

More specifically, the Commission is proposing to declare that any aerosol duster canister containing more than 18 mg of HFC–152a and/or HFC–134a to be a ''hazardous substance'' and a ''banned hazardous substance'' within the meaning of sections 2(f)(1)(A) and

[1] The petition is available at *https://www.cpsc.gov/Regulations-Laws--Standards/Rulemaking/Petitions.* The petitioner also requested that CPSC require retailers to limit multiple duster can purchases during a one-month time period; the Commission, however, explained that it does not have rulemaking authority over such personal purchasing decisions. 86 FR 34171, n.1 (June 29, 2021).

[2] *www.cpsc.gov/s3fs-public/Petition-Requesting-Rulemaking-to-Establish-Safety-Standard_0.pdf?VersionId=GNEl7pYZUBOxf1BLSC0f4.X6TlA8gT4f.*

[3] *www.cpsc.gov/s3fs-public/RCA-Petition-Requesting-Rulemaking-to-Establish-Safety-Standard-for-Aerosol-Dusters-Products-Petition-CP-21-1.pdf?VersionId=uD1mraIGCZcjBd9xiyZsanVRbngVzUvP.*

[4] *www.cpsc.gov/s3fs-public/Petition-Requesting-Rulemaking-to-Establish-Safety-Standard-for-Aerosol-Duster-Products-Petition-CP-21-1.pdf?VersionId=.NohA6DG6WsXh_tsjhGuA7RuqMCOvxSW.*

[5] *www.cpsc.gov/s3fs-public/RCAPetitionRequestingRulemakingtoEstablishSafetyStandardforAerosolDusterProductsPetitionCP21_1.pdf?VersionId=nQcgEM4wvCJE97zmhwYCdAkwuluYerIt.*

(q)(1)(B) of the FHSA.[6] 15 U.S.C. 1261(f)(1)(A), (q)(1)(B). Section 2(q)(1)(B) of the FHSA defines a ''banned hazardous substance'' to include any hazardous substance intended, or packaged in a form suitable, for household use which, notwithstanding the precautionary labeling required by the FHSA, presents such a hazard that keeping the substance out of interstate commerce is the only adequate means to protect the public health and safety. 15 U.S.C. 1261(q)(1)(B).

A proceeding to classify a hazardous substance as a ''banned hazardous substance'' under section 2(q)(1)(B) of the FHSA is governed by the requirements set forth in section 3 of the FHSA. *See* 15 U.S.C. 1261(q)(2) and 1262. The proposed rule begins the rulemaking process in accordance with the requirements of sections 3(a) and (h) of the FHSA. See 15 U.S.C. 1262(a) and (h). Pursuant to section 3(a), the Commission is proposing to declare any aerosol duster canister containing more than 18 mg in any combination of HFC–152a and/or HFC–134a to be a hazardous substance. In order to declare that a hazardous substance is banned, section 3(h) of the FHSA requires the Commission to publish in the **Federal Register** the text of a proposed rule, including any alternatives together with a preliminary regulatory analysis containing: (1) a preliminary description of the potential benefits and costs of the proposed rule; (2) a discussion of the reasons why any standard or portion of a standard submitted to the Commission was not published as the proposed rule; (3) a preliminary determination regarding why the voluntary standards process would not, within a reasonable time, result in the development of a voluntary standard that would eliminate or adequately reduce the risk of injury identified in the rule; and (4) a description of any reasonable alternatives to the proposed rule, together with a summary description of the potential benefits and costs, and a brief explanation of why such alternatives should not be published as the proposed rule. 15 U.S.C. 1262(h).

Before issuing a final rule banning any hazardous substance, the Commission must publish the text of the final rule and a final regulatory analysis that includes: (1) a description of the potential benefits and costs of the rule (including costs and benefits that cannot be quantified in monetary terms, and identification of those likely to receive the benefits and bear the costs); (2) a description of alternatives considered by the Commission (including a description of their potential benefits and costs and an explanation of why the alternatives were not chosen); and (3) a summary of significant issues raised by comments on the preliminary regulatory analysis and a summary of the assessment by the Commission of such issues. 15 U.S.C. 1262(i)(1). The Commission must also make findings that: (1) any relevant voluntary standard is unlikely to adequately reduce the risk of injury or substantial compliance with the voluntary standard is unlikely; (2) the expected benefits of the regulation bear a reasonable relationship to expected costs; and (3) the regulation imposes the least burdensome requirement that would adequately reduce the risk of injury. 15 U.S.C. 1262(i)(2).

III. The Product

A. Description of the Product

Aerosol duster products use a trigger or similar means to release a propellant[7] (typically a hydrofluorocarbon) through an orifice or attachment such as a nozzle or straw for the purpose of blowing and removing dust and debris from hard-to-reach places. Although sometimes referred to as ''canned air,'' aerosol duster products actually contain essentially 100 percent propellent,[8] which is typically a chemical such as a hydrofluorocarbon that can be compressed into a liquid for storage. Each such aerosol duster canister typically contains about 3 to 20 ounces (85 g to 567 g) of compressed liquid in equilibrium with a small amount of evaporated gas or vapor of that same chemical. The gas or vapor, consisting of nearly pure propellant chemical, is expelled when the trigger or similar means is activated, which causes more of the liquid to evaporate into gas or vapor within the canister in order to return to equilibrium. This allows multiple uses per canister. Figure 1 below, from US Patent, US–9234123–B2[9] illustrates an example of an aerosol duster product showing the propellent liquid and vapor existing in equilibrium.

[6] The Commission voted 5–0 to publish this proposed rule.

[7] Aerosol propellant is a liquid which exists in equilibrium also as a gas, or compressed gas that is used to expel aerosol content from a pressurized container.

[8] Various aerosol duster products include trace amounts of denatonium benzoate, or other bitterants in order to discourage inhalant abuse.

[9] *https://patentcenter.uspto.gov/applications/13848372.*

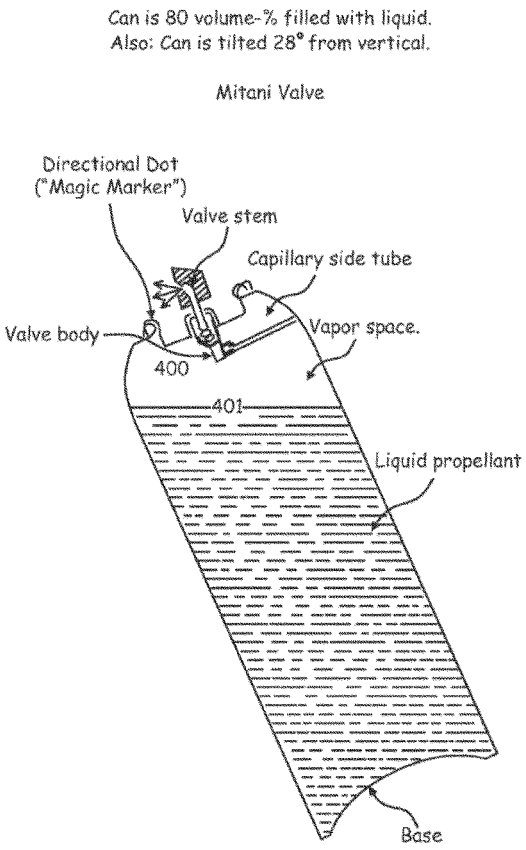

Figure 1: Illustration of the Contents of an Aerosol Duster Product.

Aerosol duster products are sold under a variety of brand names and are available in various brick and mortar stores and online retail locations. They are relatively inexpensive to purchase and easy to obtain either in stores or online. For example, online retailers sell individual canisters for about $8–10 per canister, and some retailers offer a discount when the product is purchased in bulk. Aerosol duster products are often referred to as electronics dusters, computer keyboard cleaners, canned air or compressed air dusters, aerosol cans or spray, and electronics air cleaners, among other names. (See Figure 2 below for examples of 10 oz aerosol duster products).

Figure 2: Aerosol Duster Product Examples.

Aerosol duster products typically use one or more of three propellants: 1,1-difluorethane (HFC–152a, CAS #75–37–6), 1,1,1,2-tetrafluoroethane (HFC–134a, CAS #811–97–2), and/or trans-1,3,3,3-tetrafluoropropene (HFO–1234ze, CAS

#29118–24–9). HFC–152a and HFC–134a are known to be hazardous as explained in this Notice. According to Euromonitor, approximately 87 percent of aerosol duster products available for sale in the U.S. use the propellant HFC–152a and 11 percent use HFC–134a. HFO–1234ze is a new propellant. The abuse potential for HFO–1234ze is unknown due to its relatively low use in consumer applications. Similarly, other effects on humans have not been reported. Further discussion about HFO–1234ze can be found in Tab B of the July 2023 staff petition briefing package.[10]

In order to determine the amount of propellant released from a single use of an aerosol duster product, laboratory sciences staff conducted testing of various aerosol duster products,[11] and based on that testing, determined that a trigger pull from a single aerosol duster canister lasting 5 seconds [12] releases 7.53 grams of propellant, when not using the straw provided with the product. This information regarding the 5 second time per trigger pull helped staff better understand how much propellant inhalant abusers are able to inhale with a single trigger pull of an aerosol duster product.

B. Scope of Products Subject to the NPR

Aerosol duster products are generally intended to be used for cleaning and blowing off dust from electronics as well as other household items. This NPR would apply only to aerosol duster products that contain the propellants HFC–152a or HFC–134a. Aerosol duster products using HFO–1234ze (or other substances) as a propellant are outside the scope of this NPR. Other examples of aerosol products that are outside the scope of this NPR include products that use HFC–152a or HFC–134a as propellants in freeze sprays used to cool circuit boards, automotive refrigerants, and medical freeze sprays used to cool tissue specimens as well as aerosol products that use HFC–152a or HFC–134a as propellants but include substantial additional components (such as air fresheners, paints, lubrication oils, body sprays, and silicone lubricant sprays for food pans).

C. Alternatives to Aerosol Duster Products With HFC–152a and HFC–134a

Alternatives to aerosol duster products are currently being sold for the same purpose as aerosol duster products. For example, alternatives include compressed air dusters which use corded or cordless electric pumps, or hand pumps that compress air and blow and/or vacuum it through a nozzle to remove dirt and debris. According to data collected in 2023, the average price of an electric duster is approximately $56, similar to the price of seven disposable aerosol duster canisters.[13] Staff tested battery operated USB rechargeable duster devices. The goal was to compare air speeds, measured in meters/second (m/s), generated by the battery powered devices to the speeds generated by an aerosol duster product. Three battery powered devices and two name-brand aerosol dusters were chosen for the comparison. Staff concluded that battery powered air duster devices generate comparable air speeds to the propellant speeds of aerosol duster products. See Tab D of the July 26, 2023, staff briefing package for more details on electronic dusters.[14] Carbon dioxide (CO_2) cartridge dusters that use disposable CO_2 cartridges to blow CO_2 through a nozzle to remove dirt and debris are available as well. Consumers can also use vacuum cleaners to remove dust. Thus, a number of alternative products exist that provide similar utility to that provided by aerosol duster products.

IV. Description of the Hazard

Aerosol duster products can cause significant toxicity or death if used as inhalants (Williams, 2007). Inhalants are volatile substances that produce chemical vapors that can be inhaled to induce psychoactive, or mind-altering, effects.[15] The inhalants in aerosol duster products are legally sold for purposes other than use as inhalants, are widely available, and are inexpensive. Inhalant abusers include males and females ranging in age from teenagers to adults in their 60s. Approximately 10 to 50 percent of cases of inhalant abuse may lead to abuse or dependance, depending on the characteristics of the population studied (Perron et al., 2021).

Staff has identified two toxic substances, HFC–152a and HFC–134a, that are commonly used as propellants in aerosol duster products and are widely used for inhalant abuse. Inhalant abusers use propellants to get ''high'' (Koehler and Henninger, 2014). These propellants can be sniffed, snorted or sprayed,[16] huffed,[17] or bagged [18] as inhalants to obtain a rapid euphoric effect (DEA, 2020). The euphoric effect only lasts a few minutes, requiring the repeat use of an aerosol duster product every few minutes to maintain the euphoria. These propellants can damage the heart when abused, making an individual more susceptible to a heart attack or arrhythmia [19] after an individual inhales the propellant. The abuse potential of the propellants HFC–152a and HFC–134a are further discussed below.

A. Inhalants Used in Aerosol Duster Products

1. HFC–152a (1,1-difluorethane)

HFC–152a is widely used as a propellant in the aerosol duster product market.[20] HFC–152a works through specific brain receptors [21] such as glutamate/N-methyl-D-aspartate (NMDA),[22] gamma-aminobutyric acid (GABA),[23] and dopamine [24] to elicit euphoria (Duncan and Lawrence, 2013). Aerosol duster products, especially those containing HFC–152a, are the ''drug of choice'' for many who use inhalants because they are easy to obtain, inexpensive, and contain 100 percent HFC–152a without any additional components such as paint or air freshener in the propellant (Beauvais and Oetting, 1987). After inhalation of

[14] *www.cpsc.gov/s3fs-public/Petition-Requesting-Rulemaking-to-Establish-Safety-Standard-for-Aerosol-Duster-Products-Petition-CP-21-1.pdf?VersionId=.NohA6DG6WsXh_tsjhGuA7RuqMCOvxSW.*

[15] See *nida.nih.gov/publications/research-reports/inhalants/what-are-inhalants.*

[16] Inhaling or spraying refers to inhaling the substance into the nose or mouth directly from the container.

[17] Huffing refers to placing a bag saturated with a substance over the mouth and using the nose or mouth to inhale the concentrated fumes.

[18] Bagging refers to concentrating an aerosol in a bag before inhaling.

[19] A heart arrhythmia is an irregular heartbeat caused by electrical problems in the heart.

[20] According to Euromonitor, approximately 87 percent of aerosol duster products available for sale in the U.S. use the propellant HFC–152a and 11 percent use HFC–134a.

[21] Proteins that serve as a sensor for a particulate type of molecules.

[22] The NMDA receptors are a class of receptors that respond to the neurotransmitter N-methyl-D-aspartate.

[23] The GABA receptors are a class of receptors that respond to the neurotransmitter gamma-aminobutyric acid.

[24] Dopamine is a brain neurotransmitter.

such a lipophilic [25] propellant, the substance is rapidly absorbed into the pulmonary vasculature, going directly into the lungs and easily crossing the blood-brain barrier into the brain to exert its euphoric effects. The onset of HFC–152a intoxication is rapid, and the intoxication effects are brief and dose-related, ranging from euphoria, decreased inhibition, motor excitation, and light-headedness (Koehler and Henninger, 2014).

Toxicity in humans can occur after an acute or chronic exposure to HFC–152a (Poisindex, 2021). Severe HFC–152a toxicity can cause a depressed mental state, respiratory depression, pulmonary edema, hepatic injury, and death (Poisindex, 2021). Death can occur due to sudden sniffing death syndrome (SSDS), which was first described in 1970 (Bass, 1970; George et al., 2021). Individuals inhale fluorinated hydrocarbons to become ''high'' and, if physical exertion or stress occurs, the inhaler may collapse and die. (Smeeton and Clark, 1985; Kamm, 1975; Dingle and Williams, 2019; Poisindex, 2021). Predicting the toxicity of inhaling a certain number of aerosol duster canisters is difficult because there is no clear dose-response evident in the medical literature. Death from abusing aerosol duster products is not dose dependent.[26] The medical literature indicates the use of only one canister has resulted in death (Xiong et al., 2004), while in another case inhaling multiple canisters over several years did not cause death (Peicher and Maalofouf, 2017). However, abrupt cessation of HFC–152a abuse can induce withdrawal [27] with tremors, excessive sweating, nausea, vomiting, depression, anxiety, irritability, psychosis, and hallucinations (Custer et al., 2020).

2. HFC–134a (1,1,1,2-tetrafluoroethane)

HFC–134a is another substance used as a propellant in aerosol duster products. HFC–134a is a member of the anesthetic drug class [28] (Shah et al., 2015). HFC–152a and HFC–134a have different binding mechanisms.[29] It is unclear whether the same addictive properties of HFC–152a translate to HFC–134a, but data from CPSC's Consumer Product Safety Risk Management System (CPSRMS) discussed below, show that multiple individuals have died after inhaling HFC–134a. Two other papers from medical literature demonstrate that acute exposure of HFC–134a from inhalation can be harmful (Romero et al., 2022; Burke et al., 2020). Several papers have indicated that inhalation with acute exposure to HFC–134a in humans has resulted in reactive airway dysfunction syndrome,[30] (Doshsti et al., 2016), severe hypotension, loss of consciousness, shock (Vinegar, 1997), cardiac sensitization, neurotoxicity (National Research Council, 2002), and death (Burke et al et al., 2020).

B. Description of the Hazard Pattern

To examine the hazard pattern for inhalation abuse of aerosol duster products, staff conducted 23 in-depth investigations (IDIs) with family members of individuals who died from inhaling aerosol duster products during 2020 and 2021. These IDIs were all related to HFC–152a abuse and included nine females and 14 males, between the ages of 15 to 61 years-old.

The review of the IDIs indicated the number of canisters found at the scene, the victim's history of abuse, and the scene of the incident. In five IDIs [31] only one empty canister was identified, though in some of these IDIs multiple full cans were found at the scene, and the victim had a history of aerosol duster abuse. In twelve incidents,[32] the IDIs reported that more than one completely or partially empty canister was found at the victim's death scene. In several IDIs,[33] twenty or more canisters of aerosol duster product were found with the victim at the death scene. The majority of the victims died at home, while some were found deceased in motels or in parked vehicles.

Based upon staff's review of 23 IDIs and available medical literature, the hazard pattern for inhalation deaths from HFC–152a aerosol duster products includes both males and females; covers a wide age range; indicates that death can occur from inhalation of a single canister or multiple canisters; and shows that most victims died at home, but deaths also occurred in motels and parked vehicles. As stated above, the hazard pattern for HFC–134a is believed to be similar to the hazard pattern for HFC–152a because both propellants are inhalational anesthetics with similar toxicities at high doses.

C. Incident Data

1. Deaths

This section presents information on fatal incidents reported to CPSC that involved inhalation abuse (commonly known as sniffing, spraying or huffing, but referred to here as inhaling or inhalation) of aerosol duster products. The most recent search of the CPSC databases for incidents involving inhalation abuse of aerosol duster products was conducted in February 2024.

CPSC databases (CPSRMS and the National Electronic Injury Surveillance System (NEISS)) do not contain a specific product code for aerosol duster products. Accordingly, the product codes searched in CPSRMS at that time were 1133 (Aerosol containers), 921 (Chemicals not elsewhere classified), and 954 (General-purpose household cleaners). Aerosol duster products are included as a sub-category of product code 954 but may occasionally be sorted into product codes 1133 and 921. Aerosol duster products were identified in CPSRMS incident narratives or product descriptions as dusters, aerosol dusters, computer/keyboard/electronics dusters or cleaners, canned/compressed air, or by specific brand names, including misspelled variants of the above keywords. This review excluded aerosol duster incidents that were exclusively associated with common non-inhalation hazards from aerosol duster products, such as explosions, fires, chemical burns, or respiratory injuries related to the product's intended use.

CPSC's CPSRMS database contains reports for 1,039 unique fatal incidents involving inhalation hazards from aerosol duster products that occurred between January 1, 2012, and December 31, 2021. Data collection is ongoing in CPSRMS and reporting is considered incomplete for more recent years (2022–2024). The number of deaths associated with aerosol duster products reflected in CPSRMS and classified as involving aerosol duster inhalation is almost certainly an underestimate of the actual number of aerosol duster inhalation deaths.

Almost all of the 1,039 deaths were reported from death certificates and

[25] Lipophilic means the tendency to combine with fats.

[26] If the effect is changing with the dose of the drug it is described as dose dependent.

[27] Psychotic symptoms associated with drug cessation.

[28] Substance that induces insensitivity to pain.

[29] Binding of a substance to a receptor molecule changes its shape or activity to transmit a signal.

[30] Breathing symptoms similar to asthma but with an uncertain cause.

[31] IDI numbers 230406HCC1189, 230815HCC1044, 230822HCC1098, 230906HCC1211, 231005HCC3036.

[32] IDI numbers 23071HCC3850, 230329HCC1057, 230707HCC1701, 230720HCC1777, 230725HCC1827, 230808HCC3987, 230822HCC1099, 230906HCC1208, 230906HCC1209, 230929HCC1377, 230329HCC1048, 230711HCC1721.

[33] IDI numbers 230711HCC3850, 230329HCC1057, 230707HCC1701, 230711HCC1721, 230720HCC1777, 230725HCC1827, 230808HCC3987, 230822HCC1099, 230906HCC1208, 230906HCC1209, 230929HCC1377, 230929HCC1048.

Medical Examiners and Coroners Alert Project (MECAP) reports. Among these 1,039 deaths, 775 (75%) were attributed to HFC–152a toxicity, and three were attributed to HFC–134a toxicity. In the remaining incident reports, the specific aerosol duster propellant is not explicitly identified. For several of the deaths that occurred in 2020 and 2021, staff conducted IDIs to learn more about the details surrounding the fatal incident (*i.e.,* victim's history of using aerosol duster products). This death count only includes incidents where the product involved was explicitly identified as an aerosol duster product.

Deaths from HFC–152a toxicity where the specific product was not identifiable, and deaths resulting from the inhalation of unspecified aerosols, are not included in the figures given above. Although HFC–152a is commonly used as a propellant in aerosol duster products, the compound is also used in other aerosol products, such as pesticides and air fresheners. Between 2012–2021, there were an additional 1,031 deaths reported in CPSRMS resulting from HFC–152a toxicity from an unspecified aerosol product. The age, gender, and race/ethnicity distributions of these deaths are similar to those for the aerosol duster product inhalation deaths discussed in this section. Additionally, between 2012–2021, there were at least 63 deaths found in CPSRMS that mentioned inhalation of aerosol products, without giving sufficient information to determine if the product was an aerosol duster product. Because the scope of the data analyses here only includes incidents explicitly mentioning an aerosol duster product, these deaths are not included among the 1,039 fatal incidents in the analyses discussed above.

CPSC is aware of at least seven deaths resulting from HFC–134a toxicity between 2012 and 2021. In three of these deaths, the product involved was identified as an aerosol duster product, and these three deaths are included in the above aerosol duster products fatality count. The remaining four deaths either did not specify the type of product involved, or they involved an unspecified aerosol product. CPSC has also received reports of deaths involving HFC–134a toxicity that occurred between 2006 and 2010, including some that specifically identified an aerosol duster product being involved.

Table 1 below provides an overview of the distribution of aerosol duster inhalation deaths found in CPSRMS, which, as noted, almost certainly understates the actual number of deaths reported to CPSC from these products. Data in CPSRMS are anecdotal in nature and do not necessarily represent all incidents that have actually occurred. Furthermore, death certificates tend to have a greater lag time between the incident/death date and the date the death was reported to CPSC. Therefore, the counts below are subject to increase, especially for the more recent years.

TABLE 1—AEROSOL DUSTER INHALATION DEATHS BY YEAR

[2012–2021]

Year	Total deaths
2012	54
2013	104
2014	90
2015	124
2016	130
2017	127
2018	124
2019	114
2020	89
2021	83
Total	1,039

Source: CPSRMS.
Percentages may not add to 100% due to rounding.

Table 2 below provides an overview of the distributions of aerosol duster product inhalation deaths by age group and gender. Among the identified deaths, almost 70 percent were male, and 94 percent were between the ages of 18 and 54, with ages ranging between 13 and 70 years old.

TABLE 2—DISTRIBUTION OF AEROSOL DUSTER INHALATION VICTIMS BY AGE GROUP AND GENDER

[2012–2021]

Age group (years)	Male	Female	Total
0–17*	4	8	12 (1%)
18–34	296	159	455 (44%)
35–54	376	143	519 (50%)
55 or older	40	12	52 (5%)
Unspecified	1	0	1 (<1%)
Total	717 (69%)	322 (31%)	1,039

Source: CPSRMS.
Percentages may not add to 100% due to rounding.

Race information was reported in 881 (85%) of the 1,039 deaths. Table 3 provides an overview of the distribution of aerosol duster inhalation deaths by race where the data were available. Over 92 percent of the victims were white.

TABLE 3—DISTRIBUTION OF AEROSOL DUSTER INHALATION DEATHS BY RACE

[2012–2021]

Race	Total	Percent
White	814	92
Black/African-American	24	3
American Indian/Alaska Native	17	2
Other*	26	3
Total	881	100

Source: CPSRMS.
* Includes Asian, Native Hawaiian/Pacific Islander and Other race categories.

Ethnicity data for aerosol duster inhalation deaths between 2012 and 2021 are also incomplete. The ethnicity is known for 769 (74%) of the 1,039 deaths. Among the 769 deaths with known ethnicity, 56 (7%) were identified as Hispanic, while 713 (93%) were identified as non-Hispanic.

Table 4 below provides an overview of the distribution of aerosol duster inhalation deaths found in CPSRMS by the incident location of the death. Location information was specified for 891 (88%) of the 1,039 deaths. Most of the deaths (78%) occurred in a housing unit, apartment, or condominium.

TABLE 4—DISTRIBUTION OF AEROSOL DUSTER INHALATION DEATHS

by Incident Location [2012–2021]

Location	Total	Percent
Home/Apartment/Condominium *	711	78

* Includes mobile and manufactured homes.
** Includes a school, industrial location or any other location.

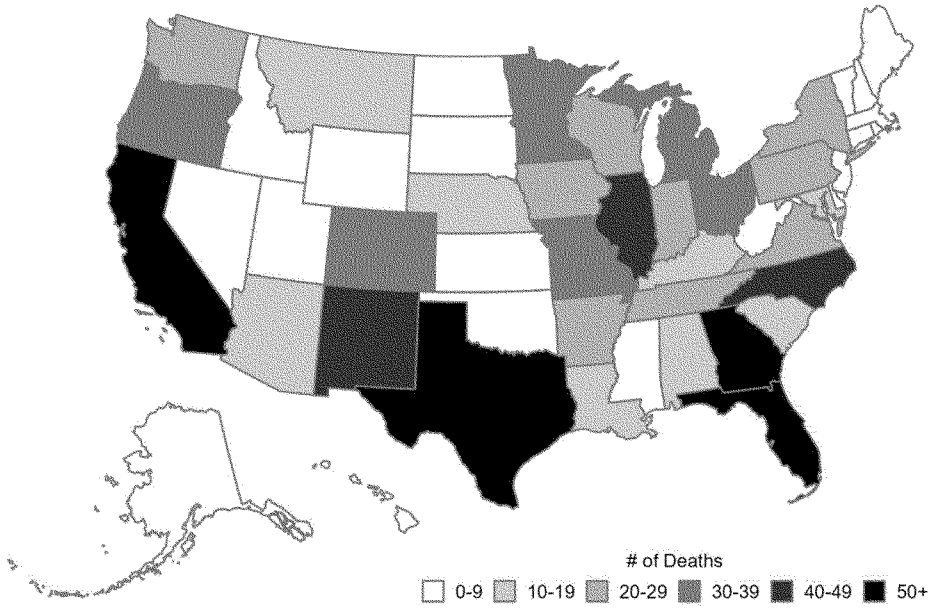

Table 5 and Figure 3 provide an overview of the distribution of aerosol duster product inhalation deaths in CPSRMS by U.S. state. The states with the most reported aerosol duster inhalation deaths are Florida (83), Texas (67), California (67), Georgia (58) and North Carolina (47). Over 30 percent of all aerosol duster inhalation deaths reported to CPSC occurred in these five states.

TABLE 5—NUMBER OF REPORTED FATAL DUSTER INCIDENTS BY STATE

[2012–2021]

State	Deaths	State	Deaths
Florida	83	Arizona	11
California	67	Nebraska	11
Texas	67	Maryland	10
Georgia	58	Montana	10
North Carolina	47	Massachusetts	9

CPSC did not receive any reports related to deaths due to aerosol duster inhalation from West Virginia or the District of Columbia that occurred between 2012 and 2021.

Figure 3: Number of Reported Fatal Duster Incidents by State (2012-2021)

2. Injury Estimates

This section presents information on emergency department treated injuries resulting from inhalation abuse of aerosol duster products. The estimates are derived from injury cases that were recorded in CPSC's NEISS database,[34] and the injuries were treated during the 10-year period between January 1, 2012, and December 31, 2021. Between 2012–2021, it is estimated that there were 21,700 ED-treated injuries in the United States resulting from inhalation of aerosol duster products. This estimate is based on a sample of 491 NEISS-reported injury cases, three of which were deaths. These three deaths are included among the 1,039 deaths from CPSRMS that are discussed above.

Injury incident cases were included in the sample only if the product being used could reasonably be classified as an aerosol duster product. While CPSRMS incidents typically report product identifying characteristics (*i.e.,* manufacturer, brand, model, retailer, product description), NEISS injury narratives rarely provide such detailed information on the products involved. Thus, NEISS data are likely an underestimate of the true number of ED-treated injuries, as more generic product classifications (*i.e.,* cleaning product, household cleaner, etc.) may be used to describe aerosol duster products. An additional 2,500 estimated ED-treated injuries resulted from ''huffing'' unspecified products, or inhalation of products described as ''aerosol cans,'' ''aerosol cleaners,'' or simply ''aerosols,'' but these injuries are excluded from this analysis because of the non-specificity of the product description and the lack of information on the propellant being inhaled. Other types of injuries not involving aerosol duster inhalation, such as respiratory injuries from the product being sprayed, are not included in the above estimates.

Table 6 below presents yearly estimates of ED-treated injuries in the United States from inhaling aerosol duster products. Between 2012–2021, there is no evidence of a statistically significant linear trend in ED-treated injuries due to aerosol duster inhalation (p-value >0.05).

TABLE 6—NEISS ESTIMATES FOR AEROSOL DUSTER INHALATION INJURIES BY YEAR
[2012–2021]

Year	Estimate[35]	Sample size	CV
2012	**	23	.28
2013	2,000	46	.22
2014	1,500	35	.28
2015	2,500	45	.26
2016	3,000	66	.28

[34] More information about the NEISS sample and estimate calculation can be found here: Explanation Of NEISS Estimates Obtained Through The CPSC website | *CPSC.gov.*

TABLE 6—NEISS ESTIMATES FOR AEROSOL DUSTER INHALATION INJURIES BY YEAR—Continued

[2012–2021]

Year	Estimate [35]	Sample size	CV
2017	2,700	67	.22
2018	2,100	53	.21
2019	2,000	50	.30
2020	**	56	.38
2021	2,000	50	.27
2012–2021	21,700	491	.18

Source: NEISS.
Estimates rounded to nearest 100; estimates that failed to meet NEISS publication criteria are presented as **.
Rows may not add to total due to rounding.

Table 7 below depicts a breakdown of the disposition of the injured patients. A large majority (70%) of the estimated injuries were categorized as ''treated and released'' or ''examined and released without treatment,'' while around 20 percent involved more serious injuries requiring hospitalization or additional observation.

TABLE 7—NEISS ESTIMATES FOR AEROSOL DUSTER INHALATION INJURIES BY DISPOSITION

Disposition	Estimate	Sample size
Treated and released, or Examined and released without treatment	15,200 (70%)	341
Treated and admitted for hospitalization, or Held for observation	4,400 (20%)	103
Left without being seen, or Left without treatment	1,900 (9%)	44
Death *	** (<1%)	3
All Severities	21,700	491

Source: NEISS.* Fatal injury cases in NEISS are also included in CPSRMS data and are thus included in the overall death count.
Estimates rounded to nearest 100; estimates that failed to meet NEISS publication criteria are presented as **.
Rows may not add to total due to rounding.

Table 8 below depicts an overview of the injuries based on age and gender. Around two-thirds of the estimated injuries occurred in males, and around 91 percent of estimated injuries occurred in patients between ages 18 and 54.

TABLE 8—NEISS ESTIMATES FOR AEROSOL DUSTER INHALATION INJURIES BY AGE & GENDER

Age group (years)	Male	Female	Total
0–17	**	**	1,500 (7%)
18–34	6,800	3,300	10,100 (47%)
35–54	6,200	3,400	9,600 (44%)
55 or older	**	**	** (2%)
Total	14,300 (65%)	7,500 (35%)	21,700 (100%)

Source: NEISS.
Estimates rounded to nearest 100; estimates that failed to meet NEISS publication criteria are presented as **.
Estimates and percents may not add to the total due to rounding.

Race and ethnicity data are largely incomplete for aerosol duster product inhalation injury cases between 2012–2021. Race is unknown for around 37 percent of the 21,700 ED-treated injuries during the 10-year period. Among the 13,700 injuries where race is known, white individuals constituted around 83 percent of injuries; Black individuals constituted 6 percent of injuries; and other races constituted the remaining 11 percent. Ethnicity data was added to the NEISS database starting in mid-2018. As such, ethnicity is unknown for the majority (79%) of injuries reported during the period reviewed. Among the 4,500 injuries with known ethnicity, Hispanic individuals constituted 37 percent of injuries, while non-Hispanic individuals constituted the remaining 63 percent.

Approximately 5,700 of the estimated 21,700 ED-treated injuries (26%) occurred at home. Another 6,300 estimated injuries (29%) took place on public property, and 2,200 estimated injuries (10%) took place on a street or highway, at a school, or at a place of recreation. The location for the remaining 7,600 estimated injuries (35%) was either unknown or not recorded.

[35] According to the NEISS publication criteria, an estimate can only be presented if it is 1,200 or greater, is derived from a sample size of at least 20 injury cases and has a coefficient of variation (CV) no greater than 33 percent. As such, estimates that do not meet all three of the above criteria are not presented in any table. CV is calculated by dividing an estimate's standard deviation by the estimate itself.

Approximately 18,700 of the estimated 21,700 ED-treated injuries (86%) were diagnosed primarily as poisonings, while the remaining 3,000 estimated injuries were diagnosed mostly as burns (chemical, thermal or unspecified), anoxia, contusions/abrasions, lacerations, or internal organ injuries. Approximately 18,900 of the estimated 21,700 ED-treated injuries (87%) were considered ''whole body'' injuries (*i.e.,* no specific individual body part injured as a result of inhalation). Another 1,700 estimated injuries (8%) were classified as head, face, or mouth injuries, while the remaining 5 percent of injuries were mostly classified as hand, lower arm, or upper trunk injuries.

D. Availability of Incident Data

Upon publication of the NPR in the **Federal Register**, CPSC will make available for review and comment, to the extent allowed by law, the CPSRMS and NEISS incident reports relied upon and discussed in the NPR, along with the associated IDIs. The data can be obtained by submitting a request to: *https://forms.office.com/g/NK9WAGMhAi.* You will then receive a website link to access the data at the email address you provided. If you do not receive a link within 72 hours, please contact: *cscorpio@cpsc.gov.*

V. Absence of Relevant Voluntary Standard

Two existing voluntary standards, ASTM D3061–97, *Standard Guide for Three-Piece Steel and Tinplate Straight-Wall and Necked-In Aerosol Cans,* and DIN EN 15008:2017, *Aerosol Containers—Aluminum Containers—Dimensions of One-Piece Cans with 25.4 mm Aperture,* apply to aerosol duster products. Both standards provide a list of currently manufactured aerosol canister sizes as well as industry voluntary dimensional guidelines, but neither standard addresses the hazard of intentional inhalant abuse.

On February 27, 2023, ASTM Committee F15 hosted an exploratory meeting discussing potential solutions that would prevent intentional inhalation and abuse of aerosol duster products such as including bitterants, warning labels, and use of alternative propellants and alternative technologies. On March 4, 2024, ASTM Committee F15 hosted a second exploratory meeting to discuss developing a possible future voluntary standard and forming a task group for the prevention of intentional inhalation and abuse of aerosol duster products. To date no such task group has been formed.

VI. Justification for the Proposed Ban

The FHSA defines a hazardous substance to include a substance that is ''toxic.'' 15 U.S.C. 1261(f)(1)(A)(i). A substance is toxic if it ''has the capacity to produce personal injury or illness to man through ingestion, inhalation, or absorption through any body surface.'' 15 U.S.C. 1261(g). As discussed in section IV, staff has identified HFC–152a and HFC–134a as two toxic hydrofluorocarbons used as propellants in aerosol duster products. Both hydrofluorocarbons are intentionally inhaled by individuals to experience a euphoric high, resulting in numerous deaths and injuries. Severe HFC–152a toxicity can cause a depressed mental state, respiratory depression, pulmonary edema, hepatic injury, and death (Poisindex, 2021). Symptoms of acute HFC–134a toxicity include severe hypotension, loss of consciousness, shock (Vinegar, 1997), cardiac sensitization, neurotoxicity (National Research Council, 2002), and death (Burke et al., 2020).

Staff researched published medical literature for papers regarding the toxicity of HFC–152a and HFC–134a. While medical literature demonstrates toxicity of the two substances, staff was unable to identify any relevant human data regarding HFC–152a and HFC–134a that would allow for the calculation of a non-toxic human dose. However, that research did provide staff with data to be able to calculate a no observed adverse effect level [36] (NOAEL) in animals for HFC–152a. In toxicology, it is customary to convert animal data to human data in the absence of human data. The Food and Drug Administration (FDA), for example, uses this approach to determine the safe dose of a drug when studying it for the first time in human clinical trials. Based on the generally accepted approach used by FDA, staff converted the NOAEL found in the medical literature to calculate a human equivalent dose (HED) using appropriate scaling factors.[37] Staff used the resulting HED it developed to determine the safe level for the proposed ban after applying a safety factor of 10.[38] Below is a description of the staff approach used in developing the level for the proposed ban on HFC–152a and HFC–134a.

A study was conducted on groups of three rats to mimic the exposure of humans while inhaling HFC–152a (Avella et al., 2010). The rats were exposed to 30 seconds (s) of 20 L/min HFC–152a in an inhalation chamber. During that exposure, all the rats showed signs of intoxication manifested by sedation which began at about 20 s and rapidly progressed to more profound intoxication. At the end of the exposure periods the rats were prostrate and could not get up. The rats remained visibly intoxicated until about four minutes post exposure. Recovery was rapid, and at about eight minutes post exposure, the rats showed no signs of obvious intoxication. Staff calculated a non-toxic human dose of 0.476 mg/kg using the information in the Avella et al., 2010 paper and applying an additional safety factor of 10 for a total safety factor of 100 (see footnote 38 for explanation regarding safety factors). The resulting calculation for a non-toxic human dose is equivalent to 18 mg for 38 kg human (5th percentile weight for 13-year-old female).[39]

Although there are no relevant human inhalation toxicology studies available regarding HFC–134a, the injury and death evidence and properties of HFC–134a discussed above demonstrate a similar hazard to that presented by HFC–152a. HFC–134a has somewhat lower inhalational toxicity in rats compared to HFC–152a (Rusch, 2018). Therefore, the non-toxic dose calculated for HFC–152a will be also protective for HFC–134a.

Based on the assessment that individuals who inhale aerosol duster products inhale a single spray at a time, but may use multiple sprays within a single period of use, and applying the conversion process described above, staff concluded that a single canister of aerosol duster product should be limited to 18 mg or less of HFC–152a and/or HFC–134a to render it non-toxic to humans. Although 18 mg of HFC–

[36] A NOAEL is the highest dose level that does not produce a significant increase in adverse effects in comparison to the control group. The NOAEL is a generally accepted benchmark for safety when derived from appropriate animal studies.

[37] Scaling factors account for differences in size between animals and humans. *See* FDA, 2005, Guidance for Industry Estimating the Maximum Safe Starting Dose in Initial Clinical Trials for Therapeutics in Adult Healthy Volunteers (FDA Guidance), available at: *www.fda.gov/regulatory-information/search-fda-guidance-documents/estimating-maximum-safe-starting-dose-initial-clinical-trials-therapeutics-adult-healthy-volunteers.*

[38] A safety factor allows for variability in extrapolating from animal toxicity studies in humans resulting from: (1) different sensitivity of drugs to animals and humans; (2) differing receptor affinity to drugs between animals and humans; (3) unexpected toxicities; and (4) interspecies differences between the metabolism and time course effect of drugs between animals and humans. Ten is a default value for a safety factor. An additional safety factor of 10 could be used to protect sensitive populations.

[39] This dose will be at least as protective for older females and males of the same age and older due to their higher weight. Anthropometric reference data for children and adults: United States, 2015–2018; *https://stacks.cdc.gov/view/cdc/100478.*

152a or HFC–134a is too small an amount to effectively be used as a propellant in an aerosol duster product, because this amount of propellant is not harmful, the Commission is proposing to allow trace amounts of 18 mg or less of HFC–152a and/or HFC–134a in aerosol duster products to allow for low level contamination that may occur during the manufacturing process. For example, if a manufacturer made a propellant change from the manufacture of an unregulated product to a regulated aerosol duster product, leftover contaminant levels remaining in hose lines used to fill aerosol duster products during manufacturing would not result in violative products as long as there is 18 mg or less per canister of the banned propellants. Therefore, the Commission preliminarily finds that any aerosol duster product containing more than 18 mg in any combination of HFC–152a and/or HFC–134a is toxic, and thus, is a hazardous substance under the FHSA.

Under the FHSA, the Commission may classify a hazardous substance that is packaged in a form suitable for use in the household as a ''banned hazardous substance'' if the Commission finds that ''notwithstanding such cautionary labeling as is or may be required under this chapter for that substance, the degree or nature of the hazard involved in the presence or use of such substance in households is such that the objective of the protection of the public health and safety can be adequately served only by keeping such substance, when so intended or packaged, out of the channels of interstate commerce.'' 15 U.S.C. 1261(q)(1)(B). The Commission preliminary makes such a finding for HFC–152a and HFC–134a used in aerosol duster products.

Aerosol duster products are sold to consumers for use in their homes, and almost all aerosol duster products currently on the market display cautionary labeling including at a minimum a signal word (POISON, DANGER, WARNING, CAUTION) and statement(s) of principal hazard(s) such as FLAMMABLE and VAPOR HARMFUL as required by the FHSA and 16 CFR 1500.121. Aerosol duster products on the market also contain statements to inform consumers of intentional misuse, inhalation abuse, and the potential consequences of either activity. Tab C in the July 20, 2022, staff briefing package contains an in-depth analysis regarding the labeling of aerosol duster products.[40]

Although current aerosol duster products on the market contain both FHSA-required labeling, as well as statements identifying the potential hazard of aerosol duster abuse and misuse, these labels have not prevented the more than 1,000 deaths described in section IV of the preamble. The Commission therefore preliminary finds that labeling of aerosol duster products does not effectively address the inhalation hazard presented by aerosol duster products. Because large numbers of deaths and injuries continue to occur despite the cautionary labeling on aerosol duster products, the Commission is proposing to ban the use of toxic propellants HFC–152a and HFC–134a in any aerosol duster canister in amounts above 18 mg.

VII. Description of the Proposed Rule

The proposed rule would amend 16 CFR part 1500 to add a new provision under 16 CFR 1500.17 declaring any canister of aerosol duster product containing more than 18 mg in any combination of HFC–152a and/or HFC–134a to be a banned hazardous substance under the FHSA. The provisions of the proposed ban are described below.

A. Proposed § 1500.17(a)(14)(i)—Ban on Aerosol Duster Products Containing More Than 18 mg in Any Combination of HFC–152a and/or HFC–134a

The proposed rule would add a new paragraph, § 1500.17(a)(14)(i) to 16 CFR 1500.17, that would declare any canister of aerosol duster product containing more than 18 mg in any combination of 1,1-difluoroethane (HFC–152a, CAS #75–37–6) and/or 1,1,1,2-tetrafluoroethane (HFC–134a, CAS #811–97–2) to be a banned hazardous substance under section 2(q)(1) of the FHSA. Section VI of the preamble provides the technical justification for the proposed ban. Proposed § 1500.17(a)(14)(i) also defines ''aerosol duster product'' to mean a product that uses a pressurized canister filled with gas or liquified gas to create a stream of gas propellant that can be used to dislodge or remove dust and debris.

B. Proposed § 1500.17(a)(14)(ii)—Prohibited Stockpiling

Pursuant to section 9(g)(2) of the CPSA, 15 U.S.C. 2058(g)(2), § 1500.17(a)(14)(ii) of the proposed rule would prohibit a manufacturer from ''stockpiling'' or substantially increasing the manufacture or importation of noncompliant aerosol duster products between the date of publication of the final rule and the effective date. Section 9(g)(2) defines stockpiling to mean manufacturing or importing a product between the date of promulgation of a rule, regulation, standard, or ban and its effective date at a rate which is significantly greater than the rate at which such product was produced or imported during a base period ending before the date of promulgation of the rule standard, or ban. The proposed stockpiling provision for hazardous aerosol dusters, which is explained more fully in Tab A of the staff NPR briefing package [41], would prohibit the manufacture or importation of noncompliant aerosol duster products in any one-month period between the date of publication of the final rule and the effective date of the final rule at a rate greater than 105 percent of the rate at which they were manufactured or imported during the base period for the manufacturer or importer. The base period for aerosol duster products is defined in the proposed rule as the average monthly manufacture or import volume for the last 13 months immediately preceding the month of the publication of the final rule.

C. Proposed § 1500.17(a)(14)(iii)—Findings

Proposed § 1500.17(a)(14)(iii) describes the Commission's preliminary findings required under sections 2(q)(1) and 3(h) of the FHSA, including requirements regarding voluntary standards, relationship of benefits to costs, and the least burdensome requirement.

VIII. Preliminary Regulatory Analysis

Pursuant to section 3(h) of the FHSA, publication of a proposed rule must include a preliminary regulatory analysis containing:

- a preliminary description of the potential benefits and potential costs of the proposed rule, including any benefits or costs that cannot be quantified in monetary terms, and an identification of those likely to receive the benefits and bear the costs;
- a discussion of why a relevant voluntary safety standard would not eliminate or adequately reduce the risk of injury addressed by the proposed rule;
- a discussion of the reasons for the Commission's preliminary determination of why the voluntary standards process would not within a reasonable time result in the development of a voluntary standard that would eliminate or adequately

[40] *www.cpsc.gov/s3fs-public/Petition-Requesting-Rulemaking-to-Establish-Safety-Standard_0.pdf?VersionId=GNEl7pYZUBOxf1BLSC0f4.X6TlA8gT4f.*

[41] *https://cpsc.gov/s3fs-public/Briefing-Package-Draft-Proposed-Rule-Aerosol-Duster-Products.pdf?VersionId=m8a.WZmo3DJvX0U3qR.EbOr4yQU9yeps.*

reduce the risk of injury identified in the rule; and

- a description of any reasonable alternatives to the proposed rule, together with a summary description of their potential costs and benefits and why such alternatives should not be published as a proposed rule.

15 U.S.C. 1262(h).

Below is a summary of the preliminary regulatory analysis for the proposed rule. See Tab A of the staff NPR briefing package [42] for the complete preliminary regulatory analysis.

A. Market Information

1. The Product

Aerosol duster products, also known as canned air, are pressurized canisters filled with liquified gas propellant. They utilize the force of compressed gas, released through a nozzle or straw attachment, to create a direct stream of gas that dislodges and blows away debris. Many aerosol duster products are labeled for ''electronics dusting,'' or more generically, as a ''multi-purpose duster.'' These products are marketed for dusting laptops, keyboards, computers, TVs, phones, printers, electronic toys, gaming devices, and other common household products including sewing machines, clocks, watches, musical instruments, and for auto detailing.

Other alternative products that would not be subject to the proposed ban exist for consumers to use for similar dusting purposes, including aerosol duster products using the propellant HFO–1234ze, compressed air dusters which use corded or cordless electric pumps, or even hand pumps, to compress air and blow it through a nozzle, CO_2 cartridge dusters which use disposable CO_2 cartridges to blow CO_2 through a nozzle, as well as vacuum cleaners.

While prices for aerosol duster products vary widely, the average price for a canister of aerosol duster is $8.00 according to a Maia Research market report [43] and $10.19 according to the Aerosol Duster Market Report available on the CPSC website.[44] Aerosol duster products that use HFC–152a as a propellant are most common due to this propellant being less expensive than the less common alternative propellants HFC–134a or HFO–1234ze (*trans*-1,3,3,3-tetrafluoropropene). HFC–134a is non-flammable but is considered a potential greenhouse gas. HFO–1234ze was introduced as an environmentally friendly alternative to HFC–134a, with low global warming potential. (See the staff's preliminary regulatory analysis in Tab A of the staff NPR briefing package for a more complete discussion of aerosol duster products and a complete list of references.)

2. Market Trends for Aerosol Duster Products

Firms that sell aerosol duster products typically engage in either contract manufacturing or are private labelers. Typically, a company that engages in contract manufacturing has another company produce their product for them but remain involved in all components of manufacturing by providing specifications. When a company engages in contract manufacturing, the firm owns the end products for which they have contracted out production. Similarly, private labelers have their production manufactured by a third party; however, the product is owned by that third party and can be sold to other companies, as well. Typically, a private labeler owns a brand name and buys products from the third party to sell it under their established brand. While slightly different in structure, both of these arrangements (contract manufacturing and private labeling) allow firms that produce aerosol duster products to benefit from flexibility in their production processes, and typically avoid large, fixed manufacturing costs to produce their products.

3. Future Market Size for Aerosol Duster Products

Staff forecast aerosol duster products sales for a 30-year study period (2026–2055) using data from a market research report by MAIA Research. In this forecast, staff estimates the number of units of aerosol duster products sold in 2026 will be 18.31 million, absent the regulation of the product described in the proposed rule. In the scenario without the proposed rule, staff estimates the number of units sold in 2055 will be 35.81 million. This estimate is based on a continuation of historical sales growth for the product, which could be affected by a number of unknown factors such as reduced use of computer keyboards or revised environmental regulations.

B. Preliminary Description of Potential Benefits and Costs of the Proposed Rule

Staff conducted a benefits analysis of the proposed rule. The benefits analysis accounted for mitigated deaths and injuries from the proposed rule, which staff monetized using the value of statistical life (VSL) for deaths and the Injury Cost Model (ICM) for injuries. As discussed above, this is likely an undercount of benefits, because staff's count of deaths was limited to cases where the product was explicitly identified as an aerosol duster product. Over a 30-year study period, staff estimated the total annualized net benefits (benefits less costs) from the proposed rule, discounted at 2 percent, to be $1.93 billion due to reduced fatalities and injuries from inhalation. Stated differently, every dollar of cost from the proposed rule is estimated to produce $16.59 of benefits.

The proposed rule would impose three main costs: (1) markup losses to manufacturers/importers of aerosol duster products; (2) increased prices paid by consumers; and (3) deadweight losses or market impacts caused by the increased price associated with compliance with the regulation and the subsequent decline in demand. As detailed in Tab A of the staff NPR briefing package, staff estimates that these costs total $123.73 million over the 30-year study period, discounted at 2 percent.

When the estimated benefits of $2.05 billion are compared to the estimated costs of $123.73 million, the estimated benefits of the rule are far greater than the estimated costs. Staff calculates net benefits (benefits less costs) to be $1.93 billion on an annualized basis, after discounting at 2 percent. However, staff notes that one of the unquantified costs of the proposed rule is the assumed creation of a black market for noncompliant aerosol duster products. Due to the euphoric high experienced with HFC–152a and HFC–134a, consumers who use aerosol duster products as inhalants may still want to purchase noncompliant canisters. This inelastic demand and significant reduction in supply of noncompliant canisters due to the proposed rule would create an incentive for individuals to supply those individuals with noncompliant canisters, such as those that are illegally imported from other countries. The creation of a black market can create significant negative externalities such as increased illicit activity, increased crime and subsequently increased spending on law enforcement, and greater health and safety risks to consumers. Staff cannot estimate the magnitude of these externalities with any certainty. In addition, this analysis does not consider individuals who may stop inhaling aerosol duster products after the rule goes into effect but start using other

[42] *https://cpsc.gov/s3fs-public/Briefing-Package-Draft-Proposed-Rule-Aerosol-Duster-Products.pdf?VersionId=m8a.WZmo3DJvX0U3qR.EbOr4yQU9yeps.*

[43] Maia Research (January 2024). United States Air Duster Industry Market Research Report. 2025 price estimate, deflated to 2023 dollars using CPI.

[44] *www.cpsc.gov/content/Aerosol-Duster-Study-Final-Report.*

intoxicants in its place. If staff were able to forecast and quantify this effect, the impact could reduce the estimated benefits from the proposed rule. However, given the net estimated benefits of $1.93 billion per year in staff's analysis, the benefits of the proposed rule would likely still outweigh the costs even if these externalities occur.

To investigate the impact of using alternative values for some of the key inputs and assumptions of the analysis, staff conducted a sensitivity analysis to compare with the main preliminary regulatory analysis. In the main preliminary regulatory analysis, staff assumes a large number of individuals would continue to use most aerosol duster products obtained on the black market as inhalants due to the euphoric high experienced with HFC–152a and HFC–134a.

In the sensitivity analysis, staff considered an alternative scenario. The sensitivity analysis assumes that the prohibition of HFC–152a and HFC–134a in aerosol duster products results in a greater reduction in inhalant abuse. Staff estimated that, currently, 7.88 percent of aerosol duster products are potentially used by consumers as inhalants. After the regulation goes into effect, staff estimated that there would be an overall reduction in products used as inhalants, but the share of products used as inhalants increases to about 30 percent. In the sensitivity analysis, staff assumes that the share of products used as inhalants is unchanged at 7.88 percent. This change in input inherently assumes that the proposed rule would be more effective at changing the behavior of consumers who use aerosol duster products as inhalants.

This change in assumption increases benefits without affecting the costs. In this scenario, net benefits increase to $2.94 billion when annualized at 2 percent, which boosts the benefit-cost ratio from $16.59 of benefits for every $1 of cost shown in the main preliminary regulatory analysis, to $24.78 of benefit for every $1 of cost show in the sensitivity analysis.

C. Evaluation of Voluntary Standards

Based on the current state of the voluntary standard's process for aerosol duster products discussed in section V of the preamble, the Commission determines that no current U.S. voluntary standard exists to address the inhalation hazard posed by aerosol duster products. Further, there is no indication that any voluntary standards organization has a clear plan to address the inhalant hazard in a new or existing voluntary standard. Therefore, the Commission preliminarily determines at this time that the voluntary standard's process will not within a reasonable time result in the development of a voluntary standard that would eliminate or adequately reduce the risk of injury identified in the proposed rule. No standard or portion of a standard has been submitted to the Commission under sections 3(f)(5) and (6) of the FHSA.

D. Alternatives to the Proposed Rule

The Commission considered four alternatives to the proposed rule: (1) performance requirements; (2) aversive agents (bitterants); (3) labeling; and (4) take no regulatory action and rely upon the voluntary standard's process. The Commission finds that none of these alternatives would adequately address the inhalation hazard associated with aerosol duster products.

1. Performance Requirements

Rather than banning hazardous aerosol duster products under the FHSA, the Commission could in principle mandate a performance requirement under sections 7 and 9 of the CPSA, 15 U.S.C. 2056, 2058, aimed at making aerosol duster products using the propellants HFC–152a and HFC–134a less likely to be used for inhalation. This alternative assumes that an effective performance standard for preventing aerosol duster abuse could be developed. To date, however, suppliers have been unable to develop a performance standard that would effectively prevent the inhalation abuse of aerosol duster products while still allowing for use of the product as intended. Staff is unaware of any existing voluntary standard to address the inhalation hazard. In March 2024, ASTM considered establishing a task group to develop a standard, but no task group was formed. Incident data indicates that victims of injury and death are primarily adults who purchase aerosol duster products with the intended goal of intentionally inhaling the product. Even assuming a performance requirement could be developed, while such a requirement may be effective in preventing young children from releasing the contents of aerosol duster products by adding child-safe features, it would not be effective in preventing adults from abusing and inhaling aerosol duster products, and notably the overwhelming number of injuries and deaths occur among adults. Thus, it would be very difficult, if not impossible, to develop a performance standard that would be effective in addressing inhalant abuse of aerosol duster products. Therefore, the Commission finds this alternative would not address the unreasonable risk of injury associated with aerosol duster products.

2. Aversive Agents (Bitterants)

As FUAIA recommended in its 2021 rulemaking petition, the Commission could adopt a CPSA performance standard to require aversive agents (bitterants) to be used in aerosol duster products. At the petition stage, staff evaluated the use of aversive agents such as bitterants in aerosol duster products and concluded that adding bitterants would not be effective at addressing the inhalant hazard posed by aerosol duster products. Tab B in the July 20, 2022 staff briefing package contains an in-depth analysis regarding the use of bitterants in aerosol duster products.[45] Additionally, many aerosol duster products currently on the market contain bitterants,[46] which appears not to have led to a decline in deaths and injuries associated with inhalant abuse of aerosol duster products. Therefore, the Commission finds this alternative would not adequately address the unreasonable risk of injury associated with aerosol duster products.

3. Labeling

The Commission could require warning and other labels on aerosol duster products. However, most aerosol duster products currently on the market are labeled regarding the inhalation hazard, which appears to have had little impact on deaths and injuries associated with inhalant abuse of aerosol duster products. Additionally, at the petition stage, staff concluded that labeling of aerosol duster products is unlikely to be effective at addressing the inhalation hazard posed by aerosol duster products. In fact, labeling could have the perverse consequence of causing people inclined to abuse inhalants to seek out products with the enhanced warning on the label, thereby facilitating the problem that the label was intended to avoid. Therefore, the Commission finds this alternative would not adequately address the unreasonable risk of injury associated with aerosol duster products.

---

[45] *www.cpsc.gov/s3fs-public/Petition-Requesting-Rulemaking-to-Establish-Safety-Standard_0.pdf?VersionId=GNEl7pYZUBOxf1BLSC0f4.X6TlA8gT4f.*

[46] According to the Aerosol Duster Study completed by Euromonitor International in July 2023, approximately 70 percent of all aerosol duster sales are of bitterant-containing products. (*https://www.cpsc.gov/s3fs-public/Aerosol-Duster-Study-2023-Redacted.pdf?VersionId=idRW1RnIfr_5Jkc9sA9mkss8kTyUmZDD*).

4. Take No Regulatory Action and Rely Upon the Voluntary Standard's Process

The Commission could take no regulatory action and rely upon the voluntary standard's process to address the inhalation hazard posed by aerosol duster products. Currently, however, no U.S. voluntary standard exists or is under consideration to address the inhalation hazard posed by aerosol duster products. Therefore, as discussed in section V of this preamble, the Commission finds this alternative would not adequately address the unreasonable risk of injury associated with aerosol duster products.

IX. Initial Regulatory Flexibility Analysis

Whenever an agency publishes an NPR, section 603 of the Regulatory Flexibility Act (RFA), 5 U.S.C. 601–612, requires the agency to prepare an initial regulatory flexibility analysis (IRFA), unless the head of the agency certifies that the rule will not have a significant economic impact on a substantial number of small entities. The IRFA, or a summary of it, must be published in the **Federal Register** with the proposed rule. Under section 603(b) of the RFA, each IRFA must address:

(1) a description of why action by the agency is being considered;

(2) a succinct statement of the objectives of, and legal basis for, the proposed rule;

(3) a description of and, where feasible, an estimate of the number of small entities to which the proposed rule will apply;

(4) a description of the projected reporting, recordkeeping, and other compliance requirements of the proposed rule, including an estimate of the classes of small entities which will be subject to the requirement and the type of professional skills necessary for preparation of the report or record; and

(5) an identification, to the extent practicable, of all relevant Federal rules which may duplicate, overlap, or conflict with the proposed rule.

The IRFA must also describe any significant alternatives to the proposed rule that would accomplish the stated objectives and that minimize any significant economic impact on small entities.

A. Reason for Agency Action

The intent of the proposed rulemaking is to reduce deaths and injuries associated with inhalant abuse of aerosol duster products. The Commission is considering the action because of the numerous deaths and injuries associated with the use of aerosol duster products.

B. Objectives of and Legal Basis for the Rule

The Commission proposes this rule to reduce death and injury associated with inhalant abuse from aerosol duster products. This standard is promulgated under the authority of the FHSA. To declare a substance a banned hazardous substance under section 2(q)(1) of the FHSA the Commission must follow the procedural requirements set forth in section 3(f)–(i) of the FHSA. *See* 15 U.S.C. 1261(q)(2) and 1262(f)–(i).

C. Small Entities To Which the Rule Will Apply

The proposed rule would apply to all manufacturers and importers of aerosol duster products. According to estimates by Euromonitor International (Euromonitor), the household consumer market for aerosol duster products was $99.7 million in 2022, and approximately 87 percent of aerosol duster products examined use the propellant HFC–152a and 11 percent use HFC–134a. The remainder use a mixture of these two propellants or an alternative propellant.

According to information collected by staff, in 2024 there were an estimated 31 firms that supply the domestic market for aerosol duster products. Among these firms, 26 are manufacturers and five are importers/wholesalers. Approximately 90 percent of suppliers (28 suppliers) are located domestically in the United States.

D. Compliance, Reporting, and Record-Keeping Requirements of Proposed Rule

In accordance with section 14 of the CPSA, 15 U.S.C. 2063, manufacturers would have to issue a General Certificate of Conformity (GCC) for each aerosol duster product model, certifying that the model complies with the proposed ban. Each GCC must also be based on a test of each product or a reasonable testing program and provided to all distributors or retailers of the product. The manufacturer would have to comply with 16 CFR part 1110 concerning the content of the GCC, retention of the associated records, and any other applicable requirements.

E. Federal Rules That May Duplicate, Overlap, or Conflict With the Proposed Rule

CPSC currently has no regulations regarding the use of HFC–152a and/or HFC–134a in aerosol duster products or any other consumer product. However, the U.S. EPA regulates, or is in the process of regulating, the use of HFC–152a and HFC–134a as hydrofluorocarbons for various uses, including for use in motor vehicle air conditioning, as refrigerants for use in self-chilling cans for household refrigeration, transport refrigeration, vending machines, cold storage warehouses and retail food refrigeration (40 CFR part 82), and as per- and polyfluoroalkyl substances (PFAS) which are broadly used in food, water, and increasingly consumer products, as exposure to some types of PFAS substances are linked to serious health effects. None of EPA's regulations regulating HFC–152a and HFC–134a address the inhalation hazard the proposed rule is intended to address, and thus do not overlap or conflict with the proposed rule.

F. Potential Impact on Small Entities

1. Impact on Small Manufacturers

For the majority of firms in this market, aerosol duster products are ancillary to their manufacturing of products such as degreasers, lubricants and other aerosol products that would not be regulated under the proposed rule. Staff identified 31 firms that would be impacted by the proposed rule. Twenty-six of these firms are manufacturers of aerosol duster products and five are wholesales/importers. Among the 26 manufacturers of aerosol duster products, 20 would be considered small firms according to Small Business Administration (SBA) thresholds.[47] The SBA size standard threshold for NAICS code 325998, All Other Miscellaneous Chemical Product and Preparation Manufacturing, is having fewer than 650 employees in order to be considered small.

Staff identified four small domestic manufacturers of aerosol duster products where the potential impact of the proposed regulation could be significant. These firms enjoy strong brand recognition, and their products are widely used aerosol duster products for electronics. For these firms, their aerosol duster products comprise a large share of their total product offerings. Staff assessed the impact to these small manufacturers to be significant (*i.e.,* greater than one percent of annual revenue) as the proposed rule is expected to increase the price of a canister of aerosol duster product more than threefold, and subsequently cause a steep decline in demand.[48]

[47] Small Business Administration, Table of Size Standards (*https://www.sba.gov/document/support-table-size-standards*).

[48] The proposed rule is expected to cause firms to shift to more expensive propellants, and therefore is expected to increase the price of a canister of aerosol duster product. For a more complete discussion of the expected price increase

Continued

2. Impact on Small Importers

Staff identified five wholesalers/importers of aerosol duster products. The SBA size standard threshold for NAICS code 424690, Other Chemical and Allied Products Merchant Wholesalers, is having fewer than 175 employees in order to be considered small. According to SBA size standards, two of these firms would be considered small and three would be considered large. Staff assessed the impact to these small importers and wholesalers to be significant (*i.e.,* greater than one percent of annual revenue) as the proposed rule is expected to increase the price of a canister of aerosol duster product more than threefold, and subsequently cause a steep decline in demand.

3. Conclusion

Given the significant impact that the proposed rule would have on the market overall, staff assessed that there would be a significant impact on a substantial number of small entities from the proposed rule.

G. Alternatives for Reducing the Adverse Impact on Small Businesses

Section VIII.D Preliminary Regulatory Analysis of this preamble provides a discussion of four alternatives to the proposed rule that were considered and why those alternatives were rejected. While the alternatives could reduce the burden on small entities, none of the alternatives are consistent with achieving the rule's objective of improving consumer safety by protecting consumers from the inhalant risks posed by aerosol duster products. The Commission is not proposing these alternatives because they would not effectively reduce the number of injuries and fatalities associated with aerosol duster products as discussed in section VIII of the preamble.

The Commission welcomes public comments on this IRFA. Small businesses that believe they would be affected by the proposed rule are encouraged to submit comments. The comments should be specific and describe the potential impact, magnitude, and alternatives that could reduce the impact of the proposed rule on small businesses.

X. Paperwork Reduction Act

This proposed rule contains information collection requirements that are subject to public comment and review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA). 44 U.S.C. 3501–3521. We describe the provisions in this section of the document with an estimate of the annual reporting burden. Our estimate includes the time for gathering certificate data and creating General Certificates of Conformity (GCCs), the keeping and maintaining of records associated with the GCCs, and the disclosure of GCCs to distributors and retailers.

CPSC particularly invites comments on: (1) whether the collection of information is necessary for the proper performance of the CPSC's functions, including whether the information would have practical utility; (2) the accuracy of CPSC's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) the accuracy of CPSC's estimate of the share of canisters used as inhalants; (4) ways to enhance the quality, utility, and clarity of the information to be collected; (5) ways to reduce the burden of the collection of information on respondents, including the use of automated collection techniques, when appropriate, and other forms of information technology; and (6) estimated burden hours associated with label modification, including any alternative estimates.

Title: Ban on Specified Aerosol Duster Products.

Description: The proposed rule would ban any canister of an aerosol duster product containing more than 18 mg in any combination of HFC–152a and/or HFC–134a.

Description of Respondents: Persons who manufacture or import aerosol duster products. Staff estimates the burden of this collection of information as follows in Table 9.

TABLE 9—ESTIMATED ANNUAL REPORTING BURDEN

Burden type	Number of respondents	Frequency of responses	Total annual responses	Minutes per response	Total burden hours
GCC Creation	30	5	150	20	50
Recordkeeping	30	5	150	2	5
Third Party Disclosure	30	500	15,000	5	1,250
Total			15,300		1,305

Section 14(a)(1) of the CPSA, 15 U.S.C. 2063(a)(1), would require manufacturers to certify that their products conform to the proposed rule and issue a GCC. There are 31 known corporate entities supplying aerosol duster products to the U.S. market (consisting of 26 manufacturers and 5 wholesalers/importers), and we assume the majority of these entities would respond annually, though this may be an overestimate.

On average, each entity may respond 5 times per year for collection requirements related to compliant aerosol duster products in the market. Each manufacturer or importer that responds may create 5 certificates annually for a total of 150 responses (30 responses × 5 responses per respondent = 150 annual responses). The estimated time required to create a GCC is about twenty minutes. Therefore, the estimated burden associated with issuance of GCCs is 50 hours (150 responses × 20 minutes per response = 50 hours).

We estimate for the purpose of this burden analysis that records supporting GCC creation, including testing records, would be maintained for a 5-year period. Staff estimates another 150 record-keeping responses, each one of which requires two minutes per year in routine recordkeeping. This adds up to 5 hours (150 records × 2 min per record = 300 minutes or 5 hours).

Section 14(g)(3) of the CPSA also requires that GCCs be disclosed to third party retailers and distributors. We estimate that each respondent will submit 5 GCCs to 100 retailers or distributors annually. Therefore, respondents are estimated to disclose 15,000 GCCs to third party retailers and

and subsequent projected decline in demand, see the full economics memorandum in Tab A.

distributors annually (30 responses × 500 disclosures per year = 15,000 responses). Staff estimates each one of which requires 5 minutes per year. This adds up to 1,205 hours (15,000 responses × 5 minutes per response = 75,000 minutes or 1,250 hours).

Based on this analysis, the proposed ban for aerosol duster products would impose a total paperwork burden to industry of 1,305 hours (50 hours for GCC creation + 5 hours for recordkeeping + 1,250 hours for third-party disclosure). To estimate the cost to industry staff uses total compensation data from the U.S. Bureau of Labor Statistics (BLS) on hourly compensation paid to private industry workers in goods-producing industries of $44.75.[49] At an hourly wage rate of $44.75, the estimated cost of the collection is $58,399 annually (1,305 hours × $44.75 = $58,398.75). There are no operating, maintenance, or capital costs associated with the collection.

Existing aerosol duster product manufactures would incur these costs in the first year following the proposed rule's effective date. In subsequent years, costs could be less, depending on the number of new GCCs issued for aerosol duster products. As required under the PRA (44 U.S.C. 3507(d)), CPSC has submitted the information collection requirements of this proposed rule to the OMB for review. Interested persons are requested to submit comments regarding information collection by September 30, 2024, to the Office of Information and Regulatory Affairs, OMB as described under the **ADDRESSES** section of this notice.

XI. Effective Date

The FHSA does not specify any requirements regarding the setting of an effective date for a rule promulgated pursuant to that authority. The Administrative Procedure Act (APA) generally requires that the effective date of a rule be at least 30 days after publication of a final rule. 5 U.S.C. 553(d).

The Commission preliminarily proposes an effective date of 30 days after publication of the final rule in the **Federal Register**. Pursuant to section 19(a)(2)(D) of the CPSA, once the rule is effective, it would be unlawful to ''sell, offer for sale, manufacture for sale, distribute in commerce, or import into the United States'' any aerosol duster product containing 18 mg in any combination of HFC–152a and/or HFC–134a. 15 U.S.C. 2068(a)(2)(D). Therefore, it would be unlawful to sell any remaining inventory of aerosol duster products containing more than 18 mg of HFC–152a or HFC–134a as of the effective date.

While there are potential vulnerabilities regarding shortages and revenue loss, these potential vulnerabilities are greatly outweighed by the reduction in benefits that would result from delaying the effective date past 30 days. Staff estimates the incremental loss in benefits from a 60-day effective date—30 additional days from the recommended 30-day effective date—to be $45.71 million in net benefits, using a 2 percent discount rate. This loss is the result of 246 additional injuries and 3 additional deaths from delaying the rule for an additional 30 days. Under a 180-day effective date—150 additional days from the recommended 30-day effective date—staff estimates a loss of $228.57 million in net benefits. This estimated further loss is the result of 1,229 additional injuries and 17 additional deaths from delaying the rule for 150 days.

Staff also considered manufacturers' expected actions required to become compliant with the proposed ban in recommending the 30-day effective date. Manufacturers of aerosol duster products would switch to an alternative propellant. Switching to an alternative propellant is a near drop-in replacement, having only minimal changes required to formulations and equipment. As such, while the new propellant itself will be more expensive, the one-time costs of switching propellants will be negligible. The manufacturing process which includes filling, sealing, and crimping the aerosol duster products remains unchanged from current manufacturing practices. It would also require manufacturers to change the labels on their canister to list the alternative propellant, which staff assesses can be accomplished in 30 days. Therefore, the cost of any retooling in the manufacturing process would be minimal. In addition, consumer aerosol duster products that would not be impacted by the proposed rule are already in use, and available for sale. Alternatively, instead of switching to a new propellant in an aerosol duster product, as discussed in section III.C of this preamble, there are manufacturers and importers that currently supply battery powered USB rechargeable duster products to the market, which provide similar utility to consumers as an aerosol duster product. For these reasons, the Commission proposes a 30-day effective date. The Commission invites comments regarding the amount of time needed to come into compliance with a final rule.

XII. Certification

Section 14(a)(1) of the CPSA requires that products subject to a consumer product safety rule under the CPSA, or to a similar rule, ban, standard or regulation under any other act enforced by the Commission, must be certified with a GCC as complying with all applicable CPSC-enforced requirements. 15 U.S.C. 2063(a)(1). A final rule establishing a ban under the FHSA would subject aerosol duster products to this requirement. Aerosol duster products would need a certification stating that they do not contain more than 18 mg in any combination of HFC–152a and/or HFC–134a.

XIII. Environmental Considerations

Generally, the Commission's regulations are considered to have little or no potential for affecting the human environment, and environmental assessments and impact statements are not usually required. *See* 16 CFR 1021.5(a). The proposed rule is not expected to have an adverse impact on the environment and is considered to fall within the ''categorical exclusion'' for the purposes of the National Environmental Policy Act. 16 CFR 1021.5(c). In fact, because HFO–1234ze was introduced as an environmentally friendly alternative to HFC–134a, substitution of HFO–1234ze for HFO–134a in aerosol duster products as a result of the proposed rule could have beneficial environmental effects.

XIV. Preemption

Executive Order (E.O.) 12988, Civil Justice Reform (Feb. 5, 1996), directs agencies to specify the preemptive effect of a rule in the regulation. 61 FR 4729 (Feb. 7, 1996). The proposed ban on any aerosol duster canister containing more than 18 mg in any combination of HFC–152a and/or HFC–134a is being promulgated under the authority of the FHSA. 15 U.S.C. 1261–1278. The FHSA provides that, generally, if the Commission issues a banning rule under section 2(q) of the FHSA to protect against a risk of illness or injury associated with a hazardous substance, ''no State or political subdivision of a State may establish or continue in effect a requirement applicable to such substance and designed to protect against the same risk of illness or injury unless such requirement is identical to the requirement established under such regulations.'' 15 U.S.C. 1261 Note. Upon application to the Commission, a State or local standard may be excepted from

[49] U.S. Bureau of Labor Statistics, ''Employer Costs for Employee Compensation,'' December 2023, Table 4, total compensation for private industry working in goods-producing industries: *https://www.bls.gov/news.release/archives/ecec_03132024.pdf.*

this preemptive effect if the State or local standard: (1) provides a higher degree of protection from the risk of injury or illness than the FHSA standard and (2) does not unduly burden interstate commerce. In addition, the Federal government, or a State or local government, may establish and continue in effect a non-identical requirement that provides a higher degree of protection than the FHSA requirement for the hazardous substance for the Federal, State or local government's own use. 15 U.S.C. 1261 note. Thus, with the exceptions noted above for standards that provide higher levels of protection, the proposed rule banning any aerosol duster canister containing more than 18 mg in any combination of HFC–152a and/or HFC–134a would preempt non-identical state or local requirements applicable to such aerosol duster products designed to protect against the same risk of injury.

XV. Request for Comments

We invite all interested persons to submit comments on all aspects of the proposed rule. The Commission specifically seeks comment on the following topics:

- Alternative propellants manufacturers would likely use in aerosol duster products and the intoxicating effects and safety implications of inhaling these alternative propellants;
- Any test methods that can be used to test for compliance of HFC–152a and HFC–134a at the proposed level of 18 mg per single aerosol duster canister;
- Information or data on future market trends, including projected sales, size of the market, growth of firms in the market, forthcoming innovation, or any other information that would inform CPSC of the expected future for the aerosol duster market with or without the proposed rule; and
- The ability of firms to complete these actions to produce compliant products within the proposed effective date.

List of Subjects in 16 CFR Part 1500

Consumer protection, Hazardous materials, Hazardous substances, Imports, Infants and children, Labeling, Law enforcement, and Reporting and recordkeeping.

For the reasons stated in the preamble, the Commission proposes to amend 16 CFR part 1500 to read as follows:

PART 1500—HAZARDOUS SUBSTANCES AND ARTICLES: ADMINISTRATION AND ENFORCEMENT REGULATIONS

■ 1. The authority for part 1500 continues to read as follows:

Authority: 15 U.S.C. 1261–1278.

■ 2. In § 1500.17, add paragraph (a)(14) to read as follows:

§ 1500.17 Banned hazardous substances.

(a) * * *

(14)(i) *Aerosol Duster Products Containing more than 18 mg in any combination of HFC–152a and/or HFC–134a.* Any canister of an aerosol duster product containing more than 18 mg in any combination of 1,1-difluoroethane (HFC–152a, CAS #75–37–6) and/or 1,1,1,2-tetrafluoroethane (HFC–134a, CAS #811–97–2). The term aerosol duster product means a product that uses a pressurized canister filled with gas or liquified gas to create a stream of gas propellant that can be used to dislodge or remove dust and debris.

(ii) *Prohibited Stockpiling—*

(A) *Prohibited acts.* Manufacturers and importers of aerosol duster products shall not manufacture or import aerosol duster products that do not comply with paragraph (a)(1)(i) in any one-month period between [DATE OF PUBLICATION OF FINAL RULE] and [EFFECTIVE DATE OF THE FINAL RULE] at a rate greater than 105 percent of the rate at which they manufactured or imported aerosol duster products during the base period for the manufacturer or importer.

(B) *Base period.* The base period for aerosol duster products is the average monthly manufacture or import volume for any month within the last 13 months immediately preceding the month of publication of the final rule.

(iii) *Findings—*

(A) *General.* To issue a rule under section 2(q)(1) of the FHSA, 15 U.S.C. 1261(q)(1), classifying a substance or article as a banned hazardous substance, the Commission must make certain findings and include them in the regulation. These findings are discussed in paragraphs (a)(14)(iii)(B) through (D) of this section.

(B) *Voluntary standard.* No voluntary standard currently exists to address the potential for death and injury posed by inhalant abuse of aerosol duster products containing HFC–152a or HFC–134a. The Commission finds that there is no evidence that a voluntary standard will be adopted and implemented within a reasonable period of time that would eliminate or adequately reduce the risk of injury regarding the potential for death and injury posed by the intentional inhalant abuse of aerosol duster products.

(C) *Relationship of benefits to costs.* The Commission estimates that the ban will be effective in reducing the potential for injury and death from compliant aerosol duster products. When benefits are compared to costs, the estimated benefits of the rule are greater than the estimated costs. Net benefits (benefits less costs) are estimated to be $1.93 billion on an annualized basis. Staff performed a 30-year prospective cost analysis (2026–2055) on all cost categories and estimated the total annualized cost from the proposed rule to be $123.73 million. Staff estimated the total annualized benefits from the proposed to be $2.05 billion, discounted at 2 percent.

(D) *Least burdensome requirement.* The Commission considered the following alternatives: require a performance requirement for aerosol duster products preventing inhalation of their propellant; require aversive agents (bitterants); require warning labels; and take no action and rely on a voluntary standard. The Commission finds none of the alternatives considered would adequately reduce the risk of death or injury. Therefore, the Commission finds that a ban on any aerosol duster product containing more than 18 mg in any combination of 1,1-difluoroethane (HFC–152a, CAS #75–37–6) and/or 1,1,1,2-tetrafluoroethane (HFC–134a, CAS #811–97–2) is the least burdensome requirement that would prevent or adequately reduce the risk of death or injury.

Alberta E. Mills,

Secretary, Consumer Product Safety Commission.

BILLING CODE 6355–01–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG–2022–0221]

RIN 1625–AA09

Drawbridge Operation Regulation; Rancocas Creek, Burlington County, NJ

AGENCY: Coast Guard, DHS.

ACTION: Supplemental notice of proposed rulemaking.

SUMMARY: The Coast Guard proposes to modify the operating schedule that governs the US Route 543 (Riverside-Delanco) Bridge across Rancocas Creek, mile 1.3, at Burlington County, NJ. The proposed rule allows the drawbridge to change its operating schedule to reduce the number of bridge openings during off-peak hours. We invite your comments on this proposed rulemaking.

DATES: Comments and related material must reach the Coast Guard on or before August 30, 2024.

ADDRESSES: You may submit comments identified by docket number USCG–2022–0221 using Federal Decision Making Portal at *https://www.regulations.gov.*

See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section below for instructions on submitting comments. This notice of proposed rulemaking with its plain-language, 100-word-or-less proposed rule summary will be available in this same docket.

FOR FURTHER INFORMATION CONTACT: If you have questions on this supplemental proposed rule, call or email Mr. Hal R. Pitts, Fifth Coast Guard District Chief Bridge Branch (dpb); telephone 571–607–8298, email *Hal.R.Pitts@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
FR Federal Register
NPRM Notice of proposed rulemaking
SNPRM Supplemental notice of proposed rulemaking
Pub. L. Public Law
§ Section
U.S.C. United States Code

II. Background, Purpose and Legal Basis

On May 23, 2022, we published a Test Deviation entitled Drawbridge Operation Regulation; Rancocas Creek, Burlington County, NJ, in the **Federal Register** (87 FR 31182). Having received no comments from the Test Deviation, we published an NPRM on April 24, 2023, in the **Federal Register** (88 FR 24739). We received no comments on the proposed rule.

The US Route 543 (Riverside-Delanco) Bridge across Rancocas Creek, mile 1.3, at Burlington County, NJ, and has a vertical clearance of 4 feet above mean high water in the closed-to-navigation position. The bridge currently operates under 33 CFR 117.745(b).

The Rancocas Creek is used predominately by recreational vessels and pleasure crafts. The bridge is currently required to open on signal from 7 a.m. to 11 p.m. from April 1 through October 31 and with 24-hour advance notice from November 1 through March 31. The bridge is allowed to remain closed to navigation at all other times.

The three-year, monthly average number of bridge openings from 7 a.m. to 3 p.m., Monday through Friday, 7 a.m. to 1 p.m., Saturday and Sunday, and from 8 p.m. to 11 p.m., daily, as drawn from the data contained in the bridge tender logs, is presented below.

April to October (2018, 2019 and 2020)	Average monthly openings
Monday–Friday, 7 a.m. to 3 p.m	4
Saturday & Sunday, 7 a.m. to 1 p.m	2
Daily, 8 p.m. to 11 p.m	7

III. Discussion of Comments and Change

As mentioned above, we received no comments from either the Test Deviation or the NPRM, however we noticed that we had not properly conveyed the new operating schedule of the bridge during the months from April

1 to October 31. Explanation of the change is provided in the below section.

IV. Discussion of Proposed Rule

In the NPRM we proposed to modify the drawbridge operating schedule to open on signal from 3 p.m. to 8 p.m., Monday through Friday, and from 1.p.m. to 8 p.m., Saturday and Sunday, from April 16 through October 15. However, the dates did not coincide with the regulation in 33 CFR 117.745(b)(2). The dates that were proposed in the NPRM left a gap of 15 days from March 31 to April 16 and another 15 day gap from October 15 to November 1. During those two 15 day periods, the bridge would fall under the operating requirements of 33 CFR 117.5 requiring the bridge to open on demand at all times. This was an oversight and was not our intention. Given the error on the dates proposed in the NPRM and the length of time from the publication of the NPRM, we are publishing this supplemental notice with request for comment regarding the new proposed dates.

In this SNPRM, we propose to modify the drawbridge operating schedule to open on signal from 3 p.m. to 8 p.m., Monday through Friday, and from 1 p.m. to 8 p.m., Saturday and Sunday, from April 1 through October 31. We are also adding clarifying language to both paragraphs (b)(1) and (2) that the bridge need not open for the passage of vessels at all other times during the dates in those paragraphs, except as provided in 33 CFR 117.745(a)(1).

V. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and Executive orders related to rulemaking. Below we summarize our analyses based on these statutes and Executive orders.

A. Regulatory Planning and Review

Executive Orders 12866 and 13563 direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits. This proposed rule has not been designated a ''significant regulatory action,'' under section 3(f) of Executive Order 12866, as amended by Executive Order 14094 (Modernizing Regulatory Review). Accordingly, the SNPRM has not been reviewed by the Office of Management and Budget. (OMB).

This regulatory action determination is based on the ability that vessels can still transit the bridge given during the appropriate time and proper notice. Notice.

B. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires Federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule would not have a significant economic impact on a substantial number of small entities.

While some owners or operators of vessels intending to transit the bridge may be small entities, for the reasons stated in section V.A above this proposed rule would not have a significant economic impact on any vessel owner or operator.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rulemaking would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rulemaking would economically affect it.

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rulemaking would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

C. Collection of Information

This proposed rule would call for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520.).

D. Federalism and Indian Tribal Government

A rule has implications for federalism under Executive Order 13132 (Federalism), if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and have determined that it is consistent with the fundamental federalism principles and preemption requirements described in Executive Order 13132.

Also, this proposed rule does not have Tribal implications under Executive Order 13175 (Consultation and Coordination with Indian Tribal Governments) because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes. If you believe this proposed rule has implications for federalism or Indian tribes, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section.

E. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of $100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule will not result in such an expenditure, we do discuss the effects of this proposed rule elsewhere in this preamble.

F. Environment

We have analyzed this rulemaking under Department of Homeland Security Management Directive 023–01, Rev.1, associated implementing instructions, and Environmental Planning Policy COMDTINST 5090.1 (series), which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321–4370f). The Coast Guard has that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule promulgates the operating regulations or procedures for drawbridges. Normally such actions are categorically excluded from further review, under paragraph L49, of Chapter 3, Table 3–1 of the U.S. Coast Guard Environmental Planning Implementation Procedures.

Neither a Record of Environmental Consideration nor a Memorandum for the Record are required for this rulemaking. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

VI. Public Participation and Request for Comments

We view public participation as essential to effective rulemaking and will consider all comments and material received during the comment period. Your comment can help shape the outcome of this rulemaking. If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation.

Submitting comments. We encourage you to submit comments through the Federal Decision-Making Portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2022–0221 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

Viewing material in docket. To view documents mentioned in this proposed rule as being available in the docket, find the docket as described in the previous paragraph, and then select ''Supporting & Related Material'' in the Document Type column. Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. Also, if you go to the online docket and sign up for email alerts, you will be notified when comments are posted, or a final rule is published of any posting or updates to the docket.

We review all comments received, but we will only post comments that address the topic of the proposed rule. We may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

List of Subjects in 33 CFR Part 117

Bridges.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 117 as follows:

PART 117—DRAWBRIDGE OPERATION REGULATIONS

■ 1. The authority citation for part 117 continues to read as follows:

Authority: 33 U.S.C. 499; 33 CFR 1.05–1; DHS Delegation No. 00170.1, Revision No. 01.3.

■ 2. Amend § 117.745 by revising paragraph (b) to read as follows:

§ 117.745 Rancocas Creek

* * * * *

(b) The drawspan for the Riverside-Delanco/SR#543 Drawbridge, mile 1.3, at Riverside must operate as follows:

(1) From April 1 through October 31 open on signal from 3 p.m. to 8 p.m., Monday through Friday, and from 1 p.m. to 8 p.m., Saturday and Sunday. The bridge need not open for the passage of vessels at all other times during those dates, except as provided in paragraph (a)(1) of this section.

(2) From November 1 through March 31 from 7 a.m. to 11 p.m., open on signal if at least 24 hours' notice is given and need not open for the passage of vessels at all other times during those dates, except as provided in paragraph (a)(1) of this section.

* * * * *

Dated: July 25, 2024.

J.C. Vann,

Rear Admiral, U.S. Coast Guard, Commander, Fifth Coast Guard District.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket Number USCG–2024–0111]

Heavy Weather and Disaster Risk Management; Los Angeles-Long Beach Captain of the Port Zone

AGENCY: Coast Guard, Department of Homeland Security (DHS).

ACTION: Notification of inquiry; request for comments; notice of meeting.

SUMMARY: We are requesting your comments on establishing port conditions and heavy weather safety zones throughout the Los Angeles-Long Beach Captain of the Port Zone. Safety zones and port conditions would establish safe practices in the event natural or manmade disasters affect navigable waterways. We seek your comments on which weather or disaster parameters would necessitate changing port conditions or establishing safety zones based on individual harbors throughout the Los Angeles-Long Beach Captain of the Port Zone (COTP Zone) from San Clemente to Morro Bay. We also plan to host a public meeting on August 12, 2024.

DATES: Your comments and related material must reach the Coast Guard on or before August 31, 2024.

A public meeting will be held 10 a.m. August 12, 2024. See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further details.

ADDRESSES: You may submit comments identified by docket number USCG–2024–0111 using the Federal portal at *https://www.regulations.gov.* See the ''Public Participation and Request for Comments'' portion of the **SUPPLEMENTARY INFORMATION** section for further instructions on submitting comments.

The public meeting will be held virtually. Please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section for call-in information.

FOR FURTHER INFORMATION CONTACT: If you have questions about this notification of inquiry or about the virtual meeting call-in information, call or email LCDR Kevin Kinsella, Waterways Management, U.S. Coast Guard Sector Los Angeles-Long Beach; telephone (310) 357–1603, email *D11-SMB-SectorLALB-WWM@uscg.mil.*

SUPPLEMENTARY INFORMATION:

I. Table of Abbreviations

CFR Code of Federal Regulations
DHS Department of Homeland Security
U.S.C. United States Code

II. Background and Purpose

Southern California has the potential to be affected by hurricanes, tropical storms, and other natural disasters on a yearly basis, especially between the months of June and November. The Captain of the Port (COTP) Los Angeles-Long Beach proposes establishing safety zones to provide for the safety of life during and after such storms. In August of 2023, heavy weather from Tropical Storm Hilary was expected to make landfall along the coast of the Los Angeles-Long Beach COTP Zone producing 35 or higher knot winds. At the time there were no established heavy weather procedures for the COTP Zone and the COTP implemented necessary measures derived from other related plans and procedures.

The purpose of this notification of inquiry is to solicit public input to help the Coast Guard prepare to protect

mariners, port infrastructure, and the environment during and after extreme weather and other natural disasters. We seek your comments on which weather or disaster parameters would necessitate changing port conditions or establishing safety zones based on individual harbors throughout the Los Angeles-Long Beach Captain of the Port Zone (COTP Zone) from San Clemente to Morro Bay. After considering the comments from this notification and public meeting, the Coast Guard will publish a notice of proposed rulemaking with opportunity for additional comments if we determine that there is a need to pursue a rulemaking.

III. Information Requested

The Coast Guard requests comments on the following questions:

1. Do you agree or disagree with the need for establishing safety measures with regards to heavy weather and disasters on the navigable waters throughout the Los Angeles-Long Beach COTP Zone? If so or if not, what is your reason?

2. What weather parameters do you think specific harbors should limit or control vessel traffic movement? (*Example:* Port Condition WHISKEY means a condition set by the COTP when weather advisories indicate sustained gale force winds (39–54 mph/34–47 knots) from a tropical or hurricane force storm are predicted to make landfall at the port within 72 hours.)

3. What control measures do you think should be in place for the corresponding port conditions? (*Example:* Port Condition WHISKEY. All vessel and port facilities must exercise due diligence in preparation for potential storm impacts. Ports and waterfront facilities must begin removing all debris and securing potential flying hazards. Oceangoing vessels 500 gross tons (GT) and above must make plans to depart no later than the setting of Port Condition Yankee unless authorized by the COTP. Vessels wishing to remain in port are required to submit a Notice of Intent to Remain in Port to the COTP prior to setting Port Condition X-Ray.)

IV. Public Participation and Request for Comments

We encourage you to submit comments in response to this notification of inquiry through the Federal Decision Making portal at *https://www.regulations.gov.* To do so, go to *https://www.regulations.gov,* type USCG–2024–0111 in the search box and click ''Search.'' Next, look for this document in the Search Results column, and click on it. Then click on the Comment option. In your submission, please include the docket number for this notification of inquiry and provide a reason for each suggestion or recommendation. If your material cannot be submitted using *https://www.regulations.gov,* contact the person in the **FOR FURTHER INFORMATION CONTACT** section of this document for alternate instructions.

Public comments will also be placed in our online docket and can be viewed by following instructions on the *https://www.regulations.gov* Frequently Asked Questions web page. We review all comments received, but we may choose not to post off-topic, inappropriate, or duplicate comments that we receive.

We accept anonymous comments. Comments we post to *https://www.regulations.gov* will include any personal information you have provided. For more about privacy and submissions in response to this document, see DHS's eRulemaking System of Records notice (85 FR 14226, March 11, 2020).

We plan to hold one public meeting virtually. The public meeting will take place at 10 a.m. on August 12, 2024. For information on facilities or services for individuals with disabilities or to request special assistance at the public meeting, contact the person named in the **FOR FURTHER INFORMATION CONTACT** section, above.

This document is issued under authority of 5 U.S.C. 552(a).

Dated: July 26, 2024.

S.L. Crecy,

Captain, U.S. Coast Guard,Captain of the Port Sector Los Angeles-Long Beach.

Homeland Security Acquisition Regulation, Rescinding Reserve Officer Training Corps and Military Recruiting on Campus Clause (HSAR Case 2024–001)

AGENCY: Office of the Chief Procurement Officer, Department of Homeland Security (DHS).

ACTION: Proposed rule.

SUMMARY: DHS is proposing to amend the Homeland Security Acquisition Regulation (HSAR). Specifically, DHS proposes to remove and reserve a HSAR clause and subpart. These provisions

contain regulatory requirements, which prohibits the award of certain Federal contracts to institutions of higher education that prohibit Reserve Officer Training Corps units or military recruiting on campus. DHS believes these HSAR provisions are no longer needed in light of amendments made in the Federal Acquisition Regulation (FAR), which DHS has adhered to since December 2020.

DATES: Comments on the proposed rule should be submitted in writing to one of the addresses shown below on or before September 30, 2024, to be considered in the formation of the final rule.

ADDRESSES: Submit comments identified by HSAR Case 2024–001, Rescinding Reserve Officer Training Corps and Military Recruiting on Campus Clause, using any of the following methods:

- *Regulations.gov: http://www.regulations.gov.*

Submit comments via the Federal eRulemaking portal by entering ''HSAR Case 2024–001'' under the heading ''Enter Keyword or ID'' and select ''Search.'' Select the link ''Submit a Comment'' that corresponds with ''HSAR Case 2024–001.'' Follow the instructions provided at the ''Submit a Comment'' screen. Please include your name, company name (if any), and ''HSAR Case 2024–001'' on your attached document.

- *Fax:* (202) 447–0520.
- *Mail:* Department of Homeland Security, Office of the Chief Procurement Officer, MS 0080, ATTN: Ms. Ellen Murray, 6595 Springfield Center Dr., Springfield, VA 20598–0080.

Comments received generally will be posted without change to *http://www.regulations.gov,* including any personal information provided. To confirm receipt of your comment(s), please check *www.regulations.gov,* approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Ms. Ellen Murray, Procurement Analyst, DHS, Office of the Chief Procurement Officer, Acquisition Policy and Legislation at (202) 603–3791 or email *HSAR@hq.dhs.gov.* When using email, include HSAR Case 2024–001 in the ''Subject'' line.

SUPPLEMENTARY INFORMATION:

I. Background

On December 4, 2003, DHS published an interim final rule to establish the Department of Homeland Security Acquisition Regulation (HSAR).[1] On May 2, 2006, DHS published a final rule, which adopted the interim rule with some changes in response to public comment (HSAR final rule).[2] The HSAR final rule finalized, among other provisions, HSAR clause 3052.209–71, Reserve Officer Training Corps and Military Recruiting on Campus (48 CFR 3052.209–71). This regulatory requirement is consistent with 10 U.S.C. 983, which prohibits the award of certain Federal contracts to institutions of higher education that prohibit Reserve Officer Training Corps units or military recruiting on campus.

HSAR clause 3052.209–71 requires certain contractors to represent at time of contract award that it does not have and agrees that during performance of a contract it will not adopt, any policy or practice that prohibits or prevents the maintenance, establishment, or operation of a Senior Reserve Officer Training Corps (ROTC) unit at the institution; students at that institution from enrolling in a unit of the Senior ROTC at another institution of higher education; the Secretary of a military department or Secretary of Homeland Security from gaining access to campuses, or students on campuses, for military recruiting purposes; or access by military recruiters, for the purposes of military recruiting, to certain information pertaining to students enrolled at the institution.[3]

The clause also lists the two statutory exceptions to the prohibition concerning the award of a contract found in 10 U.S.C. 983(c).[4] These exceptions are when the Secretary of Defense determines that the institution has ceased the prohibited policy or practice or that the institution has a long-standing policy of pacifism based on historical religious affiliation.

On October 23, 2020, the Department of Defense (DoD), the General Services Administration (GSA), and National Aeronautics and Space Administration (NASA) jointly issued a final rule entitled Federal Acquisition Regulation (FAR) Reserve Officer Training Corps and Military Recruiting on Campus (''FAR final rule'').[5] The FAR final rule, among other amendments, codified for all affected Federal agencies a requirement to include, where applicable, a clause that prohibits the award of certain Federal contracts to institutions of higher education that prohibit Reserve Officer Training Corps units or military recruiting on campus.[6]

DHS notes that the DHS Chief Procurement Officer can issue HSAR deviations when necessary to allow components to deviate from the HSAR.[7] On December 8, 2020, DHS issued HSAR Class Deviation 21–02, Reserve Officer Training Corps and Military Recruiting on Campus.[8] The deviation explained that the FAR final rule ''effective November 23, 2020, added FAR 9.110 that provides the policy and procedures for complying with the 10 U.S.C. 983 prohibition, including FAR clause 52.209–14.'' [9] The deviation then directed DHS contracting officers to follow the FAR when complying with the requirements of 10 U.S.C. 983 and suspended use of HSAR 3009.470 and HSAR clause 3052.209–71.

As a result of the FAR revision, HSAR clause 3052.209–71 is no longer being used to comply with 10 U.S.C. 983. Therefore, DHS is proposing to remove and reserve HSAR clause 3052.209–71 and subpart 3009.4.

II. Discussion and Analysis

As explained previously, DHS currently complies with the requirements of 10 U.S.C. 983 by following the regulatory provisions of the FAR final rule. Until December 8, 2020, DHS had formerly complied with this statutory provision by following 48 CFR 3052.209–71 and 48 CFR 3009.470.[10]

As a result of the amendments made in the FAR final rule that standardize compliance with 10 U.S.C. 983 for all affected Federal agencies, and the directives of HSAR Class Deviation 21–02, DHS has determined that HSAR clause 3052.209–71 and subpart 3009.4 are not needed to comply with the requirements of 10 U.S.C. 983.[11] Therefore, DHS is proposing to remove and reserve 48 CFR 3052.209–71 and subpart 3009.4 of 48 CFR part 3009. These proposed changes would also be consistent with the guidance in the HSAR Deviation.

[9] *See HSAR Deviation 21–02, Reserve Officer Training Corps and Military Recruiting on Campus,* available at: *https://www.dhs.gov/sites/default/files/publications/hsarclassdeviation_21_02_3009.470_12-8-2020.pdf* (last accessed May 28, 2024).

[10] DHS notes that 48 CFR 3009.470–3009.470–4 currently constitutes all the regulatory text contained in 48 CFR part 3009, subpart 3009.4.

III. Regulatory Analyses

A. Executive Orders 12866, 13563, and 14094

Executive Orders 12866 (Regulatory Planning and Review), as amended by Executive Order 14094 (Modernizing Regulatory Review), and 13563 (Improving Regulation and Regulatory Review) direct agencies to assess the costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, reducing costs, harmonizing rules, and promoting flexibility.

The Office of Management and Budget (OMB) has not designated this rule a significant regulatory action, under section 3(f) of Executive Order 12866, as amended by Executive Order 14094. Accordingly, OMB has not reviewed this regulatory action.

There are no quantified costs or cost savings to this rule as it simply rescinds HSAR requirements that DoD, GSA and NASA have already incorporated in the FAR. DHS believes there would be efficiency and streamlining benefits from this rule as it would remove agency specific provisions from the HSAR.

B. Regulatory Flexibility Act

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended by the Small Business Regulatory Enforcement Fairness Act of 1996, Public Law 104–121, (Mar. 29, 1996), requires Federal agencies to consider the potential impact of regulations on small businesses, small governmental jurisdictions, and small organizations during the development of their rules. The term ''small entities'' comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, or governmental jurisdictions with populations of less than 50,000. This proposed rule would rescind HSAR clause 3052.209–71 and would not impose new requirements on small entities. As such, DHS certifies this proposed change would not result in a significant economic impact on a substantial number of small entities within the meaning of the Regulatory Flexibility Act, 5 U.S.C. 601, *et seq.*

C. Paperwork Reduction Act

The rule does not contain any information collection requirements that require the approval of the Office of Management and Budget under the Paperwork Reduction Act (44 U.S.C. 3501–3521).

D. National Environmental Policy Act

Section 102 of the National Environmental Policy Act of 1969 (NEPA), Public Law 91–190, 83 Stat. 852 (Jan. 1, 1970) (42 U.S.C. 4321 *et seq.*), as amended, requires Federal agencies to evaluate the impacts of a proposed major Federal action that may significantly affect the human environment, consider alternatives to the proposed action, provide public notice and opportunity to comment, and properly document its analysis. DHS and its agency components analyze proposed actions to determine whether NEPA applies to them and, if so, what level of documentation and analysis is required.

DHS Directive 023–01, Rev. 01 and DHS Instruction Manual 023–01–001–01, Rev. 01 (Instruction Manual) establish the policies and procedures DHS and its component agencies use to comply with NEPA and the Council on Environmental Quality regulations for implementing NEPA codified in 40 CFR parts 1500–1508. The CEQ regulations allow Federal agencies to establish, in their implementing procedures, with CEQ review and concurrence, categories of actions (''categorical exclusions'') that experience has shown do not, individually or in the aggregate, have a significant effect on the human environment and, therefore, do not require preparation of an environmental assessment or environmental impact statement. 40 CFR 1501.4, 1507.3(e)(2)(ii). Appendix A of the Instruction Manual lists the DHS categorical exclusions.

Under DHS NEPA implementing procedures, for an action to be categorically excluded, it must satisfy each of the following three conditions: (1) the entire action clearly fits within one or more categorical exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that create the potential for a significant environmental effect.

The proposed rule, if finalized, would amend the HSAR to remove and reserve HSAR clause 3052.209–71 and subpart 3009.4. As stated previously, this HSAR clause and its corresponding policy that the rule proposes to remove are now obsolete given that a FAR clause has been implemented to create a single standard for all agencies subject to 10 U.S.C. 983 to comply with the statutory requirements.

DHS is not aware of any significant impact on the environment, or any change in environmental effect that will result from this proposed rule. DHS finds promulgation of the rule clearly fits within categorical exclusion A3, established in the Department's NEPA implementing procedures as removing and reserving HSAR clause 3052.209–71 and subpart 3009.4 would be strictly administrative in nature.

This proposed rule is a standalone rule and is not part of any larger action. This proposed rule would not result in any major Federal action that would significantly affect the quality of the human environment. Furthermore, DHS has determined that no extraordinary circumstances exist that would create the potential for significant environmental effects. Therefore, this proposed rule is categorically excluded from further NEPA review and documentation.

List of Subjects in 48 CFR Parts 3009 and 3052

Government procurement.

Accordingly, for the reasons set forth in the preamble, DHS proposes to amend 48 CFR parts 3009 and 3052 as follows:

PART 3009—CONTRACTOR QUALIFICATIONS

■ 1. The authority citation for part 3009 continues to read as follows:

Authority: 5 U.S.C. 301–302, 41 U.S.C. 1303, 41 U.S.C. 1707, 41 U.S.C. 1702, and 48 CFR subpart 1.3.

3009.4 [Removed and Reserved]

■ 2. Remove and reserve subpart 3009.4.

PART 3052—SOLICITATION PROVISIONS AND CONTRACT CLAUSES

■ 3. The authority citation for part 3052 continues to read as follows:

Authority: 5 U.S.C. 301–302, 41 U.S.C. 1707, 41 U.S.C. 1702, 41 U.S.C. 1303(a)(2), 48 CFR part 1, subpart 1.3, and DHS Delegation Number 0702.

3052.209–71 [Removed and Reserved]

■ 4. Remove and reserve section 3052.209–71.

Paul Courtney,

Chief Procurement Officer, Department of Homeland Security.

RIN 1018–BD66

Endangered and Threatened Wildlife and Plants; Removal of Northeastern Bulrush From the Federal List of Endangered and Threatened Plants

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service (Service), propose to remove the northeastern bulrush (*Scirpus ancistrochaetus*) from the Federal List of Endangered and Threatened Plants. After a review of the best available scientific and commercial information, we find that delisting the species is warranted. Our review indicates that the threats to the northeastern bulrush have been eliminated or reduced to the point that the species no longer meets the definition of an endangered or threatened species under the Endangered Species Act of 1973, as amended (Act). Accordingly, we propose to delist the northeastern bulrush. If we finalize this rule as proposed, the prohibitions and conservation measures provided by the Act, particularly through Sections 7 and 9 would no longer apply to the northeastern bulrush.

DATES: We will accept comments received or postmarked on or before September 30, 2024. Comments submitted electronically using the Federal eRulemaking Portal (see **ADDRESSES**, below) must be received by 11:59 p.m. eastern time on the closing date. We must receive requests for public hearings, in writing, at the address shown in **FOR FURTHER INFORMATION CONTACT** by September 16, 2024.

ADDRESSES: You may submit comments by one of the following methods:

(1) *Electronically:* Go to the Federal eRulemaking Portal: *https://www.regulations.gov.* In the Search box, enter FWS–R5–ES–2023–0014, which is the docket number for this rulemaking. Then, click on the Search button. On the resulting page, in the Search panel on the left side of the screen, under the Document Type heading, check the Proposed Rule box to locate this document. You may submit a comment by clicking on ''Comment.''

(2) *By hard copy:* Submit by U.S. mail to: Public Comments Processing, Attn: FWS–R5–ES–2023–0014, U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041–3803.

We request that you send comments only by the methods described above. We will post all comments on *https://www.regulations.gov.* This generally means that we will post any personal information you provide us (see Information Requested, below, for more information).

Availability of supporting materials: This proposed rule and supporting documents, including the 5-year reviews, the Recovery Plan, and the species status assessment (SSA) report, are available at *https://www.regulations.gov* under Docket No. FWS–R5–ES–2023–0014.

FOR FURTHER INFORMATION CONTACT: Audrey Mayer, Field Supervisor, New England Ecological Services Field Office, 70 Commercial Street, Suite 300, Concord, NH 03301; telephone 603–223–2541. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. Please see Docket No. FWS–R5–ES–2023–0014 on *https://www.regulations.gov* for a document that summarizes this proposed rule.

SUPPLEMENTARY INFORMATION:

Information Requested

We intend that any final action resulting from this proposed rule will be based on the best scientific and commercial data available and be as accurate and as effective as possible. Therefore, we request comments or information from other concerned governmental agencies, Native American Tribes, the scientific community, industry, or any other interested parties concerning this proposed rule.

We particularly seek comments concerning:

(1) Reasons we should or should not remove the northeastern bulrush from the List of Endangered and Threatened Plants.

(2) Relevant data concerning any threats (or lack thereof) to the northeastern bulrush, particularly any data on the possible effects of climate change as it relates to habitat, as well as the extent of State protection and management that would be provided to this plant as a delisted species;

(3) Current or planned activities within the geographic range of the northeastern bulrush that may have either a negative or positive impact on the species; and

(4) Considerations for post-delisting monitoring, including monitoring protocols and length of time monitoring is needed, as well as triggers for reevaluation.

Please include sufficient information with your submission (such as scientific journal articles or other publications) to allow us to verify any scientific or commercial information you include.

Please note that submissions merely stating support for, or opposition to, the action under consideration without providing supporting information, although noted, do not provide substantial information necessary to support a determination. Section 4(b)(1)(A) of the Act directs that determinations as to whether any species is an endangered species or a threatened species must be made solely on the basis of the best scientific and commercial data available.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in **ADDRESSES**. We request that you send comments only by the methods described in **ADDRESSES**.

If you submit information via *https://www.regulations.gov,* your entire submission—including any personal identifying information—will be posted on the website. If your submission is made via a hardcopy that includes personal identifying information, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. We will post all hardcopy submissions on *https://www.regulations.gov.*

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on *https://www.regulations.gov.*

Our final determination may differ from this proposal because we will consider all comments we receive during the comment period as well as any information that may become available after this proposal. For example, based on the new information we receive (and if relevant, any comments on that new information), we may conclude that the species should remain listed as endangered, or we may conclude that the species should be reclassified from endangered to threatened. We will clearly explain our rationale and the basis for our final

decision, including why we made changes, if any, that differ from this proposal.

Public Hearing

Section 4(b)(5) of the Act provides for a public hearing on this proposal, if requested. Requests must be received by the date specified in **DATES**. Such requests must be sent to the address shown in **FOR FURTHER INFORMATION CONTACT**. We will schedule a public hearing on this proposal, if requested, and announce the date, time, and place of the hearing, as well as how to obtain reasonable accommodations, in the **Federal Register** and local newspapers at least 15 days before the hearing. We may hold the public hearing in person or virtually via webinar. We will announce any public hearing on our website, in addition to the **Federal Register**. The use of these virtual public hearings is consistent with our regulation at 50 CFR 424.16(c)(3).

Peer Review

A species status assessment (SSA) team prepared an SSA report for the northeastern bulrush. The SSA team was composed of Service biologists, in consultation with other species experts. The SSA report represents a compilation of the best scientific and commercial data available concerning the status of the species, including the impacts of past, present, and future factors (both negative and beneficial) affecting the species.

In accordance with our joint policy on peer review published in the **Federal Register** on July 1, 1994 (59 FR 34270), and our August 22, 2016, memorandum updating and clarifying the role of peer review of listing and recovery actions under the Act, we solicited independent scientific review of the information contained in the northeastern bulrush SSA report. The Service sent the SSA report to 3 independent peer reviewers and received 2 responses. Results of this structured peer review process can be found at *https://www.regulations.gov* under Docket No. FWS–R5–ES–2023–0014. In preparing this proposed rule, we incorporated the results of these reviews, as appropriate, into the final SSA report, which is the foundation for this proposed rule.

Summary of Peer Reviewer Comments

As discussed in Peer Review above, we received comments from 2 peer reviewers on the draft SSA report. We reviewed all comments we received from the peer reviewers for substantive issues and new information regarding the information contained in the SSA report. Overall, the comments were supportive of the approach, analyses, and projections of the SSA. Information was presented that helped to improve the assessment and inform this proposed rule. Such information included new references, comments regarding using a spatial assessment of climate change projections, discussion of population responses to weather events, and new information to help inform our analysis of synergistic impacts to bulrush viability.

Previous Federal Actions

On May 7, 1991, we published in the **Federal Register** (56 FR 21091) a final rule listing the northeastern bulrush as an endangered species under the Act. On August 25, 1993, we approved the northeastern bulrush recovery plan (Service 1993, entire). On September 24, 2009, we completed a 5-year review (Service 2009, entire) of the status of the northeastern bulrush, which recommended reclassification from endangered to threatened status based on the increased number and status of known extant populations. On August 28, 2019, we completed a second 5-year review (Service 2019b, entire), resulting in a recommendation to delist the species, because, based on the species' current representation, resiliency, and redundancy, and our analysis of threats that may influence its future condition, the species no longer met the statutory definition of an endangered or a threatened species.

Background

Species Information

For more information on the description, biology, ecology, genetics, and habitat of the northeastern bulrush, please refer to the final listing rule (56 FR 21091; May 7, 1991), the northeastern bulrush (*Scirpus ancistrochaetus*) recovery plan (Service 1993, pp. 1–31), and the SSA report (Service 2019a, entire). These documents will be available as supporting materials at *https://www.regulations.gov* under Docket No. FWS–R5–ES–2023–0014.

Taxonomy and Species Description

The northeastern bulrush is a member of the Cyperaceae (sedge) family. It is a tall (80 to 120 centimeter), leafy, perennial herb that produces stems and leaves from short, thick, underground rhizomes. It is distinguished from other *Scirpus* species by its drooping, clustered, fruiting heads; dark, chocolate-brown florets; achene bristles that are barbed to the base; and broad bracts (Schuyler 1962, pp. 44–46).

Population size may vary from year to year. In some cases, plants are absent above ground for several years before re-emerging (Service 2019a, p. 10). This is likely due to changes in environmental conditions, although the exact causal mechanisms are not well understood. When water levels and/or light availability are not favorable, the population becomes stressed, dwindles in size, and sometimes becomes completely absent above ground. When favorable habitat conditions return, the population may re-emerge.

The northeastern bulrush is a wetland obligate plant occurring in acidic to almost neutral wetlands including sinkhole ponds, wet depressions, and vernal pools (collectively, seasonal or ephemeral wetlands); American beaver (*Castor canadensis*) flowages; and other riparian areas found in hilly country (Schuyler 1962, p. 47). Optimal habitat includes abundant sunlight, higher organic matter (Lentz and Dunson 1999, p. 165), and seasonally and/or annually fluctuating water levels, although prolonged periods with too much or too little water may be detrimental.

Distribution

At the time of listing in 1991, only 13 populations of the northeastern bulrush scattered across 6 U.S. States were known to exist (Service 1991, entire); however, the species is now known from 148 extant populations in 8 States (Service 2019a, p. 2). The populations can be loosely organized into a northern region and a southern or Appalachian region, with a large gap in the distribution in southeastern New York. The northern region includes extreme eastern New York and the New England States of Vermont, New Hampshire, and Massachusetts; and the southern or Appalachian region includes southwestern New York, Pennsylvania, Maryland, Virginia, and West Virginia. The vast majority of populations are in Pennsylvania (59.5 percent), Vermont (20.9 percent), and New Hampshire (9.5 percent).

Recovery Criteria

Section 4(f) of the Act directs us to develop and implement recovery plans for the conservation and survival of endangered and threatened species unless we determine that such a plan will not promote the conservation of the species. Under section 4(f)(1)(B)(ii), recovery plans must, to the maximum extent practicable, include objective, measurable criteria which, when met, would result in a determination, in accordance with the provisions of section 4 of the Act, that the species be

removed from the Lists of Endangered and Threatened Wildlife and Plants.

Recovery plans provide a roadmap for us and our partners on methods of enhancing conservation and minimizing threats to listed species, as well as measurable criteria against which to evaluate progress towards recovery and assess the species' likely future condition. However, they are not regulatory documents and do not substitute for the determinations and promulgation of regulations required under section 4(a)(1) of the Act. A decision to revise the status of a species or to delist a species is ultimately based on an analysis of the best scientific and commercial data available to determine whether a species is no longer an endangered species or a threatened species, regardless of whether that information differs from the recovery plan.

There are many paths to accomplishing recovery of a species, and recovery may be achieved without all of the criteria in a recovery plan being fully met. For example, one or more criteria may be exceeded while other criteria may not yet be accomplished. In that instance, we may determine that the threats are minimized sufficiently and that the species is robust enough that it no longer meets the definition of an endangered species or a threatened species. In other cases, we may discover new recovery opportunities after having finalized the recovery plan. Parties seeking to conserve the species may use these opportunities instead of methods identified in the recovery plan. Likewise, we may learn new information about the species after we finalize the recovery plan. The new information may change the extent to which existing criteria are appropriate for identifying recovery of the species. The recovery of a species is a dynamic process requiring adaptive management that may, or may not, follow all of the guidance provided in a recovery plan.

The objective identified in the northeastern bulrush recovery plan (Service 1993, p. 37), when there were 33 known extant populations, was to reclassify the species from endangered to threatened, and the plan provides three criteria for doing so: (1) 20 populations are permanently protected; (2) annual monitoring over a 10-year period shows that 20 representative populations are stable or increasing; and (3) life-history and ecological requirements are understood sufficiently to allow for effective protection, monitoring, and management. The recovery plan does not contain delisting criteria.

In the 2009 5-year review (Service 2009, entire), the Service determined that the downlisting criteria were partially met and recommended a change in listing status to threatened, because (1) the number of extant populations was three times greater than when the species was listed; [1] (2) approximately half of all known populations were on public lands; and (3) approximately half of the extant populations appeared to be stable or increasing. In the 2019 5-year review (Service 2019b, entire), the Service recommended delisting the northeastern bulrush, because it no longer meets the Act's definition of an endangered or a threatened species. While the recovery plan does not include delisting criteria, our analysis presented in the SSA report (Service 2019a, entire) shows that the intent of the recovery plan's downlisting criteria (Service 1993, p. 37) has been exceeded substantially, supporting our conclusion that the species is neither endangered nor threatened.

The purpose and intent of the first downlisting criterion calling for permanent protection of 20 populations was to provide evidence that a reasonable number of populations were reliably protected from development, which was identified as a threat to the species' viability. Currently, 89 (approximately 60 percent) of the 148 known extant populations occur on public lands, which affords consistent and reliable protection through a management structure conducive to conservation. In addition, although development was identified as an important threat at the time of listing, that threat appears to have diminished. Currently, oil and gas development in Pennsylvania is perhaps the most likely development threat; however, no available information indicates any populations are under known threat from oil and gas development. Although other types of activities such as road construction, forestry, recreation, and plant competition are factors that may affect the species, data indicate they are not primary factors influencing the viability of the northeastern bulrush. Also, because the species occurs in wetland habitats, which are provided some protections under State laws, the species is protected from many sources of impacts from human activities. As a result, the need for further affirmative protection from these threats on both public and private lands is less than previously determined at the time the recovery plan was issued in 1993. Together these factors lead to our conclusion that the purpose and intent of the first downlisting criterion of permanent protection for 20 populations has been substantially exceeded.

The intent of the second downlisting criterion calling for 20 stable or increasing populations was to demonstrate and ensure the species was not in active decline. This element of the recovery plan has also been exceeded by a wide margin. There are 148 known extant populations of the northeastern bulrush in 8 States, an increase of 31 percent from the 113 known extant populations in 7 States at the time of the 2009 5-year review. Our analysis of these populations in the SSA report (Service 2019a, p. 27) indicates that 132 (89 percent) of the 148 known extant populations demonstrate excellent, good, and fair resiliency, and only 16 (11 percent) of the populations demonstrate poor resiliency or have been extirpated. We determined that the recovery plan's terms ''stable'' and ''increasing'' are not appropriate for describing a species whose populations may naturally fluctuate dramatically in response to environmental stochasticity; for this reason, the number of populations in excellent, good, or fair condition is a better measure of the intent of this criterion. Also, because the number of populations in fair or better condition is an order of magnitude higher than the number of stable or increasing populations called for in the second downlisting criterion, we conclude that the intent of this criterion has been substantially exceeded.

The third downlisting criterion calling for increased understanding of the life-history and ecological requirements of the northeastern bulrush has been achieved in that we have sufficient information to support long-term management of populations. Research by State, Federal, and university partners on the effects of hydrology, shading, herbivory, genetics, propagation, transplantation, and nutrients on germination and plant growth has provided better understanding of how to more effectively protect, monitor, and manage the species. Therefore, lack of knowledge to support long-term management of populations no longer contributes a substantial risk to the species.

Regulatory and Analytical Framework

Regulatory Framework

Section 4 of the Act (16 U.S.C. 1533) and the implementing regulations in

[1] There were 13 known extant populations at listing in 1991, 33 at the time of the recovery plan in 1993, and 113 in 2009 when the 5-year review was completed. To clarify the 2009 5-year review, the number of extant populations in 2009 was 8.7 times the number of populations known in 1991.

title 50 of the Code of Federal Regulations set forth the procedures for determining whether a species is an endangered species or a threatened species, issuing protective regulations for threatened species, and designating critical habitat for endangered and threatened species. On April 5, 2024, jointly with the National Marine Fisheries Service, the Service issued a final rule that revised the regulations in 50 CFR 424 regarding how we add, remove, and reclassify endangered and threatened species and what criteria we apply when designating listed species' critical habitat (89 FR 24300). This final rule is now in effect and is incorporated into the current regulations. The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range, and a ''threatened species'' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether any species is an endangered species or a threatened species because of any of the following factors:

(A) The present or threatened destruction, modification, or curtailment of its habitat or range;

(B) Overutilization for commercial, recreational, scientific, or educational purposes;

(C) Disease or predation;

(D) The inadequacy of existing regulatory mechanisms; or

(E) Other natural or manmade factors affecting its continued existence.

These factors represent broad categories of natural or human-caused actions or conditions that could have an effect on a species' continued existence. In evaluating these actions and conditions, we look for those that may have a negative effect on individuals of the species, as well as other actions or conditions that may ameliorate any negative effects or may have positive effects. The determination to delist a species must be based on an analysis of the same five factors.

We use the term ''threat'' to refer in general to actions or conditions that are known to or are reasonably likely to negatively affect individuals of a species. The term ''threat'' includes actions or conditions that have a direct impact on individuals (direct impacts), as well as those that affect individuals through alteration of their habitat or required resources (stressors). The term ''threat'' may encompass—either together or separately—the source of the action or condition or the action or condition itself.

However, the mere identification of any threat(s) does not necessarily mean that the species meets the statutory definition of an ''endangered species'' or a ''threatened species.'' In determining whether a species meets either definition, we must evaluate all identified threats by considering the species' expected response and the effects of the threats—in light of those actions and conditions that will ameliorate the threats—on an individual, population, and species level. We evaluate each threat and its expected effects on the species, then analyze the cumulative effect of all of the threats on the species as a whole. We also consider the cumulative effect of the threats in light of those actions and conditions that will have positive effects on the species—such as any existing regulatory mechanisms or conservation efforts. The Secretary determines whether the species meets the definition of an ''endangered species'' or a ''threatened species'' only after conducting this cumulative analysis and describing the expected effect on the species now and in the foreseeable future.

The Act does not define the term ''foreseeable future,'' which appears in the statutory definition of ''threatened species.'' Our implementing regulations at 50 CFR 424.11(d) set forth a framework for evaluating the foreseeable future on a case-by-case basis which is further described in the 2009 Memorandum Opinion on the foreseeable future from the Department of the Interior, Office of the Solicitor (M–37021, January 16, 2009; ''M-Opinion,'' available online at *https://www.doi.gov/sites/doi.opengov.ibmcloud.com/files/uploads/M-37021.pdf*). The foreseeable future extends as far into the future as the U.S. Fish and Wildlife Service and National Marine Fisheries Service (hereafter, the Services) can make reasonably reliable predictions about the threats to the species and the species' responses to those threats. We need not identify the foreseeable future in terms of a specific period of time. We will describe the foreseeable future on a case-by-case basis, using the best available data and taking into account considerations such as the species' life-history characteristics, threat-projection timeframes, and environmental variability. In other words, the foreseeable future is the period of time over which we can make reasonably reliable predictions. ''Reliable'' does not mean ''certain''; it means sufficient to provide a reasonable degree of confidence in the prediction, in light of the conservation purposes of the Act.

Analytical Framework

The SSA report documents the results of our comprehensive biological review of the best scientific and commercial data regarding the status of the species, including an assessment of the potential threats to the species. The SSA report does not represent our decision on whether the species should be proposed for delisting. However, it does provide the scientific basis that informs our regulatory decisions, which involve the further application of standards within the Act and its implementing regulations and policies.

To assess northeastern bulrush viability, we used the three conservation biology principles of resiliency, redundancy, and representation (Shaffer and Stein 2000, pp. 306–310). Briefly, resiliency is the ability of the species to withstand environmental and demographic stochasticity (for example, wet or dry, warm or cold years); redundancy is the ability of the species to withstand catastrophic events (for example, droughts, large pollution events), and representation is the ability of the species to adapt to both near-term and long-term changes in its physical and biological environment (for example, climate conditions, pathogen). In general, species viability will increase with increases in resiliency, redundancy, and representation (Smith et al. 2018, p. 306). Using these principles, we identified the species' ecological requirements for survival and reproduction at the individual, population, and species levels, and described the beneficial and risk factors influencing the species' viability.

The SSA process can be categorized into three sequential stages. During the first stage, we evaluated individual species' life-history needs. The next stage involved an assessment of the historical and current condition of the species' demographics and habitat characteristics, including an explanation of how the species arrived at its current condition. The final stage of the SSA involved making predictions about the species' responses to positive and negative environmental and anthropogenic influences. Throughout all of these stages, we used the best available information to characterize viability as the ability of a species to sustain populations in the wild over time which we then used to inform our regulatory decision.

The following is a summary of the key results and conclusions from the SSA report; the full SSA report can be found

at Docket No. FWS–R5–ES–2023–0014 on *https://www.regulations.gov.*

Summary of Biological Status and Threats

In this discussion, we review the biological condition of the species and its resources, and the threats that influence the species' current and future condition, in order to assess the species' overall viability and the risks to that viability. In addition, the SSA report (Service 2019a, entire) and most recent 5-year review (Service 2019b, entire) document our comprehensive biological status review for the species, including an assessment of the potential threats to the species.

The following is a summary of this status review and the best available information gathered since that time that have informed this decision.

The northeastern bulrush is a wetland obligate plant occurring in acidic to almost neutral wetlands including sinkhole ponds, wet depressions, vernal pools (collectively, seasonal or ephemeral wetlands), beaver flowages, and other riparian areas found in hilly country (Schuyler 1962, p. 47). Optimal habitat includes abundant sunlight, higher organic matter (Lentz and Dunson 1999, p. 165), and seasonally and/or annually fluctuating water levels, although prolonged periods with too much or too little water may be detrimental. The northeastern bulrush may be found in a wide range of water depths from just a few centimeters up to a meter in depth, depending on seasonal fluctuations in water levels (Thompson 1991, p. 5). Plants typically grow in open areas surrounded by forest. Light availability is known to influence plant growth, reproduction, and distribution (Boardman 1977, p. 372; Lentz and Cipollini 1998, p. 126). Shaded plants are often taller, but at the expense of the roots and other organs (Lentz and Cipollini 1998, pp. 127, 129), and the species usually is absent from the highly shaded perimeter of wetlands.

Current Condition

As stated previously, when the northeastern bulrush was listed in 1991, only 13 populations were known to exist; however, the species is now known from 148 extant populations in 8 States (Service 2019a, p. 2). The populations can be loosely organized into a northern region and a southern or Appalachian region, with a large gap in the distribution in southeastern New York. As described in chapter 4 of the SSA report (Service 2019a, pp. 25–31), we used element occurrence (E.O.) rank to assess and describe the current resiliency of northeastern bulrush populations. E.O. rankings document the status and quality of plant population occurrences and assess the probability of an occurrence persisting. We consider the E.O. rank to be the most meaningful way to describe a population's status, as it requires an in-person observation and combines multiple components of a population's condition into a single metric. E.O. ranks are assigned by a surveyor based on observations beyond just population size, but also habitat conditions at the site at the time of the survey, conditions over time since its last observation, and probability of persistence. Our analysis of these populations (Service 2019a, p. 27) indicates that 132 (89 percent) of the 148 known extant populations demonstrate excellent, good, and fair resiliency, and only 16 (11 percent) of the populations demonstrate poor resiliency or have been extirpated.

Factors Influencing Viability

At the time of listing (see 56 FR 21091; May 7, 1991), habitat disturbance and destruction from development and other anthropogenic impacts, especially on private land, was identified as an important threat to the northeastern bulrush, even though there were only a few examples of populations that were under imminent threat from these activities. Since listing, one population has been lost to development, but overall, the anticipated threat of habitat loss from development has not materialized and has a much lower overall impact risk because of the increased number of known populations.

A search of the Service's Tracking and Integrated Logging System, which has information dating back approximately 15 years, revealed relatively few consultations under section 7 of the Act between the Service and Federal agencies on Federal actions that may affect the northeastern bulrush. Consultations often consider proposals for development, road construction and/or maintenance, or other habitat disturbance, and none of the consultations that included northeastern bulrush anticipated adverse effects to the species. While these search results do not capture non-Federal actions on private land, in the available survey and monitoring data, surveyors did not identify any northeastern bulrush populations as being under threat of extirpation as a result of development activities since regular surveys began. Moreover, there is no evidence that the lack of development impacts to the extant populations is attributable to the protections afforded by the Act.

At this time, oil and gas development in Pennsylvania is perhaps the most likely development threat; however, we are not aware of any information, such as project proposals, that indicates any populations are under threat from oil and gas development. Accordingly, we conclude that the threat of the destruction, modification, or curtailment of the northeastern bulrush's habitat from development is less than previously thought, and not a significant factor impacting the continued viability of the species. Although other types of activities such as road construction, forestry, and recreation are factors that may affect the species, to date they have not proved to be significant factors contributing to the risk of extinction of the northeastern bulrush. The 88 northeastern bulrush populations that occur on publicly owned land (approximately 60 percent of known populations) are provided long-term protection from risk of development. Publicly owned lands include State Game Lands, National Wildlife Refuges, National Park Service units, and lands protected by non-governmental organizations such as The Nature Conservancy. A description of these factors can be found in the SSA report (Service 2019a, pp. 21–24).

Native species are known to modify habitat for the northeastern bulrush and can have meaningful, although mostly temporary, impacts on populations. Beavers can create flood conditions that negatively impact the species through increasing water depth by constructing or adding to a dam and raising the water level in a wetland occupied by the northeastern bulrush. However, beavers also have a long-term positive effect on habitat quality by harvesting trees and other woody vegetation for food and shelter, thereby creating open canopy and increasing light availability. Trampling by white-tailed deer (*Odocoileus virginianus*) and trampling and wallowing by American black bears (*Ursus americanus*) have been noted in some northeastern bulrush populations, and these activities can have mixed, sometimes substantial, impacts, especially where bulrush populations are very small. Trampling and soil compaction occur as deer and bears move through northeastern bulrush sites. Bears excavate wallows near the edge of wetlands, and some northeastern bulrush populations have been impacted by this activity. Wallows can be big enough to affect entire populations if the populations are very small; however, wallows also can be beneficial as they help create areas of open water, which are important during

dry periods. These factors affect a small number of populations, and it appears that the timing, location, and scale of the trampling and wallows that would need to align to extirpate a population occur with such infrequency as to be discountable. Therefore, while beaver activity, trampling, and wallowing can cause substantial localized impacts to individual northeastern bulrush populations, these are not significant factors contributing to the risk of extinction.

There is no evidence the species is used for commercial or recreational purposes, or that the scientific and/or educational uses (*e.g.,* seed collection, surveys, etc.) have significant impacts. Similarly, disease has not been documented as a factor affecting the species. Browsing by white-tailed deer has been noted in some northeastern bulrush populations in the Appalachian region; although it has not been reported in the northern region, it likely occurs rangewide at a similar scale as the Appalachian region. Deer browsing may affect plant fitness, particularly if other factors, such as decreased light availability, are affecting the population. Deer browsing impacts under these conditions likely affects a small number of populations, and it appears that the timing, location, and scale of the browsing that would need to align to extirpate a population occur with such infrequency as to be discountable. Therefore, overutilization, disease, and predation do not constitute a risk to the northeastern bulrush.

The wetland habitats in which the northeastern bulrush occurs are protected by State statutes and regulations, although these mechanisms typically include a permitting process that allows direct impacts to wetlands. Some States have additional statutes or regulations or both that protect the northeastern bulrush or its habitat. For example, Vermont, New York, and Massachusetts require protection of upland buffers and permits to work within wetlands; however, State protection of upland areas around the wetlands is inconsistent, and disturbance such as roads or other development near wetlands can cause indirect effects such as sedimentation, altered hydrology, and introduction of invasive species.

The species is designated as State endangered throughout its range, except in West Virginia, and these State designations are independent of the species' Federal status. West Virginia does not have a State law to protect endangered species, but only three northeastern bulrush populations occur in West Virginia. The States that currently protect the northeastern bulrush under State law require, at a minimum, project proponents to coordinate with State resource agencies to develop minimization measures for projects that may affect the northeastern bulrush or its habitat. The *Regulatory Protection* discussion in the SSA report (Service 2019a, pp. 17–21) includes a summary of our current understanding of the laws and regulations regarding wetlands and buffers in States where the northeastern bulrush occurs. The best available information indicates that the northeastern bulrush is not threatened by inadequacy of existing regulatory mechanisms.

Climate change, especially in the southern portion of its range, is the primary factor influencing the viability of the northeastern bulrush. Although the species exists in wetlands that regularly experience fluctuating water levels, the northeastern bulrush and its habitat are susceptible to floods and droughts. Based on global, regional, and local climate models (Service 2019a, chapter 5), we expect that changes in climate will impact the northeastern bulrush's habitat by changing the amount, timing, and severity of precipitation and drought, and the number of extreme precipitation events. Higher temperatures, without increasing summer precipitation, may cause wetlands to dry up earlier, and an extended growing season may allow other vegetation to encroach upon, compete with, and increase shading of, northeastern bulrush plants. We expect these impacts to be more noticeable in populations that occur in seasonal wetlands. We expect beaver activity may at least partially mitigate effects of changing climate by regulating water levels through damming, maintaining larger wetlands and open area compared to seasonal wetlands, and removing trees and reducing shading at the wetland perimeter.

The 13 populations (8.7 percent of known extant populations) in seasonal wetlands that are currently in poor condition are the most vulnerable to the effects of changing climate and have a high risk of extirpation. However, the populations in beaver wetlands are much less vulnerable to the effects of changing climate and have a low risk of extirpation. Rangewide, most populations (78 percent) occur in seasonal wetlands, but the distribution is geographically disparate. In the New England region, 60.4 percent of populations (29 of 48) occur in beaver wetlands, while in the Appalachian region, 97 percent of populations (97 of 100) occur in seasonal wetlands (Service 2019a, p. 29). Additional information on the effects of climate change on the northeastern bulrush can be found in the SSA report (Service 2019a, pp. 33–34).

Future Condition Analysis

We modeled a single scenario to assess the potential future viability of the northeastern bulrush in the context of the factors influencing species viability and resiliency, representation, and redundancy. Due to uncertainties with factors such as fluctuating water levels, climatic stochasticity, light availability, and regulatory protection, we used EO rank to assess future resiliency condition, consistent with our current condition analysis.

We explored plausible changes in the factors considered in an EO ranking, such as population size, biotic factors, abiotic factors, and landscape context (Hammerson *et al.* 2008) to anticipate future changes in EO rank at each population. We were unable to explicitly predict changes in population size; however, we were able to use existing climate models to qualitatively anticipate effects of changing climate on biotic and abiotic factors (*i.e.,* habitat type and quality). We used the same population resiliency scoring model for future condition that we used for current condition. Accordingly, to describe plausible future viability, we model future resiliency at the population level and reasonably reliable trends in redundancy and representation at the rangewide scale (see Service 2019a, pp. 32–39).

We considered the potential consequences of climate change and carried the scenario approximately 30 years into the future (2050) to be considered our foreseeable future because we have information to reasonably reliably predict changes in climate within this timeframe. We first modeled the response of northeastern bulrush habitat to changes in climate consistent with representative concentration pathway (RCP) 8.5. The best available information, as summarized in the SSA report, generally presents this scenario as a plausible, high-emissions scenario anticipating greater changes in climate than moderate climate scenarios, such as RCP 4.5. Available information also suggests the probability of scenarios worse than RCP 8.5 is low. Therefore, RCP 8.5 presents a worst case, but still plausible, scenario for northeastern bulrush habitat. As our analysis using RCP 8.5 resulted in the northeastern bulrush not meeting the Act's definition of an endangered or a threatened species, it follows that additional analyses using RCP 4.5 or another

moderate-emissions climate model would result in lower magnitude effects on the species' habitat and, ultimately, the same listing determination. Therefore, we did not bracket our analysis with lower emissions climate models.

We generally anticipate, and modeling reflects, that climate change is likely to impact the species' habitat through higher water levels early in the growing season followed by hotter summers and a faster drying cycle. For the northeastern bulrush, this will affect fluctuating water levels, climatic stochasticity, and light availability, resulting in neutral effects on beaver wetlands and negative effects on seasonal wetlands. We expect beavers to mitigate anticipated climate changes at beaver wetlands by thinning canopy cover and regulating water levels by damming. In addition, while we are not aware of climate studies examining specific effects on beavers, beavers occur within and outside the range of the northeastern bulrush in diverse landscapes, some of which are hotter and have different precipitation regimes. Accordingly, we anticipate beavers will remain within the range of the northeastern bulrush through 2050. Therefore, we expect no reduction in northeastern bulrush population representation in beaver wetlands before 2050 beyond that which could occur through normal beaver use and disuse of wetlands.

Our future scenario anticipated moderate negative effects on resiliency, a slight decline in representation and redundancy, and extirpation of 13 populations (2 in the northern region and 11 in the Appalachian region) from seasonal wetlands. In 2050, approximately 135 populations would remain distributed across a large geographical range in at least three physiographic provinces, two habitat types, and all currently occupied States. The number of future populations could be slightly higher if new populations are discovered. The species likely would retain low genetic diversity, especially in the northern region. The species' apparent limited dispersal capacity will reduce its ability to shift its range in response to changing climate. However, the species would retain its redundancy driven by a wide geographic distribution and retain representation via the use of a variety of environmental settings (habitat and physiographic provinces).

We note that, by using the SSA framework to guide our analysis of the scientific information documented in the SSA report, we have analyzed the cumulative effects of identified threats and conservation actions on the species. To assess the current and future condition of the species, we evaluate the effects of all the relevant factors that may be influencing the species, including threats and conservation efforts. Because the SSA framework considers not just the presence of the factors, but to what degree they collectively influence risk to the entire species, our assessment integrates the cumulative effects of the factors and replaces a standalone cumulative-effects analysis.

Conservation Efforts and Regulatory Mechanisms

There are many conservation measures that benefit the northeastern bulrush's viability. These measures are consistent with those described in the recovery plan (Service 1993, entire) and include protection through State endangered species laws, protection through State wetland protection laws, protection of sites through perpetual conservation easements and public land ownership, surveys to monitor known populations and to locate additional populations, research efforts to better understand the species' life history, propagation and transplantation efforts, canopy thinning, invasive species control measures, and active management to address shrub encroachment.

Determination of Northeastern Bulrush Status

Section 4 of the Act (16 U.S.C. 1533) and its implementing regulations (50 CFR part 424) set forth the procedures for determining whether a species meets the definition of an endangered species or a threatened species. The Act defines an ''endangered species'' as a species that is in danger of extinction throughout all or a significant portion of its range, and a ''threatened species'' as a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range. The Act requires that we determine whether a species meets the definition of an endangered species or a threatened species because of any of the following factors: (A) The present or threatened destruction, modification, or curtailment of its habitat or range; (B) Overutilization for commercial, recreational, scientific, or educational purposes; (C) Disease or predation; (D) The inadequacy of existing regulatory mechanisms; or (E) Other natural or manmade factors affecting its continued existence.

Status Throughout All of Its Range

After evaluating threats to the species and assessing the cumulative effect of the threats under the Act's section 4(a)(1) factors, we listed the northeastern bulrush in 1991 (see 56 FR 21091; May 7, 1991). At that time, there were only 13 known occurrences, and the species faced threats from habitat loss primarily due to land conversion for development. The northeastern bulrush has been the subject of recovery efforts since it was listed under the Act, and the discovery of previously unknown populations, research leading to the understanding of the species' needs, and identification of management actions that support those needs have led to a revised assessment of the status of the species since that time.

As explained above, while the recovery plan does not include delisting criteria, our analysis presented in the SSA report (Service 2019a, entire) shows that the intent of the recovery plan's downlisting criteria (Service 1993, p. 37) has been exceeded substantially, supporting our conclusion that the species is neither endangered nor threatened. The underlying purpose and intent of each of the three downlisting criteria has been exceeded by a wide margin. At the time of listing in 1991, there were 13 known extant populations in 6 States. By the time the recovery plan was approved 2 years later, in 1993, 33 extant populations had been identified. Largely due to increased survey effort, there are presently 148 known extant populations in 8 States; this amounts to a 4-fold increase in known populations since the downlisting criteria were established. The first downlisting criterion in the recovery plan calls for permanent protection of 20 populations. Eighty-nine (approximately 60 percent) of the 148 known extant populations occur on public lands. This number greatly exceeds the protected populations called for in the first downlisting criterion, and we have also determined that the threat from development is less than projected at the time we completed the recovery plan (1993). Accordingly, we conclude that the intent of this criterion has been substantially exceeded. The second criterion calls for 20 stable or increasing populations. Of the 148 extant populations, 132 are in excellent, good, or fair condition, which is an order of magnitude higher than the number of stable or increasing populations called for in the second downlisting criterion. The third downlisting criterion calls for increased understanding of the species' life-

history and ecological requirements. Research on the effects of hydrology, shading, herbivory, genetics, propagation, transplantation, and nutrients on germination and plant growth has provided understanding that is sufficient to support long-term management of northeastern bulrush populations (*e.g.,* Lentz and Cipollini 1998, entire; Lentz and Dunson 1998, entire).

As discussed, under current conditions, there are 148 known populations of northeastern bulrush distributed throughout 4 physiographic provinces in 8 States—New Hampshire, Vermont, Massachusetts, New York, Pennsylvania, Maryland, Virginia, and West Virginia. The increase in known populations since listing is due primarily to increased survey effort, and it is possible that more populations will be found in the future. Despite the dynamic nature of the species' life history, there have been only a few (9) documented extirpations of extant populations (Service 2019a, p. 27). Some populations have benefited from habitat management, but we are not aware of any populations that were newly established or re-established after extirpation as a result of outplanting or other restoration efforts. Our analysis of these populations in the SSA report (Service 2019a, p. 27) indicates that 89 percent of the populations demonstrate excellent, good, and fair resiliency, and only 11 percent of the populations demonstrate poor resiliency.

Development activities are no longer considered a significant threat. Deer browsing and trampling, as well as trampling and wallowing by black bears, have been noted in some populations, and these activities can have detrimental effects on a population, particularly if other factors, such as decreased light availability, are affecting the population. However, these factors affect only a small number of populations, and the likelihood is low that browsing, trampling, or wallowing would occur in a particular population with poor resiliency and with sufficient magnitude to affect the entire population. Accordingly, we conclude that browsing, trampling, and wallowing either individually or cumulatively are not likely to cause the extirpation of a population and, therefore, are not significant factors contributing to the risk of extinction of the northeastern bulrush.

Regulatory protections afforded to the northeastern bulrush include State wetland protections and State endangered species regulations. These protections apply independently of the species' Federal status under the Act and, at a minimum, require project proponents to coordinate with State resource agencies to develop minimization measures for projects that may affect the northeastern bulrush or its habitat. A description of the States' regulatory protections can be found in the SSA report (Service 2019a, pp. 17–21).

Since the listing of the northeastern bulrush in 1991, we have become aware of the potential for the effects of climate change to affect organisms and ecosystems, including the northeastern bulrush. To inform our understanding of the species' risk of extinction, we modeled a single future scenario detailed above in *Summary of Biological Status and Threats.* This future scenario, by itself, does not provide an estimate of the species' risk of extinction, but it does help us better understand the extent to which threats would have to further affect the species to cause extinction, considering the present population figures and resiliency status. Based on the best information regarding the species' current condition and threats, we projected how the threats would manifest under this ''worst case'' scenario and how the species would respond.

To summarize, our greater knowledge regarding the prevalence of northeastern bulrush populations and the impacts of natural and artificial systems and disturbances on the species results in a conclusion that the overall extinction risk for the northeastern bulrush is much lower than we had previously determined it to be at the time the species was listed in 1991 (see 56 FR 21091; May 7, 1991). Considering our modeled ''worst case'' future scenario, it is apparent that the risk of threats manifesting in such a way as to cause extinction of the species is very low. Known impacts at the time of listing, such as habitat loss due to development and inadequate regulatory protections, that could have resulted in the extirpation of populations have either been reduced or have not materialized since listing. Through our assessment of future condition, including the status of known stressors and probable impacts of climate change, we anticipate that 88 percent of populations across the range of the species would maintain high, moderate, or fair resiliency over a timeframe of approximately 30 years into the future. We, therefore, conclude the previously recognized impacts to the northeastern bulrush from present or threatened destruction, modification, or curtailment of its habitat or range; overutilization for commercial, recreational, scientific, or educational purposes; disease or predation; the inadequacy of existing regulatory mechanisms; and other natural or manmade factors affecting its continued existence do not rise to a level of significance, either individually or in combination, such that the species is in danger of extinction now or likely to become so within the foreseeable future. Thus, after assessing the best available scientific information, we conclude that the northeastern bulrush is not in danger of extinction now or likely to become so within the foreseeable future throughout all of its range.

Status Throughout a Significant Portion of Its Range

Under the Act and our implementing regulations, a species may warrant listing if it is in danger of extinction or likely to become so in the foreseeable future throughout all or a significant portion of its range. Having determined that the northeastern bulrush is not in danger of extinction or likely to become so in the foreseeable future throughout all of its range, we now consider whether it may be in danger of extinction (*i.e.,* endangered) or likely to become so in the foreseeable future (*i.e.,* threatened) in a significant portion of its range—that is, whether there is any portion of the species' range for which both (1) the portion is significant; and, (2) the species is in danger of extinction or likely to become so in the foreseeable future in that portion. Depending on the case, it might be more efficient for us to address the ''significance'' question or the ''status'' question first. We can choose to address either question first. Regardless of which question we address first, if we reach a negative answer with respect to the first question that we address, we do not need to evaluate the other question for that portion of the species' range.

In undertaking this analysis for northeastern bulrush, we choose to address the status question first. We began by identifying portions of the range where the biological status of the species may be different from its biological status elsewhere in its range. For this purpose, we considered information pertaining to the geographic distribution of (a) individuals of the species, (b) the threats that the species faces, and (c) the resiliency condition of populations.

We evaluated the range of the northeastern bulrush to determine if the species is in danger of extinction now or likely to become so in the foreseeable future in any portion of its range. The range of a species can theoretically be divided into portions in an infinite number of ways. We focused our

analysis on portions of the species' range that may meet the definition of an endangered species or a threatened species. For northeastern bulrush, we considered whether the threats or their effects on the species are greater in any biologically meaningful portion of the species' range than in other portions such that the species is in danger of extinction now or likely to become so in the foreseeable future in that portion.

We examined the following threats and cumulative impacts of these threats: (1) habitat disturbance and destruction from development; (2) beaver activity; (3) deer and bear activities, such as trampling, browsing, and wallowing; and (4) climate change. As stated previously under *Summary of Biological Status and Threats,* when this species was listed, habitat disturbance and destruction from development and other anthropogenic impacts was identified as an important threat to the northeastern bulrush. However, since listing, the anticipated threat of habitat loss from development has not materialized in any portion of the range, and we conclude that the threat of habitat disturbance and destruction from development does not rise to a level that threatens the species now or into the future. Similarly, while we identified threats of beaver activity, trampling, and wallowing that can cause localized impacts to individual northeastern bulrush populations, these factors are not occurring at a significant level in any portion of the species' range.

The effects of climate change differ between the northern and southern portions of the range of the northeastern bulrush, as most populations in the southern portion of the range occur in seasonal wetlands while populations in the northern portion are more evenly distributed between seasonal wetlands and beaver marshes. Changing climatic conditions will include more precipitation during winters, higher temperatures throughout the species' range, and an increased frequency of extreme precipitation events. We project these conditions will have more negative effects on seasonal wetlands and neutral effects on beaver marshes, equating to a slightly elevated risk from climate change in the southern portion of the range. As described in the SSA report (Service 2019a, pp. 32–39), climate change under a worst-case scenario could contribute to extirpation of 13 populations (2 populations in the northern portion and 11 in the southern portion) across the species' range. However, there are still projected to be 135 populations remaining: 46 populations in the northern portion (96% of extant populations) and 89 in the southern portion (89%), providing representation and redundancy within each portion and across the species' range. Moreover, it is projected that the southern and northern portions of the range will each retain strong resiliency, with more than 85 percent of populations in the southern portion and 93 percent in the northern portion projected to maintain high, moderate, or fair resiliency.

Our conclusion regarding the current and future viability of the species is supported by multiple, sufficiently resilient populations distributed across representative ecological settings and physiographic provinces and encompassing most of the species' known genetic diversity. We found no biologically meaningful portion of the northeastern bulrush's range where the condition of the species differs from its condition elsewhere in its range such that the status of the species in that portion differs from its status in any other portion of the species' range.

Therefore, we find that the species is not in danger of extinction now or likely to become so in the foreseeable future in any significant portion of its range. This does not conflict with the courts' holdings in *Desert Survivors* v. *U.S. Department of the Interior,* 321 F. Supp. 3d 1011, 1070–74 (N.D. Cal. 2018) and *Center for Biological Diversity* v. *Jewell,* 248 F. Supp. 3d. 946, 959 (D. Ariz. 2017) because, in reaching this conclusion, we did not apply the aspects of the Final Policy on Interpretation of the Phrase ''Significant Portion of Its Range'' in the Endangered Species Act's Definitions of ''Endangered Species'' and ''Threatened Species'' (79 FR 37578; July 1, 2014), including the definition of ''significant'' that those court decisions held to be invalid.

Determination of Status

Our review of the best scientific and commercial data available indicates that the northeastern bulrush does not meet the definition of an endangered species or a threatened species in accordance with sections 3(6) and 3(20) of the Act. In accordance with our regulations at 50 CFR 424.11(e)(2), currently in effect, the species has recovered to the point at which it no longer meets the definition of an endangered species or a threatened species. Therefore, we propose to remove northeastern bulrush from the Federal List of Endangered and Threatened Plants.

Effects of This Rule

This proposed rule, if made final, would revise 50 CFR 17.12(h) by removing northeastern bulrush [species] from the Federal List of Endangered and Threatened Plants. The prohibitions and conservation measures provided by the Act, particularly through sections 7 and 9, would no longer apply to this species. Federal agencies would no longer be required to consult with the Service under section 7 of the Act in the event that activities they authorize, fund, or carry out may affect northeastern bulrush.

There is no critical habitat designated for this species, so there would be no effect to 50 CFR 17.96.

Post-Delisting Monitoring

Section 4(g)(1) of the Act requires us, in cooperation with the States, to implement a monitoring program for not less than 5 years for all species that have been recovered. Post-delisting monitoring (PDM) refers to activities undertaken to verify that a species delisted due to recovery remains secure from the risk of extinction after the protections of the Act no longer apply. The primary goal of PDM is to monitor the species to ensure that its status does not deteriorate, and if a decline is detected, to take measures to halt the decline so that proposing it as endangered or threatened is not again needed. If at any time during the monitoring period data indicate that protective status under the Act should be reinstated, we can initiate listing procedures, including, if appropriate, emergency listing.

We will coordinate with other Federal agencies, State resource agencies, interested scientific organizations, and others as appropriate to develop and implement an effective PDM plan for northeastern bulrush. The PDM plan will build upon current research and effective management practices that have improved the status of the species since listing. Ensuring continued implementation of proven management strategies that have been developed to sustain the species will be a fundamental goal for the PDM plan. The PDM plan will identify measurable management thresholds and responses for detecting and reacting to significant changes in northeastern bulrush numbers, distribution, and persistence. If declines are detected equaling or exceeding these thresholds, the Service, in combination with other PDM participants, will investigate causes of these declines. The investigation will be to determine if the northeastern bulrush warrants expanded monitoring, additional research, additional habitat protection, or resumption of Federal protection under the Act.

We appreciate any information on what should be included in post-

delisting monitoring strategies for these species (see Information Requested, above).

Required Determinations

Clarity of the Rule

We are required by Executive Orders 12866 and 12988 and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

(1) Be logically organized;

(2) Use the active voice to address readers directly;

(3) Use clear language rather than jargon;

(4) Be divided into short sections and sentences; and

(5) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in **ADDRESSES**. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that are unclearly written, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

References Cited

A complete list of references cited in this rulemaking is available on the internet at *https://www.regulations.gov* and upon request from the New England Ecological Services Field Office (see **FOR FURTHER INFORMATION CONTACT**).

Authors

The primary authors of this proposed rule are the staff members of the Fish and Wildlife Service's Species Assessment Team and the New England Ecological Services Field Office.

Proposed Regulation Promulgation

Accordingly, we propose to amend part 17, subchapter B of chapter I, title 50 of the Code of Federal Regulations, as set forth below:

PART 17—ENDANGERED AND THREATENED WILDLIFE AND PLANTS

■ 1. The authority citation for part 17 continues to read as follows:

Authority: 16 U.S.C. 1361–1407; 1531–1544; and 4201–4245, unless otherwise noted.

§ 17.12 [Amended]

■ 2. In § 17.12, amend paragraph (h) by removing the entry for ''*Scirpus ancistrochaetus*'' under FLOWERING PLANTS from the List of Endangered and Threatened Plants.

Martha Williams,

Director, U.S. Fish and Wildlife Service.

Wednesday, July 31, 2024

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forest Service

Proposed Recreation Fee Sites

AGENCY: Forest Service, USDA.

ACTION: Notice.

SUMMARY: The Fremont-Winema National Forest is proposing to establish several recreation fee sites. Proposed recreation fees collected at the proposed recreation fee sites would be used for operation, maintenance, and improvement of the sites. An analysis of nearby recreation fee sites with similar amenities shows the proposed recreation fees that would be charged at the new recreation fee sites are reasonable and typical of similar recreation fee sites in the area.

DATES: If approved, the proposed recreation fees would be established no earlier than six months following the publication of this notice in the **Federal Register**.

ADDRESSES: Fremont-Winema National Forest, Attention: Recreation Fees, 1301 South G Street, Lakeview, OR 97630.

FOR FURTHER INFORMATION CONTACT: Scott Stoffel, Forest Recreation Program Manager, (541) 947–2151 or *sm.fs.Fee_Proposal@usda.gov.*

SUPPLEMENTARY INFORMATION: The Federal Lands Recreation Enhancement Act (16 U.S.C. 6803(b)) requires the Forest Service to publish a six-month advance notice in the **Federal Register** of establishment of proposed recreation fee sites. In accordance with Forest Service Handbook 2309.13, Chapter 30, the Forest Service will publish the proposed recreation fee sites and proposed recreation fees in local newspapers and other local publications for public comment. Most of the proposed recreation fees would be spent where they are collected to enhance the visitor experience at the proposed recreation fee sites.

A proposed expanded amenity recreation fee of $10 per night and $5 per extra vehicle fee would be charged for Rye Spur Horse Camp and Sevenmile Equestrian Camp and Trailhead. A proposed expanded amenity recreation fee of $10 per night and $2 per extra vehicle fee would be charged for Jones Crossing, Happy Camp, and Willow Creek Campgrounds. An expanded amenity recreation fee of $5 per extra vehicle would be charged at Walt Haring Campground. A proposed expanded amenity recreation fee of $20 per night and $5 per extra vehicle would be charged for Annie Creek Campground and Sno-Park. In addition, a proposed expanded amenity recreation fee of $100 per night would be charged for rental of Pelican and Sevenmile Guard Stations.

A proposed standard amenity recreation fee of $5 per day per vehicle would be charged at Cold Springs, Malone Springs, Odessa, Rocky Point, Sevenmile Marsh, Summit Sno-Park/Pacific Crest Trail, and Wood River developed recreation sites. The Annual Northwest Forest Pass, National Forest Recreation Day Pass, National Forest Recreation ePass, and the America the Beautiful—the National Parks and Federal Recreational Lands Pass would be honored at these standard amenity recreation fee sites.

Expenditures of recreation fees collected at the proposed recreation fee sites would enhance recreation opportunities, improve customer service, and address maintenance needs. Once public involvement is complete, the proposed recreation fee sites and proposal recreation fees will be reviewed by a Recreation Resource Advisory Committee prior to a final decision and implementation. Reservations for campgrounds could be made online at *www.recreation.gov* or by calling 877–444–6777. Reservations would cost $8.00 per reservation.

Dated: July 26, 2024.

Jacqueline Emanuel,

Associate Deputy Chief, National Forest System.

DEPARTMENT OF AGRICULTURE

Forest Service

Proposed New Recreation Fee Sites

AGENCY: Forest Service, USDA.

ACTION: Notice.

SUMMARY: The Chippewa National Forest is proposing to establish several new recreation fee sites. Recreation fee revenues collected at the new recreation fee sites would be used for operation, maintenance, and improvement of the sites. An analysis of nearby recreation fee sites with similar amenities shows the recreation fees that would be charged at the new recreation fee sites are reasonable and typical of similar recreation fee sites in the area.

DATES: If approved, the new recreation fees would be implemented no earlier than six months following the publication of this notice in the **Federal Register**.

ADDRESSES: Chippewa National Forest, Attention: Michelle Heiker, 200 Ash Avenue NW, Cass Lake, Minnesota 56633.

FOR FURTHER INFORMATION CONTACT: Michelle Heiker, Recreation Program Manager, (218) 259–2664 or *michelle.heiker@usda.gov.*

SUPPLEMENTARY INFORMATION: The Federal Lands Recreation Enhancement Act (16 U.S.C. 6803(b)) requires the Forest Service to publish a six-month advance notice in the **Federal Register** of establishment of new recreation fee sites. In accordance with Forest Service Handbook 2309.13, Chapter 30, the Forest Service will publish the proposed new recreation fee sites in local newspapers and other local publications for public comment. Most of the new recreation fee revenues would be spent where they are collected to enhance the visitor experience at the new recreation fee sites.

An expanded amenity recreation fee of $40 per night would be charged for rental of Joyce and Mary Louise Cabins.

Expenditures from recreation fee revenues collected at the new recreation fee sites would enhance recreation opportunities, improve customer service, and address maintenance needs. Once public involvement is complete, these new recreation fees will be reviewed by a Recreation Resource Advisory Committee prior to a final

decision and implementation. Reservations for the cabins could be made online at *www.recreation.gov* or by calling (877)–444–6777. Reservations would cost $8.00 per reservation.

Dated: July 26, 2024.

SUPPLEMENTARY INFORMATION:

Background

On July 24, 1996, Commerce published the AD order on pasta from Italy in the **Federal Register**.[1] On June 6, 2024, Commerce received a request on behalf of Gruppo Milo for a CCR, pursuant to section 751(b)(1) of the Tariff Act of 1930, as amended (the Act) and 19 CFR 351.216(b), to establish Gruppo Milo as the successor-in-interest to GRAMM, an Italian producer and exporter of pasta and, thus, entitle it to GRAMM's AD cash deposit rate.[2] We received no comments from other interested parties concerning this request. On July 22, 2024, Commerce tolled certain deadlines in this administrative proceeding by seven days.[3] The deadline for the initiation is now July 29, 2024.

Scope of the Order[4]

The scope of this *Order* covers shipments of certain non-egg dry pasta in packages of five pounds four ounces or less, whether or not enriched or fortified or containing milk or other optional ingredients such as chopped vegetables, vegetable purees, milk, gluten, diastasis, vitamins, coloring and flavorings, and two percent egg white. The pasta covered by the scope of the *Order* is typically sold in the retail market, in fiberboard or cardboard cartons, or polyethylene or polypropylene bags of varying dimensions.

Excluded from the scope of this *Order* are refrigerated, frozen, or canned pastas, as well as all forms of egg pasta, with the exception of non-egg dry pasta containing up to two percent egg white. Multicolored pasta, imported in kitchen display bottles of decorative glass that are sealed with cork or paraffin and bound with raffia, is excluded from the scope of the *Order*.[5] Pursuant to Commerce's August 14, 2009, changed circumstances review, effective July 1, 2008, gluten free pasta is also excluded from the scope of the *Order*.[6] Effective January 1, 2012, ravioli and tortellini filled with cheese and/or vegetables are

[1] *See Notice of Antidumping Duty Order and Amended Final Determination of Sales at Less Than Fair Value: Certain Pasta from Italy,* 61 FR 38547 (July 24, 1996) (*Order*).

[2] *See* Gruppo Milos's Letter, ''Certain Dry Pasta from Italy—Request for Changed Circumstances Review,'' dated June 6, 2024 (CCR Request).

[3] *See* Memorandum, ''Tolling of Deadlines for Antidumping and Countervailing Duty Proceedings,'' dated July 22, 2024.

[4] *See Certain Pasta from Italy: Final Results of Antidumping and Countervailing Duty Changed Circumstances Reviews,* 82 FR 4291 (January 13, 2017), where Commerce aligned the scope language across the AD and countervailing duty orders on pasta from Italy.

[5] *See* Memorandum to Richard Moreland, dated August 25, 1997, which is on file in the Central Records Unit.

[6] *See Certain Pasta from Italy: Notice of Final Results of Antidumping Duty Changed Circumstances Review and Revocation, in Part,* 74 FR 41120 (August 14, 2009).

also excluded from the scope of the *Order*.[7]

Also excluded are imports of organic pasta from Italy that are certified by an EU authorized body in accordance with the United States's Department of Agriculture's National Organic Program for organic products. The organic pasta certification must be retained by exporters and importers and made available to U.S. Customs and Border Protection or the Department of Commerce upon request.

The merchandise subject to this *Order* is currently classifiable under items 1901.90.9095 and 1902.19.20 of the Harmonized Tariff Schedule of the United States (HTSUS). Although the HTSUS subheadings are provided for convenience and Customs purposes, the written description of the merchandise subject to the *Order* is dispositive.

Initiation of CCR

Pursuant to section 751(b)(1)(A) of the Act and 19 CFR 351.216(d), Commerce will conduct a CCR upon receipt of information concerning, or a request from, an interested party for a review of an AD order which shows changed circumstances sufficient to warrant a review of the order. In the past, Commerce has used CCRs to address the applicability of cash deposit rates after there have been changes in the name or structure of a respondent, such as a merger or spinoff (''successor-in-interest'' or ''successorship'' determinations).[8] Based on a review of Gruppo Milo's request, and in accordance with section 751(b)(1)(A) of the Act and 19 CFR 351.216(d), we find that the information submitted in the CCR Request supporting Gruppo Milo's request that it should be treated as the successor-in-interest to GRAMM is sufficient to warrant a review to determine whether Gruppo Milo is entitled to GRAMM's AD cash deposit rate.

Preliminary Results

Section 351.221(c)(3)(ii) of Commerce's regulations authorizes Commerce to combine the notice of initiation of a CCR and the notice of preliminary results if Commerce concludes that expedited action is warranted. In this instance, because the record contains information necessary to make a preliminary finding and no interested parties have summitted comments on Gruppo Milo's request, we find that expedited action is warranted and have combined the notice of initiation and the notice of preliminary results.

Pursuant to section 751(b) of the Act, we have conducted a CCR using a successor-in-interest analysis in response to Gruppo Milo's request. In making a successor-in-interest determination, Commerce examines several factors, including, but not limited to, changes in the following: (1) management and ownership; (2) production facilities; (3) supplier relationships; and (4) customer base.[9] While no single factor or combination of factors will necessarily provide a dispositive indication of a successor-in-interest relationship, generally, Commerce will consider the new company to be the successor to the previous company if the new company's resulting operation is not materially dissimilar to that of its predecessor.[10] Thus, if the evidence demonstrates that, with respect to the production and sales of the subject merchandise, the new company operates essentially the same business entity as the former company, Commerce will accord the new company the same antidumping treatment as its predecessor.[11] In accordance with 19 CFR 351.216, we preliminarily determine that Gruppo Milo is the successor-in-interest to GRAMM for purposes of the *Order* and is entitled to GRAMM's AD cash deposit rate.

1. Management

Gruppo Milo submitted evidence of its management before and after its name change. Gruppo Milo's evidence indicates that the board of directors, organizational chart, and ownership structure all remain the same before and after the change to its name and corporate form.[12]

2. Production Facilities

Gruppo Milo submitted evidence of its production facilities, including names of the facilities, addresses, what is produced at the facilities, and contact information. Gruppo Milo's evidence indicates that there were no changes to its production facilities as a result of the changes to its name and corporate form, as Gruppo Milo operates the same three production facilities that were operated by GRAMM.[13]

3. Supplier Relationships and Customer Base

Gruppo Milo provided lists of both its suppliers[14] and U.S. customers[15] before and after the name change to support its assertion that there have been no material changes to GRAMM's suppliers or its customer base. This documentation shows that the top suppliers and customers are the same both before and after the changes to its name and corporate form.

In addition to the evidence above, Gruppo Milo provided documentation demonstrating approval of GRAMM's name change by GRAMM's shareholders on March 8, 2024 (the shareholders remained unchanged from prior to the name change).[16] Further, as support, Gruppo Milo provided the ''Visura,'' or company registration report for Gruppo Milo SpA from the Milan Chamber of Commerce as it appears in the Italian Business Register—Company Registration Office.[17] Gruppo Milo also provided the Visura for GRAMM for comparative reference, which shows that the basic purpose and structure of the company remains unchanged.[18] The continuity between Gruppo Milo's Visura and GRAAM's Visura supports the claim that Gruppo Milo's operations with respect to sales of subject merchandise have not materially changed as a result of its name change.

[7] *See Certain Pasta from Italy: Final Results of Antidumping Duty and Countervailing Duty Changed Circumstances Reviews and Revocation, in Part,* 79 FR 58319, 58320 (September 29, 2014).

[8] *See, e.g., Diamond Sawblades and Parts Thereof from the People's Republic of China: Initiation and Preliminary Results of Antidumping Duty Changed Circumstances Review,* 82 FR 51605, 51606 (November 7, 2017) (*Diamond Sawblades from China Preliminary*), unchanged in *Diamond Sawblades and Parts Thereof from the People's Republic of China: Final Results of Antidumping Duty Changed Circumstances Review,* 82 FR 60177 (December 19, 2017) (*Diamond Sawblades from China Final*).

[9] *See, e.g., Diamond Sawblades from China Preliminary,* unchanged in *Diamond Sawblades from China Final; see also Certain Frozen Warmwater Shrimp from India: Initiation and Preliminary Results of Antidumping Duty Changed Circumstances Review,* 83 FR 37784 (August 2, 2018), unchanged in *Certain Frozen Warmwater Shrimp from India: Notice of Final Results of Antidumping Duty Changed Circumstances Review,* 83 FR 49909 (October 3, 2018).

[12] *See* CCR Request at Exhibit 3.

[13] *Id.* at Exhibit 4.

[14] *Id.* at Exhibit 5.

[15] *Id.* at Exhibit 6.

[16] *Id.* at Exhibit 1.

[17] *Id.* at Exhibit 2.

[18] *Id.*

Therefore, based on the record evidence discussed above, we preliminarily determine that Gruppo Milo is the successor-in-interest to GRAMM, as the change in the business' name and corporate form was not accompanied by changes to its management and ownership, production facilities, supplier relationships, or customer base. Thus, we preliminarily determine that Gruppo Milo is entitled to the same AD cash deposit rate with respect to subject merchandise as its predecessor.

Should our final results remain unchanged from these preliminary results, we will instruct U.S. Customs and Border Protection to assign entries of subject merchandise exported by Gruppo Milo the AD cash deposit rate applicable to GRAMM. Commerce will issue its final results of the review in accordance with the time limits set forth in 19 CFR 351.216(e).

Public Comment

In accordance with 19 CFR 351.309(c)(1)(ii), interested parties may submit case briefs not later than 14 days after the date of publication of this notice in the **Federal Register**.[19] Rebuttal briefs, limited to issues raised in the case briefs, may be filed no later than five days after the case briefs, in accordance with 19 CFR 351.309(d)(1) and (2). Interested parties who submit case briefs or rebuttal briefs in this proceeding must submit: (1) a table of contents listing each issue; and (2) a table of authorities.[20] All comments must be filed electronically using ACCESS. An electronically filed document must be received successfully in its entirety by ACCESS by 5:00 p.m. Eastern Time on the day it is due.[21] Note that Commerce has amended certain of its requirements pertaining to the service of documents in 19 CFR 351.303(f).[22]

As provided under 19 CFR 351.309(c)(2) and (d)(2), in prior proceedings we have encouraged interested parties to provide an executive summary of their brief that should be limited to five pages total, including footnotes. In this CCR, we instead request that interested parties provide at the beginning of their briefs a public, executive summary for each issue raised in their briefs.[23] Further, we request that interested parties limit their public executive summary of each issue to no more than 450 words, not including citations. We intend to use the public executive summaries as the basis of the comment summaries included in the issues and decision memorandum that will accompany the final results of this CCR. We request that interested parties include footnotes for relevant citations in the public executive summary of each issue.

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing must submit a written request via ACCESS within 14 days of publication of this notice.[24] Hearing requests should contain: (1) the party's name, address, and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective briefs. If a request for a hearing is made, Commerce will inform parties of the scheduled date for the hearing.[25] Parties should confirm the date and the time of the hearing two days before the scheduled date.

Final Results

Unless the deadline is extended, pursuant to 19 CFR 351.216(e), Commerce intends to issue the final results of this CCR no later than 270 days after the date on which this review was initiated, or within 45 days if all parties agree to our preliminary finding.

Notification to Interested Parties

This notice is published in accordance with sections 751(b)(1) and 777(i) of the Act and 351.221(b)(1) and 351.221(c)(3)(ii).

Dated: July 25, 2024.

Ryan Majerus,

Deputy Assistant Secretary for Policy and Negotiations, performing the non-exclusive functions and duties of the Assistant Secretary for Enforcement and Compliance.

DEPARTMENT OF COMMERCE

National Institute of Standards and Technology

Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Recipient Reporting Information Collection Request (ICR)

The Department of Commerce will submit the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. We invite the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. Public comments were previously requested via the **Federal Register** on 07/21/2023 during a 60-day comment period. This notice allows for an additional 30 days for public comments.

Agency: National Institute of Standards and Technology (NIST), Commerce.

Title: Recipient Reporting.

OMB Control Number: 0693–XXXX.

Form Number(s): None.

Type of Request: Regular. This is a new collection.

Number of Respondents: 90.

Average Hours per Response: 16 hours, 4 times per year.

Burden Hours: 5,760 hours per year.

Needs and Uses: The CHIPS Program Office (CPO) is collecting information from recipients of CHIPS funding for the purposes of monitoring award performance; ensuring compliance with the terms of an award; general programmatic financial management activities, including decisions to disburse funds; and executing long-term program evaluation initiatives. The CPO will collect information via regular reporting and event-driven reporting. Information will be collected via an awardee's Salesforce portal and recipients will only report on information that is part of the terms of their award. Information in the following topic areas may be collected: project health, construction, operations and production, financials, research and development, workforce, national security, community investments and inclusive opportunities for businesses, project milestones, and environment.

Affected Public: Business or other for-profit organizations.

Frequency: Recurring during lifespan of an award on quarterly submission schedule.

Respondent's Obligation: Mandatory to receive and maintain CHIPS Act funding.

Legal Authority: CHIPS Act of 2022 (Division A of Pub. L. 117–167) (the Act).

This information collection request may be viewed at *www.reginfo.gov.* Follow the instructions to view the Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be submitted within 30 days of the publication of this notice on the following website *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function and entering either the title of the collection or the OMB Control Number 0693–XXXX.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–16779 Filed 7–30–24; 8:45 am]

BILLING CODE 3510–13–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Application Forms for Membership on a National Marine Sanctuary Advisory Council

AGENCY: National Oceanic & Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. This notice pertains to a requested revision and extension of the approved collection of information for national marine sanctuary advisory council applications. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before September 30, 2024.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at *NOAA.PRA@noaa.gov.* Please reference OMB Control Number 0648–0397 in the subject line of your comments. All comments received are part of the public record and will generally be posted on *https://www.regulations.gov* without change. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Sage Riddick, National Advisory Council Coordinator, Office of National Marine Sanctuaries, 1305 East West Highway, SSMC4, 10th Floor, Silver Spring, MD 20910, (240) 560–3365, and *sage.riddick@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

This is a request for revision and extension of an approved information collection. Section 315 of the *National Marine Sanctuaries Act* (NMSA) (16 U.S.C. 1445a) allows the Secretary of Commerce to establish one or more advisory councils to advise and make recommendations to the Secretary regarding the designation and management of national marine sanctuaries. Executive Order 13178 (December 4, 2000) similarly established a Coral Reef Ecosystem Reserve Council pursuant to the NMSA for the Northwestern Hawaiian Islands Coral Reef Ecosystem Reserve. Councils are individually chartered for each site, or for the sanctuary system, to meet its specific needs. Once an advisory council has been chartered, a sanctuary superintendent starts a process to recruit members for that council by providing notice to the public and requesting interested parties to apply for the available seat(s) (*e.g.,* Research, Education) and position(s) (*i.e.,* council member or alternate). The information obtained through this application process will be used to determine the qualifications of the applicant for membership on the advisory council.

Two application forms are currently associated with this information collection: (a) National Marine Sanctuary Advisory Council Application form; and (b) National Marine Sanctuary Advisory Council Youth Seat Application form. Application form instructions will specify requirements imposed upon the agency when reviewing applicants as potential council members or alternates. Questions posed to applicants have been reviewed and an additional two questions are being added to solicit information on eligibility for a potential stipend program to decrease financial barriers to joining advisory councils. An additional section for demographic questions is also being added to include the newly updated *Statistical Policy Directive No. 15: Standards for Maintaining, Collecting, and Presenting Federal Data on Race and Ethnicity* and *Recommendations on the Best Practices for the Collection of Sexual Orientation and Gender Identity Data on Federal Statistical Surveys,* and to learn more about our applicants. Existing questions may be reordered, reworded, and at times, condensed to improve the organization of applicant responses and, thereby, simplify the applicant review process. We do not believe that such revisions to the application would appreciably change the average annual number of respondents or the reporting burden for the information requirements supporting solicitation of new advisory council members. To request and obtain a copy of the proposed application forms without charge, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section.

II. Method of Collection

Complete applications may be submitted electronically via email (with attachments), by mail, online application, or by facsimile transmission.

III. Data

OMB Control Number: 0648–0397.

Form Number(s): None.

Type of Review: Regular submission (revision and extension of a currently approved collection).

Affected Public: Individuals or households; business or other for-profit organizations; not-for-profit institutions.

Estimated Number of Respondents: 900.

Estimated Time per Response: 1.25 hours.

Estimated Total Annual Burden Hours: 1,125 hours.

Estimated Total Annual Cost to Public: $450.00.

Respondent's Obligation: Voluntary.

Legal Authority: National Marine Sanctuaries Act (16 U.S.C. 1445a).

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

[FR Doc. 2024–16770 Filed 7–30–24; 8:45 am]

BILLING CODE 3510–NK–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Agency Information Collection Activities; Submission to the Office of Management and Budget (OMB) for Review and Approval; Comment Request; Alaska Saltwater Sportfishing Economic Survey

AGENCY: National Oceanic & Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of information collection, request for comment.

SUMMARY: The Department of Commerce, in accordance with the Paperwork Reduction Act of 1995 (PRA), invites the general public and other Federal agencies to comment on proposed, and continuing information collections, which helps us assess the impact of our information collection requirements and minimize the public's reporting burden. The purpose of this notice is to allow for 60 days of public comment preceding submission of the collection to OMB.

DATES: To ensure consideration, comments regarding this proposed information collection must be received on or before September 30, 2024.

ADDRESSES: Interested persons are invited to submit written comments to Adrienne Thomas, NOAA PRA Officer, at *NOAA.PRA@noaa.gov.* Please reference OMB Control Number 0648–0639 in the subject line of your comments. All comments received are part of the public record and will generally be posted on *https://www.regulations.gov* without change. Do not submit Confidential Business Information or otherwise sensitive or protected information.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or specific questions related to collection activities should be directed to Dr. Russel Dame, Industry Economist, NOAA/NMFS, 7600 Sand Point Way NE, Bldg. 4, Seattle, WA 98115–6349, (206) 526–4432, *russel.a.dame@noaa.gov.*

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for reinstatement with changes of a previously approved information collection.

The National Marine Fisheries Service (NMFS) previously collected survey data in 2007, 2012, and 2017 for conducting economic analyses of marine sport fishing in Alaska. These surveys were necessary to understand the factors that affect marine recreational fishing and its economic value. Relative to the previously approved information collection, this information collection focuses on collecting data from a subset of the Alaska saltwater angler population targeted in previous collections, specifically all Alaska saltwater anglers fishing by charter boat rather than all Alaska saltwater anglers. The focus on charter anglers excludes anglers who fish from a private boat or from shore. The focus on the charter angler subpopulation is due to that population being of primary concern for fishery managers. Charter anglers fishing for federally-regulated Pacific halibut are subject to different regulations and management actions compared with other Alaska saltwater anglers. Harvest regulations (*e.g.,* daily bag limits) for the unguided (non-charter) sector for Pacific halibut off Alaska have been unchanged for decades and are unlikely to change in the foreseeable future. Charter fishing for halibut in Alaska, on the other hand, has experienced a number of important changes that affect both charter anglers and the charter fishing businesses providing charter fishing services. The proposed data collection is needed to improve estimates of fishing trip values and fishing behavior potentially affected by changes in federal recreational fisheries off Alaska, including recent declines in populations of Pacific halibut and subsequent measures to manage harvest in the Alaska recreational charter fishing sector. Numerous questions in the survey have been updated to better reflect, and understand the effects of, recent changes in Alaska marine recreational fisheries.

The Federal Government is responsible for the management of the Pacific halibut sport fishery off Alaska, while the State of Alaska manages the salmon sport fisheries (Chinook, coho, sockeye, chum, and pink), as well as several other saltwater sport fisheries. The updated survey's scope covers marine sport charter fishing for Pacific halibut, salmon, and other popular marine sport species in Alaska (*e.g.,* lingcod and rockfish). The data collected from the survey will be used to update estimates of the demand for and value of Pacific halibut fishing to charter anglers and to analyze how the type of fish caught, fishery regulations, and other factors affect fishing values and anglers' decisions to participate in Alaska marine charter fishing activities. The economic information provided from the survey will help inform fishery managers about the economic values of Alaska marine charter halibut fisheries and the changes to participation in these fisheries with proposed regulations.

II. Method of Collection

Data will be collected through a push-to-web survey. A random sample of sport anglers who have fished in Alaska via a charter or for-hire boat will be mailed instructions and a personalized URL or QR code to access and complete the password protected web-based survey. Follow-ups to the initial mailing will be done to encourage a response from those who have not completed the survey. Among the follow-up efforts will be a postcard reminder, a second mailing, and a telephone or email contact with non-responding license holders for whom we have telephone numbers or email addresses to encourage response and gather data for assessing non-response behavior.

III. Data

OMB Control Number: 0648–0639.

Form Number(s): None.

Type of Review: Regular submission. Reinstatement with revisions.

Affected Public: Individuals or households.

Estimated Number of Respondents: 3,700.

Estimated Time per Response: 28.7 minutes.

Estimated Total Annual Burden Hours: 1,770 hours.

Estimated Total Annual Cost to Public: $0.

Respondent's Obligation: Voluntary.

IV. Request for Comments

We are soliciting public comments to permit the Department/Bureau to: (a) Evaluate whether the proposed information collection is necessary for the proper functions of the Department, including whether the information will have practical utility; (b) Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used; (c) Evaluate ways to enhance the quality, utility, and clarity of the information to be collected; and (d) Minimize the reporting burden on those who are to respond, including the use of automated collection techniques or other forms of information technology.

Comments that you submit in response to this notice are a matter of public record. We will include or summarize each comment in our request to OMB to approve this ICR. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Sheleen Dumas,

Department PRA Clearance Officer, Office of the Under Secretary for Economic Affairs, Commerce Department.

National Oceanic and Atmospheric Administration

[RTID 0648–XE016]

Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to Marine Site Characterization Surveys Off the Coast of Delaware

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of an incidental harassment authorization.

SUMMARY: In accordance with the regulations implementing the Marine Mammal Protection Act (MMPA) as amended, notification is hereby given that NMFS has issued an incidental harassment authorization (IHA) to Orsted Wind Power North America, LLC (Orsted) to incidentally harass marine mammals during marine site characterization surveys conducted off the coast of Delaware in the Bureau of Ocean Energy Management (BOEM) Commercial Lease of Submerged Lands for Renewable Energy Development on the Outer Continental Shelf (OCS) Lease Areas OCS–A 0482 and 0519 (Lease Areas), and the associated export cable route (ECR) area.

DATES: This authorization is effective from August 1, 2024, through July 31, 2025.

ADDRESSES: Electronic copies of the application and supporting documents, as well as a list of the references cited in this document, may be obtained online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/incidental-take-authorizations-other-energy-activities-renewable.* In case of problems accessing these documents, please call the contact listed below.

FOR FURTHER INFORMATION CONTACT: Alyssa Clevenstine, Office of Protected Resources, NMFS, (301) 427–8401.

SUPPLEMENTARY INFORMATION:

Background

The MMPA prohibits the ''take'' of marine mammals, with certain exceptions. Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce (as delegated to NMFS) to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are proposed or, if the taking is limited to harassment, a notice of a proposed IHA is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds the taking will have a negligible impact on the species or stock(s) and will not have an unmitigable adverse impact on the availability of the species or stock(s) for taking for subsistence uses (where relevant). Further, NMFS must prescribe the permissible methods of taking and other ''means of effecting the least practicable adverse impact'' on the affected species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of the species or stocks for taking for certain subsistence uses (referred to in shorthand as ''mitigation''); and requirements pertaining to the monitoring and reporting of the takings. The definitions of all applicable MMPA statutory terms cited above are included in the relevant sections below.

History of Request

On October 1, 2021, Orsted, a limited liability company registered in the State of Delaware, submitted a request on behalf of Garden State Offshore Energy, LLC (Garden State) and Skipjack Offshore Energy, LLC (Skipjack), both subsidiaries of Orsted and both registered in the State of Delaware, for an IHA to take marine mammals incidental to marine site characterization surveys off the coast of Delaware in OCS–A 0482 and 0519, and along potential ECRs to landfall locations in Delaware and New Jersey. NMFS published a notice of the proposed IHA in the **Federal Register** on March 21, 2022 (87 FR 15922). Subsequently, the final notice of issuance of the IHA was published in the **Federal Register** (87 FR 30182, May 18, 2022), announcing effective dates of that IHA from May 10, 2022, through May 9, 2023 (2022 IHA). The specified activities were expected to result in the take, by Level B harassment, of 15 species (16 stocks) of marine mammals. The work was expected to be completed within the 1-year timeframe of the IHA. However, no work was completed under the original IHA.

On February 23, 2023, Orsted submitted a request that NMFS re-issue the previously issued IHA with the only change being new effective dates. NMFS published a notice of re-issuance of that IHA, announcing effective dates of May 10, 2023, through May 9, 2024 (88 FR 30278, May 11, 2023) (2023 IHA). The

specified activity, specific geographical region, the type of equipment or survey activities, amount of take requested by Orsted and later authorized by NMFS, as well as the planned mitigation, monitoring, and requirements remained unchanged from the 2022 IHA. Orsted completed a portion of the survey work that was covered by the 2023 IHA and submitted a preliminary monitoring report demonstrating that the required mitigation and monitoring requirements were satisfied, no impacts of a scale or nature not previously analyzed or authorized occurred as a result of the activities conducted, and the IHA holder did not exceed the authorized levels of take under that IHA (88 FR 30278, May 11, 2023).

On March 6, 2024, NMFS received a letter from Orsted requesting renewal of the re-issued 2023 IHA (2024 request) to conduct the same site characterization surveys within the same survey areas using the same type of survey equipment that was previously analyzed under the 2022 IHA and re-issued 2023 IHA. While Orsted's planned activity would ordinarily qualify for a renewal of the IHA, NMFS determined that a renewal of the 2023 IHA is not appropriate due to availability of substantially updated marine mammal density data for all species since issuance of the 2022 IHA (*https://seamap.env.duke.edu/models/Duke/EC/*), which NMFS determined represents the best available scientific data and which serves as the basis for updating the estimated take numbers. Marine mammal density estimates in the survey area (animals/km^2) were obtained using the most recent model results for all taxa (Roberts *et al.,* 2023). The updated models incorporate sighting data, including sightings from NOAA's Atlantic Marine Assessment Program for Protected Species (AMAPPS) surveys. After discussions with the applicant, NMFS received a revised request incorporating the new information, which was deemed adequate and complete on April 12, 2024. In evaluating the 2024 request, and where applicable, NMFS relies on the information previously presented in notices associated with issuance of the 2022 IHA (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022). There are no changes from the proposed IHA to the final IHA.

Description of the Activity and Anticipated Impacts

Overview

Orsted will conduct marine site characterization surveys, including high-resolution geophysical (HRG) surveys and geotechnical surveys, in BOEM Lease Areas OCS–A 0482 and 0519, and the associated ECRs. The purpose of the marine site characterization surveys is to collect data concerning seabed (geophysical, geotechnical, and geohazard), ecological, and archeological conditions within the footprint of offshore wind facility development. Surveys are also conducted to support engineering design and to map unexploded ordnance (UXO). Underwater sound resulting from Orsted's planned activities, specifically HRG surveys, has the potential to result in incidental take of 15 species (16 stocks) of marine mammals, in the form of Level B harassment only. The IHA covers the same specified activities previously described in Orsted's application for the 2022 IHA and subsequent documents. NMFS refers the public to the documents and supplemental materials related to the 2022 **Federal Register** notice of proposed IHA (87 FR 15922; March 21, 2022), the notice of issuance of the original 2022 IHA (87 FR 30182, May 18, 2022), the notice of re-issuance of that IHA (88 FR 30278, May 11, 2023), and 2024 notice of proposed IHA (89 FR 46073, May 28, 2024). The descriptions and analyses contained in those documents remain accurate with the exception of the minor modifications described herein.

Dates and Duration

The specified activities are planned to begin August 1, 2024. The duration of the planned activity remains unchanged from the 2022 IHA and the re-issued 2023 IHA and is expected to require up to 350 survey days across a maximum of three vessels operating concurrently over the course of a single year (''survey day'' defined as a 24-hr activity period in which the assumed number of line km are surveyed). The number of anticipated survey days was calculated as the number of days needed to reach the overall level of effort required to meet survey objectives assuming any single vessel travels 4 knots (kn) (7.4 kilometers per hour (km/hr)) and surveys cover, on average, 70 line km per 24-hr period.

Specific Geographic Region

The specific geographic region remains unchanged from the previously issued 2022 IHA and re-issued 2023 IHA. The planned activities will occur within the Project Area, which includes the Lease Areas and potential ECRs to landfall locations in Delaware. The combined Lease Areas OCS–A 0482 and 0519 comprise approximately 568 square kilometers (km^2) within the Wind Energy Area of BOEM's Mid-Atlantic Planning Area and the overall Project Area, including potential ECRs, is approximately 4,510 km^2. Water depths in the Lease Areas range from approximately 15–40 meters (m). Water depths within the ECR area extend from the shoreline (0 m depth) to approximately 40 m.

Detailed Description of the Specified Activity

A detailed description of the planned activities can be found in the previous **Federal Register** notices (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022) and related-supplemental documents. The nature of the specified activities, including the types of HRG equipment planned for use (*e.g.,* CHIRPs, boomers, and sparkers), daily trackline distances (70 line km per 24-hr period), and number of survey vessels (up to three operating concurrently), are identical to those described in the previous notices.

Comments and Responses

A notice of NMFS' proposal to issue an IHA to Orsted was published in the **Federal Register** on May 28, 2024 (89 FR 46073). That notice described, in detail, Orsted's activity, the marine mammal species that may be affected by the activity, and the anticipated effects on marine mammals while referencing the previous notices (87 FR 15922; March 21, 2022; 87 FR 30182, May 18, 2022; 88 FR 30278, May 11, 2023). In the May 28, 2024, notice, we requested public input on the request for authorization described therein, our analyses, the proposed authorization, and requested that interested persons submit relevant information, suggestions, and comments. This proposed notice was available for a 30-day public comment period.

In total, NMFS received three comments from two private citizens and from an organization (Clean Ocean Action (COA)). Some of these comments were out-of-scope or not applicable to the project (*e.g.,* general opposition to offshore wind projects, concerns for other species outside NMFS' jurisdiction) and are not described herein or discussed further. We do not specifically address comments expressing general opposition to activities related to wind energy development or respond to comments that are out of scope of the proposed IHA (89 FR 46073, May 28, 2024), such as comments on other Federal agency processes and activities not planned under this IHA.

All comments received during the public comment period which

contained relevant points were considered by NMFS and are described and responded to below. All relevant comment letters are available on NMFS' website (*https://www.fisheries.noaa.gov/action/incidental-take-authorization-orsted-wind-power-north-america-llcs-site-characterization*).

Comment 1: COA disagrees with NMFS' initial conclusion that National Environmental Policy Act (NEPA) Categorical Exclusion B4 is applicable to this action due to (1) uncertainty regarding the environmental impacts of the action, (2) a lack of justification regarding how this action does not cumulatively have the potential for significant impacts on the quality of the environment, and (3) a lack of justification as to why no extraordinary circumstances apply to this action.

Response: NMFS does not agree with the commenters. A categorical exclusion (CE) is a category of actions that an agency has determined does not individually or cumulatively have a significant effect on the quality of the human environment and is appropriately applied for such categories of actions so long as there are no extraordinary circumstances present that would indicate that the effects of the action may be significant. Extraordinary circumstances are situations for which NOAA has determined further NEPA analysis is required because they are circumstances in which a normally excluded action may have significant effects. A determination of whether an action that is normally excluded requires additional evaluation because of extraordinary circumstances focuses on the action's potential effects and considers the significance of those effects in terms of both context (consideration of the affected region, interests, and resources) and intensity (severity of impacts). Potential extraordinary circumstances relevant to this action include (1) adverse effects on species or habitats protected by the MMPA that are not negligible; (2) highly controversial environmental effects; (3) environmental effects that are uncertain, unique, or unknown; and (4) the potential for significant cumulative impacts when the proposed action is combined with other past, present, and reasonably foreseeable future actions.

The relevant NOAA CE associated with issuance of incidental take authorizations is CE B4, issuance of incidental harassment authorizations under section 101(a)(5)(A) and (D) of the MMPA for the incidental, but not intentional, take by harassment of marine mammals during specified activities and for which no serious injury or mortality is anticipated. This action falls within CE B4. In determining whether a CE is appropriate for a given incidental take authorization, NMFS considers the applicant's specified activity and the potential extent and magnitude of takes of marine mammals associated with that activity along with the extraordinary circumstances listed in the Companion Manual for NOAA Administrative Order (NAO) 216–6A and summarized above.

The issuance of this IHA will not result in highly controversial environmental effects or result in environmental effects that are uncertain, unique, or unknown because numerous entities have been engaged in site characterization surveys that result in Level B harassment of marine mammals in the United States. This type of activity is well documented; prior authorizations and analysis demonstrate issuance of an IHA for this type of action only affects the marine mammals that are the subject of the specific authorization and, thus, no potential for significant cumulative impacts are expected, regardless of past, present, or reasonably foreseeable actions, even though the impacts of the action may not be significant by itself. Based on this evaluation, we concluded that the issuance of the IHA qualifies to be categorically excluded from further NEPA review.

The evaluation of whether extraordinary circumstances (if present) have the potential for significant environmental effects is limited to the decision NMFS is responsible for, which is issuance of the incidental take authorization. While there may be environmental effects associated with the underlying action, potential effects of NMFS' action are limited to those that would occur due to the authorization of incidental take of marine mammals. NMFS prepared numerous EAs analyzing the environmental impacts of the categories of activities encompassed by CE B4, which resulted in Findings of No Significant Impacts (FONSI) and, in particular, numerous EAs prepared in support of issuance of IHAs related to similar survey actions are part of NMFS' administrative record supporting CE B4. These EAs demonstrate the issuance of a given incidental harassment authorization does not affect other aspects of the human environment because the action only affects the marine mammals that are the subject of the incidental harassment authorization. These EAs also addressed factors in 40 CFR 1508.27 regarding the potential for significant impacts and demonstrate the issuance of incidental harassment authorization for the categories of activities encompassed by CE B4 do not individually or cumulatively have a significant effect on the human environment.

Specifically for this action, NMFS independently evaluated the use of the CE for issuance of Orsted's IHA, which included consideration of extraordinary circumstances. As part of that analysis, NMFS considered whether this IHA issuance would result in cumulative impacts that could be significant. In particular, the issuance of an IHA to Orsted is expected to result in minor, short-term behavioral effects on marine mammal species due to exposure to underwater sound from site characterization survey activities. Behavioral disturbance is expected to occur intermittently in the vicinity of Orsted's survey area during the 1-year timeframe. Level B harassment will be reduced through use of mitigation measures described herein. Additionally, as discussed elsewhere, NMFS has determined that Orsted's activities fall within the scope of activities analyzed in the Greater Atlantic Regional Office's (GARFO) programmatic consultation regarding geophysical surveys along the U.S. Atlantic coast in the 3 Atlantic Renewable Energy Regions (completed June 29, 2021; revised September 2021), which concluded surveys such as those planned by Orsted are not likely to adversely affect ESA-listed species or adversely modify or destroy critical habitat. Accordingly, NMFS has determined that the issuance of this IHA will result in no more than negligible (as that term is defined by the Companion Manual for NAO 216–6A) adverse effects on species protected by the ESA and the MMPA.

Comment 2: COA noted a preliminary monitoring report by the applicant was not made publicly available with the supporting documents on the project website and that NMFS should make monitoring and compliance reports publicly available with a schedule of when such reports will be released.

Response: The preliminary report submitted by the applicant and noted in the **Federal Register** notice (89 FR 46073, May 28, 2024) proposing this action was a requirement under the BOEM Project Design Criteria (PDC) and Best Management Practices (PDC 8), not the final reporting requirements under the 2023 IHA (88 FR 30278, May 11, 2023), therefore, it was not made publicly available. NMFS agrees with the need for reporting and indeed, the MMPA calls for IHAs to incorporate reporting requirements and a final

marine mammal monitoring report is required for the 2023 IHA. As included in the proposed IHA, the final IHA includes requirements for reporting that supports COA's recommendations, as well as timeframes for when reports will be considered complete and subsequently made publicly available. Orsted is required to submit a monitoring report to NMFS within 90 days after completion of survey activities that fully documents the methods and monitoring protocols, summarizes the data recorded during monitoring. All final reports and associated data submitted to NMFS are included on the website for public inspection. However, NMFS does not concur with the suggestions that draft reports be made publicly available.

Comment 3: COA provided comments suggesting that this IHA is a renewal. COA also noted that multiple IHAs, including renewals, have been requested by Orsted for the same project activities and stated that, in circumstances when it is not clear how long the proposed activities would span, a Letter of Authorization (LOA) is more appropriate than an IHA. COA stated that, given past delays, it is not clear how long the proposed activities would occur and that it is unrealistic and unreasonable to expect survey activities will actually cease after 1 year.

Response: As NMFS stated in the notice of the proposed IHA, the proposed action for which we requested comments was not for a renewal IHA. As described in the proposed **Federal Register** notice (89 FR 46073, May 28, 2024), we determined that a renewal IHA was not appropriate due to the release of comprehensively updated Duke University density information (Roberts *et al.,* 2023). Instead, we have issued a new IHA relying substantially on information and analysis produced in support of the previously issued 2022 IHA, as project details remain the same (also as described in the proposed **Federal Register** notice (89 FR 46073, May 28, 2024)). As we noted in the proposed notice and in this final notice for the 2024 IHA, Orsted has the option for a renewal if specific conditions and criteria are met.

Regarding clarification on authorizations, as described on our website, IHAs are 1-year authorizations and Incidental Take Regulations (ITR) are 5-year regulations that allow for the issuance of LOA. An ITR must be used if authorization of take by mortality is necessary. However, both options are available for applicants requesting authorization of harassment only. While applicants may request a 5-year regulation for HRG survey activities, NMFS has not received any such requests to date and there is no expectation presented in the MMPA or Congressional record that activities continuing for more than 1 year must seek ITR and authorization under 101(a)(5)(A) of the MMPA. Therefore, a determination of which option to take is not dependent on any expectation regarding whether the activity will continue for more than 1 year or not.

Comment 4: COA stated the information provided in the proposed (89 FR 46073, May 28, 2024) and previous notices (87 FR 15922; March 21, 2022; 87 FR 30182, May 18, 2022; 88 FR 30278, May 11, 2023) for this action regarding vessel strike is insufficient for NMFS to claim the probability of vessel strike due to HRG survey vessels is low enough to be discountable. COA noted the North Atlantic Right Whale (NARW) Speed Zone Dashboard does not clearly indicate whether HRG survey vessels are included and which vessel type category HRG survey vessels fall under, nor does the proposed notice specify the number of trips HRG survey vessels would take to complete the survey activities. COA stated this IHA cannot be issued without consideration and correction of these issues.

Response: Orsted did not request authorization for take incidental to vessel strike during marine site characterization surveys. Nevertheless, NMFS analyzed the potential for vessel strikes to occur during the survey, and determined that the potential for vessel strike is so low as to be discountable. NMFS does not authorize any take of marine mammals incidental to vessel strike resulting from the survey. If Orsted were to strike a marine mammal with a vessel, this would be an unauthorized take and be in violation of the MMPA. This gives Orsted a strong incentive to operate its vessels with all due caution and to effectively implement the suite of vessel strike avoidance measures called for in the IHA. Orsted proposed a very conservative suite of mitigation measures related to vessel strike avoidance, including measures specifically designed to avoid impacts to NARWs. Section 4(f) in the IHA contains a suite of non-discretionary requirements pertaining to vessel strike avoidance, including vessel operation protocols and monitoring. To date, NMFS is not aware of any site characterization vessels from surveys reporting a vessel strike within the United States despite intensive requirements for visual monitoring at all times during survey activity. When considered in the context of low overall probability of any vessel strike by Orsted vessels, given the limited additional survey-related vessel traffic relative to existing traffic in the survey area, the comprehensive visual monitoring, and other additional mitigation measures described herein, NMFS believes these measures are sufficiently protective to avoid vessel strike. These measures are described fully in the Mitigation section below, and include, but are not limited to: training for all vessel observers and captains, daily monitoring of NARW Sighting Advisory System, WhaleAlert app, and U.S. Coast Guard Channel 16 for situational awareness regarding NARW presence in the survey area, communication protocols if whales are observed by any Orsted personnel, vessel operational protocol should any marine mammal be observed, and visual monitoring.

Comment 5: COA believes that preserving the existence of NARW warrants pausing offshore development off the Atlantic coast and states NMFS needs to consider the cumulative impact, including the total number, speed, and distance of vessel trips required for marine site characterization survey activities, for all concurrent projects in the region and adjust the permitted activities accordingly.

Response: NMFS reiterates our action concerns only the authorization of marine mammal take incidental to the planned surveys—NMFS' authority under the MMPA does not extend to the specified activities themselves. COA did not provide any new or compelling evidence that suggests that wind energy development activities have the potential to negatively impact NARW. NMFS notes the cumulative effects of substantially similar activities in the northwest Atlantic Ocean have been analyzed in the past under section 7 of the ESA when NMFS engaged in formal intra-agency consultation, such as the 2013 programmatic Biological Opinion for Bureau of Ocean Energy Management Lease and Site Assessment Rhode Island, Massachusetts, New York, and New Jersey Wind Energy Areas (*https://repository.library.noaa.gov/view/noaa/29291*). Analyzed activities include those for which NMFS issued previous IHAs (82 FR 31562, July 7, 2017; 85 FR 21198, April 16, 2020; 86 FR 26465, May 10, 2021), which are similar to those planned by Orsted under this current IHA request.

NMFS reiterates that there is no evidence that acoustic noise resulting from offshore wind development-related activities could potentially cause marine mammal stranding, and there is no evidence linking recent marine mammal

mortalities an currently ongoing offshore wind development activities. This point has been well supported by other agencies, including the Bureau of Ocean Energy Management and the Marine Mammal Commission (Marine Mammal Commission Newsletter, Spring 2023). In addition, a recent study by Thorne and Wiley (2024) reviewed spatiotemporal patterns of strandings, mortalities, and serious injuries of humpback whales along the U.S. east coast from 2016–2022 and found vessel strikes to be the major driver in the increase of humpback whale strandings, mortalities, and serious injuries. Based upon the spatiotemporal analysis, no evidence was found that offshore wind development played a role in the increased number of strandings over time; for example, spatiotemporal patterns between strandings and site assessment surveys did not seem associated. In fact, the potential for vessel strike increased from 2016–2022 in association with increased container vessel traffic that overlapped with whales in new and shallow foraging areas. This potential for vessel strike also seemed to increase with the increased presence of juvenile humpback whales foraging off the Mid-Atlantic States. Under the IHA, NMFS requires Orsted to abide by vessel speed restrictions and maintain separation distances between vessels and marine mammals that are intended to minimize the risk of any potential vessel strikes.

There is an ongoing UME for humpback whales along the Atlantic coast from Maine to Florida, which includes animals stranded since 2016. Partial or full necropsy examinations were conducted on approximately half of the whales. Necropsies were not conducted on other carcasses because they were too decomposed, not brought to land, or stranded on protected lands (*e.g.,* national and state parks) where responders had limited or no access to the carcasses. Of the roughly 90 whales examined, about 40 percent had evidence of human interaction (*i.e.,* vessel strike or entanglement). The remaining 50 necropsied whales either had an undetermined cause of death due to a limited examination or decomposition of the carcass, or had other causes of death (*e.g.,* parasite-caused organ damage and starvation). Ongoing UMEs are also occurring for North Atlantic right whales and minke whales, both since 2017. NMFS will continue to gather data to help us determine the cause of death for these stranded whales. Vessel strikes and entanglement in fishing gear continue to be the greatest human threats to large whales.

For NMFS' response on cumulative impacts, please see our response to *Comment 1.*

Changes From Proposed to Final IHA

No changes were made from the proposed IHA to the final IHA.

Description of Marine Mammals in the Area of Specified Activities

A description of the marine mammals in the area of the specified activities can be found in the previous documents and notices for the 2022 IHA (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022), which remains applicable to this IHA. NMFS reviewed the most recent SARs (found on NMFS' website at *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessments*), including the draft 2023 SARs, up-to-date information on relevant Unusual Mortality Events (UMEs; *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-unusual-mortality-events*), and recent scientific literature and determined that the new information does not change our original analysis of impacts supporting issuance of the 2022 IHA.

Marine mammal abundance estimates presented in this document represent the total number of individuals that make up a given stock or the total number estimated within a particular study or survey area. NMFS's stock abundance estimates for most species represent the total estimate of individuals within the geographic area, if known, that comprises that stock. For some species, this geographic area may extend beyond U.S. waters. All managed stocks in this region are assessed in NMFS's U.S. Atlantic and Gulf of Mexico SARs (*e.g.,* Hayes *et al.,* 2024). All values presented in table 1 are the most recent available at the time of publication, including, as applicable, from the draft 2023 SARs. NMFS notes that since the issuance of the 2022 IHA, new SARs are available for all species with the exception of humpback whale (Gulf of Maine stock), bottlenose dolphin (Northern Migratory Coastal stock), and harbor seal (Western North Atlantic stock). All new information is provided in table 1 and updated density data (Roberts *et al.,* 2023) are incorporated into take estimations (see Sections 3 and 6 of the updated application). Additionally, the new SARs data do not change our analysis of impacts, as described under the 2022 IHA.

Additionally, on August 1, 2022, NMFS announced proposed changes to the existing NARW vessel speed regulations (87 FR 46921, August 1, 2022) to further reduce the likelihood of mortalities and serious injuries to endangered NARWs from vessel collisions, which are a leading cause of the species' decline and a primary factor in an ongoing UME. Should a final vessel speed rule be issued and become effective during the effective period of this authorization (or any other MMPA incidental take authorization), the authorization holder will be required to comply with any and all applicable requirements contained within the final vessel speed rule. Specifically, where measures in any final vessel speed rule are more protective or restrictive than those in this or any other MMPA authorization, authorization holders will be required to comply with the requirements of the vessel speed rule. Alternatively, where measures in this or any other MMPA authorization are more restrictive or protective than those in any final vessel speed rule, the measures in the MMPA authorization will remain in place. The responsibility to comply with the applicable requirements of any vessel speed rule will become effective immediately upon the effective date of any final vessel speed rule.

TABLE 1—SPECIES AND STOCKS LIKELY IMPACTED BY THE SPECIFIED ACTIVITIES [1]

Common name	Scientific name	Stock	ESA/ MMPA status; strategic (Y/N) [2]	Stock abundance (CV, N_{min}, most recent abundance survey) [3]	PBR	Annual M/SI [4]

Order Carnivora—Pinnipedia						
Family Phocidae (earless seals):						
Gray seal [6]	*Halichoerus grypus*	Western N Atlantic	-, -, N	27,911 (0.20, 23,624, 2021)	1,512	4,570
Harbor seal	*Phoca vitulina*	Western N Atlantic	-, -, N	61,336 (0.08, 57,637, 2018)	1,729	339

[1] Information on the classification of marine mammal species can be found on the web page for The Society for Marine Mammalogy's Committee on Taxonomy (*https://marinemammalscience.org/science-and-publications/list-marine-mammal-species-subspecies/*).

[2] ESA status: Endangered (E), Threatened (T)/MMPA status: Depleted (D). A dash (-) indicates that the species is not listed under the ESA or designated as depleted under the MMPA. Under the MMPA, a strategic stock is one for which the level of direct human-caused mortality exceeds potential biological removal (PBR) or which is determined to be declining and likely to be listed under the ESA within the foreseeable future. Any species or stock listed under the ESA is automatically designated under the MMPA as depleted and as a strategic stock.

[3] NMFS marine mammal stock assessment reports online at: *https://www.fisheries.noaa.gov/national/marine-mammal-protection/marine-mammal-stock-assessment-reports-region.* CV is coefficient of variation; N_{min} is the minimum estimate of stock abundance.

[4] These values, found in NMFS's SARs, represent annual levels of human-caused mortality plus serious injury from all sources combined (*e.g.,* commercial fisheries, vessel strike). Annual mortality or serious injury (M/SI) often cannot be determined precisely and is in some cases presented as a minimum value or range. A CV associated with estimated mortality due to commercial fisheries is presented in some cases.

[5] Linden (2023) estimated the population size in 2022 as 356 individuals, with a 95 percent credible interval ranging from 346 to 363. NMFS acknowledges this most recent estimation in addition to the 2023 draft SAR stock abundance estimate.

[6] NMFS's stock abundance estimate (and associated PBR value) applies to the U.S. population only. Total stock abundance (including animals in Canada) is approximately 394,311. The annual M/SI given is for the total stock.

Potential Effects of Specified Activities on Marine Mammals and Their Habitat

A description of the potential effects of the specified activities on marine mammals and their habitat may be found in the documents supporting the 2022 IHA (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022). At present, there is no new information on potential effects that would change our analysis.

Estimated Take of Marine Mammals

A detailed description of the methods used to estimate take anticipated to occur incidental to the project is found in the previous **Federal Register** notices (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022). The methods of estimating take are identical to those used in the 2022 IHA. We have updated the marine mammal densities based on new information (Roberts *et al.,* 2023), available online at: *https://seamap.env.duke.edu/models/Duke/EC/.* We refer the reader to table 3 in the 2024 IHA request from Orsted for specific density values used in the analysis. The 2024 IHA request is available online at: *https://www.fisheries.noaa.gov/action/incidental-take-authorization-orsted-wind-power-north-america-llcs-site-characterization.*

The take NMFS has authorized can be found in table 2, below. Table 2 presents the results of Orsted's updated density-based calculations for the Project Area. For comparative purposes, we have provided the 2022 IHA authorized take (87 FR 30182, May 18, 2022). No take by Level A harassment was requested and none is anticipated. Therefore, NMFS has not authorized any take by Level A harassment. Mortality or serious injury (M/SI) is neither anticipated nor authorized.

TABLE 2—ESTIMATED TAKE NUMBERS AND TOTAL TAKE AUTHORIZED

Common name	Stock	Estimated abundance	Take authorized under previous 2022 IHA	Total calculated take	Authorized take	Estimated take as a percentage of population
North Atlantic right whale	Western Atlantic	340	11	4	4	1.18
Fin whale	Western N Atlantic	6,802	7	6	6	<1
Humpback whale	Gulf of Maine	1,396	4	5	5	<1

TABLE 2—ESTIMATED TAKE NUMBERS AND TOTAL TAKE AUTHORIZED—Continued

Common name	Stock	Estimated abundance	Take authorized under previous 2022 IHA	Total calculated take	Authorized take	Estimated take as a percentage of population
Minke whale	Canadian Eastern Coastal	21,968	2	10	10	<1
Sei whale	Nova Scotia	6,292	1	1	1	<1
Sperm whale	N Atlantic	5,895	3	0	[a] 2	<1
Long-Finned pilot whale	Western N Atlantic	39,215	20	1	[a] 8	<1
Atlantic spotted dolphin	Western N Atlantic	31,506	15	6	[a] 24	<1
Atlantic white-sided dolphin	Western N Atlantic	93,233	50	16	16	<1
Bottlenose dolphin [b]	Northern Migratory Coastal	6,639	2,752	4,118	[c] 4,118	62.0
Bottlenose dolphin [b]	Western N Atlantic Offshore	64,587	2,752	4,118	([c])	<7
Risso's dolphin	Western N Atlantic	44,067	20	1	[a] 7	<1
Common dolphin	Western N Atlantic	93,100	400	98	[a] 302	<1
Harbor porpoise	Gulf of Maine/Bay of Fundy	85,765	82	79	79	<1
Gray seal	Western N Atlantic	27,911	4	13	[d] 13	<1
Harbor seal	Western N Atlantic	61,336	4	13	[d] 13	<1

[a] Adjustments to the requested take numbers for the marked species are based on the average group size from AMAPPS survey data (NEFSC, 2023) and recommended values represent averages of all AMAPPS sightings, for species for which the calculated take was lower than the estimated group size, except common dolphins. For common dolphins, the AMAPPS group size was used in conjunction with the number of encounters of common dolphin groups in past PSO reports.

[b] Take estimate is based on the maximum number of calculated instances of take for either stock and is assumed to apply to all bottlenose dolphins potentially present in the survey area. Therefore, takes could consist of individuals from either the WNA Offshore or the WNA Northern Migratory Coastal stock.

[c] Although unlikely, for purposes of calculating maximum percentage of population, we assume all takes could be allocated to either stock (*i.e.,* total estimated take for ''bottlenose dolphins'' is 4,118) and that multiple repeated takes of the same individuals from each stock may occur. Please see Determinations for additional information.

[d] Roberts *et al.* (2023) only provides density estimates for seals without differentiating by species. Harbor seals and gray seals are assumed to occur equally in the survey area; therefore, density values were split evenly between the two species, *i.e.,* total estimated take for ''seals'' is 13.

Mitigation, Monitoring, and Reporting Measures

The mitigation measures, and monitoring and reporting requirements are identical to those included in the **Federal Register** notice announcing the final 2022 IHA (87 FR 30182, May 18, 2022), and the discussion of the least practicable adverse impact included in that document remains accurate. The measures included in this authorization are found below.

Mitigation

The following mitigation measures must be implemented during Orsted's marine site characterization surveys. Pursuant to section 7 of the ESA, Orsted must also be required to adhere to relevant Project Design Criteria (PDC) of the NMFS GARFO programmatic consultation (specifically PDCs 4, 5, and 7) regarding geophysical surveys along the U.S. Atlantic coast (see NOAA GARFO, 2021; *https://www.fisheries.noaa.gov/new-england-mid-atlantic/consultations/section-7-take-reporting-programmatics-greater-atlantic#offshore-wind-site-assessment-and-site-characterization-activities-programmatic-consultation*).

Marine Mammal Exclusion Zones and Harassment Zones

Marine mammal exclusion zones (EZs) must be established around the HRG survey equipment and monitored by NMFS-approved protected species observers (PSO):

- 500 m EZ for NARWs during operation of specified acoustic sources (*e.g.,* sparkers, boomers); and
- 100 m EZ for all other marine mammals, with certain exceptions (see *Shutdown Procedures*), during operation of specified acoustic sources (*e.g.,* sparkers, boomers).

If a marine mammal is detected approaching or entering the EZs during the HRG survey, the vessel operator must adhere to the shutdown procedures described below to minimize noise impacts on the animals. These stated requirements must be included in the site-specific training to be provided to the survey team. The Level B harassment zones for each sound source are listed in table 3 and remain the same as the initial IHA (see table 4 of the **Federal Register** notice of the final authorization (87 FR 30182, May 18, 2022)).

TABLE 3—LEVEL B HARASSMENT ZONES

Equipment	Distance to Level B harassment threshold (m)
ET 216 CHIRP	9
ET 424 CHIRP	4
ET 512i CHIRP	6
GeoPulse 5430	21
TB CHIRP III	48
Pangeo SBI	22
AA Triple plate S-Boom (700/1,000 J)	34
AA, Dura-spark UHD Sparkers	141
GeoMarine Sparkers	141

Note: AA = Applied Acoustics; CHIRP = compressed high-intensity radiated pulses; ET = edgetech; J = joule; SBI = sub-bottom imager; TB = Teledyne benthos; UHD = ultra-high definition.

Pre-Start Clearance

Marine mammal clearance zones must be established around the HRG survey equipment and monitored by PSOs:

- 500 m for all ESA-listed marine mammals; and
- 100 m for all other marine mammals.

Orsted must implement a 30-minute pre-start clearance period prior to the initiation of ramp-up of specified HRG equipment. During this period, clearance zones must be monitored by PSOs, using the appropriate visual technology. Ramp-up may not be initiated if any marine mammal(s) is within its respective clearance zone. If a marine mammal is observed within a clearance zone during the pre-start clearance period, ramp-up may not begin until the animal(s) has been observed exiting its respective EZ or until an additional time period has elapsed with no further sighting (*i.e.,* 15 minutes for small odontocetes and pinnipeds, 30 minutes for all other species).

Ramp-Up of Survey Equipment

A ramp-up procedure, involving a gradual increase in source level output, is required at all times as part of the activation of the acoustic source when technically feasible. The ramp-up procedure must be used at the beginning of HRG survey activities in order to provide additional protection to marine mammals near the survey area by allowing them to vacate the area prior to the commencement of survey equipment operation at full power. Operators should ramp-up sources to half power for 5 minutes and then proceed to full power.

Ramp-up activities must be delayed if a marine mammal(s) enters its respective EZ. Ramp-up will resume if the animal has been observed exiting its respective EZ or until an additional time period has elapsed with no further sighting (*i.e.,* 15 minutes for small odontocetes and pinnipeds, 30 minutes for all other species).

Ramp-up may occur at times of poor visibility, including nighttime, if appropriate visual monitoring has occurred with no detections of marine mammals in the 30 minutes prior to beginning ramp-up. Acoustic source activation may only occur at night where operational planning cannot reasonably avoid such circumstances.

Shutdown Procedures

An immediate shutdown of the impulsive HRG survey equipment (*i.e.,* sparkers, boomers) will be required if a marine mammal is sighted entering or is within its respective EZ. The vessel operator must comply immediately with any call for shutdown by the Lead PSO. Any disagreement between the Lead PSO and vessel operator should be discussed only after shutdown has occurred. Subsequent restart of the survey equipment can be initiated if the animal has been observed exiting its respective EZ or until an additional time period has elapsed with no further sighting (*i.e.,* 15 minutes for small odontocetes and pinnipeds, 30 minutes for all other species).

If a species for which authorization has not been granted, or, a species for which authorization has been granted but the authorization number of takes have been met, approaches or is observed within the Level B harassment zone, shutdown must occur.

If the acoustic source is shut down for reasons other than mitigation (*e.g.,* mechanical difficulty) for less than 30 minutes, it may be activated again without ramp-up if PSOs have maintained constant observation and no detections of any marine mammal have occurred within the respective EZs. If the acoustic source is shut down for a period longer than 30 minutes, then pre-clearance and ramp-up procedures will be initiated as described in the previous section.

The shutdown requirement will be waived for pinnipeds and for small delphinids of the following genera: *Delphinus, Lagenorhynchus, Stenella,* and *Tursiops.* Specifically, if a delphinid from the specified genera or a pinniped is visually detected approaching the vessel (*i.e.,* to bow ride) or towed equipment, shutdown is not required. Furthermore, if there is uncertainty regarding identification of a marine mammal species (*i.e.,* whether the observed marine mammal(s) belongs to one of the delphinid genera for which shutdown is waived), PSOs must use best professional judgment in making the decision to call for a shutdown. Additionally, shutdown is required if a delphinid or pinniped is detected in the EZ and belongs to a genus other than those specified.

Shutdown, pre-start clearance, and ramp-up procedures are not required during HRG survey operations using only non-impulsive sources (*e.g.,* side-scan sonar, echosounders) other than non-parametric sub-bottom profilers (*e.g.,* CHIRPs).

Vessel Strike Avoidance

Orsted must adhere to the following measures except in the case where compliance will create an imminent and serious threat to a person or vessel or to the extent that a vessel is restricted in its ability to maneuver and, because of the restriction, cannot comply:

- Vessel operators and crews must maintain a vigilant watch for all marine mammals and slow down, stop their vessel, or alter course, as appropriate and regardless of vessel size, to avoid striking any marine mammal. A visual observer aboard the vessel must monitor a vessel strike avoidance zone based on the appropriate separation distance around the vessel. Visual observers monitoring the vessel strike avoidance zone may be third-party observers (*i.e.,* PSOs) or crew members, but crew members responsible for these duties must be provided sufficient training to (1) distinguish protected species from other phenomena, and (2) broadly identify a marine mammal as a right whale, other whale (defined in this context as sperm whales or baleen whales other than right whales), or other marine mammal;
- All survey vessels, regardless of size, must observe a 10 kn (18.5 km/hr) speed restriction in specified areas designated by NMFS for the protection of NARWs from vessel strikes. These specified areas include all seasonal management areas (SMA) established under 50 CFR 224.105 (when in effect), any dynamic management areas (DMA) (when in effect), and Slow Zones. See: *https://www.fisheries.noaa.gov/national/endangered-species-conservation/reducing-vessel-strikes-north-atlantic-right-whales* for specific detail regarding these areas;
- All vessels must reduce speed to 10 kn (18.5 km/hr) or less when mother/calf pairs, pods, or large assemblages of cetaceans are observed near a vessel;
- All vessels must maintain a minimum separation distance of 500 m from right whales and other ESA-listed large whales;
  - If an ESA-listed species is sighted within the relevant separation distance, the vessel must steer a course away at 10-kn (18.5 km/hr) or less until the 500-m separation distance has been established. If a whale is observed but cannot be confirmed as a species that is not ESA-listed, the vessel operator must assume that it is an ESA-listed species and take appropriate action;
- All vessels must maintain a minimum separation distance of 100 m from non-ESA-listed baleen whales;
- All vessels must, to the maximum extent practicable, attempt to maintain a minimum separation distance of 50 m from all other marine mammals, with an understanding that at times this may not be possible (*e.g.,* for animals that approach the vessel); and
- When marine mammals are sighted while a vessel is underway, the vessel shall take action as necessary to avoid violating the relevant separation distance (*e.g.,* attempt to remain parallel to the animal's course, avoid excessive speed or abrupt changes in direction until the animal has left the area);
  - If marine mammals are sighted within the relevant separation distance, the vessel must reduce speed and shift the engine to neutral, not engaging the engines until animals are clear of the area. This does not apply to any vessel towing gear or any vessel that is navigationally constrained.

Project-specific training must be conducted for all vessel crew prior to the start of a survey and during any changes in crew such that all survey personnel are fully aware and understand the mitigation, monitoring, and reporting requirements.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered to by NMFS, NMFS has determined that the mitigation measures provide the means of effective the least practicable impact on marine mammal species or stocks

and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

Monitoring and Reporting

Visual monitoring must be performed by qualified, NMFS-approved PSOs, the resumes of whom will be provided to NMFS for review and approval prior to the start of survey activities. Orsted must employ independent, dedicated, trained PSOs, meaning that the PSOs must (1) be employed by a third-party observer provider, (2) have no tasks other than to conduct observational effort, collect data, and communicate with and instruct relevant vessel crew with regard to the presence of marine mammals and mitigation requirements (including brief alerts regarding maritime hazards), and (3) have successfully completed an approved PSO training course appropriate for their designated task. On a case-by-case basis, trained crew members may be approved by NMFS for limited, specified duties in support of approved, independent PSOs on smaller vessels with limited crew operating in nearshore waters.

The PSOs will be responsible for monitoring the waters surrounding each survey vessel to the farthest extent permitted by sighting conditions, including EZs, during all HRG survey operations. PSOs will visually monitor and identify marine mammals, including those approaching or entering the established EZs during survey activities. It will be the responsibility of the Lead PSO on duty to communicate the presence of marine mammals as well as to communicate the action(s) that are necessary to ensure mitigation and monitoring requirements are implemented as appropriate.

During all HRG survey operations (*e.g.,* any day on which use of an HRG source is planned to occur), a minimum of one PSO must be on duty during daylight operations on each survey vessel, conducting visual observations at all times on all active survey vessels during daylight hours (*i.e.,* from 30 minutes prior to sunrise through 30 minutes following sunset). Two PSOs will be on watch during nighttime operations. The PSO(s) will ensure 360 degree visual coverage around the vessel from the most appropriate observation posts and will conduct visual observations using binoculars and/or night vision goggles and the naked eye while free from distractions and in a consistent, systematic, and diligent manner. PSOs may be on watch for a maximum of 4 consecutive hours followed by a break of at least 2 hours between watches and may conduct a maximum of 12 hours of observations per 24-hr period. In cases where multiple vessels are surveying concurrently, any observations of marine mammals will be communicated to PSOs on all nearby survey vessels.

PSOs must be equipped with binoculars and have the ability to estimate distance and bearing to detect marine mammals, particularly in proximity to EZs. Reticulated binoculars must also be available to PSOs for use as appropriate based on conditions and visibility to support the sighting and monitoring of marine mammals. During nighttime operations, night-vision goggles with thermal clip-ons and infrared technology will be used. Position data will be recorded using hand-held or vessel GPS units for each sighting.

During good conditions (*e.g.,* daylight hours; Beaufort sea state (BSS) 3 or less), to the maximum extent practicable, PSOs will also conduct observations when the acoustic source is not operating for comparison of sighting rates and behavior with and without use of the active acoustic sources. Any observations of marine mammals by crew members aboard any vessel associated with the survey will be relayed to the PSO team. Data on all PSO observations will be recorded based on standard PSO collection requirements. This will include dates, times, and locations of survey operations; dates and times of observations, location and weather, details of marine mammal sightings (*e.g.,* species, numbers, behaviors); and details of any observed marine mammal behavior that occurs (*e.g.,* notes behavioral disturbances).

Orsted must consult NMFS NARW reporting system and Whale Alert, daily and as able, for the presence of NARWs throughout survey operations, and for the establishment of a DMA. If NMFS should establish a DMA in the Lease Areas during the survey, the vessels must abide by speed restrictions in the DMA

Within 90 days after completion of survey activities or expiration of this IHA, whichever comes sooner, a draft comprehensive report will be provided to NMFS that fully documents the methods and monitoring protocols, summarizes the data recorded during monitoring, summarizes the number of marine mammals observed during survey activities (by species, when known), summarizes the mitigation actions taken during surveys including what type of mitigation and the species and number of animals that prompted the mitigation action, when known), and provides an interpretation of the results and effectiveness of all mitigation and monitoring. Any recommendations made by NMFS must be addressed in the final report prior to acceptance by NMFS. A final report must be submitted within 30 days following any comments on the draft report. All draft and final marine mammal and acoustic monitoring reports must be submitted to *PR.ITP.MonitoringReports@noaa.gov* and *ITP.clevenstine@noaa.gov.* The report must contain at minimum, the following:

- PSO names and affiliations;
- Dates of departures and returns to port with port names;
- Dates and times (Greenwich Mean Time (GMT)) of survey effort and times corresponding with PSO effort;
- Vessel location (latitude/longitude) when survey effort begins and ends; vessel location at beginning and end of visual PSO duty shifts;
- Vessel heading and speed at beginning and end of visual PSO duty shifts and upon any line change;
- Environmental conditions while on visual survey (at beginning and end of PSO shift and whenever conditions change significantly), including wind speed and direction, BSS, Beaufort wind force, swell height, weather conditions, cloud cover, sun glare, and overall visibility to the horizon;
- Factors that may be contributing to impaired observations during each PSO shift change or as needed as environmental conditions change (*e.g.,* vessel traffic, equipment malfunctions); and
- Survey activity information, such as type of survey equipment in operation, acoustic source power output while in operation, and any other notes of significance (*i.e.,* pre-clearance survey, ramp-up, shutdown, end of operations, *etc.*).

If a marine mammal is sighted, the following information should be recorded:

- Watch status (sighting made by PSO on/off effort, opportunistic, crew, alternate vessel/platform);
- PSO who sighted the animal;
- Time of sighting;
- Vessel location at time of sighting;
- Water depth;
- Direction of vessel's travel (compass direction);
- Direction of animal's travel relative to the vessel;
- Pace of the animal;
- Estimated distance to the animal and its heading relative to vessel at initial sighting;
- Identification of the animal (*e.g.,* genus/species, lowest possible taxonomic level, or unidentified); also

note the composition of the group if there is a mix of species;

- Estimated number of animals (high/low/best);
- Estimated number of animals by cohort (adults, yearlings, juveniles, calves, group composition, *etc.*);
- Description (as many distinguishing features as possible of each individual seen, including length, shape, color, pattern, scars or markings, shape and size of dorsal fin, shape of head, and blow characteristics);
- Detailed behavior observations (*e.g.,* number of blows, number of surfaces, breaching, spyhopping, diving, feeding, traveling; as explicit and detailed as possible; note any observed changes in behavior);
- Animal's closest point of approach and/or closest distance from the center point of the acoustic source;
- Platform activity at time of sighting (*e.g.,* deploying, recovering, testing, data acquisition, other); and
- Description of any actions implemented in response to the sighting (*e.g.,* delays, shutdown, ramp-up, speed or course alteration, etc.) and time and location of the action.

If a NARW is observed at any time by PSOs or personnel on any project vessels, during surveys or during vessel transit, Orsted must report the sighting information to the NMFS NARW Sighting Advisory System (866–755–6622) within 2 hours of occurrence, when practicable, or no later than 24 hours after occurrence. NARW sightings in any location may also be reported to the U.S. Coast Guard via channel 16 and through the WhaleAlert app (*http://www.whalealert.org/*).

In the event that Orsted personnel discover an injured or dead marine mammal, Orsted must report the incident to the NMFS Office of Protected Resources (OPR) and the NMFS New England/Mid-Atlantic Stranding Coordinator as soon as feasible. The report will include the following information:

- Time, date, and location (latitude/longitude) of the first discovery (and updated location information if known and applicable);
- Species identification (if known) or description of the animal(s) involved;
- Condition of the animal(s) (including carcass condition if the animal is dead);
- Observed behaviors of the animal(s), if alive;
- If available, photographs or video footage of the animal(s); and
- General circumstances under which the animal was discovered.

In the unanticipated event of a vessel strike of a marine mammal by any vessel involved in this activities covered by the IHA, Orsted will report the incident to NMFS by phone (866–755–6622) and by email (*nmfs.gar.incidental-take@noaa.gov* and *PR.ITP.MonitoringReports@noaa.gov*) as soon as feasible. The report will include the following information:

- Time, date, and location (latitude/longitude) of the incident;
- Species identification (if known) or description of the animal(s) involved;
- Vessel's speed during and leading up to the incident;
- Vessel's course/heading and what operations were being conducted (if applicable);
- Status of all sound sources in use;
- Description of avoidance measures/requirements that were in place at the time of the strike and what additional measures were taken, if any, to avoid strike;
- Environmental conditions (*e.g.,* wind speed and direction, BSS, cloud cover, visibility) immediately preceding the strike;
- Estimated size and length of animal that was struck;
- Description of the behavior of the marine mammal immediately preceding and following the strike;
- If available, description of the presence and behavior of any other marine mammals immediately preceding the strike;
- Estimated fate of the animal (*e.g.,* dead, injured but alive, injured and moving, blood or tissue observed in the water, status unknown, disappeared); and
- To the extent practicable, photographs or video footage of the animal(s).

Determinations

Orsted's HRG survey activities are unchanged from those analyzed in support of the 2022 IHA. When issuing the 2022 IHA (87 FR 30182, May 18, 2022) and 2023 reissuance of that IHA, NMFS found Orsted's proposed HRG surveys would have a negligible impact to species or stocks' annual rates of recruitment and survival, and the amount of taking would be small relative to the population size of such species or stocks. Additionally, the potential effects of the activities, taking into consideration the planned mitigation and related monitoring measures, are identical to those assumed when considering the 2022 IHA. NMFS expects that all potential takes would be short-term Level B behavioral harassment, predominantly in the form of avoidance of the sound sources that may cause a temporary abandonment of the location during active use of acoustic sources that may result in a temporary interruption of foraging activities for some species (if such activity was occurring), reactions that are considered to be of low severity and with no lasting biological consequences (*e.g.,* Southall *et al.,* 2007). NMFS does not expect that the planned activity will have long-term or permanent impacts as the acoustic sources would be mobile and would leave the area within a specific amount of time for which the animals could return to the area.

Feeding behavior is not likely to be significantly impacted as prey species are mobile and are broadly distributed throughout the survey area; therefore, marine mammals that may be temporarily displaced during survey activities are expected to be able to resume foraging once they have moved away from areas with disturbing levels of underwater noise. Because of the temporary nature of the disturbance and the availability of similar habitat and resources in the surrounding area, the impacts to marine mammals and the food sources that they utilize are not expected to cause significant or long-term consequences for individual marine mammals or their populations. Even considering the increased estimated take for some species, the impacts of these lower severity exposures are not expected to accrue to a degree that the fitness of any individuals would be impacted and, therefore, no impacts on the annual rates of recruitment or survival would result.

In addition to being temporary, the maximum expected harassment zone around a survey vessel is 141 m from use of sparkers. Although this distance is assumed for all survey activity evaluated here and in authorizing take numbers, in reality, much of the survey activity would involve use of acoustic sources with reduced acoustic harassment zones (see tables 1 and 4 in the previous **Federal Register** notices (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022)), producing expected effects of particularly low severity. The ensonified area surrounding each vessel is extremely small compared to the overall distribution of the animals in the area and the available habitat.

As previously discussed in the 2022 IHA (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022), impacts from the survey are expected to be localized to the specific area of activity and only during periods when Orsted's acoustic sources are active. There are no rookeries, mating or calving grounds known to be biologically important to

marine mammals within the survey area. The survey area lies significantly south (over 250 miles (402 km)) of where Biologically Important Areas are defined for fin and humpback whales. There is no designated critical habitat for any marine mammals listed under the ESA in the survey area.

There is a slight increase in estimated take for 5 species (humpback whale, minke whale, Atlantic spotted dolphin, gray seal, harbor seal) relative to those authorized under the 2022 IHA but the total amount of takes authorized are small (less than 1 percent) relative to estimated population size of each species or stock. Additionally, due to updated information in the draft 2023 SAR on the stock abundance of the WNA stock of common dolphins, there is a minor increase in the estimated take as a percentage of that stock, however, that also results in estimated take of less than 1 percent of the population. Even considering the increased estimated take for 5 species, the impacts of these lower severity exposures are not expected to accrue to a degree that the fitness of any individuals would be impacted, and therefore, no impacts on the annual rates of recruitment or survival are expected to result. Overall, the total amount of takes authorized are small (less than 1 percent) relative to estimated population size of each species or stock (less than 1 percent for 13 species; less than 2 percent for NARW; less than 7 percent for the WNA Offshore stock of bottlenose dolphin) except for the WNA Migratory Coastal stock of bottlenose dolphin (62 percent). The values presented in table 2 are likely conservative estimates as they assume all takes are of different individual animals which is likely not to be the case. Some individuals may return multiple times in a day, but PSOs will count them as separate takes if they cannot be individually identified. This is the particularly the case for bottlenose dolphins. Given the uncertainty regarding the number of days Orsted's survey may be within the 20 m isobath, the authorization of 4,118 instances of take by Level B harassment is not allocated to a specific stock but rather could be of either stock. However, based on the expansive ranges of both bottlenose dolphin stocks and the stocks' respective occurrence in the area, it is unlikely that large segments of either stock would consistently remain in the survey area. Considering this and various factors as described in the previous **Federal Register** notices (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022), we have determined that the number of individuals taken will comprise of less than one-third of the best available population abundance estimate of either stock.

Orsted's planned activities would occur in a small fraction of the migratory corridor for NARW and impacts are expected to be limited to low levels of behavioral harassment, resulting in temporary and minor behavioral changes during any brief period of exposure. The size of the Project Area (approximately 4,510 km^2) in comparison with the entire migratory habitat for the NARW (Biologically Important Area of 269,448 km^2) is small, representing 1.67 percent of the entire migratory corridor. Because of this, and in context of the minor, low-level nature of the impacts expected to result from the planned survey, such impacts are not expected to result in disruption to biologically important behaviors.

Given the transitory nature of NARW in this area and due to the lack of year-round ''core'' NARW foraging habitat (Oleson *et al.,* 2020) (such habitat is located further north in the southern area of Martha's Vineyard and Nantucket Islands where both visual and acoustic detections of NARW indicate a nearly year-round presence (Oleson *et al.,* 2020)), it is unlikely for any exposure to cause chronic effects as any exposure would be short and intermittent. Furthermore, given the small size of the Level B harassment zones (141 m) and the robust suite of mitigation and monitoring measures, with specific note on the mitigation zones for NARW (EZ; 500 m), NMFS does not expect adverse impacts on this species. Lastly, NMFS notes the reduction in requested take from the 2022 IHA (87 FR 15922, March 21, 2022; 87 FR 30182, May 18, 2022) due to the revised density data (Roberts *et al.,* 2023). Under the 2022 IHA, NMFS authorized 11 instances of take for NARW. Here, NMFS is proposing only 4 takes by Level B harassment representing less than 2 percent of the overall species abundance. Given the updates to the density for this species, in particular during the periods where project activities are expected to be ongoing, NMFS expects low-level impacts (*e.g.,* temporary avoidance of the area) from this project on NARW.

We also note that our findings for other species with active UMEs or species where biologically important areas or haul-outs have been previously described in the **Federal Register** notices associated with issuance of the 2022 IHA remain applicable to this project. In conclusion, there is no new information suggesting that our analysis or findings should change.

Based on the information contained here and in the referenced documents, NMFS has determined the following: (1) the required mitigation measures will effect the least practicable impact on marine mammal species or stocks and their habitat; (2) the authorized takes will have a negligible impact on the affected marine mammal species or stocks; (3) the authorized takes represent small numbers of marine mammals relative to the affected stock abundances; (4) Orsted's activities will not have an unmitigable adverse impact on taking for subsistence purposes as no relevant subsistence uses of marine mammals are implicated by this action, and (5) appropriate monitoring and reporting requirements are included.

Endangered Species Act

Section 7(a)(2) of the ESA of 1973 (16 U.S.C. 1531 *et seq.*) requires that each Federal agency insure that any action it authorizes, funds, or carries out is not likely to jeopardize the continued existence of any endangered or threatened species or result in the destruction or adverse modification of designated critical habitat. To ensure ESA compliance for the issuance of IHAs, NMFS consults internally whenever we propose to authorize take for endangered or threatened species.

NMFS OPR is authorizing the incidental take of four species of marine mammals which are listed under the ESA, the North Atlantic right, fin, sei, and sperm whale, and has determined that this activity falls within the scope of activities analyzed in NMFS Greater Atlantic Regional Fisheries Office's programmatic consultation regarding geophysical surveys along the U.S. Atlantic coast in the 3 Atlantic Renewable Energy Regions (completed June 29, 2021; revised September 2021).

National Environmental Policy Act

To comply with NEPA of 1969 (42 U.S.C. 4321 *et seq.*) and NAO 216–6A, NMFS must review our proposed action (*i.e.,* the issuance of an IHA) with respect to potential impacts on the human environment.

This action is consistent with categories of activities identified in Categorical Exclusion B4 (IHAs with no anticipated serious injury or mortality) of the Companion Manual for NAO 216–6A, which do not individually or cumulatively have the potential for significant impacts on the quality of the human environment and for which we have not identified any extraordinary circumstances that would preclude this categorical exclusion. Accordingly, NMFS has determined that the issuance

of the IHA qualifies to be categorically excluded from further NEPA review.

Authorization

NMFS has issued an IHA to Orsted for the potential harassment of small numbers of 15 species (16 stocks) of marine mammals incidental to conducting marine site characterization surveys off the coast of Delaware for a period of 1 year, that includes the previously explained mitigation, monitoring, and reporting requirements.

Dated: July 25, 2024.

Kimberly Damon-Randall,

Director, Office of Protected Resources, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

[RTID 0648–XE142]

Atlantic Highly Migratory Species; Meeting of the Atlantic Highly Migratory Species Advisory Panel

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of public meeting and webinar/conference call.

SUMMARY: NMFS will hold a 2-day Atlantic Highly Migratory Species (HMS) Advisory Panel (AP) meeting in September 2024. The intent of the meeting is to consider options for the conservation and management of Atlantic HMS. The meeting is open to the public.

DATES: The AP meeting and webinar will be held on Wednesday, September 4, from 9 a.m. to 5 p.m. ET; and Thursday, September 5, from 9 a.m. to 3 p.m. ET.

ADDRESSES: The meeting will be held at the DoubleTree by Hilton Silver Spring Hotel, 8777 Georgia Avenue, Silver Spring, MD 20910. The meeting will also be accessible via WebEx webinar/conference call. Conference call and webinar access information are available at: *https://www.fisheries.noaa.gov/event/september-2024-hms-advisory-panel-meeting.*

Participants accessing the webinar are strongly encouraged to log/dial in 15 minutes prior to the meeting. NMFS will show the presentations via webinar and allow public comment during identified times on the agenda.

FOR FURTHER INFORMATION CONTACT: Peter Cooper, *peter.cooper@noaa.gov,* 301–427–8503.

SUPPLEMENTARY INFORMATION: Atlantic HMS fisheries (tunas, billfish, swordfish, and sharks) are managed under the 2006 Consolidated Atlantic HMS Fishery Management Plan (FMP) and its amendments pursuant to the authority of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act; 16 U.S.C. 1801 *et seq.*) and consistent with the Atlantic Tunas Convention Act (16 U.S.C. 971 *et seq.*). HMS implementing regulations are at 50 CFR part 635.

The Magnuson-Stevens Act requires the establishment of APs and requires NMFS to consult with and consider the comments and views of AP members during the preparation and implementation of FMPs or FMP amendments (16 U.S.C. 1854(g)(1)(A)–(B)). NMFS meets with the HMS AP approximately twice each year to consider potential alternatives for the conservation and management of Atlantic tunas, swordfish, billfish, and shark fisheries, consistent with the Magnuson-Stevens Act.

Some of the discussion topics are:

- Electronic reporting rulemaking update;
- HMS economic situation update; and
- General updates related to HMS.

We anticipate having other NMFS offices, other Federal agencies, and the U.S. Coast Guard to provide updates, if available, on their activities relevant to HMS fisheries. Additional information on the meetings and a copy of the draft agenda will be posted prior to the meeting (see **ADDRESSES**).

All members of the public will have virtual access to the meeting available via webinar and status updates of in-person public access to the meeting will be available on the NMFS website (see **ADDRESSES**). The meeting location is physically accessible to people with disabilities. Requests for sign language interpretation or other auxiliary aids should be directed to Peter Cooper at 301–427–8503, at least 7 days prior to the meeting.

Dated: July 25, 2024.

Lindsay Fullenkamp,

Acting Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

BILLING CODE 3510–22–P

DEPARTMENT OF DEFENSE

Department of the Air Force

[AFD–2071]

Notice of Intent To Grant a Partially Exclusive Patent License

AGENCY: Department of the Air Force, Department of Defense.

ACTION: Notice of intent.

SUMMARY: Pursuant to the Bayh-Dole Act and implementing regulations, the Department of the Air Force hereby gives notice of its intent to grant a partially exclusive (the field to include First Responder Market) patent license to The Science and Engineering Corps having a place of business at 9179 AA Highway, California, KY 41007.

DATES: Written objections must be filed no later than fifteen (15) calendar days after the date of publication of this Notice.

ADDRESSES: Submit written objections to Pamela Kallio, AFRL/SPT, 711 East Monument Avenue, Dayton, OH 45402; Phone: (937) 999–1621; or Email: *pamela.kallio.3.ctr@us.af.mil.* Include Docket No. AFD 2071 in the subject line of the message.

FOR FURTHER INFORMATION CONTACT: Pamela Kallio, AFRL/SPT, 711 East Monument Avenue, Dayton, OH 45402; Phone: (937) 999–1621; or Email: *pamela.kallio.3.ctr@us.af.mil.*

SUPPLEMENTARY INFORMATION:

Abstract of Patent

Personal hydration systems with cooling and/or warming capability, and the components thereof are disclosed. The personal hydration systems may include a liquid transport system for transporting cooling or heating fluid between a reservoir and a pad, which pad is configured for wearing adjacent to a wearer's body. A pump is provided for pumping the liquid through the system. A drinking tube is connected to the system for removing liquid from the system. Liquid can be removed from the system for drinking by sucking on the end of the drinking tube. A check valve is used to bypass the pump so the user will not have to suck the liquid through the pump. Alternatively, liquid can be removed by spraying the liquid out of the drinking tube using the power of the pump.

Intellectual Property

U.S. Patent No. 11,717,074, issued on August 8, 2023, and entitled, ''Personal Hydration System With Cooling or Warming Capability.''

The Department of the Air Force may grant the prospective license unless a

timely objection is received that sufficiently shows the grant of the license would be inconsistent with the Bayh-Dole Act or implementing regulations. A competing application for a patent license agreement, completed in compliance with 37 CFR 404.8 and received by the Air Force within the period for timely objections, will be treated as an objection and may be considered as an alternative to the proposed license.

Authority: 35 U.S.C. 209; 37 CFR part 404.

Tommy W. Lee,

Acting Air Force Federal Register Liaison Officer.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Combined Notice of Filings

Take notice that the Commission has received the following Natural Gas Pipeline Rate and Refund Report filings:

Filings Instituting Proceedings

Docket Numbers: RP24–917–000.

Applicants: Algonquin Gas Transmission, LLC.

Description: § 4(d) Rate Filing: Negotiated Rates—Yankee Gas to Emera Energy eff 7–25–24 to be effective 7/25/2024.

Filed Date: 7/25/24.

Accession Number: 20240725–5030.

Comment Date: 5 p.m. ET 8/6/24.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

Filings in Existing Proceedings

Docket Numbers: RP24–834–001.

Applicants: Gulf South Pipeline Company, LLC.

Description: Compliance filing: Compliance Filing in Docket No. RP24–834–000 to be effective 7/22/2024.

Filed Date: 7/24/24.

Accession Number: 20240724–5110.

Comment Date: 5 p.m. ET 8/5/24.

Any person desiring to protest in any the above proceedings must file in accordance with Rule 211 of the Commission's Regulations (18 CFR 385.211) on or before 5:00 p.m. Eastern time on the specified comment date.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Dated: July 25, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

[FR Doc. 2024–16860 Filed 7–30–24; 8:45 am]

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CD24–3–000]

City of Tualatin, Oregon; Notice of Preliminary Determination of a Qualifying Conduit Hydropower Facility and Soliciting Comments and Motions To Intervene

On July 23, 2024, the City of Tualatin, Oregon, filed a notice of intent to construct a qualifying conduit hydropower facility, pursuant to section 30 of the Federal Power Act (FPA). The proposed Tualatin Service Center Hydroelectric Energy Recovery Project would have an installed capacity of 56 kilowatts (kW), and would be located along the applicant's existing water supply system in the City of Tualatin, Washington County, Oregon.

Applicant Contact: Gregg Semler, InPipe Energy, 830 NE Holladay St., Portland, OR 97232, 503–341–0004, *gregg@inpipeenergy.com.*

FERC Contact: Christopher Chaney, 202–502–6778, *christopher.chaney@ferc.gov.*

Qualifying Conduit Hydropower Facility Description: The project would consist of: (1) one 56-kW centrifugal pump as turbine generating unit and (2) appurtenant facilities. The proposed project would have an estimated annual generation of approximately 278 megawatt-hours.

A qualifying conduit hydropower facility is one that is determined or deemed to meet all the criteria shown in the table below.

TABLE 1—CRITERIA FOR QUALIFYING CONDUIT HYDROPOWER FACILITY

Statutory provision	Description	Satisfies (Y/N)
FPA 30(a)(3)(A)	The conduit the facility uses is a tunnel, canal, pipeline, aqueduct, flume, ditch, or similar manmade water conveyance that is operated for the distribution of water for agricultural, municipal, or industrial consumption and not primarily for the generation of electricity.	Y
FPA 30(a)(3)(C)(i)	The facility is constructed, operated, or maintained for the generation of electric power and uses for such generation only the hydroelectric potential of a non-federally owned conduit.	Y
FPA 30(a)(3)(C)(ii)	The facility has an installed capacity that does not exceed 40 megawatts	Y
FPA 30(a)(3)(C)(iii)	On or before August 9, 2013, the facility is not licensed, or exempted from the licensing requirements of Part I of the FPA.	Y

Preliminary Determination: The proposed Tualatin Service Center Hydroelectric Energy Recovery Project will not alter the primary purpose of the conduit, which is for municipal water supply. Therefore, based upon the above criteria, Commission staff preliminarily determines that the operation of the project described above satisfies the

requirements for a qualifying conduit hydropower facility, which is not required to be licensed or exempted from licensing.

Comments and Motions to Intervene: Deadline for filing comments contesting whether the facility meets the qualifying criteria is 30 days from the issuance date of this notice. Deadline for filing motions to intervene is 30 days from the issuance date of this notice. Anyone may submit comments or a motion to intervene in accordance with the requirements of Rules of Practice and Procedure, 18 CFR 385.210 and 385.214. Any motions to intervene must be received on or before the specified deadline date for the particular proceeding.

Filing and Service of Responsive Documents: All filings must (1) bear in all capital letters the ''COMMENTS CONTESTING QUALIFICATION FOR A CONDUIT HYDROPOWER FACILITY'' or ''MOTION TO INTERVENE,'' as applicable; (2) state in the heading the name of the applicant and the project number of the application to which the filing responds; (3) state the name, address, and telephone number of the person filing; and (4) otherwise comply with the requirements of sections 385.2001 through 385.2005 of the Commission's regulations.[1] All comments contesting Commission staff's preliminary determination that the facility meets the qualifying criteria must set forth their evidentiary basis.

The Commission strongly encourages electronic filing. Please file motions to intervene and comments using the Commission's eFiling system at *http://www.ferc.gov/docs-filing/efiling.asp.* Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at *http://www.ferc.gov/docs-filing/ecomment.asp.* You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at *FERCOnlineSupport@ferc.gov,* (866) 208–3676 (toll free), or (202) 502–8659 (TTY). In lieu of electronic filing, you may send a paper copy. Submissions sent via the U.S. Postal Service must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Room 1A, Washington, DC 20426. Submissions sent via any other carrier must be addressed to: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, MD 20852. A copy of all other filings in reference to this application must be accompanied by proof of service on all persons listed in the service list prepared by the Commission in this proceeding, in accordance with 18 CFR 385.2010.

Locations of Notice of Intent: The Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's website at *http://www.ferc.gov/docs-filing/elibrary.asp.* Enter the docket number (*i.e.,* CD24–3) in the docket number field to access the document. You may also register online at *http://www.ferc.gov/docs-filing/esubscription.asp* to be notified via email of new filings and issuances related to this or other pending projects. Copies of the notice of intent can be obtained directly from the applicant. For assistance, call toll-free 1–866–208–3676 or email *FERCOnlineSupport@ferc.gov.* For TTY, call (202) 502–8659.

Dated: July 25, 2024.

Debbie-Anne A. Reese,

Acting Secretary.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–498–000]

Eastern Gas Transmission and Storage, Inc.; Notice of Request Under Blanket Authorization and Establishing Intervention and Protest Deadline

Take notice that on July 18, 2024, Eastern Gas Transmission and Storage, Inc. (EGTS), 10700 Energy Way, Glen Allen, VA 23060, filed in the above referenced docket, a prior notice request pursuant to sections 157.205(b) and 157.216(b) of the Commission's regulations under the Natural Gas Act (NGA), and EGTS's blanket certificate issued in Docket No. CP82–537–000, for authorization to abandon three storage wells, all associated facilities, and four-inch-diameter pipelines at each well. All of the facilities proposed to be abandoned are located in Harrison and Lewis Counties, West Virginia (Fink-Kennedy/Lost Creek Well Abandonment Project). The project will allow EGTS to abandon these storage wells that do not provide significant value through either flow performance or maintenance of current integrity standards. EGTS estimates the cost for the project to be $16 million, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the Public Reference Room at *public.referenceroom@ferc.gov.*

Any questions concerning this request should be directed to George W. Flugrad, Senior Counsel, Eastern Gas Transmission and Storage, Inc., 10700 Energy Way, Glen Allen, VA 23060, or via email at *George.Flugrad@bhegts.com.*

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file a protest to the project, you can file a motion to intervene in the proceeding, and you can file comments on the project. There is no fee or cost for filing protests, motions to intervene, or comments. The deadline for filing protests, motions to intervene, and comments is 5:00 p.m. Eastern Time on September 23, 2024. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Protests

Pursuant to section 157.205 of the Commission's regulations under the NGA,[1] any person [2] or the Commission's staff may file a protest to the request. If no protest is filed within the time allowed or if a protest is filed and then withdrawn within 30 days after the allowed time for filing a protest, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request for authorization will be considered by the Commission.

Protests must comply with the requirements specified in section 157.205(e) of the Commission's regulations,[3] and must be submitted by the protest deadline, which is September 23, 2024. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

Interventions

Any person has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure [4] and the regulations under the NGA [5] by the intervention deadline for the project, which is September 23, 2024. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

All timely, unopposed motions to intervene are automatically granted by operation of Rule 214(c)(1). Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations. A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Comments

Any person wishing to comment on the project may do so. The Commission considers all comments received about the project in determining the appropriate action to be taken. To ensure that your comments are timely and properly recorded, please submit your comments on or before September 20, 2024. The filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding.

How To File Protests, Interventions, and Comments

There are two ways to submit protests, motions to intervene, and comments. In both instances, please reference the Project docket number CP24–498–000 in your submission.

(1) You may file your protest, motion to intervene, and comments by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Protest'', ''Intervention'', or ''Comment on a Filing''; or [6]

(2) You can file a paper copy of your submission by mailing it to the address below. Your submission must reference the Project docket number CP24–498–000.

To file via USPS: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426.

To file via any other method: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852.

The Commission encourages electronic filing of submissions (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail or email (with a link to the document) at George W. Flugrad, Senior Counsel, Eastern Gas Transmission and Storage, Inc., 10700 Energy Way, Glen Allen, VA 23060, or via email at *George.Flugrad@bhegts.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

Dated: July 25, 2024.

The filings are accessible in the Commission's eLibrary system (*https://elibrary.ferc.gov/idmws/search/fercgensearch.asp*) by querying the docket number.

Any person desiring to intervene, to protest, or to answer a complaint in any of the above proceedings must file in accordance with Rules 211, 214, or 206 of the Commission's Regulations (18 CFR 385.211, 385.214, or 385.206) on or before 5:00 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: *http://www.ferc.gov/docs-filing/efiling/filing-req.pdf.* For other information, call (866) 208–3676 (toll free). For TTY, call (202) 502–8659.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP24–497–000]

MountainWest Pipeline, LLC; Notice of Request Under Blanket Authorization and Establishing Intervention and Protest Deadline

Take notice that on July 18, 2024, MountainWest Pipeline, LLC (MWP) filed a prior notice request for authorization, in accordance with sections 157.205 and 157.214, of the Federal Energy Regulatory Commission's (Commission) regulations under the Natural Gas Act and MWP's blanket certificate issued in Docket No. CP82–491–000,[1] to increase: (1) the maximum certificated shut-in pressure, (2) the maximum certificated volume of natural gas to be stored, and (3) the working gas inventory at its Clay Basin underground gas storage reservoir (Clay Basin Storage Reservoir) in Daggett County, Utah. MWP proposes to increase the maximum certificated shut-in pressure from 2,536 pounds per square inch absolute (psia) to 2,700 psia, the maximum certificated storage capacity from 120.2 billion standard cubic feet (Bscf) to 128.0 Bscf and the working gas inventory from 54.0 Bscf to 61.8 Bscf at its existing Clay Basin Storage Reservoir, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

In addition to publishing the full text of this document in the **Federal Register**, the Commission provides all interested persons an opportunity to view and/or print the contents of this document via the internet through the Commission's Home Page (*http://www.ferc.gov*). From the Commission's Home Page on the internet, this information is available on eLibrary. The full text of this document is available on eLibrary in PDF and Microsoft Word format for viewing, printing, and/or downloading. To access this document in eLibrary, type the docket number excluding the last three digits of this document in the docket number field.

User assistance is available for eLibrary and the Commission's website during normal business hours from FERC Online Support at (202) 502–6652 (toll free at 1–866–208–3676) or email at *ferconlinesupport@ferc.gov,* or the Public Reference Room at (202) 502–8371, TTY (202) 502–8659. Email the

[1] *Mountain Fuel Resources, Inc.,* 20 FERC ¶ 62,580 (1982).

Public Reference Room at *public.referenceroom@ferc.gov.*

Any questions concerning this request should be directed to Greg Williams, Regulatory Analyst Lead, MountainWest Pipeline, LLC, 333 South State Street, Salt Lake City, Utah 84111, or call (801) 209–6764, or via email to *greg.williams@williams.com.*

Public Participation

There are three ways to become involved in the Commission's review of this project: you can file a protest to the project, you can file a motion to intervene in the proceeding, and you can file comments on the project. There is no fee or cost for filing protests, motions to intervene, or comments. The deadline for filing protests, motions to intervene, and comments is 5:00 p.m. Eastern Time on September 23, 2024. How to file protests, motions to intervene, and comments is explained below.

The Commission's Office of Public Participation (OPP) supports meaningful public engagement and participation in Commission proceedings. OPP can help members of the public, including landowners, environmental justice communities, Tribal members and others, access publicly available information and navigate Commission processes. For public inquiries and assistance with making filings such as interventions, comments, or requests for rehearing, the public is encouraged to contact OPP at (202) 502–6595 or *OPP@ferc.gov.*

Protests

Pursuant to section 157.205 of the Commission's regulations under the NGA,[2] any person [3] or the Commission's staff may file a protest to the request. If no protest is filed within the time allowed or if a protest is filed and then withdrawn within 30 days after the allowed time for filing a protest, the proposed activity shall be deemed to be authorized effective the day after the time allowed for protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request for authorization will be considered by the Commission.

Protests must comply with the requirements specified in section 157.205(e) of the Commission's regulations,[4] and must be submitted by the protest deadline, which is September 23, 2024. A protest may also serve as a motion to intervene so long as the protestor states it also seeks to be an intervenor.

Interventions

Any person has the option to file a motion to intervene in this proceeding. Only intervenors have the right to request rehearing of Commission orders issued in this proceeding and to subsequently challenge the Commission's orders in the U.S. Circuit Courts of Appeal.

To intervene, you must submit a motion to intervene to the Commission in accordance with Rule 214 of the Commission's Rules of Practice and Procedure [5] and the regulations under the NGA [6] by the intervention deadline for the project, which is September 23, 2024. As described further in Rule 214, your motion to intervene must state, to the extent known, your position regarding the proceeding, as well as your interest in the proceeding. For an individual, this could include your status as a landowner, ratepayer, resident of an impacted community, or recreationist. You do not need to have property directly impacted by the project in order to intervene. For more information about motions to intervene, refer to the FERC website at *https://www.ferc.gov/resources/guides/how-to/intervene.asp.*

All timely, unopposed motions to intervene are automatically granted by operation of Rule 214(c)(1). Motions to intervene that are filed after the intervention deadline are untimely and may be denied. Any late-filed motion to intervene must show good cause for being late and must explain why the time limitation should be waived and provide justification by reference to factors set forth in Rule 214(d) of the Commission's Rules and Regulations. A person obtaining party status will be placed on the service list maintained by the Secretary of the Commission and will receive copies (paper or electronic) of all documents filed by the applicant and by all other parties.

Comments

Any person wishing to comment on the project may do so. The Commission considers all comments received about the project in determining the appropriate action to be taken. To ensure that your comments are timely and properly recorded, please submit your comments on or before September 23, 2024. The filing of a comment alone will not serve to make the filer a party to the proceeding. To become a party, you must intervene in the proceeding.

How To File Protests, Interventions, and Comments

There are two ways to submit protests, motions to intervene, and comments. In both instances, please reference the Project docket number CP24–497–000 in your submission.

(1) You may file your protest, motion to intervene, and comments by using the Commission's eFiling feature, which is located on the Commission's website (*www.ferc.gov*) under the link to Documents and Filings. New eFiling users must first create an account by clicking on ''eRegister.'' You will be asked to select the type of filing you are making; first select ''General'' and then select ''Protest'', ''Intervention'', or ''Comment on a Filing''; or [7]

(2) You can file a paper copy of your submission by mailing it to the address below. Your submission must reference the Project docket number CP24–497–000.

To file via USPS: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 888 First Street NE, Washington, DC 20426

To file via any other method: Debbie-Anne A. Reese, Acting Secretary, Federal Energy Regulatory Commission, 12225 Wilkins Avenue, Rockville, Maryland 20852

The Commission encourages electronic filing of submissions (option 1 above) and has eFiling staff available to assist you at (202) 502–8258 or *FercOnlineSupport@ferc.gov.*

Protests and motions to intervene must be served on the applicant either by mail or email (with a link to the document) at: Greg Williams, Regulatory Analyst Lead, MountainWest Pipeline, LLC, 333 South State Street, Salt Lake City, Utah 84111, or via email to *greg.williams@williams.com.* Any subsequent submissions by an intervenor must be served on the applicant and all other parties to the proceeding. Contact information for parties can be downloaded from the service list at the eService link on FERC Online.

Tracking the Proceeding

Throughout the proceeding, additional information about the project will be available from the Commission's Office of External Affairs, at (866) 208–

[2] 18 CFR 157.205.

[3] Persons include individuals, organizations, businesses, municipalities, and other entities. 18 CFR 385.102(d).

[4] 18 CFR 157.205(e).

[5] 18 CFR 385.214.

[6] 18 CFR 157.10.

[7] Additionally, you may file your comments electronically by using the eComment feature, which is located on the Commission's website at *www.ferc.gov* under the link to Documents and Filings. Using eComment is an easy method for interested persons to submit brief, text-only comments on a project.

FERC, or on the FERC website at *www.ferc.gov* using the ''eLibrary'' link as described above. The eLibrary link also provides access to the texts of all formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. For more information and to register, go to *www.ferc.gov/docs-filing/esubscription.asp.*

BILLING CODE 6717–01–P

FEDERAL HOUSING FINANCE AGENCY

[No. 2024–N–9]

Privacy Act of 1974; System of Records

AGENCY: Federal Housing Finance Agency.

ACTION: Notice of a modified system of records.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, as amended, (Privacy Act), the Federal Housing Finance Agency (FHFA or Agency) is proposing to modify the current FHFA system of records titled, ''FHFA–14, Emergency Notification System'' (System). The system of records allows FHFA to maintain emergency contact information for current and former employees and contractors. This modification is to correct the Agency's address and change the location of the system in accordance with OMB Circular A–108. These changes are administrative and non-significant in nature.

DATES: This modified system of records will go into effect without further notice on July 31, 2024, unless otherwise revised pursuant to comments received.

Comments must be received on or before August 30, 2024. FHFA will publish a new notice if the effective date is delayed in order for the Agency to review the comments or if changes are made based on comments received.

ADDRESSES: Submit comments to FHFA, identified by ''No. 2024–N–9,'' using any one of the following methods:

- *Agency Website: www.fhfa.gov/open-for-comment-or-input.*
- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. If you submit your comments to the Federal eRulemaking Portal, please also send it by email to FHFA at *RegComments@fhfa.gov* to ensure timely receipt by FHFA. Please include ''Comments/No. 2024–N–9'' in the subject line of the message.
- *Hand Delivered/Courier:* The hand delivery address is: Clinton Jones, General Counsel, Attention: Comments/No. 2024–N–9, Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219. The package should be delivered to the Seventh Street entrance Guard Desk, First Floor, on business days between 9 a.m. and 5 p.m., EST.
- *U.S. Mail, United Parcel Service, Federal Express, or Other Mail Service:* The mailing address for comments is: Clinton Jones, General Counsel, Attention: Comments/No. 2024–N–9, Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219. *Please note that all mail sent to FHFA via the U.S. Postal Service is routed through a national irradiation facility, a process that may delay delivery by approximately two weeks. For any time-sensitive correspondence, please plan accordingly.*

See **SUPPLEMENTARY INFORMATION** for additional information on submission and posting of comments.

FOR FURTHER INFORMATION CONTACT: Stacy Easter, Privacy Act Officer, *privacy@fhfa.gov* or (202) 649–3803; or Tasha Cooper, Senior Agency Official for Privacy, *privacy@fhfa.gov* or (202) 649–3091 (not toll-free numbers), Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219. For TTY/TRS users with hearing and speech disabilities, dial 711 and ask to be connected to any of the contact numbers above.

SUPPLEMENTARY INFORMATION:

I. Comments

FHFA seeks public comments on the revision to the system of records and will take all comments into consideration. In addition to referencing ''Comments/No. 2024–N–9,'' please reference ''FHFA–14, Emergency Notification System.''

FHFA will post all public comments on the FHFA public website at *http://www.fhfa.gov,* except as described below. Commenters should submit only information that the commenter wishes to make available publicly. FHFA may post only a single representative example of identical or substantially identical comments, and in such cases will generally identify the number of identical or substantially identical comments represented by the posted example. FHFA may, in its discretion, redact or refrain from posting all or any portion of any comment that contains content that is obscene, vulgar, profane, or threatens harm. All comments, including those that are redacted or not posted, will be retained in their original form in FHFA's internal file and considered as required by all applicable laws. Commenters that would like FHFA to consider any portion of their comment exempt from disclosure on the basis that it contains trade secrets, or financial, confidential or proprietary data or information, should follow the procedures in section IV.D. of FHFA's Policy on Communications with Outside Parties in Connection with FHFA Rulemakings, *see https://www.fhfa.gov/sites/default/files/documents/Ex-Parte-Communications-Public-Policy_3-5-19.pdf.* FHFA cannot guarantee that such data or information, or the identity of the commenter, will remain confidential if disclosure is sought pursuant to an applicable statute or regulation. *See* 12 CFR 1202.8, 12 CFR 1214.2, and *https://www.fhfa.gov/about/foia-reference-guide* for additional information.

II. Introduction

This notice informs the public of FHFA's proposed revision to an existing system of records. This notice satisfies the Privacy Act requirement that an agency publishes a system of records notice in the **Federal Register** when there is an addition or change to an agency's system of records. Congress has recognized that application of all requirements of the Privacy Act to certain categories of records may have an undesirable and often unacceptable effect upon agencies in the conduct of necessary public business. Consequently, Congress established general exemptions and specific exemptions that could be used to exempt records from provisions of the Privacy Act. Congress also required that exempting records from provisions of the Privacy Act would require the head of an agency to publish a determination to exempt a record from the Privacy Act as a rule in accordance with the Administrative Procedure Act. Records and information in this system of records are not exempt from the requirements of the Privacy Act.

Pursuant to OMB Circular A–108, FHFA has not submitted a report describing the modified system of records covered by this notice to OMB

and Congress because the changes to the system are minor and administrative, and changes of this nature are not required to be reported.

III. Revised System of Records

The revised system of records notice is set out in its entirety and described in detail below. The proposed modification to the System makes the following non-substantive changes:

(1) Update the Agency's address to spell out the street name; and

(2) Change the location of the system, in accordance with OMB Circular A–108.

SYSTEM NAME AND NUMBER:

Emergency Notification System, FHFA–14.

SECURITY CLASSIFICATION:

Sensitive but unclassified.

SYSTEM LOCATION:

Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219; OnSolve, LLC, 6240 Avalon Blvd., Alpharetta, GA 30009; and any alternate work site utilized by FHFA employees or by individuals assisting such employees.

SYSTEM MANAGER(S):

Office of the Chief Operating Officer, Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 552a; 12 U.S.C. 4515; and Executive Orders 12656, 12148, and 10995.

PURPOSE(S) OF THE SYSTEM:

The purpose of this system of records is to maintain emergency contact information for current and former FHFA employees and contractor personnel. The system provides for high-speed message delivery that reaches all agency and contractor personnel in response to threat alerts issued by the Department of Homeland Security, weather related emergencies, or other critical situations that disrupt the operations of and accessibility to an FHFA worksite. The system also provides for personnel accountability during an emergency, through personnel sign-in and rapid alert and notification.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Current and former FHFA employees and contractor personnel, and emergency contacts for these individuals.

CATEGORIES OF RECORDS IN THE SYSTEM:

Name and contact information such as addresses (home, mailing and/or business), telephone numbers (personal and/or business), electronic mail addresses (personal and/or business), photographs, and geospatial and/or geological data.

RECORD SOURCE CATEGORIES:

Information is provided by FHFA employees and FHFA contractor personnel.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, these records or information contained therein may specifically be disclosed outside FHFA as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

(1) When (a) it is suspected or confirmed that the security or confidentiality of information in the system of records has been compromised; (b) FHFA has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by FHFA or another agency or entity) that rely upon the compromised information; and (c) the disclosure is made to such agencies, entities, and persons who are reasonably necessary to assist in connection with FHFA's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

(2) Records in this system may be disclosed to any individual during the course of any inquiry or investigation conducted by FHFA, or in connection with civil or administrative litigation, if FHFA has reason to believe that the individual to whom the record is disclosed may have further information about the matters related therein, and those matters appeared to be relevant at the time to the subject matter of the inquiry.

(3) A record or information in the system may be disclosed to any individual with whom FHFA contracts to reproduce, by typing, photocopy or other means, any record within this system for use by FHFA and its employees in connection with their official duties or to any individual who is utilized by FHFA to perform clerical or stenographic functions relating to the official business of FHFA.

(4) To appropriate federal, state, and local authorities responsible for investigating or prosecuting a violation of, or for enforcing or implementing a statute, rule, regulation, or order issued, when the information indicates a violation or potential violation of law, whether civil, criminal, or regulatory in nature, and whether arising by general statute or particular program statute, or by regulation, rule, or order issued pursuant thereto.

(5) To a court, magistrate, or other administrative body in the course of presenting evidence, including disclosures to counsel or witnesses in the course of civil discovery, litigation, or settlement negotiations or in connection with criminal proceedings, when FHFA is a party to the proceeding or has a significant interest in the proceeding, to the extent that the information is determined to be relevant and necessary.

(6) To a Congressional office from the record of an individual in response to an inquiry from the Congressional office made at the request of that individual.

(7) To contractor personnel, interns, and others performing or working on a contract, service, grant, cooperative agreement, or project for FHFA.

(8) To any Federal government authority for the purpose of coordinating with or reviewing FHFA's continuity of operations plans or emergency contingency plans.

(9) To any Federal, State or Local government authority for the purpose of coordinating a response to threat alerts issued by the Department of Homeland Security, weather related emergencies, or other critical situations that disrupt the operations of and accessibility to an FHFA worksite.

(10) To the National Archives and Records Administration, Office of Government Information Services (OGIS), to the extent necessary to fulfill its responsibilities in 5 U.S.C. 552(b), to review administrative agency policies, procedures and compliance with the Freedom of Information Act (FOIA), and to facilitate OGIS' offering of mediation services to resolve disputes between persons making FOIA requests and administrative agencies.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

Records are maintained in electronic format, paper form, and magnetic disk or tape. Electronic records are stored in computerized databases. Paper and magnetic disk, or tape records are stored in locked file rooms, locked file cabinets and/or safes.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records may be retrieved by any of the following: Name, email address,

telephone number, or an assigned file number for the purpose of responding to the requester. Information may additionally be retrieved by other personal identifiers.

POLICIES AND PRACTICIES FOR RETENTION AND DISPOSAL OF RECORDS:

Records are periodically purged and disposed of for individuals who are no longer employees or contractors of FHFA. Otherwise, records are retained and disposed of in accordance with the appropriate National Archives and Records Administration General Records Schedules and FHFA Retention Schedules.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Records are safeguarded in a secured environment. Buildings where records are stored have security cameras and 24-hour security guard service. Computerized records are safeguarded through use of access codes and other information technology security measures. Paper records are safeguarded by locked file rooms, locked file cabinets, and/or safes. Access to the records is restricted to those who require the records in the performance of official duties related to the purposes for which the system is maintained.

RECORD ACCESS PROCEDURES:

Direct requests for access to a record to the Privacy Act Officer. Requests may be mailed to the Privacy Act Officer, Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219, or can be submitted electronically at *http://www.fhfa.gov/AboutUs/FOIAPrivacy/Pages/Privacy.aspx* in accordance with the procedures set forth in 12 CFR part 1204.

CONTESTING RECORD PROCEDURES:

Direct requests to contest or appeal an adverse decision for a record to the Privacy Act Appeals Officer. Requests may be mailed to the Privacy Act Appeals Officer, Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219, or can be submitted electronically at *http://www.fhfa.gov/AboutUs/FOIAPrivacy/Pages/Privacy.aspx* in accordance with the procedures set forth in 12 CFR part 1204.

NOTIFICATION PROCEDURES:

Direct inquiries as to whether this system contains a record pertaining to an individual to the Privacy Act Officer. Inquiries may be mailed to the Privacy Act Officer, Federal Housing Finance Agency, 400 Seventh Street SW, Washington, DC 20219, or can be submitted electronically at *http://www.fhfa.gov/AboutUs/FOIAPrivacy/Pages/Privacy.aspx* in accordance with the procedures set forth in 12 CFR part 1204.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

The system of records was last published in full in the **Federal Register** at 81 FR 22268 (April 15, 2016).

Clinton Jones,

General Counsel, Federal Housing Finance Agency.

BILLING CODE 8070–01–P

FEDERAL MARITIME COMMISSION

Notice of Agreements Filed

The Commission hereby gives notice of filing of the following agreements under the Shipping Act of 1984. Interested parties may submit comments, relevant information, or documents regarding the agreements to the Secretary by email at *Secretary@fmc.gov,* or by mail, Federal Maritime Commission, 800 North Capitol Street, Washington, DC 20573. Comments will be most helpful to the Commission if received within 12 days of the date this notice appears in the **Federal Register**, and the Commission requests that comments be submitted within 7 days on agreements that request expedited review. Copies of agreements are available through the Commission's website (*www.fmc.gov*) or by contacting the Office of Agreements at (202) 523–5793 or *tradeanalysis@fmc.gov.*

Agreement No.: 201434.

Agreement Name: The AWC Vessel Sharing Agreement.

Parties: Sea Lead Pte. Ltd.; T.S. Lines Limited.

Filing Party: Wayne Rohde; Cozen O'Connor.

Synopsis: The agreement authorizes the parties to share vessels in the trade between ports in China and South Korea on the one hand and Los Angeles/Long Beach on the other hand.

Proposed Effective Date: 07/19/2024.

Location: https://www2.fmc.gov/FMC.Agreements.Web/Public/AgreementHistory/362.

Dated: July 26, 2024.

Alanna Beck,

Federal Register Alternate Liaison Officer.

FEDERAL RESERVE SYSTEM

Proposed Agency Information Collection Activities; Comment Request

AGENCY: Board of Governors of the Federal Reserve System.

ACTION: Notice, request for comment.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) invites comment on a proposal to extend for three years, without revision, the Disclosure Requirements of Subpart H of Regulation H (Consumer Protection in Sales of Insurance) (FR H–7; OMB No. 7100–0298).

DATES: Comments must be submitted on or before September 30, 2024.

ADDRESSES: You may submit comments, identified by FR H–7, by any of the following methods:

- *Agency Website: https://www.federalreserve.gov/.* Follow the instructions for submitting comments at *https://www.federalreserve.gov/apps/foia/proposedregs.aspx.*
- *Email: regs.comments@federalreserve.gov.* Include the OMB number or FR number in the subject line of the message.
- *Fax:* (202) 452–3819 or (202) 452–3102.
- *Mail:* Federal Reserve Board of Governors, Attn: Ann E. Misback, Secretary of the Board, Mailstop M–4775, 2001 C St. NW, Washington, DC 20551.

All public comments are available from the Board's website at *https://www.federalreserve.gov/apps/foia/proposedregs.aspx* as submitted, unless modified for technical reasons or to remove personally identifiable information at the commenter's request. Accordingly, comments will not be edited to remove any confidential business information, identifying information, or contact information. Public comments may also be viewed electronically or in paper in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9:00 a.m. and 5:00 p.m. on weekdays, except for Federal holidays. For security reasons, the Board requires that visitors make an appointment to inspect comments. You may do so by calling (202) 452–3684. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

Additionally, commenters may send a copy of their comments to the Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory

Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. In exercising this delegated authority, the Board is directed to take every reasonable step to solicit comment. In determining whether to approve a collection of information, the Board will consider all comments received from the public and other agencies.

During the comment period for this proposal, a copy of the proposed PRA OMB submission, including the draft reporting form and instructions, supporting statement (which contains more detail about the information collection and burden estimates than this notice), and other documentation, will be made available on the Board's public website at *https://www.federalreserve.gov/apps/reportingforms/home/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR H–7. Final versions of these documents will be made available at *https://www.reginfo.gov/public/do/PRAMain,* if approved.

Request for Comment on Information Collection Proposal

The Board invites public comment on the following information collection, which is being reviewed under authority delegated by the OMB under the PRA. Comments are invited on the following:

a. Whether the proposed collection of information is necessary for the proper performance of the Board's functions, including whether the information has practical utility;

b. The accuracy of the Board's estimate of the burden of the proposed information collection, including the validity of the methodology and assumptions used;

c. Ways to enhance the quality, utility, and clarity of the information to be collected;

d. Ways to minimize the burden of information collection on respondents, including through the use of automated collection techniques or other forms of information technology; and

e. Estimates of capital or startup costs and costs of operation, maintenance, and purchase of services to provide information.

At the end of the comment period, the comments and recommendations received will be analyzed to determine the extent to which the Board should modify the proposal.

Proposal under OMB Delegated Authority To Extend for Three Years, Without Revision, the Following Information Collection

Collection title: Disclosure Requirements of Subpart H of Regulation H (Consumer Protection in Sales of Insurance).

Collection identifier: FR H–7.

OMB control number: 7100–0298.

General description of collection: Subpart H of Regulation H—Membership of State Banking Institutions in the Federal Reserve System (12 CFR part 208) was adopted by the Board in 2000 (65 FR 75822 (December 4, 2000) pursuant to section 305 of the Gramm-Leach-Bliley Act of 1999 (GLBA), which required the Board, the Office of the Comptroller of the Currency, and the Federal Deposit Insurance Corporation to issue joint regulations governing retail sales practices, solicitations, advertising, and offers of insurance by, on behalf of, or at the offices of depository institutions. Respondents are required to prepare and provide to consumers certain disclosures in insurance product advertisements before a consumer buys the insurance product and at the time a consumer applies for an extension of credit in connection with the solicitation, offer, or sale of an insurance product or annuity.

Frequency: Event-generated.

Respondents: State member banks or any other person who sells, solicits, advertises, or offers an insurance product or annuity to a consumer at an office of a bank or on behalf of a bank.

Total estimated number of respondents: 339.

Total estimated annual burden hours: 8,685.

Board of Governors of the Federal Reserve System, July 25, 2024.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

BILLING CODE 6210–01–P

FEDERAL RESERVE SYSTEM

Agency Information Collection Activities: Announcement of Board Approval Under Delegated Authority and Submission to OMB

AGENCY: Board of Governors of the Federal Reserve System.

SUMMARY: The Board of Governors of the Federal Reserve System (Board) is adopting a proposal to extend for three years, without revision, the Survey of Consumer Finances (FR 3059; OMB No. 7100–0287).

FOR FURTHER INFORMATION CONTACT: Federal Reserve Board Clearance Officer—Nuha Elmaghrabi—Office of the Chief Data Officer, Board of Governors of the Federal Reserve System, *nuha.elmaghrabi@frb.gov,* (202) 452–3884.

Office of Management and Budget (OMB) Desk Officer for the Federal Reserve Board, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10235, 725 17th Street NW, Washington, DC 20503, or by fax to (202) 395–6974.

SUPPLEMENTARY INFORMATION: On June 15, 1984, OMB delegated to the Board authority under the Paperwork Reduction Act (PRA) to approve and assign OMB control numbers to collections of information conducted or sponsored by the Board. Board-approved collections of information are incorporated into the official OMB inventory of currently approved collections of information. The OMB inventory, as well as copies of the PRA Submission, supporting statements (which contain more detailed information about the information collections and burden estimates than this notice), and approved collection of information instrument(s) are available at *https://www.reginfo.gov/public/do/PRAMain.* These documents are also available on the Federal Reserve Board's public website at *https://www.federalreserve.gov/apps/reportingforms/home/review* or may be requested from the agency clearance officer, whose name appears above. On the page displayed at the link above, you can find the supporting information by referencing the collection identifier, FR 3059.

Final Approval Under OMB Delegated Authority of the Extension for Three Years, Without Revision, of the Following Information Collection

Collection title: Survey of Consumer Finances.

Collection identifier: FR 3059.

OMB control number: 7100–0287.

General description of collection: This triennial survey is the only source of representative information on the structure of U.S. families' finances. The survey collects data on the assets, debts, income, work history, pension rights, use of financial services, and attitudes of a sample of U.S. families. Because the ownership of some assets is relatively concentrated in a small number of families, the survey makes a special effort to ensure proper representation of such assets by systematically oversampling wealthier families. For the 2025 survey, the Board will conduct: (1) up to 150 interviews averaging about 110 minutes as a test or series of tests of the survey procedures in 2025, and (2) up to 7,000 interviews averaging about 110 minutes (main survey) between April 2025 and March 2026.

Frequency: Triennial.

Respondents: U.S. families.

Total estimated number of respondents: 7,150.

Total estimated annual burden hours: 4,410.

Current actions: On March 7, 2024, the Board published a notice in the **Federal Register** (89 FR 16571) requesting public comment for 60 days on the extension, without revision, of the FR 3059. The comment period for this notice expired on May 6, 2024. The Board did not receive any comments.

Board of Governors of the Federal Reserve System, July 25, 2024.

Michele Taylor Fennell,

Deputy Associate Secretary of the Board.

BILLING CODE P

GENERAL SERVICES ADMINISTRATION

[Notice–IE–2024–04; Docket No. 2024–0002; Sequence No. 33]

Privacy Act of 1974; System of Records

AGENCY: General Services Administration (GSA).

ACTION: Notice of a new system of records.

SUMMARY: Pursuant to the provisions of the Privacy Act of 1974, notice is given that the General Services Administration (GSA) proposes to establish a new system of records, entitled Events Management System, GSA/PBS–9. This system of records manages registration and attendance for virtual events and in-person events on GSA-managed properties.

DATES: Submit comments on or before August 30, 2024.

ADDRESSES: Comments may be submitted to the Federal eRulemaking Portal, *http://www.regulations.gov.* Submit comments by searching for GSA/PBS–9, Events Management System.

FOR FURTHER INFORMATION CONTACT: Call or email Richard Speidel, Chief Privacy Officer at 202–969–5830 and *gsa.privacyact@gsa.gov.*

SUPPLEMENTARY INFORMATION: GSA proposes to establish a system of records subject to the Privacy Act of 1974, 5 U.S.C. 552a, to manage the personal information provided by visitors to GSA properties in connection with scheduled events.

SYSTEM NAME AND NUMBER:

Events Management System, GSA/PBS–9.

SECURITY CLASSIFICATION:

Unclassified.

SYSTEM LOCATION:

Records are maintained in an electronic form on a Software as a Service (SaaS) platform under contract to GSA.

SYSTEM MANAGER(S):

Regional Fine Arts Officer, National Capital Region, Public Buildings Service, General Services Administration, 1800 F Street NW, Washington, DC 20405.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

The E-Government Act of 2002 (Pub. L. 107–347, 44 U.S.C. 3601 n.); The Paperwork Reduction Act of 1995 (Pub. L. 104–13, 44 U.S.C. 3501).

PURPOSE(S) OF THE SYSTEM:

The purpose of the system is to collect information about event attendees that can be used to access virtual events or federal government properties for in-person events. This information is only used for a single event and then archived in accordance with the appropriate records retention schedule.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

The system of records includes members of the public who register to attend an event held by GSA (in-person or virtual). The system also includes federal employees of other agencies, federal contractors, or others who may register for an event.

CATEGORIES OF RECORDS IN THE SYSTEM:

Name, email address, affiliation, minor status, and country of citizenship. After registration, individuals may be asked if accommodations are necessary and individuals may disclose additional information in order to obtain such accommodations. As this is a free response, individuals provide what information they believe is necessary to obtain accommodations.

RECORD SOURCE CATEGORIES:

The source for information in the system is the individuals who provide this information or their representative.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act, all or a portion of the records or information contained in this system may be disclosed to authorized entities, as is determined to be relevant and necessary, outside GSA as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

a. In any legal proceeding, where pertinent, to which GSA, a GSA employee, or the United States is a party before a court or administrative body.

b. To a Federal, State, local, or foreign agency responsible for investigating, prosecuting, enforcing, or carrying out a statute, rule, regulation, or order when GSA becomes aware of a violation or potential violation of civil or criminal law or regulation.

c. To an appeal, grievance, hearing, or complaints examiner; an equal employment opportunity investigator, arbitrator, or mediator; and an exclusive representative or other person authorized to investigate or settle a grievance, complaint, or appeal filed by an individual who is the subject of the record.

d. To the Office of Personnel Management (OPM), the Office of Management and Budget (OMB), and the Government Accountability Office (GAO) in accordance with their responsibilities for evaluating Federal programs.

e. To a Member of Congress or his or her staff on behalf of and at the request of the individual who is the subject of the record.

f. To an expert, consultant, or contractor of GSA in the performance of a Federal duty to which the information is relevant.

g. To the National Archives and Records Administration (NARA) for records management purposes.

h. In connection with any litigation or settlement discussions regarding claims by or against the GSA, including public filing with a court, to the extent that GSA determines the disclosure of the information is relevant and necessary to the litigation or discussions.

i. To appropriate agencies, entities, and persons when (1) GSA suspects or has confirmed that there has been a breach of the system of records, (2) GSA has determined that as a result of the suspected or confirmed breach there is a risk of harm to individuals, GSA (including its information systems, programs, and operations), the Federal Government, or national security; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with GSA's efforts to respond to the suspected or confirmed breach or to prevent, minimize, or remedy such harm.

j. To another Federal agency or Federal entity, when GSA determines that information from this system of records is reasonably necessary to assist the recipient agency or entity in (1) responding to a suspected or confirmed breach or (2) preventing, minimizing, or remedying the risk of harm to individuals, the recipient agency or entity (including its information systems, programs, and operations), the Federal Government, or national security, resulting from a suspected or confirmed breach.

k. To compare such records to other agencies' systems of records or to non-Federal records, in coordination with an OIG in conducting an audit, investigation, inspection, evaluation, or some other review as authorized by the IG Act.

POLICIES AND PRACTICES FOR STORAGE OF RECORDS:

All records are stored electronically in a database. Information is encrypted in transit and at rest.

POLICIES AND PRACTICES FOR RETRIEVAL OF RECORDS:

Records can be retrieved by name or other personal identifier.

POLICIES AND PRACTICES FOR RETENTION AND DISPOSAL OF RECORDS:

Records relating to events management will be retained for 6 years from the end of the fiscal year of the event in accordance with the NARA-approved GSA Records Schedule DAA–0269–2016–0007–0003—''Events Records''.

ADMINISTRATIVE, TECHNICAL, AND PHYSICAL SAFEGUARDS:

Records in the system are protected from unauthorized access and misuse through a combination of administrative, technical and physical security measures. Administrative measures include but are not limited to policies that limit system access to individuals within an agency with a legitimate business need, and regular review of security procedures and best practices to enhance security. Technical measures include but are not limited to system design that allows authorized system users access only to data for which they are responsible; and use of encryption for certain data transfers. Physical security measures include but are not limited to the use of data centers which meet government requirements for storage of sensitive data.

RECORD ACCESS PROCEDURES:

If an individual wishes to access any data or record pertaining to him or her in the system after it has been submitted, that individual should consult the GSA's Privacy Act implementation rules available at 41 CFR part 105–64.2.

CONTESTING RECORD PROCEDURES:

If an individual wishes to contest the content of any record pertaining to him or her in the system after it has been submitted, that individual should consult the GSA's Privacy Act implementation rules available at 41 CFR part 105–64.4.

NOTIFICATION PROCEDURES:

If an individual wishes to be notified at his or her request if the system contains a record pertaining to him or her after it has been submitted, that individual should consult the GSA's Privacy Act implementation rules available at 41 CFR part 105–64.4.

EXEMPTIONS PROMULGATED FOR THE SYSTEM:

None.

HISTORY:

None.

Richard Speidel,

Chief Privacy Officer, Office of Enterprise Data & Privacy Management, General Services Administration.

BILLING CODE 6820–AB–P

GENERAL SERVICES ADMINISTRATION

[Notice—PBS–2024–07; Docket No. 2024–0002; Sequence No. 32]

Notice of Availability for the Final Environmental Impact Statement for the Buildings 202, 214 and 220 South State Street, Chicago, Illinois.

AGENCY: U.S. General Services Administration (GSA).

ACTION: Notice of availability (NOA).

SUMMARY: The GSA, in cooperation with the U.S. Federal Protective Service and in accordance with the National Environmental Policy Act (NEPA), announces the availability of the Final Environmental Impact Statement (EIS) for the future of 202, 214, and 220 South State Street, Chicago, Illinois. The Final EIS analyzed the potential environmental impacts of GSA's Proposed Action to address the future of the vacant buildings GSA owns at 202, 214, and 220 South State Street between Adams Street and Jackson Boulevard, adjacent to the Everett McKinley Dirksen U.S. Courthouse (Dirksen Courthouse) in downtown Chicago, Illinois. GSA considered two action alternatives (Alternative A, Demolition, and Alternative B, Viable Adaptive Reuse) and a No Action Alternative. The Final EIS states the purpose and need for the Proposed Action, analyzes alternatives considered, and assesses environmental impacts of each alternative, including avoidance, minimization, and mitigation measures. GSA has selected Viable Adaptive Reuse (Alternative B) as its Preferred Alternative.

DATES: Publication Period: The Final EIS is published with this notice of availability (NOA) in the **Federal Register** until Monday September 2, 2024. Written comments must be received by the last day of this publishing period (see **ADDRESSES** section of this NOA on how to submit comments). After this period, GSA will issue the Record of Decision (ROD).

ADDRESSES: Comments concerning the Final EIS should be directed to:

- *Email: statestreet@gsa.gov.* Please include 'Final EIS Publication' in the subject line of the message.
- *Mail:* ATTN: Joseph Mulligan, U.S. General Services Administration, 230 S Dearborn St., Suite 3600, Chicago, IL 60604.

Further information, including an electronic copy of the Final EIS, may be found online at this website: *https://www.gsa.gov/about-us/gsa-regions/region-5-great-lakes/buildings-and-facilities/illinois/chicago-202220-s-state-st-fps.*

SUPPLEMENTARY INFORMATION:

Proposed Action

The Proposed Action is to address the future of the three vacant buildings at 202, 214 and 220 South State Street, east of the Dirksen Courthouse. The purpose of the Proposed Action is to address the security needs of the Dirksen Courthouse, respond to the Congressional intent and funding authorization provided in the 2022 Consolidated Appropriations Act, and manage Federal assets.

Preferred Alternative

GSA's Preferred Alternative is Viable Adaptive Reuse (Alternative B). GSA will pursue viable adaptive reuse under the NHPA section 111 outlease authority. GSA will issue a Request for Lease Proposals (RLP) to seek a reuse that meets the purpose and need for the proposed action.

The Viable Adaptive Reuse Alternative meets the purpose and need for the Proposed Action upon satisfying the security needs of the Dirksen Courthouse. Therefore, GSA will request market-driven redevelopment proposals with the following considerations. First, GSA shall consider and prioritize proposals that align with the viable adaptive reuse security criteria established for this proposed action and demonstrate the financial capability of the offeror to successfully execute. Second, GSA shall consider proposals with proposed deviations from the viable adaptive reuse security criteria that demonstrate the financial capability of the offeror to successfully execute. Any proposed deviation must be agreed to by GSA. There are no federal funds available for reuse or proposed deviations from the security criteria. The RLP will allow for redevelopment of all buildings and parcels at 202 through 220 South State Street or one, two, or all three buildings in a manner that addresses the purpose and need.

Summary of Potential Impacts

The Final EIS identifies, describes, and analyzes the potential effects of

both the Action and No Action alternatives, including direct, indirect, and cumulative effects. GSA analyzed beneficial and adverse potential impacts of the following resources: cultural resources; aesthetic and visual resources; land use and zoning; community facilities; socioeconomics and environmental justice; greenhouse gas emissions; hazardous materials and solid waste; air quality; noise; health and safety; and transportation and traffic. The Final EIS considers measures that would avoid, minimize, or mitigate identified adverse impacts. The Final EIS identifies Viable Adaptive Reuse as the Environmentally Preferred Alternative.

National Historic Preservation Act

Consultation under section 106 of the NHPA is ongoing concurrently with the NEPA process. The Century Building (202 South State Street) and the Consumers Building (220 South State Street) are historic resources contributing to the Loop Retail Historic District, which are listed in the National Register of Historic Places (NRHP). In this Proposed Action, 214 South State Street is being treated as eligible for listing in the NRHP as a contributing resource to the Loop Retail Historic District. A draft Programmatic Agreement is included in the Final EIS. GSA will execute the Programmatic Agreement with the Illinois State Historic Preservation Officer and Advisory Council on Historic Preservation before issuing the Record of Decision.

William Renner,

Director, Facilities Management and Services Programs Division, Great Lakes Region 5, U.S. General Services Administration.

[FR Doc. 2024–16837 Filed 7–30–24; 8:45 am]

BILLING CODE 6820–CF–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Agency for Healthcare Research and Quality

Agency Information Collection Activities: Proposed Collection; Comment Request

AGENCY: Agency for Healthcare Research and Quality, HHS.

ACTION: Notice.

SUMMARY: This notice announces the intention of the Agency for Healthcare Research and Quality (AHRQ) to request that the Office of Management and Budget (OMB) approve an extension of the currently approved information collection project: ''*Medical Office Survey on Patient Safety Culture Database.*'' In accordance with the Paperwork Reduction Act of 1995, AHRQ invites the public to comment on this proposed information collection.

DATES: Comments on this notice must be received by September 30, 2024.

ADDRESSES: Written comments should be submitted to: Doris Lefkowitz, Reports Clearance Officer, AHRQ, by email at *REPORTSCLEARANCEOFFICER@ahrq.hhs.gov.*

FOR FURTHER INFORMATION CONTACT: Doris Lefkowitz, AHRQ Reports Clearance Officer, (301) 427–1477, or by email at *REPORTSCLEARANCEOFFICER@ahrq.hhs.gov.*

SUPPLEMENTARY INFORMATION:

Proposed Project

Medical Office Survey on Patient Safety Culture Database

In 1999, the Institute of Medicine called for health care organizations to develop a ''culture of safety'' such that their workforce and processes focus on improving the reliability and safety of care for patients (IOM, 1999; *To Err is Human: Building a Safer Health System*). To respond to the need for tools to assess patient safety culture in health care, AHRQ developed and pilot tested the Surveys on Patient Safety Culture® (SOPS®) Medical Office Survey with OMB approval (OMB NO.0935–0131; Approved July 5, 2007).

The survey is designed to enable medical offices to assess provider and staff perspectives about patient safety issues, medical error, and error reporting. The survey includes 38 items that measure 10 composites of patient safety culture. In addition to the composite items, 14 items measure staff perceptions of how often medical offices have problems exchanging information with other settings as well as other patient safety and quality issues. AHRQ made the survey publicly available along with a Survey User's Guide and other toolkit materials in January 2009, on the AHRQ website.

The AHRQ SOPS Medical Office Database consists of data from the AHRQ Medical Office Survey on Patient Safety Culture and may include reportable, non-required supplemental items. Medical offices in the U.S. can voluntarily submit data from the survey to AHRQ, through its contractor, Westat. The SOPS Medical Office Database (OMB NO. 0935–0196, last approved on September 24, 2021) was developed by AHRQ in 2011 in response to requests from medical offices interested in tracking their own survey results. Those organizations submitting data receive a feedback report, as well as a report of the aggregated, de-identified findings of the other medical offices submitting data. These reports are used to assist medical office staff in their efforts to improve patient safety culture in their organizations.

The goal of the Medical Office Survey on Patient Safety Culture Database is to promote improvements in the quality and safety of healthcare in medical office settings. The survey, toolkit materials, and database results are all made publicly available on AHRQ's website. Technical assistance is provided by AHRQ through its contractor at no charge to medical offices, to facilitate the use of these materials for medical office patient safety and quality improvement.

This database:

(1) Presents results from medical offices that voluntarily submit their data,

(2) Provides data to medical offices to facilitate internal assessment and learning in the patient safety improvement process, and

(3) Provides supplemental information to help medical offices identify their strengths and areas with potential for improvement in patient safety culture.

To achieve the goal of this project the following activities and data collections will be implemented:

(1) Eligibility and Registration Form—The medical office point-of-contact (POC) completes several data submission steps and forms, beginning with the completion of an online Eligibility and Registration Form. The purpose of this form is to collect basic demographic information about the medical office and initiate the registration process.

(2) Medical Office Site Information Form—The purpose of the site information form, also completed by the medical office POC, is to collect background characteristics of the medical office. This information will be used to analyze data collected with SOPS Medical Office Survey.

(3) Data Use Agreement—The purpose of the data use agreement, completed by the medical office POC, is to state how data submitted by medical offices will be used and provides privacy assurances.

(4) Data File(s) Submission—POCs upload their data file(s), using the medical office data file specifications, to ensure that users submit their data in a standardized way (*e.g.,* variable names, order, coding, formatting).The number

of submissions to the database is likely to vary from submission period to submission period because medical offices do not administer the survey and submit data every year. Data submission is typically handled by one POC who is either an office manager or a survey vendor who contracts with a medical office to collect their data. POCs submit data on behalf of 20 medical offices, on average, because many medical offices are part of a health system that includes many medical office sites, or the POC is a vendor that is submitting data for multiple medical offices.

This study is being conducted by AHRQ through its contractor, Westat, pursuant to AHRQ's statutory authority to conduct and support research on healthcare and on systems for the delivery of such care, including activities with respect to: the quality, effectiveness, efficiency, appropriateness and value of healthcare services; quality measurement and improvement; and database development. 42 U.S.C. 299a(a)(1), (2), and (8).

Method of Collection

All information collection for the SOPS Medical Office Database is done electronically, except the Data Use Agreement (DUA) that medical offices print, sign and return (either via fax, by scanning and emailing or uploading to a secure website, or by mailing back). Registration, submission of medical office information, and data upload is handled online through a secure website. Customized feedback reports are delivered electronically (the person submitting the data will enter a username and password for access to a secure website from which to download their reports).

Estimated Annual Respondent Burden

Exhibit 1 shows the estimated annualized burden hours for the respondents' time to participate in the database. An estimated 85 POCs, each representing an average of 30 individual medical offices each, will complete the database submission steps and forms. Each POC will submit the following:

1. Eligibility and Registration Form—Estimated to take 3 minutes to complete.

2. Medical Office Site Information Form—Estimated to take 5 minutes to complete.

3. Data Use Agreement—Estimated to take 3 minutes to complete.

4. Survey Data File(s) Submission—Estimated to take 1 hour to complete.

The total burden is estimated to be 308 hours.

Exhibit 2 shows the estimated annualized cost burden based on the respondents' time to submit their data. The cost burden is estimated to be $19,891 annually.

EXHIBIT 1—ESTIMATED ANNUALIZED BURDEN HOURS

Form name	Number of respondents	Number of responses per POC	Hours per response	Total burden hours
1. Eligibility/Registration Form	85	1	3/60	5
2. Medical Office Site Information Form	85	30	5/60	213
3. Data Use Agreement	85	1	3/60	5
4. Data File(s) Submission	85	1	1	85
Total	NA	NA	NA	308

EXHIBIT 2—ESTIMATED ANNUALIZED COST BURDEN

Form name	Total burden hours	Average hourly wage rate *	Total cost burden
1. Eligibility/Registration Form	5	$ 64.58	$323
2. Medical Office Site Information Form	213	64.58	13,756
3. Data Use Agreement	5	64.58	323
4. Data File(s) Submission	85	64.58	5,489
Total	308	NA	19,891

* Mean hourly wage rate of $64.58 for Medical and Health Services Managers (SOC code 11–9111) was obtained from the May 2023 National Industry-Specific Occupational Employment and Wage Estimates, NAICS 621100—Offices of Physicians located at *https://www.bls.gov/oes/current/naics4_621100.htm.*

Request for Comments

In accordance with the Paperwork Reduction Act, 44 U.S.C. 3501–3520, comments on AHRQ's information collection are requested with regard to any of the following: (a) whether the proposed collection of information is necessary for the proper performance of AHRQ's health care research and health care information dissemination functions, including whether the information will have practical utility; (b) the accuracy of AHRQ's estimate of burden (including hours and costs) of the proposed collection(s) of information; (c) ways to enhance the quality, utility and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information upon the respondents, including the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and included in the Agency's subsequent request for OMB approval of the proposed information collection. All comments will become a matter of public record.

Dated: July 25, 2024.

Marquita Cullom,

Associate Director.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–2019]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Class II Special Controls: Automated Blood Cell Separator Device Operating by Centrifugal or Filtration Principle

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Submit written comments (including recommendations) on the collection of information by August 30, 2024.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be submitted to *https://www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under Review—Open for Public Comments'' or by using the search function. The OMB control number for this information collection is 0910–0594. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: JonnaLynn Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–3794, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed collection of information to OMB for review and clearance.

Class II Special Controls: Automated Blood Cell Separator Device Operating by Centrifugal or Filtration Separation Principle

OMB Control Number 0910–0594—Extension

This information collection helps to support Agency regulations and guidance. Under Section 513(a)(1)(B) of the Federal Food, Drug and Cosmetics Act (FD&C Act) (21 U.S.C. 360c(a)(1)(B)), FDA may establish special controls, including performance standards, postmarket surveillance, patient registries, guidelines, and other appropriate actions it believes necessary to provide reasonable assurance of the safety and effectiveness of the device. The guidance entitled ''Guidance for Industry and FDA Staff—Class II Special Controls Guidance Document: Automated Blood Cell Separator Device Operating by Centrifugal or Filtration Separation Principle'' (March 2011) is available at *https://www.fda.gov/media/124263/download.* The special control guidance serves as the special control for the automated blood cell separator device operating by centrifugal or filtration separation principle intended for the routine collection of blood and blood components (§ 864.9245 (21 CFR 864.9245)).

For currently marketed products not approved under the premarket approval process, the manufacturer should file with FDA for 3 consecutive years an annual report on the anniversary date of the device reclassification from class III to class II or on the anniversary date of the 510(k) of the FD&C Act (21 U.S.C. 360(k)) clearance. These annual reports are submitted as supplements to the original 510(k) via the electronic submission gateway at *https://www.fda.gov/electronic-submissions-gateway.* The reports can also be submitted in paper format and sent to the CBER Document Control Center at *https://www.fda.gov/about-fda/center-biologics-evaluation-and-research-cber/regulatory-submissions-electronic-and-paper.*

Any subsequent change to the device requiring the submission of a premarket notification in accordance with section 510(k) of the FD&C Act should be included in the annual report. Also, a manufacturer of a device determined to be substantially equivalent to the centrifugal or filtration-based automated cell separator device intended for the routine collection of blood and blood components should comply with the same general and special controls.

Reclassification of this device from class III to class II relieves manufacturers of the burden of complying with the premarket approval requirements of section 515 of the FD&C Act (21 U.S.C. 360e) and may permit small potential competitors to enter the marketplace by reducing the burden. Although the special control guidance recommends that manufacturers of these devices file with FDA an annual report for 3 consecutive years, this would be less burdensome than the current postapproval requirements under 21 CFR part 814, subpart E, including the submission of periodic reports under 21 CFR 814.84.

In the special control guidance document, FDA recommends that manufacturers include in their annual reports a summary of adverse reactions maintained by the blood collection establishment or transfusion service or similar reports of adverse events collected.

In the **Federal Register** of May 22, 2024, (89 FR 44991), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Recommended activity; guidance section	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Annual Report; Section VI, Special Controls	3	1	3	5	15

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on submissions to FDA over the last few years, there are three manufacturers of automated blood cell separator devices. We estimate that the manufacturers will spend approximately 5 hours preparing and submitting the annual report.

The annual report should include, at a minimum, a summary of anticipated and unanticipated adverse events that have occurred and that are not required to be reported by manufacturers under Medical Device Reporting (MDR) (part 803 (21 CFR part 803)). The reporting of adverse device events summarized in an annual report will alert FDA to trends or clusters of events that might be a

safety issue otherwise unreported under the MDR regulation. The report should also include any subsequent change to the preamendments class III device requiring a 30-day notice in accordance with 21 CFR 814.39(f).

Blood collection establishments and transfusion services, the intended users of the device, and the device manufacturers have certain responsibilities under the Federal regulations. For example, collection establishments and or transfusion services are required to maintain records of any reports of complaints of adverse reactions (21 CFR 606.170), while the device manufacturer is responsible for conducting an investigation of each event that is reasonably known to the manufacturer and evaluating the cause of the event (§ 803.50(b) (21 CFR 803.50(b))). In addition, manufacturers of medical devices are required to submit to FDA individual adverse event reports of death, serious injury, and malfunctions (§ 803.50).

Other burden hours required for § 864.9245 are reported and approved under OMB control number 0910–0120 (premarket notification submission 510(k), 21 CFR part 807, subpart E), and OMB control number 0910–0437 (MDR, part 803).

Based on a review of the information collection from our last request for OMB approval, we estimate that the number of manufacturers of automated blood cell separator devices remains unchanged. As a result, we have made no adjustments to our burden estimates.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3382]

Food Safety Modernization Act Domestic and Foreign Facility Reinspection, Recall, and Importer Reinspection Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing the fiscal year (FY) 2025 fee rates for certain domestic and foreign facility reinspections, failures to comply with a recall order, and importer reinspections that are authorized by the Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the FDA Food Safety Modernization Act (FSMA).

DATES: These fees apply to the period from October 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT:

For questions related to FSMA program fees: FSMAFeeStaff@fda.hhs.gov.

For questions related to this notice: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20903, 240–402–4989; or the User Fees Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 107 of the FSMA (Pub. L. 111–353) added section 743 to the FD&C Act (21 U.S.C. 379j–31) to provide FDA with the authority to assess and collect fees from, in part: (1) the responsible party for each domestic facility and the U.S. agent for each foreign facility subject to a reinspection to cover reinspection-related costs; (2) the responsible party for a domestic facility and an importer who does not comply with a recall order to cover food [1] recall activities associated with such order; and (3) each importer subject to a reinspection to cover reinspection-related costs (sections 743(a)(1)(A), (B), and (D) of the FD&C Act). Section 743 of the FD&C Act directs FDA to establish fees for each of these activities based on an estimate of 100 percent of the costs of each activity for each year (sections 743(b)(2)(A)(i), (ii), and (iv)), and these fees must be made available solely to pay for the costs of each activity for which the fee was incurred (section 743(b)(3)). These fees are effective on October 1, 2024, and will remain in effect through September 30, 2025. Section 743(b)(2)(B)(iii) of the FD&C Act directs FDA to develop a proposed set of guidelines in consideration of the burden of fee amounts on small businesses. As a first step in developing these guidelines, FDA invited public comment on the potential impact of the fees authorized by section 743 of the FD&C Act on small businesses (76 FR 45818, August 1, 2011). The comment period for this request ended November 30, 2011. As stated in FDA's October 2011 ''Guidance for Industry: Implementation of the Fee Provisions of Section 107 of the FDA Food Safety Modernization Act'' (*https://www.fda.gov/regulatory-information/search-fda-guidance-documents/guidance-industry-implementation-fee-provisions-section-107-fda-food-safety-modernization-act*), because FDA recognizes that for small businesses the full cost recovery of FDA reinspection or recall oversight could impose severe economic hardship, FDA intends to consider reducing certain fees for those firms. FDA does not intend to issue invoices for reinspection or recall order fees until FDA publishes a guidance document outlining the process through which firms may request a reduction in fees.

In addition, as stated in the October 2011 Guidance, FDA is in the process of considering various issues associated with the assessment and collection of importer reinspection fees. The fee rates set forth in this notice will be used to determine any importer reinspection fees assessed in FY 2025.

II. Estimating the Average Cost of a Supported Direct FDA Work Hour for FY 2025

FDA is required to estimate 100 percent of its costs for each activity in order to establish fee rates for FY 2025. In each year, the costs of salary (or personnel compensation) and benefits for FDA employees account for between 50 and 60 percent of the funds available to, and used by, FDA. Almost all the remaining funds (operating funds) available to FDA are used to support FDA employees by paying for rent, travel, utility, information technology (IT), and other operating costs.

A. Estimating the Full Cost per Direct Work Hour in FY 2025

Full-time Equivalent (FTE) reflects the total number of regular straight-time hours—not including overtime or holiday hours—worked by employees, divided by the number of compensable hours applicable to each fiscal year. Annual leave, sick leave, compensatory time off, and other approved leave categories are considered ''hours worked'' for purposes of defining FTE employment.

In general, the starting point for estimating the full cost per direct work hour is to estimate the cost of an FTE or paid staff year. Calculating an Agency-wide total cost per FTE requires three primary cost elements: payroll, nonpayroll, and rent.

We have used an average of past year cost elements to predict the FY 2025 cost. The FY 2025 FDA-wide average cost for payroll (salaries and benefits) is

[1] The term ''food'' for purposes of this document has the same meaning as such term in section 201(f) of the FD&C Act (21 U.S.C. 321(f)).

$213,556; non-payroll (including equipment, supplies, IT, general and administrative overhead) is $131,739; and rent (including cost allocation analysis and adjustments for other rent and rent-related costs) is $23,750 per paid staff year, excluding travel costs.

Summing the average cost of an FTE for payroll, nonpayroll, and rent, brings the FY 2025 average fully supported cost to $369,046 [2] per FTE, excluding travel costs. FDA will use this base unit fee in determining the hourly fee rate for reinspection and recall order fees for FY 2025 prior to including domestic or foreign travel costs as applicable for the activity.

To calculate an hourly rate, FDA must divide the FY 2025 average fully supported cost of $369,046 per FTE by the average number of supported direct FDA work hours in FY 2023 (the last fiscal year for which data are available). See table 1.

TABLE 1—SUPPORTED DIRECT FDA WORK HOURS IN A PAID STAFF YEAR IN FY 2023

Total number of hours in a paid staff year	2,080
Less:	
11 paid holidays	−88
20 days of annual leave	−160
10 days of sick leave	−80
12.5 days of training	−100
22 days of general administration	−176
26.5 days of travel	−212
2 hours of meetings per week	−104
Net Supported Direct FDA Work Hours Available for Assignments	1,160

Dividing the average fully supported FTE cost in FY 2025 ($369,046) by the total number of supported direct work hours available for assignment in FY 2023 (1,160) results in an average fully supported cost of $318 (rounded to the nearest dollar), excluding inspection travel costs, per supported direct work hour in FY 2025.

B. Adjusting FY 2023 Travel Costs for Inflation To Estimate FY 2025 Travel Costs

To adjust the hourly rate for FY 2025, FDA must estimate the cost of inflation in each year for FY 2024 and FY 2025. FDA uses the method prescribed for estimating inflationary costs under the Prescription Drug User Fee Act (PDUFA) provisions of the FD&C Act (section 736(c)(1) (21 U.S.C. 379h(c)(1))), the statutory method for inflation adjustment in the FD&C Act that FDA has used consistently. FDA previously determined the FY 2024 inflation rate to be 3.8896 percent; this rate was published in the FY 2024 PDUFA user fee rates notice in the **Federal Register** (88 FR 48881, July 28, 2023). Utilizing the method set forth in section 736(c)(1) of the FD&C Act, FDA has calculated an inflation rate of 3.8896 percent for FY 2024 and 4.1167 percent for FY 2025, and FDA intends to use these inflation rates to make inflation adjustments for FY 2025 for several of its user fee programs; the derivation of this rate will be published in the **Federal Register** in the FY 2025 notice for the PDUFA user fee rates.

The average fully supported cost per supported direct FDA work hour, excluding travel costs, of $318 already takes into account inflation as the calculation above is based on FY 2025 predicted costs. FDA will use this base unit fee in determining the hourly fee rate for reinspection and recall order fees for FY 2025 prior to including domestic or foreign travel costs as applicable for the activity. In FY 2023, FDA's Office of Regulatory Affairs (ORA) spent a total of $7,463,679 for domestic regulatory inspection travel costs and General Services Administration Vehicle costs related to FDA's Center for Food Safety and Applied Nutrition (CFSAN) and Center for Veterinary Medicine (CVM) field activities programs. The total ORA domestic travel costs spent is then divided by the 8,811 CFSAN and CVM domestic inspections, which averages a total of $847 per inspection. These inspections average 41.35 hours per inspection. Dividing $847 per inspection by 41.35 hours per inspection results in a total and an additional cost of $20 (rounded to the nearest dollar) per hour spent for domestic inspection travel costs in FY 2023. To adjust for the $20 per hour additional domestic cost inflation increases for FY 2024 and FY 2025, FDA must multiply the FY 2024 PDUFA inflation rate adjustor (1.038896) times the FY 2025 PDUFA inflation rate adjustor (1.041167) times the $20 additional domestic cost, which results in an estimated cost of $22 (rounded to the nearest dollar) per paid hour in addition to $318 for a total of $340 per paid hour ($318 plus $22) for each direct hour of work requiring domestic inspection travel. FDA will use these rates in charging fees in FY 2025 when domestic travel is required.

In FY 2023, ORA spent a total of $2,629,906 on 431 foreign inspection trips related to FDA's CFSAN and CVM field activities programs, which averaged a total of $6,102 per foreign inspection trip. These trips averaged 3 weeks (or 120 paid hours) per trip. Dividing $6,102 per trip by 120 hours per trip results in a total and an additional cost of $51 (rounded to the nearest dollar) per paid hour spent for foreign inspection travel costs in FY 2023. To adjust $51 for inflationary increases in FY 2024, and FY 2025, FDA must multiply it by the same inflation factors mentioned previously in this document (1.038896 and 1.041167), which results in an estimated cost of $55 (rounded to the nearest dollar) per paid hour in addition to $318 for a total of $373 per paid hour ($318 plus $55) for each direct hour of work requiring foreign inspection travel. FDA will use these rates in charging fees in FY 2025 when foreign travel is required.

TABLE 2—FSMA FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
Hourly rate if domestic travel is required	$340
Hourly rate if foreign travel is required	373

III. Fees for Reinspections of Domestic or Foreign Facilities Under Section 743(a)(1)(A)

A. What will cause this fee to be assessed?

The fee will be assessed for a reinspection conducted under section 704 of the FD&C Act (21 U.S.C. 374) to determine whether corrective actions have been implemented and are effective and compliance has been achieved to the Secretary of Health and Human Services' (the Secretary) (and, by delegation, FDA's) satisfaction at a facility that manufactures, processes, packs, or holds food for consumption necessitated as a result of a previous inspection (also conducted under section 704) of this facility, which had a final classification of Official Action Indicated (OAI) conducted by or on behalf of FDA, when FDA determined the noncompliance was materially related to food safety requirements of the FD&C Act. FDA considers such noncompliance to include noncompliance with a statutory or regulatory requirement under section 402 of the FD&C Act (21 U.S.C. 342) and section 403(w) of the FD&C Act (21 U.S.C. 343(w)). However, FDA does not consider noncompliance that is materially related to a food safety requirement to include circumstances where the noncompliance is of a

[2] Total includes rounding.

technical nature and not food safety related (*e.g.,* failure to comply with a food standard or incorrect font size on a food label). Determining when noncompliance, other than under sections 402 and 403(w) of the FD&C Act, is materially related to a food safety requirement of the FD&C Act may depend on the facts of a particular situation. FDA intends to issue guidance to provide additional information about the circumstances under which FDA would consider noncompliance to be materially related to a food safety requirement of the FD&C Act.

Under section 743(a)(1)(A) of the FD&C Act, FDA is directed to assess and collect fees from ''the responsible party for each domestic facility (as defined in section 415(b) (21 U.S.C. 350d(b))) and the U.S. agent for each foreign facility subject to a reinspection'' to cover reinspection-related costs.

Section 743(a)(2)(A)(i) of the FD&C Act defines the term ''reinspection'' with respect to domestic facilities as ''1 or more inspections conducted under section 704 subsequent to an inspection conducted under such provision which identified noncompliance materially related to a food safety requirement of this Act, specifically to determine whether compliance has been achieved to the Secretary's satisfaction.''

The FD&C Act does not contain a definition of ''reinspection'' specific to foreign facilities. In order to give meaning to the language in section 743(a)(1)(A) of the FD&C Act to collect fees from the U.S. agent of a foreign facility subject to a reinspection, the Agency is using the following definition of ''reinspection'' for purposes of assessing and collecting fees under section 743(a)(1)(A), with respect to a foreign facility: ''1 or more inspections conducted by officers or employees duly designated by the Secretary subsequent to such an inspection which identified noncompliance materially related to a food safety requirement of the FD&C Act, specifically to determine whether compliance has been achieved to the Secretary's (and, by delegation, FDA's) satisfaction.''

This definition allows FDA to fulfill the mandate to assess and collect fees from the U.S. agent of a foreign facility in the event that an inspection reveals noncompliance materially related to a food safety requirement of the FD&C Act, causing one or more subsequent inspections to determine whether compliance has been achieved to the Secretary's (and, by delegation, FDA's) satisfaction. By requiring the initial inspection to be conducted by officers or employees duly designated by the Secretary, the definition ensures that a foreign facility would be subject to fees only in the event that FDA, or an entity designated to act on its behalf, has made the requisite identification at an initial inspection of noncompliance materially related to a food safety requirement of the FD&C Act. The definition of ''reinspection-related costs'' in section 743(a)(2)(B) of the FD&C Act relates to both a domestic facility reinspection and a foreign facility reinspection, as described in section 743(a)(1)(A).

B. Who will be responsible for paying this fee?

The FD&C Act states that this fee is to be paid by the responsible party for each domestic facility (as defined in section 415(b) of the FD&C Act) and by the U.S. agent for each foreign facility (section 743(a)(1)(A) of the FD&C Act). This is the party to whom FDA will send the invoice for any fees that are assessed under this section.

C. How much will this fee be?

The fee is based on the number of direct hours spent on such reinspections, including time spent conducting the physical surveillance and/or compliance reinspection at the facility, or whatever components of such an inspection are deemed necessary, making preparations and arrangements for the reinspection, traveling to and from the facility, preparing any reports, analyzing any samples or examining any labels if required, and performing other activities as part of the OAI reinspection until the facility is again determined to be in compliance. The direct hours spent on each such reinspection will be billed at the appropriate hourly rate shown in table 2 of this document.

IV. Fees for Noncompliance With a Recall Order Under Section 743(a)(1)(B)

A. What will cause this fee to be assessed?

The fee will be assessed for not complying with a recall order under section 423(d) (21 U.S.C. 350l(d)) or section 412(f) of the FD&C Act (21 U.S.C. 350a(f)) to cover food recall activities associated with such order performed by the Secretary (and by delegation, FDA) (section 743(a)(1)(B) of the FD&C Act). Noncompliance may include the following: (1) not initiating a recall as ordered by FDA; (2) not conducting the recall in the manner specified by FDA in the recall order; or (3) not providing FDA with requested information regarding the recall, as ordered by FDA.

B. Who will be responsible for paying this fee?

Section 743(a)(1)(B) of the FD&C Act states that the fee is to be paid by the responsible party for a domestic facility (as defined in section 415(b) of the FD&C Act) and an importer who does not comply with a recall order under section 423 or under section 412(f) of the FD&C Act. In other words, the party paying the fee would be the party that received the recall order.

C. How much will this fee be?

The fee is based on the number of direct hours spent taking action in response to the firm's failure to comply with a recall order. Types of activities could include conducting recall audit checks, reviewing periodic status reports, analyzing the status reports and the results of the audit checks, conducting inspections, traveling to and from locations, and monitoring product disposition. The direct hours spent on each such recall will be billed at the appropriate hourly rate shown in table 2 of this document.

D. How must the fees be paid?

An invoice will be sent to the responsible party for paying the fee after FDA completes the work on which the invoice is based. Payment must be made within 30 days of the invoice date in U.S. currency by electronic check, credit card, check, bank draft, U.S. postal money order, or wire transfer payable to the order of the Food and Drug Administration. Detailed payment information will be included with the invoice when it is issued.

V. What are the consequences of not paying these fees?

Under section 743(e)(2) of the FD&C Act, any fee that is not paid within 30 days after it is due shall be treated as a claim of the U.S. Government subject to provisions of subchapter II of chapter 37 of title 31, United States Code.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3453]

Medical Device User Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the fee rates and payment procedures for medical device user fees for fiscal year (FY) 2025. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Medical Device User Fee Amendments of 2022 (MDUFA V), authorizes FDA to collect user fees for certain medical device submissions and annual fees both for certain periodic reports and for establishments subject to registration. This notice establishes the fee rates for FY 2025, which apply from October 1, 2024, through September 30, 2025, and provides information on how the fees for FY 2025 were determined, the payment procedures you should follow, and how you may qualify for reduced small business fees.

SUPPLEMENTARY INFORMATION:

I. Background

The FD&C Act, as amended by MDUFA V, authorizes FDA to collect user fees for certain medical device submissions and annual fees both for certain periodic reports and for establishments subject to registration. Section 738 of the FD&C Act (21 U.S.C. 379j) establishes fees for certain medical device applications, submissions, supplements, notices, and requests (for simplicity, this document refers to these collectively as ''submissions'' or ''applications''); for periodic reporting on class III devices; and for the registration of certain establishments.

Under the FD&C Act, the fee rate for each type of submission is set at a specified percentage of the standard fee for a premarket application (a premarket application is a premarket approval application (PMA), a product development protocol (PDP), or a biologics license application (BLA)). The FD&C Act specifies the base fee for a premarket application for each year from FY 2023 through FY 2027; the base fee for a premarket application received by FDA during FY 2025 is $445,000. From this starting point, this document establishes FY 2025 fee rates for certain types of submissions, and for periodic reporting, by applying criteria specified in the FD&C Act. Under statutorily defined conditions, a qualified applicant may receive a fee waiver or may pay a lower small business fee (see sections 738(a)(3)(B), 738(d) and 738(e) of the FD&C Act). For more information on fee waivers, please see Section IX. Small Business Fee Reductions and Fee Waivers.

The FD&C Act specifies the base fee for establishment registration for each year from FY 2023 through FY 2027; the base fee for an establishment registration in FY 2025 is $7,100. Each establishment that is registered (or is required to register) with the Secretary of Health and Human Services under section 510 of the FD&C Act (21 U.S.C. 360), because such establishment is engaged in the manufacture, preparation, propagation, compounding, or processing of a device, is required to pay the annual fee for establishment registration.

II. Total Revenue Amount for FY 2025

The total revenue amount for FY 2025 is $350,746,400, as set forth in the statute prior to the inflation adjustment (see section 738(b)(3) of the FD&C Act). MDUFA V directs FDA to use the yearly total revenue amount as a starting point to set the standard fee rates for each fee type. The fee calculations for FY 2025 are described in this document.

Inflation Adjustment

MDUFA specifies that the $350,746,400 is to be adjusted for inflation increases for FY 2025 using two separate adjustments: one for payroll costs and one for non-payroll costs (see section 738(c)(2) of the FD&C Act). The base inflation adjustment for FY 2025 is the sum of one plus the two separate adjustments and is compounded as specified in the statute (see section 738(c)(2)(C) and 738(c)(2)(B) of the FD&C Act).

The component of the inflation adjustment for payroll costs is the average annual percent change in the cost of all personnel compensation and benefits (PC&B) paid per full-time equivalent (FTE) position at FDA for the first 3 of the 4 preceding FYs, multiplied by 0.60, or 60 percent (see section 738(c)(2)(C)(i)(I) of the FD&C Act).

Table 1 summarizes the actual cost and FTE data for the specified FYs, provides the percent change from the previous fiscal year, and provides the average percent change over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent (rounded).

TABLE 1—FDA PC&BS EACH YEAR AND PERCENT CHANGE

	FY 2021	FY 2022	FY 2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total FTE	18,501	18,474	18,729	.....
PC&B per FTE	$164,289	$171,348	$183,486	.....
Percent change from previous year	0.1811%	4.2967%	7.0838%	3.8539%

The payroll adjustment is 3.8539 percent multiplied by 60 percent, or 2.3123 percent. The statute specifies that the component of the inflation adjustment for non-payroll costs for FY 2025 is the average annual percent change that occurred in the Consumer Price Index (CPI) for urban consumers (Washington-Arlington-Alexandria, DC-VA-MD-WV; Not Seasonally Adjusted; All Items; Annual Index) for the first 3 of the preceding 4 years of available

data multiplied by 0.40, or 40 percent (see section 738(c)(2)(C)(i)(II) of the FD&C Act).

Table 2 provides the summary data and the 3-year average percent change in the specified CPI for the Washington-Arlington-Alexandria area. These data are published by the Bureau of Labor Statistics and can be found on their website under series Id CUURS35ASA0 at: *https://data.bls.gov/pdq/SurveyOutputServlet?data_tool=dropmap&series_id=CUURS35ASA0,CUUSS35ASA0.*

TABLE 2—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN WASHINGTON-ARLINGTON-ALEXANDRIA AREA CPI

	2021	2022	2023	3-Year average
Annual CPI	277.728	296.117	305.317	.....
Annual Percent Change	3.9568%	6.6212%	3.1069%	.....
3-Year Average Percent Change in CPI	.....	.....	.....	4.5616%

The non-payroll adjustment is 4.5616 percent multiplied by 40 percent, or 1.8246 percent. Next, the payroll adjustment (2.3123 percent or 0.023123) is added to the non-payroll adjustment (1.8246 percent or 0.018246), for a total of 4.1369 percent (or 0.041369). To complete the inflation adjustment, 1 (100 percent or 1.0) is added for a total base inflation adjustment of 1.041369 for FY 2025. If the base inflation adjustment for a fiscal year is greater than 1.04, such adjustment shall be considered to be equal to 1.04 (see section 738(c)(2)(C)(ii)(II) of the FD&C Act). The total base inflation adjustment for FY 2025 is 1.04.

MDUFA V provides for this inflation adjustment to be compounded for FY 2023 and each subsequent fiscal year (see section 738(c)(2)(B) of the FD&C Act). To complete the compounded inflation adjustment for FY 2025, the FY 2024 compounded adjustment (1.079318) is multiplied by the FY 2025 base inflation adjustment (1.040000) to reach the applicable inflation adjustment of 1.122491 (rounded) for FY 2025. We then multiply the total revenue amount for FY 2025 ($350,746,400) by 1.122491, yielding an inflation adjusted total revenue amount of $393,710,000 (rounded to the nearest thousand dollars).

III. Adjustments to Base Fee Amounts for FY 2025

Under the FD&C Act, all submission fees and the periodic reporting fee are set as a percent of the standard (full) fee for a premarket application (see section 738(a)(2)(A) and (b)(1) of the FD&C Act).

A. Inflation Adjustment

MDUFA specifies that the base fees of $445,000 (premarket application) and $7,100 (establishment registration) are to be adjusted for FY 2025 using the same methodology as that for the total revenue inflation adjustment in section II (see section 738I(2)(D)(i) of the FD&C Act). Multiplying the base fees by the compounded inflation adjustment of 1.122491 yields inflation adjusted base fees of $499,508 (premarket application) and $7,970 (establishment registration).

B. Further Adjustments To Generate the Inflation-Adjusted Total Revenue Amount

After the applicable inflation adjustment to fees is done, FDA may increase, if necessary to achieve the inflation adjusted total revenue amount, the base fee amounts on a uniform proportionate basis (see section 738(c)(2)(D)(ii) of the FD&C Act). After this adjustment, if necessary, FDA may further increase the base establishment registration fees to generate the inflation-adjusted total revenue amount (see section 738(c)(3) of the FD&C Act).

For FY 2025, further adjustments were required to meet the inflation adjusted total revenue amount of $393,710,000. After increasing base fees, on a uniform proportionate basis, and further increasing establishment registration fees, this yields inflation adjusted base fees of $540,783 (premarket application) and $8,716 (establishment registration).

C. MDUFA V Adjustments Solely to Registration Fees

MDUFA V has three new potential adjustments that will not change the total revenue amount but may impact collections by increasing or decreasing establishment registration base fees only. These adjustments are the performance improvement adjustment, the hiring adjustment, and the operating reserve adjustment.

1. Performance Improvement Adjustment

Beginning with FY 2025, this adjustment allows FDA to collect fees in addition to the total revenue amount in FYs 2025, 2026, and 2027, if the Agency meets certain performance goals in FYs 2023, 2024, and 2025. If applicable, this provision further increases base establishment registration fee amounts to achieve an increase in total fee collections equal to the applicable performance improvement adjustment, which is set forth in the statute (see section 738(c)(4) of the FD& C Act). FDA met the FY 2023 Pre-Submission Written Feedback goal, which triggers the performance improvement adjustment for FY 2025.

For FY 2025, the performance improvement adjustment is equal to the product of the pre-submission amount in section 738(c)(4)(B)(i)(I) of the FD&C Act, $15,396,600, and the inflation adjustment under section 738(c)(2)(B) of the FD&C Act, 1.122491. See section 738(c)(4)(A)(i) of the FD&C Act. For FY 2025, the performance improvement adjustment is $17,282,545.

2. Hiring Adjustment

Beginning with FY 2025, this adjustment provides for the reduction of base establishment registration fees in FYs 2025, 2026, and 2027, if specified hiring goals for FYs 2023, 2024, and 2025 are not met by a certain threshold. The hiring adjustment would serve to decrease the base establishment registration fee amounts, as necessary, to achieve a reduction in total fee collections equal to the hiring adjustment amount, which is set forth in the statute (see section 738(c)(5) of the FD&C Act).

FDA met the FY 2023 statutory hiring threshold of 123 hires, so establishment registration fees will not need to be lowered by the hiring adjustment amount in FY 2025. Since FDA met the FY 2023 Pre-Submission Written Feedback goal, the FY 2027 statutory hiring goal will be 83 hires for fiscal year 2025 (see section 738(c)(5)(D)(iii)(II) of the FD&C Act) and the threshold will be 75 hires for fiscal year 2025 (see section 738(c)(5)(B)(iii)(II) of the FD&C Act).

3. Operating Reserve Adjustment

For FYs 2023 to 2027, the operating reserve adjustment requires FDA to decrease base establishment registration fees if the amount of operating reserves

of carryover user fees exceeds the ''designated amount'', and such reduction is necessary to provide for not more than such designated amount of operating reserves of carryover user fees (see section 738(c)(6)(A) of the FD&C Act). In making this calculation for FYs 2023 to 2026, a certain amount is excluded from the designated amount and is not subject to the decrease (see section 738(c)(6)(C) of the FD&C Act). For FY 2025, this excluded amount is $77,496,161.

The designated amount is equal to the sum of 13 weeks of operating reserves of carryover user fees plus 1 month of operating reserves, as described in 738(c)(8) (see 738(c)(6)(B) of the FD&C Act).

To determine the 13-week operating reserves of carryover user fees amount, the FY 2025 inflation-adjusted total revenue amount (from section II), $393,710,000, is added to the inflation-adjusted performance improvement adjustment amount (from section III.C.1), $17,282,545, resulting in $410,992,545. This amount is then divided by 52, and then multiplied by 13. The 13-week operating reserve amount for FY 2025 is $102,748,136.

To determine the 1 month of operating reserves described in section 738(c)(8) of the FD&C Act, the FY 2025 inflation-adjusted total revenue amount of $393,710,000 is added to the inflation-adjusted performance improvement adjustment amount of $17,282,545, resulting in $410,992,545. This amount is then divided by 12. The 1 month of operating reserves for FY 2025 is $34,249,379.

For FY 2025, the designated amount is equal to the 13-week operating reserve of $102,748,136 plus the 1 month of operating reserves of $34,249,379, totaling $136,997,515.

To determine the FY 2024 end-of-year operating reserves of carryover user fees amount, FDA combined the actual collections and obligations at the end of the third quarter (June 2024) and added the forecasted collections and obligations for the fourth quarter of FY 2024 to generate a full year estimate for FY 2024. The estimated end-of-year FY 2024 operating reserves of carryover user fees is $50,394,972 (Note, this amount includes the 1-month reserve).

Note that under MDUFA V, for the purposes of calculating the operating reserve adjustment, this amount does not include user fee funds considered unappropriated ($26,680,243) or unearned revenue ($62,498,454). In addition, as noted above, for purposes of the operating reserve adjustment, operating reserves of carryover user fees do not include the estimated $77,496,161 remaining to spend at the end of FY 2024 from the total of $118,000,000 intended to support the Total Product Life Cycle Advisory Program Pilot and Third-Party Review programs.

Because the estimated end-of-year FY 2024 MDUFA operating reserves of carryover user fees amount totaling $50,394,972 does not exceed the FY 2025 designated amount of $136,997,515, FDA will not decrease the base establishment registration fee amounts for FY 2025 to provide for not more than such designated amount.

As there is a performance improvement adjustment for FY 2025, but no hiring adjustment or operating reserve adjustment, establishment registration fees are increased to achieve an increase in total fee collections for FY 2025 equal to the performance improvement adjustment amount of $17,282,545. After so increasing establishment registration fees only, this yields fees of $540,783 (premarket application) and $9,280 (establishment registration).

IV. Calculation of Fee Rates

As noted in section II, the total revenue amount after the applicable inflation adjustment is $393,710,000 (rounded to the nearest thousand dollar). As noted in section III, the performance improvement adjustment solely to registration fees for FY 2025 is $17,282,545. There is no hiring adjustment or operating reserve adjustment for FY 2025.

Table 3A provides fee-paying submission counts, excluding establishment registration, for the last 3 years and the 3-year average. Table 3B provides establishment registration fee-paying submission counts for the most recently completed fiscal year (FY 2023). Historically, FDA has estimated the total number of fee-paying submission counts it expects to receive during the next fiscal year by averaging the number of fee-paying submission counts received in the 3 most recently completed fiscal years; for FY 2025 fee-setting, this would be an average of FY 2021 through FY 2023. FDA received an abnormally high volume of fee-paying establishment registrations due to the COVID–19 pandemic in FY 2020 and FY 2021. The surge in fee-paying establishment registrations has been declining starting in FY 2022, trending back toward pre-pandemic levels. In an effort to normalize the projected volume of establishment registration submissions for the FY 2025 fee-setting calculation, and more accurately project the associated establishment registration revenue, FDA decided to utilize the number of establishment registration fee-paying submission counts from FY 2023.

TABLE 3A—THREE-YEAR AVERAGE OF FEE-PAYING SUBMISSIONS

[Excluding establishment registration]

Application type	FY 2021 actual	FY 2022 actual	FY 2023 actual	3 Yr average

[Excluding establishment registration]

Application type	FY 2021 actual	FY 2022 actual	FY 2023 actual	3 Yr average
Annual Fee for Periodic Reporting	613	620	657	630
Small Business	84	87	22	64

TABLE 3B—FISCAL YEAR 2023 ACTUAL FEE-PAYING ESTABLISHMENT REGISTRATION SUBMISSIONS

Application type	FY 2023	FY 2025 estimate for registrations
Establishment Registrations	30,645	30,645

The information in tables 3A and 3B is necessary to estimate the amount of revenue that will be collected based on the fee amounts. Tables 4A and 4B display the FY 2025 base fees set in statute (column one) and the inflation adjusted base fees (per calculations in section III.A.) (column two). Using the inflation adjusted fees, the 3-year average of fee-paying submissions (excluding establishment registration), and the fee-paying establishment registration submissions from FY 2023, collections are projected to total $361,177,583 which is $32,532,417 lower than the inflation adjusted total revenue amount (in section II). Accordingly, the next step in the fee setting process is to increase the base fee amounts on a uniform proportionate basis to generate the inflation adjusted total revenue amounts (see 738(c)(2)(D)(ii) of the FD&C Act and table 4A, column three).

Applying these further adjusted fee rates to the 3-year average of fee-paying submissions, and the fee-paying establishment registration submissions from FY 2023 results in estimated total fee collections of $391,014,947 which is still $2,695,053 lower than the inflation adjusted total revenue amount (in Section II). The next step in the fee setting process, after the adjustment in (2)(D) is done, is to increase the base establishment registration fee amount as necessary for total fee collections to generate the inflation adjusted total revenue amount, as adjusted under paragraph (2) (see 738(c)(3) of the FD&C Act). Accordingly, the base establishment registration fee was increased by $88 for an establishment registration fee rate of $8,716 (see 738(c)(3) of the FD& C Act and table 4B, column three). The performance improvement adjustment amount is $17,282,544. Per statute, the establishment registration fee is further adjusted to account for the performance improvement adjustment amount. The inflation adjusted establishment registration fee is increased by $564 for an establishment registration fee of $9,280. The fees in column three in table 4A and column four in table 4B are those we are establishing for FY 2025, which are the standard fees.

TABLE 4A—FEES NEEDED TO ACHIEVE NEW FY 2025 REVENUE TARGET

Application type	FY 2025 statutory fees (base fees)	FY 2025 inflation adjusted statutory base fees	Adjusted FY 2025 fees to meet revenue target (uniform proportionate increase)	3-Year average of fee-paying submissions	FY 2025 revenue from adjusted fees

Small Business	3,894	4,371	4,732	64	302,848
Total					126,609,887

TABLE 4B—FEES NEEDED TO ACHIEVE NEW FY 2025 REVENUE TARGET PLUS/MINUS ADJUSTMENTS

Application type	FY 2025 statutory fees (base fees)	FY 2025 inflation adjusted statutory base fees	Adjusted FY 2025 fees to meet inflation adjusted total revenue amount (uniform proportionate increase + further adjustment to establishment registrations)	Adjusted FY 2025 fees to meet inflation adjusted total revenue +/− adjustments	FY 2023 fee-paying submissions	FY 2025 revenue from adjusted fees
Establishment Registrations	$7,100	$7,970	$8,716	$9,280	30,645	$267,101,820

The standard fee (adjusted base amount) for a premarket application, including a BLA, and for a premarket report and a BLA efficacy supplement, is $540,783 for FY 2025. The fees set by reference to the standard fee for a premarket application are:

- For a panel-track supplement, 80 percent of the standard fee
- For a de novo classification request, 30 percent of the standard fee
- For a 180-day supplement, 15 percent of the standard fee
- For a real-time supplement, 7 percent of the standard fee
- For an annual fee for periodic reporting concerning a class III device, 3.5 percent of the standard fee
- For a 510(k) premarket notification, 4.5 percent of the standard fee
- For a 30-day notice, 1.6 percent of the standard fee
- For a 513(g) request for classification information, 1.35 percent of the standard fee

For all submissions other than a 30-day notice and a 513(g) request for classification information, the small business fee is 25 percent of the standard (full) fee for the submission (see section 738(d)(2)(C) and (e)(2)(C) of the FD&C Act). For a 30-day notice and a 513(g) request for classification information, the small business fee is 50 percent of the standard (full) fee for the submission (see section 738(d)(2)(C) of the FD&C Act).

The annual fee for establishment registration, after adjustments, is set at $9,280 for FY 2025. For FY 2025, there is no small business waiver for the annual establishment registration fee; all establishments pay the same fee.

For more information on reduced fees and waivers for small businesses, please see Section IX. Small Business Fee Reductions and Fee Waivers.

Table 5 summarizes the FY 2025 rates for all medical device fees.

TABLE 5—MEDICAL DEVICE FEES FOR FY 2025

Application fee type	Standard fee (as a percent of the standard fee for a premarket application)	FY 2025 standard fee	FY 2025 small business fee
Premarket application (a PMA submitted under section 515(c)(1) of the FD&C Act (21 U.S.C. 360e(c)(1)), a PDP submitted under section 515(f) of the FD&C Act, or a BLA submitted under section 351 of the Public Health Service Act (the PHS Act) (42 U.S.C. 262)).	Base fee specified in statute	$540,783	$135,196
Premarket report (submitted under section 515(c)(2) of the FD&C Act)	100%	540,783	135,196
Efficacy supplement (to an approved BLA under section 351 of the PHS Act)	100%	540,783	135,196
Panel-track supplement	80%	432,626	108,157
De novo classification request	30%	162,235	40,559
180-day supplement	15%	81,117	20,279
Real-time supplement	7%	37,855	9,464
510(k) premarket notification submission	4.5%	24,335	6,084
30-day notice	1.60%	8,653	4,326
513(g) request for classification information	1.35%	7,301	3,650
Annual Fee Type			
Annual fee for periodic reporting on a class III device	3.50%	18,927	4,732
Annual establishment registration fee (to be paid by the establishment engaged in the manufacture, preparation, propagation, compounding, or processing of a device, as defined by 21 U.S.C. 379i(14)).	Base fee specified in statute	9,280	9,280

V. How To Qualify as a Small Business for Purposes of Medical Device Fees

If your business, including your affiliates, has gross receipts or sales of no more than $100 million for the most recent tax year, you may qualify for reduced small business fees. If your business, including your affiliates, has gross sales or receipts of no more than $30 million, you may also qualify for a waiver of the fee for your first premarket application (*i.e.,* PMA, PDP, or BLA) or premarket report. If you want to pay the small business fee rate for a submission or you want to receive a waiver of the fee for your first premarket application or premarket report, you must submit the materials showing you qualify as a small business at least 60 days before you send your submission to FDA. For more information on fee waivers or reductions, please see Section IX. Small Business Fee Reductions and Fee Waivers.

Please note that the establishment registration fee is not eligible for a reduced small business fee. For FY 2025, there is no small business waiver for the annual establishment registration fee. As a result, if the establishment registration fee is the only medical device user fee that you will pay in FY 2025, you should not submit a Small Business Certification Request. FDA will review your information and determine whether you qualify as a small business eligible for the reduced fee and/or fee waiver. If you make a submission before FDA finds that you qualify as a small business, you must pay the standard (full) fee for that submission.

If your business qualified as a small business for FY 2024, your status as a small business will expire at the close of business on September 30, 2024. You must re-qualify for FY 2025 in order to pay small business fees during FY 2025.

A. Domestic (U.S.) Businesses

If you are a domestic (U.S.) business and wish to qualify as a small business for FY 2025, submit the following to FDA:

1. A completed MDUFA Small Business Certification Request for a Business Headquartered in the United States (Form FDA 3602). Form FDA 3602 is provided in the FDA Forms database: *https://www.fda.gov/about-fda/reports-manuals-forms/forms.*

2. A signed copy of your Federal (U.S.) Income Tax Return for the most recent tax year. The most recent tax year will be 2024, except:

- If you submit your MDUFA Small Business Certification Request for FY 2025 before April 15, 2025, and you have not yet filed your return for 2024, you may use tax year 2023.
- If you submit your MDUFA Small Business Certification Request for FY 2025 on or after April 15, 2025, and have not yet filed your 2024 return because you obtained an extension, you may submit your most recent return filed prior to the extension.

3. For each of your affiliates, either:

- If the affiliate is a domestic (U.S.) business, a signed copy of the affiliate's Federal (U.S.) Income Tax Return for the most recent tax year, or
- If the affiliate is a foreign business and cannot submit a Federal (U.S.) Income Tax Return, a National Taxing Authority Certification completed by, and bearing the official seal of, the National Taxing Authority, if extant, of the country in which the firm is headquartered. The National Taxing Authority is the foreign equivalent of the U.S. Internal Revenue Service. This certification must show the amount of gross receipts or sales for the most recent tax year, in both U.S. dollars and the local currency of the country, the exchange rate used in converting the local currency to U.S. dollars, and the dates of the gross receipts or sales collected. The business must also submit a statement signed by the head of the business's firm or by its chief financial officer that the business has submitted certifications for all of its affiliates, identifying the name of each affiliate, or that the business has no affiliates.
- If your affiliate is headquartered in a country without a National Taxing Authority, please contact the Division of Industry and Consumer Education at 800–638–2041 or 301–796–7100 or email at *DICE@fda.hhs.gov.*

4. Once you have completed and signed your Form FDA 3602, submit your form and your supporting documentation (copies of the Federal (U.S.) income tax returns), using the instructions which are available at the following website: *https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/HowtoMarketYourDevice/PremarketSubmissions/ucm577696.htm.*

If you need assistance, please contact the Division of Industry and Consumer Education at 800–638–2041 or 301–796–7100 or email at *DICE@fda.hhs.gov.*

B. Foreign Businesses

If you are a foreign business, and wish to qualify as a small business for FY 2025, submit the following:

1. A completed MDUFA Foreign Small Business Certification Request for a Business Headquartered Outside the United States (Form FDA 3602A). Form FDA 3602A is provided in the FDA Forms database: *https://www.fda.gov/about-fda/reports-manuals-forms/forms.*

2. A National Taxing Authority Certification, completed by, and bearing the official seal of, the National Taxing Authority, if extant, of the country in which the firm is headquartered. This certification must show the amount of gross receipts or sales for the most recent tax year, in both U.S. dollars and the local currency of the country, the exchange rate used in converting the local currency to U.S. dollars, and the dates of the gross receipts or sales collected.

If your firm is headquartered in a country without a National Taxing Authority, please contact the Division of Industry and Consumer Education at 800–638–2041 or 301–796–7100 or email at *DICE@fda.hhs.gov.*

3. For each of your affiliates, either:

- If the affiliate is a domestic (U.S.) business, a signed copy of the affiliate's Federal (U.S.) Income Tax Return for the most recent tax year (2023 or later), or
- If the affiliate is a foreign business and cannot submit a Federal (U.S.) Income Tax Return, a National Taxing Authority Certification completed by, and bearing the official seal of, the National Taxing Authority, if extant, of the country in which the firm is headquartered. The National Taxing Authority is the foreign equivalent of the U.S. Internal Revenue Service. This certification must show the amount of gross receipts or sales for the most recent tax year, in both U.S. dollars and the local currency of the country, the exchange rate used in converting the local currency to U.S. dollars, and the dates for the gross receipts or sales collected. The business must also submit a statement signed by the head of the business's firm or by its chief financial officer that the applicant has submitted certifications for all of its affiliates, identifying the name of each affiliate, or that the business has no affiliates.
- If your affiliate is headquartered in a country without a National Taxing Authority, please contact the Division of Industry and Consumer Education at 800–638–2041 or 301–796–7100 or email at *DICE@fda.hhs.gov.*

4. Once you have completed and signed your Form FDA 3602A, submit your form and your supporting documentation, including the following, using the instructions which are available at the following website: *https://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/HowtoMarketYourDevice/PremarketSubmissions/ucm577696.htm.*

- A copy of the most recent Federal (U.S.) income tax return for each of your affiliates headquartered in the U.S. and
- A copy of an MDUFA Foreign Small Business Certification Request for each of your foreign affiliates.

If you need assistance, please contact the Division of Industry and Consumer Education at 800–638–2041 or 301–796–7100 or email at *DICE@fda.hhs.gov.*

VI. Procedures for Paying Application Fees

If your application or submission is subject to a fee and your payment is received by FDA between October 1, 2024, and September 30, 2025, you must pay the fee in effect for FY 2025. To avoid delay in the review of your application, you should pay the application fee at the time you submit your application to FDA. The later of the date that the application is received in the reviewing center's document room or the date the U.S. Treasury recognizes the payment determines whether the fee rates for FY 2024 or FY 2025 apply. FDA must receive the correct fee at the time that an application is submitted, or the application will not be accepted for filing or review.

FDA requests that you follow the steps below before submitting a medical device application subject to a fee to ensure that FDA links the fee with the correct application. (*Note:* Do not send your user fee check to FDA with the application.)

A. Secure a Payment Identification Number (PIN) and Medical Device User Fee Cover Sheet From FDA Before Submitting Either the Application or the Payment

Log into the User Fee System at: *https://userfees.fda.gov/OA_HTML/mdufmaCAcdLogin.jsp.* Complete the Medical Device User Fee cover sheet. Be sure you choose the correct application

submission date range. (Two choices will be offered until October 1, 2024. One choice is for applications and fees that will be received on or before September 30, 2024, which are subject to FY 2024 fee rates. A second choice is for applications and fees received on or after October 1, 2024, which are subject to FY 2025 fee rates.) After completing data entry, print a copy of the Medical Device User Fee cover sheet and note the unique PIN located in the upper right-hand corner of the printed cover sheet.

B. Electronically Transmit a Copy of the Printed Cover Sheet With the PIN

When you are satisfied that the data on the cover sheet is accurate, electronically transmit that data to FDA according to instructions on the screen. Applicants are required to set up a user account and password to assure data security in the creation and electronic submission of cover sheets.

C. Submit Payment for the Completed Medical Device User Fee Cover Sheet

1. The preferred payment method is online using electronic check (Automated Clearing House (ACH) also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). FDA has partnered with the U.S. Department of the Treasury to utilize *Pay.gov*, a web-based payment system, for online electronic payment. You may make a payment via electronic check or credit card after submitting your cover sheet. Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay. Note:* Only full payments are accepted. No partial payments can be made online. Once you search for your invoice, select ''Pay Now'' to be redirected to *Pay.gov.* Electronic payment options are based on the balance due. Payment by credit card is available for balances that are less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S bank accounts as well as U.S. credit cards.

2. If paying with a paper check:

- All paper checks must be in U.S. currency from a U.S. bank and made payable to the Food and Drug Administration. If needed, FDA's tax identification number is 53–0196965.
- Please write your application's unique PIN (from the upper right-hand corner of your completed Medical Device User Fee cover sheet) on your check.
- *Mail the paper check and a copy of the completed cover sheet to:* Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000.

If you prefer to send a check by a courier, the courier may deliver the check to: U.S. Bank, Attn: Government Lockbox 979033, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This U.S. Bank address is for courier delivery only. If you have any questions concerning courier delivery contact U.S. Bank at 800–495–4981. This telephone number is only for questions about courier delivery).

3. If paying with a wire transfer:

- Please include your application's unique PIN (from the upper right-hand corner of your completed Medical Device User Fee cover sheet) in your wire transfer. Without the PIN, your payment may not be applied to your cover sheet and review of your application may be delayed.
- The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee it is required that you add that amount to the payment to ensure that the invoice is paid in full.

Use the following account information when sending a wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No. 75060099, Routing No. 021030004, SWIFT: FRNYUS33.

FDA records the official application receipt date as the later of the following: (1) the date the application was received by the FDA Document Control Center for the reviewing Center or (2) the date the U.S. Treasury recognizes the payment.

D. Submit Your Application to FDA With a Copy of the Completed Medical Device User Fee Cover Sheet

Please submit your application and a copy of the completed Medical Device User Fee cover sheet to the address located at *https://www.fda.gov/cdrhsubmissionaddress.*

VII. Procedures for Paying the Annual Fee for Periodic Reporting

You will be invoiced at the end of the quarter in which your PMA Periodic Report is due. Invoices will be sent based on the details included on your PMA file. You are responsible for ensuring FDA has your current billing information, and you may update your contact information for the PMA by submitting an amendment to the pending PMA or a supplement to the approved PMA.

1. The preferred payment method is online using electronic check (ACH also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay* (*Note:* Only full payments are accepted. No partial payments can be made online). Once you search for your invoice, select ''Pay Now'' to be redirected to *Pay.gov.* Note that electronic payment options are based on the balance due. Payment by credit card is available for balances that are less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

2. *If paying with a paper check:* The check must be in U.S. currency from a U.S. bank and made payable to the Food and Drug Administration. If needed, FDA's tax identification number is 53–0196965.

- Please write your invoice number on the check.
- *Mail the paper check and a copy of the invoice to:* Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000.

To send a check by a courier, the courier must deliver the check and printed copy of the cover sheet to U.S. Bank, Attn: Government Lockbox 979033, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This U.S. Bank address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 800–495–4981. This telephone number is only for questions about courier delivery).

3. When paying by a wire transfer, it is required that the invoice number is included; without the invoice number the payment may not be applied. If the payment amount is not applied, the invoice amount would be referred to collections. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required that you add that amount to the payment to ensure that the invoice is paid in full.

Use the following account information when sending a wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No. 75060099, Routing No. 021030004, SWIFT: FRNYUS33.

VIII. Procedures for Paying Annual Establishment Registration Fees

To pay the annual establishment registration fee, firms must access the Device Facility User Fee (DFUF) website at *https://userfees.fda.gov/OA_HTML/furls.jsp.* (FDA has verified the website address, but FDA is not responsible for any subsequent changes to the website

address after this document publishes in the **Federal Register**.) Create a DFUF order and you will be issued a PIN when you place your order. After payment has been processed, you will be issued a payment confirmation number (PCN). You will not be able to register your establishment if you do not have a PIN and a PCN. An establishment required to pay an annual establishment registration fee is not legally registered in FY 2025 until it has completed the steps below to register and pay any applicable fee (see section 738(f)(2) of the FD&C Act).

Companies that do not manufacture any product other than a licensed biologic are required to register in the Blood Establishment Registration (BER) system. FDA's Center for Biologics Evaluation and Research (CBER) will send establishment registration fee invoices annually to these companies.

A. Submit a DFUF Order With a PIN From FDA Before Registering or Submitting Payment

To submit a DFUF Order, you must create or have previously created a user account and password for the user fee website listed previously in this section. After creating a username and password, log into the Establishment Registration User Fee FY 2025 store. Complete the DFUF order by entering the number of establishments you are registering that require payment. When you are satisfied that the information in the order is accurate, electronically transmit that data to FDA according to instructions on the screen. Print a copy of the final DFUF order and note the unique PIN located in the upper right-hand corner of the printed order.

B. Pay for Your DFUF Order

Unless paying by U.S. credit card, all payments must be in U.S. currency and drawn on a U.S. bank.

1. *If paying by credit card or electronic check (ACH or eCheck):* The DFUF order will include payment information, including details on how you can pay online using a credit card or electronic check. Follow the instructions provided to make an electronic payment.

2. *If paying with a paper check:* The check must be in U.S. currency and drawn on a U.S. bank, and mailed to: Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000.

If a check is sent by a courier that requests a street address, the courier can deliver the check to: U.S. Bank, Attn: Government Lockbox 979033, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This U.S. Bank address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 800–495–4981. This telephone number is only for questions about courier delivery.)

Please make sure that both of the following are written on your check: (1) the FDA post office box number (P.O. Box 979033) and (2) the PIN that is printed on your order. Include a copy of your printed order when you mail your check.

3. *If paying with a wire transfer:* Wire transfers may also be used to pay annual establishment registration fees. To send a wire transfer, please read and comply with the following information:

Include your order's unique PIN (in the upper right-hand corner of your completed DFUF order) in your wire transfer. Without the PIN, your payment may not be applied to your facility and your registration may be delayed.

The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required that you add that amount to the payment to ensure that the invoice is paid in full. Use the following account information when sending a wire transfer: U.S. Dept. of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No. 75060099, Routing No. 021030004, SWIFT: FRNYUS33. If needed, FDA's tax identification number is 53–0196965.

C. Complete the Information Online To Update Your Establishment's Annual Registration for FY 2025, or To Register a New Establishment for FY 2025

Go to the Center for Devices and Radiological Health's website at *https://www.fda.gov/medical-devices/how-study-and-market-your-device/device-registration-and-listing* and click the ''Access Electronic Registration'' link on the left side of the page. This opens a new page with important information about the FDA Unified Registration and Listing System (FURLS). After reading this information, click on the ''Access Electronic Registration'' link in the middle of the page. This link takes you to an FDA Industry Systems page with tutorials that demonstrate how to create a new FURLS user account if your establishment did not create an account in FY 2024. Manufacturers of licensed biologics should register in the electronic Blood Establishment Registration (eBER) system at *https://www.fda.gov/vaccines-blood-biologics/guidance-compliance-regulatory-information-biologics/biologics-establishment-registration.*

Enter your existing account ID and password to log into FURLS. From the FURLS/FDA Industry Systems menu, click on the Device Registration and Listing Module (DRLM) of FURLS button. New establishments will need to register, and existing establishments will update their annual registration using choices on the DRLM menu. When you choose to register or update your annual registration, the system will prompt you through the entry of information about your establishment and your devices. If you have any problems with this process, email: *reglist@cdrh.fda.gov* or call 301–796–7400 for assistance. (*Note:* This email address and this telephone number are for assistance with establishment registration only; they are not to be used for questions related to other aspects of medical device user fees.) Problems with the eBER system should be directed to *https://www.accessdata.fda.gov/scripts/email/cber/bldregcontact.cfm* or call 240–402–8360.

D. Enter Your DFUF Order PIN and PCN

After completing your annual or initial registration and device listing, you will be prompted to enter your DFUF order PIN and PCN, when applicable. This process does not apply to establishments engaged only in the manufacture, preparation, propagation, compounding, or processing of licensed biologic devices. CBER will send invoices for payment of the establishment registration fee to such establishments.

IX. Small Business Fee Reductions and Fee Waivers

To qualify for reduced fees for small businesses or a small business fee waiver, please see the requirements for qualification provided in Section V. How To Qualify as a Small Business for Purposes of Medical Device Fees. The applicant should submit a Small Business Certification Request and the supporting materials showing you qualify as a small business at least 60 days before you send your submission to FDA. FDA will review your information and determine whether you qualify as a small business eligible for the reduced fee and/or fee waiver. If you make a submission before FDA finds that you qualify as a small business, you must pay the standard (full) fee for that submission.

If you need assistance, please contact the Division of Industry and Consumer Education at 800–638–2041 or 301–796–7100 or email at *DICE@fda.hhs.gov.*

A. Premarket Approval Fee Reduction or Waiver

A small business applicant may request to pay a reduced rate for

premarket approval fees. An applicant may also request a fee waiver for their first premarket application or premarket report (section 738(d) of the FD&C Act).

B. Premarket Notification Submission Fee Reduction

A small business applicant may request to pay a reduced rate for a premarket notification submission.

C. Annual Establishment Registration Fee Waiver

For FY 2025, there is no small business waiver for the annual establishment registration fee; all establishments pay the same fee.

X. Refunds

To qualify for consideration for a refund, a person shall submit to FDA a written request for a refund not later than 180 days after such fee is due. FDA has discretion to refund a fee or a portion of the fee. A determination by FDA concerning a refund shall not be reviewable. For more information on qualifying and submitting a refund, see section 738(a)(2)(D) of the FD&C Act.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3423]

Biosimilar User Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the rates for biosimilar user fees for fiscal year (FY) 2025. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Biosimilar User Fee Amendments of 2022 (BsUFA III), authorizes FDA to assess and collect user fees for certain activities in connection with biosimilar biological product development; review of certain applications for approval of biosimilar biological products; and each biosimilar biological product approved in a biosimilar biological product application. BsUFA III directs FDA to establish, before the beginning of each fiscal year, the amount of initial and annual biosimilar biological product development (BPD) fees, the reactivation fee, and the biosimilar biological product application and program fees for such year. These fees apply to the period from October 1, 2024, through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20993, 240–402–4989, and the User Fees Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

Sections 744G, 744H, and 744I of the FD&C Act (21 U.S.C. 379j–51, 379j–52, and 379j–53), as amended by BsUFA III, authorize the collection of fees for biosimilar biological products. Under section 744H(a)(1)(A) of the FD&C Act, the initial BPD fee for a product is due when the sponsor submits an investigational new drug (IND) application that FDA determines is intended to support a biosimilar biological product application or within 7 calendar days after FDA grants the first BPD meeting, whichever occurs first. A sponsor who has paid the initial BPD fee is considered to be participating in FDA's BPD program for that product.

Under section 744H(a)(1)(B) of the FD&C Act, once a sponsor has paid the initial BPD fee for a product, the annual BPD fee is assessed beginning with the next fiscal year. The annual BPD fee is assessed for the product each fiscal year until the sponsor submits a marketing application for the product that is accepted for filing, the sponsor discontinues participation in FDA's BPD program for the product, or the sponsor has been administratively removed from the BPD program for the product.

Under section 744H(a)(1)(D) of the FD&C Act, if a sponsor has discontinued participation in FDA's BPD program or has been administratively removed from the BPD program for a product and wants to reengage with FDA on development of the product, the sponsor must pay all annual BPD fees previously assessed for such product and still owed, and a reactivation fee to resume participation in the program. The sponsor must pay the reactivation fee by the earlier of the following dates: (1) no later than 7 calendar days after FDA grants the sponsor's request for a BPD meeting for that product or (2) upon the date of submission by the sponsor of an IND describing an investigation that FDA determines is intended to support a biosimilar biological product application for that product. The sponsor will be assessed an annual BPD fee beginning in the next fiscal year after payment of the reactivation fee.

BsUFA III also authorizes fees for certain biosimilar biological product applications and for each biosimilar biological product identified in an approved biosimilar biological product application (section 744H(a)(2) and (3) of the FD&C Act). Under certain conditions, FDA will grant a small business a waiver of the biosimilar biological product application fee (section 744H(d)(1) of the FD&C Act).

For FY 2023 through FY 2027, the base revenue amounts for the total revenues from all BsUFA fees are established by BsUFA III. For FY 2025, the base revenue amount is the FY 2024 total revenue amount excluding any operating reserve adjustment, which equates to the amount of $51,058,823. The FY 2025 base revenue amount is to be adjusted by the inflation adjustment, strategic hiring and retention adjustment, capacity planning adjustment (CPA), operating reserve adjustment, and the additional dollar amount. Each of these adjustments will be discussed in the sections below.

This document provides fee rates for FY 2025 for the initial and annual BPD fee ($10,000), for the reactivation fee ($20,000), for an application requiring clinical data ($1,471,118) for an application not requiring clinical data ($735,559) and for the program fee ($256,168). These fees are effective on October 1, 2024, and will remain in effect through September 30, 2025. For applications that are submitted on or after October 1, 2024, the new fee schedule must be used.

II. Fee Revenue Amount for FY 2025

The base revenue amount for FY 2025 is $51,058,823 prior to adjustments for inflation, strategic hiring and retention, capacity planning, operating reserves, and the additional dollar amount (see section 744H(b) and (c) of the FD&C Act).

A. FY 2025 Statutory Fee Revenue Adjustments for Inflation

BsUFA III specifies that the $51,058,823 is to be adjusted for inflation increases for FY 2025 using two separate adjustments: one for personnel compensation and benefits (PC&B) and one for non-PC&B costs (see section 744H(c)(1) of the FD&C Act).

The component of the inflation adjustment for payroll costs shall be the average annual percent change in the cost of all PC&B paid per full-time

equivalent (FTE [1]) positions at FDA for the first 3 of the preceding 4 fiscal years, multiplied by the proportion of PC&B costs to total FDA costs of the process for the review of biosimilar biological product applications for the first 3 of the preceding 4 fiscal years (see section 744H(c)(1)(B) of the FD&C Act).

Table 1 summarizes the actual cost and FTE data for the specified fiscal years and provides the percent changes from the previous fiscal years and the average percent changes over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 1—FDA PC&B EACH YEAR AND PERCENT CHANGES

	FY 2021	FY 2022	FY 2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	3.8539%
Total FTE	18,501	18,474	18,729	
PC&B per FTE	$164,289	$171,348	$183,486	
Percent Change from Previous Year	0.1811%	4.2967%	7.0838%	

The statute specifies that this 3.8539 percent be multiplied by the proportion of PC&B costs to the total FDA costs of the process for the review of biosimilar biological product applications. Table 2 shows the PC&B and the total obligations for the process for the review of biosimilar biological product applications for the first 3 of the preceding 4 fiscal years.

TABLE 2—PC&B AS A PERCENT OF TOTAL COST OF THE PROCESS FOR THE REVIEW OF BIOSIMILAR BIOLOGICAL PRODUCT APPLICATIONS

	2021	2022	2023	3-Year average
Total PC&B (proportion of costs)	$30,932,267	$34,065,826	$45,893,774	
Total Costs	$55,928,075	$68,521,689	$86,101,288	
PC&B percent	55.3072%	49.7154%	53.3021%	52.7749%

The payroll adjustment is 3.8539 percent from table 1 multiplied by 52.7749 percent (or 2.0339 percent).

The statute specifies that the portion of the inflation adjustment for nonpayroll costs is the average annual percent change that occurred in the Consumer Price Index (CPI) for urban consumers (Washington-Arlington-Alexandria, DC-VA-MD-WV; not seasonally adjusted; all items; annual index) for the first 3 years of the preceding 4 years of available data multiplied by the proportion of all costs other than PC&B costs to total costs of the process for the review of biosimilar biological product applications for the first 3 years of the preceding 4 fiscal years (see section 744H(c)(1)(B) of the FD&C Act). Table 3 provides the summary data for the percent changes in the specified CPI for the Washington-Arlington-Alexandria area.[2]

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN CPI FOR WASHINGTON-ARLINGTON-ALEXANDRIA AREA

Fiscal year	2021	2022	2023	3-Year average
Annual CPI	277.728	296.117	305.317	
Annual Percent Change	3.9568%	6.6212%	3.1069%	4.5616%

The statute specifies that this 4.5616 percent be multiplied by the proportion of all costs other than PC&B to total costs of the process for the review of biosimilar biological product applications obligated. Since 52.7749 percent was obligated for PC&B (as shown in table 2), 47.2251 percent is the portion of costs other than PC&B (100 percent minus 52.7749 percent equals 47.2251 percent). The non-payroll adjustment is 4.5616 percent times 47.2251 percent, 2.1542 percent.

Next, we add the payroll adjustment (2.0339 percent) to the nonpayroll adjustment (2.1542 percent), for a total inflation adjustment of 4.1881 percent (rounded) for FY 2025.

We then multiply the base revenue amount for FY 2025 ($51,058,823) by the inflation adjustment percentage (4.1881 percent), yielding an inflation adjustment of $2,138,395. Adding this amount yields an inflation-adjusted amount of $53,197,218.

B. Strategic Hiring and Retention Adjustment

The statute specifies that for each fiscal year, after the annual base revenue is adjusted for inflation, FDA shall further increase the fee revenue and fees by the strategic hiring and retention adjustment, which is $150,000 for FY 2025 (see section 744H(c)(2) of the FD&C Act).

C. FY 2025 Statutory Fee Revenue Adjustments for Capacity Planning

The statute specifies that the fee revenue and fees shall be further adjusted to reflect changes in the resource capacity needs for the process for the review of biosimilar biological product applications (see section 744H(c)(3) of the FD&C Act). Following a process agreed upon by FDA and

[1] Full-time equivalents refer to a paid staff year, rather than a count of individual employees.

[2] The data are published by the Bureau of Labor Statistics and can be found on its website at: *https://data.bls.gov/pdq/SurveyOutputServlet?data_tool=dropmap&series_id=CUURS35ASA0,CUUSS35ASA0.*

industry during BsUFA II reauthorization discussions and subsequently required in statute, FDA established the capacity planning adjustment methodology and first applied it in the setting of FY 2021 fees. The establishment of this methodology is described in the **Federal Register** at 85 FR 47220. This methodology includes a continuous, iterative improvement approach, under which the Agency intends to refine its data and estimates for the core review activities to improve their accuracy over time.

Improvements adopted for the FY 2025 CPA include the incorporation of hiring plans and attrition estimates within the capacity calculation. In prior years, the impacts of expected hiring on the review capacity of the program were considered a step within the managerial adjustment process. The FY 2025 resource capacity number includes an estimate of the onboard capacity for direct review-related work, as well as an estimate of the additional capacity that would be provided from any additional positions expected to be added through the course of FY 2024. No additional deduction for positions planned to be added prior to the end of FY 2024 then needs to be deducted within the managerial adjustment moving forward. Because of this change, the resource capacity numbers presented in this **Federal Register** Notice cannot be directly compared to those provided in prior years' fee-setting notices.

The CPA methodology consists of four steps:

1. *Forecast workload volumes:* predictive models estimate the volume of workload for the upcoming fiscal year.

2. *Forecast the resource needs:* forecast algorithms are generated utilizing time reporting data. These algorithms estimate the required demand in FTEs for direct review-related effort. This is then compared to current available resources for the direct review-related workload.

The current available resources for the direct review-related workload (presented as current resource capacity below) is a measure of the percentage of time onboard staff report to direct review-related workload activities, plus a percentage of the additional positions that are targeted to be hired within the remainder of FY 2024. Of note, the current resource capacity is not directly a function of the change in submission volume from one year to the next, but rather a summation of the percent of total staff time plus vacancies estimated to be available for direct review work. As time reporting is a direct input into the current review capacity calculations, the current review capacity may be impacted by factors such as shifts in the level of effort required for review work, staff reporting time exceeding their tour of duty, or other shifts impacting the workload of the program.

3. A managerial adjustment to assess the resource forecast in the context of additional internal factors: program leadership examines operational, financial, and resourcing data to assess whether FDA will be able to utilize additional funds during the fiscal year and whether the funds are required to support additional review capacity. FTE amounts are adjusted, if needed. The managerial adjustment process includes consideration of prior years' forecast performance, future year considerations, hiring capacity considerations, and other relevant considerations.

4. Convert the FTE need to dollars: utilizing FDA's fully loaded FTE cost model, the final feasible FTEs are converted to an equivalent dollar amount. The fully loaded FTE cost model is higher in FY 2025 than in prior years primarily due to the impact of inflation.

The following section outlines the major components of the FY 2025 BsUFA III CPA. Table 4 summarizes the forecasted workload volumes for BsUFA III in FY 2025 based on predictive models, as well as historical actuals from FY 2023 for comparison.

TABLE 4—BSUFA III ACTUAL FY 2023 WORKLOAD VOLUMES & PREDICTED FY 2025 WORKLOAD VOLUMES

Workload category	FY 2023 actuals	FY 2025 predictions
Original Biosimilar Supplements [1]	40	48
Manufacturing Supplements	92	95
Biosimilar Biological Product Applications	19	17
BsUFA Industry Meetings (BIA, BPD Type 1–4)	130	150
Participating BPD Programs [2]	114	111
Annual Reports [3]	48	52
PMR/PMC-Related Documents [3]	23	31
Active REMS Programs [2 3]	0	1

[1] Includes Supplements with Clinical Data and Labeling Supplements.
[2] Represents activities related to the review of materials submitted to the application file after approval.
[3] Represents the number of Active REMS Programs proportional to Center and User Fee by total number of qualifying products with the exclusion of the Opioid Shared System.

Utilizing the resource forecast algorithms, the forecasted workload volumes for FY 2025 were then converted into estimated FTE needs for FDA's BsUFA III direct review-related work. The resulting expected FY 2025 FTE need for BsUFA III was compared to current onboard capacity for BsUFA III direct review-related work to determine the FY 2025 resource delta, as summarized in table 5.

TABLE 5—FY 2025 BSUFA III RESOURCE DELTA

Current resource capacity	FY 2025 resource forecast	Predicted FY 2025 FTE delta
84	96	12

The projected 12 FTE delta was then assessed by FDA in the context of additional operational and internal factors to ensure that a fee adjustment is only made for resources which can be utilized in the fiscal year and for which

funds are required to support additional review capacity. In prior years, FDA adjusted the BsUFA FTE delta to 0 FTEs as there were additional funds available to support the needed FTEs. Due to large downward operating reserve adjustments in prior years, additional funds are needed to sustain additional FTE positions. BsUFA has also experienced sustained growth in review workload over recent years which is expected to continue. As such, FDA is adjusting the FTE delta to 7 FTE to provide a modest adjustment to support the sustained increases in review workload.

TABLE 6—FY 2025 BSUFA III CPA

Additional FTEs for FY 2025	Cost for each additional FTE	FY 2024 BsUFA III CPA
7	$380,675	$2,664,725

D. FY 2025 Additional Dollar Amount

For FY 2023 and FY 2024, BsUFA III provided an additional dollar amount for additional FTE for the biosimilar biological product review program to support enhancements outlined in the BsUFA III Commitment Letter. For FY 2024, the statute directed FDA to further increase the fee revenue and fees by the additional dollar amount, which was $320,569 for FY 2024 (see section 744H(b)(1)(G) of the FD&C Act). For FY 2025 no additional amount is specified in statute.

TABLE 7—BASE REVENUE AMOUNT AND ADJUSTMENTS PRIOR TO OPERATIVE RESERVE ADJUSTMENT

Fee	Amount
Base Revenue Amount (Section 744H(b)–(c) of the FD&C Act)	$51,058,823
Inflation Adjustment (Section 744H(c)(1) of the FD&C Act)	2,138,395
Strategic Hiring and Retention Adjustment (Section 744H(c)(2) of the FD&C Act)	150,000
Capacity Planning Adjustment (Section 744H(c)(3) of the FD&C Act)	2,664,725
Additional Dollar Amount	.....
Cumulative Revenue Amount Prior to Operative Reserve Adjustment	56,011,943

E. FY 2025 Statutory Fee Revenue Adjustments for Operating Reserve

BsUFA III sets forth an operating reserve adjustment to the fee revenue and fees. Specifically, for FY 2025, the statute directs FDA: (1) to increase the fee revenue and fees if such an adjustment is necessary to provide for at least 10 weeks of operating reserves of carryover user fees for the process for the review of biosimilar biological product applications and (2) if FDA has carryover balances for such process in excess of 21 weeks of such operating reserves, to decrease such fee revenue and fees to provide for not more than 21 weeks of such operating reserves (see section 744H(c)(4) of the FD&C Act).

To calculate the 10-week and 21-week threshold amounts for the FY 2025 operating reserve adjustment, the estimated adjusted revenue amount (*i.e.,* the base revenue amount and adjustments prior to the operating reserve adjustment), $56,011,943 is divided by 52, resulting in a $1,077,153 cost of operation for 1 week (rounded to the nearest dollar). The 1-week value ($1,077,153) is then multiplied by 10 weeks to generate the 10-week operating reserve threshold amount for FY 2025 of $10,771,528. The 1-week value is multiplied by 21 to generate the 21-week operating reserve threshold amount for FY 2025 of $22,620,208.

To calculate the estimated operating reserve of carryover user fees at the end of FY 2024, FDA estimated the operating reserves of carryover fees at the end of June 2024. The balance of operating reserves of carryover fees at the end of June 2024 is combined with the forecasted collections and obligations for the remainder of FY 2024 to generate a full year estimate for FY 2024. The estimated operating reserve of carryover user fees at the end of FY 2024 is $14,245,046.

The estimated operating reserve of carryover user fees at the end of FY 2024 of $14,245,046 is below the 21-week threshold allowable operating reserve of carryover user fees for FY 2025 of $22,620,208 and above the 10-week minimum operating reserve carryover user fees for FY 2025 of $10,771,528. As such, FDA is not applying a downward or upward operating reserve adjustment at the start of FY 2025, summarized below.

TABLE 8—TOTAL ESTIMATED ADJUSTED REVENUE AMOUNT

Fee	Amount
Base Revenue Amount (Section 744H(b)–(c) of the FD&C Act)	$51,058,823
Inflation Adjustment (Section 744H(c)(1) of the FD&C Act)	2,138,395
Strategic Hiring and Retention Adjustment (Section 744H(c)(2) of the FD&C Act)	150,000
Capacity Planning Adjustment (Section 744H(c)(3) of the FD&C Act)	2,664,725
Additional Dollar Amount	.....
Operating Reserve Adjustment	.....
Total Revenue Amount in sections 744H(b)–(c), 744H(c)(1), (2), (3) of the FD&C Act	56,011,943
Total Revenue Amount in sections 744H(b)–(c), 744H(c)(1), (2), (3) of the FD&C Act (rounded to the nearest thousand dollars)	56,012,000

III. Fee Amounts for FY 2025

Under section 744H(b)(2)(A) of the FD&C Act, FDA must determine the percentage of the total revenue amount for a fiscal year to be derived from: (1) initial and annual BPD fees, and reactivation fees; (2) biosimilar biological product application fees; and (3) biosimilar biological product program fees. As described above, an operating reserve adjustment is not required for FY 2025.

A. Application Fees

In establishing the biosimilar biological product application fee amount for FY 2025, FDA assessed multiple modeling options. Considering available factors, FDA selected a model that forecasts 17 biosimilar biological product applications requiring clinical data submitted for approval in FY 2025 and zero applications that do not require clinical data. Given recent years' data regarding biosimilar biological product applications that are refused to file and withdrawals before filing, the 17 submissions will be assumed to equate to 16.25 full application equivalents.

For FY 2025 the biosimilar biological product application fee for applications requiring clinical data is $1,471,118. Applications not requiring clinical data pay half that fee, or $735,559. This is estimated to provide a total of $23,905,668 representing 43 percent (rounded to the nearest whole number) of the FY 2025 target revenue amount.

B. Biosimilar Biological Product Program Fee

Under BsUFA III, FDA assesses biosimilar biological product program fees (''program fees''). An applicant in a biosimilar biological product application shall not be assessed more than five program fees for a fiscal year for biosimilar biological products identified in a single biosimilar biological product application (see section 744H(a)(3)(D) of the FD&C Act). Applicants are assessed a program fee for a fiscal year for biosimilar biological products that are identified in a biosimilar biological product application approved as of October 1 of such fiscal year; that may be dispensed only under prescription pursuant to section 503(b) of the FD&C Act; and that, as of October 1 of such fiscal year, do not appear on a list developed and maintained by FDA of discontinued biosimilar biological products. An approved biosimilar biological product that appears on the list of discontinued biosimilar biological products as of October 1 of a fiscal year would also be assessed the program fee if it is removed from the discontinued list during the fiscal year and the other statutory criteria for fee assessment are satisfied (see section 744H(a)(3)(E)(iii) of the FD&C Act).

Based on available information, FDA estimates that 121 program fees will be invoiced for FY 2025. For products invoiced in the FY 2025 regular billing cycle, FDA anticipates that zero program fees will be refunded.

For FY 2025, the biosimilar biological product program fee is $256,168. This is estimated to provide a total of $30,996,328, representing 55 percent (rounded to the nearest whole number) of the FY 2025 target revenue amount.

C. Initial and Annual BPD Fees, and Reactivation Fees

To estimate the number of BPD fees to be paid in FY 2025, FDA must consider the number of new BPD programs, the number of current BPD programs, and the number of BPD programs that will be reactivated. These estimates provide information that, when aggregated, allows FDA to set BPD fees (initial BPD fees, annual BPD fees, reactivation fees).

FDA analyzed available data to estimate the total number of BPD programs for FY 2025. In FY 2025, FDA estimates approximately 23 new BPD programs, no reactivations (a single reactivation is weighted as two BPD fees), and approximately 88 BPD programs to pay the annual BPD fee, yielding a rounded total estimated equivalent of 111 BPD fees to be collected in FY 2025. The remainder of the target revenue of $1,110,000 or 2 percent is to be collected from the BPD fees. Dividing this amount by the estimated 111 BPD fees to be paid equals an initial BPD and annual BPD fee amount of $10,000 (rounded to the nearest dollar). The reactivation fee is set at twice the initial/annual BPD amount at $20,000 (rounded to the nearest dollar).

IV. Fee Schedule for FY 2025

The fee rates for FY 2025 are displayed in table 9.

TABLE 9—FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
Initial BPD	$10,000
Annual BPD	10,000
Reactivation	20,000
Applications:	
Requiring Clinical Data	1,471,118
Not Requiring Clinical Data	735,559
Program Fee	256,168

V. Fee Payment Options and Procedures

A. Initial BPD, Reactivation, and Application Fees

The fees established in the new fee schedule apply to FY 2025, *i.e.,* the period from October 1, 2024, through September 30, 2025. The initial BPD fee for a product is due when the sponsor submits an IND that FDA determines is intended to support a biosimilar biological product application for the product or within 7 calendar days after FDA grants the first BPD meeting for the product, whichever occurs first. Sponsors who have discontinued participation in the BPD program for a product or have been administratively removed from the BPD program for a product, and seek to resume participation in the BPD program for the product must pay all annual BPD fees previously assessed for such product and still owed and the reactivation fee by the earlier of the following dates: no later than 7 calendar days after FDA grants the sponsor's request for a BPD meeting for that product, or upon the date of submission by the sponsor of an IND describing an investigation that FDA determines is intended to support a biosimilar biological product application for that product.

The application fee for a biosimilar biological product is due upon submission of the application (see section 744H(a)(2)(C) of the FD&C Act).

To make a payment of the initial BPD, reactivation, or application fee, complete the Biosimilar User Fee Cover Sheet, available on FDA's website (*https://www.fda.gov/bsufa*) and generate a user fee identification (ID) number. Payment must be made in U.S. currency by electronic check, check, bank draft, U.S. postal money order, or wire transfer. The preferred payment method is online using electronic check (Automated Clearing House (ACH) also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). FDA has partnered with the U.S. Department of the Treasury to use *www.pay.gov,* a web-based payment application, for online electronic payment. The *www.pay.gov* feature is available on the FDA website after the user fee ID number is generated. Secure electronic payments can be submitted using the User Fees Payment Portal at

https://userfees.fda.gov/pay (*Note:* only full payments are accepted. No partial payments can be made online). Once you search for your invoice, click ''Pay Now'' to be redirected to *www.pay.gov*. Electronic payment options are based on the balance due. Payment by credit card is available for balances that are less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

If a check, bank draft, or postal money order is submitted, make it payable to the order of the Food and Drug Administration and include the user fee ID number to ensure that the payment is applied to the correct fee(s). Payments can be mailed to: Food and Drug Administration, P.O. Box 979108, St. Louis, MO 63197–9000. If a check, bank draft, or money order is to be sent by a courier that requests a street address, the courier should deliver your payment to U.S. Bank, Attention: Government Lockbox 979108, 3180 Rider Trail South, Earth City, MO 63045. (Note: this U.S. Bank address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 800–495–4981 (this telephone number is only for questions about courier delivery). Please make sure that the FDA post office box number (P.O. Box 979108) and ID number is written on the check, bank draft, or postal money order.

For payments made by wire transfer, include the unique user fee ID number to ensure that the payment is applied to the correct fee(s). Without the unique user fee ID number, the payment may not be applied. The originating financial institution may charge a wire transfer fee. Include applicable wire transfer fees with payment to ensure fees are fully paid. Questions about wire transfer fees should be addressed to the financial institution. The following account information should be used to send payments by wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No: 75060099, Routing No: 021030004, SWIFT: FRNYUS33. FDA's tax identification number is 53–0196965.

B. Annual BPD and Program Fees

FDA will issue invoices with payment instructions for FY 2025 annual BPD and program fees under the new fee schedule in August 2024. Under sections 744H(a)(1)(B)(ii) and 744H(a)(3)(B) of the FD&C Act, annual BPD and program fees will be due on October 1, 2024.

If sponsors join the BPD program after the annual BPD invoices have been issued in August 2024 FDA will issue invoices in December 2024 to sponsors subject to fees for FY 2025 that qualify for the annual BPD fee after the August 2024 billing. FDA will issue invoices in December 2025 for any products that qualify for the annual program fee after the August 2024 billing.

C. Waivers and Returns

To qualify for consideration for a small business waiver under section 744H(d) of the FD&C Act, or the return of any fee paid under section 744H of the FD&C Act, including if the fee is claimed to have been paid in error, a person shall submit to FDA a written request justifying such waiver or return and, except as otherwise specified in section 744H of the FD&C Act, such written request shall be submitted to FDA not later than 180 days after such fee is due. Such written request shall include any legal authorities under which the request is made. See section 744H(h) of the FD&C Act.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3404]

Generic Drug User Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Federal Food, Drug, and Cosmetic Act (FD&C Act or statute), as amended by the Generic Drug User Fee Amendments of 2022 (GDUFA III), authorizes the Food and Drug Administration (FDA, Agency, or we) to assess and collect fees for abbreviated new drug applications (ANDAs); drug master files (DMFs); generic drug active pharmaceutical ingredient (API) facilities, finished dosage form (FDF) facilities, and contract manufacturing organization (CMO) facilities; and generic drug applicant program user fees. In this document, FDA is announcing fiscal year (FY) 2025 rates for GDUFA III fees. These fees are effective on October 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave, Silver Spring, MD 20903, 240–402–4989; or the User Fees Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Sections 744A and 744B of the FD&C Act (21 U.S.C. 379j–41 and 379j–42), as amended by GDUFA III, authorize FDA to assess and collect fees associated with human generic drug products. Fees are assessed on: (1) certain types of applications for human generic drug products; (2) certain facilities where APIs and FDFs are produced; (3) certain DMFs associated with human generic drug products; and (4) generic drug applicants who own one or more approved ANDAs (the program fee) (see section 744B(a)(2) through (5) of the FD&C Act). For more information about GDUFA III, please refer to the FDA website (*https://www.fda.gov/gdufa*).

For FY 2025, the generic drug user fee rates are ANDA ($321,920), DMF ($95,084), domestic API facility ($41,580), foreign API facility ($56,580), domestic FDF facility ($231,952), foreign FDF facility ($246,952), domestic CMO facility ($55,668), foreign CMO facility ($70,668), large size operation generic drug applicant program ($1,891,664), medium size operation generic drug applicant program ($756,666), and small business generic drug applicant program ($189,166). These fees are effective on October 1, 2024, and will remain in effect through September 30, 2025. The fee rates for FY 2025 are set out in table 1.

TABLE 1—FEE SCHEDULE FOR FY 2025

Generic drug fee category	Fees rates for FY 2025
Applications:	
Abbreviated New Drug Application (ANDA)	$321,920
Drug Master File (DMF)	95,084
Facilities:	
Active Pharmaceutical Ingredient (API)—Domestic	41,580
API—Foreign	56,580
Finished Dosage Form (FDF)—Domestic	231,952
FDF—Foreign	246,952
Contract Manufacturing Organization (CMO)—Domestic	55,668
CMO—Foreign	70,668
GDUFA Program:	
Large size operation generic drug applicant	1,891,664
Medium size operation generic drug applicant	756,666
Small business generic drug applicant	189,166

II. Fee Revenue Amount for FY 2025

Under section 744B(b)(1)(B)(ii) of the FD&C Act, the base revenue amount for FY 2025 for GDUFA III is $613,538,015. Under section 744B(c)(1) of the FD&C Act, applicable inflation adjustments to base revenue shall be made beginning with FY 2024.

Under section 744B(c)(2) of the FD&C Act, for FY 2025, FDA shall, in addition to the inflation adjustment, apply a capacity planning adjustment to further adjust, as needed, the fee revenue and fees to reflect changes in the resource capacity needs of FDA for human generic drug activities.

Under section 744B(c)(3) of the FD&C Act, for FY 2025, FDA may, in addition to the inflation and capacity planning adjustments, apply an operating reserve adjustment to further increase the fee revenue and fees if necessary to provide operating reserves of carryover user fees for human generic drug activities for not more than the number of weeks specified in such section (or as applicable, shall apply such adjustment to decrease the fee revenues and fees to provide for not more than 12 weeks of such operating reserves).

A. Inflation Adjustment

As noted above, the base revenue amount for FY 2025 is $613,538,015. This is the total revenue amount specified for the prior fiscal year, FY 2024, pursuant to the statute (see section 744B(b)(1)(A) of the FD&C Act).[1] GDUFA III specifies that the $613,538,015 is to be adjusted for inflation for FY 2025 using two separate adjustments: one for personnel compensation and benefits (PC&B) and one for non-PC&B costs (see sections 744B(c)(1)(B) and (C) of the FD&C Act).

The component of the inflation adjustment for PC&B costs shall be the average annual percent change in the cost of all PC&B paid per full-time equivalent (FTE) positions at FDA for the first 3 of the 4 preceding fiscal years, multiplied by the proportion of PC&B costs to total FDA costs of human generic drug activities for the first 3 of the preceding 4 fiscal years (see section 744B(c)(1)(B) of the FD&C Act).

Table 2 summarizes the actual cost and total FTEs for the specified fiscal years and provides the percent change from the previous fiscal year and the average percent change over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 2—FDA PERSONNEL COMPENSATION AND BENEFITS (PC&B) EACH YEAR AND PERCENT CHANGE

Fiscal year	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total FTEs	18,501	18,474	18,729	.....
PC&B per FTE	$164,289	$171,348	$183,486	.....
Percent Change from Previous Year	0.1811%	4.2967%	7.0838%	3.8539%

The statute specifies that this 3.8539 percent should be multiplied by the proportion of PC&B expended for human generic drug activities for the first 3 of the preceding 4 fiscal years. Table 3 shows the amount of PC&B and the total amount obligated for human generic drug activities from FY 2021 through FY 2023.

TABLE 3—PC&B AS A PERCENT OF FEE REVENUES SPENT ON HUMAN GENERIC DRUG ACTIVITIES OVER THE LAST 3 YEARS

Fiscal year	2021	2022	2023	3-Year average
PC&B	$410,587,565	$391,922,747	$441,930,068	.....
Non-PC&B	$271,328,560	$289,479,265	$301,930,017	.....
Total Costs	$681,916,125	$681,402,012	$743,860,085	.....
PC&B Percent	60.2109%	57.5171%	59.4104%	59.0461%

[1] Under section 744B(b)(1)(B)(ii) of the FD&C Act, the base revenue amount for a fiscal year is equal to the total revenue amount established for the previous fiscal year, not including any adjustments for such previous fiscal year under section 744B(c)(3).

TABLE 3—PC&B AS A PERCENT OF FEE REVENUES SPENT ON HUMAN GENERIC DRUG ACTIVITIES OVER THE LAST 3 YEARS—Continued

Fiscal year	2021	2022	2023	3-Year average
Non-PC&B Percent	39.7891%	42.4829%	40.5896%	40.9539%

The payroll adjustment is 3.8539 percent multiplied by 59.0461 percent (or 2.2756 percent).

The statute specifies that the portion of the inflation adjustment for non-PC&B costs for FY 2025 is the average annual percent change that occurred in the Consumer Price Index (CPI) for urban consumers (Washington-Arlington-Alexandria Area, DC-VA-MD-WV; not seasonally adjusted; all items; annual index) for the first 3 of the preceding 4 years of available data multiplied by the proportion of all costs other than PC&B costs to total costs of human generic drug activities for the first 3 years of the preceding 4 fiscal years (see section 744B(c)(1)(C) of the FD&C Act). Table 4 provides the summary data for the percent change in the specified CPI. The data are published by the Bureau of Labor Statistics and can be found on its website at: *https://data.bls.gov/pdq/SurveyOutputServlet?data_tool=dropmap&series_id=CUURS35ASA0,CUUSS35ASA0.*

TABLE 4—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN CPI FOR WASHINGTON-ARLINGTON-ALEXANDRIA AREA

Year	2021	2022	2023	3-Year average
Annual CPI	277.73	296.12	305.32	.....
Annual Percent Change	3.9568%	6.6212%	3.1069%	4.5616%

To calculate the inflation adjustment for non-pay costs, we multiply the 3-year average percent change in the CPI (4.5616 percent) by the proportion of all costs other than PC&B to total costs of human generic drug activities obligated. Because 59.0461 percent was obligated for PC&B as shown in table 3, 40.9539 percent is the portion of costs other than PC&B. The non-pay adjustment is 4.5616 percent times 40.9539 percent, or 1.8682 percent.

To complete the inflation adjustment for FY 2025, we add the PC&B component (2.2756 percent) to the non-PC&B component (1.8682 percent) for a total inflation adjustment of 4.1438 percent (rounded), and then add 1, making an inflation adjustment multiple of 1.041438. We then multiply the base revenue amount for FY 2025 ($613,538,015) by 1.041438, yielding an inflation-adjusted amount of $638,961,803.

B. FY 2025 Statutory Fee Revenue Adjustments for Capacity Planning

The statute specifies that after the base revenue amount for FY 2025 of $613,538,015 has been adjusted for inflation as described in section A above, the resulting amount shall be further adjusted to reflect changes in the resource capacity needs for human generic drug activities (see section 744B(c)(2) of the FD&C Act). Following a process required in the statute, FDA established the capacity planning adjustment (CPA) methodology that is derived from the methodology and recommendations made in the report titled ''Independent Evaluation of the GDUFA Resource Capacity Planning Adjustment Methodology: Evaluation and Recommendations'' as announced in the **Federal Register** of August 3, 2020, and incorporating approaches and attributes determined appropriate by the Agency, except that the workload drivers are limited to those specified in the GDUFA Reauthorization Performance Goals and Program Enhancements Fiscal Years 2023–2027 (GDUFA III Commitment Letter).[2] This methodology includes a continuous, iterative improvement approach, under which the Agency intends to refine its data and estimates for the core review activities to improve the accuracy of its data and estimates over time.[3] Improvements adopted for the FY2025 CPA include the incorporation of hiring plans and attrition estimates within the capacity calculation. In calculation of GDUFA fees for the prior fiscal year (FY 2024), the impacts of expected hiring on the review capacity of the program were considered within the managerial adjustment process (described below).

The CPA methodology consists of four steps:

1. *Forecast workload volumes:* Predictive models estimate the volume of workload for the upcoming FY.

2. *Forecast the resource needs:* Forecast algorithms are generated utilizing time reporting data. These algorithms estimate the required demand in FTEs[4] for direct review-related effort. This is then compared to current available resources for the direct review-related workload. The current available resources for the direct review related workload are a measure of the percentage of time onboard staff report to direct review workload activities, plus a percentage of the additional positions that are targeted to be hired within the remainder of FY 2024.

3. *A managerial adjustment to assess the resource forecast in the context of additional internal factors:* Program leadership examines operational, financial, and resourcing data to assess whether FDA will be able to utilize additional funds during the fiscal year, and whether the additional funds are required to support additional review capacity. FTE amounts are adjusted, if needed.

4. *Convert the FTE need to dollars:* Utilizing FDA's fully loaded FTE cost model, the final feasible FTEs are converted to an equivalent dollar amount.

Table 5 summarizes the forecasted workload volumes for the Center for Drug Evaluation and Research (CDER)

[2] Section 744B(c)(2)(B) of the FD&C Act; see also section VIII.B.2.e. of the GDUFA III Commitment Letter available at *https://www.fda.gov/media/153631/download.*

[3] For example, FDA will aim to refine the CPA methodology to reflect a more comprehensive assessment of the applicable workload drivers across the Agency.

[4] Full-time equivalents refer to a paid staff year, rather than a count of individual employees.

for FY 2025 based on predictive models, as well as historical actuals from FY 2023 for comparison.

TABLE 5—CDER ACTUAL FY 2023 WORKLOAD VOLUMES AND PREDICTED FY 2025 WORKLOAD VOLUMES

Workload driver category	FY 2023 actuals	FY 2025 predictions
ANDA Originals [1]	685	651
ANDA Supplements [2]	10,237	12,045
Pre-ANDA Meetings	114	106
Controlled Correspondences [3]	3,580	3,156
Suitability Petitions	14	32
ANDA Annual Reports [4]	12,162	13,230
Active REMS Programs [4 5]	49	49

[1] Excludes response to refused to receive (RTR) and Orig-2+. ANDA Original and Resubmissions/Amendments captured in time reporting data.
[2] Includes changes being effected (CBE) and prior approval supplement (PAS) Manufacturing and Labeling Supplements. PAS exclude response to RTRs, risk evaluation and mitigation strategies (REMS) and Bioequivalence Supplements. ANDA Supplement and Resubmissions/Amendments captured in time reporting data.
[3] Includes all requesting controlled correspondences.
[4] Data represents workload related to resource needs for post-marketing safety activities (developed in alignment with the methodology used in fee-setting under PDUFA (section 736 of the FD&C Act) (21 U.S.C. 379h) and BsUFA (section 744H of the FD&C Act) (21 U.S.C. 379j–52)), as applicable.
[5] Represents the percentage of Active REMS Programs proportional to Center and User Fee by total number of qualifying products with the exclusion of the Opioid Shared System.

Utilizing the resource forecast algorithms, the forecasted workload volumes for FY 2025 were then converted into estimated FTE needs for FDA's GDUFA direct review-related work. The resulting expected FY 2025 FTE need for GDUFA was compared to current onboard capacity for GDUFA direct review-related work. Based on this comparison, FDA determined that the GDUFA program had sufficient resources to perform expected workload. Therefore, no CPA is applicable for FY 2025 fee setting.

TABLE 6—BASE REVENUE AMOUNT AND SECTION 744B(c)(1) AND (2) ADJUSTMENT AMOUNTS

Fee	Amount
Statutory Fee Revenue Base Amount (section 744B(b)(1) of the FD&C Act)	$613,538,015
Inflation Adjustment (section 744B(c)(1) of the FD&C Act)	25,423,788
Capacity Planning Adjustment (section 744B(c)(2) of the FD&C Act)	0
Revenue Amount after Adjustments in sections 744B(b)(1), 744B(c)(1), and 744B(c)(2) of the FD&C Act	638,961,803

C. FY 2025 Statutory Fee Revenue Adjustments for Operating Reserve

Under section 744B(c)(3) of the FD&C Act, for FY 2025, FDA may, in addition to the inflation and capacity planning adjustments, apply an operating reserve adjustment to further increase the fee revenue and fees if necessary to provide operating reserves of carryover user fees for human generic drug activities for not more than the number of weeks specified in such section (or as applicable, shall apply such adjustment to decrease the fee revenues and fees to provide for not more than 12 weeks of such operating reserves).

The upward operating reserve adjustment is discretionary. For FY 2025, FDA may take an adjustment to provide for not more than 9 weeks of operating reserve. If carryover is more than 12 weeks of operating reserve, FDA must decrease the fee revenues and fees to provide for not more than 12 weeks of operating reserve. To calculate the 9-week and 12-week threshold amounts for the FY 2025 operating reserve adjustment, the FY 2025 adjusted revenue amount, $638,961,803 is divided by 52, resulting in a $12,287,727 cost of operation for 1 week. The 1-week value is then multiplied by 9 weeks to generate the 9-week operating reserve threshold amount for FY 2025 of $110,589,543. The 1-week value is multiplied by 12 to generate the 12-week operating reserve threshold amount for FY 2025 of $147,452,724.

To determine the FY 2024 end-of-year operating reserves of carryover user fees, the Agency assessed the operating reserve of carryover fees at the end of June 2024 and forecast collections and obligations in the fourth quarter of FY 2024 combined. This provides an estimated end-of-year FY 2024 operating reserve of carryover user fees of $110,920,103 which equates to 9.03 weeks of operations. As the estimated end-of-year FY 2024 operating reserve is within the thresholds, there will not be an operating reserve adjustment.

Table 7 below summarizes FY 2025 fee revenue.

TABLE 7—TOTAL ESTIMATED ADJUSTED REVENUE AMOUNT

Fee	Amount
Statutory Fee Revenue Base Amount (section 744B(b)(1) of the FD&C Act)	$613,538,015
Inflation Adjustment (section 744B(c)(1) of the FD&C Act)	25,423,788
Capacity Planning Adjustment (section 744B(c)(2) of the FD&C Act)	0
Operating Reserve Adjustment (section (744B(c)(3) of the FD&C Act)	0
Total Revenue Amount (sections 744B(b)(1), 744B(c)(1), 744B(c)(2) and 744B(c)(3) of the FD&C Act)	638,961,803

TABLE 7—TOTAL ESTIMATED ADJUSTED REVENUE AMOUNT—Continued

Fee	Amount
Total Revenue Amount (rounded to the nearest thousand dollars) (sections 744B(b)(1), 744B(c)(1), 744B(c)(2) and 744B(c)(3) of the FD&C Act) (rounded to the nearest thousand)	638,962,000

III. ANDA Filing Fee

Under GDUFA III, the FY 2025 ANDA filing fee is owed by each applicant that submits an ANDA on or after October 1, 2024.[5] This fee is due on the submission date of the ANDA. Section 744B(b)(2)(B) of the FD&C Act specifies that the ANDA fee will make up 33 percent of the $638,962,000, which is $210,857,460.

To calculate the ANDA fee, FDA estimated the number of full application equivalents (FAEs) that will be submitted in FY 2025. The submissions are broken down into three categories: new originals (submissions that have not been received by FDA previously), submissions that FDA RTR for reasons other than failure to pay fees, and applications that are resubmitted after an RTR decision for reasons other than failure to pay fees. An ANDA counts as one FAE; however, 75 percent of the fee paid for an ANDA that has been RTR shall be refunded according to GDUFA III if: (1) the ANDA is refused for a cause other than failure to pay fees or (2) the ANDA has been withdrawn prior to receipt (section 744B(a)(3)(D)(i) of the FD&C Act). Therefore, an ANDA that is considered not to have been received by FDA due to reasons other than failure to pay fees or withdrawn prior to receipt counts as one-fourth of an FAE. After an ANDA has been RTR, the applicant has the option of resubmitting. For user fee purposes, these resubmissions are equivalent to new original submissions: ANDA resubmissions are charged the full amount for an application (one FAE).

As shown in table 5, FDA estimates that 651 new original ANDAs will be submitted and incur filing fees in FY 2025. Not all the new original ANDAs will be received by FDA and some of those not received will be resubmitted in the same fiscal year. Therefore, FDA expects that the FAE count for ANDAs will be 655 for FY 2025.

The FY 2025 ANDA filing fee is estimated by dividing the number of FAEs that will incur the fee in FY 2025 (655) into the fee revenue amount to be derived from ANDA filing fees in FY 2025 ($210,857,460). The result, rounded to the nearest dollar, is a fee of $321,920 per ANDA.

[5] Section 744B(a)(3) of the FD&C Act.

The statute provides that those ANDAs that include information about the production of APIs other than by reference to a DMF will pay an additional fee that is based on the number of such APIs and the number of facilities proposed to produce those ingredients (see section 744B(a)(3)(F) of the FD&C Act). FDA anticipates that this additional fee is unlikely to be assessed often; therefore, FDA has not included projections concerning the amount of this fee in calculating the fees for ANDAs.

IV. DMF Fee

Under GDUFA III, the DMF fee is owed by each person that owns a type II API DMF that is referenced, on or after October 1, 2012, in a generic drug submission by an initial letter of authorization.[6] This is a one-time fee for each DMF. This fee is due on the earlier of the date on which the first generic drug submission is submitted that references the associated DMF or the date on which the DMF holder requests the initial completeness assessment. Under section 744B(a)(2)(D)(iii) of the FD&C Act, if a DMF has successfully undergone an initial completeness assessment and the fee is paid, the DMF will be placed on a publicly available list documenting DMFs available for reference.

To calculate the DMF fee, FDA assessed the volume of DMF submissions over time. FDA assessed DMFs from October 1, 2022, to April 30, 2024, and concluded that averaging the number of fee-paying DMFs provided the most accurate model for predicting fee-paying DMFs for FY 2025. The monthly average of paid DMF submissions FDA received during FY 2023 and FY 2024 is 28. To determine the FY 2025 projected number of fee-paying DMFs, the average of 28 DMF submissions is multiplied by 12 months, which results in 336 estimated FY 2025 fee-paying DMFs. FDA is estimating 336 fee-paying DMFs for FY 2025.

The FY 2025 DMF fee is determined by dividing the DMF target revenue by the estimated number of fee-paying DMFs in FY 2025. Section 744B(b)(2)(A) of the FD&C Act specifies that the DMF fees will make up 5 percent of the $638,962,000, which is $31,948,100. Dividing the DMF revenue amount ($31,948,100) by the estimated fee-paying DMFs (336), and rounding to the nearest dollar, yields a DMF fee of $95,084 for FY 2025.

[6] Section 744B(a)(2) of the FD&C Act.

V. Foreign Facility Fee Differential

Under GDUFA III, the fee for a facility located outside the United States and its territories and possessions shall be $15,000 higher than the amount of the fee for a facility located in the United States and its territories and possessions.[7] The basis for this differential is the extra cost incurred by conducting an inspection outside the United States and its territories and possessions.

VI. FDF and CMO Facility Fees

Under GDUFA III, the annual FDF facility fee is owed by each person who owns an FDF facility that is identified in at least one approved generic drug submission owned by that person or its affiliates.[8] The CMO facility fee is owed by each person who owns an FDF facility that is identified in at least one approved ANDA but is not identified in an approved ANDA held by the owner of that facility or its affiliates.[9] Section 744B(b)(2)(C) of the FD&C Act specifies that the FDF and CMO facility fee revenue will make up 20 percent of the $638,962,000, which is $127,792,400.

To calculate the fees, data from FDA's Integrity Services (IS) were utilized as the primary source of facility information for determining the denominators of each facility fee type. IS is the master data steward for all facility information provided in generic drug submissions received by FDA. A facility's reference status in an approved generic drug submission is extracted directly from submission data rather than relying on data from self-identification. This information provided the number of facilities referenced as FDF manufacturers in at least one approved generic drug submission. These findings were compared against facility statuses from FDA's Office Regulatory Affairs (ORA) to exclude facilities that are no longer operational.

[7] Section 744B(b)(2)(C) and (D) of the FD&C Act.

[8] Section 744B(a)(4)(A) of the FD&C Act.

[9] Section 744A(5) and 744B(b)(2)(C) of the FD&C Act.

Based on these data, the FDF and CMO facility denominators are 160 FDF domestic, 311 FDF foreign, 83 CMO domestic, and 131 CMO foreign facilities for FY 2025.

GDUFA III specifies that the CMO facility fee is to be equal to 24 percent of the FDF facility fee.[10] Therefore, to generate the target collection revenue amount from FDF and CMO facility fees ($127,792,400), FDA must weight a CMO facility as 24 percent of an FDF facility. FDA set fees based on the estimate of 160 FDF domestic, 311 FDF foreign, 19.92 CMO domestic (83 multiplied by 24 percent), and 31.44 CMO foreign facilities (131 multiplied by 24 percent), which equals 522.36 total weighted FDF and CMO facilities for FY 2025.

To calculate the fee for domestic facilities, FDA first determines the total fee revenue that will result from the foreign facility differential by subtracting the fee revenue resulting from the foreign facility fee differential from the target collection revenue amount ($127,792,400) as follows: the foreign facility fee differential revenue equals the foreign facility fee differential ($15,000) multiplied by the number of FDF foreign facilities (311) plus the foreign facility fee differential ($15,000) multiplied by the number of CMO foreign facilities (131), totaling $6,630,000. This results in foreign fee differential revenue of $6,630,000 from the total FDF and CMO facility fee target collection revenue.

Subtracting the foreign facility differential fee revenue ($6,630,000) from the total FDF and CMO facility target collection revenue ($127,792,400) results in a remaining facility fee revenue balance of $121,162,400. To determine the domestic FDF facility fee, FDA divides the $121,162,400 by the total weighted number of FDF and CMO facilities (522.36), which results in a domestic FDF facility fee of $231,952. The foreign FDF facility fee is $15,000 more than the domestic FDF facility fee, or $246,952.

According to GDUFA III, the domestic CMO fee is calculated as 24 percent of the amount of the domestic FDF facility fee.[11] Therefore, the domestic CMO fee is $55,668, rounded to the nearest dollar. The foreign CMO fee is calculated as the domestic CMO fee plus the foreign fee differential of $15,000. Therefore, the foreign CMO fee is $70,668.

[10] Section 744B(b)(2)(C) of the FD&C Act.

[11] Section 744B(b)(2)(C) of the FD&C Act.

VII. API Facility Fee

Under GDUFA III, the annual API facility fee is owed by each person who owns a facility that is identified in at least one approved generic drug submission in which the facility is approved to produce one or more API or in a Type II API DMF referenced in at least one approved generic drug submission.[12] Section 744B(b)(2)(D) of the FD&C Act specifies the API facility fee will make up 6 percent of $638,962,000 in fee revenue, which is $38,337,720.

To calculate the API facility fee, data from FDA's IS were utilized as the primary source of facility information for determining the denominator. As stated above, IS is the master data steward for all facility information provided in generic drug submissions received by FDA. A facility's reference status in an approved generic drug submission is extracted directly from submission data rather than relying on data from self-identification. This information provided the number of facilities referenced as API manufacturers in at least one approved generic drug submission. These findings were compared against facility statuses from FDA's ORA to exclude facilities that are no longer operational.

Based on these data, the total number of API facilities identified was 698; of that number, 77 were domestic and 621 were foreign facilities. The foreign facility differential is $15,000. To calculate the fee for domestic facilities, FDA must first subtract the fee revenue that will result from the foreign facility fee differential. FDA takes the foreign facility differential ($15,000) and multiplies it by the number of foreign facilities (621) to determine the total fee revenue that will result from the foreign facility differential. As a result of this calculation, the foreign fee differential revenue will make up $9,315,000 of the total API fee revenue. Subtracting the foreign facility differential fee revenue ($9,315,000) from the total API facility target revenue ($38,337,720) results in a remaining balance of $29,022,720. To determine the domestic API facility fee, we divide the $29,022,720 by the total number of facilities (698), which gives us a domestic API facility fee of $41,580. The foreign API facility fee is $15,000 more than the domestic API facility fee, or $56,580.

VIII. Generic Drug Applicant Program Fee

Under GDUFA III, if a person and its affiliates own at least one but not more than five approved ANDAs on October 1, 2024, the person and its affiliates shall owe a small business generic drug applicant program fee.[13] If a person and its affiliates own at least 6 but not more than 19 approved ANDAs, the person and its affiliates shall owe a medium size operation generic drug applicant program fee.[14] If a person and its affiliates own at least 20 approved ANDAs, the person and its affiliates shall owe a large size operation generic drug applicant program fee.[15] Section 744B(b)(2)(E) of the FD&C Act specifies the GDUFA program fee will make up 36 percent of $638,962,000 in fee revenue, which is $230,026,320.

To determine the appropriate number of parent companies for each tier, FDA asked companies to claim their ANDAs and affiliates in the CDER NextGen Portal. The companies were able to confirm relationships currently present in FDA's records, while also reporting newly approved ANDAs, newly acquired ANDAs, and new affiliations.

In determining the appropriate number of approved ANDAs, FDA has factored in a number of variables that could affect the collection of the target revenue: (1) withdrawals of approved ANDAs by April 1: applicants who have submitted a written request for withdrawal of approval by April 1 of the previous fiscal year;[16] (2) inactive ANDAs: applicants who have not submitted an annual report for one or more of their approved applications within the past 2 years; (3) CBER-approved ANDAs: applicants and their affiliates with CBER-approved ANDAs are added to CDER's population of approved ANDAs; (4) Program Fee Arrears List: parent companies that are on the arrears list for any fiscal year; (5) Out of Business companies: parent companies that are no longer in operation; and (6) Tier Adjustment: the frequency of large-tier, medium-tier, and small-tier companies moving to different tiers (or as applicable, dropping out of any tier) after the completion of the program fee methodology and tier determination.

The list of original approved ANDAs from the Generic Drug Review Platform as of April 30, 2024, in addition to CBER's database, shows 241 applicants in the small business tier, 74 applicants in the medium size tier, and 81 applicants in the large size tier. Factoring in all the variables, we estimate there will be 194 applicants in

[12] Section 744B(a)(4)(A)(ii) of the FD&C Act.

[13] Sections 744B(a)(5)(A) and 744B(b)(2)(E)(i) of the FD&C Act.

[14] Id.

[15] Id.

[16] See section 744B(b)(2)(E)(ii) of the FD&C Act.

the small business tier, 68 applicants in the medium size tier, and 75 applicants in the large size tier for FY 2025.

To calculate the GDUFA program fee, GDUFA III provides that large size operation generic drug applicants pay the full fee, medium size operation applicants pay two-fifths of the full fee, and small business applicants pay one-tenth of the full fee.[17] To generate the target collection revenue amount from GDUFA program fees ($230,026,320), we must weigh medium and small tiered applicants as a subset of a large size operation generic drug applicant. FDA will set fees based on the weighted estimate of 19.40 applicants in the small business tier (194 multiplied by 10 percent), 27.2 applicants in the medium size tier (68 multiplied by 40 percent), and 75 applicants in the large size tier, arriving at 121.60 total weighted applicants for FY 2025.

To generate the large size operation GDUFA program fee, FDA divides the target revenue amount of $230,026,320 by 121.60, which equals $1,891,664. The medium size operation GDUFA program fee is 40 percent of the full fee ($756,666), and the small business GDUFA program fee is 10 percent of the full fee ($189,166).

IX. Fee Schedule for FY 2025

The fee rates for FY 2025 are set out in table 8.

TABLE 8—FEE SCHEDULE FOR FY 2025

Generic drug fee category	Fees rates for FY 2025
Applications:	
Abbreviated New Drug Application (ANDA)	$321,920
Drug Master File (DMF)	95,084
Facilities:	
Active Pharmaceutical Ingredient (API)—Domestic	41,580
API—Foreign	56,580
Finished Dosage Form (FDF)—Domestic	231,952
FDF—Foreign	246,952
Contract Manufacturing Organization (CMO)—Domestic	55,668
CMO—Foreign	70,668
GDUFA Program:	
Large size operation generic drug applicant	1,891,664
Medium size operation generic drug applicant	756,666
Small business generic drug applicant	189,166

X. Fee Payment Options and Procedures

The new fee rates are effective on October 1, 2024, and will remain in effect through September 30, 2025. Under sections 744B(a)(4) and (5) of the FD&C Act, respectively, facility and program fees are generally due on the later of the first business day on or after October 1 of each fiscal year or the first business day after the enactment of an appropriations act providing for the collection and obligation of GDUFA fees for the fiscal year.

To pay the ANDA, DMF, API facility, FDF facility, CMO facility, and GDUFA program fees, complete the Generic Drug User Fee Cover Sheet, available at *https://www.fda.gov/gdufa* and *https://userfees.fda.gov/OA_HTML/gdufaCAcdLogin.jsp,* and generate a user fee identification (ID) number. Payment must be made in U.S. currency drawn on a U.S. bank by electronic check, check, bank draft, U.S. postal money order, credit card, or wire transfer. The preferred payment method is online using electronic check (Automated Clearing House (ACH), also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). FDA has partnered with the U.S. Department of the Treasury to utilize *Pay.gov*, a web-based payment application, for online electronic payment. The *Pay.gov* feature is available on the FDA website after completing the Generic Drug User Fee Cover Sheet and generating the user fee ID number.

Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay.* (*Note:* Only full payments are accepted; no partial payments can be made online.) Once an invoice is located, ''Pay Now'' should be selected to be redirected to *Pay.gov.* Electronic payment options are based on the balance due. Payment by credit card is available for balances less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

If a check, bank draft, or postal money order is submitted, make it payable to the order of the Food and Drug Administration and include the user fee ID number to ensure that the payment is applied to the correct fee(s). Payments can be mailed to: Food and Drug Administration, P.O. Box 979108, St. Louis, MO 63197–9000. If checks are to be sent by a courier that requests a street address, the courier can deliver checks to U.S. Bank, Attention: Government Lockbox 979108, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This U.S. Bank address is for courier delivery only). For questions concerning courier delivery, U.S. Bank can be contacted at 800–495–4981. This telephone number is only for questions about courier delivery.) The FDA post office box number (P.O. Box 979108) must be written on the check, bank draft, or postal money order.

For payments made by wire transfer, include the unique user fee ID number to ensure that the payment is applied to the correct fee(s). Without the unique user fee ID number, the payment may not be applied. If the payment amount is not applied, the invoice amount will be referred to collections. The originating financial institution may charge a wire transfer fee. Include applicable wire transfer fees with payment to ensure fees are fully paid. Questions about wire transfer fees should be addressed to the financial institution. The following account information should be used to send payments by wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, account number: 75060099, routing number: 021030004, SWIFT:

[17] Section 744B(b)(2)(E)(i) of the FD&C Act.

FRNYUS33. FDA's tax identification number is 53–0196965.

Dated: July 26, 2024.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–2865]

Agency Information Collection Activities; Proposed Collection; Comment Request; Generic Clearance for Quantitative Testing for the Development of Food and Drug Administration Communications

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or Agency) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on generic clearance for quantitative testing for the development of FDA communications, which collects individual generic quantitative information (*e.g.,* surveys, experimental studies) to test communications or educational messages on FDA-regulated food and cosmetic products, dietary supplements, and animal food and feed while they are being developed or are in review.

DATES: Either electronic or written comments on the collection of information must be submitted by September 30, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of September 30, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–N–2865 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; Generic Clearance for Quantitative Testing for the Development of Food and Drug Administration Communications.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: JonnaLynn Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–3794, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an

existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Generic Clearance for Quantitative Testing for the Development of FDA Communications

OMB Control Number 0910–0865—Extension

This notice requests extension of OMB approval of the FDA information collection for a generic clearance that allows FDA to use quantitative social/behavioral science data collection techniques (*i.e.,* surveys and experimental studies) to test consumers' reactions to FDA communications or educational messaging about FDA-regulated food and cosmetic products, dietary supplements, and animal food and feed. To ensure that communications activities and educational campaigns have the highest potential to be received, understood, and accepted by those for whom they are intended, it is important to assess communications while they are under development. Understanding consumers' attitudes, motivations, and behaviors in response to potential communications and education messaging plays an important role in improving FDA's communications.

If the following conditions are not met, FDA will submit an information collection request to OMB for approval through the normal PRA process:

- The collections are voluntary;
- The collections are low burden for participants (based on considerations of total burden hours, total number of participants, or burden hours per participant) and are low cost for both the participants and the Federal Government;
- The collections are noncontroversial;
- Personally-identifiable information (PII) is collected only to the extent necessary [1] and is not retained;
- Information gathered will not be used for the purpose of substantially informing influential policy decisions; [2] and
- The collections will not be designed or expected to yield statistical data or used as though the results are generalizable to the population of study.

To obtain approval for an individual generic collection submission that meets the conditions of this generic clearance, an abbreviated supporting statement will be submitted to OMB along with supporting documentation (*e.g.,* a copy of the survey or experimental design and stimuli for testing).

FDA will submit individual quantitative collections under this generic clearance to OMB. Individual quantitative collections will also undergo review by FDA's Human Subject Protection Program, senior leadership in the Center for Food Safety and Applied Nutrition, and PRA specialists.

Respondents to this collection of information may include a wide range of consumers and other FDA stakeholders such as producers and manufacturers who are regulated under FDA-regulated food and cosmetic products, dietary supplements, and animal food and feed.

We estimate the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Cognitive Interviews Screener	720	1	720	0.083 (5 minutes)	60
Cognitive Interviews	144	1	144	1	144
Pre-test study screener	2,400	1	2,400	0.083 (5 minutes)	199
Pre-testing study	480	1	480	0.25 (15 minutes)	120
Self-administered surveys/experimental Studies Screener.	75,000	1	75,000	0.083 (5 minutes)	6,225
Self-Administered Surveys/Experimental Studies.	15,000	1	15,000	0.25 (15 minutes)	3,750
Total					10,498

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

Based on a review of the information collection since our last request for OMB approval, we have made no adjustments to our burden estimate. Current estimates are based on both historical numbers of participants from past projects as well as estimates for projects to be conducted in the next 3 years. The number of participants to be included in each new survey will vary, depending on the nature of the compliance efforts and the target audience.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

[FR Doc. 2024–16830 Filed 7–30–24; 8:45 am]

BILLING CODE 4164–01–P

[1] For example, collections that collect PII to provide remuneration for participants of focus groups and cognitive laboratory studies will be submitted under this request. All Privacy Act requirements will be met.

[2] As defined in OMB and Agency Information Quality Guidelines, ''influential'' means that ''an agency can reasonably determine that dissemination of the information will have or does have a clear and substantial impact on important public policies or important private sector decisions.''

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3001]

Over-the-Counter Monograph Drug User Fee Program—OTC Monograph Order Request Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the over-the-counter (OTC) monograph order request (OMOR) fee rates under the OTC monograph drug user fee program (OMUFA) for fiscal year (FY) 2025. The Federal Food, Drug, and Cosmetic Act (FD&C Act) authorizes FDA to assess and collect user fees from qualifying manufacturers of OTC monograph drugs and submitters of OMORs. This notice publishes the OMOR fee rates under OMUFA for FY 2025. FDA plans to publish the FY 2025 OMUFA facility fee rates, *i.e.,* monograph drug facility (MDF) and contract manufacturing organization (CMO) facility fee rates, in a subsequent **Federal Register** notice (and anticipates its issuance will generally align with the timing of OMUFA facility fee rate publication for prior fiscal years).

DATES: These OTC OMORs fees are effective on October 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20903, 240–402–4989; or the User Fees Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov*.

SUPPLEMENTARY INFORMATION:

I. Background

Section 744M of the FD&C Act (21 U.S.C. 379j–72), authorizes FDA to assess and collect: (1) facility fees from qualifying owners of OTC monograph drug facilities and (2) fees from submitters of qualifying OTC monograph order requests. These fees are to support FDA's OTC monograph drug activities, which are detailed in section 744L(6) of the FD&C Act (21 U.S.C. 379j–71(6)) and include various FDA activities associated with OTC monograph drugs.[1]

For OMUFA purposes, an OTC OMOR is a request for an administrative order, with respect to an OTC monograph drug, which is submitted under section 505G(b)(5) of the FD&C Act (see section 744L(7) of the FD&C Act).

Under section 744M(a)(2)(A) of the FD&C Act, the Agency is authorized to assess and collect fees from submitters of OMORs, except for OMORs that request certain safety-related changes (as discussed below). There are two levels of OMOR fees, based on whether the OMOR at issue is a Tier 1 or Tier 2 OMOR.[2]

For FY 2025, the OMUFA fee rates for OTC OMORs are: Tier 1 OMOR fees ($559,777), Tier 2 OMOR fees ($111,955). These fees are effective for the period from October 1, 2024, through September 30, 2025. This document is issued pursuant to section 744M(a)(2) and (c)(4)(B) of the FD&C Act and describes the calculations used to set the OMUFA OMOR fees for FY 2025 in accordance with the directives in the statute.

II. Determination of FY 2025 OMOR Fees

Under OMUFA, the FY 2025 Tier 1 OMOR fee is $559,777 and the Tier 2 OMOR fee is $111,955, including an adjustment for inflation (see sections 744M(a)(2)(A)(i) and (ii) of the FD&C Act, respectively). OMOR fees are not included in the OMUFA target revenue calculation, which is based on the facility fees (see section 744M(b) of the FD&C Act).

An OMOR fee is generally assessed to each person who submits an OMOR (see section 744M(a)(2)(A) of the FD&C Act). OMOR fees are due on the date of the submission of the OMOR (see section 744M(a)(2)(B) of the FD&C Act). The payor should submit the OMOR fee that applies to the type of OMOR they are submitting (*i.e.,* Tier 1 or Tier 2). FDA will determine whether the appropriate OMOR fee has been submitted following receipt of the OMOR and the fee.

An OMOR fee will not be assessed if the OMOR seeks to make certain safety changes with respect to an OTC monograph drug. Specifically, no fee will be assessed if FDA finds that the OMOR seeks to change the drug facts labeling of an OTC monograph drug in a way that would add to or strengthen: (1) a contraindication, warning, or precaution; (2) a statement about risk associated with misuse or abuse; or (3) an instruction about dosage and administration that is intended to increase the safe use of the OTC monograph drug (see section 744M(a)(2)(C) of the FD&C Act).

III. OMOR Fee Adjustment for Inflation

Under OMUFA, the OMOR fee is adjusted for inflation for FY 2022 and each subsequent FY (see section 744M(c)(1)(B) of the FD&C Act). That provision states that the dollar amount of the inflation adjustment to the fee for OMORs is equal to the product of the applicable fee for the preceding fiscal year and the inflation adjustment percentage.[3] For FY 2025, the inflation adjustment percentage is equal to the sum of:

- The average annual percent change in the cost, per full-time equivalent position of FDA, of all personnel compensation and benefits paid with respect to such positions for the first 3 years of the preceding 4 FYs, multiplied by the proportion of personnel compensation and benefits costs to total costs of OTC monograph drug activities for the first 3 years of the preceding 4 FYs (see section 744M(c)(1)(C)(ii)(I) of the FD&C Act); and
- The average annual percent change that occurred in the Consumer Price Index for urban consumers (Washington-Baltimore, DC-MD-VA-WV; Not Seasonally Adjusted; All items; Annual Index) for the first 3 years of the preceding 4 years of available data multiplied by the proportion of all costs other than personnel compensation and benefits costs to total costs of OTC monograph drug activities for the first 3 years of the preceding 4 FYs (see section 744M(c)(1)(C)(ii)(II) of the FD&C Act).

As a result of a geographical revision made by the Bureau of Labor and Statistics in January 2018, the ''Washington, DC-Baltimore'' index was discontinued and replaced with two separate indices (*i.e.,* the ''Washington-Arlington-Alexandria'' and ''Baltimore-Columbia-Towson'' indices). To continue applying a CPI that best reflects the geographic region in which FDA is located and that provides the most current data available, the ''Washington-Arlington-Alexandria'' index is used in calculating the inflation adjustment percentage.

Table 1 summarizes the actual cost and FTE data for the specified FYs, provides the percent changes from the previous FYs, and provides the average

[1] For OMUFA purposes, an OTC monograph drug is a nonprescription drug without an approved new drug application that is governed by the provisions of section 505G of the FD&C Act (21 U.S.C. 355h) (see section 744L(5) of the FD&C Act);

[2] Under OMUFA, a Tier 1 OMOR is defined as any OMOR that is not a Tier 2 OMOR (see section 744L(8) of the FD&C Act). Tier 2 OMORs are detailed in section 744L(9) of the FD&C Act.

[3] See section 744M(c)(1)(C) of the FD&C Act.

percent changes over the first 3 of the 4 FYs preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 1—FDA PERSONNEL COMPENSATION AND BENEFITS (PC&B) EACH YEAR AND PERCENT CHANGES

	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total FTE	18,501	18,474	18,729	.....
PC&B per FTE	$164,289	$171,348	$183,486	.....
Percent Change from Previous Year	0.1811%	4.2967%	7.0838%	3.8539%

Under the statute, this 3.8539 percent is multiplied by the proportion of PC&B costs to the total FDA costs of OTC monograph drug activities for the first 3 years of the preceding 4 FYs (see section 744M(c)(1)(C)(ii) of the FD&C Act).

Table 2 shows the PC&B and the total obligations for OTC monograph drug activities for the first 3 of the preceding 4 FYs.

TABLE 2—PC&B AS A PERCENT OF TOTAL COST OF OTC MONOGRAPH DRUG ACTIVITIES

	2021	2022	2023	3-Year average
Total PC&B	$23,133,775	$25,415,237	$39,133,075	.....
Total Costs	$35,030,659	$49,644,273	$68,480,052	.....
PC&B Percent	66.0387%	51.1947%	57.1452%	58.1262%

The payroll adjustment is 3.8539 percent from table 1 multiplied by 58.1262 percent resulting in 2.2401 percent.

Table 3 provides the summary data for the percent changes in the specified CPI for the Washington-Arlington-Alexandria, DC-VA-MD-WV. The data are published by the Bureau of Labor Statistics on its website: *https://data.bls.gov/pdq/SurveyOutputServlet?data_tool=dropmap&series_id=CUURS35ASA0,CUUSS35ASA0.*

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN CPI FOR WASHINGTON-ARLINGTON-ALEXANDRIA, DC-VA-MD-WV AREA

Year	2021	2022	2023	3-Year average
Annual CPI	277.73	296.12	305.32	.....
Annual Percent Change	3.9568%	6.6212%	3.1069%	4.5616%

The statute specifies that this 4.5616 percent be multiplied by the proportion of all costs other than PC&B to total costs of OTC monograph drug activities. Because 58.1262 percent was obligated for PC&B (as shown in table 2), 41.8738 percent is the portion of costs other than PC&B (100 percent minus 58.1262 percent equals 41.8738 percent). The non-payroll adjustment is 4.5616 percent times 41.8738 percent, or 1.9101 percent.

Next, we add the payroll adjustment (2.2401 percent) to the non-payroll adjustment (1.9101 percent), for a total inflation adjustment of 4.1502 percent (rounded) for FY 2025.

IV. OMOR Fee Calculations

Under section 744M(a)(2)(A) of the FD&C Act, each person that submits a qualifying OMOR shall be subject to a fee for an OMOR. The amount of such fee shall be:

(1) For a Tier 1 OTC monograph order request, $500,000, adjusted for inflation for the FY (see section 744M(c)(1)(B) of the FD&C Act); and

(2) For a Tier 2 OTC monograph order request, $100,000, adjusted for inflation for the FY (see section 744M(c)(1)(B) of the FD&C Act).

In addition, under section 744M(c)(1)(B) of the FD&C Act and for purposes of section 744M(a)(2) of the FD&C Act, the dollar amount of the inflation adjustment to the fee for OMORs for FY 2022 and each subsequent FY shall be equal to the product of:

(1) The applicable fee under section 744M(a)(2) of the FD&C Act for the preceding FY; and

(2) The inflation adjustment percentage under section 744M(c)(1)(C) of the FD&C Act.

Thus, for FY 2025, the base of OMOR fees taken from the preceding FY (*i.e.,* FY 2024) are: Tier 1: $537,471 and Tier 2: $107,494. The FY 2025 inflation adjustment percentage is: 4.1502%.

V. Fee Schedule

The fee rates for FY 2025 are displayed in Table 4.

TABLE 4—FEE SCHEDULE FOR FY 2025

Fee category	FY 2025 fee rates
OMOR:	
Tier 1	$559,777
Tier 2	111,955

VI. Fee Payment Options and Procedures

The new OMOR fee rates are for the period from October 1, 2024, through September 30, 2025. To pay the OMOR fees, complete an OTC Monograph User Fee Cover Sheet, available at: *https://*

userfees.fda.gov/OA_HTML/omufaCAcdLogin.jsp.

A user fee identification (ID) number will be generated. Payment must be made in U.S. currency by electronic check or wire transfer, payable to the order of the Food and Drug Administration. The preferred payment method is online using electronic check (Automated Clearing House (ACH) also known as eCheck).

FDA has partnered with the U.S. Department of the Treasury to use *Pay.gov*, a web-based payment application, for online electronic payment. The *Pay.gov* feature is available on the FDA website after completing the OTC Monograph User Fee Cover Sheet and generating the user fee ID number. Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay.* (*Note:* Only full payments are accepted through *https://userfees.fda.gov/pay.* No partial payments can be made online). Once an invoice is located, ''Pay Now'' should be selected to be redirected to *Pay.gov*. Electronic payment options are based on the balance due. Payment by credit card is available for balances that are less than $25,000 (Discover, VISA, MasterCard, American Express). If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

For payments made by wire transfer, include the unique user fee ID number to ensure that the payment is applied to the correct fee(s). Without the unique user fee ID number, the payment may not be applied, which could result in FDA not filing an OMOR request, or other consequences of nonpayment. The originating financial institution may charge a wire transfer fee. Applicable wire transfer fees must be included with payment to ensure fees are fully paid. Questions about wire transfer fees should be addressed to the financial institution. The account information for wire transfers is as follows: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No.: 75060099, Routing No.: 021030004, SWIFT: FRNYUS33. If needed, FDA's tax identification number is 53–0196965.

Dated: July 26, 2024.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3029]

Agency Information Collection Activities; Proposed Collection; Comment Request; FDA Food Safety and Nutrition Survey

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing an opportunity for public comment on the proposed collection of certain information by the Agency. Under the Paperwork Reduction Act of 1995 (PRA), Federal Agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information, including each proposed reinstatement of an existing collection of information, and to allow 60 days for public comment in response to the notice. This notice solicits comments on a collection of information used to conduct a voluntary consumer survey entitled, ''FDA Food Safety and Nutrition Survey.''

DATES: Either electronic or written comments on the collection of information must be submitted by September 30, 2024.

ADDRESSES: You may submit comments as follows. Please note that late, untimely filed comments will not be considered. The *https://www.regulations.gov* electronic filing system will accept comments until 11:59 p.m. Eastern Time at the end of September 30, 2024. Comments received by mail/hand delivery/courier (for written/paper submissions) will be considered timely if they are received on or before that date.

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal: https://www.regulations.gov.* Follow the instructions for submitting comments. Comments submitted electronically, including attachments, to *https://www.regulations.gov* will be posted to the docket unchanged. Because your comment will be made public, you are solely responsible for ensuring that your comment does not include any confidential information that you or a third party may not wish to be posted, such as medical information, your or anyone else's Social Security number, or confidential business information, such as a manufacturing process. Please note that if you include your name, contact information, or other information that identifies you in the body of your comments, that information will be posted on *https://www.regulations.gov.*
- If you want to submit a comment with confidential information that you do not wish to be made available to the public, submit the comment as a written/paper submission and in the manner detailed (see ''Written/Paper Submissions'' and ''Instructions'').

Written/Paper Submissions

Submit written/paper submissions as follows:

- *Mail/Hand Delivery/Courier (for written/paper submissions):* Dockets Management Staff (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.
- For written/paper comments submitted to the Dockets Management Staff, FDA will post your comment, as well as any attachments, except for information submitted, marked and identified, as confidential, if submitted as detailed in ''Instructions.''

Instructions: All submissions received must include the Docket No. FDA–2024–N–3029 for ''Agency Information Collection Activities; Proposed Collection; Comment Request; FDA Food Safety and Nutrition Survey.'' Received comments, those filed in a timely manner (see **ADDRESSES**), will be placed in the docket and, except for those submitted as ''Confidential Submissions,'' publicly viewable at *https://www.regulations.gov* or at the Dockets Management Staff between 9 a.m. and 4 p.m., Monday through Friday, 240–402–7500.

- Confidential Submissions—To submit a comment with confidential information that you do not wish to be made publicly available, submit your comments only as a written/paper submission. You should submit two copies total. One copy will include the information you claim to be confidential with a heading or cover note that states ''THIS DOCUMENT CONTAINS CONFIDENTIAL INFORMATION.'' The Agency will review this copy, including the claimed confidential information, in its consideration of comments. The second copy, which will have the claimed confidential information redacted/blacked out, will be available for public viewing and posted on *https://www.regulations.gov.* Submit both copies to the Dockets Management Staff. If you do not wish your name and contact information to be made publicly available, you can provide this information on the cover sheet and not

in the body of your comments and you must identify this information as ''confidential.'' Any information marked as ''confidential'' will not be disclosed except in accordance with 21 CFR 10.20 and other applicable disclosure law. For more information about FDA's posting of comments to public dockets, see 80 FR 56469, September 18, 2015, or access the information at: *https://www.govinfo.gov/content/pkg/FR-2015-09-18/pdf/2015-23389.pdf.*

Docket: For access to the docket to read background documents or the electronic and written/paper comments received, go to *https://www.regulations.gov* and insert the docket number, found in brackets in the heading of this document, into the ''Search'' box and follow the prompts and/or go to the Dockets Management Staff, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852, 240–402–7500.

FOR FURTHER INFORMATION CONTACT: JonnaLynn Capezzuto, Office of Operations, Food and Drug Administration, Three White Flint North, 10A–12M, 11601 Landsdown St., North Bethesda, MD 20852, 301–796–5733, *PRAStaff@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION: Under the PRA (44 U.S.C. 3501–3521), Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires Federal Agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed reinstatement of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, FDA is publishing notice of the proposed collection of information set forth in this document.

With respect to the following collection of information, FDA invites comments on these topics: (1) whether the proposed collection of information is necessary for the proper performance of FDA's functions, including whether the information will have practical utility; (2) the accuracy of FDA's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Food Safety and Nutrition Survey

OMB Control Number 0910–0345—Reinstatement

Under section 1003(b)(2) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 393(b)(2)), we are authorized to conduct research relating to foods and to conduct educational and public information programs relating to the safety of the nation's food supply. In the past, FDA has conducted two separate surveys, a Food Safety Survey and a Health and Diet Survey, to measure consumers' knowledge, attitudes, and beliefs about food safety and nutrition issues. These surveys have been conducted every 3 to 5 years since the 1980s. In the **Federal Register** of August 14, 2018 (83 FR 40293), we announced the combination of these two surveys, which will now be the FDA Food Safety and Nutrition Survey (FSANS). Data from FDA's food safety and nutrition surveys have been used to support rulemaking and educational campaigns and to measure progress toward Healthy People 2010, 2020, and 2030 food safety goals. The proposed 2024 FSANS will contain many of the same questions and topics as the previous surveys to facilitate measuring trends in food safety and diet knowledge, attitudes, and behaviors over time. The proposed survey will also be updated to explore emerging consumer food safety and nutrition topics and to expand understanding of previously asked topics.

The 2024 FSANS will be both a paper-and-pencil and web-based survey. Respondents will be contacted by postal mail, using an addressed-based sampling frame. Once contacted, respondents will be encouraged to take the survey online. A paper-and-pencil version of the survey will be mailed to those who do not initially take the web-based version of the survey. One randomly selected adult from each sampled household will be invited to participate in the survey using the Hagen-Collier method.[1] A total of 5,000 respondents will be surveyed. We will sample approximately 25,000 households to offset nonresponding households and ineligible addresses and achieve 5,000 adult respondents. Participation in the survey will be voluntary. Cognitive interviews and a pre-test will be conducted prior to fielding the survey.

Description of Respondents: Respondents to this collection of information are individuals who are adults, age 18 and older, drawn from the 50 states and the District of Columbia.

FDA estimates the burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN [1]

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Cognitive interview screener	75	1	75	0.083 (5 minutes)	6
Cognitive interview	18	1	18	1	18
Pretest	100	1	100	0.33 (20 minutes)	33
Mail survey	5,000	1	5,000	0.33 (20 minutes)	1,650
Total			5,193		1,707

[1] There are no capital costs or operating and maintenance costs associated with this collection of information.

FDA's burden estimate is based on the Agency's prior experience with food safety and nutrition surveys. We will use a cognitive interview screener with 75 individuals to recruit prospective interview participants for a total of 18

[1] In this method, we randomly select a category based on gender and age (based on the gender-age composition of the household), and then take the adult in that selected category.

individuals. We estimate that it will take each screener respondent approximately 5 minutes (0.083 hours) to complete the cognitive interview screener, for a total of 6 hours. We will conduct cognitive interviews with 18 participants. We estimate that it will take each participant approximately 1 hour to complete the interview, for a total of 18 hours. Prior to the administration of the surveys, the Agency plans to conduct a pretest to identify and resolve potential survey administration problems. The pretest will be conducted with 100 participants; we estimate that it will take each participant 20 minutes (0.33 hours) for the pretest for a total of 33 hours. We estimate that 5,000 eligible adults will participate in the survey with each taking 20 minutes (0.33 hours), for a total of 1,650 hours. Thus, the total estimated burden is 1,707 hours.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3480]

Animal Drug User Fee Rates and Payment Procedures for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the fee rates and payment procedures for fiscal year (FY) 2025 animal drug user fees. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Animal Drug User Fee Amendments of 2023 (ADUFA V), authorizes FDA to collect user fees for certain animal drug applications and supplemental animal drug applications, for certain animal drug products, for certain establishments where such products are made, and for certain sponsors of such animal drug applications and/or investigational animal drug submissions. This notice establishes the fee rates for FY 2025.

DATES: The application fee rates apply to applications submitted on or after October 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Visit FDA's website at: *https://www.fda.gov/industry/fda-user-fee-programs/animal-drug-user-fee-act-adufa* or contact Lisa Kable, Center for Veterinary Medicine (HFV–10), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–402–6888, *Lisa.Kable@fda.hhs.gov.* For general questions, you may also email FDA's Center for Veterinary Medicine (CVM) at: *cvmadufa@fda.hhs.gov.*

For questions relating to this notice: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20903, 240–402–4989; or the User Fee Support Staff at *OO-OFBAP-OFM-UFFS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 740(a) of the FD&C Act (21 U.S.C. 379j–12), as amended by ADUFA V, establishes four different types of user fees: (1) fees for certain animal drug applications and supplemental animal drug applications; (2) annual fees for certain animal drug products; (3) annual fees for certain establishments where such products are made; and (4) annual fees for certain sponsors of animal drug applications and/or investigational animal drug submissions. When certain conditions are met, FDA will waive or reduce fees per section 740(d) of the FD&C Act.

For FYs 2024 through 2028, section 740(b)(1) of the FD&C Act establishes the base revenue amount for each fiscal year. Per section 740(c)(2) and (3) of the FD&C Act, the base revenue amounts established for fiscal years after FY 2024 are subject to adjustment for inflation and workload. Beginning in FY 2025, the annual fee revenue amount is also subject to an operating reserve adjustment to allow FDA to adjust the fee revenue amount to maintain a specified operating reserve of carryover user fees, per section 740(c)(4) of the FD&C Act. FDA may increase the fee revenue amount to maintain a 12-week minimum. If FDA has an excess operating reserve, FDA will decrease the fee revenue amount so that FDA has 22 weeks of operating reserve for FY 2025, 20 weeks for FY 2026, 18 weeks for FY 2027, and 16 weeks for FY 2028.

Per section 740(b)(2) of the FD&C Act, fees for applications, establishments, products, and sponsors are to be established each year by FDA so that the percentages of the total revenue that are derived from each type of user fee will be as follows: (1) revenue from application fees shall be 20 percent of total fee revenue; (2) revenue from product fees shall be 27 percent of total fee revenue; (3) revenue from establishment fees shall be 26 percent of total fee revenue; and (4) revenue from sponsor fees shall be 27 percent of total fee revenue. The target revenue amounts for each fee category for FY 2025 are as follows: for application fees, the target revenue amount is $5,701,000; for product fees, the target revenue amount is $7,697,000; for establishment fees, the target revenue amount is $7,412,000; and for sponsor fees, the target revenue amount is $7,697,000.

For FY 2025, the animal drug user fee rates are: (1) $581,735 for an animal drug application; (2) $290,867 for a supplemental animal drug application for which safety or effectiveness data are required, for an animal drug application subject to the criteria set forth in section 512(d)(4) of the FD&C Act (21 U.S.C. 360b), and for an application for conditional approval under section 571 of the FD&C Act (21 U.S.C. 360ccc) for which an animal drug application submitted under section 512(b)(1) of the FD&C Act has been previously approved under section 512(d)(1) of the FD&C Act for another intended use; (3) $10,705 for the annual product fee; $157,702 for the annual establishment fee; and (4) $137,446 for the annual sponsor fee. FDA will issue invoices for FY 2025 product, establishment, and sponsor fees by December 31, 2024, and payment will be due by January 31, 2025. The application fee rates are effective for applications submitted on or after October 1, 2024, and will remain in effect through September 30, 2025. Applications will not be accepted for review until FDA has received full payment of application fees and any other animal drug user fees owed under the ADUFA program.

II. Fee Revenue Amount for FY 2025

A. Statutory Fee Revenue Amounts

Section 740(b)(1) of the FD&C Act specifies that the base fee revenue amount for FY 2025 for all animal drug user fee categories totals $33,500,000.

B. Inflation Adjustment to Fee Revenue Amount

Section 740(c)(2)(A)(ii) and (iii) of the FD&C Act specifies that the annual fee revenue amount is to be adjusted for inflation increases for FY 2025 and subsequent fiscal years using two separate adjustments: one for personnel compensation and benefits (PC&B) and one for non-PC&B costs. Section 740(c)(2)(A)(ii) of the FD&C Act specifies the component of the inflation adjustment for payroll costs shall be one plus the average annual percent change in the cost of all PC&B paid per full-time equivalent position (FTE) at FDA for the

first 3 of the 4 preceding fiscal years of available data, multiplied by the average proportion of PC&B costs to total FDA costs for the first 3 of the 4 preceding fiscal years of available data. The data on total PC&B paid and numbers of FTE paid, from which the average cost per FTE can be derived, are published in FDA's Justification of Estimates for Appropriations Committees.

Table 1 summarizes the total PC&B cost per FTE for the specified fiscal years, provides the percent change from the previous fiscal year, and provides the average percent change over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 1—FDA PERSONNEL COMPENSATION AND BENEFITS (PC&B) EACH YEAR AND PERCENTAGE CHANGE

Fiscal year	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total FTEs	18,501	18,474	18,729	.....
PC&B per FTE	$164,289	$171,348	$183,486	.....
Percentage Change From Previous Year	0.1811%	4.2967%	7.0838%	3.8539%

Section 740(c)(2)(A)(ii) of the FD&C Act specifies that this 3.8539 percent should be multiplied by the proportion of PC&B costs to total FDA costs for the first 3 of the preceding 4 fiscal years for which data are available. Table 2 shows the amount of PC&B and the total amount obligated by FDA for the same 3 fiscal years.

TABLE 2—PC&B AS A PERCENT OF TOTAL COST AT FDA

Fiscal year	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total Costs	$6,049,798,000	$6,251,981,000	$6,654,058,000	.....
PC&B percent	50.2416%	50.6316%	51.6454%	50.8395%

The portion of the inflation adjustment relating to payroll costs is 3.8539 percent multiplied by 50.8359 percent, or 1.9593 percent.

Section 740(c)(2)(A)(iii) of the FD&C Act specifies that the portion of the inflation adjustment for non-payroll costs is the average annual percent change that occurred in the Consumer Price Index (CPI) (Washington-Arlington-Alexandria, DC-VA-MD-WV; not seasonally adjusted; all items less food and energy; annual index) for the first 3 years of the preceding 4 years of available data multiplied by the average proportion of all costs other than PC&B costs to total FDA costs for the first 3 years of the preceding 4 fiscal years. Table 3 provides the summary data for the percent change in the specified CPI for the Washington-Arlington-Alexandria area. The data from the Bureau of Labor Statistics are shown in table 3.[1]

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENTAGE CHANGE IN CPI (LESS FOOD AND ENERGY) FOR WASHINGTON-ARLINGTON-ALEXANDRIA AREA

Fiscal year	2021	2022	2023	3-Year average
Annual CPI	287.144	302.608	313.315	.....
Annual Percent Change	3.1271%	5.3855%	3.5382%	4.0169%

Section 740(c)(2)(A)(iii) of the FD&C Act specifies to calculate the inflation adjustment for non-payroll costs, we multiply 4.0169 percent by the average proportion of all costs other than PC&B to total FDA costs for the first 3 years of the preceding 4 fiscal years. Since 50.8395 percent was obligated for PC&B as shown in table 2, 49.1605 percent is the portion of costs other than PC&B (100 percent minus the PC&B percentage of 50.8395). The portion of the inflation adjustment relating to non-payroll costs is 4.0169 percent multiplied by 49.1605 percent, or 1.9747 percent.

Next, we add the payroll component (1.9593 percent) to the non-payroll component (1.9747 percent), for an inflation adjustment of 3.9340 percent for FY 2025.

Section 740(c)(2)(B) of the FD&C Act provides for the inflation adjustment to be compounded each fiscal year after FY 2025. The inflation adjustment for FY 2025 (3.9340 percent) is compounded by adding 1 and then multiplying by 1 plus the inflation adjustment factor for FY 2024 (zero percent), which equals 1.0393 (rounded) (1.0393 multiplied 1.0). We then multiply the base revenue amount for FY 2025 ($33,500,000) by 1.0393, yielding an inflation adjusted amount of $34,817,890.

C. Workload Adjustment to Inflation Adjusted Fee Revenue Amount

Section 740(c)(3)(A) of the FD&C Act specifies that the annual fee revenue amounts in ADUFA V for FY 2025 and subsequent fiscal years are subject to adjustment to account for changes in FDA's review workload. The workload

[1] The data is published by the Bureau of Labor Statistics and can be found on its website at: *https://data.bls.gov/timeseries/CUURS35ASA0L1E.*

adjustment will be applied to the inflation adjusted fee revenue amount.

To determine whether a workload adjustment applies, per ADUFA V commitments FDA calculates the weighted average of the change in the total number of each of the five types of applications and submissions specified in the workload adjustment provision (animal drug applications, supplemental animal drug applications for which data with respect to safety or efficacy are required, manufacturing supplemental animal drug applications, investigational animal drug study submissions, and investigational animal drug protocol submissions) received over the 5-year period that ended on September 30, 2023 (the base years; 2019 through 2023), and the average number of each of these types of applications and submissions over the most recent 5-year period that ended April 30, 2024.

The results of these calculations are presented in the first two columns of table 4. Column 3 reflects the percent change in workload over the two 5-year periods. Column 4 shows the weighting factor for each type of application/submissions, reflecting how much of the total FDA animal drug review workload was accounted for by each type of application or submission in the table during the most recent 5 years. Column 5 is the weighted percent change in each category of workload and was derived by multiplying the weighting factor in each line in column 4 by the percent change from the base years in column 3. At the bottom right of the table, the sum of the values in column 5 is calculated, reflecting a total change in workload of negative 4.4338 percent for FY 2025. This is the workload adjuster for FY 2025.

TABLE 4—WORKLOAD ADJUSTER CALCULATION

Application type	Column 1 5-Year average (base years)	Column 2 Latest 5-year average	Column 3 Percent change	Column 4 Weighting factor	Column 5 Weighted percent change
New Animal Drug Application (NADAs)	11.60	12.40	6.8966	0.0355	0.2447
Supplemental NADAs With Safety or Efficacy Data	8.20	7.60	−7.3171	0.0276	−0.2021
Manufacturing Supplements	367.20	359.20	−2.1786	0.2065	−0.4499
Investigational Study Submissions	164.20	159.00	−3.1669	0.5887	−1.8644
Investigational Protocol Submissions	216.20	183.20	−15.2636	0.1416	−2.1621
FY 2025 ADUFA V Workload Adjuster					−4.4338

Section 740(c)(3)(B) of the FD&C Act specifies that under no circumstances shall the workload adjustment result in fee revenues that are less than the base fee revenues for that fiscal year as adjusted for inflation. Additionally, section 740(c)(3)(A)(ii) states that the workload adjuster must be greater than 3 percent for a second fiscal year within ADUFA V before FDA can add the adjustment to the target revenue. For FY 2025 the workload adjuster is below the 3 percent statute threshold, therefore no workload adjustment shall be applied.

D. Operating Reserve Adjustment to Inflation and Workload Adjusted Fee Revenue Amount

Section 740(c)(4)(A) of the FD&C Act specifies that for FY 2025, after the fee revenue amount established under section 740(b) of the FD&C Act is adjusted for inflation and workload, the Secretary shall increase the fee revenue amount for such fiscal year, if necessary to provide an operating reserve of not less than 12 weeks or decrease the fee revenue amount for such fiscal year, if necessary to provide for not more than 22 weeks of operating reserves.

To determine the dollar amounts for the 12-week and 22-week operating reserve thresholds, we divide the adjusted annual fee revenue amount (rounded) ($34,818,000) by 52 weeks to generate a 1-week operating reserve amount of $669,577. The 1-week operating reserve amount is then multiplied by 12 and 22. This results in a 12-week minimum threshold of $8,034,923 and a 22-week maximum threshold of $14,730,692.

To estimate the FY 2024 end-of-year operating reserve of carryover user fees, the Agency projected the user fee carryover amount at the end of July 2024 using forecasted obligations, collections, and estimated recoveries but not including carryover use fees that have not been appropriated. The operating reserve of carryover user fees is projected to be $21,041,545 or 31.43 weeks ($21,041,545 divided by $669,577).

Because the estimated FY 2024 end-of-year operating reserve of carryover user fees is not below the 12-week threshold amount of $8,034,923, FDA will not increase the fee revenue amount and fees for FY 2025.

However, because the estimated FY 2024 end-of-year operating reserve of carryover user fees of $21,041,545 exceeds the 22-week threshold of $14,730,692, FDA will apply an operating reserve adjustment of $6,310,853 to decrease the fee revenue and fees for FY 2025.

With respect to target revenue for FY 2025, subtracting the operating reserve adjustment amount of $6,310,853 from the adjusted fee revenue amount of $34,817,890 results in a total target revenue amount of $28,507,037 for FY 2025.

E. FY 2025 Fee Revenue Amounts

The fee revenue amount (rounded) for FY 2025 is $28,507,000. Section 740(b)(2) of the FD&C Act specifies that this revenue amount is to be divided as follows: 20 percent, or a total of $5,701,000 is to come from application fees; 27 percent, or a total of $7,697,000, is to come from product fees; 26 percent, or a total of $7,412,000 is to come from establishment fees; and 27 percent, or a total of $7,697,000 is to come from sponsor fees.

III. Animal Drug Application Fee Calculations for FY 2025

A. Application Fee Revenues and Numbers of Fee-Paying Applications

Section 740(a)(1)(A) of the FD&C Act states that each person that submits an animal drug application or a supplemental animal drug application shall be subject to an application fee, with limited exceptions. The term ''animal drug application'' means an application for approval of any new animal drug submitted under section 512(b)(1) of the FD&C Act or an application for conditional approval of a new animal drug submitted under section 571 of the FD&C Act. A ''supplemental animal drug

application'' is defined as a request to FDA to approve a change in an approved animal drug application, or a request to FDA to approve a change to an application approved under section 512(c)(2) of the FD&C Act for which data with respect to safety or effectiveness are required. Such applications are subject to ADUFA fees, except those fees may be waived under the circumstances described in section 740(d)(1)(D) and 740(i) of the FD&C Act.

Furthermore, ADUFA V continues to provide an exception from application fees for animal drug applications submitted under section 512(b)(1) of the FD&C Act by a sponsor who previously applied for conditional approval under section 571 of the FD&C Act for the same product and paid an application fee at the time they applied for conditional approval. The purpose of this exception is to prevent sponsors of conditionally approved products from having to pay a second application fee at the time they apply for full approval of their products under section 512(b)(1) of the FD&C Act, provided the sponsor's application for full approval is filed consistent with the timeframes established in section 571(h) of the FD&C Act.

The application fees are to be set so that they will generate $5,701,000 in fee revenue for FY 2025. The fee for a supplemental animal drug application for which safety or effectiveness data are required, for an animal drug application subject to criteria set forth in section 512(d)(4) of the FD&C Act, and for an application for conditional approval under section 571 of the FD&C Act of a new animal drug for which an animal drug application submitted under section 512(b)(1) of the FD&C Act has been previously approved under section 512(d)(1) for another intended use is to be set at 50 percent of the animal drug application fee.

To set animal drug application fees and supplemental animal drug application fees to realize $5,701,000 FDA must first make some assumptions about the number of fee-paying applications and supplemental applications the Agency will receive in FY 2025.

The Agency knows the number of applications that have been submitted in previous fiscal years. That number fluctuates annually. In estimating the fee revenue to be generated by animal drug application fees in FY 2025, FDA is assuming that the number of applications for which fees will be paid in FY 2025 will equal the average number of applications over the five most recently completed fiscal years of the ADUFA program (FY 2019 to FY 2023).

Over the 5 most recently completed fiscal years, the average number of animal drug applications subject to the full fee was 5.60. Over this same period, the average number of supplemental applications for which safety or effectiveness data are required, applications subject to the criteria set forth in section 512(d)(4) of the FD&C Act, and applications for conditional approval of a new animal drug for which a section 512(b)(1) application has been previously approved for another intended use subject to half of the full fee was 8.40.

Based on the previous assumptions, FDA is estimating that it will receive a total of 9.80 fee-paying animal drug applications in FY 2025 (5.60 applications paying a full fee and 8.40 applications paying a half fee).

B. Application Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the estimated 9.80 applications that pay the fee will generate a total of $5,701,000. To generate this amount, the fee for an animal drug application, rounded to the nearest dollar, will have to be $581,735, and the fee for a supplemental animal drug application for which safety or effectiveness data are required, for applications subject to the criteria set forth in section 512(d)(4) of the FD&C Act, and for an application for conditional approval under section 571 of the FD&C Act of a new animal drug for which an animal drug application submitted under section 512(b)(1) of the FD&C Act has been previously approved under section 512(d)(1) for another intended use will have to be $290,867.

IV. Animal Drug Product Fee Calculations for FY 2025

A. Product Fee Revenues and Numbers of Fee-Paying Products

Section 740(a)(2) of the FD&C Act specifies that the animal drug product fee must be paid annually by the person named as the applicant in a new animal drug application or supplemental new animal drug application for an animal drug product submitted for listing under section 510 of the FD&C Act (21 U.S.C. 360) and who had an animal drug application or supplemental animal drug application pending at FDA after September 1, 2003. The term ''animal drug product'' means each specific strength or potency of a particular active ingredient or ingredients in final dosage form marketed by a particular manufacturer or distributor, which is uniquely identified by the labeler code and product code portions of the National Drug Code, and for which an animal drug application or a supplemental animal drug application has been approved (see section 739(3) of the FD&C Act). The product fees are to be set so that they will generate $7,697,000 in fee revenue for FY 2025.

To set animal drug product fees to realize $7,697,000, FDA must make some assumptions about the number of products for which these fees will be paid in FY 2025. FDA developed data on all animal drug products that have been submitted for listing under section 510 of the FD&C Act and matched this to the list of all persons who had an animal drug application or a supplemental animal drug application pending after September 1, 2003. As of May 2024, FDA estimates that there are 734 products submitted for listing by persons who had an animal drug application or supplemental animal drug application pending after September 1, 2003. Based on this, FDA estimates that a total of 734 products will be subject to this fee in FY 2025.

In estimating the fee revenue to be generated by animal drug product fees in FY 2025, FDA is assuming that 2 percent of the products invoiced, or 15, will not pay fees in FY 2025, due to fee waivers and reductions. FDA has made this estimate at 2 percent this year, based on historical data over the past 5 completed fiscal years of the ADUFA program.

Accordingly, the Agency estimates that a total of 719 (734 minus 15) products will be subject to product fees in FY 2025.

B. Product Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the estimated 719 products for which fees are paid will generate a total of $7,697,000. To generate this amount will require the fee for an animal drug product, rounded to the nearest dollar, to be $10,705.

V. Animal Drug Establishment Fee Calculations for FY 2025

A. Establishment Fee Revenues and Numbers of Fee-Paying Establishments

Section 740(a)(3) of the FD&C Act states that the animal drug establishment fee must be paid annually by the person who: (1) owns or operates, directly or through an affiliate, an animal drug establishment; (2) is named as the applicant in an animal drug application or supplemental animal drug application for an animal drug product submitted for listing under section 510 of the FD&C Act; (3) had an animal drug application or supplemental animal drug application

pending at FDA after September 1, 2003; and (4) whose establishment engaged in the manufacture of the animal drug product during the fiscal year. An establishment subject to animal drug establishment fees is assessed only one such fee per fiscal year. The term ''animal drug establishment'' is defined as a foreign or domestic place of business at one general physical location, consisting of one or more buildings, all of which are within 5 miles of each other, at which one or more animal drug products are manufactured in final dosage form (see section 739(4) of the FD&C Act). The establishment fees are to be set so that they will generate $7,412,000 in fee revenue for FY 2025.

To set animal drug establishment fees to realize $7,412,000, FDA must make some assumptions about the number of establishments for which these fees will be paid in FY 2025. FDA developed data on all animal drug establishments and matched this to the list of all persons who had an animal drug application or supplemental animal drug application pending after September 1, 2003. As of May 2024, FDA estimates that there are a total of 50 establishments owned or operated by persons who had an animal drug application or supplemental animal drug application pending after September 1, 2003. Based on this, FDA believes that 50 establishments will be subject to this fee in FY 2025.

In estimating the fee revenue to be generated by animal drug establishment fees in FY 2025, FDA is assuming that 6 percent of the establishments invoiced, or three, will not pay fees in FY 2025 due to fee waivers and reductions. FDA has made this estimate at 6 percent this year, based on historical data over the past 5 completed fiscal years.

Accordingly, the Agency estimates that a total of 47 establishments (50 minus 3) will be subject to establishment fees in FY 2025.

B. Establishment Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the fees paid for the estimated 47 establishments will generate a total of $7,412,000. To generate this amount will require the fee for an animal drug establishment, rounded to the nearest dollar, to be $157,702.

VI. Animal Drug Sponsor Fee Calculations for FY 2025

A. Sponsor Fee Revenues and Numbers of Fee-Paying Sponsors

The animal drug sponsor fee must be paid annually by each person who: (1) is named as the applicant in an animal drug application, except for an approved application for which all subject products have been removed from listing under section 510 of the FD&C Act, or has submitted an investigational animal drug submission that has not been terminated or otherwise rendered inactive and (2) had an animal drug application, supplemental animal drug application, or investigational animal drug submission pending at FDA after September 1, 2003 (see sections 739(6) and 740(a)(4) of the FD&C Act). An animal drug sponsor is subject to only one such fee each fiscal year (see § 740(a)(4) of the FD&C Act). The sponsor fees are to be set so that they will generate $7,697,000 in fee revenue for FY 2025.

To set animal drug sponsor fees to realize $7,697,000, FDA must make some assumptions about the number of sponsors who will pay these fees in FY 2025. FDA developed data on all animal drug sponsors and matched this to the list of all sponsors who had pending submissions and applications after September 1, 2003. As of May 2024, FDA estimates that a total of 176 sponsors will meet this definition in FY 2025.

In estimating the fee revenue to be generated by animal drug sponsor fees in FY 2025, FDA is assuming that 68 percent of the sponsors invoiced, or 120, will not pay sponsor fees in FY 2025 due to fee waivers and reductions. FDA has made this estimate at 68 percent this year, based on historical data over the past 5 completed fiscal years of the ADUFA program.

Accordingly, the Agency estimates that a total of 56 sponsors (176 minus 120) will be subject to and pay sponsor fees in FY 2025.

B. Sponsor Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the estimated 56 sponsors that pay fees will generate a total of $7,697,000. To generate this amount will require the fee for an animal drug sponsor, rounded to the nearest dollar, to be $137,446.

VII. Fee Schedule for FY 2025

The fee rates for FY 2025 are summarized in table 5.

TABLE 5—FY 2025 FEE RATES

Animal drug user fee category	Fee rate for FY 2025
Animal Drug Application Fees:	
Animal Drug Application	$581,735
Supplemental Animal Drug Application for Which Safety or Effectiveness Data are Required, Animal Drug Application Subject to the Criteria Set Forth in Section 512(d)(4) of the FD&C Act, or Application for Conditional Approval Under Section 571 of the FD&C Act for Which an Animal Drug Application Submitted Under Section 512(b)(1) of the FD&C Act Has Been Previously Approved Under Section 512(d)(1) for Another Intended Use.	290,867
Animal Drug Product Fee	10,705
Animal Drug Establishment Fee [1]	157,702
Animal Drug Sponsor Fee [2]	137,446

[1] An animal drug establishment is subject to only one such fee each fiscal year.
[2] An animal drug sponsor is subject to only one such fee each fiscal year.

VIII. Fee Waiver or Reduction; Exemption From Fees

The types of fee waivers, fee reductions, and exemptions from fees that applied during ADUFA IV still exist in ADUFA V, with one exception. After September 30, 2023, there is no longer an exemption for any person who submits to CVM a supplemental animal drug application relating to a new animal drug application approved under section 512 of the FD&C Act, solely to add the application number to the labeling of the drug in the manner specified in section 503(w) of the FD&C Act.

Remaining waivers and reductions apply for the following: barriers to innovation; where fees will exceed the cost to review the animal drug application; if the application is related

to certain free-choice medicated feeds; if the application is solely for a MUMS indication; or if the sponsor is a small business submitting its first animal drug application. See section 740(d)(1) of the FD&C Act.

A. Barrier to Innovation Waivers or Fee Reductions

Under section 740(d)(1)(A) of the FD&C Act, an animal drug applicant may qualify for a waiver or reduction of one or more ADUFA fees if the fee would present a significant barrier to innovation because of limited resources available to the applicant or other circumstances. CVM's guidance for industry (GFI) #170, entitled ''Animal Drug User Fees and Fee Waivers and Reductions,'' [2] states that the Agency interprets this provision to mean that a waiver or reduction is appropriate when: (1) the product for which the waiver is being requested is innovative, or the requestor is otherwise pursuing innovative animal drug products or technology and (2) the fee would be a significant barrier to the applicant's ability to develop, manufacture, or market the innovative product or technology. Only those applicants that meet both criteria will qualify for a waiver or reduction in user fees under this provision (see GFI #170 at pp. 6–8). For purposes of determining whether the second criterion would be met based on limited financial resources available to the applicant, FDA has determined an applicant with financial resources of less than $20,000,000 (including the financial resources of the applicant's affiliates), adjusted annually for inflation, has limited resources available. Using the CPI for urban consumers (U.S. city average; not seasonally adjusted; all items; annual index), the inflation-adjusted level for FY 2025 will be $23,258,600; this level represents the financial resource ceiling that will be used to determine if there are limited resources available to an applicant requesting a Barrier to Innovation waiver on financial grounds for FY 2025. Requests for a waiver must be submitted in writing to FDA each fiscal year not later than 180 days from when the fees are due. A waiver granted on Barrier to Innovation grounds (or any of the other grounds listed in section 740(d)(1) of the FD&C Act) is only valid for one fiscal year. If a sponsor is not granted a waiver, they are liable for the fees.

[2] CVM's GFI #170 is located at: *https://www.fda.gov/downloads/AnimalVeterinary/GuidanceComplianceEnforcement/GuidanceforIndustry/UCM052494.pdf.*

B. Exemption or Exception From Fees

In addition to the waivers and fee reductions described above, one fee exemption and two exceptions still apply in ADUFA V.

If an animal drug application, supplemental animal drug application, or investigational submission involves the intentional genomic alteration of an animal that is intended to produce a human medical product, any person who is the named applicant or sponsor of that application or submission will not be subject to sponsor, product, or establishment fees under ADUFA based solely on that application or submission (see section 740(d)(4) of the FD&C Act).

There is an exception from application fees for animal drug applications submitted under section 512(b)(1) of the FD&C Act by a sponsor who previously applied for conditional approval under section 571 of the FD&C Act for the same product and paid an application fee at the time they applied for conditional approval, provided the sponsor has submitted the application under section 512(b)(1) of the FD&C Act within the timeframe specified in section 571(h) of the FD&C Act. There is also an exception from application fees for previously filed applications that were not approved or were withdrawn (without waiver or refund). Both exceptions are detailed in section 740(a)(1)(C) of the FD&C Act.

IX. Procedures for Paying the FY 2025 Fees

A. Application Fees and Payment Instructions

The FY 2025 fee established in the new fee schedule must be paid for an animal drug application or supplement subject to fees under ADUFA V that is submitted on or after October 1, 2024. The payment must be made in U.S. currency from a U.S. bank by one of the following methods: wire transfer, electronically, check, bank draft, or U.S. postal money order made payable to the Food and Drug Administration. The preferred payment method is online using electronic check (Automated Clearing House (ACH) also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Electronic payment options are based on the balance due. Payment by credit card is available only for balances that are less than $25,000. If the balance exceeds this amount, only the ACH option is available. Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay*, or the *Pay.gov* payment option is available to you after you submit a cover sheet. (Note: only full payments are accepted. No partial payments can be made online.) Once you search for and find your invoice, select ''Pay Now'' to be redirected to *www.pay.gov.* Payments must be made using U.S. bank accounts as well as U.S. credit cards.

When paying by check, bank draft, or U.S. postal money order, please write your application's unique Payment Identification Number (PIN), beginning with the letters AD, on the upper right-hand corner of your completed Animal Drug User Fee Cover Sheet. Also write the FDA's post office box number (P.O. Box 979033) and PIN on the enclosed check, bank draft, or money order. Mail the payment and a copy of the completed Animal Drug User Fee Cover Sheet to: Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000. Note: In no case should the payment for the fee be submitted to FDA with the application.

When paying by wire transfer, the invoice number or PIN needs to be included. Without the invoice number or PIN, the payment may not be applied, and the invoice amount would be referred to collections. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required to add that amount to the payment to ensure that the invoice is paid in full.

Use the following account information when sending a payment by wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Account Name: Food and Drug Administration, Account Number: 75060099, U.S. Department of the Treasury routing/transit number: 021030004, SWIFT Number: FRNYUS33.

To send a check by a courier such as FedEx, the courier must deliver the check and printed copy of the cover sheet to U.S. Bank: U.S. Bank, Attn: Government Lockbox 979033, 3180 Rider Trail South, Earth City, MO 63045. (Note: This address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 855–259–3064. This telephone number is only for questions about courier delivery.)

It is important that the fee arrives at the bank at least a day or two before the application arrives at FDA's CVM. FDA records the official application receipt date as the later of the following: the date the application was received by CVM, or the date U.S. Bank notifies FDA that your payment in the full amount has been received, or when the U.S. Department of the Treasury notifies FDA of receipt of an electronic or wire transfer payment. U.S. Bank and the

U.S. Department of the Treasury are required to notify FDA within 1 working day, using the PIN described previously. The tax identification number of FDA is 53–0196965.

B. Application Cover Sheet Procedures

Step One: Create a user account and password. Log on to the ADUFA website at *https://www.fda.gov/industry/animal-drug-user-fee-act-adufa/animal-drug-user-fee-cover-sheet* and, under Application Submission Information, click on ''Create ADUFA User Fee Cover Sheet.'' For security reasons, each firm applying will be assigned an organization identification number, and each user will also be required to set up a user account and password the first time you use this site. Online instructions will walk you through this process.

Step Two: Create an Animal Drug User Fee Cover Sheet, transmit it to the FDA, and print a copy. After logging into your account with your username and password, complete the steps required to create an Animal Drug User Fee Cover Sheet. One cover sheet is needed for each animal drug application or supplement. Once you are satisfied that the data on the cover sheet is accurate and you have finalized the cover sheet, you will be able to transmit it electronically to the FDA and you will be able to print a copy of your cover sheet showing your unique PIN.

Step Three: Send the payment for your application as described in section IX.A above.

Step Four: Submit your application.

C. Product, Establishment, and Sponsor Fees

By December 31, 2024, FDA will issue invoices and payment instructions for product, establishment, and sponsor fees for FY 2025 using this fee schedule. Payment will be due by January 31, 2025. FDA will issue invoices in November 2025 for any products, establishments, and sponsors subject to fees for FY 2025 that qualify for fees after the December 2024 billing.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3481]

Animal Generic Drug User Fee Program Rates and Payment Procedures for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or the Agency) is announcing the fee rates and payment procedures for fiscal year (FY) 2025 generic new animal drug program user fees. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Animal Generic Drug User Fee Amendments of 2023 (AGDUFA IV), authorizes FDA to collect user fees for certain abbreviated applications for generic new animal drugs, for certain generic new animal drug products, for certain sponsors of such abbreviated applications for generic new animal drugs and/or investigational submissions for generic new animal drugs (JINAD's), and for certain submissions related to JINAD files. This notice establishes the fee rates for FY 2025.

DATES: The application fee rates are effective for all abbreviated applications for a generic new animal drug submitted on or after October 1, 2024, and will remain in effect through September 30, 2025. The fee rates for requests to establish a JINAD file, and for certain submissions to JINAD files established prior to October 1, 2023, are effective on October 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Visit FDA's website at: *https://www.fda.gov/ForIndustry/UserFees/AnimalGenericDrugUserFeeActAGDUFA/default.htm* or contact: Lisa Kable, Center for Veterinary Medicine (HFV–10), Food and Drug Administration, 7500 Standish Pl., Rockville, MD 20855, 240–402–6888, *Lisa.Kable@fda.hhs.gov*. For general questions, you may also email the Center for Veterinary Medicine (CVM) at: *cvmagdufa@fda.hhs.gov.*

For questions relating to this notice: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20903, 240–402–4989; or the User Fee Support Staff at *OO-OFBAP-OFM-UFFS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 741(a) of the FD&C Act (21 U.S.C. 379j–21(a)), establishes four different types of generic new animal drug user fees: (1) fees for certain abbreviated applications for generic new animal drugs; (2) annual fees for certain generic new animal drug products; (3) annual fees for certain sponsors of abbreviated applications for generic new animal drugs and/or investigational submissions for generic new animal drugs; and (4) JINAD file fees. When certain conditions are met, section 741(d) of the FD&C Act authorizes FDA to waive or reduce fees for generic new animal drugs intended solely to provide for a minor use or minor species indication.

Section 741(b)(1) of the FD&C Act establishes a base revenue amount for each fiscal year. Per section 741(c)(2) and (3) of the FD&C Act, the base revenue amounts established for fiscal years after FY 2024 are subject to adjustment for inflation and workload. Beginning FY 2026, the annual fee revenue amounts are also subject to adjustment to reduce workload-based increases by the amount of certain excess collections. Section 741(b) of the FD&C Act establishes fees each year so that the percentage allocations for each of the fee categories is as follows: 20 percent shall be derived from fees for abbreviated applications for a generic new animal drug and JINAD file fees; 40 percent shall be derived from fees for generic new animal drug products; and 40 percent shall be derived from fees for generic new animal drug sponsors. The target revenue amounts for each fee category for FY 2025 are as follows: for application and/or JINAD file fees, the target revenue amount is $5,196,700; for product fees, the target revenue amount is $10,393,400; and for sponsor fees, the target revenue amount is $10,393,400.

For FY 2025, the AGDUFA rates are: $161,907 for each abbreviated application for a generic new animal drug other than those subject to the criteria in section 512(d)(4) of the FD&C Act (21 U.S.C. 360b(d)(4)); $80,954 for each abbreviated application for a generic new animal drug subject to the criteria in section 512(d)(4) of the FD&C Act; $50,000 for each JINAD file request or certain submissions to established JINAD files; $16,139 for each generic new animal drug product; $270,204 for each generic new animal drug sponsor paying 100 percent of the sponsor fee; $202,653 for each generic new animal drug sponsor paying 75 percent of the sponsor fee; and $135,102 for each generic new animal drug sponsor paying 50 percent of the sponsor fee. FDA will

issue invoices for FY 2025 product and sponsor fees by December 31, 2024, and payment will be due by January 31, 2025. The application fee rates are effective for all abbreviated applications for a generic new animal drug submitted on or after October 1, 2024, and will remain in effect through September 30, 2025. The fee rate for requests to establish a JINAD file, and for certain submissions to JINAD files established prior to October 1, 2023, is effective on October 1, 2024, and will remain in effect through September 30, 2025.

Applications will not be accepted for review until FDA has received full payment of application fees and any other fees owed under the AGDUFA program. Similarly, a request to establish a JINAD file or a submission to an existing JINAD file will not be accepted for action by FDA until FDA has received full payment of all fees owed under the AGDUFA program.

II. Fee Revenue Amount for FY 2025

A. Statutory Fee Revenue Amounts

Section 741(b)(1) of the FD&C Act specifies that the base fee revenue amount for FY 2025 for all generic animal drug user fee categories totals $25,000,000.

B. Inflation Adjustment to Fee Revenue Amount

Section 741(c)(2)(A) of the FD&C Act specifies that the annual fee revenue amount is to be adjusted for inflation increases for FY 2025 and subsequent fiscal years using two separate factors—one for personnel compensation and benefits (PC&B) costs and one for non-PC&B costs.

Section 741(c)(2)(A)(ii) of the FD&C Act specifies the component of the inflation adjustment for payroll costs shall be one plus the average annual percent change in the cost of all PC&B, per full-time equivalent (FTE) position of the FDA, for the first 3 of the preceding 4 fiscal years of available data, multiplied by the average proportion of PC&B costs to total FDA costs for the first 3 of the 4 preceding fiscal years of available data. The data on total PC&B paid and numbers of FTE paid, from which the average cost per FTE can be derived, are published in FDA's Justification of Estimates for Appropriations Committees.

Table 1 summarizes the total PC&B costs per FTE for the specified fiscal years, provides the percentage change from the previous fiscal year, and provides the average percentage change over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 1—FDA PERSONNEL COMPENSATION AND BENEFITS (PC&B) EACH YEAR AND PERCENT CHANGE

Fiscal year	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total FTEs	18,501	18,474	18,729	.....
PC&B per FTE	$164,289	$171,348	$183,486	.....
Percent Change from Previous Year	0.1811%	4.2967%	7.0838%	3.8539%

Section 741(c)(2)(A)(ii) of the FD&C Act specifies that the 3.8539 percent should be multiplied by the average proportion of PC&B costs to total FDA costs for the first 3 of the preceding 4 fiscal years for which data are available. Table 2 shows the amount of PC&B and the total costs obligated by FDA for the same 3 fiscal years.

TABLE 2—PC&B AS A PERCENT OF TOTAL COST

Fiscal year	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total Costs	$6,049,798,000	$6,251,981,000	$6,654,058,000	.....
PC&B percent	50.2416%	50.6316%	51.6454%	50.8395%

The portion of the inflation adjustment relating to payroll costs is 3.8539 percent multiplied by 50.8359 percent, or 1.9593 percent.

Section 741(c)(2)(A)(iii) of the FD&C Act specifies that the non-payroll costs adjustment factor is calculated by multiplying the average annual percentage change that occurred in the Consumer Price Index for Urban Consumers (Washington-Arlington-Alexandria, DC-VA-MD-WV; Not Seasonally Adjusted; All Items Less Food and Energy; Annual Index) for the first 3 years of the preceding 4 years of available data by the average proportion of all non-PC&B costs to total FDA costs for the first 3 years of the preceding 4 fiscal years. Table 3 provides the summary data for the percentage change in the specified CPI for the Washington-Arlington-Alexandria area.[1]

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN CPI (LESS FOOD AND ENERGY) FOR WASHINGTON-ARLINGTON-ALEXANDRIA AREA

Fiscal year	2021	2022	2023	3-Year average
Annual CPI	287.144	302.608	313.315	.....
Annual Percent Change	3.1271%	5.3855%	3.5382%	4.0169%

[1] The data is published by the Bureau of Labor Statistics and can be found on its website at: *https://data.bls.gov/timeseries/CUURS35ASA0L1E.*

Section 741(c)(2)(A)(iii) of the FD&C Act specifies to calculate the inflation adjustment for non-payroll costs, we multiply 4.0169 percent by the average proportion of all costs other than PC&B to total FDA costs for the first 3 years of the preceding 4 fiscal years. Since 50.8395 percent was obligated for PC&B as shown in table 2, 49.1605 percent is the portion of costs other than PC&B (100 percent minus the PC&B percentage of 50.8395). The portion of the inflation adjustment relating to non-payroll costs is 4.0169 percent multiplied by 49.1605 percent, or 1.9747 percent.

Next, we add the payroll component (1.9593 percent) to the non-payroll component (1.9747 percent), for an inflation adjustment of 3.9340 percent for FY 2025.

Section 741(c)(2)(B) of the FD&C Act provides for the inflation adjustment to be compounded each fiscal year after FY 2025. The inflation adjustment for FY 2025 (3.9340 percent) is compounded by adding 1 and then multiplying by 1 plus the inflation adjustment factor for FY 2024 (zero percent), which equals 1.0393 (rounded) (1.0393 × 1.0). We then multiply the base revenue amount for FY 2025 ($25,000,000) by 1.0393, yielding an inflation adjusted amount of $25,983,500.

C. Workload Adjustment to Inflation Adjusted Fee Revenue Amount

Section 741(c)(3)(A) of the FD&C Act specifies that fee revenue amounts for FY 2025 and subsequent fiscal years are subject to adjustment to account for changes in FDA's review workload. The workload adjustment would be applied to the inflation adjusted fee revenue amount.

To determine whether a workload adjustment applies, per AGDUFA IV commitments FDA calculates the weighted average of the change in the total number of each of the six types of applications and submissions specified in the workload adjustment provision (abbreviated applications for generic new animal drugs, manufacturing supplemental abbreviated applications for generic new animal drugs, investigational generic new animal drug study submissions, investigational generic new animal drug protocol submissions, generic investigational new animal drug file requests, and generic investigational new animal drug meeting requests) received over the 5-year period that ended on September 30, 2023 (the base years; 2019 through 2023), and the average number of each of these types of applications and submissions over the most recent 5-year period that ended April 30, 2024.

The results of these calculations are presented in the first two columns of table 4. Column 3 reflects the percent change in workload over the two 5-year periods. Column 4 shows the weighting factor for each type of application/submission, reflecting how much of the total FDA generic new animal drug review workload was accounted for by each type of application or submission in the table during the most recent 5 years. Column 5 is the weighted percent change in each category of workload and was derived by multiplying the weighting factor in each line in column 4 by the percent change from the base years in column 3. At the bottom right of the table, the sum of the values in column 5 is calculated, reflecting a total change in workload of negative 0.9977 percent for FY 2025. This is the workload adjuster for FY 2025.

TABLE 4—WORKLOAD ADJUSTER CALCULATION

Application type	Column 1 5-Year average (base years)	Column 2 Latest 5-year average	Column 3 Percent change	Column 4 Weighting factor	Column 5 Weighted percent change
Abbreviated Application for a Generic New Animal Drug (ANADAs)	28.00	31.60	12.8571	0.0902	1.1600
Manufacturing Supplements ANADAs	249.40	249.20	−0.0802	0.2321	−0.0186
Generic Investigational Study Submissions	171.80	167.00	−2.7939	0.4759	−1.3296
Generic Investigational Protocol Submissions	58.00	54.60	−5.8621	0.1068	−0.6263
Generic Investigational New Animal Drug File Requests (JINAD)	49.20	47.20	−4.0650	0.0183	−0.0744
Generic Investigational New Animal Drug Meeting Requests (JINAD)	28.20	27.80	−1.4184	0.0767	−0.1087
FY 2025 AGDUFA IV Workload Adjuster					−0.9977

Per section 741(c)(3)(C) of the FD&C Act under no circumstances shall the workload adjustment result in fee revenues that are less than the base fee revenues for that fiscal year as adjusted for inflation. For FY 2025 the workload adjustment would result in fee revenues less than the base fee revenues as adjusted for inflation, therefore no workload adjustment shall be applied.

E. FY 2025 Fee Revenue Amounts

AGDUFA IV specifies that the revenue amount of $25,983,500 for FY 2025 is to be divided as follows: 20 percent, or a total of $5,196,700, is to come from application and/or JINAD file fees; 40 percent, or a total of $10,393,400, is to come from product fees; and 40 percent, or a total of $10,393,400 is to come from sponsor fees (See section 741(b) of the FD&C Act).

III. Abbreviated Application Fee and Generic Investigational New Animal Drug (JINAD) File Fee Calculations for FY 2025

A. Fee Revenues and Numbers of Fee-Paying Applications and Submissions

Section 741(a)(1)(A) of the FD&C Act states that each person who submits an abbreviated application for a generic new animal drug shall be subject to an application fee, with limited exceptions. The term ''abbreviated application for a generic new animal drug'' means an abbreviated application for the approval of any generic new animal drug submitted under section 512(b)(2) of the FD&C Act. FDA will assess fees related to JINAD files under section 741(a)(4)(A)(i) of the FD&C Act when a person submits a request to establish a new JINAD file. FDA will assess a fee under section 741(a)(4)(A)(ii) and (iii) of the FD&C Act for a person's first submission, as described below, to a JINAD file on or after October 1, 2023, where the JINAD file had been established prior to that date. The JINAD file fee is set in accordance with

section 741(c)(1)(C) of the FD&C Act at $50,000. FDA will set the abbreviated application fee so that such fees combined with the JINAD file fees will generate a combined total of $5,196,700 in fee revenue for FY 2025.

To set fees for abbreviated applications for generic new animal drugs, FDA must first make some assumptions about the number of fee-paying abbreviated applications it will receive during FY 2025, the number of requests to establish new JINAD files it will receive during FY 2025, and the number of existing (prior to October 1, 2023) JINAD files to which it will receive submissions during FY 2025.

Regarding the fee for a person's first submission to an existing (prior to October 1, 2023) JINAD file on or after October 1, 2023, FDA intends to assess a fee only for the first data (or ''P'') submission to the Bioequivalence (BE) or Chemistry, Manufacturing, and Controls (CMC) technical sections of the JINAD file. The Agency has selected P submissions to the BE or CMC technical sections as the basis for assessing this fee because P submissions to these sections consistently entail the substantial use of FDA review hours during the phased review process.

The Agency knows the numbers of applications and submissions that have been submitted in previous years. Those numbers fluctuate annually. In estimating the fee revenue to be generated by application and submission fees in FY 2025, FDA is assuming that the number of applications and submissions for which fees will be paid in FY 2025 will equal the average number of applications and submissions over the 5 most recently completed fiscal years of the AGDUFA program (FY 2019–FY 2023).

In addition, under section 741(a)(1)(C)(ii) of the FD&C Act an abbreviated application for a generic new animal drug subject to the criteria in section 512(d)(4) of the FD&C Act and submitted on or after October 1, 2013, shall be subject to 50 percent of the fee applicable to all other abbreviated applications for a generic new animal drug.

The average number of original submissions of abbreviated applications for generic new animal drugs over the 5 most recently completed fiscal years is 15 applications not subject to the criteria in section 512(d)(4) of the FD&C Act and 6.4 submissions subject to the criteria in section 512(d)(4). Each of the submissions described under section 512(d)(4) of the FD&C Act pays 50 percent of the fee paid by the other applications and will be counted as one half of a fee. Adding all of the applications not subject to the criteria in section 512(d)(4) of the FD&C Act and 50 percent of the number that are subject to such criteria results in a total of 18.20 anticipated full fees.

Based on the previous assumptions, FDA is estimating that it will receive a total of 18.20 fee-paying generic new animal drug applications in FY 2025 (15.0 original applications paying a full fee and 6.4 applications paying a half fee).

For estimating the number of requests to establish a new JINAD file and the number of P submissions to the BE or CMC section of an existing (prior to October 1, 2023) JINAD file the Agency will receive in FY 2025, FDA took the number of new JINAD file requests and P submissions to the BE or CMC section of an existing JINAD file received in FY 2024. The number of requests to establish new JINAD files and P submissions to the BE or CMC section of existing JINAD files during FY 2024 as of June is 45.

Based on the previous assumptions, FDA is estimating that it will receive a total of 45 fee-paying JINAD file submissions in FY 2025 (including both requests to establish new JINAD files and first P submissions to the BE or CMC section of existing (prior to October 1, 2023) JINAD files).

B. Application Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the estimated 18.20 abbreviated application fees and 45 JINAD file fees will generate a total of $5,196,700. The fee for a new JINAD file request or the first submission to an existing (prior to October 1, 2023) JINAD file is $50,000 under section 741(c)(1)(C) of the FD&C Act. Therefore, the JINAD fees will generate a total of $2,250,000. Abbreviated application fees will have to generate a total of $2,946,700.

To generate this amount, the fee for a generic new animal drug application will be $161,907 and for those applications that are subject to the criteria set forth in section 512(d)(4) of the FD&C Act, 50 percent of that amount, or $80,954.

IV. Generic New Animal Drug Product Fee Calculations For FY 2025

A. Product Fee Revenues and Numbers of Fee-Paying Products

The generic new animal drug product fee must be paid annually by the person named as the applicant in an abbreviated application or supplemental abbreviated application for a generic new animal drug product submitted for listing under section 510 of the FD&C Act (21 U.S.C. 360), and who had an abbreviated application or supplemental abbreviated application for a generic new animal drug product pending at FDA after September 1, 2008 (21 U.S.C. 379j–21(a)(2)). Section 741(k)(6) of FD&C Act defines ''generic new animal drug product'' as a specific strength or potency of a particular active ingredient or ingredients in final dosage form marketed by a particular manufacturer or distributor, which is uniquely identified by the labeler code and product code portions of the National Drug Code, and for which an abbreviated application for a generic new animal drug or supplemental abbreviated application for a generic new animal drug has been approved. The product fees are to be set so that they will generate $10,393,400 in fee revenue for FY 2025.

To set generic new animal drug product fees to realize $10,393,400, FDA must make some assumptions about the number of products for which these fees will be paid in FY 2025. FDA gathered data on all generic new animal drug products that have been submitted for listing under section 510 of the FD&C Act and matched this to the list of all persons who FDA estimated would have a generic new animal drug application or supplemental abbreviated application pending after September 1, 2008. As of May 2024, FDA estimates that there is a total of 651 products submitted for listing by persons who had an abbreviated application for a generic new animal drug or supplemental abbreviated application for a generic new animal drug pending after September 1, 2008. Based on this, FDA believes that a total of 651 products will be subject to this fee in FY 2025.

Per section 741(d) of the FD&C Act in estimating the fee revenue to be generated by generic new animal drug product fees in FY 2025, FDA is estimating that 1 percent of the products invoiced, or 7 products, will not pay fees in FY 2025, due to fee waivers and reductions. FDA has made this estimate at 1 percent this year, based on historical data over the past 5 completed fiscal years of the AGDUFA program.

Accordingly, the Agency estimates that a total of 644 (651 minus 7) products will be subject to product fees in FY 2025.

B. Product Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the estimated 644 products for which fees are paid will generate a total of $10,393,400. To generate this amount will require the fee for a generic new animal drug product, rounded to the nearest dollar, to be $16,139.

V. Generic New Animal Drug Sponsor Fee Calculations for FY 2025

A. Sponsor Fee Revenues and Numbers of Fee-Paying Sponsors

The generic new animal drug sponsor fee must be paid annually by each person who: (1) is named as the applicant in an abbreviated application for a generic new animal drug, except for an approved application for which all subject products have been removed from listing under section 510 of the FD&C Act, or has submitted an investigational submission for a generic new animal drug that has not been terminated or otherwise rendered inactive and (2) had an abbreviated application for a generic new animal drug, supplemental abbreviated application for a generic new animal drug, or investigational submission for a generic new animal drug pending at FDA after September 1, 2008. See section 741(k)(7) and (a)(3) of the FD&C Act.

Per section 741(a)(3)(C) of the FD&C Act, a generic new animal drug sponsor is subject to only one such fee each fiscal year. Applicants with more than 6 approved abbreviated applications will pay 100 percent of the sponsor fee; applicants with more than 1 and fewer than 7 approved abbreviated applications will pay 75 percent of the sponsor fee; and applicants with 1 or fewer approved abbreviated applications will pay 50 percent of the sponsor fee. The sponsor fees are to be set so that they will generate $10,393,400 in fee revenue for FY 2025.

To set generic new animal drug sponsor fees to realize $10,393,400, FDA must make some assumptions about the number of sponsors who will pay these fees in FY 2025. FDA developed data on all generic new animal drug sponsors and matched this to the list of all sponsors who had pending submissions and applications after September 1, 2008. As of May, 2024, FDA estimates that in FY 2025, 15 sponsors will pay 100 percent fees, 15 sponsors will pay 75 percent fees, and 26 sponsors will pay 50 percent fees. The total of these figures is the equivalent of 39.25 full sponsor fees (15 times 100 percent or 15, plus 15 times 75 percent or 11.25 plus 26 times 50 percent or 13).

FDA estimates that about 2 percent of all of these sponsors, or 0.79, will not pay fees in FY 2025, due to fee waivers and reductions. FDA has made the estimate of the percentage of sponsors that will not pay fees at 2 percent this year, based on historical data over the past 5 completed fiscal years of the AGDUFA program. See section 741(d) of the FD&C Act.

Accordingly, the Agency estimates that the equivalent of 38.47 full sponsor fees (39.25 minus 0.78) are likely to be paid in FY 2025.

B. Sponsor Fee Rates for FY 2025

FDA must set the fee rates for FY 2025 so that the estimated equivalent of 38.47 full sponsor fees will generate a total of $10,393,400. To generate this amount will require the 100 percent fee for a generic new animal drug sponsor, rounded to the nearest dollar, to be $270,204. Accordingly, the fee for those paying 75 percent of the full sponsor fee will be $202,653, and the fee for those paying 50 percent of the full sponsor fee will be $135,102.

VI. Fee Schedule for FY 2025

The fee rates for FY 2025 are summarized in table 5.

TABLE 5—FY 2025 FEE RATES

User fee category	Fee rate for FY 2025
Abbreviated Application Fee for Generic New Animal Drug except those subject to the criteria in section 512(d)(4)	$161,907
Abbreviated Application Fee for Generic New Animal Drug subject to the criteria in section 512(d)(4)	80,954
Generic Investigational New Animal Drug File Fee (JINAD)	50,000
Generic New Animal Drug Product Fee	16,139
100% Generic New Animal Drug Sponsor Fee [1]	270,204
75% Generic New Animal Drug Sponsor Fee [1]	202,653
50% Generic New Animal Drug Sponsor Fee [1]	135,102

[1] An animal drug sponsor is subject to only one fee each fiscal year.

VIII. Fee Waiver or Reduction; Exemption From Fees

Per section 741(d)(1), of the FD&C Act the types of fees waivers and reductions that applied last fiscal year still exist for FY 2025. However, after September 30, 2023, there is no longer an exemption for any person who submits to CVM a supplemental abbreviated application relating to a generic new animal drug approved under section 512 of the FD&C Act, solely to add the application number to the labeling of the drug in the manner specified in section 502(w)(3) of the FD&C Act (21 U.S.C. 352(w)(3)).

Waivers or reductions remain available for abbreviated applications for generic new animal drugs intended solely for a minor use/minor species indication; see section 741(d) of the FD&C Act.

IX. Procedures for Paying FY 2025 Fees

A. Abbreviated Application Fees, JINAD File Fees, and Payment Instructions

The FY 2025 fees established in the new fee schedule must be paid for the following applications/submissions that are subject to fees under AGDUFA IV and submitted on or after October 1, 2024: a generic new animal drug application, a submission requesting to establish a JINAD file, or the first BE or CMC submission to a JINAD file that was established prior to October 1, 2023. The payment must be made in U.S. currency from a U.S. bank by one of the following methods: wire transfer, electronically, check, bank draft, or U.S. postal money order made payable to the Food and Drug Administration. The preferred payment method is online using electronic check (Automated Clearing House (ACH), also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Electronic payment options are based on the balance due. Payment by credit card is available only for balances that are less than $25,000. If the balance exceeds this amount, only the ACH option is available. Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/*pay or the *Pay.gov* payment option is available to you after you submit a cover sheet. (*Note:* only full payments are accepted. No partial payments can be made online.) Once you find your invoice, select ''Pay Now'' to be redirected to *Pay.gov.* Payments must be made using U.S. bank accounts as well as U.S. credit cards.

When paying by check, bank draft, or U.S. postal money order, please write your application's unique Payment Identification Number (PIN), beginning

with the letters ''AG'', on the upper right-hand corner of your completed Animal Generic Drug User Fee Cover Sheet. Also write FDA's post office box number (P.O. Box 979033) and PIN on the enclosed check, bank draft, or money order. Mail the payment and a copy of the completed Animal Generic Drug User Fee Cover Sheet to: Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000. *Note:* In no case should the payment for the fee be submitted to FDA with the application or JINAD file submission.

When paying by wire transfer, the invoice number or PIN needs to be included. Without the invoice number or PIN, the payment may not be applied, and the invoice amount would be referred to collections. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required to add that amount to the payment to ensure that the invoice is paid in full. Use the following account information when sending a payment by wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Account Name: Food and Drug Administration, Account Number: 75060099, U.S. Department of the Treasury routing/transit number: 021030004, SWIFT Number: FRNYUS33.

To send a check by a courier such as FedEx, the courier must deliver the check and printed copy of the cover sheet to U.S. Bank: U.S. Bank, Attn: Government Lockbox 979033, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 855–259–3064. This telephone number is only for questions about courier delivery.)

It is important that the fee arrives at the bank at least a day or two before the abbreviated application or JINAD submission arrives at FDA's CVM. FDA records the official abbreviated application or JINAD submission receipt date as the later of the following: the date the application or submission was received by CVM, or the date U.S. Bank notifies FDA that your payment in the full amount has been received, or when the U.S. Department of the Treasury notifies FDA of payment. U.S. Bank and the U.S. Department of the Treasury are required to notify FDA within 1 working day, using the PIN described previously.

The tax identification number of FDA is 53–0196965.

B. Application and JINAD File Submission Cover Sheet Procedures

Step One: Create a user account and password. Log onto the AGDUFA website at *https://www.fda.gov/ForIndustry/UserFees/AnimalGenericDrugUserFeeActAGDUFA/ucm137049.htm* and, under Application Submission Information, click on ''Create AGDUFA User Fee Cover Sheet'' and follow the directions. For security reasons, each firm submitting an application and/or a JINAD file submission will be assigned an organization identification number, and each user will also be required to set up a user account and password the first time you use this site. Online instructions will walk you through this process.

Step Two: Create an Animal Generic Drug User Fee Cover Sheet, transmit it to FDA, and print a copy. After logging into your account with your username and password, complete the steps required to create an Animal Generic Drug User Fee Cover Sheet. One cover sheet is needed for each abbreviated application for a generic new animal drug or JINAD file submission. Once you are satisfied that the data on the cover sheet is accurate and you have finalized the cover sheet, you will be able to transmit it electronically to FDA and you will be able to print a copy of your cover sheet showing your unique PIN.

Step Three: Send the payment for your application or JINAD file submission as described in section IX.A.

Step Four: Submit your application or JINAD file submission.

C. Product and Sponsor Fees

By December 31, 2024, FDA will issue invoices and payment instructions for product and sponsor fees for FY 2025 using this fee schedule. Payment will be due by January 31, 2025. FDA will issue invoices in November 2025 for any products and sponsors subject to fees for FY 2025 that qualify for fees after the December 2024 billing.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3005]

Outsourcing Facility Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the fiscal year (FY) 2025 rates for the establishment and reinspection fees related to entities that compound human drugs and elect to register as outsourcing facilities under the Federal Food, Drug, and Cosmetic Act (FD&C Act). The FD&C Act authorizes FDA to assess and collect an annual establishment fee from outsourcing facilities, as well as a reinspection fee for each reinspection of an outsourcing facility. This document establishes the FY 2025 rates for the small business establishment fee ($6,488), the non-small business establishment fee ($21,534), and the reinspection fee ($19,465) for outsourcing facilities; provides information on how the fees for FY 2025 were determined; and describes the payment procedures outsourcing facilities should follow.

DATES: These fee rates are effective October 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: For more information on human drug compounding and outsourcing facility fees, visit FDA's website at: *https://www.fda.gov/drugs/guidance-compliance-regulatory-information/human-drug-compounding.*

For questions relating to this notice: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20903, 240–402–4989; or the User Fee Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Under section 503B of the FD&C Act (21 U.S.C. 353b), a human drug compounder can register with FDA as an ''outsourcing facility.'' Outsourcing facilities, as defined in section 503B(d)(4), are facilities that meet all the conditions described in section 503B(a), including registering with FDA as an outsourcing facility and paying an annual establishment fee. If the conditions of section 503B are met, a

drug compounded by or under the direct supervision of a licensed pharmacist in an outsourcing facility is exempt from three sections of the FD&C Act: (1) section 502(f)(1) (21 U.S.C. 352(f)(1)), concerning the labeling of drugs with adequate directions for use; (2) section 505 (21 U.S.C. 355), concerning the approval of human drug products under new drug applications or abbreviated new drug applications; and (3) section 582 (21 U.S.C. 360eee–1), concerning drug supply chain security requirements. Drugs compounded in outsourcing facilities are not exempt from the requirements of section 501(a)(2)(B) of the FD&C Act (21 U.S.C. 351(a)(2)(B)), concerning current good manufacturing practice requirements for drugs.

Section 744K of the FD&C Act (21 U.S.C. 379j–62) authorizes FDA to assess and collect the following fees associated with outsourcing facilities: (1) an annual establishment fee from each outsourcing facility and (2) a reinspection fee from each outsourcing facility subject to a reinspection (see section 744K(a)(1) of the FD&C Act). Under statutorily defined conditions, a qualified applicant may pay a reduced small business establishment fee (see section 744K(c)(4) of the FD&C Act).

FDA announced in the **Federal Register** of November 24, 2014 (79 FR 69856), the availability of a final guidance for industry entitled ''Fees for Human Drug Compounding Outsourcing Facilities Under Sections 503B and 744K of the FD&C Act.'' The guidance provides additional information on the annual fees for outsourcing facilities and adjustments required by law, reinspection fees, how to submit payment, the effect of failure to pay fees, and how to qualify as a small business to obtain a reduction of the annual establishment fee. This guidance can be accessed on FDA's website at: *https://www.fda.gov/media/136683/download.*

II. Fees for FY 2025

A. Methodology for Calculating FY 2025 Adjustment Factors

1. Inflation Adjustment Factor

Section 744K(c)(2) of the FD&C Act specifies the annual inflation adjustment for outsourcing facility fees. The inflation adjustment has two components: one based on FDA's payroll costs and one based on FDA's non-payroll costs for the first 3 of the 4 previous fiscal years. The payroll component of the annual inflation adjustment is calculated by taking the average change in FDA's per full-time equivalent (FTE) personnel compensation and benefits (PC&B) in the first 3 of the 4 previous fiscal years (see section 744K(c)(2)(A)(ii) of the FD&C Act). FDA's total annual spending on PC&B is divided by the total number of FTEs per fiscal year to determine the average PC&B per FTE.

Table 1 summarizes the actual cost and FTE data for the specified fiscal years and provides the percent change from the previous fiscal year and the average percent change over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 1—FDA PC&BS EACH YEAR AND PERCENT CHANGE

	FY 2021	FY 2022	FY 2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	
Total FTE	$18,501	$18,474	$18,729	
PC&B per FTE	$164,289	$171,348	$183,486	
Percent Change From Previous Year	0.1811%	4.2967%	7.0838%	3.8539%

Section 744K(c)(2)(A)(ii) of the FD&C Act specifies that this 3.8539 percent should be multiplied by the proportion of PC&B to total costs of an average FDA FTE for the same 3 fiscal years.

TABLE 2—FDA PC&BS AS A PERCENT OF FDA TOTAL COSTS OF AN AVERAGE FTE

	FY 2021	FY 2022	FY 2023	3-Year average
Total PC&B (proportion of costs)	$3,039,513,000	$3,165,477,000	$3,436,513,000	
Total Costs	$6,105,480,000	$6,251,981,000	$6,654,058,000	
PC&B percent	49.7834%	50.6316%	51.6454%	50.6868%

The payroll adjustment is 3.8539 percent multiplied by 50.6868 percent, or 1.9534 percent.

Section 744K(c)(2)(A)(iii) of the FD&C Act specifies that the portion of the inflation adjustment for non-payroll costs for FY 2025 is equal to the average annual percent change in the Consumer Price Index (CPI) for urban consumers (U.S. City Average; Not Seasonally Adjusted; All items; Annual Index) for the first 3 years of the preceding 4 years of available data, multiplied by the proportion of all non-PC&B costs to total costs of an average FDA FTE for the same period.

Table 3 provides the summary data for the percent change in the specified CPI for U.S. cities. These data are published by the Bureau of Labor Statistics and can be found on its website: *https://data.bls.gov/cgi-bin/surveymost?cu.* The data can be viewed by checking the box marked ''U.S. city average, All items—CUUR0000SA0'' and then selecting ''Retrieve Data.''

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN U.S. CITY AVERAGE CPI

	2021	2022	2023	3-Year average
Annual CPI	270.970	292.655	304.702	
Annual Percent Change	4.6980%	8.0027%	4.1165%	5.6057%

Section 744K(c)(2)(A)(iii) of the FD&C Act specifies that this 5.6057 percent should be multiplied by the proportion of all non-PC&B costs to total costs of an average FTE for the same 3 fiscal years. The proportion of all non-PC&B costs to total costs of an average FDA FTE for FYs 2021 to 2023 is 49.3132 percent (100 percent minus 50.6868 percent equals 49.3132 percent). Therefore, the non-pay adjustment is 5.6057 percent times 49.3132 percent, or 2.7644 percent.

The PC&B component (1.9534 percent) is added to the non-PC&B component (2.7644 percent), for a total inflation adjustment of 4.7178 percent (rounded). Section 744K(c)(2)(A)(i) of the FD&C Act specifies that one is added to that figure, making the inflation adjustment 1.047178.

Section 744K(c)(2)(B) of the FD&C Act provides for this inflation adjustment to be compounded after FY 2015. This factor for FY 2025 (4.7178 percent) is compounded by adding one to it, and then multiplying it by one plus the inflation adjustment factor for FY 2024 (23.9215 percent), as published in the **Federal Register** on July 28, 2023 (88 FR 48878). The result of this multiplication of the inflation factors for the 10 years since FY 2015 (1.047178×1.239215) becomes the inflation adjustment for FY 2025. For FY 2025, the inflation adjustment is 29.7679 percent (rounded). We then add one, making the FY 2025 inflation adjustment factor 1.297679.

2. Small Business Adjustment Factor

Section 744K(c)(3) of the FD&C Act specifies that in addition to the inflation adjustment factor, the establishment fee for non-small businesses is to be further adjusted for a small business adjustment factor. Section 744K(c)(3)(B) of the FD&C Act provides that the small business adjustment factor is the adjustment to the establishment fee for non-small businesses that is necessary to achieve total fees equaling the amount that FDA would have collected if no entity qualified for the small business exception in section 744K(c)(4) of the FD&C Act. Additionally, section 744K(c)(5)(A) states that in establishing the small business adjustment factor for a fiscal year, FDA shall provide for the crediting of fees from the previous year to the next year if FDA overestimated the amount of the small business adjustment factor for such previous fiscal year.

Therefore, to calculate the small business adjustment to the establishment fee for non-small businesses for FY 2025, FDA must estimate: (1) the number of outsourcing facilities that will pay the reduced fee for small businesses for FY 2025 and (2) the total fee revenue it would have collected if no entity had qualified for the small business exception (*i.e.,* if each entity that registers as an outsourcing facility for FY 2025 were to pay the inflation-adjusted fee amount of $19,465).

With respect to (1), FDA estimates that 11 entities will qualify for small business exceptions and will pay the reduced fee for FY 2025. With respect to (2), to estimate the total number of entities that will register as outsourcing facilities for FY 2025, FDA used data submitted by outsourcing facilities through the voluntary registration process, which began in December 2013. Accordingly, FDA estimates that 80 outsourcing facilities, including 11 small businesses, will be registered with FDA in FY 2025.

If the projected 80 outsourcing facilities paid the full inflation-adjusted fee of $19,465, this would result in total revenue of $1,557,200 in FY 2025 ($\$19,465 \times 80$). However, 11 of the entities that are expected to register as outsourcing facilities for FY 2025 are projected to qualify for the small business exception and to pay one-third of the full fee ($\$6,488 \times 11$), totaling $71,368 instead of paying the full fee ($\$19,465 \times 11$), which would total $214,115. This would leave a potential shortfall of $142,747 ($214,115 minus $71,368).

Additionally, section 744K(c)(5)(A) of the FD&C Act states that in establishing the small business adjustment factor for a fiscal year, FDA shall provide for the crediting of fees from the previous year to the next year if FDA overestimated the amount of the small business adjustment factor for such previous fiscal year. FDA has determined that it is appropriate to credit excess fees collected from the last completed fiscal year, due to the inability to conclusively determine the amount of excess fees from the fiscal year that is in progress at the time this calculation is made. This crediting is done by comparing the small business adjustment factor for the last completed fiscal year, FY 2023 ($1,747), to what would have been the small business adjustment factor for FY 2023 ($2,011) if FDA had estimated perfectly.

The calculation for what the small business adjustment would have been if FDA had estimated perfectly begins by determining the total target collections ($15{,}000 \times$ [inflation adjustment factor] $\times$ [number of registrants]). For the most recent complete fiscal year, FY 2023, this was $1,354,548 ($\$17{,}823 \times 76$). The actual FY 2023 revenue from the 76 total registrants (*i.e.,* 65 registrants paying FY 2023 non-small business establishment fee and 11 small business registrants) paying establishment fees is $1,223,846. $1,223,846 is calculated as follows: (FY 2023 Non-Small Business Establishment Fee adjusted for inflation only) $\times$ (total number of registrants in FY 2023 paying Non-Small Business Establishment Fee) + (FY 2023 Small Business Establishment Fee) $\times$ (total number of small business registrants in FY 2023 paying Small Business Establishment Fee). $\$17{,}823 \times 65 + \$5{,}824 \times 11 = \$1{,}223{,}846$. This left a shortfall of $130,702 from the estimated total target collection amount ($1,354,548 minus $1,223,846). This amount ($130,702) divided by the total number of registrants in FY 2023 paying Standard Establishment Fee (65) equals $2,011.

The difference between the small business adjustment factor used in FY 2023 and the small business adjustment factor that would have been used had FDA estimated perfectly is $-\$263$ ($1,747 minus $2,011). The $-\$263$ (rounded to the nearest dollar) is then multiplied by the number of actual registrants who paid the standard fee for FY 2023 (65), which provides us a total collection deficit of $-\$17{,}124$ in FY 2023. No credit will be applied in FY 2025.

Therefore, to calculate the small business adjustment factor for FY 2025, FDA divides the projected shortfall of $142,747 for FY 2025 by 69 (the number of expected non-small businesses for FY 2025), which is $2,069 (rounded to the nearest dollar).

B. FY 2025 Rates for Small Business Establishment Fee, Non-Small Business Establishment Fee, and Reinspection Fee

1. Establishment Fee for Qualified Small Businesses [1]

The amount of the establishment fee for a qualified small business is equal to $15,000 multiplied by the inflation adjustment factor for that fiscal year, divided by 3 (see section 744K(c)(4)(A) and (c)(1)(A) of the FD&C Act). The inflation adjustment factor for FY 2025 is 1.297679. See section II.A.1 of this document for the methodology used to calculate the FY 2025 inflation adjustment factor. Therefore, the establishment fee for a qualified small business for FY 2025 is one third of $19,465, which equals $6,488 (rounded to the nearest dollar).

2. Establishment Fee for Non-Small Businesses

Under section 744K(c) of the FD&C Act, the amount of the establishment fee for a non-small business is equal to $15,000 multiplied by the inflation adjustment factor for that fiscal year, plus the small business adjustment factor for that fiscal year, and plus or minus an adjustment factor to account for over or under collections due to the small business adjustment factor in the prior year. The inflation adjustment factor for FY 2025 is 1.297609. The small business adjustment amount for FY 2025 is $2,069. See section II.A.2 of this document for the methodology used to calculate the small business adjustment factor for FY 2025. Therefore, the establishment fee for a non-small business for FY 2025 is $15,000 multiplied by 1.297679 plus $2,069, which equals $21,534 (rounded to the nearest dollar).

3. Reinspection Fee

Section 744K(c)(1)(B) of the FD&C Act provides that the amount of the FY 2025 reinspection fee is equal to $15,000, multiplied by the inflation adjustment factor for that fiscal year. The inflation adjustment factor for FY 2025 is 1.297679. Therefore, the reinspection fee for FY 2025 is $15,000 multiplied by 1.297679, which equals $19,465 (rounded to the nearest dollar). There is no reduction in this fee for small businesses.

C. Summary of FY 2025 Fee Rates

TABLE 4—OUTSOURCING FACILITY FEES

Qualified Small Business Establishment Fee	$6,488
Non-Small Business Establishment Fee	21,534
Reinspection Fee	19,465

III. Fee Payment Options and Procedures

A. Establishment Fee

Once an entity submits registration information and FDA has determined that the information is complete, the entity will incur the annual establishment fee. FDA will send an invoice to the entity, via email to the email address indicated in the registration file. The invoice will contain information regarding the obligation incurred, the amount owed, and payment procedures. A facility will not be registered as an outsourcing facility until it has paid the annual establishment fee under section 744K of the FD&C Act. Accordingly, it is important that facilities seeking to operate as outsourcing facilities pay all fees immediately upon receiving an invoice. If an entity does not pay the full invoiced amount within 15 calendar days after FDA issues the invoice, FDA will consider the submission of registration information to have been withdrawn and adjust the invoice to reflect that no fee is due.

Outsourcing facilities that registered in FY 2024 and wish to maintain their status as an outsourcing facility in FY 2025 must register during the annual registration period that lasts from October 1, 2024, to December 31, 2024. Failure to register and complete payment by December 31, 2024, will result in a loss of status as an outsourcing facility on January 1, 2025. Entities should submit their registration information no later than December 10, 2024, to allow enough time for review of the registration information, invoicing, and payment of fees before the end of the registration period.

B. Reinspection Fee

FDA will issue invoices for each reinspection after the conclusion of the reinspection, via email to the email address indicated in the registration file or via regular mail if email is not an option. Payments must be made within 30 days of the invoice date.

C. Fee Payment Procedures

1. The preferred payment method is online using electronic check (Automated Clearing House (ACH) also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay.* (*Note:* only full payments are accepted. No partial payments can be made online.) Once you search for your invoice, click ''Pay Now'' to be redirected to *Pay.gov.* Electronic payment options are based on the balance due. Payment by credit card is available for balances less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

2. If a check, bank draft, or postal money order is submitted, make it payable to the order of the Food and Drug Administration and include the user fee ID number to ensure that the payment is applied to the correct fee(s). Payments can be mailed to: Food and Drug Administration, P.O. Box 979033, St. Louis, MO 63197–9000. If a check, bank draft, or money order is to be sent by a courier that requests a street address, the courier should deliver your payment to: U.S. Bank, Attention: Government Lockbox 979033, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This U.S. Bank address is for courier delivery only. If you have any questions concerning courier delivery, contact the U.S. Bank at 800–495–4981. This telephone number is only for questions about courier delivery). Please make sure that the FDA post office box number (P.O. Box 979033) is written on the check, bank draft, or postal money order.

3. For payments made by wire transfer, the invoice number must be included. Without the invoice number, the payment may not be applied. Regarding reinspection fees, if the payment amount is not applied, the invoice amount will be referred to collections. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required that the outsourcing facility add that amount to the payment to ensure that the invoice is paid in full. Use the following account information when sending a wire transfer: U.S. Dept of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No. 75060099, Routing No. 021030004, SWIFT: FRNYUS33. If needed, FDA's tax identification number is 53–0196965.

[1] To qualify for a small business reduction of the FY 2025 establishment fee, entities had to submit their exception requests by April 30, 2024. *See* section 744K(c)(4)(B) of the FD&C Act. The time for requesting a small business exception for FY 2025 has now passed. An entity that wishes to request a small business exception for FY 2026 should consult section 744K(c)(4) of the FD&C Act and section III.D of FDA's guidance for industry entitled ''Fees for Human Drug Compounding Outsourcing Facilities Under Sections 503B and 744K of the FD&C Act,'' which can be accessed on FDA's website at *https://www.fda.gov/media/136683/download.*

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–0007]

Prescription Drug User Fee Rates for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA, Agency, or we) is announcing the rates for prescription drug user fees for fiscal year (FY) 2025. The Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the Prescription Drug User Fee Amendments of 2022 (PDUFA VII), authorizes FDA to collect application fees for certain applications for the review of human drug and biological products and prescription drug program fees for certain approved products. This notice establishes the fee rates for FY 2025.

DATES: These fees apply to the period from October 1, 2024, through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave, Silver Spring, MD 20903, 240–402–4989; and the User Fee Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Sections 735 and 736 of the FD&C Act (21 U.S.C. 379g and 379h) establish two different kinds of user fees. Fees are assessed as follows: (1) application fees are assessed on certain types of applications for the review of human drug and biological products and (2) prescription drug program fees are assessed on certain approved products (section 736(a) of the FD&C Act). The statute also includes conditions under which such fees may be waived or reduced (section 736(d) of the FD&C Act), or under which fee exceptions, refunds, or exemptions apply (sections 736(a)(1)(C) through (H), 736(a)(2)(B) through (C), and 736(k) of the FD&C Act).

For FY 2023 through FY 2027, the base revenue amounts for the total revenues from all PDUFA fees are established by PDUFA VII. The base revenue amount for FY 2025 is $1,358,764,346. The FY 2025 base revenue amount is adjusted for inflation, strategic hiring and retention, and for the resource capacity needs for the process for the review of human drug applications (the capacity planning adjustment (CPA)). This amount is further adjusted to include the additional dollar amount as specified in the statute (see section 736(b)(1)(G) of the FD&C Act) to provide for additional full-time equivalent (FTE) positions to support PDUFA VII initiatives. If applicable, an operating reserve adjustment is added to provide sufficient operating reserves of carryover user fees. The amount from the preceding adjustments is then adjusted to provide for additional direct costs to fund PDUFA VII initiatives. Fee amounts are to be established each year so that revenues from application fees provide 20 percent of the total revenue, and prescription drug program fees provide 80 percent of the total revenue (see section 736(b)(2) of the FD&C Act).

This document provides fee rates for FY 2025 for an application requiring covered clinical data [1] ($4,310,002), for an application not requiring covered clinical data ($2,155,001), and for the prescription drug program fee ($403,889). These fees are effective on October 1, 2024, and will remain in effect through September 30, 2025. For applications that are submitted on or after October 1, 2024, the new fee schedule must be used.

II. Fee Revenue Amount for FY 2025

The base revenue amount for FY 2025 is $1,358,764,346 (see section 736(b)(1)(A) and (b)(3) of the FD&C Act). This amount is prior to any adjustments made for inflation, the strategic hiring and retention adjustment, CPA, additional dollar amount, operating reserve adjustment (if applicable), and additional direct costs (see section 736(b)(1) of the FD&C Act).

A. FY 2025 Statutory Fee Revenue Adjustments for Inflation

PDUFA VII specifies that the $1,358,764,346 is to be adjusted for inflation increases for FY 2025 using two separate adjustments: one for personnel compensation and benefits (PC&B) and one for non-PC&B costs (see section 736(c)(1) of the FD&C Act).

The component of the inflation adjustment for payroll costs is the average annual percent change in the cost of all PC&B paid per FTE positions at FDA for the first 3 of the preceding 4 fiscal years, multiplied by the proportion of PC&B costs to total FDA costs of the process for the review of human drug applications for the first 3 of the preceding 4 fiscal years (see section 736(c)(1)(A) and (B)(i) of the FD&C Act).

Table 1 summarizes the actual cost and FTE data for the specified fiscal years, provides the percent changes from the previous fiscal years, and provides the average percent changes over the first 3 of the 4 fiscal years preceding FY 2025. The 3-year average is 3.8539 percent.

TABLE 1—FDA PERSONNEL COMPENSATION AND BENEFITS (PC&B) EACH YEAR AND PERCENT CHANGES

	2021	2022	2023	3-Year average
Total PC&B	$3,039,513,000	$3,165,477,000	$3,436,513,000	.....
Total FTEs	18,501	18,474	18,729	.....
PC&B per FTE	$164,289	$171,348	$183,486	.....
Percent Change from Previous Year	0.1811%	4.2967%	7.0838%	3.8539%

The statute specifies that this 3.8539 percent be multiplied by the proportion of PC&B costs to the total FDA costs of the process for the review of human drug applications. Table 2 shows the PC&B and the total obligations for the process for the review of human drug applications for the first 3 of the preceding 4 fiscal years.

[1] As used herein, ''covered clinical data'' is ''clinical data (other than bioavailability or bioequivalence studies) with respect to safety or effectiveness [that] are required for approval'' (see section 736(a)(1)(A) of the FD&C Act).

TABLE 2—PC&B AS A PERCENT OF TOTAL COST OF THE PROCESS FOR THE REVIEW OF HUMAN DRUG APPLICATIONS

	2021	2022	2023	3-Year average
Total PC&B (proportion of costs)	$959,387,333	$931,302,114	$1,040,590,183	
Total Costs	$1,499,064,056	$1,480,601,875	$1,686,733,841	
PC&B percent	63.9991%	62.9002%	61.6926%	62.8640%

The payroll adjustment is 3.8539 percent from table 1 multiplied by 62.8640 percent from table 2 resulting in 2.4227 percent.

The statute specifies that the portion of the inflation adjustment for non-payroll costs is the average annual percent change that occurred in the Consumer Price Index for urban consumers (Washington-Arlington-Alexandria, DC-VA-MD-WV; Not Seasonally Adjusted; All items; Annual Index) for the first 3 years of the preceding 4 years of available data multiplied by the proportion of all costs other than personnel compensation and benefits costs to total costs of the process for the review of human drug applications (as defined in section 735(6)) for the first 3 years of the preceding 4 fiscal years (see section 736(c)(1)(A) and (B)(ii)). Table 3 provides the summary data for the percent changes in the specified CPI for the Washington-Arlington-Alexandria area.[2]

TABLE 3—ANNUAL AND 3-YEAR AVERAGE PERCENT CHANGE IN CPI FOR WASHINGTON-ARLINGTON-ALEXANDRIA AREA

	2021	2022	2023	3-Year average
Annual CPI	277.73	296.12	305.32	
Annual Percent Change	3.9568%	6.6212%	3.1069%	4.5616%

The statute specifies that this 4.5616 percent be multiplied by the proportion of all costs other than PC&B to total costs of the process for the review of human drug applications obligated. Because 62.8640 percent was obligated for PC&B (as shown in table 2), 37.1360 percent is the portion of costs other than PC&B (100 percent minus 62.8640 percent equals 37.1360 percent). The non-payroll adjustment is 4.5616 percent times 37.1360 percent, or 1.6940 percent.

Next, we add the payroll adjustment (2.4227 percent) to the non-payroll adjustment (1.6940 percent), for a total inflation adjustment of 4.1167 percent (rounded) for FY 2025.

We then multiply the base revenue amount for FY 2025 ($1,358,764,346) by 4.1167 percent, which produces an inflation adjustment amount of $55,936,252. Adding this amount to the base revenue amount yields an inflation-adjusted base revenue amount of $1,414,700,598.

TABLE 4—BASE REVENUE AMOUNT AND SECTION 736(c)(1) ADJUSTMENT AMOUNT

Fee	Amount
Statutory Fee Revenue Base Amount (section 736(b)(3) of the FD&C Act)	$1,358,764,346
Inflation Adjustment (section 736(c)(1) of the FD&C Act)	55,936,252
Revenue Amount after Adjustments in sections 736(c)(1) of the FD&C Act	1,414,700,598

B. FY 2025 Strategic Hiring and Retention Adjustment

For each fiscal year, after the annual base revenue established in section II is adjusted for inflation in accordance with section II.A, the statute directs FDA to further increase the fee revenue and fees to support strategic hiring and retention. For FY 2025, this amount is $4,000,000 (see section 736(c)(2)(A) of the FD&C Act).

TABLE 5—BASE REVENUE AMOUNT AND SECTION 736(c)(1) THROUGH (2) ADJUSTMENT AMOUNTS

Fee	Amount
Statutory Fee Revenue Base Amount (section 736(b)(3) of the FD&C Act)	$1,358,764,346
Inflation Adjustment (section 736(c)(1) of the FD&C Act)	55,936,252
Strategic Hiring and Retention Adjustment (section 736(c)(2) of the FD&C Act)	4,000,000
Revenue Amount after Adjustments in sections 736(c)(1) and (2) of the FD&C Act	1,418,700,598

C. FY 2025 Statutory Fee Revenue Adjustments for Capacity Planning

The statute specifies that after the base revenue amount for FY 2025 of $1,358,764,346 has been adjusted as described in sections II.A and II.B, this amount shall be further adjusted to reflect changes in the resource capacity needs for the process of human drug application reviews (see section 736(c)(3) of the FD&C Act). Following a process agreed upon by FDA and

[2] The data are published by the Bureau of Labor Statistics and can be found on its website at: *https://data.bls.gov/pdq/SurveyOutputServlet?data_tool=dropmap&series_id=CUURS35ASA0,CUUSS35ASA0.*

industry during PDUFA VI reauthorization discussions and subsequently required in statute, FDA established a new CPA methodology and first applied it in the setting of FY 2021 fees. The establishment of this methodology is described in the **Federal Register** of August 3, 2020 (85 FR 46651). This methodology includes a continuous, iterative improvement approach, under which the Agency intends to refine its data and estimates for the core review activities to improve their accuracy over time. An adjustment for workload has been a critical aspect of the PDUFA program since PDUFA III in FY 2003 as it enables the program to adjust to shifts in review workload resulting from industry submissions to the Agency. The annual adjustment process allows greater accuracy than would be expected if workload adjustments were fixed at the start of the reauthorization period. The capacity planning adjustment is an evolution of the PDUFA workload adjuster and was implemented through a process agreed to by FDA and industry during PDUFA VI. The capacity planning adjustment builds on the concepts of the workload adjuster but realizes enhancements including the use of leading indicators of workload, use of full-time reporting data, the introduction of a managerial adjustment process as an internal check on the reasonableness of any adjustment, outputs measured in full-time equivalent employees, and the incorporation of adjustments into the base revenue amounts to ensure sustainability of payroll to support any new hires.

Improvements adopted for the FY 2025 CPA include the incorporation of hiring plans and attrition estimates within the capacity calculation. In prior years, the impacts of expected hiring on the review capacity of the program were considered within a step in the managerial adjustment process. The FY 2025 resource capacity number includes an estimate of the onboard capacity for direct review work, as well as an estimate of the additional capacity that would be provided from any additional positions expected to be added through the course of FY 2024. No additional deduction for positions planned to be added prior to the end of FY 2024 then need to be deducted within the managerial adjustment moving forward. Because of this change, the resource capacity numbers presented in this **Federal Register** Notice cannot be directly compared to those provided in prior years' fee-setting notices.

The CPA methodology includes four steps:

1. *Forecast workload volumes:* predictive models estimate the volume of workload for the upcoming FY.

2. *Forecast the resource needs:* forecast algorithms are generated utilizing time reporting data. These algorithms estimate the required demand in FTEs [3] for direct review related effort. This is then compared to current available resources for the direct review related workload.

The current available resources for the direct review related workload (presented as current resource capacity below) is a measure of the percentage of time onboard staff report to direct review workload activities, plus a percentage of the additional positions that are targeted to be hired within the remainder of FY 2024. Of note, the current resource capacity is not directly a function of the change in submission volume from one year to the next, but rather a summation of the percent of total staff time plus vacancies estimated to be available for direct review work. As time reporting is a direct input into the current review capacity calculations, the current review capacity may be impacted by factors such as shifts in the level of effort required for review work, staff reporting time exceed their tour of duty, or other shifts impacting the workload of the program.

3. *A managerial adjustment to assess the resource forecast in the context of additional internal factors:* program leadership examines operational, financial, and resourcing data to assess whether FDA will be able to utilize additional funds during the FY, and whether the funds are required to support additional review capacity. FTE amounts are adjusted, if needed.

The managerial adjustment process includes consideration of prior years' forecast performance, future year considerations, hiring capacity considerations, and other relevant considerations. While in some years FDA has over forecasted some submission volumes, it has managerially adjusted down the FTE delta considerably to take relatively small adjustments. For example, in FY23 CDER had a forecasted delta of 151 FTE but only took an adjustment for 27 FTE.

4. *Convert the FTE need to dollars:* utilizing FDA's fully loaded FTE cost model, the final feasible FTEs are converted to an equivalent dollar amount. The fully loaded FTE cost model is higher in FY 2025 than in prior years primarily due to the impact of inflation.

To determine the FY 2025 CPA, FDA calculated a CPA for the Center for Drug Evaluation and Research (CDER) and the Center for Biologics Evaluation and Research (CBER) individually. The final center-level results were then combined to determine the total FY 2025 PDUFA CPA. The following section outlines the major components of each center's FY 2025 PDUFA CPA.

Table 6 summarizes the forecasted workload volumes for CDER in FY 2025 based on predictive models, as well as historical actuals from FY 2023 for comparison.

TABLE 6—CDER ACTUAL FY 2023 WORKLOAD VOLUMES AND PREDICTED FY 2025 WORKLOAD VOLUMES

Workload category	FY 2023 actuals	FY 2025 predictions
Efficacy Supplements	232	233
Labeling Supplements	917	1,191
Manufacturing Supplements	2,372	2,320
NDA/BLA[1] Original	145	133
PDUFA Industry Meetings (including WROs[2])	3,570	3,783
Active Commercial INDs[3]	9,882	10,788
Annual Reports[4]	3,465	3,556
PMR/PMC-Related Documents[4]	1,696	1,605
Active REMS Programs[4 5]	23	23

[1] New drug applications (NDA)/biological license applications (BLA).
[2] Written responses only (WROs).

[3] Full-time equivalents refer to a paid staff year, rather than a count of individual employees.

[3] For purpose of the CPA, this is defined as an active commercial investigational new drug (IND) for which a document has been received in the past 18 months.
[4] Represents activities related to the review of materials submitted to the application file after approval.
[5] Represents the percentage of active risk evaluation and management strategy (REMS) programs proportional to Center and User Fee by total number of qualifying products with the exclusion of the Opioid Shared System.

Utilizing the resource forecast algorithms, the forecasted workload volumes for FY 2025 were then converted into estimated FTE needs for CDER's PDUFA direct review related work. The resulting expected FY 2025 FTE need for CDER was compared to current resource capacity for direct review related work to determine the FY 2025 resource delta, as summarized in table 7. Hiring and inclusion of hiring plans into the current resource capacity increased the value over prior years.

TABLE 7—CDER FY 2025 PDUFA RESOURCE DELTA

Center	Current resource capacity	FY 2025 resource forecast	Predicted FY 2025 FTE delta
CDER	2,055	2,078	23

The projected 23 FTEs delta was then assessed by FDA through the managerial adjustment process to ensure that any fee adjustment is only made for resources that can be utilized in the fiscal year and for which funds are required to support additional review capacity. FDA observes that the CDER delta has been declining each year as measured by the CPA. This indicates that resources are coming into approximate alignment with the workload as measured by the CPA. The adjusted 23 FTE delta would represent about 1 percent growth above the current resource capacity of 2,055. FDA notes, however, that through the managerial adjustment process it was observed that review work related to rare and/or orphan disease conditions has been growing disproportionality. After consideration of additional negotiated positions to be added in FY 2025 that overlap with the scope of the CPA (3), and other factors related to the CPA, CDER is adjusting the FTE delta to 4 FTE. These 4 FTEs positions will be allocated in a manner to address the growth in workload resulting from rare and/or orphan disease conditions. The FY 2025 PDUFA CPA for CDER is therefore $1,522,700, as summarized in table 8.

TABLE 8—CDER FY 2025 PDUFA CPA

Center	Additional FTEs for FY 2025	Cost for each additional FTE	CDER FY 2025 PDUFA CPA
CDER	4	$380,675	$1,522,700

To calculate the FY 2025 PDUFA CPA for CBER, FDA followed the approach outlined above. Table 9 summarizes the forecasted workload volumes for CBER in FY 2025 as well as the corresponding historical actuals from FY 2023 for comparison.

TABLE 9—CBER ACTUAL FY 2023 WORKLOAD VOLUMES AND PREDICTED FY 2025 WORKLOAD VOLUMES

Workload category	FY 2023 actuals	FY 2025 predictions
Efficacy Supplements	25	30
Labeling Supplements	58	62
Manufacturing Supplements	752	767
NDA/BLA[1] Original	14	15
PDUFA Industry Meetings (including WROs[2])	756	778
Active Commercial INDs[3]	1,829	2,027
Annual Reports[4]	314	319
PMR/PMC-Related Documents[4]	143	188
Active REMS Programs[4 5]	2	2

[1] New drug applications (NDA)/biological license applications (BLA).
[2] Written responses only (WROs).
[3] For purpose of the CPA, this is defined as an active commercial investigational new drug (IND) for which a document has been received in the past 18 months.
[4] Represents activities related to the review of materials submitted to the application file after approval.
[5] Represents the percentage of active REMS programs proportional to Center and User Fee by total number of qualifying products with the exclusion of the Opioid Shared System.

The forecasted CBER PDUFA workload for FY 2025 was then converted into expected FTE resources and compared to current resource capacity for PDUFA direct review work, as summarized in table 10. Hiring and inclusion of hiring plans into the current resource capacity increased the value over prior years.

TABLE 10—CBER FY 2025 PDUFA RESOURCE DELTA

Center	Current resource capacity	FY 2025 resource forecast	Predicted FY 2025 FTE delta
CBER	492	507	15

The projected 15 FTEs delta for CBER was also assessed by FDA through the managerial adjustment process to ensure the need and/or feasibility of obtaining the additional resources. After considering additional negotiated positions to be added in FY 2025 that overlap with the scope of the CPA (12), current statuses for PDUFA vacancies, and other factors related to the CPA, CBER adjusted the FTE delta to 0 additional FTEs for FY 2025. The FY 2025 CPA for CBER is therefore $0, as summarized in table 11.

TABLE 11—CBER FY 2025 PDUFA CPA

Center	Additional FTEs for FY 2025	Cost for each additional FTE	CBER FY 2025 CPA
CBER	0	$372,270	$0

The CDER and CBER CPA amounts were then added together to determine the PDUFA CPA for FY 2025 of $1,522,700, as outlined in table 12. FDA will track the utilization of the CPA funds to ensure they are supporting the organizational components engaged in PDUFA direct review work to enhance resources and expand staff capacity and capability. Should FDA be unable to utilize any amounts of the CPA funds during the fiscal year, it will not spend those funds and the unspent funds will be transferred to the carryover balance at the end of the fiscal year.

TABLE 12—FY 2025 PDUFA CPA

Center	FY 2025 PDUFA CPA
CDER	$1,522,700
CBER	0
Total	1,522,700

TABLE 13—BASE REVENUE AMOUNT AND SECTION 736(c)(1) THROUGH (3) ADJUSTMENT AMOUNTS

Fee	Amount
Statutory Fee Revenue Base Amount (section 736(b)(3) of the FD&C Act)	$1,358,764,346
Inflation Adjustment (section 736(c)(1) of the FD&C Act)	55,936,252
Strategic Hiring and Retention Adjustment (section 736(c)(2) of the FD&C Act)	4,000,000
Capacity Planning Adjustment (section 736(c)(3) of the FD&C Act)	1,522,700
Revenue Amount after Adjustments in sections 736(c)(1), (2), and (3) of the FD&C Act	1,420,223,298

D. FY 2025 Statutory Fee Revenue Adjustments for Additional Dollar Amounts

PDUFA VII provides an additional dollar amount for each of the 5 fiscal years covered by PDUFA VII for additional FTEs to support enhancements outlined in the PDUFA VII commitment letter. The additional dollar amount for FY 2025 as outlined in statute is $14,154,169 (see section 736(b)(1)(G)(iii) of the FD&C Act). This amount will be added to the total FY 2025 PDUFA VII revenue amount.

TABLE 14—BASE REVENUE AMOUNT AND SECTION 736(c)(1) THROUGH (3) ADJUSTMENT AMOUNTS

Fee	Amount
Statutory Fee Revenue Base Amount (section 736(b)(3) of the FD&C Act)	$1,358,764,346
Inflation Adjustment (section 736(c)(1) of the FD&C Act)	55,936,252
Strategic Hiring and Retention Adjustment (section 736(c)(2) of the FD&C Act)	4,000,000
Capacity Planning Adjustment (section 736(c)(3) of the FD&C Act)	1,522,700
Additional Dollar Amounts Adjustment (section 736(b)(1)(G) of the FD&C Act)	14,154,169
Cumulative Revenue Amount after Adjustments in sections 736(c)(1), (2), and (3) of the FD&C Act	1,434,377,467

E. FY 2025 Statutory Fee Revenue Adjustments for Operating Reserve

PDUFA VII provides for an operating reserve adjustment that may result in an increase or decrease in fee revenue and fees for a given FY (see section 736(c)(4) of the FD&C Act). For FY 2025, FDA is required to further increase fee revenue and fees if an adjustment is necessary to provide for at least 10 weeks of operating reserves of carryover user fees (see section 736(c)(4)(A)(iii) of the FD&C Act). If FDA has carryover balances of user fees in excess of 14 weeks of operating reserves, FDA is required to decrease fee revenue and fees to provide for not more than 14 weeks of operating reserves of carryover user fees (see section 736(c)(4)(B) of the FD&C Act).

To determine the dollar amounts for the 10-week and 14-week operating reserve thresholds, the adjustments (inflation, strategic hiring and retention, capacity planning, and additional dollar amount) discussed in sections II.A, II.B, II.C, and II.D are applied to the FY 2025 base revenue (see section 736(c)(4)(A) of the FD&C Act), resulting in $1,434,377,467. This amount is then divided by 52 to generate the 1-week operating amount of $27,584,182. The 1-week operating amount is then multiplied by 10 and 14. This results in a 10-week threshold amount of $275,841,821 and a 14-week threshold amount of $386,178,549.

To determine the FY 2024 end-of-year operating reserves of carryover user fees, the Agency assessed the operating reserve of carryover fees at the end of June 2024 and forecasted collections and obligations in the fourth quarter of FY 2024 combined. This provides an estimated end-of-year FY 2024 operating reserve of carryover user fees of $270,834,409, which equates to 9.82 weeks of operations.[4]

Because the estimated FY 2024 end-of-year operating reserves of carryover user fees does not exceed the 14-week threshold amount, FDA will not reduce the FY 2025 fees or fee revenue. However, because the estimated FY 2024 end-of-year operating reserves of carryover user fees of $270,834,409 is below the 10-week threshold amount of $275,841,821, FDA will apply an operating reserve adjustment of $5,007,412 to increase the fee revenue and fees for FY 2025.

TABLE 15—BASE REVENUE AMOUNT AND SECTION 736(c)(1) THROUGH (4) ADJUSTMENT AMOUNTS

Fee	Amount
Statutory Fee Revenue Base Amount (section 736(b)(3) of the FD&C Act)	$1,358,764,346
Inflation Adjustment (section 736(c)(1) of the FD&C Act)	55,936,252
Strategic Hiring and Retention Adjustment (section 736(c)(2) of the FD&C Act)	4,000,000
Capacity Planning Adjustment (section 736(c)(3) of the FD&C Act)	1,522,700
Additional Dollar Amounts Adjustment (section 736(b)(1)(G) of the FD&C Act)	14,154,169
Operating Reserve Adjustment (section (736(c)(4) of the FD&C Act)	5,007,412
Cumulative Revenue Amount after Adjustments in sections 736(c)(1), (2), (3), and (4) of the FD&C Act	1,439,384,879

F. FY 2025 Statutory Fee Revenue Adjustments for Additional Direct Cost

PDUFA VII specifies that an additional direct cost of $39,355,553 is to be added to the total FY 2025 PDUFA revenue amount (see section 736(c)(5)(ii) of the FD&C Act). With respect to target revenue for FY 2025, adding the additional direct cost amount of $39,355,553 to the inflation, strategic hiring and retention, CPA, additional dollar amount, and operating reserve adjustment results in the total revenue amount of $1,478,740,000 (rounded to the nearest thousand dollars).

TABLE 16—TOTAL ESTIMATED ADJUSTED REVENUE AMOUNT

Fee	Amount
Statutory Fee Revenue Base Amount (section 736(b)(3) of the FD&C Act)	$1,358,764,346
Inflation Adjustment (section 736(c)(1) of the FD&C Act)	55,936,252
Strategic Hiring and Retention Adjustment (section 736(c)(2)(B) of the FD&C Act)	4,000,000
Capacity Planning Adjustment (section 736(c)(3) of the FD&C Act)	1,522,700
Additional Dollar Amounts Adjustment (section 736(b)(1)(G) of the FD&C Act)	14,154,169
Operating Reserve Adjustment (section (736(c)(4) of the FD&C Act)	5,007,412
Additional Direct Cost Adjustment (section 736(c)(5) of the FD&C Act)	39,355,553
Cumulative Revenue Amount after Adjustments in sections 736(c)(1), (2), (3), (4), and (5) of the FD&C Act	1,478,740,432
Cumulative Revenue Amount after Adjustments in sections 736(c)(1), (2), (3), (4), and (5) of the FD&C Act (rounded to the nearest thousand)	1,478,740,000

III. Application Fee Calculations

A. Application Fee Revenues and Application Fees

Application fees will be set to generate 20 percent of the total revenue amount, amounting to $295,748,000 in FY 2025.

B. Estimate of the Number of Fee-Paying Applications and Setting the Application Fees

FDA has estimated the total number of fee-paying full application equivalents (FAEs) it expects to receive during the next fiscal year by averaging the number of fee-paying FAEs received in the ten most recently completed fiscal years. For FY 2025 fee setting, the 10 relevant fiscal years are FY 2014–2023. While a 3-year average has been used in recent years' fee setting FRNs, FDA is using a 10-year average for FY 2025 to address volatility in the number of FAEs. Prior year FAE totals are

[4] For purposes of the operating reserve adjustment under PDUFA VII, the operating reserve of carryover user fees includes only user fee funds that are available for obligation. FDA excludes from the operating reserve of carryover user fee funds that were collected prior to 2010 and that are held by FDA, but which are considered unavailable for obligation due to lack of an appropriation ($78,850,995).

updated annually to reflect refunds and waivers processed after the close of the fiscal year.[5]

In estimating the number of fee-paying FAEs, an application requiring covered clinical data[6] counts as one FAE. An application not requiring covered clinical data counts as one-half of an FAE. An application that is withdrawn before filing, or refused for filing, counts as one-fourth of an FAE if the applicant initially paid a full application fee, or one-eighth of an FAE if the applicant initially paid one-half of the full application fee amount.

As table 17 shows, the average number of fee-paying FAEs received annually in FY 2014 through FY 2023 is 68.619. FDA will set fees for FY 2025 based on this estimate as the number of full application equivalents that will be subject to fees.

TABLE 17—FEE-PAYING FAEs

	2014	2015	2016	2017	2018	2019	2020	2021	2022	2023	10-year average
Fee-Paying FAEs	73.375	81.956	70.483	79.750	68.875	80.000	56.750	78.875	45.125	51.000	68.619

Note: Prior year FAE totals are updated annually to reflect refunds and waivers processed after the close of the fiscal year.

The FY 2025 application fee is estimated by dividing the average number of full applications that paid fees from FY 2014 through FY 2023, 68.619, into the fee revenue amount to be derived from application fees in FY 2025, $295,748,000. The result is a fee of $4,310,002 per full application requiring clinical data, and $2,155,001 per application not requiring clinical data.

IV. Fee Calculation for Prescription Drug Program Fees

PDUFA VII assesses prescription drug program fees for certain prescription drug products. Program fees will be set to generate 80 percent of the total target revenue amounting to $1,182,992,000 in FY 2025.

An applicant will not be assessed more than five program fees for a FY for prescription drug products identified in a single approved NDA or BLA (see section 736(a)(2)(C) of the FD&C Act). Applicants are assessed a program fee for a FY for user fee eligible prescription drug products identified in a human drug application approved as of October 1 of such FY. Additionally, applicants are assessed a program fee for a product that is not a prescription drug product on October 1 because it is included in the discontinued section of the Orange Book or the CDER/CBER Billable Biologics List on that date, if the product becomes a fee-eligible prescription drug product during the FY.

FDA estimates 3,049 program fees will be invoiced in FY 2025 before factoring in waivers, refunds, exceptions, and exemptions. FDA approximates that there will be 81 waivers and refunds granted. Additionally, FDA approximates that another 39 program fees will be exempted in FY 2025 based on the orphan drug exemption in section 736(k) of the FD&C Act.

FDA estimates 2,929 program fees in FY 2025, after allowing for an estimated 120 waivers and reductions, including the orphan drug exemptions, excepted and exempted fee-liable products. The FY 2025 prescription drug program fee rate is calculated by dividing the adjusted total revenue from program fees ($1,182,992,000) by the estimated 2,929 program fees, resulting in a FY 2025 program fee of $403,889 (rounded to the nearest dollar).

V. Fee Schedule for FY 2025

The fee rates for FY 2025 are displayed in table 18.

TABLE 18—FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
Application:	
Requiring clinical data	$4,310,002
Not requiring clinical data	2,155,001
Program	403,889

VI. Fee Payment Options and Procedures

A. Application Fees

The appropriate application fee established in the new fee schedule must be paid for any application subject to fees under PDUFA VII that is submitted on or after October 1, 2024. Payment must be made in U.S. currency by electronic check, check, bank draft, wire transfer, or U.S. postal money order payable to the order of the Food and Drug Administration. The preferred payment method is online using electronic check (Automated Clearing House (ACH) also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express).

FDA has partnered with the U.S. Department of the Treasury to use *Pay.gov*, a web-based payment application, for online electronic payment. The *Pay.gov* feature is available on FDA's website after completing the Prescription Drug User Fee Cover Sheet and generating the user fee ID number. Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay* (*Note:* only full payments are accepted. No partial payments can be made online). Once an invoice is located, ''Pay Now'' should be selected to be redirected to *Pay.gov*. Electronic payment options are based on the balance due. Payment by credit card is available for balances that are less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

If a check, bank draft, or postal money order is submitted, make it payable to the order of the Food and Drug Administration and include the user fee ID number to ensure that the payment is applied to the correct fee(s). Payments can be mailed to: Food and Drug Administration, P.O. Box 979107, St. Louis, MO 63197–9000. If a check, bank draft, or money order is to be sent by a courier that requests a street address, the courier should deliver your payment to: U.S. Bank, Attention: Government Lockbox 979107, 3180 Rider Trail S, Earth City, MO 63045. (*Note:* This U.S. Bank address is for courier delivery only). If you have any questions concerning courier delivery, contact the U.S. Bank at 800–495–4981. This phone number is designated for courier use only and is not intended for payment and billing inquiries. Please make sure that the FDA post office box number (P.O. Box 979107) is written on the

[5] In the PDUFA fee setting FRNs for FYs 2023 and 2024, this adjustment for refunds was erroneously excluded, resulting in an overstatement of the historical FAE data.

[6] As defined in section 736(a)(1)(A)(i) of the FD&C Act.

check, bank draft, or postal money order.

For payments made by wire transfer, include the unique user fee ID number to ensure that the payment is applied to the correct fee(s). Without the unique user fee ID number, the payment may not be applied, which could result in FDA not filing an application and other penalties. Note: the originating financial institution may charge a wire transfer fee, especially for international wire transfers. Applicable wire transfer fees must be included with payment to ensure fees are paid in full. Questions about wire transfer fees should be addressed to the financial institution. The account information for wire transfers is as follows: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Acct. No.: 75060099, Routing No.: 021030004, SWIFT: FRNYUS33. If needed, FDA's tax identification number is 53–0196965.

B. Prescription Drug Program Fees

FDA will issue invoices and payment instructions for FY 2025 program fees under the new fee schedule in August 2024. Under section 736(a)(2)(A)(i) of the FD&C Act, prescription drug program fees are due on October 1, 2024.

FDA will issue invoices in December 2025 for products that qualify for FY 2025 program fee assessments after the October 2024 billing.

C. Fee Waivers and Refunds

To qualify for consideration for a waiver or reduction under section 736(d) of the FD&C Act, an exemption under section 736(k) of the FD&C Act, or the return of an application or program fee paid under section 736 of the FD&C Act, including if the fee is claimed to have been paid in error, a person must submit to FDA a written request justifying such waiver, reduction, exemption or return not later than 180 days after such fee is due (section 736(i) of the FD&C Act). A request submitted under this paragraph must include any legal authorities under which the request is made.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3383]

Food Safety Modernization Act Third-Party Certification Program User Fee Rate for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA or we) is announcing the fiscal year (FY) 2025 annual fee rate for recognized accreditation bodies and accredited certification bodies, and the initial and renewal fee rate for accreditation bodies applying to be recognized in the third-party certification program that is authorized by the Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the FDA Food Safety Modernization Act (FSMA). We are also announcing the fee rate for certification bodies that are applying to be directly accredited by FDA.

DATES: The fees apply to the period from October 1, 2024, through September 30, 2025.

FOR FURTHER INFORMATION CONTACT:

For Questions Related to FSMA Program Fees: FSMAFeeStaff@fda.hhs.gov.

For Questions Related to This Notice: Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave, Silver Spring, MD 20903, 240–402–4989; or the User Fees Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 307 of FSMA (Pub. L. 111–353), Accreditation of Third-Party Auditors, amended the FD&C Act to create a new provision, section 808, under the same name. Section 808 of the FD&C Act (21 U.S.C. 384d) directs FDA to establish a program for accreditation of third-party certification bodies [1] conducting food safety audits and issuing food and facility certifications to eligible foreign entities (including registered foreign food facilities) that meet our applicable requirements. Under this provision, we established a system for FDA to recognize accreditation bodies to accredit certification bodies, except for limited circumstances in which we may directly accredit certification bodies to participate in the third-party certification program.

Section 808(c)(8) of the FD&C Act directs FDA to establish a reimbursement (user fee) program by which we assess fees and require reimbursement for the work FDA performs to establish and administer the third-party certification program under section 808 of the FD&C Act. The user fee program for the third-party certification program was established by a final rule entitled ''Amendments to Accreditation of Third-Party Certification Bodies To Conduct Food Safety Audits and To Issue Certifications To Provide for the User Fee Program'' (81 FR 90186, December 14, 2016).

The FSMA FY 2025 third-party certification program user fee rate announced in this notice is effective on October 1, 2024 and will remain in effect through September 30, 2025.

II. Estimating the Average Cost of a Supported Direct FDA Work Hour for FY 2025

FDA must estimate its costs for each activity in order to establish fee rates for FY 2025. In each year, the costs of salary (or personnel compensation) and benefits for FDA employees account for between 50 and 60 percent of the funds available to, and used by, FDA. Almost all the remaining funds (operating funds) available to FDA are used to support FDA employees by paying for rent, travel, utility, information technology, and other operating costs.

A. Estimating the Full Cost per Direct Work Hour in FY 2025

Full-time Equivalent (FTE) reflects the total number of regular straight-time hours—not including overtime or holiday hours—worked by employees, divided by the number of compensable hours applicable to each fiscal year. Annual leave, sick leave, compensatory time off, and other approved leave categories are considered ''hours worked'' for purposes of defining FTE employment.

In general, the starting point for estimating the full cost per direct work hour is to estimate the cost of an FTE or paid staff year. Calculating an Agency-wide total cost per FTE requires three primary cost elements: payroll, non-payroll, and rent.

We have used an average of past year cost elements to predict the FY 2025

[1] For the reasons explained in the third-party certification final rule (80 FR 74570 at 74578–74579, November 27, 2015), and for consistency with the implementing regulations for the third-party certification program in 21 CFR parts 1, 11, and 16, this notice uses the term ''third-party certification body'' rather than the term ''third-party auditor'' used in section 808(a)(3) of the FD&C Act.

cost. The FY 2025 FDA-wide average cost for payroll (salaries and benefits) is $213,556; non-payroll (including equipment, supplies, information technology, general and administrative overhead) is $131,739; and rent (including cost allocation analysis and adjustments for other rent and rent-related costs) is $23,750 per paid staff year, excluding travel costs.

Summing the average cost of an FTE for payroll, non-payroll, and rent, brings the FY 2025 average fully supported cost to $369,046 [2] per FTE, excluding travel costs. FDA will use this base unit fee in determining the hourly fee rate for third-party certification user fees for FY 2025 prior to including travel costs as applicable for the activity.

To calculate an hourly rate, FDA must divide the FY 2025 average fully supported cost of $369,046 per FTE by the average number of supported direct FDA work hours in FY 2023 (the last FY for which data are available). See table 1.

TABLE 1—SUPPORTED DIRECT FDA WORK HOURS IN A PAID STAFF YEAR IN FY 2023

Total number of hours in a paid staff year	2,080
Less:	
11 paid holidays	−88
20 days of annual leave	−160
10 days of sick leave	−80
12.5 days of training	−100
22 days of general administration	−176
26.5 days of travel	−212
2 hours of meetings per week	−104
Net Supported Direct FDA Work Hours Available for Assignments	1,160

Dividing the average fully supported FTE cost in FY 2025 ($369,046) by the total number of supported direct work hours available for assignment in FY 2023 (1,160) results in an average fully supported cost of $318 (rounded to the nearest dollar), excluding travel costs, per supported direct work hour in FY 2025.

B. Adjusting FY 2023 Travel Costs for Inflation To Estimate FY 2025 Travel Costs

To adjust the hourly rate for FY 2025, FDA must estimate the cost of inflation in each year for FY 2024 and FY 2025. FDA uses the method prescribed for estimating inflationary costs under the Prescription Drug User Fee Act (PDUFA) provisions of the FD&C Act (section 736(c)(1) (21 U.S.C. 379h(c)(1))), the statutory method for inflation adjustment in the FD&C Act that FDA has used consistently. FDA previously determined the FY 2024 inflation rate to be 3.8896 percent; this rate was published in the FY 2024 PDUFA user fee rates notice in the **Federal Register** (July 28, 2023, 88 FR 48881). Utilizing the method set forth in section 736(c)(1) of the FD&C Act, FDA has calculated an inflation rate of 3.8896 percent for FY 2024 and 4.1167 percent for FY 2025. FDA intends to use this inflation rate to make inflation adjustments for FY 2025; the derivation of this rate will be published in the **Federal Register** in the FY 2025 notice for the PDUFA user fee rates. The compounded inflation rate for FYs 2024 and 2025, therefore, is 1.08166 (or 8.166 percent) (calculated as 1 plus 3.8896 percent times 1 plus 4.1167 percent).

The average fully supported cost per supported direct FDA work hour, excluding travel costs, of $318 already takes into account inflation as the calculation above is based on FY 2025 predicted costs. FDA will use this base unit fee in determining the hourly fee rate for third-party certification program fees for FY 2025 prior to including travel costs as applicable for the activity. For the purpose of estimating the fee, we are using the travel cost rate for foreign travel because we anticipate that the vast majority of onsite assessments made by FDA under this program will require foreign travel. In FY 2023, the Office of Regulatory Affairs spent a total of $2,629,906 on 431 foreign inspection trips related to FDA's Center for Food Safety and Applied Nutrition and Center for Veterinary Medicine field activities programs, which averaged a total of $6,102 per foreign inspection trip. These trips averaged 3 weeks (or 120 paid hours) per trip. Dividing $6,102 per trip by 120 hours per trip results in an additional cost of $51 (rounded to the nearest dollar) per paid hour spent for foreign inspection travel costs in FY 2023. To adjust $51 for inflationary increases in FY 2024 and FY 2025, FDA must multiply it by the same inflation factor mentioned previously in this document (1.08166 or 8.166 percent), which results in an estimated cost of $55 per paid hour in addition to $318 for a total of $373 per paid hour ($318 plus $55) for each direct hour of work requiring foreign inspection travel. FDA will use this rate in charging fees in FY 2025 when travel is required for the third-party certification program.

TABLE 2—FSMA FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
Hourly rate without travel	$318
Hourly rate if travel is required	373

III. Fees for Accreditation Bodies and Certification Bodies in the Third-Party Certification Program Under Section 808(c)(8) of the FD&C Act

The third-party certification program assesses application fees and annual fees. In FY 2025, the only fees that could be collected by FDA under section 808(c)(8) of the FD&C Act are the initial application fee for accreditation bodies seeking recognition, the annual fee for recognized accreditation bodies, the annual fee for certification bodies accredited by a recognized accreditation body, the initial application fee for a certification body seeking direct accreditation from FDA, and the renewal application fee for recognized accreditation bodies. Table 3 provides an overview of the fees for FY 2025.

[2] Total includes rounding.

TABLE 3—FSMA THIRD-PARTY CERTIFICATION PROGRAM USER FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
Initial Application Fee for Accreditation Body Seeking Recognition	$53,520
Annual Fee for Recognized Accreditation Body	2,505
Annual Fee for Accredited Certification Body	3,131
Initial Application Fee for a Certification Body Seeking Direct Accreditation from FDA	53,520
Renewal Application Fee for Recognized Accreditation Body	32,802

A. Application Fee for Accreditation Bodies Applying for Recognition in the Third-Party Certification Program Under Section 808(c)(8) of the FD&C Act

Section 1.705(a)(1) (21 CFR 1.705(a)(1)) establishes an application fee for accreditation bodies applying for initial recognition that represents the estimated average cost of the work FDA performs in reviewing and evaluating initial applications for recognition of accreditation bodies.

The fee is based on the fully supported FTE hourly rates and estimates of the number of hours it would take FDA to perform relevant activities. These estimates represent FDA's current thinking, and as the program evolves, FDA will continue to reconsider the estimated hours. Based on data we have acquired since starting the program, we estimate that it would take, on average, 80 person-hours to review an accreditation body's submitted application, 48 person-hours for an onsite performance evaluation of the applicant (including travel and other steps necessary for a fully supported FTE to complete an onsite assessment), and 32 person-hours to prepare a written report documenting the onsite assessment.

FDA employees review applications and prepare reports from their worksites, so we use the fully supported FTE hourly rate excluding travel, $318 per hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (80 hours (application review) + 32 hours (written report)) = $35,616. FDA employees will likely travel to foreign countries for the onsite performance evaluations because most accreditation bodies are anticipated to be located in foreign countries. For this portion of the fee, we use the fully supported FTE hourly rate for work requiring travel, $373 per hour, to calculate the portion of the user fee attributable to those activities: $373/hour × 48 hours (*i.e.,* two fully supported FTEs × ((2 travel days × 8 hours) + (1 day onsite × 8 hours))) = $17,904. The estimated average cost of the work FDA performs in total for reviewing an initial application for recognition for an accreditation body based on these figures would be $35,616 + $17,904 = $53,520. Therefore, the application fee for accreditation bodies applying for recognition in FY 2025 will be $53,520.

B. Annual Fee for Accreditation Bodies Participating in the Third-Party Certification Program Under Section 808(c)(8) of the FD&C Act

To calculate the annual fee for each recognized accreditation body, FDA takes the estimated average cost of work FDA performs to monitor performance of a single recognized accreditation body and annualizes that over the average term of recognition. At this time, we assume an average term of recognition of 5 years. We also assume that FDA will monitor 10 percent of recognized accreditation bodies onsite. As the program proceeds, we will adjust the term of recognition as appropriate. We estimate that for one performance evaluation of a recognized accreditation body, it would take, on average (taking into account that not all recognized accreditation bodies would be monitored onsite), 22 hours for FDA to conduct records review, 8 hours to prepare a report detailing the records review and onsite performance evaluation, and 8 hours of onsite performance evaluation. Using the fully supported FTE hourly rates in table 2, the estimated average cost of the work FDA performs to monitor performance of a single recognized accreditation body would be $9,540 ($318/hour × (22 hours (records review) + 8 hours (written report))) plus $2,984 ($373/hour × 8 hours (onsite evaluation)), which is $12,524. Annualizing this amount over 5 years would lead to an annual fee for recognized accreditation bodies of $2,505 for FY 2025.

C. Annual Fee for Certification Bodies Accredited by a Recognized Accreditation Body in the Third-Party Certification Program Under Section 808(c)(8) of the FD&C Act

To calculate the annual fee for a certification body accredited by a recognized accreditation body, FDA takes the estimated average cost of work FDA performs to monitor performance of a single certification body accredited by a recognized accreditation body and annualizes that over the average term of accreditation. At this time, we assume an average term of accreditation of 4 years. This fee is based on the fully supported FTE hourly rates and estimates of the number of hours it would take FDA to perform relevant activities. We estimate that FDA would conduct, on average, the same activities, for the same amount of time to monitor certification bodies accredited by a recognized accreditation body as we would to monitor an accreditation body recognized by FDA. Using the fully supported FTE hourly rates in table 2, the estimated average cost of the work FDA performs to monitor performance of a single accredited certification body would be $9,540 ($318/hour × (22 hours (records review) + 8 hours (written report))) plus $2,984 ($373/hour × 8 hours (onsite evaluation)), which is $12,524. Annualizing this amount over 4 years would lead to an annual fee for accredited certification bodies of $3,131 for FY 2025.

D. Initial Application Fee for Certification Bodies Seeking Direct Accreditation From FDA in the Third-Party Certification Program Under Section 808(c)(8) of the FD&C Act

Section 1.705(a)(3) establishes an application fee for certification bodies applying for direct accreditation from FDA that represents the estimated average cost of the work FDA performs in reviewing and evaluating initial applications for direct accreditation of certification bodies.

The fee is based on the fully supported FTE hourly rates and estimates of the number of hours it would take FDA to perform relevant activities. These estimates represent FDA's current thinking, and as the program evolves, FDA will reconsider the estimated hours. We estimate that it would take, on average, 80 person-hours to review a certification body's submitted application, 48 person-hours for an onsite performance evaluation of the applicant (including travel and other steps necessary for a fully supported FTE to complete an onsite assessment),

and 32 person-hours to prepare a written report documenting the onsite assessment.

FDA employees are likely to review applications and prepare reports from their worksites, so we use the fully supported FTE hourly rate excluding travel, $318 per hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (80 hours (application review) + 32 hours (written report)) = $35,616. FDA employees will likely travel to foreign countries for the onsite performance evaluations because most certification bodies are anticipated to be located in foreign countries. For this portion of the fee, we use the fully supported FTE hourly rate for work requiring travel, $373 per hour, to calculate the portion of the user fee attributable to those activities: $373/hour × 48 hours (*i.e.,* two fully supported FTEs × ((2 travel days × 8 hours) + (1 day onsite × 8 hours))) = $17,904. The estimated average cost of the work FDA performs in total for reviewing an initial application for direct accreditation of a certification body based on these figures would be $35,616 + $17,904 = $53,520. Therefore, the application fee for certification bodies applying for direct accreditation from FDA in FY 2025 will be $53,520.

E. Renewal Application Fee for Accreditation Bodies Participating in the Third-Party Certification Program Under Section 808(c)(8) of the FD&C Act

Section 1.705(a)(2) establishes a renewal application fee for recognized accreditation bodies that represents the estimated average cost of the work FDA performs in reviewing and evaluating renewal applications for recognition of accreditation bodies.

The fee is based on the fully supported FTE hourly rates and estimates of the number of hours it would take FDA to perform relevant activities. These estimates represent FDA's current thinking, and as the program evolves, FDA will reconsider the estimated hours. We estimate that it would take, on average, 43 person-hours to review an accreditation body's submitted renewal application, 24 person-hours for an onsite performance evaluation of the applicant (including travel and other steps necessary for a fully supported FTE to complete an onsite assessment), and 32 person-hours to prepare a written report documenting the onsite assessment.

FDA employees are likely to review renewal applications and prepare reports from their worksites, so we use the fully supported FTE hourly rate excluding travel, $318 per hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (43 hours (application review) + 32 hours (written report)) = $23,850. FDA employees will likely travel to foreign countries for the onsite performance evaluations because most certification bodies are anticipated to be located in foreign countries. For this portion of the fee, we use the fully supported FTE hourly rate for work requiring travel, $373 per hour, to calculate the portion of the user fee attributable to those activities: $373/hour × 24 hours (*i.e.,* fully supported FTE × ((2 travel days × 8 hours) + (1 day onsite × 8 hours))) = $8,952. The estimated average cost of the work FDA performs in total for reviewing a renewal application for recognition of an accreditation body based on these figures would be $23,850 + $8,952 = $32,802. Therefore, the renewal application fee for recognized accreditation bodies in FY 2025 will be $32,802.

IV. Estimated Fees for Accreditation Bodies and Certification Bodies in Other Fee Categories for FY 2025

Section 1.705(a) also establishes application fees for certification bodies applying for renewal of direct accreditation. Section 1.705(b) also establishes annual fees for certification bodies directly accredited by FDA.

Although we will not be collecting these other fees in FY 2025, for transparency and planning purposes, we have provided an estimate of what these fees would be for FY 2025 based on the fully supported FTE hourly rates for FY 2025 and estimates of the number of hours it would take FDA to perform relevant activities as outlined in the Final Regulatory Impact Analysis for the Third-Party Certification Regulation. Table 4 provides an overview of the estimated fees for other fee categories.

TABLE 4—ESTIMATED FEE RATES FOR OTHER FEE CATEGORIES UNDER THE FSMA THIRD-PARTY CERTIFICATION PROGRAM

Fee category	Estimated fee rates for FY 2025
Renewal application fee for directly accredited certification body	$32,802
Annual fee for certification body directly accredited by FDA	25,096

V. How must the fee be paid?

Accreditation bodies seeking initial recognition must submit the application fee with the application. For recognized accreditation bodies and accredited certification bodies, an invoice will be sent annually. Payment must be made within 30 days of the invoice date. The payment must be made in U.S. currency from a U.S. bank by one of the following methods: wire transfer, electronically, check, bank draft, or U.S. postal money order made payable to the Food and Drug Administration. The preferred payment method is online using an electronic check (Automated Clearing House (ACH), also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay.* (Note: only full payments are accepted. No partial payments can be made online.) Once you have found your invoice, select ''Pay Now'' to be redirected to *Pay.gov.* Electronic payment options are based on the balance due. Payment by credit card is available only for balances less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards. When paying by check, bank draft, or U.S. postal money order, please include the invoice number. Also write the FDA post office box number (P.O. Box 979108) on the enclosed check, bank draft, or money order. Mail the payment, including the invoice number on the check stub, to: Food and Drug Administration, P.O. Box 979108, St. Louis, MO 63197–9000.

When paying by wire transfer, it is required that the invoice number is included; without the invoice number the payment may not be applied. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required to add that

amount to the payment to ensure that the invoice is paid in full. For international wire transfers, please inquire with the financial institutions prior to submitting the payment. Use the following account information when sending a wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Account Name: Food and Drug Administration, Account No.: 75060099, Routing No.: 021030004, Swift No.: FRNYUS33.

To send a check by a courier such as Federal Express, the courier must deliver the check to: U.S. Bank, Attn: Government Lockbox 979108, 3180 Rider Trail S., Earth City, MO 63045. (Note: this address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 855–259–3064. This phone number is only for questions about courier delivery.) The tax identification number of FDA is 53–0196965.

VI. What are the consequences of not paying this fee?

The consequences of not paying these fees are outlined in 21 CFR 1.725. If FDA does not receive an application fee with an application for recognition, the application will be considered incomplete, and FDA will not review the application. If a recognized accreditation body fails to submit its annual user fee within 30 days of the due date, we will suspend its recognition. If the recognized accreditation body fails to submit its annual user fee within 90 days of the due date, we will revoke its recognition. If an accredited certification body fails to pay its annual fee within 30 days of the due date, we will suspend its accreditation. If the accredited certification body fails to pay its annual fee within 90 days of the due date, we will withdraw its accreditation.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2024–N–3381]

Food Safety Modernization Act Voluntary Qualified Importer Program User Fee Rate for Fiscal Year 2025

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the fiscal year (FY) 2025 annual fee rate for importers approved to participate in the Voluntary Qualified Importer Program (VQIP) that is authorized by the Federal Food, Drug, and Cosmetic Act (FD&C Act), as amended by the FDA Food Safety Modernization Act (FSMA). This fee is effective on August 1, 2024, and will remain in effect through September 30, 2025.

FOR FURTHER INFORMATION CONTACT: *For questions related to FSMA program fees: FSMAFeeStaff@fda.hhs.gov. For questions related to this notice:* Olufunmilayo Ariyo, Office of Financial Management, Food and Drug Administration, 10903 New Hampshire Ave., Silver Spring, MD 20903, 240–402–4989; or the User Fees Support Staff at *OO-OFBAP-OFM-UFSS-Government@fda.hhs.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

Section 302 of FSMA, VQIP, amended the FD&C Act to create a new provision, section 806, under the same name. Section 806 of the FD&C Act (21 U.S.C. 384b) directs FDA to establish a program to provide for the expedited review and importation of food offered for importation by importers who have voluntarily agreed to participate in such program, and a process, consistent with section 808 of the FD&C Act (21 U.S.C. 384d), for the issuance of a facility certification to accompany a food offered for importation by importers participating in VQIP.

Section 743 of the FD&C Act (21 U.S.C. 379j–31) authorizes FDA to assess and collect fees from each importer participating in VQIP to cover FDA's costs of administering the program. Each fiscal year, fees are to be established based on an estimate of 100 percent of the costs for the year. The fee rates must be published in a **Federal Register** notice not later than 60 days before the start of each fiscal year (section 743(b)(1) of the FD&C Act). After FDA approves a VQIP application, the user fee must be paid before October 1, the start of the VQIP fiscal year, to begin receiving benefits for that VQIP fiscal year.

The FY 2025 VQIP user fee will support benefits from October 1, 2024, through September 30, 2025.

II. Estimating the Average Cost of a Supported Direct FDA Work Hour for FY 2025

FDA is required to estimate 100 percent of its costs for each activity in order to establish fee rates for FY 2025. In each year, the costs of salary (or personnel compensation) and benefits for FDA employees account for between 50 and 60 percent of the funds available to, and used by, FDA. Almost all of the remaining funds (operating funds) available to FDA are used to support FDA employees by paying for rent, travel, utility, information technology (IT), and other operating costs.

A. Estimating the Full Cost Per Direct Work Hour in FY 2025

Full-time Equivalent (FTE) reflects the total number of regular straight-time hours—not including overtime or holiday hours—worked by employees, divided by the number of compensable hours applicable to each fiscal year. Annual leave, sick leave, compensatory time off, and other approved leave categories are considered ''hours worked'' for purposes of defining FTE employment.

In general, the starting point for estimating the full cost per direct work hour is to estimate the cost of an FTE or paid staff year. Calculating an Agency-wide total cost per FTE requires three primary cost elements: payroll, non-payroll, and rent.

We have used an average of past year cost elements to predict the FY 2025 cost. The FY 2025 FDA-wide average cost for payroll (salaries and benefits) is $213,556; non-payroll—including equipment, supplies, IT, general and administrative overhead—is $131,739; and rent, including cost allocation analysis and adjustments for other rent and rent-related costs, is $23,750 per paid staff year, excluding travel costs.

Summing the average cost of an FTE for payroll, non-payroll, and rent, brings the FY 2025 average fully supported cost to $369,046 [1] per FTE, excluding travel costs. FDA will use this base unit fee in determining the hourly fee rate for VQIP fees for FY 2025 prior to including domestic or foreign travel costs as applicable for the activity.

To calculate an hourly rate, FDA must divide the FY 2025 average fully supported cost of $369,046 per FTE by the average number of supported direct FDA work hours in FY 2023—the last FY for which data are available. See table 1.

TABLE 1—SUPPORTED DIRECT FDA WORK HOURS IN A PAID STAFF YEAR IN FY 2023

Total number of hours in a paid staff year	2,080
Less:	
11 paid holidays	−88
20 days of annual leave	−160

[1] Total includes rounding.

TABLE 1—SUPPORTED DIRECT FDA WORK HOURS IN A PAID STAFF YEAR IN FY 2023—Continued

Total number of hours in a paid staff year	2,080
10 days of sick leave	−80
12.5 days of training	−100
22 days of general administration	−176
26.5 days of travel	−212
2 hours of meetings per week	−104
Net Supported Direct FDA Work Hours Available for Assignments	1,160

Dividing the average fully supported FTE cost in FY 2025 ($369,046) by the total number of supported direct work hours available for assignment in FY 2023 (1,160) results in an average fully supported cost of $318 (rounded to the nearest dollar), excluding inspection travel costs, per supported direct work hour in FY 2025.

B. Adjusting FY 2023 Travel Costs for Inflation To Estimate FY 2025 Travel Costs

To adjust the hourly rate for FY 2025, FDA must estimate the cost of inflation in each year for FYs 2024 and 2025. FDA uses the method prescribed for estimating inflationary costs under the Prescription Drug User Fee Act (PDUFA) provisions of the FD&C Act (section 736(c)(1) (21 U.S.C. 379h(c)(1))), the statutory method for inflation adjustment in the FD&C Act that FDA has used consistently. FDA previously determined the FY 2024 inflation rate to be 3.8896 percent; this rate was published in the FY 2024 PDUFA user fee rates notice in the **Federal Register** (July 28, 2023, 88 FR 48881). Utilizing the method set forth in section 736(c)(1) of the FD&C Act, FDA has calculated an inflation rate of 3.8896 percent for FY 2024 and 4.1167 percent for FY 2025, and FDA intends to use these inflation rates to make inflation adjustments for FY 2025; the derivation of this rate will be published in the **Federal Register** in the FY 2025 notice for the PDUFA user fee rates. The compounded inflation rate for FYs 2024 and 2025, therefore, is 1.08166 (or 8.166 percent) (calculated as 1 plus 3.8896 percent times 1 plus 4.1167 percent).

The average fully supported cost per supported direct FDA work hour, excluding travel costs, of $318 already takes into account inflation as the calculation above is based on FY 2025 predicted costs. FDA will use this base unit fee in determining the hourly fee rate for VQIP fees for FY 2025 prior to including domestic or foreign travel costs as applicable for the activity.

In FY 2023, FDA's Office of Regulatory Affairs (ORA) spent a total of $7,463,679 for domestic regulatory inspection travel costs and General Services Administration Vehicle costs related to FDA's Center for Food Safety and Applied Nutrition (CFSAN) and Center for Veterinary Medicine (CVM) field activities programs. The total ORA domestic travel costs spent is then divided by the 8,811 CFSAN and CVM domestic inspections, which averages a total of $847 per inspection. These inspections average 41.35 hours per inspection. Dividing $847 per inspection by 41.35 hours per inspection results in a total and an additional cost of $20 (rounded to the nearest dollar) per hour spent for domestic inspection travel costs in FY 2023. To adjust for the $20 per hour additional domestic cost inflation increases for FY 2024 and FY 2025, FDA must multiply the FY 2024 PDUFA inflation rate adjustor (1.038896) by the FY 2025 PDUFA inflation rate adjustor (1.041167) times the $20 additional domestic cost, which results in an estimated cost of $22 (rounded to the nearest dollar) per paid hour in addition to $318 for a total of $340 per paid hour ($318 plus $22) for each direct hour of work requiring domestic inspection travel. FDA will use these rates in charging fees in FY 2025 when domestic travel is required.

In FY 2023, ORA spent a total of $2,629,906 on 431 foreign inspection trips related to FDA's CFSAN and CVM field activities programs, which averaged a total of $6,102 per foreign inspection trip. These trips averaged 3 weeks (or 120 paid hours) per trip. Dividing $6,102 per trip by 120 hours per trip results in a total and an additional cost of $51 (rounded to the nearest dollar) per paid hour spent for foreign inspection travel costs in FY 2023. To adjust $51 for inflationary increases in FY 2024 and FY 2025, FDA must multiply it by the same inflation factors mentioned previously in this document (1.038896 and 1.041167), which results in an estimated cost of $55 (rounded to the nearest dollar) for each direct hour of work requiring foreign inspection travel. FDA will use these rates in charging fees in FY 2025 when foreign travel is required.

TABLE 2—FSMA FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
Hourly rate without travel	$318
Hourly rate if domestic travel is required	340
Hourly rate if foreign travel is required	373

III. Fees for Importers Approved To Participate in the Voluntary Qualified Importer Program Under Section 743 of the FD&C Act

FDA assesses fees for VQIP annually. Table 3 provides an overview of the fees for FY 2025.

TABLE 3—FSMA VQIP USER FEE SCHEDULE FOR FY 2025

Fee category	Fee rates for FY 2025
VQIP User Fee	$9,999

Section 743 of the FD&C Act requires that each importer participating in VQIP pay a fee to cover FDA's costs of administering the program. This fee represents the estimated average cost of the work FDA performs in reviewing and evaluating a VQIP importer. At this time, FDA is not offering an adjusted fee for small businesses. As required by section 743(b)(2)(B)(iii) of the FD&C Act, FDA previously published a set of guidelines in consideration of the burden of the VQIP fee on small businesses and provided for a period of public comment on the guidelines (80 FR 32136, June 5, 2015). While we did receive some comments in response, they did not address the questions posed, *i.e.,* how a small business fee reduction should be structured, what percentage of fee reduction would be appropriate, or what alternative structures FDA might consider to indirectly reduce fees for small businesses by charging different fee amounts to different VQIP participants. We plan on monitoring costs and collecting data to determine if, in future fiscal years, we will provide for a small business fee reduction. Consistent with section 743(b)(2)(B)(iii) of the FD&C Act, we will adjust the fee schedule for small businesses only through notice and comment rulemaking.

The fee is based on the fully supported FTE hourly rates and estimates of the number of hours it would take FDA to perform relevant activities. These estimates represent FDA's current thinking, and as the program evolves, FDA will reconsider the estimated hours. We estimate that it would take, on average, 39 person-hours to review a new VQIP application (including communication provided through the VQIP Importer's Help Desk), 28 person-hours to review a returning VQIP application (including communication provided through the VQIP Importer's Help Desk), 16 person-hours for an onsite performance evaluation of a domestic VQIP importer

(including travel and other steps necessary for a fully supported FTE to complete and document an onsite assessment), and 34 person-hours for an onsite performance evaluation of a foreign VQIP importer (including travel and other steps necessary for a fully supported FTE to complete and document an onsite assessment).

Based on updated data, FDA anticipates that there may be up to seven returning VQIP applicants and up to one new applicant this fiscal year. FDA employees are likely to review new VQIP applications from their worksites, so we use the fully supported FTE hourly rate excluding travel, $318/hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (39 hours) = $12,402. FDA employees are likely to review returning VQIP applications from their worksites, so we use the fully supported FTE hourly rate excluding travel, $318/hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (28 hours) = $8,904.

FDA employees will conduct a VQIP inspection to verify the eligibility criteria and full implementation of the food safety and food defense systems established in the Quality Assurance Program. A VQIP importer may be located inside or outside of the United States. However, this fiscal year, all VQIP importers will be located inside the United States. One VQIP applicant may have an associated VQIP inspection.

FDA employees are likely to prepare for and report on the performance evaluation of a domestic VQIP importer at an FTE's worksite, so we use the fully supported FTE hourly rate excluding travel, $318/hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (8 hours) = $2,544. For the portion of the fee covering onsite evaluation of a domestic VQIP importer, we use the fully supported FTE hourly rate for work requiring domestic travel, $340/hour, to calculate the portion of the user fee attributable to those activities: $340/hour × 8 hours (*i.e.,* one fully supported FTE × (1 day onsite × 8 hours)) = $2,720. Therefore, the total cost of conducting the domestic performance evaluation of a VQIP importer is determined to be $2,544 + $2,720 = $5,264.

Coordination of the onsite performance evaluation of a foreign VQIP importer is estimated to take place at an FTE's worksite, so we use the fully supported FTE hourly rate excluding travel, $318/hour, to calculate the portion of the user fee attributable to those activities: $318/hour × (10 hours) = $3,180. For the portion of the fee covering onsite evaluation of a foreign VQIP importer, we use the fully supported FTE hourly rate for work requiring foreign travel, $373/hour, to calculate the portion of the user fee attributable to those activities: $373/hour × 24 hours (*i.e.,* one fully supported FTE × ((2 travel days × 8 hours) + (1 day onsite × 8 hours))) = $8,952. Therefore, the total cost of conducting the foreign performance evaluation of a VQIP importer is determined to be $3,180 + $8,952 = $12,132.

Therefore, the estimated average cost of the work FDA performs in total for approving an application for a VQIP importer in FY 2025 based on these figures would be ($12,402 × ⅛) + ($8,904 × ⅞) + ($5,264 × ⅛) = $9,999.

IV. How must the fee be paid?

An invoice will be sent to VQIP importers approved to participate in the program. Payment must be made prior to October 1, 2024, to be eligible for VQIP participation for the benefit year beginning October 1, 2024. FDA will not refund the VQIP user fee for any reason.

The payment must be made in U.S. currency from a U.S. bank by one of the following methods: wire transfer, electronically, check, bank draft, or U.S. postal money order made payable to the Food and Drug Administration. The preferred payment method is online using an electronic check (Automated Clearing House (ACH), also known as eCheck) or credit card (Discover, VISA, MasterCard, American Express). Secure electronic payments can be submitted using the User Fees Payment Portal at *https://userfees.fda.gov/pay.* (Note: only full payments are accepted. No partial payments can be made online.) Once you have found your invoice, select ''Pay Now'' to be redirected to *Pay.gov*. Electronic payment options are based on the balance due. Payment by credit card is available only for balances less than $25,000. If the balance exceeds this amount, only the ACH option is available. Payments must be made using U.S. bank accounts as well as U.S. credit cards.

When paying by check, bank draft, or U.S. postal money order, please include the invoice number on the check stub. Also write the FDA post office box number (P.O. Box 979108) on the enclosed check, bank draft, or money order. Mail the payment including the invoice number on the check stub to: Food and Drug Administration, P.O. Box 979108, St. Louis, MO 63197–9000.

When paying by wire transfer, it is required that the invoice number is included; without the invoice number the payment may not be applied. The originating financial institution may charge a wire transfer fee. If the financial institution charges a wire transfer fee, it is required to add that amount to the payment to ensure that the invoice is paid in full. For international wire transfers, please inquire with the financial institutions prior to submitting the payment. Use the following account information when sending a wire transfer: U.S. Department of the Treasury, TREAS NYC, 33 Liberty St., New York, NY 10045, Account Name: Food and Drug Administration, Account No.: 75060099, Routing No.: 021030004, Swift No.: FRNYUS33.

To send a check by a courier such as Federal Express, the courier must deliver the check to: U.S. Bank, Attn: Government Lockbox 979108, 3180 Rider Trail S., Earth City, MO 63045. (*Note:* This address is for courier delivery only. If you have any questions concerning courier delivery, contact U.S. Bank at 855–259–3064. This phone number is only for questions about courier delivery.)

The tax identification number of FDA is 53–0196965.

V. What are the consequences of not paying this fee?

The consequences of not paying these fees are outlined in Section J of ''FDA's Voluntary Qualified Importer Program; Guidance for Industry'' document (available at *https://www.fda.gov/media/92196/download*). If the user fee is not paid before October 1, a VQIP importer will not be eligible to participate in VQIP. For the first year a VQIP application is approved, if the user fee is not paid before October 1, 2024, you are not eligible to participate in VQIP. If you subsequently pay the user fee, FDA will begin your benefits after we receive the full payment. The user fee may not be paid after December 31, 2024. For a subsequent year, if you do not pay the user fee before October 1, FDA will send a Notice of Intent to Revoke your participation in VQIP. If you do not pay the user fee within 30 days of the date of the Notice of Intent to Revoke, we will revoke your participation in VQIP.

Dated: July 26, 2024.

Lauren K. Roth,

Associate Commissioner for Policy.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

[Document Identifier: HHS–OS—60D–0990–New]

Agency Information Collection Activities; Proposed Collection; Public Comment Request

AGENCY: Office of the Secretary

ACTION: Notice.

SUMMARY: In compliance with the requirement of the Paperwork Reduction Act of 1995, the Office of the Secretary (OS), Department of Health and Human is publishing the following summary of a proposed collection for public comment.

DATES: Comments on the ICR must be received on or before September 30, 2024.

ADDRESSES: Submit your comments to *Sherrette.funn@hhs.gov* or by calling (202) 264–0041 and *PRA@HHS.GOV*

FOR FURTHER INFORMATION CONTACT: When submitting comments or requesting information, please include the document identifier 0990–New–60D and project title for reference, to Sherrette A. Funn, email: *Sherrette.Funn@hhs.gov, PRA@HHS.GOV* or call (202) 264–0041 the Reports Clearance Officer.

SUPPLEMENTARY INFORMATION: Interested persons are invited to send their comments regarding this burden estimate or any other aspect of this collection of information, including any of the following subjects: (1) The necessity and utility of the proposed information collection for the proper performance of the agency's functions; (2) the accuracy of the estimated burden; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) the use of automated collection techniques or other forms of information technology to minimize the information collection burden.

Title of Information Collection: Performance and Evaluation Measurement Systems (PEMS).

Type of Collection: New Data Collection.

OMB No.: 0990–New.

Abstract: The U.S. Department of Health and Human Services (HHS) Office of Minority Health (OMH) is requesting OMB approval for PEMS. The proposed information collection activity will allow OMH to collect grant management and performance data and disparity impact information for all OMH-funded projects. The clearance is needed to support data collection using Grant Solutions, a system that enables OMH to comply with Federal reporting requirements and monitor and evaluate performance by enabling the efficient collection of performance-oriented data tied to OMH-wide performance reporting needs. The ability to monitor and evaluate performance in this manner, and to work towards continuous program improvement are basic functions that OMH must be able to accomplish to carry out its mandate with the most effective and appropriate use of resources.

TOTAL ESTIMATED ANNUALIZED BURDEN—HOURS

Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total burden hours
Disparity Impact Statement Template	125	1	1	125
OMH Performance Progress Report	125	4	1.5	750
Total	250	5	2.5	875

Sherrette A. Funn,

Paperwork Reduction Act Reports Clearance Officer, Office of the Secretary.

BILLING CODE 4150–36–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

National Institute on Drug Abuse; Notice of Meeting

Pursuant to section 1009 of the Federal Advisory Committee Act, as amended, notice is hereby given of a meeting of the National Advisory Council on Drug Abuse.

This will be a hybrid meeting held in-person and virtually and will be open to the public, as indicated below, with attendance limited to space available. Individuals who plan to attend in-person or view the virtual meeting and need special assistance, such as sign language interpretation or other reasonable accommodations, should notify Dr. Gillian Acca via email at *gillian.acca@nih.gov* five days in advance of the meeting. The open session of the meeting can be accessed from the NIH Videocast at the following link: *https://videocast.nih.gov/.*

A portion of the meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: National Advisory Council on Drug Abuse.

Date: September 11, 2024.

Closed: 10:30 a.m. to 11:45 a.m.

Agenda: To review and evaluate grant applications.

Open: 1:00 p.m. to 5:00 p.m.

Agenda: Presentations and other business of the Council.

Place: Neuroscience Center, Conference Room 1145/1155, National Institutes of Health, 6001 Executive Boulevard, Rockville, MD 20852 (Hybrid Meeting).

Contact Persons:

Susan R.B. Weiss, Ph.D., Director, Division of Extramural Research, Office of the Director, National Institute on Drug Abuse, NIH, Three White Flint North, RM 09D08, 11601 Landsdown Street, Bethesda, MD 20852, 301–443–6480, *sweiss@nida.nih.gov.*

Gillian Acca, Ph.D., Health Science Policy Analyst, Division of Extramural Research, Office of Extramural Policy, National Institute on Drug Abuse, NIH, Three White Flint North, RM 09C70, 11601 Landsdown Street, Bethesda, MD 20852, 301–827–5863, *gillian.acca@nih.gov.*

Any interested person may file written comments with the committee by forwarding the statement to Dr. Gillian Acca via email at *gillian.acca@nih.gov.* The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has procedures at *https://www.nih.gov/about-nih/visitor-information/campus-access-*

security for entrance into on-campus and off-campus facilities. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors attending a meeting on campus or at an off-campus federal facility will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: *www.drugabuse.gov/NACDA/NACDAHome.html,* where an agenda and any additional information for the meeting will be posted when available.

BILLING CODE 4140–01–P

DEPARTMENT OF HOMELAND SECURITY

[Docket Number DHS–2024–0027]

Agency Information Collection Activities: VULNERABILITY DISCOVERY PROGRAM, OMB CONTROL NO. 1601–0028

AGENCY: Department of Homeland Security (DHS).

ACTION: 60-Day notice and request for comments.

SUMMARY: The Department of Homeland Security will submit the following Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995.

DATES: Comments are encouraged and will be accepted until September 30, 2024. This process is conducted in accordance with 5 CFR 1320.1.

ADDRESSES: You may submit comments, identified by docket number Docket # DHS–2024–0027, at:

○ *Federal eRulemaking Portal: http://www.regulations.gov.* Please follow the instructions for submitting comments.

Instructions: All submissions received must include the agency name and docket number Docket # DHS–2024–2027. All comments received will be posted without change to *http://www.regulations.gov,* including any personal information provided.

Docket: For access to the docket to read background documents or comments received, go to *http://www.regulations.gov.*

SUPPLEMENTARY INFORMATION: Security vulnerabilities, defined in section 102(17) of the Cybersecurity Information Sharing Act of 2015, are any attribute of hardware, software, process, or procedure that could enable or facilitate the defeat of a security control. Security vulnerability mitigation is a process starting with discovery of the vulnerability leading to applying some solution to resolve the vulnerability. There is constantly a search for security vulnerabilities within information systems, from individuals or nation states wishing to bypass security controls to gain invaluable information, to researchers seeking knowledge in the field of cyber security. Bypassing such security controls in the DHS and other Federal Agencies information systems can cause catastrophic damage including but not limited to loss in Personally Identifiable Information (PII), sensitive information gathering, and data manipulation.

Pursuant to section 101 of the Strengthening and Enhancing Cyber-capabilities by Utilizing Risk Exposure Technology Act, (commonly known as the SECURE Technologies Act) individuals, organizations, and/or companies may submit any discovered security vulnerabilities found associated with the information system of any Federal agency. This collection is used by these individuals, organizations, and/or companies who choose to submit a discovered vulnerability found associated with the information system of any Federal agency.

Specifically, DHS and Federal cybersecurity agencies are working to address vulnerabilities within DHS's components. While DHS had previously obtained approval to collect this information on its own behalf, recent cyberattacks and trends exploiting vulnerabilities have exemplified the need to have this capability government-wide. In June 2023, a major and widespread cyberattack occurred by Russian cybercriminals, that impacted multiple U.S. federal government agencies. This was reported to be a result of cybercriminals exploiting a vulnerability in widely used software known as MOVEit. Cybercriminals gained the opportunity exploit the software that agencies use to transfer data. This attack was reported to be widespread and allowed for cybercriminals to break into multiple networks due to lack of remediation. Impacted organizations included The Energy Department, Johns Hopkins University, and University of Georgia. The MOVEit exploitation appears to have affected at least 122 organizations and exposed the data of roughly 15 million people. These numbers are based on posts from CL0P, the Russian ransomware group that has claimed responsibility for the attacks. This is just a single example among a myriad of vulnerabilities and incidents that we strive to avoid.

Public Law 116–283, Sec. 1705 (which amended 44 U.S.C. 3553) permits extensive sharing of information regarding cybersecurity and the protection of information and information systems from cybersecurity risks between Federal Agencies covered by the Federal Information Security Modernization Act and the Department of Homeland Security. This unique authority makes DHS well positioned to host the approval of this information collection on behalf of other Federal agencies

DHS is requesting pursuant to 44 US Code 33554(a)(1)(B), that the information collection continue to be designated for any Federal agency's ability to utilize the standardized DHS online Vulnerability Disclosure Form to collect their own agency's vulnerability information and post the information on their own agency websites.

DHS leverages the form to collect information about vulnerabilities impacting DHS assets. The form includes the following: vulnerable host(s), necessary information for reproducing the security vulnerability, remediation or suggestions for remediation of the vulnerability, and potential impact on host, if not remediated.

This form allows Federal agencies to complete the following actions; (1) allow the individuals, organizations, and/or companies who discover vulnerabilities in the information systems to report their findings to the agency, and (2) provide the agencies initial insight into any newly discovered vulnerabilities, as well as zero-day vulnerabilities in order to mitigate the security issues prior to malicious actors acting upon the vulnerability for malicious intent.

The form also benefits researchers and provides a safe and lawful method to practice and discover new cyber methods to discover the vulnerabilities. It provides the same benefit to Federal agencies and promotes the enhancement of Federal information system security policies.

Respondents may electively submit their information directly to the agency in which they would like to report a vulnerability. Federal Agencies provide the form electronically via their agency's website. The information collected does not have an impact on small business or other small entities.

The collection of this information is related to the discovery of security vulnerabilities by individuals, organizations, and/or companies is needed to fulfill the congressional mandate in Section 101 of the SECURE Technologies Act related to creating Vulnerability Disclosure Policies. In addition, without the ability to collect information on newly discovered security vulnerabilities associated with Federal agency information systems, Federal agencies will rely solely on the internal security personnel and/or the discovery through a post occurrence breach of security controls.

There are no assurances of confidentiality provide. Any PII that is collected is for the sole purpose of feedback and dialogue. This information collection is covered by a Privacy Impact Assessment (PIA), DHS/ALL/PIA–006 DHS General Contacts List (June 15, 2007), and a System of Records Notice, DHS/ALL–002 Department of

Homeland Security (DHS) Mailing and Other Lists System, 73 FR 71659 (November 25, 2008).

The Office of Management and Budget is particularly interested in comments which:

1. Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

2. Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

3. Enhance the quality, utility, and clarity of the information to be collected; and

4. Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submissions of responses.

Analysis

Agency: Department of Homeland Security (DHS).

Title: VULNERABILITY DISCOVERY PROGRAM.

OMB Number: 1601–0028.

Frequency: Annually.

Affected Public: Individuals, Organizations, and/or Companies.

Number of Respondents: 3,000.

Estimated Time per Respondent: 3 hours.

Total Burden Hours: 9,000.

Robert Dorr,

Executive Director, Business Management Directorate.

BILLING CODE 9112–FL–P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–7080–N–33]

30-Day Notice of Proposed Information Collection: OMB Circular A–11 Section 280 Customer Experience Clearance OMB Control No.: 2511–0001

AGENCY: Office of Policy Development and Research, Chief Data Officer, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 30 days of public comment.

DATES: *Comments Due Date:* August 30, 2024.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal.

Written comments and recommendations for the proposed information collection can be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Interested persons are also invited to submit comments regarding this proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Room 8210, Washington, DC 20410; telephone (202) 402–3577 (this is not a toll-free number) or email: *PaperworkReductionActOffice@hud.gov.*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, REE, Department of Housing and Urban Development, 451 7th Street SW, Washington, DC 20410; email *Colette.Pollard@hud.gov* or telephone (202) 402–3400. This is not a toll-free number. HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech or communication disabilities. To learn more about how to make an accessible telephone call, please visit: *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.*

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: : This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on May 17, 2024, at 89 FR 43423.

A. Overview of Information Collection

Title of Information Collection: Renewal of OMB Circular A–11 Section 280 Customer Experience Clearance.

OMB Approval Number: 2511–0001.

OMB Expiration Date: 09/30/2024.

Type of Request: Extension of an existing collection.

Form Number: None.

Description of the need for the information and proposed use: Under the PRA, (*44 U.S.C. 3501–3520*) Federal Agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. ''Collection of information'' is defined in *44 U.S.C. 3502(3)* and *5 CFR 1320.3(c)* and includes Agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA requires Federal Agencies to provide a 60-day and a 30-day notice in the **Federal Register** concerning each proposed collection of information, including each proposed extension of an existing collection of information, before submitting the collection to OMB for approval. To comply with this requirement, HUD published the 60-day notice in the **Federal Register** on 05/17/2024 and is now publishing this 30-day notice of the proposed collection of information set forth in this document.

Whether seeking a loan, Social Security benefits, veterans' benefits, or other services provided by the Federal Government, individuals and businesses expect Government customer services to be efficient and intuitive, just like services from leading private-sector organizations. Yet the 2016 American Consumer Satisfaction Index and the 2017 Forrester Federal Customer Experience Index show that, on average, Government services lag nine percentage points behind the private sector.

A modern, streamlined and responsive customer experience means: Raising government-wide customer experience to the average of the private sector service industry; developing indicators for high-impact Federal programs to monitor progress towards excellent customer experience and mature digital services; and providing the structure (including increasing transparency) and resources to ensure customer experience is a focal point for agency leadership. To support this, OMB Circular A–11 Section 280 established government-wide standards for mature customer experience organizations in government and measurement. To enable Federal programs to deliver the experience taxpayers deserve, they must undertake three general categories of activities: Conduct ongoing customer research, gather and share customer feedback, and test services and digital products.

These data collection efforts may be either qualitative or quantitative in nature or may consist of mixed methods. Additionally, data may be collected via a variety of means, including but not limited to electronic or social media, direct or indirect observation (*i.e.,* in person, video and audio collections), interviews, questionnaires, surveys, and focus groups. HUD will limit its inquiries to data collections that solicit strictly voluntary opinions or responses. Steps will be taken to ensure anonymity of respondents in each activity covered by this request.

The results of the data collected will be used to improve the delivery of Federal services and programs. It will include the creation of personas, customer journey maps, and reports and summaries of customer feedback data and user insights. It will also provide government-wide data on customer experience that can be displayed on *performance.gov* to help build transparency and accountability of Federal programs to the customers they serve.

Respondents: Collections will be targeted to the solicitation of opinions from respondents who have experience with the program or may have experience with the program in the near future. For the purposes of this request, ''customers'' are individuals, businesses, and organizations that interact with a Federal Government agency or program, either directly or via a Federal contractor. This could include individuals or households; businesses or other for-profit organizations; not-for-profit institutions; State, local or tribal governments; Federal government; and Universities.

Estimated Number of Respondents: 1,500,000.

Estimated Number of Responses: 1,500,000.

Frequency of Response: One time per collection.

Average Hours per Response: Varied, dependent upon the data collection method used. The possible response time to complete a questionnaire or survey may be 3 minutes or up to 2 hours to participate in an interview.

Estimated Burden: 75,000.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions. (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

C. Authority

Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Colette Pollard,

Department Reports Management Officer, Office of Policy Development and Research, Chief Data Officer.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR–6485–N–01]

Announcement of the Housing Counseling Federal Advisory Committee; Notice of Public Meeting

AGENCY: Office of the Assistant Secretary for Housing—Federal Housing Commissioner, Department of Housing and Urban Development (HUD).

ACTION: Notice of Housing Counseling Federal Advisory Committee Public Meeting.

SUMMARY: This gives notice of a Housing Counseling Federal Advisory Committee (HCFAC) meeting and sets forth the proposed agenda. The HCFAC meeting will be held on Wednesday, September 11, 2024. The meeting is open to the public and is accessible to individuals with disabilities.

DATES: The hybrid meeting (virtual and in-person meeting) will be held on Wednesday, September 11, 2024, starting at 10:00 a.m. Eastern Daylight Time (EDT).

FOR FURTHER INFORMATION CONTACT: Virginia F. Holman, Housing Program Technical Specialist, Office of Housing Counseling, U.S. Department of Housing and Urban Development; telephone number 540–894–7790 (this is not a toll-free number); email *virginia.f.holman@hud.gov.* HUD welcomes and is prepared to receive calls from individuals who are deaf or hard of hearing, as well as individuals with speech and communication disabilities. To learn more about how to make an accessible telephone call, please visit: *https://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs.* Individuals may also email *HCFACCommittee@hud.gov* for information.

SUPPLEMENTARY INFORMATION: HUD is convening a hybrid meeting (virtual and in-person meeting) of the HCFAC on Wednesday, September 11, 2024, from 10:00 a.m. to 4:00 p.m. Eastern Daylight Time (EDT). The virtual meeting will be held via ZOOM. The in-person meeting will be held at Norfolk State University, 700 Park Avenue, Norfolk, Virginia 23504. This meeting notice is provided in accordance with the Federal Advisory Committee Act, 5 U.S.C. 1009(a)(2).

Draft Agenda—Housing Counseling Federal Advisory Committee Meeting

Wednesday September 11, 2024

Housing Solutions for Military Families How HUD Certified Housing Counselors Can Help

I. Welcome
II. Presentations and HCFAC Member Discussion
III. Public Comment
IV. Next Steps
V. Adjourn

Registration

The public is invited to attend this 6-hour hybrid meeting (virtual and in-person meeting) using ZOOM for the virtual meeting. Advance registration is required to attend. To register, please visit *https://us06web.zoom.us/webinar/register/WN_hiN_XLEDSoWdMum6TPOfFw* and complete the registration form no later than September 9, 2024. Registration will be closed after September 9, 2024. After submitting the registration form, registrants for the virtual meeting will receive a confirmation email with the meeting link and passcode needed to attend. Registrants asking to attend in-person will receive details about the meeting location and how to access the building If you have any questions about registration, please email *HCFACCommittee@ajantaconsulting.com.*

Public Comments

The public will have an opportunity to give written and oral comments

relative to agenda topics for the HCFAC's consideration. Written comments can be provided on the registration form or by emailing *HCFACCommittee@ajantaconsulting.com.* All written comments must be provided by September 9, 2024. Please note, written comments will not be read during the meeting, but will be provided to the HCFAC members. Oral comments may be provided during the meeting. Comments from the public will be received at the end of the meeting to ensure all agenda items can be completed. Each person providing oral comments will be allocated two minutes. This time will be allocated on a first-come first-served basis by HUD. The meeting registration confirmation will contain additional instructions for providing oral comments, virtually or in-person. The HCFAC will not respond to individual written or oral statements during the meeting but will take all public comments into account in its deliberations.

Meeting Records

Records and documents discussed during the meeting, as well as other information about the work of the HCFAC, will be available for public viewing as they become available at *https://www.hud.gov/program_offices/housing/sfh/hcc/housing_counseling.*

Information on the Committee is also available at *https://www.hud.gov/program_offices/housing/sfh/hcc/housing_counseling* and on HUD Exchange at *https://www.hudexchange.info/programs/housing-counseling/federal-advisory-committee/.*

Julia R. Gordon,

Assistant Secretary for Housing—FHA Commissioner.

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[Docket No. FWS–HQ–IA–2024–0123; FXIA16710900000–245–FF09A30000]

Foreign Endangered Species; Receipt of Permit Applications

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of receipt of permit applications; request for comments.

SUMMARY: We, the U.S. Fish and Wildlife Service, invite the public to comment on applications to conduct certain activities with foreign species that are listed as endangered under the Endangered Species Act (ESA). With some exceptions, the ESA prohibits activities with listed species unless Federal authorization is issued that allows such activities. The ESA also requires that we invite public comment before issuing permits for any activity otherwise prohibited by the ESA with respect to any endangered species.

DATES: We must receive comments by August 30, 2024.

ADDRESSES:

Obtaining Documents: The applications, application supporting materials, and any comments and other materials that we receive will be available for public inspection at *https://www.regulations.gov* in Docket No. FWS–HQ–IA–2024–0123.

Submitting Comments: When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. You may submit comments by one of the following methods:

- *Internet: https://www.regulations.gov.* Search for and submit comments on Docket No. FWS–HQ–IA–2024–0123.
- *U.S. mail:* Public Comments Processing, Attn: Docket No. FWS–HQ–IA–2024–0123; U.S. Fish and Wildlife Service Headquarters, MS: PRB/3W; 5275 Leesburg Pike; Falls Church, VA 22041–3803.

For more information, see Public Comment Procedures under **SUPPLEMENTARY INFORMATION**.

FOR FURTHER INFORMATION CONTACT: Timothy MacDonald, by phone at 703–358–2185 or via email at *DMAFR@fws.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

I. Public Comment Procedures

A. How do I comment on submitted applications?

We invite the public and local, State, Tribal, and Federal agencies to comment on these applications. Before issuing any of the requested permits, we will take into consideration any information that we receive during the public comment period.

You may submit your comments and materials by one of the methods in **ADDRESSES**. We will not consider comments sent by email or to an address not in **ADDRESSES**. We will not consider or include in our administrative record comments we receive after the close of the comment period (see **DATES**).

When submitting comments, please specify the name of the applicant and the permit number at the beginning of your comment. Provide sufficient information to allow us to authenticate any scientific or commercial data you include. The comments and recommendations that will be most useful and likely to influence agency decisions are: (1) Those supported by quantitative information or studies; and (2) those that include citations to, and analyses of, the applicable laws and regulations.

B. May I review comments submitted by others?

You may view and comment on others' public comments at *https://www.regulations.gov* unless our allowing so would violate the Privacy Act (5 U.S.C. 552a) or Freedom of Information Act (5 U.S.C. 552).

C. Who will see my comments?

If you submit a comment at *https://www.regulations.gov,* your entire comment, including any personal identifying information, will be posted on the website. If you submit a hardcopy comment that includes personal identifying information, such as your address, phone number, or email address, you may request at the top of your document that we withhold this information from public review. However, we cannot guarantee that we will be able to do so. Moreover, all submissions from organizations or businesses, and from individuals identifying themselves as representatives or officials of organizations or businesses, will be made available for public disclosure in their entirety.

II. Background

To help us carry out our conservation responsibilities for affected species, and in consideration of section 10(c) of the Endangered Species Act of 1973, as amended (ESA; 16 U.S.C. 1531 *et seq.*), we invite public comments on permit applications before final action is taken. With some exceptions, the ESA prohibits certain activities with listed species unless Federal authorization is issued that allows such activities. Permits issued under section 10(a)(1)(A) of the ESA allow otherwise prohibited activities for scientific purposes or to enhance the propagation or survival of the affected species. Service regulations

regarding prohibited activities with endangered species, captive-bred wildlife registrations, and permits for any activity otherwise prohibited by the ESA with respect to any endangered species are available in title 50 of the Code of Federal Regulations in part 17.

III. Permit Applications

We invite comments on the following applications.

Applicant: East Coast Zoological Society of Florida, Inc. dba Brevard Zoo, Melbourne, FL; Permit No. PER11200311

The applicant requests a permit to import one live captive-born female jaguar (*Panthera onca*) from Zoo de Granby, Granby, Canada, for the purpose of enhancing the propagation or survival of the species. This notification is for a single import.

Applicant: Staten Island Zoo, Staten Island, NY; Permit No. PER11277351

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species, to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Common name	Scientific name
Aruba Island rattlesnake.	*Crotalus unicolor.*
Black-and-white ruffed lemur.	*Varecia variegata.*
Chinese alligator	*Alligator sinensis.*
Cotton-top marmoset	*Saguinus oedipus.*
Leopard	*Panthera pardus.*
Ring-tailed lemur	*Lemur catta.*

Applicant: Tulsa Zoo, Tulsa, OK; Permit No. PER11295255

The applicant requests a captive-bred wildlife registration under 50 CFR 17.21(g) for the following species, to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Common name	Scientific name
Fiji banded iguana	*Brachylophus fasciatus.*
Aquatic box turtle	*Terrapene coahuila.*
Radiated Madagascar tortoise.	*Geochelone radiata.*
San Esteban Island chuckwalla.	*Sauromalus varius.*
Komodo Island monitor.	*Varanus komodoensis.*
Jamaican boa	*Epicrates subflavus.*
Chinese alligator	*Alligator sinensis.*
Siberian white crane	*Grus leucogeranus.*
African penguin	*Spheniscus demersus.*
Golden parakeet	*Guaruba guarouba.*
Rothschild's starling	*Leucopsar rothschildi.*
Asian elephant	*Elephas maximus.*
Black-and-white ruffed lemur.	*Varecia variegata.*
Golden-headed lion tamarin.	*Leontopithecus chrysomelas.*
Diana monkey	*Cercopithecus diana.*
Siamang	*Symphalangus syndactylus.*
Chimpanzee	*Pan troglodytes.*
Black-footed cat	*Felis nigripes.*
Lion	*Panthera leo.*
Malayan tiger	*Panthera tigris.*
Snow leopard	*Panthera uncia.*
African wild dog	*Lycaon pictus.*
White rhinoceros	*Ceratotherium simum.*

Applicant: DNCR State of North Carolina dba North Carolina Zoo, Asheboro, NC; Permit No. PER11439122

The applicant requests to renew their captive-bred wildlife registration under 50 CFR 17.21(g) for Komodo Island monitor (*Varanus komodoensis*), to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

Applicant: Daniel Pearson, Micanopy, FL; Permit No. PER11444722

The applicant requests to renew their captive-bred wildlife registration under 50 CFR 17.21(g) for Madagascar radiated tortoise (*Geochelone radiata*), to enhance the propagation or survival of the species. This notification covers activities to be conducted by the applicant over a 5-year period.

The following applicants request permits to import sport-hunted trophies of male bontebok (*Damaliscus pygargus pygargus*) culled from a captive herd maintained under the management program of the Republic of South Africa, for the purpose of enhancing the propagation or survival of the species.

- *Applicant:* Zachary Boles, Cumming, GA; Permit No. PER11541505
- *Applicant:* Tony Boles, Cumming, GA; Permit No. PER11541207

IV. Next Steps

After the comment period closes, we will make decisions regarding permit issuance. If we issue permits to any of the applicants listed in this notice, we will publish a notice in the **Federal Register**. You may locate the notice announcing the permit issuance by searching *https://www.regulations.gov* for the permit number listed above in this document. For example, to find information about the potential issuance of Permit No. 12345A, you would go to *regulations.gov* and search for ''12345A''.

V. Authority

We issue this notice under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), and its implementing regulations.

Timothy MacDonald,

Government Information Specialist, Branch of Permits, Division of Management Authority.

[FR Doc. 2024–16769 Filed 7–30–24; 8:45 am]

BILLING CODE 4333–15–P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[WAOR 057423]

Public Land Order No. 7944; Extension of Public Land Order No. 7614 for Halliday Fen Research Natural Area, Washington

AGENCY: Bureau of Land Management, Interior.

ACTION: Public land order.

SUMMARY: This order extends the duration of the withdrawal created by Public Land Order (PLO) No. 7614 for an additional 20-year period. PLO No. 7614 withdrew 646.40 acres of National Forest System lands in the Colville National Forest near Metaline, Washington from location and entry under the United States mining laws to protect the Halliday Fen Research Natural Area (RNA). A **Federal Register** notice published on September 29, 2023, revised the legal land description and acreage written in PLO No. 7614 to reflect the Bureau of Land Management (BLM) Cadastral Survey's current standards for Specifications for Descriptions of Land.

DATES: This PLO takes effect on September 10, 2024.

FOR FURTHER INFORMATION CONTACT: Luke Poff, Realty Specialist, BLM Oregon/Washington State Office, (503) 808–6249, by email at *lpoff@blm.gov.* The US Forest Service can be reached at the Colville National Forest Supervisor's Office, 765 South Main St., Colville, Washington, 99114, (509) 684–7000. Individuals in the United States who are deaf, blind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION: The extension of PLO No. 7614 is required in order to continue the protection of

the unique characteristics, sensitive fauna, hydrology, and research values of the Halliday Fen RNA, which includes a marl fen, western red cedar and western hemlock forests, and habitat for a variety of rare plant and animal species. The RNA is also within the Salmo Priest Grizzly Bear Management Unit, which is part of the Selkirk Grizzly Bear Recovery Zone in Pend Oreille County, Washington.

Order

By virtue of the authority vested in the Secretary of the Interior by section 204(d) of the Federal Land Policy and Management Act of 1976, 43 U.S.C. 1714(d), it is ordered as follows:

1. PLO No. 7614 (69 FR 55448 (2004)), as corrected (88 FR 67349 (2023)), which withdrew 646.40 acres of National Forest System lands from location and entry under the United States mining laws, subject to valid existing rights, to protect the Halliday Fen RNA, is hereby extended for an additional 20-year period. The legal land description and acreage was revised to reflect the BLM Cadastral Survey's Specifications for Descriptions of Land, which is as follows:

Colville National Forest

Willamette Meridian

T. 40 N., R. 44 E.,
Sec. 31, W½NE¼, SE¼NE¼, SE¼NW¼, E½SW¼, and NW¼SE¼.

Together with portions of the following lands as specifically identified and described by metes and bounds in the ''Boundary Description for Halliday Fen Research Natural Area to be Withdrawn from Mineral Location'' dated April 19, 2002, in the official records of the BLM Oregon/Washington State Office and the Colville National Forest Office, Colville, Washington:

T. 39 N., R. 43 E.,
Sec. 1, lot 1.
T. 40 N., R. 43 E.,
Sec. 36, E½SE¼.
T. 39 N., R. 44 E.,
Sec. 6, lots 2 thru 5, and SE¼NW¼.
T. 40 N., R. 44 E.,
Sec. 30, SE¼SW¼, NW¼SE¼, and S½SE¼;
Sec. 31, lots 1 thru 4, NE¼NE¼, NE¼NW¼, NE¼SE¼, and S½SE¼;
Sec. 32, W½NW¼ and NW¼SW¼.

The areas described aggregate 646.37 acres.

2. This withdrawal will expire 20 years from the effective date of this order unless, as a result of a review conducted prior to the expiration date pursuant to Section 204(f) of the Federal Land Policy and Management Act, the Secretary determines that the withdrawal shall be further extended.

(Authority: 43 U.S.C. 1714)

Robert T. Anderson,

Solicitor.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[BLM_ID_FRN_MO4500181054]

Filing of Plats of Survey: Idaho

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of official filing of plats of surveys.

SUMMARY: The plats of survey of the following described lands are scheduled to be officially filed in the Bureau of Land Management (BLM), Idaho State Office (ISO), Boise, Idaho, 30 days from the date of this publication. The plats were prepared to meet administrative needs of various Federal agencies.

ADDRESSES: A copy of the plat may be obtained from the Public Room at the Bureau of Land Management, Idaho State Office, 1387 S Vinnell Way, Boise, Idaho 83709, upon required payment.

FOR FURTHER INFORMATION CONTACT: Daniel S. Young, Branch of Cadastral Survey, BLM, 1387 South Vinnell Way, Boise, Idaho, 83709–1657; (208) 373–3994; email: *dsyoung@blm.gov.* Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 7–1–1 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States.

SUPPLEMENTARY INFORMATION:

Boise Meridian, Idaho

T. 8 N., R. 33 E., Sections 19, 30, and 31, accepted May 17, 2024.
T. 48 N., R. 2 E., Sections 21 and 22, accepted July 1, 2024.
T. 2 S., R. 3 W., Section 18, accepted July 16, 2024.
T. 2 S., R. 4 W., Section 13, accepted July 16, 2024.
T. 4 N., R. 3 E., Sections 1, 4, 5, 8, 10, 11, 14, 15, 23, 24, 25, 26, and 35, accepted July 19, 2024.
T. 4 N., R. 4 E., Sections 6 and 30, accepted July 19, 2024.

The plat, in one sheet, incorporating the field notes of the dependent resurvey of a portion of the 8th Auxiliary Meridian East (west boundary) and a portion of the subdivisional lines, and the subdivision of sections 19, 30, and 31, T. 8 N., R. 33 E., Boise Meridian, Idaho, Group Number 1549, accepted May 17, 2024.

The plat, in three sheets, of the corrective dependent resurvey of a portion of the subdivisional lines, and the dependent resurvey of portions of the subdivisional lines and certain mineral surveys, and the metes-and-bounds survey of Tract 47, T. 48 N., R. 2 E, Boise Meridian, Idaho, Group Number 1432, accepted July 1, 2024.

The plat, in one sheet, incorporating the field notes of the dependent resurvey of a portion of the subdivisional lines, and the subdivision of section 18, T. 2 S., R. 3 W., Boise Meridian, Idaho, Group Number 1566, accepted July 16, 2024.

The plat, in one sheet, incorporating the field notes of the dependent resurvey of portions of the east boundary and the subdivisional lines, and the subdivision of section 13, T. 2 S., R. 4 W., Boise Meridian, Idaho, Group Number 1566, accepted July 16, 2024.

The plat, in two sheets, incorporating the field notes of the dependent resurvey of portions of the north, south, and east boundaries, and a portion of the subdivisional lines, and the boundaries of Mineral Survey Number 1661, and the subdivision of sections 1, 4, 5, 8, 10, 11, 14, 15, 23, 24, 25, 26, and 35, T. 4 N., R. 3 E., Boise Meridian, Idaho, Group Number 1452, accepted July 19, 2024.

The plat, in one sheet, incorporating the field notes of the dependent resurvey of portions of the west and north boundaries, and a portion of the subdivisional lines, and the subdivision of sections 6 and 30, T. 4 N., R. 4 E., Boise Meridian, Idaho, Group Number 1478, accepted July 19, 2024.

If you wish to protest one or more plats of survey identified above, you must file a written notice of protest with the Chief Cadastral Surveyor for Idaho, BLM within 30 calendar days from the date of this publication at the address listed in the **ADDRESSES** section of this notice. The protest must identify the plat(s) of survey being protested and contain all reasons and evidence in support of the protest. A protest is considered filed on the date it is received by the Chief Cadastral Surveyor for Idaho during regular business hours; if received after regular business hours, a protest will be considered filed the next business day.

Before including your address, phone number or email address in a protest, you should be aware the documents you submit, including your personal identifying information, may be made publicly available in their entirety. While you can ask to withhold your personal identifying information from public review, we cannot guarantee this.

(Authority: 43 U.S.C. chapter 3.)

Michael L. Hart,

Chief Cadastral Surveyor for Idaho.

BILLING CODE 4331–19–P

DEPARTMENT OF THE INTERIOR

Office of Surface Mining Reclamation and Enforcement

[S1D1S SS08011000 SX064A000 245S180110; S2D2S SS08011000 SX064A000 24XS501520; OMB Control Number 1029–0047]

Agency Information Collection Activities; Permanent Program Performance Standards—Surface and Underground Mining Activities

AGENCY: Office of Surface Mining Reclamation and Enforcement, Interior.

ACTION: Notice of information collection; request for comment.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, we, the Office of Surface Mining Reclamation and Enforcement (OSMRE), are proposing to renew an information collection.

DATES: Interested persons are invited to submit comments on or before August 30, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function. Please provide a copy of your comments to Mark Gehlhar, Office of Surface Mining Reclamation and Enforcement, 1849 C Street NW, Room 1544–MIB, Washington, DC 20240, or by email to *mgehlhar@osmre.gov.* Please reference OMB Control Number 1029–0047 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: To request additional information about this ICR, contact Mark Gehlhar by email at *mgehlhar@osmre.gov,* or by telephone at (202) 208–2716. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. You may also view the ICR at *http://www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: In accordance with the Paperwork Reduction Act of 1995 (PRA; 44 U.S.C. 3501 *et seq.*) and 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on new, proposed, revised, and continuing collections of information. This helps us assess the impact of our information collection requirements and minimize the public's reporting burden. It also helps the public understand our information collection requirements and provide the requested data in the desired format.

A **Federal Register** notice with a 60-day public comment period soliciting comments on this collection of information was published on April 17, 2024 (89 FR 27448). No comments were received.

As part of our continuing effort to reduce paperwork and respondent burdens, we are again soliciting comments from the public and other Federal agencies on the proposed ICR that is described below. We are especially interested in public comment addressing the following:

(1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;

(2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) How might the agency minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.,* permitting electronic submission of response.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Abstract: Sections 515 and 516 of the Surface Mining Control and Reclamation Act of 1977 provide that permittees conducting coal mining operations shall meet all applicable performance standards of the Act. The information collected is used by the regulatory authority to monitor and inspect surface coal mining activities to ensure that they are conducted in compliance with the requirements of the Act.

Title of Collection: Permanent Program Performance Standards—Surface and Underground Mining Activities.

OMB Control Number: 1029–0047.

Form Number: None.

Type of Review: Extension of a currently approved collection.

Respondents/Affected Public: Businesses and State governments.

Total Estimated Number of Annual Respondents: 524.

Total Estimated Number of Annual Responses: 264,783.

Estimated Completion Time per Response: Varies from 2 hours to 336 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 1,068,422.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: Annually.

Total Estimated Annual Nonhour Burden Cost: $20,650,947.

An agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

The authority for this action is the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

Mark J. Gehlhar,

Information Collection Clearance Officer, Office of Surface Mining Reclamation and Enforcement.

BILLING CODE 4310–05–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–582 and 731–TA–1377 (Review)]

Ripe Olives From Spain

Determinations

On the basis of the record [1] developed in the subject five-year reviews, the United States International Trade Commission (''Commission'') determines, pursuant to the Tariff Act of 1930 (''the Act''), that revocation of the countervailing and antidumping duty orders on ripe olives from Spain would be likely to lead to continuation or recurrence of material injury to an industry in the United States within a reasonably foreseeable time.

[1] The record is defined in § 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

Background

The Commission instituted these reviews on July 3, 2023 (88 FR 42751) and determined on October 6, 2023 that it would conduct full reviews (88 FR 73043, October 24, 2023). Notice of the scheduling of the Commission's reviews and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** on January 22, 2024 (89 FR 3950). The Commission conducted its hearing on May 30, 2024. All persons who requested the opportunity were permitted to participate.

The Commission made these determinations pursuant to section 751(c) of the Act (19 U.S.C. 1675(c)). It completed and filed its determinations in these reviews on August 5, 2024. The views of the Commission are contained in USITC Publication 5526 (July 2024), entitled *Ripe Olives from Spain: Investigation Nos. 701–TA–582 and 731–TA–1377 (Review).*

By order of the Commission.

Issued: July 25, 2024.

Sharon Bellamy,

Supervisory Hearings and Information Officer.

BILLING CODE 7020–02–P

JUDICIAL CONFERENCE OF THE UNITED STATES

Advisory Committees on Appellate, Bankruptcy, and Evidence Rules; Hearings of the Judicial Conference

AGENCY: Judicial Conference of the United States.

ACTION: Advisory Committees on Appellate, Bankruptcy, and Evidence Rules; notice of proposed amendments and open hearings.

DATES: All written comments and suggestions with respect to the proposed amendments may be submitted on or after the opening of the period for public comment on August 15, 2024, but no later than February 17, 2025.

ADDRESSES: Written comments must be submitted electronically, following the instructions provided on the website. Comments will be posted on the website and available to the public.

Public hearings either virtually or in person are scheduled on the proposed amendments as follows:

- Appellate Rules on January 10, 2025, and February 14, 2025;
- Bankruptcy Rules on January 17, 2025, and January 31, 2025; and
- Evidence Rule on January 22, 2025, and February 12, 2025.

Those wishing to testify must contact the Secretary of the Committee on Rules of Practice and Procedure by email at: *RulesCommittee_Secretary@ao.uscourts.gov,* at least 30 days before the hearing.

FOR FURTHER INFORMATION CONTACT: H. Thomas Byron III, Esq., Chief Counsel, Rules Committee Staff, Administrative Office of the U.S. Courts, Thurgood Marshall Federal Judiciary Building, One Columbus Circle NE, Suite 7–300, Washington, DC 20544, Phone (202) 502–1820, *RulesCommittee_Secretary@ao.uscourts.gov.*

SUPPLEMENTARY INFORMATION: The Advisory Committees on Appellate, Bankruptcy, and Evidence Rules have proposed amendments to the following rules:

- Appellate Rules 29 and 32, Appendix on Length Limits, and Form 4;
- Bankruptcy Rules 1007, 3018, 5009, 9006, 9014, 9017, new Rule 7043, and Official Form 410S1; and
- Evidence Rule 801.

The text of the proposals will be posted August 15, 2024, on the Judiciary's website at: *https://www.uscourts.gov/rules-policies/proposed-amendments-published-public-comment.*

(Authority: 28 U.S.C. 2073.)

Dated: July 25, 2024.

BILLING CODE 2210–55–P

DEPARTMENT OF LABOR

Employment and Training Administration

Workforce Information Advisory Council

AGENCY: Employment and Training Administration, Labor.

ACTION: Notice of a virtual WIAC meeting September 9–10, 2024.

SUMMARY: Notice is hereby given that the Workforce Information Advisory Council (WIAC or Advisory Council) will meet in-person September 9–10, 2024. Information for public attendance will be posted at *www.dol.gov/agencies/eta/wioa/wiac/meetings* several days prior to each meeting date. The meetings will be open to the public.

DATES: The meeting will take place September 9–10, 2024. The meeting will begin at 9 a.m. EDT and conclude at approximately 4:30 p.m. EDT on each day. Public statements and requests for special accommodations or to address the Advisory Council must be received by August 26, 2024.

ADDRESSES: The meeting will be held at the Hyatt Regency Crystal City, 2799 Richmond Hwy., Arlington, VA 22202. Any special instructions for attendance will be posted on the WIAC website, *www.dol.gov/agencies/eta/wioa/wiac/meetings.* If problems arise accessing the meeting, please contact Donald Haughton, Unit Chief in the Division of National Programs, Tools, and Technical Assistance, Employment and Training Administration, U.S. Department of Labor, at 202–203–9209.

FOR FURTHER INFORMATION CONTACT: Steven Rietzke, Chief, Division of National Programs, Tools, and Technical Assistance, Employment and Training Administration, U.S. Department of Labor, Room C–4510, 200 Constitution Ave. NW, Washington, DC 20210; Telephone: 202–693–3912; Email: *WIAC@dol.gov.* Mr. Rietzke is the WIAC Designated Federal Officer.

SUPPLEMENTARY INFORMATION:

Background: This meeting is being held pursuant to sec. 308 of the Workforce Innovation and Opportunity Act of 2014 (WIOA) (Pub. L. 113–128), which amends sec. 15 of the Wagner-Peyser Act of 1933 (29 U.S.C. 491–2). The WIAC is an important component of WIOA. The WIAC is a federal advisory committee of workforce and labor market information experts representing a broad range of national, state, and local data and information users and producers. The WIAC was established in accordance with provisions of the Federal Advisory Committee Act (FACA), as amended (5 U.S.C. app.) and will act in accordance with the applicable provisions of FACA and its implementing regulation at 41 CFR 102–3. The purpose of the WIAC is to provide recommendations to the Secretary of Labor (Secretary), working jointly through the Assistant Secretary for Employment and Training and the Commissioner of Labor Statistics, to address: (1) the evaluation and improvement of the nationwide workforce and labor market information (WLMI) system and statewide systems that comprise the nationwide system; and (2) how the Department of Labor (Department) and the states will cooperate in the management of those systems. These systems include programs to produce employment-

related statistics and state and local WLMI.

The Department anticipates the WIAC will accomplish its objectives by: (1) studying WLMI issues; (2) seeking and sharing information on innovative approaches, new technologies, and data to inform employment, skills training, and workforce and economic development decision making and policy; and (3) advising the Secretary on how the WLMI system can best support workforce development, planning, and program development. Additional information is available at *www.dol.gov/agencies/eta/wioa/wiac/meetings*.

Purpose: The WIAC is continually identifying and reviewing issues and aspects of the WLMI system and statewide systems that comprise the nationwide system and how the Department and the states will cooperate in the management of those systems. As part of this process, the Advisory Council meets to gather information and to engage in deliberative and planning activities to facilitate the development and provision of its recommendations to the Secretary in a timely manner.

Agenda: The agenda topics for the meeting are: (1) Review, discuss and approve the draft recommendations presented at the Jun 26–27, 2024, virtual meeting, (2) Discuss topics for future consideration of the WIAC, and (3) Determine workplan for developing the next set of WIAC recommendations. A detailed agenda will be available at *www.dol.gov/agencies/eta/wioa/wiac/meetings* shortly before the September 9–10, 2024, meeting commences.

The Advisory Council will open the floor for public comment at approximately 1:15 p.m. EDT for approximately 10 minutes on both meeting dates. However, that time may change at the WIAC chair's discretion.

Attending the meetings: Members of the public who require reasonable accommodations to attend the in-person meeting may submit requests for accommodations via email to the email address indicated in the **FOR FURTHER INFORMATION CONTACT** section with the subject line ''September 2024 WIAC Meeting Accommodations'' by the date indicated in the **DATES** section. Please include a specific description of the accommodations requested and phone number or email address where you may be contacted if additional information is needed to meet your request.

Public statements: Organizations or members of the public wishing to submit written statements may do so by transmitting them as email attachments in PDF format to the email address indicated in the **FOR FURTHER INFORMATION CONTACT** section with the subject line ''September 2024 WIAC Meeting Public Statements'' by the date indicated in the **DATES** section. Submitters may include their name and contact information in the body of the email for statements transmitted electronically. Relevant statements received before the date indicated in the **DATES** section will be included in the record of each meeting. No deletions, modifications, or redactions will be made to statements received, as they are public records. Please do not include personally identifiable information in your public statement.

Requests to Address the Advisory Council: Members of the public or representatives of organizations wishing to address the Advisory Council should forward their requests to the contact indicated in the **FOR FURTHER INFORMATION CONTACT** section, or contact the same by phone, by the date indicated in the **DATES** section. Oral presentations will be limited to 10 minutes, time permitting, and shall proceed at the discretion of the Advisory Council chair. Individuals with disabilities, or others who need special accommodations, should indicate their needs along with their request.

José Javier Rodríguez,

Assistant Secretary for Employment and Training.

BILLING CODE 4510–FN–P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Request To Be Selected as Payee

ACTION: Notice of availability; request for comments.

SUMMARY: The Department of Labor (DOL) is submitting this Office of Workers' Compensation Programs (OWCP)-sponsored information collection request (ICR) to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995 (PRA). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that the agency receives on or before August 30, 2024.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Michelle Neary by telephone at 202–693–6312, or by email at *DOL_PRA_PUBLIC@dol.gov.*

SUPPLEMENTARY INFORMATION: The CM–910 is used to obtain information about prospective representative payees to determine whether they are qualified to handle monetary benefits on behalf of a beneficiary under part 901 of the Black Lung Benefits Act. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on April 9, 2024 (89 FR 24867).

Comments are invited on: (1) whether the collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; (2) if the information will be processed and used in a timely manner; (3) the accuracy of the agency's estimates of the burden and cost of the collection of information, including the validity of the methodology and assumptions used; (4) ways to enhance the quality, utility and clarity of the information collection; and (5) ways to minimize the burden of the collection of information on those who are to respond, including the use of automated collection techniques or other forms of information technology.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless the OMB approves it and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

DOL seeks PRA authorization for this information collection for three (3) years. OMB authorization for an ICR cannot be for more than three (3) years without renewal. The DOL notes that information collection requirements submitted to the OMB for existing ICRs receive a month-to-month extension while they undergo review.

Agency: DOL–OWCP.

Title of Collection: Request to be Selected as Payee.

OMB Control Number: 1240–0010.

Affected Public: Individuals or Households.

Total Estimated Number of Respondents: 350.

Total Estimated Number of Responses: 350.

Total Estimated Annual Time Burden: 88 hours.

Total Estimated Annual Other Costs Burden: $230.

(Authority: 44 U.S.C. 3507(a)(1)(D))

Michelle Neary,

Senior Paperwork Reduction Act Analyst.

DEPARTMENT OF LABOR

Office of the Acting Secretary

All Items Consumer Price Index for All Urban Consumers; United States City Average

Pursuant to section 315(c) of the Federal Election Campaign Act of 1971, as amended (Pub. L. 92–225), 52 U.S.C. 30116(c), the Secretary of Labor has certified to the Chair of the Federal Election Commission and publishes this notice in the **Federal Register** that the United States City Average All Items Consumer Price Index for All Urban Consumers (CPI–U) (1967=100) increased 518.0 percent from its 1974 annual average of 147.7 to its 2023 annual average of 912.551 and it increased 72.1 percent from its 2001 annual average of 530.4 to its 2023 annual average of 912.551. Using 1974 as a base (1974=100), I certify that the CPI–U increased 518.0 percent from its 1974 annual average of 100 to its 2023 annual average of 617.976. Using 2001 as a base (2001=100), I certify that the CPI–U increased 72.1 percent from its 2001 annual average of 100 to its 2023 annual average of 172.087. Using 2006 as a base (2006=100), I certify that the CPI–U increased 51.1 percent from its 2006 annual average of 100 to its 2023 annual average of 151.143.

Signed at Washington, DC.

Julie A. Su,

Acting Secretary of Labor.

BILLING CODE 4510–24–P

NATIONAL CREDIT UNION ADMINISTRATION

Revision of Agency Information Collections for Comments Request: Proposed Collections

AGENCY: National Credit Union Administration (NCUA).

ACTION: Notice and request for comments.

SUMMARY: The National Credit Union Administration (NCUA) will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice.

DATES: Written comments should be received on or before September 30, 2024 to be assured consideration.

ADDRESSES: Interested persons are invited to submit written comments on the information collection to Dacia Rogers, National Credit Union Administration, 1775 Duke Street, Alexandria, Virginia 22314, Suite 5067; Fax No. (703) 519–8161; or email at *PRAComments@NCUA.gov.*

FOR FURTHER INFORMATION CONTACT: Copies of the submission may be obtained by contacting Dacia Rogers at (703) 718–1155.

SUPPLEMENTARY INFORMATION:

OMB Number: 3133–0129.

Title: Corporate Credit Unions, 12 CFR part 704.

Type of Review: Revision of a currently approved collection.

Abstract: Part 704 of NCUA's regulations established the regulatory framework for corporate credit unions. This includes various reporting and recordkeeping requirements as well as safety and soundness standards. NCUA has established and regulates corporate credit unions pursuant to its authority under sections 120, 201, and 209 of the Federal Credit Union Act, 12 U.S.C. 1766(a), 1781, and 1789. The collection of information is necessary to ensure that corporate credit unions operate in a safe and sound manner by limiting risk to their natural person credit union members and the National Credit Union Share Insurance Fund.

Affected Public: Private Sector: Not-for-profit institutions.

Estimated Total Annual Burden Hours: 230.

Request for Comments: Comments submitted in response to this notice will be summarized and included in the request for Office of Management and Budget approval. All comments will become a matter of public record. The public is invited to submit comments concerning: (a) whether the collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information, including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of the information on the respondents, including the use of automated collection techniques or other forms of information technology.

By the National Credit Union Administration Board.

Melane Conyers-Ausbrooks,

Secretary of the Board.

BILLING CODE 7535–01–P

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–456 and 50–457; NRC–2024–0112]

Constellation Energy Generation, LLC; Braidwood Station, Units 1 and 2; Environmental Assessment and Finding of No Significant Impact

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is considering amending Renewed Facility Operating License Nos. NPF–72 and NPF–77, which authorize Constellation Energy Generation, LLC, (Constellation, the licensee) to operate Braidwood Station

(Braidwood), Units 1 and 2. The proposed amendments would change Technical Specification (TS) Surveillance Requirement (SR) 3.7.9.2 to allow an ultimate heat sink (UHS) temperature of less than or equal to 102.8 degrees Fahrenheit (°F) through September 30, 2024. The NRC staff is issuing an environmental assessment (EA) and finding of no significant impact (FONSI) associated with the proposed amendments.

DATES: The EA and FONSI referenced in this document are available on July 31. 2024.

ADDRESSES: Please refer to Docket ID NRC–2024–0112 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2024–0112. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* For the convenience of the reader, instructions about obtaining materials referenced in this document are provided in the ''Availability of Documents'' section.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: Joel S. Wiebe, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001, telephone: 301–415–6606; email: *Joel.Wiebe@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Introduction

The NRC is considering amending Renewed Facility Operating License Nos. NPF–72 and NPF–77, which authorize Constellation to operate Braidwood, Units 1 and 2, located in Will County, Illinois. Constellation submitted its license amendment request in accordance with section 50.90 of title 10 of the *Code of Federal Regulation* (10 CFR), ''Application for amendment of license, construction permit, or early site permit,'' by letter dated June 4, 2024. If approved, the license amendments would revise TS SR 3.7.9.2 to allow a temporary increase in the allowable UHS average temperature of less than or equal to (≤) 102.8 °F (39.3 degrees Celsius (°C)) through September 30, 2024. In accordance with 10 CFR 51.21, the NRC has determined that an EA is the appropriate form of environmental review for the requested action. Based on the results of the EA that follows, the NRC has determined not to prepare an environmental impact statement for the proposed amendments and is issuing a FONSI.

II. Environmental Assessment

Description of the Proposed Action

The proposed action would allow Constellation to operate Braidwood, Units 1 and 2, at UHS temperatures up to 102.8 °F (39.3 °C) until September 30, 2024. The proposed action is in response to the licensee's license amendment request application dated June 4, 2024. The proposed action would amend the Braidwood, Units 1 and 2, renewed operating licenses TS to allow a temporary increase in the allowable average temperature of water withdrawn from the UHS and supplied to the plant for cooling from ≤102 °F (38.9 °C) to ≤102.8 °F (39.3 °C) through September 30, 2024. Specifically, the proposed action would revise TS SR 3.7.9.2, which currently states, ''Verify average water temperature of UHS is ≤102.8 °F until September 30, 2023. After September 30, 2023, verify average water temperature of UHS is ≤102 °F'' to state ''Verify average water temperature of UHS is ≤102.8 °F until September 30, 2024. After September 30, 2024, verify average water temperature of UHS is ≤102 °F.'' Under the current TS, if the average UHS temperature as measured at the discharge of the operating essential service water system pumps is greater than 102 °F (38.9 °C), TS 3.7.9, Required Actions A.1 and A.2, would be entered concurrently and would require the licensee to place Braidwood in hot standby (Mode 3) within 12 hours and cold shutdown (Mode 5) within 36 hours. The proposed action would allow Braidwood to continue to operate during times when the UHS indicated average water temperature exceeds 102 °F (38.9 °C) but is less than or equal to 102.8 °F (39.3 °C) through September 30, 2024. The current TS's UHS average water temperature limit of 102 °F (38.9 °C) would remain applicable to all other time periods beyond September 30, 2024. The proposed action is nearly identical to previously approved license amendments that allowed for the average water temperature of the UHS to be ≤102.8 °F until September 30, 2020, September 30, 2021, September 30, 2022, and September 30, 2023. The NRC issued EAs for the 2020, 2021, 2022, and 2023, UHS amendments in the **Federal Register** on September 10, 2020 (85 FR 55863), July 7, 2021 (86 FR 35831), July 20, 2022 (87 FR 43301), and June 16, 2023 (88 FR 39487), respectively. The NRC issued the license amendments on September 24, 2020, July 13, 2021, August 10, 2022, and July 13, 2023, respectively. The only difference between the previously approved amendments to TS SR 3.7.9.2 and the proposed action is that the proposed action would replace the year ''2023'' with ''2024.'' It should also be noted that during the past 4 years the temperature of the UHS has not exceeded 102 °F, so no cumulative effects need be considered.

Need for the Proposed Action

The proposed action would allow Constellation to operate Braidwood, Units 1 and 2, during the hot summer months by allowing an UHS temperature of ≤102.8 °F (39.3 °C) until September 30, 2024. The licensee has requested the proposed amendments in connection with historical meteorological and atmospheric conditions that have resulted in the TS UHS temperature being challenged. These conditions included elevated air temperatures, high humidity, and low wind speed. Specifically, from July 4, 2020, through July 9, 2020, northern Illinois experienced high air temperatures and drought conditions, which caused sustained elevated UHS temperatures. In response to these conditions in 2020, the licensee submitted license amendment requests contained in letter dated July 15, 2020, as supplemented by letter dated August 14, 2020. The NRC subsequently granted the licensee's request by letter dated September 24, 2020. The NRC approved similar requests for subsequent years by letters dated July 13, 2021, August 10, 2022, and July 13, 2023. Constellation projects that similar conditions are likely this year. The proposed action

would provide the licensee with operational flexibility until September 30, 2024, so that the plant shutdown criteria specified in the TS are not triggered unless UHS temperature exceeds 102.8 °F (39.3 °C).

Plant Site and Environs

Braidwood Station, in Will County, Illinois, is located approximately 50 miles (mi) or 80 kilometers (km) southwest of the Chicago Metropolitan Area and 20 mi (32 km) south-southwest of Joliet. The Kankakee River is approximately five mi (8 km) east of the eastern site boundary. An onsite 2,540-acre (ac); 1,030-hectare (ha) cooling pond provides condenser cooling. Cooling water is withdrawn from the pond through the lake screen house, which is located at the north end of the pond. Heated water returns to the cooling pond through a discharge canal west of the lake screen house intake that is separated from the intake by a dike. The pond typically holds 22,300 acre-feet (27.5 million cubic meters) of water at any given time. The cooling pond includes both ''essential'' and ''non-essential'' areas. The essential cooling pond is the portion of the cooling pond that serves as the UHS for emergency core cooling, and it consists of a 99 ac (40-ha) excavated area of the pond directly in front of the lake screen house. The essential cooling pond's principal functions are to dissipate residual heat after reactor shutdown and to dissipate heat after an accident. It is capable of supplying Braidwood's cooling system with water for 30 days without additional makeup water. The term ''UHS'' in this EA refers to the 99-ac (40-ha) essential cooling pond, and the term ''cooling pond'' or ''pond'' describes the entire 2,540-ac (1,030-ha) area, which includes both the essential and non-essential areas.

The cooling pond is also part of the Mazonia-Braidwood State Fish and Wildlife Area, which encompasses the majority of the non-UHS area of the cooling pond as well as Illinois Department of Natural Resources (IDNR) owned lands adjacent to the Braidwood site to the south and southwest of the cooling pond. Constellation and the IDNR have jointly managed the cooling pond as part of the Mazonia-Braidwood State Fish and Wildlife Area since 1991 pursuant to a long-term lease agreement. Under the terms of the agreement, the public has access to the pond for fishing, waterfowl hunting, fossil collecting, and other recreational activities.

The cooling pond is also a wastewater treatment works as defined by section 301.415 of title 35 of the Illinois Administrative Code (35 IAC 301.415). Under this definition, the cooling pond is not considered waters of the State under Illinois Administrative Code (35 IAC 301.440) or waters of the United States under the Federal Clean Water Act (40 CFR 230.3(s)), and so the cooling pond is not subject to State water quality standards. In addition, the cooling pond is a managed ecosystem where IDNR fish stocking and other human activities primarily influence species composition and population dynamics.

Since the beginning of the lease agreement, the IDNR has stocked the cooling pond with a variety of game fish, including largemouth bass (Micropterus salmoides), smallmouth bass (M. dolomieu), blue catfish (Ictalurus furcatus), striped bass (Morone saxatilis), crappie (Pomoxis spp.), walleye (Sander vitreum), and tiger muskellunge (Esox masquinongy x lucius). IDNR performs annual surveys to determine which fish to stock based on fishermen preferences, fish abundance, different species' tolerance to warm waters, predator and prey dynamics, and other factors. Because of the warm water temperatures experienced in the summer months, introductions of warm water species, such as largemouth bass and blue catfish, have been more successful than introductions of cool-water species, such as walleye and tiger muskellunge. Since annual surveys began in 1980, IDNR has collected 47 species in the cooling pond. In recent years, bluegill (Lepomis macrochirus), channel catfish (Ictalurus punctatus), threadfin shad (Dorosoma petenense), and common carp (Cyprinus carpio) have been among the most abundant species in the cooling pond. Gizzard shad (Dorosoma cepedianum), one of the most frequently affected species during periods of elevated pond temperatures, have decreased in abundance dramatically in recent years, while bluegills, which can tolerate high temperatures with relatively high survival rates, have noticeably increased in relative abundance. IDNR stocked warm water game species, such as largemouth bass and blue catfish, continue to persist in small numbers, while cooler water stocked species, such as walleye and tiger muskellunge, no longer appear in IDNR survey collections. No Federally listed species or designated critical habitats protected under the Endangered Species Act (ESA) occur within or near the cooling pond.

The Kankakee River serves as the source of makeup water for the cooling pond. The river also receives continuous blowdown from the cooling pond. Water is withdrawn from a small river screen house located on the Kankakee River, and liquid effluents from Braidwood are discharged into the cooling pond blowdown line, which subsequently discharges into the Kankakee River.

The plant site and environs are described in greater detail in Chapter 3 of the NRC's November 2015 ''Generic Environmental Impact Statement for License Renewal of Nuclear Plants: Regarding Braidwood Station, Units 1 and 2, Final Report'' (NUREG 1437, Supplement 55) or ''Braidwood FSEIS'' (Final Supplemental Environment Impact Statement). Figure 3–5 on pages 3–7 in the Braidwood FSEIS depicts the Braidwood Station layout, and Figure 3–4 on pages 3–6 depicts the cooling pond, including the portion of the pond that constitutes the essential cooling pond (or UHS) and the blowdown line to the Kankakee River.

Environmental Impacts of the Proposed Action

The proposed action consists of changing the year ''2023'' to ''2024'' in TS SR 3.7.9.2, allowing a temporary increase in the allowable UHS average temperature of ≤102.8 °F (39.3 °C) until September 30, 2024.

The proposed changes would not increase the probability or consequences of radiological accidents. There would be no change to the types or amounts of radioactive effluents released into the environment and, therefore, no change in occupational or public radiation exposure from the proposed changes. Therefore, there would be no significant radiological environmental impacts associated with the proposed action.

In addition, the proposed action would have no direct impacts on land use or terrestrial biota, as the proposed action involves no new construction or modification of plant operational systems. There would be no changes to the quality or quantity of nonradiological effluents and no changes to the plant's National Pollutant Discharge Elimination System permits would be needed. Overall staffing levels would not increase; therefore, worker vehicle air emissions are not expected to increase. In addition, there would be no noticeable effect on socioeconomic conditions in the region, no environment justice impacts, and no impacts to historic and cultural resources from the proposed action.

Temporarily raising the maximum allowable UHS temperature could increase cooling pond water temperatures until September 30, 2024. Because the proposed action would not affect Braidwood's licensed thermal

power level, the temperature rise across the condensers as cooling water travels through the cooling system would remain unchanged. Thus, if water in the UHS were to rise to 102.8 °F (39.3 °C), heated water returning to the cooling pond through the discharge canal, which lies west of the river screen house, could also experience a corresponding increase. The additional heat load is expected to dissipate across some thermal gradient as discharged water travels down the discharge canal and through the 99-ac (40-ha) UHS.

Fish kills often occur when cooling pond temperatures rise above 95 °F (35 °C), the temperature at which most fish in the cooling pond are thermally stressed. For example, section 3.7.4 of the Braidwood FSEIS describes six fish kill events for the period of 2001 through 2015. The fish kill events, which occurred in July 2001, August 2001, June 2005, August 2007, June 2009, and July 2012, primarily affected threadfin shad and gizzard shad, although bass, catfish, carp, and other game fish were also affected. Reported peak temperatures in the cooling pond during these events ranged from 98.4 °F (36.9 °C) to over 100 °F (37.8 °C), and each event resulted in the death of between 700 to as many as 10,000 fish. During the July 2012 event, cooling pond temperatures exceeded 100 °F (37.8 °C), which resulted in the death of approximately 3,000 gizzard shad and 100 bass, catfish, and carp. This event coincided with the NRC's granting of Enforcement Discretion to allow Braidwood to continue to operate above the TS limit of ≤100 °F (37.8 °C). The IDNR attributed this event, as well as four of the other fish kill events, to Braidwood operation and high cooling pond temperatures. Appendix B, section 4.1, of the Braidwood renewed facility operating licenses, requires Constellation to report unusual or important environmental events, including fish kills, related to plant operation to the NRC. Since November 2015 (issuance of the Braidwood FSEIS), Constellation has not reported any additional fish kill events to the NRC. Although not related to plant operation, several fish kills have occurred since this time, the most recent of which happened in August 2018 and July 2020.

In section 4.7.1.3 of the Braidwood FSEIS, NRC staff concluded that thermal impacts associated with continued operation of Braidwood during the license renewal term would result in SMALL to MODERATE impacts to aquatic resources in the cooling pond. MODERATE impacts would primarily be experienced by gizzard shad and other non-stocked and low-heat tolerant species. As part of its conclusion, NRC staff also noted that because the cooling pond is a highly managed system, any cascading effects that result from the loss of gizzard shad (such as reduction in prey for stocked species, which in turn could affect those stocked species' populations) could be mitigated through IDNR's annual stocking and continual management of the pond. At that time, the UHS TS limit was ≤100 °F (37.8 °C).

In 2016, the NRC granted license amendments that increased the allowable UHS average water temperature TS limit from ≤100 °F (37.8 °C) to ≤102.0 °F (38.9 °C). The NRC staff concluded in its environmental review that increasing the TS limit to ≤102.0 °F (38.9 °C) would have no significant environmental effect, and the NRC issued a FONSI with the EA.

In 2020, 2021, 2022, and 2023 the NRC granted additional license amendments that temporarily increased the allowable UHS average water temperature TS limit from ≤102.0 °F (38.9 °C) to ≤102.8 °F (39.3 °C) until September 30, 2020, September 30, 2021, September 30, 2022, and September 30, 2023, respectively. The NRC staff concluded in their reviews that temporarily increasing the TS limit to ≤102.8 °F (39.3 °C) would have no significant environmental effect, and the NRC issued FONSIs with the EAs.

The NRC staff has also determined that this proposed action would result in no significant impact to aquatic resources in the cooling pond for the same reasons reached in the 2020, 2021, 2022, and 2023, license amendments. The NRC staff's justification for this conclusion is as follows.

The proposed increase in the allowable UHS average water temperature limit by 0.8 °F (0.4 °C) would not increase the likelihood of a fish kill event because the current TS limit for the UHS of 102.0 °F (38.9 °C) already allows cooling pond temperatures above those at which fish species can be thermally stressed (95 °F (35 °C)). In effect, if the UHS temperature rises to the current TS limit, fish within or near the discharge canal, within the flow path between the discharge canal and UHS, or within the UHS itself would have already experienced thermal stress and possibly died. Thus, an incremental increase in the allowable UHS water temperature by 0.8 °F (0.4 °C) and the corresponding temperature increases within and near the discharge canal and within the flow path between the discharge canal and UHS would not significantly affect the number of fish kill events in the cooling pond. Additionally, the proposed action would only increase the allowable UHS average water temperature until September 30, 2024. Thus, any impacts to the aquatic communities in the managed cooling pond, if experienced, would be temporary in nature, and fish populations could recover quickly.

While the proposed action would not affect the likelihood of a fish kill event occurring during periods when the average UHS water temperature approaches the TS limit, the proposed action could increase the number of fish killed per high temperature event. For fish with thermal tolerances at or near 95 °F (35 °C), there would likely be no significant difference in the number of affected fish per high temperature event because, as previously discussed, these fish could have already experienced thermal stress and possibly died, and the additional temperature increase would not measurably affect the mortality rate. For fish with thermal tolerances above 95 °F (35 °C), such as bluegill, increased mortality is possible, as previously explained.

In addition, scientific literature provides conflicting information as to whether incremental temperature increases would cause a subsequent increase in mortality rates of bluegill or other high-temperature-tolerant fish when temperatures exceed 100 °F (37.8 °C). For instance, in laboratory studies, Banner and Van Arman (1973) demonstrated 85 percent survival of juvenile bluegill after 24 hours of exposure to 98.6 °F (37.0 °C) water for stock acclimated to 91.2 °F (32.9 °C). At 100.0 °F (37.8 °C), survival decreased to 25 percent, and at 100.4 °F (38.0 °C) and 102.0 °F (38.9 °C), no individuals survived. Even at 1 hour of exposure to 102.0 °F (38.9 °C) water, average survival was relatively low between 40 to 67.5 percent per replicate. However, in another laboratory study, Cairns (1956 in Banner and Van Arman 1973) demonstrated that if juvenile bluegill were acclimated to higher temperatures at a 3.6 °F (2.0 °C) increase per day, individuals could tolerate water temperatures up to 102.6 °F (39.2 °C) with 80 percent survival after 24 hours of exposure.

Although these studies present inconsistent information on thermal tolerance limits, data from past fish kill events indicate that Cairns' study results more closely describe the cooling pond's bluegill population because the licensee has not reported bluegill as one of the species having been affected by past high temperature events. Thus, bluegills are likely acclimating to temperature rises at rates that allow individuals to remain in high temperature areas until temperatures

decrease or allow individuals time to seek refuge in cooler areas of the pond. Alternately, if Banner and Van Arman's results were more predictive, 75 percent or more of bluegill individuals in high temperature areas of the cooling pond could be expected to die at temperatures approaching or exceeding 100 °F (37.8 °C) for 24 hours, and shorter exposure time would likely result in the death of some reduced percentage of bluegill individuals.

Under the proposed action, fish exposure to temperatures approaching the proposed UHS TS average water temperature limit of 102.8 °F (39.3 °C) and those exposed to the associated discharge for at least 1 hour could result in observable deaths. However, as stated previously, the licensee has not reported bluegill as one of the species that has been affected during past fish kills. Consequently, the NRC staff assumes that bluegill and other high-temperature-tolerant species in the cooling pond would experience effects similar to those observed in Cairn's study. Based on Cairn's results, the proposed action's incremental and short-term temperature increase could result in the death of some additional high-temperature-tolerant individuals, especially in cases where cooling pond temperatures rise dramatically over a short period of time (more than 3.6 °F (2.0 °C) in a 24-hour period).

Nonetheless, the discharge canal, flow path between the discharge canal and the UHS, and the UHS itself is a small portion of the cooling pond. Thus, while the incremental increase would likely increase the area over which cooling pond temperatures would rise, most of the cooling pond would remain at tolerable temperatures, and fish would be able to seek refuge in those cooler areas. Therefore, only fish within or near the discharge canal, within the flow path between the discharge canal and UHS, or within the UHS itself at the time of elevated temperatures would likely be affected, and fish would experience such effects to lessening degrees over the thermal gradient that extends from the discharge canal. This would not result in a significant difference in the number of fish killed per high temperature events for those species with thermal tolerances at or near 95 °F (35 °C) and an insignificant increase in the number of individuals affected for species with thermal tolerances above 95 °F (35 °C), such as bluegill. Additionally, the cooling pond is a managed ecosystem in which fish stocking, fishing pressure, and predator-prey relationships constitute the primary population pressures.

Fish populations affected by fish kills generally recover quickly and, thus, fish kills do not appear to significantly influence the fish community structure. This is demonstrated by the fact that the species that are most often affected by high temperature events (threadfin shad and gizzard shad) are also among the most abundant species in the cooling pond. Managed species would continue to be assessed and stocked by the IDNR on an annual basis in accordance with the lease agreement between Constellation and IDNR. Continued stocking would mitigate any minor effects resulting from the proposed action. As previously stated in this notice, although authorized to operate up to 102.8 °F (39.3 °C), at no time in the past 3 years did the UHS temperature exceed 102 °F (38.9 °C).

Based on the foregoing analysis, the NRC staff concludes that the proposed action would not result in significant impacts to aquatic resources in the cooling pond. Some terrestrial species, such as birds or other wildlife, rely on fish or other aquatic resources from the cooling pond as a source of food. The NRC staff does not expect any significant impacts to birds or other wildlife because, if a fish kill occurs, the number of dead fish would be a small proportion of the total population of fish in the cooling pond. Furthermore, during fish kills, birds and other wildlife could consume many of the floating, dead fish. Additionally, and as described previously, the NRC staff does not expect that the proposed action would result in a significant difference in the number or intensity of fish kill events or otherwise result in significant impacts on aquatic resources in the cooling pond.

With respect to water resources and ecological resources along and within the Kankakee River, the Illinois Environmental Protection Agency imposes regulatory controls on Braidwood's thermal effluent through title 35, Environmental Protection, section 302, ''Water Quality Standards,'' of the Illinois Administrative Code (35 IAC 302) and through the National Pollutant Discharge Elimination System (NPDES) permitting process pursuant to the Clean Water Act. Section 302 of the Illinois Administrative Code stipulates that ''[t]he maximum temperature rise shall not exceed 2.8 °C (5 °F) above natural receiving water body temperatures,'' (35 IAC 302.211(d)) and that ''[w]ater temperature at representative locations in the main river shall at no time exceed 33.7 °C (93 °F) from April through November and 17.7 °C (63 °F) in other months'' (35 IAC 302.211(e)). Additional stipulations pertaining to the mixing zone further protect water resources and biota from thermal effluents. The Braidwood NPDES permit contains special conditions that mirror these temperature requirements and that stipulate more detailed temperature requirements at the edge of the mixing zone. Under the proposed action, Braidwood thermal effluent would continue to be limited by the Illinois Administrative Code and the Braidwood NPDES permit to ensure that Braidwood operations do not create adverse effects on water or ecological resources along or within the Kankakee River. Occasionally, the licensee has applied for a provisional variance to allow higher-than-permitted temperatures at the edge of the discharge mixing zone. For instance, Exelon, the license holder at the time, applied for and the Illinois Environmental Protection Agency (IEPA) granted one provisional variance in 2012 during a period of extremely warm weather and little to no precipitation. Constellation reported no fish kills or other events to the IEPA and the NRC that would indicate adverse environmental effects resulting from the provisional variance. The details of this provisional variance are described in section 4.7.1.3 of the Braidwood FSEIS.

Under the proposed action, Constellation would remain subject to the regulatory controls described in this notice. The NRC staff finds it reasonable to assume that Constellation's continued compliance with, and the State's continued enforcement of, the Illinois Administrative Code and the Braidwood NPDES permit would ensure that Kankakee River water and ecological resources are protected. Further, the proposed action would not alter the types or amounts of effluents being discharged to the river as blowdown. Therefore, the NRC staff does not expect any significant impacts to water or ecological resources within and along the Kankakee River from temporarily increasing the allowable UHS average water temperature TS limit.

With respect to Federally listed species, the NRC staff consulted with the U.S. Fish and Wildlife Service (FWS) pursuant to section 7 of the ESA during its license renewal environmental review for Braidwood. During that consultation, the NRC staff found that the sheepnose (Plethobasus cyphyus) and snuffbox (Epioblasma triquetra) mussels had the potential to occur in the areas that would be directly or indirectly affected by license renewal (*i.e.,* the action area). In September 2015, Exelon transmitted the results of a mussel survey to the NRC and the FWS. The survey documented the

absence of Federally listed mussels near the Braidwood discharge site in the Kankakee River. Based on this survey and other information described in the Braidwood FSEIS, the NRC concluded that license renewal may affect, but is not likely to adversely affect the sheepnose mussel, and the NRC determined that license renewal would have no effect on the snuffbox mussel. The FWS concurred with the NRC's ''not likely to adversely affect'' determination in a letter dated October 20, 2015. The results of the consultation are further summarized in the Record of Decision for Braidwood license renewal.

As previously described, the impacts of the proposed action would be confined to the UHS cooling pond and would not affect water or ecological resources along and within the Kankakee River. The NRC's previous ESA, section 7, consultation confirmed that no Federally listed aquatic species occur within or near the cooling pond. The NRC has not identified any information indicating the presence of Federally listed species in the area since consultation was concluded, and the FWS has not listed any new aquatic species that may occur in the area since that time. The proposed action would not result in any disturbance or other impacts to terrestrial habitats and, thus, no Federally listed terrestrial species would be affected. Accordingly, the NRC staff concludes that the proposed action would have no effect on Federally listed species or designated critical habitat. Consultation with the FWS regarding the proposed action is not necessary because the NRC staff has determined that the proposed action will have no effect on listed species or critical habitat.

The NRC staff has identified no foreseeable land use, visual resource, noise, or waste management impacts given that the proposed action would not result in any physical changes to Braidwood facilities or equipment or changes any land uses on or off site. The NRC staff has identified no air quality impacts given that the proposed action would not result in air emissions beyond what would be experienced during current operations. Additionally, there would be no socioeconomic, environmental justice, or historic and cultural resource impacts associated with the proposed action since no physical changes would occur beyond the site boundaries and any impacts would be limited to the cooling pond.

Based on the discussion and findings previously described in this EA, the NRC concludes that the proposed action would not significantly affect plant safety and would not have a significant adverse effect on the probability of an accident occurring. In addition, there would be no significant nonradiological environmental impacts associated with the proposed action. Accordingly, the NRC concludes that the proposed action would have no significant environmental effect on the quality of the human environment.

Environmental Impacts of the Alternatives to the Proposed Action

As an alternative to the proposed action, the NRC staff considered the denial of the proposed action (*i.e.,* the ''no-action'' alternative). Denial of the proposed action would result in no changes to the current TS. Therefore, the licensee would continue to be required to place Braidwood in hot standby (Mode 3) if average UHS water temperatures exceed 102 °F (38.9 °C). The no-action alternative would result in no change in current environmental conditions or impacts at Braidwood beyond those considered in the Braidwood FSEIS.

Alternative Use of Resources

There are no unresolved conflicts concerning alternative uses of available resources under the proposed action.

Agencies and Persons Consulted

No additional agencies or persons were consulted regarding the environmental impact of the proposed action.

III. Finding of No Significant Impact

Constellation submitted a license amendment request in accordance with 10 CFR 50.90. The request seeks to amend Renewed Facility Operating License Nos. NPF–72 and NPF–77, issued to Constellation for operation of Braidwood. The amendments would revise TS SR in TS 3.7.9.2 to allow a temporary increase in the allowable UHS average temperature of less than or equal to (≤) 102.8 °F (39.3 degrees Celsius (°C)) through September 30, 2024. The NRC is considering the requested amendments.

In addition, the NRC staff conducted an environmental review of the proposed action, and prepared an EA, which is provided in Section II of this notice and is incorporated by reference in this FONSI. The NRC determined the proposed action would not significantly affect plant safety, would not have a significant adverse effect on the probability of an accident occurring, and would not have any significant radiological or nonradiological impacts. Based on the EA, the NRC staff has concluded that the proposed action will not have a significant impact on the quality of the human environment. Based on its finding, the NRC has decided not to prepare an environmental impact statement for the proposed action.

As required by 10 CFR 51.32(a)(5), the related environmental document is the ''Generic Environmental Impact Statement for License Renewal of Nuclear Plants: Regarding Braidwood Station, Units 1 and 2, Final Report,'' NUREG–1437, Supplement 55, which provides the latest environmental review of current operations and description of environmental conditions at Braidwood.

Section IV lists the environmental documents related to the proposed action and includes information on the availability of these documents.

This FONSI and other related environmental documents are available for public inspection and are accessible online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* Persons who do not have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC's PDR reference staff by telephone at 1–800–397–4209 or 301–415–4737, or by email to *PDR.Resource@nrc.gov.*

IV. Availability of Documents

The documents identified in the following table are available to interested persons through one or more of the following methods, as indicated.

NUCLEAR REGULATORY COMMISSION

[Docket Nos. 50–338 and 50–339; NRC–2020–0201]

Virginia Electric and Power Company; North Anna Power Station, Unit Nos. 1 and 2; Final Site-Specific Environmental Impact Statement

AGENCY: Nuclear Regulatory Commission.

ACTION: Notice; issuance.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) has published a final site-specific environmental impact statement (EIS), issued as NUREG–1437, Supplement 7a, Second Renewal, ''Site-Specific Environmental Impact Statement for License Renewal of Nuclear Plants Regarding Subsequent License Renewal for North Anna Power Station Units 1 and 2, Final Report.'' This EIS evaluates, on a site-specific basis, the environmental impacts of subsequent license renewal of Facility Operating License Nos. NPF–4 and NPF–7 for an additional 20 years of operation for North Anna Power Station (NAPS), Unit Nos. 1 and 2, respectively.

NAPS is located in Louisa County, Virginia. Alternatives to the proposed action of subsequent license renewal for NAPS include the no-action alternative and reasonable replacement power alternatives.

DATES: NUREG–1437, Supplement 7a, Second Renewal is available as of July 22, 2024.

ADDRESSES: Please refer to Docket ID NRC–2020–0201 when contacting the NRC about the availability of information regarding this document. You may obtain publicly available information related to this document using any of the following methods:

- *Federal Rulemaking Website:* Go to *https://www.regulations.gov* and search for Docket ID NRC–2020–0201. Address questions about Docket IDs in *Regulations.gov* to Stacy Schumann; telephone: 301–415–0624; email: *Stacy.Schumann@nrc.gov.* For technical questions contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.
- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may access publicly available documents online in the ADAMS Public Documents collection at *https://www.nrc.gov/reading-rm/adams.html.* To begin the search, select ''Begin Web-based ADAMS Search.'' For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1–800–397–4209, at 301–415–4737, or by email to *PDR.Resource@nrc.gov.* NUREG–1437, Supplement 7a, Second Renewal is available in ADAMS under Accession No. ML24204A104.
- *NRC's PDR:* The PDR, where you may examine and order copies of publicly available documents, is open by appointment. To make an appointment to visit the PDR, please send an email to *PDR.Resource@nrc.gov* or call 1–800–397–4209 or 301–415–4737, between 8 a.m. and 4 p.m. eastern time (ET), Monday through Friday, except Federal holidays.
- *Public Library:* A copy of the final EIS will be available for public inspection at the Louisa County Library, 881 Davis Highway, Mineral, VA 23117. The NRC staff encourages those addressees with mailing addresses listed in Chapter 7 of the final EIS, to visit the NRC's NUREG-Series Publication website (*https://www.nrc.gov/reading-rm/doc-collections/nuregs/staff.html*) or the NAPS project website (*https://www.nrc.gov/reactors/operating/licensing/renewal/applications/north-anna-1-2-subsequent.html*) to download an electronic copy. You may also obtain an electronic copy by contacting Tam Tran via email at *Tam.Tran@nrc.gov.*

FOR FURTHER INFORMATION CONTACT: Tam Tran, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001; telephone: 301–415–3617; email: *Tam.Tran@nrc.gov.*

SUPPLEMENTARY INFORMATION:

I. Background

In accordance with section 51.118 of title 10 of the *Code of Federal Regulations* (10 CFR), ''Final environmental impact statement—notice of availability,'' the NRC is making available for public inspection NUREG–1437, Supplement 7a, Second Renewal, regarding the subsequent license renewal of Virginia Electric and Power Company's (Dominion), renewed Facility Operating License Nos. NPF–4 and NPF–7 for an additional 20 years of operation for NAPS. A notice of availability of the site-specific draft EIS (DEIS) (NUREG–1437, Supplement 7a, Second Renewal) was published in the **Federal Register** on January 8, 2024, (89 FR 960) by the NRC, and on January 5, 2024 (89 FR 781) as amended January 19, 2024 (89 FR 3653), by the Environmental Protection Agency. The public comment period on the site-specific DEIS (NUREG–1437, Supplement 7a, Second Renewal) ended on February 22, 2024, and the comments received on the site-specific DEIS are addressed in the final EIS (NUREG–1437, Supplement 7a, Second Renewal).

II. Discussion

The site-specific draft EIS (NUREG–1437, Supplement 7a, Second Renewal) superseded a draft Supplemental EIS (SEIS) (NUREG–1437, Supplement 7, Second Renewal), that the NRC had issued for public comment on August 25, 2021 (86 FR 47525). The site-specific final EIS addresses the comments received on both the site-specific draft EIS (NUREG–1437, Supplement 7a, Second Renewal) and the previous draft SEIS (NUREG–1437, Supplement 7, Second Renewal). As discussed in Chapter 4 of the final EIS (NUREG–1437, Supplement 7a, Second Renewal), the NRC staff has determined that the adverse environmental impacts of subsequent license renewal for NAPS for an additional 20 years beyond the expiration dates of the initial renewed licenses are not so great that preserving the option of subsequent license renewal for energy-planning decisionmakers would be unreasonable. This recommendation is based on: (1) information provided in the environmental report, as supplemented, and other documents submitted by Dominion; (2) consultation with Federal, State, Tribal, and local governmental agencies; (3) the NRC staff's independent environmental review; and (4) consideration of public comments received during the scoping process, on the site-specific DEIS (NUREG–1437, Supplement 7a, Second Renewal), and on the previous draft SEIS (NUREG–1437, Supplement 7, Second Renewal).

Dated: July 26, 2024.

New Postal Products

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing for the Commission's consideration concerning a negotiated service agreement. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 2, 2024.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at *http://www.prc.gov.* Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202–789–6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

I. Introduction
II. Docketed Proceeding(s)

I. Introduction

The Commission gives notice that the Postal Service filed request(s) for the Commission to consider matters related to negotiated service agreement(s). The request(s) may propose the addition or

removal of a negotiated service agreement from the Market Dominant or the Competitive product list, or the modification of an existing product currently appearing on the Market Dominant or the Competitive product list.

Section II identifies the docket number(s) associated with each Postal Service request, the title of each Postal Service request, the request's acceptance date, and the authority cited by the Postal Service for each request. For each request, the Commission appoints an officer of the Commission to represent the interests of the general public in the proceeding, pursuant to 39 U.S.C. 505 (Public Representative). Section II also establishes comment deadline(s) pertaining to each request.

The public portions of the Postal Service's request(s) can be accessed via the Commission's website (*http://www.prc.gov*). Non-public portions of the Postal Service's request(s), if any, can be accessed through compliance with the requirements of 39 CFR 3011.301.[1]

The Commission invites comments on whether the Postal Service's request(s) in the captioned docket(s) are consistent with the policies of title 39. For request(s) that the Postal Service states concern Market Dominant product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3622, 39 U.S.C. 3642, 39 CFR part 3030, and 39 CFR part 3040, subpart B. For request(s) that the Postal Service states concern Competitive product(s), applicable statutory and regulatory requirements include 39 U.S.C. 3632, 39 U.S.C. 3633, 39 U.S.C. 3642, 39 CFR part 3035, and 39 CFR part 3040, subpart B. Comment deadline(s) for each request appear in section II.

II. Docketed Proceeding(s)

1. *Docket No(s).:* CP2024–142; *Filing Title:* USPS Notice of Amendment to USPS Ground Advantage & Parcel Select Contract 1, Filed Under Seal; *Filing Acceptance Date:* July 25, 2024; *Filing Authority:* 39 CFR 3035.105; *Public Representative:* Arif Hafiz; *Comments Due:* August 2, 2024.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100595; File No. SR–ISE–2024–30]

Self-Regulatory Organizations; Nasdaq ISE, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Its Expanded Co-Location Services

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 15, 2024, Nasdaq ISE, LLC (''ISE'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for its expanded co-location services, as described further below.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on August 15, 2024.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/ise/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange filed a proposal to expand its co-location services by offering new cabinet, power, and power distribution unit options in the Exchange's expanded data center.[3] As described in that filing, the Exchange's current data center (''NY11'') in Carteret, NJ is undergoing an expansion (''NY11–4'') in response to demand for power and cabinets. The purpose of this proposed rule change is to establish fees for the expanded co-location services. Specifically, the Exchange proposes to

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* SR–ISE–2024–28 (not yet published).

establish (i) a monthly fee for Ultra High Density Cabinets, (ii) an installation fee for cabinets in NY11–4, (iii) fees for power installation in NY11–4, and (iv) fees for power distribution unit options in NY11–4.

Ultra High Density Cabinet

Currently, co-location customers have the option of obtaining cabinets of various sizes and power densities. Co-location customers may obtain a Half Cabinet,[4] a Low Density Cabinet with power density less than or equal to 2.88 kilowatts (''kW''), a Medium Density Cabinet with power density greater than 2.88 kW and less than or equal to 5 kW, a Medium-High Density Cabinet with power density greater than 5 kW and less than or equal to 7 kW, a High Density Cabinet with power density greater than 7 kW and less than 10 kW, and a Super High Density Cabinet with power density greater than 10 kW and less than or equal to 17.3 kW.

The Exchange filed a proposal to introduce a new cabinet choice in NY11–4, an ''Ultra High Density Cabinet,'' with power density greater than 10 kW and less than or equal to 15 kW.[5] The Ultra High Density Cabinet option will only be offered in NY11–4 because of the power configuration necessary for such cabinets, which is not possible or available in other portions of the data center due to different power distribution.[6] In addition to the Ultra High Density Cabinet, the Exchange will offer the other, existing cabinet options in NY11–4, with the exception of the Low Density Cabinet and Half Cabinet due to a lack of demand for such cabinets. The ongoing monthly fees for the Super High Density Cabinet, High Density Cabinet, Medium-High Density Cabinet, and Medium Density Cabinet are the same in NY11 and NY11–4 and the Exchange is not proposing to modify such fees.

The Exchange proposes to establish an ongoing monthly fee of $7,230 for the Ultra High Density Cabinets. To effectuate this change, the Exchange proposes to add the $7,230 ongoing monthly fee for Ultra High Density Cabinets to its fee schedule in General 8, Section 1(a). The Exchange notes that the proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets).

Installation Fee for Cabinets in NY11–4

The Exchange proposes to establish a cabinet installation fee of $5,940 for all cabinets in NY11–4. To effectuate this change, the Exchange proposes to add the proposed $5,940 installation fee to its fee schedule in General 8, Section 1(a) for Super High Density Cabinets, Ultra High Density Cabinets, High Density Cabinets, Medium-High Density Cabinets, and Medium Density Cabinets in NY11–4. In the existing data halls, customers may bring their own cabinets or use Exchange-provided cabinets. In NY11–4, because of the cooling system (hot aisle containment),[7] all cabinets must be uniform and therefore, the Exchange will provide all cabinets, the cost of which is included in the $5,940 installation fee.[8] The cabinets in NY11–4 include certain features not included in cabinets provided by the Exchange in the existing data halls. Specifically, the cabinets in NY11–4 include uniform, wider cabinets (32′ W x 48′ D x 91′ H), cable management, and a rear split door and combo lock. In addition, the proposed installation fee of $5,940 is comparable to fees charged for similar products.[9]

Installation Fee for Cabinet Power in NY11–4

The cabinet power options for NY11–4 include: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, Phase 1 40 amp 240 volt, Phase 3 20 amp 415 volt, and Phase 3 32 amp 415 volt. These cabinet power options are specific to NY11–4 and one of these options must be selected for cabinets in NY11–4. The Exchange proposes to establish an installation fee of $3,600 for Phase 1 cabinet power options in NY11–4 and an installation fee of $4,560 for Phase 3 cabinet power options in NY11–4. To effectuate this change, the Exchange proposes to add the proposed fees to its fee schedule in General 8, Section 1(c). The Exchange also proposes not to charge an ongoing monthly fee for the cabinet power options in NY11–4 and update the fee schedule accordingly. For NY11–4, the data center operator is bringing in these higher voltage power options and is likely to experience increased power distribution efficiencies across the data center. The proposed power installation fees are higher in NY11–4 as compared to the existing data halls as the installation of the higher voltage power options costs more to the Exchange and is considered a premium product due to anticipated operational efficiencies.[10] As between the Phase 1 and Phase 3 power options, the Phase 3 options provide a more efficient power source.

Fees for Power Distribution Unit Options

The Exchange will offer power distribution units (''PDUs'')[11] in NY11–4 as a convenience to customers. Rather than sourcing PDUs on a customer-by-customer basis, as the Exchange does for customers in NY11, the Exchange will offer Phase 1 and Phase 3[12] power distribution units in NY11–4. The Exchange proposes to establish a fee of $4,100 for a Phase 1 PDU and $5,260 for a Phase 3 PDU. This service is optional and customers may choose to provide their own PDUs appropriate for their power installation choices. The Exchange notes that, as part of such proposed fees, the Exchange would provide a primary and redundant PDU. As such, the proposed PDU fees covers a pair of PDUs. In addition, customers utilizing a Phase 1 or Phase 3 PDU provided by the Exchange have the ability to upgrade or downgrade between amperage levels without replacing the PDU, by a simple upgrade of the facility cord and a receptacle

[4] Half cabinets are not available to new subscribers. *See* General 8, Section 1(a).

[5] *Supra* note 3.

[6] Because of the addition of the Ultra High Density Cabinet option in NY11–4, the Super High Density Cabinet in NY11–4 will have power density greater than 15 kW and less than or equal to 17.3 kW.

[7] The existing data halls utilize cold aisle containment to manage temperatures. Hot aisle containment is a more effective way to manage heat in the data center.

[8] In contrast, to the extent customers provide their own cabinets in NY11, there is an additional out-of-pocket cost for such cabinets.

[9] For example, NYSE charges an initial $5,000 fee for dedicated cabinets. *See https://www.nyse.com/publicdocs/Wireless_Connectivity_Fees_and_Charges.pdf.*

[10] Benefits include future proofing the data hall to allow for increasing power density in the future, requiring less whips to deliver the same amount of amperage, less circuits need to be installed to reach the same power supply, and safety improvements.

[11] PDUs are devices fitted with multiple outputs designed to distribute electric power. The standardized PDUs would only be offered for NY11–4.

[12] Phase 1 PDUs are compatible with the following power options: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, and Phase 1 40 amp 240 volt. Phase 3 PDUs are compatible with the following power options: Phase 3 20 amp 415 volt and Phase 3 32 amp 415 volt. Phase 1 and Phase 3 are available in NY11 and NY11–4. Phase 3 PDUs provide greater power density than Phase 1 PDUs by delivering power over three wires as opposed to one wire.

update.[13] A PDU replacement is required when switching between phases/voltage.

The Exchange will also offer a switch monitored PDU add on in NY11–4, which would allow customers to connect remotely to their PDU and control the power sockets. With the switch monitored PDU option, customers would be able to power cycle or shut off power remotely. The Exchange proposes to establish a $2,000 fee for the switch monitored PDU option. This option is optional as well and customers may choose to provide their own switch monitored PDU, if desired.

Implementation

Although the timing is subject to change,[14] the Exchange anticipates opening NY11–4 Exchange access on October 21, 2024 and providing customers access in advance of this date. The proposed fees are designated to be operative on August 15, 2024. However, customer orders will not be fee liable until customers are provided access to the space.[15]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[16] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[17] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposal to establish a monthly fee for Ultra High Density Cabinets, an installation fee for cabinets in NY11–4, installation fees for power installation in NY11–4, and fees for power distribution unit options in NY11–4 is reasonable. First, the Exchange's proposal to establish a $7,230 ongoing monthly fee for Ultra High Density Cabinets in NY11–4 is reasonable because it is comparable to the Exchange's current ongoing monthly fees for cabinets. The proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets). Second, the Exchange believes that the proposed cabinet installation fee of $5,940 is reasonable as compared to the installation fees in NY11 (of $3,693–$4,748) because the proposed installation fee includes the cabinet itself, which includes certain enhanced features in NY11–4, including uniform, wider cabinets (32″ W × 48″ D × 91″ H), cable management, and a rear split door and combo lock. In contrast, in NY11, customers may choose to provide their own cabinets, incurring an additional cost. Furthermore, the proposed installation fee is comparable to the rate charged by NYSE for a similar product, as described above. Third, the Exchange believes that the power installation fees of $3,600 for Phase 1 power options and $4,560 for Phase 3 power options in NY11–4 are reasonable. As compared to power installation fees in NY11, the proposed rates for NY11–4 are higher because the Exchange will incur increased costs for installation of the higher voltage power options. In addition, the higher voltage power options will provide operational efficiencies for the data hall, as discussed above,[18] warranting a higher fee. Finally, the Exchange believes that the proposed fees for PDUs and the PDU add on are reasonable because such fees are consistent with market rates. Furthermore, the Exchange is providing the PDU options as a convenience to customers. No customer is required to purchase any PDU options from the Exchange. Customers may choose to provide their own PDUs and PDU add ons.

The Exchange believes substitutable products and services are available to market participants, including, among other things, other options exchanges that a market participant may connect to in lieu of the Exchange,[19] connectivity to the Exchange via a third-party reseller of connectivity, and/or trading of options products within markets which do not require connectivity to the Exchange, such as the Over-the-Counter (OTC) markets. Market participants that wish to connect to the Exchange will continue to choose the method of connectivity based on their specific needs. Market participants that wish to connect to the Exchange but want to avoid or mitigate the effect of these proposed fees can choose to connect to the Exchange through a vendor.

In summary, the proposal represents an equitable allocation of reasonable dues, fees and other charges because customers have choices in how they connect to the Exchange, the proposed monthly fee for Ultra High Density Cabinets is comparable to current fees charged by the Exchange for other cabinets, the Exchange will provide uniform cabinets in NY11–4 with special features, the proposed cabinet installation fee is consistent with that of comparable products offered by other providers, the Exchange will incur increased costs for new power installation in NY11–4, higher voltage power options will provide operational efficiencies for the data hall, and PDU options are provided as a convenience to customers and customers may choose to provide their own PDUs.

The Exchange believes that the proposed fee changes are not unfairly discriminatory because the cabinet, power, and PDU fees for NY11–4 are available to and assessed uniformly across all market participants. In addition, all customers have the choice of whether and how to connect to the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The

[13] This functionality may be available with customer-provided PDUs as well and depends on the PDU provided by the customer.

[14] The Exchange will announce modifications to the proposed timing via the Nasdaq Customer Portal, which is the web portal used for order and inventory management of colocation services, and email communication to all colocation customers.

[15] Charging customers once access is provided is consistent with current practice and allows customers to set up equipment and begin using power.

[16] 15 U.S.C. 78f(b).

[17] 15 U.S.C. 78f(b)(4) and (5).

[18] *Supra* note 10.

[19] There are currently 17 exchanges offering options trading services. No single options exchange trades more than 15% of the options market by volume and only one of the 17 options exchanges has a market share over 10 percent. *See* Nasdaq, Options Market Statistics (Last updated July 3, 2024), available at *https://www.nasdaqtrader.com/Trader.aspx?id=OptionsVolumeSummary*. This broad dispersion of market share demonstrates that market participants can and do exercise choice in trading venues. Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers.

Exchange operates in a highly competitive market in which market participants can determine whether or not to connect to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative exchanges that they may participate on and direct their order flow, as well as off-exchange venues, where competitive products are available for trading.

Nothing in the proposal burdens intra-market competition because the Ultra High Density Cabinets, cabinet power options, and PDU optionality in NY11–4 are available to any customer under the same fees as any other customer, and any customer that wishes to order cabinets, power and PDUs in NY11–4 can do so on a non-discriminatory basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[20] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–ISE–2024–30 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–ISE–2024–30. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–ISE–2024–30 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100587; File No. SR–CboeBZX–2024–068]

Self-Regulatory Organizations; Cboe BZX Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend Its Fees Schedule

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the ''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 9, 2024, Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

Cboe BZX Exchange, Inc. (the ''Exchange'' or ''BZX'') proposes to amend its Fees Schedule. The text of the proposed rule change is provided in Exhibit 5.

The text of the proposed rule change is also available on the Exchange's website (*http://markets.cboe.com/us/equities/regulation/rule_filings/BZX/*), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend its Fees Schedule.[3]

The Exchange first notes that it operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. More specifically, the Exchange is only one of 17 options venues to which market participants may direct their order flow. Based on publicly available information, no single options exchange has more than 13% of the market share.[4] Thus, in such a low-concentrated and highly competitive market, no single options exchange, including the Exchange, possesses significant pricing power in the execution of option order flow. The Exchange believes that the ever-shifting market share among the exchanges from month to month demonstrates that market participants can shift order flow or discontinue to reduce use of certain categories of products, in response to fee changes. Accordingly, competitive forces constrain the Exchange's transaction fees, and market participants can readily trade on competing venues if they deem pricing levels at those other venues to be more favorable. In response to competitive pricing, the Exchange, like other options exchanges, offers rebates and assesses fees for certain order types executed on or routed through the Exchange.

The Exchange's fee schedule sets forth standard rebates and rates applied per contract. For example, the Exchange provides a rebate of $0.25 per contract for Firm,[5] Broker Dealer[6] and Joint Back Office[7] (''Firm/BD/JBO'') orders that add liquidity in Penny Securities, yielding fee code PF. Additionally, in response to the competitive environment, the Exchange also offers tiered pricing, which provides Members opportunities to qualify for higher rebates or reduced fees where certain volume criteria and thresholds are met.[8] Tiered pricing provides an incremental incentive for Members to strive for higher tier levels, which provides increasingly higher benefits or discounts for satisfying increasingly more stringent criteria.

First, the Exchange proposes to increase the standard rebate for Firm/BD/JBO orders (*i.e.,* yield fee code PF) that add liquidity in Penny Securities, from $0.25 to $0.26.[9]

Second, the Exchange proposes to update the Firm, Broker Dealer, and Joint Back Office Penny Add Volume Tiers (*i.e.,* applicable to orders yielding fee code PF) set forth in Footnote 2. The Exchange currently provides opportunities for rebates per contract to add liquidity in Penny Securities as follows:

Tier	Rebate per contract to add	Required criteria
Tier 1	($0.38)	Member has an ADAV* in Firm/BD/JBO orders ≥0.20% of average OCV.**
Tier 2	($0.46)	(1) Member has an ADAV in Away MM/Firm/BD/JBO orders ≥1.05% of average OCV; and (2) Member has an ADV*** ≥1.95% of average OCV.

* ''ADAV'' means average daily added volume calculated as the number of contracts added.
** ''OCC Customer Volume'' or ''OCV'' means the total equity and ETF options volume that clears in the Customer range at the Options Clearing Corporation (''OCC'') for the month for which the fees apply, excluding volume on any day that the Exchange experiences an Exchange System Disruption and on any day with a scheduled early market close.
*** ''ADV'' means average daily volume calculated as the number of contracts added or removed, combined, per day.

The Exchange proposes to amend these tiers as follows:

- modify Tier 1 to require the Member to have an ADAV in Firm/BD/JBO orders greater than or equal to 15,000 contracts and an ADAV in Customer orders greater than or equal to 0.20% of average OCV, to qualify for the rebate; and
- modify Tier 2 to reduce the rebate from $0.46 to $0.42 per contract[10] and require the Member to have an ADAV in Firm/BD/JBO orders greater than or equal to 30,000 contracts and an ADAV in Customer orders greater than or equal to 0.20% of average OCV, to qualify for the rebate.

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Securities Exchange Act of 1934 (the ''Act'') and the rules and regulations thereunder applicable to the Exchange and, in particular, the requirements of Section 6(b) of the Act.[11] Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[12] requirements that the rules of an exchange be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. Additionally, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)[13] requirement that the rules of an exchange not be designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The Exchange also believes the proposed rule change is consistent with Section 6(b)(4) of the Act,[14] which requires that Exchange rules provide for the equitable allocation of reasonable

[3] The Exchange initially filed the proposed fee changes on July 1, 2024 (SR–CboeBZX–2024–063). On July 9, 2024, the Exchange withdrew that filing and submitted this proposal.

[4] *See* Cboe Global Markets U.S. Options Market Volume Summary by Month (June 27, 2024), available at *https://markets.cboe.com/us/options/market_statistics/.*

[5] ''Firm'' applies to any order for the proprietary account of an OCC clearing member.

[6] ''Broker Dealer'' applies to any order for the account of a broker dealer, including a foreign broker dealer.

[7] ''Joint Back Office'' applies to any order for a joint back office account.

[8] As part of the proposed rule change, the Exchange proposes a clarifying change to remove the duplicative reference to a rebate of $0.39 for fee code PM in the Standard Rates table.

[9] In connection with the proposed fee changes, the Exchange also proposes to update the corresponding listed rebate of $0.25 for fee codes PF in the Fee Codes and Associated Fees table to the proposed new rebate of $0.26.

[10] In connection with the proposed fee changes, the Exchange also proposes to update the corresponding listed rebate of $0.46 for fee codes PF in the Fee Codes and Associated Fees table to the proposed new rebate of $0.42.

[11] 15 U.S.C. 78f(b).

[14] 15 U.S.C. 78f(b)(4).

dues, fees, and other charges among its Members and other persons using its facilities.

As described above, the Exchange operates in a highly competitive market in which market participants can readily direct order flow to competing venues if they deem fee levels at a particular venue to be excessive or incentives to be insufficient. The proposed rule change reflects a competitive pricing structure designed to incentivize market participants to direct their order flow to the Exchange, which the Exchange believes would enhance market quality to the benefit of all Members. Additionally, competing exchanges offer similar tiered pricing structures, including schedules of rebates and fees that apply based upon similarly situated members achieving certain volume and/or growth thresholds, as well as assess similar fees or rebates for similar types of orders, to that of the Exchange.

The Exchange believes the proposed rule change to increase the standard rebate for Firm/BD/JBO orders that add liquidity in Penny Securities is reasonable because it is a modest increase in this rebate rate for these orders and it continues to be in line with the standard rebate for orders of other market participants that remove liquidity in Penny Securities on the Exchange.[15] Additionally, the proposed rebate is in line with rebates for similar transactions at other exchanges.[16] The Exchange believes the proposed change is equitable and not unfairly discriminatory because it applies uniformly to all Members and, as previously noted, the increased rebate is in line with the standard rebate for orders submitted for other market participants that add liquidity in Penny Securities on the Exchange.

The Exchange believes the proposed changes to the Firm/BD/JBO Penny Add Volume Tiers are reasonable because they continue to provide opportunities for Members to receive higher rebates by providing for incrementally increasing volume-based criteria they can reach for. The Exchange believes the tiers, as modified, continue to serve as a reasonable means to encourage Members to increase their liquidity on the Exchange, particularly in connection with additional Firm/BD/JBO order flow to the Exchange in order to benefit from the proposed enhanced rebates.

The Exchange believes the proposed criteria remain commensurate with the corresponding enhanced rebates, including as amended for Tier 2. The Exchange believes the revised criteria will continue to encourage Members to send additional Firm/BD/JBO orders to the Exchange. Greater remove volume order flow may increase transactions on the Exchange, which the Exchange believes incentivizes liquidity providers to submit additional liquidity and execution opportunities. An overall increase in activity deepens the Exchange's liquidity pool, offers additional cost savings, supports the quality of price discovery, promotes market transparency and improves market quality for all investors.

Further, the Exchange believes the proposed reduced rebate offered under revised Firm/BD/JBO Penny Add Volume Tier 2 is reasonable because Members are still eligible to receive a rebate for meeting the corresponding criteria, albeit at a lower amount then before. While Firm/BD/JBO Penny Add Volume Tier 2, as proposed, will provide a lower rebate than that currently offered (from $0.46 to $0.42), the Exchange still believes that the changes are reasonable as the tier, even as amended, will continue to incentivize Members to send additional Firm/BD/JBO orders to the Exchange. As noted above, an overall increase in add activity may provide for deeper, more liquid markets and execution opportunities at improved prices, which ultimately offers additional cost savings, supports the quality of price discovery, promotes market transparency and improves market quality for all investors. Moreover, the Exchange is not required to maintain these tiers nor provide rebates. The Exchange believes the proposed changes to the rebates offered under these tiers still remain commensurate with the corresponding criteria under the respective tiers.

The Exchange believes the proposed change is also equitable and not unfairly discriminatory because it applies uniformly to all Members, who will have the opportunity to meet the tiers' criteria and receive the corresponding enhanced rebate for each tier if such criteria is met. Without having a view of activity on other markets and off-exchange venues, the Exchange has no way of knowing whether these proposed changes would definitely result in any Members qualifying for the proposed rebates. While the Exchange has no way of predicting with certainty how the proposed changes will impact Member activity, based on trading activity from the prior months, the Exchange anticipates that up to two Members will achieve Tier 1 and up to two Members will achieve Tier 2. Additionally, all Members are able to increase their Firm/BD/JBO order flow to attempt to achieve these tiers. Should a Member not meet the proposed new criteria, the Member will merely not receive that corresponding enhanced rebate.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. Particularly, the Exchange believes the proposal to increase the standard rebate for Firm/BD/JBO orders that add liquidity in Penny Securities will not impose any burden on intramarket competition because it will apply uniformly to all Members. All Members that submit orders yielding fee code PF will receive this same rebate. The Exchange believes the proposal to amend the Firm/BD/JBO Penny Add Volume Tiers will also not impose any burden on intramarket competition, as the changes will also apply to all Members. All Members will continue to have an opportunity to receive rebates under various tiers in the program. The Firm/BD/JBO Penny Add Volume Tiers are generally designed to increase the competitiveness of BZX and incentivize participants to increase their order flow on the Exchange, providing for additional execution opportunities for market participants and improved price transparency. An overall increase in add activity may provide for deeper, more liquid markets and execution opportunities at improved prices. Furthermore, greater overall order flow, trading opportunities, and pricing transparency benefit all market participants on the Exchange by enhancing market quality and continuing to encourage Members to send orders, thereby contributing towards a robust and well-balanced market ecosystem.

The Exchange does not believe that the proposed changes represent a significant departure from pricing currently offered by the Exchange. Members may opt to disfavor the Exchange's pricing if they believe that alternatives offer them better value. Accordingly, the Exchange does not believe that the proposed changes will impair the ability of Members or competing venues to maintain their

[15] As set forth in the Fees Schedule, the standard rebate for orders that add liquidity in Penny Securities is between $0.25 and $0.29 for Professional, Customer, Market Maker, and Away MM orders.

[16] *See, e.g.,* MIAX Emerald Options Exchange Fee Schedule, Transaction Fees, which provides that Firm Proprietary and Broker Dealer orders that add liquidity are provided a rebate of $0.25 per contract in Penny Classes. *See also* MEMX Options Fee Schedule, which provides Firms and Broker Dealers that add liquidity are provided a rebate of $0.45 per contract in Penny Securities.

competitive standing in the financial markets.

The Exchange does not believe that the proposed rule changes will impose any burden on intermarket competition that is not necessary or appropriate in furtherance of the purposes of the Act. As previously discussed, the Exchange operates in a highly competitive market. Members have numerous alternative venues that they may participate on and direct their order flow, including 16 other options exchanges and off-exchange venues. Additionally, the Exchange represents a small percentage of the overall market. Based on publicly available information, no single options exchange has more than 13% of the market share.[17] Therefore, no exchange possesses significant pricing power in the execution of option order flow. Indeed, participants can readily choose to send their orders to other exchange and off-exchange venues if they deem fee levels at those other venues to be more favorable. Moreover, the Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [18] The fact that this market is competitive has also long been recognized by the courts. In NetCoalition v. Securities and Exchange Commission, the D.C. Circuit stated as follows: ''[n]o one disputes that competition for order flow is 'fierce.' . . . As the SEC explained, '[i]n the U.S. national market system, buyers and sellers of securities, and the broker-dealers that act as their order-routing agents, have a wide range of choices of where to route orders for execution'; [and] 'no exchange can afford to take its market share percentages for granted' because 'no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers' . . . .''.[19] Accordingly, the Exchange does not believe its proposed fee change imposes any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act [20] and paragraph (f) of Rule 19b–4 [21] thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission will institute proceedings to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*http://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–CboeBZX–2024–068 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–CboeBZX–2024–068. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–CboeBZX–2024–068 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[22]

Sherry R. Haywood,

Assistant Secretary.

Reporting and Compliance Engine (''TRACE'') system to one minute, with exceptions for FINRA member firms with de minimis reporting activity and for manual trades. The proposed rule change was published for comment in the **Federal Register** on January 25, 2024.[3]

On February 29, 2024, pursuant to Section 19(b)(2) of the Act,[4] the Commission designated a longer period within which to approve the proposed rule change, disapprove the proposed rule change, or institute proceedings to determine whether to disapprove the proposed rule change.[5] On April 22, 2024, the Commission instituted proceedings under Section 19(b)(2)(B) of the Act[6] to determine whether to approve or disapprove the proposed rule change.[7] On July 18, 2024, the Commission, pursuant to Section 19(b)(2) of the Act,[8] designated September 20, 2024, as the date by which the Commission shall either approve or disapprove the proposed rule change.[9] On July 18, 2024, FINRA responded to comments[10] and filed a partial amendment to the proposed rule change in response to certain comments on the proposed rule change (''Partial Amendment No. 1''). Partial Amendment No. 1 is described in Item II below, which has been substantially prepared by FINRA.[11] The Commission is publishing this notice to solicit comments on Partial Amendment No. 1 from interested persons.[12]

[3] *See* Securities Exchange Act Release No. 99404 (Jan. 19, 2024), 89 FR 5034 (Jan. 25, 2024) (''Notice''). Comments received on the proposed rule change are available at: *https://www.sec.gov/comments/sr-finra-2024-004/srfinra2024004.htm.*

II. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Partial Amendment

FINRA is proposing the following amendments to the filing:

1. FINRA Proposes To Amend the Proposed Manual Trades Exception To Provide FINRA Members With an Additional Year To Transition to Five-Minute Reporting for Manual Trades

As discussed in the original filing, the proposed rule change would create an exception from the proposed one-minute reporting requirement for manual trades.[13] As originally proposed, manual trades would have been subject to reporting as soon as practicable with a five-minute outer-limit reporting timeframe, phased in after two years.[14] Specifically, where a trade qualified for the manual trades exception, a 15-minute outer limit would have applied for the first year following implementation; a 10-minute outer limit would have applied for the second year; and a five-minute outer limit would have applied thereafter.[15] Some commenters raised various concerns regarding the feasibility of five-minute reporting for manual trades, and some commenters recommended that FINRA study and assess (and provide an opportunity for public comment on) the feasibility of five-minute reporting for manual trades prior to its implementation or maintain a 15-minute reporting requirement for manual trades.[16]

In response to these comments, FINRA is amending the proposed rule change to extend the phase-in period for five-minute reporting by one year so that FINRA members would have three years to transition to five-minute reporting for manual trades.[17]

Accordingly, the proposed rule change, as amended, would provide that a FINRA member relying on the manual trades exception will be required to report the manual trade as soon as practicable and no later than within 15 minutes of the time of execution (for up to one calendar year from the effectiveness of the proposed amendments), within 10 minutes of the time of execution (for up to three calendar years from the effectiveness of the proposed amendments), and within five minutes of the time of execution (three or more calendar years from the effectiveness of the proposed amendments).[18] Partial Amendment No. 1 will provide FINRA with additional time to assess FINRA members' trade reporting times in connection with manual trades and request comment on the operation of the manual trades exception—and FINRA will be prepared to make adjustments, as necessary, prior to the effectiveness of the five-minute reporting timeframe.[19]

Following are the changes proposed in Partial Amendment No. 1, with the proposed changes in the original filing shown as if adopted. Proposed new language in Partial Amendment No. 1 is italicized; proposed deletions in Partial Amendment No. 1 are in brackets:

6730. Transaction Reporting

(a) through (f) No Change.

• • • **Supplementary Material:**

.01 through **.08** No Change.

.09 Exception for Manual Trades

(a) No Change.

(b) Except as otherwise specifically provided in paragraph (a)(2) of this Rule with respect to List or Fixed Offering Price Transactions and Takedown Transactions, a member relying on the exception for manual trades in this Supplementary Material .09 must report the transaction as soon as practicable but no later than within: 15 minutes of the Time of Execution (this 15-minute outer timeframe is available for up to one calendar year from the effectiveness of this Supplementary Material .09); within 10 minutes of the Time of Execution (this 10-minute outer timeframe is available for up to *three*[two] calendar years from the effectiveness of this Supplementary Material .09); or within 5 minutes of the Time of Execution (this 5-minute outer timeframe is applicable *three*[two] or more calendars years from the effectiveness of this Supplementary Material .09), as further provided in this paragraph.

(1) No Change.

(2) Transactions Executed During TRACE System Hours

Transactions executed on a business day at or after 8:00:00 a.m. Eastern Time through 6:29:59 p.m. Eastern Time (standard TRACE System Hours) must be reported as soon as practicable, but no later than within 15, 10, or 5 minutes *of the Time of Execution*[after the TRACE system opens] (the 15-, 10-, or 5-minute outer timeframe is available for up to one year, up to *three*[two]

[13] *See* Notice, *supra* note 3.

[14] *Id.*

[15] *Id.*

[16] *See* Partial Amendment No. 1 at 4.

[17] *Id.*

years, or *three*[two] or more years, respectively, from the effectiveness of this Supplementary Material .09), except as provided in paragraph (b)(3) of this Supplementary Material .09.

(3) Transactions Executed Less Than 5 Minutes Before TRACE System Closes

Transactions executed on a business day less than 15, 10, or 5 minutes (the 15-, 10-, or 5-minute timeframe is available for up to one year, up to *three*[two] years, or *three*[two] or more years, respectively, from the effectiveness of this Supplementary Material .09) before 6:30:00 p.m. Eastern Time must be reported as soon as practicable after the TRACE system opens the next business day (T + 1), but no later than within 15 minutes after the TRACE system opens the next business day, and if reported on T + 1, designated ''as/of'' and include the date of execution.

(4) No Change.

2. FINRA Proposes To Make a Correction to the Text of Proposed Rule 6730.09(b)(2)

Additionally, Partial Amendment No. 1 would make a correction to the proposed rule text such that proposed Rule 6730.09(b)(2) would require reporting within the prescribed timeframe from ''the Time of Execution'' rather than ''after the TRACE system opens.'' [20] As originally proposed, for transactions subject to the manual trades exception that were executed on a business day at or after 8:00:00 a.m. Eastern Time (''ET'') through 6:29:59 p.m. ET (*i.e.,* during TRACE system hours), the rule text erroneously would have required reporting ''. . . as soon as practicable, but no later than within 15, 10, or 5 minutes after the TRACE system opens. . . .'' [21] Partial Amendment No. 1 would correct the text of proposed Rule 6730.09(b)(2) so that it requires reporting of these transactions ''. . . as soon as practicable, but no later than within 15, 10, or 5 minutes of the Time of Execution. . . .'' [22]

III. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change, as amended by Partial Amendment No. 1, is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–FINRA–2024–004 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–FINRA–2024–004. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of FINRA. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to File Number SR–FINRA–2024–004 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[23]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100589; File No. SR–MSRB–2024–01]

Self-Regulatory Organizations; Municipal Securities Rulemaking Board; Notice of Filing of Amendment No. 1 to Proposed Rule Change Consisting of Amendments to MSRB Rule G–14 To Shorten the Timeframe for Reporting Trades in Municipal Securities to the MSRB

July 25, 2024.

I. Introduction

On January 12, 2024, the Municipal Securities Rulemaking Board (''MSRB'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission''), pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act'' or ''Exchange Act'') [1] and Rule 19b–4 thereunder,[2] a proposed rule change to (1) amend MSRB Rule G–14 (''Rule G–14''), on reports of sales or purchases, to (i) shorten the amount of time within which brokers, dealers, and municipal securities dealers (collectively, ''dealers,'' and each individually, a ''dealer'') must report most transactions to the MSRB; and (ii) require dealers to report certain transactions with a new trade indicator, and make certain clarifying amendments, and (2) make conforming amendments to MSRB Rule G–12, on uniform practice (''Rule G–12''), and the MSRB's Real-Time Transaction Reporting System (''RTRS'') Information Facility (''IF–1'') to reflect the shortened reporting timeframe (collectively, the ''proposed rule change'').[3] The proposed rule change was published for comment in the **Federal Register** on January 26, 2024.[4]

The Commission received comments in response to the proposed rule change.[5] On April 22, 2024, the Commission instituted proceedings under Section 19(b)(2)(B) of the Act [6] to determine whether to approve or disapprove the proposed rule change.

On July 18, 2024, the Commission, pursuant to Section 19(b)(2) of the Act,[7] designated September 20, 2024, as the date by which the Commission shall either approve or disapprove the

proposed rule change.[8] On July 18, 2024, the MSRB responded to comments[9] and filed Amendment No. 1 to the original proposed rule change (''Amendment No. 1''). The text of Amendment No. 1 is available on the MSRB's website.[10]

II. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Amendment

As described further below, the MSRB filed Amendment No. 1 to amend the proposed rule change to (i) revise the definition of a ''dealer with limited trading activity'' in proposed subsection (d)(xi) of Rule G–14 RTRS Procedures[11] and (ii) modify the pace of phasing-in the shortened reporting timeframe for a ''trade with a manual component'' in proposed Supplementary Material .02(b).

A. Exception for Dealers With Limited Trading Activity

The MSRB noted that upon further review of the methodology used for proposing a 1,800-trade threshold for qualifying for the dealer with limited trading activity exception in the original proposed rule change, the MSRB had determined to increase the threshold to 2,500 trades in connection with a modification of its methodology.[12]

In establishing the original proposed threshold of 1,800 trades, the MSRB explained that it had used an approach, consistent with other instances where MSRB rules and related transparency activities had been based on inter-dealer trade activity, that relied solely on the sell-side inter dealer trade reports to avoid, for those specific purposes, potential double counting if both the sell-side and buy-side were used.[13] The MSRB stated that the calculations discussed in the Notice underlying the 1,800-trade threshold in the proposed definition of ''dealer with limited trading activity'' resulted in a lower threshold and did not fully account for inter-dealer trade reports since only the sell-side inter-dealer trade reports were taken into account.[14] In order to maintain comparability with the threshold used by the Financial Industry Regulatory Authority, Inc. (''FINRA'') in its proposed definition of ''member with limited trading activity'' [15] and in light of the plain meaning of the language of the MRSB's proposed definition of ''dealer with limited trading activity,'' the MSRB explained that it had recalculated the appropriate threshold for such definition to be 2,500 trades, taking into account both sell-side and buy-side inter-dealer trade reports together with reports of dealer trades with customers, regardless of whether the dealer bought or sold in the customer transaction.[16] The MSRB also stated that Amendment No. 1 would add clarifying language to reflect that the threshold is based on both sell-side and buy-side inter-dealer and customer trade reports.[17] Thus, proposed subparagraph (d)(xi) of Rule G–14 RTRS Procedures would define a dealer with limited trading activity as a dealer that, during at least one of the two prior consecutive calendar years, reported to an RTRS Portal fewer than 2,500 purchase or sale transactions with customers or other dealers, excluding certain exempted transactions as specified therein.[18] The MSRB further noted that the proposed new threshold would continue to account for only a very small portion of the market volume and therefore would have minimal impact on overall trading.[19]

B. Exception for Trades With a Manual Component

The MSRB noted concerns expressed by commenters regarding potential difficulties in achieving dramatically shortened reporting timeframes for at least some trades with a manual component and whether dealers would have sufficient time to make the necessary changes to processes and technology to achieve such shortened timeframes, and determined to modify the pace of phasing-in the shortened reporting timeframe for trades with a manual component to extend the period during which such trades would be reportable by no later than 10 minutes after the Time of Trade from one year to two years.[20]

The MSRB explained that Amendment No. 1 would, in part, amend proposed Supplementary Material .02(b) to provide in clause (ii) that a trade with a manual component must be reported no later than 10 minutes after the Time of Trade for the second and third calendar years (rather than only the second year) from the effective date of the proposed rule change and to provide in clause (iii) that a trade with a manual component would become reportable no later than five minutes after the Time of Trade after the conclusion of the third calendar year (rather than the second calendar year) from the effective date of the proposed rule change.[21]

The MSRB further explained that the proposed rule change sets out a phased-in implementation of the exception for manual trades that would provide for an ultimate five-minute timeframe for the reporting of such trades. The MSRB also noted that no further reductions in such timeframe, and no elimination of the manual trade exception, could be possible without additional formal rulemaking by the MSRB that would be filed with the Commission, and that any such change would be subject to the required notice and comment process under Section 19 of the Exchange Act.[22]

Furthermore, the MSRB stated that it would monitor the implementation of the proposed rule change and, going forward, would analyze trade data related to the operation of the proposed two new exceptions to, among other things, determine whether the eventual five-minute trade reporting timeframe that would become applicable after two years continues to be feasible and appropriate in light of the empirical data collected through the earlier phases of implementation.[23] The MSRB further explained that it would be prepared to take action to provide appropriate guidance or undertake appropriate modifications in connection with the phase-in of the manual trade exception should circumstances warrant any such action, including, but not limited to

[9] *See* Letter from Ernesto A. Lanza, Chief Regulatory and Policy Officer, MSRB, to Secretary, Commission, dated July 18, 2024, available at *https://www.sec.gov/comments/sr-msrb-2024-01/srmsrb202401-491663-1411646.pdf.*

[10] Amendment No. 1 is available at *https://www.msrb.org/sites/default/files/2024-07/MSRB-2024-01-A-1.pdf.*

[11] The MSRB stated that the revision to the proposed definition of dealer with limited trading activity does not have a material impact on the MSRB's economic analysis included in the original proposed rule change. *See* Amendment No. 1 at 9.

[12] *See* Amendment No. 1 at 7.

[13] *Id.* at 7–8.

[14] *Id.* at 8.

[15] *See* Exchange Act Release No. 99404 (Jan. 19, 2024), 89 FR 5034 (Jan. 24, 2024) (''FINRA Notice'').

[16] *See* Amendment No. 1 at 8. The MSRB explained that reports of dealer trades with customers, regardless of whether the dealer bought or sold in the transaction, were included in the original methodology and continue to be included in the revised methodology. Based on this change in methodology, the total number of trade reports in 2022 has changed to 16.8 million when counting both the buy-side and the sell-side trades for inter-dealer trades. Previously, when only counting the sell side trades for inter-dealer trades, the total number of reported trades in 2022 was 12.1 million. *See* Amendment No. 1 n. 21.

[17] *See* Amendment No. 1 at 8.

[18] *Id.*

[19] *See* Amendment No. 1 at 9. The MSRB stated that the revised number of transactions under Amendment No. 1 would be expected to continue to capture approximately 1.5 percent of the trades in the municipal securities markets in a given calendar year, based on transaction data from calendar year 2022.

[20] *See* Amendment No. 1 at 9.

[22] 15 U.S.C. 78s. *See* Amendment No. 1 at 9.

[23] *See* Amendment No. 1 at 9.

potentially filing a proposed rule change to extend the implementation period for the eventual five-minute timeframe for trades with a manual component.[24]

As noted by the MSRB, Amendment No. 1 would provide for a modified phase-in of the shortened reporting timeframe for trades with a manual component that the MSRB believes would foster a more orderly transition to more rapid reporting of manual trades.[25] Additionally, the MSRB explained that Amendment No. 1 would allow the MSRB to undertake a more meaningful and timely analysis of potential impacts of the intermediate 10-minute reporting stage in the phase-in process.[26] Specifically, the MSRB observed the extended timeframe would provide more time and data for the MSRB to understand whether any adverse impacts have developed as a result of the shortened reporting timeframe to 10 minutes so that the MSRB can determine whether it should undertake additional rulemaking to modify implementation or phase-in of the final step to a five-minute timeframe.[27]

III. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the filing as amended by Amendment No. 1 is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include File Number SR–MSRB–2024–01 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549.

All submissions should refer to File Number SR–MSRB–2024–01. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*http://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the MSRB. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection.

All submissions should refer to File Number SR–MSRB–2024–01 and should be submitted on or before August 21, 2024.

For the Commission, pursuant to delegated authority.[28]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100601; File No. SR–NYSEAMER–2024–44]

Self-Regulatory Organizations; NYSE American LLC; Notice of Filing and Immediate Effectiveness of Proposed Change To Establish Fees for the NYSE American Aggregated Lite Data Feed

July 25, 2024.

Pursuant to Section 19(b)(1) [1] of the Securities Exchange Act of 1934 (''Act'') [2] and Rule 19b–4 thereunder,[3] notice is hereby given that on July 11, 2024, NYSE American LLC (''NYSE American'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for the NYSE American Aggregated Lite data feed. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the NYSE American LLC Equities Proprietary Market Data Fees Schedule (''Fee Schedule'') and establish fees for the NYSE American Aggregated Lite (''NYSE American Agg Lite'') data feed,[4] effective July 11, 2024.[5]

In summary, the NYSE American Agg Lite is a NYSE American-only frequency-based depth of book market data feed of the NYSE American's limit order book for up to ten (10) price levels on both the bid and offer sides of the order book for securities traded on the Exchange and for which the Exchange reports quotes and trades under the Consolidated Tape Association (''CTA'') Plan or the Nasdaq/UTP Plan. The NYSE American Agg Lite is a compilation of limit order data that the

[4] The proposed rule change establishing the NYSE American Agg Lite data feed was immediately effective on February 27, 2024. *See* Securities Exchange Act Release No. 99690 (March 7, 2024), 89 FR 18445 (March 13, 2024) (SR–NYSEAMER–2024–14) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish the NYSE American Aggregated Lite Market Data Feed).

[5] The Exchange originally filed to amend the Fee Schedule on May 13, 2024 (SR–NYSEAMER–2024–31). SR–NYSEAMER–2024–31 was subsequently withdrawn and replaced by this filing.

Exchange provides to vendors and subscribers. The NYSE American Agg Lite includes depth of book order data as well as security status messages. The security status message informs subscribers of changes in the status of a specific security, such as trading halts, short sale restriction, etc. In addition, the NYSE American Agg Lite includes order imbalance information prior to the opening and closing of trading.

Background

The Exchange operates in a highly competitive market. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [6]

While Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [7] Indeed, cash equity trading is currently dispersed across 16 exchanges,[8] numerous alternative trading systems,[9] and broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 20% market share (whether including or excluding auction volume).[10]

Proposed NYSE American Agg Lite Data Feed Fees

To reflect the value of NYSE American's market data, the Exchange proposes to establish the fees listed below for the NYSE American Agg Lite data feed. The Exchange proposes to charge fees for the same categories of market data use as its affiliated exchanges (namely, NYSE, NYSE Arca and NYSE National) currently charge. The Exchange believes that adopting the same fee structure as its affiliated exchanges would reduce administrative burdens on market data subscribers that also currently subscribe to market data feeds from the Exchange's affiliates.

1. *Access Fee.* For the receipt of access to the NYSE American Agg Lite data feed, the Exchange proposes to charge $500 per month. This proposed Access Fee would be charged to any data recipient that receives the NYSE American Agg Lite data feed. Data recipients that only use display devices to view NYSE American Agg Lite market data and do not separately receive a data feed would not be charged an Access Fee. The proposed Access Fee would be charged only once per firm.

2. *User Fees.* The Exchange proposes to charge a Professional User Fee (Per User) of $1 per month. The Exchange does not propose a fee for Non-Professional Users. The Professional User Fee would apply to each display device that has access to the NYSE American Agg Lite data feed.

3. *Redistribution Fee.* For redistribution of the NYSE American Agg Lite data feed, the Exchange proposes to establish a fee of $250 per month. The proposed Redistribution Fee would be charged to any Redistributor of the NYSE American Agg Lite data feed, which is defined to mean a vendor or any person that provides a real-time NYSE American market data product externally to a data recipient that is not its affiliate or wholly-owned subsidiary, or to any system that an external data recipient uses, irrespective of the means of transmission or access. The proposed Redistribution Fee would be charged only once per Redistributor account. As an incentive to potential Redistributors to subscribe to the NYSE American Agg Lite data feed, the Exchange proposes to waive the Access Fee and Redistribution Fee for a Redistributor if the Redistributor provides NYSE American Agg Lite externally to at least one data feed recipient and reports such data feed recipient or recipients to the Exchange. For example, a Redistributor that subscribes to the NYSE American Agg Lite data feed will have the Access Fee and Redistribution Fee waived if such Redistributor provides NYSE American Agg Lite externally to at least one data feed recipient and reports such data feed recipient to the Exchange.

By targeting this proposed fee waiver to Redistributors that provide external distribution of NYSE American Agg Lite, the Exchange believes that this would provide an incentive for Redistributors to make the NYSE American Agg Lite market data product available to its customers. Specifically, if a data recipient is interested in subscribing to NYSE American Agg Lite and relies on a Redistributor to obtain market data products from the Exchange, that data recipient would need its Redistributor to subscribe to and redistribute NYSE American Agg Lite. The Exchange believes that this proposed fee waiver for Redistributors of NYSE American Agg Lite would provide an incentive for Redistributors to make NYSE American Agg Lite available to their customers, which will increase the availability of the Exchange's market data products to a larger potential population of data recipients.

Further, the Exchange proposes to adopt a credit that would be applicable to Redistributors that provide external distribution of NYSE American Agg Lite to Professional and Non-Professional Users. As proposed, such Redistributors would receive a credit equal to the amount of the monthly Professional User and Non-Professional User Fees for such external distribution, up to a maximum of the combination of the Access Fee and Redistribution Fee for NYSE American Agg Lite that the Redistributor would otherwise be required to pay to the Exchange. For example, a Redistributor that reports external Professional Users in a month totaling $750 or more would receive a maximum credit of $750 for that month, which could effectively reduce its monthly fee for access and redistribution to zero. If that same Redistributor were to report external User quantities in a month totaling $600 of monthly usage, that Redistributor would receive a credit of $600. The Exchange believes the proposed credit would provide Redistributors with an incentive to increase their redistribution of NYSE American Agg Lite because the credit they would be eligible to receive would increase if they report additional external User quantities.

4. *Enterprise Fees.* The Exchange proposes to establish an enterprise license that will reduce Exchange fees and administrative costs for subscribers that disseminate NYSE American Agg Lite. Subscribers that are broker-dealers

---

will be able to distribute the NYSE American Agg Lite data feed for display usage to an unlimited number of recipients (professional users and non-professional users) for a monthly fee of $550, with an opportunity to lower that fee to $500 per month if they contract for twelve months of service in advance.

As proposed, the NYSE American Agg Lite data feed may be distributed pursuant to the proposed market data enterprise license only for display usage and in the context of a brokerage relationship with a broker-dealer through such broker-dealer's own devices. Purchase of an enterprise license would eliminate per User subscriber fees for NYSE American Agg Lite. Further, the Exchange proposes to waive the Access Fee and the Redistribution Fee for NYSE American Agg lite for Redistributors that pay the Professional and Non-Professional Enterprise Fee. The Exchange believes the proposed fee waiver would provide an incentive for Redistributors to subscribe to the NYSE American Agg Lite market data product at the enterprise level to reduce the fees it would pay to the Exchange and without having to report the number of users that receive the data feed from the Redistributor.

Subscribers that intend to purchase a market data enterprise license for at least twelve months may elect to purchase this product in advance for a monthly fee of $500 per month for distribution to an unlimited number of professional users and non-professional users. This feature is intended to simplify cost projections and budgeting for both subscribers and the Exchange. Subscribers that elect not to purchase this particular feature will nevertheless be able to obtain all of the market data information offered by NYSE American Agg Lite by paying the standard fee of $550 per month for distribution to an unlimited number of professional users and non-professional users. Subscribers that elect to pay the monthly fee will be able to switch to the annual fee at any time, and those that elect to purchase the annual contract would be able to change to the monthly contract, with notice, at the end of the twelve-month period.

The Exchange believes that the proposed market data enterprise license will reduce exchange fees, lower administrative costs for subscribers, and help expand the availability of market information to investors, and thereby increase participation in financial markets.

5. *Non-Display Use Fees.* The Exchange proposes to establish non-display fees for the NYSE American Agg Lite data feed that are based on the non-display use categories charged by NYSE, NYSE Arca, NYSE National, the CTA, and the UTP Plan for non-display use.[11] Non-display use would mean accessing, processing, or consuming the NYSE American Agg Lite data feed delivered directly or through a Redistributor, for a purpose other than in support of a data recipient's display or further internal or external redistribution (''Non-Display Use''). Non-Display Use would include trading uses such as high frequency or algorithmic trading as well as any trading in any asset class, automated order or quote generation and/or order pegging, price referencing for algorithmic trading or smart order routing, operations control programs, investment analysis, order verification, surveillance programs, risk management, compliance, and portfolio management.

Under the proposal, for Non-Display Use of NYSE American Agg Lite, there would be three categories of, and fees applicable, to data recipients. One, two, or three categories of Non-Display Use may apply to a data recipient.

- As proposed, the Category 1 Fee would be $1,000 per month and would apply when a data recipient's Non-Display Use of the NYSE American Agg Lite data feed is on its own behalf, not on behalf of its clients.
- As proposed, Category 2 Fees would be $1,000 per month and would apply to a data recipient's Non-Display Use of the NYSE American Agg Lite data feed on behalf of its clients.
- As proposed, Category 3 Fees would be $1,000 per month and would apply to a data recipient's Non-Display Use of the NYSE American Agg Lite data feed for the purpose of internally matching buy and sell orders within an organization, including matching customer orders for a data recipient's own behalf and/or on behalf of its clients. This category would apply to Non-Display Use in trading platforms, such as, but not restricted to, alternative trading systems (''ATSs''), broker crossing networks, broker crossing systems not filed as ATSs, dark pools, multilateral trading facilities, exchanges and systematic internalization systems. A data recipient will be charged $1,000 per month for each platform on which it uses the Non-Display data internally to match buy and sell orders, up to a cap of $3,000 per month; even if the data recipient uses the NYSE American Agg Lite data feed for more than three platforms, it will not pay more than $3,000 for such Category 3 use per month.

The description of the three non-display use categories is set forth in the Fee Schedule in endnote 1 and that endnote would be referenced in the NYSE American Agg Lite data feed fees on the Fee Schedule. The text in the endnote would remain unchanged.

Data recipients that receive the NYSE American Agg Lite data feed for Non-Display Use would be required to complete and submit a Non-Display Use Declaration before they would be authorized to receive the feed. A firm subject to Category 3 Fees would be required to identify each platform that uses the NYSE American Agg Lite data feed for a Category 3 Non-Display Use basis, such as ATSs and broker crossing systems not registered as ATSs, as part of the Non-Display Use Declaration.

6. *Non-Display Use Declaration Late Fee.* Data recipients that receive the NYSE American Agg Lite data feed for Non-Display Use would be required to complete and submit a Non-Display Use Declaration before they would be authorized to receive the feed. Beginning in 2025, NYSE American Agg Lite data feed recipients would be required to submit, by January 31 of each year, the Non-Display Use Declaration. The requirement to submit a Non-Display Use Declaration applies to all real-time NYSE American data feed product recipients. The Exchange proposes to charge a Non-Display Use Declaration Late Fee of $1,000 per month to any data recipient that pays an Access Fee for the NYSE American Agg Lite data feed that has failed to timely complete and submit a Non-Display Use Declaration. Specifically, with respect to the Non-Display Use Declaration due by January 31 of each year, the Non-Display Use Declaration Late Fee would apply to data recipients that fail to complete and submit the Non-Display Use Declaration by the January 31 due date, and would apply beginning February 1 and for each month

[11] *See* Endnote 1 to the NYSE Proprietary Market Data Fees, available here: *https://www.nyse.com/publicdocs/nyse/data/NYSE_Market_Data_Fee_Schedule.pdf;* Endnote 1 to the NYSE Arca Equities Proprietary Market Data Fees, available here: *https://www.nyse.com/publicdocs/nyse/data/NYSE_Arca_Equities_Proprietary_Data_Fee_Schedule.pdf;* Endnote 1 to the NYSE National Equities Proprietary Market Data Fees, available here: *https://www.nyse.com/publicdocs/nyse/data/NYSE_National_Market_Data_Fee_Schedule.pdf;* Endnote 8 to the Schedule of Market Data Charges for the CTA, available here: *https://www.ctaplan.com/publicdocs/ctaplan/notifications/trader-update/ScheduleOfMarketDataCharges-January1,2015.pdf;* and Non-Display Usage Fees as set forth in the UTP Plan Fee Schedule and Non-Display Policy, available here: *http://utpplan.com/DOC/Datapolicies.pdf. See, e.g.,* Securities Exchange Act Release Nos. 69285 (April 3, 2013), 78 FR 21172 (April 9, 2013) (SR–NYSEMKT–2013–32) and 72020 (September 9, 2014), 79 FR 55040 (September 15, 2014) (SR–NYSEMKT–2014–72).

thereafter until the data recipient has completed and submitted the annual Non-Display Use Declaration.

The proposed Non-Display Use Declaration Late Fee applicable to NYSE American Agg Lite data feed would be set forth in endnote 2 on the Fee Schedule. As proposed, endnote 2 would be amended with the proposed addition of the following new text: ''The Non-Display Declaration Late Fee will apply, beginning in 2025, to NYSE American Aggregated Lite data recipients that fail to complete and submit the annual Non-Display Use Declaration by the January 31st due date, and applies beginning February 1st and for each month thereafter until the data recipient has completed and submitted the annual Non-Display use Declaration.''

In addition, if a data recipient's use of the NYSE American Agg Lite data feed changes at any time after the data recipient submits a Non-Display Use Declaration, the data recipient must inform the Exchange of the change by completing and submitting at the time of the change an updated declaration reflecting the change of use.

7. *Multiple Data Feed Fee.* The Exchange proposes to establish a monthly fee, the ''Multiple Data Feed Fee,'' that would apply to data recipients that take a data feed for a market data product in more than two locations. Data recipients taking the NYSE American Agg Lite data feed in more than two locations would be charged $200 per additional location per month. No new reporting would be required.[12]

8. *Three-Month Fee Waiver.* The Exchange currently provides a one-month free trial to any firm that subscribes to a particular NYSE American market data product for the first time. Under the current one-month trial, a first-time subscriber is not charged the Access Fee, Non-Display Fee, any applicable Professional and Non-Professional User Fee and Redistribution Fee for one calendar month.[13] The Exchange now proposes an additional three-month fee waiver for any Redistributor that subscribes to a particular NYSE American market data product for the first time for external redistribution. As proposed, a first-time Redistributor would be any firm that has not previously subscribed to and externally redistributed a particular NYSE American market data product listed on the Fee Schedule. As proposed, a first-time Redistributor that subscribes to a particular NYSE American market data product would not be charged the Access Fee and the Redistribution Fee for that product for three calendar months. Any other fees, including but not limited to, Non-Display Fee, any applicable Professional and Non-Professional User Fee, and Enterprise Fee would be billable after the first calendar month after a first-time Redistributor subscribes to a particular NYSE American market data product. For example, a first-time Redistributor that chooses to subscribe to NYSE American Agg Lite on July 24, 2024 would not be charged the Access Fee and the Redistribution Fee for the months of August, September, and October 2024. The proposed fee waiver would be for the three calendar months following the date a Redistributor is approved to receive access to the particular NYSE American market data product. The Exchange would provide the three-month fee waiver for each particular product to each Redistributor once.

The Exchange believes that providing a three-month fee waiver to NYSE American market data products listed on the Fee Schedule would enable potential Redistributors to determine whether a particular NYSE American market data product provides value to their business models before fully committing to expend development and implementation costs related to the receipt of that product, and is intended to encourage increased use of the Exchange's market data products by defraying some of the development and implementation costs Redistributors would ordinarily have to expend before using a product. The proposed three-month fee waiver would also provide Redistributors with time to begin onboarding new clients prior to being liable to the Access Fee and the Redistribution Fee, allowing time to choose how to allocate costs and increase revenues to defray costs associated with providing a new feed to its customers.

Application of Proposed Fees

The Exchange is not required to make the NYSE American Agg Lite data feed available or to offer any specific pricing alternatives to any customers, nor is any firm required to purchase the NYSE American Agg Lite data feed. Firms that choose to purchase the NYSE American Agg Lite data feed do so for the primary goals of using it to increase their revenues, reduce their expenses, and in some instances to compete directly with the Exchange (including for order flow). Those firms are able to determine for themselves whether or not the NYSE American Agg Lite data feed or any other similar products are attractively priced.

The Exchange believes the proposed rule change would provide an incentive both for data subscribers to subscribe to NYSE American Agg Lite and for Redistributors to subscribe to the product for purposes of providing external distribution of NYSE American Agg Lite. The Exchange believes that this proposed rule change also has the potential to attract new Redistributors for NYSE American Agg Lite.

The proposed fee structure is not novel as it is based on the fee structure currently in place for the NYSE American OpenBook feed. The Exchange is proposing fees for the NYSE American Agg Lite data feed that are based on the existing fee structure and rates that data recipients already pay for the NYSE American OpenBook feed. Specifically, the fees for the NYSE American OpenBook feed—which like the NYSE American Agg Lite data feed, includes depth of book and security status messages—consist of an Access Fee of $1,000 per month, a Professional User Fee (Per User) of $5 per month, a Non-Professional User Fee (Per User) of $1 per month, Non-Display Fees of $2,000 per month for each of Categories 1, 2 and 3. The Exchange does not currently charge a Redistribution Fee for NYSE American OpenBook. The Exchange also charges a Non-Display Use Declaration Late Fee of $1,000 per month and a Multiple Data Feed Fee of $200 per month for NYSE American OpenBook.[14]

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[15] in general, and Sections 6(b)(4) and 6(b)(5) of the Act,[16] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers.

[12] Data vendors currently report a unique Vendor Account Number for each location at which they provide a data feed to a data recipient. The Exchange considers each Vendor Account Number a location. For example, if a data recipient has five Vendor Account Numbers, representing five locations, for the receipt of the NYSE American Agg Lite data feed, that data recipient will pay the Multiple Data Feed fee with respect to three of the five locations.

[16] 15 U.S.C. 78f(b)(4), (5).

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [17]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

> In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [18]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [19]

More recently, the Commission confirmed that it applies a ''market-based'' test in its assessment of market data fees, and that under that test:

> the Commission considers whether the exchange was subject to significant competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder.[20]

As discussed below, the Exchange believes that its proposed fees are constrained by competitive forces.

As the D.C. Circuit recognized in *NetCoalition I,* ''[n]o one disputes that competition for order flow is fierce.'' [21] The court further noted that ''no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers,'' and that an exchange ''must compete vigorously for order flow to maintain its share of trading volume.'' [22]

As noted above, while Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [23] Indeed, today, equity trading is currently dispersed across 16 exchanges,[24] numerous alternative trading systems,[25] broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 20% market share.[26]

Further, low barriers to entry mean that new exchanges may rapidly and inexpensively enter the market to compete with the Exchange. For example, since 2020, three new ones have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020; [27] Members Exchange (MEMX), which began operations as an exchange on September 29, 2020; [28] and Miami International Holdings (MIAX), which began operations of its first equities exchange on September 29, 2020.[29]

These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others).[30]

For example, one of MEMX's founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering ''[l]ower pricing on market data.'' [31] Nor is this a new phenomenon: exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX ''BATS 2.0.'' [32]

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive

and contestable.[33] And low barriers to entry act as a market check on high prices.[34]

In sum, the fierce competition thus constrains any exchange from pricing its market data at a supracompetitive price and constrains the Exchange in setting its fees at issue here.

More specifically, in setting fees for the NYSE American Agg Lite data feed, the Exchange is constrained by the fact that, if its pricing is unattractive to customers, customers have their pick of an increasing number of alternatives to purchase similar data from instead of purchasing it from the Exchange. The existence of alternatives to the Exchange's data product ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for proprietary market data.

The Exchange notes that the NYSE American Agg Lite is entirely optional. The Exchange is not required to make the NYSE American Agg Lite available to any customers, nor is any customer required to purchase the NYSE American Agg Lite market data feed. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfil regulatory obligations,[35] a customer's decision whether to purchase any of the Exchange's proprietary market data feeds, including the NYSE American Agg Lite, is entirely discretionary. Most firms that choose to subscribe to the proprietary market data feeds from the Exchange, including NYSE American Agg Lite, would do so for the primary goals of using it to increase their revenues, reduce their expenses, and in some instances to compete directly with the Exchange for order flow. Such firms are able to determine for themselves whether the NYSE American Agg Lite data feed is necessary for their business needs, and if so, whether or not it is attractively priced. If the NYSE American Agg Lite data feed does not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the NYSE American Agg Lite data feed.

Further, in the case of products that are also redistributed through market data vendors such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. Vendors may elect not to make NYSE American Agg Lite available to its customers unless their customers request it, and customers will not elect to pay the proposed fees unless NYSE American Agg Lite can provide value by sufficiently increasing revenues or reducing costs in the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

In setting the proposed fees for the NYSE American Agg Lite data feed, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The proposed fees are therefore reasonable because in setting them, the Exchange is constrained by the availability of numerous substitute market data products. The Commission has been clear that substitute products need not be identical, but only substantially similar to the product at hand.[36]

The NYSE American Aggregated Lite market data feed is subject to significant competitive forces that constrain its pricing. Specifically, the NYSE American Agg Lite data feed competes head-to-head with similar market data products currently offered by the four U.S. equities exchanges operated by Cboe Exchange, Inc.—Cboe BZX Exchange, Inc. (''BZX''), Cboe BYX Exchange, Inc. (''BYX''), Cboe EDGA Exchange, Inc. (''EDGA''), and Cboe EDGX Exchange, Inc. (''EDGX''), each of which offers a market data product called BZX Summary Depth, BYX Summary Depth, EDGA Summary Depth and EDGX Summary Depth, respectively (collectively, the ''Cboe Summary Depth'').[37] Similar to Cboe Summary Depth, NYSE American Agg Lite can be utilized by vendors and subscribers to quickly access and distribute aggregated order book data. As noted above, NYSE American Agg Lite, similar to Cboe Summary Depth, would provide aggregated depth per security, including the bid, ask and share quantity for orders received by NYSE American, except unlike Cboe Summary Depth, which provides aggregated depth per security for up to five price levels, NYSE American Agg Lite would provide aggregated depth per security for up to ten price levels on both the bid and offer sides of the NYSE American limit order book as well as auction imbalance data.

The specific fees that the Exchange proposes for the NYSE American Agg Lite data feed are reasonable for the following additional reasons.

Overall. The Exchange believes that the proposed fees for the NYSE American Agg Lite data feed are reasonable because they represent the value of receiving the data on an aggregated basis. The Exchange believes

[33] *United States* v. *SunGard Data Sys.,* 172 F. Supp. 2d 172, 186 (D.D.C. 2001) (recognizing that ''[a]s a matter of law, courts have generally recognized that when a customer can replace the services of an external product with an internally-created system, this captive output (*i.e.* the self-production of all or part of the relevant product) should be included in the same market.''). In *SunGard,* the court rejected the Antitrust Division's attempt to block SunGuard's acquisition of the disaster recovery assets of Comdisco on the basis that the acquisition would ''substantially lessen competition in the market for shared hotsite disaster recovery services,'' when the evidence showed that ''internal hotsites'' created by customers competed with the ''external shared hotsite business'' engaged in by the merging parties. *Id.* at 173–74, 187.

[34] *United States* v. *Baker Hughes,* 908 F.2d 981, 987 (1990) (''In the absence of significant barriers [to entry], a company probably cannot maintain supracompetitive pricing for any length of time.''); *see also* David S. Evans and Richard Schmalensee, Markets with Two-Sided Platforms, in 1 Issues In Competition Law And Policy 667, 685 (ABA Section of Antitrust Law 2008) (noting that exchange mergers in 2005 and 2006 were approved by competition authorities in part in reliance on planned and likely entry of other firms).

[35] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some broker-dealers and ATSs have chosen not to do so.

[36] For example, in the National IF Approval Order, the Commission recognized that for some customers, the best bid and offer information from consolidated data feeds may function as a substitute for the NYSE National Integrated Feed product, which contains order by order information. *See* National IF Approval Order, *supra* note 20, at 67397 [release p. 21] (''[I]nformation provided by NYSE National demonstrates that a number of executing broker-dealers do not subscribe to the NYSE National Integrated Feed and executing broker-dealers can otherwise obtain NYSE National best bid and offer information from the consolidated data feeds.'' (internal quotations omitted)).

[37] *See* BZX Rule 11.22(m) BZX Summary Depth; BYX Rule 11.22(k) BYX Summary Depth; EDGA Rule 13.8(f) EDGA Summary Depth; and EDGX Rule 13.8(f) EDGX Summary Depth. The Cboe Summary Depth offered by BZX, BYX, EDGA and EDGX are each a data feed that offers aggregated two-sided quotations for all displayed orders for up to five (5) price levels and contains the individual last sale information, market status, trading status and trade break messages.

that providing vendors and subscribers with the option to subscribe to a market data product that integrates a subset of data from existing products and where such aggregated data is published at a pre-defined interval, thus lowering bandwidth, infrastructure and operational requirements, would allow vendors and subscribers to choose the best solution for their specific business needs.

The Exchange believes the proposed fees for the NYSE American Agg Lite data feed are also reasonable when compared to fees for comparable products, such as the Cboe Summary Depth.[38] Additionally, the Exchange is proposing fees for the NYSE American Agg Lite data feed that are based on the existing fee structure that data recipients already pay for the NYSE American's other market data products. The Exchange believes that adopting the same fee structure would reduce administrative burdens on NYSE American data subscribers that also currently subscribe to market data feeds from NYSE American.

Access Fee. The Exchange believes that the proposed monthly Access Fee of $500 for the NYSE American Aggregated Lite data feed is reasonable because it is lower than the fees charged by BZX, BYX, EDGA, and EDGX, each of which charges between $2,500 per month to $5,000 per month for both Internal Distribution and External Distribution of the Cboe Summary Depth market data product.[39]

User Fees. The Exchange believes that having separate Professional and Non-Professional User fees for the NYSE American Agg Lite data feed is reasonable because it will make the product more affordable and result in greater availability to Professional and Non-Professional Users. Not charging a Non-Professional User fee is reasonable because it provides a cost-effective method for Non-Professional Users to access the NYSE American Agg Lite data feed by providing the same data that is available to Professional Users. The proposed monthly Professional User Fee (Per User) of $1 and monthly Non-Professional User Fee (Per User) of $0 are reasonable because they are comparable to user fees generally charged by exchanges. For example, NYSE American charges a monthly Professional User Fee (Per User) of $5 and a monthly Non-Professional User Fee (Per User) of $1 for the NYSE American OpenBook feed.[40] Although the proposed User Fees for Professional and Non-Professional Users are higher than those charged by BZX, BYX, EDGA and EDGX, the Exchange notes that User fees are only a subset of the total fees that vendors and subscribers pay and the lower fees proposed to access and redistribute NYSE American Agg Lite would provide such market data recipients with a more affordable alternative to existing substitutes offered by the Exchange and its competitors.

Redistribution Fees. The Exchange believes that it is reasonable to charge redistribution fees because vendors receive value from redistributing the data in their business products for their customers. The Exchange believes that charging a Redistribution Fee is reasonable because the vendors that would be charged such a fee profit by re-transmitting the Exchange's market data to their customers. This fee would be charged only once per month to each vendor account that redistributes the NYSE American Agg Lite data feed, regardless of the number of customers to which that vendor redistributes the data. The Exchange believes the proposed monthly Redistribution Fee of $250 for the NYSE American Agg Lite data feed is reasonable because it is nominal and lower than the fees charged by BZX, BYX, EDGA and EDGX, each of which charges considerably more for both Internal Distribution and External Distribution of the Cboe Summary Depth market data feed.[41]

Enterprise Fees. The Exchange believes the proposed enterprise license is reasonable because it would reduce exchange fees, lower administrative costs for subscribers that are broker-dealers and help expand the availability of market information to investors, and thereby increase participation in financial markets. Subscribers that are broker-dealers would be able to disseminate the NYSE American Agg Lite data feed for display usage to an unlimited number of professional users and non-professional users for a monthly fee of $550, or $500 if they contract for twelve months of service in advance. The proposed enterprise license would result in lower fees for subscribers able to reach the largest audience of investors, including retail investors. Discounts for broader dissemination of market data information have routinely been adopted by exchanges and permitted by the Commission as equitable allocations of reasonable dues, fees and charges.[42]

Non-Display Use Fees. The Exchange believes that the proposed Non-Display Use fees reflect the value of the non-display data use to data recipients, which purchase such data on an entirely voluntary basis. Non-display data can be used by data recipients for a wide variety of uses, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms. Non-display data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce a recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting recipients. The Exchange believes that charging for non-trading uses is reasonable because data recipients can derive substantial value from such uses, for example, by automating tasks so that they can be performed more quickly and accurately and less expensively than if they were performed manually.

Previously, the non-display use data pricing policies of many exchanges required customers to count, and the exchanges to audit the count of, the number of non-display devices used by a customer. As non-display use grew more prevalent and varied, however, exchanges received an increasing number of complaints about the impracticality and administrative burden associated with that approach. In response, the Exchange and its affiliated exchanges developed a non-display use pricing structure that does not require non-display devices to be counted or those counts to be audited, and instead looks merely at the three following categories of potential use of non-display data: use of the data on the customer's own behalf (Category 1), use on behalf of clients (Category 2), and use to internally match buy and sell orders within an organization (Category 3).

The Exchange believes that it is reasonable to segment the fee for non-display use into these three categories. As noted above, the uses to which customers can put the NYSE American

[38] *See https://cdn.cboe.com/resources/membership/US_Market_Data_Product_Price_List.pdf.*

[39] *Id.*

[40] *See* Fee Schedule.

[41] *See supra,* note 38.

[42] For example, the Commission has permitted pricing discounts for market data under Nasdaq Rules 7023(c) and 7047(b). *See also* Securities Exchange Act Release No. 82182 (November 30, 2017), 82 FR 57627 (December 6, 2017) (SR–NYSE–2017–60) (changing an enterprise fee for NYSE BBO and NYSE Trades).

Agg Lite data feed are numerous and varied, and the Exchange believes that charging separate fees for these separate categories of use is reasonable because it reflects the actual value the customer derives from the data, based upon how many categories of use the customer makes of the data. Segmenting the fees for non-display data in this way avoids the unreasonable result of customers that make only limited non-display use of the data paying the same fees as customers that use the data for numerous different purposes.

The Exchange believes that the proposed fees of $1,000 per month for each of Categories 1, 2, and 3 is reasonable. These fees are comparable to non-display use fees generally charged by exchanges. For example, the fees for Non-Display Use of NYSE American OpenBook for Categories 1, 2 and 3 is $2,000 per month.[43] The Exchange believes that the proposed fees directly and appropriately reflect the value of using non-display data in a wide range of computer-automated functions relating to both trading and non-trading activities and that the number and range of these functions continue to grow through innovation and technology developments.

The Exchange believes that it is reasonable to cap non-display use fees for Category 3 at $3,000 per month per data recipient, because a higher monthly fee may potentially dissuade competitors from buying the NYSE American Agg Lite data feed.

The proposed Non-Display Use fees for the NYSE American Agg Lite data feed are also reasonable because they take into account the value of receiving the data for Non-Display Use on an integrated basis. The Exchange believes that the proposed fees directly and appropriately reflect the value of using the NYSE American Agg Lite data feed on a non-display basis in a wide range of computer-automated functions relating to both trading and non-trading activities and that the number and range of these functions continue to grow through innovation and technology developments.[44]

Non-Display Use Declaration Late Fee. The Exchange believes that it is reasonable to require annual submissions of the Non-Display Use Declaration so that the Exchange will have current and accurate information about the use of the NYSE American Agg Lite data feed and can correctly assess fees for the uses of the NYSE American Agg Lite data feed. Requiring annual submissions of such declarations is reasonable because it also allows users to re-assess their own usage each year.

The Exchange believes that it is reasonable to impose a late fee in connection with the submission of the Non-Display Use Declaration. In order to correctly assess fees for the non-display use of the NYSE American Agg Lite data feed, the Exchange needs to have current and accurate information about the use of the NYSE American Agg Lite data feed. The failure of data recipients to submit the Non-Display Use Declaration on time leads to potentially incorrect billing and administrative burdens, including tracking and obtaining late Non-Display Use Declarations and correcting and following up on payments owed in connection with late Non-Display Use Declarations. The purpose of the late fee is to incent data recipients to submit the Non-Display Use Declaration promptly to avoid the administrative burdens associated with the late submission of Non-Display Use Declarations.

Multiple Data Feed Fee. The Exchange believes that it is reasonable to require data recipients to pay a modest fee for taking a data feed for a market data product in more than two locations, because such data recipients can derive substantial value from being able to consume the product in as many locations as they want. In addition, there are administrative burdens associated with tracking each location at which a data recipient receives the product. The Multiple Data Feed Fee is designed to encourage data recipients to better manage their requests for additional data feeds and to monitor their usage of data feeds. The proposed fee is designed to apply to data feeds received in more than two locations so that each data recipient can have one primary and one backup data location before having to pay a multiple data feed fee.

Three-Month Fee Waiver. The Exchange believes the proposal to waive the Access Fee and the Redistribution Fee for the NYSE American Agg Lite data feed to new Redistributors for three calendar months is reasonable because it would enable potential Redistributors to determine whether a particular NYSE American market data product provides value to their business models before fully committing to expend development and implementation costs related to the receipt of that product, and is intended to encourage increased use of the Exchange's market data products by defraying some of the development and implementation costs Redistributors would ordinarily have to expend before using a product. The proposed fee waiver would also allow Redistributors to become familiar with the feed and determine whether it suits their needs without incurring fees. Making a new market data product available without charging a fee for three months is consistent with offerings of other exchanges. For example, BZX offers subscribers of BZX Summary Depth a three-month credit for external distribution, which is akin to the three-month fee waiver proposed by the Exchange.[45]

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE American Agg Lite data feed are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed fees for the NYSE American Agg Lite data feed are allocated fairly and equitably among the various categories of users of the feed, and any differences among categories of users are justified.

Overall. The Exchange believes that the proposed fees are equitably allocated because they will apply to all data recipients that choose to subscribe to the NYSE American Agg Lite data feed. Any subscriber or vendor that chooses to subscribe to the NYSE American Agg Lite data feed is subject to the same Fee Schedule, regardless of what type of business they operate or the use they plan to make of the data feed. Subscribers and vendors are not required to purchase the NYSE American Agg Lite data feed and may choose to receive the data on the NYSE American Agg Lite data feed regardless of what type of business they operate or the use they plan to make of the data feed.

Access Fee. The Exchange believes the proposed monthly Access Fee of $500 for the NYSE American Agg Lite data feed is equitably allocated because it would be charged on an equal basis to all data recipients that receive a data feed of the NYSE American Agg Lite

[43] *See* Fee Schedule.

[44] *See also* Exchange Act Release No. 69157, March 18, 2013, 78 FR 17946, 17949 (March 25, 2013) (SR–CTA/CQ–2013–01) (''[D]ata feeds have become more valuable, as recipients now use them to perform a far larger array of non-display functions. Some firms even base their business models on the incorporation of data feeds into black boxes and application programming interfaces that apply trading algorithms to the data, but that do not require widespread data access by the firm's employees. As a result, these firms pay little for data usage beyond access fees, yet their data access and usage is critical to their businesses.'').

[45] *See e.g.,* Securities Exchange Act Release No. 94432 (March 16, 2022), 87 FR 16277 (March 22, 2022) (SR–CboeBZX–2022–015) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fees Applicable to Various Market Data Products).

data feed, regardless of what type of business they operate or the use they plan to make of the data feed.

User Fees. The Exchange believes that the fee structure differentiating Professional User fees ($1 per month per user) from Non-Professional User fees ($0 per month per user) for display device access to the NYSE American Agg Lite data feed is equitable. This structure has long been used by the Exchange to reduce the price of data to Non-Professional Users and make it more broadly available.[46] Offering the NYSE American Agg Lite data feed to Non-Professional Users with the same data as is available to Professional Users results in greater equity among data recipients. These user fees would be charged uniformly to all display devices that have access to the NYSE American Agg Lite data feed.

Redistribution Fees. The Exchange believes the proposed monthly fee of $250 for redistributing the NYSE American Agg Lite data feed is equitably allocated because it would be charged on an equal basis to those Redistributors that choose to redistribute the feed.

Enterprise Fees. The Exchange believes the proposed enterprise license is equitably allocated because it would be available on an equal basis to all subscribers that are broker-dealers, each of whom would benefit from reduced exchange fees and from lower administrative costs. Moreover, the specific feature of the proposed enterprise license that will allow subscribers to lower fees by subscribing to a twelve-month contract is also an equitable allocation because all subscribers will have the same option of choosing between the stability of a fixed, lower rate, and the more flexible option of maintaining the ability to change market data products after a month of service. Subscribers will be free to move from the monthly to the annual rate at any time, or from annual to a monthly fee, with notice, at the expiration of the twelve-month period.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Use fees are equitably allocated because they would require subscribers to pay fees only for the uses they actually make of the data. As noted above, non-display data can be used by data recipients for a wide variety of purposes (including trading, risk management, and compliance) as well as purposes that reduce the recipient's costs by automating certain functions. The Exchange believes that it is equitable to charge non-display data subscribers a $1,000 fee for each category of use they make of such data—namely, using the data on their own behalf (Category 1), on behalf of their clients (Category 2), and to internally match buy and sell orders within an organization (Category 3)—because this fee structure results in subscribers with greater uses of the data paying higher fees, and subscribers with fewer uses of the data paying lower fees. This segmented fee structure is also equitable because no subscriber of non-display data would be charged a fee for a category of use in which it did not actually engage.

The Exchange believes that it is equitable to cap non-display use fees for Category 3 at $3,000 per month per data recipient, because a higher monthly fee may potentially dissuade competitors from buying the NYSE American Agg Lite data feed.

Non-Display Use Declaration Late Fee. The Exchange believes that the proposed fee of $1,000 per month for a late Non-Display Use Declaration is equitably allocated because it applies to any data recipient that pays an Access Fee for the NYSE American Agg Lite data feed but has failed to complete and submit a Non-Display Use Declaration. In addition, the Exchange believes that it is equitable to charge a late fee to subscribers who fail to timely submit their Non-Display Use Declarations because their failure to do so leads to potentially incorrect billing and administrative burdens on the part of the Exchange. The Exchange believes it is equitable to defray these administrative costs by imposing a late fee only on subscribers' whose declarations were late, as opposed to all subscribers.

Multiple Data Feed Fee. The Exchange believes that the $200 per month per location fee to data recipients taking the NYSE American Agg Lite data feed in more than two locations is equitable because it would apply to all such customers, regardless of what type of business they operate or the use they make of the data feed. In addition, the Exchange believes that it is equitable to charge a fee to subscribers for taking a data feed in more than two locations because there are administrative burdens on the part of the Exchange associated with tracking each location at which a data recipient receives the product. The Exchange believes that it is equitable for it to defray these administrative costs by imposing a modest fee only on subscribers who seek to take the feed in more than two locations, as opposed to all subscribers.

Three-Month Fee Waiver. The Exchange believes the proposal to waive the Access Fee and the Redistribution Fee for the NYSE American Agg Lite data feed to new Redistributors for three calendar months is equitable because it would apply to any first-time Redistributor, regardless of the use they plan to make of the feed. As proposed, any first-time Redistributor of the NYSE American Agg Lite data feed would not be charged the Access Fee and the Redistribution Fee for three calendar months. The Exchange believes it is equitable to restrict the availability of this three-month fee waiver to Redistributors that have not previously subscribed to and redistributed the NYSE American Agg Lite data feed, since customers who are current or previous subscribers of the feed are already familiar with it and are able to determine whether it suits their needs.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE American Agg Lite data feed are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees for the NYSE American Agg Lite data feed are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers.

Overall. The Exchange believes that the proposed fees are not unfairly discriminatory because they would apply to all data recipients that choose to subscribe to the NYSE American Agg Lite data feed. Any subscriber, including Redistributor, that chooses to subscribe to the NYSE American Agg Lite data feed is subject to the same Fee Schedule, regardless of what type of business they operate or the use they plan to make of the data feed. Subscribers, including Redistributors, may choose to receive the data on the NYSE American Agg Lite data feed regardless of what type of business they operate or the use they plan to make of the data feed.

Access Fee. The Exchange believes the proposed monthly Access Fee of $500 for the NYSE American Agg Lite data feed is not unfairly discriminatory because it would be charged on an equal basis to all data recipients that receive a data feed of the NYSE American Agg Lite, regardless of what type of business

[46] *See, e.g.,* Securities Exchange Act Release No. 70212 (August 15, 2013), 78 FR 51775 (August 21, 2013) (SR–NYSEMKT–2013–69) (lowering the Non-Professional User Fee (Per User) for NYSE MKT BBO and Trades); Securities Exchange Act Release No. 20002, File No. S7–433 (July 22, 1983), 48 FR 34552 (July 29, 1983) (establishing Non-Professional fees for CTA data); NASDAQ BX Equity 7 Pricing Schedule, Section 123.

they operate or the use they plan to make of the data feed.

User Fees. The Exchange believes that the fee structure differentiating Professional User fees ($1 per month per user) from Non-Professional User fees ($0 per month per user) for display device access to the NYSE American Agg Lite data feed is not unfairly discriminatory. This structure has long been used by the Exchange to reduce the price of data to Non-Professional Users and make it more broadly available.[47] Offering the NYSE American Agg Lite data feed to Non-Professional Users with the same data as is available to Professional Users results in greater equity among data recipients. These user fees would be charged uniformly to all display devices that have access to the NYSE American Agg Lite data feed.

Redistribution Fees. The Exchange believes the proposed monthly fee of $250 for redistributing the NYSE American Agg Lite data feed is not unfairly discriminatory because it would be charged on an equal basis to those Redistributors that choose to redistribute the feed.

Enterprise Fees. The Exchange believes the proposed enterprise license will not unfairly discriminate between customers, issuers, brokers or dealers. The Act does not prohibit all distinctions among customers, but only discrimination that is unfair, and it is not unfair discrimination to charge those subscribers that are able to reach the largest audiences of investors, including retail investors, a lower fee for incremental investors in order to encourage the widespread distribution of market data. This principle has been repeatedly endorsed by the Commission, as evidenced by the approval of enterprise licenses for other market data products.[48] Moreover, the proposed enterprise license will be subject to significant competition, and that competition will ensure that there is no unfair discrimination. Each subscriber will be able to accept or reject the license depending on whether it will or will not lower costs for that particular subscriber, and, if the license is not sufficiently competitive, the Exchange may lose market share. The proposed enterprise license will compete with other enterprise licenses of the Exchange, underlying fee schedules promulgated by the Exchange, and enterprise licenses and fee structures implemented by other exchanges. As such, it is a voluntary product for which market participants can readily find substitutes. Accordingly, the Exchange is constrained from introducing a fee that would be inequitable or unfairly discriminatory.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Use fees are not unfairly discriminatory because they would require subscribers for non-display use to pay fees only for the categories of use they actually make of the data. As noted above, non-display data can be used by data recipients for a wide variety of purposes (including trading, risk management, and compliance) as well as purposes that reduce the recipient's costs by automating certain functions. The Exchange believes that it is not unfairly discriminatory to charge non-display data subscribers a $1,000 per month fee for each category of use they make of such data—namely, using the data on their own behalf (Category 1), on behalf of their clients (Category 2), and to internally match buy and sell orders within an organization (Category 3)—because this fee structure results in subscribers with greater uses for the data paying higher fees, while subscribers with fewer uses of the data pay lower fees. This segmented fee structure is not unfairly discriminatory because no subscriber of non-display data would be charged a fee for a category of use in which it did not actually engage.

The Exchange believes that it is not unreasonably discriminatory to cap non-display use fees for Category 3 at $3,000 per month per data recipient, because a higher monthly fee may potentially dissuade competitors from buying the NYSE American Agg Lite data feed.

Non-Display Use Declaration Late Fee. The Exchange believes that the proposed fee of $1,000 per month for a late Non-Display Use Declaration is not unfairly discriminatory because it applies to any data recipient that pays an Access Fee for the NYSE American Agg Lite data feed but has failed to complete and submit a Non-Display Use Declaration. In addition, the Exchange believes that it is not unfairly discriminatory to charge a late fee to subscribers who fail to timely submit their Non-Display Use Declarations because their failure to do so leads to potentially incorrect billing and administrative burdens on the part of the Exchange. Nor is it unfairly discriminatory for the Exchange to defray these administrative costs by imposing a late fee only on subscribers' whose declarations were late, as opposed to all subscribers.

Multiple Data Feed Fee. The Exchange believes that the $200 per month per location fee to data recipients taking the NYSE American Agg Lite data feed in more than two locations is not unfairly discriminatory because it would apply to all such customers, regardless of what type of business they operate or the use they make of the data feed. In addition, the Exchange believes that it is not unfairly discriminatory to charge a fee to subscribers for taking a data feed in more than two locations because there are administrative burdens on the part of the Exchange associated with tracking each location at which a data recipient receives the product. The Exchange believes that it is not unfairly discriminatory for it to defray these administrative costs by imposing a modest fee only on subscribers who seek to take the feed in more than two locations, as opposed to all subscribers.

Three-Month Fee Waiver. The Exchange believes the proposal to waive the Access Fee and the Redistribution Fee for the NYSE American Agg Lite data feed to new Redistributors for three months is not unfairly discriminatory because it would apply to any first-time Redistributor, regardless of the use they plan to make of the feed. As proposed, any first-time Redistributor of the NYSE American Agg Lite data feed would not be charged the Access Fee and the Redistribution Fee for three calendar months. The Exchange believes it is not unfairly discriminatory to restrict the availability of this three-month fee waiver to Redistributors that have not previously subscribed to the NYSE American Agg Lite data feed, since Redistributors who are current or previous subscribers of the feed are already familiar with it and are able to determine whether it suits their needs.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE American Agg Lite data feed are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed fees will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the proposed fees would apply to all subscribers, including Redistributors,

[47] *Id.*

[48] *See e.g.,* Securities Exchange Act Release No. 83751 (July 31, 2018), 83 FR 38428 (August 6, 2018) (SR–NASDAQ–2018–058) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower Fees and Administrative Costs for Distributors of Nasdaq Basic, Nasdaq Last Sale, NLS Plus and the Nasdaq Depth-of-Book Products Through a Consolidated Enterprise License).

of the NYSE American Agg Lite data feed, and customers may not only choose whether to subscribe to the feed at all, but also may tailor their subscription to include only the products offered by the Exchange that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition. As shown above, to the extent that particular proposed fees apply to only a subset of subscribers (*e.g.,* Category 2 fees apply only to those making non-display use on behalf of clients; late fees apply only to customers who fail to timely submit their declarations), those distinctions are not unfairly discriminatory and do not unfairly burden one set of customers over another. To the contrary, by tailoring the proposed fees in this manner, the Exchange believes that it has eliminated the potential burden on competition that might result from unfairly asking subscribers to pay fees for services they did not use, or late fees they did not actually incur.

Intermarket Competition. The Exchange believes that the proposed fees do not impose a burden on competition or on other SROs that is not necessary or appropriate. In setting the proposed fees, the Exchange is constrained by the availability of numerous substitute platforms also offering market data products, and low barriers to entry mean new exchanges are frequently introduced. In setting fees for the NYSE American Agg Lite data feed, the Exchange is constrained by the fact that if its pricing for the NYSE American Agg Lite data feed is unattractive to customers, customers will have their pick of an increasing number of alternative market data products to purchase instead of purchasing the Exchange's products.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Many other exchanges offer proprietary data feeds like the NYSE American Agg Lite data feed, supplying depth of book order data, security status updates, stock summary messages, and the exchange's best bid and offer at any given time, on a real-time basis. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may purchase another market's market data product. These competitive pressures ensure that no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A)[49] of the Act and paragraph (f) thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSEAMER–2024–44 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEAMER–2024–44. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSEAMER–2024–44 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[50]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100603; File No. SR–NYSE–2024–39]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend the NYSE Proprietary Market Data Fee Schedule To Establish an Access Fee for the NYSE Pillar Depth Data Feed

July 25, 2024.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on July 11, 2024, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend the NYSE Proprietary Market Data Fee Schedule to establish an Access Fee for the NYSE Pillar Depth data feed. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the NYSE Proprietary Market Data Fee Schedule (''Fee Schedule''). Specifically, the Exchange proposes to establish an Access Fee for the NYSE Pillar Depth (''Pillar Depth'') data feed, effective July 11, 2024.[4]

The proposed fee for Pillar Depth would be $250 per month, provided that the market data recipient separately pays the applicable fees for the five existing market data products underlying the Pillar Depth data feed, consistent with the existing fee structures for those market data products.

The Pillar Depth data feed is a frequency-based depth of book market data feed that provides a consolidated view of the ten (10) best price levels on both the bid and offer sides across the NYSE Group's combined limit order books for securities traded on the NYSE Group equities markets, *i.e.,* NYSE, NYSE American LLC (''NYSE American''), NYSE Arca, Inc. (''NYSE Arca''), NYSE Chicago, Inc. (''NYSE Chicago'') and NYSE National, Inc. (''NYSE National''), for which the NYSE Group equities markets report quotes and trades under the Consolidated Tape Association (''CTA'') Plan or the Nasdaq/UTP Plan.[5] In other words, Pillar Depth would be a compilation of limit order data that the Exchange provides to vendors and subscribers, updated no less frequently than once per second. Specifically, the Pillar Depth data feed consists of certain data elements from five market data feeds[6]—NYSE Aggregated Lite,[7] NYSE American Aggregated Lite,[8] NYSE Arca Aggregated Lite,[9] NYSE Chicago Aggregated Lite[10] and NYSE National Aggregated Lite.[11]

The Exchange, NYSE American, NYSE Arca, NYSE Chicago and NYSE National are the exclusive distributors of the five Aggregated Lite feeds from which certain data elements are taken to create the Pillar Depth data feed. By contrast, the Exchange would not be the exclusive distributor of the aggregated and consolidated information that comprises the Pillar Depth data feed. Any entity that receives, or elects to receive, the five underlying Aggregated Lite data feeds would be able, if it so chooses, to create a data feed with the same information included in Pillar Depth and sell and distribute it to its clients so that it could be received by those clients as quickly as the Pillar Depth data feed would be received by those same clients.[12]

As proposed, the Exchange would charge a $250 per month Access Fee for Pillar Depth, which reflects the value of the aggregation and consolidation function that the Exchange performs in creating Pillar Depth. To obtain Pillar Depth, a market data recipient would need to pay any applicable fees for the five data feeds underlying Pillar Depth, consistent with the existing fee schedules for those market data products as previously filed with the Commission and which may be amended from time to time, including any applicable Access, Redistribution, Professional User, Non-Professional User, Non-Display or Enterprise fees. The Exchange proposes to denote the requirement for market data recipients to pay the applicable fees for the five data feeds underlying Pillar Depth in proposed footnote 3 on the Fee Schedule.

When subscribing to Pillar Depth, the underlying data feeds would be delivered in the Pillar Depth consolidated format, as described above, but charged for as if the recipient were receiving the underlying feeds directly. The Exchange notes that if a subscriber chooses to receive the five underlying feeds both separately and in the Pillar Depth format, such subscriber may be subject to additional Professional User or Non-Professional User fees to reflect the distribution of both Pillar Depth (which incorporates the five underlying data feeds) and any separate dissemination of the underlying data feeds. The Exchange believes that the proposed fees for Pillar Depth would not be lower than the cost to a vendor of creating a comparable product, including the cost of receiving the underlying data feeds.

The Exchange notes that another market participant seeking to distribute a competing product to Pillar Depth might engage in a different analysis of assessing the cost of a competing product, which may incorporate passing through fees associated with co-location at the Mahwah, New Jersey data center. However, the incremental co-location cost to a particular vendor might be inconsequential if such vendor is already co-located and is able to allocate its co-location costs over numerous product and customer relationships.

[4] The Exchange originally filed to amend the Fee Schedule on May 13, 2024 (SR–NYSE–2024–30). SR–NYSE–2024–30 was subsequently withdrawn and replaced by this filing.

[6] Each of these data feeds are offered pursuant to preexisting and effective rules and fees filed with the Commission. This filing does not affect those rules, or the fees associated with these underlying data feeds or the ability for the Exchange, NYSE American, NYSE Arca, NYSE Chicago or NYSE National to amend the data feeds or fees associated with those data feeds pursuant to a separate rule filing.

[12] *See* Pillar Depth Product Filing, *supra* note 5.

The Exchange therefore believes that a vendor could create and offer a product similar to Pillar Depth on a cost-competitive basis.

The proposed rule change is intended to encourage market participants to subscribe to Pillar Depth by making it more affordable for prospective customers. The proposed fee change would allow the Exchange to compete more effectively with the Cboe One Premium Feed, which as described below, is a comparable market data offering to Pillar Depth.

The Exchange notes that the proposed change is not otherwise intended to address any other issues, and the Exchange is not aware of any problems that member organizations or others would have in complying with the proposed rule change.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[13] in general, and Sections 6(b)(4) and 6(b)(5) of the Act,[14] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers. The Exchange also believes that the proposed rule change is consistent with Section 11(A) of the Act [15] in that it is consistent with (i) fair competition among brokers and dealers, among exchange markets, and between exchange markets and markets other than exchange markets; and (ii) the availability to brokers, dealers, and investors of information with respect to quotations for and transactions in securities. Furthermore, the proposed rule change is consistent with Rule 603 of Regulation NMS,[16] which provides that any national securities exchange that distributes information with respect to quotations for or transactions in an NMS stock do so on terms that are not unreasonably discriminatory.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [17]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

> In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [18]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [19]

More recently, the Commission confirmed that it applies a ''market-based'' test in its assessment of market data fees, and that under that test:

> the Commission considers whether the exchange was subject to significant competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder.[20]

As discussed below, the Exchange believes that its proposed fees are constrained by competitive forces.

As the D.C. Circuit recognized in *NetCoalition I,* ''[n]o one disputes that competition for order flow is fierce.'' [21] The court further noted that ''no exchange possesses a monopoly, regulatory or otherwise, in the execution of order flow from broker dealers,'' and that an exchange ''must compete vigorously for order flow to maintain its share of trading volume.'' [22]

As noted above, while Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [23] Indeed, today, equity trading is currently dispersed across 16 exchanges,[24] numerous alternative trading systems,[25] broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 20% market share.[26]

Further, low barriers to entry mean that new exchanges may rapidly and inexpensively enter the market to compete with the Exchange. For example, since 2020, three new ones have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020; [27] Members Exchange (MEMX), which began operations as an exchange on September 29, 2020; [28] and Miami International Holdings (MIAX), which

[28] As of October 29, 2020, MEMX is trading all NMS symbols. *See https://info.memxtrading.com/trader-alert-20-10-memx-trading-symbols-update/.*

began operations of its first equities exchange on September 29, 2020.[29]

These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others).[30]

For example, one of MEMX's founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering ''[l]ower pricing on market data.'' [31] Nor is this a new phenomenon: exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX ''BATS 2.0.'' [32]

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive and contestable.[33] And low barriers to entry act as a market check on high prices.[34]

In sum, the fierce competition thus constrains any exchange from pricing its market data at a supracompetitive price and constrains the Exchange in setting its fees at issue here.

More specifically, in setting fees for the Pillar Depth data feed, the Exchange is constrained by the fact that, if its pricing is unattractive to customers, customers have their pick of an increasing number of alternatives to purchase similar data from instead of purchasing it from the Exchange. The existence of alternatives to the Exchange's data product ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for proprietary market data.

More specifically, the Exchange believes that the proposed $250 per month Access Fee for Pillar Depth is reasonable because it represents the value for the data aggregation and consolidation function that the Exchange performs. The Exchange further believes that requiring market data recipients to separately pay for the five underlying data feeds to Pillar Depth is reasonable because by design, Pillar Depth represents an aggregated and consolidated version of those existing five data feeds. The Exchange notes that it is not seeking with this filing to establish fees relating to the underlying five Aggregated Lite data feeds, as those fees have been established consistent with Section 19(b)(3)(A) of the Act [35] and Rule 19b–4(f)(2) [36] thereunder, and which may be amended from time to time. However, the Exchange believes it would be unfair if it did not require Pillar Depth data feed recipients to separately pay for those five feeds because otherwise, Pillar Depth data feed recipients would be receiving a data product that includes such underlying data at a lower cost than separately subscribing to the underlying data feeds. Similarly, the Exchange believes that it would be reasonable to charge separate Professional User or Non-Professional User fees if a market data recipient chooses to receive both Pillar Depth and a separate dissemination of the five underlying data feeds in a non-consolidated form. The Exchange believes that such delivery would constitute two separate uses of the underlying data feeds and thus should be charged accordingly, consistent with the existing fee schedule for those market data products. The Exchange therefore believes that the proposed fee structure for Pillar Depth would not be lower than the cost to another party to create a comparable product, including the cost of receiving the underlying data feeds.

The Exchange notes that its proposed fee structure is similar to the fee structure for the NYSE BQT data feed.[37] The NYSE BQT data feed provides best bid and offer (''BBO'') and last sale information (''Trades'') for the Exchange and its affiliates, NYSE Arca, NYSE American, NYSE Chicago and NYSE National. NYSE BQT consists of certain data elements from ten market data feeds—NYSE Trades, NYSE BBO, NYSE Arca Trades, NYSE Arca BBO, NYSE American Trades, NYSE American BBO, NYSE Chicago Trades, NYSE Chicago BBO, NYSE National Trades and NYSE National BBO.[38] To receive NYSE BQT, a market data recipient must pay the applicable fee for the ten data feeds underlying NYSE BQT, and an Access Fee of $250 per month.[39]

The Exchange notes that Pillar Depth is entirely optional. The Exchange is not required to make Pillar Depth available

Supp. 2d 172, 186 (D.D.C. 2001) (recognizing that ''[a]s a matter of law, courts have generally recognized that when a customer can replace the services of an external product with an internally-created system, this captive output (*i.e.* the self-production of all or part of the relevant product) should be included in the same market.''). In *SunGard,* the court rejected the Antitrust Division's attempt to block SunGuard's acquisition of the disaster recovery assets of Comdisco on the basis that the acquisition would ''substantially lessen competition in the market for shared hotsite disaster recovery services,'' when the evidence showed that ''internal hotsites'' created by customers competed with the ''external shared hotsite business'' engaged in by the merging parties. *Id.* at 173–74, 187.

to any customers, nor is any customer required to purchase the Pillar Depth data feed. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfil regulatory obligations,[40] a customer's decision whether to purchase any of the Exchange's proprietary market data feed, including Pillar Depth, is entirely discretionary. Most firms that choose to subscribe to proprietary market data feeds from the Exchange, including Pillar Depth, would do so for the primary goals of using it to increase their revenues, reduce their expenses, and in some instances compete directly with the Exchange's order flow. Such firms are able to determine for themselves whether Pillar Depth is necessary for their business needs, and if so, whether or not it is attractively priced. If Pillar Depth does not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use Pillar Depth.

Further, in the case of products that are also redistributed through market data vendors such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. Vendors may elect not to make Pillar Depth available to its customers unless their customers request it, and customers will not elect to pay the proposed fees unless Pillar Depth can provide value by sufficiently increasing revenues or reducing costs in the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

In setting the proposed fees for Pillar Depth, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The proposed fees are therefore reasonable because in setting them, the Exchange is constrained by the availability of numerous substitute market data products. The Commission has been clear that such substitutes need not be identical, but only substantially similar to the product at hand.[41]

The four U.S. equities exchanges operated by Cboe Exchange, Inc.—Cboe BZX Exchange, Inc. (''BZX''), Cboe BYX Exchange, Inc. (''BYX''), Cboe EDGA Exchange, Inc. (''EDGA''), and Cboe EDGX Exchange, Inc. (''EDGX''), currently offer a market data product called the Cboe One Premium Feed,[42] which competes with the Pillar Depth data feed. Similar to the Cboe One Premium Feed, Pillar Depth can be utilized by vendors and subscribers to quickly access and distribute aggregated order book data. As noted above, Pillar Depth, similar to Cboe One Premium Feed, would provide aggregated depth per security, including the bid, ask and share quantity for orders received by the NYSE Group markets. The Exchange believes that Pillar Depth will offer a competitive alternative to the Cboe One Premium Feed.[43]

The fees that are the subject of this rule filing are constrained by competition. As explained below in the Exchange's Statement on Burden on Competition, the existence of alternatives to these data products further ensures that the Exchange cannot set unreasonable fees, or fees that are unreasonably discriminatory, when vendors and subscribers can elect such alternatives. That is, the Exchange competes with other exchanges (and their affiliates) that provide similar market data products. If another exchange (or its affiliate) were to charge less to consolidate and distribute its similar product than the Exchange charges to consolidate and distribute Pillar Depth, prospective users likely would not subscribe to, or would cease subscribing to, Pillar Depth. In addition, the Exchange would compete with unaffiliated market data vendors who would be in a position to consolidate and distribute the same data that comprises the Pillar Depth data feed into the vendor's own comparable market data product. If the third-party vendor is able to provide the exact same data for a lower cost, prospective users would avail themselves of that lower cost and elect not to take Pillar Depth.

The Proposed Fees Are Equitably Allocated and Are Not Unfairly Discriminatory

The Exchange believes that the proposed fee is equitable and non-discriminatory in that it would apply uniformly to all recipients of Exchange data. The Exchange also believes the proposed fee is competitive with those charged by other venues and, therefore, reasonable and equitably allocated to recipients. The Exchange also notes that the proposed fee is not designed to permit unfair discrimination because all market data recipients that subscribe to Pillar Depth would be charged the same fee. The Exchange further believes that the proposed Pillar Depth fee structure is equitable and not unfairly discriminatory because all vendors and subscribers that elect to purchase Pillar Depth would be charged the same fees. In addition, vendors and subscribers that do not wish to purchase Pillar Depth may separately purchase the five individual underlying products, and if they so choose, perform a similar aggregation and consolidation function that the Exchange performs in creating Pillar Depth. To enable such competition, the Exchange is offering Pillar Depth on terms that a subscriber of those five feeds could offer a competing product if it so chooses.

For these reasons, the Exchange believes that the proposed fees are reasonable, equitable, and not unfairly discriminatory.

[40] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some broker-dealers and ATSs have chosen not to do so.

[41] For example, in the National IF Approval Order, the Commission recognized that for some customers, the best bid and offer information from consolidated data feeds may function as a substitute for the NYSE National Integrated Feed product, which contains order by order information. *See* National IF Approval Order, *supra* note 20, at 67397 [release p. 21] (''[I]nformation provided by NYSE National demonstrates that a number of executing broker-dealers do not subscribe to the NYSE National Integrated Feed and executing broker-dealers can otherwise obtain NYSE National best bid and offer information from the consolidated data feeds.'' (internal quotations omitted)).

[42] *See* BZX Rule 11.22(j); BYX Rule 11.22(i); EDGA Rule 13.8(b); and EDGX Rule 13.8(b). The Cboe One Feed offered by BZX, BYX, EDGA and EDGX is a data feed that contains the aggregate best bid and offer of all displayed orders for securities traded on the Cboe exchanges. The Cboe One Feed also contains the individual last sale information, consolidated volume, the primary listing market's official opening and closing price, and the current day consolidated high and low price for all listed equity securities. Cboe One Feed recipients may also elect to receive aggregated two-sided quotations from the Cboe exchanges for five (5) price levels (''Cboe One Premium Feed'').

[43] Fees for the Cboe One Premium Feed are available at *https://www.cboe.com/market_data_services/us/equities/cboe_one/.*

B. Self-Regulatory Organization's Statement on Burden on Competition

In accordance with Section 6(b)(8) [44] of the Act, the Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. As noted above, the Pillar Depth data feed represents aggregated and consolidated information from five existing market data feeds. Although the Exchange, NYSE American, NYSE Arca, NYSE Chicago and NYSE National are the exclusive distributors of the five Aggregated Lite data feeds from which certain data elements are taken to create Pillar Depth, the Exchange may not be the exclusive distributor of the aggregated and consolidated information that comprises the Pillar Depth data feed. Any other market participant recipient of the five Aggregated Lite feeds would be able, if it chose, to create a data feed with the same information as Pillar Depth and distribute it to their clients on a level-playing field with respect to latency and cost as compared to the Exchange's product.[45]

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participant at a relative disadvantage compared to other market participant. As noted above, the proposed fees would apply equally to all subscribers of Pillar Depth, and subscribers may not only choose whether to subscribe to Pillar Depth at all, but also may tailor their subscription to include only the products offered by the Exchange that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition.

Intermarket Competition. The Exchange believes that the proposed monthly Access Fee the Exchange proposes to charge subscribers for Pillar Depth would be pro-competitive because another market data recipient could perform a similar aggregating and consolidating function and similarly charge for such service. The Exchange notes that a competing vendor might engage in a different analysis of assessing the cost of a competing product, which may incorporate passing through fees associated with co-location at the Mahwah, New Jersey data center. However, the incremental co-location costs to a particular vendor may be inconsequential if such vendor is already co-located and is able to allocate its co-location costs over numerous product and customer relationships. The Exchange therefore believes that a competing vendor could create and offer a product similar to the Pillar Depth data feed at a similar cost. For these reasons, the Exchange believes that vendors could readily offer a product similar to Pillar Depth on a competitive basis.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Specifically, as described above, Pillar Depth would compete with the Cboe One Premium Feed.[46] These products each serve as reasonable substitutes for one another as they are each designed to provide investors with a unified view of quotes in all Tape A, B, and C securities. Each product provides subscribers with aggregated and consolidated quotes from multiple U.S. equities markets. Pillar Depth provides depth of book data from five NYSE-affiliated U.S. equities exchanges, while Cboe One Premium Feed similarly provides depth of book data from Cboe's four U.S. equities exchanges. Pillar Depth and Cboe One Premium Feed are intended to provide indicative pricing and therefore, are reasonable substitutes for one another. Additionally, market data vendors are also able to offer close substitutes to Pillar Depth. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may substitute another source of market data information for its own. These competitive pressures ensure that no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

As such, in establishing the proposed fees, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish fair, reasonable, and not unreasonably discriminatory fees and an equitable allocation of fees among all users. The existence of alternatives to Pillar Depth, including the five underlying feeds, consolidated data, and proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees, or fees that are unreasonably discriminatory, when vendors and subscribers can elect these alternatives or choose not to purchase a specific proprietary data product if its cost to purchase is not justified by the returns any particular vendor or subscriber would achieve through the purchase.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A) [47] of the Act and paragraph (f) thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSE–2024–39 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSE–2024–39. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the

[44] 78 U.S.C. 78f(b)(8).

[45] *See* Pillar Depth Product Filing, *supra* note 5.

[46] *See supra,* note 42.

[47] 15 U.S.C. 78s(b)(3)(A).

submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSE–2024–39 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[48]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100602; File No. SR–NYSE–2024–38]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for the NYSE Aggregated Lite Data Feed

July 25, 2024.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that on July 11, 2024, New York Stock Exchange LLC (''NYSE'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for the NYSE Aggregated Lite data feed. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to amend the NYSE Proprietary Market Data Fees Schedule (''Fee Schedule'') and establish fees for the NYSE Aggregated Lite (''NYSE Agg Lite'') data feed,[4] effective July 11, 2024.[5]

In summary, the NYSE Agg Lite is a NYSE-only frequency-based depth of book market data feed of the NYSE's limit order book for up to ten (10) price levels on both the bid and offer sides of the order book for securities traded on the Exchange and for which the Exchange reports quotes and trades under the Consolidated Tape Association (''CTA'') Plan or the Nasdaq/UTP Plan. The NYSE Agg Lite is a compilation of limit order data that the Exchange provides to vendors and subscribers. The NYSE Agg Lite includes depth of book order data as well as security status messages. The security status message informs subscribers of changes in the status of a specific security, such as trading halts, short sale restriction, etc. In addition, the NYSE Agg Lite includes order imbalance information prior to the opening and closing of trading.

Background

The Exchange operates in a highly competitive market. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. In Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues and, also, recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.''[6]

While Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.''[7] Indeed, cash equity trading is currently dispersed across 16 exchanges,[8] numerous alternative trading systems,[9] and broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 20% market share (whether including or excluding auction volume).[10]

Proposed NYSE Agg Lite Data Feed Fees

To reflect the value of NYSE's market data, the Exchange proposes to establish the fees listed below for the NYSE Agg Lite data feed. The Exchange proposes

to charge fees for the same categories of market data use as its affiliated exchanges (namely, NYSE Arca, NYSE American and NYSE National) currently charge. The Exchange believes that adopting the same fee structure as its affiliated exchanges would reduce administrative burdens on market data subscribers that also currently subscribe to market data feeds from the Exchange's affiliates.

1. *Access Fee.* For the receipt of access to the NYSE Agg Lite data feed, the Exchange proposes to charge $3,000 per month. This proposed Access Fee would be charged to any data recipient that receives the NYSE Agg Lite data feed. Data recipients that only use display devices to view NYSE Agg Lite market data and do not separately receive a data feed would not be charged an Access Fee. The proposed Access Fee would be charged only once per firm.

2. *User Fees.* The Exchange proposes to charge a Professional User Fee (Per User) of $35 per month and a Non-Professional User Fee (Per User) of $6 per month. These user fees would apply to each display device that has access to the NYSE Agg Lite data feed.

3. *Redistribution Fee.* For redistribution of the NYSE Agg Lite data feed, the Exchange proposes to establish a fee of $250 per month. The proposed Redistribution Fee would be charged to any Redistributor of the NYSE Agg Lite data feed, which is defined to mean a vendor or any person that provides a real-time NYSE market data product externally to a data recipient that is not its affiliate or wholly-owned subsidiary, or to any system that an external data recipient uses, irrespective of the means of transmission or access. The proposed Redistribution Fee would be charged only once per Redistributor account. As an incentive to potential Redistributors to subscribe to the NYSE Agg Lite data feed, the Exchange proposes to waive the Access Fee and Redistribution Fee for a Redistributor if the Redistributor provides NYSE Agg Lite externally to at least one data feed recipient and reports such data feed recipient or recipients to the Exchange. For example, a Redistributor that subscribes to the NYSE Agg Lite data feed will have the Access Fee and Redistribution Fee waived if such Redistributor provides NYSE Agg Lite externally to at least one data feed recipient and reports such data feed recipient to the Exchange.

By targeting this proposed fee waiver to Redistributors that provide external distribution of NYSE Agg Lite, the Exchange believes that this would provide an incentive for Redistributors to make the NYSE Agg Lite market data product available to its customers. Specifically, if a data recipient is interested in subscribing to NYSE Agg Lite and relies on a Redistributor to obtain market data products from the Exchange, that data recipient would need its Redistributor to subscribe to and redistribute NYSE Agg Lite. The Exchange believes that this proposed fee waiver for Redistributors of NYSE Agg Lite would provide an incentive for Redistributors to make NYSE Agg Lite available to their customers, which will increase the availability of the Exchange's market data products to a larger potential population of data recipients.

Further, the Exchange proposes to adopt a credit that would be applicable to Redistributors that provide external distribution of NYSE Agg Lite to Professional and Non-Professional Users. As proposed, such Redistributors would receive a credit equal to the amount of the monthly Professional User and Non-Professional User Fees for such external distribution, up to a maximum of the combination of the Access Fee and Redistribution Fee for NYSE Agg Lite that the Redistributor would otherwise be required to pay to the Exchange. For example, a Redistributor that reports external Professional Users and Non-Professional Users in a month totaling $3,250 or more would receive a maximum credit of $3,250 for that month, which could effectively reduce its monthly fee for access and redistribution to zero. If that same Redistributor were to report external User quantities in a month totaling $600 of monthly usage, that Redistributor would receive a credit of $600. The Exchange believes the proposed credit would provide Redistributors with an incentive to increase their redistribution of NYSE Agg Lite because the credit they would be eligible to receive would increase if they report additional external User quantities.

4. *Enterprise Fees.* The Exchange proposes to establish an enterprise license that will reduce Exchange fees and administrative costs for subscribers that disseminate NYSE Agg Lite. Subscribers that are broker-dealers will be able to distribute the NYSE Agg Lite data feed for display usage to an unlimited number of non-professional users for a monthly fee of $20,000, with an opportunity to lower that fee to $18,000 per month if they contract for twelve months of service in advance. Alternatively, subscribers that are broker-dealers will be able to distribute the NYSE Agg Lite data feed for display usage to an unlimited number of recipients (professional users and non-professional users) for a monthly fee of $25,000, with an opportunity to lower that fee to $22,500 per month if they contract for twelve months of service in advance.

As proposed, the NYSE Agg Lite data feed may be distributed pursuant to the proposed market data enterprise license only for display usage and in the context of a brokerage relationship with a broker-dealer through such broker-dealer's own devices. Purchase of an enterprise license would eliminate per User subscriber fees for NYSE Agg Lite. Further, the Exchange proposes to waive the Access Fee and the Redistribution Fee for NYSE Agg lite for Redistributors that pay either the Non-Professional Enterprise Fee or the Professional and Non-Professional Enterprise Fee. The Exchange believes the proposed fee waiver would provide an incentive for Redistributors to subscribe to the NYSE Agg Lite market data product at the enterprise level to reduce the fees it would pay to the Exchange and without having to report the number of users that receive the data feed from the Redistributor.

Subscribers that intend to purchase a market data enterprise license for at least twelve months may elect to purchase this product in advance for a monthly fee of $18,000 for distribution of NYSE Agg Lite to an unlimited number of non-professional users, or $22,500 per month for distribution to an unlimited number of professional users and non-professional users. This feature is intended to simplify cost projections and budgeting for both subscribers and the Exchange. Subscribers that elect not to purchase this particular feature will nevertheless be able to obtain all of the market data information offered by NYSE Agg Lite by paying the standard fee of $20,000 per month for distribution of NYSE Agg Lite to an unlimited number of non-professional users, or $25,000 per month for distribution to an unlimited number of professional users and non-professional users. Subscribers that elect to pay the monthly fee will be able to switch to the annual fee at any time, and those that elect to purchase the annual contract would be able to change to the monthly contract, with notice, at the end of the twelve-month period.

The Exchange believes that the proposed market data enterprise license will reduce exchange fees, lower administrative costs for subscribers, and help expand the availability of market information to investors, and thereby increase participation in financial markets.

5. *Non-Display Use Fees.* The Exchange proposes to establish non-

display fees for the NYSE Agg Lite data feed that are based on the non-display use categories charged by NYSE Arca, NYSE American, NYSE National, the CTA, and the UTP Plan for non-display use.[11] Non-display use would mean accessing, processing, or consuming the NYSE Agg Lite data feed delivered directly or through a Redistributor, for a purpose other than in support of a data recipient's display or further internal or external redistribution (''Non-Display Use''). Non-Display Use would include trading uses such as high frequency or algorithmic trading as well as any trading in any asset class, automated order or quote generation and/or order pegging, price referencing for algorithmic trading or smart order routing, operations control programs, investment analysis, order verification, surveillance programs, risk management, compliance, and portfolio management.

Under the proposal, for Non-Display Use of NYSE Agg Lite, there would be three categories of, and fees applicable, to data recipients. One, two, or three categories of Non-Display Use may apply to a data recipient.

- As proposed, the Category 1 Fee would be $4,500 per month and would apply when a data recipient's Non-Display Use of the NYSE Agg Lite data feed is on its own behalf, not on behalf of its clients.
- As proposed, Category 2 Fees would be $4,500 per month and would apply to a data recipient's Non-Display Use of the NYSE Agg Lite data feed on behalf of its clients.
- As proposed, Category 3 Fees would be $4,500 per month and would apply to a data recipient's Non-Display Use of the NYSE Agg Lite data feed for the purpose of internally matching buy and sell orders within an organization, including matching customer orders for a data recipient's own behalf and/or on behalf of its clients. This category would apply to Non-Display Use in trading platforms, such as, but not restricted to, alternative trading systems (''ATSs''), broker crossing networks, broker crossing systems not filed as ATSs, dark pools, multilateral trading facilities, exchanges and systematic internalization systems. A data recipient will be charged $4,500 per month for each platform on which it uses the Non-Display data internally to match buy and sell orders, up to a cap of $13,500 per month; even if the data recipient uses the NYSE Agg Lite data feed for more than three platforms, it will not pay more than $13,500 for such Category 3 use per month.

The description of the three non-display use categories is set forth in the Fee Schedule in endnote 1 and that endnote would be referenced in the NYSE Agg Lite data feed fees on the Fee Schedule. The text in the endnote would remain unchanged.

Data recipients that receive the NYSE Agg Lite data feed for Non-Display Use would be required to complete and submit a Non-Display Use Declaration before they would be authorized to receive the feed. A firm subject to Category 3 Fees would be required to identify each platform that uses the NYSE Agg Lite data feed for a Category 3 Non-Display Use basis, such as ATSs and broker crossing systems not registered as ATSs, as part of the Non-Display Use Declaration.

6. *Non-Display Use Declaration Late Fee.* Data recipients that receive the NYSE Agg Lite data feed for Non-Display Use would be required to complete and submit a Non-Display Use Declaration before they would be authorized to receive the feed. Beginning in 2025, NYSE Agg Lite data feed recipients would be required to submit, by January 31 of each year, the Non-Display Use Declaration. The requirement to submit a Non-Display Use Declaration applies to all real-time NYSE data feed product recipients. The Exchange proposes to charge a Non-Display Use Declaration Late Fee of $1,000 per month to any data recipient that pays an Access Fee for the NYSE Agg Lite data feed that has failed to timely complete and submit a Non-Display Use Declaration. Specifically, with respect to the Non-Display Use Declaration due by January 31 of each year, the Non-Display Use Declaration Late Fee would apply to data recipients that fail to complete and submit the Non-Display Use Declaration by the January 31 due date, and would apply beginning February 1 and for each month thereafter until the data recipient has completed and submitted the annual Non-Display Use Declaration.

The proposed Non-Display Use Declaration Late Fee applicable to NYSE Agg Lite data feed would be set forth in endnote 2 on the Fee Schedule. As proposed, endnote 2 would be amended with the proposed addition of the following new text: ''The Non-Display Declaration Late Fee will apply, beginning in 2025, to NYSE Aggregated Lite data recipients that fail to complete and submit the annual Non-Display Use Declaration by the January 31st due date, and applies beginning February 1st and for each month thereafter until the data recipient has completed and submitted the annual Non-Display use Declaration.''

In addition, if a data recipient's use of the NYSE Agg Lite data feed changes at any time after the data recipient submits a Non-Display Use Declaration, the data recipient must inform the Exchange of the change by completing and submitting at the time of the change an updated declaration reflecting the change of use.

7. *Multiple Data Feed Fee.* The Exchange proposes to establish a monthly fee, the ''Multiple Data Feed Fee,'' that would apply to data recipients that take a data feed for a market data product in more than two locations. Data recipients taking the NYSE Agg Lite data feed in more than two locations would be charged $200 per additional location per month. No new reporting would be required.[12]

8. *Three-Month Fee Waiver.* The Exchange currently provides a one-month free trial to any firm that subscribes to a particular NYSE market data product for the first time. Under the current one-month trial, a first-time subscriber is not charged the Access Fee, Non-Display Fee, any applicable Professional and Non-Professional User Fee and Redistribution Fee for one calendar month.[13] The Exchange now proposes an additional three-month fee waiver for any Redistributor that subscribes to a particular NYSE market data product for the first time for external redistribution. As proposed, a first-time Redistributor would be any firm that has not previously subscribed to and externally redistributed a particular NYSE market data product

[11] *See* Endnote 1 to the NYSE Arca Equites Proprietary Market Data Fees, available here: *https://www.nyse.com/publicdocs/nyse/data/NYSE_Arca_Equities_Proprietary_Data_Fee_Schedule.pdf*; Endnote 1 to the NYSE American LLC Equities Proprietary Market Data Fees, available here: *https://www.nyse.com/publicdocs/nyse/data/NYSE_American_Equities_Market_Data_Fee_Schedule.pdf*; Endnote 1 to the NYSE National Equities Proprietary Market Data Fees, available here: *https://www.nyse.com/publicdocs/nyse/data/NYSE_National_Market_Data_Fee_Schedule.pdf*; Endnote 8 to the Schedule of Market Data Charges for the CTA, available here: *https://www.ctaplan.com/publicdocs/ctaplan/notifications/trader-update/ScheduleOfMarketDataCharges-January1,2015.pdf*; and Non-Display Usage Fees as set forth in the UTP Plan Fee Schedule and Non-Display Policy, available here: *http://utpplan.com/DOC/Datapolicies.pdf. See, e.g.,* Securities Exchange Act Release Nos. 69278 (April 2, 2013), 78 FR 20973 (April 8, 2013) (SR–NYSE–2013–25) and 72923 (Aug. 26, 2014), 79 FR 52079 (Sept. 2, 2014) (SR–NYSE–2014–43).

[12] Data vendors currently report a unique Vendor Account Number for each location at which they provide a data feed to a data recipient. The Exchange considers each Vendor Account Number a location. For example, if a data recipient has five Vendor Account Numbers, representing five locations, for the receipt of the NYSE Agg Lite data feed, that data recipient will pay the Multiple Data Feed fee with respect to three of the five locations.

[13] *See* Fee Schedule.

listed on the Fee Schedule. As proposed, a first-time Redistributor that subscribes to a particular NYSE market data product would not be charged the Access Fee and the Redistribution Fee for that product for three calendar months. Any other fees, including but not limited to, Non-Display Fee, any applicable Professional and Non-Professional User Fee, and Enterprise Fee would be billable after the first calendar month after a first-time Redistributor subscribes to a particular NYSE market data product. For example, a first-time Redistributor that chooses to subscribe to NYSE Agg Lite on July 24, 2024 would not be charged the Access Fee and the Redistribution Fee for the months of August, September, and October 2024. The proposed fee waiver would be for the three calendar months following the date a Redistributor is approved to receive access to the particular NYSE market data product. The Exchange would provide the three-month fee waiver for each particular product to each Redistributor once.

The Exchange believes that providing a three-month fee waiver to NYSE market data products listed on the Fee Schedule would enable potential Redistributors to determine whether a particular NYSE market data product provides value to their business models before fully committing to expend development and implementation costs related to the receipt of that product, and is intended to encourage increased use of the Exchange's market data products by defraying some of the development and implementation costs Redistributors would ordinarily have to expend before using a product. The proposed three-month fee waiver would also provide Redistributors with time to begin onboarding new clients prior to being liable to the Access Fee and the Redistribution Fee, allowing time to choose how to allocate costs and increase revenues to defray costs associated with providing a new feed to its customers.

Application of Proposed Fees

The Exchange is not required to make the NYSE Agg Lite data feed available or to offer any specific pricing alternatives to any customers, nor is any firm required to purchase the NYSE Agg Lite data feed. Firms that choose to purchase the NYSE Agg Lite data feed do so for the primary goals of using it to increase their revenues, reduce their expenses, and in some instances to compete directly with the Exchange (including for order flow). Those firms are able to determine for themselves whether or not the NYSE Agg Lite data feed or any other similar products are attractively priced.

The Exchange believes the proposed rule change would provide an incentive both for data subscribers to subscribe to NYSE Agg Lite and for Redistributors to subscribe to the product for purposes of providing external distribution of NYSE Agg Lite. The Exchange believes that this proposed rule change also has the potential to attract new Redistributors for NYSE Agg Lite.

The proposed fee structure is not novel as it is based on the fee structure currently in place for the NYSE OpenBook feed. The Exchange is proposing fees for the NYSE Agg Lite data feed that are based on the existing fee structure and rates that data recipients already pay for the NYSE OpenBook feed. Specifically, the fees for the NYSE OpenBook feed—which like the NYSE Agg Lite data feed, includes depth of book and security status messages—consist of an Access Fee of $5,000 per month, a Professional User Fee (Per User) of $60 per month, a Non-Professional User Fee (Per User) of $15 per month, Non-Display Fees of $6,000 per month for each of Categories 1, 2 and 3, and a Redistribution Fee of $3,000 per month. The Exchange also charges a Non-Display Use Declaration Late Fee of $1,000 per month and a Multiple Data Feed Fee of $200 per month for NYSE OpenBoook.[14]

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,[15] in general, and Sections 6(b)(4) and 6(b)(5) of the Act,[16] in particular, in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers.

The Proposed Rule Change Is Reasonable

In adopting Regulation NMS, the Commission granted SROs and broker-dealers increased authority and flexibility to offer new and unique market data to the public. The Commission has repeatedly expressed its preference for competition over regulatory intervention in determining prices, products, and services in the securities markets. Specifically, in Regulation NMS, the Commission highlighted the importance of market forces in determining prices and SRO revenues, and also recognized that current regulation of the market system ''has been remarkably successful in promoting market competition in its broader forms that are most important to investors and listed companies.'' [17]

With respect to market data, the decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition* v. *SEC* upheld the Commission's reliance on the existence of competitive market mechanisms to evaluate the reasonableness and fairness of fees for proprietary market data:

> In fact, the legislative history indicates that the Congress intended that the market system ''evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed'' and that the SEC wield its regulatory power ''in those situations where competition may not be sufficient,'' such as in the creation of a ''consolidated transactional reporting system.'' [18]

The court agreed with the Commission's conclusion that ''Congress intended that 'competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.' '' [19]

More recently, the Commission confirmed that it applies a ''market-based'' test in its assessment of market data fees, and that under that test:

> the Commission considers whether the exchange was subject to significant competitive forces in setting the terms of its proposal for [market data], including the level of any fees. If an exchange meets this burden, the Commission will find that its fee rule is consistent with the Act unless there is a substantial countervailing basis to find that the terms of the rule violate the Act or the rules thereunder.[20]

As discussed below, the Exchange believes that its proposed fees are constrained by competitive forces.

As the D.C. Circuit recognized in *NetCoalition I,* ''[n]o one disputes that competition for order flow is fierce.'' [21] The court further noted that ''no exchange possesses a monopoly, regulatory or otherwise, in the execution

[21] *NetCoalition I,* 615 F.3d at 544 (internal quotation omitted).

of order flow from broker dealers,'' and that an exchange ''must compete vigorously for order flow to maintain its share of trading volume.'' [22]

As noted above, while Regulation NMS has enhanced competition, it has also fostered a ''fragmented'' market structure where trading in a single stock can occur across multiple trading centers. When multiple trading centers compete for order flow in the same stock, the Commission has recognized that ''such competition can lead to the fragmentation of order flow in that stock.'' [23] Indeed, today, equity trading is currently dispersed across 16 exchanges,[24] numerous alternative trading systems,[25] broker-dealer internalizers and wholesalers, all competing for order flow. Based on publicly-available information, no single exchange currently has more than 20% market share.[26]

Further, low barriers to entry mean that new exchanges may rapidly and inexpensively enter the market to compete with the Exchange. For example, since 2020, three new ones have entered the market: Long Term Stock Exchange (LTSE), which began operations as an exchange on August 28, 2020; [27] Members Exchange (MEMX), which began operations as an exchange on September 29, 2020; [28] and Miami International Holdings (MIAX), which began operations of its first equities exchange on September 29, 2020.[29]

These low barriers enable existing exchange customers to disintermediate and start their own exchanges if they think the prices charged for exchange proprietary market data products are too high. This is precisely the rationale behind the creation of MEMX, which was formed by some of the largest and most well capitalized financial firms that are also Exchange customers (including Bank of America, BlackRock, Charles Schwab, Citadel, Citi, E*Trade, Fidelity, Goldman Sachs, J.P. Morgan, Jane Street, Morgan Stanley, TD Ameritrade, and others).[30]

For example, one of MEMX's founding principles is that exchange proprietary market data prices are too high, and that MEMX will benefit its members by offering ''[l]ower pricing on market data.'' [31] Nor is this a new phenomenon: exchange customers formed BATS to compete with incumbent exchanges and once registered as an exchange in 2008, BATS did not initially charge for market data. The BATS venture was a financial success for its founders, first through recouping their investment in its initial public offering and then in the subsequent sale of BATS to Cboe, which now charges for market data from those exchanges. Notably, MEMX has some of the same founding broker-dealer customers, leading some to dub MEMX ''BATS 2.0.'' [32]

The fact that this cycle is viable and repeatable by entities that both trade on and compete with existing exchanges confirms that barriers to entry are low and that these markets are competitive and contestable.[33] And low barriers to entry act as a market check on high prices.[34]

In sum, the fierce competition thus constrains any exchange from pricing its market data at a supracompetitive price and constrains the Exchange in setting its fees at issue here.

More specifically, in setting fees for the NYSE Agg Lite data feed, the Exchange is constrained by the fact that, if its pricing is unattractive to customers, customers have their pick of an increasing number of alternatives to purchase similar data from instead of purchasing it from the Exchange. The existence of alternatives to the Exchange's data product ensures that the Exchange cannot set unreasonable market data fees without suffering the negative effects of that decision in the fiercely competitive market for proprietary market data.

The Exchange notes that the NYSE Agg Lite is entirely optional. The Exchange is not required to make the NYSE Agg Lite available to any customers, nor is any customer required to purchase the NYSE Agg Lite market data feed. Unlike some other data products (*e.g.,* the consolidated quotation and last-sale information feeds) that firms are required to purchase in order to fulfil regulatory obligations,[35] a customer's decision whether to purchase any of the Exchange's proprietary market data feeds, including the NYSE Agg Lite, is entirely discretionary. Most firms that choose to subscribe to the proprietary market data feeds from the Exchange, including NYSE Agg Lite, would do so for the primary goals of using it to increase their revenues, reduce their expenses, and in some instances to compete directly with the Exchange for order flow. Such firms are able to determine for themselves whether the NYSE Agg Lite data feed is necessary for their business needs, and if so, whether

[33] *United States* v. *SunGard Data Sys.,* 172 F. Supp. 2d 172, 186 (D.D.C. 2001) (recognizing that ''[a]s a matter of law, courts have generally recognized that when a customer can replace the services of an external product with an internally-created system, this captive output (*i.e.* the self-production of all or part of the relevant product) should be included in the same market.''). In *SunGard,* the court rejected the Antitrust Division's attempt to block SunGuard's acquisition of the disaster recovery assets of Comdisco on the basis that the acquisition would ''substantially lessen competition in the market for shared hotsite disaster recovery services,'' when the evidence showed that ''internal hotsites'' created by customers competed with the ''external shared hotsite business'' engaged in by the merging parties. *Id.* at 173–74, 187.

[34] *United States* v. *Baker Hughes,* 908 F.2d 981, 987 (1990) (''In the absence of significant barriers [to entry], a company probably cannot maintain supracompetitive pricing for any length of time.''); *see also* David S. Evans and Richard Schmalensee, Markets with Two-Sided Platforms, in 1 Issues In Competition Law And Policy 667, 685 (ABA Section of Antitrust Law 2008) (noting that exchange mergers in 2005 and 2006 were approved by competition authorities in part in reliance on planned and likely entry of other firms).

[35] The Exchange notes that broker-dealers are not required to purchase proprietary market data to comply with their best execution obligations. *See In the Matter of the Application of Securities Industry and Financial Markets Association for Review of Actions Taken by Self-Regulatory Organizations,* Release Nos. 34–72182; AP–3–15350; AP–3–15351 (May 16, 2014). Similarly, there is no requirement in Regulation NMS or any other rule that proprietary data be utilized for order routing decisions, and some broker-dealers and ATSs have chosen not to do so.

or not it is attractively priced. If the NYSE Agg Lite data feed does not provide sufficient value to firms based on the uses those firms may have for it, such firms may simply choose to conduct their business operations in ways that do not use the NYSE Agg Lite data feed.

Further, in the case of products that are also redistributed through market data vendors such as Bloomberg and Refinitiv, the vendors themselves provide additional price discipline for proprietary data products because they control the primary means of access to certain end users. These vendors impose price discipline based upon their business models. For example, vendors that assess a surcharge on data they sell are able to refuse to offer proprietary products that their end users do not or will not purchase in sufficient numbers. Vendors may elect not to make NYSE Agg Lite available to its customers unless their customers request it, and customers will not elect to pay the proposed fees unless NYSE Agg Lite can provide value by sufficiently increasing revenues or reducing costs in the customer's business in a manner that will offset the fees. All of these factors operate as constraints on pricing proprietary data products.

In setting the proposed fees for the NYSE Agg Lite data feed, the Exchange considered the competitiveness of the market for proprietary data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish reasonable fees. The proposed fees are therefore reasonable because in setting them, the Exchange is constrained by the availability of numerous substitute market data products. The Commission has been clear that substitute products need not be identical, but only substantially similar to the product at hand.[36]

The NYSE Aggregated Lite market data feed is subject to significant competitive forces that constrain its pricing. Specifically, the NYSE Agg Lite data feed competes head-to-head with similar market data products currently offered by the four U.S. equities exchanges operated by Cboe Exchange, Inc.—Cboe BZX Exchange, Inc. (''BZX''), Cboe BYX Exchange, Inc. (''BYX''), Cboe EDGA Exchange, Inc. (''EDGA''), and Cboe EDGX Exchange, Inc. (''EDGX''), each of which offers a market data product called BZX Summary Depth, BYX Summary Depth, EDGA Summary Depth and EDGX Summary Depth, respectively (collectively, the ''Cboe Summary Depth'').[37] Similar to Cboe Summary Depth, NYSE Agg Lite can be utilized by vendors and subscribers to quickly access and distribute aggregated order book data. As noted above, NYSE Agg Lite, similar to Cboe Summary Depth, would provide aggregated depth per security, including the bid, ask and share quantity for orders received by NYSE, except unlike Cboe Summary Depth, which provides aggregated depth per security for up to five price levels, NYSE Agg Lite would provide aggregated depth per security for up to ten price levels on both the bid and offer sides of the NYSE limit order book as well as auction imbalance data.

The specific fees that the Exchange proposes for the NYSE Agg Lite data feed are reasonable for the following additional reasons.

Overall. The Exchange believes that the proposed fees for the NYSE Agg Lite data feed are reasonable because they represent the value of receiving the data on an aggregated basis. The Exchange believes that providing vendors and subscribers with the option to subscribe to a market data product that integrates a subset of data from existing products and where such aggregated data is published at a pre-defined interval, thus lowering bandwidth, infrastructure and operational requirements, would allow vendors and subscribers to choose the best solution for their specific business needs.

The Exchange believes the proposed fees for the NYSE Agg Lite data feed are also reasonable when compared to fees for comparable products, such as the Cboe Summary Depth.[38] Additionally, the Exchange is proposing fees for the NYSE Agg Lite data feed that are based on the existing fee structure that data recipients already pay for the NYSE's other market data products. The Exchange believes that adopting the same fee structure would reduce administrative burdens on NYSE data subscribers that also currently subscribe to market data feeds from NYSE.

Access Fee. The Exchange believes that the proposed monthly Access Fee of $3,000 for the NYSE Aggregated Lite data feed is reasonable because it is comparable to the fees charged by BZX, BYX, EDGA, and EDGX, each of which charges between $2,500 per month to $5,000 per month for both Internal Distribution and External Distribution of the Cboe Summary Depth market data product.[39]

User Fees. The Exchange believes that having separate Professional and Non-Professional User fees for the NYSE Agg Lite data feed is reasonable because it will make the product more affordable and result in greater availability to Professional and Non-Professional Users. Setting a modest Non-Professional User fee is reasonable because it provides an additional method for Non-Professional Users to access the NYSE Agg Lite data feed by providing the same data that is available to Professional Users. The proposed monthly Professional User Fee (Per User) of $35 and monthly Non-Professional User Fee (Per User) of $6 are reasonable because they are comparable to user fees generally charged by exchanges. For example, NYSE charges a monthly Professional User Fee (Per User) of $60 and a monthly Non-Professional User Fee (Per User) of $15 for the NYSE OpenBook feed.[40] Although the proposed User Fees for Professional and Non-Professional Users are higher than those charged by BZX, BYX, EDGA and EDGX, the Exchange notes that User fees are only a subset of the total fees that vendors and subscribers pay and the lower fees proposed to access and redistribute NYSE Agg Lite would provide such market data recipients with a more affordable alternative to existing substitutes offered by the Exchange and its competitors.

Redistribution Fees. The Exchange believes that it is reasonable to charge redistribution fees because vendors receive value from redistributing the data in their business products for their customers. The Exchange believes that charging a Redistribution Fee is reasonable because the vendors that would be charged such a fee profit by re-transmitting the Exchange's market data to their customers. This fee would be charged only once per month to each

[36] For example, in the National IF Approval Order, the Commission recognized that for some customers, the best bid and offer information from consolidated data feeds may function as a substitute for the NYSE National Integrated Feed product, which contains order by order information. *See* National IF Approval Order, *supra* note 20, at 67397 [release p. 21] (''[I]nformation provided by NYSE National demonstrates that a number of executing broker-dealers do not subscribe to the NYSE National Integrated Feed and executing broker-dealers can otherwise obtain NYSE National best bid and offer information from the consolidated data feeds.'' (internal quotations omitted)).

[37] *See* BZX Rule 11.22(m) BZX Summary Depth; BYX Rule 11.22(k) BYX Summary Depth; EDGA Rule 13.8(f) EDGA Summary Depth; and EDGX Rule 13.8(f) EDGX Summary Depth. The Cboe Summary Depth offered by BZX, BYX, EDGA and EDGX are each a data feed that offers aggregated two-sided quotations for all displayed orders for up to five (5) price levels and contains the individual last sale information, market status, trading status and trade break messages.

[38] *See https://cdn.cboe.com/resources/membership/US_Market_Data_Product_Price_List.pdf.*

[39] *Id.*

[40] *See* Fee Schedule.

vendor account that redistributes the NYSE Agg Lite data feed, regardless of the number of customers to which that vendor redistributes the data. The Exchange believes the proposed monthly Redistribution Fee of $250 for the NYSE Agg Lite data feed is reasonable because it is nominal and lower than the fees charged by BZX, BYX, EDGA and EDGX, each of which charges considerably more for both Internal Distribution and External Distribution of the Cboe Summary Depth market data feed.[41]

Enterprise Fees. The Exchange believes the proposed enterprise license is reasonable because it would reduce exchange fees, lower administrative costs for subscribers that are broker-dealers and help expand the availability of market information to investors, and thereby increase participation in financial markets. Subscribers that are broker-dealers would be able to disseminate the NYSE Agg Lite data feed for display usage to an unlimited number of non-professional users for a monthly fee of $20,000, or $18,000 if they contract for twelve months of service in advance. Alternatively, subscribers that are broker-dealers would be able to disseminate the NYSE Agg Lite data feed for display usage to an unlimited number of professional users and non-professional users for a monthly fee of $25,000, or $22,500 if they contract for twelve months of service in advance. The proposed enterprise license would result in lower fees for subscribers able to reach the largest audience of investors, including retail investors. Discounts for broader dissemination of market data information have routinely been adopted by exchanges and permitted by the Commission as equitable allocations of reasonable dues, fees and charges.[42]

Non-Display Use Fees. The Exchange believes that the proposed Non-Display Use fees reflect the value of the non-display data use to data recipients, which purchase such data on an entirely voluntary basis. Non-display data can be used by data recipients for a wide variety of uses, including proprietary and agency trading and smart order routing, as well as by data recipients that operate order matching and execution platforms. Non-display data also can be used for a variety of non-trading purposes that indirectly support trading, such as risk management and compliance. Although some of these non-trading uses do not directly generate revenues, they can nonetheless substantially reduce a recipient's costs by automating such functions so that they can be carried out in a more efficient and accurate manner and reduce errors and labor costs, thereby benefiting recipients. The Exchange believes that charging for non-trading uses is reasonable because data recipients can derive substantial value from such uses, for example, by automating tasks so that they can be performed more quickly and accurately and less expensively than if they were performed manually.

Previously, the non-display use data pricing policies of many exchanges required customers to count, and the exchanges to audit the count of, the number of non-display devices used by a customer. As non-display use grew more prevalent and varied, however, exchanges received an increasing number of complaints about the impracticality and administrative burden associated with that approach. In response, the Exchange and its affiliated exchanges developed a non-display use pricing structure that does not require non-display devices to be counted or those counts to be audited, and instead looks merely at the three following categories of potential use of non-display data: use of the data on the customer's own behalf (Category 1), use on behalf of clients (Category 2), and use to internally match buy and sell orders within an organization (Category 3).

The Exchange believes that it is reasonable to segment the fee for non-display use into these three categories. As noted above, the uses to which customers can put the NYSE Agg Lite data feed are numerous and varied, and the Exchange believes that charging separate fees for these separate categories of use is reasonable because it reflects the actual value the customer derives from the data, based upon how many categories of use the customer makes of the data. Segmenting the fees for non-display data in this way avoids the unreasonable result of customers that make only limited non-display use of the data paying the same fees as customers that use the data for numerous different purposes.

The Exchange believes that the proposed fees of $4,500 per month for each of Categories 1, 2, and 3 is reasonable. These fees are comparable to non-display use fees generally charged by exchanges. For example, the fees for Non-Display Use of NYSE OpenBook for Categories 1, 2 and 3 is $6,000 per month.[43] The Exchange believes that the proposed fees directly and appropriately reflect the value of using non-display data in a wide range of computer-automated functions relating to both trading and non-trading activities and that the number and range of these functions continue to grow through innovation and technology developments.

The Exchange believes that it is reasonable to cap non-display use fees for Category 3 at $13,500 per month per data recipient, because a higher monthly fee may potentially dissuade competitors from buying the NYSE Agg Lite data feed.

The proposed Non-Display Use fees for the NYSE Agg Lite data feed are also reasonable because they take into account the value of receiving the data for Non-Display Use on an integrated basis. The Exchange believes that the proposed fees directly and appropriately reflect the value of using the NYSE Agg Lite data feed on a non-display basis in a wide range of computer-automated functions relating to both trading and non-trading activities and that the number and range of these functions continue to grow through innovation and technology developments.[44]

Non-Display Use Declaration Late Fee. The Exchange believes that it is reasonable to require annual submissions of the Non-Display Use Declaration so that the Exchange will have current and accurate information about the use of the NYSE Agg Lite data feed and can correctly assess fees for the uses of the NYSE Agg Lite data feed. Requiring annual submissions of such declarations is reasonable because it also allows users to re-assess their own usage each year.

The Exchange believes that it is reasonable to impose a late fee in connection with the submission of the Non-Display Use Declaration. In order to correctly assess fees for the non-display use of the NYSE Agg Lite data feed, the Exchange needs to have current and accurate information about the use of the NYSE Agg Lite data feed. The failure of data recipients to submit the Non-Display Use Declaration on

[41] *See supra,* note 38.

[42] For example, the Commission has permitted pricing discounts for market data under Nasdaq Rules 7023(c) and 7047(b). *See also* Securities Exchange Act Release No. 82182 (November 30, 2017), 82 FR 57627 (December 6, 2017) (SR–NYSE–2017–60) (changing an enterprise fee for NYSE BBO and NYSE Trades).

[43] *See* Fee Schedule.

[44] *See also* Exchange Act Release No. 69157, March 18, 2013, 78 FR 17946, 17949 (March 25, 2013) (SR–CTA/CQ–2013–01) (''[D]ata feeds have become more valuable, as recipients now use them to perform a far larger array of non-display functions. Some firms even base their business models on the incorporation of data feeds into black boxes and application programming interfaces that apply trading algorithms to the data, but that do not require widespread data access by the firm's employees. As a result, these firms pay little for data usage beyond access fees, yet their data access and usage is critical to their businesses.'').

time leads to potentially incorrect billing and administrative burdens, including tracking and obtaining late Non-Display Use Declarations and correcting and following up on payments owed in connection with late Non-Display Use Declarations. The purpose of the late fee is to incent data recipients to submit the Non-Display Use Declaration promptly to avoid the administrative burdens associated with the late submission of Non-Display Use Declarations.

Multiple Data Feed Fee. The Exchange believes that it is reasonable to require data recipients to pay a modest fee for taking a data feed for a market data product in more than two locations, because such data recipients can derive substantial value from being able to consume the product in as many locations as they want. In addition, there are administrative burdens associated with tracking each location at which a data recipient receives the product. The Multiple Data Feed Fee is designed to encourage data recipients to better manage their requests for additional data feeds and to monitor their usage of data feeds. The proposed fee is designed to apply to data feeds received in more than two locations so that each data recipient can have one primary and one backup data location before having to pay a multiple data feed fee.

Three-Month Fee Waiver. The Exchange believes the proposal to waive the Access Fee and the Redistribution Fee for the NYSE Agg Lite data feed to new Redistributors for three calendar months is reasonable because it would enable potential Redistributors to determine whether a particular NYSE market data product provides value to their business models before fully committing to expend development and implementation costs related to the receipt of that product, and is intended to encourage increased use of the Exchange's market data products by defraying some of the development and implementation costs Redistributors would ordinarily have to expend before using a product. The proposed fee waiver would also allow Redistributors to become familiar with the feed and determine whether it suits their needs without incurring fees. Making a new market data product available without charging a fee for three months is consistent with offerings of other exchanges. For example, BZX offers subscribers of BZX Summary Depth a three-month credit for external distribution, which is akin to the three-month fee waiver proposed by the Exchange.[45]

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE Agg Lite data feed are reasonable.

The Proposed Fees Are Equitably Allocated

The Exchange believes the proposed fees for the NYSE Agg Lite data feed are allocated fairly and equitably among the various categories of users of the feed, and any differences among categories of users are justified.

Overall. The Exchange believes that the proposed fees are equitably allocated because they will apply to all data recipients that choose to subscribe to the NYSE Agg Lite data feed. Any subscriber or vendor that chooses to subscribe to the NYSE Agg Lite data feed is subject to the same Fee Schedule, regardless of what type of business they operate or the use they plan to make of the data feed. Subscribers and vendors are not required to purchase the NYSE Agg Lite data feed and may choose to receive the data on the NYSE Agg Lite data feed regardless of what type of business they operate or the use they plan to make of the data feed.

Access Fee. The Exchange believes the proposed monthly Access Fee of $3,000 for the NYSE Agg Lite data feed is equitably allocated because it would be charged on an equal basis to all data recipients that receive a data feed of the NYSE Agg Lite data feed, regardless of what type of business they operate or the use they plan to make of the data feed.

User Fees. The Exchange believes that the fee structure differentiating Professional User fees ($35 per month per user) from Non-Professional User fees ($6 per month per user) for display device access to the NYSE Agg Lite data feed is equitable. This structure has long been used by the Exchange to reduce the price of data to Non-Professional Users and make it more broadly available.[46] Offering the NYSE Agg Lite data feed to Non-Professional Users with the same data as is available to Professional Users results in greater equity among data recipients. These user fees would be charged uniformly to all display devices that have access to the NYSE Agg Lite data feed.

Redistribution Fees. The Exchange believes the proposed monthly fee of $250 for redistributing the NYSE Agg Lite data feed is equitably allocated because it would be charged on an equal basis to those Redistributors that choose to redistribute the feed.

Enterprise Fees. The Exchange believes the proposed enterprise license is equitably allocated because it would be available on an equal basis to all subscribers that are broker-dealers, each of whom would benefit from reduced exchange fees and from lower administrative costs. Moreover, the specific feature of the proposed enterprise license that will allow subscribers to lower fees by subscribing to a twelve-month contract is also an equitable allocation because all subscribers will have the same option of choosing between the stability of a fixed, lower rate, and the more flexible option of maintaining the ability to change market data products after a month of service. Subscribers will be free to move from the monthly to the annual rate at any time, or from annual to a monthly fee, with notice, at the expiration of the twelve-month period.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Use fees are equitably allocated because they would require subscribers to pay fees only for the uses they actually make of the data. As noted above, non-display data can be used by data recipients for a wide variety of purposes (including trading, risk management, and compliance) as well as purposes that reduce the recipient's costs by automating certain functions. The Exchange believes that it is equitable to charge non-display data subscribers a $4,500 fee for each category of use they make of such data—namely, using the data on their own behalf (Category 1), on behalf of their clients (Category 2), and to internally match buy and sell orders within an organization (Category 3)—because this fee structure results in subscribers with greater uses of the data paying higher fees, and subscribers with fewer uses of the data paying lower fees. This segmented fee structure is also equitable because no subscriber of non-display data would be charged a fee for a category of use in which it did not actually engage.

The Exchange believes that it is equitable to cap non-display use fees for Category 3 at $13,500 per month per data recipient, because a higher monthly fee may potentially dissuade

[45] *See e.g.,* Securities Exchange Act Release No. 94432 (March 16, 2022), 87 FR 16277 (March 22, 2022) (SR–CboeBZX–2022–015) (Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Amend the Fees Applicable to Various Market Data Products).

[46] *See, e.g.,* Securities Exchange Act Release No. 59544 (March 9, 2009), 74 FR 11162 (March 16, 2009) (SR–NYSE–2008–131) (establishing the $15 Non-Professional User Fee (Per User) for NYSE OpenBook); Securities Exchange Act Release No. 20002, File No. S7–433 (July 22, 1983), 48 FR 34552 (July 29, 1983) (establishing Non-Professional fees for CTA data); NASDAQ BX Equity 7 Pricing Schedule, Section 123.

competitors from buying the NYSE Agg Lite data feed.

Non-Display Use Declaration Late Fee. The Exchange believes that the proposed fee of $1,000 per month for a late Non-Display Use Declaration is equitably allocated because it applies to any data recipient that pays an Access Fee for the NYSE Agg Lite data feed but has failed to complete and submit a Non-Display Use Declaration. In addition, the Exchange believes that it is equitable to charge a late fee to subscribers who fail to timely submit their Non-Display Use Declarations because their failure to do so leads to potentially incorrect billing and administrative burdens on the part of the Exchange. The Exchange believes it is equitable to defray these administrative costs by imposing a late fee only on subscribers' whose declarations were late, as opposed to all subscribers.

Multiple Data Feed Fee. The Exchange believes that the $200 per month per location fee to data recipients taking the NYSE Agg Lite data feed in more than two locations is equitable because it would apply to all such customers, regardless of what type of business they operate or the use they make of the data feed. In addition, the Exchange believes that it is equitable to charge a fee to subscribers for taking a data feed in more than two locations because there are administrative burdens on the part of the Exchange associated with tracking each location at which a data recipient receives the product. The Exchange believes that it is equitable for it to defray these administrative costs by imposing a modest fee only on subscribers who seek to take the feed in more than two locations, as opposed to all subscribers.

Three-Month Fee Waiver. The Exchange believes the proposal to waive the Access Fee and the Redistribution Fee for the NYSE Agg Lite data feed to new Redistributors for three calendar months is equitable because it would apply to any first-time Redistributor, regardless of the use they plan to make of the feed. As proposed, any first-time Redistributor of the NYSE Agg Lite data feed would not be charged the Access Fee and the Redistribution Fee for three calendar months. The Exchange believes it is equitable to restrict the availability of this three-month fee waiver to Redistributors that have not previously subscribed to and redistributed the NYSE Agg Lite data feed, since customers who are current or previous subscribers of the feed are already familiar with it and are able to determine whether it suits their needs.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE Agg Lite data feed are equitably allocated.

The Proposed Fees Are Not Unfairly Discriminatory

The Exchange believes the proposed fees for the NYSE Agg Lite data feed are not unfairly discriminatory because any differences in the application of the fees are based on meaningful distinctions between customers, and those meaningful distinctions are not unfairly discriminatory between customers.

Overall. The Exchange believes that the proposed fees are not unfairly discriminatory because they would apply to all data recipients that choose to subscribe to the NYSE Agg Lite data feed. Any subscriber, including Redistributor, that chooses to subscribe to the NYSE Agg Lite data feed is subject to the same Fee Schedule, regardless of what type of business they operate or the use they plan to make of the data feed. Subscribers, including Redistributors, may choose to receive the data on the NYSE Agg Lite data feed regardless of what type of business they operate or the use they plan to make of the data feed.

Access Fee. The Exchange believes the proposed monthly Access Fee of $3,000 for the NYSE Agg Lite data feed is not unfairly discriminatory because it would be charged on an equal basis to all data recipients that receive a data feed of the NYSE Agg Lite, regardless of what type of business they operate or the use they plan to make of the data feed.

User Fees. The Exchange believes that the fee structure differentiating Professional User fees ($35 per month per user) from Non-Professional User fees ($6 per month per user) for display device access to the NYSE Agg Lite data feed is not unfairly discriminatory. This structure has long been used by the Exchange to reduce the price of data to Non-Professional Users and make it more broadly available.[47] Offering the NYSE Agg Lite data feed to Non-Professional Users with the same data as is available to Professional Users results in greater equity among data recipients. These user fees would be charged uniformly to all display devices that have access to the NYSE Agg Lite data feed.

Redistribution Fees. The Exchange believes the proposed monthly fee of $250 for redistributing the NYSE Agg Lite data feed is not unfairly discriminatory because it would be charged on an equal basis to those Redistributors that choose to redistribute the feed.

Enterprise Fees. The Exchange believes the proposed enterprise license will not unfairly discriminate between customers, issuers, brokers or dealers. The Act does not prohibit all distinctions among customers, but only discrimination that is unfair, and it is not unfair discrimination to charge those subscribers that are able to reach the largest audiences of investors, including retail investors, a lower fee for incremental investors in order to encourage the widespread distribution of market data. This principle has been repeatedly endorsed by the Commission, as evidenced by the approval of enterprise licenses for other market data products.[48] Moreover, the proposed enterprise license will be subject to significant competition, and that competition will ensure that there is no unfair discrimination. Each subscriber will be able to accept or reject the license depending on whether it will or will not lower costs for that particular subscriber, and, if the license is not sufficiently competitive, the Exchange may lose market share. The proposed enterprise license will compete with other enterprise licenses of the Exchange, underlying fee schedules promulgated by the Exchange, and enterprise licenses and fee structures implemented by other exchanges. As such, it is a voluntary product for which market participants can readily find substitutes. Accordingly, the Exchange is constrained from introducing a fee that would be inequitable or unfairly discriminatory.

Non-Display Use Fees. The Exchange believes the proposed Non-Display Use fees are not unfairly discriminatory because they would require subscribers for non-display use to pay fees only for the categories of use they actually make of the data. As noted above, non-display data can be used by data recipients for a wide variety of purposes (including trading, risk management, and compliance) as well as purposes that reduce the recipient's costs by automating certain functions. The Exchange believes that it is not unfairly discriminatory to charge non-display data subscribers a $4,500 per month fee for each category of use they make of such data—namely, using the data on

[47] *Id.*

[48] *See e.g.,* Securities Exchange Act Release No. 83751 (July 31, 2018), 83 FR 38428 (August 6, 2018) (SR–NASDAQ–2018–058) (Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Lower Fees and Administrative Costs for Distributors of Nasdaq Basic, Nasdaq Last Sale, NLS Plus and the Nasdaq Depth-of-Book Products Through a Consolidated Enterprise License).

their own behalf (Category 1), on behalf of their clients (Category 2), and to internally match buy and sell orders within an organization (Category 3)—because this fee structure results in subscribers with greater uses for the data paying higher fees, while subscribers with fewer uses of the data pay lower fees. This segmented fee structure is not unfairly discriminatory because no subscriber of non-display data would be charged a fee for a category of use in which it did not actually engage.

The Exchange believes that it is not unreasonably discriminatory to cap non-display use fees for Category 3 at $13,500 per month per data recipient, because a higher monthly fee may potentially dissuade competitors from buying the NYSE Agg Lite data feed.

Non-Display Use Declaration Late Fee. The Exchange believes that the proposed fee of $1,000 per month for a late Non-Display Use Declaration is not unfairly discriminatory because it applies to any data recipient that pays an Access Fee for the NYSE Agg Lite data feed but has failed to complete and submit a Non-Display Use Declaration. In addition, the Exchange believes that it is not unfairly discriminatory to charge a late fee to subscribers who fail to timely submit their Non-Display Use Declarations because their failure to do so leads to potentially incorrect billing and administrative burdens on the part of the Exchange. Nor is it unfairly discriminatory for the Exchange to defray these administrative costs by imposing a late fee only on subscribers' whose declarations were late, as opposed to all subscribers.

Multiple Data Feed Fee. The Exchange believes that the $200 per month per location fee to data recipients taking the NYSE Agg Lite data feed in more than two locations is not unfairly discriminatory because it would apply to all such customers, regardless of what type of business they operate or the use they make of the data feed. In addition, the Exchange believes that it is not unfairly discriminatory to charge a fee to subscribers for taking a data feed in more than two locations because there are administrative burdens on the part of the Exchange associated with tracking each location at which a data recipient receives the product. The Exchange believes that it is not unfairly discriminatory for it to defray these administrative costs by imposing a modest fee only on subscribers who seek to take the feed in more than two locations, as opposed to all subscribers.

Three-Month Fee Waiver. The Exchange believes the proposal to waive the Access Fee and the Redistribution Fee for the NYSE Agg Lite data feed to new Redistributors for three months is not unfairly discriminatory because it would apply to any first-time Redistributor, regardless of the use they plan to make of the feed. As proposed, any first-time Redistributor of the NYSE Agg Lite data feed would not be charged the Access Fee and the Redistribution Fee for three calendar months. The Exchange believes it is not unfairly discriminatory to restrict the availability of this three-month fee waiver to Redistributors that have not previously subscribed to the NYSE Agg Lite data feed, since Redistributors who are current or previous subscribers of the feed are already familiar with it and are able to determine whether it suits their needs.

For all of the foregoing reasons, the Exchange believes that the proposed fees for the NYSE Agg Lite data feed are not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed fees will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

Intramarket Competition. The Exchange believes that the proposed fees do not put any market participants at a relative disadvantage compared to other market participants. As noted above, the proposed fees would apply to all subscribers, including Redistributors, of the NYSE Agg Lite data feed, and customers may not only choose whether to subscribe to the feed at all, but also may tailor their subscription to include only the products offered by the Exchange that they deem suitable for their business needs. The Exchange also believes that the proposed fees neither favor nor penalize one or more categories of market participants in a manner that would impose an undue market on competition. As shown above, to the extent that particular proposed fees apply to only a subset of subscribers (*e.g.,* Category 2 fees apply only to those making non-display use on behalf of clients; late fees apply only to customers who fail to timely submit their declarations), those distinctions are not unfairly discriminatory and do not unfairly burden one set of customers over another. To the contrary, by tailoring the proposed fees in this manner, the Exchange believes that it has eliminated the potential burden on competition that might result from unfairly asking subscribers to pay fees for services they did not use, or late fees they did not actually incur.

Intermarket Competition. The Exchange believes that the proposed fees do not impose a burden on competition or on other SROs that is not necessary or appropriate. In setting the proposed fees, the Exchange is constrained by the availability of numerous substitute platforms also offering market data products, and low barriers to entry mean new exchanges are frequently introduced. In setting fees for the NYSE Agg Lite data feed, the Exchange is constrained by the fact that if its pricing for the NYSE Agg Lite data feed is unattractive to customers, customers will have their pick of an increasing number of alternative market data products to purchase instead of purchasing the Exchange's products.

In addition, the Exchange believes that the proposed fees do not impose a burden on competition or on other exchanges that is not necessary or appropriate because of the availability of numerous substitute market data products. Many other exchanges offer proprietary data feeds like the NYSE Agg Lite data feed, supplying depth of book order data, security status updates, stock summary messages, and the exchange's best bid and offer at any given time, on a real-time basis. Because market data users can find suitable substitute feeds, an exchange that overprices its market data products stands a high risk that users may purchase another market's market data product. These competitive pressures ensure that no one exchange's market data fees can impose an unnecessary burden on competition, and the Exchange's proposed fees do not do so here.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A) [49] of the Act and paragraph (f) thereunder. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of

[49] 15 U.S.C. 78s(b)(3)(A).

investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–NYSE–2024–38 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSE–2024–38. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–NYSE–2024–38 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[50]

Sherry R. Haywood,

Assistant Secretary.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100592; File No. SR–Phlx–2024–37]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Its Expanded Co-Location Services

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 23, 2024, Nasdaq PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for its expanded co-location services, as described further below.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on August 15, 2024.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/phlx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose [3]

The Exchange filed a proposal to expand its co-location services by offering new cabinet, power, and power distribution unit options in the Exchange's expanded data center.[4] As described in that filing, the Exchange's current data center (''NY11'') in Carteret, NJ is undergoing an expansion (''NY11–4'') in response to demand for power and cabinets. The purpose of this proposed rule change is to establish fees for the expanded co-location services. Specifically, the Exchange proposes to establish (i) a monthly fee for Ultra High Density Cabinets, (ii) an installation fee for cabinets in NY11–4, (iii) fees for power installation in NY11–4, and (iv) fees for power distribution unit options in NY11–4.

Ultra High Density Cabinet

Currently, co-location customers have the option of obtaining cabinets of various sizes and power densities. Co-location customers may obtain a Half Cabinet,[5] a Low Density Cabinet with power density less than or equal to 2.88 kilowatts (''kW''), a Medium Density Cabinet with power density greater than 2.88 kW and less than or equal to 5 kW, a Medium-High Density Cabinet with power density greater than 5 kW and less than or equal to 7 kW, a High Density Cabinet with power density greater than 7 kW and less than 10 kW, and a Super High Density Cabinet with power density greater than 10 kW and less than or equal to 17.3 kW.

The Exchange filed a proposal to introduce a new cabinet choice in NY11–4, an ''Ultra High Density Cabinet,'' with power density greater than 10 kW and less than or equal to 15 kW.[6] The Ultra High Density Cabinet option will only be offered in NY11–4 because of the power configuration necessary for such cabinets, which is not possible or available in other portions of the data center due to

[50] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange initially filed the proposed pricing change on July 15, 2024 (SR–Phlx–2024–34). The instant filing replaces SR–Phlx–2024–34, which was withdrawn on July 23, 2024.

[4] *See* Securities Exchange Act Release No. 34–100559 (July 18, 2024) (SR–Phlx–2024–32) (not yet published).

[5] Half cabinets are not available to new subscribers. *See* General 8, Section 1(a).

[6] *Supra* note 4.

different power distribution.[7] In addition to the Ultra High Density Cabinet, the Exchange will offer the other, existing cabinet options in NY11–4, with the exception of the Low Density Cabinet and Half Cabinet due to a lack of demand for such cabinets. The ongoing monthly fees for the Super High Density Cabinet, High Density Cabinet, Medium-High Density Cabinet, and Medium Density Cabinet are the same in NY11 and NY11–4 and the Exchange is not proposing to modify such fees.

The Exchange proposes to establish an ongoing monthly fee of $7,230 for the Ultra High Density Cabinets. To effectuate this change, the Exchange proposes to add the $7,230 ongoing monthly fee for Ultra High Density Cabinets to its fee schedule in General 8, Section 1(a). The Exchange notes that the proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets).

Installation Fee for Cabinets in NY11–4

The Exchange proposes to establish a cabinet installation fee of $5,940 for all cabinets in NY11–4. To effectuate this change, the Exchange proposes to add the proposed $5,940 installation fee to its fee schedule in General 8, Section 1(a) for Super High Density Cabinets, Ultra High Density Cabinets, High Density Cabinets, Medium-High Density Cabinets, and Medium Density Cabinets in NY11–4. In the existing data halls, customers may bring their own cabinets or use Exchange-provided cabinets. In NY11–4, because of the cooling system (hot aisle containment),[8] all cabinets must be uniform and therefore, the Exchange will provide all cabinets, the cost of which is included in the $5,940 installation fee.[9] The cabinets in NY11–4 include certain features not included in cabinets provided by the Exchange in the existing data halls. Specifically, the cabinets in NY11–4 include uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In addition, the proposed installation fee of $5,940 is comparable to fees charged for similar products.[10]

Installation Fee for Cabinet Power in NY11–4

The cabinet power options for NY11–4 include: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, Phase 1 40 amp 240 volt, Phase 3 20 amp 415 volt, and Phase 3 32 amp 415 volt. These cabinet power options are specific to NY11–4 and one of these options must be selected for cabinets in NY11–4. The Exchange proposes to establish an installation fee of $3,600 for Phase 1 cabinet power options in NY11–4 and an installation fee of $4,560 for Phase 3 cabinet power options in NY11–4. To effectuate this change, the Exchange proposes to add the proposed fees to its fee schedule in General 8, Section 1(c). The Exchange also proposes not to charge an ongoing monthly fee for the cabinet power options in NY11–4 and update the fee schedule accordingly. For NY11–4, the data center operator is bringing in these higher voltage power options and is likely to experience increased power distribution efficiencies across the data center. The proposed power installation fees are higher in NY11–4 as compared to the existing data halls as the installation of the higher voltage power options costs more to the Exchange and is considered a premium product due to anticipated operational efficiencies.[11] As between the Phase 1 and Phase 3 power options, the Phase 3 options provide a more efficient power source.

Fees for Power Distribution Unit Options

The Exchange will offer power distribution units (''PDUs'')[12] in NY11–4 as a convenience to customers. Rather than sourcing PDUs on a customer-by-customer basis, as the Exchange does for customers in NY11, the Exchange will offer Phase 1 and Phase 3[13] power distribution units in NY11–4. The Exchange proposes to establish a fee of $4,100 for a Phase 1 PDU and $5,260 for a Phase 3 PDU. This service is optional and customers may choose to provide their own PDUs appropriate for their power installation choices. The Exchange notes that, as part of such proposed fees, the Exchange would provide a primary and redundant PDU. As such, the proposed PDU fees covers a pair of PDUs. In addition, customers utilizing a Phase 1 or Phase 3 PDU provided by the Exchange have the ability to upgrade or downgrade between amperage levels without replacing the PDU, by a simple upgrade of the facility cord and a receptacle update.[14] A PDU replacement is required when switching between phases/voltage.

The Exchange will also offer a switch monitored PDU add on in NY11–4, which would allow customers to connect remotely to their PDU and control the power sockets. With the switch monitored PDU option, customers would be able to power cycle or shut off power remotely. The Exchange proposes to establish a $2,000 fee for the switch monitored PDU option. This option is optional as well and customers may choose to provide their own switch monitored PDU, if desired.

Implementation

Although the timing is subject to change,[15] the Exchange anticipates opening NY11–4 Exchange access on October 21, 2024 and providing customers access in advance of this date. The proposed fees are designated to be operative on August 15, 2024. However, customer orders will not be fee liable until customers are provided access to the space.[16]

[7] Because of the addition of the Ultra High Density Cabinet option in NY11–4, the Super High Density Cabinet in NY11–4 will have power density greater than 15 kW and less than or equal to 17.3 kW.

[8] The existing data halls utilize cold aisle containment to manage temperatures. Hot aisle containment is a more effective way to manage heat in the data center.

[9] In contrast, to the extent customers provide their own cabinets in NY11, there is an additional out-of-pocket cost for such cabinets.

[10] For example, NYSE charges an initial $5,000 fee for dedicated cabinets. *See https://www.nyse.com/publicdocs/Wireless_Connectivity_Fees_and_Charges.pdf.*

[11] Benefits include future proofing the data hall to allow for increasing power density in the future, requiring less whips to deliver the same amount of amperage, less circuits need to be installed to reach the same power supply, and safety improvements.

[12] PDUs are devices fitted with multiple outputs designed to distribute electric power. The standardized PDUs would only be offered for NY11–4.

[13] Phase 1 PDUs are compatible with the following power options: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, and Phase 1 40 amp 240 volt. Phase 3 PDUs are compatible with the following power options: Phase 3 20 amp 415 volt and Phase 3 32 amp 415 volt. Phase 1 and Phase 3 are available in NY11 and NY11–4. Phase 3 PDUs provide greater power density than Phase 1 PDUs by delivering power over three wires as opposed to one wire.

[14] This functionality may be available with customer-provided PDUs as well and depends on the PDU provided by the customer.

[15] The Exchange will announce modifications to the proposed timing via the Nasdaq Customer Portal, which is the web portal used for order and inventory management of colocation services, and email communication to all colocation customers.

[16] Charging customers once access is provided is consistent with current practice and allows

Continued

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[17] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[18] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposal to establish a monthly fee for Ultra High Density Cabinets, an installation fee for cabinets in NY11–4, installation fees for power installation in NY11–4, and fees for power distribution unit options in NY11–4 is reasonable. First, the Exchange's proposal to establish a $7,230 ongoing monthly fee for Ultra High Density Cabinets in NY11–4 is reasonable because it is comparable to the Exchange's current ongoing monthly fees for cabinets. The proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets). Second, the Exchange believes that the proposed cabinet installation fee of $5,940 is reasonable as compared to the installation fees in NY11 (of $3,693–$4,748) because the proposed installation fee includes the cabinet itself, which includes certain enhanced features in NY11–4, including uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In contrast, in NY11, customers may choose to provide their own cabinets, incurring an additional cost. Furthermore, the proposed installation fee is comparable to the rate charged by NYSE for a similar product, as described above. Third, the Exchange believes that the power installation fees of $3,600 for Phase 1 power options and $4,560 for Phase 3 power options in NY11–4 are reasonable. As compared to power installation fees in NY11, the proposed rates for NY11–4 are higher because the Exchange will incur increased costs for installation of the higher voltage power options. In addition, the higher voltage power options will provide operational efficiencies for the data hall, as discussed above,[19] warranting a higher fee. Finally, the Exchange believes that the proposed fees for PDUs and the PDU add on are reasonable because such fees are consistent with market rates. Furthermore, the Exchange is providing the PDU options as a convenience to customers. No customer is required to purchase any PDU options from the Exchange. Customers may choose to provide their own PDUs and PDU add ons.

The Exchange believes substitutable products and services are available to market participants, including, among other things, other equities and options exchanges that a market participant may connect to in lieu of the Exchange,[20] connectivity to the Exchange via a third-party reseller of connectivity, and/or trading of equities or options products within markets which do not require connectivity to the Exchange, such as the Over-the-Counter (OTC) markets. Market participants that wish to connect to the Exchange will continue to choose the method of connectivity based on their specific needs. Market participants that wish to connect to the Exchange but want to avoid or mitigate the effect of these proposed fees can choose to connect to the Exchange through a vendor.

In summary, the proposal represents an equitable allocation of reasonable dues, fees and other charges because customers have choices in how they connect to the Exchange, the proposed monthly fee for Ultra High Density Cabinets is comparable to current fees charged by the Exchange for other cabinets, the Exchange will provide uniform cabinets in NY11–4 with special features, the proposed cabinet installation fee is consistent with that of comparable products offered by other providers, the Exchange will incur increased costs for new power installation in NY11–4, higher voltage power options will provide operational efficiencies for the data hall, and PDU options are provided as a convenience to customers and customers may choose to provide their own PDUs.

The Exchange believes that the proposed fee changes are not unfairly discriminatory because the cabinet, power, and PDU fees for NY11–4 are available to and assessed uniformly across all market participants. In addition, all customers have the choice of whether and how to connect to the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative exchanges that they may participate on and direct their order flow, as well as off-exchange venues, where competitive products are available for trading.

Nothing in the proposal burdens intra-market competition because the Ultra High Density Cabinets, cabinet power options, and PDU optionality in NY11–4 are available to any customer under the same fees as any other customer, and any customer that wishes to order cabinets, power and PDUs in NY11–4 can do so on a non-discriminatory basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

customers to set up equipment and begin using power.

[17] 15 U.S.C. 78f(b).

[18] 15 U.S.C. 78f(b)(4) and (5).

[19] *Supra* note 11.

[20] There are currently 16 registered equities exchanges that trade equities and 17 exchanges offering options trading services. No single equities exchange has more than 20% of the market share. *See* Cboe Global Markets, U.S. Equities Market Volume Summary, Month-to-Date (Last updated July 3, 2024), available at *https://www.cboe.com/us/equities/market_statistics/*. No single options exchange trades more than 15% of the options market by volume and only one of the 17 options exchanges has a market share over 10 percent. *See* Nasdaq, Options Market Statistics (Last updated July 3, 2024), available at *https://www.nasdaqtrader.com/Trader.aspx?id=OptionsVolumeSummary.* This broad dispersion of market share demonstrates that market participants can and do exercise choice in trading venues. Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[21]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–Phlx–2024–37 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–Phlx–2024–37. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–Phlx–2024–37 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[22]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100596; File No. SR–GEMX–2024–23]

Self-Regulatory Organizations; Nasdaq GEMX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Its Expanded Co-Location Services

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 15, 2024, Nasdaq GEMX, LLC (''GEMX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for its expanded co-location services, as described further below.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on August 15, 2024.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/gemx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange filed a proposal to expand its co-location services by offering new cabinet, power, and power distribution unit options in the Exchange's expanded data center.[3] As described in that filing, the Exchange's current data center (''NY11'') in Carteret, NJ is undergoing an expansion (''NY11–4'') in response to demand for power and cabinets. The purpose of this proposed rule change is to establish fees for the expanded co-location services. Specifically, the Exchange proposes to establish (i) a monthly fee for Ultra High Density Cabinets, (ii) an installation fee for cabinets in NY11–4, (iii) fees for power installation in NY11–4, and (iv) fees for power distribution unit options in NY11–4.

Ultra High Density Cabinet

Currently, co-location customers have the option of obtaining cabinets of various sizes and power densities. Co-location customers may obtain a Half Cabinet,[4] a Low Density Cabinet with power density less than or equal to 2.88 kilowatts (''kW''), a Medium Density Cabinet with power density greater than 2.88 kW and less than or equal to 5 kW, a Medium-High Density Cabinet with power density greater than 5 kW and less than or equal to 7 kW, a High Density Cabinet with power density greater than 7 kW and less than 10 kW, and a Super High Density Cabinet with power density greater than 10 kW and less than or equal to 17.3 kW.

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* SR–GEMX–2024–21 (not yet published).

[4] Half cabinets are not available to new subscribers. *See* General 8, Section 1(a).

The Exchange filed a proposal to introduce a new cabinet choice in NY11–4, an ''Ultra High Density Cabinet,'' with power density greater than 10 kW and less than or equal to 15 kW.[5] The Ultra High Density Cabinet option will only be offered in NY11–4 because of the power configuration necessary for such cabinets, which is not possible or available in other portions of the data center due to different power distribution.[6] In addition to the Ultra High Density Cabinet, the Exchange will offer the other, existing cabinet options in NY11–4, with the exception of the Low Density Cabinet and Half Cabinet due to a lack of demand for such cabinets. The ongoing monthly fees for the Super High Density Cabinet, High Density Cabinet, Medium-High Density Cabinet, and Medium Density Cabinet are the same in NY11 and NY11–4 and the Exchange is not proposing to modify such fees.

The Exchange proposes to establish an ongoing monthly fee of $7,230 for the Ultra High Density Cabinets. To effectuate this change, the Exchange proposes to add the $7,230 ongoing monthly fee for Ultra High Density Cabinets to its fee schedule in General 8, Section 1(a). The Exchange notes that the proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets).

Installation Fee for Cabinets in NY11–4

The Exchange proposes to establish a cabinet installation fee of $5,940 for all cabinets in NY11–4. To effectuate this change, the Exchange proposes to add the proposed $5,940 installation fee to its fee schedule in General 8, Section 1(a) for Super High Density Cabinets, Ultra High Density Cabinets, High Density Cabinets, Medium-High Density Cabinets, and Medium Density Cabinets in NY11–4. In the existing data halls, customers may bring their own cabinets or use Exchange-provided cabinets. In NY11–4, because of the cooling system (hot aisle containment),[7] all cabinets must be uniform and therefore, the Exchange will provide all cabinets, the cost of which is included in the $5,940 installation fee.[8] The cabinets in NY11–4 include certain features not included in cabinets provided by the Exchange in the existing data halls. Specifically, the cabinets in NY11–4 include uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In addition, the proposed installation fee of $5,940 is comparable to fees charged for similar products.[9]

Installation Fee for Cabinet Power in NY11–4

The cabinet power options for NY11–4 include: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, Phase 1 40 amp 240 volt, Phase 3 20 amp 415 volt, and Phase 3 32 amp 415 volt. These cabinet power options are specific to NY11–4 and one of these options must be selected for cabinets in NY11–4. The Exchange proposes to establish an installation fee of $3,600 for Phase 1 cabinet power options in NY11–4 and an installation fee of $4,560 for Phase 3 cabinet power options in NY11–4. To effectuate this change, the Exchange proposes to add the proposed fees to its fee schedule in General 8, Section 1(c). The Exchange also proposes not to charge an ongoing monthly fee for the cabinet power options in NY11–4 and update the fee schedule accordingly. For NY11–4, the data center operator is bringing in these higher voltage power options and is likely to experience increased power distribution efficiencies across the data center. The proposed power installation fees are higher in NY11–4 as compared to the existing data halls as the installation of the higher voltage power options costs more to the Exchange and is considered a premium product due to anticipated operational efficiencies.[10] As between the Phase 1 and Phase 3 power options, the Phase 3 options provide a more efficient power source.

Fees for Power Distribution Unit Options

The Exchange will offer power distribution units (''PDUs'')[11] in NY11–4 as a convenience to customers. Rather than sourcing PDUs on a customer-by-customer basis, as the Exchange does for customers in NY11, the Exchange will offer Phase 1 and Phase 3[12] power distribution units in NY11–4. The Exchange proposes to establish a fee of $4,100 for a Phase 1 PDU and $5,260 for a Phase 3 PDU. This service is optional and customers may choose to provide their own PDUs appropriate for their power installation choices. The Exchange notes that, as part of such proposed fees, the Exchange would provide a primary and redundant PDU. As such, the proposed PDU fees covers a pair of PDUs. In addition, customers utilizing a Phase 1 or Phase 3 PDU provided by the Exchange have the ability to upgrade or downgrade between amperage levels without replacing the PDU, by a simple upgrade of the facility cord and a receptacle update.[13] A PDU replacement is required when switching between phases/voltage.

The Exchange will also offer a switch monitored PDU add on in NY11–4, which would allow customers to connect remotely to their PDU and control the power sockets. With the switch monitored PDU option, customers would be able to power cycle or shut off power remotely. The Exchange proposes to establish a $2,000 fee for the switch monitored PDU option. This option is optional as well and customers may choose to provide their own switch monitored PDU, if desired.

Implementation

Although the timing is subject to change,[14] the Exchange anticipates

[5] *Supra* note 3.

[6] Because of the addition of the Ultra High Density Cabinet option in NY11–4, the Super High Density Cabinet in NY11–4 will have power density greater than 15 kW and less than or equal to 17.3 kW.

[7] The existing data halls utilize cold aisle containment to manage temperatures. Hot aisle containment is a more effective way to manage heat in the data center.

[8] In contrast, to the extent customers provide their own cabinets in NY11, there is an additional out-of-pocket cost for such cabinets.

[9] For example, NYSE charges an initial $5,000 fee for dedicated cabinets. *See https://www.nyse.com/publicdocs/Wireless_Connectivity_Fees_and_Charges.pdf.*

[10] Benefits include future proofing the data hall to allow for increasing power density in the future, requiring less whips to deliver the same amount of amperage, less circuits need to be installed to reach the same power supply, and safety improvements.

[11] PDUs are devices fitted with multiple outputs designed to distribute electric power. The standardized PDUs would only be offered for NY11–4.

[12] Phase 1 PDUs are compatible with the following power options: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, and Phase 1 40 amp 240 volt. Phase 3 PDUs are compatible with the following power options: Phase 3 20 amp 415 volt and Phase 3 32 amp 415 volt. Phase 1 and Phase 3 are available in NY11 and NY11–4. Phase 3 PDUs provide greater power density than Phase 1 PDUs by delivering power over three wires as opposed to one wire.

[13] This functionality may be available with customer-provided PDUs as well and depends on the PDU provided by the customer.

[14] The Exchange will announce modifications to the proposed timing via the Nasdaq Customer Portal, which is the web portal used for order and

opening NY11–4 Exchange access on October 21, 2024 and providing customers access in advance of this date. The proposed fees are designated to be operative on August 15, 2024. However, customer orders will not be fee liable until customers are provided access to the space.[15]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[16] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[17] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposal to establish a monthly fee for Ultra High Density Cabinets, an installation fee for cabinets in NY11–4, installation fees for power installation in NY11–4, and fees for power distribution unit options in NY11–4 is reasonable. First, the Exchange's proposal to establish a $7,230 ongoing monthly fee for Ultra High Density Cabinets in NY11–4 is reasonable because it is comparable to the Exchange's current ongoing monthly fees for cabinets. The proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets). Second, the Exchange believes that the proposed cabinet installation fee of $5,940 is reasonable as compared to the installation fees in NY11 (of $3,693–$4,748) because the proposed installation fee includes the cabinet itself, which includes certain enhanced features in NY11–4, including uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In contrast, in NY11, customers may choose to provide their own cabinets, incurring an additional cost. Furthermore, the proposed installation fee is comparable to the rate charged by NYSE for a similar product, as described above. Third, the Exchange believes that the power installation fees of $3,600 for Phase 1 power options and $4,560 for Phase 3 power options in NY11–4 are reasonable. As compared to power installation fees in NY11, the proposed rates for NY11–4 are higher because the Exchange will incur increased costs for installation of the higher voltage power options. In addition, the higher voltage power options will provide operational efficiencies for the data hall, as discussed above,[18] warranting a higher fee. Finally, the Exchange believes that the proposed fees for PDUs and the PDU add on are reasonable because such fees are consistent with market rates. Furthermore, the Exchange is providing the PDU options as a convenience to customers. No customer is required to purchase any PDU options from the Exchange. Customers may choose to provide their own PDUs and PDU add ons.

The Exchange believes substitutable products and services are available to market participants, including, among other things, other options exchanges that a market participant may connect to in lieu of the Exchange,[19] connectivity to the Exchange via a third-party reseller of connectivity, and/or trading of options products within markets which do not require connectivity to the Exchange, such as the Over-the-Counter (OTC) markets. Market participants that wish to connect to the Exchange will continue to choose the method of connectivity based on their specific needs. Market participants that wish to connect to the Exchange but want to avoid or mitigate the effect of these proposed fees can choose to connect to the Exchange through a vendor.

In summary, the proposal represents an equitable allocation of reasonable dues, fees and other charges because customers have choices in how they connect to the Exchange, the proposed monthly fee for Ultra High Density Cabinets is comparable to current fees charged by the Exchange for other cabinets, the Exchange will provide uniform cabinets in NY11–4 with special features, the proposed cabinet installation fee is consistent with that of comparable products offered by other providers, the Exchange will incur increased costs for new power installation in NY11–4, higher voltage power options will provide operational efficiencies for the data hall, and PDU options are provided as a convenience to customers and customers may choose to provide their own PDUs.

The Exchange believes that the proposed fee changes are not unfairly discriminatory because the cabinet, power, and PDU fees for NY11–4 are available to and assessed uniformly across all market participants. In addition, all customers have the choice of whether and how to connect to the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative exchanges that they may participate on and direct their order flow, as well as off-exchange venues, where competitive products are available for trading.

Nothing in the proposal burdens intra-market competition because the Ultra High Density Cabinets, cabinet power options, and PDU optionality in NY11–4 are available to any customer under the same fees as any other customer, and any customer that wishes to order cabinets, power and PDUs in NY11–4 can do so on a non-discriminatory basis.

inventory management of colocation services, and email communication to all colocation customers.

[15] Charging customers once access is provided is consistent with current practice and allows customers to set up equipment and begin using power.

[16] 15 U.S.C. 78f(b).

[17] 15 U.S.C. 78f(b)(4) and (5).

[18] *Supra* note 10.

[19] There are currently 17 exchanges offering options trading services. No single options exchange trades more than 15% of the options market by volume and only one of the 17 options exchanges has a market share over 10 percent. *See* Nasdaq, Options Market Statistics (Last updated July 3, 2024), available at *https://www.nasdaqtrader.com/Trader.aspx?id=OptionsVolumeSummary.* This broad dispersion of market share demonstrates that market participants can and do exercise choice in trading venues. Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[20] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–GEMX–2024–23 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–GEMX–2024–23. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–GEMX–2024–23 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[21]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100599; File No. SR–Phlx–2024–26]

Self-Regulatory Organizations; Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Options 2, Sections 5 and 10 and Options 3, Section 15

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 16, 2024, Nasdaq PHLX LLC (''Phlx'' or ''Exchange'') filed with the Securities and Exchange Commission (''SEC'' or ''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Options 2, Sections 5 and 10 and Options 3, Section 15.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/phlx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Phlx proposes to amend: (1) Directed Market Maker quoting obligations in Options 2, Section 5, Electronic Market Maker Obligations and Quoting Requirements; (2) a reference to ''Exchange's best price'' in Options 2, Section 10, Directed Orders; and (3) rule text related to the Acceptable Trade Range in Options 3, Section 15, Simple Order Risk Protections. Each change will be discussed below.

Options 2, Section 5

The Exchange proposes to amend the rule text within Options 2, Section 5(c)(2)(C) related to the quoting obligations applicable to a Directed Market Maker.

The current rule text states that Directed SQTs and Directed RSQTs, associated with the same member organization, are collectively required to provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, for which that member organization's assigned options series are open for trading. With respect to a Directed Market Maker, Phlx currently requires that the Directed Market Maker provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, in any options series in which the Directed Market Maker has executed a Directed Order on a daily basis. Phlx requires the Market Maker to fulfill this requirement in addition to its

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

requirement to quote as a Market Maker or a Lead Market Maker.

Below the Exchange presents examples of how the new rule text would operate.

Example 1

- Assume a Market Maker was assigned in options overlying AAPL, SPY, NFLX, ORCL and ADBE.
- Assume this Market Maker had previously executed a Directed Order and executes a Directed Order in NFLX and ADBE on February 27, 2024.
- The Directed Market Maker obligation is a daily obligation once triggered and continues until the Directed Market Maker notifies the Exchange that it no longer desires to be a part of the Directed Order program.
- Moreover, on February 28, 2024 and each day thereafter the Directed Market Maker is required to provide two-sided quotations in 90% of the cumulative number of seconds among all options series in which the Directed Market Maker has executed a Directed Order on a daily basis until a Directed Market Maker notifies the Exchange that it is no longer directed. Therefore, the Directed Market Maker would be required to quote at 90% of the cumulative number of seconds among all options series in which the Directed Market Maker has executed a Directed Order each day, regardless of whether the Directed Market Maker executed a Directed Order that day.

Obligations

This Market Maker is required to provide two-sided quotations in 60% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, for which that member's assigned options series are open for trading among AAPL, SPY, and ORCL to fulfill its Market Maker obligation.

Separately, this Market Maker would be obligated, separate and apart from its Market Maker obligations described in this example, to provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, among NFLX and ADBE to fulfill its Directed Market Maker Obligation.

This Market Maker would not be required to make two-sided markets in any Quarterly Option Series, any Adjusted Option Series, and any option series with an expiration of nine months or greater for options on equities and ETFs or with an expiration of twelve months or greater for index options in AAPL, SPY, NFLX, ORCL and ADBE when meeting its Market Maker or Directed Market Maker requirements.

Example 2

- Assume a Lead Market Maker was assigned in options overlying AAPL, SPY, NFLX, ORCL and ADBE.
- Assume this Lead Market Maker had previously executed a Directed Order and executes a Directed Order in NFLX and ADBE on February 27, 2024. The Directed Market Maker obligation is a daily obligation once triggered and continues until the Directed Market Maker notifies the Exchange that it no longer desires to be a part of the Directed Order program.
- The Directed Market Maker obligation is a daily obligation once triggered and continues until the Directed Market Maker notifies the Exchange that it no longer desires to be a part of the Directed Order program.
- Moreover, on February 28, 2024 and each day thereafter the Directed Market Maker is required to provide two-sided quotations in 90% of the cumulative number of seconds among all options series in which the Directed Market Maker has executed a Directed Order on a daily basis until a Directed Market Maker notifies the Exchange that it is no longer directed. Therefore, the Directed Market Maker would be required to quote at 90% of the cumulative number of seconds among all options series in which the Directed Market Maker has executed a Directed Order each day, regardless of whether the Directed Market Maker executed a Directed Order that day.

Obligations

This Lead Market Maker, associated with the same member, is collectively required to provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, among AAPL, SPY, and ORCL to fulfill its Lead Market Maker obligation.[3]

Separately, this Lead Market Maker would be obligated, separate and apart from its Lead Market Maker obligations described in this example, to provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, among NFLX and ADBE to fulfill its Directed Market Maker obligation.

This Market Maker would not be required to make two-sided markets in any Quarterly Option Series, any Adjusted Option Series, and any option series with an expiration of nine months or greater for options on equities and ETFs or with an expiration of twelve months or greater for index options in AAPL, SPY, NFLX, ORCL and ADBE when meeting its Lead Market Maker or Directed Market Maker requirements.

The Exchange proposes to amend the rule text in Options 2, Section 5(c)(2)(C) to require Directed Lead Market Makers, Directed SQTs and Directed RSQTs (collectively ''Directed Market Makers''),[4] associated with the same member organization, collectively, to provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, among all option series in which the Directed Market Maker has executed a Directed Order on a daily basis, except that a Directed Market Maker shall not be required to make two-sided markets in any Quarterly Option Series, any Adjusted Option Series, and any option series with an expiration of nine months or greater for options on equities and exchange-traded funds (''ETFs'') or with an expiration of twelve months or greater for index options. The Exchange notes that the proposed requirements are similar to requirements imposed by other options exchanges. NYSE Arca, Inc. (''NYSE Arca'') and NYSE American LLC (''NYSE American'') require that their lead market makers and market makers provide continuous two-sided quotations throughout the trading day in issues for which it receives Directed Orders for 90% of the time the Exchange is open for trading in each issue.[5]

The Exchange also proposes to relocate certain rule text within Options 2, Section 5(c)(2)(C) to make clear the requirements applicable to a Directed Market Maker and make other amendments as well. The Exchange

[3] *See* Options 2, Section 4(j)(1).

[4] The Exchange will utilize the term ''Directed Market Makers'' throughout to refer to Directed Lead Market Makers, Directed SQTs and Directed RSQTs. The Exchange will also utilize the term ''Market Maker'' in this 19b4 to refer to a Lead Market Maker, SQT and an RSQT. *See* Options 7, Section 1(b)(28), ''A 'Market Maker' means a Streaming Quote Trader or a Remote Streaming Quote Trader who enters quotations for his own account electronically into the System.'' Further, *see* Options 7, Section 1(b)(27), ''A 'Lead Market Maker' means a member who is registered as an options Lead Market Maker pursuant to Options 2, Section 12(a). A Lead Market Maker includes a Remote Lead Market Maker which is defined as a Lead Market Maker in one or more classes that does not have a physical presence on the Exchange's Trading Floor and is approved by the Exchange pursuant to Options 2, Section 11.''

[5] *See* NYSE Arca Rule 6.88–O and NYSE American Rule 964.1NY. NYSE Arca Rule 6.88–O(iv) states that these obligations will apply collectively to all series in all of the issues for which the Directed Order Market Maker receives Directed Orders, rather than on an issue-by-issue basis.

proposes to amend the timeframe in which a Directed Market Maker is obligated to commence complying with the quoting obligations of Options 2, Section 5(c)(2)(C).[6] Today, a Directed Market Maker must commence complying with the quoting obligations specified in Options 2, Section 5(c)(2)(C) when a Directed Market Maker receives a Directed Order in any option in which they are assigned until such time as the Directed Market Maker notifies the Exchange that they are no longer directed. Pursuant to Options 2, Section 10(a)(ii), ''[w]hen the Exchange's disseminated price is the NBBO at the time of receipt of the Directed Order, and the Directed Lead Market Maker, SQT or RSQT is quoting at the Exchange's best price, the Directed Order shall be automatically executed and allocated in accordance with Options 3, Section 10(a)(1).'' The Exchange proposes to amend Options 2, Section 5(c)(2)(C) to instead begin requiring a Directed Market Maker to comply with the Directed Market Maker quoting obligations in Options 2, Section 5(c)(2)(C) when the Directed Market Maker executes its first Directed Order in any option in which they are assigned. A Directed Market Maker has the ongoing quoting obligation from the time a Directed Market Maker executes its first Directed Order in the options in which the Directed Market Maker is assigned until a Directed Market Maker notifies the Exchange that the Directed Market Maker is no longer directed. Because Directed Market Makers are unaware if an order is directed to them until such time as they execute the Directed Order and receive an allocation pursuant to Options 3, Section 10, the Exchange believes that starting the quoting obligation once a Directed Order is executed is a practical approach to ensuring that Directed Market Makers comply with their quoting obligations.

The proposed rule text would provide,

Directed Lead Market Makers, Directed SQTs and Directed RSQTs (''Directed Market Makers''), associated with the same member organization, are collectively required to provide two-sided quotations in 90% of the cumulative number of seconds, or such higher percentage as Phlx may announce in advance, among all options series in which the Directed Market Maker has executed a Directed Order on a daily basis, except that a Directed Market Maker shall not be required to make two-sided markets in any Quarterly Options Series, any Adjusted Options Series, and any options series with an expiration of nine months or greater for options on equities and ETFs or with an expiration of twelve months or greater for index options. A Directed Market Maker has the ongoing quoting obligation from the time a Directed Market Maker executes its first Directed Order in the options in which the Directed Market Maker is assigned until a Directed Market Maker notifies the Exchange that the Directed Market Maker is no longer directed.

A Directed Market Maker shall not be required to make two-sided markets in any Quarterly Options Series, any Adjusted Options Series, and any options series with an expiration of nine months or greater for options on equities and ETFs or with an expiration of twelve months or greater for index options and would receive a participation entitlement in the Quarterly Options Series, the Adjusted Options Series, and an options series with an expiration of nine months or greater for options on equities and ETFs or with an expiration of twelve months or greater for index options for the Directed Order, only if it complies with the heightened 90% quoting requirement.

As is the case today, a Directed Market Maker must be quoting at the Exchange's best price[7] at the time of receipt of the Directed Order to be entitled to the allocation in accordance with Options 3, Section 10. The Exchange notes that the amendment adds clarity to the Exchange's current practice[8] and harmonizes the rules of Phlx with those of other Nasdaq affiliated markets.

Options 2, Section 10

The Exchange proposes to amend Options 2, Section 10, Directed Orders. Specifically, Options 2, Section 10(a)(ii) provides, ''When the Exchange's disseminated price is the NBBO at the time of receipt of the Directed Order, and the Directed Lead Market Maker, SQT or RSQT is quoting at the Exchange's best price, the Directed Order shall be automatically executed and allocated in accordance with Options 3, Section 10(a)(1).'' The Exchange proposes to amend this sentence to replace the words ''Exchange's best price'' with ''better of the internal PBBO or the NBBO.'' The Exchange proposes this amendment to conform the rule text with language throughout the Options 3 trading rules that describe the Exchange's best price with references to the internal PBBO and NBBO. Pursuant to Options 3, Section 5, the System automatically executes eligible orders using the Exchange's displayed best bid and offer (''PBBO'') or the Exchange's non-displayed order book (''internal PBBO'') if there are non-displayed orders on the order book or the best bid and/or offer on the Exchange has been repriced pursuant to Options 3, Section 5(d) or Options 3, Section 4(b)(6) which describes trade-through compliance and locked and crossed markets. The Exchange also proposes to amend the citation to ''Options 3, Section 10(a)(1)'' to the more precise citation ''Options 3, Section 10(a)(1)(C)'' which describes the Directed Market Maker Priority allocation. The Exchange's amendment will bring additional clarity to current rule text and harmonize the rule text with Options 3 language.

Options 3, Section 15

Today, Options 3, Section 15(b)(1)(A) provides that, ''Upon receipt of a new order/quote, the Reference Price is the better of the National Best Bid (''NBB'') or internal best bid for sell orders/quotes and the National Best Offer (''NBO'') or internal best offer for buy orders/quotes, excluding All-or-None Orders which cannot be satisfied, or the last price at which the order/quote is posted whichever is higher for a buy order/quote or lower for a sell order/quote.'' The Exchange proposes to remove the phrase ''excluding All-or-None Orders which cannot be satisfied'' from the rule text. The Exchange previously filed a rule change[9] to amend All-or-None Orders so that they may only be submitted by a Public Customer as an Immediate-or-Cancel Order. As a result of this rule change, All-or-None Orders no longer rest on the order book. Upon entry, an All-or-None Order is executed in its entirety or cancelled if it cannot execute. The Exchange inadvertently did not remove the aforementioned rule text which would require an All-or-None Order to

[6] Options 2, Section 5(c)(2)(C) provides that a member organization shall be considered directed in all assigned options once the member organization receives a Directed Order in any option in which they are assigned and shall be considered a Directed SQT or Directed RSQT until such time as the member organization notifies the Exchange that they are no longer directed.

[7] As part of this proposed rule change the Exchange is amending Options 2, Section 10(a)(ii) to replace the words ''Exchange's best price'' with ''better of the internal PBBO or the NBBO.'' The ''internal PBBO'' is comprised of non-displayed and displayed orders on the Exchange's order book.

[8] Phlx noted in a 2018 rule change that if a member desired to become a Directed SQT that the quoting obligations specified in Rule 1081(c)(ii)(C) (now Options 2, Section 5) would commence when that Directed SQT executed an order directed to the Directed SQT. *See* Securities Exchange Act Release No. 82975 (March 30, 2018), 83 FR 14690, 14694 (April 5, 2018) (SR–Phlx–2018–22) (Notice of Filing of Proposed Rule Change To Create a New Rule 1081, To Amend Electronic Market Maker Obligations and Quoting Requirements for Electronic ROTs, Which Will Be Defined To Include SQTs, RSQTs, Directed SQTs, Directed RSQTs, Specialists, and Remote Specialists).

[9] *See* Securities Exchange Act Release No. 98142 (August 16, 2023), 88 FR 57140 (August 22, 2023) (SR–Phlx–2023–34) (Nasdaq PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Phlx's All-or-None Order) (''SR–Phlx–2023–34'').

rest to be applicable. At this time, the Exchange proposes to also remove this rule text reference to All-or-None Orders in Options 3, Section 15(b)(1)(A), similar to the other rule text rule references that were removed in SR–Phlx–2023–34.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[10] in general, and furthers the objectives of Section 6(b)(5) of the Act,[11] in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest.

Options 2, Section 5

The Exchange's proposal to amend the Directed Market Maker quoting obligations in Options 2, Section 5(c)(2)(C) is consistent with the Act. Other options exchanges today require Directed Market Makers, collectively, to provide two-sided quotations in 90% of the cumulative number of seconds among all options series in which the Directed Market Maker has received a Directed Order on a daily basis. The proposed Directed Market Maker quoting obligations would require Directed Market Makers, collectively, to provide two-sided quotations in 90% of the cumulative number of seconds or such higher percentage as Phlx may announce in advance, among all options series in which the Directed Market Maker has executed a Directed Order on a daily basis in addition to their quoting requirements as Market Makers and Lead Market Makers.

The Exchange believes that these quoting requirements create a direct nexus between the allocation that would be received by a Directed Market Maker pursuant to Options 3, Section 10 and the liquidity that the Directed Market Maker would be required to provide to the market in that particular options series. The Exchange notes that any Directed Market Maker quoting at the NBBO would need to provide two-sided quotations in 90% of the cumulative number of seconds among all options series in which the Directed Market Maker has executed a Directed Order for the entire day in which the Directed Market Maker received the Directed Order and each day thereafter, on a daily basis, until a Directed Market Maker notifies the Exchange that it is no longer directed. The Exchange believes that this quoting obligation is designed to promote just and equitable principles of trade by ensuring that Directed Market Makers quote competitively in as many series as possible to attract Directed Orders so that they may receive an enhanced allocation as a Directed Market Maker.

The proposed rule text would harmonize the Directed Market Maker's quoting obligations with other options exchanges, such as NYSE Arca and NYSE American which require that their lead market makers and market makers provide continuous two-sided quotations throughout the trading day in issues for which it receives Directed Orders for 90% of the time the Exchange is open for trading in each issue.[12]

The Exchange's proposal to amend Options 2, Section 5(c)(2)(C) to require a Directed Market Maker to commence complying with the Options 2, Section 5(c)(2)(C) quoting obligations when the Directed Market Maker executes its first Directed Order in any option in which they are assigned is a practical approach to ensuring that Directed Market Makers comply with their quoting obligations. Directed Market Makers are unaware if an order is directed to them until such time as they execute the Directed Order and receive an allocation pursuant to Options 3, Section 10. Further, the Exchange notes that a Directed Market Maker must be quoting at the Exchange's best price[13] at the time of receipt of the Directed Order to be entitled to the allocation in accordance with Options 3, Section 10.

Options 2, Section 10

The Exchange's proposal to amend Options 2, Section 10, Directed Orders, to replace the words ''Exchange's best price'' with ''better of the internal PBBO or the NBBO'' is consistent with the Act. The proposed amendment will conform the rule text with language throughout the Options 3 trading rules that describe the Exchange's best price with references to the internal PBBO and NBBO. Additionally, the Exchange's amendment will protect investors and the general public by adding clarity to current rule text as well as harmonizing the rule text with Options 3 language.

Options 3, Section 15

The Exchange's proposal to remove rule text within Options 3, Section 15(b)(1)(A), related to the Acceptable Trade Range, is consistent with the Act as SR–Phlx–2023–34 amended All-or-None Orders such that they may only be submitted by a Public Customer as an Immediate-or-Cancel Order. An All-Or-None Order will either execute immediately or be cancelled back to the member or member organization. The Exchange inadvertently did not remove the aforementioned rule text which would require an All-or-None Order to rest to be applicable. This change will remove the incorrect rule text and bring greater clarity to the rules.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Options 2, Section 5

The Exchange's proposal to amend the Directed Market Maker quoting obligations in Options 2, Section 5(c)(2)(C) does not impose an undue burden on competition as every Directed Market Maker would be required, collectively, to provide two-sided quotations in 90% of the cumulative number of seconds or such higher percentage as Phlx may announce in advance, among all options series in which the Directed Market Maker has executed a Directed Order for the entire day in which the Directed Market Maker received the Directed Order, on a daily basis, until a Directed Market Maker notifies the Exchange that it is no longer directed. The proposal does not impose a burden on inter-market competition as other options markets today impose similar quoting obligations.

The Exchange's proposal to amend Options 2, Section 5(c)(2)(C) to require a Directed Market Maker to commence complying with the Options 2, Section 5(c)(2)(C) quoting obligations when the Directed Market Maker executes its first Directed Order in any option in which they are assigned does not impose an undue burden on competition because all Directed Market Makers will be required to commence complying with Options 2, Section 5(c)(2)(C) when the Directed Market Maker executes its first Directed Order in any option in which they are assigned. The proposal does not impose a burden on inter-market competition as other options markets today impose similar quoting obligations and may amend their rules to mirror those of Phlx.

Options 2, Section 10

The Exchange's proposal to amend Options 2, Section 10, Directed Orders, to replace the words ''Exchange's best price'' with ''better of the internal PBBO or the NBBO'' does not impose an

[10] 15 U.S.C. 78f(b).

[11] 15 U.S.C. 78f(b)(5).

[12] *See supra* note 5.

[13] *See supra* note 7.

undue burden on competition because the amendment more specifically describes the Exchange's best price with references to the internal PBBO and NBBO. The Exchange's amendment will add clarity to current rule text.

Options 3, Section 15

The Exchange's proposal to remove rule text within Options 3, Section 15(b)(1)(A), related to the Acceptable Trade Range, does not impose an undue burden on competition as All-or-None Orders may only be submitted by a Public Customer as an Immediate-or-Cancel Order. An All-Or-None Order will either execute immediately or be cancelled back to the member or member organization. Removing the incorrect rule text will bring greater clarity to the rules.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act[14] and subparagraph (f)(6) of Rule 19b–4 thereunder.[15]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–Phlx–2024–26 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–Phlx–2024–26. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–Phlx–2024–26 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[16]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100588; File No. SR–SAPPHIRE–2024–01]

Self-Regulatory Organizations; MIAX Sapphire, LLC; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change To Establish Proprietary Market Data Products

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 19, 2024, MIAX Sapphire, LLC (''MIAX Sapphire'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I and II, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish proprietary market data products. The text of the proposed rule change is available on the Exchange's website at *https://www.miaxglobal.com/markets/us-options/miax-sapphire/rule-filings,* at the Exchange's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to establish the MIAX Sapphire Top of Market (''ToM'') data feed, MIAX Sapphire Complex Top of Market (''cToM'') data

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

feed, and MIAX Sapphire Liquidity Feed (''SLF'').

The proposed ToM data feed will provide market participants with a direct data feed that includes the Exchange's best bid [3] and offer,[4] with aggregate size, and last sale information, based on displayable order and quoting interest on the Exchange. The proposed ToM data feed will include data that is identical to the data sent to the processor for the Options Price Reporting Authority (''OPRA''). The ToM and OPRA data will leave the MIAX Sapphire System [5] at the same time, as required under Section 5.2(c)(iii)(B) of the Limited Liability Company Agreement of the Options Price Reporting Authority LLC (the ''OPRA Plan''), which prohibits the dissemination of proprietary information on any more timely basis than the same information is furnished to the OPRA system for inclusion in OPRA's consolidated dissemination of options information. ToM will also contain a feature that provides the number of Priority Customer [6] contracts that are included in the size associated with the Exchange's best bid and offer.

The proposed cToM data feed will provide subscribers with the same information as the ToM data product as it relates to complex orders [7] on the Strategy Book,[8] *i.e.,* the Exchange's best bid and offer for a complex strategy, with aggregate size, based on displayable order and quoting interest in the complex strategy on the Exchange. The proposed cToM data feed will also provide subscribers with the identification of the complex strategies currently trading on MIAX Sapphire; complex strategy last sale information; and the status of securities underlying the complex strategy (*e.g.,* halted, open, or resumed). cToM will be distinct from ToM, and any firm that would like to receive cToM data must subscribe to cToM regardless of whether they are a current ToM subscriber. ToM subscribers will not be required to subscribe to cToM, and cToM subscribers will not be required to subscribe to ToM.

The proposed SLF data product will provide market participants with a direct data feed that allows subscribers to receive real-time updates of options orders, products traded on MIAX Sapphire, MIAX Sapphire System status, and MIAX Sapphire underlying trading status. When an order is received or an order state changes, published order information will be transmitted over the SLF, including time stamp, action, product ID, order ID, order side, order type, order price, original order size, open order size, time in force, origin, open or close, and route instruction. For complex orders, complex strategy definition notification and complex order notice are also included. Subscribers to the SLF data feed will get a list of all options symbols and strategies that will be traded and sourced on that feed at the start of every session.

The proposed data products provide valuable information that can help subscribers make informed investment decisions, and operate in the same manner as similar data products offered by the Exchange's affiliate, including Miami International Securities Exchange, LLC (''MIAX''), namely the MIAX Top of Market data feed (''MIAX ToM''),[9] MIAX Complex Top of Market data feed (''MIAX cToM''),[10] and the MIAX Order Feed (''MIAX MOR'').[11] The proposed data products also operate in the same manner as similar data products offered by the Exchange's affiliate, MIAX Emerald, LLC (''MIAX Emerald''), namely the MIAX Emerald Top of Market data feed (''Emerald ToM''), MIAX Emerald Complex Top of Market data feed (''Emerald cToM''), and the MIAX Emerald Order Feed (''Emerald MOR'').[12]

The Exchange represents that it will make ToM, cToM, and SLF equally available to any market participant that wishes to subscribe to any of those products. The Exchange will submit a separate proposed rule change for immediate effectiveness pursuant to Section 19(b)(3)(A) of the Act [13] and Rule 19b–4(f)(2) [14] thereunder to establish fees for the ToM, cToM and SLF data feeds. The Exchange notes that its affiliate, MIAX Emerald, filed a substantively similar proposal to adopt its own market data products—Emerald ToM, Emerald cToM and Emerald MOR—prior to offering such products to market participants prior to launching operations as a national securities exchange.[15]

2. Statutory Basis

The Exchange believes that its proposed rule change is consistent with Section 6(b) [16] of the Act in general, and furthers the objectives of Section 6(b)(5) [17] of the Act in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, promote just and equitable principles of trade, foster cooperation and coordination with persons engaged in facilitating transactions in securities, remove impediments to and perfect the mechanisms of a free and open market and a national market system and, in general, protect investors and the public interest.

The ToM market data product is designed to promote just and equitable principles of trade by providing all subscribers with top of market data that includes the Exchange's best bid and offer, with aggregate size, and last sale information, based on order and quoting interest on the Exchange that should enable them to make informed decisions on trading on MIAX Sapphire by using the ToM data to assess current market conditions that directly affect such decisions.

The cToM market data product is designed to promote just and equitable principles of trade by providing all subscribers with top of market data that includes similar information provided via ToM but for the Exchange's complex

[3] The term ''bid'' means a limit order to buy one or more options contracts. *See* Exchange Rule 100.

[4] The term ''offer'' means a limit order to sell one or more options contracts. *See id.*

[5] The term ''System'' means the automated trading system used by the Exchange for the trading of securities. *See id.*

[6] The term ''Priority Customer'' means a person or entity that (i) is not a broker or dealer in securities, and (ii) does not place more than 390 orders in listed options per day on average during a calendar month for its own beneficial account(s). The number of orders shall be counted in accordance with Interpretation and Policy .01. *See id.*

[7] A ''complex order'' is ''any order involving the concurrent purchase and/or sale of two or more different options in the same underlying security (the 'legs' or 'components' of the complex order), for the same account, in a conforming or non-conforming ratio. . . .'' *See* Exchange Rule 518(a).

[8] The term ''complex strategy'' means a particular combination of components and their ratios to one another. New complex strategies can be created as the result of the receipt of a complex order or by the Exchange for a complex strategy that is not currently in the System. The Exchange may limit the number of new complex strategies that may be in the System at a particular time and will communicate this limitation to Members via Regulatory Circular. *See* Exchange Rule 518(a). The ''Strategy Book'' is the Exchange's electronic book of complex orders. *See* Exchange Rule 100. The Strategy Book is organized by complex strategy in that individual orders for a defined complex strategy are organized together in a book that is separate from the orders for a different complex strategy.

orders on the Strategy Book, including the Exchange's best bid and offer for a complex strategy, with aggregate size, based on displayable order and quoting interest in the complex strategy on the Exchange that should enable subscribers to make informed decisions on trading on MIAX Sapphire by using the cToM data to assess current market conditions that directly affect such decisions.

The SLF market data product is designed to promote just and equitable principles of trade by providing all subscribers with limit order book data that should enable subscribers to make informed decisions on trading in MIAX Sapphire options by using the SLF data to assess current market conditions that directly affect such decisions. The proposed market data product facilitates transactions in securities, removes impediments to and perfect the mechanisms of a free and open market and a national market system by enhancing the subscribers' ability to make decisions on trading strategy, and by providing data that should help bring about such decisions in a timely manner to the protection of investors and the public interest. The market data provided by SLF removes impediments to, and is designed to further perfect, the mechanisms of a free and open market and a national market system by making the MIAX Sapphire market more transparent and accessible to market participants making routing decisions concerning their options orders. The SLF market data product is also designed to protect investors and the public interest by providing data to subscribers that is already currently available on other exchanges and will enable MIAX Sapphire to compete with such other exchanges, thereby offering market participants with additional data in order to seek the market center with the best price and the most liquidity on which to execute their transactions, all to the benefit of investors and the public interest, and to the marketplace as a whole.

The proposed ToM, cToM, and SLF market data products facilitate transactions in securities, remove impediments to and perfect the mechanisms of a free and open market and a national market system by enhancing the subscriber's ability to make decisions on trading strategies and by providing data which should help bring about such decisions in a timely manner to benefit the protection of investors and the public interest. The market data provided by ToM, cToM, and SLF removes impediments to, and is designed to further perfect, the mechanisms of a free and open market and a national market system by making the MIAX Sapphire market more transparent and accessible to market participants making routing decisions concerning their options orders. The Exchange notes that these data products are similar to, and provide data that is equivalent to, the ToM, cToM, and MOR data products for MIAX and MIAX Emerald with respect to options traded on those exchanges.[18] The Exchange believes that it is in the public interest to make similar information available with respect to options traded on MIAX Sapphire.

The proposed ToM, cToM, and SLF market data products are also designed to protect investors and the public interest by providing data to subscribers that is already currently available on at least one other competing options exchange [19] and will enable MIAX Sapphire to compete with such other exchanges, thereby offering market participants with additional data in order to seek the market center with the best price and the most liquidity on which to execute their transactions, all to the benefit of investors and the public interest, and to the marketplace as a whole.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. On the contrary, the Exchange believes that the new market data products will enhance competition in the U.S. options markets by providing users of MIAX Sapphire market data products that are similar to that which are currently provided on other competing options exchanges.[20]

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Written comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A)(iii) of the Act [21] and Rule 19b–4(f)(6) thereunder.[22]

A proposed rule change filed under Rule 19b–4(f)(6) [23] normally does not become operative prior to 30 days after the date of the filing. However, pursuant to Rule 19b–4(f)(6)(iii),[24] the Commission may designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Exchange states that waiver of the operative delay will enable the Exchange to make the ToM, cToM, and SLF market data products available to subscribers at the time of the launch of trading on the Exchange, which is scheduled for August 12, 2024.[25] The Exchange further states that the proposed rule change does not present any new or novel issues because the proposed market data products are substantially similar to market data products offered by the Exchange's affiliates, MIAX and MIAX Emerald, and by at least one other competing options exchange.[26] For these reasons, and because the proposal does not raise any new or novel issues, the Commission believes that waiver of the operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative

[18] *See supra* notes 9, 10, 11, and 12.

[19] For example, Nasdaq GEMX, LLC (''GEMX'') has similar data products to ToM and MOR available for purchase by GEMX users, including the Nasdaq GEMX Top Feed and Nasdaq GEMX Order Feed. *See* Nasdaq GEMX Options 7, Pricing Schedule, Section 7, Market Data.

[21] 15 U.S.C. 78s(b)(3)(A)(iii).

[22] 17 CFR 240.19b–4(f)(6). In addition, Rule 19b–4(f)(6) requires a self-regulatory organization to give the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission. The Exchange has satisfied this requirement.

[23] 17 CFR 240.19b–4(f)(6).

[24] 17 CFR 240.19b–4(f)(6)(iii).

[25] *See* MIAX Sapphire Options Exchange Trading Alert, Regulatory Alert, Technical Alert, dated July 15, 2024, *available at https://www.miaxglobal.com/alert/2024/07/15/miax-sapphire-options-exchange-july-20th-mock-trading-test-plan-preparation; see also* Securities Exchange Act Release No. 100539 (July 15, 2024) (File No. 10–240) (In the Matter of the Application of MIAX Sapphire, LLC for Registration as a National Securities Exchange; Findings, Opinion, and Order of the Commission) (order approving MIAX Sapphire, LLC for registration as a national securities exchange).

[26] *See supra* notes 9, 10, 11, 12 and 19.

delay and designates the proposal operative upon filing.[27]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings under Section 19(b)(2)(B)[28] of the Act to determine whether the proposed rule change should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov.* Please include file number SR–SAPPHIRE–2024–01 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–SAPPHIRE–2024–01. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. Do not include personal identifiable information in submissions; you should submit only information that you wish to make available publicly. We may redact in part or withhold entirely from publication submitted material that is obscene or subject to copyright protection. All submissions should refer to file number SR–SAPPHIRE–2024–01 and should be submitted on or before August 21, 2024.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.[29]

Sherry R. Haywood,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100597; File No. SR–NYSEARCA–2024–61]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Amend Rule 1.1 and Rule 5.2–E(j)(6)

July 25, 2024.

Pursuant to Section 19(b)(1)[1] of the Securities Exchange Act of 1934 (''Act'')[2] and Rule 19b–4 thereunder,[3] notice is hereby given that, on July 15, 2024, NYSE Arca, Inc. (''NYSE Arca'' or the ''Exchange'') filed with the Securities and Exchange Commission (the ''Commission'') the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to (1) amend Rule 1.1 to include Exchange-Traded Fund Shares in the definition of ''UTP Derivative Securities Product,'' and (2) amend Rule 5.2–E(j)(6) to exclude Exchange-Traded Fund Shares when applying the quantitative generic listing criteria applicable to Equity Index-Linked Securities. The proposed rule change is available on the Exchange's website at *www.nyse.com,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

[1] 15 U.S.C. 78s(b)(1).

[2] 15 U.S.C. 78a.

[3] 17 CFR 240.19b–4.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

Rule 1.1

The Exchange proposes to amend Rule 1.1, which sets forth definitions of terms used in Exchange rules, including the meanings of ''Derivative Securities Product'' and ''UTP Derivative Securities Product.''

Specifically, the Exchange proposes to amend the definition of ''UTP Derivative Securities Product'' to include Exchange-Traded Fund Shares listed pursuant to NYSE Arca, Inc. (''NYSE Arca'') Rule 5.2–E(j)(8), Exchange-Traded Fund Shares listed pursuant to New York Stock Exchange LLC (''NYSE'') Rule 5.2(j)(8), Exchange-Traded Fund Shares listed pursuant to Cboe BZX Exchange, Inc. (''BZX'') Rule 14.11(l), and Exchange Traded Fund Shares listed pursuant to Nasdaq Stock Market LLC (''Nasdaq'') Rule 5704 as additional types of Exchange Traded Product (''ETPs'') that may trade on the Exchange pursuant to unlisted trading privileges (''UTP'').[4]

[4] Exchange-Traded Fund Shares and Exchange Traded Fund Shares are substantially similar products that generally refer to shares of exchange-traded funds eligible to operate in reliance on Rule 6c–11 under the Investment Company Act of 1940. *See* Securities Exchange Act Release Nos. 88625 (April 13, 2020), 85 FR 21479 (April 17, 2020) (SR–NYSEArca–2019–81) (order approving NYSE Arca Rule 5.2–E(j)(8) governing the listing and trading of Exchange-Traded Fund Shares); 91029 (February 1, 2021), 86 FR 8420 (February 5, 2021) (SR–NYSE–2020–86) (order approving NYSE Rule 5.2(j)(8) governing the listing and trading of Exchange-Traded Fund Shares); 88566 (April 6, 2020), 85 FR 20312 (April 10, 2020) (SR–CboeBZX–2019–097)

Continued

To effect this change, the Exchange proposes to add a bullet point listing ''Exchange-Traded Fund Shares listed pursuant to NYSE Arca, Inc. Rule 5.2–E(j)(8), New York Stock Exchange LLC Rule 5.2(j)(8), or Cboe BZX Exchange, Inc. Rule 14.11(l) and Exchange Traded Fund Shares listed pursuant to Nasdaq Stock Market LLC Rule 5704'' in Rule 1.1 to include them in the enumerated list of Derivative Securities Products that may trade on the Exchange on a UTP basis. The Exchange also proposes non-substantive changes to accommodate the addition of this bullet point as the final item in the bulleted list in Rule 1.1.

The Exchange believes that the proposed change would ensure that the definition of ''UTP Derivative Securities Product'' in Rule 1.1 reflects a complete list of Derivative Securities Products that may trade on the Exchange pursuant to UTP, thereby improving the clarity and transparency of Exchange Rules.

Rule 5.2–E(j)(6)

Rule 5.2–E(j)(6) sets forth criteria applicable to Exchange listing of equity index-linked securities (''Equity Index-Linked Securities''), commodity-linked securities, currency-linked securities, fixed income index-linked securities, futures-linked securities, and multifactor index-linked securities.

As defined in Rule 5.2–E(j)(6)(B)(I)(1), Equity Index-Linked Securities are securities that provide for the payment at maturity (or earlier redemption) based on the performance of an underlying index or indexes of equity securities, securities of closed-end management investment companies registered under the Investment Company Act of 1940,[5] and/or Investment Company Units. In addition to certain other generic listing criteria, Equity Index-Linked Securities must satisfy the generic quantitative initial and continued listing criteria under Rule 5.2–E(j)(6)(B)(I) in order to become, and continue to be, listed and traded on the Exchange. Certain of the applicable quantitative criteria specify minimum or maximum thresholds that must be satisfied with respect to, for example, market value, trading volume, and dollar weight of an index represented by a single component or groups of components.

Currently, Rule 5.2–E(j)(6)(B)(I)(1)(a) provides that each underlying index of an Equity Index-Linked Security is required to have at least ten component securities, provided, however, that there shall be no minimum number of component securities if one or more issues of Derivative Securities Products (*i.e.,* Investment Company Units (as described in Rule 5.2–E(j)(3)) and securities described in Section 2 of Rule 8) or Index-Linked Securities (as described in Rule 5.2–E(j)(6)), constitute, at least in part, component securities underlying an issue of Equity Index-Linked Securities. The Exchange proposes to amend Rule 5.2–E(j)(6)(B)(I)(1)(a) to include Exchange-Traded Fund Shares, as described in Rule 5.2–E(j)(8), in the group of Derivative Securities Products to which the ten component security minimum would not apply. The Exchange also proposes to exclude Derivative Securities Products, consistent with this proposed change to the description of Derivative Securities Products in Rule 5.2–E(j)(6)(B)(I)(1)(a), from consideration when determining whether the applicable quantitative generic thresholds have been satisfied under the initial listing standards specified in Rules 5.2–E(j)(6)(B)(I)(1)(b)(i) through (iv) and the continued listing standards specified in Rules 5.2–E(j)(6)(B)(I)(2)(a)(i) and (ii). Thus, for example, when determining compliance with Rule 5.2–E(j)(6)(B)(I)(1)(b)(ii), component stocks, excluding Derivative Securities Products (which would, as proposed, include Exchange-Traded Fund Shares) or Index-Linked Securities, that in the aggregate account for at least 90% of the remaining index weight, excluding any Derivative Securities Products (including, as proposed, Exchange-Traded Fund Shares) or Index-Linked Securities, would be required to have a minimum global monthly trading volume of 1,000,000 shares, or minimum global notional volume traded per month of $25,000,000, averaged over the last six months.

In addition, Rule 5.2–E(j)(6)(B)(I)(1)(a) currently provides that the securities described in Rule 5.2–E(j)(3), Section 2 of Rule 8, and Rule 5.2–E(j)(6), as referenced in Rule 5.2–E(j)(6)(B)(I)(1)(b)(2) and Rule 5.2–E(j)(6)(B)(I)(2)(a), shall include securities listed on another national securities exchange pursuant to substantially equivalent listing rules. The Exchange proposes to update this list to include a reference to Rule 5.2–E(j)(8), consistent with the proposed change described above. The Exchange also proposes non-substantive changes in two places in Rule 5.2–E(j)(6)(B)(I)(1)(a) to refer to ''Section 2 of Rule 8–E'' (instead of ''Section 2 of Rule 8'') to reflect the current NYSE Arca rule numbering convention. Finally, the Exchange proposes non-substantive changes to delete the extra spaces that appear in the term ''Index-Linked Securities'' in Rules 5.2–E(j)(6)(B)(I)(1)(b)(ii), 5.2–E(j)(6)(B)(I)(2)(a)(i), and 5.2–E(j)(6)(B)(I)(2)(a)(ii).

The Exchange notes that the inclusion of Exchange-Traded Fund Shares in the group of Derivative Securities Products that are excepted from the generic listing and continued listing criteria specified above for Equity Index-Linked Securities would align the Exchange's rules with the listing criteria for Equity Index-Linked Securities on at least one other equity exchange.[6]

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b) of the Act,[7] in general, and furthers the objectives of Section 6(b)(5) of the Act,[8] in particular, because it is designed to remove impediments to and perfect the mechanism of a free and open market, to promote just and equitable principles of trade, and, in general, to protect investors and the public interest.

The proposed rule change with respect to the definition of ''UTP Derivative Securities Products'' in Rule 1.1 is designed to remove impediments to and perfect the mechanism of a free and open market, promote just and equitable principles of trade, and, in general, to protect investors and the public interest because it modifies Rule

(order approving BZX Rule 14.11(l) governing the listing and trading of Exchange-Traded Fund Shares); 88561 (April 3, 2020), 85 FR 19984 (April 9, 2020) (SR–NASDAQ–2019–090) (order approving Nasdaq Rule 5704 governing the listing and trading of Exchange Traded Fund Shares).

[5] 15 U.S.C. 80–1.

[6] *See, e.g.,* BZX Rule 14.11(d)(2)(K)(i)(a) (describing listing criteria for Equity Index-Linked Securities, including that ''each underlying index is required to have at least ten (10) component securities; provided, however, that there shall be no minimum number of component securities if one or more issues of Derivative Securities Products (which are defined in Rule 14.11(c)(3)(A)(i)(a)). . .constitute, at least in part, component securities underlying an issue of Equity Index-Linked Securities''); BZX Rule 14.11(c)(3)(A)(i)(a) (defining ''Derivative Securities Products'' to include Index Fund Shares, Portfolio Depositary Receipts, Trust Issued Receipts, ETF Shares, and Managed Fund Shares); and BZX 14.11(l) (defining Exchange-Traded Fund Shares or ETF Shares). *Cf.* Nasdaq Rule 5705(b)(3)(A)(i)(a) (describing listing criteria for Index Fund Shares, including that ''Component stocks (excluding ''Derivative Securities Products'' as defined in this subsection a.) that in the aggregate account for at least 90% of the weight of the U.S. Component Stocks portion of the index or portfolio (excluding Derivative Securities Products) each shall have a minimum market value of at least $75 million'' and defining ''Derivative Securities Products'' as including Exchange Traded Fund Shares listed under Nasdaq Rule 5704).

[7] 15 U.S.C. 78f(b).

[8] 15 U.S.C. 78f(b)(4) & (5).

1.1 to state the complete list of Derivative Securities Products that may trade on a UTP basis on the Exchange, providing specificity, clarity, and transparency in the Exchange's rules. Moreover, the proposed rule change would facilitate the trading of additional types of Derivative Securities Products on the Exchange pursuant to UTP, thereby enhancing competition among market participants for the benefit of investors and the marketplace.

The Exchange believes that the proposed change with respect to Rule 5.2–E(j)(6) is designed to remove impediments to and perfect the mechanism of a free and open market, promote just and equitable principles of trade, and, in general, to protect investors and the public interest because including Exchange-Traded Fund Shares as Derivative Securities Products excepted from certain generic listing and continued listing criteria for Equity Index-Linked Securities would facilitate the listing and trading of additional types of Equity Index-Linked Securities. The Exchange further believes the proposed change would remove impediments to and perfect the mechanism of a free and open market and promote competition, to the benefit of investors and the marketplace, because the proposed change would amend the Exchange's rules to be consistent with the listing criteria for Equity Index-Linked Securities on at least one other equity exchange.[9]

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The proposed change would provide the public and investors with up-to-date information about the types of Derivative Securities Products that can trade on the Exchange on a UTP basis and would promote competition by providing for additional types of Derivative Securities Products that may trade on the Exchange pursuant to UTP. The Exchange also believes that the proposed change would encourage competition by enabling additional types of Equity Index-Linked Securities to be listed on the Exchange.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Pursuant to Section 19(b)(3)(A) of the Act[10] and Rule 19b–4(f)(6)[11] thereunder, the Exchange has designated this proposal as one that effects a change that: (i) does not significantly affect the protection of investors or the public interest; (ii) does not impose any significant burden on competition; and (iii) by its terms, does not become operative for 30 days after the date of the filing, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest.[12]

A proposed rule change filed pursuant to Rule 19b–4(f)(6) under the Act normally does not become operative for 30 days after the date of its filing. However, Rule 19b–4(f)(6)(iii)[13] permits the Commission to designate a shorter time if such action is consistent with the protection of investors and the public interest. The Exchange requested that the Commission waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The proposed rule change, which adds Exchange-Traded Fund Shares (or Exchange Traded Fund Shares, as the case may be) to the definition of ''UTP Derivative Securities Product'' in NYSE Arca Rule 1.1 and modifies certain listing standards applicable to Equity Index-Linked Securities, conforms to substantially similar rules of other exchanges[14] and raises no unique or novel legal or regulatory issues. Therefore, the Commission believes that waiver of the 30-day operative delay is consistent with the protection of investors and the public interest. Accordingly, the Commission hereby waives the 30-day operative delay and designates the proposed rule change operative upon filing.[15]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–NYSEARCA–2024–61 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NYSEARCA–2024–61. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for website viewing and printing in the Commission's Public Reference Room, 100 F Street NE, Washington, DC 20549, on official business days between the hours of 10 a.m. and 3 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the

[Release No. 34–100590; File No. SR–NASDAQ–2024–039]

Self-Regulatory Organizations; The Nasdaq Stock Market LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Its Expanded Co-Location Services

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 15, 2024, The Nasdaq Stock Market LLC (''Nasdaq'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for its expanded co-location services, as described further below.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on August 15, 2024.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/nasdaq/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange filed a proposal to expand its co-location services by offering new cabinet, power, and power distribution unit options in the Exchange's expanded data center.[3] As described in that filing, the Exchange's current data center (''NY11'') in Carteret, NJ is undergoing an expansion (''NY11–4'') in response to demand for power and cabinets. The purpose of this proposed rule change is to establish fees for the expanded co-location services. Specifically, the Exchange proposes to establish (i) a monthly fee for Ultra High Density Cabinets, (ii) an installation fee for cabinets in NY11–4, (iii) fees for power installation in NY11–4, and (iv) fees for power distribution unit options in NY11–4.

Ultra High Density Cabinet

Currently, co-location customers have the option of obtaining cabinets of various sizes and power densities. Co-location customers may obtain a Half Cabinet,[4] a Low Density Cabinet with power density less than or equal to 2.88 kilowatts (''kW''), a Medium Density Cabinet with power density greater than 2.88 kW and less than or equal to 5 kW, a Medium-High Density Cabinet with power density greater than 5 kW and less than or equal to 7 kW, a High Density Cabinet with power density greater than 7 kW and less than 10 kW, and a Super High Density Cabinet with power density greater than 10 kW and less than or equal to 17.3 kW.

The Exchange filed a proposal to introduce a new cabinet choice in NY11–4, an ''Ultra High Density Cabinet,'' with power density greater than 10 kW and less than or equal to 15 kW.[5] The Ultra High Density Cabinet option will only be offered in NY11–4 because of the power configuration necessary for such cabinets, which is not possible or available in other portions of the data center due to different power distribution.[6] In addition to the Ultra High Density Cabinet, the Exchange will offer the other, existing cabinet options in NY11–4, with the exception of the Low Density Cabinet and Half Cabinet due to a lack of demand for such cabinets. The ongoing monthly fees for the Super High Density Cabinet, High Density Cabinet, Medium-High Density Cabinet, and Medium Density Cabinet are the same in NY11 and NY11–4 and the Exchange is not proposing to modify such fees.

The Exchange proposes to establish an ongoing monthly fee of $7,230 for the Ultra High Density Cabinets. To effectuate this change, the Exchange proposes to add the $7,230 ongoing monthly fee for Ultra High Density Cabinets to its fee schedule in General 8, Section 1(a). The Exchange notes that the proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets).

Installation Fee for Cabinets in NY11–4

The Exchange proposes to establish a cabinet installation fee of $5,940 for all cabinets in NY11–4. To effectuate this change, the Exchange proposes to add the proposed $5,940 installation fee to its fee schedule in General 8, Section 1(a) for Super High Density Cabinets, Ultra High Density Cabinets, High Density Cabinets, Medium-High Density Cabinets, and Medium Density Cabinets in NY11–4. In the existing data halls, customers may bring their own cabinets or use Exchange-provided cabinets. In NY11–4, because of the cooling system

[16] 17 CFR 200.30–3(a)(12), (59).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* Securities Exchange Act Release No. 34–100440 (June 27, 2024), 89 FR 55294 (July 3, 2024) (SR–NASDAQ–2024–026).

[4] Half cabinets are not available to new subscribers. *See* General 8, Section 1(a).

[5] *Supra* note 3.

[6] Because of the addition of the Ultra High Density Cabinet option in NY11–4, the Super High Density Cabinet in NY11–4 will have power density greater than 15 kW and less than or equal to 17.3 kW.

(hot aisle containment),[7] all cabinets must be uniform and therefore, the Exchange will provide all cabinets, the cost of which is included in the $5,940 installation fee.[8] The cabinets in NY11–4 include certain features not included in cabinets provided by the Exchange in the existing data halls. Specifically, the cabinets in NY11–4 include uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In addition, the proposed installation fee of $5,940 is comparable to fees charged for similar products.[9]

Installation Fee for Cabinet Power in NY11–4

The cabinet power options for NY11–4 include: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, Phase 1 40 amp 240 volt, Phase 3 20 amp 415 volt, and Phase 3 32 amp 415 volt. These cabinet power options are specific to NY11–4 and one of these options must be selected for cabinets in NY11–4. The Exchange proposes to establish an installation fee of $3,600 for Phase 1 cabinet power options in NY11–4 and an installation fee of $4,560 for Phase 3 cabinet power options in NY11–4. To effectuate this change, the Exchange proposes to add the proposed fees to its fee schedule in General 8, Section 1(c). The Exchange also proposes not to charge an ongoing monthly fee for the cabinet power options in NY11–4 and update the fee schedule accordingly. For NY11–4, the data center operator is bringing in these higher voltage power options and is likely to experience increased power distribution efficiencies across the data center. The proposed power installation fees are higher in NY11–4 as compared to the existing data halls as the installation of the higher voltage power options costs more to the Exchange and is considered a premium product due to anticipated operational efficiencies.[10] As between the Phase 1 and Phase 3 power options, the Phase 3 options provide a more efficient power source.

Fees for Power Distribution Unit Options

The Exchange will offer power distribution units (''PDUs'')[11] in NY11–4 as a convenience to customers. Rather than sourcing PDUs on a customer-by-customer basis, as the Exchange does for customers in NY11, the Exchange will offer Phase 1 and Phase 3[12] power distribution units in NY11–4. The Exchange proposes to establish a fee of $4,100 for a Phase 1 PDU and $5,260 for a Phase 3 PDU. This service is optional and customers may choose to provide their own PDUs appropriate for their power installation choices. The Exchange notes that, as part of such proposed fees, the Exchange would provide a primary and redundant PDU. As such, the proposed PDU fees covers a pair of PDUs. In addition, customers utilizing a Phase 1 or Phase 3 PDU provided by the Exchange have the ability to upgrade or downgrade between amperage levels without replacing the PDU, by a simple upgrade of the facility cord and a receptacle update.[13] A PDU replacement is required when switching between phases/voltage.

The Exchange will also offer a switch monitored PDU add on in NY11–4, which would allow customers to connect remotely to their PDU and control the power sockets. With the switch monitored PDU option, customers would be able to power cycle or shut off power remotely. The Exchange proposes to establish a $2,000 fee for the switch monitored PDU option. This option is optional as well and customers may choose to provide their own switch monitored PDU, if desired.

Implementation

Although the timing is subject to change,[14] the Exchange anticipates opening NY11–4 Exchange access on October 21, 2024 and providing customers access in advance of this date. The proposed fees are designated to be operative on August 15, 2024. However, customer orders will not be fee liable until customers are provided access to the space.[15]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[16] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[17] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposal to establish a monthly fee for Ultra High Density Cabinets, an installation fee for cabinets in NY11–4, installation fees for power installation in NY11–4, and fees for power distribution unit options in NY11–4 is reasonable. First, the Exchange's proposal to establish a $7,230 ongoing monthly fee for Ultra High Density Cabinets in NY11–4 is reasonable because it is comparable to the Exchange's current ongoing monthly fees for cabinets. The proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets). Second, the Exchange believes that the proposed cabinet installation fee of $5,940 is reasonable as compared to the installation fees in NY11 (of $3,693–$4,748) because the proposed installation fee includes the cabinet itself, which includes certain enhanced features in NY11–4, including uniform, wider cabinets (32′ W x 48′ D x 91′ H), cable management, and a rear split door and combo lock. In contrast,

[7] The existing data halls utilize cold aisle containment to manage temperatures. Hot aisle containment is a more effective way to manage heat in the data center.

[8] In contrast, to the extent customers provide their own cabinets in NY11, there is an additional out-of-pocket cost for such cabinets.

[9] For example, NYSE charges an initial $5,000 fee for dedicated cabinets. *See https://www.nyse.com/publicdocs/Wireless_Connectivity_Fees_and_Charges.pdf.*

[10] Benefits include future proofing the data hall to allow for increasing power density in the future, requiring less whips to deliver the same amount of amperage, less circuits need to be installed to reach the same power supply, and safety improvements.

[11] PDUs are devices fitted with multiple outputs designed to distribute electric power. The standardized PDUs would only be offered for NY11–4.

[12] Phase 1 PDUs are compatible with the following power options: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, and Phase 1 40 amp 240 volt. Phase 3 PDUs are compatible with the following power options: Phase 3 20 amp 415 volt and Phase 3 32 amp 415 volt. Phase 1 and Phase 3 are available in NY11 and NY11–4. Phase 3 PDUs provide greater power density than Phase 1 PDUs by delivering power over three wires as opposed to one wire.

[13] This functionality may be available with customer-provided PDUs as well and depends on the PDU provided by the customer.

[14] The Exchange will announce modifications to the proposed timing via the Nasdaq Customer Portal, which is the web portal used for order and inventory management of colocation services, and email communication to all colocation customers.

[15] Charging customers once access is provided is consistent with current practice and allows customers to set up equipment and begin using power.

[16] 15 U.S.C. 78f(b).

[17] 15 U.S.C. 78f(b)(4) and (5).

in NY11, customers may choose to provide their own cabinets, incurring an additional cost. Furthermore, the proposed installation fee is comparable to the rate charged by NYSE for a similar product, as described above. Third, the Exchange believes that the power installation fees of $3,600 for Phase 1 power options and $4,560 for Phase 3 power options in NY11–4 are reasonable. As compared to power installation fees in NY11, the proposed rates for NY11–4 are higher because the Exchange will incur increased costs for installation of the higher voltage power options. In addition, the higher voltage power options will provide operational efficiencies for the data hall, as discussed above,[18] warranting a higher fee. Finally, the Exchange believes that the proposed fees for PDUs and the PDU add on are reasonable because such fees are consistent with market rates. Furthermore, the Exchange is providing the PDU options as a convenience to customers. No customer is required to purchase any PDU options from the Exchange. Customers may choose to provide their own PDUs and PDU add ons.

The Exchange believes substitutable products and services are available to market participants, including, among other things, other equities and options exchanges that a market participant may connect to in lieu of the Exchange,[19] connectivity to the Exchange via a third-party reseller of connectivity, and/or trading of equities or options products within markets which do not require connectivity to the Exchange, such as the Over-the-Counter (OTC) markets. Market participants that wish to connect to the Exchange will continue to choose the method of connectivity based on their specific needs. Market participants that wish to connect to the Exchange but want to avoid or mitigate the effect of these proposed fees can choose to connect to the Exchange through a vendor.

In summary, the proposal represents an equitable allocation of reasonable dues, fees and other charges because customers have choices in how they connect to the Exchange, the proposed monthly fee for Ultra High Density Cabinets is comparable to current fees charged by the Exchange for other cabinets, the Exchange will provide uniform cabinets in NY11–4 with special features, the proposed cabinet installation fee is consistent with that of comparable products offered by other providers, the Exchange will incur increased costs for new power installation in NY11–4, higher voltage power options will provide operational efficiencies for the data hall, and PDU options are provided as a convenience to customers and customers may choose to provide their own PDUs.

The Exchange believes that the proposed fee changes are not unfairly discriminatory because the cabinet, power, and PDU fees for NY11–4 are available to and assessed uniformly across all market participants. In addition, all customers have the choice of whether and how to connect to the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative exchanges that they may participate on and direct their order flow, as well as off-exchange venues, where competitive products are available for trading.

Nothing in the proposal burdens intra-market competition because the Ultra High Density Cabinets, cabinet power options, and PDU optionality in NY11–4 are available to any customer under the same fees as any other customer, and any customer that wishes to order cabinets, power and PDUs in NY11–4 can do so on a non-discriminatory basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[20]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–NASDAQ–2024–039 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–NASDAQ–2024–039. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than

[18] *Supra* note 10.

[19] There are currently 16 registered equities exchanges that trade equities and 17 exchanges offering options trading services. No single equities exchange has more than 20% of the market share. *See* Cboe Global Markets, U.S. Equities Market Volume Summary, Month-to-Date (Last updated July 3, 2024), available at *https://www.cboe.com/us/equities/market_statistics/*. No single options exchange trades more than 15% of the options market by volume and only one of the 17 options exchanges has a market share over 10 percent. *See* Nasdaq, Options Market Statistics (Last updated July 3, 2024), available at *https://www.nasdaqtrader.com/Trader.aspx?id=OptionsVolumeSummary*. This broad dispersion of market share demonstrates that market participants can and do exercise choice in trading venues. Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100593; File No. SR–MRX–2024–24]

Self-Regulatory Organizations; Nasdaq MRX, LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Its Expanded Co-Location Services

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 15, 2024, Nasdaq MRX, LLC (''MRX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for its expanded co-location services, as described further below.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on August 15, 2024.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/mrx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange filed a proposal to expand its co-location services by offering new cabinet, power, and power distribution unit options in the Exchange's expanded data center.[3] As described in that filing, the Exchange's current data center (''NY11'') in Carteret, NJ is undergoing an expansion (''NY11–4'') in response to demand for power and cabinets. The purpose of this proposed rule change is to establish fees for the expanded co-location services. Specifically, the Exchange proposes to establish (i) a monthly fee for Ultra High Density Cabinets, (ii) an installation fee for cabinets in NY11–4, (iii) fees for power installation in NY11–4, and (iv) fees for power distribution unit options in NY11–4.

Ultra High Density Cabinet

Currently, co-location customers have the option of obtaining cabinets of various sizes and power densities. Co-location customers may obtain a Half Cabinet,[4] a Low Density Cabinet with power density less than or equal to 2.88 kilowatts (''kW''), a Medium Density Cabinet with power density greater than 2.88 kW and less than or equal to 5 kW, a Medium-High Density Cabinet with power density greater than 5 kW and less than or equal to 7 kW, a High Density Cabinet with power density greater than 7 kW and less than 10 kW, and a Super High Density Cabinet with power density greater than 10 kW and less than or equal to 17.3 kW.

The Exchange filed a proposal to introduce a new cabinet choice in NY11–4, an ''Ultra High Density Cabinet,'' with power density greater than 10 kW and less than or equal to 15 kW.[5] The Ultra High Density Cabinet option will only be offered in NY11–4 because of the power configuration necessary for such cabinets, which is not possible or available in other portions of the data center due to different power distribution.[6] In addition to the Ultra High Density Cabinet, the Exchange will offer the other, existing cabinet options in NY11–4, with the exception of the Low Density Cabinet and Half Cabinet due to a lack of demand for such cabinets. The ongoing monthly fees for the Super High Density Cabinet, High Density Cabinet, Medium-High Density Cabinet, and Medium Density Cabinet are the same in NY11 and NY11–4 and the Exchange is not proposing to modify such fees.

The Exchange proposes to establish an ongoing monthly fee of $7,230 for the Ultra High Density Cabinets. To effectuate this change, the Exchange proposes to add the $7,230 ongoing monthly fee for Ultra High Density Cabinets to its fee schedule in General 8, Section 1(a). The Exchange notes that the proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets).

Installation Fee for Cabinets in NY11–4

The Exchange proposes to establish a cabinet installation fee of $5,940 for all cabinets in NY11–4. To effectuate this change, the Exchange proposes to add the proposed $5,940 installation fee to

[21] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] *See* SR–MRX–2024–23 (not yet published).

[4] Half cabinets are not available to new subscribers. *See* General 8, Section 1(a).

[5] *Supra* note 3.

[6] Because of the addition of the Ultra High Density Cabinet option in NY11–4, the Super High Density Cabinet in NY11–4 will have power density greater than 15 kW and less than or equal to 17.3 kW.

its fee schedule in General 8, Section 1(a) for Super High Density Cabinets, Ultra High Density Cabinets, High Density Cabinets, Medium-High Density Cabinets, and Medium Density Cabinets in NY11–4. In the existing data halls, customers may bring their own cabinets or use Exchange-provided cabinets. In NY11–4, because of the cooling system (hot aisle containment),[7] all cabinets must be uniform and therefore, the Exchange will provide all cabinets, the cost of which is included in the $5,940 installation fee.[8] The cabinets in NY11–4 include certain features not included in cabinets provided by the Exchange in the existing data halls. Specifically, the cabinets in NY11–4 include uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In addition, the proposed installation fee of $5,940 is comparable to fees charged for similar products.[9]

Installation Fee for Cabinet Power in NY11–4

The cabinet power options for NY11–4 include: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, Phase 1 40 amp 240 volt, Phase 3 20 amp 415 volt, and Phase 3 32 amp 415 volt. These cabinet power options are specific to NY11–4 and one of these options must be selected for cabinets in NY11–4. The Exchange proposes to establish an installation fee of $3,600 for Phase 1 cabinet power options in NY11–4 and an installation fee of $4,560 for Phase 3 cabinet power options in NY11–4. To effectuate this change, the Exchange proposes to add the proposed fees to its fee schedule in General 8, Section 1(c). The Exchange also proposes not to charge an ongoing monthly fee for the cabinet power options in NY11–4 and update the fee schedule accordingly. For NY11–4, the data center operator is bringing in these higher voltage power options and is likely to experience increased power distribution efficiencies across the data center. The proposed power installation fees are higher in NY11–4 as compared to the existing data halls as the installation of the higher voltage power options costs more to the Exchange and is considered a premium product due to anticipated operational efficiencies.[10] As between the Phase 1 and Phase 3 power options, the Phase 3 options provide a more efficient power source.

Fees for Power Distribution Unit Options

The Exchange will offer power distribution units (''PDUs'')[11] in NY11–4 as a convenience to customers. Rather than sourcing PDUs on a customer-by-customer basis, as the Exchange does for customers in NY11, the Exchange will offer Phase 1 and Phase 3[12] power distribution units in NY11–4. The Exchange proposes to establish a fee of $4,100 for a Phase 1 PDU and $5,260 for a Phase 3 PDU. This service is optional and customers may choose to provide their own PDUs appropriate for their power installation choices. The Exchange notes that, as part of such proposed fees, the Exchange would provide a primary and redundant PDU. As such, the proposed PDU fees covers a pair of PDUs. In addition, customers utilizing a Phase 1 or Phase 3 PDU provided by the Exchange have the ability to upgrade or downgrade between amperage levels without replacing the PDU, by a simple upgrade of the facility cord and a receptacle update.[13] A PDU replacement is required when switching between phases/voltage.

The Exchange will also offer a switch monitored PDU add on in NY11–4, which would allow customers to connect remotely to their PDU and control the power sockets. With the switch monitored PDU option, customers would be able to power cycle or shut off power remotely. The Exchange proposes to establish a $2,000 fee for the switch monitored PDU option. This option is optional as well and customers may choose to provide their own switch monitored PDU, if desired.

Implementation

Although the timing is subject to change,[14] the Exchange anticipates opening NY11–4 Exchange access on October 21, 2024 and providing customers access in advance of this date. The proposed fees are designated to be operative on August 15, 2024. However, customer orders will not be fee liable until customers are provided access to the space.[15]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[16] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[17] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposal to establish a monthly fee for Ultra High Density Cabinets, an installation fee for cabinets in NY11–4, installation fees for power installation in NY11–4, and fees for power distribution unit options in NY11–4 is reasonable. First, the Exchange's proposal to establish a $7,230 ongoing monthly fee for Ultra High Density Cabinets in NY11–4 is reasonable because it is comparable to the Exchange's current ongoing monthly fees for cabinets. The proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets). Second, the Exchange believes that the proposed cabinet

[7] The existing data halls utilize cold aisle containment to manage temperatures. Hot aisle containment is a more effective way to manage heat in the data center.

[8] In contrast, to the extent customers provide their own cabinets in NY11, there is an additional out-of-pocket cost for such cabinets.

[9] For example, NYSE charges an initial $5,000 fee for dedicated cabinets. *See https://www.nyse.com/publicdocs/Wireless_Connectivity_Fees_and_Charges.pdf.*

[10] Benefits include future proofing the data hall to allow for increasing power density in the future, requiring less whips to deliver the same amount of amperage, less circuits need to be installed to reach the same power supply, and safety improvements.

[11] PDUs are devices fitted with multiple outputs designed to distribute electric power. The standardized PDUs would only be offered for NY11–4.

[12] Phase 1 PDUs are compatible with the following power options: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, and Phase 1 40 amp 240 volt. Phase 3 PDUs are compatible with the following power options: Phase 3 20 amp 415 volt and Phase 3 32 amp 415 volt. Phase 1 and Phase 3 are available in NY11 and NY11–4. Phase 3 PDUs provide greater power density than Phase 1 PDUs by delivering power over three wires as opposed to one wire.

[13] This functionality may be available with customer-provided PDUs as well and depends on the PDU provided by the customer.

[14] The Exchange will announce modifications to the proposed timing via the Nasdaq Customer Portal, which is the web portal used for order and inventory management of colocation services, and email communication to all colocation customers.

[15] Charging customers once access is provided is consistent with current practice and allows customers to set up equipment and begin using power.

[16] 15 U.S.C. 78f(b).

[17] 15 U.S.C. 78f(b)(4) and (5).

installation fee of $5,940 is reasonable as compared to the installation fees in NY11 (of $3,693–$4,748) because the proposed installation fee includes the cabinet itself, which includes certain enhanced features in NY11–4, including uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In contrast, in NY11, customers may choose to provide their own cabinets, incurring an additional cost. Furthermore, the proposed installation fee is comparable to the rate charged by NYSE for a similar product, as described above. Third, the Exchange believes that the power installation fees of $3,600 for Phase 1 power options and $4,560 for Phase 3 power options in NY11–4 are reasonable. As compared to power installation fees in NY11, the proposed rates for NY11–4 are higher because the Exchange will incur increased costs for installation of the higher voltage power options. In addition, the higher voltage power options will provide operational efficiencies for the data hall, as discussed above,[18] warranting a higher fee. Finally, the Exchange believes that the proposed fees for PDUs and the PDU add on are reasonable because such fees are consistent with market rates. Furthermore, the Exchange is providing the PDU options as a convenience to customers. No customer is required to purchase any PDU options from the Exchange. Customers may choose to provide their own PDUs and PDU add ons.

The Exchange believes substitutable products and services are available to market participants, including, among other things, other options exchanges that a market participant may connect to in lieu of the Exchange,[19] connectivity to the Exchange via a third-party reseller of connectivity, and/or trading of options products within markets which do not require connectivity to the Exchange, such as the Over-the-Counter (OTC) markets. Market participants that wish to connect to the Exchange will continue to choose the method of connectivity based on their specific needs. Market participants that wish to connect to the Exchange but want to avoid or mitigate the effect of these proposed fees can choose to connect to the Exchange through a vendor.

In summary, the proposal represents an equitable allocation of reasonable dues, fees and other charges because customers have choices in how they connect to the Exchange, the proposed monthly fee for Ultra High Density Cabinets is comparable to current fees charged by the Exchange for other cabinets, the Exchange will provide uniform cabinets in NY11–4 with special features, the proposed cabinet installation fee is consistent with that of comparable products offered by other providers, the Exchange will incur increased costs for new power installation in NY11–4, higher voltage power options will provide operational efficiencies for the data hall, and PDU options are provided as a convenience to customers and customers may choose to provide their own PDUs.

The Exchange believes that the proposed fee changes are not unfairly discriminatory because the cabinet, power, and PDU fees for NY11–4 are available to and assessed uniformly across all market participants. In addition, all customers have the choice of whether and how to connect to the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative exchanges that they may participate on and direct their order flow, as well as off-exchange venues, where competitive products are available for trading.

Nothing in the proposal burdens intra-market competition because the Ultra High Density Cabinets, cabinet power options, and PDU optionality in NY11–4 are available to any customer under the same fees as any other customer, and any customer that wishes to order cabinets, power and PDUs in NY11–4 can do so on a non-discriminatory basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[20] At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or
- Send an email to *rule-comments@sec.gov*. Please include file number SR–MRX–2024–24 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE, Washington, DC 20549–1090.

All submissions should refer to file number SR–MRX–2024–24. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's internet website (*https://www.sec.gov/rules/sro.shtml*). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than

[18] *Supra* note 10.

[19] There are currently 17 exchanges offering options trading services. No single options exchange trades more than 15% of the options market by volume and only one of the 17 options exchanges has a market share over 10 percent. *See* Nasdaq, Options Market Statistics (Last updated July 3, 2024), available at *https://www.nasdaqtrader.com/Trader.aspx?id=OptionsVolumeSummary*. This broad dispersion of market share demonstrates that market participants can and do exercise choice in trading venues. Further, low barriers to entry mean that new exchanges may rapidly enter the market and offer additional substitute platforms to further compete with the Exchange and the products it offers.

BILLING CODE 8011–01–P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–100591; File No. SR–BX–2024–027]

Self-Regulatory Organizations; Nasdaq BX, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Its Expanded Co-Location Services

July 25, 2024.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (''Act''),[1] and Rule 19b–4 thereunder,[2] notice is hereby given that on July 23, 2024, Nasdaq BX, Inc. (''BX'' or ''Exchange'') filed with the Securities and Exchange Commission (''Commission'') the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to establish fees for its expanded co-location services, as described further below.

While these amendments are effective upon filing, the Exchange has designated the proposed amendments to be operative on August 15, 2024.

The text of the proposed rule change is available on the Exchange's website at *https://listingcenter.nasdaq.com/rulebook/bx/rules,* at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose [3]

The Exchange filed a proposal to expand its co-location services by offering new cabinet, power, and power distribution unit options in the Exchange's expanded data center.[4] As described in that filing, the Exchange's current data center (''NY11'') in Carteret, NJ is undergoing an expansion (''NY11–4'') in response to demand for power and cabinets. The purpose of this proposed rule change is to establish fees for the expanded co-location services. Specifically, the Exchange proposes to establish (i) a monthly fee for Ultra High Density Cabinets, (ii) an installation fee for cabinets in NY11–4, (iii) fees for power installation in NY11–4, and (iv) fees for power distribution unit options in NY11–4.

Ultra High Density Cabinet

Currently, co-location customers have the option of obtaining cabinets of various sizes and power densities. Co-location customers may obtain a Half Cabinet,[5] a Low Density Cabinet with power density less than or equal to 2.88 kilowatts (''kW''), a Medium Density Cabinet with power density greater than 2.88 kW and less than or equal to 5 kW, a Medium-High Density Cabinet with power density greater than 5 kW and less than or equal to 7 kW, a High Density Cabinet with power density greater than 7 kW and less than 10 kW, and a Super High Density Cabinet with power density greater than 10 kW and less than or equal to 17.3 kW.

The Exchange filed a proposal to introduce a new cabinet choice in NY11–4, an ''Ultra High Density Cabinet,'' with power density greater than 10 kW and less than or equal to 15 kW.[6] The Ultra High Density Cabinet option will only be offered in NY11–4 because of the power configuration necessary for such cabinets, which is not possible or available in other portions of the data center due to different power distribution.[7] In addition to the Ultra High Density Cabinet, the Exchange will offer the other, existing cabinet options in NY11–4, with the exception of the Low Density Cabinet and Half Cabinet due to a lack of demand for such cabinets. The ongoing monthly fees for the Super High Density Cabinet, High Density Cabinet, Medium-High Density Cabinet, and Medium Density Cabinet are the same in NY11 and NY11–4 and the Exchange is not proposing to modify such fees.

The Exchange proposes to establish an ongoing monthly fee of $7,230 for the Ultra High Density Cabinets. To effectuate this change, the Exchange proposes to add the $7,230 ongoing monthly fee for Ultra High Density Cabinets to its fee schedule in General 8, Section 1(a). The Exchange notes that the proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets).

[21] 17 CFR 200.30–3(a)(12).

[1] 15 U.S.C. 78s(b)(1).

[2] 17 CFR 240.19b–4.

[3] The Exchange initially filed the proposed pricing change on July 15, 2024 (SR–BX–2024–025). The instant filing replaces SR–BX–2024–025, which was withdrawn on July 23, 2024.

[4] *See* Securities Exchange Act Release No. 34–100558 (July 18, 2024) (SR–BX–2024–024) (not yet published).

[5] Half cabinets are not available to new subscribers. *See* General 8, Section 1(a).

[6] *Supra* note 4.

[7] Because of the addition of the Ultra High Density Cabinet option in NY11–4, the Super High Density Cabinet in NY11–4 will have power density greater than 15 kW and less than or equal to 17.3 kW.

Installation Fee for Cabinets in NY11–4

The Exchange proposes to establish a cabinet installation fee of $5,940 for all cabinets in NY11–4. To effectuate this change, the Exchange proposes to add the proposed $5,940 installation fee to its fee schedule in General 8, Section 1(a) for Super High Density Cabinets, Ultra High Density Cabinets, High Density Cabinets, Medium-High Density Cabinets, and Medium Density Cabinets in NY11–4. In the existing data halls, customers may bring their own cabinets or use Exchange-provided cabinets. In NY11–4, because of the cooling system (hot aisle containment),[8] all cabinets must be uniform and therefore, the Exchange will provide all cabinets, the cost of which is included in the $5,940 installation fee.[9] The cabinets in NY11–4 include certain features not included in cabinets provided by the Exchange in the existing data halls. Specifically, the cabinets in NY11–4 include uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In addition, the proposed installation fee of $5,940 is comparable to fees charged for similar products.[10]

Installation Fee for Cabinet Power in NY11–4

The cabinet power options for NY11–4 include: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, Phase 1 40 amp 240 volt, Phase 3 20 amp 415 volt, and Phase 3 32 amp 415 volt. These cabinet power options are specific to NY11–4 and one of these options must be selected for cabinets in NY11–4. The Exchange proposes to establish an installation fee of $3,600 for Phase 1 cabinet power options in NY11–4 and an installation fee of $4,560 for Phase 3 cabinet power options in NY11–4. To effectuate this change, the Exchange proposes to add the proposed fees to its fee schedule in General 8, Section 1(c). The Exchange also proposes not to charge an ongoing monthly fee for the cabinet power options in NY11–4 and update the fee schedule accordingly. For NY11–4, the data center operator is bringing in these higher voltage power options and is likely to experience increased power distribution efficiencies across the data center. The proposed power installation fees are higher in NY11–4 as compared to the existing data halls as the installation of the higher voltage power options costs more to the Exchange and is considered a premium product due to anticipated operational efficiencies.[11] As between the Phase 1 and Phase 3 power options, the Phase 3 options provide a more efficient power source.

Fees for Power Distribution Unit Options

The Exchange will offer power distribution units (''PDUs'')[12] in NY11–4 as a convenience to customers. Rather than sourcing PDUs on a customer-by-customer basis, as the Exchange does for customers in NY11, the Exchange will offer Phase 1 and Phase 3[13] power distribution units in NY11–4. The Exchange proposes to establish a fee of $4,100 for a Phase 1 PDU and $5,260 for a Phase 3 PDU. This service is optional and customers may choose to provide their own PDUs appropriate for their power installation choices. The Exchange notes that, as part of such proposed fees, the Exchange would provide a primary and redundant PDU. As such, the proposed PDU fees covers a pair of PDUs. In addition, customers utilizing a Phase 1 or Phase 3 PDU provided by the Exchange have the ability to upgrade or downgrade between amperage levels without replacing the PDU, by a simple upgrade of the facility cord and a receptacle update.[14] A PDU replacement is required when switching between phases/voltage.

The Exchange will also offer a switch monitored PDU add on in NY11–4, which would allow customers to connect remotely to their PDU and control the power sockets. With the switch monitored PDU option, customers would be able to power cycle or shut off power remotely. The Exchange proposes to establish a $2,000 fee for the switch monitored PDU option. This option is optional as well and customers may choose to provide their own switch monitored PDU, if desired.

Implementation

Although the timing is subject to change,[15] the Exchange anticipates opening NY11–4 Exchange access on October 21, 2024 and providing customers access in advance of this date. The proposed fees are designated to be operative on August 15, 2024. However, customer orders will not be fee liable until customers are provided access to the space.[16]

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,[17] in general, and furthers the objectives of Sections 6(b)(4) and 6(b)(5) of the Act,[18] in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The Exchange believes that the proposal to establish a monthly fee for Ultra High Density Cabinets, an installation fee for cabinets in NY11–4, installation fees for power installation in NY11–4, and fees for power distribution unit options in NY11–4 is reasonable. First, the Exchange's proposal to establish a $7,230 ongoing monthly fee for Ultra High Density Cabinets in NY11–4 is reasonable because it is comparable to the Exchange's current ongoing monthly fees for cabinets. The proposed fee amount falls between the $4,748 ongoing monthly fee charged for High Density Cabinets and the $8,440 ongoing monthly fee charged for Super High Density Cabinets. Furthermore, the proposed fee is consistent with the existing ongoing monthly cabinet fees on a per kW basis. The existing monthly cabinet fees range from approximately $475 per kW to $916 per kW, while the proposed ongoing monthly cabinet fee for the Ultra High Density Cabinet ranges from approximately $482 per kW (at the high end of the power density

[8] The existing data halls utilize cold aisle containment to manage temperatures. Hot aisle containment is a more effective way to manage heat in the data center.

[9] In contrast, to the extent customers provide their own cabinets in NY11, there is an additional out-of-pocket cost for such cabinets.

[10] For example, NYSE charges an initial $5,000 fee for dedicated cabinets. *See https://www.nyse.com/publicdocs/Wireless_Connectivity_Fees_and_Charges.pdf.*

[11] Benefits include future proofing the data hall to allow for increasing power density in the future, requiring less whips to deliver the same amount of amperage, less circuits need to be installed to reach the same power supply, and safety improvements.

[12] PDUs are devices fitted with multiple outputs designed to distribute electric power. The standardized PDUs would only be offered for NY11–4.

[13] Phase 1 PDUs are compatible with the following power options: Phase 1 20 amp 240 volt, Phase 1 32 amp 240 volt, and Phase 1 40 amp 240 volt. Phase 3 PDUs are compatible with the following power options: Phase 3 20 amp 415 volt and Phase 3 32 amp 415 volt. Phase 1 and Phase 3 are available in NY11 and NY11–4. Phase 3 PDUs provide greater power density than Phase 1 PDUs by delivering power over three wires as opposed to one wire.

[14] This functionality may be available with customer-provided PDUs as well and depends on the PDU provided by the customer.

[15] The Exchange will announce modifications to the proposed timing via the Nasdaq Customer Portal, which is the web portal used for order and inventory management of colocation services, and email communication to all colocation customers.

[16] Charging customers once access is provided is consistent with current practice and allows customers to set up equipment and begin using power.

[17] 15 U.S.C. 78f(b).

[18] 15 U.S.C. 78f(b)(4) and (5).

range for Ultra High Density Cabinets) to $723 per kW (at the low end of the power density range for Ultra High Density Cabinets). Second, the Exchange believes that the proposed cabinet installation fee of $5,940 is reasonable as compared to the installation fees in NY11 (of $3,693–$4,748) because the proposed installation fee includes the cabinet itself, which includes certain enhanced features in NY11–4, including uniform, wider cabinets (32″ W x 48″ D x 91″ H), cable management, and a rear split door and combo lock. In contrast, in NY11, customers may choose to provide their own cabinets, incurring an additional cost. Furthermore, the proposed installation fee is comparable to the rate charged by NYSE for a similar product, as described above. Third, the Exchange believes that the power installation fees of $3,600 for Phase 1 power options and $4,560 for Phase 3 power options in NY11–4 are reasonable. As compared to power installation fees in NY11, the proposed rates for NY11–4 are higher because the Exchange will incur increased costs for installation of the higher voltage power options. In addition, the higher voltage power options will provide operational efficiencies for the data hall, as discussed above,[19] warranting a higher fee. Finally, the Exchange believes that the proposed fees for PDUs and the PDU add on are reasonable because such fees are consistent with market rates. Furthermore, the Exchange is providing the PDU options as a convenience to customers. No customer is required to purchase any PDU options from the Exchange. Customers may choose to provide their own PDUs and PDU add ons.

The Exchange believes substitutable products and services are available to market participants, including, among other things, other equities and options exchanges that a market participant may connect to in lieu of the Exchange,[20] connectivity to the Exchange via a third-party reseller of connectivity, and/or trading of equities or options products within markets which do not require connectivity to the Exchange, such as the Over-the-Counter (OTC) markets. Market participants that wish to connect to the Exchange will continue to choose the method of connectivity based on their specific needs. Market participants that wish to connect to the Exchange but want to avoid or mitigate the effect of these proposed fees can choose to connect to the Exchange through a vendor.

In summary, the proposal represents an equitable allocation of reasonable dues, fees and other charges because customers have choices in how they connect to the Exchange, the proposed monthly fee for Ultra High Density Cabinets is comparable to current fees charged by the Exchange for other cabinets, the Exchange will provide uniform cabinets in NY11–4 with special features, the proposed cabinet installation fee is consistent with that of comparable products offered by other providers, the Exchange will incur increased costs for new power installation in NY11–4, higher voltage power options will provide operational efficiencies for the data hall, and PDU options are provided as a convenience to customers and customers may choose to provide their own PDUs.

The Exchange believes that the proposed fee changes are not unfairly discriminatory because the cabinet, power, and PDU fees for NY11–4 are available to and assessed uniformly across all market participants. In addition, all customers have the choice of whether and how to connect to the Exchange.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

Nothing in the proposal burdens inter-market competition because approval of the proposal does not impose any burden on the ability of other exchanges to compete. The Exchange operates in a highly competitive market in which market participants can determine whether or not to connect to the Exchange based on the value received compared to the cost of doing so. Indeed, market participants have numerous alternative exchanges that they may participate on and direct their order flow, as well as off-exchange venues, where competitive products are available for trading.

Nothing in the proposal burdens intra-market competition because the Ultra High Density Cabinets, cabinet power options, and PDU optionality in NY11–4 are available to any customer under the same fees as any other customer, and any customer that wishes to order cabinets, power and PDUs in NY11–4 can do so on a non-discriminatory basis.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act.[21]

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) necessary or appropriate in the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's internet comment form (*https://www.sec.gov/rules/sro.shtml*); or

SMALL BUSINESS ADMINISTRATION

Reporting and Recordkeeping Requirements Under OMB Review

AGENCY: Small Business Administration.

ACTION: 30-Day notice.

SUMMARY: The Small Business Administration (SBA) is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act and OMB procedures, SBA is publishing this notice to allow all interested member of the public an additional 30 days to provide comments on the proposed collection of information.

DATES: Submit comments on or before August 30, 2024.

ADDRESSES: Written comments and recommendations for this information collection request should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/*PRAMain. Find this particular information collection request by selecting ''Small Business Administration''; ''Currently Under Review,'' then select the ''Only Show ICR for Public Comment'' checkbox. This information collection can be identified by title and/or OMB Control Number.

FOR FURTHER INFORMATION CONTACT: You may obtain a copy of the information collection and supporting documents from the Agency Clearance Office at *Curtis.Rich@sba.gov;* (202) 205–7030, or from *www.reginfo.gov/public/do/PRAMain.*

SUPPLEMENTARY INFORMATION: SBA is required by statute to administer the 8(a) Business Development (15 U.S.C. 637(a); 13 CFR 124); Historically Underutilized Business Zone (HUBZone) (15 U.S.C. 657a; 13 CFR 126); Veteran-Owned/Service-Disabled Veteran-Owned (VOSB/SDVOSB) (15 U.S.C. 657f and 657f–1; 13 CFR 128); and Women-Owned/Economically Disadvantaged Women-Owned (WOSB/EDWOSB) (15 U.S.C. 636(m); 13 CFR 127) certification programs. The Small Business Act requires small businesses to apply to SBA for 8(a), HUBZone, VOSB/SDVOSB, and WOSB/EDWOSB certifications. SBA's regulations require the applications for certification to be submitted electronically. All of the collections are overseen by Government Contracting and Business Development staff. The HUBZone program requires small businesses to recertify their eligibility annually, while WOSB/EDWOSB and VOSB/SDVOSB require recertification every three years. All recertifications are done electronically. This information collection will allow for application, certification, recertification, and administration of the 8(a), HUBZone, WOSB/EDWOSB, and VOSB/SDVOSB programs in one system. By having one system, the process is streamlined and easier for small businesses applying to SBA for certification.

Failing to collect the information described above would impede SBA's ability to fulfill its statutory mandates to certify 8(a), HUBZone, VOSB/SDVOSB, and WOSB/EDWOSB certification programs, and maintain and update the list of certified small business concerns.

This PRA submission will amend SBA forms from the current HUBZone (OMB Control No. 3245–0320), 8(a) (OMB Control No. 3245–0331), VOSB/SDVOSB (OMB Control No. 3245–0426), and WOSB/EDWOSB (OMB Control No. 3245–0374) information collections into one unified information collection.

Solicitation of Public Comments

Comments may be submitted on (a) whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

OMB Control Number 3245–0374.

Title: SBA Unified Certification System.

Description of Respondents: Small Business concerns applying for SBA certification in the 8(a), HUBZone,

WOSB/EDWOSB, and VOSB/SDVOSB programs.

SBA Form Number: SBA Form 2413.

Estimated Number of Respondents: 29,329.

Estimated Annual Responses: 29,329.

Estimated Annual Hour Burden: 39,330.

Curtis Rich,

Agency Clearance Officer.

SMALL BUSINESS ADMINISTRATION

[Disaster Declaration #20484 and #20485; KENTUCKY Disaster Number KY–20004]

Presidential Declaration of a Major Disaster for the Commonwealth of Kentucky

AGENCY: Small Business Administration.

ACTION: Notice.

SUMMARY: This is a Notice of the Presidential declaration of a major disaster for the Commonwealth of Kentucky (FEMA–4804–DR), dated 07/23/2024.

Incident: Severe Storms, Straight-line Winds, Tornadoes, Landslides, and Mudslides.

Incident Period: 05/21/2024 through 05/27/2024.

DATES: Issued on 07/23/2024.

Physical Loan Application Deadline Date: 09/23/2024.

Economic Injury (EIDL) Loan Application Deadline Date: 04/23/2025.

ADDRESSES: Visit the MySBA Loan Portal at *https://lending.sba.gov* to apply for a disaster assistance loan.

FOR FURTHER INFORMATION CONTACT: Vanessa Morgan, Office of Disaster Recovery & Resilience, U.S. Small Business Administration, 409 3rd Street SW, Suite 6050, Washington, DC 20416, (202) 205–6734.

SUPPLEMENTARY INFORMATION: Notice is hereby given that as a result of the President's major disaster declaration on 07/23/2024, applications for disaster loans may be submitted online using the MySBA Loan Portal *https://lending.sba.gov* or other locally announced locations. Please contact the SBA disaster assistance customer service center by email at *disastercustomerservice@sba.gov* or by phone at 1–800–659–2955 for further assistance.

The following areas have been determined to be adversely affected by the disaster:

Primary Counties (Physical Damage and Economic Injury Loans): Butler, Caldwell, Calloway, Christian, Clay, Greenup, Hopkins, Knox, Logan, Muhlenberg, Simpson, Todd, Trigg, Warren, Whitley.

Contiguous Counties (Economic Injury Loans Only):

Kentucky: Allen, Barren, Bell, Boyd, Carter, Crittenden, Edmonson, Graves, Grayson, Jackson, Laurel, Leslie, Lewis, Lyon, Marshall, McCreary, McLean, Ohio, Owsley, Perry, Webster

Ohio: Lawrence, Scioto

Tennessee: Campbell, Claiborne, Henry, Montgomery, Robertson, Sumner, Stewart

The Interest Rates are:

	Percent
For Physical Damage:	
Homeowners with Credit Available Elsewhere	5.375
Homeowners without Credit Available Elsewhere	2.688
Businesses with Credit Available Elsewhere	8.000
Businesses without Credit Available Elsewhere	4.000
Non-Profit Organizations with Credit Available Elsewhere	3.250
Non-Profit Organizations without Credit Available Elsewhere	3.250
For Economic Injury:	
Business and Small Agricultural Cooperatives without Credit Available Elsewhere	4.000
Non-Profit Organizations without Credit Available Elsewhere	3.250

The number assigned to this disaster for physical damage is 20484C and for economic injury is 204850.

(Catalog of Federal Domestic Assistance Number 59008)

Rafaela Monchek,

Deputy Associate Administrator, Office of Disaster Recovery & Resilience.

BILLING CODE 8026–09–P

SURFACE TRANSPORTATION BOARD

[Docket No. AB 55 (Sub-No. 816X)]

CSX Transportation, Inc.—Abandonment Exemption—in Pike County, KY

CSX Transportation, Inc. (CSXT), has filed a verified notice of exemption under 49 CFR part 1152 subpart F—*Exempt Abandonments* to abandon an approximately 5.1-mile rail line that runs between milepost CML 9.0 and milepost CML 14.1, Louisville Division, Winns Branch-Big Sandy Subdivision, in Pike County, Ky. (the Line). The Line traverses U.S. Postal Service Zip Codes 41557 and 41501.

CSXT has certified that: (1) no local freight traffic has moved over the Line during the past two years; (2) any overhead traffic on the Line can be rerouted over other lines; (3) no formal complaint filed by a user of rail service on the Line (or by a state or local government on behalf of such user) regarding cessation of service over the Line is pending with either the Surface Transportation Board (Board) or any U.S. District Court or has been decided in favor of a complainant within the two-year period; and (4) the requirements at 49 CFR 1105.7(b) and 1105.8(c) (notice of environmental and historic reports), 49 CFR 1105.12 (newspaper publication), and 49 CFR 1152.50(d)(1) (notice to government agencies) have been met.

As a condition to this exemption, any employee adversely affected by the abandonment shall be protected under *Oregon Short Line Railroad—Abandonment Portion Goshen Branch Between Firth & Ammon, in Bingham & Bonneville Counties, Idaho,* 360 I.C.C. 91 (1979). To address whether this condition adequately protects affected employees, a petition for partial revocation under 49 U.S.C. 10502(d) must be filed.

Provided no formal expression of intent to file an offer of financial assistance (OFA) has been received,[1] this exemption will be effective on August 30, 2024, unless stayed pending reconsideration. Petitions to stay that do not involve environmental issues[2] must be filed by August 9, 2024. Formal expressions of intent to file an OFA under 49 CFR 1152.27(c)(2) and interim trail use/rail banking requests under 49 CFR 1152.29 must be filed by August 12, 2024.[3] Petitions to reopen and requests for public use conditions under 49 CFR 1152.28 must be filed by August 20, 2024.

All pleadings, referring to Docket No. AB 55 (Sub-No. 816X), must be filed with the Surface Transportation Board either via e-filing on the Board's website or in writing addressed to 395 E Street SW, Washington, DC 20423–0001. In addition, a copy of each pleading must be served on CSXT's representative, Louis E. Gitomer, Law Offices of Louis E. Gitomer, LLC, 600 Baltimore Avenue, Suite 301, Towson, MD 21204.

If the verified notice contains false or misleading information, the exemption is void ab initio.

CSXT has filed a combined environmental and historic report that addresses the potential effects, if any, of

[1] Persons interested in submitting an OFA must first file a formal expression of intent to file an offer, indicating the type of financial assistance they wish to provide (*i.e.,* subsidy or purchase) and demonstrating that they are preliminarily financially responsible. *See* 49 CFR 1152.27(c)(2)(i).

[2] The Board will grant a stay if an informed decision on environmental issues (whether raised by a party or by the Board's Office of Environmental Analysis (OEA) in its independent investigation) cannot be made before the exemption's effective date. *See Exemption of Out-of-Serv. Rail Lines,* 5 I.C.C.2d 377 (1989). Any request for a stay should be filed as soon as possible so that the Board may take appropriate action before the exemption's effective date.

[3] Filing fees for OFAs and trail use requests can be found at 49 CFR 1002.2(f)(25) and (27), respectively.

the abandonment on the environment and historic resources. OEA will issue a Draft Environmental Assessment (Draft EA) by August 5, 2024. The Draft EA will be available to interested persons on the Board's website, by writing to OEA, or by calling OEA at (202) 245–0294. If you require an accommodation under the Americans with Disabilities Act, please call (202) 245–0245. Comments on environmental or historic preservation matters must be filed within 15 days after the Draft EA becomes available to the public.

Environmental, historic preservation, public use, or trail use/rail banking conditions will be imposed, where appropriate, in a subsequent decision.

Pursuant to the provisions of 49 CFR 1152.29(e)(2), CSXT shall file a notice of consummation with the Board to signify that it has exercised the authority granted and fully abandoned the Line. If consummation has not been effected by CSXT's filing of a notice of consummation by July 31, 2025, and there are no legal or regulatory barriers to consummation, the authority to abandon will automatically expire.

Board decisions and notices are available at *www.stb.gov.*

Decided: July 24, 2024.

By the Board, Scott M. Zimmerman, Acting Director, Office of Proceedings.

Stefan Rice,

Clearance Clerk.

BILLING CODE 4915–01–P

TENNESSEE VALLEY AUTHORITY

Meeting of the Regional Resource Stewardship Council

AGENCY: Tennessee Valley Authority (TVA).

ACTION: Notice of meeting.

SUMMARY: The TVA Regional Resource Stewardship Council (RRSC) will hold a virtual meeting on August 13, 2024, to kick off the 13th term of the RRSC. The Council will receive updates about TVA's work in Natural Resources, River Management, and Cultural Compliance. RRSC members will also hear an update on the development of TVA's Integrated Resource Plan (IRP).

DATES: The meeting will be held virtually via webinar, on Tuesday, August 13, 2024, from 1 p.m. to 5 p.m. EST. The public must register to attend the webinar. You may register by going to *www.tva.com/rrsc.* A 30-minute public listening session for the public to present comments during the webinar will be held August 13, 2024, at 2 p.m. ET. Persons who wish to speak during the public listening session must pre-register by 5 p.m. ET Friday, August 9, 2024, by emailing *bhaliti@tva.gov.*

ADDRESSES: The meeting will be fully virtual, and the meeting link is provided at *www.tva.com/rrsc.* Anyone needing special accommodations should let the contact below know at least one week in advance.

FOR FURTHER INFORMATION CONTACT: Bekim Haliti, *bhaliti@tva.gov* or 931–349–1894.

SUPPLEMENTARY INFORMATION: The RRSC is a discretionary advisory committee established under the authority of the Tennessee Valley Authority (TVA) in accordance with the provisions of the Federal Advisory Committee Act (FACA), as amended, 5 U.S.C. app. 2.

The meeting agenda includes the following:

August 13

1. Welcome and Introductions
2. Public Listening Session
3. River Management Update
4. Natural Resources Update
5. Cultural Compliance Update
6. IRP Development Update

The RRSC will hear views of citizens by providing a 30-minute public comment session starting August 13 at 2 p.m. ET. Persons registered will be called on during the public listening session to share their views for up to five minutes, depending on the number of registrants. Persons wishing to speak virtually must register by sending an email to *bhaliti@tva.gov* or by calling 931–349–1894 by 5 p.m. ET, on Friday, August 9, 2024. Written comments are invited and may be emailed to *bhaliti@tva.gov.*

The DFO of the Tennessee Valley Authority and Vice President of External Strategy and Regulatory Oversight, Melanie Farrell, having reviewed and approved this document, is delegating the authority to sign this document to Bekim Haliti, Specialist of Valley Alliances for publication in the **Federal Register**.

Dated: July 26, 2024.

Bekim Haliti,

Specialist, Valley Alliances, Tennessee Valley Authority.

BILLING CODE 8120–08–P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

[Docket No. FAA–2024–1988]

Agency Information Collection Activities: Requests for Comments; Clearance of a Renewed Approval of Information Collection: Small Unmanned Aircraft Systems (sUAS) Safety Event Reporting

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice and request for comments.

SUMMARY: In accordance with the Paperwork Reduction Act of 1995, FAA invites public comments about our intention to request the Office of Management and Budget (OMB) approval to renew an information collection. The collection involves information that must be reported to the FAA about small unmanned aircraft system (sUAS) safety events if they result in serious injury or damage exceeding certain thresholds.

DATES: Written comments should be submitted by September 30, 2024.

ADDRESSES: Please send written comments:

By Electronic Docket: www.regulations.gov (Enter docket number into search field).

By mail: Benjamin Walsh, FAA Flight Standards Service, Emerging Technologies Division, AFS–700, 800 Independence Ave. SW, Washington, DC 20591.

By fax: 202–267–8233.

FOR FURTHER INFORMATION CONTACT: Benjamin Walsh by email at: *ben.walsh@faa.gov;* phone: 202–267–8233.

SUPPLEMENTARY INFORMATION:

Public Comments Invited: You are asked to comment on any aspect of this information collection, including (a) Whether the proposed collection of information is necessary for FAA's performance; (b) the accuracy of the estimated burden; (c) ways for FAA to enhance the quality, utility and clarity of the information collection; and (d) ways that the burden could be minimized without reducing the quality of the collected information. The agency will summarize and/or include your comments in the request for OMB's clearance of this information collection.

OMB Control Number: 2120–0767.

Title: Small Unmanned Aircraft Systems (sUAS) Safety Event Reporting.

Form Numbers: N/A (web portal: *https://faadronezone.faa.gov*).

Type of Review: Renewal of an information collection.

Background: The title of this information collection is being changed from ''Small Unmanned Aircraft Systems (sUAS) Accident Reporting'' to ''Small Unmanned Aircraft Systems (sUAS) Safety Event Reporting'' to reflect the change made to the title of the applicable regulation (14 CFR, 107.9) in 2022. 14 CFR part 107.9 requires that a small unmanned aircraft system safety event be reported if it causes: (1) serious injury to any person or any loss of consciousness; or (2) damage to any property, other than the small unmanned aircraft, unless the cost of repair or fair market value in the event of total loss does not exceed $500. The information collected by the FAA through its DroneZone web portal, Flight Standards District Offices, one of the Regional Operations Centers, or the Washington Operations Center for each small UAS safety event will be used to investigate and determine regulatory compliance. In addition, the safety event information will go into the FAA aircraft accident database for safety analysis purposes by the FAA Office of Accident Investigation and Analysis, pursuant to its statutory safety mission.

As is currently the case for manned aircraft accidents, small UAS safety event data will be made available to the public and the National Transportation Safety Board (NTSB).

Respondents: Small Unmanned Aircraft System operators that experience a safety event that must be reported to the FAA per 14 CFR, 107.9. Approximately 41 per year.

Frequency: On occasion.

Estimated Average Burden per Response: 15 minutes.

Estimated Total Annual Burden: 10.25 hours.

Issued in Washington, DC, on July 26, 2024.

Joseph Morra,

Manager, Emerging Technologies Division, AFS–700.

[FR Doc. 2024–16892 Filed 7–30–24; 8:45 am]

BILLING CODE 4910–13–P

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket Number FRA–2010–0054]

Alaska Railroad's Request To Amend Its Positive Train Control Safety Plan and Positive Train Control System

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Notice of availability and request for comments.

SUMMARY: This document provides the public with notice that, on July 18, 2024, Alaska Railroad (ARR) submitted a request for amendment (RFA) to its FRA-approved Positive Train Control Safety Plan (PTCSP). As this RFA involves a request for FRA's approval of proposed material modifications to an FRA-certified positive train control (PTC) system, FRA is publishing this notice and inviting public comment on the railroad's RFA to its PTCSP.

DATES: FRA will consider comments received by August 20, 2024. FRA may consider comments received after that date to the extent practicable and without delaying implementation of valuable or necessary modifications to a PTC system.

ADDRESSES:

Comments: Comments may be submitted by going to *https://www.regulations.gov* and following the online instructions for submitting comments.

Instructions: All submissions must include the agency name and the applicable docket number. The relevant PTC docket number for this host railroad is Docket No. FRA–2010–0054. For convenience, all active PTC dockets are hyperlinked on FRA's website at *https://railroads.dot.gov/research-development/program-areas/train-control/ptc/railroads-ptc-dockets.* All comments received will be posted without change to *https://www.regulations.gov;* this includes any personal information.

FOR FURTHER INFORMATION CONTACT: Gabe Neal, Staff Director, Signal, Train Control, and Crossings Division, telephone: 816–516–7168, email: *Gabe.Neal@dot.gov.*

SUPPLEMENTARY INFORMATION: In general, Title 49 United States Code (U.S.C.) section 20157(h) requires FRA to certify that a host railroad's PTC system complies with Title 49 Code of Federal Regulations (CFR) part 236, subpart I, before the technology may be operated in revenue service. Before making certain changes to an FRA-certified PTC system or the associated FRA-approved PTCSP, a host railroad must submit, and obtain FRA's approval of, an RFA to its PTCSP under 49 CFR 236.1021.

Under 49 CFR 236.1021(e), FRA's regulations provide that FRA will publish a notice in the **Federal Register** and invite public comment in accordance with 49 CFR part 211, if an RFA includes a request for approval of a material modification of a signal or train control system. Accordingly, this notice informs the public that, on July 18, 2024, ARR submitted an RFA to its PTCSP for its Interoperable Electronic Train Management System (I–ETMS), which seeks FRA's approval of ARR's proposed I–ETMS onboard software upgrade. The upgrade includes changes and enhancements to software functionality to improve operational efficiencies in managing high volumes of passenger traffic during Alaska's tourist season. That RFA is available in Docket No. FRA–2010–0054.

Interested parties are invited to comment on ARR's RFA to its PTCSP by submitting written comments or data. During FRA's review of this railroad's RFA, FRA will consider any comments or data submitted within the timeline specified in this notice and to the extent practicable, without delaying implementation of valuable or necessary modifications to a PTC system. *See* 49 CFR 236.1021; *see also* 49 CFR 236.1011(e). Under 49 CFR 236.1021, FRA maintains the authority to approve, approve with conditions, or deny a railroad's RFA to its PTCSP at FRA's sole discretion.

Privacy Act Notice

In accordance with 49 CFR 211.3, FRA solicits comments from the public to better inform its decisions. DOT posts these comments, without edit, including any personal information the commenter provides, to *https://www.regulations.gov,* as described in the system of records notice (DOT/ALL–14 FDMS), which can be reviewed at *https://www.transportation.gov/privacy.* See *https://www.regulations.gov/privacy-notice* for the privacy notice of *regulations.gov.* To facilitate comment tracking, we encourage commenters to provide their name, or the name of their organization; however, submission of names is completely optional. If you wish to provide comments containing proprietary or confidential information, please contact FRA for alternate submission instructions.

Issued in Washington, DC.

Carolyn R. Hayward-Williams,

Director, Office of Railroad Systems and Technology.

[FR Doc. 2024–16811 Filed 7–30–24; 8:45 am]

BILLING CODE 4910–06–P

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

[Docket No. OCC–2024–0014]

FEDERAL RESERVE SYSTEM

[Docket No. OP–1836]

FEDERAL DEPOSIT INSURANCE CORPORATION

RIN 3064–ZA43

Request for Information on Bank-Fintech Arrangements Involving Banking Products and Services Distributed to Consumers and Businesses

AGENCY: Office of the Comptroller of the Currency, Treasury; Board of Governors of the Federal Reserve System; and Federal Deposit Insurance Corporation.

ACTION: Request for information and comment.

SUMMARY: Over the past several years, the Office of the Comptroller of the Currency (OCC), Treasury; the Board of Governors of the Federal Reserve System (Board); and the Federal Deposit Insurance Corporation (FDIC) (collectively, ''the agencies'' or ''agency'' when referencing the singular) have observed and reviewed arrangements between banks and financial technology (fintech) companies. The agencies support responsible innovation and banks pursuing bank-fintech arrangements in a manner consistent with safe and sound banking practices, and with applicable laws and regulations, including consumer protection requirements and those addressing financial crimes. Bank-fintech arrangements can provide benefits; however, supervisory experience has highlighted a range of potential risks with these bank-fintech arrangements. This request solicits input on the nature of bank-fintech arrangements, effective risk management practices regarding bank-fintech arrangements, and the implications of such arrangements, including whether enhancements to existing supervisory guidance may be helpful in addressing risks associated with these arrangements.

DATES: Comments must be received on or before September 30, 2024.

ADDRESSES: Comments should be directed to:

OCC: Commenters are encouraged to submit comments through the Federal eRulemaking Portal, if possible. Please use the title ''Request for Information on Bank-Fintech Arrangements Involving Banking Products and Services Distributed to Consumers and Businesses'' to facilitate the organization and distribution of the comments. You may submit comments by any of the following methods:

- *Federal eRulemaking Portal—Regulations.gov:* Go to *https://www.regulations.gov.* Enter ''Docket ID OCC–2024–0014'' in the Search Box and click ''Search.'' Public comments can be submitted via the ''Comment'' box below the displayed document information or by clicking on the document title and then clicking the ''Comment'' box on the top-left side of the screen. For help with submitting effective comments, please click on ''Commenter's Checklist.'' For assistance with the *Regulations.gov* site, please call 1–866–498–2945 (toll free) Monday–Friday, 8:00 a.m. to 7:00 p.m. ET, or email *regulationshelpdesk@gsa.gov.*
- *Mail:* Chief Counsel's Office, Attention: Comment Processing, Office of the Comptroller of the Currency, 400 7th Street SW, Suite 3E–218, Washington, DC 20219.
- *Hand Delivery/Courier:* 400 7th Street SW, Suite 3E–218, Washington, DC 20219.

Instructions: You must include ''OCC'' as the agency name and ''Docket ID OCC–2024–0014'' in your comment. In general, the OCC will enter all comments received into the docket and publish the comments on the *Regulations.gov* website without change, including any business or personal information provided such as name and address information, email addresses, or phone numbers. Comments received, including attachments and other supporting materials, are part of the public record and subject to public disclosure. Do not include any information in your comment or supporting materials that you consider confidential or inappropriate for public disclosure.

You may review comments and other related materials that pertain to this action by the following method:

- *Viewing Comments Electronically—Regulations.gov:* Go to *https://regulations.gov/.* Enter ''Docket ID OCC–2024–0014'' in the Search Box and click ''Search.'' Click on the ''Dockets'' tab and then the document's title. After clicking the document's title, click the ''Browse All Comments'' tab. Comments can be viewed and filtered by clicking on the ''Sort By'' drop-down on the right side of the screen or the ''Refine Comments Results'' options on the left side of the screen. Supporting materials can be viewed by clicking on the ''Browse Documents'' tab. Click on the ''Sort By'' drop-down on the right side of the screen or the ''Refine Results'' options on the left side of the screen checking the ''Supporting & Related Materials'' checkbox. For assistance with the *Regulations.gov* site, please call 1–866–498–2945 (toll free) Monday–Friday, 8:00 a.m. to 7:00 p.m. ET, or email *regulationshelpdesk@gsa.gov.*

The docket may be viewed after the close of the comment period in the same manner as during the comment period.

Board: You may submit comments, identified by Docket No. OP–1836, by any of the following methods:

- *Agency Website: https://www.federalreserve.gov/.* Follow the instructions for submitting comments at *https://www.federalreserve.gov/apps/foia/proposedregs.aspx.*
- *Email: regs.comments@federalreserve.gov.* Include the OMB number or FR number in the subject line of the message.
- *Fax:* (202) 452–3819 or (202) 452–3102.
- *Mail:* Federal Reserve Board of Governors, Attn: Ann E. Misback, Secretary of the Board, Mailstop M–4775, 2001 C St. NW, Washington, DC 20551.

All public comments are available from the Board's website at *https://www.federalreserve.gov/apps/foia/proposedregs.aspx* as submitted, unless modified for technical reasons or to remove personally identifiable information at the commenter's request. Accordingly, comments will not be edited to remove any confidential business information, identifying information, or contact information. Public comments may also be viewed electronically or in paper in Room M–4365A, 2001 C St. NW, Washington, DC 20551, between 9:00 a.m. and 5:00 p.m. on weekdays, except for Federal holidays. For security reasons, the Board requires that visitors make an appointment to inspect comments. You may do so by calling (202) 452–3684. Upon arrival, visitors will be required to present valid government-issued photo identification and to submit to security screening in order to inspect and photocopy comments.

FDIC: You may submit comments, identified by RIN 3064–ZA43, by any of the following methods:

- *Agency Website: https://www.fdic.gov/resources/regulations/federal-register-publications/.* Follow instructions for submitting comments on the FDIC's website.
- *Email: Comments@fdic.gov.* Include ''Request for Information on Bank-Fintech Arrangements Involving Banking Products and Services Distributed to Consumers and

Businesses/RIN 3064–ZA43'' in the subject line of the message.

• *Mail:* James P. Sheesley, Assistant Executive Secretary, Attention: Request for Information on Bank-Fintech Arrangements Involving Banking Products and Services Distributed to Consumers and Businesses—RIN 3064–ZA43, Federal Deposit Insurance Corporation, 550 17th Street NW, Washington, DC 20429.

• *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 550 17th Street NW, building (located on F Street NW) on business days between 7:00 a.m. and 5:00 p.m. ET.

• *Public Inspection:* Comments received, including any personal information provided, may be posted without change to *https://www.fdic.gov/resources/regulations/federal-register-publications/.* Commenters should submit only information that the commenter wishes to make available publicly. The FDIC may review, redact, or refrain from posting all or any portion of any comment that it may deem to be inappropriate for publication, such as irrelevant or obscene material. The FDIC may post only a single representative example of identical or substantially identical comments, and in such cases will generally identify the number of identical or substantially identical comments represented by the posted example. All comments that have been redacted, as well as those that have not been posted, that contain comments on the merits of this notice will be retained in the public comment file and will be considered as required under all applicable laws. All comments may be accessible under the Freedom of Information Act.

SUPPLEMENTARY INFORMATION:

Background Information

The agencies are responsible for supervising certain Federally-chartered and State-chartered banks (herein referred to as ''banks'').[1] Over the past several years, the agencies have observed and reviewed arrangements between banks and fintech companies [2] that provide consumers and businesses (herein referred to as ''end users''), access to banking products and services. Although these arrangements may provide benefits, supervisory experience has highlighted a range of risks with these bank-fintech arrangements. The agencies support responsible innovation and support banks in pursuing bank-fintech arrangements in a manner consistent with safe and sound practices and applicable laws and regulations, including but not limited to, consumer protection requirements (such as fair lending laws and prohibitions against unfair, deceptive, or abusive acts or practices) and those addressing financial crimes (such as fraud and money laundering).[3] This request solicits input on the nature of bank-fintech arrangements, including their benefits and risks, effective risk management practices regarding bank-fintech arrangements, and the implications of such arrangements, including whether enhancements to existing supervisory guidance may be helpful in addressing risks associated with these arrangements.

For many years, non-banks have provided access to financial products and services, such as consumer credit products, commercial loans, payment products, and deposit accounts. Rapid technological advances and evolving customer preferences are accelerating these trends. Over the past decade, fintech companies have significantly expanded their ability to distribute financial products and services directly to end users. These companies include small- and medium-sized firms specifically focused on the financial services sector as well as larger firms with established, multi-use technology platforms (sometimes referred to as ''Big Tech''). For purposes of this Request for Information (RFI), we refer to all of these types of non-bank firms as ''fintech companies.'' [4]

To facilitate providing end users with access to banking products and services, fintech companies may enter into arrangements with banks. In these arrangements, a bank typically makes products or services available through an arrangement with one or more fintech companies in which the fintech company, rather than the bank, markets, distributes, or otherwise provides access

[1] For a description of the banks supervised by each agency and relevant to this request for information, refer to the definition of ''appropriate Federal banking agency'' in the Federal Deposit Insurance Act (12 U.S.C. 1813(q)(1), (2), and (3)(A)–(E)).

[2] In some cases, the fintech company may be an affiliate of the bank, such as, for example, where a bank holding company owns a fintech, and that fintech relies on the holding company's subsidiary bank to provide end users access to banking products or services.

[3] Examples of relevant issuances may include the following: Interagency Guidance on Third-Party Relationships: Risk Management, 88 FR 37920 (Jun. 9, 2023); Interagency Guidelines Establishing Information Security Standards, 70 FR 15736 (Mar. 29, 2005); Interagency Guidelines Establishing Standards for Safety and Soundness, 61 FR 43948 (Oct. 1, 1996); FDIC FIL–15–2024, Collecting Identifying Information Required Under the Customer Identification Program (CIP) Rule (Mar. 28, 2024); Third-Party Risk Management: A Guide for Community Banks (May 2024); Conducting Due Diligence on Financial Technology Companies: A Guide for Community Banks (Oct. 2023); FDIC FIL–35–2022, Advisory to FDIC-Insured Institutions Regarding Deposit Insurance and Dealings with Crypto Companies (July 20, 2022); Joint Statement on the Risk-Based Approach to Assessing Customer Relationships and Conducting Customer Due Diligence (July 6, 2022); Interagency Guidance to Issuing Banks on Applying Customer Identification Program Requirements to Holders of Prepaid Cards (Mar. 21, 2016); Interagency Policy Statement on Funding and Liquidity Risk Management, 75 FR 13656 (Mar. 22, 2010); Interagency Interpretive Guidance on Customer Identification Program Requirements, (Apr. 28, 2005); Unfair or Deceptive Acts or Practices by State-Chartered Banks (Mar. 11, 2004).

[4] This term includes, among many others, intermediate platform providers (as defined below), as well as certain processors and payments platforms. It also includes certain non-financial retail businesses seeking to expand into markets for financial products and services through arrangements that could allow them to leverage their existing infrastructure and customer relationships to offer a one-stop-shop to access financial and non-financial products and services.

to or facilitates the provision of the product or service directly to the end user.[5] These arrangements enable fintech companies to provide end users with access to a range of banking products, including deposit products (*e.g.,* checking or savings accounts); payment services (*e.g.,* peer-to-peer, debit card, contactless payments, Automated Clearing House (ACH) transactions, or wire transfer capabilities); or lending products (*e.g.,* unsecured consumer or small business loans) through online and mobile applications, platforms, or digital wallets. In some of these cases, fintech companies (sometimes referred to as a ''middleware provider'' or ''intermediate platform provider'') act as intermediaries by engaging in a variety of functions, as described in detail below. For purposes of this RFI, we refer to all of these types of arrangements as ''bank-fintech arrangements.''

Bank-fintech arrangements may enable banks to leverage newer technology and offer innovative products or services to further their digitalization efforts and to meet evolving customer demands and expectations. These arrangements may also provide banks with the ability to quickly and more cost effectively deploy products or services into the market through the fintech company. In addition, these arrangements may provide banks with access to new or expanded markets, revenue sources, and customers. As discussed in more detail below, bank-fintech arrangements also may introduce potential risks through business and legal structures that increase operational complexity, unbundle traditional banking products and services (particularly payments), and increase compliance challenges. The failure of banks to manage these arrangements effectively may present consumer protection, safety and soundness, and compliance concerns.

The following sections of this RFI describe several bank-fintech arrangement structures and use cases, as well as the risks the agencies have seen manifesting and arising from these arrangements. The agencies seek public comment to build on their understanding of these arrangements, including with respect to roles, risks, costs, and revenue allocation. The agencies also seek additional information and stakeholder perspectives relevant to the implications of such arrangements, including for banks' risk management, safety and soundness, and compliance with applicable laws and regulations. The RFI is not intended to impose any obligations or define any rights, and it is not an interpretation of any statute or regulation.

Descriptions of Bank-Fintech Arrangements

The agencies have observed that bank-fintech arrangements vary significantly in structure and product and service offerings, but many commonly fall into one or more categories of facilitating deposit-taking, payment (including card issuance and digital wallet capabilities), and lending activities. Such arrangements may be effectuated either directly between banks and fintech companies or indirectly through the use of an intermediate platform provider. The agencies seek comment on these categories and the attributes of the bank-fintech arrangements described below.

Bank-Fintech Arrangements in Connection With Deposit-Taking Activities

Some non-bank fintech companies provide end users with access to deposit products and services; however, these entities are not Federally insured depository institutions (IDIs). Instead, the fintech company establishes arrangements with one or more IDIs, directly or through an intermediate platform provider, to provide end users with access to banking products and services—such as deposit accounts, debit cards, savings accounts, and other account-related services—through the fintech company's online or mobile platform.[6] Some fintech companies enter into these deposit-taking arrangements with banks to target a specific customer base, such as underserved or younger demographics. Other fintech companies incorporate such deposit-taking arrangements into much larger suites of financial and non-financial products and services and target a much broader customer base.

In arrangements between banks and fintech companies to facilitate an IDI's deposit-taking activities, fintech companies often play a critical role in maintaining a deposit and transaction system of record. These transaction records may not be reflected in the bank's core processing system. Instead, the bank's core deposit ledger may only include omnibus accounts, often titled to reflect that they are held for the benefit of (FBO) end users. The contracts governing these arrangements commonly set forth the operational responsibilities of each party, such as record-keeping and access to records, end-user on-boarding, compliance management, transaction monitoring, and complaint handling. Bank-fintech arrangements involving deposit-taking activities often involve heightened levels of operational complexity, including as it relates to reconciliations and Bank Secrecy Act (BSA) recordkeeping and compliance (*e.g.,* customer identification and due diligence, suspicious activity monitoring, and reporting and sanctions screening).

Bank-Fintech Arrangements in Connection With Payment Activities, Including Card Issuance

Banks may enter a variety of arrangements with fintech companies in connection with fund-transfer services, card issuance, contactless payments, and other payment solutions. While banks and non-banks have entered into payment-related card sponsorship arrangements for decades, the types, number, and complexity of payment-related products and services and associated arrangements between banks and fintech companies have rapidly increased in recent years.

Today, payment-related bank-fintech arrangements can vary widely and may include several different types of payment options, including debit and credit card offerings, fund-transfer services utilizing ACH transactions, wire transfers, prepaid services, and instant payments. Non-cash payments, particularly cards and ACH transactions, have increased significantly in size and volume in recent years due to innovation and the ease, convenience, accessibility, and speed of digital payments. A fintech company may enter into a card offering arrangement with a bank to provide end users with access to bank-issued, fintech-branded debit or credit cards. In some of these card offering arrangements, the partner bank directly operates and manages the cards. In others, the fintech company directly operates and manages the cards with oversight by the partner bank pursuant to a bank sponsorship agreement between the bank and fintech company. In a prepaid services arrangement, a fintech company may offer end users access to bank-operated (and, often, fintech-branded) prepaid accounts that link to end users' accounts with the fintech company. This type of structure allows end users to load and store prepaid funds and transfer such funds to others. A fintech company may also

[5] These arrangements are sometimes referred to as ''banking-as-a-service'' or ''embedded finance'' depending on the structure and parties involved in the arrangement.

[6] Fintech companies that offer these services to end users through such arrangements are sometimes referred to as ''neobanks'' or ''challenger banks.''

enter into a bank-fintech arrangement to offer ACH transactions, wire transfers, or settlement of payment services to end users. For example, a fintech company may enter into an arrangement with a bank to offer ACH services to its end users, such as sending or receiving funds via ACH transfers, which may take place through a bank sponsorship arrangement. Additionally, operators of digital platforms permitting the transmittal and exchange of funds between and among member participants [7] enter into bank-fintech arrangements to offer a range of payment options to end users of the platforms.

Under each of these arrangements, fintech companies also may provide a variety of additional services, including providing end users with personal finance and payment management tools, marketing the branded cards and payment services to end users, or assisting banks with underwriting for credit cards (sometimes using alternative data). Additionally, under each of these arrangements, banks may provide access to various services to or for end users, including card or account issuance, back-end fund-transfer and redemption operations support, access to proprietary electronic platforms, or bill payment services.

Many fintech companies enter these arrangements with banks in order to gain access to existing payment systems and card networks. In these types of structures, a bank may enter into an arrangement with the fintech company (such as a payments platform or a card processor) to ''sponsor'' the fintech company's access to one or more payment systems or card networks to facilitate the availability of specified payment options to end users in exchange for one-time and/or per-transaction fees. In this structure, operators of payment systems and card networks may permit fintech companies to conduct transactions on payment and card networks through the bank's sponsorship arrangements with the operator. Among other things, bank sponsorship may entail the partner bank agreeing with the operators of the payment and card networks to sponsor and pre-approve the proposed payment activities of the fintech company across the payment or card networks, to monitor the fintech company's operations for compliance with operator and relevant network rules, or to accept risk-of-loss liability in connection with transactions effectuated by the fintech company.

A bank that sponsors a fintech company's access to a payment system or card network for these purposes may establish an account for the fintech company at the bank for the acceptance and settlement of end-user payments, which may be effectuated in several different ways depending on the agreement between the fintech company and bank. For example, the bank may agree to open an account FBO the end users and use it to settle payment transactions. In some cases, the fintech may provide recordkeeping functions to facilitate the settlement of end-user transactions.

Several fintech companies have also entered into arrangements with banks in recent years to offer digital wallets, often in conjunction with associated payment applications (sometimes referred to as ''pay apps''). A digital wallet is a software application that permits end users to store card account or other payment credentials in encrypted or tokenized form so that end users may recall and transmit the stored credentials via a digital payment application at physical or digital points of sale. End users may rely on digital wallet functionality, used in combination with payment applications, to make in-person, contactless payments via their mobile devices (sometimes referred to as ''tap-to-pay''). Digital wallet functionalities also may assist end users in making online purchases through web and mobile applications. Some fintech companies make their digital wallets and associated payment applications available for limited use—for instance, to effectuate purchases with a single retailer or group of retailers. Others offer general use digital wallets and associated digital payment applications available to end users at a variety of participating points of sale.

In each case, fintech companies offering combined digital wallet and payment applications typically enter into arrangements with banks that issue the debit and credit cards that end users wish to include in their digital wallets. Many of the arrangements reflect standard terms governed by the payment systems and card networks. Other arrangements may require debit and credit card issuers to pay fintech companies per-transaction fees associated with the end users' reliance on the combined digital wallet and payment applications of the fintech companies.

Bank-Fintech Arrangements in Connection With Consumer and Small Business Lending

Bank-fintech arrangements can also facilitate loans through a fintech company's online platform. Fintech companies may market and distribute a variety of loan products, including those targeted to consumers, students, and small businesses.[8] Banks increasingly engage with fintech companies to access these lending markets. The parties to these arrangements in turn may be assigned to perform various core operational functions in connection with lending, including those relating to the processing, underwriting, closing, delivering, or servicing of loans.

In a typical arrangement, a partner bank agrees to facilitate and fund loans, while the fintech company solicits end users and collects application data. In some arrangements, end-user application data collected by the fintech company is used in the underwriting process within the parameters of underwriting standards agreed upon with the bank. Loans might be retained on the bank's balance sheet, or the loans (or a portion of the loans or an interest in the loan payment streams) might be sold to the fintech company. The fintech company may then securitize any acquired loans for subsequent re-sale into the public or private asset-backed securities markets, although the bank may retain an economic interest in the performance of the loans through a variety of contractual mechanisms. The fintech company or a fourth party often performs loan servicing and collection under these arrangements.

The Role of Intermediate Platform Providers

The growth of bank-fintech arrangements has spurred the development of a new business model whereby some fintech companies provide an intermediate technology platform—sometimes referred to as an ''aggregation layer''—to facilitate relationships between banks and other fintech companies that seek to distribute banking products and services directly

[7] These platforms are sometimes referred to as ''Peer-2-Peer,'' ''Business-2-Consumer,'' or ''Business-2-Business'' platforms.

[8] Such products may also include ''buy now, pay later'' (BNPL) lending, to the extent offered through a bank-fintech arrangement; however, BNPL offerings have to date typically been offered and distributed solely through either a bank, fintech company, or consumer retailer, rather than through a bank-fintech arrangement. BNPL generally refers to point-of-sale installment loans offered to end users that are payable in four or fewer installments, often concurrently with their purchase of non-financial goods and services. For additional information on BNPL, and the risks it may pose to banks, see *Retail Lending: Risk Management of 'Buy Now, Pay Later' Lending,* OCC Bulletin 2023–37 (Dec. 6, 2023).

to end users. These intermediate platform providers enable individual banks to connect to numerous fintech companies and serve the role of introducing banks and fintech companies seeking such relationships. Intermediate platform providers may also market these services together as an ''all-in-one'' solution for fintech companies and banks by providing technological, operational, and information services in one place, enabling fintech companies and banks to connect more seamlessly. An intermediate platform provider may also offer to assist fintech companies in implementing compliance risk management programs and in handling the transfer and flow of funds across deposit-taking, payments, card issuance, or lending activities.

Operators of intermediate platforms may enter into their own arrangements with banks and third parties to provide these services. These arrangements may involve a bank providing an intermediate platform provider with permission to transfer data via, for example, application programming interfaces (APIs). A single intermediate platform provider may have arrangements with multiple banks to provide such access or provide services to banks relating to operational, compliance, data, or other functions in connection with the banks' relationships with fintech companies or the platform provider itself.

Risk Implications

While bank-fintech arrangements may offer banks significant benefits, they also may present the full spectrum of risks facing banks, including, but not limited to, third-party, credit, liquidity, compliance, and operational risk. Risks may also be heightened where the fintech is the distributor of the banking product or service to the end user, or where the fintech or intermediate platform provider performs key functions, such as handling end-user complaints, performing customer identification and due diligence, developing and transmitting disclosures, monitoring transactions, maintaining end-user ledgers, performing certain lending-related activities, developing and deploying marketing materials, or directly communicating with end users.[9] Bank-fintech arrangements may also involve a wide range of practices to deliver banking products and services to end users through a combination of the fintech company's technological capabilities and the bank's infrastructure, including the ability to provide access to deposit accounts, access to payment rails, and extend credit. These facets of bank-fintech arrangements may create heightened or novel risks for banks relative to the risks associated with more traditional third-party vendor relationships. The following discussion of risks in bank-fintech arrangements is meant to be illustrative of certain select concerns and is not meant to be comprehensive.

Accountability

Contractual accountability for different aspects of the end-user relationship may be allocated among the parties to a bank-fintech arrangement. However, banks remain responsible for compliance with applicable law. Failure to conduct sufficient due diligence, ongoing monitoring, and oversight of the bank-fintech arrangement may complicate the bank's ability to ensure such compliance and to identify risk. In addition, contractual division of labor may complicate the bank's ability to establish clear lines of accountability, implement effective risk and compliance management strategies, and address and remediate issues as they arise, especially where novel arrangements place certain traditional banking activities outside of the bank. These factors may expose the bank to compliance, litigation, and other risks.

For example, in a bank-fintech arrangement, the fintech company may maintain the end-user relationship, including by interacting directly with end users, responding to inquiries and complaints, and providing required consumer protection and other disclosures. However, independent of contractual responsibilities, the end user may still qualify as a customer of the bank for certain regulatory purposes.[10] The bank also remains responsible for its various other compliance requirements, such as Anti-Money Laundering and Countering the Financing of Terrorism (AML/CFT) compliance program requirements.[11] Similarly, the fintech company's role in providing disclosures may increase the risk of inaccurate or misleading representations concerning, for example, the applicability, nature, or scope of Federal deposit insurance available to end users.[12] Such risks may be heightened where the fintech company controls the end-user relationship and uses the bank's name and branding in marketing or when an intermediate platform provider is used and further distances the bank from the end user.

Under certain bank-fintech arrangements, it may be difficult for the bank to perform oversight and control functions over the fintech company effectively where the fintech company has substantial negotiating power relative to the bank or where the bank relies on revenue or liquidity from the fintech company. Difficulty in performing this oversight and control function in turn could impede bank staff's ability to provide effective challenge to critical aspects of the bank-fintech relationship, including whether to terminate the contractual arrangement if necessary. These risks may be heightened where the fintech company is not familiar with or has a different risk tolerance concerning the specific requirements of the laws and regulations applicable to it,[13] the bank, or the products and services offered via the arrangement. These risks may be further heightened where an intermediate platform provider assists the fintech company in implementing risk management programs, such as compliance.

[9] A fintech company may also use subcontractors (referred to variously as ''nth-party risk,'' ''nested risk,'' or ''banking services supply chain risk'') in providing these services. Ineffectual oversight of subcontractors (including failure to properly account for subcontractors in the arrangement's business continuity plan) could result in material disruptions of the arrangement. *See generally* Interagency Guidance on Third-Party Relationships: Risk Management, 88 FR 37920 (Jun. 9, 2023).

[10] *See, e.g.,* 12 CFR 1016.3(i) (defining customer relationships for purposes of the Consumer Financial Protection Bureau's (CFPB) Regulation P); OCC (12 CFR part 30, App. B (I)(C)(2)(d); Board (12 CFR part 208, App. D–2 § I.C.2.d) FDIC (12 CFR part 364, App. B § I.C.2.d) (adopting Regulation P's definition of ''customer'' for the Interagency Guidelines Establishing Information Security Standards); 31 CFR 1020.100(b) (defining customer relationships for purposes of a bank's customer identification program).

[11] *See, e.g.,* suspicious activity reporting and BSA/AML program requirements for the OCC (12 CFR 21.11 and 21.21), Board (12 CFR 208.62 and 208.63), and FDIC (12 CFR 326.8 and part 353).

[12] *See, e.g.,* 12 U.S.C. 1828(a)(4); 12 CFR part 328, subpart B; FDIC, FIL–35–2022, ''Advisory to FDIC-Insured Institutions Regarding Deposit Insurance and Dealings with Crypto Companies'' (Jul. 29, 2022); *see also* 12 CFR 7.5010 (requiring banking organizations to distinguish products and services offered by it from those of a third party on co-branded websites and other shared electronic spaces). Even when the parties intend that the financial products or services will benefit from deposit insurance, application of Federal deposit insurance may be complicated in novel arrangements; 12 CFR 330.5, 330.7 (describing requirements for pass-through deposit insurance).

[13] The CFPB (for instance) possesses authority under 12 U.S.C. 5514 to engage in risk-based supervision of non-depository financial institutions participating in certain markets for consumer financial products and services. Fintech companies that are regulated as money services businesses are also subject to certain BSA/AML and state law requirements. *See, e.g.,* 31 CFR part 1022.

End-User Confusion

The fintech company's efforts to provide a seamless end-user experience could make it difficult for end users to know in what capacity they are dealing with the bank or the fintech company. In some cases, marketing materials or other statements by the fintech company or bank may exacerbate end-user confusion. For example, end users may not be well-informed regarding the type of account relationship that the end user is establishing through the fintech and may not understand that Federal deposit insurance does not protect them from a nonbank fintech company's failure. End-user confusion may also complicate compliance efforts and pose other risks to the bank. For example, an end user that is unaware of the bank's presence in the arrangement may direct complaints solely to the fintech company. The bank's ability to comply with its obligations under Federal consumer financial protection laws could be undermined if the fintech company fails to timely communicate to, or coordinate with, the bank on responses to consumer complaints.[14]

Rapid Growth

A bank may experience rapid growth as a result of engaging in a bank-fintech arrangement (*e.g.,* growth in deposits or transaction volume), especially in the case of a community bank. Various risks can emerge from rapid growth and the bank's changing risk profile, including risks that may threaten the bank's safety and soundness or its ability to comply with applicable laws and regulations.[15] These risks may arise from challenges such as appropriately scaling risk and compliance management systems, operational complexities, significant deposit growth, and insufficient capital to support the rapid growth, among other things.

For example, a bank's existing risk and compliance management systems, as well as management's and employees' expertise and roles and responsibilities, may neither be commensurate with the risk profile of the new business model nor be sufficiently scalable without significant investments in resources and training. Failure to scale compliance and risk management functions and resources with the growth resulting from the bank-fintech arrangement may increase the likelihood of the bank violating applicable laws and regulations, including those related to AML/CFT or sanctions, consumer protection, and fair lending.

Bank-fintech arrangements may also pose operational complexities, which may lead to increased risk. For example, potentially significant increases in the volume of payment processing may give rise to increased transaction monitoring alerts. In addition, depending on the integration of the bank's information technology systems with those of the fintech company, security vulnerabilities and other sources of operational disruption may arise, increasing the likelihood of data breaches, privacy incidents, service interruptions, and fraud.[16] In some cases, banks do not have or are unable to develop the infrastructure to adequately address these complexities, and instead rely on manual workarounds, which could lead to operational breakdowns that may implicate various other risks, including compliance and legal risks. These risks may be heightened where the bank-fintech arrangement involves an additional entity (*e.g.,* an intermediate platform provider).[17]

Rapid deposit growth related to a bank-fintech arrangement can also pose risks related to funds management. For example, a bank may need to invest an influx of short-term deposits that greatly exceed amounts the bank has traditionally managed. To the extent that deposits are used to fund growth in longer-term or higher-risk fixed-rate assets, including loans and securities, the bank may be exposed to greater liquidity, interest rate, or credit risk, especially when such investments are concentrated, or the risks are otherwise correlated. The bank may also experience increased liquidity stress should it need to meet material short-term withdrawal requests. Rapid deposit or asset growth also implicates various other risks, including those relating to maintaining sufficient capital to support expansion of the bank's business.[18]

Concentration and Liquidity Management

Bank-fintech arrangements may also result in the bank's business becoming highly concentrated in the arrangement. This concentration risk may amplify other risks to the bank, including from any market stresses or if deposits are used to fund longer-term assets. For example, in a rising interest rate environment, a bank-fintech arrangement involving loan products may see a reduction in originations. This reduction may pose particular risk to a bank whose business has become heavily concentrated in that arrangement and that, as a result, relies on those originations for a material portion of its earnings. Such an environment may increase the bank's exposure to credit risk from the arrangement (*e.g.,* the credit risk of the fintech company or of loans originated under the arrangement, whether still on the bank's balance sheet or for which the bank retains any contractual interest, even if repurchased by the fintech company). Such an environment may also lead to an increase in the credit risk of a bank's overall retail loan portfolio.[19]

Bank-fintech arrangements may also pose liquidity risks if the bank fails to establish adequate liquidity contingency plans and exit strategies, particularly when arrangements represent a funding concentration. An arrangement may be terminated or reduced in amount for any number of reasons, including those over which the bank has little control, and which may result in significant stress on a bank. For example, if the fintech partner or an intermediate platform provider in a deposit-taking bank-fintech arrangement faces a stress event or terminates the contractual arrangement, that could lead to a large withdrawal of end-user-related deposits, resulting in liquidity stress and losses for the bank. Failure to establish adequate liquidity contingency plans and exit strategies could also increase operational and strategic risks for the bank.

[14] For example, the bank's ability to comply with its dispute and error resolution obligations or undertake its risk monitoring capabilities could be impaired.

[15] *See* OCC Bulletin 2017–43, *New, Modified, or Expanded Bank Products and Services: Risk Management Principles* (Oct. 20, 2017) for a general discussion of these risks.

[16] Integration could also introduce security vulnerabilities, including by providing another access point into the bank's systems. Integration may amplify operational risks, such as fraud, cybersecurity, and data privacy incidents occurring at the fintech company that then affect the bank.

[17] The growing prevalence of nested relationships may materially alter the traditional third-party risks present, complicating the bank's ability to provide effective oversight to the arrangement. This is especially so if the additional entity may be contractually allowed to add operating partners or subcontractors without the bank's prior consent. *See* ''Interagency Guidance on Third-Party Relationships,'' *supra* note 9, for more.

[18] Additionally, to the extent that a fintech company meets the definition of a deposit broker under 12 CFR 337.6, any related deposits would be brokered deposits subject to applicable restrictions if the bank becomes less than well capitalized under the prompt corrective action provisions of the agencies' capital rules.

[19] These risks may be heightened where the arrangement results in the bank's risk profile becoming more correlated to or concentrated in a particular market segment or asset type, either directly through its exposure to certain products, or indirectly through its exposure to the fintech company.

Use and Ownership of Data and Customer Information

Bank-fintech arrangements often rely on new, innovative, and potentially untested uses of data to expand or enhance access to financial services, which may in turn lead to risks related to compliance with laws and regulations, operational challenges, and the ownership, use, and nature of that data. For instance, a bank-fintech arrangement may be premised on underwriting credit using alternative data. Introducing alternative data into a bank's existing systems may pose risks. These include, for example, risks related to the bank's ability to address concerns associated with alternative data and its use (including as to accuracy and biases) and to incorporate alternative data types and formats into its information technology systems, credit risk modeling capabilities, and compliance management systems.[20]

Data ownership and use questions may also create risks for the bank. For instance, the fintech company may attempt to limit the bank's access to data generated as part of the arrangement if the fintech company views the data as its proprietary information. Other issues related to data ownership and use may arise where banks are required by law to limit the fintech company's access to and use of certain data. For example, banks are restricted in the sharing, use, and disposal of end user nonpublic information, and end users may have opt-out rights, which could pose operational difficulties and compliance risks.[21] Therefore, the bank may require information on the bank-fintech arrangement's end users to meet its own compliance obligations, including, but not limited to, those related to recordkeeping, AML/CFT or sanctions, fair lending, or state escheatment statutes or regulations. This requirement for information may arise even where the bank lacks a direct relationship with end users or where they are not named account holders with the bank.[22] As discussed in more detail above, these risks may be heightened where aspects of the end-user relationship or compliance-related activities are contractually allocated among multiple entities (*e.g.,* intermediate platform providers).

Request for Comment

In this RFI, the agencies are inviting interested members of the public to comment on the descriptions of bank-fintech arrangements and risks summarized in the document. The agencies are also seeking comment on effective practices for managing these risks. Where questions ask for the ''range of practices,'' respondents are encouraged to describe the practices' advantages and disadvantages.

Bank-Fintech Arrangement Descriptions

1. Do the descriptions and categorizations in this RFI adequately describe the types of bank-fintech arrangements in the industry and the companies involved? If not, why? Are the descriptions or categorizations overly broad or narrow, or are there any types of companies or categories of arrangements missing from the descriptions?

2. Are there any benefits of bank-fintech arrangements that are not addressed by this RFI? What benefits do the bank or the fintech company receive by using an intermediate platform provider?

3. Describe the range of practices regarding banks' use of data [23] to monitor risk, ensure compliance with regulatory responsibilities and obligations, or otherwise manage bank-fintech arrangements. What data and information do banks typically receive in bank-fintech arrangements, including in those involving intermediate platform providers? To what extent is this information different from the information banks would receive when interacting with end users independent of fintech companies? What challenges have banks experienced in bank-fintech arrangements—including those involving intermediate platform providers—related to the timely access to customer information, and what steps have the parties to bank-fintech arrangements taken to assess potential compliance issues associated with such challenges?

4. How do the parties to bank-fintech arrangements determine the end user's status as a customer of the bank, the fintech company, or both, including for purposes of compliance with applicable laws and regulations, and each party's responsibility in complying with contractual requirements? What disputes or uncertainties regarding the status of end users have the parties experienced, and how have they sought to resolve them? How does the type of arrangement impact such determinations?

5. Describe the range of practices regarding the use of a core bank service provider or other third-party providers in bank-fintech arrangements. How do these providers help or hinder bank-fintech arrangements?

6. Describe the range of practices in cases where bank-fintech arrangements involve affiliates of the bank, including fintechs. What are the benefits and risks of these arrangements?

7. Bank-fintech arrangements can involve significant up-front and ongoing costs and resources for the bank involved and may take some time to recoup these costs and resources. What type of up-front and ongoing costs and resources are associated with establishing bank-fintech arrangements? Describe the range of practices regarding how a bank factors such upfront costs and resources into its overall strategy and risk management strategy. Describe the range of practices regarding how revenues and costs resulting from these arrangements are allocated between the bank and fintech company.

Risk and Risk Management

1. Describe the range of practices for maintaining safety and soundness, and compliance with applicable laws and regulations arising from bank-fintech arrangements. How do the practices differ as between different categories of arrangements? Does the RFI adequately identify and describe the potential risks of bank-fintech arrangements?

2. Bank-fintech arrangements can present unique or heightened consumer protection risks, such as risks of discrimination, unfair or deceptive acts or practices under the Federal Trade Commission Act, or privacy concerns. Describe the range of practices for managing any heightened risks.

3. Describe the range of practices parties to a bank-fintech arrangement may use in contractually allocating functions among themselves, including the advantages and disadvantages of each such practice. For example, while the parties to such arrangements remain responsible for their own compliance with applicable laws and regulations, as a matter of contractual allocation, who performs which activities related to risk and compliance management, customer identification and due diligence,

[20] For example, alternative datasets that impact credit decisions could potentially create or heighten consumer protection risks, such as unlawful discrimination in lending.

[21] *See* Title V, subtitle A of the Gramm-Leach Bliley Act, Public Law 106–102, 113 Stat. 1338, codified in relevant part at 15 U.S.C. 6801 *et seq.,* implemented at OCC (12 CFR part 30 Appendix B, including Supplement A), Board (12 CFR part 208 Appendix D–2, including Supplement A), FDIC (12 CFR part 364 (Appendix B, including Supplement A), and 12 CFR part 1016 (Regulation P).

[22] *See, e.g.,* suspicious activity reporting and BSA/AML program requirements for the OCC (12 CFR 21.11 and 21.21), Board (12 CFR 208.62 and 208.63), and FDIC (12 CFR 326.8 and part 353). *See also supra* note 10 and accompanying text.

[23] For example, key performance indicators, product-level data, service levels, end-user information, key risk indicators, consumer complaints, fraud monitoring metrics, or KYC/CIP information.

transaction monitoring, sanctions screening, fraud monitoring, end-user complaint management, dispute resolution, data protection, or credit underwriting, if applicable? Who develops and oversees marketing materials, develops and provides disclosures and account statements, addresses errors, receives and resolves disputes, and responds to complaints? How are contractual breaches and indemnifications typically addressed in these types of arrangements? Describe the range of practices for monitoring compliance with applicable laws and regulations, notwithstanding contractual allocations.

4. How are risks resulting from these arrangements, including those concerning credit, liquidity, concentration, compliance, and operational risk, as well as concerns regarding negative end-user experience managed? What techniques or strategies are most effective in managing the impact of rapid growth, particularly related to deposit-taking and payment-related arrangements?

5. Describe the range of risk management strategies banks and fintech companies use to ensure that required disclosures in bank-fintech arrangements, including those relating to rates and fees associated with end-user banking products and services, are accurately and plainly communicated, and comply with all relevant state and Federal laws and regulations.

6. Describe the range of practices regarding disclosures (*e.g.,* initial, annual, or ongoing) to end users about the involvement of bank-fintech arrangements in the delivery of banking products and service.

7. Describe the range of practices regarding the use of an intermediate platform provider. Describe how the use of an intermediate platform provider may amplify or mitigate risk, and to what extent, if any, intermediate platform providers influence how banks handle operational, compliance, or other issues when dealing with fintech companies within the intermediate platform provider's network.

8. Describe the range of practices regarding how banks manage the risks of connecting to multiple technology platforms and exchanging data in bank-fintech arrangements.

9. Describe the range of practices regarding planning for when a fintech company or intermediate platform provider exits an arrangement, faces a stress event, or experiences a significant operational disruption, such as a cyber-attack. Describe the range of practices regarding how arrangements are structured to minimize harm to end users, meet compliance requirements, and minimize liquidity risks and other risks in the event of such exits, stresses, or disruptions.

10. Describe the range of practices, and challenges, in negotiating contracts with, or conducting due diligence on fintech companies. Describe the range of practices in maintaining ongoing monitoring of bank-fintech arrangements, particularly related to risk management, regulatory compliance, data ownership and use, and information security assessment rights. What impact, if any, does the size and negotiating power of the bank or the fintech company have on these issues? What impact, if any, does the fintech company's or intermediary platform provider's degree of control of operational functions have on these issues? What impact, if any, does bank liquidity or revenues concentration represented by any particular fintech company, intermediary platform provider, or business line have on these issues?

11. Bank-fintech arrangements may involve processing payments transactions unrelated to any specific deposit-taking or credit offering in significant volumes. Describe the range of practices that banks adopt to manage potential risks associated with processing large volumes of otherwise unaffiliated payments transactions. Do banks view bank-fintech arrangements involving such processing differently from other payments-related products and services offered to end users?

12. How do banks ensure bank-fintech arrangements can be suspended or terminated based upon safety and soundness, compliance, or consumer protection concerns? What fees or other costs are typically involved in exiting these arrangements?

13. Are there other techniques or strategies that banks use to manage the various risks bank-fintech arrangements may present? Which of these techniques or strategies are most effective in managing such risks?

14. In the context of bank-fintech arrangements, how are deposit accounts usually titled? Describe the range of practices reconciling bank deposit account records with the fintechs' records. Generally, what party holds and maintains the account records? Describe the structure in place to exchange accurate customer information between the bank and the fintech company and how the agreements between banks and fintech companies generally address these matters. Describe any additional controls, that banks or fintechs may use to provide for accurate reconciliations.

15. Describe the range of practices regarding the maintenance of systems of records and account titling in the context of bank-fintech arrangements. Do certain account structures pose greater risk considerations to banks and end users than others? What additional controls, if any, do banks or fintechs place on these accounts to manage these risks?

16. To what extent would additional clarifications or further guidance be helpful to banks with respect to bank-fintech arrangements? If so, please explain. In what specific areas would additional clarification or further guidance be most helpful?

Trends and Financial Stability

1. What data would be helpful for the agencies in monitoring developments regarding bank-fintech arrangements? For example, this might include data to assist in monitoring developments and trends in bank-fintech arrangement structures and use cases, concentrations, and the number and types of bank-fintech arrangements in the financial services industry.

2. In what ways do or can bank-fintech arrangements support increased access to financial products and services? Alternatively, in what ways do or can these arrangements disadvantage end users?

3. In what ways might bank-fintech arrangements function as transmission mechanisms to amplify financial shocks (*i.e.,* threaten financial stability)? Conversely, how could these arrangements help to contain shocks and reduce contagion?

4. What factors are important in determining whether bank-fintech arrangements support or hinder responsible innovation and a competitive and compliant financial services landscape?

Michael J. Hsu,

Acting Comptroller of the Currency.

By order of the Board of Governors of the Federal Reserve System.

Ann E. Misback,

Secretary of the Board.

Federal Deposit Insurance Corporation.

Dated at Washington, DC, on July 23, 2024.

James P. Sheesley,

Assistant Executive Secretary.

BILLING CODE 4810–33–P; 6210–01–P; 6714–01–P

DEPARTMENT OF THE TREASURY

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Multiple Departmental Offices Information Collection Requests

AGENCY: Departmental Offices, U.S. Department of the Treasury.

ACTION: Notice of information collection; request for comment.

SUMMARY: The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, on or after the date of publication of this notice. The public is invited to submit comments on these requests.

DATES: Comments should be received on or before August 30, 2024 to be assured of consideration.

ADDRESSES: Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to *www.reginfo.gov/public/do/PRAMain.* Find this particular information collection by selecting ''Currently under 30-day Review—Open for Public Comments'' or by using the search function.

FOR FURTHER INFORMATION CONTACT: Copies of the submissions may be obtained from Spencer W. Clark by emailing *PRA@treasury.gov,* calling (202) 927–5331, or viewing the entire information collection request at *www.reginfo.gov.*

SUPPLEMENTARY INFORMATION:

1. Title: Treasury International Capital Form SLT, ''Aggregate Holdings, Purchases and Sales, and Fair Value Changes of Long-Term Securities by U.S. and Foreign Residents''.

OMB Control Number: 1505–0235.

Type of Review: Extension without change of a currently approved collection.

Description: Form SLT is part of the Treasury International Capital (TIC) reporting system, which is required by law (22 U.S.C. 286f; 22 U.S.C. 3103; E.O. 10033; 31 CFR part 128) for the purpose of providing timely information on international capital movements. Form SLT is used to collect monthly data on cross-border ownership by U.S. and foreign residents of long-term securities, purchases and sales of long-term securities, and changes in fair value of long-term securities, for portfolio investment purposes. These data are used by the U.S. Government in the formulation of international and financial policies and for the preparation of the U.S. balance of payments accounts and the U.S. international investment position. Form SLT is filed by U.S.-resident custodians, U.S.-resident issuers of long-term securities, and U.S.-resident end-investors (including endowments, foundations, pension funds, mutual funds, and other investment managers/advisors/sponsors) in long-term foreign securities.

Form: Treasury International Capital Form SLT.

Affected Public: Businesses or other for-profits, Not-for-profit Institutions.

Estimated Number of Respondents: 429.

Frequency of Response: Monthly.

Estimated Total Number of Annual Responses: 5,148.

Estimated Time per Response: 14.5 hours.

Estimated Total Annual Burden Hours: 74,882.

2. Title: Coronavirus State and Local Fiscal Recovery Funds Program.

OMB Control Number: 1505–0271.

Type of Review: Revision of a currently approved collection.

Description: Sections 602 and 603 of the Social Security Act (the ''Act''), as added by section 9901 of the American Rescue Plan Act of 2021, Public Law 117–2 (Mar. 11, 2021) authorized the Coronavirus State Fiscal Recovery Fund (''CSFRF'') and Coronavirus Local Fiscal Recovery Fund (''CLFRF'') respectively (referred to as the ''Coronavirus State and Local Fiscal Recovery Funds'' or ''SLFRF''). The SLFRF provided $350 billion in total funding for the U.S. Department of the Treasury (''Treasury'') to make payments to States (defined to include the District of Columbia), U.S. Territories (defined to include Puerto Rico, U.S. Virgin Islands, Guam, Northern Mariana Islands, and American Samoa), Tribes, Metropolitan cities, Counties, Consolidated Governments, and (through States) Non-entitlement units of local government (collectively the ''eligible entities'') to (1) respond to the COVID–19 public health emergency or its negative economic impacts, including providing assistance to households, small business, nonprofits, and impacted industries, such as tourism, travel, and hospitality; (2) respond to workers performing essential work during the COVID–19 pandemic by providing premium pay to eligible workers of the State, U.S. Territory, Tribal government, Metropolitan city, County, or Non-entitlement units of local government who are performing essential work or by providing grants to eligible employers that have eligible workers; (3) provide of government services, to the extent COVID–19 caused a reduction of revenues collected in the most recent full fiscal year of the State, U.S. Territory, Tribal government, Metropolitan city, County, or Non-entitlement units of local government; or (4) make necessary investments in water, sewer, or broadband infrastructure, (5) provide emergency relief from natural disasters or the negative economic impacts of natural disasters including temporary emergency housing, food assistance, financial assistance for lost wages, and other immediate needs; (6) use funds for projects eligible under 26 programs administered by the Department of Transportation (''Surface Transportation projects''), or (7) use funds for projects eligible under Title I of the Housing and Community Development Act of 1974 (''Title I projects'').

Title I projects require the implementing recipients to submit to Treasury a National Environmental Review Act (NEPA) Environmental Certification form under certain circumstances. This form can be found on the Treasury website.

To administer the SLFRF program, a Project and Expenditure (P&E) Report is required to be submitted by recipients quarterly or annually based on their ''reporting tier'' provided in the Compliance and Reporting Guidance. The first quarterly reports were due January 31, 2022 for certain recipients. The first annual reports were due April 30, 2022. The P&E Report has been updated periodically to accommodate new reporting needs corresponding to updated program guidance offered through interim final rules (IFRs) and frequently asked questions (FAQs) and will be continuously updated throughout the program's period of performance. Existing and anticipated future updates are reflected in the estimated time per response for reporting.

Final program reports will be due in accordance to guidelines established in *2 CFR 200.344,* and property, real property, and equipment disposition procedures must be followed in accordance with 2 CFR 200.311, 200.313, and 200.314, as well as in accordance with additional guidance issued by Treasury.

Form: Award and Payment Forms and associated forms; Annual Recovery Performance Plan and Distribution Templates; Annual and Quarterly Project and Expenditure Reports, National Environmental Protection Act (NEPA) Review Certification Form for Title I projects, disposition and

associated forms, and the Impact Story submission form.

Affected Public: State, Territorial, Tribal, and certain Local Governments.

Estimated Number of Respondents: 30,000.

Frequency of Response: As required.

Estimated Total Number of Annual Responses: 82,874.

Estimated Time per Response: 15 minutes to 1 hour for Award and Payment forms, up to 100 hours for Annual Recovery Plan Performance Reports, up to 15 hours for annual and quarterly Project and Expenditure Reports, up to 2 hours for Title I NEPA Environmental Reviews, and up to 1 hour for optional impact story submissions, in addition to time spent on previously collected items.

Estimated Total Annual Burden Hours: 628,494.

Authority: 44 U.S.C. 3501 *et seq.*

Spencer W. Clark,

Treasury PRA Clearance Officer.

SUPPLEMENTARY INFORMATION:

Internal Revenue Service (IRS)

1. Title: Payout Requirements for Type III Supporting Organizations that are not Functionally Integrated.

OMB Number: 1545–2157.

Regulation Project Number: TD 9605.

Abstract: This document contains final regulations regarding the requirements to qualify as a Type III supporting organization that is operated in connection with one or more supported organizations. The regulations reflect changes to the law made by the Pension Protection Act of 2006. The regulations will affect Type III supporting organizations and their supported organizations.

Current Actions: There is no change in the paperwork burden previously approved by OMB. However, the estimated number of responses were updated based on current filing data.

Type of Review: Extension of a currently approved collection.

Affected Public: Not-for-profit institutions, State, local or Tribal governments.

Estimated Number of Respondents: 6,089.

Estimated Time per Respondent: 2 hours.

Estimated Total Annual Burden Hours: 12,178.

2. Title: Limited Payability Claim Against the United States for Proceeds of An Internal Revenue Refund Check.

OMB Number: 1545–2024.

Document Number: 13818.

Abstract: Form 13818, *Limited Payability Claim Against the United States for the Proceeds of an Internal Revenue Refund Check,* is sent to the payee (taxpayer). This form is designed to provide taxpayers a method to file a claim for a replacement check when the original check is over 12 months old.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, Businesses, and other for-profit organizations.

Estimated Number of Respondents: 6,000.

Estimated Time per Respondent: 1 hr.

Estimated Total Annual Burden Hours: 6,000.

3. Title: U.S. Information Return-Trust Accumulation of Charitable Amounts.

OMB Number: 1545–0094.

Form Number: 1041–A.

Abstract: Form 1041–A is used to report the information required in Internal Revenue Code section 6034 concerning accumulation and distribution of charitable amounts. Trusts claiming a contributions deduction under section 642(c) or split-interest trusts described in section 4947(a)(2) use Form 1041–A to report information required by section 6034.

Current Actions: There are changes (reduction in filers) in the paperwork burden previously approved by OMB. The Tax Cuts and Jobs Act of 2017 (Pub. L. 115–97) amended section 641(c)(2). As a result, Electing Small Business Trusts (ESBTs) are no longer subject to the charitable information reporting requirements under section 6034 and do not file Form 1041–A. This form is being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations, and individuals.

Estimated Number of Respondents: 6,700.

Estimated Time per Respondent: 36 hours, 40 minutes.

Estimated Total Annual Burden Hours: 245,622.

4. Title: Information Reporting Requirements under Code sec. 6039.

OMB Number: 1545–2129.

Document Number: Forms 3921 and 3922.

Abstract: Form 3921 is a copy of the information return filed with the Internal Revenue Service by the corporation which transferred shares of stock to a recipient. Form 3922 is used by the corporation to record a transfer of the legal title of a share of stock acquired by the employee where the stock was acquired pursuant to the exercise of an option described in Internal Revenue Code section 423(c). Treasury Decision 9470 contains the final regulations relating to the return and information statement requirements under Internal Revenue Code section 6039. These regulations reflect changes to section 6039 made by section 403 of the Tax Relief and Health Care Act of 2006.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Business and other for-profit organizations.

Estimated Number of Respondents: 6,676,894.

Estimated Time per Respondent: 25 min.

Estimated Total Annual Burden Hours: 1,457,411.

5. Title: Product Liability Losses and Accumulations for Product Liability Losses.

OMB Number: 1545–0863.

Regulation Project Number: T.D. 8096.

Abstract: T.D. 8096 provides final regulations relating to product liability losses and accumulations for the payment of reasonable anticipated product liability losses. Changes to the applicable tax law were made by the Revenue Act of 1978. Generally, a taxpayer who sustains a product liability loss must carry the loss back 10 years. However, a taxpayer may elect to have such loss treated as a regular net operating loss under section 172. If desired, such election is made by attaching a statement to the tax return. This statement will enable the IRS to monitor compliance with the statutory requirements.

Current Actions: There is no change to this existing regulation or to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 5,000.

Estimated Time per Respondent: 30 minutes.

Estimated Total Annual Burden Hours: 2,500.

6. Title: Low-Income Housing Credit Agencies Report of Noncompliance or Building Disposition.

OMB Number: 1545–1204.

Form Number: 8823.

Abstract: Under Internal Revenue Code section 42(m)(1)(B)(iii), state housing credit agencies are required to notify the IRS of any building disposition or noncompliance with the low-income housing tax credit provisions. A separate form must be filed for each building that is not in compliance. The IRS uses this information to determine whether the low-income housing credit is being correctly claimed and whether there is any credit recapture.

Current Actions: There are no changes being made to the form at this time, changes to the burden estimates are due to IRS most current filing data.

Type of Review: Extension of a currently approved collection.

Affected Public: State or local government housing credit agencies.

Estimated Number of Respondents: 14,474.

Estimated Time per Respondent: 15.16 hours.

Estimated Total Annual Burden Hours: 219,426.

7. Title: Refunds and Credits; Periods of Limitations; Financial Disability.

OMB Number: 1545–1649.

Revenue Procedure: Revenue Procedure 99–21.

Abstract: Generally, under section 6511(a), a taxpayer must file a claim for credit or refund of tax within three years after the date of filing a tax return or within two years after the date of payment of the tax, whichever period expires later. Under section 6511(h), the statute of limitations on claims for credit or refund is suspended for any period of an individual taxpayer's life during which the taxpayer is unable to manage his or her financial affairs because of a medically determinable mental or physical impairment, if the impairment can be expected to result in death, or has lasted (or can be expected to last) for a continuous period of not less than 12 months.

Current Actions: There is no change in the paperwork burden previously approved by OMB. The revenue procedure is being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 48,200.

Estimated Time per Response: 30 minutes.

Estimated Total Annual Burden Hours: 24,100.

8. Title: Statement of Liability of Lender, Surety, or Other Person for Withholding Taxes.

OMB Number: 1545–2254.

Form Number: Form 4219.

Abstract: Third parties who directly pay another's payrolls can be held liable for the full amount of taxes required to be withheld but not paid to the Government (subject to the 25% limitation). IRC 3505 deals with persons who supply funds to an employer for the purpose of paying wages. The notification that a third party is paying or supplying wages will usually be made by filing of the Form 4219, Statement of Liability of Lender, Surety, or Other Person for Withholding Taxes. The Form 4219, Statement of Liability of Lender, Surety, or Other Person for Withholding Taxes, is to be submitted and associated with each employer and for every calendar quarter for which a liability under section 3505 is incurred.

Current Actions: There have been no changes to the form that would affect burden.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profit organizations, Not-for-profit institutions, Farms, Federal Government, State, Local, or Tribal Government.

Estimated Number of Respondents: 1,000.

Estimated Time per Respondent: 12 hours, 50 minutes.

Estimated Total Annual Burden Hours: 12,833.

9. Title: Itemized Statement Component of Advisee List.

OMB Number: 1545–1686.

Form Number: Form 13976.

Abstract: Internal Revenue Code (IRC) Section 6112, (as amended by the American Jobs Creation Act of 2004, Pub. L. 108–357), requires that each material advisor with respect to any reportable transaction shall maintain (in such manner as the Secretary may by regulations prescribe) a list identifying each person with respect to whom the advisor acted as a material advisor. Form 13976, Itemized Statement Component of Advisee List, may be used by Material Advisors for the purpose of preparing and maintaining list with respect to reportable transaction under section 6112, but the form is not required to be used under 301.6112–1, but is offered as an option for maintaining the transaction participants list.

Current Actions: There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households, and not-for-profit institutions.

Estimated Number of Respondents: 500.

Estimated Time per Respondent: 100.

Estimated Total Annual Burden Hours: 50,000 hours.

10. Title: Information Reporting by Passport Applicants.

OMB Number: 1545–1359.

Regulation Number: T.D. 9679.

Abstract: These final regulations provide information reporting rules for certain passport applicants. These final regulations apply to certain individuals applying for passports (including renewals) and provide guidance to such individuals about the information that must be included with their passport application.

Current Actions: There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or Households.

Estimated Number of Respondents: 12,133,537.

Estimated Time per Response: 6 minutes.

Estimated Total Annual Burden Hours: 1,213,354 hours.

11. Title: Manufacturers Excise Taxes on Sporting Goods and Firearms and Other Administrative Provisions of Special Application to Manufacturers and Retailers Excise Taxes Reporting and Recordkeeping Requirements.

OMB Number: 1545–0723.

Regulation Project Number: T.D. 8043.

Abstract: Chapters 31 and 32 of the Internal Revenue Code impose excise taxes on the sale or use of certain articles. Code section 6416 allows a credit or refund of the tax to manufacturers in certain cases. Code sections 6420, 6421, and 6427 allow credits or refunds of the tax to certain users of the articles. This regulation contains reporting and recordkeeping requirements that enable the IRS and taxpayers to verify that the proper amount of tax is reported or excluded.

Current Actions: There is no change in the paperwork burden previously approved by OMB. The regulation is being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit or not-for-profit institutions.

Estimated Number of Respondents: 1,500,000.

Estimated Time per Response: 19 minutes.

Estimated Total Annual Burden Hours: 475,000.

12. Title: Guidance under Sections 897, 1445, and 6109 to require use of Taxpayer Identifying Numbers on Submission under the Section 897 and 1445.

OMB Number: 1545–1797.

Document Number: TD 9082, TD 9751.

Abstract: The collection of information relates to applications for withholding certificates under section 1.1445–3 to be filed with the IRS with respect to (1) dispositions of U.S. real property interests that have been used by foreign persons as a principle residence within the prior 5 years and excluded from gross income under section 121 and (2) dispositions of U.S. real property interests by foreign persons in deferred like kind exchanges that qualify for nonrecognition under section 1031.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households and Business or other for-profit.

Estimated Number of Respondents: 50.

Estimated Time per Respondent: 2 hrs.

Estimated Total Annual Burden Hours: 100.

13. Title: Claim for Refund and Request for Abatement.

OMB Number: 1545–0024.

Form Number: 843.

Abstract: Internal Revenue Code section 6402, 6404, and sections 301.6402–2, 301.6404–1, and 301.6404–3 of the regulations allow for refunds of taxes (except income taxes) or refund, abatement, or credit of interest, penalties, and additions to tax in the event of errors or certain actions by the IRS. Form 843 is used by taxpayers to claim these refunds, credits, or abatements.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households, not-for-profit institutions, farms, and State, local or Tribal governments.

Estimated Number of Responses: 550,500.

Estimated Time per Respondent: 1 hr., 35 min.

Estimated Total Annual Burden Hours: 875,295.

14. Title: Disclosure of Tax Return Information for Purposes of Quality or Peer Reviews, Due to Incapacity or Death of Tax Return Preparer.

OMB Number: 1545–1209.

Regulation Project Number: TD 8383.

Abstract: These regulations govern the circumstances under which tax return information may be disclosed for purposes of conducting quality or peer reviews, and disclosures that are necessary because of the tax return preparer's death or incapacity.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 250,000.

Estimated Time per Respondent: 1 hour.

Estimated Total Annual Burden Hours: 250,000.

15. Title: Application for Determination of Employee Stock Ownership Plan (ESOP).

OMB Number: 1545–0284.

Form Number: 5309.

Abstract: Internal Revenue Code section 404(a) allows employers an income tax deduction for contributions to their qualified deferred compensation plans. Form 5309 is used to request an IRS determination letter about whether the plan is qualified under Code section 409 or 4975(e)(7).

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 3,655.

Estimated Time per Respondent: 10 hours, 47 minutes.

Estimated Total Annual Burden Hours: 39,437.

16. Title: Special Rules and Certificate of Partner-Level Items to Reduce Section 1446 Withholding.

OMB Number: 1545–1934.

Regulation and Form Number: T.D. 9394 and Form 8404–C.

Abstract: T.D. 9394 contains final regulations regarding when a partnership may consider certain deductions and losses of a foreign partner to reduce or eliminate the partnership's obligation to pay withholding tax under section 1446 on effectively connected taxable income allocable under section 704 to such partner. Form 8804–C is used by a foreign partner that voluntary submit to the partnership if it chooses to provide a certification that could reduce or eliminate the partnership's withholding tax obligation under section 1446 (1446 tax) on the partner's allocable share of effectively connected income (ECTI) from the partnership.

Current Actions: There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profit organizations, Individuals or Households, and Not-for-Profit Organizations.

Form 8804–C

Estimated Number of Respondents: 1,000.

Estimated Time per Response: 18.7 hours.

Estimated Total Annual Burden Hours: 18,700 hours.

17. Title: Electronic Deposit of Tax Refund of $1 Million of More.

OMB Number: 1545–1763.

Form Number: Form 8302.

Abstract: Form 8302 is used to report an electronic deposit of a tax refund of $1 millon or more directly into an account at any U.S. bank or other

financial institution that accepts electronic deposits.

Current Actions: There is no change to the existing collection. However, the estimated number of responses was updated based on current filing data.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Responses: 160.

Estimated Time per Respondent: 1 hours, 42 minutes.

Estimated Total Annual Burden Hours: 272.

18. Title: Electronic Filing of Form W–4.

OMB Number: 1545–1435.

Regulation Number: T.D. 8706.

Abstract: Information is required by the Internal Revenue Service to verify compliance with regulation section 31.3402(f)(2)–1(g)(1), which requires submission to the Service of certain withholding exemption certificates. The affected respondents are employers that choose to make electronic filing of Forms W–4 available to their employees.

Current Actions: There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, not for-profit institutions, and Federal, State, local or Tribal governments.

Estimated Number of Respondents: 2,000.

Estimated Number of Responses: 160,000.

Estimated Time per Response: 15 minutes.

Estimated Total Annual Burden Hours: 40,000 hours.

19. Title: Cancellation of Debt.

OMB Number: 1545–1424.

Form Number: 1099–C.

Regulation Project Number: TD 9793.

Abstract: This form is used by Federal Government agencies, financial institutions, and credit unions to report the cancellation or forgiveness of a debt of $600 or more, as required by section 6050P of the Internal Revenue Code. The IRS uses the form to verify compliance with the reporting rules and to verify that the debtor has included the proper amount of canceled debt in income on his or her income tax return.

TD 9793

Abstract: These regulations under section 6050P of the Internal Revenue Code (Code), relating to the rule in § 1.6050P–1(b)(2)(iv) that the 36-month non-payment testing period is an identifiable event triggering an information reporting obligation on Form 1099–C for discharge of indebtedness by certain entities.

Current Actions: There are no changes being made to the form or regulation at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, not-for-profit institutions, and the Federal Government.

Estimated Number of Responses: 6,540,900.

Estimated Time per Response: 13 minutes.

Estimated Total Annual Burden Hours: 1,438,998.

20. Title: Credit for Increasing Research Activities.

OMB Number: 1545–0619.

Form Number: 6765.

Abstract: Internal Revenue Code section 38 allows a credit against income tax (Determined under IRC section 41) for an increase in research activities in a trade or business. Form 6765 is used by businesses and individuals engaged in a trade or business to figure and report the credit. The data is used to verify that the credit claimed is correct.

Current Actions: There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals, and not-for-profit institutions.

Estimated Number of Respondents: 15,805.

Estimated Time per Respondent: 18 hours, 3 minutes.

Estimated Total Annual Burden Hours: 285,281 hours.

21. Title: Request for Change in Plan/Trust Year (Form 5308).

OMB Number: 1545–0201.

Form Number: Form 5308.

Abstract: Form 5308 is used to request permission to change the plan or trust year for a pension benefit plan. The information submitted is used in determining whether IRS should grant permission of the change.

Current Actions: There is no change to the existing collection. However, the time per respondent was recalculated for a better estimate.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Responses: 3.

Estimated Time per Respondent: 7 hours, 54 minutes.

Estimated Total Annual Burden Hours: 24.

22. Title: Treaty-Based Return Position Disclosure.

OMB Number: 1545–1354.

Document Number: 8833.

Abstract: Revenue Procedure 2010–19 provides guidance for individuals who emigrate from Canada and wish to make an election for U.S. federal income tax purposes. Form 8833 is used by taxpayers to make the treaty-based return position disclosure required by section 6114.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Business and other for-profit organizations.

Estimated Number of Respondents: 4,100.

Estimated Time per Respondent: 7 hrs., 25 min.

Estimated Total Annual Burden Hours: 25,740.

23. Title: Continuation Coverage Requirements Application to Group Health Plans.

OMB Number: 1545–1581.

Regulation Number: REG–209485–86 (TD 8812).

Abstract: The regulations require group health plans to provide notices to individuals who are entitled to elect COBRA (The Consolidated Omnibus Budget Reconciliation Act of 1985) continuation coverage of their election rights. Individuals who wish to obtain the benefits provided under the statute are required to provide plans notices in the cases of divorce from the covered employee, a dependent child's ceasing to be dependent under the terms of the plan, and disability. Most plans will require that elections of COBRA continuation coverage be made in writing. In cases where qualified beneficiaries are short by an insignificant amount in a payment made to the plan, the regulations require the plan to notify the qualified beneficiary if the plan does not wish to treat the tendered payment as full payment. If a health care provider contacts a plan to confirm coverage of a qualified beneficiary, the regulations require that the plan disclose the qualified beneficiary's complete rights to coverage.

Current Actions: There is no change to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households, and not-for-profit institutions.

Estimated Number of Respondents: 12,079,600.

Estimated Time per Response: Varies from 30 seconds to 330 hours, depending on individual circumstances, with an estimated average of 14 minutes.

Estimated Total Annual Burden Hours: 404,640 hours.

24. Title: Monthly Tax Return for Wagers (Form 730).

OMB Number: 1545–0235.

Form Number: Form 730.

Abstract: Form 730 is used to identify taxable wagers under Internal Revenue Code section 4401 and collect the tax monthly. The information is used to determine if persons accepting wagers are correctly reporting the amount of wagers and paying the required tax.

Current Actions: There is no change to the existing collection. However, the estimated number of responses was updated based on current filing data.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Responses: 17,796.

Estimated Time per Respondent: 8 hours, 11 minutes.

Estimated Total Annual Burden Hours: 145,749.

25. Title: Carryover of Passive Activity Losses and Credits and At-Risk losses to Bankruptcy Estates for Individuals.

OMB Number: 1545–1375.

Regulation Project Number: T.D. 8537.

Abstract: These regulations relate to the application of carryover of passive activity losses and credits and at risk losses to the bankruptcy estates of individuals. The final regulations affect individual taxpayers who file bankruptcy petitions under chapter 7 or chapter 11 of title 11 of the United States Code and have passive activity losses and credits under section 469 or losses under section 465.

Current Actions: There are no changes being made to this existing regulation or to the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 500.

Estimated Time per Respondent: 12 Minutes.

Estimated Total Annual Burden Hours: 100.

26. Title: Adjustments to Basis of Stock and Indebtedness to Shareholders of S Corporations and Treatment of Distributions by S Corporations to Shareholders.

OMB Number: 1545–1139.

Regulation Project Number: TD 9300 and TD 9428.

Abstract: This document contains final regulations relating to the passthrough of items of an S corporation to its shareholders, the adjustments to the basis of stock of the shareholders, and the treatment of distributions by an S corporation. Changes to the applicable law were made by the Subchapter S Revision Act of 1982, the Tax Reform Act of 1984, the Tax Reform Act of 1986, the Technical and Miscellaneous Revenue Act of 1988, and the Small Business Job Protection Act of 1996. These regulations provide the public with guidance needed to comply with the applicable law and will affect S corporations and their shareholders.

Current Actions: There are no changes being made to this existing regulation or to the paperwork burden previously approved by OMB.

Type of Review: Extension of currently approved collection.

Affected Public: Business or other for-profit organizations and individuals.

Estimated Number of Responses: 2,000.

Estimated Time per Respondent: 6 minutes.

Estimated Total Annual Burden Hours: 200.

27. Title: Salary Reduction Simplified Employee Pension—Individual Retirement Accounts Contribution Agreement.

OMB Number: 1545–1012.

Document Number: 5305A SEP.

Abstract: Form 5305A–SEP is used by an employer to make an agreement to provide benefits to all employees under a Simplified Employee Pension (SEP) described in Internal Revenue Code section 408(k). This form is not to be filed with the IRS, but is to be retained in the employer's records as proof of establishing a SEP and justifying a deduction for contributions made to the SEP.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Business and other for-profit organizations.

Estimated Number of Respondents: 100,000.

Estimated Time per Respondent: 9 hrs., 43 min.

Estimated Total Annual Burden Hours: 972,000.

28. Title: PTIN Supplemental Application for U.S. Citizens Without A Social Security Number Due to Conscientious Religious Objection.

OMB Number: 1545–2188.

Form Number: 8945.

Abstract: Form 8945 is used by U.S. citizens who are members of certain recognized religious groups that want to prepare tax returns for compensation. Most individuals applying for a Preparer Tax Identification Number (PTIN) will have a social security number, which will be used to help establish their identity. However, there exists a population of U.S. residents that are religious objectors and do not have social security numbers. Form 8945 was created to assist that population in establishing their identity while applying for a PTIN.

Current Actions: There is no change in the paperwork burden previously approved by OMB. This form is being submitted for renewal purposes.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profit organizations.

Estimated Number of Respondents: 500.

Estimated Time per Respondent: 7 hours, 11 min.

Estimated Total Annual Burden Hours: 3,590.

29. Title: Diesel Fuel and Kerosene Excise Tax; Dye Injection.

OMB Number: 1545–1418.

Regulation Project Number: TD 9199.

Abstract: This document contains regulations relating to the diesel fuel and kerosene excise tax. These regulations reflect changes made by the American Jobs Creation Act of 2004 regarding mechanical dye injection systems for diesel fuel and kerosene. These regulations affect certain enterers, refiners, terminal operators, and through putters.

Current Actions: There are no changes to the burden previously approved by OMB. This request is to extend the current approval for another 3 years.

Type of Review: Extension of a currently approved collection.

Affected Public: Business and other for-profit organizations.

Estimated Number of Respondents: 1.

Estimated Time per Respondent: 1 hr.

Estimated Total Annual Burden Hours: 1.

30. Title: Acquisition or Abandonment of Secured Property.

OMB Number: 1545–0877.

Form Number: 1099–A.

Abstract: This form is used by persons who lend money in connection with a trade or business, and who acquire an interest in the property that is security for the loan or who have reason to know that the property has been abandoned, to report the acquisition or abandonment.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Responses: 466,000.

Estimated Time per Response: 10 minutes.

Estimated Total Annual Burden Hours: 74,560.

31. Title: Sales of Business Property.

OMB Number: 1545–0184.

Form Number: Form 4797.

Abstract: Form 4797 is used by taxpayers to report sales, exchanges, or involuntary conversions of assets used in a trade or business. It is also used to compute ordinary income from recapture and the recapture of prior year losses under section 1231 of the Internal Revenue Code.

Current Actions: There are no changes being made to the form at this time. The forms are being submitted for renewal purposes only.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households, and farms.

Estimated Number of Respondents: 211,536.

Estimated Time per Response: 51 hours, 7 minutes.

Estimated Total Annual Burden Hours: 10,813,730.

32. Title: Information Regarding Beneficiaries Acquiring Property From a Decedent.

OMB Number: 1545–2264.

Form Number: 8971.

Abstract: The Surface Transportation and Veterans Health Care Choice Improvement Act of 2015 requires executors of an estate and other persons who are required to file a Form 706, Form 706–NA, or Form 706–A, to report to the Internal Revenue Service (IRS) and to each beneficiary receiving property from an estate tax value of the property, if the return is filed after July 31, 2015. Form 8971 is used to report to the IRS and a Schedule A will be sent to each beneficiary and a copy of each Schedule A will be attached to the Form 8971. Some property received by a beneficiary may have a consistency requirement, meaning that the beneficiary must use the value reported on the Schedule A as the beneficiary's initial basis of the property. A beneficiary is an individual, trust, or other estate who has acquired (or is expected to acquire) property from the estate. If the executor is also a beneficiary who has acquired (or is expected to acquire) property from the estate, the executor is a beneficiary for purposes of the Form 8971 and the attached Schedule A.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals, business or other for-profit organization, and not-for-profit institutions.

Estimated Number of Responses: 10,000.

Estimated Time per Response: 20 hours.

Estimated Total Annual Burden Hours: 200,000.

33. Title: ABLE Account Contribution Information; Distributions from ABLE Accounts.

OMB Number: 1545–2262.

Form Numbers: 5498–QA; 1099–QA.

Abstract: Form 5498–QA, ABLE Account Contributions Information. Public Law 113–295, ABLE Act of 2014 allows individuals and families to set money aside in this special account for the purpose of supporting individuals with disabilities to maintain health, independence, and quality of life, without impacting eligibility for other social service financial assistance programs such as Medicaid. Form 1099–QA allows these individuals and families to draw from the special account.

Current Actions: There are no changes being made to the forms at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Responses: 20,000.

Estimated Time per Respondent: 22 minutes.

Estimated Total Annual Burden Hours: 3,600.

34. Title: Mortgage Credit Certificates (MCCs).

OMB Number: 1545–0922.

Regulation Project Number: Form 8329 and Form 8330.

Abstract: Mortgage Credit Certificates provide qualified holders of the certificates with a credit against income tax liability. In general, an Issuer elects to establish a mortgage credit certificate program in lieu of issuing qualified mortgage revenue bonds. Section 25 of the Code permits states and political subdivisions to elect to issue Mortgage Credit Certificates in lieu of qualified mortgage revenue bonds. Form 8329 is used by lending institutions and Form 8330 is used by state and local governments to provide the IRS with information on the issuance of mortgage credit certificates (MCCs) authorized under Internal Revenue Code section 25. IRS matches the information supplied by lenders and issuers to ensure that the credit is computed properly.

Current Actions: There is no change to the burden previously approved.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: Form 8329—10,000; Form 8330—2,000.

Estimated Time per Respondent: Form 8329—5 hrs. 53 min.; Form 8330—7 hrs. 28 min.

Estimated Total Annual Burden Hours: Form 8329—58,800; Form 8330—14,920.

35. Title: Passive Activity Loss Limitations.

OMB Number: 1545–1008.

Form Number: 8582.

Abstract: Internal Revenue Code section 469 limits the passive activity losses that a taxpayer may deduct. The passive activity losses from passive activities, to the extent that they exceed income from passive activities, cannot be deducted against nonpassive income. Form 8582 is used to figure the passive activity loss allowed and the actual loss to be reported on the tax returns.

Current Actions: There is no change to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, estates, and trusts.

Estimated Number of Respondents: 400,000.

Estimated Time per Respondent: 3 hours, 12 minutes.

Estimated Total Annual Burden Hours: 1,280,000.

36. Title: Payments from Qualified Education Programs (Under Sections 529 and 530).

OMB Number: 1545–1760.

Form Number: Form 1099–Q.

Abstract: Form 1099–Q is used to report distributions from private and state qualified tuition programs as required under Internal Revenue Code sections 529 and 530.

Current Actions: There are no changes to the burden previously approved by OMB. This submission is for renewal purposes.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Responses: 3,649,000.

Estimated Time per Respondent: 13 minutes.

Estimated Total Annual Burden Hours: 802,780.

37. Title: Optional Election to Make Monthly 706(a) Computations.

OMB Number: 1545–1768.

Revenue Procedure Number: 2003–84.

Abstract: This procedure allows certain partnerships that invest in tax-exempt obligations to make an election that enables the partners to take into account monthly the inclusions required under sections 702 and 707(c) of the Code and provides rules for partnership income tax reporting under section 6031 for such partnerships. Rev. Proc. 2002–68 modified and superseded.

Current Actions: There are no changes being made to the revenue procedure at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 1,000.

Estimated Time per Respondent: 30 mins.

Estimated Total Annual Burden Hours: 500.

38. Title: Excise Tax on Certain Transfers of Qualifying Geothermal or Mineral Interests.

OMB Number: 1545–2099.

Form Number: 8924.

Abstract: This form is required by Section 403 of the Tax Relief and Health Care Act of 2006 which imposes an excise tax on certain transfers of qualifying mineral or geothermal interests.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations.

Estimated Number of Respondents: 20.

Estimated Time per Respondent: 5 hours, 32 minutes.

Estimated Total Annual Burden Hours: 111.

Authority: 44 U.S.C. 3501 *et seq.*

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

Solicitation of Nomination for Appointment to the Advisory Committee on Women Veterans

ACTION: Notice.

SUMMARY: The Department of Veterans Affairs (VA) is seeking nominations of qualified candidates to be considered for membership on the Advisory Committee on Women Veterans (''the Committee'') for the 2024 membership cycle.

DATES: Nominations for membership on the Committee must be received by August 12, 2024, no later than 4:00 p.m., eastern standard time. Packages received after this time will not be considered for the current membership cycle.

ADDRESSES: All nomination packages should be sent to the Advisory Committee Management Office at *vaadvisorycmte@va.gov* with subject line: Nomination to Women Veterans.

FOR FURTHER INFORMATION CONTACT: Shannon Middleton, Assistant Designated Federal Officer, Center for Women Veterans, Department of Veterans Affairs, 810 Vermont Avenue NW, (00W), Washington, DC 20420, telephone 202–461–6194.

SUPPLEMENTARY INFORMATION: In carrying out the duties set forth, the Committee provides a Congressionally-mandated report to the Secretary each year, which includes:

(1) An assessment of the needs of women Veterans with respect to compensation, health care, rehabilitation, outreach, and other benefits and programs administered by VA;

(2) A review of the programs and activities of VA designed to meet such needs;

(3) An assessment of the effects of intimate partner violence on women Veterans; and

(4) Recommendations (including recommendations for administrative and legislative action) as the Committee considers appropriate. The Committee reports to the Secretary, through the Director of the Center for Women Veterans.

Authority: The Committee is authorized by 38 U.S.C. 542, to provide advice to the Secretary of Veterans Affairs (Secretary) on: the administration of VA's benefits and services (health care, rehabilitation benefits, compensation, outreach, and other relevant programs) for women Veterans; reports and studies pertaining to women Veterans; and the needs of women Veterans. In accordance with the statute and the Committee's current charter, the majority of the membership shall consist of non-Federal employees appointed by the Secretary from the general public, serving as special government employees.

The Secretary appoints Committee members and determines the length of terms in which Committee members serve. A term of service for any member may not exceed three (3) years. However, the Secretary can reappoint members for additional terms. Each year, there are several vacancies on the Committee, as members' terms expire.

Membership Criteria: The Committee is currently comprised of 12 members. By statute, the Committee consists of members appointed by the Secretary from the general public, including: representatives of women Veterans; individuals who are recognized authorities in fields pertinent to the needs of women Veterans, including the gender specific health-care needs of women Veterans; representatives of both female and male Veterans with service-connected disabilities, including at least one female Veteran with a service-connected disability and at least one male Veteran with a service-connected disability; and women Veterans who are recently separated from service in the Armed Forces. Non-Veterans are also eligible for nomination.

The Committee meets at least two times annually, which may include a site visit to a VA field location. In accordance with Federal travel regulation, VA will cover travel expenses—to include per diem—for all members of the Committee, for any travel associated with official Committee duties. A copy of the Committee's most recent charter and a list of the current membership can be found at *www.va.gov/ADVISORY/* or *www.va.gov/womenvet/*.

In accordance with revised guidance regarding the ban on lobbyists serving as members of advisory boards and commissions, Federally-registered lobbyists are prohibited from serving on Federal advisory committees in an individual capacity. Additional information regarding this issue can be found at *www.federalregister.gov/articles/2014/08/13/2014-19140/revised-guidance-on-appointment-of-lobbyists-to-federal-advisory-committees-boards-and-commissions*.

Requirements for Nomination Submission: Nomination packages must be typed (12-point font) and include: (1) a cover letter from the nominee and (2) a current resume that is no more than four pages in length. The cover letter must summarize: the nominee's interest in serving on the Committee and contributions she/he can make to the Committee's work; any relevant Veterans' service activities she/he is currently engaged in; and the military branch affiliation and timeframe of military service (if applicable). To promote inclusion and demographic balance of membership, please include as much information related to your race, national origin, disability status,

minority Veteran status, or any other factors that may give you a diverse perspective on women Veterans matters. Finally, the cover letter *must* include the nominee's complete contact information (name, address, email address and phone number); and a statement confirming that she/he is not a Federally-registered lobbyist. The resume should show professional and/or work experience and Veterans' service involvement—especially service that involves women Veterans' issues.

Self-nominations are acceptable. Any letters of nomination from organizations or other individuals *must* accompany the package when it is submitted. Letters of nomination submitted without a complete nomination package *will not* be considered. If you are submitting a package on behalf of an individual, it *must* include all of the required components and complete contact information. Do not submit a package without the nominee's consent or awareness.

The Department makes every effort to ensure that the membership of its advisory committees is fairly balanced, in terms of points of view represented. In the review process, consideration is given to nominees' potential to address the Committee's demographic needs (regional representation, race/ethnicity/minority representation, professional expertise, war era service, gender, former enlisted or officer status, branch of service, for example). Other considerations to promote a balanced membership include longevity of military service, significant deployment experience, ability to handle complex issues, experience running large organizations and ability to contribute to the gender-specific health care and benefits needs of women Veterans.

Dated: July 25, 2024.

Jelessa M. Burney,

Federal Advisory Committee Management Officer.

BILLING CODE 8320–01–P

DEPARTMENT OF VETERANS AFFAIRS

Research Advisory Committee on Gulf War Veterans' Illnesses, Notice of Meeting

The Department of Veterans Affairs (VA) gives notice under the Federal Advisory Committee Act, 5 U.S.C. ch. 10., that the Research Advisory Committee on Gulf War Veterans' Illnesses will meet at The Benson Hotel & Faculty Club, 13025 E Montview Blvd., Aurora, CO 80045 in the Ballroom. The meeting sessions will begin and end as follows:

Dates	Times
August 20, 2024	11:00 a.m. to 5:00 p.m. Eastern Time (ET).
August 21, 2024	11:00 a.m. to 2:00 p.m. (ET).

All sessions will be open to the public. For interested parties who cannot attend in person, this meeting will also be available by videoconference by connecting to Webex at the following URLs:

August 20, 2024, 11:00 a.m. to 5:00 p.m. (ET): *https://veteransaffairs.webex.com/veteransaffairs/j.php?MTID=mf8041252f79288e6e3dae062aa7d856c* or join by phone: 1–833–558–0712 Toll-free; meeting number (access code): 2828 129 4501. Meeting password: GWVET1991!

August 21, 2024, 11:00 a.m. to 2:00 p.m. (ET): *https://veteransaffairs.webex.com/veteransaffairs/j.php?MTID=m6a2eeeff9e182753391e8f5dbc0a3571* or join by phone: 1–833–558–0712 Toll-free; meeting number (access code): 2824 038 6205. Meeting password: GWVETS1991!

The purpose of the Committee is to provide advice and make recommendations to the Secretary of Veterans Affairs on proposed research studies, research plans, and research strategies relating to the health consequences of military service in the Southwest Asia theater of operations during the Gulf War in 1990–91.

The Committee will review VA program activities related to Gulf War Veterans' illnesses and updates on relevant scientific research published since the last Committee meeting. This meeting will focus in part on (1) diversity, equity, inclusion, and women's health research, (2) research project updates, (3) updates on committee membership and recommendations, and (4) a report from the Veteran Engagement Subcommittee.

The meeting will include time reserved for public comments before the meeting closes each day. Individuals wishing to make public comments should contact *VARACGWVI@va.gov.* Public comment speakers are requested to submit a 1–2-page summary of their comments for inclusion in the official meeting record. Written comments will also be accepted for the record. Members of the public who have confirmed public speaker registrations will be allowed to provide public comment first followed by non-registered speakers time permitting. Each public comment speaker will be held to a 5-minute time limit. Individuals wishing to seek additional information should contact Dr. Karen Block, Designated Federal Officer, at *Karen.Block@va.gov.*

Dated: July 26, 2024.

RIN 0938–AV33

Medicare and Medicaid Programs; CY 2025 Payment Policies Under the Physician Fee Schedule and Other Changes to Part B Payment and Coverage Policies; Medicare Shared Savings Program Requirements; Medicare Prescription Drug Inflation Rebate Program; and Medicare Overpayments

AGENCY: Centers for Medicare & Medicaid Services (CMS), Health and Human Services (HHS).

ACTION: Proposed rule.

SUMMARY: This major proposed rule addresses: changes to the physician fee schedule (PFS); other changes to Medicare Part B payment policies to ensure that payment systems are updated to reflect changes in medical practice, relative value of services, and changes in the statute; codification of, and proposing policies for, the Medicare Prescription Drug Inflation Rebate Program under the Inflation Reduction Act of 2022; updates to the Medicare Diabetes Prevention Program expanded model; payment for dental services inextricably linked to specific covered medical services; updates to drugs and biological products paid under Part B including immunosuppressive drugs and clotting factors; Medicare Shared Savings Program requirements; updates to the Quality Payment Program; Medicare coverage of opioid use disorder services furnished by opioid treatment programs; updates to policies for Rural Health Clinics and Federally Qualified Health Centers; electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or a Medicare Advantage Prescription Drug (MA–PD) plan under the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act); update to the Ambulance Fee Schedule regulations; codification of the Inflation Reduction Act and Consolidated Appropriations Act, 2023 provisions; updates to Clinical Laboratory Fee Schedule regulations; updates to the diabetes payment structure and PHE flexibilities; expansion of colorectal cancer screening and Hepatitis B vaccine coverage and payment; establishing payment for drugs covered as additional preventive services; Medicare Parts A and B Overpayment Provisions of the Affordable Care Act.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 9, 2024.

ADDRESSES: In commenting, please refer to file code CMS–1807–P.

Comments, including mass comment submissions, must be submitted in one of the following three ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to *https://www.regulations.gov.* Follow the ''Submit a comment'' instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1807–P, P.O. Box 8016, Baltimore, MD 21244–8016.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY:

Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS–1807–P, Mail Stop C4–26–05, 7500 Security Boulevard, Baltimore, MD 21244–1850.

FOR FURTHER INFORMATION CONTACT:

MedicarePhysicianFeeSchedule@cms.hhs.gov, for any issues not identified below. Please indicate the specific issue in the subject line of the email.

Michael Soracoe, (410) 786–6312, Morgan Kitzmiller, (410) 786–1623, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to practice expense, work RVUs, conversion factor, and PFS specialty-specific impacts.

Kris Corwin, (410) 786–8864, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to strategies for updates to practice expense data collection and methodology.

Hannah Ahn, (814) 769–0143, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to potentially misvalued services under the PFS.

Kris Corwin, (410) 786–8864, Patrick Sartini, (410) 786–9252, Mikayla Murphy, (667) 414–0093, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to direct supervision using two-way audio/video communication technology, telehealth, and other services involving communications technology.

Tamika Brock, (312) 886–7904, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to teaching physician billing for services involving residents in teaching settings.

Sarah Leipnik, (410) 786–3933, Mikayla Murphy, (667) 414–0093, Regina Walker-Wren, (410) 786–9160, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to payment for caregiver training services and addressing health-related social needs (community health integration, principal illness navigation, and social determinants of health risk assessment).

Erick Carrera, (410) 786–8949, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to office/outpatient evaluation and management visit inherent complexity add-one.

Sarah Irie, (410) 786–1348, Emily Parris (667) 414–0418, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to payment for advanced primary care management service.

Sarah Leipnik, (410) 786–3933, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to global surgery payment accuracy.

Pamela West, (410) 786–2302, for issues related to supervision of outpatient therapy services in private practices, certification of therapy plans of care, and KX modifier threshold.

Lindsey Baldwin, (410) 786–1694, Regina Walker-Wren, (410) 786–9160, Erick Carrera, (410) 786–8949, Mikayla Murphy, (667) 414–0093, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to advancing access to behavioral health services.

Laura Ashbaugh, (410) 786–1113, and Erick Carrera, (410) 786–8949, Zehra Hussain, (214) 767–4463, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to dental services inextricably linked to specific covered medical services.

Zehra Hussain, (214) 767–4463, or *MedicarePhysicianFeeSchedule@cms.hhs.gov,* for issues related to payment of skin substitutes.

Laura Kennedy, (410) 786–3377, Adam Brooks, (202) 205–0671, Rachel Radzyner, (410) 786–8215, Rebecca Ray, (667) 414–0879, and Jae Ryu, (667) 414–0765 for issues related to Drugs and Biological Products Paid Under Medicare Part B.

MedicarePhysicianFeeSchedule@cms.hhs.gov, for issues related to complex drug administration.

Glenn McGuirk, (410) 786–5723, or *CLFS_Inquiries@cms.hhs.gov* for issues related to Clinical Laboratory Fee Schedule.

Lisa Parker, (410) 786–4949, or *FQHC–PPS@cms.hhs.gov,* for issues related to FQHC payments.

Heidi Oumarou, (410) 786–7942, for issues related to the FQHC market basket.

Michele Franklin, (410) 786–9226, or *RHC@cms.hhs.gov,* for issues related to RHC payments.

Kianna Banks (410) 786–3498 and Cara Meyer (667) 290–9856, for issues related to RHCs and FQHCs and Conditions for Certification or Coverage.

Colleen Barbero (667) 290–8794, for issues related to Medicare Diabetes Prevention Program.

Ariana Pitcher, (667) 290–8840, or *OTP_Medicare@cms.hhs.gov,* for issues related to Medicare coverage of opioid use disorder treatment services furnished by opioid treatment programs.

Sabrina Ahmed, (410) 786–7499, or *SharedSavingsProgram@cms.hhs.gov,* for issues related to the Medicare Shared Savings Program (Shared Savings Program) Quality performance standard and quality reporting requirements.

Janae James, (410) 786–0801, or *SharedSavingsProgram@cms.hhs.gov,* for issues related to Shared Savings Program beneficiary assignment and benchmarking methodology.

Richard (Chase) Kendall, (410) 786–1000, or *SharedSavingsProgram@cms.hhs.gov,* for issues related to reopening ACO payment determinations, and mitigating the impact of significant, anomalous, and highly suspect billing activity on Shared Savings Program financial calculations.

Lucy Bertocci, (410) 786–3776, or *SharedSavingsProgram@cms.hhs.gov,* for issues related to Shared Savings Program prepaid shared savings, advance investment payments, beneficiary notice and eligibility requirements.

Rachel Radzyner, (410) 786–8215, for issues related to payment for preventative services, including preventive vaccine administration and drugs covered as additional preventive services.

Elisabeth Daniel, (667) 290–8793, for issues related to the Medicare Prescription Drug Inflation Rebate Program.

Genevieve Kehoe, *Ambulatoryspecialtycare@cms.hhs.gov,* or 1–844–711–2664 (Option 4) for issues related to the Request for Information: Building upon the MIPS Value Pathways (MVPs) Framework to Improve Ambulatory Specialty Care.

Kimberly Long, (410) 786–5702, for issues related to expanding colorectal cancer screening.

Rachel Katonak, (410) 786–8564, for issues related to expanding Hepatitis B vaccine coverage.

Mei Zhang, (410) 786–7837, for issues related to requirement for electronic prescribing for controlled substances for a covered Part D drug under a prescription drug plan or an MA–PD plan (section 2003 of the SUPPORT Act).

Katie Parker, (410) 786–0537, for issues related to Parts A and B overpayment provisions of the Affordable Care Act.

Amy Gruber, (410) 786–1542, for issues related to low titer O+ whole blood transfusion therapy during ground ambulance transport.

Renee O'Neill, (410) 786–8821, or Sophia Sugumar, (410) 786–1648, for inquiries related to Merit-based Incentive Payment System (MIPS) track of the Quality Payment Program.

Danielle Drayer, (516) 965–6630, for inquiries related to Alternative Payment Models (APMs).

SUPPLEMENTARY INFORMATION:

Addenda Available Only Through the Internet on the CMS website: The PFS Addenda along with other supporting documents and tables referenced in this proposed rule are available on the CMS website at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html.* Click on the link on the left side of the screen titled, ''PFS Federal Regulations Notices'' for a chronological list of PFS **Federal Register** and other related documents. For the CY 2025 PFS proposed rule, refer to item CMS–1807–P. Readers with questions related to accessing any of the Addenda or other supporting documents referenced in this proposed rule and posted on the CMS website identified above should contact *MedicarePhysicianFeeSchedule@cms.hhs.gov.*

I. Executive Summary

A. Purpose

This major annual rule proposes to revise payment policies under the Medicare PFS and makes other policy changes, including proposals to implement certain provisions of the Further Continuing Appropriations and Other Extensions Act of 2024 (Pub. L. 118–22, November 16, 2023), Consolidated Appropriations Act, 2023 (Pub. L. 117–328, September 29, 2022), Inflation Reduction Act of 2022 (IRA) (Pub. L. 117–169, August 16, 2022), Consolidated Appropriations Act, 2022 (Pub. L. 117–103, March 15, 2022), Consolidated Appropriations Act, 2021 (CAA, 2021) (Pub. L. 116–260, December 27, 2020), Bipartisan Budget Act of 2018 (BBA of 2018) (Pub. L. 115–123, February 9, 2018) and the Substance Use-Disorder Prevention that Promotes Opioid Recovery and Treatment for Patients and Communities Act (SUPPORT Act) (Pub. L. 115–271, October 24, 2018), related to Medicare Part B payment. In addition, this major proposed rule includes proposals regarding other Medicare payment policies described in sections III. and IV.

This rulemaking also proposes to codify policies previously established in guidance for the Medicare Prescription Drug Inflation Rebate Program at new parts 427 and 428, including clarifications to certain existing policies, consistent with sections 1847A(i) and 1860D–14B of the Act. This rulemaking also proposes new policies for the Medicare Prescription Drug Inflation Rebate Program, including removal of units of drugs subject to discarded drug refunds from the Part B rebate amounts, exclusion of units for which a manufacturer provides a discount under the 340B Program from the Part D inflation rebate amount starting on January 1, 2026, the process for reconciliation of a Part B or Part D rebate amount to incorporate certain revised information, and procedures for imposing civil money penalties on manufacturers that do not pay Part B or Part D inflation rebate amounts within a specified period of time.

This rulemaking proposes to update the Rural Health Clinic (RHC) and Federally Qualified Health Clinic (FQHC) Conditions for Certification and Conditions for Coverage (CfCs), respectively, by clarifying the requirements and intent of the program regarding the provision of services. We also aim to ensure RHCs are provided flexibility in the services they offer, including specialty and laboratory services.

This rulemaking also proposes to further advance Medicare's overall value-based care strategy of growth, alignment, and equity through the Medicare Shared Savings Program (Shared Savings Program) and the Quality Payment Program. The structure of the programs enables us to develop a set of tools for measuring and encouraging improvements in care, which may support a shift to clinician payment over time into Advanced Alternative Payment Models (APMs) and accountable care arrangements which reduce care fragmentation and unnecessary costs for patients and the health system.

This rulemaking also proposes changes to Medicare regulations regarding requirements for reporting and returning Parts A and B overpayments.

B. Summary of the Major Provisions

Please note, some sections of this proposed rule contain a request for information (RFI). In accordance with the implementing regulations of the Paperwork Reduction Act of 1995 (PRA), specifically 5 CFR 1320.3(h)(4), these general solicitations are exempt from the PRA. Facts or opinions submitted in response to general solicitations of comments from the public, published in the **Federal Register** or other publications, regardless of the form or format thereof, provided that no person is required to supply specific information pertaining to the commenter, other than that necessary for self-identification, as a condition of the agency's full consideration, are not generally considered information collections and therefore not subject to the PRA. Respondents are encouraged to provide complete but concise responses. These RFIs are issued solely for information and planning purposes; they do not constitute a Request for Proposal (RFP), applications, proposal abstracts, or quotations. These RFIs do not commit the U.S. Government to contract for any supplies or services or make a grant award. Further, CMS is not seeking proposals through these RFIs and will not accept unsolicited proposals. Responders are advised that the U.S. Government will not pay for any information or administrative costs incurred in response to these RFIs; all costs associated with responding to these RFIs will be solely at the interested party's expense. Not responding to these RFIs does not preclude participation in any future procurement, if conducted. It is the responsibility of the potential responders to monitor these RFI announcements for additional information pertaining to these requests. Please note that CMS will not respond to questions about the policy issues raised in these RFIs. CMS may or may not choose to contact individual responders. Such communications would only serve to further clarify written responses. Contractor support personnel may be used to review RFI responses. Responses to this notice are not offers and cannot be accepted by the U.S. Government to form a binding contract or issue a grant. Information obtained as a result of these RFIs may be used by the U.S. Government for program planning on a non-attribution basis. Respondents should not include any information that might be considered proprietary or confidential. These RFIs should not be construed as a commitment or authorization to incur cost for which reimbursement would be required or sought. All submissions become U.S. Government property and will not be returned. CMS may publicly post the comments received, or a summary thereof.

Section 1848 of the Social Security Act (the Act) requires us to establish payments under the PFS, based on national uniform relative value units (RVUs) that account for the relative resources used in furnishing a service. The statute requires that RVUs be established for three categories of resources: work, practice expense (PE), and malpractice (MP) expense. In addition, the statute requires that each year we establish, by regulation, the payment amounts for physicians' services paid under the PFS, including geographic adjustments to reflect the variations in the costs of furnishing services in different geographic areas.

In this major proposed rule, we are proposing to establish RVUs for CY 2025 for the PFS to ensure that our payment systems are updated to reflect changes in medical practice and the relative value of services, as well as changes in the statute. This proposed rule also includes discussions and provisions regarding several other Medicare Part B payment policies, Medicare and Medicaid provider and supplier enrollment policies, and other policies regarding programs administered by CMS.

Specifically, this proposed rule addresses:

- Background (section II.A.)
- Determination of PE RVUs (section II.B.)
- Potentially Misvalued Services Under the PFS (section II.C.)
- Payment for Medicare Telehealth Services Under Section 1834(m) of the Act (section II.D.)
- Valuation of Specific Codes (section II.E.)
- Evaluation and Management (E/M) Visits (section II.F.)
- Enhanced Care Management (section II.G.)
- Supervision of Outpatient Therapy Services in Private Practices, Certification of Therapy Plans of Care with a Physician or NPP Order, and KX Modifier Thresholds (section II.H.)
- Advancing Access to Behavioral Health Services (section II.I.)
- Proposals on Medicare Parts A and B Payment for Dental Services Inextricably Linked to Specific Covered Services (section II.J.)
- Payment for Skin Substitutes (section II.K.)
- Drugs and Biological Products Paid Under Medicare Part B (section III.A.)
- Rural Health Clinics (RHCs) and Federally Qualified Health Centers (FQHCs) (section III.B.)
- Rural Health Clinic (RHC) and Federally Qualified Health Center (FQHC) Conditions for Certification and Conditions for Coverage (CfCs) (section III.C.)
- Clinical Laboratory Fee Schedule: Revised Data Reporting Period and Phase-in of Payment Reductions (section III.D.)
- Medicare Diabetes Prevention Program (MDPP) (section III.E.)
- Modifications Related to Medicare Coverage for Opioid Use Disorder (OUD) Treatment Services Furnished by Opioid Treatment Programs (OTPs) (section III.F.)
- Medicare Shared Savings Program (section III.G.)
- Medicare Part B Payment for Preventive Services (§§ 410.10, 410.57, 410.64, 410.152) (section III.H.)
- Medicare Prescription Drug Inflation Rebate Program (section III.I.)
- Request for Information: Building upon the MIPS Value Pathways (MVPs) Framework to Improve Ambulatory Specialty Care (section III.J.)
- Expand Colorectal Cancer Screening (section III.K.)
- Requirements for Electronic Prescribing for Controlled Substances for a Covered Part D Drug under a Prescription Drug Plan or an MA–PD Plan (section III.L.)
- Expand Hepatitis B Vaccine Coverage (section III.M.)
- Low Titer O+ Whole Blood Transfusion Therapy During Ground Ambulance Transport (section III.N.)
- Medicare Parts A and B Overpayment Provisions of the Affordable Care Act (section III.O.)
- Updates to the Quality Payment Program (section IV.)

- Collection of Information Requirements (section V.)
- Response to Comments (section VI.)
- Regulatory Impact Analysis (section VII.)

C. Summary of Costs and Benefits

We have determined that this proposed rule is economically significant. We estimate the CY 2025 PFS conversion factor to be 32.3562 which reflects a 0.05 percent positive budget neutrality adjustment required under section 1848(c)(2)(B)(ii)(II) of the Act, the 0.00 percent update adjustment factor specified under section 1848(d)(19) of the Act, and the removal of the temporary 2.93 percent payment increase for services furnished from March 9, 2024, through December 31, 2024, as provided in the CAA, 2024. For a detailed discussion of the economic impacts, see section VII., Regulatory Impact Analysis, of this proposed rule.

II. Provisions of the Proposed Rule for the PFS

A. Background

In accordance with section 1848 of the Social Security Act (the Act), CMS has paid for physicians' services under the Medicare physician fee schedule (PFS) since January 1, 1992. The PFS relies on national relative values that are established for work, practice expense (PE), and malpractice (MP), which are adjusted for geographic cost variations. These values are multiplied by a conversion factor (CF) to convert the relative value units (RVUs) into payment rates. The concepts and methodology underlying the PFS were enacted as part of the Omnibus Budget Reconciliation Act of 1989 (OBRA '89) (Pub. L. 101–239, December 19, 1989), and the Omnibus Budget Reconciliation Act of 1990 (OBRA '90) (Pub. L. 101–508, November 5, 1990). The final rule published in the November 25, 1991 **Federal Register** (56 FR 59502) set forth the first fee schedule used for Medicare payment for physicians' services.

We note that throughout this proposed rule, unless otherwise noted, the term ''practitioner'' is used to describe both physicians and nonphysician practitioners (NPPs) who are permitted to bill Medicare under the PFS for the services they furnish to Medicare beneficiaries.

B. Determination of PE RVUs

1. Overview

Practice expense (PE) is the portion of the resources used in furnishing a service that reflects the general categories of physician and practitioner expenses, such as office rent and personnel wages, but excluding malpractice (MP) expenses, as specified in section 1848(c)(1)(B) of the Act. As required by section 1848(c)(2)(C)(ii) of the Act, we use a resource-based system for determining PE RVUs for each physicians' service. We develop PE RVUs by considering the direct and indirect practice resources involved in furnishing each service. Direct expense categories include clinical labor, medical supplies, and medical equipment. Indirect expenses include administrative labor, office expense, and all other expenses. The sections that follow provide more detailed information about the methodology for translating the resources involved in furnishing each service into service specific PE RVUs. We refer readers to the CY 2010 Physician Fee Schedule (PFS) final rule with comment period (74 FR 61743 through 61748) for a more detailed explanation of the PE methodology.

2. Practice Expense Methodology

a. Direct Practice Expense

We determine the direct PE for a specific service by adding the costs of the direct resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing that service. The costs of the resources are calculated using the refined direct PE inputs assigned to each CPT code in our PE database, which are generally based on our review of recommendations received from the American Medical Association (AMA) Relative Value Scale Update Committee (RUC) and those provided in response to public comment periods. For a detailed explanation of the direct PE methodology, including examples, we refer readers to the 5-year review of work RVUs under the PFS and proposed changes to the PE methodology in the CY 2007 PFS proposed rule (71 FR 37242) and the CY 2007 PFS final rule with comment period (71 FR 69629).

b. Indirect Practice Expense Per Hour Data

We use survey data on indirect PEs incurred per hour worked to develop the indirect portion of the PE RVUs. Prior to CY 2010, we primarily used the PE/HR by specialty obtained from the AMA's Socioeconomic Monitoring System (SMS). The AMA administered a new survey in CY 2007 and CY 2008, the Physician Practice Information Survey (PPIS). The PPIS is a multispecialty, nationally representative, PE survey of physicians and NPPs paid under the PFS using a survey instrument and methods highly consistent with those used for the SMS and the supplemental surveys. The PPIS gathered information from 3,656 respondents across 51 physician specialty and health care professional groups. We believe the PPIS is the most comprehensive source of PE survey information available. We used the PPIS data to update the PE/HR data for the CY 2010 PFS for almost all of the Medicare-recognized specialties that participated in the survey.

When we began using the PPIS data in CY 2010, we did not change the PE RVU methodology or how the PE/HR data are used. We only updated the PE/HR data based on the new survey. Furthermore, as we explained in the CY 2010 PFS final rule with comment period (74 FR 61751), because of the magnitude of payment reductions for some specialties resulting from the use of the PPIS data, we transitioned its use over a 4-year period from the previous PE RVUs to the PE RVUs developed using the new PPIS data. As provided in the CY 2010 PFS final rule with comment period (74 FR 61751), the transition to the PPIS data was complete for CY 2013. Therefore, PE RVUs from CY 2013 forward are developed based entirely on the PPIS data, except as noted in this section.

Section 1848(c)(2)(H)(i) of the Act requires us to use the medical oncology supplemental survey data submitted in 2003 for oncology drug administration services. Therefore, the PE/HR for medical oncology, hematology, and hematology/oncology reflects the continued use of these supplemental survey data.

Supplemental survey data on independent labs from the College of American Pathologists were implemented for payments beginning in CY 2005. Supplemental survey data from the National Coalition of Quality Diagnostic Imaging Services (NCQDIS), representing independent diagnostic testing facilities (IDTFs), were blended with supplementary survey data from the American College of Radiology (ACR) and implemented for payments beginning in CY 2007. Neither IDTFs nor independent labs participated in the PPIS. Therefore, we continue to use the PE/HR that was developed from their supplemental survey data.

Consistent with our past practice, the previous indirect PE/HR values from the supplemental surveys for these specialties were updated to CY 2006 using the Medicare Economic Index (MEI) to put them on a comparable basis with the PPIS data.

We also do not use the PPIS data for reproductive endocrinology and spine surgery since these specialties are not

separately recognized by Medicare, nor do we have a method to blend the PPIS data with Medicare-recognized specialty data.

Previously, we established PE/HR values for various specialties without SMS or supplemental survey data by crosswalking them to other similar specialties to estimate a proxy PE/HR. For specialties that were part of the PPIS for which we previously used a crosswalked PE/HR, we instead used the PPIS based PE/HR. We use crosswalks for specialties that did not participate in the PPIS. These crosswalks have been generally established through notice and comment rulemaking and are available in the file titled ''CY 2025 PFS proposed rule PE/HR'' on the CMS website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

For CY 2025, we have incorporated the available utilization data for two new specialties, Marriage and Family Therapist (MFT) and Mental Health Counselor (MHC), which we recognized effective January 1, 2024, in accordance with section 4121 of the CAA, 2023. We are proposing to use proxy PE/HR values for these new specialties, as there are no PPIS data for these specialties, by crosswalking the PE/HR as follows from specialties that furnish similar services in the Medicare claims data:

- Marriage and Family Therapist (MFT) from Licensed Clinical Social Workers; and
- Mental Health Counselor (MHC) from Licensed Clinical Social Workers

These updates are reflected in the ''CY 2025 PFS proposed rule PE/HR'' file available on the CMS website under the supporting data files for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

c. Allocation of PE to Services

To establish PE RVUs for specific services, it is necessary to establish the direct and indirect PE associated with each service.

(1) Direct Costs

The relative relationship between the direct cost portions of the PE RVUs for any two services is determined by the relative relationship between the sum of the direct cost resources (that is, the clinical staff, medical supplies, and medical equipment) typically involved with furnishing each of the services. The costs of these resources are calculated from the refined direct PE inputs in our PE database. For example, if one service has a direct cost sum of $400 from our PE database and another service has a direct cost sum of $200, the direct portion of the PE RVUs of the first service would be twice as much as the direct portion of the PE RVUs for the second service.

(2) Indirect Costs

We allocate the indirect costs at the code level based on the direct costs specifically associated with a code and the greater of either the clinical labor costs or the work RVUs. We also incorporate the survey data described earlier in the PE/HR discussion. The general approach to developing the indirect portion of the PE RVUs is as follows:

- For a given service, we use the direct portion of the PE RVUs calculated as previously described and the average percentage that direct costs represent of total costs (based on survey data) across the specialties that furnish the service to determine an initial indirect allocator. That is, the initial indirect allocator is calculated so that the direct costs equal the average percentage of direct costs of those specialties furnishing the service. For example, if the direct portion of the PE RVUs for a given service is 2.00 and direct costs, on average, represent 25 percent of total costs for the specialties that furnish the service, the initial indirect allocator would be calculated so that it equals 75 percent of the total PE RVUs. Thus, in this example, the initial indirect allocator would equal 6.00, resulting in a total PE RVU of 8.00 (2.00 is 25 percent of 8.00 and 6.00 is 75 percent of 8.00).
- Next, we add the greater of the work RVUs or clinical labor portion of the direct portion of the PE RVUs to this initial indirect allocator. In our example, if this service had a work RVU of 4.00 and the clinical labor portion of the direct PE RVU was 1.50, we would add 4.00 (since the 4.00 work RVUs are greater than the 1.50 clinical labor portion) to the initial indirect allocator of 6.00 to get an indirect allocator of 10.00. In the absence of any further use of the survey data, the relative relationship between the indirect cost portions of the PE RVUs for any two services would be determined by the relative relationship between these indirect cost allocators. For example, if one service had an indirect cost allocator of 10.00 and another service had an indirect cost allocator of 5.00, the indirect portion of the PE RVUs of the first service would be twice as great as the indirect portion of the PE RVUs for the second service.
- Then, we incorporate the specialty specific indirect PE/HR data into the calculation. In our example, if, based on the survey data, the average indirect cost of the specialties furnishing the first service with an allocator of 10.00 was half of the average indirect cost of the specialties furnishing the second service with an indirect allocator of 5.00, the indirect portion of the PE RVUs of the first service would be equal to that of the second service.

(3) Facility and Nonfacility Costs

For procedures that can be furnished in a physician's office, as well as in a facility setting, where Medicare makes a separate payment to the facility for its costs in furnishing a service, we establish two PE RVUs: facility and nonfacility. The methodology for calculating PE RVUs is the same for both the facility and nonfacility RVUs but is applied independently to yield two separate PE RVUs. In calculating the PE RVUs for services furnished in a facility, we do not include resources that would generally not be provided by physicians when furnishing the service. For this reason, the facility PE RVUs are generally lower than the nonfacility PE RVUs.

(4) Services With Technical Components and Professional Components

Diagnostic services are generally comprised of two components: a professional component (PC); and a technical component (TC). The PC and TC may be furnished independently or by different healthcare providers, or they may be furnished together as a global service. When services have separately billable PC and TC components, the payment for the global service equals the sum of the payment for the TC and PC. To achieve this, we use a weighted average of the ratio of indirect to direct costs across all the specialties that furnish the global service, TCs, and PCs; that is, we apply the same weighted average indirect percentage factor to allocate indirect expenses to the global service, PCs, and TCs for a service. (The direct PE RVUs for the TC and PC sum to the global.)

(5) PE RVU Methodology

For a more detailed description of the PE RVU methodology, we direct readers to the CY 2010 PFS final rule with comment period (74 FR 61745 through 61746). We also direct readers to the file titled ''Calculation of PE RVUs under Methodology for Selected Codes'' which is available on our website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/*

Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html. This file contains a table that illustrates the calculation of PE RVUs as described in this proposed rule for individual codes.

(a) Setup File

First, we create a setup file for the PE methodology. The setup file contains the direct cost inputs, the utilization for each procedure code at the specialty and facility/nonfacility place of service level, and the specialty specific PE/HR data calculated from the surveys.

(b) Calculate the Direct Cost PE RVUs

Sum the costs of each direct input.

Step 1: Sum the direct costs of the inputs for each service.

Step 2: Calculate the aggregate pool of direct PE costs for the current year. We set the aggregate pool of PE costs equal to the product of the ratio of the current aggregate PE RVUs to current aggregate work RVUs and the projected aggregate work RVUs.

Step 3: Calculate the aggregate pool of direct PE costs for use in ratesetting. This is the product of the aggregate direct costs for all services from Step 1 and the utilization data for that service.

Step 4: Using the results of Step 2 and Step 3, use the CF to calculate a direct PE scaling adjustment to ensure that the aggregate pool of direct PE costs calculated in Step 3 does not vary from the aggregate pool of direct PE costs for the current year. Apply the scaling adjustment to the direct costs for each service (as calculated in Step 1).

Step 5: Convert the results of Step 4 to an RVU scale for each service. To do this, divide the results of Step 4 by the CF. Note that the actual value of the CF used in this calculation does not influence the final direct cost PE RVUs as long as the same CF is used in Step 4 and Step 5. Different CFs would result in different direct PE scaling adjustments, but this has no effect on the final direct cost PE RVUs since changes in the CFs and the associated direct scaling adjustments offset one another.

(c) Create the Indirect Cost PE RVUs

Create indirect allocators.

Step 6: Based on the survey data, calculate direct and indirect PE percentages for each physician specialty.

Step 7: Calculate direct and indirect PE percentages at the service level by taking a weighted average of the results of Step 6 for the specialties that furnish the service. Note that for services with TCs and PCs, the direct and indirect percentages for a given service do not vary by the PC, TC, and global service.

We generally use an average of the three most recent years of available Medicare claims data to determine the specialty mix assigned to each code. Codes with low Medicare service volume require special attention since billing or enrollment irregularities for a given year can result in significant changes in specialty mix assignment. We finalized a policy in the CY 2018 PFS final rule (82 FR 52982 through 59283) to use the most recent year of claims data to determine which codes are low volume for the coming year (those that have fewer than 100 allowed services in the Medicare claims data). For codes that fall into this category, instead of assigning a specialty mix based on the specialties of the practitioners reporting the services in the claims data, we use the expected specialty that we identify on a list developed based on medical review and input from expert interested parties. We display this list of expected specialty assignments as part of the annual set of data files we make available as part of notice and comment rulemaking and consider recommendations from the RUC and other interested parties on changes to this list annually. Services for which the specialty is automatically assigned based on previously finalized policies under our established methodology (for example, ''always therapy'' services) are unaffected by the list of expected specialty assignments. We also finalized in the CY 2018 PFS final rule (82 FR 52982 through 52983) a policy to apply these service-level overrides for both PE and MP, rather than one or the other category.

Step 8: Calculate the service level allocators for the indirect PEs based on the percentages calculated in Step 7. The indirect PEs are allocated based on the three components: the direct PE RVUs; the clinical labor PE RVUs; and the work RVUs.

For most services the indirect allocator is: indirect PE percentage * (direct PE RVUs/direct percentage) + work RVUs.

There are two situations where this formula is modified:

- If the service is a global service (that is, a service with global, professional, and technical components), then the indirect PE allocator is: indirect percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs + work RVUs.
- If the clinical labor PE RVUs exceed the work RVUs (and the service is not a global service), then the indirect allocator is: indirect PE percentage (direct PE RVUs/direct percentage) + clinical labor PE RVUs.

(*Note:* For global services, the indirect PE allocator is based on both the work RVUs and the clinical labor PE RVUs. We do this to recognize that, for the PC service, indirect PEs would be allocated using the work RVUs, and for the TC service, indirect PEs would be allocated using the direct PE RVUs and the clinical labor PE RVUs. This also allows the global component RVUs to equal the sum of the PC and TC RVUs.)

For presentation purposes, in the examples in the download file titled ''Calculation of PE RVUs under Methodology for Selected Codes'', the formulas were divided into two parts for each service.

- The first part does not vary by service and is the indirect percentage (direct PE RVUs/direct percentage).
- The second part is either the work RVU, clinical labor PE RVU, or both depending on whether the service is a global service and whether the clinical PE RVUs exceed the work RVUs (as described earlier in this step).

Apply a scaling adjustment to the indirect allocators.

Step 9: Calculate the current aggregate pool of indirect PE RVUs by multiplying the result of step 8 by the average indirect PE percentage from the survey data.

Step 10: Calculate an aggregate pool of indirect PE RVUs for all PFS services by adding the product of the indirect PE allocators for a service from Step 8 and the utilization data for that service.

Step 11: Using the results of Step 9 and Step 10, calculate an indirect PE adjustment so that the aggregate indirect allocation does not exceed the available aggregate indirect PE RVUs and apply it to indirect allocators calculated in Step 8.

Calculate the indirect practice cost index.

Step 12: Using the results of Step 11, calculate aggregate pools of specialty specific adjusted indirect PE allocators for all PFS services for a specialty by adding the product of the adjusted indirect PE allocator for each service and the utilization data for that service.

Step 13: Using the specialty specific indirect PE/HR data, calculate specialty specific aggregate pools of indirect PE for all PFS services for that specialty by adding the product of the indirect PE/HR for the specialty, the work time for the service, and the specialty's utilization for the service across all services furnished by the specialty.

Step 14: Using the results of Step 12 and Step 13, calculate the specialty specific indirect PE scaling factors.

Step 15: Using the results of Step 14, calculate an indirect practice cost index at the specialty level by dividing each specialty specific indirect scaling factor by the average indirect scaling factor for the entire PFS.

Step 16: Calculate the indirect practice cost index at the service level to ensure the capture of all indirect costs. Calculate a weighted average of the practice cost index values for the specialties that furnish the service. (Note: For services with TCs and PCs, we calculate the indirect practice cost index across the global service, PCs, and TCs. Under this method, the indirect practice cost index for a given service (for example, echocardiogram) does not vary by the PC, TC, and global service.)

Step 17: Apply the service level indirect practice cost index calculated in Step 16 to the service level adjusted indirect allocators calculated in Step 11 to get the indirect PE RVUs.

(d) Calculate the Final PE RVUs

Step 18: Add the direct PE RVUs from Step 5 to the indirect PE RVUs from Step 17 and apply the final PE budget neutrality (BN) adjustment. The final PE BN adjustment is calculated by comparing the sum of steps 5 and 17 to the aggregate work RVUs scaled by the ratio of current aggregate PE and work RVUs. This adjustment ensures that all PE RVUs in the PFS account for the fact that certain specialties are excluded from the calculation of PE RVUs but included in maintaining overall PFS BN. (See ''Specialties excluded from ratesetting calculation'' later in this proposed rule.)

Step 19: Apply the phase-in of significant RVU reductions and its associated adjustment. Section 1848(c)(7) of the Act specifies that for services that are not new or revised codes, if the total RVUs for a service for a year would otherwise be decreased by an estimated 20 percent or more as compared to the total RVUs for the previous year, the applicable adjustments in work, PE, and MP RVUs shall be phased in over a 2-year period. In implementing the phase-in, we consider a 19 percent reduction as the maximum 1-year reduction for any service not described by a new or revised code. This approach limits the year one reduction for the service to the maximum allowed amount (that is, 19 percent), and then phases in the remainder of the reduction. To comply with section 1848(c)(7) of the Act, we adjust the PE RVUs to ensure that the total RVUs for all services that are not new or revised codes decrease by no more than 19 percent, and then apply a relativity adjustment to ensure that the total pool of aggregate PE RVUs remains relative to the pool of work and MP RVUs. For a more detailed description of the methodology for the phase-in of significant RVU changes, we refer readers to the CY 2016 PFS final rule with comment period (80 FR 70927 through 70931).

(e) Setup File Information

- Specialties excluded from ratesetting calculation: To calculate the PE and MP RVUs, we exclude certain specialties, such as NPPs paid at a percentage of the PFS and low volume specialties, from the calculation. These specialties are included to calculate the BN adjustment. They are displayed in Table 1.

BILLING CODE P

TABLE 1: Specialties Excluded from Ratesetting Calculation

Specialty Code	Specialty Description
49	Ambulatory surgical center
50	Nurse practitioner
51	Medical supply company with certified orthotist
52	Medical supply company with certified prosthetist
53	Medical supply company with certified prosthetist-orthotist
54	Medical supply company not included in 51, 52, or 53.
55	Individual certified orthotist
56	Individual certified prosthetist
57	Individual certified prosthetist-orthotist
58	Medical supply company with registered pharmacist
59	Ambulance service supplier, e.g., private ambulance companies, funeral homes, etc.
60	Public health or welfare agencies
61	Voluntary health or charitable agencies
73	Mass immunization roster biller
74	Radiation therapy centers
87	All other suppliers (e.g., drug and department stores)
88	Unknown supplier/provider specialty
89	Certified clinical nurse specialist
96	Optician
97	Physician assistant
A0	Hospital
A1	SNF
A2	Intermediate care nursing facility
A3	Nursing facility, other
A4	HHA
A5	Pharmacy
A6	Medical supply company with respiratory therapist
A7	Department store
A8	Grocery store
B1	Supplier of oxygen and/or oxygen related equipment (eff. 10/2/2007)
B2	Pedorthic personnel
B3	Medical supply company with pedorthic personnel
B4	Rehabilitation Agency
B5	Ocularist
C1	Centralized Flu
C2	Indirect Payment Procedure
C5	Dentistry

BILLING CODE C

- *Crosswalk certain low volume physician specialties:* Crosswalk the utilization of certain specialties with relatively low PFS utilization to the associated specialties.
- *Physical therapy utilization:* Crosswalk the utilization associated with all physical therapy services to the specialty of physical therapy.
- *Identify professional and technical services not identified under the usual TC and 26 modifiers:* Flag the services that are PC and TC services but do not use TC and 26 modifiers (for example, electrocardiograms). This flag associates the PC and TC with the associated global code for use in creating the indirect PE RVUs. For example, the professional service, CPT code 93010 (Electrocardiogram, routine ECG with at least 12 leads; interpretation and report only), is associated with the global service, CPT code 93000 (Electrocardiogram, routine ECG with at least 12 leads; with interpretation and report).
- *Payment modifiers:* Payment modifiers are accounted for in creating the file consistent with the current payment policy as implemented in claims processing. For example, services billed with the assistant at surgery modifier are paid 16 percent of the PFS amount for that service; therefore, the utilization file is modified to only account for 16 percent of any service that contains the assistant at surgery modifier. Similarly, for those services to which volume adjustments are made to account for the payment modifiers, time adjustments are applied as well. For time adjustments to surgical services, the intraoperative portion in the work time file is used; where it is not present, the intraoperative percentage from the payment files used by contractors to process Medicare claims is used instead. Where neither is available, we use the payment adjustment ratio to adjust the time accordingly. Table 2 details the

manner in which the modifiers are applied.

TABLE 2: Application of Payment Modifiers to Utilization Files

Modifier	Description	Volume Adjustment	Time Adjustment
80,81,82	Assistant at Surgery	16%	Intraoperative portion
AS	Assistant at Surgery – Physician Assistant	14% (85% * 16%)	Intraoperative portion
50 or LT and RT	Bilateral Surgery	150%	150% of work time
51	Multiple Procedure	50%	Intraoperative portion
52	Reduced Services	50%	50%
53	Discontinued Procedure	50%	50%
54	Intraoperative Care only	Preoperative + Intraoperative Percentages on the payment files used by Medicare contractors to process Medicare claims	Preoperative + Intraoperative portion
55	Postoperative Care only	Postoperative Percentage on the payment files used by Medicare contractors to process Medicare claims	Postoperative portion
62	Co-surgeons	62.5%	50%
66	Team Surgeons	33%	33%
CO, CQ	Physical and Occupational Therapy Assistant Services	88%	88%

We also adjust volume and time that correspond to other payment rules, including special multiple procedure endoscopy rules and multiple procedure payment reductions (MPPRs). We note that section 1848(c)(2)(B)(v) of the Act exempts certain reduced payments for multiple imaging procedures and multiple therapy services from the BN calculation under section 1848(c)(2)(B)(ii)(II) of the Act. These MPPRs are not included in the development of the RVUs.

Beginning in CY 2022, section 1834(v)(1) of the Act required that we apply a 15 percent payment reduction for outpatient occupational therapy services and outpatient physical therapy services that are provided, in whole or in part, by a physical therapist assistant (PTA) or occupational therapy assistant (OTA). Section 1834(v)(2)(A) of the Act required CMS to establish modifiers to identify these services, which we did in the CY 2019 PFS final rule (83 FR 59654 through 59661), creating the CQ and CO payment modifiers for services provided in whole or in part by PTAs and OTAs, respectively. These payment modifiers are required to be used on claims for services with dates of service beginning January 1, 2020, as specified in the CY 2020 PFS final rule (84 FR 62702 through 62708). We applied the 15 percent payment reduction to therapy services provided by PTAs (using the CQ modifier) or OTAs (using the CO modifier), as required by statute. Under sections 1834(k) and 1848 of the Act, payment is made for outpatient therapy services at 80 percent of the lesser of the actual charge or applicable fee schedule amount (the allowed charge). The remaining 20 percent is the beneficiary copayment. For therapy services to which the new discount applies, payment will be made at 85 percent of the 80 percent of allowed charges. Therefore, the volume discount factor for therapy services to which the CQ and CO modifiers apply is: (0.20 + (0.80* 0.85), which equals 88 percent.

We note that for CY 2025, we are proposing mandatory use of the 54 and 55 modifiers when practitioners furnishing global surgery procedures share in patient care and intend only to furnish preoperative/intraoperative or postoperative portions of the total global procedure. If finalized, this proposal will likely increase the number of claims subject to the adjustment described in the discussion above. We discuss this proposal in section II.G. of this proposed rule.

For anesthesia services, we do not apply adjustments to volume since we use the average allowed charge when simulating RVUs; therefore, the RVUs as calculated already reflect the payments as adjusted by modifiers, and no volume adjustments are necessary. However, a time adjustment of 33 percent is made only for medical direction of two to four cases since that is the only situation where a single practitioner is involved with multiple beneficiaries concurrently, so that counting each service without regard to the overlap with other services would overstate the amount of time spent by the practitioner furnishing these services.

- *Work RVUs:* The setup file contains the work RVUs from this proposed rule.

(6) Equipment Cost per Minute

The equipment cost per minute is calculated as:

(1/(minutes per year * usage)) * price * ((interest rate/(1 (1/((1 + interest rate)^ life of equipment)))) + maintenance)

Where:

minutes per year = maximum minutes per year if usage were continuous (that is, usage=1); generally, 150,000 minutes.
usage = variable, see discussion below in this proposed rule.
price = price of the particular piece of equipment.
life of equipment = useful life of the particular piece of equipment.
maintenance = factor for maintenance; 0.05.
interest rate = variable, see discussion below in this proposed rule.

Usage: We currently use an equipment utilization rate assumption of 50 percent for most equipment, with the exception of expensive diagnostic

imaging equipment, for which we use a 90 percent assumption as required by section 1848(b)(4)(C) of the Act.

Useful Life: In the CY 2005 PFS final rule we stated that we updated the useful life for equipment items primarily based on the AHA's ''Estimated Useful Lives of Depreciable Hospital Assets'' guidelines (69 FR 66246). The most recent edition of these guidelines was published in 2018. This reference material provides an estimated useful life for hundreds of different types of equipment, the vast majority of which fall in the range of 5 to 10 years, and none of which are lower than two years in duration. We believe that the updated editions of this reference material remain the most accurate source for estimating the useful life of depreciable medical equipment.

In the CY 2021 PFS final rule, we finalized a proposal to treat equipment life durations of less than 1 year as having a duration of 1 year for the purpose of our equipment price per minute formula. In the rare cases where items are replaced every few months, we noted that we believe it is more accurate to treat these items as disposable supplies with a fractional supply quantity as opposed to equipment items with very short equipment life durations. For a more detailed discussion of the methodology associated with very short equipment life durations, we refer readers to the CY 2021 PFS final rule (85 FR 84482 through 84483).

- *Maintenance:* We finalized the 5 percent factor for annual maintenance in the CY 1998 PFS final rule with comment period (62 FR 33164). As we previously stated in the CY 2016 PFS final rule with comment period (80 FR 70897), we do not believe the annual maintenance factor for all equipment is precisely 5 percent, and we concur that the current rate likely understates the true cost of maintaining some equipment. We also noted that we believe it likely overstates the maintenance costs for other equipment. When we solicited comments regarding data sources containing equipment maintenance rates, commenters could not identify an auditable, robust data source that CMS could use on a wide scale. We noted that we did not believe voluntary submissions regarding the maintenance costs of individual equipment items would be an appropriate methodology for determining costs. As a result, in the absence of publicly available datasets regarding equipment maintenance costs or another systematic data collection methodology for determining a different maintenance factor, we did not propose a variable maintenance factor for equipment cost per minute pricing as we did not believe that we have sufficient information at present. We noted that we would continue to investigate potential avenues for determining equipment maintenance costs across a broad range of equipment items.
- *Interest Rate:* In the CY 2013 PFS final rule with comment period (77 FR 68902), we updated the interest rates used in developing an equipment cost per minute calculation (see 77 FR 68902 for a thorough discussion of this issue). The interest rate was based on the Small Business Administration (SBA) maximum interest rates for different categories of loan size (equipment cost) and maturity (useful life). The Interest rates are listed in Table 3.

TABLE 3: SBA Maximum Interest Rates

Price	Useful Life	Interest Rate
<$25K	<7 Years	7.50%
$25K to $50K	<7 Years	6.50%
>$50K	<7 Years	5.50%
<$25K	7+ Years	8.00%
$25K to $50K	7+ Years	7.00%
>$50K	7+ Years	6.00%

We are not proposing any changes to the equipment interest rates for CY 2025.

3. Adjusting RVUs To Match the PE Share of the Medicare Economic Index (MEI)

In the past, we have stated that we believe that the MEI is the best measure available of the relative weights of the three components in payments under the PFS—work, practice expense (PE), and malpractice (MP). Accordingly, we believe that to ensure that the PFS payments reflect the relative resources in each of these PFS components as required by section 1848(c)(3) of the Act, the RVUs used in developing rates should reflect the same weights in each component as the cost share weights in the Medicare Economic Index (MEI). In the past, we have proposed (and subsequently finalized) to accomplish this by holding the work RVUs constant and adjusting the PE RVUs, MP RVUs, and CF to produce the appropriate balance in RVUs among the three PFS components and payment rates for individual services, that is, that the total RVUs on the PFS are proportioned to approximately 51 percent work RVUs, 45 percent PE RVUs, and 4 percent MP RVUs. As the MEI cost shares are updated, we would typically propose to modify steps 3 and 10 to adjust the aggregate pools of PE costs (direct PE in step 3 and indirect PE in step 10) in proportion to the change in the PE share in the rebased and revised MEI cost share weights, and to recalibrate the relativity adjustment that we apply in step 18 as described in the CY 2023 PFS final rule (87 FR 69414 and 69415) and CY 2014 PFS final rule (78 FR 74236 and 74237). The most recent recalibration was done for the CY 2014 RVUs.

In the CY 2014 PFS proposed rule (78 FR 43287 through 43288) and final rule (78 FR 74236 through 74237), we detailed the steps necessary to accomplish this result (see steps 3, 10, and 18). The CY 2014 proposed and final adjustments were consistent with our longstanding practice to make adjustments to match the RVUs for the PFS components with the MEI cost share weights for the components, including the adjustments described in the CY 1999 PFS final rule (63 FR 58829), CY 2004 PFS final rule (68 FR 63246 and 63247), and CY 2011 PFS final rule (75 FR 73275).

In the CY 2023 PFS final rule (87 FR 69688 through 69711), we finalized to rebase and revise the MEI to reflect more current market conditions faced by physicians in furnishing physicians' services (referred to as the ''2017-based MEI''). We also finalized a delay of the adjustments to the PE pools in steps 3

and 10 and the recalibration of the relativity adjustment in step 18 until the public had an opportunity to comment on the rebased and revised MEI (87 FR 69414 through 69416). Because we finalized significant methodological and data source changes to the MEI in the CY 2023 PFS final rule and significant time has elapsed since the last rebasing and revision of the MEI in CY 2014, we believed that delaying the implementation of the finalized CY 2023 rebased and revised MEI was consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. We refer readers to the discussion of our comment solicitation in the CY 2023 PFS final rule (87 FR 69429 through 69432), where we reviewed our ongoing efforts to update data inputs for PE to aid stability, transparency, efficiency, and data adequacy. We also solicited comment in the CY 2023 PFS proposed rule on when and how to best incorporate the CY 2023 rebased and revised MEI into PFS ratesetting, and whether it would be appropriate to consider a transition to full implementation for potential future rulemaking. We presented the impacts of implementing the rebased and revised MEI in PFS ratesetting through a 4-year transition and through full immediate implementation, that is, with no transition period in the CY 2023 PFS proposed rule. We also solicited comment on other implementation strategies for potential future rulemaking in the CY 2023 PFS proposed rule. In the CY 2023 PFS final rule, we discussed that many commenters supported our proposed delayed implementation, and many commenters expressed concerns with the redistributive impacts of the implementation of the rebased and revised MEI in PFS ratesetting. Many commenters also noted the AMA's intent to collect practice cost data from physician practices, which could be used to derive cost share weights for the MEI and RVU shares.

In light of the AMA's current data collection efforts and because the methodological and data source changes to the MEI finalized in the CY 2023 PFS final rule would have significant impacts on PFS payments, similar to our discussion of this topic in the CY 2024 PFS rulemaking cycle (88 FR 78829 through 78831), we continue to believe that delaying the implementation of the finalized 2017-based MEI cost share weights for the RVUs is consistent with our efforts to balance payment stability and predictability with incorporating new data through more routine updates. For these reasons, we did not propose to incorporate the 2017-based MEI in PFS ratesetting for CY 2024. As we noted in the CY 2024 PFS final rule, many commenters on the CY 2024 PFS proposed rule supported our continued delayed implementation of the 2017-based MEI in PFS ratesetting (88 FR 78830). Most of these commenters urged us to pause consideration of other sources for the MEI until the AMA's efforts to collect practice cost data from physician practices have concluded, although a few commenters recommended that we implement the MEI for PFS ratesetting as soon as possible. We agree with the commenters that it would be prudent, and avoid potential duplication of effort, to wait to consider other data sources for the MEI while the AMA's data collection activities are ongoing. As we discussed in the CY 2024 PFS final rule, we continue to monitor the data available related to physician services' input expenses, but we are not proposing to update the data underlying the MEI cost weights at this time. Given our previously described policy goal to balance PFS payment stability and predictability with incorporating new data through more routine updates to the MEI, we are not proposing to incorporate the 2017-based MEI in PFS ratesetting for CY 2025. We invite comments on this approach as well as any information on the timing of the AMA's practice cost data collection efforts and other sources of data we could consider for updating the MEI.

4. Changes to Direct PE Inputs for Specific Services

This section focuses on specific PE inputs. The direct PE inputs are included in the CY 2025 direct PE input public use files, which are available on the CMS website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

a. Standardization of Clinical Labor Tasks

As we noted in the CY 2015 PFS final rule with comment period (79 FR 67640 through 67641), we continue to make improvements to the direct PE input database to provide the number of clinical labor minutes assigned for each task for every code in the database instead of only including the number of clinical labor minutes for the preservice, service, and post service periods for each code. In addition to increasing the transparency of the information used to set PE RVUs, this level of detail would allow us to compare clinical labor times for activities associated with services across the PFS, which we believe is important to maintaining the relativity of the direct PE inputs. This information would facilitate the identification of the usual numbers of minutes for clinical labor tasks and the identification of exceptions to the usual values. It would also allow for greater transparency and consistency in the assignment of equipment minutes based on clinical labor times. Finally, we believe that the detailed information can be useful in maintaining standard times for particular clinical labor tasks that can be applied consistently to many codes as they are valued over several years, similar in principle to physician preservice time packages. We believe that setting and maintaining such standards would provide greater consistency among codes that share the same clinical labor tasks and could improve the relativity of values among codes. For example, as medical practice and technologies change over time, standards could be updated simultaneously for all codes with the applicable clinical labor tasks instead of waiting for individual codes to be reviewed.

In the CY 2016 PFS final rule with comment period (80 FR 70901), we solicited comments on the appropriate standard minutes for the clinical labor tasks associated with services that use digital technology. After consideration of comments received, we finalized standard times for clinical labor tasks associated with digital imaging at 2 minutes for ''Availability of prior images confirmed'', 2 minutes for ''Patient clinical information and questionnaire reviewed by technologist, order from physician confirmed and exam protocoled by radiologist'', 2 minutes for ''Review examination with interpreting MD'', and 1 minute for ''Exam documents scanned into PACS'' and ''Exam completed in RIS system to generate billing process and to populate images into Radiologist work queue.'' In the CY 2017 PFS final rule (81 FR 80184 through 80186), we finalized a policy to establish a range of appropriate standard minutes for the clinical labor activity, ''Technologist QCs images in PACS, checking for all images, reformats, and dose page.'' These standard minutes will be applied to new and revised codes that make use of this clinical labor activity when they are reviewed by us for valuation. We finalized a policy to establish 2 minutes as the standard for the simple case, 3 minutes as the standard for the intermediate

case, 4 minutes as the standard for the complex case, and 5 minutes as the standard for the highly complex case. These values were based upon a review of the existing minutes assigned for this clinical labor activity; we determined that 2 minutes is the duration for most services and a small number of codes with more complex forms of digital imaging have higher values. We also finalized standard times for a series of clinical labor tasks associated with pathology services in the CY 2016 PFS final rule with comment period (80 FR 70902). We do not believe these activities would be dependent on number of blocks or batch size, and we believe that the finalized standard values accurately reflect the typical time it takes to perform these clinical labor tasks.

In reviewing the RUC-recommended direct PE inputs for CY 2019, we noticed that the 3 minutes of clinical labor time traditionally assigned to the ''Prepare room, equipment and supplies'' (CA013) clinical labor activity were split into 2 minutes for the ''Prepare room, equipment and supplies'' activity and 1 minute for the ''Confirm order, protocol exam'' (CA014) activity. We proposed to maintain the 3 minutes of clinical labor time for the ''Prepare room, equipment and supplies'' activity and remove the clinical labor time for the ''Confirm order, protocol exam'' activity wherever we observed this pattern in the RUC-recommended direct PE inputs. Commenters explained in response that when the new version of the PE worksheet introduced the activity codes for clinical labor, there was a need to translate old clinical labor tasks into the new activity codes, and that a prior clinical labor task was split into two of the new clinical labor activity codes: CA007 (*Review patient clinical extant information and questionnaire*) in the preservice period, and CA014 (*Confirm order, protocol exam*) in the service period. Commenters stated that the same clinical labor from the old PE worksheet was now divided into the CA007 and CA014 activity codes, with a standard of 1 minute for each activity. We agreed with commenters that we would finalize the RUC-recommended 2 minutes of clinical labor time for the CA007 activity code and 1 minute for the CA014 activity code in situations where this was the case. However, when reviewing the clinical labor for the reviewed codes affected by this issue, we found that several of the codes did not include this old clinical labor task, and we also noted that several of the reviewed codes that contained the CA014 clinical labor activity code did not contain any clinical labor for the CA007 activity. In these situations, we believe that the three total minutes of clinical staff time would be more accurately described by the CA013 ''Prepare room, equipment and supplies'' activity code, and we finalized these clinical labor refinements. We direct readers to the discussion in the CY 2019 PFS final rule (83 FR 59463 through 59464) for additional details.

Following the publication of the CY 2020 PFS proposed rule, one commenter expressed concern with the published list of common refinements to equipment time. The commenter stated that these refinements were the formulaic result of applying refinements to the clinical labor time and did not constitute separate refinements; the commenter requested that CMS no longer include these refinements in the table published each year. In the CY 2020 PFS final rule, we agreed with the commenter that these equipment time refinements did not reflect errors in the equipment recommendations or policy discrepancies with the RUC's equipment time recommendations. However, we believed it was important to publish the specific equipment times that we were proposing (or finalizing in the case of the final rule) when they differed from the recommended values due to the effect these changes can have on the direct costs associated with equipment time. Therefore, we finalized the separation of the equipment time refinements associated with changes in clinical labor into a separate table of refinements. We direct readers to the discussion in the CY 2020 PFS final rule (84 FR 62584) for additional details.

Historically, the RUC has submitted a ''PE worksheet'' that details the recommended direct PE inputs for our use in developing PE RVUs. The format of the PE worksheet has varied over time, and among the medical specialties developing the recommendations. These variations have made it difficult for the RUC's development and our review of code values for individual codes. Beginning with its recommendations for CY 2019, the RUC mandated the use of a new PE worksheet for its recommendation development process that standardizes the clinical labor tasks and assigns them a clinical labor activity code. We believe the RUC's use of the new PE worksheet in developing and submitting recommendations helps us simplify and standardize the hundreds of clinical labor tasks currently listed in our direct PE database. As in previous calendar years, to facilitate rulemaking for CY 2025, we are continuing to display two versions of the Labor Task Detail public use file: one version with the old listing of clinical labor tasks and one with the same tasks crosswalked to the new listing of clinical labor activity codes. These lists are available on the CMS website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.*

b. Updates to Prices for Existing Direct PE Inputs

In the CY 2011 PFS final rule with comment period (75 FR 73205), we finalized a process to act on public requests to update equipment and supply price and equipment useful life inputs through annual rulemaking, beginning with the CY 2012 PFS proposed rule. Beginning in CY 2019 and continuing through CY 2022, we conducted a market-based supply and equipment pricing update using information developed by our contractor, StrategyGen, which updated pricing recommendations for approximately 1300 supplies and 750 equipment items currently used as direct PE inputs. Given the potentially significant changes in payment that would occur, in the CY 2019 PFS final rule, we finalized a policy to phase in our use of the new direct PE input pricing over a 4-year period using a 25/75 percent (CY 2019), 50/50 percent (CY 2020), 75/25 percent (CY 2021), and 100/0 percent (CY 2022) split between new and old pricing. We believed that implementing the proposed updated prices with a 4-year phase-in would improve payment accuracy while maintaining stability and allowing interested parties to address potential concerns about changes in payment for particular items. This 4-year transition period to update supply and equipment pricing concluded in CY 2022; for a more detailed discussion, we refer readers to the CY 2019 PFS final rule with comment period (83 FR 59473 through 59480).

For CY 2025, we are proposing to update the price of 17 supplies and one equipment item in response to the public submission of invoices following the publication of the CY 2024 PFS final rule. The 18 supply and equipment items with proposed updated prices are listed in the valuation of specific codes section of the preamble under Table 16, CY 2025 Invoices Received for Existing Direct PE Inputs.

An interested party submitted 30 invoices to update pricing for the human amniotic membrane allograft

mounted on a non-absorbable self-retaining ring (SD248) supply. We previously updated the price of this supply in the CY 2024 final rule (88 FR 78901) based on averaging together the price of the Prokera Slim, Prokera Classic, and Prokera Plus devices. The interested party submitted new invoices for all three of these devices which averaged to a new price of $1149.00 which we are proposing for the SD248 supply. We are soliciting additional comments from interested parties regarding the price of the SD248 supply as well as any information as far as whether one of these three devices (the Prokera Slim, Prokera Classic, and Prokera Plus) would be more typical than the other two for use as a supply in CPT code 65778.

In the case of the indocyanine green (25ml uou) (SL083) supply, we noticed that there was a clear bimodal distribution of prices on the eight submitted invoices, clustered around $91.00 and $141.67, respectively, with no pricing in between $100 and $140. We are proposing the updated total average price of $125.11 based on the eight submitted invoices for the SL083 supply, however, we are soliciting comments on why there was such divergence in the pricing on the submitted invoices, as well as whether these may represent pricing for two different supplies.

Regarding the Reaction buffer 10X (Ventana 950–300) (SL478) supply, we are proposing to update the price from $0.037 to $0.045, which is less than the $0.075 contained on the invoice submitted by interested parties. We were able to find this product readily available for purchase online at a quantity of 10 liters for $453 or a price of $0.045. We do not believe that it would be typical for providers to pay a higher price based on smaller unit quantities; therefore, we are proposing to update the price of the SL478 supply but only to $0.045, which is the price to purchase this supply online, as stated above.

Interested parties also alerted CMS to a technical correction for pricing the Atomizer tips (disposable) (SL464) supply. We previously finalized a price of $2.66 for the SL464 supply, which was included in the table of Invoices Received for Existing Direct PE Inputs in the CY 2018 final rule (82 FR 53162). However, due to a technical error, the updated pricing for the SL464 supply was never implemented. We are proposing to make this correction for CY 2025; the corrected price of $2.66 for the SL464 supply is included in Table 16.

We are not proposing to update the price of another ten supplies, which were the subject of public submission of invoices. Our reasons for not proposing updates to these prices are detailed below, and we are seeking additional information from interested parties for assistance in pricing these supplies:

- *Liposorber supplies: Tubing set (SC083), Plasma LDL adsorption column (SD186), and Plasma separator (SD188):* We received invoices for these three Liposorber supplies from an interested party. However, it was unclear from the invoice submissions what the unit quantity size is for each product. We require additional information regarding the unit size of each supply included on these invoices to establish updated pricing, and therefore, we are not proposing updates to the prices for these supplies. We are seeking additional comments regarding the pricing of these supplies and whether the pricing has increased so dramatically, as it seems unlikely that prices have tripled in the five years since we most recently updated the pricing for these supplies.
- *Congo Red kits (SA110):* We received three invoices from interested parties requesting an increase in the price of the SA110 supply from $6.80 to $18.78. However, we were able to find Congo Red staining kits readily available online at a price of 100 for $410 or $4.10 per kit. The unit size of these kits was also unclear, which made price comparisons with the submitted invoices difficult. Based on the three invoices and the online price of 100 for $410 or $4.10 per kit, we do not believe there is enough pricing data to support an increase in the price of the SA110 supply from $6.80 to $18.78, and we are not proposing an increase in the price of this supply.
- *Gauze, non-sterile 4in x 4in (SG051):* We received one invoice from interested parties requesting an increase in the price of the SG051 supply from $0.03 to $0.04. However, the submitted invoice price appeared to be for surgical gauze, not non-sterile gauze. We were able to find the 4x4 non-sterile gauze readily available online at less than the invoice price. Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SG051 supply from $0.03 to $0.04, and we are not proposing an increase in the price of this supply.
- *Permanent marking pen (SL477):* We received one invoice from interested parties requesting an increase in the price of the SL477 supply from $2.81 to $4.62. However, we found black marking pens, such as Sharpies, widely available at unit prices around $2.00 when purchased in larger quantities. Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SL477 supply from $2.81 to $4.62, and we are not proposing an increase in the price of this supply.
- *Hematoxylin II (Ventana 790–2208) (SL483):* We received four invoices from interested parties requesting an increase in the price of the SL483 supply from $0.780 to $2.722. However, we were able to find hematoxylin II stains readily available online at cheaper prices, such as $52.00 for 500 ml ($0.104 per ml). Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SL483 supply from $0.780 to $2.722, and we are not proposing an increase in the price of this supply.
- *Bluing reagent (Ventana 760–2037) (SL484):* We received three invoices from interested parties requesting an increase in the price of the SL484 supply from $4.247 to $6.130. While researching the pricing of the SL484 supply, we were unable to determine the unit quantity size on invoices, which made it difficult to evaluate if the requested price accurately reflected market pricing. As best we could tell, the requested price increase to $6.130 was more expensive than comparable online bluing reagents available for purchase. Based on this information, we do not believe there is enough pricing data to support an increase in the price of the SL484 supply from $4.247 to $6.130, and we are not proposing an increase in the price of this supply.
- *EZ Prep (10X) (Ventana 950–102) (SL481) and 250 Test Prep Kit # 78 (Ventana 786–3034) (SL486):* In each of these cases, we received invoices from interested parties requesting substantial increases in the price of the associated supplies, from $0.034 to $0.509 for the SL481 supply and from $0.309 to $2.134 for the SL486 supply. We do not believe that it is reasonable to expect that the typical market prices for these supplies have increased by 1400 percent and 600 percent, respectively, in the 5 years since we most recently updated the pricing for these supplies. The limited pricing information we could find online for each product also failed to support these drastic increases in pricing. Based on this information, we do not believe there is enough pricing data to support the requested increases for the SL481 and SL486 supplies, and we are not proposing increases to the prices for these supplies.

(1) Invoice Submission

We remind readers that we routinely accept public submissions of invoices as part of our process for developing payment rates for new, revised, and

potentially misvalued codes. Often, these invoices are submitted in conjunction with the RUC-recommended values for the codes. To be included in a given year's proposed rule, we generally need to receive invoices by the same February 10th deadline we noted for consideration of RUC recommendations. However, we will consider invoices submitted as public comments during the comment period following the publication of the PFS proposed rule and would consider any invoices received after February 10th or outside of the public comment process as part of our established annual process for requests to update supply and equipment prices. Interested parties are encouraged to submit invoices with their public comments or, if outside the notice and comment rulemaking process, via email at *PE_Price_Input_Update@cms.hhs.gov.*

In recent years, we have noticed a growing number of invoice submissions for use in updating supply and equipment pricing. Although we continue to believe in the importance of using the most recent and accurate invoice data to reflect current market pricing, we do have some concerns that the increased use of these submissions may distort relativity across the fee schedule. Relying on voluntary invoice submissions to update pricing for a small subset of the total number of supply and equipment items in our database, while leaving the overwhelming majority of prices untouched, could be distorting pricing in favor of the most recent submissions. We believe that it may be more efficient, and more accurate, to update supply and equipment pricing in a more comprehensive fashion similar to the pricing update that took place from CY 2019 to CY 2022. For example, future updates to supply and equipment pricing could take place in tandem with updates to clinical labor pricing after the current clinical labor update concludes in CY 2025. We welcome public comments on this general topic of more comprehensive updates to supply and equipment pricing, and we may consider comments we receive to inform future rulemaking.

(2) Supply Pack Pricing Update

Interested parties previously notified CMS that they identified numerous discrepancies between the aggregated cost of some supply packs and the individual item components contained within. The interested parties indicated that CMS should rectify these mathematical errors as soon as possible to ensure that the sum correctly matches the totals from the individual items, and they recommended that we resolve these pricing discrepancies in the supply packs during CY 2024 rulemaking. The AMA RUC convened a workgroup on this subject and submitted recommendations to update pricing for a series of supply packs along with the RUC's comment letter for the CY 2024 rule cycle.

We appreciated the additional information and RUC workgroup recommendations regarding discrepancies in the aggregated cost of some supply packs. However, due to the projected significant cost revisions in the pricing of supply packs and because we did not propose to address supply pack pricing in the CY 2024 proposed rule, we stated that this issue would be better addressed in future rulemaking. For example, the cleaning and disinfecting endoscope pack (SA042) is included as a supply input in more than 300 HCPCS codes, which could have a sizable impact on the overall valuation of these services, and which was not incorporated into the proposed RVUs published for the CY 2024 proposed rule. We stated that interested parties would be better served if we comprehensively addressed this topic during future rulemaking in which commenters could provide feedback in response to proposed pricing updates (88 FR 78833 through 78834).

For CY 2025, we are proposing to implement the supply pack pricing update and associated revisions as recommended by the RUC's workgroup. We are proposing to update the pricing of the ''pack, cleaning and disinfecting, endoscope'' (SA042) supply from $19.43 to $31.29, to update the pricing of the ''pack, drapes, cystoscopy'' (SA045) supply from $17.33 to $14.99, to update the pricing of the ''pack, ocular photodynamic therapy'' (SA049) supply from $16.35 to $26.35, to update the pricing of the ''pack, urology cystoscopy visit'' (SA058) supply from $113.70 to $37.63, and to update the pricing of the ''pack, ophthalmology visit (w-dilation)'' (SA082) supply from $3.91 to $2.33. As recommended by the RUC workgroup, we are also proposing to delete the ''pack, drapes, laparotomy (chest-abdomen)'' (SA046) supply entirely. The proposed updated prices for these supply packs are listed in the valuation of specific codes section of the preamble under Table 16, CY 2025 Invoices Received for Existing Direct PE Inputs.

In accordance with the RUC workgroup's recommendations, we are also proposing to create eight new supply codes, including components contained within previously existing supply packs. Aside from the SB056 supply, which is a replacement in several HCPCS codes for the deleted SA046 supply pack, all of these new supplies are not included as standalone direct PE inputs in any current HCPCS codes, as they are, again, components contained within previously existing supply packs. We are proposing to add:

- The kit, ocular photodynamic therapy (PDT) (SA137) supply at a price of $26.00 as a component of the SA049 supply pack;
- The Abdominal Drape Laparotomy Drape Sterile (100 in x 72 in x 124 in) (SB056) supply at a price of $8.049 as a replacement for the SA046 supply pack;
- The drape, surgical, legging (SB057) supply at a price of $3.284 as a component of the SA045 supply pack;
- The drape, surgical, split, impervious, absorbent (SB058) supply at a price of $8.424 as a component of the SA045 supply pack;
- The post-mydriatic spectacles (SB059) supply at a price of $0.328 as a component of the SA082 supply pack;
- The y-adapter cap (SD367) supply at a price of $0.352 as a component of the SA049 supply pack;
- The ortho-phthalaldehyde 0.55% (*e.g.,* Cidex OPA) (SM030) supply at a price of $0.554 as a component of the SA042 supply pack; and
- The ortho-phthalaldehyde test strips (SM031) supply at a price of $1.556 as a component of the SA042 supply pack.

The proposed new supply pack component items are listed in the valuation of specific codes section of the preamble under Table 17, CY 2025 New Invoices.

We are also proposing the following additional supply substitutions based on the recommendations of the RUC workgroup. We are proposing to remove the deleted SA046 supply pack and replace it with the drape, sterile, fenestrated 16in x 29in (SB011) supply for CPT codes 19020, 19101, 19110, 19112, 20101, and 20102. We are proposing to remove the deleted SA046 supply pack and replace it with two supplies—the drape, sterile, three-quarter sheet (SB014) and the drape, towel, sterile 18in x 26in (SB019)—for CPT codes 19000 and 60300. We are proposing to remove the deleted SA046 supply pack and replace it with two supplies—the drape, towel, sterile 18in × 26in (SB019) and the newly created Abdominal Drape Laparotomy Drape Sterile (100 in × 72 in × 124 in) (SB056) supply—for CPT codes 22510, 22511, 22513, and 22514. We are proposing to remove the deleted SA046 supply pack without replacing it with anything for CPT code 22526; the RUC workgroup

did not make a recommendation on what to do with CPT code 27278, which also previously contained the SA046 supply pack. Therefore, we are also proposing not to replace the SA046 supply pack with any supplies for this code. The RUC workgroup also recommended removing the SA046 supply pack from CPT code 64595 with no replacement; however, this code was recently reviewed at the April 2022 RUC meeting and it no longer includes the SA046 supply.

The RUC workgroup also reviewed the issue of skin adhesives and identified several generic alternatives to using the skin adhesive (Dermabond) (SG007) supply. The workgroup stated that there are multiple skin adhesive products, at different price points, available that work similarly to Dermabond and requested that generic alternatives be used overall in place of brand names in the CMS direct PE database. The workgroup made a series of suggestions for CMS to create new medical supply item codes to encompass the generic formulations of cyanoacrylate skin adhesive in multidose form and single use sterile application.

We appreciate the recommendations from the RUC workgroup and concur that generic alternatives be used in place of brand names, where appropriate, in the CMS direct PE database. However, we have no pricing information or submitted invoices for the four generic formulations of cyanoacrylate skin adhesive requested by the RUC workgroup (2-Octyl-cyanoacrylate, n-Butyl-2-cyanoacrylate, Combined n-Butyl and 2-Octylcyanoacrylate, and Ethyl-2-cyanoacrylate). Since these four potential new supplies have no pricing information and are not currently included as direct PE inputs for any HCPCS codes, we have not added them to our direct PE database for the CY 2025 proposed rule due to lack of available information.

c. Clinical Labor Pricing Update

Section 220(a) of the PAMA provides that the Secretary may collect or obtain information from any eligible professional or any other source on the resources directly or indirectly related to furnishing services for which payment is made under the PFS and that such information may be used in the determination of relative values for services under the PFS. Such information may include the time involved in furnishing services; the amounts, types, and prices of PE inputs; overhead and accounting information for practices of physicians and other suppliers, and any other elements that would improve the valuation of services under the PFS.

Beginning in CY 2019, we updated the supply and equipment prices used for PE as part of a market-based pricing transition; CY 2022 was the final year of this 4-year transition. We initiated a market research contract with StrategyGen to conduct an in-depth and robust market research study to update the supply and equipment pricing for CY 2019, and we finalized a policy in CY 2019 to phase in the new pricing over a period of 4 years. However, we did not propose to update the clinical labor pricing, and the pricing for clinical labor has remained unchanged during this pricing transition. Clinical labor rates were last updated for CY 2002 using Bureau of Labor Statistics (BLS) data and other supplementary sources where BLS data were not available; we refer readers to the full discussion in the CY 2002 PFS final rule for additional details (66 FR 55257 through 55262).

Interested parties raised concerns that the long delay since clinical labor pricing was last updated created a significant disparity between CMS' clinical wage data and the market average for clinical labor. In recent years, several interested parties suggested that certain wage rates were inadequate because they did not reflect current labor rate information. Some interested parties also stated that updating the supply and equipment pricing without updating the clinical labor pricing could create distortions in the allocation of direct PE. They argued that since the pool of aggregated direct PE inputs is budget neutral, if these rates are not routinely updated, clinical labor may become undervalued over time relative to equipment and supplies, especially since the supply and equipment prices are in the process of being updated. There was considerable interest among interested parties in updating the clinical labor rates, and when we solicited comment on this topic in past rules, such as in the CY 2019 PFS final rule (83 FR 59480), interested parties supported the idea.

Therefore, we proposed to update the clinical labor pricing for CY 2022, in conjunction with the final year of the supply and equipment pricing update (86 FR 39118 through 39123). We believed updating the clinical labor pricing was important to maintain relativity with the recent supply and equipment pricing updates. We proposed to use the methodology outlined in the CY 2002 PFS final rule (66 FR 55257), which draws primarily from BLS wage data, to calculate updated clinical labor pricing. As we stated in the CY 2002 PFS final rule, the BLS' reputation for publishing valid estimates that are nationally representative led to the choice to use the BLS data as the main source. We believe that the BLS wage data continues to be the most accurate source to use as a basis for clinical labor pricing and this data will appropriately reflect changes in clinical labor resource inputs for setting PE RVUs under the PFS. We used the most current BLS survey data (2019) as the main source of wage data for our CY 2022 clinical labor proposal.

We recognized that the BLS survey of wage data does not cover all the staff types contained in our direct PE database. Therefore, we crosswalked or extrapolated the wages for several staff types using supplementary data sources for verification whenever possible. In situations where the price wages of clinical labor types were not referenced in the BLS data, we used the national salary data from the Salary Expert, an online project of the Economic Research Institute that surveys national and local salary ranges and averages for thousands of job titles using mainly government sources. (A detailed explanation of the methodology used by Salary Expert to estimate specific job salaries can be found at *www.salaryexpert.com*.) We previously used Salary Expert information as the primary backup source of wage data during the last update of clinical labor pricing in CY 2002. If we did not have direct BLS wage data available for a clinical labor type, we used the wage data from Salary Expert as a reference for pricing, then crosswalked these clinical labor types to a proxy BLS labor category rate that most closely matched the reference wage data, similar to the crosswalks used in our PE/HR allocation. For example, there is no direct BLS wage data for the Mammography Technologist (L043) clinical labor type; we used the wage data from Salary Expert as a reference and identified the BLS wage data for Respiratory Therapists as the best proxy category. We calculated rates for the ''blend'' clinical labor categories by combining the rates for each labor type in the blend and then dividing by the total number of labor types in the blend.

As in the CY 2002 clinical labor pricing update, the proposed cost per minute for each clinical staff type was derived by dividing the average hourly wage rate by 60 to arrive at the per minute cost. In cases where an hourly wage rate was not available for a clinical staff type, the proposed cost per minute for the clinical staff type was derived by

dividing the annual salary (converted to 2021 dollars using the Medicare Economic Index) by 2080 (the number of hours in a typical work year) to arrive at the hourly wage rate and then again by 60 to arrive at the per minute cost. We ultimately finalized the use of median BLS wage data instead of mean BLS wage data in response to comments in the CY 2022 PFS final rule. To account for the employers' cost of providing fringe benefits, such as sick leave, we finalized a benefits multiplier of 1.296 based on a BLS release from June 17, 2021 (USDL–21–1094). As an example of this process, for the Physical Therapy Aide (L023A) clinical labor type, the BLS data reflected a median hourly wage rate of $12.98, which we multiplied by the 1.296 benefits modifier and then divided by 60 minutes to arrive at the finalized per-minute rate of $0.28.

After considering the comments on our CY 2022 proposals, we agreed with commenters that the use of a multi-year transition would help smooth out the changes in payment resulting from the clinical labor pricing update, avoiding potentially disruptive changes in payment for affected interested parties, and promoting payment stability from year-to-year. We believed it would be appropriate to use a 4-year transition, as we have for several other broad-based updates or methodological changes. While we recognized that using a 4-year transition to implement the update means that we will continue to rely in part on outdated data for clinical labor pricing until the change is fully completed in CY 2025, we agreed with the commenters that these significant updates to PE valuation should be implemented in the same way, and for the same reasons, as for other major updates to pricing such as the recent supply and equipment update. Therefore, we finalized the clinical labor pricing update implementation over four years to transition from current prices to the final updated prices in CY 2025. We finalized the implementation of this pricing transition over 4 years, such that one-quarter of the difference between the current price and the fully phased-in price is implemented for CY 2022, one-third of the difference between the CY 2022 price and the final price is implemented for CY 2023, and one-half of the difference between the CY 2023 price and the final price is implemented for CY 2024, with the new direct PE prices fully implemented for CY 2025. (86 FR 65025) An example of the transition from the current to the fully-implemented new pricing that we finalized in the CY 2022 PFS final rule is provided in Table 4.

TABLE 4: Example of Clinical Labor Pricing Transition

Current Price	$1.00	
Final Price	$2.00	
Year 1 (CY 2022) Price	$1.25	1/4 difference between $1.00 and $2.00
Year 2 (CY 2023) Price	$1.50	1/3 difference between $1.25 and $2.00
Year 3 (CY 2024) Price	$1.75	1/2 difference between $1.50 and $2.00
Final (CY 2025) Price	$2.00	

(1) CY 2023 Clinical Labor Pricing Updates

For CY 2023, we received information from one interested party regarding the pricing of the Histotechnologist (L037B) clinical labor type. The interested party provided data from the 2019 Wage Survey of Medical Laboratories which supported an increase in the per-minute rate from the $0.55 finalized in the CY 2022 PFS final rule to $0.64. This rate of $0.64 for the L037B clinical labor type is a close match to the online salary data that we had for the Histotechnologist and matches the $0.64 rate that we initially proposed for L037B in the CY 2022 PFS proposed rule. Based on the wage data provided by the commenter, we proposed this $0.64 rate for the L037B clinical labor type for CY 2023; we also proposed a slight increase in the pricing for the Lab Tech/Histotechnologist (L035A) clinical labor type from $0.55 to $0.60 as it is a blend of the wage rate for the Lab Technician (L033A) and Histotechnologist clinical labor types. We also proposed the same increase to $0.60 for the Angio Technician (L041A) clinical labor type, as we previously established a policy in the CY 2022 PFS final rule that the pricing for the L041A clinical labor type would match the rate for the L035A clinical labor type (86 FR 65032).

Based on comments received on the CY 2023 proposed rule, we finalized a change in the descriptive text of the L041A clinical labor type from ''Angio Technician'' to ''Vascular Interventional Technologist''. We also finalized an update in the pricing of three clinical labor types: from $0.60 to $0.84 for the Vascular Interventional Technologist (L041A), from $0.63 to $0.79 for the Mammography Technologist (L043A), and from $0.76 to $0.78 for the CT Technologist (L046A) based on submitted wage data from the 2022 Radiologic Technologist Wage and Salary Survey (87 FR 69422 through 69425).

(2) CY 2024 Clinical Labor Pricing Updates

We did not receive new wage data or other additional information for use in clinical labor pricing from interested parties prior to the publication of the CY 2024 PFS proposed rule. Therefore, our proposed clinical labor pricing for CY 2024 was based on the clinical labor pricing that we finalized in the CY 2023 PFS final rule, incremented an additional step for Year 3 of the update. Based on comments received on the CY 2024 proposed rule, we finalized an update in the clinical labor pricing of the cytotechnologist (L045A) clinical labor type from $0.76 to $0.85 based on submitted data from the 2021 American Society of Clinical Pathologists (ASCP) Wage Survey of Medical Laboratories (88 FR 78838).

(3) CY 2025 Clinical Labor Pricing Update Proposals

We did not receive new wage data or other additional information for use in clinical labor pricing from interested parties prior to the publication of the CY 2025 PFS proposed rule. Therefore, our proposed clinical labor pricing for CY 2025 in Table 5 is based on the clinical labor pricing that we finalized in the CY 2024 PFS final rule, incremented an additional step for the final Year 4 of the update:

BILLING CODE P

TABLE 5: Proposed CY 2025 Clinical Labor Pricing

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Y4 Rate Per Minute	Total % Change
L023A	Physical Therapy Aide	BLS 31-2022	0.23	0.28	22%
L026A	Medical/Technical Assistant	BLS 31-9092	0.26	0.36	38%
L030A	Lab Tech/MTA	L033A, L026A	0.30	0.46	53%
L032B	EEG Technician	BLS 29-2098	0.32	0.44	38%
L033A	Lab Technician	BLS 29-2010	0.33	0.55	67%
L033B	Optician/COMT	BLS 29-2081, BLS 29-2057	0.33	0.39	18%
L035A	Lab Tech/Histotechnologist	L033A, L037B	0.35	0.60	70%
L037A	Electrodiagnostic Technologist	BLS 29-2098	0.37	0.44	19%
L037B	Histotechnologist	BLS 29-2010	0.37	0.64	73%
L037C	Orthoptist	BLS 29-1141	0.37	0.76	105%
L037D	RN/LPN/MTA	L051A, BLS 29-2061, L026A	0.37	0.54	46%
L037E	Child Life Specialist	BLS 21-1021	0.37	0.49	32%
L038A	COMT/COT/RN/CST	BLS 29-2057, BLS 29-2055, L051A, BLS 19-4010	0.38	0.52	37%
L038B	Cardiovascular Technician	BLS 29-2031	0.38	0.60	58%
L038C	Medical Photographer	BLS 29-2050	0.38	0.38	0%
L039A	Certified Retinal Angiographer	BLS 29-9000	0.39	0.52	33%
L039B	Physical Therapy Assistant	BLS 31-2021	0.39	0.61	56%
L039C	Psychometrist	BLS 21-1029	0.39	0.64	62%
L041A	Vascular Interventional Technologist	ASRT Wage Data	0.41	0.84	104%
L041B	Radiologic Technologist	BLS 29-2034	0.41	0.63	54%
L041C	Second Radiologic Technologist for Vertebroplasty	BLS 29-2034	0.41	0.63	54%
L042A	RN/LPN	L051A, BLS 29-2061	0.42	0.63	50%
L042B	Respiratory Therapist	BLS 29-1126	0.42	0.64	52%
L043A	Mammography Technologist	ASRT Wage Data	0.43	0.79	84%
L045A	Cytotechnologist	BLS 29-9092	0.45	0.85	89%
L045B	Electron Microscopy Technologist	BLS 29-1124	0.45	0.89	98%
L045C	CORF social worker/psychologist	BLS 21-1022, BLS 19-3031	0.45	0.70	56%
L046A	CT Technologist*	ASRT Wage Data	0.46	0.78	70%
L047A	MRI Technologist	BLS 29-2035	0.47	0.76	62%
L047B	REEGT (Electroencephalographic Tech)	BLS 29-2035	0.47	0.76	62%
L047C	RN/Respiratory Therapist	L051A, L042B	0.47	0.70	49%

Labor Code	Labor Description	Source	CY 2021 Rate Per Minute	Final Y4 Rate Per Minute	Total % Change
L107A	Medical Dosimetrist/Medical Physicist	L063A, L152A	1.08	1.52	41%
L152A	Medical Physicist	AAPM Wage Data	1.52	2.14	41%

BILLING CODE C

As was the case for the market-based supply and equipment pricing update, the clinical labor rates will remain open for public comment during the 60-day comment period for this CY 2025 PFS proposed rule. We expect to set the updated clinical labor rates for CY 2025 in the final rule. We updated the pricing of some clinical labor types in the CY 2022, CY 2023, and CY 2024 PFS final rules in response to information provided by commenters. For the full discussion of the clinical labor pricing update, we direct readers to the CY 2022 PFS final rule (86 FR 65020 through 65037).

5. Development of Strategies for Updates to Practice Expense Data Collection and Methodology

a. Background

The AMA PPIS was first introduced in 2007 as a means to collect comprehensive and reliable data on the direct and indirect PEs incurred by physicians (72 FR 66222). In considering the use of PPIS data, the goal was to improve the accuracy and consistency of PE RVUs used in the PFS. The data collection process included a stratified random sample of physicians across various specialties, and the survey was administered between August 2007 and March 2008. Data points from that period of time are integrated into PFS calculations today. In the CY 2009 PFS proposed rule (73 FR 38507 through 3850), we discussed the indirect PE methodology that used data from the AMA's survey that predated the PPIS. In CY 2010 PFS rulemaking, we announced our intent to incorporate the AMA PPIS data into the PFS ratesetting process, which would first affect the PE RVU. In the CY 2010 PFS proposed rule, we outlined a 4-year transition period, during which we would phase in the AMA PPIS data, replacing the existing PE data sources (74 FR 33554). We also explained that our proposals intended to update survey data only (74 FR 33530 through 33531). In our CY 2010 final rule, we finalized our proposal, with minor adjustments based on public comments (74 FR 61749 through 61750). We responded to the comments we received about the transition to using the PPIS to inform indirect PE allocations (74 FR 61750). In the responses, we acknowledged concerns about potential gaps in the data, which could impact the allocation of indirect PE for certain physician specialties and suppliers, which are issues that remain important today. The CY 2010 PFS final rule explains that section 212 of the Balanced Budget Refinement Act of 1999 (Pub. L. 106–113, November 29, 1999) (BBRA) directed the Secretary to establish a process under which we accept and use, to the maximum extent practicable and consistent with sound data practices, data collected or developed by entities and organizations to supplement the data we normally collect in determining the PE component. BBRA required us to establish criteria for accepting supplemental survey data. Since the supplemental surveys were specific to individual specialties and not part of a comprehensive multispecialty survey, we had required that certain precision levels be met in order to ensure that the supplemental data was sufficiently valid, and acceptable for use in the development of the PE RVUs. At the time, our rationale included the assumption that because the PPIS is a contemporaneous, consistently collected, and comprehensive multispecialty survey, we do not believe similar precision requirements are necessary, and we did not propose to establish them for the use of the PPIS data (74 FR 61742). We noted potential gaps in the data, which could impact the allocation of indirect PE for certain physician and suppliers. The CY 2010 final rule adopted the proposal, with minor adjustments based on public comments, and explained that these minor adjustments were in part due to non-response bias that results when the characteristics of survey respondents differ in meaningful ways, such as in the mix of practices sizes, from the general population (74 FR 61749 through 61750).

Throughout the 4-year transition period, from CY 2010 to CY 2013, we gradually incorporated the AMA PPIS data into the PFS rates, replacing the previous data sources. The process involved addressing concerns and making adjustments as necessary, such as refining the PFS ratesetting methodology in consideration of interested party feedback. For background on the refinements that we considered after the transition began, we refer readers to discussions in the CY 2011 through 2014 final rules (75 FR 73178 through 73179; 76 FR 73033 through 73034; 77 FR 98892; 78 FR 74272 through 74276).

In the CY 2011 PFS proposed rule, we requested comments on the methodology for calculating indirect PE RVUs, explicitly seeking input on using survey data, allocation methods, and potential improvements (75 FR 40050). In our CY 2011 PFS final rule, we addressed comments regarding the methodology for indirect PE calculations, focusing on using survey data, allocation methods, and potential improvements (75 FR 73178 through 73179). We recognized some limitations of the current PFS ratesetting methodology but maintained that the approach was the most appropriate at the time. In the CY 2012 PFS final rule, we responded to comments related to indirect PE methodology, including concerns about allocating indirect PE to specific services and using the AMA PPIS data for certain specialties (76 FR 73033 through 73034). We indicated that CMS would continue to review and refine the methodology and work with interested parties to address their concerns. In the CY PFS 2014 final rule, we responded to comments about fully implementing the AMA PPIS data. By 2014, the AMA PPIS data had been fully integrated into the PFS, serving as the primary source for determining indirect PE inputs (78 FR 74235). We continued to review data and the PE methodology annually, considering interested party feedback and evaluating the need for updates or refinements to ensure the accuracy and relevance of PE RVUs (79 FR 67548). In the years following the full implementation of the AMA PPIS data, we further engaged with interested parties, thought leaders and subject matter experts to improve our PE inputs' accuracy and reliability. For further background, we refer readers to our discussions in final rules for CY 2016 through 2022 (80 FR 70892; 81 FR 80175; 82 FR 52980 through 52981; 83 FR 59455 through 59456; 84 FR 62572; 85 FR 84476 through 84478; 86 FR 62572).

In our CY 2023 PFS final rule, we issued an RFI to solicit public comment

on strategies to update PE data collection and methodology (87 FR 69429 through 69432). We solicited comments on current and evolving trends in health care business arrangements, the use of technology, or similar topics that might affect or factor into PE calculations. We reminded readers that we have worked with interested parties and CMS contractors for years to study the landscape and identify possible strategies to reshape the PE portion of physician payments. The fundamental issues are clear but thought leaders and subject matter experts have advocated for more than one tenable approach to updating our PE methodology.

As described in previous rulemaking, we have continued interest in developing a roadmap for updates to our PE methodology that account for changes in the health care landscape. Of various considerations necessary to form a roadmap for updates, we reiterate that allocations of indirect PE continue to present a wide range of challenges and opportunities. As discussed in multiple cycles of previous rulemaking, our PE methodology relies on AMA PPIS data, which may represent the best aggregated available source of information at this time. However, we acknowledge the limitations and challenges interested parties have raised about using the current data for indirect PE allocations, which we have also examined in related ongoing research. We noted in our CY 2023 and CY 2024 rules that there are several competing concerns that CMS must take into account when considering updated data sources, which also should support and enable ongoing refinements to our PE methodology.

b. Preparation for Incorporating Refreshed Data and Request for Information on Timing To Effectuate Routine Updates

In the CY 2024 PFS proposed rule, we continued to encourage interested parties to provide feedback and suggestions to CMS that give an evidentiary basis to shape optimal PE data collection and methodological adjustments over time. Considering our ratesetting methodology and prior experiences implementing new data, we issued a follow-up from the CY 2023 comment solicitation for general information. We solicited comments from interested parties on strategies to incorporate information that could address known challenges we experienced in implementing the initial AMA PPIS data. Our current methodology relies on the AMA PPIS data, legislatively mandated supplemental data sources (for, example, we use supplemental survey data collected in 2003, as required by section 1848(c)(2)(H)(i) of the Act to set rates for oncology and hematology specialties), and in some cases crosswalks to allocate indirect PE as necessary for certain specialties and provider types. We also sought to understand whether, upon completion of the updated PPIS data collection effort by the AMA, contingencies or alternatives may be necessary and available to address the lack of data availability or response rates for a given specialty, set of specialties, or specific service suppliers who are paid under the PFS.

In response to last year's RFI, most commenters stated that CMS should defer significant changes until the AMA PPIS results become available. For further background, refer to 88 FR 78841 to 78843. In responding to our RFI, the AMA RUC provided a set of responses, which many other commenters repeated in their separate, individual comments. In summary, the AMA RUC letter submission from CY 2024 suggested that CMS should not consider further changes until PPIS data collection and analysis is complete. Overall, the AMA comments generally do not support any change to the methodology and stated that CMS should wait to consider any further changes until PPIS updates become available. Further, we noted that through its contractor, Mathematica, the AMA secured an endorsement for the PPIS updates from each State society, national medical specialty society, and others prior to fielding the survey (88 FR 78843). Refer to the AMA's summary of the PPIS, available at *https://www.ama-assn.org/system/files/physician-practice-information-survey-summary.pdf.* The AMA expects analysis, reporting, and documentation to complete by the end of CY 2024, and the AMA would share data with CMS when results become available.

We believe the AMA's approach may possibly mitigate nonresponse bias, which created challenges using previous PPIS data. However, we remain uncertain about whether endorsements prior to fielding the survey may inject other types of bias in the validity and reliability of the information collected. We believe it remains important to reflect on the challenges with our current methodology, and to continue to consider alternatives that improve the stability and accuracy of our overall PE methodology. We reiterate our discussion summarizing the responses to previous years' RFIs in each of the CY 2023 and CY 2024 final rules (refer to 87 FR 69429 through 69432 and 88 FR 78841 to 78843). We have started new work under contract with the RAND Corporation to analyze and develop alternative methods for measuring PE and related inputs for implementation of updates to payment under the PFS. We continue to study possible alternatives, and would include analysis of updated PPIS data, as part of our ongoing work. In the meantime, we request general information from the public on ways that CMS may continue work to improve the stability and predictability of any future updates. Specifically, we request feedback from interested parties regarding scheduled, recurring updates to PE inputs for supply and equipment costs.

We believe that establishing a cycle of timing to update supply and equipment cost inputs every 4 years may be one means of advancing shared goals of stability and predictability. CMS would collect available data, including, but not limited to, submissions and independent third-party data sources, and propose a phase-in period over the following 4 years. The phase-in approach maps to our experience with previous updates. Additionally, we believe that more frequent updates may have the unintended consequence of disproportionate effects of various supplies and equipment that have newly updated costs.

Further, we seek feedback on possible mechanisms to establish a balance whereby our methodology would account for inflation and deflation in supply and equipment costs. We remain uncertain how economies of scale (meaning a general principle that cost per unit of production decreases as the scale of production increases) should or should not factor into future adjustments to our methodology. There remains a diversity of perspectives among interested parties about such effects. We seek information about specific mechanisms that may be appropriate, and in particular, approaches that would leverage verifiable and independent, third-party data that is not managed or controlled by active market participants.

C. Potentially Misvalued Services Under the PFS

1. Background

Section 1848(c)(2)(B) of the Act directs the Secretary to conduct a periodic review, not less often than every 5 years, of the relative value units (RVUs) established under the PFS. Section 1848(c)(2)(K) of the Act requires the Secretary to periodically identify potentially misvalued services using

certain criteria and to review and make appropriate adjustments to the relative values for those services. Section 1848(c)(2)(L) of the Act also requires the Secretary to develop a process to validate the RVUs of certain potentially misvalued codes under the PFS, using the same criteria used to identify potentially misvalued codes, and to make appropriate adjustments.

As discussed in section II.E. of this proposed rule, under Valuation of Specific Codes, each year we develop appropriate adjustments to the RVUs taking into account recommendations provided by the American Medical Association (AMA) Resource-Based Relative Value Scale (RBRVS) Update Committee (RUC), MedPAC, and other interested parties. For many years, the RUC has provided us with recommendations on the appropriate relative values for new, revised, and potentially misvalued PFS services. We review these recommendations on a code-by-code basis and consider these recommendations in conjunction with analyses of other data, such as claims data, to inform the decision-making process as authorized by statute. We may also consider analyses of work time, work RVUs, or direct PE inputs using other data sources, such as the Veterans Health Administration (VHA), National Surgical Quality Improvement Program (NSQIP), the Society for Thoracic Surgeons (STS), and the Merit-based Incentive Payment System (MIPS) data. In addition to considering the most recently available data, we assess the results of physician surveys and specialty recommendations submitted to us by the RUC for our review. We also consider information provided by other interested parties such as from the general medical-related community and the public. We conduct a review to assess the appropriate RVUs in the context of contemporary medical practice. We note that section 1848(c)(2)(A)(ii) of the Act authorizes the use of extrapolation and other techniques to determine the RVUs for physicians' services for which specific data are not available and requires us to take into account the results of consultations with organizations representing physicians who provide the services. In accordance with section 1848(c) of the Act, we determine and make appropriate adjustments to the RVUs.

In its March 2006 Report to the Congress (*https://www.medpac.gov/document/report-to-the-congress-2006-medicare-payment-policy/*), MedPAC discussed the importance of appropriately valuing physicians' services, noting that misvalued services can distort the market for physicians' services, as well as for other health care services that physicians order, such as hospital services. In that same report, MedPAC postulated that physicians' services under the PFS can become misvalued over time. MedPAC stated, ''When a new service is added to the physician fee schedule, it may be assigned a relatively high value because of the time, technical skill, and psychological stress that are often required to furnish that service. Over time, the work required for certain services would be expected to decline as physicians become more familiar with the service and more efficient in furnishing it.'' We believe services can also become overvalued when PE costs decline. This can happen when the costs of equipment and supplies fall, or when equipment is used more frequently than is estimated in the PE methodology, reducing its cost per use. Likewise, services can become undervalued when physician work increases, or PE costs rise.

As MedPAC noted in its March 2009 Report to Congress (*https://www.medpac.gov/docs/default-source/reports/march-2009-report-to-congress-medicare-payment-policy.pdf*), in the intervening years since MedPAC made the initial recommendations, CMS and the RUC have taken several steps to improve the review process. Also, section 1848(c)(2)(K)(ii) of the Act augments our efforts by directing the Secretary to specifically examine, as determined appropriate, potentially misvalued services in the following categories:

- Codes that have experienced the fastest growth.
- Codes that have experienced substantial changes in PE.
- Codes that describe new technologies or services within an appropriate time-period (such as 3 years) after the relative values are initially established for such codes.
- Codes which are multiple codes that are frequently billed in conjunction with furnishing a single service.
- Codes with low relative values, particularly those that are often billed multiple times for a single treatment.
- Codes that have not been subject to review since implementation of the fee schedule.
- Codes that account for the majority of spending under the PFS.
- Codes for services that have experienced a substantial change in the hospital length of stay or procedure time.
- Codes for which there may be a change in the typical site of service since the code was last valued.
- Codes for which there is a significant difference in payment for the same service between different sites of service.
- Codes for which there may be anomalies in relative values within a family of codes.
- Codes for services where there may be efficiencies when a service is furnished at the same time as other services.
- Codes with high intraservice work per unit of time.
- Codes with high PE RVUs.
- Codes with high cost supplies.
- Codes as determined appropriate by the Secretary.

Section 1848(c)(2)(K)(iii) of the Act also specifies that the Secretary may use existing processes to receive recommendations on the review and appropriate adjustment of potentially misvalued services. In addition, the Secretary may conduct surveys, other data collection activities, studies, or other analyses, as the Secretary determines to be appropriate, to facilitate the review and appropriate adjustment of potentially misvalued services. This section also authorizes the use of analytic contractors to identify and analyze potentially misvalued codes, conduct surveys or collect data, and make recommendations on the review and appropriate adjustment of potentially misvalued services. Additionally, this section provides that the Secretary may coordinate the review and adjustment of any RVU with the periodic review described in section 1848(c)(2)(B) of the Act. Section 1848(c)(2)(K)(iii)(V) of the Act specifies that the Secretary may make appropriate coding revisions (including using current processes for consideration of coding changes), which may involve consolidating individual services into bundled codes for payment under the PFS.

2. Progress in Identifying and Reviewing Potentially Misvalued Codes

To fulfill our statutory mandate, we have identified and reviewed numerous potentially misvalued codes as specified in section 1848(c)(2)(K)(ii) of the Act, and we intend to continue our work examining potentially misvalued codes in these areas over the upcoming years. As part of our current process, we identify potentially misvalued codes for review, and request recommendations from the RUC and other public commenters on revised work RVUs and direct PE inputs for those codes. The RUC, through its own processes, also identifies potentially misvalued codes for review. Through our public nomination process for potentially

misvalued codes established in the CY 2012 PFS final rule with comment period (76 FR 73026, 73058 through 73059), other individuals and groups submit nominations for review of potentially misvalued codes as well. Individuals and groups may submit codes for review under the potentially misvalued codes initiative to CMS in one of two ways. Nominations may be submitted to CMS via email or through postal mail. Email submissions should be sent to the CMS emailbox at *MedicarePhysicianFeeSchedule@cms.hhs.gov,* with the phrase ''Potentially Misvalued Codes'' and the referencing CPT code number(s) and/or the CPT descriptor(s) in the subject line. Physical letters for nominations should be sent via the U.S. Postal Service to the Centers for Medicare & Medicaid Services, Mail Stop: C4–01–26, 7500 Security Blvd., Baltimore, Maryland 21244. Envelopes containing the nomination letters must be labeled ''Attention: Division of Practitioner Services, Potentially Misvalued Codes.'' Nominations for consideration in our next annual rule cycle should be received by our February 10th deadline. Since CY 2009, as a part of the annual potentially misvalued code review and Five-Year Review process, we have reviewed over 1,700 potentially misvalued codes to refine work RVUs and direct PE inputs. We have assigned appropriate work RVUs and direct PE inputs for these services as a result of these reviews. A more detailed discussion of the extensive prior reviews of potentially misvalued codes is included in the CY 2012 PFS final rule with comment period (76 FR 73052 through 73055). In the same CY 2012 PFS final rule with comment period, we finalized our policy to consolidate the review of physician work and PE at the same time and established a process for the annual public nomination of potentially misvalued services.

In the CY 2013 PFS final rule with comment period (77 FR 68892, 68896 through 68897), we built upon the work we began in CY 2009 to review potentially misvalued codes that have not been reviewed since the implementation of the PFS (so-called ''Harvard-valued codes'' [1]). In the CY 2019 PFS proposed rule (73 FR 38589), we requested recommendations from the RUC to aid in our review of Harvard-valued codes that had not yet been reviewed, focusing first on high-volume, low intensity codes. In the fourth Five-Year Review of Work RVUs proposed rule (76 FR 32410, 32419), we requested recommendations from the RUC to aid in our review of Harvard-valued codes with annual utilization of greater than 30,000 services. In the CY 2013 PFS final rule with comment period, we identified specific Harvard-valued services with annual allowed charges that total at least $10,000,000 as potentially misvalued. In addition to the Harvard-valued codes, in the CY 2013 PFS final rule with comment period we finalized for review a list of potentially misvalued codes that have stand-alone PE (codes with physician work and no listed work time and codes with no physician work that have listed work time). We continue each year to consider and finalize a list of potentially misvalued codes that have or will be reviewed and revised as appropriate in future rulemaking.

3. CY 2025 Identification and Review of Potentially Misvalued Services

In the CY 2012 PFS final rule with comment period (76 FR 73058), we finalized a process for the public to nominate potentially misvalued codes. In the CY 2015 PFS final rule with comment period (79 FR 67548, 67606 through 67608), we modified this process whereby the public and interested parties may nominate potentially misvalued codes for review by submitting the code with supporting documentation by February 10th of each year. Supporting documentation for codes nominated for the annual review of potentially misvalued codes may include the following:

- Documentation in peer reviewed medical literature or other reliable data that demonstrate changes in physician work due to one or more of the following: technique, knowledge and technology, patient population, site-of-service, length of hospital stay, and work time.
- An anomalous relationship between the code being proposed for review and other codes.
- Evidence that technology has changed physician work.
- Analysis of other data on time and effort measures, such as operating room logs or national and other representative databases.
- Evidence that incorrect assumptions were made in the previous valuation of the service, such as a misleading vignette, survey, or flawed crosswalk assumptions in a previous evaluation.
- Prices for certain high cost supplies or other direct PE inputs that are used to determine PE RVUs are inaccurate and do not reflect current information.
- Analyses of work time, work RVU, or direct PE inputs using other data sources (for example, VA, NSQIP, the STS National Database, and the MIPS data).
- National surveys of work time and intensity from professional and management societies and organizations, such as hospital associations.

We evaluate the supporting documentation submitted with the nominated codes and assess whether the nominated codes appear to be potentially misvalued codes appropriate for review under the annual process. In the following year's PFS proposed rule, we publish the list of nominated codes and indicate for each nominated code whether we agree with its inclusion as a potentially misvalued code. The public has the opportunity to comment on these and all other proposed potentially misvalued codes. In each year's final rule, we finalize our list of potentially misvalued codes.

a. Public Nominations

In each proposed rule, we seek nominations from the public and from interested parties of codes that they believe we should consider as potentially misvalued. We receive public nominations for potentially misvalued codes by February 10th and we display these nominations on our public website, where we include the submitter's name, their associated organization, and the submitted studies for full transparency. We sometimes receive submissions for specific, PE-related inputs for codes, and discuss these PE-related submissions, as necessary under the Determination of PE RVUs section of the rule. We summarize below this year's submissions under the potentially misvalued code initiative. For CY 2025, we received 5 nominations concerning various codes. The nominations are as follows:

(1) CPT Codes 22210, 22212, 22214, 22216

An interested party nominated CPT codes 22210 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; cervical*) (090 day global code), 22212 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; thoracic*) (090 day global code), 22214 (*Osteotomy of spine, posterior or posterolateral approach, 1 vertebral segment; lumbar*) (090 day global code), and 22216 (*Osteotomy of*

[1] The research team and panels of experts at the Harvard School of Public Health developed the original work RVUs for most CPT codes, in a cooperative agreement with the Department of Health and Human Services (HHS). Experts from both inside and outside the Federal Government obtained input from numerous physician specialty groups. This input was incorporated into the initial PFS, which was implemented on January 1, 1992.

spine, posterior or posterolateral approach, 1 vertebral segment; each additional vertebral segment (List separately in addition to primary procedure) (add-on ZZZ) as potentially misvalued for six reasons: (1) incorrect global period; (2) incorrect inpatient days; (3) incorrect intraservice work description; (4) overvalued intraservice times; (5) changed surgical practice; and (6) incorrect use of posterior osteotomy codes. The posterior osteotomy codes were last valued by the RUC in 1995. Currently, CPT code 22210 has a work RVU of 25.38, CPT code 22212 has a work RVU of 20.99, CPT code 22214 has a work RVU of 21.02, and CPT code 22216 has a work RVU of 6.03. CPT codes 22210, 22212, and 22214 have 7 inpatient days each, while CPT code 22216 has 0 inpatient days, and it is an add-on code.

First, the nominator stated that these posterior osteotomies are always performed as an optional addition to a spinal fusion and should be valued as add-on services and not as 90-day global services. We note that no references are provided to support the statement that the service is always performed as an optional addition to a spinal fusion. Second, the nominator explained that the average hospital stay for scoliosis fusion with osteotomy is 4 to 5 days according to the current literature,[2] [3] [4] in contrast with the currently included 7 inpatient days. We note that the majority of the medical literature submitted by the nominator presented outcome information on adolescent patients, which may be different from the Medicare population. Furthermore, the nominator stated that the intraservice work description for CPT code 22216 describes removal of the pedicle, which is not a typical part of a Ponte/Schwab II osteotomy. Among the posterior osteotomy codes, only CPT code 22216 had vignettes and we do not have information to decide whether the code descriptor is correct. We believe this issue would benefit from further review by the medical community and welcome comments and considerations, including from the AMA CPT.

The nominator also asserted that intraservice times were too high, particularly for these osteotomy services furnished with scoliosis fusion procedures. The nominator explained that a typical scoliosis fusion would be billed with an intraservice time of up to 840 minutes for pediatric scoliosis fusion and 915 minutes for adult cases. However, referencing current literature, they observed that a typical scoliosis fusion in a child requires approximately 278 minutes (243–296 minutes),[5] [6] [7] which contrasts significantly with the durations indicated for the current codes. The nominator provided no studies to support a typical scoliosis fusion time in adults. Drawing from the literature, the nominators assert that intraservice times are overvalued for these services and propose that these times should be adjusted to align more closely with average and/or typical surgery times.

The nominator further asserted that this code family is potentially misvalued because surgical practice for these procedures has evolved since 1995. Approximately 30 years ago, osteotomies were infrequently performed and usually reserved for addressing completely ankylosed or fused spinal segments.[8] However, according to the nominator, contemporary surgical techniques often involve posterior osteotomies to release multiple stiff vertebral segments, thereby enhancing coronal correction and reducing thoracic hypokyphosis. In addition to changes in surgical techniques over time, there are notable shifts in the trends regarding the utilization of osteotomies. For instance, between 2007 and 2015, the use of posterior osteotomies in scoliosis cases nearly doubled, increasing from 17 percent to 35 percent.[9] Additionally, 73 percent of patients undergoing scoliosis surgery received posterior osteotomies.[4] This information supports the nominator's assertion that there have been notable changes in the surgical practice for these codes over time.

Lastly, the nominator highlighted incorrect usage of posterior osteotomy codes. They noted instances where facet/soft tissue releases, such as Schwab type I osteotomies, are inaccurately reported with these codes. According to the nominator, isolated partial facetectomy and soft tissue release are already included in spinal fusion procedures and should not be separately billed with an osteotomy code. Additionally, CMS in reviewing data for these services identified potential bundling of services within this code family. For instance, CPT code 22210 is frequently billed alongside CPT code 22600 (*Arthrodesis, posterior or posterolateral technique, single interspace; cervical below C2 segment*) (090-day global code), approximately 83 percent of the time. This indicates a common billing pattern, suggesting potential for coding revisions, including the consideration of consolidating individual services into bundled codes. Overall, based on the six reasons provided by the nominator, along with the fact that these codes were last valued almost 30 years ago, and given the identified billing practices, we concur that CPT codes 22210, 22212, 22214, and 22216 are potentially misvalued. The nominator suggested two options to address this concern: (1) developing add-on codes to differentiate between the number of vertebral segments involved in the osteotomy procedure and whether it occurs in the cervical, thoracic, or lumbar regions; and (2) removing the current posterior osteotomy codes and incorporating osteotomies into new deformity fusion codes, both with and without osteotomy. We are proposing to consider this code family as potentially misvalued and we appreciate the detailed information submitted by the nominator with sufficient supporting evidence. We believe that this code family would benefit from a comprehensive review by the RUC, and we welcome comments on a broader understanding of these codes. Additionally, we seek input on current standard billing practices. For example, information on whether the standard of

practice has evolved over time, and if so, how it has evolved, could aid in identifying potential coding issues related to this matter.

(2) CPT Code 27279

CPT code 27279 (*Arthrodesis, sacroiliac joint, percutaneous or minimally invasive (indirect visualization), with image guidance, includes obtaining bone graft when performed, and placement of transfixing device*) (090 day global code) has been re-nominated as potentially misvalued based on the absence of separate direct PE inputs for this 090 day global code in the nonfacility setting. Currently, CPT code 27279 is only priced under the PFS in the facility setting, but the nominator is requesting that we establish separate direct PE inputs for this service to value the service when performed in the nonfacility/office setting (for example, in an office-based lab). The nominator stated that establishing payment for direct PE inputs in the nonfacility/office setting would increase access to this service for Medicare patients.

We did not nominate CPT code 27279 as potentially misvalued in the CY 2024 PFS final rule, mainly due to a lack of consensus on whether these services may be safely and effectively furnished in the nonfacility/office setting. In this year's submission, the nominator provided three post-market surveillance publications and two independent reviews of minimally invasive sacroiliac (SI) joint fusion procedures to support their assertion that this 90-day surgical service could be safely and effectively furnished in the nonfacility/office setting. Based on the studies, the nominator stated that the current medical literature provides evidence supporting the conclusion that percutaneous or minimally invasive SI joint arthrodesis (CPT code 27279) carries a complication rate that is acceptably low, comparable to other spinal procedures commonly performed in the office-based lab (OBL). For instance, the risk of major complications during lateral trans iliac (LTI) SI joint fusion (CPT code 27279) is lower than the risks associated with other OBL procedures. These include the risk of iliac perforation during angioplasty, the risk of death, myocardial infarction (MI), and stroke during diagnostic cardiac catheterization. The nominator did not reference literature regarding the rates of major complications for other OBL procedures in their submission.

Based on the information submitted we recognize the possibility that CPT code 27279 may be potentially misvalued, given the nominator's assertion that its complication rate is acceptably low based on the five studies they submitted. The results of the studies may suggest that CPT code 27279 can be safely performed in the office-based lab setting, as asserted by the nominator, with a relatively low complication rate. However, upon reviewing the submitted information, we also note that these studies collectively report heterogeneous safety outcomes. The large variabilities in safety outcomes reported in the studies, coupled with several unreported outcomes, may indicate that we have little knowledge about the effect of the service on safety outcomes, prompting the need for further investigation. Therefore, we are not proposing to consider this code as potentially misvalued, and we are instead seeking comments and additional studies from the broader medical community regarding whether this code should be priced under the PFS for the non-facility/office setting.

(3) CPT code 95800

An interested party re-nominated CPT code 95800 (*Sleep study, unattended, simultaneous recording; heart rate, oxygen saturation, respiratory analysis (e.g., by airflow or peripheral arterial tone), and sleep time*) to update practice expenses that were last reviewed in 2017. This code was nominated as potentially misvalued in the CY 2024 PFS proposed rule (88 FR 52283). For the CY 2024 final rule, we stated that we were unable to properly assess whether CPT code 95800 is potentially misvalued based on the evidence submitted with the original nominations and subsequent comments that CMS received (88 FR 78849–78850). This year, an interested party re-nominated CPT code 59800 noting two significant changes: (1) in the technologies available to perform home sleep apnea testing (HSAT) services; and (2) in clinical practice that leads to the typical procedure reported with the CPT code 95800. According to the nominator, the current practice utilizes disposable HSAT technology, such as the WatchPat One device, more often than the reusable equipment currently included in the procedure's direct practice expense (PE) inputs.

To account for these changes, the nominator requested the deletion of three direct PE input codes: (1) equipment code EQ335 (*WatchPAT 200 Unit with strap, cables, charger, booklet, and patient video*); (2) equipment code EQ336 (*Oximetry and Airflow Device*); and (3) supply code SD263 (*WatchPAT pneumo-opt sleep probes), which are WatchPAT probes used with the reusable WatchPAT unit. Instead, the nominator requested the addition of a supply code SD362 (the WatchPAT ONE device*), a disposable HSAT technology, as a replacement. According to our PE supply list, the combined price of the items that the nominator requested to delete (EQ335, EQ336, and SD263) is $4.71 + $4.55 + $73.32 = $82.58, which is $15.62 less than the price of the item that the nominator requested to add (SD362), priced at $98.20. The price of $98.20 is mentioned in the nomination letter without an accompanying specific invoice. Last year, the nominator submitted invoices, showing a price of $99.00 each (a case of 12 totaling $1,188.00) for the WatchPat One Device (SD362) (see Table 6).

TABLE 6: Listing of Nominator's Practice Expense items for addition or deletion to CPT code 95800

Current Equipment/Supply Code	Equipment/Supply Description	Non-Facility/ Office Equipment/Supply PE Cost	Recommended Equipment/ Supply Status
EQ335	WatchPAT 200 Unit with strap, cables, charger, booklet and patient video	$4.71	Delete
EQ336	Oximetry and Airflow Device	$4.55	Delete
SD263	WatchPAT pneumo-opt slp probes (reusable)	$73.32	Delete
SD362	WatchPAT ONE device (disposable)	$98.20	Add

The nominator asserted that testing trends have shifted away from traditional airflow-based tests, with a noticeable rise in peripheral arterial tone (PAT)-based (non-airflow) tests. The traditional airflow-based tests use the reusable supplies and equipment, whereas the PAT-based non-airflow tests use the disposable HSAT device. While describing these changes in trends, the nominator did not provide us with their internal data, thus we are unable to verify its validity. The nominator also stated that disposable HSAT devices were used for nearly 50 percent of CPT code 95800 services in 2023 and attributed the increased use of disposable devices to the COVID–19 public health emergency (PHE). Furthermore, the nominator projected that over 50 percent of CPT code 95800 services will be furnished using disposable devices in 2024 and 2025. Explaining the patterns and predictions, the nominator concluded that the pandemic significantly altered the delivery of HSAT services, with many sleep physicians transitioning to single-use, disposable sleep tests as an alternative to the reusable testing equipment that is shipped from patient-to-patient after post-use cleaning. The nominator believes that, going forward, the typical procedure described by CPT code 95800 in CY 2024 and beyond will be furnished using disposable HSAT devices rather than reusable equipment.

Since the COVID–19 PHE ended in 2023, we are still unclear as to whether the typical procedure reported with CPT code 95800 involves the use of a reusable or disposable HSAT device. Given that we only have access to the nominator's summary of their internal data to observe changes in usage trends, which may not be generalizable, we propose to maintain the current direct PE supply and equipment inputs for CPT code 95800. While we are not currently proposing to review CPT code 95800 as potentially misvalued for CY 2025, we seek public comments on this nomination. In particular, we seek comments on whether the typical procedure described by CPT code 95800 now involves the use of a disposable HSAT device rather than reusable equipment.

(4) CPT codes 10021, 10004, 10005, 10006

An interested party nominated the CPT code 10021 (*Fine needle aspiration biopsy, without imaging guidance; first lesion*), CPT code 10004 (*Fine needle aspiration biopsy, without imaging guidance; each additional lesion*), CPT code 10005 (*Fine needle aspiration biopsy, including ultrasound guidance; first lesion*) and CPT code 10006 (*Fine needle aspiration biopsy, including ultrasound guidance; each additional lesion*) as potentially misvalued. We note that this code family has been nominated several times in recent years. We discussed our review of these codes and our rationale for finalizing the current values extensively in the CY 2019 PFS final rule (83 FR 59517), and CY 2021 PFS final rule (85 FR 84602). Furthermore, this code family was nominated as potentially misvalued and discussed in the CY 2020 PFS final rule (84 FR 62625). For more information we encourage the interested parties to go to our previous PFS final rules.

The nominator specifically requested that we revisit our work RVU decisions for these codes, stating that the underpinnings of the reduction in work RVUs from the RUC-recommended values were flawed. The nominator suggested that CMS should adopt the RUC-recommended work RVUs. For CPT code 10021, the RUC recommended a work RVU of 1.20, but we adopted a lower value of 1.03. Similarly, for CPT code 10005, the RUC recommended a work RVU of 1.63, but we adopted 1.46. The nominator disagreed with these reductions from the RUC-recommended values by CMS, raising particular concerns about our choice for the RVU crosswalk for CPT code 36440 (*Push blood transfusion, patient 2 years or younger*). According to the nominator, the CPT code we chose is not comparable to fine needle aspiration in any respect other than service time. The nominator raised several points, including that CPT code 36440 is rarely utilized and is almost never billed to Medicare because it pertains to a pediatric procedure conducted on neonates, while CPT code 10021 is never performed on neonates. They further asserted that the training and experience levels required to properly perform these procedures differ significantly; neonatal transfusions can be conducted by less experienced personnel, while performing a thyroid fine needle aspiration demands more experience. Specifically, they argued that there is a notable difference in the work intensity between the two procedures. The thyroid is closely positioned to vital structures such as the carotid artery, jugular vein, lymphatic vessels, nerves, trachea, and esophagus. When sampling thyroid nodules, they are often in proximity to the carotid artery, jugular vein, or both. According to the nominator, even a slight deviation of 1–2 millimeters during the sampling procedure can result in accidental puncture of these critical blood vessels or other nearby structures. Factors such as respiratory movements, patient swallowing, or anxiety may cause the thyroid to move, further increasing the

risk during the procedure. In contrast, neonatal phlebotomy does not require such measures. Also, the CPT code 36440 is designated as facility-only, meaning it does not include any clinical staff pre-service time and has no associated practice expense inputs. According to the nominator, fine needle aspiration is a very complex and high-risk procedure that may require significant physician work and a higher level of clinical expertise to furnish the service, which is very different from CPT code 36440. We appreciated the survey (N=74) results that the nominator submitted to support their statements. The nominator-conducted survey, and their survey questions aimed to gather information on the practitioners' experiences, opinions, and practices related to fine needle aspiration procedures. However, no other references such as peer reviewed medical literature or other nationally representative survey data were provided to reinforce their argument.

The nominator further stated that thyroid fine needle aspiration should exclusively be performed as an outpatient procedure and does not require hospitalization. The nominator emphasized that the reduction in payment for the code family due to the reduction in work RVUs from the RUC-recommended values has led endocrinologists in office-based practices, those who are not affiliated with facilities, to discontinue furnishing this service. According to the nominator, as a consequence of this payment decrease, patients are now being referred to hospital-based radiology practices, despite the fact that thyroid fine needle aspiration should ideally be conducted exclusively in nonfacility outpatient settings. The nominator asserted that radiologists in hospital settings are often unfamiliar with the patient's medical history and risk factors for suspected thyroid cancer. The nominator further noted that radiologists' training in thyroid cancer primarily emphasizes imaging and procedures, rather than considering the patient's overall health perspective. This result may further lead to an increase in medically unnecessary procedures. Additionally, the nominator believes that the payment reduction for this code family has the potential to diminish the specialist workforce trained to perform these procedures, thereby presenting future challenges in patient care and access to specialized services.

Overall, we appreciate the comprehensive information and level of detail provided by the nominator. The nominator disagreed with the choice of crosswalk CPT code 36440 made by CMS, emphasizing the differences in provider training, procedure risk, and patient population. They noted the rarity of Medicare billing for this code. Additionally, they emphasized the importance of outpatient thyroid fine needle aspiration being performed by endocrinologists. The shift to facility settings, prompted by reduced work RVUs, could raise Medicare costs. This, along with a potential decline in specialist workforce, may hinder patient access. However, in discussing this group of codes, we must note that these codes have been recently reviewed multiple times through the annual PFS rulemaking process. We would like to clarify once again that we disagree with the nominator that this code family is potentially misvalued. We acknowledge the possibility that there could be significant changes in the practice of delivering services described by these codes that were not fully reflected in the current work RVU. In such cases, it would be appropriate to refer the codes to the RUC to conduct a new survey to capture these changes accurately. However, we note that these codes underwent thorough RUC survey and review processes during the October 2017 and January 2018 RUC meetings. Based on these considerations, we disagree with the assertion that this code family is potentially misvalued. Nevertheless, we welcome comments on whether these codes should be re-reviewed in light of the arguments made by the nominator.

(5) Tympanostomy codes

CMS routinely interacts with interested parties, and in our most recent review, we have observed several new devices that could be beneficial for populations but are not currently included in our coding system. While there are variations in the described devices, they commonly share the following descriptions. This device uses an innovative surgical technology that combines the separate functions of creating a myringotomy (incision in the eardrum), and positioning and placing a ventilation tube across the tympanic membrane. The new device is intended to deliver a tympanostomy tube (also referred to as a ventilation tube) through the tympanic membrane of the patient and is indicated to be used in office settings for pediatric patients 6 months and older. This device allows the tympanostomy service to be furnished to patients without general anesthesia and the service could therefore be performed in the office setting.

Regarding the delivery of this service using innovative surgical technology, CMS recognizes that CPT code 69433 (*Tympanostomy (requiring insertion of ventilating tube), local or topical anesthesia*) (010-day global code) may serve as a sufficient base code, adequately describing the majority of the surgeon's work and facility resources. However, a practitioner may incur additional resources, due to the higher expected intraservice work driven by both time and intensity factors, especially when furnishing a service to a child, and the cost of the device when using these devices as part of the performed procedure. While the existing CPT code 69433 is not age-specific, both the vignette and the RVU associated with this procedure are established for adult patients who can respond to surgeon direction, and do not have risk of movement during the procedure. We believe that potentially establishing additional coding and payment for tympanostomy services may enable the provision of these services utilizing new technologies to a broader patient population who may benefit from innovative surgical technology. To improve the accuracy of the payment for these services, we are soliciting comments on several alternatives that we are considering for adoption in the CY 2025 PFS final rule or future rulemaking. First, we are seeking comment on whether to establish a new G code that accounts for the work and practice expense for a procedure involving the positioning and placement of a ventilation tube across the tympanic membrane using an innovative surgical technology that combines the separate functions of creating a myringotomy (incision in the eardrum). We could assign contractor pricing to this potential G code for generalizable innovative tympanostomy tube delivery devices and/or systems falling under emerging technology and services categories. Alternatively, we are seeking comment on whether we should establish an add-on payment for the service using inputs from CPT code 69433 as a crosswalk reference, plus direct costs from invoices for the surgical devices referenced above. We are seeking comments regarding these potential approaches, particularly on whether there is additional information we should consider if we were to establish additional coding and payment for these services.

D. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

As discussed in prior rulemaking, several conditions must be met for Medicare to make payment for telehealth services under the PFS. See

further details and full discussion of the scope of Medicare telehealth services in the CY 2018 PFS final rule (82 FR 53006), the CY 2021 PFS final rule (85 FR 84502) and the CY 2024 PFS final rule (88 FR 78861 through 78866) and in 42 CFR 410.78 and 414.65. For a discussion of Telemedicine Evaluation and Management (E/M) Services, we refer readers to section II.E.4.18 of this proposed rule.

1. Payment for Medicare Telehealth Services Under Section 1834(m) of the Act

a. Changes to the Medicare Telehealth Services List

In the CY 2003 PFS final rule with comment period (67 FR 79988), we established a regulatory process for adding services to or deleting services from the Medicare Telehealth Services List in accordance with section 1834(m)(4)(F)(ii) of the Act. This process provides the public with an ongoing opportunity to submit requests for adding services, which are then reviewed by us and assigned to categories established through notice and comment rulemaking. Under the process we established beginning in CY 2003, we evaluated whether a service meets the following criteria:

- *Category 1:* Services similar to professional consultations, office visits, and office psychiatry services currently on the Medicare Telehealth Services List. In reviewing these requests, we looked for similarities between the requested and existing telehealth services for the roles of, and interactions among, the beneficiary, the physician (or other practitioner) at the distant site, and, if necessary, the telepresenter, a practitioner who was present with the beneficiary in the originating site. We also looked for similarities in the telecommunications system used to deliver the service, for example, the use of interactive audio and video equipment.
- *Category 2:* Services that are not similar to those on the current Medicare Telehealth Services List. Our review of these requests included assessing whether the service was accurately described by the corresponding code when furnished via telehealth and whether using a telecommunications system to furnish the service produces demonstrated clinical benefit to the patient. Submitted evidence should have included both a description of relevant clinical studies that demonstrated the service furnished by telehealth to a Medicare beneficiary improves the diagnosis or treatment of an illness or injury or improves the functioning of a malformed body part, including dates and findings, and a list and copies of published peer-reviewed articles relevant to the service when furnished via telehealth. Our evidentiary standard of clinical benefit did not include minor or incidental benefits. Some examples of other clinical benefits that we considered include the following:
  - Ability to diagnose a medical condition in a patient population without access to clinically appropriate in-person diagnostic services.
  - Treatment option for a patient population without access to clinically appropriate in-person treatment options.
  - Reduced rate of complications.
  - Decreased rate of subsequent diagnostic or therapeutic interventions (for example, due to reduced rate of recurrence of the disease process).
  - Decreased number of future hospitalizations or physician visits.
  - More rapid beneficial resolution of the disease process treatment.
  - Decreased pain, bleeding, or other quantifiable signs or symptoms.
  - Reduced recovery time.

In the CY 2021 PFS final rule (85 FR 84507), we created a third category of criteria for adding services to the Medicare Telehealth Services List on a temporary basis following the end of the PHE for the COVID–19 pandemic. This new category described services that were added to the Medicare Telehealth Services List during the PHE, for which there was likely to be clinical benefit when furnished via telehealth, but there was not yet sufficient evidence available to consider the services for permanent addition under the Category 1 or Category 2 criteria. Services added on a temporary, Category 3 basis ultimately needed to meet the criteria under Category 1 or 2 in order to be permanently added to the *Medicare Telehealth* Services List. To add specific services on a Category 3 basis, we would conduct a clinical assessment to identify those services for which we could foresee a reasonable potential likelihood of clinical benefit when furnished via telehealth.

In the CY 2024 PFS final rule (88 FR 78861 through 78866), we consolidated these three categories and implemented a revised 5-step process for making additions, deletions, and changes to the Medicare Telehealth Services List (5-step process), beginning for the CY 2025 Medicare Telehealth Services List. Rather than categorizing a service as ''Category 1'' or ''Category 2,'' each service is now assigned a ''permanent'' or ''provisional'' status. As described further below, a service is assigned a ''provisional'' status if there is not enough evidence to demonstrate that the service is of clinical benefit, but there is enough evidence to suggest that further study may demonstrate such benefit. The 5-step process review criteria are set forth in the CY 2024 PFS final rule (88 FR 78861 through 78866), listed at *https://www.cms.gov/medicare/coverage/telehealth/criteria-request*, and summarized below. Consistent with the deadline for our receipt of code valuation recommendations from the American Medical Association's Relative Value Scale Update Committee (AMA RUC) and other interested parties (83 FR 59491) and with the process set forth in prior calendar years, for CY 2025, requests to add services to the Medicare Telehealth Services List must have been submitted to and received by CMS by February 10, 2024. Each request to add a service to the Medicare Telehealth Services List must have included any supporting documentation the requester wishes us to consider as we review the request. Because we use the annual PFS rulemaking process to make changes to the Medicare Telehealth Services List, requesters are advised that any information submitted as part of a request is subject to public disclosure for this purpose. For more information on submitting a request to add services to the Medicare Telehealth Services List, including where to send these requests, and to view the current Medicare Telehealth Service List, see our website at *https://www.cms.gov/Medicare/Medicare-General-Information/Telehealth/index.html*.

Step 1. Determine whether the service is separately payable under the PFS.

When considering whether to add, remove, or change the status of a service on the Medicare Telehealth Services List, we first determine whether the service, as described by the individual HCPCS code, is separately payable under the PFS because, as further discussed in CY 2024 PFS final rule (88 FR 78861 through 78866), Medicare telehealth services are limited to those services for which separate Medicare payments can be made under the PFS. Before gathering evidence and preparing to submit a request to add a service to the Medicare Telehealth Services List, the submitter should therefore first check the payment status for a given service and ensure that the service (as identified by a HCPCS code), is a covered and separately payable service under the PFS (as identified by payment status indicators A, C, T, or R on our public use files).

Step 2. Determine whether the service is subject to the provisions of section 1834(m) of the Act.

If we determine at Step 1 that a service is separately payable under the PFS, we apply Step 2 under which we determine whether the service at issue is subject to the provisions of section 1834(m) of the Act. Section 1834(m) of the Act provides for payment to a physician (or other practitioner) for a service furnished via an interactive telecommunications system, notwithstanding that the furnishing practitioner and patient are not in the same location, at the same amount that would have been paid if the service was furnished without the telecommunications system. We have historically interpreted this to mean that only services that are ordinarily furnished with the furnishing practitioner and patient in the same location can be classified as a ''telehealth service'' for which payment can be made under section 1834(m) of the Act. Given that there may be a range of services delivered using certain telecommunications technology that, though they are separately payable under the PFS, do not fall within the definition of telehealth service set forth in section 1834(m) of the Act, the aim of Step 2 is therefore to determine whether the service at issue is, in whole or in part, inherently a face-to-face service. Such services generally include services that do not require the presence of, or involve interaction with, the patient (for example, remote interpretation of diagnostic imaging tests, and certain care management services). Other examples include virtual check-ins, e-visits, and remote patient monitoring services which involve the use of telecommunications technology to facilitate interactions between the patient and practitioner, but do not serve as a substitute for an in-person encounter, for example, to assess whether an in-person or telehealth visit is needed or to transmit health information to the practitioner.

In determining whether a service is subject to the provisions of section 1834(m) of the Act, we therefore review during this Step 2 whether one or more of the elements of the service, as described by the particular HCPCS code at issue, ordinarily involve direct, face-to-face interaction between the patient and practitioner such that the use of an interactive telecommunications system to deliver the service would be a substitute for an in-person visit.

Step 3. Review the elements of the service as described by the HCPCS code and determine whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3).

Step 3 is corollary to Step 2, and is used to determine whether one or more elements of a service are capable of being delivered via an interactive telecommunication system as defined in § 410.78(a)(3). In Step 3, we consider whether one or more face-to-face component(s) of the service, if furnished via audio-video communications technology, would be equivalent to the service being furnished in-person, and we seek information from requesters to demonstrate evidence of substantial clinical improvement in different beneficiary populations that may benefit from the requested service when furnished via telehealth, including, for example, in rural populations. The services are not equivalent when the clinical actions, or patient interaction, would not be of similar content as an in-person visit, or could not be completed.

Step 4. Consider whether the service elements of the requested service map to the service elements of a service on the list that has a permanent status described in previous final rulemaking.

The purpose of Step 4 is to simplify and reduce the administrative burden of submission and review. For Step 4, we review whether the service elements of a code that we are considering for addition to, or removal from, the Medicare Telehealth Services List map to the service elements of a service that is already on the list and is assigned permanent status. Any code that satisfies this criterion would require no further analysis. If the service elements of a code maps to the service elements of a code that is already included on the Medicare Telehealth Services List and is assigned permanent basis, we will add the code to the Medicare Telehealth Services List and assign it permanent status. While we have not previously found that the service elements of a code we are considering for addition to the list map to the elements of a service that was previously added to the list and assigned permanent basis, we believe that it is appropriate to apply this step 4 analysis to compare the candidate service with any permanent code that is on the list on a permanent basis. When Step 4 is met, further evidence review is not necessary. We continue to Step 5 if Step 4 is not met.

Step 5. Consider whether there is evidence of clinical benefit analogous to the clinical benefit of the in-person service when the patient, who is located at a telehealth originating site, receives a service furnished by a physician or practitioner located at a distant site using an interactive telecommunications system.

Similar to Steps 3, 4, and 5 above, the purpose of the proposed step 5 is to simplify and reduce the administrative burden. Under Step 5, we review the evidence provided with a submission to determine the clinical benefit of a service. We then compare the clinical benefit of that service, when provided via telehealth, to the clinical benefit of the service if it were to be furnished in person. If there is enough evidence to suggest that further study may demonstrate that the service, when provided via telehealth, is of clinical benefit, CMS will assign the code a ''provisional'' status on the Medicare Telehealth Services List. Where the clinical benefit of a service, when provided via telehealth, is clearly analogous to the clinical benefit of the service when provided in person, CMS will assign the code ''permanent'' status on the Medicare Telehealth Services List, even if the code's service elements do not map to the service elements of a service that already has permanent status. We reminded readers that our evidentiary standard of demonstrated clinical benefit does not include minor or incidental benefits (81 FR 80194). We review the evidence submitted by interested parties, and other evidence that CMS has on hand. The evidence should indicate that the service can be safely delivered using two-way interactive audio-video communications technology. Clinical practice guidelines, peer-reviewed literature, and similar materials, should illustrate specifically how the methods and findings within the material establish a foundation of support that each element of the defined, individual service described by the existing face-to-face service code has been studied in the typical setting of care, typical population of beneficiaries, and typical clinical scenarios that practitioners would encounter when furnishing the service using only interactive, two-way audio-video communications technology to complete the visit or encounter with Medicare beneficiaries. General evidence may also answer the question of whether a certain beneficiary population requiring care for a specific illness or injury may benefit from receiving a service via telehealth versus receiving no service at all, but must establish that the service is a substitute for an equivalent in-person service. Evidence should demonstrate how all elements described by the individual service code can be met when two-way, interactive audio-video communications technology is used as a complete substitute for any face-to-face interaction required between the patient and practitioner that are described in the individual code descriptor. We further remind readers that submissions

reflecting practitioner services furnished to Medicare beneficiaries are helpful in our considerations.

b. Requests To Add Services to the Medicare Telehealth Services List for CY 2025

We received several requests to permanently add various services to the Medicare Telehealth Services List, effective for CY 2025. The requested services are listed in Table 7.

Many services were added to the Medicare Telehealth Services List on a temporary basis as discussed in the March 31st COVID–19 interim final rule with comment period (IFC) (85 FR 19235 through 19237) for the PHE for Covid-19, and we subsequently retained these services on a provisional basis. All of the received submissions were requests for addition on a permanent basis. We believe that, rather than selectively adjudicating only those services for which we received requests for potential permanent status, it would be appropriate to complete a comprehensive analysis of all provisional codes currently on the Medicare Telehealth Services List before determining which codes should be made permanent. We are therefore not making determinations to recategorize provisional codes as permanent until such time as CMS can complete a comprehensive analysis of all such provisional codes which we expect to address in future rulemaking.

The following is a discussion of the requests received for addition of services to the Medicare Telehealth Services List:

(1) Continuous Glucose Monitoring

We received a request to add CPT code 95251 (*Ambulatory continuous glucose monitoring of interstitial tissue fluid via a subcutaneous sensor for a minimum of 72 hours; analysis, interpretation and report*) to the Medicare Telehealth Services List and assign it permanent status. This code is not on the Medicare Telehealth Services List, nor had it been previously added and removed. The requester stated that the ability of the practitioner to interpret continuous glucose monitoring data and communicate changes in the diabetes care plan to our patients is enhanced by the availability of video visits, and the code should therefore be added to the Medicare Telehealth Services List. This service does not meet the criteria described by Step 2 of the 5-step process: determination of whether the service is subject to the provisions of section 1834(m) of the Act. Section 1834(m) of the Act limits the definition of Medicare telehealth services to those services that would ordinarily be furnished with the furnishing practitioner and patient in the same location (88 78863). In other words, as stated above, for a service to be considered a Medicare telehealth service subject to and payable under section 1834(m) of the Act, the service must be so analogous to in-person care such that the telehealth service, as defined in § 410.78, is essentially a substitute for a face-to-face encounter. We do not consider this service a Medicare telehealth service because it is not an inherently face-to-face service; the patient does not need to be present for the service to be furnished in its entirety. CPT code 95251 describes sensor placement and monitoring over a 72-hour period. We do not consider CPT code 95251 a telehealth service under section 1834(m) of the Act or our regulation at § 410.78. Therefore, we are not proposing to add this service to the Medicare Telehealth Services List.

(2) Cardiovascular and Pulmonary Rehabilitation

We received requests to permanently add cardiovascular *rehabilitation* services (CPT codes 93797 and 93798) and *pulmonary rehabilitation* services (CPT codes 94625 and 94626) to the Medicare Telehealth Services List. These services are currently on the Medicare Telehealth List and are assigned provisional status. We had originally added CPT codes 93797 and 93798 and HCPCS codes G0422 and G0423 on a temporary basis in the CY 2022 PFS final rule (FR 86 65054 through 65055). A requester cited studies that they say demonstrate that the availability of these services via telehealth enhances access and patient equity. Another requester cited evidence of improved outcomes for patients that had access to these services via telehealth. As explained previously, we are not proposing to revise the status of codes from provisional to permanent in this proposed rule because we intend to conduct a comprehensive review. While considering these issues for future rulemaking, we are not proposing to assign CPT codes 93797 and 93798 or CPT codes 94625 and 94626 permanent status on the Medicare Telehealth Services List and would instead maintain the services on the Medicare Telehealth Services List on a provisional basis for CY 2025.

(3) Health and Well Being-Coaching

We received a request to add Health and Well-Being Coaching (CPT codes 0591T–0593T) to the Medicare Telehealth Services List with permanent status. These services are currently on the Medicare Telehealth Services List and are assigned a provisional status. We originally added these codes on a provisional basis in the CY 2024 PFS final rule (FR 88 78859 and 78860). One requester stated that health and well-being coaching, including content education, delivered in a telehealth modality is an evidence-based, cost-

effective, sustainable, and common sense approach to facilitating lifestyle/behavioral intervention and treating the Medicare population with or at heightened risk for chronic diseases. As explained previously, we are not proposing to revise the status of codes from provisional to permanent in this proposed rule because we intend to conduct a comprehensive review. Therefore, we are not proposing to assign them to the Medicare Telehealth Services List with permanent status.

(4) Psychological Testing and Developmental Testing

We received a request to add Psychological Testing and Developmental Testing (CPT codes 96112, 96113, 96130, 96136, and 96137) to the Medicare Telehealth Services List on a permanent basis. These services are currently on the Medicare Telehealth Services List and are assigned provisional status. In the March 31, 2020 interim final rule with comment period (IFC–1) (85 FR 19239), we originally added CPT codes 96130, 96136, and 96137 to the Medicare Telehealth Services List for the duration of the PHE for COVID–19, and in the CY 2021 PFS final rule (85 FR 85003), we stated we were retaining them on the list on a category 3 basis. In the CY 2023 PFS final rule (87 FR 69460), we added CPT codes 96112 and 96113 on a temporary basis.

As explained previously, we are not proposing to revise the status of codes from provisional to permanent in this proposed rule because we intend to conduct a comprehensive review. Therefore, we are not proposing to either remove these services from or to assign them permanent status on the Medicare Telehealth Services List.

(5) Therapy/Audiology/Speech Language Pathology

We received multiple requests to add the Therapy services described by CPT codes 97110, 97112, 97116, 97161 through 97164, 97530 and 97535, 97165 through 97168, and Audiology and Speech Language Pathology services CPT codes 92507, 92508, 92521 through 92524, 92526, 92607 through 92610, 96105 92626, 92627, 96125, 97129, 97130, 92607 through 92609 92550 through 92557, 92563, 92565 92567, 92568, 92570, 92587, 92588, 92601 through 92604, 92625 through 92627, and 92651 and 92652 to the Medicare Telehealth Services List on a permanent basis stating that continuing Telehealth flexibilities for these services could lead to reduced health care expenditures, increased patient access, and improved management of chronic disease and quality of life. These services are currently available on the Medicare Telehealth Services List and are assigned provisional status, and we refer readers to section II.D.1. for further discussion of these services. In the CY 2023 PFS final rule (87 FR 69451), we originally added CPT codes 90901, 97150, 97530, 97537, 97542, 97763, and 98960–98962 to the Medicare Telehealth Services List on a Category 3 basis. As explained previously, we are not proposing to revise the status of codes from provisional to permanent in this proposed rule because we intend to conduct a comprehensive review. Therefore, we are not proposing to assign them permanent status on the Medicare Telehealth Services List.

(6) Care Management

We received a request to permanently add General Behavioral Health Integration (CPT code 99484) and Principal Care Management (CPT codes 99424–99427) to the Medicare Telehealth Services List. These services are not on the Medicare Telehealth Services List, nor have they been previously added and removed. These services do not meet the criteria described by Step 2 of the 5-step process: determination of whether the service is subject to the provisions of section 1834(m) of the Act. As stated above, the scope of section 1834(m) of the Act is limited to services that would ordinarily be furnished with the furnishing practitioner and patient in the same location (88 78863), and for a service to be considered a telehealth service subject to and payable under section 1834(m) of the Act, the service must be so analogous to in-person care such that the telehealth service, as defined in § 410.78, is essentially a substitute for a face-to-face encounter. We do not consider these services to be Medicare telehealth services because they are not inherently face-to-face services, and the patient need not be present for the services to be furnished in its entirety. Therefore, we do not consider CPT codes 99484 and 99424–99427 to be telehealth services under section 1834(m) of the Act or our regulation at § 410.78. Therefore, we are not proposing to add this service to the Medicare Telehealth Services List.

(7) Posterior Tibial Nerve Stimulation for Voiding Dysfunction

We received a request to permanently add Posterior tibial neurostimulation (CPT code 64566) to the Medicare Telehealth Services List. This code is not on the Medicare Telehealth Services List, nor had it been previously added and removed. This service does not meet the criteria for addition described by Step 3 of the 5-step process, namely the review the elements of the service as described by the HCPCS code and determine whether each of them is capable of being furnished using an interactive telecommunications system as defined in § 410.78(a)(3). The requestor describes the services underlying CPT code 64566 as the continual or recurring treatments over a period of time consisting of the remote monitoring of device utilization and bladder diary for the generation of reports for review by the care provider. Based on our review, this description does not align with the elements of the service as described by CPT code 64566. CPT code 64566 describes a single treatment provided by a clinician who has direct contact with the patient and inserts an electrode into the skin overlying the posterior tibial nerve. Upon conclusion of the treatment, the clinician removes the electrode and examines and dresses the puncture wound. Providing these services would require in-person interaction. We are therefore not proposing to add the service to the Medicare Telehealth Services List because we do not believe the service elements can be met in full using two-way audio-video telecommunications technology.

(8) Radiation Treatment Management

We received requests to permanently add Radiation Treatment Management (CPT code 77427) to the Medicare Telehealth Services List. The code is currently on the Medicare Telehealth List with provisional status. In the March 31, 2020 IFC (85 FR 9240), we originally added CPT code 77427 on the Medicare Telehealth Services List for the duration of the PHE for Covid–19. A requester stated that data collected during the PHE demonstrates that the telehealth option is as safe as the in-person equivalent. We also received a request that we remove this code from the Medicare Telehealth Services List, citing the importance of in-person physical examination to ensure quality of care and stating that a telehealth modality presents patient safety concerns such as those related to the ability of the practitioner to address side effects of radiation therapy. Given the safety concerns raised by members of the practitioner community, we believe this service may not be safely and effectively furnished, and therefore believe that such concerns merit removing this item from the telehealth list. We are therefore proposing to remove this code from the Medicare Telehealth Services List, and we are

soliciting comment on these quality of care concerns.

(9) Home International Normalized Ratio (INR) Monitoring

We received a request to permanently add Home INR Monitoring (HCPCS code G0248) to the Medicare Telehealth Services List. This service is not on the Medicare Telehealth Services List, nor had it been previously added and removed. We are proposing to add HCPS code G0248 to the Medicare Telehealth Services List with provision status because our clinical analyses of these services indicate that they can be furnished in full using two-way, audio and video technology, and information provided by requesters indicates that there may be clinical benefit; however, there is not yet sufficient evidence available to consider the services for permanent status. This service as described by the HCPCS code describes face-to-face demonstration of use and care of the INR monitor, obtaining at least one blood sample, provision of instructions for reporting home INR test results, and documentation of patient's ability to perform testing and report results, and we believe each of these service elements the elements is capable of being furnished using an interactive telecommunications system. Adding this service on a provisional basis will allow additional time for the development of evidence of clinical benefit when this service is furnished via telehealth for CMS to consider when evaluating this service for potential permanent addition to the Medicare Telehealth Services List.

(10) Caregiver Training

We received a request to permanently add Caregiver Training services, as described by HCPCS codes 97550 (*Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [iADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; initial 30 minutes*) and CPT code 97551 *(Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [ADLs], instrumental ADLs [iADLs], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; each additional 15 minutes (List separately in addition to code for primary service))* to the Medicare Telehealth Services List. These codes do not currently appear on the Medicare Telehealth Services List nor had they previously been added or removed. We are proposing to add these services to the Medicare Telehealth List with provisional status for CY 2025, in addition to the other currently payable caregiver training service codes (CPT codes 97550, 97551, 97552, 96202, 96203). These codes are new services that were added to the PFS beginning in 2024. Given the limited utilization of those codes added for 2024, there are not peer-reviewed studies supporting these codes' ability to be furnished remotely. Adding these services on a provisional basis will allow additional time for the development of evidence of clinical benefit when these services are furnished via telehealth for CMS to consider when evaluating these services for potential permanent addition to the Medicare Telehealth Services List. Contingent upon finalizing the service code descriptions that we propose in section II.E. of this proposed rule, we also propose that HCPCS code GCTD1–3 and GCTB1–2 be added to the Medicare Telehealth Services list for CY 2025 on a provisional basis. We believe that these codes are similar to other services already available on the Medicare Telehealth Services List, including education and training for patient self-management (CPT codes 98960–98962), self-care/home management training (CPT codes 97535), and caregiver-focused health risk assessment (CPT code 96161). Further, it appears that all elements of these services may be furnished when using two-way interactive communications technology. Adding these services on a provisional basis will allow additional time for the development of evidence of clinical benefit when this service is furnished via telehealth for CMS to consider when evaluating these services for potential permanent addition to the Medicare Telehealth Services List.

c. Other Services Proposed for Addition to the Medicare Telehealth Services List

(1) Preexposure Prophylaxis (PrEP) of Human Immunodeficiency Virus (HIV)

As discussed in Section II.E. of this proposed rule, we are proposing national rates for HCPCS codes G0011 (Individual counseling for pre-exposure prophylaxis (PrEP) by physician or QHP to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence, 15–30 minutes) and G0013 (Individual counseling for pre-exposure prophylaxis (PrEP) by clinical staff to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence) pending the future finalization of the NCD for Pre-Exposure Prophylaxis (PrEP) for Human Immunodeficiency Virus (HIV) Infection. We believe these services are similar to services currently on the Medicare Telehealth Services list, specifically HCPCS codes G0445 (High intensity behavioral counseling to prevent sexually transmitted infection; face-to-face, individual, includes: education, skills training and guidance on how to change sexual behavior; performed semi-annually, 30 minutes) and CPT code 99211 (Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional) as these codes are the codes from which HCPCS codes G0011 and G0013 were unbundled, respectively. As similarity to services currently on the Medicare telehealth list is one of our criteria for permanent addition, we are proposing to add HCPCS codes G0011 and G0013 to the Medicare Telehealth Services List with a permanent status.

The services that we are proposing to add to the Medicare Telehealth Services List are listed in Table 8.

BILLING CODE P

TABLE 8: Services Proposed for Addition to the Medicare Telehealth Services List for CY 2025

Category	HCPCS	Long Description	Proposed Status
PrEP for HIV	G0011	Individual counseling for pre-exposure prophylaxis (PrEP) by physician or QHP to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence, 15-30 minutes	Permanent
	G0013	Individual counseling for pre-exposure prophylaxis (PrEP) by clinical staff to prevent human immunodeficiency virus (HIV), includes: HIV risk assessment (initial or continued assessment of risk), HIV risk reduction and medication adherence	Permanent
Home INR Monitoring	G0248	Demonstration, prior to initiation of home inr monitoring, for patient with either mechanical heart valve(s), chronic atrial fibrillation, or venous thromboembolism who meets medicare coverage criteria, under the direction of a physician; includes: face-to-face demonstration of use and care of the inr monitor, obtaining at least one blood sample, provision of instructions for reporting home inr test results, and documentation of patient's ability to perform testing and report results	Provisional
Caregiver Training	97550	Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [adls], instrumental adls [iadls], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; initial 30 minutes	Provisional
	97551	Caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities of daily living [adls], instrumental adls [iadls], transfers, mobility, communication, swallowing, feeding, problem solving, safety practices) (without the patient present), face to face; each additional 15 minutes (list separately in addition to code for primary service)	Provisional
	97552	Group caregiver training in strategies and techniques to facilitate the patient's functional performance in the home or community (eg, activities	Provisional

	GCTB2	Caregiver training in behavior management/modification for parent(s)/guardian(s)/caregiver(s) of patients with a mental or physical health diagnosis, administered by physician or other qualified health care professional (without the patient present), face-to-face; each additional 15 minutes (List separately in addition to code for primary service) (Use GCTB2 in conjunction with GCTB1)	Provisional

BILLING CODE C

d. Frequency Limitations on Medicare Telehealth Subsequent Care Services in Inpatient and Nursing Facility Settings, and Critical Care Consultations

When adding some services to the Medicare Telehealth Services List in the past, we have included certain frequency restrictions on how often practitioners may furnish the service via Medicare telehealth. These include a limitation of one subsequent hospital care service furnished through telehealth every 3 days, added in the CY 2011 PFS final rule (75 FR 73317 through 73318), one subsequent nursing facility visit furnished through telehealth every 14 days, added in the CY 2011 PFS final rule (75 FR73318), and one critical care consultation service furnished through telehealth per day, added in the CY 2017 final rule (81 FR 80198). In establishing these limits, we cited concerns regarding the potential acuity and complexity of these patients.

We temporarily removed these frequency restrictions during the PHE for COVID–19. In the March 31, 2020 COVID–19 interim final rule with comment period (IFC) (85 FR 19241), we stated that we did not believe the frequency limitations for certain subsequent inpatient visits, subsequent NF visits, and critical care consultations furnished via Medicare telehealth were appropriate or necessary for the duration of the PHE because this would have been a patient population who would have otherwise not had access to clinically appropriate in-person treatment. Although the frequency limitations resumed effect on May 12, 2023 (upon expiration of the PHE), through enforcement discretion during the remainder of CY 2023 and notice-and-comment rulemaking for CY 2024, Medicare telehealth frequency limitations have been suspended for CY 2024 (88 FR 78876 through 78878) for the following codes relating to Subsequent Inpatient Visits, Subsequent Nursing Facility Visits, and Critical Care Consultation Services:

1. Subsequent Inpatient Visit CPT Codes

- 99231 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward or low level of medical decision making. when using total time on the date of the encounter for code selection, 25 minutes must be met or exceeded.*);
- 99232 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. when using total time on the date of the encounter for code selection, 35 minutes must be met or exceeded.*); *and*
- 99233 (*Subsequent hospital inpatient or observation care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 50 minutes must be met or exceeded.*)

2. Subsequent Nursing Facility Visit CPT Codes

- 99307 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and straightforward medical decision making. when using total time on the date of the encounter for code selection, 10 minutes must be met or exceeded.*);
- 99308 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and low level of medical decision making. when using total time on the date of the encounter for code selection, 15 minutes must be met or exceeded.*);
- 99309 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and moderate level of medical decision making. when using total time on the date of the encounter for code selection, 30 minutes must be met or exceeded.*); and
- 99310 (*Subsequent nursing facility care, per day, for the evaluation and management of a patient, which requires a medically appropriate history and/or examination and high level of medical decision making. when using total time on the date of the encounter for code selection, 45 minutes must be met or exceeded.*)

3. Critical Care Consultation Services: HCPCS Codes

- G0508 (*Telehealth consultation, critical care, initial, physicians typically spend 60 minutes communicating with the patient and providers via telehealth.*); and
- G0509 (*Telehealth consultation, critical care, subsequent, physicians typically spend 50 minutes communicating with the patient and providers via telehealth.*)

We are proposing to remove the frequency limitations for these codes for CY 2025.

In the CY 2024 PFS final rule (88 FR 78877), we solicited comments from interested parties on how practitioners have been ensuring that Medicare beneficiaries receive subsequent inpatient and nursing facility visits, as well as critical care consultation services since the expiration of the PHE. As discussed in that final rule, many commenters supported permanently removing these frequency limitations, stating that they are arbitrary and re-imposing the limitations would result in decreased access to care; that practitioners should be allowed to use

their clinical judgment to determine the type of visit, how many visits, and the type of treatment that is the best fit for the patient so long as the standard of care is met; and that lifting these limitations during the PHE has been instructive and demonstrates the value of continuing such flexibilities. Many commenters urged us to permanently remove them. That said, some commenters did not support removing these frequency limitations citing patient acuity and safety, some commenters cited the importance of in-person care for patients in acute care settings. Some commenters stated that telehealth patient assessments and evaluations are never the same as in-person, hands on visits and should not be considered a viable replacement with no limitations for in-person care. We are continuing to consider what changes we should be making to how telehealth services are reimbursed under Medicare in light of the way practice patterns may have changed following the PHE for COVID–19. Taking into account the information received from commenters in the CY 2024 PFS final rule, we believe it is reasonable to continue to pause certain pre-pandemic restrictions, such as the frequency limitations for the abovementioned codes for CY 2025. Removing such restrictions for CY 2025 will allow us to gather an additional year of data to determine how practice patterns are evolving and what changes, if any, to frequency limitations should be made. We do not believe pausing such frequency limitations for another year presents a level of safety risk requiring us to immediately reinstate the limitations. Our analysis of claims data indicates that the volume of services that would be affected by implementing these limitations is relatively low; in other words, these services are not being furnished via telehealth with such frequency that frequency limits are being met or exceeded very often or for many beneficiaries (claims data from 2020—2023 suggest that less than five percent received one or more of these services as a telehealth service). Therefore, while claims data does not suggest that lifting these limitations during the PHE has led to an increase in utilization, we continue to be interested in information from interested parties on our concerns regarding the potential acuity and complexity of these patients and how such acuity and complexity should complexity should influence our implementation of frequency limitations.

e. Audio-Only Communication Technology To Meet the Definition of ''Telecommunications System''

Through our regulation at § 410.78(a)(3), we define ''interactive telecommunications system'' as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication between the patient and distant site physician or practitioner. Through emergency regulations and waiver authority under section 1135(b)(8) of the Act, in response to the PHE for COVID–19, we allowed the use of audio-only communications technology to furnish services described by the codes for audio-only telephone evaluation and management services and behavioral health counseling and educational services. Section 4113 of the CAA, 2023, extended the availability of telehealth services that can be furnished using audio-only technology and provided for the extension of other PHE-related flexibilities including removal of the geographic and location limitations under section 1834(m) of the Act through December 31, 2024.

In the CY 2022 PFS final rule (86 FR 65060), in part to recognize the changes made by section 123 of the CAA, 2021 that removed the geographic restrictions for Medicare telehealth services for the diagnosis, evaluation, or treatment of a mental health disorder and the addition of the patient's home as a permissible originating site for these services, we revisited our regulatory definition of ''interactive telecommunications system'' beyond the circumstances of the PHE. Specifically, we finalized a policy to allow for audio-only services under certain circumstances and revised the regulation at § 410.78(a)(3) to permit the use of audio-only equipment for telehealth services furnished to established patients in their homes for purposes of diagnosis, evaluation, or treatment of a mental health disorder (including substance use disorders) if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined previously, but the patient is not capable of, or does not consent to, the use of video technology. We also established this policy in part because mental health services are different from most other services on the Medicare telehealth services list in that many of the services primarily involve verbal conversation where visualization between the patient and furnishing physician or practitioner may be less critical to the provision of the service.

However, with the successive statutory extensions of the telehealth flexibilities implemented in response to the PHE for COVID–19, most recently by the CAA, 2023, and our adoption of other extensions where we have had authority to do so, we have come to believe that it would be appropriate to allow interactive audio-only telecommunications technology when any telehealth service is furnished to a beneficiary in their home (when the patient's home is a permissible originating site) and when the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined previously, but the patient is not capable of, or does not consent to, the use of video technology. While practitioners should always use their clinical judgment as to whether the use of interactive audio-only technology is sufficient to furnish a Medicare telehealth service, we recognize that there is variable broadband access in patients' homes, and that even when technologically feasible, patients simply may not always wish to engage with their practitioner in their home using interactive audio and video. Under current statute, with the expiration of the PHE-related telehealth flexibilities on December 31, 2024, the patient's home is a permissible originating site only for services for the diagnosis, evaluation, or treatment of a mental health or substance use disorder, and for the monthly ESRD-related clinical assessments described in section 1881(b)(3)(B) of the Act.

We are proposing to revise the regulation at § 410.78(a)(3) to state that an interactive telecommunications system may also include two-way, real-time audio-only communication technology for any telehealth service furnished to a beneficiary in their home if the distant site physician or practitioner is technically capable of using an interactive telecommunications system as defined as multimedia communications equipment that includes, at a minimum, audio and video equipment permitting two-way, real-time interactive communication, but the patient is not capable of, or does not consent to, the use of video technology. Additionally, a modifier designated by CMS must be appended to the claim for services described in this paragraph to verify that these conditions have been met. These are CPT modifier ''93'' and, for RHCs and FQHCs, Medicare modifier ''FQ'' (Medicare telehealth service was furnished using audio-only communication technology).

Practitioners have the option to use the ''FQ'' or the ''93'' modifiers or both where appropriate and true, since they are identical in meaning.

f. Distant Site Requirements

In the CY 2024 PFS final rule (88 FR 78873 through 78874) we discussed that many commenters expressed concerns regarding the expiring flexibility for telehealth practitioners to bill from their currently enrolled location instead of their home address when providing telehealth services from their home. CMS issued an FAQ, available at *https://www.cms.gov/files/document/physicians-and-other-clinicians-cms-flexibilities-fight-covid-19.pdf*, which extended the flexibility for telehealth practitioners to bill from their currently enrolled location instead of their home address when providing telehealth services from their home through December 31, 2023. Interested parties suggested that the expiration of this flexibility poses a potential and imminent threat to the safety and privacy of health professionals who work from home and furnish telehealth services. Commenters cited recent examples of workplace violence in health care facilities, where direct harm to nurses and other medical staff occurred. In addition to safety and privacy concerns, interested parties explained that a significant number of practitioners would need to change their billing practices or add their home address to the Medicare enrollment file, coordinating with the appropriate Medicare Administrative Contractor in their jurisdiction, and this would present administrative burden. To address these concerns, commenters requested that CMS take steps to protect telehealth practitioners by adjusting enrollment requirements so that individual practitioners do not have to list their home addresses on enrollment forms.

In response, CMS finalized, through CY 2024, that we would continue to permit a distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home.

We have continued to hear from interested parties who have stressed the importance of continuing this flexibility for the safety and privacy of health care professionals. Given the shift in practice patterns toward models of care that include the practitioner's home as the distant site, we believe it would be appropriate to continue this flexibility as CMS considers various proposals that may better protect the safety and privacy of practitioners. We are therefore proposing that through CY 2025 we will continue to permit the distant site practitioner to use their currently enrolled practice location instead of their home address when providing telehealth services from their home.

2. Other Non-Face-to-Face Services Involving Communications Technology Under the PFS

a. Direct Supervision Via Use of Two-Way Audio/Video Communications Technology

Under Medicare Part B, certain types of services, including diagnostic tests described under § 410.32 and services incident to a physician's (or other practitioner's) professional service described under § 410.26 (incident-to services), are required to be furnished under specific minimum levels of supervision by a physician or other practitioner. We define three levels of supervision in our regulation at § 410.32(b)(3): General Supervision, Direct Supervision, and Personal Supervision. Notwithstanding the temporary measures implemented in response to the PHE for COVID–19, direct supervision requires the physician (or other supervising practitioner) to be present in the office suite and immediately available to furnish assistance and direction throughout the performance of the service. It does not mean that the physician (or other supervising practitioner) must be present in the room when the service is performed. Again, notwithstanding the temporary measures implemented in response to the PHE for COVID–19, we have established this ''immediate availability'' requirement to mean in-person, physical, not virtual, availability (please see the April 6, 2020 IFC (85 FR 19245) and the CY 2022 PFS final rule (86 FR 65062)).

Direct supervision is required for various types of services, including most incident-to services under § 410.26, many diagnostic tests under § 410.32, pulmonary rehabilitation services under § 410.47, cardiac rehabilitation and intensive cardiac rehabilitation services under § 410.49, and certain hospital outpatient services as provided under § 410.27(a)(1)(iv). In the March 31, 2020 COVID–19 IFC, we amended the definition of ''direct supervision'' for the duration of the PHE for COVID–19 (85 FR 19245 through 19246) at § 410.32(b)(3)(ii) to state that the necessary presence of the physician (or other practitioner) for direct supervision includes virtual presence through audio/video real-time communications technology. Instead of requiring the supervising physician's (or other practitioner's) physical presence, the amendment permitted a supervising physician (or other practitioner) to be considered ''immediately available'' through virtual presence using two-way, real-time audio/visual technology for diagnostic tests, incident-to services, pulmonary rehabilitation services, and cardiac and intensive cardiac rehabilitation services. We made similar amendments at § 410.27(a)(1)(iv) to specify that direct supervision for certain hospital outpatient services may include virtual presence through audio/video real-time communications. The CY 2021 PFS final rule (85 FR 84538 through 84540) and the CY 2024 PFS final rule (88 FR 78878) subsequently extended these policies through December 31, 2024. As stated in the CY 2024 PFS final rule, we extended this definition of direct supervision through December 31, 2024, in order to align the timeframe of the policy with other PHE-related telehealth policies that were extended most recently under the provisions of the CAA, 2023.

We note that in the CY 2021 PFS final rule (85 FR 84539) we clarified that, to the extent our policy allows direct supervision through virtual presence using audio/video real-time communications technology, the requirement could be met by the supervising physician (or other practitioner) being immediately available to engage via audio/video technology (excluding audio-only), and would not require real-time presence or observation of the service via interactive audio and video technology throughout the performance of the service. We noted that this was the case during the PHE and would continue to be the case following the PHE. While flexibility to provide direct supervision through audio/video real-time communications technology was adopted to be responsive to critical needs during the PHE for COVID–19 to ensure beneficiary access to care, reduce exposure risk and to increase the capacity of practitioners and physicians to respond to COVID–19, we expressed concern that direct supervision through virtual presence may not be sufficient to support PFS payment on a permanent basis, beyond the PHE for COVID–19, due to issues of patient safety. For instance, in complex, high-risk, surgical, interventional, or endoscopic procedures, or anesthesia procedures, a patient's clinical status can quickly change; in-person supervision would be necessary for such services to allow for rapid on-site decision-making in the event of an

adverse clinical situation. In addition to soliciting comment in the CY 2021 PFS proposed rule on whether there should be any additional ''guardrails'' or limitations to ensure patient safety/clinical appropriateness, beyond typical clinical standards, as well as restrictions to prevent fraud or inappropriate use, we solicited comment in the CY 2024 PFS proposed rule on whether we should consider extending the definition of direct supervision to permit virtual presence beyond December 31, 2024. Specifically, we stated that we were interested in input from interested parties on potential patient safety or quality concerns when direct supervision occurs virtually; for instance, if direct supervision of certain types of services with virtual presence of the supervising practitioner is more or less likely to present patient safety concerns, or if this flexibility would be more appropriate for certain types of services, or when certain types of auxiliary personnel are performing the supervised service. We were also interested in potential program integrity concerns that interested parties may have regarding this policy, such as overutilization or fraud and abuse.

(1) Proposal To Extend Definition of ''Direct Supervision'' To Include Audio-Video Communications Technology Through 2025

As discussed in the CY 2024 PFS final rule (88 FR 78878), in the absence of evidence that patient safety is compromised by virtual direct supervision, we are concerned about an abrupt transition to our pre-PHE policy that defines direct supervision to require the physical presence of the supervising practitioner. We noted that an immediate reversion to the pre-PHE definition of direct supervision would prohibit virtual direct supervision, which may present a barrier to access to many services, such as incident-to services, and that physicians and/or other supervising practitioners, in certain instances, would need time to reorganize their practice patterns established during the PHE to reimplement the pre-PHE approach to direct supervision without the use of audio/video technology. We acknowledge the utilization of this flexibility and recognize that many practitioners have stressed the importance of maintaining it, however we seek additional information regarding potential patient safety and quality of care concerns. This flexibility has been available and widely utilized since the beginning of the PHE, and we recognize that may enhance patient access. However, given the importance of certain services being furnished under direct supervision in ensuring quality of care and patient safety, and in particular the ability of the supervising practitioner to intervene if complications arise, we believe an incremental approach is warranted, particularly in instances where unexpected or adverse events may arise for procedures which may be riskier or more intense. In light of these potential safety and quality of care implications, and exercising an abundance of caution, we are extending this flexibility for all services on a temporary basis only. We are therefore proposing to continue to define direct supervision to permit the presence and ''immediate availability'' of the supervising practitioner through real-time audio and visual interactive telecommunications through December 31, 2025.

(2) Proposal To Permanently Define ''Direct Supervision'' To Include Audio-Video Communications Technology for a Subset of Services

In the CY 2024 PFS proposed rule, we solicited comment on extending or permanently establishing the virtual presence flexibility for certain services valued under the PFS given that these services typically are performed in their entirety by auxiliary personnel as defined at § 410.26(a)(1). We stated such services would include incident-to services wholly furnished by auxiliary personnel, Level I office or other outpatient E/M visits for established patients. We also mentioned Level I Emergency Department (ED) visits in this list, but have since concluded that ED services would not be wholly furnished by auxiliary personnel and, for that reason, have excluded them from the discussion in this proposed rule. Based on our review, these specific services present less of a patient safety concern than services for which there may be a need for immediate intervention of the supervising practitioner; as noted in the CY 2024 PFS proposed rule, allowing virtual presence for direct supervision of these services could balance patient safety concerns with the interest of supporting access and preserving workforce capacity for medical professionals while considering potential quality and program integrity concerns. After reviewing the various comments in response to this solicitation, additional feedback provided by interested parties, and conducting our own independent review, we believe these services are low risk by their nature, do not often demand in-person supervision, are typically furnished entirely by the supervised personnel, and allowing virtual presence for direct supervision of these services would balance patient safety concerns with the interest of supporting access and preserving workforce capacity.

We are proposing to adopt a definition of direct supervision that allows ''immediate availability'' of the supervising practitioner using audio/video real-time communications technology (excluding audio-only), but only for the following subset of incident-to services described under § 410.26: (1) services furnished incident to a physician or other practitioner's service when provided by auxiliary personnel employed by the billing practitioner and working under their direct supervision, and for which the underlying HCPCS code has been assigned a PC/TC indicator of '5';[10] and (2) services described by CPT code 99211 (*Office or other outpatient visit for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional*). As provided in the code descriptor for CPT code 99211, an office or other outpatient visit for the evaluation and management of an established patient may not require the presence of a physician or other practitioner and may be furnished incident to a physicians' service by a nonphysician employee of the physician under direct supervision. The service described by CPT code 99211 and the services that are identified with a PC/TC indicator of '5' as listed in the PFS Relative Value Files are services that are nearly always performed in entirety by auxiliary personnel. The vignette for CPT code 99211 describes the provision of supervision and guidance to the clinical staff as necessary. The code descriptor for this service specifies an E/M service that may not require the presence of a physician or other professional; and the current valuation, which is relatively low compared to other office and outpatient E/M services, suggests that this service would primarily be provided by auxiliary personnel.

We are proposing an incremental approach whereby we will adopt without any time limitation the definition of direct supervision

[10] For a full list of all PFS payment status indicators and descriptions, see the Medicare Claims Processing Manual (IOM Pub. 100–04, chapter 23, sections 30.2.2). For a full list of all PFS payment status indicators and descriptions, see the Medicare Claims Processing Manual (IOM Pub. 100–04, chapter 23, sections 30.2.2 and 50.6). Specific indicators by service are listed in the PFS Relative Value files at *https://www.cms.gov/medicare/payment/fee-schedules/physician/pfs-relative-value-files*).

permitting virtual presence for services that are inherently lower risk: that is, services that do not ordinarily require the presence of the billing practitioner, do not require direction by the supervising practitioner to the same degree as other services furnished under direct supervision, and are not services typically performed directly by the supervising practitioner.

For all other services required to be furnished under the direct supervision of the supervising physician or other practitioner, we are proposing, as described above, to continue to define ''immediate availability'' to include real-time audio and visual interactive telecommunications technology only through December 31, 2025.

We are proposing to revise the regulations at § 410.32(b)(3)(ii) to state that through December 31, 2025, the presence of the physician (or other practitioner) would include virtual presence through audio/video real-time communications technology (excluding audio-only).

We are proposing to revise the regulation at § 410.26(a)(2) to state that for the following services furnished after December 31, 2025, the presence of the physician (or other practitioner) required for direct supervision shall continue to include virtual presence through audio/video real-time communications technology (excluding audio-only): services furnished incident to a physician's service when they are provided by auxiliary personnel employed by the physician and working under his or her direct supervision and for which the underlying HCPCS code has been assigned a PC/TC indicator of '5'; and office and other outpatient visits for the evaluation and management of an established patient that may not require the presence of a physician or other qualified health care professional.

(3) Teaching Physician Billing for Services Involving Residents With Virtual Presence

In the CY 2021 PFS final rule (85 FR 84577 through 84584), we established a policy that, after the end of the PHE for COVID–19, teaching physicians may meet the requirements to be present for the key or critical portions of services when furnished involving residents through audio/video real-time communications technology (virtual presence), but only for services furnished in residency training sites located outside of an Office of Management and Budget (OMB)-defined metropolitan statistical area (MSA). We made this location distinction consistent with our longstanding interest in increasing beneficiary access to Medicare-covered services in rural areas. We noted the ability to expand training opportunities for residents in rural settings. For all other locations, we expressed concerns that continuing to permit teaching physicians to bill for services furnished involving residents when they are virtually present, outside the conditions of the PHE for COVID–19, may not allow the teaching physician to have personal oversight and involvement over the management of the portion of the case for which the payment is sought, under section 1842(b)(7)(A)(i)(I) of the Act. In addition, we stated concerns about patient populations that may require a teaching physician's experience and skill to recognize specialized needs or testing and whether it is possible for the teaching physician to meet these clinical needs while having a virtual presence for the key portion of the service. We refer readers to the CY 2021 PFS final rule (85 FR 84577 through 84584) for a more detailed description of our specific concerns. At the end of the PHE for COVID–19, and as finalized in the CY 2021 PFS final rule, we intended for the teaching physician to have a physical presence during the key portion of the service personally provided by residents in order to be paid for the service under the PFS, in locations that were within a MSA. This policy applied to all services, regardless of whether the patient was co-located with the resident or only present virtually (for example, the service was furnished as a 3-way telehealth visit, with the teaching physician, resident, and patient in different locations). However, interested parties expressed concerns regarding the requirement that the teaching physician be physically present with the resident when a service is furnished virtually (as a Medicare telehealth service) within an MSA. Some interested parties stated that during the PHE for COVID–19, when residents provided telehealth services, and the teaching physician was virtually present, the same safe and high-quality oversight was provided as when the teaching physician and resident were physically co-located. In addition, these interested parties stated that during telehealth visits, the teaching physician was virtually present during the key and critical portions of the telehealth service, available immediately in real-time, and had access to the electronic health record. After review of the public comments, we finalized a policy that allowed the teaching physician to have a virtual presence in all teaching settings, only in clinical instances when the service was furnished virtually (for example, a 3-way telehealth visit, with all parties in separate locations). This permitted teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment was sought, through audio/video real-time communications technology, in all residency training locations through December 31, 2024.

As stated in the CY 2024 PFS final rule (88 FR 78880), we are concerned that an abrupt transition to our pre-PHE policy may present a barrier to access to many services. We also understand that teaching physicians have gained clinical experience providing services involving residents with virtual presence during the PHE for COVID–19 and could help us to identify circumstances where the teaching physician can routinely provide sufficient personal and identifiable services to the patient through their virtual presence during the key portion of the Medicare telehealth service. We sought comment and information to help us consider other clinical treatment situations where it may be appropriate to continue to permit the virtual presence of the teaching physician, while continuing to support patient safety, meeting the clinical needs for all patients, and ensuring burden reduction without creating risks to patient care or increasing opportunities for fraud. As summarized in the CY 2024 PFS final rule (88 FR 78881 through 78882), commenters encouraged us to establish this policy permanently and include in-person services to promote access to care, stated that teaching physicians should be allowed to determine when their virtual presence would be clinically appropriate, based on their assessment of the patient's needs and the competency level of the resident. While we continue to consider clinical scenarios where it may be appropriate to permit the virtual presence of the teaching physician, we are proposing to continue our current policy to allow teaching physicians to have a virtual presence for purposes of billing for services furnished involving residents in all teaching settings, but only when the service is furnished virtually (for example, a 3-way telehealth visit, with the patient, resident, and teaching physician in separate locations). This would permit teaching physicians to have a virtual presence during the key portion of the Medicare telehealth service for which payment is sought in any residency training location through December 31, 2025. The teaching physician's virtual presence would continue to require real-time observation (not mere availability) and

excludes audio-only technology. The documentation in the medical record must continue to demonstrate whether the teaching physician was physically present or present through audio/video real-time communications technology at the time of the Medicare telehealth service, which includes documenting the specific portion of the service for which the teaching physician was present through audio/video real-time communications technology.

(a) Request for Information for Teaching Physician Services Furnished Under the Primary Care Exception

The so-called primary care exception set forth at § 415.174 permits the teaching physician to bill for certain lower and mid-level complexity physicians' services furnished by residents in certain types of residency training settings even when the teaching physician is not present with the resident during the services as long as certain conditions are met, including that the services are furnished by residents with more than 6 months of training in the approved residency program; and that the teaching physician directs the care of no more than four residents at a time, remains immediately available and has no other responsibilities while directing the care, assumes management responsibility for beneficiaries seen by the residents, ensures that the services furnished are appropriate, and reviews certain elements of the services with each resident during or immediately after each visit. For a more detailed description of the list of services currently allowed under the primary care exception policy, we refer readers to the CY 2021 PFS final rule (85 FR 84585 through 84590).

We have received feedback from interested parties requesting that we permanently expand the list of services that can be furnished under the primary care exception to include all levels of E/M services and additional preventive services. These interested parties have stated that the fact that high-value primary care and preventive services are not included in the scope of the primary care exception discourages their integration in residency training in these primary care settings, which has a negative impact on physician training, patient access, and longer-term outcomes. Additionally, these interested parties have suggested that including all levels of E/M services under the primary care exception could support primary care workforce development and improve patient continuity of care without compromising patient safety; furthermore, including additional preventive services within the primary care exception would increase the utilization of high-value services.

We believe the primary care exception was intended to broaden opportunities for teaching physicians to involve residents in furnishing services under circumstances that preserve the direction of the care by the teaching physician and promote safe, high-quality patient care. As such, we are requesting information to help us consider whether and how best to expand the array of services included under the primary care exception in future rulemaking. We are interested in hearing more about the types of services that could be allowed under the primary care exception, specifically preventive services, and whether the currently required six months of training in an approved program is sufficient for residents to furnish these types of services without the presence of a teaching physician. We are seeking comment to help us consider whether adding certain preventive services or higher level E/M services to the primary care exception would hinder the teaching physician from maintaining sufficient personal involvement in the care to warrant PFS payment for the services being furnished by up to four residents at any given time. Similarly, we are requesting information on whether the inclusion in the primary care exception of specific higher-level or preventive services would impede the teaching physician's ability to remain immediately available for up to four residents at any given time, while directing and managing the care furnished by these residents.

3. Telehealth Originating Site Facility Fee Payment Amount Update

Section 1834(m)(2)(B) of the Act established the Medicare telehealth originating site facility fee for telehealth services furnished from October 1, 2001, through December 31, 2002 at $20.00, and specifies that, for telehealth services furnished on or after January 1 of each subsequent calendar year, the telehealth originating site facility fee is increased by the percentage increase in the Medicare Economic Index (MEI) as defined in section 1842(i)(3) of the Act. The proposed MEI increase for CY 2025 is 3.6 percent and is based on the expected historical percentage increase of the 2017-based MEI. For the final rule, we propose to update the MEI increase for CY 2025 based on historical data through the second quarter of 2024. Therefore, for CY 2025, the proposed payment amount for HCPCS code Q3014 (*Telehealth originating site facility fee*) is $31.04. Table 9 shows the Medicare telehealth originating site facility fee and the corresponding MEI percentage increase for each applicable time period.

BILLING CODE P

TABLE 9: The Medicare Telehealth Originating Site Facility Fee

Time Period	MEI (%)	Facility Fee for Q3014
Oct. 1, 2001 to Dec. 31, 2002	NA	$ 20.00
2003	3.0	$ 20.60
2004	2.9	$ 21.20
2005	3.1	$ 21.86
2006	2.8	$ 22.47
2007	2.1	$ 22.94
2008	1.8	$ 23.35
2009	1.6	$ 23.72
2010	1.2	$ 24.00
2011	0.4	$ 24.10
2012	0.6	$ 24.24
2013	0.8	$ 24.43
2014	0.8	$ 24.63
2015	0.8	$ 24.83
2016	1.1	$ 25.10
2017	1.2	$ 25.40
2018	1.4	$ 25.76
2019	1.5	$ 26.15
2020	1.9	$ 26.65
2021	1.4	$ 27.02
2022	2.1	$ 27.59
2023	3.8	$ 28.64
2024	4.6	$ 29.96
2025*	3.6	$ 31.04

*Reflects the most recent estimate of the CY 2025 MEI percentage increase and will be updated in the final rule based on historical data through the second quarter of 2024.

BILLING CODE C

4. Payment for Outpatient Therapy Services, Diabetes Self-Management Training, and Medical Nutrition Therapy When Furnished by Institutional Staff to Beneficiaries in Their Homes Through Communication Technology

For information related to outpatient physical therapy, occupational therapy, speech-language pathology, diabetes self-management training (DSMT) and medical nutritional therapy (MNT) services furnished by institutional staff in hospitals and other institutional settings to beneficiaries in their homes through communication technology, please refer to section X.A. in the CY 2025 Hospital Outpatient Prospective Payment System (OPPS) proposed rule (FR Doc. 2024–15087), on public inspection July 10, 2024, and publishing in the **Federal Register** of July 22, 2024.

E. Valuation of Specific Codes

1. Background: Process for Valuing New, Revised, and Potentially Misvalued Codes

Establishing valuations for newly created and revised CPT codes is a routine part of maintaining the PFS. Since the inception of the PFS, it has also been a priority to revalue services regularly to make sure that the payment rates reflect the changing trends in the practice of medicine and current prices for inputs used in the PE calculations. Initially, this was accomplished primarily through the 5-year review process, which resulted in revised work RVUs for CY 1997, CY 2002, CY 2007, and CY 2012, and revised PE RVUs in CY 2001, CY 2006, and CY 2011, and revised MP RVUs in CY 2010, CY 2015, and CY 2020. Under the 5-year review process, revisions in RVUs were proposed and finalized via rulemaking. In addition to the 5-year reviews, beginning with CY 2009, CMS and the RUC identified a number of potentially misvalued codes each year using various identification screens, as outlined in section II.C. of this proposed rule, Potentially Misvalued Services under the PFS. Historically, when we received RUC recommendations, our process had been to establish interim final RVUs for the potentially misvalued codes, new codes, and any other codes for which there were coding changes in the final rule with comment period for a year. Then, during the 60-day period following the publication of the final rule with comment period, we accepted public comment about those valuations. For services furnished during the calendar year following the publication of interim final rates, we paid for services based upon the interim final values established in the final rule. In the final rule with comment period for the subsequent year, we considered and responded to public comments received on the interim final values, and typically made any appropriate adjustments and finalized those values.

In the CY 2015 PFS final rule with comment period (79 FR 67547), we finalized a new process for establishing values for new, revised and potentially misvalued codes. Under the new process, we include proposed values for these services in the proposed rule, rather than establishing them as interim final in the final rule with comment period. Beginning with the CY 2017 PFS proposed rule (81 FR 46162), the new process was applicable to all codes, except for new codes that describe truly new services. For CY 2017, we proposed new values in the CY 2017 PFS proposed rule for the vast majority of

new, revised, and potentially misvalued codes for which we received complete RUC recommendations by February 10, 2016. To complete the transition to this new process, for codes for which we established interim final values in the CY 2016 PFS final rule with comment period (81 FR 80170), we reviewed the comments received during the 60-day public comment period following release of the CY 2016 PFS final rule with comment period (80 FR 70886), and re-proposed values for those codes in the CY 2017 PFS proposed rule. We considered public comments received during the 60-day public comment period for the proposed rule before establishing final values in the CY 2017 PFS final rule. As part of our established process, we will adopt interim final values only in the case of wholly new services for which there are no predecessor codes or values and for which we do not receive recommendations in time to propose values.

As part of our obligation to establish RVUs for the PFS, we thoroughly review and consider available information including recommendations and supporting information from the RUC, the Health Care Professionals Advisory Committee (HCPAC), public commenters, medical literature, Medicare claims data, comparative databases, comparison with other codes within the PFS, as well as consultation with other physicians and healthcare professionals within CMS and the Federal Government as part of our process for establishing valuations. Where we concur that the RUC's recommendations, or recommendations from other commenters, are reasonable and appropriate and are consistent with the time and intensity paradigm of physician work, we proposed those values as recommended. Additionally, we continually engage with interested parties, including the RUC, with regard to our approach for accurately valuing codes, and as we prioritize our obligation to value new, revised, and potentially misvalued codes. We continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process.

2. Methodology for Establishing Work RVUs

For each code identified in this section, we conduct a review that includes the current work RVU (if any), RUC-recommended work RVU, intensity, time to furnish the preservice, intraservice, and postservice activities, as well as other components of the service that contribute to the value. Our reviews of recommended work RVUs and time inputs generally include, but have not been limited to, a review of information provided by the RUC, the HCPAC, and other public commenters, medical literature, and comparative databases, as well as a comparison with other codes within the PFS, consultation with other physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. In the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329), we discussed a variety of methodologies and approaches used to develop work RVUs, including survey data, building blocks, crosswalks to key reference or similar codes, and magnitude estimation (see the CY 2011 PFS final rule with comment period (75 FR 73328 through 73329) for more information). When referring to a survey, unless otherwise noted, we mean the surveys conducted by specialty societies as part of the formal RUC process.

Components that we use in the building block approach may include preservice, intraservice, or postservice time and post-procedure visits. When referring to a bundled CPT code, the building block components could include the CPT codes that make up the bundled code and the inputs associated with those codes. We use the building block methodology to construct, or deconstruct, the work RVU for a CPT code based on component pieces of the code. Magnitude estimation refers to a methodology for valuing work that determines the appropriate work RVU for a service by gauging the total amount of work for that service relative to the work for a similar service across the PFS without explicitly valuing the components of that work. In addition to these methodologies, we frequently utilize an incremental methodology in which we value a code based upon its incremental difference between another code and another family of codes. Section 1848(c)(1)(A) of the Act specifically defines the work component as the resources that reflect time and intensity in furnishing the service. Also, the published literature on valuing work has recognized the key role of time in overall work. For particular codes, we refine the work RVUs in direct proportion to the changes in the best information regarding the time resources involved in furnishing particular services, either considering the total time or the intraservice time.

Several years ago, to aid in the development of preservice time recommendations for new and revised CPT codes, the RUC created standardized preservice time packages. The packages include preservice evaluation time, preservice positioning time, and preservice scrub, dress and wait time. Currently, there are preservice time packages for services typically furnished in the facility setting (for example, preservice time packages reflecting the different combinations of straightforward or difficult procedure, and straightforward or difficult patient). Currently, there are three preservice time packages for services typically furnished in the nonfacility setting.

We developed several standard building block methodologies to value services appropriately when they have common billing patterns. In cases where a service is typically furnished to a beneficiary on the same day as an E/M service, we believe that there is overlap between the two services in some of the activities furnished during the preservice evaluation and postservice time. Our longstanding adjustments have reflected a broad assumption that at least one-third of the work time in both the preservice evaluation and postservice period is duplicative of work furnished during the E/M visit.

Accordingly, in cases where we believe that the RUC has not adequately accounted for the overlapping activities in the recommended work RVU and/or times, we adjust the work RVU and/or times to account for the overlap. The work RVU for a service is the product of the time involved in furnishing the service multiplied by the intensity of the work. Preservice evaluation time and postservice time both have a long-established intensity of work per unit of time (IWPUT) of 0.0224, which means that 1 minute of preservice evaluation or postservice time equates to 0.0224 of a work RVU.

Therefore, in many cases when we remove 2 minutes of preservice time and 2 minutes of postservice time from a procedure to account for the overlap with the same day E/M service, we also remove a work RVU of 0.09 (4 minutes $\times$ 0.0224 IWPUT) if we do not believe the overlap in time had already been accounted for in the work RVU. The RUC has recognized this valuation policy and, in many cases, now addresses the overlap in time and work when a service is typically furnished on the same day as an E/M service.

The following paragraphs discuss our approach to reviewing RUC recommendations and developing

proposed values for specific codes. When they exist, we also include a summary of interested party reactions to our approach. We noted that many commenters and interested parties have expressed concerns over the years with our ongoing adjustment of work RVUs based on changes in the best information we had regarding the time resources involved in furnishing individual services. We have been particularly concerned with the RUC's and various specialty societies' objections to our approach given the significance of their recommendations to our process for valuing services and since much of the information we used to make the adjustments is derived from their survey process. We note that we are obligated under the statute to consider both time and intensity in establishing work RVUs for PFS services. As explained in the CY 2016 PFS final rule with comment period (80 FR 70933), we recognize that adjusting work RVUs for changes in time is not always a straightforward process, so we have applied various methodologies to identify several potential work values for individual codes.

We have observed that for many codes reviewed by the RUC, recommended work RVUs have appeared to be incongruous with recommended assumptions regarding the resource costs in time. This has been the case for a significant portion of codes for which we recently established or proposed work RVUs that are based on refinements to the RUC-recommended values. When we have adjusted work RVUs to account for significant changes in time, we have started by looking at the change in the time in the context of the RUC-recommended work RVU. When the recommended work RVUs do not appear to account for significant changes in time, we have employed the different approaches to identify potential values that reconcile the recommended work RVUs with the recommended time values. Many of these methodologies, such as survey data, building block, crosswalks to key reference or similar codes, and magnitude estimation have long been used in developing work RVUs under the PFS. In addition to these, we sometimes use the relationship between the old time values and the new time values for particular services to identify alternative work RVUs based on changes in time components.

In so doing, rather than ignoring the RUC-recommended value, we have used the recommended values as a starting reference and then applied one of these several methodologies to account for the reductions in time that we believe were not otherwise reflected in the RUC-recommended value. If we believe that such changes in time are already accounted for in the RUC's recommendation, then we do not make such adjustments. Likewise, we do not arbitrarily apply time ratios to current work RVUs to calculate proposed work RVUs. We use the ratios to identify potential work RVUs and consider these work RVUs as potential options relative to the values developed through other options.

We do not imply that the decrease in time as reflected in survey values should always equate to a one-to-one or linear decrease in newly valued work RVUs. Instead, we believe that, since the two components of work are time and intensity, absent an obvious or explicitly stated rationale for why the relative intensity of a given procedure has increased, significant decreases in time should be reflected in decreases to work RVUs. If the RUC's recommendation has appeared to disregard or dismiss the changes in time, without a persuasive explanation of why such a change should not be accounted for in the overall work of the service, then we have generally used one of the aforementioned methodologies to identify potential work RVUs, including the methodologies intended to account for the changes in the resources involved in furnishing the procedure.

Several interested parties, including the RUC, have expressed general objections to our use of these methodologies and suggested that our actions in adjusting the recommended work RVUs are inappropriate; other interested parties have also expressed general concerns with CMS refinements to RUC-recommended values in general. In the CY 2017 PFS final rule (81 FR 80272 through 80277), we responded in detail to several comments that we received regarding this issue. In the CY 2017 PFS proposed rule (81 FR 46162), we requested comments regarding potential alternatives to making adjustments that would recognize overall estimates of work in the context of changes in the resource of time for particular services; however, we did not receive any specific potential alternatives. As described earlier in this section, crosswalks to key reference or similar codes are one of the many methodological approaches we have employed to identify potential values that reconcile the RUC-recommend work RVUs with the recommended time values when the RUC-recommended work RVUs did not appear to account for significant changes in time.

In response to comments, in the CY 2019 PFS final rule (83 FR 59515), we clarified that terms ''reference services'', ''key reference services'', and ''crosswalks'' as described by the commenters are part of the RUC's process for code valuation. These are not terms that we created, and we do not agree that we necessarily must employ them in the identical fashion for the purposes of discussing our valuation of individual services that come up for review. However, in the interest of minimizing confusion and providing clear language to facilitate feedback from interested parties, we stated that we would seek to limit the use of the term, ''crosswalk,'' to those cases where we are making a comparison to a CPT code with the identical work RVU. (83 FR 59515) We note that we also occasionally make use of a ''bracket'' for code valuation. A ''bracket'' refers to when a work RVU falls between the values of two CPT codes, one at a higher work RVU and one at a lower work RVU.

We look forward to continuing to engage with interested parties and commenters, including the RUC, as we prioritize our obligation to value new, revised, and potentially misvalued codes; and we will continue to welcome feedback from all interested parties regarding valuation of services for consideration through our rulemaking process. We refer readers to the detailed discussion in this section of the valuation considered for specific codes. Table 13 contains a list of codes and descriptors for which we are proposing work RVUs for CY 2025; this includes all codes for which we received RUC recommendations by February 10, 2024. The proposed work RVUs, work time and other payment information for all CY 2025 payable codes are available on the CMS website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/index.html*).

3. Methodology for the Direct PE Inputs To Develop PE RVUs

a. Background

On an annual basis, the RUC provides us with recommendations regarding PE inputs for new, revised, and potentially misvalued codes. We review the RUC-recommended direct PE inputs on a code-by-code basis. Like our review of recommended work RVUs, our review of recommended direct PE inputs generally includes, but is not limited to, a review of information provided by the RUC, HCPAC, and other public commenters, medical literature, and

comparative databases, as well as a comparison with other codes within the PFS, and consultation with physicians and health care professionals within CMS and the Federal Government, as well as Medicare claims data. We also assess the methodology and data used to develop the recommendations submitted to us by the RUC and other public commenters and the rationale for the recommendations. When we determine that the RUC's recommendations appropriately estimate the direct PE inputs (clinical labor, disposable supplies, and medical equipment) required for the typical service, are consistent with the principles of relativity, and reflect our payment policies, we use those direct PE inputs to value a service. If not, we refine the recommended PE inputs to better reflect our estimate of the PE resources required for the service. We also confirm whether CPT codes should have facility and/or nonfacility direct PE inputs and refine the inputs accordingly.

Our review and refinement of the RUC-recommended direct PE inputs includes many refinements that are common across codes, as well as refinements that are specific to particular services. Table 14 details our refinements of the RUC's direct PE recommendations at the code-specific level. In section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), we address certain refinements that will be common across codes. Refinements to particular codes are addressed in the portions of that section that are dedicated to particular codes. We note that for each refinement, we indicate the impact on direct costs for that service. We note that, on average, in any case where the impact on the direct cost for a particular refinement is $0.35 or less, the refinement has no impact on the PE RVUs. This calculation considers both the impact on the direct portion of the PE RVU, as well as the impact on the indirect allocator for the average service. In this proposed rule, we also note that many of the refinements listed in Table 14 result in changes under the $0.35 threshold and would be unlikely to result in a change to the RVUs.

We note that the direct PE inputs for CY 2025 are displayed in the CY 2025 direct PE input files, available on the CMS website under the downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html.* The inputs displayed there have been used in developing the CY 2025 PE RVUs as displayed in Addendum B (see *https://www.cms.gov/medicare/payment/prospective-payment-systems/hospital-outpatient/addendum-a-b-updates*).

b. Common Refinements

(1) Changes in Work Time

Some direct PE inputs are directly affected by revisions in work time. Specifically, changes in the intraservice portions of the work time and changes in the number or level of postoperative visits associated with the global periods result in corresponding changes to direct PE inputs. The direct PE input recommendations generally correspond to the work time values associated with services. We believe that inadvertent discrepancies between work time values and direct PE inputs should be refined or adjusted in the establishment of proposed direct PE inputs to resolve the discrepancies.

(2) Equipment Time

Prior to CY 2010, the RUC did not generally provide CMS with recommendations regarding equipment time inputs. In CY 2010, in the interest of ensuring the greatest possible degree of accuracy in allocating equipment minutes, we requested that the RUC provide equipment times along with the other direct PE recommendations, and we provided the RUC with general guidelines regarding appropriate equipment time inputs. We appreciate the RUC's willingness to provide us with these additional inputs as part of its PE recommendations.

In general, the equipment time inputs correspond to the service period portion of the clinical labor times. We clarified this principle over several years of rulemaking, indicating that we consider equipment time as the time within the intraservice period when a clinician is using the piece of equipment plus any additional time that the piece of equipment is not available for use for another patient due to its use during the designated procedure. For those services for which we allocate cleaning time to portable equipment items, because the portable equipment does not need to be cleaned in the room where the service is furnished, we do not include that cleaning time for the remaining equipment items, as those items and the room are both available for use for other patients during that time. In addition, when a piece of equipment is typically used during follow-up postoperative visits included in the global period for a service, the equipment time will also reflect that use.

We believe that certain highly technical pieces of equipment and equipment rooms are less likely to be used during all of the preservice or postservice tasks performed by clinical labor staff on the day of the procedure (the clinical labor service period) and are typically available for other patients even when one member of the clinical staff may be occupied with a preservice or postservice task related to the procedure. We also noted that we believe these same assumptions will apply to inexpensive equipment items that are used in conjunction with and located in a room with non-portable highly technical equipment items since any items in the room in question will be available if the room is not being occupied by a particular patient. For additional information, we referred readers to our discussion of these issues in the CY 2012 PFS final rule with comment period (76 FR 73182) and the CY 2015 PFS final rule with comment period (79 FR 67639).

(3) Standard Tasks and Minutes for Clinical Labor Tasks

In general, the preservice, intraservice, and postservice clinical labor minutes associated with clinical labor inputs in the direct PE input database reflect the sum of particular tasks described in the information that accompanies the RUC-recommended direct PE inputs, commonly called the ''PE worksheets.'' For most of these described tasks, there is a standardized number of minutes, depending on the type of procedure, its typical setting, its global period, and the other procedures with which it is typically reported. The RUC sometimes recommends a number of minutes either greater than or less than the time typically allotted for certain tasks. In those cases, we review the deviations from the standards and any rationale provided for the deviations. When we do not accept the RUC-recommended exceptions, we refine the proposed direct PE inputs to conform to the standard times for those tasks. In addition, in cases when a service is typically billed with an E/M service, we remove the preservice clinical labor tasks to avoid duplicative inputs and to reflect the resource costs of furnishing the typical service.

We refer readers to section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units (PE RVUs), for more information regarding the collaborative work of CMS and the RUC in improvements in standardizing clinical labor tasks.

(4) Recommended Items That Are Not Direct PE Inputs

In some cases, the PE worksheets included with the RUC's

recommendations include items that are not clinical labor, disposable supplies, or medical equipment or that cannot be allocated to individual services or patients. We addressed these kinds of recommendations in previous rulemaking (78 FR 74242), and we do not use items included in these recommendations as direct PE inputs in the calculation of PE RVUs.

(5) New Supply and Equipment Items

The RUC generally recommends the use of supply and equipment items that already exist in the direct PE input database for new, revised, and potentially misvalued codes. However, some recommendations include supply or equipment items that are not currently in the direct PE input database. In these cases, the RUC has historically recommended that a new item be created and has facilitated our pricing of that item by working with the specialty societies to provide us copies of sales invoices. For CY 2025 we received invoices for several new supply and equipment items. Tables 17 and 18 detail the invoices received for new and existing items in the direct PE database. As discussed in section II.B. of this proposed rule, Determination of Practice Expense Relative Value Units, we encourage interested parties to review the prices associated with these new and existing items to determine whether these prices appear to be accurate. Where prices appear inaccurate, we encourage interested parties to submit invoices or other information to improve the accuracy of pricing for these items in the direct PE database by February 10th of the following year for consideration in future rulemaking, similar to our process for consideration of RUC recommendations.

We remind interested parties that due to the relativity inherent in the development of RVUs, reductions in existing prices for any items in the direct PE database increase the pool of direct PE RVUs available to all other PFS services. Tables 17 and 18 also include the number of invoices received and the number of nonfacility allowed services for procedures that use these equipment items. We provide the nonfacility allowed services so that interested parties will note the impact the particular price might have on PE relativity, as well as to identify items that are used frequently, since we believe that interested parties are more likely to have better pricing information for items used more frequently. A single invoice may not be reflective of typical costs, and we encourage interested parties to provide additional invoices so that we might identify and use accurate prices in the development of PE RVUs.

In some cases, we do not use the price listed on the invoice that accompanies the recommendation because we identify publicly available alternative prices or information that suggests a different price is more accurate. In these cases, we include this in the discussion of these codes. In other cases, we cannot adequately price a newly recommended item due to inadequate information. Sometimes, no supporting information regarding the price of the item has been included in the recommendation. In other cases, the supporting information does not demonstrate that the item has been purchased at the listed price (for example, vendor price quotes instead of paid invoices). In cases where the information provided on the item allows us to identify clinically appropriate proxy items, we might use existing items as proxies for the newly recommended items. In other cases, we include the item in the direct PE input database without any associated price. Although including the item without an associated price means that the item does not contribute to the calculation of the final PE RVU for particular services, it facilitates our ability to incorporate a price once we obtain information and are able to do so.

(6) Service Period Clinical Labor Time in the Facility Setting

Generally speaking, our direct PE inputs do not include clinical labor minutes assigned to the service period because the cost of clinical labor during the service period for a procedure in the facility setting is not considered a resource cost to the practitioner since Medicare makes separate payment to the facility for these costs. We address code-specific refinements to clinical labor in the individual code sections.

(7) Procedures Subject to the Multiple Procedure Payment Reduction (MPPR) and the OPPS Cap

We note that the list of services for the upcoming calendar year that are subject to the MPPR on diagnostic cardiovascular services, diagnostic imaging services, diagnostic ophthalmology services, and therapy services; and the list of procedures that meet the definition of imaging under section 1848(b)(4)(B) of the Act, and therefore, are subject to the OPPS cap; are displayed in the public use files for the PFS proposed and final rules for each year. The public use files for CY 2025 are available on the CMS website under downloads for the CY 2025 PFS proposed rule at *https://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/PhysicianFeeSched/PFS-Federal-Regulation-Notices.html*. For more information regarding the history of the MPPR policy, we refer readers to the CY 2014 PFS final rule with comment period (78 FR 74261 through 74263).

Effective January 1, 2007, section 5102(b)(1) of the Deficit Reduction Act of 2005 (Pub. L. 109–171) (DRA) amended section 1848(b)(4) of the Act to require that, for imaging services, if—(i) The TC (including the TC portion of a global fee) of the service established for a year under the fee schedule without application of the geographic adjustment factor, exceeds (ii) The Medicare OPD fee schedule amount established under the prospective payment system (PPS) for HOPD services under section 1833(t)(3)(D) of the Act for such service for such year, determined without regard to geographic adjustment under section 1833(t)(2)(D), the Secretary shall substitute the amount described in clause (ii), adjusted by the geographic adjustment factor under the PFS, for the fee schedule amount for such TC for such year. As required by section 1848(b)(4)(A) of the Act, for imaging services furnished on or after January 1, 2007, we cap the TC of the PFS payment amount for the year (prior to geographic adjustment) by the Outpatient Prospective Payment System (OPPS) payment amount for the service (prior to geographic adjustment). We then apply the PFS geographic adjustment to the capped payment amount. Section 1848(b)(4)(B) of the Act defines imaging services as ''imaging and computer-assisted imaging services, including X-ray, ultrasound (including echocardiography), nuclear medicine (including PET), magnetic resonance imaging (MRI), computed tomography (CT), and fluoroscopy, but excluding diagnostic and screening mammography.'' For more information regarding the history of the cap on the TC of the PFS payment amount under the DRA (the ''OPPS cap''), we refer readers to the CY 2007 PFS final rule with comment period (71 FR 69659 through 69662).

For CY 2025, we identified new and revised codes to determine which services meet the definition of ''imaging services'' as defined at section 1848(b)(4)(B) of the Act for purposes of this cap. Beginning for CY 2025, we are proposing to include the following services on the list of codes to which the OPPS cap applies: CPT codes 0868T (*High-resolution gastric electrophysiology mapping with simultaneous patient-symptom profiling, with interpretation and*

report), 0876T (Duplex scan of hemodialysis fistula, computer-aided, limited (volume flow, diameter, and depth, including only body of fistula)), 74263 (Computed tomographic (ct) colonography, screening, including image postprocessing), 9X059 (*Computerized ophthalmic diagnostic imaging (eg, optical coherence tomography [OCT]), posterior segment, with interpretation and report, unilateral or bilateral; retina including OCT angiography*), 93X94 (*Vasoreactivity study performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*), 93X95 (*Emboli detection without intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*), and 93X96 (*Venous-arterial shunt detection with intravenous microbubble injection performed with transcranial Doppler study of intracranial arteries, complete (List separately in addition to code for primary procedure)*). We believe that these codes meet the definition of imaging services under section 1848(b)(4)(B) of the Act, and thus, should be subject to the OPPS cap.

In the CY 2024 PFS final rule (88 FR 78894), we noted that in response to the CY 2024 PFS proposed rule, commenters requested that CMS remove CPT code 92229 (*Imaging of retina for detection or monitoring of disease; point-of-care autonomous analysis and report, unilateral or bilateral*) from the OPPS cap list because it does not include an associated PC or physician interpretation and it is primarily utilized in the physician office setting. We are soliciting comment on the appropriateness of applying the OPPS cap to services such as this for which the interpretation component is not captured by work RVUs, and the service is not split into technical and professional components. We are more broadly evaluating how services involving assistive technologies are most accurately valued. We note that the OPPS rate for this service is currently higher than what would be paid in a physician office setting, and therefore the OPPS cap does not currently apply to CPT code 92229 as of 2024.

4. Valuation of Specific Codes for CY 2025

(1) Skin Cell Suspension Autograft (CPT codes 15XX1, 15XX2, 15XX3, 15XX4, 15XX5, 15XX6, 15XX7, and 15XX8)

In September 2023, the CPT Editorial Panel approved the creation of eight new CPT codes to describe skin cell suspension autograft (SCSA) procedures. The code set includes a 000-day global base code (CPT code 15XX1 (*Harvest of skin for skin cell suspension autograft; first 25 sq cm or less*)) and an add-on code (CPT code 15XX2 (*Harvest of skin for skin cell suspension autograft; each additional 25 sq cm or part thereof (List separately in addition to code for primary procedure)*)) describing the harvesting component of the procedure, an XXX global base code (CPT code 15XX3 (*Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; first 25 sq cm or less of harvested skin*) and an add-on code (CPT code 15XX4 (*Preparation of skin cell suspension autograft, requiring enzymatic processing, manual mechanical disaggregation of skin cells, and filtration; each additional 25 sq cm of harvested skin or part thereof (List separately in addition to code for primary procedure)*)) describing the preparation component of the procedure, and two 090-day global base codes and two add-on codes for the application component to distinguish between body areas: trunk, arms, and legs with CPT codes 15XX5 (*Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; first 480 sq cm or less*) and 15XX6 (*Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, trunk, arms, legs; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)*); and face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, or multiple digits with CPT codes 15XX7 (*Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; first 480 sq cm or less*) and 15XX8 (*Application of skin cell suspension autograft to wound and donor sites, including application of primary dressing, face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits; each additional 480 sq cm or part thereof (List separately in addition to code for primary procedure)*).

We disagree with the RUC-recommended work RVUs of 3.00, 2.00, 2.51, 2.00, 10.97, 2.50, 12.50, and 3.00 for CPT codes 15XX1 through 15XX8, respectively, and are proposing contractor-pricing for these CPT codes due to concerns with the coding structure of the code family and the total physician time that results when these codes are billed multiple times on the same date of service for the typical patient.

We note that our concerns with these CPT codes are expansive. Firstly, we note that these CPT codes represent a segmentation of a single service that is performed sequentially on the same date of service. We are seeking comment on whether the segmentation of the harvest, preparation, and application is necessary when these are sequential service parts of one episode of care, and could be simplified by having just two codes that encompass all three service parts (harvest, preparation, and application), to differentiate the two different application areas. We also are soliciting comment on the base and add-on codes' incremental square centimeters, considering that the typical size treatment area described in the vignettes could result in the add-on codes being billed multiple times, particularly for the base application CPT code 15XX5 and add-on CPT code 15XX6. Based on the meeting notes from the September 2023 CPT Editorial Panel meeting, the specialty society initially structured their coding request to ''bundle'' the service components into fewer codes, but it is unclear to us why these codes were further segmented. We believe that the very large range of intraservice times from the 33 burn surgeons may have been exacerbated by the harvest, preparation, and application components of the service being segmented in this manner. Most notably, CPT code 15XX1, which describes the first 25 sq cm of harvest, base code, had an intraservice survey time range of 5 to 480 minutes, and CPT code 15XX7, which describes the first 480 sq cm of application to the face, scalp, eyelids, mouth, neck, ears, orbits, genitalia, hands, feet, and/or multiple digits, had an intraservice survey time range of 10 to 360 minutes.

We note that the survey median intraservice times for CPT codes 15XX1 through 15XX8 contradict numerous publicly available sources that describe much lower times for this service or specific service parts. Most notably, the manufacturer of the RECELL Autologous Cell Harvesting Device (RECELL® System) used in this service, indicates

that a suspension of Spray-On Skin™ Cells using a small sample of the patient's own skin for the treatment of thermal burn wounds and full-thickness skin defects is ''prepared and applied at the point of care in as little as 30 minutes.'' [11] Additionally, Temple University Hospital published a news article on December 20, 2019, just 11 months after the U.S. Food and Drug Administration (FDA) approval of the RECELL® System for the treatment of acute thermal second and third-degree burns in adult patients in January 2019, stating that the entire process of skin sample collection, enzyme solution preparation, and suspension spraying/application ''can take as little as 30 minutes'' and ''treat a wound up to 80 times the size of the donor skin sample.'' [12] Additionally, an article published in Europe PubMed Central states that the procedure takes approximately 30 minutes and is performed by a burn surgeon trained in how to use RECELL® System, and does not require specialized laboratory staff.[13] Additionally, a 2007 study aimed at comparing the results from the RECELL® System and the classic skin grafting for epidermal replacement in deep partial thickness burns showed a total procedure time of 59±4 minutes for the RECELL® System group.[14]

More granularly, the FDA's Instructions for Use of the RECELL® Autologous Cell Harvesting Device state that ''if a skin sample is harvested and processed according to these instructions, it should require between 15 and 30 minutes of contact with the Enzyme''.[15] Additionally, the National Institute for Health and Care Excellence (NICE) produced guidance on using the RECELL® System based on the consideration of evidence submitted and the views of expert advisers, and stated that the harvested skin is added to the proprietary enzyme solution in a processing unit and heated for 15 to 30 minutes to disaggregate the cells. The skin is then removed and scraped with a scalpel to develop a plume of cells. These cells are added to a buffer solution, aspirated and filtered to create a cell suspension that contains keratinocytes, melanocytes, fibroblasts and Langerhans cells.[16] This correlates to the preparation component of the service described by CPT codes 15XX3 and 15XX4, for which the RUC recommended the survey median time of 33 and 28 minutes, respectively.

We believe that the publicly available sources that make representations about the total service and preparation times contradict the RUC-recommended median times based on the survey of 33 burn surgeons. Moreover, when we considered how the add-on CPT codes 15XX2, 15XX4, 15XX6, and 15XX8 would be billed based on the typical patient described in the vignettes, we believe the survey times are inflated compared to the publicly available sources, likely due to how the survey respondents considered the service given the segmentation of the code set. For example, the vignette for CPT code 15XX5 describing the application to the trunk, arms, and legs says ''A 35-year-old male sustained partial-thickness thermal burns on his trunk and arms measuring 3,600 sq cm. A skin cell suspension autograft is applied to 480 sq cm of the wound bed.'' Of the 33 burn surgeons surveyed, 96 percent found this vignette to be typical. Given the typical sq cm application area of 3,600 sq cm and the expansion ratio of harvested and prepared skin to treatment skin for application of 1:80, the typical episode of care would constitute 1 unit of both CPT codes 15XX1 and 15XX2 for harvesting, 1 unit of both CPT codes 15XX3 and 15XX4 for preparation, 1 unit of CPT code 15XX5 for the first 480 sq cm of application, and 7 units of CPT code 15XX6 for the remaining 3,120 sq cm of application area. When the RUC-recommended intraservice and total times (not including the post-operative visit time for CPT code 15XX5) for all the units billed on the same date of service as sequential service parts are summed, the intraservice time totals to 399 minutes and total time (not including the post-operative visit time included in the global period for CPT code 15XX5) totals to 529 minutes. The intraservice time total alone is nearly 6 and 2/3 hours.

We note the RUC recommended that CPT codes 15XX1 through 15XX8 be placed on the New Technology list to be re-reviewed by the RUC for both work and PE for the September 2026 or January 2027 RUC meeting when 2025 Medicare utilization data is available, and at that time, the RUC would consider if other specialties were performing the service and if the service was performed in the non-facility setting. We look forward to re-reviewing these CPT codes when recommendations are re-submitted with more robust and inclusive survey data. In the meantime, we encourage the reconsideration of the family's coding structure by the CPT Editorial Panel given the challenging aspects of this service, including the fact that the current coding structure represents a severely segmented single episode of care with troublesome billing patterns for the typical patient, particularly for the add-on CPT code 15XX6 describing the additional 480 sq cm increments of application on the trunk, arms, and legs. This code is particularly concerning because the coding structure of the family requires 7 units of add-on CPT code 15XX6 to be billed for the typical patient. Similarly, the typical patient described in the vignettes for this family of codes would require 3 units of add-on CPT code 15XX8 due to the coding structure.

We are also seeking feedback on the recommended global period for CPT code 15XX3. The RUC recommended an XXX global period, which indicates that the global concept does not apply, but we believe a 000-day global period, indicating an endoscopic or minor procedure with related preoperative and postoperative relative values on the day of the procedure only in the fee schedule payment amount, may be more appropriate given the nature of the service (which is intertwined with the other codes in the series) and that the entire service cannot be completed without 15XX3. This would allow the entire service to run within a surgical global period.

We note that we believe contractor-pricing is appropriate for CPT codes 15XX1 through 15XX8 until reconsideration of the coding structure and re-survey is complete, given the concerning aspects of the CPT codes. We note that this service is currently billed for using contractor-priced CPT code 17999 (*Unlisted procedure, skin, mucous membrane and subcutaneous*

tissue) and the eight new codes are expected to be a very low utilization.

(2) Hand, Wrist, & Forearm Repair & Recon (CPT Codes 25310, 25447, 2X005, and 26480)

In September 2022, the RUC referred CPT codes 26480 and 25447 to the CPT Editorial Panel for a code bundling solution. In May 2023, the CPT Editorial Panel approved a new bundled code (CPT code 2X005) to report intercarpal or carpometacarpal joint suspension arthroplasty, including transfer or transplant of tendon, with interposition when performed while CPT code 25447 was revised to clarify that the code only included interposition of a tendon and not suspension. This family of codes was surveyed for the September 2023 RUC meeting.

We disagree with the RUC-recommended work RVU of 9.50 for CPT code 25310 (*Tendon transplantation or transfer, flexor or extensor, forearm and/or wrist, single; each tendon*) and we are instead proposing a work RVU of 9.00 based on the survey 25th percentile result. In reviewing CPT code 25310, we noted that the recommended intraservice time was unchanged at 60 minutes in the new survey; however, the RUC-recommended work RVU is increasing from the current 8.08 to 9.50. Although we do not imply that changes in work time as reflected in survey values must equate to a one-to-one or linear change in the valuation of work RVUs, we believe that since the two components of work are time and intensity, increases in the recommended work RVU should typically be reflected in increases in the surveyed work time. We recognize that the total time for CPT code 25310 is increasing from 235 minutes to 263 minutes (an increase of 12 percent) due to changes in the code's post-operative office visits which will now take place at a higher level. However, this again does not match the increase in the recommended work RVU, which is increasing from 8.08 to 9.50 (approximately 18 percent). We believe that it would be more accurate to propose the survey 25th percentile work RVU of 9.00 for CPT code 25310 which matches this increase in the total work time. We also note that the intensity of CPT code 25310 is decreasing, not increasing, as recommended by the RUC which further suggests that a work RVU of 9.50 would not be appropriate for this code given the surveyed work times.

We disagree with the RUC-recommended work RVU of 11.14 for CPT code 25447 (*Arthroplasty, intercarpal or carpometacarpal joints; interposition (eg, tendon)*) and we are instead proposing a work RVU of 10.50 based on the survey 25th percentile result. In reviewing CPT code 25447, we noted that the recommended intraservice time was decreasing from 100 minutes to 75 minutes in the new survey; however, the RUC recommended maintaining the current work RVU of 11.14. Although we do not imply that changes in work time as reflected in survey values must equate to a one-to-one or linear change in the valuation of work RVUs, we believe that since the two components of work are time and intensity, decreases in the surveyed work time should typically be reflected in decreases to the work RVU. We recognize that the total time for CPT code 25447 is slightly increasing from 278 minutes to 281 minutes (an increase of about 1 percent) due to changes in the code's post-operative office visits which will now take place at a higher level. However, we believe that the sizable decrease in surveyed intraservice work time (a reduction of approximately 33 percent) better supports proposing the survey 25th percentile work RVU of 10.50 instead of maintaining the current work RVU of 11.14. We also disagree with the RUC that the intensity of CPT code 25447 is unchanged due to increases in the post-operative work; we believe that the sizable decrease in surveyed intraservice work time indicates a modest decrease in intensity. We note again that the intensity of CPT code 25310 is decreasing, not increasing, as recommended by the RUC which suggests that a similar pattern is likely taking place with clinically similar procedures elsewhere in the same code family.

We disagree with the RUC-recommended work RVU of 13.90 for CPT code 2X005 (*Arthroplasty, intercarpal or carpometacarpal joints; suspension, including transfer or transplant of tendon, with interposition, when performed*) and we are instead proposing a work RVU of 11.85 based on the survey 25th percentile result. We note that the RUC typically values new codes such as CPT code 2X005 using this survey 25th percentile work RVU as opposed to the survey median work RVU that it recommended. The RUC's recommendations stated that CPT code 2X005 should be valued higher than CPT code 25447 due to having higher intensity, a relationship which is preserved at our proposed work RVUs of 11.85 and 10.50 respectively. The RUC also stated in its recommendations that CPT code 2X005 should be valued higher than reference CPT code 29828 (*Arthroscopy, shoulder, surgical; biceps tenodesis*) because it has more intraservice time and total work time. However, the RUC also stated elsewhere in its recommendations that the arthroscopy described by CPT code 29828 is more intense than the arthroplasty procedures described by this family of codes, which we believe supports CPT code 29828 having a higher work RVU despite its lower work times. Based on this information, we believe that proposing the survey 25th percentile work RVU of 11.85 is the most accurate valuation for CPT code 2X005.

We disagree with the RUC-recommended work RVU of 9.50 for CPT code 26480 (*Transfer or transplant of tendon, carpometacarpal area or dorsum of hand; without free graft, each tendon*) and we are instead proposing a work RVU of 9.00 based on the survey 25th percentile result. In reviewing CPT code 26480, we noted that the recommended intraservice time was unchanged at 60 minutes in the new survey; however, the RUC-recommended work RVU is increasing from the current 6.90 to 9.50. Although we do not imply that changes in work time as reflected in survey values must equate to a one-to-one or linear change in the valuation of work RVUs, we believe that since the two components of work are time and intensity, increases in the recommended work RVU should typically be reflected in increases in the surveyed work time. We recognize that the total time for CPT code 26480 is increasing from 227 minutes to 263 minutes (an increase of 16 percent) due to changes in the code's post-operative office visits which will now take place at a higher level. However, this again does not match the increase in the recommended work RVU, which is increasing from 6.90 to 9.50 (approximately 38 percent). We believe that it would be more accurate to propose the survey 25th percentile work RVU of 9.00 for CPT code 26480 which more closely matches this increase in the total work time. We also note that CPT codes 25310 and 26480 were surveyed as having identical work times and identical survey 25th percentile and survey median work RVUs. We concur with the RUC that these two codes should be valued at the same work RVU, however we continue to believe that the survey 25th percentile work RVU of 9.00 is a more accurate choice in both cases. We are proposing the RUC-recommended direct PE inputs for all four codes in the family without refinement.

(3) CAR–T Therapy Services (CPT Codes 3X018, 3X019, 3X020, and 3X021)

In September 2023, the CPT Editorial Panel deleted four category III codes (0537T–0540T) and approved the addition of four new codes (3X018–3X021) that describe only steps of the complex CAR–T Therapy process performed and supervised by physicians. The RUC recommended four different work RVUs for codes 3X018, 3X019, 3X020, and 3X021 and only recommended direct PE values for code 3X021.

For CPT code 3X018 (Chimeric antigen receptor T-cell (CAR–T) therapy; harvesting of blood-derived T lymphocytes for development of genetically modified autologous CAR–T cells, per day) the RUC recommended a work RVU of 1.94. For CPT code 3X019 (*Chimeric antigen receptor T-cell (CAR–T) therapy; preparation of blood-derived T lymphocytes for transportation (eg, cryopreservation, storage)*) the RUC recommended a work RVU of 0.79. For CPT code 3X021 (*Chimeric antigen receptor T-cell (CAR–T) therapy; CAR–T cell administration, autologous*) the RUC recommended a work RVU of 3.00. For CPT code 3X020 (*Chimeric antigen receptor T-cell (CAR–T) therapy; receipt and preparation of CAR–T cells for administration*) the RUC recommended a work RVU of 0.80 and for CPT code 3X020, we are proposing the RUC-recommended work RVU of 0.80. We are proposing the RUC-recommended work RVUs for CPT codes 3X018, 3X019, and 3X021 respectively.
