The ten PTEP groups fall within two categories—section 959(c)(2) PTEP groups and section 959(c)(1) PTEP groups. *See* proposed § 1.959–2(b)(2)(i). The section 959(c)(2) groups separately track PTEP resulting from subpart F income inclusions, GILTI inclusions, application of section 965(a) or 965(b), or income inclusions to which section 245A(d) applies (PTEP resulting from section 245A(e)(2) or certain PTEP resulting from section 959(e) (concerning section 1248) or section 964(e)(4) (concerning certain dispositions of foreign stock)). The section 959(c)(1) PTEP groups correspond to the section 959(c)(2) PTEP groups and account for the reclassification of PTEP pursuant to section 959(a)(2). PTEP arising from section 956 inclusions is combined with reclassified PTEP arising from subpart F income inclusions.

The two subgroups track PTEP arising from income inclusions of certain covered shareholders. *See* proposed § 1.959–2(b)(2)(ii). One subgroup tracks PTEP arising from an income inclusion of an individual and includible in gross income under section 962(d) when distributed in a distribution to which section 959(a) would otherwise apply (taxable section 962 PTEP). The second subgroup tracks PTEP arising from an income inclusion of an individual, estate, or trust that would be includible in net investment income under section 1411(c) when distributed (that is, the election under § 1.1411–10(g) is not made and, thus, the income inclusion giving rise to the PTEP was not taken into account in determining net investment income).

Additionally, for PTEP resulting from the application of section 965(a) or (b), an adjusted applicable percentage must be maintained, which tracks the percentage of a credit or deduction for foreign income taxes associated with PTEP that is disallowed under § 1.965–5. *See* proposed § 1.959–2(b)(2)(iii)(A). Similarly, for PTEP resulting from the application of section 965(a), a section 965(c) deduction percentage must be maintained, which tracks the percentage of foreign currency gain or loss with respect to PTEP that is not recognized under § 1.986(c)–1. *See* proposed § 1.959–2(b)(2)(iii)(B). The adjusted applicable percentage and the section 965(c) deduction percentage are tracked by section 904 category. Each is determined using a single weighted average across that section 904 category,

which is intended to reduce the compliance burden and facilitate administrability in cases in which the applicable percentage or section 965(c) deduction amount differs with respect to PTEP in the section 904 category by not requiring the separate tracking of those percentages or amounts. *See also* part IX.B.3. of the Explanation of Provisions (describing transition rules for the initial determination of the adjusted applicable percentage and section 965(c) deduction percentage).

iii. Dollar Basis Pools and PTEP Tax Pools

Dollar basis pools track the basis in U.S. dollars of a foreign corporation's PTEP with respect to a covered shareholder, and such dollar basis is used to determine foreign currency gain or loss under section 986(c). *See* proposed § 1.959–2(b)(1). PTEP tax pools track the U.S. dollar amount of foreign income taxes associated with a foreign corporation's PTEP with respect to a covered shareholder, and such taxes are assigned to a creditable PTEP tax group to the extent eligible to be deemed paid under section 960(b). *See* proposed § 1.959–2(b)(1) and (4)(ii). The creditable PTEP tax group tracks foreign income taxes that are eligible to be deemed paid under section 960(b).

Furthermore, together, dollar basis and the U.S. dollar amount of associated foreign income taxes determine basis reductions under section 961 for distributions of PTEP. *See also* part III.C.2 of the Explanation of Provisions.

Tracking foreign income taxes associated with PTEP in a shareholder-specific manner (consistent with how PTEP is tracked) differs from the approach under existing § 1.960–3 (and the 1988 notice), which tracks such taxes only at the CFC-level (without regard to the shareholder whose PTEP account was reduced by the taxes). This new approach ensures that, in structures involving multiple covered shareholders, foreign income taxes are associated with PTEP with respect to a particular covered shareholder and do not include foreign income taxes that were imposed on PTEP with respect to another covered shareholder. Thus, in a distribution of PTEP to a covered shareholder, the covered shareholder's basis is reduced under section 961(b) by the foreign income taxes that are (i) associated with (and consequently reduced) PTEP with respect to the covered shareholder, and (ii) deemed paid by the covered shareholder. This method is intended to prevent each covered shareholder from incurring double taxation on a single item of income, by ensuring that a covered

shareholder is able to take into account the foreign income taxes associated with the PTEP with respect to the covered shareholder.

Generally, dollar basis pools and PTEP tax pools are maintained on a year-by-year basis, with one pool for each PTEP group within each annual PTEP account. *See* proposed § 1.959–2(b)(3) and (4). Maintenance of separate dollar basis pools for each PTEP group prevents the commingling of dollar basis of PTEP that is subject to different rules with respect to the recognition of foreign currency gain or loss under section 986(c). Maintenance of separate PTEP tax pools for each PTEP group prevents the commingling of foreign income taxes for which the related PTEP is subject to different rules regarding the applicability of section 960(b).

Under an exception intended to simplify PTEP accounting, a covered shareholder may elect to combine dollar basis pools and PTEP tax pools across years. *See* proposed § 1.959–2(c). In such a case, each dollar basis pool and PTEP tax pool relates to PTEP assigned to a single PTEP group and a single section 904 category (without regard to the taxable years to which the PTEP relates). *See* proposed § 1.959–2(b)(3) and (4). This election is consistent with a comment in response to the 2019 notice that recommended allowing taxpayers to pool dollar basis across years within section 904 categories.

If a covered shareholder elects to combine dollar basis pools and PTEP tax pools across years, the election applies to the covered shareholder's dollar basis pools and PTEP tax pools with respect to each foreign corporation in which the covered shareholder owns stock. *See* proposed § 1.959–2(c)(1). This ensures consistent treatment by not permitting a covered shareholder to maintain combined pools with respect to some foreign corporations but not others. A combined pool election may be revoked only with the consent of the Commissioner. *See* proposed § 1.959–2(c)(2).

2. Foreign Corporation-Level Accounts

Foreign corporation-level accounts track a foreign corporation's PTEP and associated foreign income taxes (corporate PTEP accounts and corporate PTEP tax pools, respectively). *See* proposed § 1.959–2(d)(1) and (d)(2). A corporate PTEP account and corporate PTEP tax pool each relate to a single covered shareholder, and PTEP or foreign income taxes within such an account are assigned to section 904 categories and PTEP groups (as is the case in shareholder-level accounts). These accounts reflect that PTEP and

associated foreign income taxes are foreign corporation-level attributes (which, as discussed in part II.B.1 of the Explanation of Provisions, are tracked in a shareholder-specific manner). These accounts also are necessary to allocate and apportion current year taxes paid or accrued by a foreign corporation among the relevant statutory and residual groupings of the foreign corporation, as discussed in part II.F of the Explanation of Provisions, as well as for computations under section 956, which take into account E&P described in section 959(c)(1). Finally, as with shareholder-level accounts, these rules are issued pursuant to the express delegations of authority under sections 245A(g), 904(d)(7), 960(f), 965(o), and 989(c).

A corporate PTEP account relating to a covered shareholder represents all PTEP within the covered shareholder's annual PTEP accounts with respect to the foreign corporation (therefore, unlike shareholder-level accounts, a corporate PTEP account does not relate to a single taxable year of the foreign corporation). Similarly, a corporate PTEP tax pool for a covered shareholder represents all foreign income taxes within the covered shareholder's PTEP tax pools with respect to the foreign corporation. Thus, as a covered shareholder's annual PTEP accounts and PTEP tax pools with respect to a foreign corporation are adjusted, the foreign corporation-level accounts (including the PTEP groups within the accounts) are also adjusted.

The proposed regulations do not provide rules for maintaining a foreign corporation-level account for section 959(c)(3) E&P because the Treasury Department and the IRS are studying whether such E&P should be separately computed with respect to each covered shareholder in certain instances and related issues (for example, coordination with section 1248). For example, assume a case in which US1 and US2, each a covered shareholder, own 60% and 40%, respectively, of the stock of CFC1, a foreign corporation. CFC1 has \$75x and \$0 of PTEP with respect to US1 and US2, respectively, but only \$50x of total E&P as a result of incurring a deficit in E&P after generating the PTEP. Under a shareholder-specific approach to computing CFC1's section 959(c)(3) E&P, such E&P would be negative \$45x with respect to US1 ($\$50x \times 60\% - \$75x$) and \$20x with respect to US2 ($\$50x \times 40\% - \$0$). Under a non-shareholder-specific approach to computing section 959(c)(3) E&P, CFC1's section 959(c)(3) E&P would be negative \$25x ($\$50x - \$75x$).

The proposed regulations clarify that a foreign corporation's E&P is determined independently of the foreign corporation's PTEP. *See* proposed § 1.959–2(d)(3). For example, in a distribution by a foreign corporation with respect to its stock, section 316 determines the extent to which the distribution is made out of the foreign corporation's E&P, and section 959 determines the extent to which the portion that is made out of E&P is a distribution of PTEP. *See also* proposed § 1.959–10(c)(2)(iii) (*Example 2, alternative facts*, regarding a distribution of built-in loss property). Additionally, as in the example in the preceding paragraph, the proposed regulations clarify that a foreign corporation's E&P may be less than the foreign corporation's PTEP because a loss does not reduce PTEP.

C. Shareholder-Level Account Adjustments (Proposed § 1.959–3)

1. In General

The proposed regulations describe the adjustments made to a covered shareholder's annual PTEP accounts (including PTEP groups within those accounts and, if applicable, relevant percentages for section 965 PTEP and PTEP subgroups), dollar basis pools, and PTEP tax pools with respect to a foreign corporation. *See* proposed § 1.959–3. The rules for making these adjustments are issued pursuant to the express delegations of authority under sections 245A(g), 904(d)(7), 986(c)(2), 960(f), 965(o), and 989(c).

These adjustments reflect income inclusions and transactions related to a taxable year of the foreign corporation, and the adjustments preserve the character of the foreign corporation's PTEP with respect to the covered shareholder (for example, the taxable year, section 904 category, and PTEP group to which PTEP relates). In applying these rules to tiers of foreign corporations, the adjustments are applied successively from the lowest-tier foreign corporation to the highest-tier foreign corporation. *See* proposed § 1.959–3(g).

An adjustment to annual PTEP accounts is treated as made at one of three points in time (each of which is discussed below in this part II.C of the Explanation of Provisions), which determines when PTEP becomes (or ceases to be) available for distribution to the covered shareholder: (i) at the beginning of the first day of the foreign corporation's taxable year, (ii) concurrently with the transaction giving rise to the adjustment, or (iii) at the end of the last day of the foreign

corporation's taxable year. *See* proposed § 1.959–3(f). An adjustment to dollar basis pools and PTEP tax pools is treated as made concurrently with the related adjustment to annual PTEP accounts.

2. Beginning of Year Adjustments

Three types of PTEP are added to annual PTEP accounts at the beginning of the foreign corporation's taxable year (even if, for example, the determination of the amount giving rise to the PTEP occurs at the end of such taxable year). This timing ensures that PTEP generated or received during the taxable year is available for distribution as of the start of the taxable year, consistent with sections 316(a)(2) and 959(c) (which determine dividend treatment and the application of section 959(a) or (b) based on E&P for the taxable year).

The first type is PTEP arising from the covered shareholder's subpart F income inclusion or GILTI inclusion with respect to the foreign corporation for the taxable year. *See* proposed § 1.959–3(c)(1)(i) and (ii). To reflect the addition of this PTEP, basis equal to the U.S. dollar amount of the income inclusion giving rise to the PTEP is added to related dollar basis pools. *See* proposed § 1.959–3(d)(1)(i).

The second type is PTEP with respect to the covered shareholder that is distributed to the foreign corporation during the taxable year (discussed in part II.D of the Explanation of Provisions). *See* proposed § 1.959–3(c)(1)(iii). To reflect the addition of this PTEP, the dollar basis and associated foreign income taxes of the PTEP are added to related dollar basis pools and PTEP tax pools, and such taxes are assigned to the creditable PTEP tax group to the extent the foreign corporation is deemed to pay the taxes under section 960(b)(2) and proposed § 1.960–3(c). *See* proposed § 1.959–3(d)(1)(ii), (e)(1)(i). Further, the PTEP is reduced by current year taxes allocated and apportioned to the PTEP (that is, by foreign income taxes imposed on the PTEP and paid or accrued by the foreign corporation in the taxable year, as distinguished from foreign income taxes described in the preceding sentence, which were paid or accrued by another foreign corporation in a prior distribution of the PTEP). *See* proposed § 1.959–3(c)(1)(v); *see also* part II.F of the Explanation of Provisions (rules for allocating and apportioning current year taxes to PTEP). Such current year taxes reduce related dollar basis pools and are added to related PTEP tax pools, where the taxes are assigned to the creditable PTEP tax group to the extent the foreign corporation is a CFC and a credit for the

taxes is not disallowed or suspended at the level of the CFC. *See* proposed § 1.959–3(d)(1)(iii), (e)(1)(ii).

The third type is PTEP with respect to the covered shareholder that results from the application of the foreign corporation's section 961(c) basis to gain recognized by the foreign corporation during the taxable year (discussed in part III.E of the Explanation of Provisions). *See* proposed § 1.959–3(c)(1)(iv). To reflect the addition of this PTEP, the dollar basis of the PTEP is added to related dollar basis pools. *See* proposed § 1.959–3(d)(1)(ii). Further, current year taxes allocated and apportioned to the PTEP reduce the PTEP, reduce related dollar basis pools, and are added to related PTEP tax pools, where (like in a distribution) the taxes are assigned to the creditable PTEP tax group to the extent the foreign corporation is a CFC and a credit for the taxes is not disallowed or suspended at the level of the CFC. *See* proposed § 1.959–3(d)(1)(iii), (e)(1)(ii).

3. Time of Transaction Adjustments

Three types of PTEP are added to, or removed from, annual PTEP accounts concurrently with the relevant transaction occurring during the foreign corporation's taxable year.

The first type is PTEP distributed by the foreign corporation during the taxable year. *See* proposed § 1.959–3(c)(1)(vi). To reflect the removal of this PTEP, the dollar basis and associated foreign income taxes of the PTEP are removed from related dollar basis pools and PTEP tax pools. *See* proposed § 1.959–3(d)(1)(iv), (e)(1)(iii).

The second type is PTEP arising from gain recognized by the covered shareholder on the sale or exchange of stock during the taxable year that is recharacterized and included in gross income as a dividend under section 1248 by reason of E&P attributed to stock of the foreign corporation under section 1248. *See* proposed § 1.959–3(c)(1)(vii); *see also* section 959(e). This timing prevents iterative computations that could result if the PTEP were available for distribution earlier in the taxable year. To reflect the addition of this PTEP, basis equal to the U.S. dollar amount of the income inclusion giving rise to the PTEP is added to related dollar basis pools. *See* proposed § 1.959–3(d)(1)(i). The Treasury Department and the IRS are studying whether a foreign corporation's PTEP should similarly be increased to reflect gain treated as a dividend under section 964(e)(1) by reason of E&P of the foreign corporation, which amount generally increases the selling CFC's PTEP, and welcome comments on whether

increasing the foreign corporation's PTEP would be appropriate notwithstanding the duplicative result (that is, PTEP would be in the selling CFC and the foreign corporation whose E&P gave rise to the dividend).

The third type is PTEP that transfers from (or to) the covered shareholder under section 959's successor rules (discussed in part II.G of the Explanation of Provisions). *See* proposed § 1.959–3(c)(1)(viii), (ix). To reflect the removal (or addition) of this PTEP, the dollar basis and associated foreign income taxes of the PTEP are removed from (or added to) related dollar basis pools and PTEP tax pools. *See* proposed § 1.959–3(d)(1)(iv) and (v), (e)(1)(iii) and (iv).

4. End of Year Adjustments

Two types of adjustments are made at the end of the foreign corporation's taxable year. These adjustments relate to the covered shareholder's section 956 amount with respect to the foreign corporation for the taxable year.

First, PTEP to which the section 956 amount is allocated (which, as discussed in part II.E of the Explanation of Provisions, is excluded from the covered shareholder's gross income under section 959(a)(2)) is reassigned within annual PTEP accounts from section 959(c)(2) PTEP groups to section 959(c)(1) PTEP groups. *See* proposed § 1.959–3(c)(1)(x). To reflect the reclassification, the dollar basis and associated foreign income taxes of the PTEP are moved from dollar basis pools and PTEP tax pools relating to section 959(c)(2) PTEP groups to dollar basis pools and PTEP tax pools relating to section 959(c)(1) PTEP groups. *See* proposed § 1.959–3(d)(1)(vi), (e)(1)(v).

Next, PTEP arising from the portion of the section 956 amount included in the covered shareholder's gross income under section 951(a)(1)(B) is added to annual PTEP accounts. *See* proposed § 1.959–3(c)(1)(xi). In addition, an amount of basis equal to the U.S. dollar amount of the section 956 inclusion giving rise to the PTEP is added to related dollar basis pools. *See* proposed § 1.959–3(d)(1)(i).

Further, additional rules address cases where the covered shareholder acquires ownership of stock of the foreign corporation on or after the last relevant day of the foreign corporation's taxable year (that is, the last day of such taxable year on which the foreign corporation is a CFC) and a portion of a section 956 amount of a United States shareholder is attributable to such stock. *See* proposed § 1.959–3(c)(4). Under these rules, PTEP of the foreign corporation that has transferred to the

covered shareholder but to which such portion of the section 956 amount is ultimately allocated (discussed in part II.E of the Explanation of Provisions) is reclassified from section 959(c)(2) PTEP groups to section 959(c)(1) PTEP groups. Moreover, the foreign corporation's PTEP with respect to the covered shareholder is increased to reflect the inclusion in income by the United States shareholder of such portion of the section 956 amount.

D. Distributions of PTEP (Proposed § 1.959-4)

1. Application of Exclusions

i. In General

The proposed regulations provide rules regarding the exclusions from gross income under section 959(a)(1) and (b) for PTEP that is distributed to a covered shareholder or a CFC. *See* proposed § 1.959-4; *see also* part II.D.2 of the Explanation of Provisions (determining distributed PTEP).

Under the section 959(a)(1) exclusion, PTEP distributed to a covered shareholder, other than taxable section 962 PTEP, is excluded from the covered shareholder's gross income. *See* proposed § 1.959-4(b)(1); *see also* section 962(d) and proposed § 1.312-8(c) (domestic corporation's receipt of PTEP does not increase E&P, discussed in part VIII.I of the Explanation of Provisions).

Under the section 959(b) exclusion, PTEP distributed by a CFC to another CFC is excluded from the recipient CFC's gross income for purposes of determining the recipient CFC's subpart F income and tested income or tested loss, provided that the PTEP relates to a covered shareholder that is a United States shareholder in both CFCs. *See* proposed § 1.959-4(b)(2); *see also* § 1.312-6(b) (the distribution generally increases the recipient CFC's E&P) and proposed § 1.952-1(c)(4) (the distribution does not increase the recipient CFC's current year E&P for purposes of the limitation in section 952(c)(1)(A), discussed in part VIII.I of the Explanation of Provisions).

Applying the section 959(b) exclusion for purposes of determining the recipient CFC's tested income or tested loss prevents double taxation (and thus is consistent with the policy of section 959) in cases where the distribution is not a related party dividend described in section 951A(c)(2)(A)(i)(IV) and therefore could otherwise result in tested income. The Treasury Department and the IRS are of the view that this approach, which is issued under the express delegation of authority in section 951A(f)(1)(B), is

consistent with section 951A(f)(1)(A) (treating an inclusion under section 951A(a) in the same manner as an inclusion under section 951(a)(1)(A) for purposes of section 959), which should be interpreted as allowing references to section 951(a) in section 959 to be treated as including a reference to section 951A(a).

Applying the section 959(b) exclusion only to PTEP distributed by a CFC to another CFC is consistent with the statute. However, under the express delegation of authority in section 965(o), the proposed regulations provide a special rule pursuant to which a specified foreign corporation (as defined in § 1.965-1(f)(45)(i)(B)) that is not a CFC is treated as a CFC for purposes of applying the section 959(b) exclusion to section 965 PTEP distributed by the specified foreign corporation, which ensures that the section 959(b) exclusion applies to such PTEP when received by a CFC. *See* proposed § 1.959-4(b)(2)(ii). The Treasury Department and the IRS are studying the application of section 959(b) to other PTEP distributed by a foreign corporation that is not a CFC (for example, in a case where the foreign corporation was a CFC when the PTEP was generated but is no longer a CFC when the PTEP is distributed). Irrespective of whether the section 959(b) exclusion applies to PTEP distributed to a foreign corporation, the PTEP remains PTEP and, in a subsequent distribution, may be excluded from gross income under section 959(a)(1) or (b). *See* proposed §§ 1.959-2 and 1.959-3 (describing shareholder-level annual PTEP accounts and related adjustments with respect to a foreign corporation without regard to CFC status). This treatment is required to give effect to section 959(a), which does not depend on the CFC status of any intermediary entities through which a covered shareholder ultimately receives PTEP.

ii. Split-Ownership Structures

Under the proposed regulations, the section 959(b) exclusion applies at the CFC-level by excluding a distribution of PTEP from the recipient CFC's gross income for certain purposes. In structures where stock of a CFC is not all owned by a single United States shareholder, the application of the section 959(b) exclusion at the CFC-level could, absent special rules, result in all United States shareholders of the CFC sharing any benefits of the exclusion (rather than just the United States shareholder to which the excluded PTEP relates) and partial double taxation to the United States

shareholder to which the excluded PTEP relates (to the extent the exclusion benefits other United States shareholders).

Guidance issued before the Act generally used a "gross-up" mechanism to address this issue. Rev. Rul. 82-16, 1982-1 C.B. 106, considered a scenario where a United States shareholder owned 70% of the stock of an upper-tier CFC, with the remaining 30% owned by non-United States shareholders, and the upper-tier CFC owned all the stock of a lower-tier CFC. The lower-tier CFC earned \$100x of subpart F income, which gave rise to a \$70x subpart F income inclusion and, thus, \$70x of PTEP with respect to the United States shareholder. In a later year, the lower-tier CFC distributed \$200x to the upper-tier CFC. The ruling concluded that section 959(b) looks to the total amount of E&P of the lower-tier CFC that caused the United States shareholder's subpart F income inclusion, with the result that section 959(b) excluded \$100x (rather than \$70x) from the upper-tier CFC's subpart F income in applying section 951(a) to the United States shareholder. Conversely, a \$70x exclusion under section 959(b) would have caused the upper-tier CFC to have an additional \$30x of subpart F income from the distribution, which would have led to a \$21x (\$30x × 70%) subpart F income inclusion for the United States shareholder even though its share of the distribution was all attributable to PTEP.

However, a gross-up mechanism raises certain issues. For example, computing a gross-up may be complex or burdensome in light of the increased prevalence of PTEP that is not pro rata with respect to United States shareholders following the Act (for instance, PTEP resulting from a GILTI inclusion, which is not determined solely by reference to a particular CFC). Additionally, a gross-up mechanism could result in the need for different determinations of a CFC's subpart F income (and tested income or tested loss) for different United States shareholders of the CFC, which is inconsistent with the way that these types of income are treated under existing regulations for other purposes of the Code such as the expense allocation rules or foreign tax credit rules.

Accordingly, instead of a gross-up mechanism, the proposed regulations coordinate the section 959(b) exclusion with revisions to the pro rata share rules of section 951(a) (discussed in part IV.C of the Explanation of Provisions). Under this approach, a CFC's subpart F income is determined with respect to all

shareholders by excluding the same amount of PTEP received by the CFC, and United States shareholders' pro rata shares of the CFC's subpart F income are computed in a manner so that any benefits of the application of the section 959(b) exclusion to PTEP with respect to a United States shareholder generally inure only to that United States shareholder. For instance, if two United States shareholders own equal interests in a CFC, and the CFC receives a distribution half of which is PTEP with respect to one United States shareholder (because there is PTEP with respect to the United States shareholder at least equal to its share of distribution) and the other half of which gives rise to subpart F income (because there is no PTEP with respect to the other United States shareholder and no exception from subpart F income applies), then only the United States shareholder with respect to which there is no PTEP has a pro rata share of the subpart F income resulting from the distribution.

The Treasury Department and the IRS are of the view that the approach in the proposed regulations appropriately carries out the shareholder-specific nature of section 959(b) (that is, excluding PTEP with respect to a United States shareholder from a CFC's gross income for purposes of the application of section 951(a) to the CFC with respect to the United States shareholder). Additionally, this approach conforms with the approach for applying section 961(c) which, under the proposed regulations (as discussed in part III.E of the Explanation of Provisions), also provides for a gross income exclusion at the CFC-level that is coordinated with the section 951(a) pro rata share rules to ensure its benefits generally inure only to the appropriate United States shareholder.

iii. Issues Involving Allocation Rules Under Section 861

The approach in the proposed regulations discussed in part II.D.1.ii of the Explanation of Provisions (applying the section 959(b) exclusion, as well as section 961(c), at the CFC-level) can lead to issues involving the rules of section 861 for allocating and apportioning deductions because a CFC's deductions that are not current year taxes are not allocated and apportioned under section 861 to PTEP. See § 1.960–1(c)(1)(ii) and proposed § 1.959–6(d)(1).

For example, in a case where some, but not all, of a distribution received by a CFC is PTEP, an amount of the CFC's deductible interest expense could reduce the non-PTEP portion of the distribution. See also proposed § 1.951–

1(h)(2)(ii)(C) (*Example 1, alternative facts*). This may result in a benefit if the non-PTEP portion would give rise to subpart F income or tested income, but otherwise may not be beneficial if the interest deductions reduce section 959(c)(3) E&P and thus the potential for a dividends received deduction under section 245A. Comments are requested on how to appropriately allocate and apportion deductions of a CFC when some, but not all, of a distribution (or gain recognized) is PTEP.

For example, comments are requested on whether deductions that are not current year taxes, such as deductible interest expense, should be allocated and apportioned to, and therefore reduce, the CFC's PTEP. Under this approach, to the extent PTEP with respect to a United States shareholder is reduced by deductions that are not current year taxes, the shareholder could be allowed to retain an equivalent amount of adjusted basis in property directly owned by the shareholder and on which the remaining PTEP is ultimately distributed, with the result that the shareholder would receive a benefit equivalent to a deduction (similar to the result discussed in Part III.C.2.ii of the Explanation of Provisions in the case of foreign income taxes that are associated with PTEP but not credited under section 901).

Comments are also requested on whether, as an alternative to the approach in the proposed regulations, sections 959(b) and 961(c) should apply at the shareholder-level. Under this type of approach, instead of section 959(b) preventing a distribution to a CFC from giving rise to subpart F income (as it has historically been interpreted, but with respect to a particular shareholder), section 959(b) would generally reduce a United States shareholder's pro rata share of the CFC's subpart F income, to the extent attributable to distributed PTEP. Furthermore, section 961(c) would apply in a similar manner in the case of a CFC's gain from a sale or other disposition of stock of a foreign corporation. Comments should address whether a CFC's deductions that are not current year taxes, such as deductible interest expense, should be allocated and apportioned to gross income of the CFC that does not give rise to an inclusion at the shareholder-level under section 959(b) or 961(c) or whether CFC-level provisions (such as section 954(c)(3) or (c)(6) or 964(e)(1)) apply to such income and, if so applied, whether the E&P from the income should be treated as section 959(c)(3) E&P or PTEP to ensure that the CFC-level and shareholder-level provisions interact appropriately.

2. Determining Distributed PTEP

i. Covered Distributions

For a distribution to be considered a distribution of PTEP under section 959, the proposed regulations first require that the distribution be a covered distribution, which is generally defined as any distribution made by a foreign corporation with respect to its stock to the extent that the distribution is a dividend (as defined in section 316), determined without regard to section 959(d). See proposed § 1.959–4(c)(1). While a covered distribution may include deemed distributions treated as dividends (for example, distributions under section 304), a covered distribution does not include an amount treated as a dividend by reason of section 78, 367(b), 964(e)(1), or 1248. A deemed dividend under section 78 is determined without regard to E&P (and does not represent a distribution of E&P to any shareholder), and deemed dividends under the other provisions, regardless of whether they constitute deemed distributions of E&P, are determined by excluding PTEP (apart from § 1.367(b)–2(j)(2)(ii), which separately provides for a deemed distribution of PTEP in certain nonrecognition transactions, and § 1.367(b)–3(g)(1), which separately provides for a deemed distribution of E&P, including PTEP, in certain inbound nonrecognition transactions described in § 1.367(b)–3). The proposed regulations do not address the treatment of dividends arising under section 356(a)(2) as covered distributions, which will be addressed in future guidance regarding reorganizations (although no inference is intended as to the treatment of such dividends under current law). See proposed § 1.959–4(c)(2).

Comments on the 2019 notice asserted that a distribution of PTEP should not depend on the existence of E&P that would result in a dividend under section 316, stating that section 959(c) requires applying section 316 separately to sections 959(c)(1), (c)(2), and (c)(3) in determining whether there is sufficient E&P under section 316 to support a distribution of E&P under that paragraph. Comments noted that the approach described in the 2019 notice was contrary to section 959(a) and inconsistent with the policy of section 959 to facilitate the repatriation of PTEP. The Treasury Department and the IRS remain of the view described in the 2019 notice under which the reference to section 316(a) in section 959(c) indicates that, under the statute, a distribution of PTEP cannot occur unless there is sufficient current or

accumulated E&P to support what would otherwise be a dividend under section 316. This reading of the statute is consistent with the principle underlying section 959 that PTEP represents a type of E&P. Thus, the proposed regulations do not adopt the comments.

ii. Analyzing Covered Distributions

The proposed regulations provide rules for determining the extent to which PTEP is distributed in a covered distribution. *See* proposed § 1.959–4(d). Under these rules, each covered shareholder first determines its share of the covered distribution, which is the portion of the covered distribution that is made to the covered shareholder or any portion of the covered distribution that is made to an upper-tier foreign corporation and assigned to the covered shareholder under proposed § 1.951–2 (discussed in part IV.B of the Explanation of Provisions). *See* proposed § 1.959–4(d)(1). For this purpose, the portion of a covered distribution that is made to a partnership, or that is treated as made to the partnership in the case of tiered partnerships, is treated as made to the partnership's partners in accordance with their respective distributive shares of such portion. *See* proposed § 1.959–4(c)(3). Thus, if a covered shareholder is a partner in an upper-tier partnership, the covered shareholder's share of a covered distribution would include a portion of the covered distribution that is made to a lower-tier partnership because an amount of the covered distribution made to the lower-tier partnership would be treated as made to the upper-tier partnership by reason of the upper-tier partnership being a partner in the lower-tier partnership and, in turn, an amount of the covered distribution treated as made to the upper-tier partnership would be treated as made to the covered shareholder by reason of the covered shareholder being a partner in the upper-tier partnership.

Next, each covered shareholder allocates its share of the covered distribution to the distributing foreign corporation's PTEP with respect to the covered shareholder, to the extent thereof and in accordance with the composition rules described in part II.D.2.iii of the Explanation of Provisions, and then allocates any remaining portion of such share to the distributing foreign corporation's section 959(c)(3) E&P. *See* proposed § 1.959–4(d)(2) and (e)(1). For this purpose, the distributing foreign corporation's PTEP is determined immediately before the covered distribution (and thus includes PTEP

resulting from a subpart F income inclusion or GILTI inclusion for the distributing foreign corporation's taxable year in which the covered distribution is made because such PTEP is added to the covered shareholder's annual PTEP accounts at the beginning of the taxable year).

Further, because the amount of a covered shareholder's share of a covered distribution is determined on an aggregate basis rather than on a share-specific basis, the proposed regulations treat a pro rata portion of all PTEP distributed in each covered shareholder's share of the covered distribution as distributed with respect to each share of stock of the distributing foreign corporation on which the covered shareholder's share of the covered distribution is made. *See* proposed § 1.959–4(d)(4); *see also* proposed § 1.959–10(c)(1) (*Example 1*). In this way, basis adjustments resulting from distributed PTEP can be made on each share of stock of the foreign corporation in accordance with section 961 and, if applicable, PTEP of a recipient foreign corporation can be increased.

iii. Composition Rules

As discussed in part II.C of the Background, different types of PTEP can have different tax effects, including with respect to foreign currency gain or loss under section 986(c) or deemed paid taxes under section 960(b). Thus, once a covered shareholder has identified the portion of its share of a covered distribution that is allocated to PTEP, it is necessary to determine the specific PTEP that is distributed. The proposed regulations include composition rules for this purpose. *See* proposed § 1.959–4(d)(3) and (e)(2) through (5); *see also* proposed § 1.959–10(c)(2) (*Example 2*).

Under these composition rules, PTEP is sourced from section 959(c)(1) PTEP groups before section 959(c)(2) PTEP groups and then from each group within the section 959(c)(1) PTEP groups or section 959(c)(2) PTEP groups, respectively, on a "last-in, first-out" basis, subject to a priority rule for PTEP resulting from section 965 (section 965 priority rule). *See* proposed § 1.959–4(e)(2), (3). Additionally, PTEP that otherwise has the same priority is sourced first from PTEP that is not taxable section 962 PTEP and then from taxable section 962 PTEP, consistent with the rules currently in § 1.962–3. *See* proposed § 1.959–4(e)(4). Lastly, PTEP that has the same priority is sourced on a pro rata basis. *See* proposed § 1.959–4(e)(5).

The section 965 priority rule sources PTEP in section 959(c)(1) PTEP groups

first from the reclassified section 965(a) PTEP group, then from the reclassified section 965(b) PTEP group, and finally from the remaining section 959(c)(1) PTEP groups. *See* proposed § 1.959–4(e)(2)(ii). Similarly, for PTEP in section 959(c)(2) PTEP groups, the section 965 priority rule sources such PTEP first from the section 965(a) PTEP group, then from the section 965(b) PTEP group, and finally from the remaining section 959(c)(2) PTEP groups. *See* proposed § 1.959–4(e)(2)(iii). The section 965 priority rule, which is issued under the express delegation of authority in section 965(o), is consistent with the 2019 notice and is intended to simplify PTEP recordkeeping and IRS administration.

Comments on the 2019 notice stated that the section 965 priority rule (as described in the notice) would be a departure from the last-in, first-out approach for sourcing distributions from E&P, and also argued that there is no suggestion in section 965 or its legislative history that such a departure was intended or is necessary or appropriate. Other comments asserted that the policy for the section 965 priority rule was unclear, stating that a pure last-in, first-out approach does not impose additional burdens on taxpayers because once a taxpayer has determined its section 965 PTEP the additional burden of maintaining that information is minimal. Further, even if the section 965 priority rule simplifies PTEP recordkeeping, comments noted that this may be outweighed by the reduction in foreign tax credits under section 960(b) that accompanies distributions of section 965 PTEP. Another comment noted that the section 965 priority rule would adversely affect certain individuals who made section 962 elections and are economically compelled to distribute their PTEP every year to pay taxes arising under section 951(a) because it would accelerate the distribution of PTEP that is not excluded from gross income under section 962(d). Given these concerns, and because the section 965 priority rule departs from the longstanding approach in existing § 1.959–3(b), comments requested that taxpayers be able to elect to apply a last-in, first-out approach with no prioritization of section 965 PTEP.

The Treasury Department and the IRS continue to be of the view that the section 965 priority rule will simplify PTEP recordkeeping and IRS administration in the future by eventually eliminating section 965 PTEP (which, as noted in part II.C of the Background requires specific and detailed rules to apply sections 960(b)

and 986(c)) and reducing the overall number of PTEP groups that need to be tracked. The Treasury Department and the IRS are of the view that, on balance, this benefit outweighs the concerns raised in comments. Additionally, the section 965 priority rule is within the scope of the authority delegated to the Treasury Department and the IRS to administer section 965, including through sections 965(o) and 7805(a). Further, the proposed regulations do not adopt comments suggesting that taxpayers be allowed to not apply the section 965 priority rule because this would undermine the simplification and burden reduction policy of the rule.

iv. Dollar Basis and Associated Foreign Income Taxes Rules

The proposed regulations provide a pro rata approach for determining the dollar basis and associated foreign income taxes of PTEP distributed in a covered shareholder's share of a covered distribution. *See* proposed § 1.959–4(e)(3), (f) and (g). Under this approach, the portion of a dollar basis pool or PTEP tax pool, as applicable, attributed to distributed PTEP is determined based on the percentage that such PTEP represents of all PTEP relating to the dollar basis pool or PTEP tax pool. As discussed in part II.B.1.iii of the Explanation of Provisions, dollar basis pools and PTEP tax pools are maintained separately within each annual PTEP account for each PTEP group unless a combined pool election is in effect, in which case each dollar basis pool and PTEP tax pool relates to PTEP assigned to a single PTEP group and a single section 904 category (without regard to the taxable years to which the PTEP relates).

E. PTEP to Which a Section 956 Amount Is Allocated (Proposed § 1.959–5)

The proposed regulations provide rules regarding the exclusion from gross income under section 959(a)(2) for PTEP that would otherwise be included under section 951(a)(1)(B). *See* proposed § 1.959–5; *see also* proposed § 1.959–10(c)(4) (*Example 4*). Under these rules, a covered shareholder allocates its section 956 amount (that is, the amount determined under section 956 and § 1.956–1 with respect to the covered shareholder and a CFC) first to the CFC's PTEP that is with respect to the covered shareholder and assigned to section 959(c)(2) PTEP groups, to the extent thereof and in accordance with the principles of the composition rules for distributions of PTEP, and then allocates any remaining portion of such section 956 amount to the CFC's section

959(c)(3) E&P. *See* proposed § 1.959–5(c)(1) and (d)(1).

For purposes of these rules, the CFC's PTEP is determined on the last relevant day of the CFC's taxable year to which the section 956 amount relates (that is, the last day of such taxable year on which the foreign corporation is a CFC). *See* proposed § 1.959–5(d)(2). However, the CFC's PTEP is reduced to the extent it is distributed on or after the last relevant day to ensure that the section 956 amount is allocated only to section 959(c)(2) PTEP that remains after accounting for all covered distributions during the CFC's taxable year, in accordance with section 959(f)(2). Moreover, the PTEP is determined without regard to any transfer of PTEP from the covered shareholder to a successor covered shareholder on (or after) the last relevant day, thereby ensuring that section 959(c)(2) PTEP that exists with respect to the covered shareholder when the covered shareholder's ownership of stock of the CFC is determined for purposes of sections 951(a)(1)(B) and 956 may be taken into account for purposes of section 959(a)(2).

As with distributions of PTEP, the proposed regulations use a pro rata approach to determine the dollar basis and associated foreign income taxes of PTEP to which a section 956 amount is allocated. *See* proposed § 1.959–5(e) and (f).

F. Allocating and Apportioning Current Year Taxes to PTEP (Proposed § 1.959–6)

The proposed regulations provide rules for the application of § 1.861–20 to allocate and apportion current year taxes to the statutory groupings (as generally described in § 1.861–8(a)(4)) of PTEP of a foreign corporation. *See* proposed § 1.959–6(b) (describing the statutory groupings for purposes of proposed § 1.959–6 as the corporate PTEP accounts of the foreign corporation described in proposed § 1.959–2(d)(1)). These rules are issued pursuant to the express delegations of authority under sections 245A(g), 904(d)(7), 960(f), and 965(o).

Under the proposed regulations, current year taxes are generally associated with PTEP to the extent the foreign corporation pays or accrues such taxes with respect to PTEP arising by reason of a PTEP realization event that occurs in the same taxable year. *See* proposed § 1.959–6(b); *see also* proposed § 1.959–10(c)(3) (*Example 3*). A PTEP realization event occurs if there is a distribution of PTEP or gain recognized on a sale, exchange, or other disposition of foreign stock that is

treated as PTEP as a result of the application of section 961(c) basis. Current year taxes that are paid or accrued with respect to a PTEP realization event that occurs in a different taxable year may not be associated with PTEP of a foreign corporation (consistent with the rule in current § 1.960–1(d)(3)(ii)(B)). *See* proposed § 1.959–6(b) and 1.960–1(d)(3)(ii)(B).

Proposed § 1.959–6(c) provides rules relating to the application of the allocation and apportionment rules in § 1.861–20. Current year taxes (in the foreign corporation's functional currency) are allocated and apportioned to each corporate PTEP account of the foreign corporation that is increased during the taxable year as the result of a PTEP realization event by applying the rules in § 1.861–20 and treating PTEP with respect to each covered shareholder arising by reason of a PTEP realization event as an amount of dividend income (in the case of a distribution of PTEP) or gain from the sale, exchange, or other disposition of foreign stock (in the case of PTEP resulting from the application of section 961(c) basis). *See* proposed § 1.959–6(c) for purposes of identifying the corresponding U.S. item under § 1.861–20(b) through (c). While certain United States shareholders (taking into account the application of § 1.958–1(d)) must take into account a pro rata share of a CFC's subpart F income and tested income (or loss), the CFC's deductions are not divided into pro rata shares allocable to particular shareholders, and instead, must be allocated and apportioned to gross income of the CFC before the determination of each United States shareholder's pro rata share of subpart F income and tested income (or loss). As a result, because deductions must be allocated and apportioned to a CFC's income (rather than being allocated directly to United States shareholders), it is necessary to allocate and apportion current year taxes with respect to the statutory groupings of PTEP of the foreign corporation, which the proposed regulations provide are the corporate PTEP accounts described in proposed § 1.959–2(d)(1).

The proposed regulations also clarify other aspects of allocations of deductions involving PTEP. In particular, the proposed regulations provide that no deductions, other than current year taxes, may be allocated and apportioned to the statutory groupings of PTEP of a foreign corporation (consistent with the rule in current § 1.960–1(c)(1)(ii)). *See* proposed § 1.959–6(d)(1). *See also* the request for comments in Part II.D.1.iii of the

Explanation of Provisions on an approach that would also allocate and apportion deductions, other than current year taxes, to PTEP.

Finally, the proposed regulations provide that current year taxes paid or accrued by a foreign corporation that are denominated in a currency other than the functional currency of the foreign corporation are translated into the functional currency of the foreign corporation at the spot rate on the day on which the current year taxes are paid or accrued. *See* proposed § 1.959–6(d)(2). This currency translation rule applies for purposes of (i) making certain adjustments to accounts maintained under section 959 and the proposed regulations in the foreign corporation's functional currency and (ii) allocating and apportioning functional currency amounts at the level of the foreign corporation.

G. General Successor Transactions (Proposed § 1.959–7)

1. In General

If there is an acquisition of stock of a foreign corporation that results in a change of ownership of stock of the foreign corporation, successor rules in section 959 generally transfer the foreign corporation's PTEP with respect to the covered shareholder that relinquishes ownership of stock of the foreign corporation to the covered shareholder that acquires ownership of the stock. *See* section 959(a) (applying the rules of section 959(a) to any other United States person who acquires any portion of a United States shareholder's interest in a foreign corporation from any person); section 959(b) (similarly applying to any other United States shareholder who acquires any portion of a United States shareholder's interest in a CFC from any person). These successor rules generally ensure that PTEP is not subject to U.S. tax again in the hands of the acquiring covered shareholder when received in a distribution, even though that shareholder did not own the stock of the foreign corporation when the PTEP was generated and therefore did not have the inclusion that gave rise to the PTEP. Additionally, the rules ensure that E&P retains its PTEP status and thus remains subject to the rules under sections 959 and 961, rather than reverting to section 959(c)(3) E&P and potentially becoming eligible for a deduction under section 245A without a reduction in basis.

The proposed regulations address certain transactions subject to the successor rules in section 959, which the proposed regulations refer to as general successor transactions. *See*

proposed § 1.959–7(b)(1); *see also* part III.C.4 of the Explanation of Provisions (discussing rules for section 961(c) basis in general successor transactions). A general successor transaction occurs when a covered shareholder (successor covered shareholder) acquires ownership of stock of one or more foreign corporations (each, an acquired foreign corporation) that, immediately before the transaction, is owned by another covered shareholder (transferor covered shareholder). The acquisition may be direct or indirect. For example, a sale of stock of a foreign corporation by a covered shareholder (or by an upper-tier foreign corporation owned by the covered shareholder) to another covered shareholder (or to an upper-tier foreign corporation owned by such other covered shareholder) is a general successor transaction.

However, a general successor transaction is determined without regard to any portion of an acquisition of ownership of stock of a foreign corporation that results from any of the following: (i) an issuance of stock or a partnership interest, (ii) a redemption of stock (within the meaning of section 317(b)) or a liquidating distribution in redemption of a partnership interest, or (iii) a transfer of stock of a foreign corporation, or any property through which stock of a foreign corporation is owned, if such stock or property is substituted basis property. *See* proposed § 1.959–7(b)(2). For example, an exchange of stock of a foreign corporation solely for stock of another foreign corporation in an exchange under section 351(a) or 354(a), or as part of an exchange described in section 361, is not a general successor transaction because such stock is substituted basis property, even if covered shareholders' ownership of stock of the foreign corporation changes in the exchange. Alternatively, to the extent stock of a foreign corporation is not substituted basis property in such transactions (for example, if basis in the stock is determined under section 301(d) or 358(a)(2)), then the acquisition of ownership of stock of the foreign corporation is a general successor transaction. The Treasury Department and the IRS intend to issue additional rules regarding the transfer of PTEP in acquisitions that are not general successor transactions and proposed §§ 1.959–8 and 1.959–9 are reserved for this purpose. In these acquisitions, the Treasury Department and the IRS are considering adding a rule as part of finalization of the proposed regulations providing that, for any period before those additional rules apply and after

existing § 1.959–1(d) (successor in interest rules) is removed upon finalization of the proposed regulations, PTEP will transfer automatically (that is, without any requirement to submit proof of identity to the IRS) in accordance with the statute and consistent with the manner in which PTEP transfers in general successor transactions (as discussed in part II.G.2 of the Explanation of Provisions). The Treasury Department and the IRS request comments on this potential rule.

2. Categories of Transferred PTEP

The proposed regulations provide that two categories of an acquired foreign corporation's PTEP transfer from the transferor covered shareholder to the successor covered shareholder (and thus become PTEP with respect to the successor covered shareholder) in a general successor transaction. *See* proposed § 1.959–7(c); *see also* § 1.959–10(c)(5) (*Example 5*). For both categories of PTEP, the transfer is not subject to any requirement to submit proof of identity to the IRS (in contrast to current § 1.959–1(d)) and, thus, the transfer occurs automatically, although taxpayers should maintain sufficient records to substantiate the transfer on examination. *See also* § 1.245A–5(c)(4) (automatically transferring certain shareholder-level accounts in certain acquisitions of stock); § 1.245A(e)–1(d)(4)(iii) (similar). The automatic transfer ensures that E&P retains PTEP status and, therefore, will be excluded from income under section 959 and give rise to basis reductions under section 961 in subsequent distributions.

The first category of PTEP that transfers is PTEP of the acquired foreign corporation with respect to the transferor covered shareholder, as determined immediately before the general successor transaction. However, if the general successor transaction occurs before the last relevant day of the acquired foreign corporation's taxable year, certain current year PTEP does not transfer because such current year PTEP relates to shares of stock either retained by the transferor covered shareholder or acquired by the transferor covered shareholder concurrently with or after the general successor transaction. *See* proposed § 1.959–7(c)(1). Only a pro rata portion of this PTEP (called general successor PTEP) transfers, and the amount is determined based on the percentage of a hypothetical distribution by the acquired foreign corporation that would be made with respect to the stock of the corporation acquired by the successor covered shareholder. *See* proposed § 1.959–7(d). In this way, distributions made by the acquired

foreign corporation after the general successor transaction will generally be allocated to PTEP to the same extent the distributions would be so allocated if the general successor transaction did not occur.

The second category of PTEP that transfers is PTEP resulting from the application of section 1248 to gain recognized by the transferor covered shareholder in the general successor transaction. *See* proposed § 1.959–7(c)(2). Because section 1248 only applies to the extent of E&P of the acquired foreign corporation that is attributable to the stock being sold or exchanged in the general successor transaction, the Treasury Department and the IRS determined that it is appropriate for PTEP described in this category (called section 959(e) successor PTEP) to transfer in the general successor transaction. The transfer of all PTEP arising under section 1248 in a sale or exchange of a foreign corporation is consistent with existing guidance. *See* Rev. Rul. 90–31, 1990–1 C.B. 147.

Like for distributions, the proposed regulations use a pro rata approach to determine the dollar basis and associated foreign income taxes of general successor PTEP. *See* proposed § 1.959–7(e)(1) and (f)(1). The dollar basis of section 959(e) successor PTEP is the U.S. dollar amount of the income inclusion giving rise to the PTEP. *See* proposed § 1.959–7(e)(2). There are no associated foreign income taxes with respect to section 959(e) successor PTEP because the PTEP is newly created PTEP to which foreign income taxes will not yet have been allocated and apportioned. *See* proposed § 1.959–7(f)(2).

3. Deemed Covered Shareholder

Section 959(a) applies to any other United States person “who acquires from any person” any portion of a United States shareholder’s interest in a foreign corporation. *See also* section 959(b) (similarly applying to an acquisition from “any person”). Accordingly, if there is an acquisition of stock of a foreign corporation, section 959 does not condition a transfer of the foreign corporation’s PTEP on whether the transfer is by or from a covered shareholder (or United States shareholder).

For example, if a nonresident alien individual acquires ownership of all the stock of a foreign corporation that has PTEP from a covered shareholder and another covered shareholder subsequently acquires ownership of all the stock from the individual, then, absent an election under section 338(g), the foreign corporation’s PTEP transfers

to the second covered shareholder. This prevents double taxation of the PTEP and ensures that PTEP does not become section 959(c)(3) E&P (potentially eligible for a dividends received deduction under section 245A(a)). However, existing guidance does not clearly address whether the amount of PTEP that transfers is reduced for transactions during the individual’s ownership period (for example, for E&P distributed by the foreign corporation to the individual).

To address the transfer of a foreign corporation’s PTEP among covered shareholders where there is intervening foreign ownership, the proposed regulations treat any stock of a foreign corporation not owned by a covered shareholder as owned by a single hypothetical person that is deemed to be a covered shareholder (the deemed covered shareholder). *See* proposed § 1.959–7(g). Under these rules, the deemed covered shareholder is treated in the same manner as a covered shareholder for purposes of transferring PTEP under section 959, and a reference to a covered shareholder includes the deemed covered shareholder. *See* proposed § 1.959–7(g)(1). Thus, in the example described in the preceding paragraph, the foreign corporation’s PTEP transfers in the first acquisition from the first covered shareholder to the deemed covered shareholder (who is a hypothetical person treated as owning all the stock of the foreign corporation owned by the nonresident alien individual). Then, in the second acquisition, the foreign corporation’s PTEP, adjusted using a reasonable method to reflect transactions during the deemed covered shareholder’s ownership period (for example, reductions for distributions), transfers from the deemed covered shareholder to the second covered shareholder. *See* § 1.959–7(g)(2). In cases where there are no previous covered shareholders or PTEP, the deemed covered shareholder rules have no effect.

The Treasury Department and the IRS are of the view that alternative approaches such as “freezing” a foreign corporation’s PTEP during periods in which its stock is not owned by a covered shareholder could inappropriately separate a foreign corporation’s PTEP from its E&P and give rise to double taxation or other distortions. For example, under such an alternative, a covered shareholder could transfer the stock of an upper-tier foreign corporation that owns stock of a lower-tier foreign corporation with PTEP to a nonresident alien individual, the lower-tier foreign corporation could distribute all its E&P to the upper-tier

foreign corporation without affecting its PTEP, and then the stock of the upper-tier foreign corporation could be transferred to another individual covered shareholder that would succeed to the PTEP that remains with the lower-tier foreign corporation even though it has no E&P. If the form of the transaction were respected for Federal income tax purposes, the result would be that a distribution by the upper-tier foreign corporation would not be sourced from PTEP and the transferred PTEP of the lower-tier foreign corporation could be distributed only to the extent that the lower-tier foreign corporation earns section 959(c)(3) E&P.

The Treasury Department and the IRS recognize that shareholders of a foreign corporation may not track PTEP of the foreign corporation that transfers to the deemed covered shareholder. In these cases, a covered shareholder that eventually succeeds to the PTEP must determine the amount and character of the PTEP, including by reconstructing transactions that affected the PTEP while the foreign corporation was under foreign ownership. This reconstruction is similar to other determinations that shareholders must make in certain acquisitions of stock of a foreign corporation for which an election under section 338(g) is not made, for example determinations regarding the foreign corporation’s basis in assets or its E&P. The use of a single deemed covered shareholder to represent all foreign ownership of a foreign corporation is intended to ease the burden of this reconstruction by focusing only on whether and how PTEP moves under foreign ownership rather than, for example, by attributing portions of PTEP to each shareholder that is a nonresident alien individual and separately analyzing such portions. The Treasury Department and the IRS welcome comments about how to decrease the compliance burden and improve the administrability of this regime while still ensuring that the correct amount and character of PTEP is transferred from one covered shareholder to another even when there is intervening foreign ownership. For instance, the Treasury Department and the IRS welcome comments on whether a majority United States shareholder of a CFC should be permitted or required to track PTEP that transfers from a minority United States shareholder of that CFC to the deemed covered shareholder.

III. Section 961 Regulations

A. Overview

As discussed in part II.C.2 of the Background, section 961 authorizes regulations that provide for basis increases to reflect income inclusions under section 951 and basis reductions and gain recognition to reflect distributions of PTEP. Generally, the purpose of basis increases is to prevent PTEP of a foreign corporation from giving rise to additional U.S. tax in a sale or exchange of stock of the foreign corporation or property through which such stock is owned (for example, an interest in a partnership) when the stock or other property is sold before the PTEP is distributed. The purpose of basis reductions and gain recognition is to prevent double benefits from the basis increases provided under section 961.

Thus, the proposed regulations under section 961 adjust the basis in shares of stock of a foreign corporation owned by a covered shareholder, and the basis in any items of property through which the covered shareholder owns stock of the foreign corporation, to reflect the foreign corporation's PTEP with respect to the covered shareholder (for example, to reflect income inclusions giving rise to the PTEP or distributions of the PTEP). Unlike annual PTEP accounts, basis adjustments under the proposed regulations are specific to a share of stock or other item of property, consistent with each item of property having separate basis under the Code. Timing of basis adjustments generally matches the timing of related adjustments to annual PTEP accounts. Further, the proposed regulations under section 961 provide rules for different types of basis under section 961, including the tax consequences of the basis, and are issued pursuant to the express delegations of authority in section 961(a), (b), and (c).

As discussed in part III.A of the Background, a covered shareholder does not include a domestic partnership because a domestic partnership is treated as an aggregate of its partners in determining stock ownership for purposes of section 961. *See* proposed § 1.961–1(b); *see also* part VIII.A of the Explanation of Provisions (providing that an S corporation is generally treated in the same manner as a domestic partnership). As also discussed in part III.A of the Background, under section 958(a) stock ownership means stock owned directly and stock owned indirectly through foreign entities, including domestic partnerships to the extent treated as foreign partnerships under § 1.958–1(d)(1). Thus, the

adjustments provided for by the proposed section 961 regulations also apply at the partner level to covered shareholders that own stock of a foreign corporation through one or more domestic (or foreign) partnerships. *See* part III.B.3 of this Explanation of Provisions for a discussion of basis provided in stock of a foreign corporation directly owned by a partnership.

B. Types of Property Units and Basis (Proposed § 1.961–2)

1. In General

Under the proposed regulations, the type of basis provided in an item of property depends on whether the direct owner of the item is a covered shareholder, partnership, or CFC. This is because when the direct owner of an item of property is a partnership or CFC, covered shareholder-specific basis is necessary so that the benefits of basis provided in the item to reflect income inclusions of a covered shareholder inure only to that shareholder. Additionally, section 961(c) provides that the basis in the case of an item of property directly owned by a CFC only applies for the purposes of determining the amount included under section 951 in the gross income of a United States shareholder. Specific rules are therefore needed with respect to basis adjustments for property owned by a CFC to reflect the limited purposes of basis under section 961(c).

Thus, the proposed regulations set forth rules for three types of property (each referred to as a property unit) and basis: (i) section 961(a) ownership units and adjusted basis, which is provided to a covered shareholder, (ii) derivative ownership units and derived basis, which is provided to a partnership and is covered shareholder-specific, and (iii) section 961(c) ownership units and section 961(c) basis, which is provided to a CFC and is covered shareholder-specific. *See* proposed § 1.961–2; *see also* proposed § 1.961–12(c) (*Example 1*). Each type of basis is maintained in U.S. dollars to ensure that basis reductions for a distribution of PTEP are commensurate with prior basis increases reflecting the income inclusion giving rise to the PTEP, regardless of movements in exchange rates (with any such movements taken into account under the rules for recognizing foreign currency gain or loss pursuant to section 986(c)).

2. Section 961(a) Ownership Units and Adjusted Basis

A section 961(a) ownership unit is a share of stock of a foreign corporation

directly owned by a covered shareholder, or a partnership interest directly owned by a covered shareholder and through which the covered shareholder owns stock of a foreign corporation. *See* proposed § 1.961–2(c). For example, if a covered shareholder directly owns an interest in a partnership and the partnership owns (directly or indirectly) stock of a foreign corporation, the partnership interest is a section 961(a) ownership unit. A covered shareholder is provided adjusted basis in a section 961(a) ownership unit.

3. Derivative Ownership Units and Derived Basis

A derivative ownership unit is a share of stock of a foreign corporation directly owned by a partnership and owned (indirectly) by one or more covered shareholders through only one or more partnerships (for example, not through a foreign corporation), or a partnership interest directly owned by another partnership and through which one or more covered shareholders own stock of a foreign corporation through only partnerships. *See* proposed § 1.961–2(d)(1). For example, if a covered shareholder directly owns an interest in a partnership and the partnership directly owns shares of stock of a foreign corporation, each share of stock of the foreign corporation is a derivative ownership unit (and the interest in the partnership is a section 961(a) ownership unit). If, instead, the partnership is a lower-tier partnership an interest in which is directly owned by an upper-tier partnership and the covered shareholder directly owns an interest in the upper-tier partnership, the upper-tier partnership's interest in the lower-tier partnership is also a derivative ownership unit along with each share of stock of the foreign corporation directly owned by the lower-tier partnership (and the interest in the upper-tier partnership directly owned by the covered shareholder is a section 961(a) ownership unit).

A partnership is provided derived basis in a derivative ownership unit, which is maintained separately with respect to each covered shareholder that owns the derivative ownership unit through only one or more partnerships. *See* proposed § 1.961–2(d)(2). Derived basis may be positive or negative and is treated as an attribute of the partnership but has no effect on the partnership's common basis in the derivative ownership unit (that is, the partnership's basis that is shared among all partners) or any other asset of the partnership. *See* part III.C of the Explanation of Provisions for a

discussion of adjustments to derived basis, including the allowance of negative derived basis. Derived basis is intended to operate in a manner similar to a basis adjustment under section 743(b). *See* parts III.D and F of the Explanation of Provisions for the tax consequences of derived basis.

4. Section 961(c) Ownership Units and Section 961(c) Basis

A section 961(c) ownership unit is a share of stock of a foreign corporation directly owned by a CFC and owned (indirectly) by one or more covered shareholders. *See* proposed § 1.961–2(e)(1). For example, if a covered shareholder directly owns stock of an upper-tier CFC and the upper-tier CFC directly owns shares of stock of a lower-tier foreign corporation, each share of stock of the lower-tier foreign corporation owned by the upper-tier CFC is a section 961(c) ownership unit.

A CFC is provided section 961(c) basis in a section 961(c) ownership unit, which is maintained separately with respect to each covered shareholder that owns the section 961(c) ownership unit. *See* proposed § 1.961–2(e)(2). Section 961(c) basis may be positive or negative and is treated as an attribute of the CFC that generally is taken into account on the sale, exchange, or other disposition of the section 961(c) ownership unit, but has no effect on the CFC's adjusted basis in the section 961(c) ownership unit or any other asset of the CFC. *See* part III.C of the Explanation of Provisions for a discussion of adjustments to section 961(c) basis, including the allowance of negative section 961(c) basis. Section 961(c) basis applies only for the purposes prescribed in the section 961 regulations and, therefore, does not affect the amount of the CFC's gross income or E&P. *See* parts III.E through G of the Explanation of Provisions for the tax consequences of section 961(c) basis.

5. Certain Basis Not Addressed

i. Section 961(c) Basis and Non-CFCs

Consistent with the statutory language of section 961(c), the proposed regulations provide for basis under section 961(c) only with respect to stock of a CFC that is directly owned by another CFC. Although a section 961(c) ownership unit is defined as a share of stock of a foreign corporation directly owned by a CFC, section 961(c) basis adjustments are generally made only with respect to section 961(c) ownership units that are shares of stock in a CFC, as discussed in part III.C of the Explanation of Provisions. *See* proposed § 1.961–3 (basis increases for income

inclusions); proposed § 1.961–4(d) (basis reductions for distributions); proposed § 1.961–5(b) (adjustments for foreign currency gain or loss). The Treasury Department and the IRS are studying whether, and to what extent, basis adjustments may or should also be made under section 961(c) in cases where stock of a CFC is owned by a covered shareholder through a foreign corporation that is not a CFC or where a CFC owns stock of a foreign corporation that used to be a CFC.

A CFC's section 961(c) basis with respect to a covered shareholder in stock of a lower-tier foreign corporation that is provided under the proposed regulations when that lower-tier foreign corporation was a CFC continues to exist, however, if that lower-tier foreign corporation ceases to be a CFC (a share of stock of the lower-tier foreign corporation is a section 961(c) ownership unit regardless of CFC status). Thus, for example, section 961(c) basis in stock of a foreign corporation that was a CFC but ceases to be a CFC may transfer to another covered shareholder in a general successor transaction and become section 961(c) basis with respect to that covered shareholder. *See* proposed § 1.961–5(c) (discussed in part III.C.4 of the Explanation of Provisions). Similarly, a CFC's positive section 961(c) basis in stock of a foreign corporation that was a CFC but ceases to be a CFC may be applied to certain gain recognized by the CFC with respect to stock of that foreign corporation. *See* proposed § 1.961–9 (discussed in part III.E of the Explanation of Provisions).

ii. Partnership Interests Owned by Foreign Corporations

Under the proposed regulations, a property unit does not include a share of stock of a foreign corporation or a partnership interest to the extent the share of stock or partnership interest is directly owned by a partnership and the interests of such partnership are owned by foreign corporations (including CFCs). Nor does a property unit include a partnership interest directly owned by a foreign corporation. For example, assume a covered shareholder directly owns all the stock of two upper-tier CFCs, the upper-tier CFCs are the only direct partners in a partnership, and the partnership directly owns all the stock of a lower-tier CFC. In such a case, neither the shares of stock of the lower-tier CFC directly owned by the partnership, nor the upper-tier CFCs' interests in the partnership, are property units. The Treasury Department and the IRS are studying whether the basis that should be provided in these items of

property should be similar to derived basis or section 961(c) basis or have characteristics of both. Thus, the proposed regulations do not address the extent to which section 961 provides basis in such items.

C. Basis Adjustments (Proposed §§ 1.961–3, 1.961–4, and 1.961–5)

1. Basis Increases for Certain Income Inclusions

i. In General

To reflect a covered shareholder's income inclusions under sections 951(a) and 951A(a) for a taxable year of a CFC, the proposed regulations provide rules to increase the basis of property units that are shares of stock of the CFC owned by the covered shareholder and the basis of any property units through which the covered shareholder owns such stock. *See* proposed § 1.961–3(b); *see also* proposed § 1.961–12(c) (*Example 2*). For this purpose, a reference to basis means adjusted basis of the covered shareholder in the case of a section 961(a) ownership unit, derived basis with respect to the covered shareholder in the case of a derivative ownership unit, and section 961(c) basis with respect to the covered shareholder in the case of a section 961(c) ownership unit.

Generally, the basis of each property unit is increased by the amount that would be distributed with respect to the property unit in a hypothetical distribution by the CFC equal to the U.S. dollar amount of the covered shareholder's income inclusions (hypothetical distribution rule). *See* proposed § 1.961–3(c)(1) and (4); *see also* part III.C.1.ii of the Explanation of Provisions (discussing additional rules that apply in the case of a midyear transaction). The hypothetical distribution is treated as made through all tiers to the covered shareholder on the last relevant day of the CFC's taxable year (taking into account only stock or other property owned by the covered shareholder). *See* proposed § 1.961–3(e). In this way, under the grant of regulatory authority in section 961, a property unit is generally provided an amount of basis matching the amount by which basis of the property unit is reasonably expected to be reduced under section 961 when PTEP resulting from the income inclusions is subsequently distributed to the covered shareholder. The amount of basis provided to a particular property unit will generally equal the covered shareholder's income inclusion attributable to that property unit, but the amount may differ in certain cases.

For example, consider a case where the covered shareholder owns all the stock of the CFC, with such stock consisting of a single preferred share with a \$10x preference and common stock. The CFC has \$100x of E&P for its taxable year, consisting of \$90x of subpart F income, \$0 of tested income or tested loss, and \$10x of other income. The covered shareholder includes \$90x in gross income under section 951(a)(1)(A) (under § 1.951–1, \$9x of the inclusion is attributable to the preferred share and the remaining \$81x is attributable to the common stock), and, consequently, the CFC's PTEP with respect to the covered shareholder increases by \$90x. While only \$9x of the covered shareholder's \$90x income inclusion is attributable to the preferred share, the proposed regulations increase the basis of the preferred share by \$10x and the basis of the common stock by the remaining \$80x. This approach takes into account that, of the first \$10x of PTEP distributed by the CFC to the covered shareholder, that amount is likely to be distributed on the preferred share. And, if the basis adjustments to the preferred share were to instead match the income inclusion attributable to that share (\$9x), the covered shareholder would receive a \$10x distribution on the preferred share, thus potentially giving rise to gain under section 961(b)(2) in an amount equal to that difference. The proposed regulations prevent that result by adjusting the basis in the preferred share by \$10x. The Treasury Department and the IRS request comments on this approach, including whether there are ways to improve the accuracy of allocating basis to a property unit without undue complexity and additional compliance and administrative burden, and without creating the possibility of inappropriate results.

However, if the CFC distributes PTEP with respect to the covered shareholder before the last relevant day of the CFC's taxable year, the policies underlying the hypothetical distribution rule (matching basis with distributed PTEP) are better carried out by using such actual distributions (rather than a hypothetical distribution on the last relevant day) to allocate basis increases among property units, particularly when there are midyear transactions (though where there is no midyear transaction the two approaches generally produce the same results). Thus, an actual distribution rule applies in these cases and consequently reduces the amount that can give rise to a basis increase pursuant

to the hypothetical distribution rule. *See* proposed § 1.961–3(c)(3).

The actual distribution rule applies in chronological order to distributions of the CFC's PTEP with respect to the covered shareholder, and in each case generally increases basis of a share of stock of the CFC on which the distribution is made by the amount of the reduction required under section 961 to such basis by reason of the distribution. *See* proposed § 1.961–3(d)(2). However, basis increases to stock of the CFC under the actual distribution rule cannot exceed the U.S. dollar amount of the covered shareholder's income inclusions, excluding for this purpose an income inclusion under section 951(a)(1)(B) because such inclusion does not give rise to PTEP that could be distributed before the last relevant day of the CFC's taxable year. Additionally, the actual distribution rule applies only to distributions on stock of the CFC that the covered shareholder owns on the last relevant day because the covered shareholder's income inclusions with respect to the CFC are attributable only to that stock.

Basis increases to stock of the CFC under the actual distribution rule “tier up” through property units through which the covered shareholder owns such stock, based on how the PTEP that is actually distributed would be further distributed in a hypothetical distribution made at the time of the actual distribution. *See* proposed § 1.961–3(d)(3). The Treasury Department and the IRS considered alternative approaches to tiering such as analyzing the extent to which PTEP is further distributed before the last relevant day, but those approaches could give rise to additional complexity and burden. For instance, the approaches could require rules tracing distributed PTEP through tiers of foreign corporation and coordinating applications of the actual distribution rule at each tier. The Treasury Department and the IRS welcome comments on the actual distribution rule, including whether there are ways to improve the accuracy of tiering without undue complexity and additional compliance and administrative burden.

Generally, each basis increase under the hypothetical distribution rule or actual distribution rule is treated as made at the beginning of the first day of the CFC's taxable year or, if later, at the beginning of the first day in the taxable year on which the covered shareholder owns the property unit. *See* proposed § 1.961–3(d)(1), (e)(1). In this way, the timing of a basis increase generally

matches when PTEP to which the basis is attributable could first be distributed on the property unit. Additionally, the portion of a basis increase for a section 951(a)(1)(B) inclusion is treated as made at the end of the last day of the taxable year, subject to a special rule. *See* proposed § 1.961–3(e)(1). The special rule applies where a property unit that will receive a basis increase for the section 951(a)(1)(B) inclusion is transferred before the end of the taxable year (but on or after the last relevant day of the taxable year), and in such a case accelerates the basis increase to the property unit so that it is treated as made immediately before the transfer, thereby ensuring that the basis is available in determining the tax consequences of the transfer. *See* proposed § 1.961–3(e)(4).

ii. Midyear Transactions

Additional rules address unique timing considerations for basis increases when a midyear transaction occurs during the taxable year of a CFC. *See* proposed § 1.961–3(c)(2). A midyear transaction represents any transaction occurring before the last relevant day of the taxable year that changes the covered shareholder's ownership structure of the CFC (for example, an exchange of the covered shareholder's stock of the CFC or an issuance of stock of the CFC to the covered shareholder).

In the case of a midyear transaction, a basis increase under the hypothetical distribution rule or actual distribution rule is treated as made at the earliest time during the CFC's taxable year at which the same ownership structure is in place as the ownership structure when the relevant hypothetical or actual distribution is made. *See* proposed § 1.961–3(d)(1), (e)(1). Thus, for a basis increase under the actual distribution rule, if the distribution is made before all midyear transactions, the basis increase is treated as made at the beginning of the first day of the CFC's taxable year; on the other hand, if the distribution is made after a midyear transaction, the basis increase is treated as made immediately after the most recent midyear transaction preceding the distribution. This approach is intended to prevent distortions, including possible duplication of basis in certain cases.

For example, assume a covered shareholder (US1) directly owns all the stock of two CFCs (CFC1 and CFC2) on January 1 of year 1. On June 30 of year 1, US1 exchanges all the stock of CFC1 solely for stock of CFC2 in an exchange described in section 351(a) (which is a midyear transaction with respect to CFC1 and CFC2). CFC1 makes no

distributions during its taxable year ending on December 31 of year 1, and US1 has a \$100x subpart F income inclusion with respect to CFC1 for that taxable year. Thus, under the hypothetical distribution rule, US1 increases its adjusted basis in its stock of CFC2 by \$100x and CFC2 increases its section 961(c) basis with respect to US1 in its stock of CFC1 by \$100x. However, basis could be inappropriately duplicated if the \$100x basis increase in the stock of CFC1 were treated as made on January 1 of year 1, which would be the case absent the section 351 exchange. This could occur if US1's basis in its stock of CFC2 were to both be increased under the hypothetical distribution rule and take a basis under section 358(a) reflecting the basis increase in the stock of CFC1 under the hypothetical distribution rule. To address this, special timing rules treat the \$100x basis increase in each of the stock of CFC1 and stock of CFC2 as made immediately after the section 351 exchange, which is the first time during CFC1's taxable year at which the same ownership structure is in place as the ownership structure on the last relevant day of the taxable year (when the hypothetical distribution determining the basis increase is made).

2. Basis Reductions and Gain Recognition for Distributions

i. In General

As discussed in part II.C.2 of the Background, section 961(b)(1) provides for reductions to the basis of stock or other property with respect to which a covered shareholder receives PTEP excluded from its gross income under section 959(a), with amounts in excess of such basis resulting in gain under section 961(b)(2). Section 961(c) indicates that the Secretary should issue regulations providing for adjustments similar to those in section 961(b) with respect to PTEP received by a CFC and amounts in excess of section 961(c) basis.

In order to implement the statutory language of section 961, the proposed regulations provide rules for reducing basis and recognizing gain with respect to property units to reflect distributions of PTEP. *See* proposed § 1.961–4; *see also* proposed § 1.961–12(c)(3) (*Example 3*). These rules describe the amounts of adjustments, limitations on basis reductions, and treatment of gain under section 961, which can differ depending on the type of property unit for which the basis is being adjusted. The adjustments are treated as made concurrently with the distribution if the property unit is stock of a foreign

corporation or, if the property unit is an interest in a partnership, concurrently with an adjustment to the partnership interest under section 705 resulting from the distribution. *See* proposed § 1.961–4(e) and (f)(1).

ii. Adjustments to Section 961(a) Ownership Units

If a covered shareholder receives a distribution of PTEP that is excluded from its gross income under section 959(a) (that is, PTEP other than taxable section 962 PTEP), then the covered shareholder's adjusted basis of each section 961(a) ownership unit is generally reduced by the dollar basis and associated foreign income taxes of the PTEP received with respect to the section 961(a) ownership unit. *See* proposed § 1.961–4(b)(2)(i) and (ii). Associated foreign income taxes are taken into account for this purpose because when foreign income taxes are allocated and apportioned to PTEP, the foreign income taxes reduce the PTEP and the dollar basis of the PTEP, as discussed in part II.C.2 of the Explanation of Provisions. As a result, the sum of the dollar basis and associated foreign income taxes of PTEP represent the amount by which basis was increased under section 961 when the PTEP was generated.

However, the associated foreign income taxes (which represent PTEP that was eliminated by foreign income taxes) reduce adjusted basis only to the extent the covered shareholder is allowed a credit under section 901 for those taxes. *See* proposed § 1.961–4(b)(2)(i). Consequently, associated foreign income taxes ultimately give rise to either a credit or an amount equivalent to a deduction (in the form of retained adjusted basis, which, in turn, will produce a lesser amount of gain or an additional amount of loss on a subsequent sale of the section 961(a) ownership unit relative to the gain or loss that would result if adjusted basis were reduced by associated foreign income taxes). The Treasury Department and the IRS are of the view that this prevents double taxation of PTEP but are studying whether the policies of section 245A(d) or 965(g) (denying a credit or deduction for foreign income taxes) should require reducing adjusted basis for associated foreign income taxes of PTEP resulting from section 245A(e) or 965.

Further, to the extent the required reduction to adjusted basis of a section 961(a) ownership unit exceeds such adjusted basis, the covered shareholder is treated as recognizing gain from a sale or exchange of the section 961(a) ownership unit, in accordance with

section 961(b)(2). *See* proposed § 1.961–4(b)(2)(iii) and (f)(1). Basis of another section 961(a) ownership unit (for example, another share of stock of the foreign corporation) cannot be used to reduce gain under section 961(b)(2), which is consistent with the approach in section 301(c)(3), pursuant to which basis is not shared among shares of stock on distributions. *See also Johnson v. United States*, 435 F.2d 1257 (4th Cir. 1971).

Moreover, unlike the approach described in the 2006 proposed regulations, basis attributable to section 961 does not shift from one share to another share when PTEP is distributed with respect to the other share. The Treasury Department and the IRS are of the view that a shifting approach could give rise to inappropriate results, is not required by section 961 (which increases basis for income inclusions without any indication that such basis must or should remain tied to the PTEP resulting from the income inclusion), and would depart from analogous provisions like section 358 (which, for example, increases basis for contributions to capital without subsequently shifting such basis to follow distributions of capital). Further, the approach in the proposed regulations is consistent with the share-by-share approach in the current regulations under section 961. *See* § 1.961–2(b) and (c).

As an example of inappropriate results that could arise from basis shifting, assume a covered shareholder owns all the stock of a foreign corporation with PTEP and contributes money to the corporation in exchange for a newly-issued share of stock, and the corporation subsequently distributes the PTEP, including on the newly-issued share. If a portion of the basis that had been provided under section 961(a) for the PTEP were to shift from the original shares to the newly-issued share as a result of the distribution, then that basis would be added on top of the existing fair market value basis in the newly-issued share (by an amount equal to the amount of PTEP distributed on that share), which could produce a noneconomic loss in the newly-issued share. Additionally, as indicated in the document withdrawing the 2006 proposed regulations (87 FR 63981), the Treasury Department and the IRS are aware of transactions in which taxpayers have taken positions that basis shifting produces large uneconomic losses, and the IRS may challenge such positions and other positions giving rise to abuse or inappropriate results.

iii. Adjustments to Derivative Ownership Units

If, through a partnership or tiered partnerships, one or more covered shareholder partners are treated as receiving PTEP that is excluded from gross income under section 959(a) and the proposed section 959 regulations, then each such partnership's derived basis with respect to such covered shareholders of derivative ownership units is reduced to reflect the PTEP received with respect to the derivative ownership units. *See* proposed § 1.961–4(c)(1); *see also* part II.D.2.ii of the Explanation of Provisions (portion of a covered distribution that is made to a partnership, or that is treated as made to the partnership in the case of tiered partnerships, is treated as made to the partnership's partners in accordance with their respective distributive shares of such portion). Specifically, starting with the partnership at the lowest tier, the partnership's derived basis with respect to each covered shareholder partner of each derivative ownership unit is generally reduced by the dollar basis and associated foreign income taxes of the PTEP with respect to the covered shareholder that is treated as received by the covered shareholder through the partnership with respect to the derivative ownership unit. *See* proposed § 1.961–4(c)(2)(i) and (ii). A basis increase under section 705 for the distribution occurs at the same time as the reduction to derived basis, with the result that, in tiered partnership structures, derived basis of an upper-tier partnership in a lower-tier partnership interest is reduced and common basis in the lower-tier partnership interest is increased (the common basis, in turn, may be decreased in a distribution to the upper-tier partnership by the lower-tier partnership of the amounts that constituted the PTEP, for example).

However, to the extent the required reduction to derived basis with respect to a covered shareholder of a derivative ownership unit exceeds the derived basis (for example, because a partnership purchased stock of a CFC and thus has no derived basis with respect to the derivative ownership unit), the excess first reduces the covered shareholder's positive section 743(b) basis adjustment of the derivative ownership unit (if any), but not below zero. *See* proposed § 1.961–4(c)(2)(iii). Thus, this rule, by treating the positive section 743(b) basis adjustment in the same manner as adjusted basis specific to the covered shareholder, is consistent with § 1.743–1(j) (regarding the effect of a basis adjustment under section 743(b)). Then, any remaining portion of

the excess reduces the derived basis below zero, subject to a limitation. *See id.* As discussed in part III.C.2.v of the Explanation of Provisions, this limitation is intended to prevent reductions to derived basis of the derivative ownership unit from having the effect of reducing the partnership's total basis (measured for this purpose by netting common basis and all negative derived basis) of the derivative ownership unit below zero.

Finally, to the extent the required reduction to derived basis with respect to a covered shareholder of a derivative ownership unit exceeds the amount of positive derived basis, positive section 743(b) basis, and negative derived basis created, the partnership is treated as recognizing gain from a sale or exchange of the derivative ownership unit. *See* proposed § 1.961–4(c)(2)(iv). The gain is allocated by the partnership solely to the covered shareholder and is taken into account in adjusting basis under section 705, but it has no effect on any partnership's computations or allocations of any other items under section 703 or 704 or on the covered shareholder's capital account. *See* proposed § 1.961–4(f)(2).

iv. Adjustments to Section 961(c) Ownership Units

If a CFC receives a distribution of PTEP, then the CFC's section 961(c) basis with respect to each covered shareholder of each section 961(c) ownership unit is generally reduced by the dollar basis and associated foreign income taxes of the PTEP with respect to the covered shareholder that is received with respect to the section 961(c) ownership unit. *See* proposed § 1.961–4(d)(2)(i) and (ii).

To the extent the required reduction to section 961(c) basis with respect to a covered shareholder of a section 961(c) ownership unit exceeds such section 961(c) basis (for example, because a CFC purchased stock of another CFC and thus has no section 961(c) basis with respect to the section 961(c) ownership unit or a portion of the distributed PTEP is section 965(b) PTEP), the excess reduces the section 961(c) basis below zero, subject to a limitation. *See* proposed § 1.961–4(d)(2)(ii). As discussed in part III.C.2.v of the Explanation of Provisions, this limitation is intended to prevent reductions to section 961(c) basis of the section 961(c) ownership unit from having the effect of reducing the CFC's total basis (measured for this purpose by netting adjusted basis and all negative section 961(c) basis) of the section 961(c) ownership unit below zero. Then, any remaining portion of the excess is

treated as gain recognized by the CFC from a sale or exchange of the section 961(c) ownership unit, and such gain is assigned from the CFC solely to the covered shareholder. *See* proposed § 1.961–4(d)(2)(iii). Gain recognized by a CFC under this rule applies only for purposes of determining amounts included in gross income of United States shareholders under proposed § 1.961–11 (discussed in part III.G. of the Explanation of Provisions) because section 961(c) applies only for limited purposes. *See* proposed § 1.961–4(f)(3). Therefore, the gain does not affect the CFC's items of gross income for purposes of section 952 or 951A or its E&P.

The Treasury Department and the IRS are of the view that the gain recognition rules described in this part III.C.2 of the Explanation of Provisions appropriately prevent use of the same basis more than once, provide similar outcomes for similar transactions at different tiers, and ensure the tax consequences of the gain are covered shareholder-specific. Any alternative approach that did not require gain recognition under section 961(b)(2) and (c) for amounts in excess of basis would necessarily have to narrow the application of section 961(c) basis (discussed in part III.E of the Explanation of Provisions), with the result that section 961(c) basis would not be available for use in a section 301(c)(3) transaction and, in a sale, might be available for use only to the extent of undistributed PTEP.

Consider the following examples illustrating that the proposed regulations provide a consistent approach ensuring that distributions appropriately reduce basis or result in the recognition of gain. First, assume US1, a covered shareholder, directly owns the single share of outstanding stock of CFC1, a newly formed foreign corporation. For simplicity, assume US1 has \$0 basis in its stock in CFC1. In year 1, CFC1 generates \$100x of PTEP with respect to US1, which increases US1's adjusted basis of the share of stock of CFC1 from \$0 to \$100x. In year 2, CFC1 makes a \$100x distribution out of E&P and, in year 3, CFC1 makes a \$100x distribution that is not out of E&P. In this case, the year 2 distribution is tax-free (that is, the distribution is excluded from US1's gross income under section 959(a) but reduces US1's adjusted basis in its stock of CFC1 under section 961(b)(1)), and the year 3 distribution requires US1 to recognize \$100x of gain under section 301(c)(3). Alternatively, assume CFC1 generates a deficit in E&P in year 2 and generates E&P in year 3, with the result that the year 3 distribution, but not the year 2

distribution, is out of E&P. In such a case, the year 2 \$100x distribution is tax-free under section 301(c)(2) by reason of US1's adjusted basis pursuant to section 961(a), and the year 3 \$100x distribution requires US1 to recognize \$100x of gain under section 961(b)(2), which appropriately prevents a double use of basis.

Now assume instead that CFC2, a foreign corporation directly owned by US1, directly owns the single share of stock of CFC1 (rather than US1), CFC2's adjusted basis of the share of stock of CFC1 is \$0, and CFC2's section 961(c) basis with respect to US1 of the share of stock of CFC1 is increased from \$0 to \$100x to reflect the \$100x of PTEP generated by CFC1 with respect to US1. In that case, if CFC1's year 2 distribution is out of E&P, the year 2 distribution is tax-free under sections 959 and 961 and the year 3 distribution requires CFC2 to recognize \$100x of gain under section 301(c)(3), which US1 will generally include in gross income under section 951(a). Alternatively, if the year 3 distribution is out of E&P instead of the year 2 distribution, the year 2 distribution is tax-free by reason of CFC2's section 961(c) basis and the year 3 distribution requires CFC2 to recognize \$100x of gain pursuant to section 961(c), which US1 will generally include in gross income under the rules described in part III.G of the Explanation of Provisions.

v. Limitations on Negative Derived Basis and Negative Section 961(c) Basis

As discussed in parts III.C.2.iii and iv of the Explanation of Provisions, a partnership's derived basis or a CFC's section 961(c) basis with respect to a covered shareholder of a property unit can be reduced below zero (and therefore result in negative basis instead of triggering immediate gain recognition) as a result of a distribution of PTEP with respect to the property unit, subject to a limitation. The concept of negative section 961(c) basis stems from the language of section 961(c) (providing "adjustments similar to the adjustments" of section 961(a) and (b), "but only for the purposes of determining the amount included under section 951"), which contemplates section 961(c) basis replicating the outcomes that would occur for section 951 purposes if the CFC's adjusted basis could be increased or reduced under section 961(a) or (b). In this way, negative section 961(c) basis can be conceptualized as a reduction to adjusted basis that has no tax effect until a transaction relevant for purposes of section 951 occurs with respect to the

property unit. Negative derived basis follows the same concept.

Under the limitation, a distribution can reduce (or further reduce) derived basis or section 961(c) basis below zero only to the extent of the amount of the partnership's common basis or the CFC's adjusted basis of the property unit that is available with respect to the covered shareholder (determined as described in the next paragraph). *See* proposed § 1.961–4(c)(3)(i) and (d)(3)(i). In the case of a partnership, the amount of common basis available with respect to the covered shareholder is reduced by the covered shareholder's negative section 743(b) basis adjustment of the derivative ownership unit (if applicable). *See* proposed § 1.961–4(c)(3)(i).

The common basis or adjusted basis available with respect to the covered shareholder is determined by first computing the partnership's common basis or the CFC's adjusted basis of the property unit, reduced, as applicable, by all negative derived basis or all negative section 961(c) basis of the property unit (regardless of the covered shareholders to which the negative basis relates). *See* proposed § 1.961–4(c)(3)(ii) and (d)(3)(ii). This amount represents the partnership's common basis or the CFC's adjusted basis that is potentially available to reduce derived basis or section 961(c) basis of the property unit below zero. To address concurrent adjustments with respect to multiple covered shareholders, the partnership's available common basis or the CFC's available adjusted basis is then multiplied by a fraction. The fraction determines the basis available with respect to a covered shareholder based on relative amounts by which derived basis or section 961(c) basis with respect to the covered shareholders would be reduced below zero without limitation.

The Treasury Department and the IRS are of the view that allowing, but limiting the amount of, negative basis in this way has the effect of permitting the partnership's common basis or CFC's adjusted basis of the property unit to be reduced to, but not below, zero. These rules do not affect the treatment or availability of a partnership's common basis or a CFC's adjusted basis under any other provision of the Code (and, thus, for example, do not impact the application of section 704(c)).

The Treasury Department and the IRS considered other approaches to the limitation such as looking to a covered shareholder's share of common basis or adjusted basis, based on the percentage of the interests in the partnership (using § 1.743–1(d) principles, for example) or the stock of the CFC that is owned by

the covered shareholder. However, those approaches would give rise to additional complexity and burden because, for example, they could require rules adjusting negative basis with respect to a covered shareholder to the extent that an issuance reduces the covered shareholder's share of common basis or adjusted basis. Further, as discussed in part III.F of the Explanation of Provisions, rules requiring gain recognition in transactions involving negative basis adequately prevent a covered shareholder from disproportionality benefiting from common basis or adjusted basis because gain recognized by a partnership or a CFC under those rules is allocated or assigned to covered shareholders based on relative amounts of negative basis with respect to the covered shareholders. Thus, although a partnership's common basis or a CFC's adjusted basis is available with respect to all covered shareholders in determining the amount by which derived basis or section 961(c) basis can be negative, a covered shareholder will generally be required to include in gross income any gain attributable to negative basis with respect to the covered shareholder.

The Treasury Department and the IRS request comments on the approach to limiting negative basis in the proposed regulations, including alternative methods for determining the amount of a partnership's common basis or a CFC's adjusted basis available with respect to a covered shareholder for this purpose.

3. Basis Adjustments for Foreign Currency Gain or Loss

To reflect foreign currency gain or loss recognized under section 986(c) by a covered shareholder with respect to a foreign corporation's PTEP in a general successor transaction or other transaction not including a distribution of PTEP (*see* proposed § 1.986(c)–1, discussed in part V of the Explanation of Provisions), the proposed regulations provide rules to adjust the basis of property units that are shares of stock of the foreign corporation owned by the covered shareholder. These adjustments "tier up" through any property units through which the covered shareholder owns such stock, with the result that the basis of such property units is also adjusted. *See* proposed § 1.961–5(b)(1). For purposes of these rules, a reference to basis means adjusted basis of the covered shareholder in the case of a section 961(a) ownership unit, derived basis with respect to the covered shareholder in the case of a derivative ownership unit, and section 961(c) basis with respect to the covered shareholder

in the case of a section 961(c) ownership unit. These rules are issued pursuant to the express delegations of authority under sections 965(o) and 989(c) (as well as those under sections 961(a), (b), and (c), as described in part III.A. of the Explanation of Provisions).

The amount of the basis adjustments is equal to the amount of net foreign currency gain or loss. *See* proposed § 1.961–5(b)(2). This is determined by comparing the sum of all foreign currency gain and the sum of all foreign currency loss that the covered shareholder recognizes with respect to the foreign corporation's PTEP in the transaction under section 986(c), without regard to limitations on the recognition of such foreign currency gain or loss for PTEP resulting from section 965.

Generally, the basis of each property unit is increased by the property unit's share of net foreign currency gain or is reduced by the property unit's share of net foreign currency loss, as applicable, determined in each case based on a hypothetical distribution by the foreign corporation equal to all PTEP of the foreign corporation with respect to which the covered shareholder recognizes (or, but for limitations for PTEP resulting from section 965, would recognize) foreign currency gain or loss in the transaction. *See* proposed § 1.961–5(b)(3) and (4). The basis adjustments are treated as made immediately before the transaction (and therefore are taken into account in the transaction). *See* proposed § 1.959–5(b)(4). Additionally, like in the case of distributions of PTEP, a reduction to basis can reduce derived basis or section 961(c) basis below zero and can result in gain recognition with respect to a property unit. *See id.*

These basis adjustments are consistent with the 1988 notice and prevent foreign currency gain or loss with respect to PTEP, which is recognized at the covered shareholder-level under section 986(c), from also being taken into account with respect to property units sold or exchanged in the transaction (which might otherwise occur if basis of the property units were not adjusted to reflect movements in exchange rates between the time of the income inclusion that gave rise to the PTEP (and basis) and the time of the transaction). The adjustments to basis are determined without regard to the limitations on the recognition of foreign currency gain or loss with respect to PTEP resulting from section 965, which ensures that such unrecognized foreign currency gain or loss does not result in a commensurate amount of gain or loss with respect to property units sold or

exchanged in the transaction. *See also* part V.B of the Explanation of Provisions (discussing rules under which foreign currency gain or loss with respect to PTEP resulting from section 965(a) is reduced based on the section 965(c) deduction percentage, and no foreign currency gain or loss is recognized for PTEP arising under section 965(b)).

4. Successor Basis

i. In General

If there is an acquisition of stock of a foreign corporation that results in a change of ownership of stock of the foreign corporation, successor rules in section 961(c) generally transfer the foreign corporation's section 961(c) basis with respect to the covered shareholder that relinquishes ownership of stock of the foreign corporation to the covered shareholder who acquires ownership of the stock. *See* section 961(c) (prescribed adjustments to basis in CFC stock also apply to any United States shareholder that acquires from any person any portion of the interest of a United States shareholder by reason of which such shareholder was treated as owning CFC stock). These rules generally ensure that undistributed PTEP of a lower-tier foreign corporation does not give rise to additional U.S. tax in the hands of the acquiring covered shareholder when stock of the corporation is later sold by an upper-tier CFC, even though the covered shareholder did not own such stock when the PTEP was generated and section 961(c) basis was increased. These successor basis rules are issued pursuant to the express delegation of authority under section 743(b) (as well as the express delegation of authority under section 961(c), as described in part III.A. of the Explanation of Provisions).

The proposed regulations set forth rules for transferring section 961(c) basis in a general successor transaction, as well as for transferring a partnership's derived basis if the general successor transaction involves an acquisition of an interest in a partnership (acquired partnership). *See* proposed § 1.961–5(c). These rules generally provide parity between derived basis and section 961(c) basis in a general successor transaction and, in the case of an acquired partnership, ensure that the successor covered shareholder succeeds to derived basis (as compared to an approach that attempted to replace all or a portion of derived basis with a section 743(b) basis adjustment, which would require an election under section 754 to be in effect or a substantial built-in

loss). The Treasury Department and the IRS intend to issue additional rules regarding the transfer of section 961(c) basis and derived basis (as well as the transfer of PTEP) in acquisitions that are not general successor transactions. In these acquisitions, the Treasury Department and the IRS are considering adding a rule as part of finalization of the proposed regulations that, similar to the potential rule discussed in part II.G.1 of the Explanation of Provisions, provides that section 961(c) basis and derived basis transfer automatically in periods before those additional rules apply.

In a general successor transaction, a portion of an acquired partnership's derived basis or acquired foreign corporation's section 961(c) basis with respect to the transferor covered shareholder of a property unit transfers to the successor covered shareholder and therefore becomes with respect to the successor covered shareholder. Thus, to reflect the general successor transaction, derived basis or section 961(c) basis is increased (or reduced) by the basis that transfers to (or from) the covered shareholder, and those adjustments are treated as made concurrently with the general successor transaction. *See* proposed § 1.961–5(c)(1) and (2)(iii). The amount of basis that transfers may be a positive or negative amount and is equal to a pro rata portion of the derived basis or section 961(c) basis of the property unit immediately before the general successor transaction, plus any increase, or minus any decrease, to the basis for foreign currency gain or loss recognized under section 986(c) in the general successor transaction (discussed in part V of the Explanation of Provisions). *See* proposed § 1.961–5(c)(2)(i) and (ii).

The pro rata portion is determined based on the percentage, by value, of the transferor covered shareholder's interests in the acquired partnership or acquired foreign corporation that the successor covered shareholder acquires in the general successor transaction. *See* proposed § 1.961–5(c)(2)(i). This approach is intended to transfer derived basis or section 961(c) basis commensurate with the percentage change of the transferor covered shareholder's indirect interests in the partnership's common basis or foreign corporation's adjusted basis by reason of the general successor transaction. The Treasury Department and the IRS are of the view that alternative approaches—such as transferring an amount of derived basis or section 961(c) basis equal to the amount of PTEP that transfers in the general successor transaction—could give rise to

inappropriate outcomes or undue complexity where derived basis or section 961(c) basis is not equal to the PTEP that transfers in the general successor transaction.

ii. Deemed Covered Shareholder

Consistent with the deemed covered shareholder rules discussed in part II.G.3 of the Explanation of Provisions, the proposed regulations provide that the deemed covered shareholder is treated in the same manner as a covered shareholder in determining the transfer of derived basis or section 961(c) basis. See proposed § 1.961–5(c)(3)(i). Thus, for example, if a covered shareholder owns all the stock of an upper-tier CFC, the upper-tier CFC directly owns all the stock of a lower-tier CFC, and the covered shareholder sells a portion of its stock of the upper-tier CFC to a nonresident alien individual, then a portion of the upper-tier CFC's section 961(c) basis in the stock of the lower-tier CFC transfers from the seller covered shareholder to the deemed covered shareholder. The proposed regulations further provide that, to the extent the deemed covered shareholder is treated as owning stock of any foreign corporation that is not otherwise a CFC, the foreign corporation is treated as a CFC for purposes of determining section 961(c) basis that transfers to or from the deemed covered shareholder. See proposed § 1.961–5(c)(3)(ii). This is intended to allow for section 961(c) basis to transfer from the deemed covered shareholder to a subsequent covered shareholder (as properly adjusted under the proposed section 961 regulations) even if both an upper-tier foreign corporation and the lower-tier foreign corporation in which the upper-tier foreign corporation directly owns stock cease to be CFCs during the period in which the stock of the foreign corporations is considered owned by the deemed covered shareholder.

In cases where basis of a derivative ownership unit or section 961(c) ownership unit transfers from the deemed covered shareholder to a covered shareholder, the covered shareholder must use a reasonable method to determine the amount of transferred basis. See proposed § 1.961–5(c)(3)(iii). The proposed regulations provide that such method must take into account adjustments to basis with respect to the deemed covered shareholder that would have been made under the proposed regulations if the basis were with respect to a covered shareholder during the time that it was with respect to the deemed covered shareholder.

Like in the context of the deemed covered shareholder rules for purposes of transferring PTEP, the Treasury Department and the IRS welcome comments on this regime.

iii. Coordination With Section 743(b)

In certain general successor transactions in which an acquired partnership has a section 754 election in effect or a substantial built-in loss as defined under section 743(d), property of the acquired partnership will receive a section 743(b) basis adjustment with respect to the successor covered shareholder. Accordingly, the proposed regulations take into account derived basis that transfers to the successor covered shareholder in calculating the overall section 743(b) basis adjustment and its allocation among the acquired partnership's assets with respect to the successor covered shareholder. See proposed § 1.961–5(d). In transactions involving multiple tiers of acquired partnerships, this coordination rule applies to each acquired partnership.

5. Basis Adjustments for Deemed Dividends Under Section 1248(c)(2) or 964(e)(1)

The Treasury Department and the IRS are studying whether basis under section 961 should be increased to reflect gain treated as a dividend under section 1248(c)(2) or 964(e)(1). For example, to the extent gain recognized by a covered shareholder on a sale of stock of a first-tier CFC is treated as a dividend under section 1248(c)(2) by reason of E&P of a third-tier CFC (and therefore gives rise to PTEP under section 959(e)), the Treasury Department and the IRS are considering whether (and to what extent) the first-tier CFC's and second-tier CFC's section 961(c) basis can and should be increased to reflect the resulting PTEP. The Treasury Department and the IRS request comments on this topic.

D. Tax Consequences of Positive Derived Basis (Proposed § 1.961–8)

1. In General

The rules for a partnership's positive derived basis with respect to a covered shareholder are generally intended to replicate the outcome that would occur on a sale, exchange, or other disposition of the derivative ownership unit if such basis were an additional amount of common basis taken into account in determining gain or loss allocable to the covered shareholder. These rules are generally modeled after the rules in § 1.743–1.

Under the proposed regulations, in a sale, exchange, or other disposition by a partnership (transferring partnership)

of one or more derivative ownership units (transferred units), each partner's distributive share of gain or loss recognized by the transferring partnership is first determined under section 704 without regard to positive derived basis (but with regard to any section 743(b) basis adjustment with respect to the partner). See proposed § 1.961–8(b)(1). Then, positive derived basis is applied to each covered shareholder's distributive share of such gain or loss, in an amount equal to the transferring partnership's positive derived basis with respect to the covered shareholder of the transferred units, subject to two limitations (discussed in part III.D.2 of the Explanation of Provisions). See proposed § 1.961–8(b)(2)(i); see also proposed § 1.961–12(c)(4) (*Example 4*). This application of positive derived basis can decrease a distributive share of gain, increase a distributive share of loss, or convert a distributive share of gain to a distributive share of loss.

The application of positive derived basis to a covered shareholder's distributive share is generally treated as an application of positive derived basis by the transferring partnership. See proposed § 1.961–8(b)(1). However, if the covered shareholder owns the transferred units through tiered partnerships, only the partnership in which the covered shareholder directly owns an interest is treated as applying the positive derived basis).

To coordinate with section 705, the proposed regulations provide that adjusted basis of a partnership interest directly owned by the covered shareholder is adjusted under section 705 after taking into account the partnership's application of positive derived basis to the covered shareholder's distributive share of gain or loss with respect to the transferred units. See proposed § 1.961–8(c). On the other hand, in tiered partnership structures, an upper-tier partnership's common basis in a lower-tier partnership interest is adjusted under section 705 without regard to the application of positive derived basis to the covered shareholder's distributive share. See proposed § 1.961–8(d). Additionally, an upper-tier partnership's derived basis with respect to the covered shareholder in a lower-tier partnership interest (starting at the lowest-tier if there is more than one lower-tier partnership) is concurrently reduced (or gain is recognized, as applicable) by the amount of positive derived basis applied to the covered shareholder's distributive share. In this way, an upper-tier partnership's derived basis in a lower-tier partnership interest

is replaced with common basis under section 705 (which may be decreased under section 705(a)(2) when the lower-tier partnership makes a distribution).

2. Limitations

As discussed in part III.D.1 of the Explanation of Provisions, the amount of positive derived basis applied to a covered shareholder's distributive share of gain or loss with respect to transferred units is equal to the transferring partnership's positive derived basis with respect to the covered shareholder of the transferred units, subject to two limitations. *See* proposed § 1.961–8(b)(2)(i).

The first limitation applies in nonrecognition transactions to replicate the effect of additional basis under the “boot-within-gain” rule of section 351(b) or 356(a)(1), where additional basis might reduce the amount of gain realized but not the amount of gain recognized. *See* proposed § 1.961–8(b)(2)(ii). Under this limitation, the amount of positive derived basis applied to the covered shareholder's distributive share is equal to the excess of the amount of positive derived basis with respect to the covered shareholder of the transferred units over the covered shareholder's share of the gain realized but not recognized by the transferring partnership with respect to the transferred units (determined without regard to derived basis). In this way, positive derived basis is available for use only to the extent that, if the positive derived basis were additional common basis taken into account in determining gain allocable to the covered shareholder, such derived basis would reduce gain recognized with respect to the transferred units.

To illustrate this limitation, assume US1, a covered shareholder, directly owns a 50 percent interest in PRS1, a partnership, and PRS1 directly owns the single share of outstanding stock of F1, a foreign corporation. The fair market value of the share is \$150x. PRS1's common basis of the share is \$100x, and PRS1's derived basis with respect to US1 of the share is \$15x. PRS1 exchanges the share for \$120x of stock and \$30x of money in a reorganization described in section 368(a)(1)(D), recognizing \$30x of gain on the exchange under section 356(a)(1) (the lesser of the \$30x of money received and the \$50x of gain in the stock of F1) and therefore \$20x of the \$50x of realized gain is not recognized due to the boot limitation in section 356(a)(1). US1's distributive share of the recognized gain is \$15x ($\$30x \times 50\%$), determined without regard to derived basis. Under the limitation in the

proposed regulations, only \$5x of positive derived basis is applied to such distributive share (thus, \$10x of the \$15x of derived basis is not available for use). The \$5x is computed as the excess of \$15x (the amount of positive derived basis with respect to US1 without regard to the limitation), over \$10x ($\$20x \times 50\%$, which represents US1's share of the realized-but-not-recognized gain). Accordingly, US1's distributive share of gain taking into account derived basis is \$10x (US1's \$15x distributive share of gain without regard to derived basis over \$5x of positive derived basis available under the limitation). This \$10x represents the amount of gain that would be recognized under section 356(a)(1) and allocated to US1 if such were determined based on \$75x of value (50% of each of the \$120x of stock consideration and \$30x of money) and \$65x of basis (50% of the \$100x of common basis, increased by the \$15x of derived basis).

Under the second limitation, positive derived basis can increase or create a distributive share of loss only if the transferring partnership recognizes, or would recognize, loss on the sale, exchange, or other disposition of the transferred units and a current deduction in respect of the loss is, or would be, allowable. *See* proposed § 1.961–8(b)(2)(iii). Thus, for example, positive derived basis cannot create a distributive share of loss if the gain recognized with respect to the transferred units is pursuant to section 301(c)(3).

3. Certain Scenarios Not Addressed

The proposed regulations do not address the interaction of derived basis with the rules regarding distributions by a partnership (for example, sections 732 and 734). The Treasury Department and the IRS request comments on this interaction, including whether derived basis with respect to a covered shareholder should be taken into account in the case of a distribution by a partnership of a derivative ownership unit to the covered shareholder or to another partner and whether derived basis should be taken into account in the case of distributions of other types of assets by a partnership.

The proposed regulations also do not address the effect of derived basis under the dividend recharacterization rules of section 1248. The Treasury Department and the IRS are studying this and other issues with respect to the application of section 1248 when stock of a foreign corporation is owned through a partnership (for example, the manner in which section 1248(d)(1) applies to exclude PTEP in determining deemed

dividend treatment), and welcome comments on these issues.

E. Tax Consequences of Positive Section 961(c) Basis (Proposed § 1.961–9)

1. In General

As discussed in part III.B.4 of the Explanation of Provisions, a CFC's section 961(c) basis applies only for the purposes prescribed in the section 961 regulations and thus does not affect the amount of the CFC's gross income or E&P. Under the rules in the proposed regulations for the tax consequences of positive section 961(c) basis, gain to which positive section 961(c) basis is applied is treated as PTEP that is generally excluded from the CFC's gross income under section 961(c) (section 961(c) exclusion). *See* proposed § 1.961–9. The proposed regulations describe the section 961(c) exclusion, the application of section 961(c) basis to gain, and the PTEP that results from such application (including the character of the PTEP).

2. Section 961(c) Exclusion

i. In General

The section 961(c) exclusion operates in a similar manner to the section 959(b) exclusion. It provides that PTEP resulting from the application of a CFC's section 961(c) basis to gain recognized by the CFC is excluded from the CFC's gross income for purposes of determining the CFC's subpart F income and tested income or tested loss, provided that the PTEP relates to a covered shareholder that is a United States shareholder in the CFC. *See* proposed § 1.961–9(b); *see also* part III.E.3 of the Explanation of Provisions (determining PTEP resulting from section 961(c) basis).

The Treasury Department and the IRS are of the view that E&P attributable to gain to which section 961(c) basis is applied gives rise to PTEP. Section 959(a) refers to E&P of a foreign corporation that is “attributable to amounts which are, or have been, included in gross income under section 951(a) [or 951A(a)].” Gain recognized by an upper-tier foreign corporation on the disposition of stock of a lower-tier foreign corporation may likewise reflect amounts included in gross income under section 951(a) or 951A(a) with respect to the lower-tier foreign corporation and, thus, give rise to E&P that is attributable to such amounts. Because section 961(c) basis reflects amounts included in gross income under section 951(a) or 951A(a), the application of section 961(c) basis to such gain means that the resulting E&P is attributable to an amount included in gross income under section 951(a) or

951A(a) in accordance with the language of section 959(a). Additionally, treating the resulting E&P as PTEP (rather than section 959(c)(3) E&P) prevents double non-taxation and double taxation and provides symmetry between distributions and dispositions involving foreign stock, as discussed in part III.E.2.ii of the Explanation of Provisions.

The proposed regulations apply the section 961(c) exclusion for purposes of determining a CFC's tested income or tested loss pursuant to the express delegation of authority in section 951A(f)(1)(B), which prevents double taxation and is therefore consistent with the policy of section 961. Additionally, this approach is consistent with section 951A(f)(1)(A) (treating an inclusion under section 951A(a) in the same manner as an inclusion under section 951(a)(1)(A) for purposes of section 961), which should be interpreted as allowing references to section 951 in section 961(c) to be treated as including a reference to section 951A(a). This approach is also consistent with a comment received in response to the 2019 notice, which requested clarification that section 961(c) basis applies for purposes of determining tested income, noting that some comments asserted that section 961(c) basis only applies in determining a CFC's subpart F income. *See also* TD 9866, 84 FR 29288, 29298 (describing similar comments received in response to proposed regulations under section 951A).

Further, the application of the section 961(c) exclusion at the CFC-level is coordinated with the pro rata share rules of section 951(a) (discussed in part IV.C of the Explanation of Provisions). Under this approach, a CFC's subpart F income is determined with respect to all shareholders by excluding the same amount of PTEP resulting from section 961(c) basis of the CFC, and United States shareholders' pro rata shares of the CFC's subpart F income are computed in a manner so that any benefits of the application of the section 961(c) exclusion to PTEP with respect to a United States shareholder generally inure only to that United States shareholder. For instance, if two United States shareholders own equal interests in a CFC and, on a sale of foreign stock by the CFC, the CFC recognizes gain half of which is treated as PTEP with respect to one United States shareholder (because there is positive section 961(c) basis with respect to the United States shareholder at least equal to its share of the gain) and the other half of which gives rise to subpart F income (because there is no section 961(c) basis with

respect to the other United States shareholder and no exception from subpart F income applies), then only the United States shareholder with respect to which there is no section 961(c) basis has a pro rata share of the subpart F income resulting from the sale.

Lastly, by applying section 961(c) at the CFC-level, the proposed regulations provide symmetry between sections 959(b) and 961(c), which are companion provisions with a common purpose. Thus, PTEP is generally treated the same under the proposed regulations regardless of whether it arises from a distribution or disposition involving stock of a foreign corporation. As indicated in part II.D.1.iii of the Explanation of Provisions, the Treasury Department and the IRS request comments on the CFC-level approach in the proposed regulations, including alternative approaches providing symmetry between sections 959(b) and 961(c) (such as a shareholder-level approach), or whether symmetry is necessary under the statute.

ii. Considerations in Treating Sheltered E&P as PTEP

The Treasury Department and the IRS considered treating a CFC's E&P that is sheltered from tax by positive section 961(c) basis with respect to a covered shareholder as section 959(c)(3) E&P. However, such an approach could give rise to double non-taxation or double taxation. Moreover, treating sheltered E&P as PTEP provides symmetry between distributions and dispositions involving foreign stock because both E&P to which annual PTEP accounts are applied and E&P to which section 961(c) basis is applied are treated as PTEP.

For example, double non-taxation could occur if the sheltered E&P were to subsequently give rise to a dividend for which the covered shareholder is allowed a dividends received deduction under section 245A (including as a result of a disposition pursuant to section 1248(j)). In that case, the taxable portion of any unrealized appreciation in stock of the CFC, to the extent attributable to unrealized appreciation in the CFC's assets, could be reduced by the amount of the dividend (because the dividend reduces the value of the CFC stock without a corresponding basis reduction or, in a disposition of stock, because gain attributable to the appreciation is recharacterized as a dividend). *See also* TD 9866, 84 FR 29288, 29298 (discussing this concern and requesting comments). This would result in double non-taxation when combined with the covered shareholder's adjusted basis (increased under section 961(a)) in its top-tier CFC

stock, which generally would not be reduced when section 959(c)(3) E&P is distributed with respect to the stock. Treating the sheltered E&P as PTEP prevents this outcome because section 961 reduces basis for distributions of PTEP (thereby preventing double benefits) and, in a disposition, PTEP is not taken into account under section 1248.

In a case where the covered shareholder is not eligible for a section 245A deduction (for example, because the covered shareholder is an individual), the covered shareholder would generally include the sheltered E&P in gross income when distributed by the CFC if the sheltered E&P were treated as section 959(c)(3) E&P. This would represent double taxation with respect to the E&P that gave rise to the section 961(c) basis because such E&P was taxed under section 951(a) or 951A(a) when earned and would in effect be taxed again when the sheltered E&P is distributed to the covered shareholder. Although the covered shareholder's adjusted basis under section 961(a) in its top-tier CFC stock would generally not be reduced for the distribution of the sheltered E&P, there would nevertheless be double taxation until or unless that basis can be utilized, and even in that case there may be a character mismatch. *See also* TD 9866, 84 FR 29288, 29298 (requesting comments on the extent to which adjustments should be made to the operation of section 961(c) to minimize the potential for the same item of income being subject to tax more than once); 2006 proposed regulations, 71 FR 51155, 51162 (noting similar concerns). Treating the sheltered E&P as PTEP prevents this outcome because a distribution of PTEP to a covered shareholder is generally excluded from gross income under section 959(a).

The Treasury Department and the IRS also considered treating sheltered E&P as section 959(c)(3) E&P but reducing basis (including the covered shareholder's adjusted basis in its top-tier CFC stock) to the extent the sheltered E&P is eligible for a section 245A deduction. However, this approach is not being proposed because it would raise other issues, including the timing of the basis reduction (either immediately upon creation of sheltered E&P, which may later cause excess taxation, or only upon distribution of sheltered E&P, which would require additional tracking), and would not address the double taxation issue for covered shareholders that do not qualify for a section 245A deduction.

3. Application of Section 961(c) Basis to Gain and Resulting PTEP

i. In General

The rules for applying a CFC's positive section 961(c) basis with respect to a covered shareholder are generally intended to replicate the outcome that would occur on a sale, exchange, or other disposition of the section 961(c) ownership unit if such basis were an additional amount of adjusted basis taken into account in determining gain allocable to the covered shareholder under section 951.

Under the proposed regulations, in a sale, exchange, or other disposition by a CFC of one or more section 961(c) ownership units that are shares of stock of a single foreign corporation (transferred units), the CFC first determines gain recognized with respect to the transferred units (covered gain). *See* proposed § 1.961–9(c)(1). Covered gain is determined on an aggregate basis with respect to all transferred units, without regard to section 961(c) basis or loss recognized on any transferred unit (and before any application of section 964(e) or other dividend recharacterization provisions). Then, portions of the covered gain are assigned to covered shareholders under proposed § 1.951–2 (the same rules that assign covered distributions, discussed in part IV.B of the Explanation of Provisions), and this determines a covered shareholder's share of the covered gain. *See* proposed § 1.961–9(d)(1).

Next, positive section 961(c) basis is applied (on an aggregate basis) to each covered shareholder's share of the covered gain, in an amount equal to the CFC's positive section 961(c) basis with respect to the covered shareholder of the transferred units (but not in excess of such share), and subject to a limitation in nonrecognition transactions (similar to the limitation rule that applies to derived basis discussed in part III.D.1 of the Explanation of Provisions). *See* proposed § 1.961–9(d)(2), (e). This application of positive section 961(c) basis characterizes the covered shareholder's share of the covered gain as PTEP with respect to the covered shareholder, and that PTEP is generally excluded from the CFC's gross income for purposes of determining its subpart F income and tested income or tested loss. *See* proposed § 1.961–9(b), (d)(3); *see also* proposed § 1.961–12(c)(5) (*Example 5*).

An aggregate approach to applying positive section 961(c) basis allows positive section 961(c) basis of a transferred unit to be applied to a portion of the covered shareholder's

share of the covered gain that is recognized with respect to another transferred unit. For example, in a case where there are two transferred units, one of which is sold at a loss but has positive section 961(c) basis with respect to the covered shareholder and the other of which is sold at a gain but has no section 961(c) basis with respect to the covered shareholder, positive section 961(c) basis in the first transferred unit will be applied to gain recognized with respect to the second transferred unit (and, to the extent so applied, the gain will be treated as PTEP and will be reduced only by any foreign income taxes allocated and apportioned to the PTEP). Aggregating positive section 961(c) basis in this manner is intended to replicate the effect of netting gains and losses on similar types of property in determining a CFC's subpart F income. *See* section 954(c)(1)(B) (foreign personal holding company income includes the portion of gross income that consists of the excess of gains over losses from the sale or exchange of certain property). Although aggregation differs from the share-by-share approach under section 961 to adjusting basis (including for purposes of determining the consequences of distributions of PTEP), it provides a simpler and more direct way of achieving the same effect as a share-by-share approach to the use of positive section 961(c) basis that allows excess section 961(c) basis on a particular share to be applied to gain recognized on another share of stock in the same foreign corporation for which there is not sufficient section 961(c) basis to fully offset the gain. *See also* part III.E.4 of the Explanation of Provisions (discussing a rule allocating PTEP to shares of stock in order to facilitate the application of dividend recharacterization provisions like section 964(e)).

The proposed regulations, however, do not allow positive section 961(c) basis of transferred units in excess of the covered shareholder's share of the covered gain to be applied to other covered gain or to create a loss that reduces subpart F income or tested income. Allowing section 961(c) basis in stock of a foreign corporation to only reduce a section 951 inclusion attributable to sales, exchanges, or other dispositions of stock of that foreign corporation is consistent with the language of section 961(c), with the result that only shares of stock of the same foreign corporation should be viewed as similar types of property for purposes of replicating the effect of netting under section 961(c). Unused

positive section 961(c) basis, however, may be applied to gain recognized pursuant to section 961(c), provided the gain is recognized with respect to stock of the foreign corporation to which the section 961(c) basis relates, as discussed in part III.G of the Explanation of Provisions.

ii. Character and Dollar Basis of Resulting PTEP

As discussed in part II.C of the Background, the character of PTEP (for example, the taxable year, section 904 category, and PTEP group to which the PTEP relates) must be tracked to ensure the proper application of provisions regarding the treatment of PTEP. Accordingly, the proposed regulations provide rules for determining the character of a CFC's PTEP with respect to a covered shareholder that results from the application of positive section 961(c) basis to the covered shareholder's share of covered gain (section 961(c) PTEP). *See* proposed § 1.961–9(d)(3) and (f)(1). Generally, the effect of these rules is to duplicate undistributed PTEP of lower-tier foreign corporations by having the PTEP “tier up” into the CFC, but without reducing PTEP of the lower-tier foreign corporations, and this effect is analogous to the effect of section 964(e)(1) (“tiering-up” certain section 959(c)(3) E&P of lower-tier foreign corporation in certain sales or exchanges of stock by a CFC).

The proposed regulations generally adopt a mirroring approach, which provides that section 961(c) PTEP takes the same character as PTEP that transfers from the covered shareholder under section 959 or is eliminated (for example, by reason of an election under section 338(g)) in the sale, exchange, or other disposition of the transferred units (referred to as mirrored PTEP). *See* proposed § 1.961–9(f)(2); *see also* proposed § 1.961–12(c)(5) (*Example 5*). Mirrored PTEP is increased for foreign income taxes associated with such transferred or eliminated PTEP because those taxes relate to PTEP to which section 961(c) basis used in the transaction is attributable. The mirroring rule is intended to identify (and duplicate) PTEP to which section 961(c) basis used in the transaction is attributable in an administrable manner that does not impose undue burden on taxpayers. Alternative approaches that were considered include requiring section 961(c) basis to be established and maintained with the same characterizations with which annual PTEP accounts are established and maintained (so that section 961(c) PTEP could be characterized based on section 961(c) basis, portions of would relate to

each PTEP group). However, the view of the Treasury Department and the IRS is that those approaches would be unduly burdensome because they would substantially increase the information required to be tracked under section 961(c).

In some cases, section 961(c) PTEP may be less than mirrored PTEP. This could occur, for example, if a foreign corporation's assets depreciate in value before the transaction or if mirrored PTEP consists of PTEP attributable to section 965(b) (which does not increase section 961(c) basis). In that case, section 961(c) PTEP takes the same character as a pro rata portion of mirrored PTEP. In other words, the mirroring rule applies but mirrored PTEP is pro rata reduced to equal section 961(c) PTEP.

In other cases, section 961(c) PTEP may exceed mirrored PTEP. This could occur if section 961(c) basis used in the transaction is attributable to PTEP that was distributed before the transaction in a manner different than how the PTEP was expected to be distributed when the section 961(c) basis was provided. In that case, the mirroring rule applies to the extent of mirrored PTEP, with a "lookback" rule applying to the portion of section 961(c) PTEP that is not characterized under the mirroring rule (excess section 961(c) PTEP). *See* proposed § 1.961–9(f)(3). Under the lookback rule, excess section 961(c) PTEP takes the same character as lookback PTEP, which is PTEP that resulted from income inclusions under sections 951(a) and 951A(a) of the covered shareholder attributable to the transferred units (including stock of a lower-tier foreign corporation owned through the transferred units) during a 36-month lookback period (without any reduction for foreign income taxes imposed on that PTEP). The lookback rule is intended to provide an administrable method to approximate PTEP that should be viewed as duplicated in the transaction, while minimizing taxpayer burden in the limited cases where section 961(c) PTEP exceeds mirrored PTEP. Like under the mirroring rule, lookback PTEP is pro rata reduced to equal excess section 961(c) PTEP if excess section 961(c) PTEP is less than lookback PTEP.

If excess section 961(c) PTEP is greater than lookback PTEP, the portion of excess section 961(c) PTEP that is not characterized under the lookback rule is characterized as PTEP relating to the section 245A(d) PTEP group, the taxable year in which the transaction occurs, and the general category under section 904(d)(1)(D). *See* proposed § 1.961–9(f)(4). The Treasury Department and

the IRS are of the view that this rule is a necessary consequence of balancing compliance and administrative burden with precision under the mirroring rule and lookback rule, and that alternative characterizations could inappropriately incentivize transactions intended to distribute PTEP to which section 961(c) basis used in the transaction is attributable in a manner different than the manner in which the PTEP was expected to be distributed when the section 961(c) basis was provided.

Finally, the proposed regulations provide that the dollar basis of section 961(c) PTEP is equal to the U.S. dollar amount of section 961(c) basis giving rise to the PTEP. *See* proposed § 1.961–9(g). Because section 961(c) basis is adjusted to take into account foreign currency gain or loss recognized in the transaction (as discussed in part III.C.3 of the Explanation of Provisions), any foreign currency gain or loss subsequently recognized with respect to the section 961(c) PTEP is determined by reference to the time the section 961(c) PTEP comes into existence.

4. Coordination With Dividend Recharacterization Provisions

The proposed regulations provide two rules to coordinate with provisions of the Code or regulations that would treat covered gain, in whole or in part, as a dividend. The first rule provides that such dividend recharacterization provisions do not apply to the portion of covered gain that is PTEP. *See* proposed § 1.961–9(c)(2). Thus, for example, section 961(c) basis applies and characterizes covered gain as PTEP before the application of section 964(e) (treating gain recognized by a CFC on the sale or exchange of stock in a foreign corporation as a dividend in certain cases), similar to how adjusted basis must be taken into account to determine gain recognized before applying section 964(e).

The second rule allocates PTEP resulting from section 961(c) basis to transferred units. *See* proposed § 1.961–9(d)(5) and (h). This rule is intended to facilitate the application of dividend recharacterization provisions by providing certainty about the amount of gain with respect to a particular transferred unit that is treated as PTEP, which otherwise might be unclear in light of the aggregation component in applying positive section 961(c) basis (discussed in part III.E.3.i of the Explanation of Provisions).

Further, the Treasury Department and the IRS are studying other issues involving dividend recharacterization provisions (for example, the application of section 1248(d)(1) in section 964(e)

transactions) and may address these issues in future guidance.

F. Gain Recognition in Transactions Involving Property Units With Negative Basis (Proposed § 1.961–10)

To account for negative derived basis and negative section 961(c) basis, the proposed regulations provide rules that treat a partnership or CFC as recognizing gain with respect to a property unit. *See* proposed § 1.961–10. These rules are consistent with the theory of negative basis described in part III.C.2.v the Explanation of Provisions, which provides that negative basis is akin to a reduction to common basis or adjusted basis that only has a tax effect when the common basis or adjusted basis becomes relevant to determining taxable income in a transaction.

One set of rules applies in any transaction in which a partnership's common basis or CFC's adjusted basis of a property unit is relevant in determining gain or loss recognized with respect to the property unit—for example, a sale or exchange of the property unit or a distribution under section 301(c)(2) on the property unit. *See* proposed § 1.961–10(b)(1) and (c)(1); *see also* proposed § 1.961–12(c)(6) and (7) (*Examples 6 and 7*). In these cases, the partnership or CFC is treated as recognizing gain with respect to the property unit to the extent of the additional amount of gain, plus the lesser amount of loss, that it would have recognized in the transaction if its common basis or adjusted basis of the property unit were reduced by all negative derived basis or negative section 961(c) basis of the property unit. In this way, negative basis gives rise to gain that reflects income that would exist or counteracts loss that would not exist if common basis or adjusted basis were reduced by the negative basis, thereby replicating the outcome that would occur in the transaction if common basis or adjusted basis were so reduced.

So, for example, in a sale of a property unit, negative basis of the property unit generally gives rise to an equal amount of gain. In contrast, in a distribution under section 301(c)(2) with respect to a property unit or an exchange of a property unit under section 351, negative basis of the property unit gives rise to an amount of gain equal to the gain that would have been recognized under section 301(c)(3) or 351(b), as applicable, if common basis (in the case of a partnership) or adjusted basis (in the case of a CFC) were reduced by all negative basis of the property unit.

Another set of rules applies in any transaction in which a property unit loses its status as a derivative ownership unit or section 961(c) ownership unit. This could occur, for example, as a result of a transfer by a partnership of a derivative ownership unit to a foreign corporation in an exchange to which section 351 applies, or a distribution by a CFC of a section 961(c) ownership unit to a domestic corporation in a transaction to which sections 332 and 337 apply. *See* proposed § 1.961–10(b)(2)(ii) and (c)(2)(ii). This could also occur if an upper-tier foreign corporation ceases to be a CFC, in which case shares of stock of a lower-tier foreign corporation directly owned by the upper-tier foreign corporation would no longer be section 961(c) ownership units. In these cases, the partnership or CFC is treated as recognizing gain with respect to the property unit to the extent of all negative derived basis or negative section 961(c) basis of the property unit, and this addresses a concern that the negative basis might otherwise not be taken into account. The Treasury Department and the IRS are studying to what extent this set of rules should be narrowed or eliminated in future guidance if a rule is adopted that converts one type of basis into another type (for example, a rule that converts derived basis into section 961(c) basis or section 961(c) basis into adjusted basis in a nonrecognition transaction).

A portion of gain recognized by a partnership or CFC under these rules is allocated by the partnership or assigned from the CFC, as applicable, to each covered shareholder by multiplying the gain by the percentage of the aggregate negative basis of the property unit that is negative basis with respect to the covered shareholder. *See* proposed § 1.961–10(b)(3) and (c)(3). This approach treats the gain (which may be less than the aggregate negative basis of the property unit) as relating pro rata to the negative basis with respect to each covered shareholder, thereby preventing a covered shareholder from disproportionality benefiting from common basis or adjusted basis that enabled the creation of negative basis (as discussed in part III.C.2.v of the Explanation of Provisions) and ensuring the tax consequences of negative basis are specific to the covered shareholder to which the negative basis relates.

Additionally, the gain is treated in the same manner as gain recognized in connection with distributions of PTEP in excess of basis (discussed in part III.C.2.iii and iv of the Explanation of Provisions), which reflects that the negative basis giving rise to the gain arose as a result of prior distributions of

PTEP. *See* proposed § 1.961–10(b)(4) and (c)(4). Thus, the gain applies for all purposes of the Code in the case of a partnership and, in the case of a CFC, is recognized pursuant to section 961(c) and applies only for purposes of determining amounts included in gross income of United States shareholders under the rules discussed in part III.G of the Explanation of Provisions. Further, the gain is treated as separate from the transaction and therefore, for example, does not give rise to basis adjustments under section 358 or 362 in a nonrecognition transaction.

Lastly, after determining gain required to be recognized under these rules, negative derived basis or negative section 961(c) basis that causes the gain to be recognized is eliminated concurrently with the transaction. *See* proposed § 1.961–10(b)(5) and (c)(5). Thus, if the covered shareholder continues to own the property unit (for example, if the transaction is a section 301(c)(2) distribution), then such negative basis will cease to be taken into account with respect to the covered shareholder and, if the transaction is a general successor transaction, then the negative basis will not be taken into account with respect to the successor covered shareholder.

G. United States Shareholder Inclusions for Gain Recognized Under Section 961(c) (Proposed § 1.961–11)

1. In General

The proposed regulations provide rules requiring United States shareholders of a CFC to include in gross income their allocated portions of the CFC's section 961(c) income. *See* proposed § 1.961–11; *see also* proposed § 1.961–12(c)(8) (*Example 8*). A CFC's section 961(c) income is, for a taxable year of the CFC, all gain recognized by the CFC pursuant to section 961(c) for amounts in excess of basis or by reason of a trigger of negative section 961(c) basis (as discussed in parts III.C.2.iv, C.3, and F of the Explanation of Provisions).

These rules are intended to ensure section 961(c) income is taken into account (and thus has a tax consequence) at the covered shareholder-level such that section 961(c) basis is treated in the same manner as adjusted basis in directly held CFC stock or derived basis (where, for example, amounts in excess of basis under section 961 are always taken into account at the covered shareholder-level). Specifically, a United States shareholder owning stock of a CFC on the last relevant day of a taxable year of the CFC must include in gross income

its allocated amount of the CFC's section 961(c) income for that taxable year. *See* proposed § 1.961–11(b). The amount so allocated to a United States shareholder is the sum of any portions of such section 961(c) income assigned to the United States shareholder under the section 961 regulations (adjusted, if applicable, for transfers of stock of the CFC, as discussed in part III.G.2 of the Explanation of Provisions), reduced by any loss that the CFC is treated as recognizing under section 961(c) with respect to the United shareholder. *See* proposed § 1.961–11(c).

This loss under section 961(c) is equal to the CFC's positive section 961(c) basis with respect to the United States shareholder of section 961(c) ownership units sold, exchanged, or disposed of by the CFC in the taxable year, but only to the extent the positive section 961(c) basis is not applied to covered gain, and subject to two limitations. *See* proposed § 1.961–11(e). Under the first limitation, positive section 961(c) basis can create or increase a loss under section 961(c) only if the CFC recognizes, or would recognize, loss on the sale, exchange, or other disposition and a current deduction in respect of the loss is, or would be, allowable. Under the second limitation, positive section 961(c) basis can create or increase a loss under section 961(c) only to the extent of the amount of section 961(c) income that both is otherwise allocable to the United States shareholder and relates to stock of the same foreign corporation to which the positive section 961(c) basis relates. This is consistent with the same foreign corporation limitation for applying positive section 961(c) basis to covered gain (discussed in part III.E.3.i of the Explanation of Provisions).

The United States shareholder includes its allocated amount of section 961(c) income in gross income in its taxable year in which or with which the CFC's taxable year ends, and the allocated amount is treated in the same manner as an amount included in gross income under section 951(a)(1)(A) for purposes of applying sections 961 and 989(b). *See* proposed § 1.961–11(b). Thus, under section 961, the inclusion increases basis in the United States shareholder's stock of the CFC and any property units through which the United States shareholder owns stock of the CFC, consistent with how a subpart F income inclusion increases basis. The inclusion does not increase the CFC's PTEP, however, because the section 961(c) income does not give rise to E&P at the level of the CFC, and thus there is no amount related to the inclusion satisfying section 959's description of PTEP (E&P attributable to amounts

which are, or have been, included in gross income under section 951(a)). Moreover, increasing basis but not PTEP helps to ensure that gain is not recognized on subsequent distributions of PTEP the distribution of which gave rise to the section 961(c) income.

2. Adjustments for Transfers of CFC Stock

The proposed regulations provide additional rules in allocating a CFC's section 961(c) income for a taxable year if stock of the CFC is transferred during the taxable year. *See* proposed § 1.961–11(d). These rules are necessary because gain comprising section 961(c) income is assigned to covered shareholders at the time of the transaction giving rise to the gain (for example, a distribution in excess of basis) but, due to a transfer of stock of the CFC, a covered shareholder to which a portion of the gain is assigned may not own stock of the CFC stock on the last relevant day of the CFC's taxable year.

One set of rules applies if the CFC is an acquired foreign corporation in a general successor transaction that occurs during the taxable year. *See* proposed § 1.961–11(d)(1). In such a case, if the general successor transaction occurs before the last relevant day of the taxable year, then a pro rata portion of section 961(c) income that is recognized before the general successor transaction and assigned to the transferor covered shareholder is treated as instead assigned to the successor covered shareholder. Alternatively, if the general successor transaction occurs on or after the last relevant day of the taxable year, then a pro rata portion of section 961(c) income that is recognized after the general successor transaction and assigned to the successor covered shareholder is treated as instead assigned to the transferor covered shareholder. In both cases, the pro rata portion is determined based on the percentage of the CFC's section 961(c) basis that transfers in the general successor transaction.

A second set of rules applies the principles of the first set of rules to transactions, other than general successor transactions, in which the CFC's section 961(c) basis is transferred to another covered shareholder. *See* proposed § 1.961–11(d)(2).

IV. Section 951 Regulations

A. Overview

The proposed regulations under section 951 provide two coordinated sets of rules regarding the assignment and allocation of covered items, which are gross income of a foreign

corporation consisting of covered distributions or covered gains. One set applies at the foreign corporation-level to assign covered items to covered shareholders, with these rules identifying the portions of covered items to which attributes specific to a covered shareholder (PTEP or section 961(c) basis) may be applied to exclude such portions under section 959(b) or 961(c). *See* proposed § 1.951–2 (discussed in part IV.B of the Explanation of Provisions). The other set applies at the shareholder-level to allocate a CFC's subpart F income to United States shareholders, with these rules ensuring that the CFC's subpart F income attributable to covered items is allocated consistently with how the covered items were assigned under the first set of rules. *See* proposed § 1.951–1(c) (discussed in part IV.C of the Explanation of Provisions).

B. Foreign Corporation-Level Rules for Assigning Covered Items (Proposed § 1.951–2)

1. In General

The proposed regulations assign portions of a foreign corporation's covered items to covered shareholders that own stock of the foreign corporation during the foreign corporation's taxable year in which the covered items are received or recognized by the foreign corporation. *See* proposed § 1.951–2(b). The assignments are done on a covered-item-by-covered-item basis, in each case first by assigning the covered item under a general assignment rule, and then by adjusting assignments for any general successor transactions.

2. General Assignment Rule

The general assignment rule assigns a pro rata portion of a covered item of a foreign corporation to each covered shareholder that owns stock of the foreign corporation on the last relevant day of the foreign corporation's taxable year in which the covered item is received or recognized by the foreign corporation (that is, the last day of such taxable year on which the foreign corporation is a CFC). *See* proposed § 1.951–2(c)(1); *see also* proposed § 1.951–2(h)(3)(i) (*Example 1*). The pro rata portion is determined based on the percentage of the foreign corporation's allocable E&P for the taxable year that would be allocated to the covered shareholder in the hypothetical distribution described in § 1.951–1(e), applied by treating allocable E&P as equal to the greater of the foreign corporation's E&P for the taxable year and all covered items of the foreign

corporation. *See* proposed § 1.951–2(d). By applying § 1.951–1(e) in this way, the general assignment rule is consistent with the principles of the pro rata share rules under section 951(a). *See* § 1.951–1(e).

3. Adjustments for General Successor Transactions

A foreign corporation that is an acquired foreign corporation in a general successor transaction that occurs before the last relevant day of a taxable year of the foreign corporation may receive or recognize a covered item before the general successor transaction (pre-transaction covered item). In that case, the general successor transaction could preclude PTEP or section 961(c) basis with respect to the transferor covered shareholder from being applied to the covered item (as a result of reducing the allocation of the foreign corporation's E&P to the covered shareholder in the hypothetical distribution described in § 1.951–1(e) and therefore reducing the covered shareholder's assignment under the general assignment rule). This could inappropriately separate PTEP and basis from the appropriate covered shareholder.

To illustrate this issue, assume US1 is a covered shareholder and each of CFC1 and CFC2 is a CFC with a calendar taxable year. On January 1 of year 1, US1 owns all the stock of CFC1, and CFC1 owns all the stock of CFC2. On June 30 of year 1, CFC2 makes a \$100x covered distribution to CFC1, which immediately makes a \$100x covered distribution to US1. On September 30 of year 1, US1 sells all its stock of CFC1 to US2, an unrelated covered shareholder in what constitutes a general successor transaction. Without regard to the covered distributions, CFC2 has \$100x of PTEP with respect to US1 (relating to the prior year) and CFC1 has \$0 of PTEP.

Under the general assignment rule, the entire \$100x of the covered distribution received by CFC1 would be assigned to US2 (the covered shareholder owning all the stock of CFC1 on December 31 of year 1, the last relevant day of CFC1's taxable year). As a result, no PTEP would be applied to either covered distribution (and each covered distribution would reduce the distributing CFC's section 959(c)(3) E&P by \$100x).

The proposed regulations include additional rules to address this issue. Specifically, the additional rules increase the portion of a pre-transaction covered item that otherwise (without the additional rules) would be assigned to the transferor covered shareholder

and correspondingly decrease the portions of the item that otherwise (without the additional rules) would be assigned to connected covered shareholders. *See* proposed § 1.951–2(e); *see also* proposed § 1.951–2(h)(3)(ii) (*Example 2*). A connected covered shareholder means the successor covered shareholder (or any other covered shareholder owning the stock acquired in the general successor transaction, in the case of back-to-back general successor transactions, for example) and any covered shareholder related to such covered shareholder (determined under section 267(b) or 707(b)). *See* proposed § 1.951–2(g).

Thus, in the example above, the additional rules assign all the covered distribution received by CFC1 to US1 (rather than to US2, a connected covered shareholder), and \$100x of CFC2's PTEP with respect to US1 is applied to the covered distribution (which, in turn, increases CFC1's PTEP with respect to US1 by \$100x). As a result, that covered distribution is treated in the same manner as if the sale had not occurred, and \$100x of CFC1's PTEP with respect to US1 is then available to be (and in fact is) distributed by CFC1 to US1. If, instead, CFC1 did not make a covered distribution before the sale, then \$100x of PTEP of CFC1 with respect to US1 would transfer from US1 to US2 in the sale.

Subject to two limitations, the increase to the transferor covered shareholder's assignment is equal to the additional amount of the pre-transaction covered item that would have been assigned to the transferor covered shareholder if the date on which the covered item is received or recognized were the last relevant day and the hypothetical distribution for purposes of the general assignment rule were treated as made immediately before the covered item is received or recognized. *See* proposed § 1.951–2(e)(2)(i). In this way, the transferor covered shareholder's assignment of a pre-transaction covered item is, as illustrated above, generally consistent with what would have been its assignment if the general successor transaction and any subsequent transactions that change the ownership of stock of the acquired foreign corporation (for example, issuances of stock by the acquired foreign corporation) had not occurred.

With the limitations, the increase applies only to the extent it results in additional PTEP or section 961(c) basis with respect to the transferor covered shareholder being applied to the pre-transaction covered item, and the increase cannot exceed the portions of

the covered item that otherwise (without the additional rules) would be assigned to connected covered shareholders. *See* proposed § 1.951–2(e)(2)(iii). Thus, the additional rules only shift an assignment of gross income identified under the principles of section 951(a) as allocable to covered shareholders that bear a defined relationship to the transferor covered shareholder (through the general successor transaction or relatedness). The Treasury Department and the IRS are of the view that this approach reasonably balances the policies of the general assignment rule (following the principles of section 951(a)) and the additional rules (assuring the tax consequences of PTEP and basis remain with the appropriate covered shareholder).

The corresponding decrease applies, first, to assignments of connected covered shareholders owning, on the last relevant day, stock acquired in the general successor transaction and, next, to assignments of other connected covered shareholders, in each case on a pro rata basis. *See* proposed § 1.951–2(e)(3) and (4). With this ordering, assignments of such other connected covered shareholders are decreased only if their ownership of stock of the acquired foreign corporation increases after the general successor transaction. The Treasury Department and the IRS are of the view that applying the additional rules to such other connected covered shareholders maintains the integrity of the additional rules (for example, by preventing issuances to covered shareholders related to the successor covered shareholder from reducing the application of the additional rules, as could otherwise occur because the issuances would have the effect of reducing the successor covered shareholder's assignment under the general assignment rule, which, in turn, would limit the increase to the transferor covered shareholder's assignment).

Similar additional rules apply if a foreign corporation is an acquired foreign corporation in a general successor transaction that occurs on or after the last relevant day of a taxable year of the foreign corporation and the foreign corporation receives or recognizes a covered item after the general successor transaction. *See* proposed § 1.951–2(e)(2)(ii). In these cases, the additional rules increase the portion of such an item that otherwise (without the additional rules) would be assigned to the successor covered shareholder, generally by correspondingly decreasing the portion of the item that otherwise (without the

additional rules) would be assigned to the transferor covered shareholder. *See also* proposed § 1.951–2(h)(3)(iii) (*Example 3*).

C. Shareholder-Level Rules for Allocating Subpart F Income (Proposed § 1.951–1)

Under § 1.951–1 (and as discussed in part II.B.1 of the Background), a CFC's subpart F income is allocated to each United States shareholder of the CFC based on a fraction, the numerator of which is the United States shareholder's share of the CFC's allocable E&P, and denominator of which is the CFC's allocable E&P. *See* § 1.951–1(e). The amount of subpart F income so allocated to a United States shareholder is the United States shareholder's pro rata share of the foreign corporation's subpart F income, subject to certain adjustments. *See* § 1.951–1(b); *see also* § 1.951A–1(d) (determining pro rata shares of tested income in the same manner).

If a CFC's subpart F income attributable to covered items were allocated to United States shareholders in the same manner, the income might be allocated differently than how the covered items were assigned at the CFC-level as part of determining the extent to which the covered items are PTEP excluded from the CFC's gross income under section 959(b) or 961(c). *See also* proposed § 1.951–2 (assignment rules, discussed in part IV.B of the Explanation of Provisions). This could cause the tax consequences of PTEP or section 961(c) basis to not be specific to the United States shareholder to which such attribute relates, which would be inconsistent with the shareholder-specific nature of sections 959(b) and 961(c) and could result in partial double taxation to the United States shareholder.

For instance, assume two unrelated United States shareholders are assigned equal portions of covered gain recognized by a CFC, with the half assigned to one United States shareholder characterized as PTEP excluded from the CFC's gross income under section 961(c) (because there is positive section 961(c) basis with respect to the United States shareholder at least equal to such shareholder's share of the covered gain) and the half assigned to the other United States shareholder characterized as subpart F income (because there is no section 961(c) basis with respect to the other United States shareholder and no exception from subpart F income applies). In such a case, the Treasury Department and the IRS are of the view that allocating half of the subpart F

income from the covered gain to each United States shareholder would be inconsistent with sections 951(a) and 961(c), as doing so would cause the United States shareholders to share both any benefits of the section 961(c) exclusion and any detriments of the inclusion in subpart F income.

To address this, the proposed regulations modify § 1.951–1 so that a CFC's subpart F income attributable to covered items is separately allocated to United States shareholders. *See* proposed § 1.951–1(c)(1); *see also* proposed § 1.951–1(h)(2)(ii) (*Example 1*). Subpart F income attributable to covered items is determined on a covered-item-by-covered-item basis, and in each case is the portion of the covered item that is included in the CFC's foreign base company income (adjusted net foreign base company income as defined in § 1.954–1(a)(5)) or insurance income (adjusted net insurance income as defined in § 1.954–1(a)(6)). *See* proposed § 1.951–1(c)(2)(i). The proposed regulations facilitate these determinations by treating each portion of gross foreign base company income (as defined in § 1.954–1(a)(2)) that consists of a covered item as a single item of income. *See* proposed § 1.954–1(c)(1)(iii)(C).

Subpart F income attributable to a covered item is allocated to United States shareholders consistently with how the covered item was assigned at the CFC-level as part of determining the extent to which the covered item is PTEP excluded from the CFC's gross income under section 959(b) or 961(c). Specifically, subpart F income attributable to a covered item is allocated to each United States shareholder based on a fraction, the numerator of which is the portion of the covered item that is both assigned at the CFC-level to the United States shareholder and included in the CFC's adjusted gross foreign base company income or adjusted gross insurance company income (as defined in § 1.954–1(a)(3) or (6)), and the denominator of which is the portion of the covered item that is included in adjusted gross foreign base company income or adjusted gross insurance company income. *See* proposed § 1.951–1(c)(2)(ii). In this way, a United States shareholder's pro rata share of subpart F income attributable to a covered item is the subpart F income that results from the United States shareholder's assigned portion of the covered item.

Then, remaining subpart F income (that is, subpart F income not attributable to covered items) is allocated pro rata to United States shareholders in accordance with

existing § 1.951–1. Specifically, such subpart F income is allocated to each United States shareholder based on a fraction, the numerator of which is the United States shareholder's share of the CFC's allocable E&P (determined under § 1.951–1(e)), and the denominator of which is the CFC's allocable E&P. *See* proposed § 1.951–1(c)(2)(iii).

Thus, under the proposed regulations, the effect of sections 959(b) and 961(c) on allocations under section 951(a) is limited to ensuring that any benefits of the application of the relevant exclusion to a portion of a covered item, or any detriments of an inclusion of such portion in subpart F income, generally inure only to the United States shareholder to which the portion was assigned in determining the extent to which the portion is excludable PTEP. Accordingly, under the proposed regulations, sections 959(b) and 961(c) do not affect the allocation of subpart F income attributable to gross income not eligible for exclusion under those sections. Similarly, the proposed regulations do not affect the allocation of tested items under section 951A. *See* proposed § 1.951A–1(d) (pro rata shares of tested income, tested loss, and qualified business asset investment are determined in the same manner as the determination of pro rata shares of subpart F income not attributable to covered items); *see also* § 1.951A–1(d)(5) and (6) (pro rata shares of tested interest expense and tested interest income determined by reference to pro rata shares of tested income and tested loss, as applicable).

An alternative approach that treated the allocation of subpart F income attributable to covered items as altering the manner in which other income of the CFC is allocated would require broader revisions to § 1.951–1. Under this type of approach, a CFC would be treated as having four types of allocable income, which together would equal allocable E&P: subpart F income, tested income, excludable PTEP income (that is, PTEP that is distributed to, or results from section 961(c) basis of, the CFC and is excluded from the CFC's gross income under section 959(b) or 961(c), reduced by current year taxes allocated and apportioned thereto), and residual income (equal to the excess of the CFC's E&P for the taxable year over the sum of the other types of income). A United States shareholder's share of the CFC's allocable E&P would be treated as first relating to income attributable to covered items, with any remaining portion of the share treated as relating on a pro rata basis to all other income. However, this approach would generally produce the same results as the

approach in the proposed regulations, except in cases where a deductible item (other than current year taxes) disproportionately reduces a covered item (because some, but not all, of the covered item is excludable PTEP and thus the deduction reduces only the non-PTEP portion of the covered item). Moreover, the Treasury Department and the IRS are of the view that sections 959(b) and 961(c) do not require such an approach.

Lastly, the Treasury Department and the IRS request comments on whether additional rules are warranted for allocating tested items in cases where a covered item is excluded from subpart F income by reason of section 954(b)(3)(A)'s de minimis rule and may consequently give rise to tested income (which, under the proposed regulations, would be allocated under the rules for subpart F income not attributable to covered items).

V. Section 986(c) Regulations (Proposed § 1.986(c)–1)

A. Overview

The proposed regulations under section 986(c) describe the circumstances in which a covered shareholder recognizes foreign currency gain or loss with respect to PTEP and provide rules for determining the amount of gain or loss that is recognized. These rules are issued pursuant to the express delegations of authority under sections 986(c)(2), 965(o), and 989(c). *See also* part VIII.F of the Explanation of Provisions (proposing to withdraw or studying whether to withdraw provisions regarding foreign currency gain or loss in §§ 1.985–5 and 1.985–7).

B. Circumstances in Which Foreign Currency Gain or Loss Is Recognized

Under the proposed regulations, a covered shareholder recognizes foreign currency gain or loss under section 986(c) with respect to PTEP in two circumstances. *See* proposed § 1.986(c)–1(b)(1). The first circumstance is when PTEP is distributed to the covered shareholder (including PTEP treated as received through a partnership). The second circumstance is when PTEP ceases to be with respect to the covered shareholder (for example, as a result of being transferred to another covered shareholder in a general successor transaction or eliminated as a consequence of an election under section 338(g)). These rules, which are generally consistent with the 1988 notice, provide parity between distributions of PTEP and dispositions of foreign stock that in each case present

the last opportunity for the covered shareholder to recognize foreign currency gain or loss with respect to PTEP.

The proposed regulations provide that no foreign currency gain or loss is recognized in a distribution of PTEP to a foreign corporation. *See* proposed § 1.986(c)–1(c). In these cases, the Treasury Department and the IRS are of the view that preserving the dollar basis of the PTEP (through adjustments to shareholder-level dollar basis pools) is the appropriate application of section 986(c) at the time of the distribution, with such dollar basis then determining foreign currency gain or loss when the PTEP is subsequently distributed to the covered shareholder.

Foreign currency gain or loss is also generally not recognized (and dollar basis is preserved) when PTEP transfers in a transaction other than a general successor transaction (for example, a transfer of stock of a CFC by a domestic corporation to a non-consolidated domestic corporation in a section 351 transaction). *See* proposed § 1.986(c)–1(b)(5); *but see* § 1.367(b)–2(j)(2)(i). This rule limits the ability to recognize foreign currency gain or loss in nonrecognition transactions or other transactions where gain or loss is generally not recognized. Comments are requested on this rule and, more generally, whether foreign currency gain or loss should not be recognized and thus deferred in sales or other transactions involving related parties.

Foreign currency gain or loss recognized with respect to PTEP is recognized concurrently with the transaction requiring recognition of such gain or loss. *See* proposed § 1.986(c)–1(b)(4). Additionally, the foreign currency gain or loss is treated as ordinary income or loss from the same source and relating to the same section 904 category as the income inclusion that gave rise to the PTEP (consistent with the rule in § 1.904–4(p) for distributions of PTEP). *See also* proposed § 1.961–5(b) (adjusting basis for foreign currency gain or loss recognized in a transaction other than a distribution, as discussed in part III.C.3 of this Explanation of Provisions).

C. Determining Foreign Currency Gain or Loss

Foreign currency gain or loss with respect to PTEP is determined by translating the PTEP (which is denominated in the foreign corporation's functional currency) into U.S. dollars at the spot rate on the day of the transaction requiring recognition of such gain or loss and subtracting from that U.S. dollar amount the dollar basis

of the PTEP. *See* proposed § 1.986(c)–1(b)(2); *see also* proposed § 1.959–10(c)(2) (*Example 2*). A positive difference is foreign currency gain and the absolute value of a negative difference is foreign currency loss.

As a result, foreign currency gain or loss with respect to PTEP is based on movements in exchange rates between the time of the income inclusion giving rise to the PTEP (translated pursuant to the appropriate exchange rate) or, if applicable, the most recent prior transfer of the PTEP (treated as the deemed distribution described in section 986(c)(1)), and the date of the transaction requiring recognition of such gain or loss (treated as the actual distribution described in section 986(c)(1)).

D. Limitations

Consistent with existing § 1.986(c)–1 (discussed in part II.C.3 of the Background of this preamble), only a portion of foreign currency gain or loss with respect to PTEP resulting from section 965(a) is recognized, based on the section 965(c) deduction percentage with respect to the PTEP, and no foreign currency gain or loss is recognized with respect to PTEP resulting from section 965(b). *See* proposed § 1.986(c)–1(b)(3)(i) and (ii). Further, no foreign currency gain or loss is recognized with respect to taxable section 962 PTEP because such PTEP is included in gross income pursuant to section 962(d) and, therefore, the foreign currency gain or loss is accounted for in gross income. *See* proposed § 1.986(c)–1(b)(3)(iii).

VI. Section 960 Regulations (Proposed §§ 1.960–1 and 1.960–3)

Current §§ 1.960–1 and 1.960–2 provide rules for computing the amount of foreign income taxes deemed paid under section 960(a) and (d), and current §§ 1.960–1 and 1.960–3 provide rules for computing the amount of foreign income taxes deemed paid under section 960(b). The PTEP accounting rules under proposed § 1.959–2 replace the rules in current § 1.960–3 that describe a CFC's PTEP, and the rules allocating and apportioning current year taxes to PTEP in proposed § 1.959–6 replace the rules in current § 1.960–1 for purposes of applying section 960(b). Other rules relating to PTEP that are included in current §§ 1.960–1 and 1.960–3 have also been replaced by rules in the proposed regulations under section 959 to ensure conformity and proper tracking of amounts described in sections 959 and 960(b). Current §§ 1.960–1 through 1.960–3, as modified by proposed §§ 1.960–1 and 1.960–3,

will generally continue to describe how deemed paid taxes are computed under section 960, and incorporate updates to coordinate those rules with the proposed regulations under sections 959 and 961.

Proposed § 1.960–1 limits the rules in § 1.960–1 to the computation of deemed paid taxes under section 960(a) and (d). To this end, proposed § 1.960–1 treats a CFC's PTEP arising by reason of a PTEP realization event during its taxable year as gross income in a residual income group, rather than as gross income in a PTEP group. *See* proposed § 1.960–1(d)(2)(ii)(D). However, proposed § 1.959–6 provides specific rules for allocating and apportioning current year taxes arising by reason of a PTEP realization event that occurred during a taxable year to the statutory groupings of PTEP of a foreign corporation. Additionally, proposed § 1.959–2 generally provides rules for tracking the foreign income taxes associated with PTEP. *See* parts II.F and II.B of the Explanation of Provisions for a discussion of proposed §§ 1.959–6 and 1.959–2, respectively. Finally, proposed § 1.960–1(d)(3)(ii)(B) (consistent with current § 1.960–1(d)(3)(ii)(B)) provides specific rules for assigning foreign gross income to the statutory and residual groupings of income of a CFC when the CFC pays or accrues current year taxes with respect to a PTEP realization event that occurs in a different U.S. taxable year. Proposed § 1.960–1 also includes changes to current § 1.960–1 to conform with the approach and terminology used in the proposed regulations under sections 959 and 961 and in proposed § 1.960–3.

Proposed § 1.960–3 provides rules for determining foreign income taxes that are deemed paid under section 960(b) with respect to the receipt of a distribution of PTEP, primarily by reference to PTEP tax pools. In particular, the foreign income taxes that are properly attributable to a distribution of PTEP are the foreign income taxes removed from the corporate PTEP tax pools of the distributing CFC under proposed § 1.959–2(d)(2) and the PTEP tax pools of the covered shareholder under § 1.959–3(e)(1)(iii) (that is, the foreign income taxes associated with the distributed PTEP under proposed § 1.959–4), but only to the extent the foreign income taxes are in the creditable PTEP tax group immediately before the distribution.

These rules are issued pursuant to the express delegation of authority under section 960(f).

VII. Section 1502 Regulations (Proposed § 1.1502–59)

The proposed regulations provide rules specific to members of a consolidated group. *See* proposed § 1.1502–59. These rules are issued pursuant to the express delegation of authority under section 1502.

The proposed regulations provide that members of a consolidated group are treated as a single covered shareholder for purposes of section 959 and the regulations thereunder. *See* proposed § 1.1502–59(c). This approach is consistent with guidance on the application of other international tax rules to consolidated groups (for example, §§ 1.1502–50, 1.1502–51, and 1.1502–80(j)).

Consequently, a consolidated group maintains only a single set of annual PTEP accounts, dollar basis pools, and PTEP tax pools with respect to a foreign corporation whose stock is owned by one or more members. These annual PTEP accounts track the foreign corporation's PTEP with respect to the group and thus, for example, determine whether a covered distribution received by any member of the group from the foreign corporation is a distribution of PTEP.

This application of single-entity treatment is important to ensure the proper reflection of the consolidated group's income. Without the application of single-entity treatment for purposes of shareholder-level PTEP accounting, a consolidated group effectively could elect in or out of PTEP distributions by changing the structure through which it owns stock of foreign corporations. For example, assume that a member of a consolidated group (M1) owns all the stock of CFC and has a subpart F income inclusion of \$100x in year 1 with respect to CFC. Absent single-entity treatment, M1, and not the consolidated group, would have \$100x of PTEP in its annual PTEP accounts with respect to CFC. In year 2, the first \$100x of covered distributions from CFC would be characterized as distributions of PTEP. However, if another member (M2) made a contribution to CFC at the beginning of year 2 in exchange for 50% of the stock of CFC, only the first \$100x of covered distributions to M1, and no covered distribution to M2, would be characterized as a distribution of PTEP. Therefore, if CFC made a pro rata covered distribution of \$100x, only \$50x would be characterized as PTEP. Applying single-entity treatment thus ensures that changes in the location of ownership of foreign stock within a consolidated group do not change the

group's characterization of a distribution by the foreign corporation.

In contrast, the proposed regulations incorporate a mix of single- and separate-entity treatment for purposes of section 961 in order to prevent basis shifting between members. *See* proposed § 1.1502–59(d); *see also* part III.C.2.ii of the Explanation of Provisions (describing how, outside of the consolidated group context, basis cannot be shared among section 961(a) ownership units even if owned by the same covered shareholder). The proposed regulations respect each member's separate basis in its directly held property units, and adjustments to the basis of section 961(a) ownership units are thus computed on a separate-entity basis. Consequently, a distribution of PTEP may result in the recognition of gain under section 961(b)(2) if the distributee member has insufficient basis in a section 961(a) ownership unit. The Treasury Department and the IRS are of the view that an approach like that in the 2006 proposed regulations, in which one member may access basis belonging to another member, would create opportunities for inappropriate tax planning by shifting basis among members in a way that does not reflect the economics of the members' investments.

For indirectly held property units (for example, lower-tier CFC stock), a consolidated group is treated as a single covered shareholder. For example, a partnership has only a single derived basis in a derivative ownership unit with respect to a group, and, similarly, a CFC has only a single section 961(c) basis in a section 961(c) ownership unit with respect to a group and increases to derived basis and section 961(c) basis generally are computed on a single-entity basis. However, the proposed regulations also include rules to prevent basis shifting among members with respect to these property units, because member shareholders may have different bases in these property units under other rules (for example, under section 743(b)). When computing reductions in basis to derivative ownership units or section 961(c) ownership units, the proposed rules provide that the group basis of the relevant property unit is allocated to the member shareholders, the basis reduction is computed separately for each member (and may trigger gain if there is insufficient basis), and then the basis is recombined.

The proposed regulations also provide rules for corporations that become or cease to be members of a consolidated group. *See* proposed § 1.1502–59(e).

These rules generally implement single-entity treatment by mirroring the principles that would apply if members of the group were divisions of a single corporation. For example, if a shareholder of a foreign corporation joins a consolidated group, solely for purposes of applying sections 959 and 961, the transaction is treated as if the group directly acquired the stock in the foreign corporation. Similarly, if a shareholder of a foreign corporation ceases to be a member of a consolidated group, solely for purposes of applying sections 959 and 961, the transaction is treated as if the group directly disposed of the stock in the foreign corporation.

When the proposed regulations are finalized, the Treasury Department and the IRS intend to conform the terminology in § 1.1502–80(j) (treating a consolidated group as a single United States shareholder for purposes of applying section 951(a)(2)(B) to distributions of PTEP from one CFC to another) to match these regulations, and may relocate that rule to § 1.1502–59.

VIII. Miscellaneous Provisions

A. S Corporations

Consistent with section 1373(a), the proposed regulations generally treat an S corporation in the same manner as a domestic partnership and thus as not a covered shareholder. *See* proposed §§ 1.959–1(c)(1) and 1.961–1(c)(1). When this treatment applies, each owner of the S corporation maintains annual PTEP accounts, dollar basis pools, and PTEP tax pools (as applicable) with respect to a foreign corporation in which the S corporation owns stock (rather than the S corporation itself). Also, like domestic partnerships, an S corporation is provided derived basis in a derivative ownership unit directly owned by the S corporation.

Notwithstanding the general rule that an S corporation is not treated as a covered shareholder, an exception provides that an S corporation is a covered shareholder for any taxable year of the S corporation for which the S corporation is treated as an entity separate from its owners in determining stock ownership for purposes of section 951(a) or 951A(a). *See* proposed §§ 1.959–11(d) and 1.961–13(c); *see also* part IX.B.5 of the Explanation of Provisions (describing transition rules applicable to domestic partnerships, including S corporations). Thus, the exception applies if the S corporation has made an election described in § 1.958–1(e), as proposed to be amended at 87 FR 3890 (Jan. 25, 2022), or section 3.02 of Notice 2020–69, 2020–39 I.R.B.

604. Accordingly, an S corporation is a covered shareholder if such election is in effect and the S corporation thus includes amounts in gross income under sections 951(a) and 951A(a).

Where the exception applies to an S corporation (and thus both the S corporation and its owners are covered shareholders), rules relating to distributions of PTEP, derived basis (of a partnership that is owned by the S corporation), and section 961(c) basis (of a CFC that is owned by the S corporation) apply to the S corporation in its capacity as a covered shareholder before those rules apply to an owner of the S corporation. *See* proposed §§ 1.959–11(d) and 1.961–13(c). For example, a covered distribution made to the S corporation is first a distribution of the distributing foreign corporation's PTEP with respect to the S corporation, and then, to the extent remaining, a distribution of the distributing foreign corporation's PTEP with respect to owners of the S corporation.

B. Passive Foreign Investment Companies

The proposed regulations do not address passive foreign investment companies (PFICs) (as defined in 1297(a)) or a PFIC's earnings and profits described in section 1293(c). The Treasury Department and the IRS are studying issues involving PFICs, including coordination of sections 959 and 1293(c), and may address these issues in future guidance.

C. Foreign Trusts and Foreign Estates

For purposes of determining ownership under section 958(a)(2), stock owned by a foreign trust (within the meaning of section 7701(a)(31)(B)) described in sections 671 through 679 (relating to grantors and others treated as substantial owners) is treated as being owned proportionately by its grantors or other persons treated as owners under sections 671 through 679 of any portion of the trust that includes the stock. *See* § 1.958–1(b). Similarly, stock owned by any other foreign trust (not described in sections 671 through 679) or a foreign estate (within the meaning of section 7701(a)(31)(A)) is treated as being owned proportionately by its beneficiaries. *See id.* Consistent with section 961(a) and (b), which provide for adjustments to the basis of property of a United States shareholder by reason of which the shareholder is considered under section 958(a)(2) as owning stock of a CFC, the current regulations under section 961 provide for adjustments to a United States shareholder's basis in a beneficial interest in a foreign trust or foreign estate through which the United

States shareholder owns stock of a CFC. *See* §§ 1.961–1 and 1.961–2.

The proposed regulations, however, do not address the operation of sections 959 and 961 with respect to foreign trusts (thus, for example, if a covered shareholder owns stock of a CFC through a foreign trust, the proposed regulations do not address the treatment of a covered distribution received by the foreign trust from the CFC or basis in the covered shareholder's interest in the foreign trust or the trust's stock of the CFC). The Treasury Department and the IRS are studying the manner in which section 959 should be applied in these structures to ensure that PTEP distributed to a covered shareholder through a foreign trust is properly excluded from the covered shareholder's gross income. Comments are requested on the treatment of foreign trusts under section 959, including whether treatment similar to a foreign corporation or partnership is appropriate or would impose significant burdens on such trusts, their owners, or beneficiaries. Comments are also requested on the appropriateness and effect of providing basis adjustments under section 961 in structures involving these entities as well as the interaction between these provisions and the rules in section 643(i) that treat certain loans from foreign trusts as distributions.

Comments are likewise requested on how foreign estates, which are also not addressed in the proposed regulations, should be treated for purposes of sections 959 and 961.

D. Section 962

Consistent with section 962(d), the proposed regulations do not exclude taxable section 962 PTEP that is distributed to a covered shareholder from the shareholder's gross income. *See* proposed § 1.959–4(b)(1). Similarly, consistent with section 961(a) and (b), the proposed regulations do not increase or reduce adjusted basis or derived basis for taxable section 962 PTEP. *See* proposed §§ 1.961–3(f)(2) and 1.961–4(b)(1), (c)(1). However, the proposed regulations apply the section 959(b) exclusion to, and provide section 961(c) basis for, taxable section 962 PTEP to prevent further tax on such PTEP in distributions to, or dispositions of stock by, a CFC. *See* proposed §§ 1.959–4(b)(2) and 1.961–3. Thus, taxable section 962 PTEP is generally subject to an additional level of taxation only in distributions to a covered shareholder or dispositions of section 961(a) ownership units or derivative ownership units.

Under the proposed regulations, PTEP retains its character as taxable section

962 PTEP in a general successor transaction and thus may transfer from a transferor covered shareholder to a successor covered shareholder. Likewise, taxable section 962 PTEP may be reflected in PTEP resulting from section 961(c) basis. In this way, the proposed regulations are consistent with the requirement in section 962(d) that taxable section 962 PTEP be included in gross income when distributed because it has not been sufficiently taxed.

Further, the proposed regulations remove § 1.962–3 because the proposed regulations generally incorporate the rules in § 1.962–3. *See, for example,* proposed § 1.959–4. The proposed regulations, however, do not incorporate § 1.962–3(b)(3)(iv), which describes the application of a foreign corporation's E&P deficit to taxable section 962 PTEP, and § 1.962–3(b)(4), which provides that § 1.962–3 does not apply to a distribution of section 962 PTEP treated as in exchange for stock. The Treasury Department and the IRS request comments on these rules, including whether they continue to be needed and, if so, their interaction with these regulations.

E. Currency Translation

In applying the proposed regulations in certain cases, an amount must be translated into a currency different than the currency in which it is denominated. For example, in a distribution of PTEP to a foreign corporation, the PTEP must be translated into the functional currency of the recipient foreign corporation (if the recipient foreign corporation and distributing foreign corporation have different functional currencies) so that the PTEP can be added to annual PTEP accounts with respect to the recipient foreign corporation (which are maintained in the recipient foreign corporation's functional currency). As an additional example, in applying section 961(c) basis to a CFC's covered gain, the section 961(c) basis (which is maintained in U.S. dollars) must be translated into the CFC's functional currency if the CFC does not use the U.S. dollar as its functional currency. Accordingly, the proposed regulations provide currency translation rules where relevant. *See, for example,* proposed §§ 1.951–2(f), 1.959–3(c)(5), 1.959–6(d)(2), and 1.961–9(e)(3). The Treasury Department and the IRS welcome comments on these rules.

F. Section 985

When a CFC changes its functional currency to the U.S. dollar, § 1.985–5(e)(2) requires a United States shareholder of that CFC to recognize

foreign currency gain or loss with respect to PTEP under section 986(c) as if all of the PTEP were distributed to the United States shareholder immediately before the change. No rules currently require recognition of foreign currency gain or loss with respect to PTEP when a CFC with a functional currency other than the U.S. dollar distributes PTEP to a CFC with a functional currency that is the U.S. dollar, nor does § 1.985–5(e)(2) apply when a CFC changes its functional currency to a currency other than the U.S. dollar. As a result, current law requires recognizing foreign currency gain or loss on PTEP deemed distributed to a CFC immediately before it converts its functional currency to the U.S. dollar but not immediately after.

As noted in part V.A of this Explanation of provisions, the rules in the proposed regulations for recognizing foreign currency gain or loss with respect to PTEP require recognizing such gain or loss in distributions of PTEP to a covered shareholder and dispositions of foreign stock because those circumstances present the last opportunity for the covered shareholder to recognize foreign currency gain or loss with respect to the PTEP. In the case of a distribution of PTEP to a foreign corporation, the dollar basis is preserved, which in turn preserves the appropriate application of section 986(c) until one of the circumstances noted in the previous sentence occurs. The Treasury Department and the IRS are of the view that the appropriate time to recognize foreign currency gain or loss should not depend on whether and when a CFC changes its functional currency, nor on the functional currencies involved. The proposed regulations provide a comprehensive system for determining and tracking the dollar basis of PTEP (through dollar basis pools, PTEP groups, and annual PTEP accounts), as well as for using these accounts to determine foreign currency gain or loss when appropriate. To the extent the rule in § 1.985–5(e)(2) was supported by concerns that having a U.S. dollar basis in PTEP that are measured in the U.S. dollar might create administrative difficulties or lead to the undercounting of foreign currency gain or loss, the Treasury Department and the IRS are of the view that the comprehensive system promulgated in the proposed regulations alleviates that concern. *See, for example*, part V of this Explanation of Provisions for rules determining currency gain and loss. Finally, the Treasury Department and the IRS are also concerned that the rule in § 1.985–5(e)(2) may permit taxpayers to inappropriately accelerate foreign

currency loss by deeming a distribution of such PTEP to a CFC that then changes its functional currency to the U.S. dollar. Accordingly, the proposed regulations withdraw the rule in § 1.985–5(e)(2).

For similar reasons, the Treasury Department and the IRS are studying whether § 1.985–7(c)(3), which requires certain adjustments by a United States shareholder related to foreign currency gain or loss with respect to PTEP in cases involving dollar approximate separate transactions method of accounting, should be modified.

G. Qualified Deficit Transition Rule for Domestic Partnerships (Including S Corporations)

Under the qualified deficit rule of section 952(c)(1)(B), a United States shareholder's pro rata share of any prior-year E&P deficit of a CFC may generally be used to reduce the United States shareholder's subpart F income inclusion with respect to the CFC to the extent such deficit is attributable to the same qualified activity as the activity that gives rise to the current year subpart F income of the CFC (and has not already been taken into account under section 952(c)(1)(B)). For this purpose, the United States shareholder's pro rata share of any prior-year E&P deficit is the lesser of the amount determined (under rules similar to section 951(a)(2)) at the close of the current taxable year or at the close of the taxable year in which the deficit arose. Section 952(c)(1)(B)(iv).

As described in part III.A of the Background, because a domestic partnership was previously treated as an entity for purposes of including amounts in income under section 951(a)(1)(A) with respect to CFCs it owned, the domestic partnership would have been entitled to utilize those CFCs' qualified deficits to reduce its subpart F income inclusions. However, under § 1.958–1(d), a domestic partnership is now generally treated as an aggregate of its partners for purposes of determining which United States shareholder has a subpart F income inclusion with respect to a CFC. To accommodate this aggregate approach for domestic partnerships, and like the transition rule for partnership-level accounts described in proposed § 1.959–11(e) and part IX.B.5 of the Explanation of Provisions, the proposed regulations provide a transition rule that ensures a prior-year E&P deficit of a CFC is taken into account by a domestic partnership's United States shareholder partners for taxable years of the CFC to which § 1.958–1(d) applies to the domestic

partnership. *See* proposed § 1.952–1(c)(5).

Under the transition rule, a United States shareholder that owns stock of a CFC through an interest in a domestic partnership on the transition date (which is the last day of the first taxable year of the CFC to which § 1.958–1(d) applies to the domestic partnership) takes into account its assigned portion of any prior-year E&P deficit of the CFC that arose before the application of § 1.958–1(d) in determining the shareholder's pro rata share of a prior-year E&P deficit under section 952(c)(1)(B)(iv)(II). *See* proposed § 1.952–1(c)(5)(i). The United States shareholder's assigned portion is determined based on liquidation rights as of the transition date. *See* proposed § 1.952–1(c)(5)(ii); *see also* part IX.B.5 of the Explanation of Provisions (discussing a similar concept used in pushing out annual PTEP accounts, dollar basis pools, and PTEP tax pools to partners). The United States shareholder's pro rata share of the prior-year E&P deficit as of the close of the taxable year in which section 952(c)(1)(B) would apply to reduce its subpart F income inclusion is determined by reference to the United States shareholder's ownership of the stock of the CFC at such time.

As with the proposed regulations generally, an S corporation is treated in the same manner as a domestic partnership for purposes of applying this transition rule. *See* section 1373(a) and part VIII.A of the Explanation of Provisions. However, unlike domestic partnerships, an S corporation may have elected to defer the application of § 1.958–1(d) and maintain entity treatment for purposes of section 951(a)(1)(A), in which case the transition rule may not apply until such election ceases to have effect. *See* part VIII.A of the Explanation of Provisions.

The transition rule generally applies with respect to taxable years of foreign corporations beginning on or after the date the proposed regulations are finalized in a Treasury Decision, although taxpayers are permitted to apply the transition rule to earlier taxable years if certain consistency requirements are satisfied and the period of limitations on assessment is open for those taxable years under section 6501. *See* proposed § 1.952–1(c)(5)(iii).

H. Anti-Avoidance Rules

The proposed regulations include anti-avoidance rules. *See* proposed §§ 1.959–1(d) and 1.961–1(d). Under these rules, appropriate adjustments are made if a transaction, series of

transactions, plan, or arrangement is engaged in with a principal purpose of avoiding the purposes of section 959 or 961 or the regulations thereunder. These rules are intended to address transactions that are designed to produce double-nontaxation by, for instance, converting distributions of E&P from PTEP (which generally may be received tax-free under section 959 but requires a basis reduction under section 961) to section 959(c)(3) E&P (which may be received tax-free under other provisions and may not require a basis reduction) or vice versa.

For example, assume a corporate covered shareholder owns all the stock of a foreign corporation and the foreign corporation has PTEP with respect to the corporate covered shareholder. If an individual who would have purchased newly issued shares in the foreign corporation instead purchases shares from the corporate covered shareholder with a principal purpose of succeeding to a portion of the foreign corporation's PTEP with respect to the corporate covered shareholder's PTEP and with the expectation that at some point in the future the corporate covered shareholder will contribute the proceeds to the foreign corporation (thus achieving the individual's intended effect of acquiring newly issued shares, while also transferring the PTEP from the corporate covered shareholder to the individual), appropriate adjustments may be made to disregard the transfer of PTEP. The result would be the same if the transaction was entered into with a principal purpose of reducing the foreign corporation's PTEP with respect to the corporate covered shareholder.

I. Clarifications and Other Matters

The proposed regulations clarify that a distribution of PTEP does not increase the E&P of a recipient domestic corporation (because the E&P of a domestic corporation is increased for, and at the time of, an inclusion giving rise to PTEP, and distributions to which sections 959 and 961(b) apply are described in section 312(f)(2)). See proposed §§ 1.312–6(f) and 1.312–8(c). No inference is intended as to the treatment under these provisions of other amounts a domestic corporation includes in its gross income as a result of ownership of stock in a foreign corporation, such as inclusions with respect to a PFIC, and the Treasury Department and IRS continue to consider these issues. Additionally, the proposed regulations clarify that, solely for purposes of the limitation in section 952(c)(1)(A), PTEP received by, or resulting from section 961(c) basis of, a CFC is not included in the CFC's current

year E&P. See proposed § 1.952–1(c)(4). This treatment is consistent with § 1.952–1(c)(3) (*Example 1*) and coordinates sections 952(c), 959(b), and 961(c) so that PTEP does not have the effect of increasing subpart F income.

The proposed regulations also provide that, for purposes of section 163(j), PTEP received by, or resulting from section 961(c) basis of, a foreign corporation does not give rise to tentative taxable income (because the income that gave rise to the PTEP has already been taken into account), and this rule is issued under the express delegation of authority in section 163(j)(8)(B). See proposed § 1.163(j)–7(g)(2). Moreover, the proposed regulations revise § 1.951–1(a)(1) to reflect the repeal of provisions relating to foreign base company shipping income and foreign investments in less developed countries and move the examples in § 1.951–1(e)(7) to a separate example paragraph.

The proposed regulations modify § 1.905–3(b)(2)(ii) to clarify that if a foreign tax redetermination impacts the characterization or amount of a distribution or inclusion in any other year, that year is an affected year for which a redetermination of U.S. tax is required. This is a conforming change relating to the timing and ordering rules in the proposed regulations, which could, in certain situations, result in a foreign tax redetermination impacting the characterization or amount of a distribution or inclusion not only in a subsequent year, but in a prior year.

IX. Applicability Dates and Transition Rules

A. Applicability Dates

1. General Applicability Date and Application to 2019 Notice Years

The proposed regulations would generally apply to taxable years of foreign corporations beginning on or after the date the proposed regulations are finalized in a Treasury Decision and to taxable years of persons for which such taxable years of foreign corporations are relevant (general applicability date). See, for example, proposed §§ 1.951–1(i), 1.951–2(i), 1.959–12(b), 1.960–7(c), 1.961–14(b), 1.986(c)–1(e), and 1.1502–59(g).

Notwithstanding the general applicability date, portions of the proposed section 959 regulations relating to rules described in the 2019 notice would apply before the general applicability date to taxable years of United States shareholders (and successors in interest) ending after December 14, 2018, and taxable years of foreign corporations ending with or

within those taxable years, as described in the 2019 notice (2019 notice years). See proposed § 1.959–12(c). For this purpose, taxpayers are required to apply to 2019 notice years the rules in proposed §§ 1.959–1(c) (treatment of S corporations), 1.959–2 (accounting of PTEP), 1.959–3 (adjustments to shareholder-level accounts and, consequently, foreign-corporation level accounts), 1.959–4(e) and 1.959–5(d) (allocation of distributions and section 956 amounts), and the relevant definitions in 1.959–1(b) (collectively, the 2019 notice provisions). Consistent with the 2019 notice, PTEP is treated as distributed under section 959 to the extent the distribution constitutes a dividend under section 316 (determined without regard to section 959(d)). Additionally, because taxpayers may have maintained PTEP groups in accordance with the groups described in the 2019 notice, taxpayers may use those PTEP groups for 2019 notice years instead of the PTEP groups listed in proposed § 1.959–2. Furthermore, neither the portions of proposed §§ 1.959–2 and 1.959–3 relating to PTEP tax pools, corporate PTEP tax pools, adjusted applicable percentages, and section 965(c) deduction percentages, nor the portions of proposed §§ 1.959–3 through 1.959–5 and 1.959–7 relating to the timing of adjustments and determinations, are 2019 notice provisions, and, therefore, taxpayers are not required to apply these provisions to 2019 notice years.

Apart from the 2019 notice provisions, the proposed regulations would apply before the general applicability date only if taxpayers choose to apply the proposed regulations early in accordance with the rules described in part IX.A.2 of the Explanation of Provisions.

2. Early Application Option

Taxpayers would be permitted to choose to apply the proposed regulations in their entirety to taxable years of foreign corporations beginning before the general applicability date (such years to which the regulations are applied, the early application years) if certain conditions prescribed in proposed § 1.959–12(d) are satisfied (early application option). See, for example, proposed §§ 1.951–1(i), 1.951–2(i), 1.960–7(c), 1.961–14(b), 1.986(c)–1(e), and 1.1502–59(g). The early application option would satisfy, and therefore supersede, the required application of the 2019 notice provisions if the first early application year precedes, or is the same as, the first 2019 notice year. See proposed § 1.959–12(c).

Under the early application option, taxpayers must apply the proposed regulations, as finalized, in their entirety to an early application year and all succeeding early application years, all taxable years of covered shareholders for which the early application years are relevant, and all taxable years of related foreign corporations (determined under section 267(b)) that end on or after the later of the last day of the first early application year and the first day on which the foreign corporations are related. *See* proposed § 1.959–12(d)(2). Further, all taxable years of covered shareholders for which the early application years are relevant must be open under section 6501, which each covered shareholder must confirm in a written statement to the foreign corporation that also provides the covered shareholder's consent to apply the proposed regulations before the general applicability date. *See* proposed § 1.959–12(d)(3) and (4). These conditions are intended to promote consistency and administrability.

B. Transition Rules

1. In General

To facilitate the initial application of the proposed regulations, the proposed regulations include transition rules under section 959 for establishing and conforming accounts under section 959, as well as rules under section 961 for establishing derived basis and section 961(c) basis. These rules also address particular transition issues relating to the treatment of domestic partnerships (including S corporations).

2. Annual PTEP Accounts, Dollar Basis Pools, and Corporate PTEP Accounts

As of the beginning of the first taxable year of a foreign corporation to which the proposed section 959 regulations apply pursuant to the 2019 notice or the early application option, a reasonable method must be used to establish annual PTEP accounts, dollar basis pools, and corporate PTEP accounts in accordance with proposed § 1.959–2, including to reflect any prior adjustments that would have been made under the principles of proposed §§ 1.959–2 through 1.959–5 and 1.959–7. *See* proposed § 1.959–11(b)(1) and (2)(i). Additionally, adjustments must be made to account for the transition tax under section 965. *See* proposed § 1.959–11(b)(3).

In establishing these accounts, any existing accounts of a covered shareholder must be conformed to the requirements of proposed § 1.959–2. *See* proposed § 1.959–11(b)(2)(i). Further, in the case of existing accounts tracking

PTEP or dollar basis in multi-year pools, a reasonable method to conforming the accounts includes an approach consistent with the rules in the 2019 notice. *See* proposed § 1.959–11(b)(2)(ii).

Lastly, a reasonable method used to establish annual PTEP accounts, dollar basis pools, and corporate PTEP accounts must be consistently applied by the covered shareholder with respect to all foreign corporations in which the covered shareholder owns stock. The same method must also be applied by all covered shareholders that join in filing a federal income tax return (for example, domestic corporations that file a consolidated federal income tax return in cases where the early application option does not apply). *See* proposed § 1.959–11(b)(2)(i). In cases where there are multiple covered shareholders of a foreign corporation, corporate PTEP accounts of a foreign corporation are established based on the reasonable method applied by each covered shareholder. Thus, for example, assume US1, a covered shareholder, owns all the stock of CFC1 and 40% of the stock of CFC2, and that both CFC1 and CFC2 are foreign corporations. The remaining 60% of the stock of CFC2 is owned by US2, a covered shareholder unrelated to US1. US1 must consistently use a reasonable method for establishing its annual PTEP accounts and dollar basis pools with respect to CFC1 and CFC2, and US2 must use a reasonable method for its own determination of those accounts with respect to CFC2. CFC1's corporate PTEP accounts would then reflect the annual PTEP accounts of US1, and CFC2's corporate PTEP accounts would then reflect the annual PTEP accounts of US1 and US2.

3. PTEP Tax Pools, Corporate PTEP Tax Pools, and Section 965 Related Amounts

As of the beginning of the first taxable year of a foreign corporation to which the proposed section 959 regulations apply pursuant to the general applicability date or the early application option, the proposed regulations require the establishment of PTEP tax pools, corporate PTEP tax pools, adjusted applicable percentages, and section 965(c) deduction percentages reflecting the foreign corporation's PTEP. *See* proposed § 1.959–11(c)(1).

PTEP tax pools and corporate PTEP tax pools are established by adding a pro rata portion of the foreign corporation's PTEP group taxes (prior-law PTEP group taxes) with respect to PTEP groups (prior-law PTEP group), as those terms are defined in current § 1.960–3, to each PTEP tax pool with

respect to the foreign corporation. *See* proposed § 1.959–11(c)(2). This is determined by multiplying the prior-law PTEP group taxes by a fraction, the numerator of which is the balance of the prior-law PTEP group that is PTEP relating to the PTEP tax pool, and the denominator of which is the balance of the prior-law PTEP group.

An adjusted applicable percentage is established with respect to all the foreign corporation's PTEP resulting from section 965 within a covered shareholder's annual PTEP accounts relating to the same section 904 category by calculating a weighted average of the applicable percentages with respect to the PTEP (as defined in § 1.965–5(d)). *See* proposed § 1.959–11(c)(3). A section 965(c) deduction percentage is established with respect to all the foreign corporation's PTEP resulting from section 965(a) within a covered shareholder's annual PTEP accounts relating to the same section 904 category by calculating a weighted average of the percentages for which foreign currency gain or loss recognized under section 986(c) with respect to distributions of the PTEP would be reduced under current § 1.986(c)–1. *See* proposed § 1.959–11(c)(4).

4. Derived Basis of Partnerships and Section 961(c) Basis

As of the beginning of the first taxable year of a foreign corporation to which the proposed section 961 regulations apply pursuant to the general applicability date or the early application option, a partnership's derived basis or a CFC's section 961(c) basis of a property unit is established based on the amount of basis that would exist in the property unit if the principles of the applicable proposed section 961 regulations were to have applied for all prior periods, determined using a reasonable method. *See* proposed § 1.961–13(b)(1), (2), and (3). The reasonable method must be consistently applied to each foreign corporation owned by the partnership or CFC and with respect to each covered shareholder that owns an interest in the partnership or stock in the CFC. For this purpose, the establishment of section 961(c) basis includes replacing any existing basis under section 961(c) in the property unit, to the extent a foreign corporation took the position under current law that it was afforded such basis, with section 961(c) basis as prescribed in the proposed section 961 regulations.

The rule for establishing derived basis applies to foreign partnerships and is also applicable to domestic partnerships (including S corporations) to the extent

that aggregate treatment applies with respect to the domestic partnership under § 1.958–1(d) or former § 1.951A–1(e)(1) (as in effect before TD 9960, 87 FR 3648) before the application of the proposed section 961 regulations. However, in the case of a domestic partnership, the amount of any derived basis does not take into account amounts included in income by the domestic partnership or any lower-tier domestic partnership for periods in which aggregate treatment does not apply. For example, if a domestic partnership directly owns stock in a CFC, the domestic partnership's derived basis is determined without regard to any subpart F income inclusion of the domestic partnership attributable to the CFC in a period before § 1.958–1(d) applies to the domestic partnership, which instead gives rise to adjusted basis of the domestic partnership under section 961(a). *See* part IX.B.5 of the Explanation of Provisions for a discussion of the treatment of such basis under the proposed regulations, which is not converted into derived basis as a result of § 1.958–1(d) applying to the domestic partnership.

The proposed regulations also provide that a specified foreign corporation that is not otherwise a CFC is treated as a CFC for purposes of applying the principles of proposed § 1.961–3 to an income inclusion under section 951(a)(1)(A) that arises by reason of section 965(a). *See* proposed § 1.961–13(b)(4). This rule is intended to clarify that basis increases are made to stock of a foreign corporation for inclusions arising under section 965(a) regardless of CFC status. However, no basis increases are afforded under section 961 for PTEP attributable to section 965(b). *See* section 965(b)(4)(A) (providing that the amount of the reduction described in section 965(b) is treated as included in gross income under section 951(a) only for purposes of applying section 959).

The transition rules for the establishment of derived basis and section 961(c) basis are intended to facilitate the application of the rules governing such basis under the proposed regulations and should not be interpreted in a manner that results in a double benefit. To ensure this result, the proposed regulations provide that derived basis or section 961(c) basis is increased to reflect an income inclusion under section 951(a)(1)(A) or 951A(a) only to the extent such an increase would not duplicate basis at the level of the partnership or CFC to reflect the income inclusion. *See* proposed § 1.961–13(b)(5). Thus, for example, if a foreign partnership was provided basis

with respect to stock in a foreign corporation under § 1.965–2(h)(5)(ii) for an income inclusion, no derived basis is provided to the foreign partnership under the proposed regulations for the inclusion (and any existing basis under § 1.965–2(h)(5)(ii) in the property unit remains and, thus, is not converted to derived basis). As an additional example, if a CFC previously claimed basis under section 961(c) for an income inclusion, section 961(c) basis is provided to the CFC under the proposed regulations for the inclusion only to the extent the previously-claimed-basis has not been used (and, therefore, can be replaced with section 961(c) basis pursuant to the proposed regulations).

5. Treatment of Domestic Partnerships (Including S Corporations)

For taxable years of a domestic partnership (including an S corporation by operation of section 1373(a)) to which § 1.958–1(d)(1) does not apply, the domestic partnership is treated as an entity separate from its owners in determining stock ownership for purposes of section 951(a) and therefore is required to include amounts in gross income under section 951(a). In these cases, foreign corporations may have PTEP with respect to the domestic partnership and the domestic partnership may have been provided basis under section 961(a). Moreover, in a case where former § 1.951A–1(e)(1) (as in effect before TD 9960, 87 FR 3648) treated the domestic partnership as an aggregate of its partners for purposes of applying section 951A and related provisions, both the domestic partnership and its partners may be United States shareholders with income inclusions attributable to the same CFC.

The proposed regulations address the treatment of domestic partnerships before the application of § 1.958–1(d)(1) by, in these cases, treating the domestic partnership as a covered shareholder. *See* proposed §§ 1.959–11(d) and 1.961–13(c). In addition, rules regarding distributions of PTEP, derived basis (of a partnership that is owned by the domestic partnership), and section 961(c) basis (of a CFC that is owned by the domestic partnership) apply to the domestic partnership in its capacity as a covered shareholder before those rules apply to covered shareholders that own interests in the domestic partnership. *See* proposed §§ 1.959–11(d) and 1.961–13(c). In this way, the PTEP and basis afforded with respect to a domestic partnership as a covered shareholder are taken into account before looking to the PTEP and basis with respect to covered shareholders that own interests in the partnership. In addition to providing a

rule for coordinating the operation of these provisions in the interim period before § 1.958–1(d)(1) applies, this rule should reduce the amount of PTEP and basis of a domestic partnership that ultimately must be converted to be with respect to covered shareholders that own interests in the partnership when § 1.958–1(d) applies.

Once both § 1.958–1(d)(1) and the proposed regulations apply to a domestic partnership (and, consequently, the domestic partnership is no longer a covered shareholder), the proposed regulations convert the domestic partnership's accounts described in proposed § 1.959–2 (annual PTEP accounts, dollar basis pools, and PTEP tax pools) to accounts with respect to covered shareholders owning interests in the domestic partnership, including the deemed covered shareholder to the extent any interest in the domestic partnership is not owned by a covered shareholder. *See* proposed § 1.959–11(e). Similarly, the proposed regulations convert a CFC's section 961(c) basis with respect to the domestic partnership to section 961(c) basis with respect to covered shareholders owning interests in the domestic partnership (including the deemed covered shareholder). *See* proposed § 1.961–13(d). Additionally, because another partnership may have derived basis with respect to the domestic partnership (for example, if the domestic partnership owns an interest in a foreign partnership that owns stock of a CFC, with the foreign partnership having derived basis with respect to the domestic partnership), the proposed regulations likewise convert the other partnership's derived basis to derived basis with respect to covered shareholders owning interests in the domestic partnership. *See id.*

The conversion of the domestic partnership's annual PTEP accounts, dollar basis pools, and PTEP tax pools is based on liquidation rights and occurs once the proposed regulations apply to the domestic partnership (either pursuant to the general applicability date or the early application option) or, if later, once § 1.958–1(d) first applies to the domestic partnership (including, in the case of S corporations, because an election not to apply § 1.958–1(d) ceases to have effect). *See* proposed § 1.959–11(e)(2)(i)(B). Because the conversion of accounts under these rules depends on when § 1.958–1(d) first applies to a particular domestic partnership, the rules may apply at different times in cases where stock of a foreign corporation is owned through tiers of domestic partnerships.

The conversion of derived basis or section 961(c) basis is determined consistently, and occurs concurrently, with the conversion of the accounts under section 959. *See* proposed § 1.961–13(d)(2)(i) and (3)(i). The proposed regulations do not convert basis previously provided to the domestic partnership under section 961(a) into derived basis, nor do the proposed regulations affect prior basis adjustments made under section 705. Thus, for example, if a domestic corporation owns an interest in a foreign partnership, and that foreign partnership owns an interest in a domestic partnership that owns stock of a CFC, the proposed regulations do not alter the treatment of basis provided to the domestic partnership in its CFC stock under section 961(a) or the related basis afforded to the foreign partnership in its domestic partnership interest under section 705.

Special Analyses

I. Regulatory Planning and Review—Economic Analysis

Pursuant to the Memorandum of Agreement, Review of Treasury Regulations under Executive Order 12866 (June 9, 2023), tax regulatory actions issued by the IRS are not subject to the requirements of section 6 of Executive Order 12866, as amended. Therefore, a regulatory impact assessment is not required.

II. Paperwork Reduction Act

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520) generally requires that a Federal agency obtain the approval of the Office of Management and Budget before collecting information from the public, whether such collection of information is mandatory, voluntary, or required to obtain or retain a benefit. There are no additional information collection requirements associated with the proposed regulations.

III. Regulatory Flexibility Act

When an agency issues a rulemaking proposal, the Regulatory Flexibility Act (5 U.S.C. chapter 6) (RFA) requires the agency to prepare and make available for public comment an initial regulatory flexibility analysis that will describe the impact of the proposed rule on small entities. *See* 5 U.S.C. 603(a). Section 605 of the RFA provides an exception to this requirement if the agency certifies that the proposed rulemaking will not have a substantial economic impact on a substantial number of small entities. A small entity is defined as a small business, small nonprofit organization,

or small governmental jurisdiction. *See* U.S.C. 601(3) through (6).

The Treasury Department and the IRS do not expect that the proposed regulations will have a significant economic impact on a substantial number of small entities within the meaning of sections 601(3) through (6) of the RFA. The proposed regulations provide guidance on issues regarding sections 959 and 961 and related provisions but do not change the economic impact of the existing regulations or impose any new costs on small entities. It is unlikely the proposed regulations will affect a substantial number of small businesses due to the significant resources and investment required to engage in the type of foreign operations to which the proposed regulations are relevant. However, because there is a possibility of significant economic impact on a substantial number of small entities, an initial regulatory flexibility analysis for the regulation is provided below. The Treasury Department and the IRS request comments from the public on the number of small entities that may be impacted and whether that impact will be economically significant.

Pursuant to section 7805(f) of the Code, the proposed regulations have been submitted to the Chief Counsel for Advocacy of the Small Business Administration for comment on their impact on small businesses.

A. Reasons Why the Action Is Being Considered

The proposed regulations update the core aspects of the PTEP system in a manner that addresses both longstanding issues and more recent issues (such as those arising under the Act), thereby reducing potential uncertainty under the existing regulations, ensuring consistent outcomes across taxpayers and economically similar transactions, and preventing double taxation and double non-taxation. These updates to the PTEP system involve PTEP accounting, the application of section 959(b), the application of section 961 as to certain property owned by a partnership, the application of section 961(c), and rules coordinating sections 951(a), 959(b), and 961(c).

The proposed regulations described in part II of the Explanation of Provisions establish covered shareholder-specific PTEP accounts, and this accounting prevents inappropriate outcomes that could arise under an alternative approach in light of the Act (such as share-specific accounting) while ensuring a covered shareholder the benefit of PTEP relating to it. This

covered shareholder-specific accounting applies to the other aspects of the PTEP system—namely, sections 986(c) and 960(b)—and ensures consistency across the PTEP system. The proposed regulations also provide rules under sections 959(b) and 951 that address longstanding issues that arise in certain split-ownership structures (that is, structures in which stock of a CFC is not all owned by a single United States shareholder), which issues were exacerbated by the Act.

The proposed regulations described in part III of the Explanation of Provisions provide guidance addressing longstanding issues under section 961. That is, the proposed regulations provide rules to adjust the basis in shares of stock of a foreign corporation owned indirectly by a covered shareholder through only one or more partnerships, and the basis under section 961(c) in shares of stock of a foreign corporation owned by a CFC, to reflect the foreign corporation's PTEP with respect to the covered shareholder. Additionally, the proposed regulations, as discussed in part III.E of the Explanation of Provisions, provide rules treating E&P generated by gain to which section 961(c) is applied as PTEP. This approach ensures consistent outcomes across economically similar transactions regardless of how a foreign corporation's PTEP is monetized (whether through a distribution to which section 959(b) applies or a disposition to which section 961(c) applies), and, by treating the E&P as PTEP, reflects the policy of sections 959 and 961 and prevents both double taxation and double non-taxation.

The proposed regulations, as discussed in part IV of the Explanation of Provisions, provide rules under section 951 that work in tandem with sections 959(b) and 961(c) to perfect the approach discussed in the preceding paragraphs. These rules comprise two sets of rules, one applying at the foreign corporation-level and one applying at the shareholder-level, that together ensure that attributes like PTEP and section 961(c) basis are allocated to the appropriate shareholder, consistent with the shareholder-specific nature of sections 959(b) and 961(c).

B. Objectives of, and Legal Basis for, the Proposed Regulations

The proposed regulations are intended to provide guidance addressing core aspects of the PTEP system and significant statutory changes since the current regulations were finalized. The legal basis for these regulations is contained in various sections of the Code, including sections 959, 960, 961, 965, 986, and 7805.

C. Small Business Entities to Which These Regulations Will Apply

Because an estimate of the number of small businesses affected is not currently feasible, this initial regulatory flexibility analysis assumes that a substantial number of small businesses will be affected. However, as noted above, the Treasury Department and the IRS believe that it is unlikely the proposed regulations will affect a substantial number of small businesses due to the significant resources and investment required to engage in the type of foreign operations to which the proposed regulations are relevant. The Treasury Department and the IRS do not expect that these regulations will affect a substantial number of small nonprofit or small governmental jurisdictions.

D. Projected Reporting, Recordkeeping, and Other Compliance Requirements

In certain cases, the proposed regulations require information that currently is tracked at the foreign corporation-level to also be tracked at the shareholder-level.

E. Duplicate, Overlapping, or Relevant Federal Rules

The proposed regulations would replace portions of existing regulations. The Treasury Department and the IRS are not aware of any Federal rules that duplicate, overlap, or conflict with these regulations.

F. Alternatives Considered

The Treasury Department and the IRS considered alternatives including alternatives to treating E&P generated by gain to which section 961(c) applies as PTEP. One alternative, as discussed in part III.E.2.ii of the Explanation of Provisions, involved treating such E&P as section 959(c)(3) E&P. However, this approach was not adopted because it could lead to double taxation or double non-taxation, while also creating dissymmetry between distributions (E&P to which annual PTEP accounts apply is PTEP) and dispositions involving foreign stock (E&P to which section 961(c) basis applies is not PTEP). The proposed regulations, by providing certainty regarding longstanding issues under section 961(c), reduce economic burden, and, by protecting the policies underlying sections 959 and 961, ensure a covered shareholder the benefit of PTEP relating to it; this represents the approach with the least economic impact.

The Treasury Department and the IRS also considered alternatives to the proposed rules under section 951 that work in tandem with sections 959(b) and 961(c). But the alternatives either

could not provide the certainty or the consistency of the approach in the proposed regulations or could not properly protect against double taxation or double non-taxation.

The proposed regulations, and the PTEP system generally, apply uniformly to large and small business entities. The Treasury Department and the IRS are of the view that such an approach is necessitated by the statutory scheme; in other words, a small business exception could undermine the provisions comprising the PTEP system. Accordingly, there is no viable alternative to the proposed regulations for small entities.

IV. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 requires that agencies assess anticipated costs and benefits and take certain other actions before issuing a final rule that includes any Federal mandate that may result in expenditures in any one year by a State, local, or Tribal government, in the aggregate, or by the private sector, of \$100 million in 1995 dollars, updated annually for inflation. The proposed regulations do not include any Federal mandate that may result in expenditures by State, local, or Tribal governments, or by the private sector in excess of that threshold.

V. Executive Order 13132: Federalism

Executive Order 13132 (Federalism) prohibits an agency from publishing any rule that has federalism implications if the rule either imposes substantial, direct compliance costs on State and local governments, and is not required by statute, or preempts State law, unless the agency meets the consultation and funding requirements of section 6 of the Executive order. The proposed regulations do not have federalism implications, do not impose substantial direct compliance costs on State and local governments, and do not preempt State law within the meaning of the Executive order.

Comments and Requests for a Public Hearing

Before the proposed regulations are adopted as final regulations, consideration will be given to comments that are submitted timely to the IRS as prescribed in the preamble under the **ADDRESSES** section. In addition to the comments specifically requested in the Explanation of Provisions, the Treasury Department and the IRS request comments on all aspects of the proposed regulations. Any comments submitted will be made available at www.regulations.gov or upon request.

A public hearing will be scheduled if requested in writing by any person who timely submits written comments. Requests for a public hearing are encouraged to be made electronically. If a public hearing is scheduled, notice of the date and time for the public hearing will be published in the **Federal Register**.

Statement of Availability of IRS Documents

Any IRS Revenue Procedures, Revenue Rulings, Notices, or other guidance cited in this document are published in the Internal Revenue Bulletin (or Cumulative Bulletin) and are available from the Superintendent of Documents, U.S. Government Publishing Office, Washington, DC 20402, or by visiting the IRS website at www.irs.gov.

Drafting Information

The principal authors of these regulations are Karen R. Li, Elena M. Madaj and Chadwick Rowland, Office of Associate Chief Counsel (International). However, other personnel from the IRS and the Treasury Department participated in their development.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Proposed Amendments to the Regulations

Accordingly, the Treasury Department and the IRS propose to amend 26 CFR part 1 as follows:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 is amended by revising the entry for § 1.951–1, adding entries in numerical order for §§ 1.951–2, 1.959–1 through 1.959–12, and 1.961–1 through 1.961–13, revising the entry for § 1.986(c)–1, and adding an entry in numerical order for § 1.1502–59 to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

* * * * *

Sections 1.951–1 and 1.951–2 also issued under 26 U.S.C. 951, 959, and 961.

* * * * *

Sections 1.959–1 through 1.959–12 also issued under 26 U.S.C. 245A(g), 904(d)(7), 951A(f)(1)(B), 959, 960(f), 962, 965(o), 986, 986(c)(2), 989(c), and 1373.

* * * * *

Sections 1.961–1 through 1.961–13 also issued under 26 U.S.C. 743(b), 959, 961 and 961(a), (b), and (c), 965(o), and 1373.

* * * * *

Section 1.986(c)–1 also issued under 26 U.S.C. 962, 965(o), 986 and 986(c)(2), and 989(c).

* * * * *

Section 1.1502–59 also issued under 26 U.S.C. 959, 960, 961, 986, and 1502.

* * * * *

■ **Par. 2.** Section 1.163(j)–7 is amended by:

- 1. Revising paragraph (g)(2); and
- 2. Adding a sentence to the end of paragraph (m)(2).

The revision and addition read as follows:

§ 1.163(j)–7 Application of the section 163(j) limitation to foreign corporations and United States shareholders.

* * * * *

(g) * * *

(2) *Treatment of certain dividends and previously taxed earnings and*

profits. For purposes of computing the ATI of a relevant foreign corporation for a taxable year, the following amounts are (without duplication) subtracted from tentative taxable income—

(i) Any dividend included in gross income that is received from a related person, within the meaning of section 954(d)(3), with respect to the distributee; and

(ii) Any previously taxed earnings and profits that are distributed to the foreign corporation in a covered distribution (determined under § 1.959–4) or that result from the application of section 961(c) basis to covered gain recognized by the foreign corporation (determined under § 1.961–9).

* * * * *

(m) * * *

(2) * * * Paragraph (g)(2)(ii) of this section applies to a taxable year of a foreign corporation that begins on or after [date of publication of final regulations in the **Federal Register**] or is an early application year (as described in § 1.959–12(d)) and to a taxable year of a person for which such taxable year of that foreign corporation is relevant.

* * * * *

■ **Par. 3.** Section 1.245A(d)–1 is amended by:

- 1. Revising the first sentence of paragraph (c)(22); and
- 2. For each paragraph listed in the table, removing the language in the “Remove” column wherever it appears and adding in its place the language in the “Add” column:

Paragraph	Remove	Add
(d)(2)(i)	section 951A PTEP (as defined in § 1.960–3(c)(2)(viii)) in a single annual PTEP account (as defined in § 1.960–3(c)(1)).	previously taxed earnings and profits assigned to the section 951A PTEP group (as defined in § 1.959–1(b)) within a single annual PTEP account (as defined in § 1.959–1(b)).
(d)(2)(ii)(B)	section 951A PTEP	previously taxed earnings and profits assigned to the section 951A PTEP group.
(d)(3)(i)	section 951A PTEP (as defined in § 1.960–3(c)(2)(viii)) in a single annual PTEP account (as defined in § 1.960–3(c)(1)).	previously taxed earnings and profits assigned to the section 951A PTEP group (as defined in § 1.959–1(b)) within a single annual PTEP account (as defined in § 1.959–1(b)).
(d)(3)(ii)(B)	section 951A PTEP	previously taxed earnings and profits assigned to the section 951A PTEP group.
(d)(4)(i)	section 951(a)(1)(A) PTEP (as defined in § 1.960–3(c)(2)(x)) in a single annual PTEP account (as defined in § 1.960–3(c)(1)).	previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group (as defined in § 1.959–1(b)) within a single annual PTEP account (as defined in § 1.959–1(b)).
(d)(4)(i)	section 951(a)(1)(A) PTEP	previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group.
(d)(4)(ii)(B)(1) through (3), and (D)	section 951(a)(1)(A) PTEP	previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group.

The revision reads as follows:

§ 1.245A(d)–1 Disallowance of foreign tax credit or deduction.

* * * * *

(c) * * *

(22) * * * The term *section 245A(d) PTEP* means previously taxed earnings and profits assigned to a section 245A(d) PTEP group or a reclassified section 245A(d) PTEP group (each as defined in § 1.959–1(b)). * * *

* * * * *

■ **Par. 4.** Section 1.312–6 is amended by adding paragraph (f) to read as follows:

§ 1.312–6 Earnings and profits.

* * * * *

(f) An amount included in a corporation’s gross income under section 951(a) or 951A(a) for a particular period is taken into account in computing the corporation’s earnings and profits for that period. *See also* § 1.312–8(c) (domestic corporation’s

receipt of previously taxed earnings and profits does not increase earnings and profits). This paragraph (f) applies to a taxable year of a corporation beginning on or after [date of publication of final regulations in the **Federal Register**]. This paragraph (f) also applies to a taxable year of a domestic corporation that is a shareholder in a foreign corporation, if a taxable year of the foreign corporation that is an early application year (as described in § 1.959–12(d)) ends with or within the taxable year of the domestic corporation.

■ **Par. 5.** Section 1.312–8 is amended by adding paragraph (c) to read as follows:

§ 1.312–8 Effect on earnings and profits of receipt of tax-free distributions requiring adjustment or allocation of basis of stock.

* * * * *

(c) Previously taxed earnings and profits that are distributed to a domestic corporation in a covered distribution

(determined under § 1.959–4) do not increase the corporation’s earnings and profits. *See* §§ 1.959–4 and 1.961–4 for rules excluding distributed previously taxed earnings and profits from gross income and reducing basis. *See also* § 1.312–6(f) (sections 951(a) and 951A(a) inclusions increase earnings and profits). This paragraph (c) applies to a taxable year of a domestic corporation beginning on or after [date of publication of final regulations in the **Federal Register**]. This paragraph (c) also applies to a taxable year of a domestic corporation that is a shareholder in a foreign corporation, if a taxable year of the foreign corporation that is an early application year (as described in § 1.959–12(d)) ends with or within the taxable year of the domestic corporation.

■ **Par. 6.** Section 1.743–1 is amended by adding paragraphs (d)(4) and (j)(7) to read as follows:

§ 1.743–1 Optional adjustment to basis of partnership property.

* * * * *

(d) * * *

(4) *Coordination with derived basis.*

See § 1.961–5(d) for a rule coordinating the application of this paragraph (d) with derived basis that transfers to a transferee.

* * * * *

(j) * * *

(7) *Covered distributions treated as previously taxed earnings and profits.*

See § 1.961–4(c)(2)(iii) for rules regarding the use of a positive basis adjustment under section 743(b) upon the receipt of a covered distribution that is treated as previously taxed earnings and profits with respect to certain direct or indirect partners of the partnership.

* * * * *

§ 1.861–20 [Amended]

■ **Par. 7.** Section 1.861–20 is amended by:

■ 1. In paragraph (a), adding the language “1.959–6,” after the language, “1.904–6,”;

■ 2. In paragraph (d)(2)(ii)(B), adding the language “§ 1.959–6(c) and” before the language “§ 1.960–1(d)(3)(ii)”, and removing the language “income groups or PTEP groups” and adding the language “previously taxed earnings and profits and to income groups, respectively,” in its place;

■ 3. In paragraph (d)(3)(i)(B)(1), adding the language “§ 1.959–6(c) and” before the language “§ 1.960–1(d)(3)(ii)”, and removing the language “income groups or PTEP groups” and adding the language “previously taxed earnings and profits and to income groups, respectively,” in its place; and

■ 4. In paragraph (g)(6)(i), removing the language “section 965(a) PTEP (as defined in § 1.960–3(c)(2)(vi)) in a single annual PTEP account (as defined in § 1.960–3(c)(1))” and adding the language “previously taxed earnings and profits assigned to the section 965(a) PTEP group (as defined in § 1.959–1(b)) within a single annual PTEP account (as defined in § 1.959–1(b))” in its place.

§ 1.904–6 [Amended]

■ **Par. 8.** Section 1.904–6 is amended by:

■ 1. In paragraph (e)(2), removing the language “§ 1.959–1” and adding the language “§ 1.959–4” in its place, adding the language “(as defined in § 1.959–1(b))” after “annual PTEP account”, and removing the language “§ 1.960–3(c)” and adding the language “§ 1.959–1(b)” in its place;

■ 2. Removing paragraph (e)(3);

■ 3. Redesignating paragraph (e)(4) as new paragraph (e)(3);

■ 4. In newly redesignated paragraph (e)(3)(i), removing the language “(e)(4)(ii)” and adding the language “(e)(3)(ii)” in its place; and

■ 5. In newly redesignated paragraph (e)(3)(ii)(C), removing the language “(e)(4)(ii)(B)” and adding the language “(e)(3)(ii)(B)” in its place.

§ 1.905–3 [Amended]

■ **Par. 9.** Section 1.905–3 is amended by:

■ 1. In paragraph (a), removing the language “PTEP group taxes (as defined in § 1.960–3(d)(1))” and adding the language “a tax pool described in § 1.959–2(b)(4) or (d)(2)” in its place;

■ 2. In the fifth sentence of paragraph (a), removing the language “PTEP group taxes” and adding the language “a tax pool described in § 1.959–2(b)(4) or (d)(2)” in its place;

■ 3. In the last sentence of paragraph (a), removing the language “PTEP group taxes” and adding the language “a tax pool described in § 1.959–2(b)(4) or (d)(2)” in its place; and

■ 4. In the last sentence of paragraph (b)(2)(ii), removing the language “subsequent”.

§ 1.905–4 [Amended]

■ **Par. 10.** Section 1.905–4 is amended by, in paragraph (c)(6), removing the language “PTEP group taxes (as defined in § 1.960–3(d)(1))” and adding the language “a tax pool described in § 1.959–2(b)(4) or (d)(2)” in its place.

■ **Par. 11.** Section 1.951–1 is amended by:

■ 1. Removing the introductory text of paragraph (a), revising paragraphs (a)(1) and (2), and adding headings for paragraphs (a)(3) and (4);

■ 2. In the introductory text of paragraph (b)(1), removing the language “(a)(2)(i)” and “(e)” and adding the language “(a)(1)(i)” and “(c)” in their places, respectively;

■ 3. Adding paragraph (c);

■ 4. Revising the heading for paragraph (e) and revising paragraph (e)(1)(i);

■ 5. In paragraph (e)(1)(ii)(A), adding the language “and not reduced by distributions during the year” immediately before the semicolon;

■ 6. In paragraph (g)(1), adding the language “(or, if applicable pursuant to section 953(c)(1)(A), any stock of such foreign corporation)” immediately before the period;

■ 7. Revising paragraph (h);

■ 8. Redesignating paragraph (e)(7) as paragraph (h)(1) and revising the heading and introductory text of newly redesignated paragraph (h)(1);

■ 9. In newly redesignated paragraph (h)(1)(i)(I), adding the language

“covered items (within the meaning of paragraph (c)(3) of this section),” immediately after the language “neither”;

■ 10. In newly redesignated paragraphs (h)(1)(ii) through (viii), removing the language “(e)(1) of this section” wherever it may appear and adding the language “(c)(1) of this section” in its place;

■ 11. In newly redesignated paragraph (h)(1)(viii)(A), removing the language “(e)(7)(vii)(A) of this section” and adding the language “(h)(1)(vii)(A) of this section” in its place;

■ 12. Adding paragraph (h)(2); and

■ 13. Adding paragraph (i).

The revisions and additions read as follows:

§ 1.951–1 Amounts included in gross income of United States shareholders.

(a) * * *

(1) *Section 951(a) inclusions.* If a foreign corporation is a controlled foreign corporation (within the meaning of section 957 or, if applicable, section 953(c)(1)(B)) at any time during a taxable year of the foreign corporation, every person who is a United States shareholder (as defined in section 951(b) and paragraph (g) of this section) of the foreign corporation at any time during such taxable year and owns (within the meaning of section 958(a)) stock in the foreign corporation on the last day in such taxable year on which the foreign corporation is a controlled foreign corporation shall, for the United States shareholder’s taxable year in which or with which such taxable year of the foreign corporation ends, include in gross income the sum of—

(i) The United States shareholder’s pro rata share (determined under paragraph (b) of this section) of the foreign corporation’s subpart F income (as defined in section 952) for the taxable year of the foreign corporation; and

(ii) The amount determined under section 956 with respect to the United States shareholder for the taxable year of the foreign corporation, but only to the extent not excluded from gross income under section 959(a)(2) and § 1.959–5.

(2) *Currency translation.* See section 989(b) for translating an amount included in income under this section into U.S. dollars.

(3) *Characterization of inclusion in determining a personal holding company.* * * *

(4) *Certain stock ownership rules.*

* * *

* * * * *

(c) *Pro rata share of subpart F income—(1) In general.* For purposes of paragraph (b) of this section, a United

States shareholder's pro rata share of the foreign corporation's subpart F income for the taxable year of the foreign corporation is the sum of all subpart F income allocated to the United States shareholder in accordance with the rules described in paragraph (c)(2) of this section. Under those rules, subpart F income attributable to covered items (that is, subpart F income attributable to certain distributions and certain gain with respect to stock) is separately allocated, in each case consistently with how the covered item is assigned at the foreign corporation-level under § 1.951-2 as part of determining the extent to which attributes specific to the United States shareholder (that is, previously taxed earnings and profits or section 961(c) basis) are applied to exclude the covered item from the foreign corporation's subpart F income under section 959(b) or 961(c). Then, subpart F income not attributable to covered items is allocated based on the United States shareholder's share of the foreign corporation's allocable earnings and profits (as determined under paragraph (e) of this section). See paragraphs (c)(3) and (h) of this section for definitions and examples, respectively.

(2) *Rules for allocating subpart F income*—(i) *Determine subpart F income attributable to each covered item.* First, determine the subpart F income of the foreign corporation attributable to each covered item, computed as the portion of the covered item that is included in foreign base company income (as defined in § 1.954-1(a)(5)) or insurance income (as defined in § 1.954-1(a)(6)). See § 1.951-2(b) for the definition of a covered item.

(ii) *Allocate subpart F income attributable to each covered item.* Second, allocate to the United States shareholder a pro rata portion of the subpart F income attributable to each covered item, determined by multiplying such subpart F income by a fraction. The numerator of the fraction is the portion of the covered item that is both assigned to the United States shareholder under § 1.951-2 and included in adjusted gross foreign base company income (as defined in § 1.954-1(a)(3)) or adjusted gross insurance company income (as defined in § 1.954-1(a)(6)), and the denominator of the fraction is the portion of the covered item that is included in adjusted gross foreign base company income or adjusted gross insurance company income. However, if the denominator of the fraction would be zero, then the fraction is considered to be zero.

(iii) *Allocate subpart F income not attributable to covered items.* Third, allocate to the United States shareholder

a pro rata portion of all subpart F income of the foreign corporation not attributable to covered items, determined by multiplying all such subpart F income by a fraction. The numerator of the fraction is the portion of the foreign corporation's hypothetical distribution described in paragraph (e) of this section that would be distributed with respect to the stock of the corporation that the United States shareholder owns (within the meaning of section 958(a)), and the denominator of the fraction is the amount of such hypothetical distribution.

(3) *Definitions.* For purposes of this paragraph (c), the term *covered item* has the meaning provided in § 1.951-2(b).

* * * * *

(e) *Hypothetical distribution*—(1)

* * *

(i) *Hypothetical distribution and hypothetical distribution date.* For a taxable year of a controlled foreign corporation, the hypothetical distribution described in this paragraph (e) (*hypothetical distribution*) is a distribution treated as made by the corporation with respect to stock of the corporation owned by all shareholders of the corporation in an amount equal to the corporation's allocable earnings and profits for the taxable year, on the last day of the taxable year on which the corporation is a controlled foreign corporation (*hypothetical distribution date*).

* * * * *

(h) *Examples*—(1) *Examples not involving covered items.* The following examples illustrate the application of paragraphs (c) and (e) of this section in cases not involving covered items.

* * * * *

(2) *Examples involving covered items.* The following examples illustrate the application of paragraphs (c) and (e) of this section in cases involving covered items.

(i) *Assumed facts.* For purposes of the examples in this paragraph (h)(2), unless otherwise indicated, the following facts are assumed:

(A) US1 and US2 are unrelated domestic corporations that are covered shareholders. Neither US1 nor US2 is a member of a consolidated group (as defined in § 1.1502-1(h)).

(B) F1, F2, and F3 are foreign corporations, each of which is a controlled foreign corporation and uses the British pound (£) as its functional currency.

(C) Each entity uses the calendar year as its taxable year, and no entity has a short taxable year.

(D) To the extent a covered item received or recognized by a foreign

corporation is previously taxed earnings and profits, the covered item is excluded in determining the foreign corporation's subpart F income and tested income or tested loss under section 959(b) and § 1.959-4 or section 961(c) and § 1.961-9, as applicable.

(E) To the extent a covered item received or recognized by a foreign corporation is not previously taxed earnings and profits, the covered item is—

(1) In the case of a covered distribution, excluded in determining the foreign corporation's subpart F income and tested income or tested loss under sections 954(c)(6) and 951A(c)(2)(A)(i)(IV); and

(2) In the case of covered gain, included in the foreign corporation's foreign personal holding company income (as defined in section 954(c)) and then its adjusted gross foreign base company income (as defined in § 1.954-1(a)(3)) either because section 964(e)(1) does not apply or because section 964(e)(4) applies.

(F) The only reductions to adjusted gross foreign base company income (as defined in § 1.954-1(a)(3)) are for deductions under § 1.954-1(a)(4). Thus, there are no reductions by reason of section 952(c) (subpart F income limited to current earnings and profits) or section 954(b)(4) (exception for certain income subject to high foreign taxes).

(G) To the extent a covered item received or recognized by a foreign corporation is excluded in determining the foreign corporation's subpart F income and tested income or tested loss as described in this paragraph (h)(2)(i), the listed exclusion is not necessarily the only applicable exclusion.

(ii) *Example 1: Subpart F income attributable to covered items*—(A) *Facts*—(1) *In general.* US1 and US2 each directly own 50% of the single class of outstanding stock of F1. F1 directly owns all the outstanding stock of each of F2 and F3. For F1's taxable year ending on December 31 of year 3, F1's gross income consists of two covered items, which are a £60x covered distribution received from F2 and £40x of covered gain recognized with respect to stock of F3. US1 and US2 are assigned equal portions of each covered item under § 1.951-2. The entirety of US1's assigned portion of each covered item is previously taxed earnings and profits (because, in the case of the covered distribution, £30x of F2's previously taxed earnings and profits with respect to US1 is applied to US1's assigned portion and, in the case of the covered gain, £20x of F1's section 961(c) basis with respect to US1 is applied to US1's assigned portion). None of US2's

assigned portion of either covered item is previously taxed earnings and profits (because F2 has no previously taxed earnings and profits with respect to US2 and F1 has no section 961(c) basis with respect to US2). F1 has no deductions for the taxable year.

(2) *Subpart F income.* For F1's taxable year ending on December 31 of year 3, F1 has £20x of subpart F income consisting of foreign base company income (adjusted net foreign base company income as defined in § 1.954–1(a)(5)), which in turn consists of

foreign personal holding company income (as defined in section 954(c)). Table 1 in this paragraph (h)(2)(ii)(A)(2) provides the treatment of F1's gross income in computing its adjusted net foreign base company income.

TABLE 1 TO PARAGRAPH (h)(2)(ii)(A)(2) OF THIS SECTION—FOREIGN BASE COMPANY INCOME ANALYSIS

Gross income	Foreign base company income		
	Adjusted gross FBCI	Reductions	Adjusted net FBCI
£60x covered distribution from F2:			
US1's £30x assigned portion	£0 (§ 959(b)).		
US2's £30x assigned portion	£0 (§ 954(c)(6)).		
£40x covered gain on F3 stock:			
US1's £20x assigned portion	£0 (§ 961(c))	£0	£20x (£20x – £0).
US2's £20x assigned portion	£20x.		

(B) *Analysis.* Under paragraph (c) of this section, F1's subpart F income attributable to each covered item is separately allocated to US1 and US2. F1 has £0 of subpart F income attributable to the covered distribution and £20x of subpart F income attributable to the covered gain because in each case that is the portion of the covered item that is included in F1's adjusted net foreign base company income. See paragraph (c)(2)(i) of this section. The £20x of subpart F income attributable to the covered gain is allocated to each of US1 and US2 by multiplying the amount of such subpart F income by a fraction, the numerator of which is the portion of the covered gain that is both assigned to the United States shareholder under § 1.951–2 and included in F1's adjusted gross foreign base company income (£0 in the case of US1, and £20x in the case of US2), and the denominator of which is the portion of the covered gain that is included in F1's adjusted gross foreign base company income (£20x).

See paragraph (c)(2)(ii) of this section. Thus, US2 is allocated all £20x of the subpart F income attributable to the covered gain. Accordingly, for purposes of paragraph (b) of this section, US1 has a £0 pro rata share, and US2 has a £20x pro rata share, of F1's £20x of subpart F income. See paragraph (c)(1) of this section.

(C) *Alternative facts: expenses—(1) Facts.* The facts are the same as in paragraph (h)(2)(ii)(A) of this section, except as follows. Only £10x of US1's assigned portion of the covered gain is previously taxed earnings and profits (because there is only £10x of section 961(c) basis with respect to US1 available to be applied to US1's assigned portion). In addition, F1 has £5x of deductions, which are not foreign income taxes, that are definitely related to the covered gain. The deductions reduce F1's adjusted gross foreign base company income by £5x in computing net foreign base company income under § 1.954–1(a)(4). Thus, F1 has £25x of

subpart F income, all of which is attributable to the covered gain.

(2) *Analysis.* As summarized in Table 1 in this paragraph (h)(2)(ii)(C)(2), the £25x of subpart F income attributable to the covered gain is allocated to each of US1 and US2 by multiplying the amount of such subpart F income by a fraction, the numerator of which is the portion of the covered gain that is both assigned to the United States shareholder under § 1.951–2 and included in F1's adjusted gross foreign base company income (£10x in the case of US1, and £20x in the case of US2), and the denominator of which is the portion of the covered gain that is included in F1's adjusted gross foreign base company income (£30x). See paragraph (c)(2)(ii) of this section. Accordingly, for purposes of paragraph (b) of this section, US1 has a £8.3x pro rata share, and US2 has a £16.7x pro rata share, of F1's £25x of subpart F income.

TABLE 1 TO PARAGRAPH (h)(2)(ii)(C)(2) OF THIS SECTION—FOREIGN BASE COMPANY INCOME ANALYSIS

Gross income	Foreign base company income			Allocation of subpart F income attributable to the covered item under § 1.951–1(c)(2)(ii)	
	Adjusted gross FBCI	Reductions	Adjusted net FBCI	US1	US2
£60x covered distribution from F2:					
US1's £30x assigned portion	£0 (§ 959(b)).				
US2's £30x assigned portion	£0 (§ 954(c)(6)).				
£40x covered gain on F3 stock:					
US1's £20x assigned portion	£10x (§ 961(c) for remaining £10x).	£5x	£25x (£30x – £5x)	£8.3x (£25x × £10x/£30x).	£16.7x (£25x × £20x/£30x).
US2's £20x assigned portion	£20x.				

(iii) *Example 2: Subpart F income attributable and not attributable to covered items—(A) Facts—(1) In general.* US1 and US2 each directly own 50% of the single class of outstanding stock of F1. F1 directly owns all the outstanding stock of each of F2 and F3. For F1's taxable year ending on

December 31 of year 3, F1 has £500x of allocable earnings and profits for purposes of the hypothetical distribution described in paragraph (e) of this section. F1's gross income for the taxable year consists of a £60x covered distribution received from F2, £40x of covered gain recognized with respect to

stock of F3, £295x of royalty income received from an unrelated person, and £125x of foreign oil and gas extraction income (as defined in section 907(c)(1)). US1 and US2 are assigned equal portions of each covered item under § 1.951–2, and the entirety of US1's assigned portion of each covered item,

but none of US2's assigned portion of either covered item, is previously taxed earnings and profits (because, in the case of the covered distribution, there are sufficient previously taxed earnings and profits with respect to US1 to be applied to US1's assigned portion and there are no previously taxed earnings and profits with respect to US2 to be applied to US2's assigned portion, and, in the case of the covered gain, there is sufficient section 961(c) basis with respect to US1 to be applied to US1's

assigned portion and there is no section 961(c) basis with respect to US2 to be applied to US2's assigned portion). F1 has £20x of deductions for the taxable year, consisting of £15x of foreign withholding taxes imposed on the covered distribution and £5x of expenses, which are not foreign income taxes, that are definitely related to the covered gain. The £5x of expenses reduce F1's adjusted gross foreign base company income by £5x in computing

net foreign base company income under § 1.954–1(a)(4).

(2) *Subpart F income.* For F1's taxable year ending on December 31 of year 3, F1 has £310x of subpart F income consisting of foreign base company income (adjusted net foreign base company income as defined in § 1.954–1(a)(5)). Table 1 in this paragraph (h)(2)(iii)(A)(2) provides the treatment of F1's items of gross income in computing its adjusted net foreign base company income.

TABLE 1 TO PARAGRAPH (h)(2)(iii)(A)(2) OF THIS SECTION—FOREIGN BASE COMPANY INCOME ANALYSIS

Gross income	Foreign base company income		
	Adjusted gross FBCI	Reductions	Adjusted net FBCI
£60x covered distribution from F2:			
US1's £30x assigned portion	£0 (§ 959(b)).		
US2's £30x assigned portion	£0 (§ 954(c)(6)).		
£40x covered gain on F3 stock:			
US1's £20x assigned portion	£0 (§ 961(c))	£5x	£15x (£20x – £5x).
US2's £20x assigned portion	£20x.		
£295x royalty income	£295x	£0	£295x (£295x – £0).
£125x foreign oil and gas extraction income	£0.		

(B) *Analysis—(1) In general.* Under paragraph (c) of this section, F1's subpart F income attributable to each covered item is separately allocated to US1 and US2, and then F1's remaining subpart F income is allocated to the United States shareholders. As

described in paragraphs (h)(2)(iii)(B)(2) and (3) of this section and summarized in Table 1 in this paragraph (h)(2)(iii)(B)(1), US1 is allocated a total of £147.5x, and US2 is allocated a total of £162.5x, of subpart F income. Accordingly, for purposes of paragraph

(b) of this section, US1 has a £147.5x pro rata share, and US2 has a £162.5x pro rata share, of F1's £310x of subpart F income. See paragraph (c)(1) of this section.

TABLE 1 TO PARAGRAPH (h)(2)(iii)(B)(1) OF THIS SECTION—FOREIGN BASE COMPANY INCOME ANALYSIS

Gross income	Foreign base company income			Allocation of subpart F income under § 1.951–1(c)(2)(ii) and (iii)	
	Adjusted gross FBCI	Reductions	Adjusted net FBCI	US1	US2
£60x covered distribution from F2:					
US1's £30x assigned portion	£0 (§ 959(b)).				
US2's £30x assigned portion	£0 (§ 954(c)(6)).				
£40x covered gain on F3 stock:					
US1's £20x assigned portion	£0 (§ 961(c))	£5x	£15x (£20x – £5x)	£0 (£15x × £0/£20x) ...	£15x (£15x × £20x/£20x).
US2's £20x assigned portion	£20x.				
£295x royalty income	£295x	£0	£295x (£295x – £0)	£147.5x (£295x × £250x/£500x).	£147.5x (£295x × £250x/£500x).
£125x foreign oil and gas extraction income.	£0.				

(2) *Allocation of subpart F income attributable to covered items.* F1 has £0 of subpart F income attributable to the covered distribution and £15x of subpart F income attributable to the covered gain because in each case that is the portion of the covered item that is included in F1's adjusted net foreign base company income. See paragraph (c)(2)(i) of this section. The £15x of subpart F income attributable to the covered gain is allocated to each of US1 and US2 by multiplying the amount of such subpart F income by a fraction, the numerator of which is the portion of the covered gain that is both assigned to the United States shareholder under

§ 1.951–2 and included in F1's adjusted gross foreign base company income (£0 in the case of US1, and £20x in the case of US2), and the denominator of which is the portion of the covered gain that is included in F1's adjusted gross foreign base company income (£20x). See paragraph (c)(2)(ii) of this section. Thus, US2 is allocated all £15x of the subpart F income attributable to the covered gain.

(3) *Allocation of subpart F income not attributable to covered items.* F1 has £295x of subpart F income not attributable to covered items (£310x – £15x). This subpart F income is allocated to each of US1 and US2 by

multiplying the amount of the subpart F income by a fraction, the numerator of which is portion of F1's £500x hypothetical distribution described in paragraph (e) of this section that would be distributed with respect to stock of F1 that the United States shareholder owns (£250x in the case of each of US1 and US2), and the denominator of which is the amount of the hypothetical distribution (£500x). See paragraph (c)(2)(iii) of this section. Thus, each of US1 and US2 is allocated £147.5x of the subpart F income not attributable to covered items.

(C) *Alternative facts: tested income—(1) Facts.* The facts are the same as in

paragraph (h)(2)(iii)(A) of this section, except that F1's £125x item of foreign oil and gas extraction income is instead gross tested income. Because there are no allowable deductions properly allocable to the gross tested income, F1 thus has £125x of tested income.

(2) *Analysis.* The results are the same as in paragraph (h)(2)(iii)(B) of this section. In addition, each of US1 and US2 has a £62.5x pro rata share of F1's £125x of tested income, determined by multiplying the amount of the tested income by the fraction used in allocating F1's subpart F income not attributable to covered items to the United States shareholder (£250x/£500x, as described in paragraph (h)(2)(iii)(B)(3) of this section). See § 1.951A-1(d)(2).

(i) *Applicability date.* This section applies to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in described in § 1.959-12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant. See § 1.951-1 as contained in 26 CFR part 1 revised as of April 1, 2024, for a version of this section applicable to prior taxable years. ■ **Par. 12.** Add section 1.951-2 to read as follows:

§ 1.951-2 Foreign corporation-level assignment rules for covered items.

(a) *Scope.* This section sets forth the rules for assigning a foreign corporation's covered items to covered shareholders. Under §§ 1.959-4 and 1.961-9, these assignments determine the extent to which shareholder-specific attributes (previously taxed earnings and profits or section 961(c) basis) are applied to the covered items. Paragraph (b) of this section defines a covered item. Paragraph (c) of this section describes the rules for assigning covered items. Paragraph (d) of this section describes a fraction determining assignments under the general assignment rule. Paragraph (e) of this section adjusts assignments to account for general successor transactions. Paragraph (f) of this section provides a currency translation rule. Paragraph (g) of this section provides definitions and rules of general applicability for purposes of this section. Paragraph (h) of this section provides examples illustrating the application of this section. Paragraph (i) of this section provides the applicability date of this section.

(b) *Covered items.* A covered item is gross income of a foreign corporation that consists of either the portion of a

covered distribution received by the foreign corporation (determined under § 1.959-4) or a covered gain recognized by the foreign corporation (determined under § 1.961-9). Covered shareholders that own stock of a foreign corporation during a taxable year of the foreign corporation in which the foreign corporation receives or recognizes a covered item are assigned portions of the covered item in accordance with the rules described in paragraph (c) of this section. See also paragraph (g) of this section, incorporating § 1.959-1(b) for the definition of covered shareholder, § 1.959-4(c) for the definition of covered distribution, and § 1.961-9(c) for the definition of covered gain.

(c) *Rules for assigning a covered item—(1) Determine assignments based on stock ownership on the last relevant day.* First, assign a pro rata portion of the covered item to each covered shareholder that owns stock of the foreign corporation on the last relevant day of the foreign corporation's taxable year (defined in § 1.959-1(b) as the last day of the taxable year on which the foreign corporation is a controlled foreign corporation), determined by multiplying the amount of the covered item by the fraction computed in accordance with paragraph (d) of this section. If there is no day during the taxable year on which the foreign corporation is a controlled foreign corporation, then treat the last day of the taxable year as the last relevant day.

(2) *Adjust assignments for general successor transactions.* Second, if the foreign corporation is an acquired foreign corporation in one or more general successor transactions that occur during the foreign corporation's taxable year, then, for each such general successor transaction (starting with the earliest transaction), adjust covered shareholders' assigned portions of the covered item in accordance with paragraph (e) of this section. See also paragraph (g) of this section, incorporating § 1.959-7(b) for the definitions of acquired foreign corporation and general successor transaction.

(d) *Fraction in determining assignments—(1) In general.* In determining a covered shareholder's assigned portion of a covered item of a foreign corporation under paragraph (c)(1) of this section, the fraction described in that paragraph is computed as follows. The numerator of the fraction is the amount that would be the covered shareholder's share of the hypothetical distribution described in § 1.951-1(e) for the foreign corporation's taxable year if, for purposes of this paragraph (d), § 1.951-1(e) were applied

with the modifications described in paragraph (d)(2) of this section. The denominator of the fraction is the amount that would be the hypothetical distribution described in § 1.951-1(e) for the foreign corporation's taxable year if, for purposes of this paragraph (d), § 1.951-1(e) were applied with the modifications described in paragraph (d)(2) of this section.

(2) *Modifications—(i) Allocable earnings and profits.* For purposes of this paragraph (d), the foreign corporation's allocable earnings and profits (as defined in § 1.951-1(e)(1)(ii)) are treated as the amount that is the greater of—

(A) The earnings and profits of the foreign corporation for the taxable year, determined under section 964 and not reduced by distributions during the taxable year; and

(B) The sum of all covered items of the foreign corporation for the taxable year.

(ii) *Controlled foreign corporation status.* For purposes of this paragraph (d), § 1.951-1(e) applies without regard to whether the foreign corporation is a controlled foreign corporation. In addition, if there is no day during the taxable year on which the foreign corporation is a controlled foreign corporation, then the hypothetical distribution date (as defined in § 1.951-1(e)(1)(i)) is treated as the last day of the taxable year.

(e) *Rules for general successor transactions—(1) In general.* In adjusting covered shareholders' assignments of a covered item for a general successor transaction under paragraph (c)(2) of this section, increase an assignment in accordance with paragraph (e)(2) of this section, and then decrease assignments in accordance with paragraphs (e)(3) and (4) of this section. Generally, under these rules (together with §§ 1.959-4 and 1.961-9), previously taxed earnings and profits or section 961(c) basis with respect to the transferor covered shareholder (if the general successor transaction occurs before the last relevant day) or successor covered shareholder (if the general successor transaction occurs on or after the last relevant day) are applied to a covered item to the same extent such previously taxed earnings and profits or section 961(c) basis would have been applied if the general successor transaction had not occurred.

(2) *Increase—(i) General successor transaction occurring before the last relevant day.* If the general successor transaction occurs before the last relevant day of the taxable year but after the covered item is received or recognized, then, subject to the

limitation in paragraph (e)(2)(iii) of this section, increase the transferor covered shareholder's assignment of the covered item as follows. Increase the assignment by the additional portion of the covered item that would have been assigned to the transferor covered shareholder under paragraph (c)(1) of this section if the day on which the covered item is received or recognized were the last relevant day and the hypothetical distribution described in paragraph (d)(1) of this section were treated as made immediately before the covered item is received or recognized.

(ii) *General successor transaction occurring on or after the last relevant day.* If the general successor transaction occurs on or after the last relevant day of the taxable year but before the covered item is received or recognized, then, subject to the limitation in paragraph (e)(2)(iii) of this section, increase the successor covered shareholder's assignment of the covered item as follows. Increase the assignment by the additional portion of the covered item that would have been assigned to the successor covered shareholder under paragraph (c)(1) of this section if the day on which the covered item is received or recognized were the last relevant day and the hypothetical distribution described in paragraph (d)(1) of this section were treated as made immediately before the covered item is received or recognized.

(iii) *Limitations.* The increase pursuant to paragraph (e)(2)(i) or (ii) of this section applies only to the extent it results in an additional portion of the covered item being previously taxed earnings and profits that are both with respect to the covered shareholder described in that paragraph and excluded from the foreign corporation's gross income under section 959(b) and § 1.959-4 or section 961(c) and § 1.961-9. Further, the increase cannot exceed the aggregate of each connected covered shareholder's assigned portion of the covered item under paragraph (c)(1) of this section.

(3) *Decreases for connected covered shareholders owning acquired stock.* For each connected covered shareholder that owns acquired stock of the foreign corporation on the last relevant day of the taxable year, decrease the connected covered shareholder's assignment (but not below zero) by the product of the increase pursuant to paragraph (e)(2) of this section and a fraction. The numerator of the fraction is the connected covered shareholder's assigned portion of the covered item under paragraph (c)(1) of this section, and the denominator of the fraction is the aggregate of the assigned portion of

the covered item under paragraph (c)(1) of this section of each connected covered shareholder described in the preceding sentence.

(4) *Decreases for connected covered shareholders not owning acquired stock.* For each connected covered shareholder that does not own acquired stock of the foreign corporation on the last relevant day of the taxable year, decrease the connected covered shareholder's assignment by the product of the increase pursuant to paragraph (e)(2) of this section, reduced by the decreases pursuant to paragraph (e)(3) of this section, and a fraction. The numerator of the fraction is the connected covered shareholder's assigned portion of the covered item under paragraph (c)(1) of this section, and the denominator of the fraction is the aggregate of the assigned portion of the covered item under paragraph (c)(1) of this section of each connected covered shareholder described in the preceding sentence.

(f) *Currency rule.* For purposes of this section, if a covered item of a foreign corporation is denominated in a currency other than the foreign corporation's functional currency, then the covered item is translated into the foreign corporation's functional currency at the spot rate on the day on which the covered item is received or recognized.

(g) *Definitions and rules of general applicability.* The definitions in §§ 1.959-1(b) and 1.961-1(b), and the rules of general applicability in §§ 1.959-1(c) and (d) and 1.961-1(c) and (d), apply for purposes of this section, with the following additions.

Acquired stock. The term *acquired stock* means, in a general successor transaction, stock of an acquired foreign corporation the ownership of which is acquired by the successor covered shareholder.

Connected covered shareholder. The term *connected covered shareholder* means, in a general successor transaction, a covered shareholder that owns acquired stock of an acquired foreign corporation on the last relevant day of the acquired foreign corporation's taxable year in which the general successor transaction occurs, or any covered shareholder bearing a relationship described in section 267(b) (determined without regard to section 267(c)(3)) or 707(b) to a covered shareholder first described in this sentence.

Covered item. The term *covered item* has the meaning provided in paragraph (b) of this section.

(h) *Examples—(1) In general.* This paragraph (h) provides examples

illustrating the application of this section.

(2) *Assumed facts.* For purposes of the examples in this paragraph (h), unless otherwise indicated, the following facts are assumed:

(i) US1 and US2 are unrelated domestic corporations that are covered shareholders. Neither US1 nor US2 is a member of a consolidated group (as defined in § 1.1502-1(h)).

(ii) F1, F2, and F3 are foreign corporations, each of which is a controlled foreign corporation and uses the British pound (£) as its functional currency.

(iii) Each entity uses the calendar year as its taxable year, and no entity has a short taxable year.

(3) *Examples—(i) Example 1: General assignment rule and single class of stock—(A) Facts.* US1 and US2 each directly own 50% of the single class of outstanding stock of F1. F1 directly owns all the outstanding stock of each of F2 and F3. For F1's taxable year ending on December 31 of year 3, the last relevant day is December 31, and F1 has £500x of earnings and profits and two covered items. The covered items are a £60x covered distribution received from F2 and £40x of covered gain recognized with respect to stock of F3.

(B) *Analysis.* The portion of each covered item assigned to each of US1 and US2 is determined by multiplying the amount of the covered item by a fraction, the numerator of which is the portion of a £500x hypothetical distribution treated as made by F1 on the last relevant day that would be distributed with respect to stock of F1 that the covered shareholder owns (£250x in the case of each US1 and US2), and the denominator of which is the amount of the hypothetical distribution (£500x). See paragraphs (c)(1) and (d)(1) of this section; see also paragraph (d)(2) of this section (treating F1's hypothetical distribution as equal to the greater of £500x, F1's earnings and profits for the taxable year, and £100x, the sum of F1's covered items for the taxable year). Thus, US1 and US2 are each assigned £30x of the covered distribution (£60x × £250x/£500x) and £20x of the covered gain (£40x × £250x/£500x).

(C) *Alternative facts: common stock and preferred stock—(1) Facts.* The facts are the same as in paragraph (h)(3)(i)(A) of this section (*Example 1*), except as follows. The stock of F1 owned by US1 is an 8% nonparticipating, voting preferred share of stock with a par value of £1,000x, and the stock of F1 owned by US2 is common stock. There are no accrued but unpaid dividends with respect to the preferred stock.

(2) *Analysis.* The portion of each covered item assigned to each of US1 and US2 is determined by multiplying the amount of the covered item by a fraction, the numerator of which is the portion of a £500x hypothetical distribution treated as made by F1 on the last relevant day that would be distributed with respect to stock of F1 that the covered shareholder owns (£80x in the case of US1, computed as $0.08 \times £1,000x$, and £420x in the case of US2, computed as $£500x - £80x$), and the denominator of which is the amount of the hypothetical distribution (£500x). See paragraphs (c)(1) and (d) of this section. Thus, US1 is assigned £9.6x of the covered distribution ($£60x \times £80x / £500x$) and £6.4x of the covered gain ($£40x \times £80x / £500x$), and US2 is assigned £50.4x of the covered distribution ($£60x \times £420x / £500x$) and £33.6x of the covered gain ($£40x \times £420x / £500x$).

(ii) *Example 2: General successor transaction occurs before the last relevant day and after a covered distribution—(A) Facts.* US1 directly owns all the shares of the single class of outstanding stock of F1, and F1 directly owns all the outstanding stock of F2. On June 30 of year 3, US1 sells all the stock of F1 to US2 for money equal to the fair market value of the stock in a general successor transaction. For F1's taxable year ending on December 31 of year 3, the last relevant day is December 31, and F1 has £500x of earnings and profits and one covered item. The covered item is a £100x covered distribution received by F1 from F2 on March 31. Immediately before the covered distribution, F2 has £100x of previously taxed earnings and profits with respect to US1.

(B) *Analysis—(1) In general.* Without regard to paragraphs (c)(2) and (e) of this section (adjustments for general successor transactions), US2 would be assigned all £100x (and thus US1 would be assigned none) of the covered item because US2 owns all the stock of F1 on the last relevant day and therefore US2 would have a 100% share of a £500x hypothetical distribution treated as made by F1 on that day. See paragraphs (c)(1) and (d) of this section. However, because the sale is a general successor transaction occurring before the last relevant day but after F1 receives the covered item, the assignments to US1 (the transferor covered shareholder) and US2 (a connected covered shareholder by reason of owning acquired stock of F1 on the last relevant day) are adjusted. See paragraphs (c)(2) and (e)(1) of this section. The specific adjustments are described in paragraph (h)(3)(ii)(B)(2) of this section. As a result of these

adjustments, the entirety of the covered item is a distribution to F1 of F2's previously taxed earnings and profits with respect to US1 under § 1.959–4. Moreover, the previously taxed earnings and profits could be distributed by F1 to US1 before the sale and, to the extent not so distributed, are previously taxed earnings and profits of F1 that transfer from US1 to US2 in the sale under § 1.959–7.

(2) *Adjustments.* US1's assigned portion of the covered item is increased by £100x, which is the additional portion of the covered item that would have been assigned to US1 under paragraph (c)(1) of this section if March 31 were the last relevant day (and, thus, F1's £500x hypothetical distribution were treated as made when US1 owned all the stock of F1 and would therefore have a 100% share of the hypothetical distribution). See paragraph (e)(2)(i) of this section. In determining this increase, the first limitation in paragraph (e)(2)(iii) of this section does not apply because a £100x increase does not exceed the amount of F2's previously taxed earnings and profits with respect to US1 that could be applied to exclude such additional portion of the covered item from F1's gross income under section 959(b). In addition, the second limitation in paragraph (e)(2)(iii) of this section does not apply because a £100x increase does not exceed the amount of the covered item assigned to US2 under paragraph (c)(1) of this section. The £100x increase to US1's assigned portion of the covered item decreases US2's assigned portion of the covered item from £100x to £0. See paragraph (e)(3) of this section.

(C) *Alternative facts: limitation on increase and multiple connected covered shareholders—(1) Facts.* The facts are the same as in paragraph (h)(3)(ii)(A) of this section (*Example 2*), except as follows. Immediately before the £100x covered distribution on March 31, F2 has £90x (rather than £100x) of previously taxed earnings and profits with respect to US1. On September 30 of year 3, F1 issues shares of its single class of outstanding stock to US3, a corporate covered shareholder related to US2 within the meaning of section 267(b), with the result that US2 and US3 each own half of the stock of F1 on the last relevant day.

(2) *Analysis—(i) In general.* Without regard to paragraphs (c)(2) and (e) of this section (adjustments for general successor transactions), US2 and US3 would each be assigned £50x (and thus US1 would be assigned none) of the covered item because US2 and US3 each own half of the stock of F1 on the last relevant day and therefore would each

have a 50% share of a £500x hypothetical distribution treated as made by F1 on that day. See paragraphs (c)(1) and (d) of this section. However, because the sale is a general successor transaction occurring before the last relevant day but after F1 receives the covered item, the assignments to US1 (the transferor covered shareholder), US2 (a connected covered shareholder by reason of owning acquired stock of F1 on the last relevant day), and US3 (a connected covered shareholder by reason of bearing a relationship described in section 267(b) to US2) are adjusted. See paragraphs (c)(2) and (e)(1) of this section. The specific adjustments are described in paragraph (h)(3)(ii)(C)(2)(ii) of this section. As a result of these adjustments, £90x of the covered item is a distribution to F1 of F2's previously taxed earnings and profits with respect to US1 under § 1.959–4. Moreover, the previously taxed earnings and profits could be distributed by F1 to US1 before the sale and, to the extent not so distributed, are previously taxed earnings and profits of F1 that transfer from US1 to US2 in the sale under § 1.959–7.

(ii) *Adjustments.* US1's assigned portion of the covered item is increased by £90x, which is the lesser of the additional portion of the covered item that would have been assigned to US1 if March 31 were the last relevant day (£100x) and the amount of F2's previously taxed earnings and profits with respect to US1 that could be applied to exclude such additional portion of the covered item from F1's gross income under section 959(b) (£90x). See paragraphs (e)(2)(i) and (iii) of this section. Because US2 owns acquired stock of F1 on the last relevant day, the £90x increase to US1's assigned portion of the covered item first decreases US2's assigned portion of the covered item, from £50x to £0. See paragraph (e)(3) of this section. Then, the remaining £40x increase to US1's assigned portion of the covered item decreases US3's assigned portion of the covered item, from £50x to £10x. See paragraph (e)(4) of this section.

(iii) *Example 3: General successor transaction occurs after the last relevant day—(A) Facts.* US1 directly owns all 100 shares of the single class of outstanding stock of F1. F1 directly owns all the outstanding stock of F2. On March 31 of year 3, F1 issues 100 shares of its single class of outstanding stock to a nonresident alien individual and, consequently, F1 ceases to be a controlled foreign corporation. On June 30 of year 3, US1 sells its 100 shares of stock of F1 to US2 for money equal to the stock's fair market value in a general

successor transaction. For F1's taxable year ending on December 31 of year 3, the last relevant day is March 31 and F1 has £500x of earnings and profits and one covered item. The covered item is a £100x covered distribution received by F1 from F2 on September 30. Immediately before the covered distribution, F2 has £50x of previously taxed earnings and profits with respect to US2 (all of which transferred from US1 to US2 in the Sale).

(B) *Analysis—(1) In general.* Without regard to paragraphs (c)(2) and (e) of this section (adjustments for general successor transactions), US2 would be assigned none of the covered item because US2 owns none of the stock of F1 on the last relevant day and therefore US2 would have a 0% share of a £500x hypothetical distribution treated as made by F1 on that day. *See* paragraphs (c)(1) and (d) of this section. However, because the sale is a general successor transaction occurring on or after the last relevant day but before F1 receives the covered item, the assignments to US2 (the successor covered shareholder) and US1 (a connected covered shareholder by reason of owning acquired stock of

F1 on the last relevant day) are adjusted. *See* paragraphs (c)(2) and (e)(1) of this section. The specific adjustments are described in paragraph (h)(3)(iii)(B)(2) of this section. As a result of these adjustments, £50x of the covered item is a distribution to F1 of F2's previously taxed earnings and profits with respect to US2 under § 1.959–4.

(2) *Adjustments.* US2's assigned portion of the covered item is increased by £50x, which is the additional portion of the covered item that would have been assigned to US2 under paragraph (c)(1) of this section if September 30 were the last relevant day (and, thus, F1's £500x hypothetical distribution were treated as made when US2 owned half of the stock of F1 and would therefore have a 50% share of the hypothetical distribution). *See* paragraph (e)(2)(ii) of this section. In determining this increase, the first limitation in paragraph (e)(2)(iii) of this section does not apply because a £50x increase does not exceed the amount of F2's previously taxed earnings and profits with respect to US2 that could be applied to exclude such additional portion of the covered item from F1's

gross income under section 959(b). In addition, the second limitation in paragraph (e)(2)(iii) of this section does not apply because a £50x increase does not exceed the amount of the covered item assigned to US1 under paragraph (c)(1) of this section. The £50x increase to US2's assigned portion of the covered item decreases US1's assigned portion of the covered item by £50x. *See* paragraph (e)(3) of this section.

(i) *Applicability date.* This section applies to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959–12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant.

§ 1.951A–1 [Amended]

■ **Par. 13.** Section 1.951A–1 is amended by, for each paragraph listed in the following table, removing the language in the “Remove” column wherever it appears and adding in its place the language in the “Add” column:

Paragraph	Remove	Add
(d)(1)	§ 1.951–1(b) and (e)	§ 1.951–1(b) and (c).
(d)(1)	subpart F income	subpart F income not attributable to covered items.
(d)(2)(i)	§ 1.951–1(b) and (e)	§ 1.951–1(b) and (c).
(d)(2)(i)	substituting “tested income” for “subpart F income”	substituting “tested income” for “subpart F income”
	each place it appears, other than in § 1.951–	each place it appears in § 1.951–1(b) other than in
	1(e)(1)(ii)(B) and the denominator of the fraction de-	the denominator of the fraction described in § 1.951–
	scribed in § 1.951–1(b)(1)(ii)(A).	1(b)(1)(ii)(A), substituting “tested income of the for-
		foreign corporation” for “all subpart F income of the for-
		foreign corporation not attributable to covered items” in
		§ 1.951–1(c)(2)(iii), and substituting “such tested in-
		come” for “such subpart F income” in § 1.951–
		1(c)(2)(iii).
(d)(3)(iii)	§ 1.951–1(e)(7)(vii)	§ 1.951–1(h)(1)(vii).
(d)(3)(iii)(A)(2)(i)	§ 1.951–1(e)(1)	§ 1.951–1(c)(2)(iii).
(d)(4)(i)	§ 1.951–1(b) and (e)	§ 1.951–1(b) and (c).
(d)(4)(i)(A)	substituted for “subpart F income” each place it ap-	substituted for “subpart F income” each place it ap-
	pears.	pears in § 1.951–1(b) and (c), “tested loss of the for-
		foreign corporation” is substituted for “all subpart F in-
		come of the foreign corporation not attributable to
		covered items” in § 1.951–1(c)(2)(iii), and “such test-
		ed loss” is substituted for “such subpart F income” in
		§ 1.951–1(c)(2)(iii).
(d)(4)(iv)	§ 1.951–1(e)(7)(viii)	§ 1.951–1(h)(1)(viii).

■ **Par. 14.** Section 1.951A–2 is amended by:

■ 1. In paragraph (c)(1)(iv), removing the language “and”;

■ 2. In paragraph (c)(1)(v), removing the period and adding the language “, and” in its place; and

■ 3. Adding paragraph (c)(1)(vi).

The addition reads as follows:

§ 1.951A–2 Tested income and tested loss.

* * * *

(c) * * *

(1) * * *
(vi) Previously taxed earnings and profits excluded from the corporation's gross income under section 959(b) and § 1.959–4 or section 961(c) and § 1.961–9.

* * * *

■ **Par. 15.** Section 1.951A–7 is amended by adding paragraph (f) to read as follows:

§ 1.951A–7 Applicability dates.

* * * *

(f) *Pro rata share determinations and exclusions under sections 959(b) and 961(c).* Sections 1.951A–1(d) and 1.951A–2(c)(1)(vi) apply to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959–12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant. *See* § 1.951A–1(d) as contained in 26

CFR part 1 revised as of April 1, 2024, for a version of § 1.951A-1(d) applicable to prior taxable years.

■ **Par. 16.** Section 1.952-1 is amended by adding paragraphs (c)(4), (c)(5), and (h) to read as follows:

§ 1.952-1 Subpart F income defined.

* * * * *

(c) * * *

(4) *Coordination of earnings and profits limitation with sections 959(b) and 961(c)*—(i) *In general.* Distributions of previously taxed earnings and profits received by a controlled foreign corporation, and previously taxed earnings and profits resulting from the application of a controlled foreign corporation's section 961(c) basis to gain recognized by the controlled foreign corporation, are not included in the controlled foreign corporation's earnings and profits for the taxable year for purposes of the limitation in section 952(c)(1)(A). See paragraph (h) of this section (regarding excluding previously taxed earnings and profits from a controlled foreign corporation's gross income for purposes of determining its subpart F income).

(ii) *Applicability date.* Paragraph (c)(4)(i) of this section applies to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959-12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant.

(5) *Transition rule for deficits of a domestic partnership that was an inclusion shareholder with respect to a controlled foreign corporation*—(i) *In general.* For purposes of applying section 952(c)(1)(B) to any taxable year of a controlled foreign corporation, a United States shareholder that owns (within the meaning of section 958(a)) stock of the controlled foreign corporation by reason of an interest in a domestic partnership on the last day of the first taxable year of the controlled foreign corporation during which § 1.958-1(d) applies to the domestic partnership (or, if earlier, the last day of such taxable year on which the foreign corporation is a controlled foreign corporation) (transition date) takes into account its assigned portion of any prior year deficit (determined under paragraph (c)(5)(ii) of this section) for any taxable year of the controlled foreign corporation ending before the application of § 1.958-1(d) in determining the United States shareholder's pro rata share of a prior year deficit under section 952(c)(1)(B)(iv)(II), and the domestic

partnership ceases to take into account such prior year deficit.

(ii) *Assigned portion of prior year deficit.* A United States shareholder's assigned portion of a prior year deficit is determined on the transition date by multiplying a domestic partnership's pro rata share of the prior year deficit (determined under section 952(c)(1)(B)(iv)(II) as of the close of the taxable year in which the deficit arose) by a fraction, the numerator of which is the liquidation value of the United States shareholder's interest in the partnership and the denominator of which is the aggregate liquidation value of all partners' interests in the partnership. For purposes of this fraction, the liquidation value of a partner's interest in the partnership is the amount of cash the partner would receive with respect to the interest if, on the transition date, the partnership (and any partnership through which the partner indirectly owns an interest in the partnership) sold all of its property for an amount of cash equal to the fair market value of the property (taking into account section 7701(g)), satisfied all of its liabilities (other than those described in § 1.752-7), paid an unrelated third party to assume all of its § 1.752-7 liabilities in a fully taxable transaction, and then the partnership (and any partnership through which the partner indirectly owns an interest in the partnership) liquidated.

(iii) *Applicability date.* This paragraph (c)(5) applies to taxable years of foreign corporations beginning on or after [date of publication of final regulations in the **Federal Register**], and to taxable years of United States shareholders in which or with which such taxable years of foreign corporation end. A United States shareholder may apply this paragraph (c)(5) to a taxable year of a foreign corporation that precedes the taxable years described in the preceding sentence if each of the following conditions is satisfied—

(A) *Consistent application condition.* This paragraph (c)(5) is applied in its entirety to the taxable year and all succeeding taxable years of the foreign corporation, to all taxable years of United States shareholders to which such a taxable year of the foreign corporation is relevant, and to all taxable years of related foreign corporations that end on or after the later of the last day of the first taxable year of the foreign corporation to which this paragraph (c)(5) applies and the first day on which the foreign corporations are related. For purposes of the preceding sentence, foreign corporations are related if the foreign

corporations bear a relationship to each other described in section 267(b).

(B) *Open period of limitations condition.* The period of limitations on assessment for each taxable year described in paragraph (c)(5)(iii)(A) of this section is open under section 6501.

(C) *Written consent condition.* Each United States shareholder described in paragraph (c)(5)(iii)(A) of this section provides to the foreign corporation a written statement in which the United States shareholder consents to apply the rules described in this paragraph (c)(5) to the taxable years of the United States shareholder described in paragraph (c)(5)(iii)(A) of this section and affirms that the period of limitations on assessment for each such taxable year is open under section 6501.

* * * * *

(h) *Exclusions from gross income under sections 959(b) and 961(c).* See §§ 1.959-4 and 1.961-9 for rules excluding previously taxed earnings and profits from a controlled foreign corporation's gross income for purposes of determining its subpart F income.

■ **Par. 17.** Section 1.954-1 is amended by:

■ 1. In paragraph (c)(1)(iii)(A), adding the language “or income from a covered item” immediately after the language “that is passive”; and

■ 2. Adding paragraphs (c)(1)(iii)(C) and (h)(4).

The additions read as follows:

§ 1.954-1 Foreign base company income.

* * * * *

(c) * * *

(1) * * *

(iii) * * *

(C) *Covered items.* A single item of income is the portion of a covered item (as defined in § 1.951-2(b)) that—

(1) Falls within a single category of foreign base company income described in paragraph (c)(1)(iii)(A)(1) or (2) of this section;

(2) Falls within a separate category (as defined in § 1.904-5(a)(4)(v)); and

(3) In the case of any amount which constitutes passive foreign personal holding company income, falls within a single group of passive income under the grouping rules of § 1.904-4(c)(3), (4), or (5).

* * * * *

(h) * * *

(4) *Paragraph (c)(1)(iii)(C) of this section.* Paragraph (c)(1)(iii)(C) of this section applies to taxable years of a foreign corporation that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959-12(d)), and to taxable years of a

United States shareholder of the foreign corporation in which or with which such taxable year of such foreign corporation ends.

■ **Par. 18.** Section 1.959–1 is revised to read as follows:

§ 1.959–1 Overview, definitions, and rules of general applicability.

(a) *Overview*—(1) *In general.* The section 959 regulations provide rules regarding previously taxed earnings and profits. This section sets forth definitions and rules of general applicability. Section 1.959–2 sets forth rules for shareholder-level and foreign corporation-level accounting of a foreign corporation's previously taxed earnings and profits. Section 1.959–3 provides the adjustments under section 959 to shareholder-level accounts with respect to a foreign corporation. Section 1.959–4 provides rules for excluding previously taxed earnings and profits received in a distribution from gross income of a covered shareholder or controlled foreign corporation. Section 1.959–5 provides rules for excluding the portion of a section 956 amount that is allocated to previously taxed earnings and profits from gross income of a covered shareholder. Section 1.959–6 provides rules for allocating and apportioning current year taxes paid or accrued by a foreign corporation to its previously taxed earnings and profits. Section 1.959–7 provides rules for transferring previously taxed earnings and profits in a general successor transaction. Sections 1.959–8 through 1.959–9 are reserved. Section 1.959–10 provides examples illustrating the application of the section 959 regulations. Section 1.959–11 sets forth transition rules. Section 1.959–12 sets forth applicability dates. *See* § 1.1502–59 for additional rules for a consolidated group.

(2) *Scope.* This section sets forth definitions and rules of general applicability for purposes of the section 959 regulations. Paragraph (b) of this section provides definitions. Paragraph (c) of this section provides rules relating to S corporations. Paragraph (d) of this section provides an anti-avoidance rule.

(b) *Definitions.* The following definitions apply for purposes of the section 959 regulations.

2019 notice provisions. The term *2019 notice provisions* has the meaning provided in § 1.959–12(c)(2).

Acquired foreign corporation. The term *acquired foreign corporation* has the meaning provided in § 1.959–7(b).

Adjusted applicable percentage. The term *adjusted applicable percentage* has the meaning provided in § 1.959–2(b)(2)(iii)(A).

Annual PTEP account. The term *annual PTEP account* means an account that is described in § 1.959–2(b)(1) and tracks previously taxed earnings and profits.

Character. The term *character* means, with respect to previously taxed earnings and profits, the taxable year, section 904 category, PTEP group and, if applicable, PTEP subgroup to which the previously taxed earnings and profits relate, as well as, if applicable, the adjusted applicable percentage and section 965(c) deduction percentage with respect to the previously taxed earnings and profits.

Controlled foreign corporation. The term *controlled foreign corporation* has the meaning provided in section 957(a) (or, if applicable, section 957(b) or 953(c)(1)(B)).

Corporate PTEP account. The term *corporate PTEP account* has the meaning provided in § 1.959–2(d)(1).

Corporate PTEP tax pool. The term *corporate PTEP tax pool* has the meaning provided in § 1.959–2(d)(2).

Covered distribution. The term *covered distribution* has the meaning provided in § 1.959–4(c).

Covered gain. The term *covered gain* has the meaning provided in § 1.961–9(c).

Covered shareholder. The term *covered shareholder* means a United States person (as described in section 7701(a)(30)), other than a domestic partnership.

Creditable PTEP tax group. The term *creditable PTEP tax group* has the meaning provided in § 1.959–2(b)(4)(ii).

Current year taxes. The term *current year taxes* has the meaning provided in § 1.960–1(b)(4) except that “foreign corporation” is substituted for “controlled foreign corporation” and “the foreign corporation’s taxable year” is substituted for “current taxable year”.

Deemed covered shareholder. The term *deemed covered shareholder* has the meaning provided in § 1.959–7(g).

Dollar basis pool. The term *dollar basis pool* means an account that is described in § 1.959–2(b)(1) and that tracks the basis in U.S. dollars of previously taxed earnings and profits.

Domestic partnership. The term *domestic partnership* has the meaning provided in section 7701(a)(2) and (4). *See* paragraph (c) of this section, providing that an S corporation is treated in the same manner as a domestic partnership.

Early application corporation. The term *early application corporation* has the meaning provided in § 1.959–12(d)(1).

Early application years. The term *early application years* has the meaning provided in § 1.959–12(d)(1).

Foreign income taxes. The term *foreign income taxes* has the meaning provided in § 1.901–2(a).

General successor PTEP. The term *general successor PTEP* has the meaning provided in § 1.959–7(c)(1).

General successor transaction. The term *general successor transaction* has the meaning provided in § 1.959–7(b).

GILTI inclusion amount. The term *GILTI inclusion amount* has the meaning provided in § 1.951A–1(c)(1) (or § 1.1502–51(b) in the case of a member of a consolidated group, as defined in § 1.1502–1(h)).

Last relevant day. The term *last relevant day* means the last day of a taxable year of a foreign corporation on which the foreign corporation is a controlled foreign corporation.

Multi-year dollar basis account. The term *multi-year dollar basis account* has the meaning provided in § 1.959–11(b)(2)(ii)(B).

Multi-year PTEP account. The term *multi-year PTEP account* has the meaning provided in § 1.959–11(b)(2)(ii)(A).

Own. The term *own* (or *ownership* or *owned*), when used with respect to stock of a foreign corporation, means to own the stock within the meaning of section 958(a) and § 1.958–1(a) (thus determined by treating a domestic partnership in the same manner as a foreign partnership pursuant to § 1.958–1(d)). When used with respect to interests in a partnership, *own* (or *ownership* or *owned*) means to own the interests within the meaning of the preceding sentence, determined by treating the interests as stock of a foreign corporation.

Previously taxed earnings and profits. The term *previously taxed earnings and profits* means earnings and profits of a foreign corporation that are described in section 959(c)(1) or (2). *See* § 1.959–2(b) and (d) for covered shareholder-level and foreign corporation-level accounting of previously taxed earnings and profits.

Prior-law PTEP groups. The term *prior-law PTEP groups* has the meaning provided in § 1.959–11(c)(2)(iii).

Prior-law PTEP group taxes. The term *prior-law PTEP group taxes* has the meaning provided in § 1.959–11(c)(2)(iii).

PTEP group. The term *PTEP group* means any of the groups listed in § 1.959–2(b)(2)(i).

PTEP realization event. The term *PTEP realization event* has the meaning provided in § 1.959–6(b).

PTEP subgroup. The term *PTEP subgroup* means any of the groups listed in § 1.959–2(b)(2)(ii).

PTEP tax pool. The term *PTEP tax pool* means an account that is described in § 1.959–2(b)(1) and that tracks the U.S. dollar amount of foreign income taxes associated with previously taxed earnings and profits.

Relevant taxable year. The term *relevant taxable year* has the meaning provided in § 1.959–3(b).

S corporation. The term *S corporation* has the meaning provided in section 1361(a)(1). See paragraph (c) of this section, providing that an S corporation is treated in the same manner as a domestic partnership.

Same priority PTEP. The term *same priority PTEP* has the meaning provided in § 1.959–4(e)(5).

Section 904 category. The term *section 904 category* has the meaning provided in § 1.960–1(b).

Section 956 amount. The term *section 956 amount* has the meaning provided in § 1.959–5(c).

Section 959 regulations. The term *section 959 regulations* means the regulations in this part issued under section 959.

Section 965(c) deduction percentage. The term *section 965(c) deduction percentage* has the meaning provided in § 1.959–2(b)(2)(iii)(B).

Spot rate. The term *spot rate* has the meaning provided in § 1.988–1(d).

Substituted basis property. The term *substituted basis property* has the meaning provided in section 7701(a)(42).

Successor covered shareholder. The term *successor covered shareholder* has the meaning provided in § 1.959–7(b).

Subpart F income. The term *subpart F income* has the meaning provided in section 952 and § 1.952–1.

Taxable year. The term *taxable year* has the meaning provided in section 7701(a)(23), determined by treating a person (as described in section 7701(a)(1)) other than an individual that does not otherwise have a taxable year as computing taxable income on the basis of the calendar year.

Tested income. The term *tested income* has the meaning provided in section 951A(c)(2) and § 1.951A–2(b)(1).

Tested loss. The term *tested loss* has the meaning provided in section 951A(c)(2) and § 1.951A–2(b)(2).

Transferor covered shareholder. The term *transferor covered shareholder* has the meaning provided in § 1.959–7(b).

United States shareholder. The term *United States shareholder* has the meaning provided in section 951(b) (or, if applicable, section 953(c)(1)(A)).

(c) Treatment of an S corporation—(1) In general. Except as provided in paragraph (c)(2) of this section, for purposes of the section 959 regulations, an S corporation is treated in the same manner as a domestic partnership, a reference to a domestic partnership includes an S corporation, and shareholders of an S corporation are treated as partners of such partnership. See section 1373(a). As applicable, the treatment of an S corporation and its shareholders under the preceding sentence is determined by replacing any partnership-specific provision with the equivalent provision for S corporations (for example, a reference to a partner's distributive share of a partnership's income refers to a shareholder's pro rata share of an S corporation's income).

(2) Treatment as a covered shareholder for taxable years for which elective entity treatment applies for § 1.958–1(d)(1) purposes. See § 1.959–11(d) for a rule treating an S corporation as a covered shareholder for any taxable year of the S corporation for which § 1.958–1(d)(1) does not apply and § 1.959–11(e) for a transition rule converting S corporation-level accounts (for example, annual PTEP accounts) to accounts of covered shareholders owning interests in the S corporation once the S corporation is no longer treated as a covered shareholder.

(d) Anti-avoidance rule. If a transaction, series of transactions, plan, or arrangement is engaged in with a principal purpose of avoiding the purposes of section 959 and the section 959 regulations, then appropriate adjustments are made, which may

include adjustments to disregard the transaction, series of transactions, plan, or arrangement.

■ **Par. 19.** Section 1.959–2 is revised to read as follows:

§ 1.959–2 Accounting of previously taxed earnings and profits.

(a) Scope. This section sets forth rules for shareholder-level and foreign corporation-level accounting of a foreign corporation's previously taxed earnings and profits. Paragraph (b) of this section provides the shareholder-level accounting rules. Paragraph (c) of this section provides rules relating to combined pool elections for certain covered shareholder-level accounts. Paragraph (d) of this section provides the foreign corporation-level accounting rules.

(b) Shareholder-level accounting—(1) In general. A covered shareholder that owns stock of a foreign corporation must establish and maintain *annual PTEP accounts, dollar basis pools, and PTEP tax pools* with respect to the foreign corporation in accordance with this paragraph (b) and the adjustments prescribed in § 1.959–3. The annual PTEP accounts track the foreign corporation's previously taxed earnings and profits with respect to the covered shareholder, the dollar basis pools track the basis in U.S. dollars of the previously taxed earnings and profits, and the PTEP tax pools track the U.S. dollar amount of any foreign income taxes associated with the previously taxed earnings and profits. See also § 1.1502–59(c)(2), treating members of a consolidated group as a single covered shareholder for purposes of section 959.

(2) Annual PTEP accounts—(i) In general. Each annual PTEP account must relate to a single taxable year of the foreign corporation and a single section 904 category. In addition, previously taxed earnings and profits within each annual PTEP account must be maintained in the foreign corporation's functional currency and assigned to the PTEP groups identified in the following table.

TABLE 1 TO PARAGRAPH (b)(2)(i) OF THIS SECTION—PTEP GROUPS

Section 959(c)(1) PTEP groups		Section 959(c)(2) PTEP groups	
Group	Description	Group	Description
<i>General section 959(c)(1) PTEP group.</i>	Earnings and profits described in section 959(c)(1) and not described in another PTEP group.	<i>Section 951(a)(1)(A) PTEP group.</i>	Earnings and profits described in section 959(c)(2) and not described in another PTEP group.
<i>Reclassified section 951A PTEP group.</i>	Earnings and profits described in section 959(c)(1) and initially assigned to the section 951A PTEP group.	<i>Section 951A PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 951A.

TABLE 1 TO PARAGRAPH (b)(2)(i) OF THIS SECTION—PTEP GROUPS—Continued

Section 959(c)(1) PTEP groups		Section 959(c)(2) PTEP groups	
Group	Description	Group	Description
<i>Reclassified section 245A(d) PTEP group.</i>	Earnings and profits described in section 959(c)(1) and initially assigned to the section 245A(d) PTEP group.	<i>Section 245A(d) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of an income inclusion to which section 245A(d) applies.
<i>Reclassified section 965(a) PTEP group.</i>	Earnings and profits described in section 959(c)(1) and initially assigned to the section 965(a) PTEP group.	<i>Section 965(a) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 965(a).
<i>Reclassified section 965(b) PTEP group.</i>	Earnings and profits described in section 959(c)(1) and initially assigned to the section 965(b) PTEP group.	<i>Section 965(b) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 965(b).

(ii) *Subgroups*—(A) *In general.* To the extent required under § 1.959–3(c), previously taxed earnings and profits assigned to a PTEP group within an annual PTEP account must be further assigned to the *taxable section 962 PTEP subgroup* or *taxable section 1411 subgroup*. These subgroups track previously taxed earnings and profits that will be includible in gross income under section 962(d) or includible in net investment income under section 1411(c) when distributed to the covered shareholder, as applicable.

(B) *Coordination rule.* A subgroup described in paragraph (b)(2)(ii)(A) of this section is not treated as a separate PTEP group for purposes of establishing and maintaining dollar basis pools and PTEP tax pools.

(iii) *Percentages with respect to section 965 previously taxed earnings and profits*—(A) *Adjusted applicable percentage.* An *adjusted applicable percentage* must be established and maintained with respect to all previously taxed earnings and profits assigned to the reclassified section 965(a) PTEP group, reclassified section 965(b) PTEP group, section 965(a) PTEP group, and section 965(b) PTEP group and relating to a single section 904 category (therefore without regard to the taxable years to which the previously taxed earnings and profits relate). The adjusted applicable percentage tracks the percentage of a credit or deduction for foreign income taxes associated with previously taxed earnings and profits that is disallowed under § 1.965–5. *See* § 1.959–11(c)(3) for the initial determination of the adjusted applicable percentage and § 1.959–3(c)(3) for adjustments.

(B) *Section 965(c) deduction percentage.* A *section 965(c) deduction percentage* must be established and maintained with respect to all previously taxed earnings and profits assigned to the reclassified section 965(a) PTEP group and section 965(a) PTEP group and relating to a single section 904 category (therefore without

regard to the taxable years to which the previously taxed earnings and profits relate). The section 965(c) deduction percentage tracks the percentage of foreign currency gain or loss with respect to previously taxed earnings and profits that is not recognized under § 1.986(c)–1. *See* § 1.959–11(c)(4) for the initial determination of the section 965(c) deduction percentage and § 1.959–3(c)(3) for adjustments.

(iv) *Deemed taxable years.* If previously taxed earnings and profits are distributed to an upper-tier foreign corporation or result from the application of section 961(c) basis to gain recognized by an upper-tier corporation, and the previously taxed earnings and profits relate to a taxable year of a lower-tier foreign corporation that includes one or more days on which the upper-tier foreign corporation did not exist, then, solely for purposes of the establishment and maintenance of annual PTEP accounts, the upper-tier corporation is treated as having the taxable year or taxable years it would have had if it were to have existed on those days, determined based on the manner in which it computes its taxable income for its initial taxable year.

(3) *Dollar basis pools.* Each dollar basis pool must relate to previously taxed earnings and profits assigned to a single PTEP group within a single annual PTEP account or, if a combined pool election applies to the covered shareholder, previously taxed earnings and profits assigned to a single PTEP group and relating to a single section 904 category (therefore without regard to the taxable years to which the previously taxed earnings and profits relate). Basis within each dollar basis pool must be maintained in U.S. dollars.

(4) *PTEP tax pools*—(i) *In general.* Each PTEP tax pool must relate to previously taxed earnings and profits assigned to a single PTEP group within a single annual PTEP account or, if a combined pool election applies to the covered shareholder, previously taxed earnings and profits assigned to a single

PTEP group and relating to a single section 904 category (therefore without regard to the taxable years to which the previously taxed earnings and profits relate). Foreign income taxes within each PTEP tax pool must be maintained in U.S. dollars.

(ii) *Creditable PTEP tax group.* To the extent required under § 1.959–3(e), foreign income taxes within each PTEP tax pool must be assigned to the *creditable PTEP tax group*. This group tracks foreign income taxes that are eligible to be deemed paid under section 960(b).

(c) *Combined pool elections*—(1) *In general.* For purposes of paragraph (c) of this section, a combined pool election is made for a taxable year of a covered shareholder and, once made, remains in effect until revoked. The combined pool election applies with respect to each foreign corporation in which the covered shareholder owns stock, beginning as of the first day of the first taxable year of the foreign corporation that ends with or within the taxable year of the covered shareholder for which the combined pool election is made or, if later, the first day in which the covered shareholder owns stock of the foreign corporation.

(2) *Revocation.* A combined pool election may only be revoked with the consent of the Commissioner (and in the time and manner specified by the Commissioner), and such consent will be granted only in rare and unusual circumstances.

(3) *Time and manner of making election*—(i) *In general.* Except as otherwise provided by a form, instruction, publication, or other guidance, a covered shareholder makes a combined pool election by, for a transaction related to a timely filed (including extensions) original Federal income tax return of the covered shareholder, computing the dollar basis of, or foreign income taxes associated with, previously taxed earnings and profits consistent with a combined pool election.

(ii) *Sixty-month limitation on a subsequent election.* A covered shareholder is not permitted to make a combined pool election for any taxable year beginning less than 60 months after the last day that a previous combined pool election applied to the covered shareholder (or a predecessor).

(4) *Converting to combined pools.* As of the beginning of the first day that a covered shareholder's combined pool election applies with respect to a foreign corporation, each of the covered shareholder's dollar basis pools or PTEP tax pools with respect to the foreign corporation (a *combined pool*) is equal to the sum of all of the dollar basis pools or PTEP tax pools, as applicable, that, immediately before the combined pool election applies, related to the same PTEP group and section 904 category to which the combined pool relates.

(d) *Foreign corporation-level accounting*—(1) *Corporate PTEP accounts.* Corporate PTEP accounts must be established and maintained with respect to a foreign corporation. Each corporate PTEP account must relate to a single covered shareholder, and previously taxed earnings and profits within a corporate PTEP account must be assigned to section 904 categories and the PTEP groups identified in the table to paragraph (b)(2)(i) of this section. A corporate PTEP account for a covered shareholder is equal to the aggregate of all previously taxed earnings and profits that are within such covered shareholder's annual PTEP accounts with respect to the foreign corporation. Thus, as a covered shareholder's annual PTEP accounts with respect to the foreign corporation are adjusted under § 1.959–3, the foreign corporation's corporate PTEP account for the covered shareholder and the foreign corporation's earnings and profits described in section 959(c)(1) or (c)(2) are also adjusted.

(2) *Corporate PTEP tax pools.* Corporate PTEP tax pools must be established and maintained by a foreign corporation. Each corporate PTEP tax pool must relate to a single covered shareholder, and foreign income taxes within a corporate PTEP tax pool must be assigned to section 904 categories and the PTEP groups identified in the table to paragraph (b)(2)(i) of this section. A corporate PTEP tax pool relating to a covered shareholder is equal to the aggregate of all foreign income taxes that are within that covered shareholder's PTEP tax pools with respect to the foreign corporation. Thus, as a covered shareholder's PTEP tax pools with respect to the foreign corporation are adjusted under § 1.959–

3, the foreign corporation's corporate PTEP tax pool relating to the covered shareholder is also adjusted. Foreign income taxes within a corporate PTEP tax pool that are eligible to be deemed paid under section 960(b) are assigned to the creditable PTEP tax group within the covered shareholder's PTEP tax pools.

(3) *Earnings and profits determined independently of previously taxed earnings and profits.* A foreign corporation's earnings and profits are determined independently of the foreign corporation's previously taxed earnings and profits. Thus, for example, the extent to which a distribution is made out of a foreign corporation's earnings and profits is determined independently of the foreign corporation's corporate PTEP accounts. See section 316. Similarly, a foreign corporation's earnings and profits may be less than the foreign corporation's previously taxed earnings and profits (with the result that the foreign corporation has a deficit in earnings and profits described in section 959(c)(3)).

■ **Par. 20.** Section 1.959–3 is revised to read as follows:

§ 1.959–3 Adjustments to shareholder-level accounts.

(a) *Scope.* This section provides the adjustments under section 959 to shareholder-level accounts with respect to a foreign corporation. Paragraph (b) of this section provides the general rule, pursuant to which shareholder-level accounts (annual PTEP accounts, dollar basis pools, and PTEP tax pools) are adjusted with respect to a foreign corporation to reflect income inclusions relating to, and transactions occurring within, the foreign corporation's taxable year. Paragraph (c) of this section describes adjustments to annual PTEP accounts. Paragraph (d) of this section describes adjustments to dollar basis pools. Paragraph (e) of this section describes adjustments to PTEP tax pools. Paragraph (f) of this section provides timing rules for when adjustments are treated as made. Paragraph (g) of this section provides an ordering rule for the application of this section to tiered foreign corporations. See also § 1.959–2(d)(1) and (2), providing that as shareholder-level accounts are adjusted with respect to a foreign corporation under this section, the foreign corporation-level accounts are consequently also adjusted.

(b) *In general.* To reflect income inclusions and transactions related to a taxable year of a foreign corporation (such taxable year for which this section is being applied, the *relevant taxable year*), a covered shareholder's annual

PTEP accounts, dollar basis pools, and PTEP tax pools with respect to the foreign corporation must be adjusted in accordance with the rules in this section.

(c) *Adjustments to annual PTEP accounts*—(1) *In general*—(i) *Increases for amounts included in gross income under section 951(a)(1)(A).* If the foreign corporation is a controlled foreign corporation and the covered shareholder includes in gross income its pro rata share of the corporation's subpart F income for the relevant taxable year under section 951(a)(1)(A) (including by reason of section 245A(e)(2) or 964(e)(4), but not including an amount described in section 959(e)), then, for each annual PTEP account that relates to the relevant taxable year and a section 904 category to which a portion of the inclusion is assigned (determined at the level of the covered shareholder, thus after the application of § 1.904–4(c)), add an amount of previously taxed earnings and profits equal to such portion to the annual PTEP account. Assign such previously taxed earnings and profits to the section 951(a)(1)(A) PTEP group, except assign previously taxed earnings and profits to the section 245A(d) PTEP group to the extent section 245A(d) applies to the inclusion giving rise to the previously taxed earnings and profits (see sections 245A(e)(3) and 964(e)(4)). If applicable, further assign previously taxed earnings and profits to a PTEP subgroup in accordance with paragraph (c)(2) of this section.

(ii) *Increases for amounts included in gross income under section 951A(a).* If the foreign corporation is a controlled foreign corporation and the covered shareholder includes in gross income the portion of its GILTI inclusion amount that is treated as with respect to the corporation for the relevant taxable year under section 951A(a) and (f)(2), then, for each annual PTEP account that relates to the relevant taxable year and a section 904 category to which a portion of the inclusion is assigned (determined at the level of the covered shareholder, thus after the application of § 1.904–4(c)), add an amount of previously taxed earnings and profits equal to such portion to the annual PTEP account. Assign such previously taxed earnings and profits to the section 951A PTEP group. If applicable, further assign previously taxed earnings and profits to a PTEP subgroup in accordance with paragraph (c)(2) of this section.

(iii) *Increases for receipt of distributed previously taxed earnings and profits.* If, during the relevant taxable year, previously taxed earnings and profits with respect to the covered shareholder

are distributed to the foreign corporation in a covered distribution (determined under § 1.959–4), then add such distributed previously taxed earnings and profits to the annual PTEP accounts in accordance with paragraph (c)(3) of this section.

(iv) *Increases for previously taxed earnings and profits resulting from section 961(c) basis.* If, during the relevant taxable year, previously taxed earnings and profits with respect to the covered shareholder result from the application of positive section 961(c) basis to covered gain recognized by the foreign corporation (determined under § 1.961–9), then add such resulting previously taxed earnings and profits to the annual PTEP accounts in accordance with paragraph (c)(3) of this section.

(v) *Decreases for current year taxes.* If previously taxed earnings and profits are added to a PTEP group within an annual PTEP account pursuant to paragraph (c)(1)(iii) or (iv) of this section, then reduce the previously taxed earnings and profits in that PTEP group by the amount of the current year taxes allocated and apportioned under § 1.959–6 to the corresponding PTEP group of the foreign corporation. The corresponding PTEP group of the foreign corporation is the PTEP group of the foreign corporation that is of the same type as the increased PTEP group and that is within a corporate PTEP account of the foreign corporation that is with respect to the covered shareholder. If the PTEP group of that type in multiple annual PTEP accounts increases pursuant to paragraph (c)(1)(iii) or (iv) of this section, apportion the amount of the current year taxes allocated and apportioned under § 1.959–6 to the corresponding PTEP group of the foreign corporation among those increased PTEP groups under the principles of § 1.861–20.

(vi) *Decreases for distributed previously taxed earnings and profits.* If, during the relevant taxable year, the foreign corporation distributes previously taxed earnings and profits with respect to the covered shareholder in a covered distribution (determined under § 1.959–4), then remove such distributed previously taxed earnings and profits from the annual PTEP accounts.

(vii) *Increases for amounts included in gross income as a dividend under section 1248(a) or (f).* If, during the relevant taxable year, gain recognized by the covered shareholder is included in gross income as a dividend under section 1248(a) or (f) by reason of earnings and profits of the foreign corporation, then, for each annual PTEP account that relates to the relevant

taxable year and a section 904 category to which a portion of the inclusion is assigned (determined at the level of the covered shareholder, thus after the application of § 1.904–4(c)), add an amount of previously taxed earnings and profits equal to such portion to the annual PTEP account (see section 959(e)). Assign such previously taxed earnings and profits to the section 951(a)(1)(A) PTEP group, except assign previously taxed earnings and profits to the section 245A(d) PTEP group to the extent section 245A(d) applies to the inclusion giving rise to the previously taxed earnings and profits (including by reason of section 245A(e)(3)). If applicable, further assign previously taxed earnings and profits to a PTEP subgroup in accordance with paragraph (c)(2) of this section.

(viii) *Decreases with respect to transferor covered shareholder for transferred previously taxed earnings and profits.* If, during the relevant taxable year, previously taxed earnings and profits of the foreign corporation transfer from the covered shareholder in a general successor transaction (determined under § 1.959–7), then remove such transferred previously taxed earnings and profits from the annual PTEP accounts.

(ix) *Increases with respect to successor covered shareholder for transferred previously taxed earnings and profits.* If, during the relevant taxable year, previously taxed earnings and profits of the foreign corporation transfer to the covered shareholder in a general successor transaction (determined under § 1.959–7), then add such transferred previously taxed earnings and profits to the annual PTEP accounts in accordance with paragraph (c)(3) of this section.

(x) *Reassignments for previously taxed earnings and profits to which a section 956 amount is allocated.* If the foreign corporation is a controlled foreign corporation and a portion of the covered shareholder's section 956 amount with respect to the corporation for the relevant taxable year is allocated to previously taxed earnings and profits (determined under § 1.959–5), then reassign such previously taxed earnings and profits from a section 959(c)(2) PTEP group to the section 959(c)(1) PTEP group in the same row in the table in § 1.959–2(b)(2)(i). If applicable, further assign previously taxed earnings and profits to the PTEP subgroup to which they relate. See paragraph (c)(4) of this section in the case of certain acquisitions of stock to which a section 956 amount of another shareholder is attributable.

(xi) *Increases for amounts included in gross income under section 951(a)(1)(B).* If the foreign corporation is a controlled foreign corporation and the covered shareholder includes in gross income a portion of its section 956 amount with respect to the corporation for the relevant taxable year under section 951(a)(1)(B), then, for each annual PTEP account that relates to the relevant taxable year and a section 904 category to which a portion of the inclusion is assigned (determined at the level of the covered shareholder, thus after the application of § 1.904–4(c)), add an amount of previously taxed earnings and profits equal to such portion to the annual PTEP account. Assign such previously taxed earnings and profits to the general section 959(c)(1) PTEP group. If applicable, further assign previously taxed earnings and profits to a PTEP subgroup in accordance with paragraph (c)(2) of this section. See paragraph (c)(4) of this section in the case of certain acquisitions of stock to which a section 956 amount of another shareholder is attributable.

(2) *Assignment to PTEP subgroups—*

(i) *Taxable section 962 PTEP subgroup.* If the covered shareholder is an individual and an election under § 1.962–2 applies to the covered shareholder's income inclusions under section 951(a) or 951A(a) for the relevant taxable year, then further assign a portion of previously taxed earnings and profits added pursuant to paragraph (c)(1)(i), (ii), or (xi) of this section (section 951(a) or 951A(a) inclusions) to the taxable section 962 PTEP subgroup. The portion of previously taxed earnings and profits assigned to the taxable section 962 PTEP subgroup is equal to the excess of the previously taxed earnings and profits over the income tax paid under this chapter on the income inclusions giving rise to the previously taxed earnings and profits (determined by translating such tax into the foreign corporation's functional currency at the exchange rate at which the income inclusion is translated into U.S. dollars under section 989(b)).

(ii) *Taxable section 1411 PTEP subgroup.* If the covered shareholder is an individual, estate, or trust, then further assign previously taxed earnings and profits added pursuant to paragraph (c)(1)(i), (ii), (vii), and (xi) of this section (section 951(a), 951A(a), or 1248(a) or (f) inclusions) to the taxable section 1411 PTEP subgroup to the extent the income inclusion giving rise to the previously taxed earnings and profits is not taken into account in determining net investment income under § 1.1411–4(a)(1)(i).

(3) *Preserving the character of previously taxed earnings and profits—*
 (i) *In general.* Add previously taxed earnings and profits that are described in paragraph (c)(1)(iii), (iv), or (ix) of this section (previously taxed earnings and profits received in a distribution, resulting from section 961(c) basis, or transferred to the covered shareholder) and that relate to a single section 904 category and single taxable year to the annual PTEP account that relates to such section 904 category and such taxable year or a taxable year (including a deemed taxable year) that ends with, or closest to, the last day of such taxable year, as applicable. Assign the previously taxed earnings and profits to the PTEP group, and if applicable PTEP subgroup, to which they relate. See § 1.959–4, 1.959–7, or 1.961–9 for rules determining the character of previously taxed earnings and profits received, transferred, or resulting from section 961(c) basis, respectively.

(ii) *Recalculate percentages with respect to section 965 previously taxed earnings and profits—*(A) *In general.* If applicable in adding previously taxed earnings and profits described in paragraph (c)(1)(iii), (iv), or (ix) of this section (previously taxed earnings and profits received in a distribution, resulting from section 961(c) basis, or transferred to the covered shareholder) to annual PTEP accounts relating to the same section 904 category, recalculate an adjusted applicable percentage or section 965(c) deduction percentage with respect to relevant previously taxed earnings and profits within such annual PTEP accounts so that the percentage is a weighted average of—

(1) The adjusted applicable percentage or section 965(c) deduction percentage with respect to relevant previously taxed earnings and profits within the annual PTEP accounts immediately before the addition; and

(2) The adjusted applicable percentage or section 965(c) deduction percentage with respect to relevant previously taxed earnings and profits added to the annual PTEP accounts.

(B) *Determining the weighted average.* The weighted average is determined as the sum of the product of each percentage described in paragraph (c)(3)(ii)(A)(1) or (2) of this section and the amount of previously taxed earnings and profits described in that paragraph, divided by the sum of the amounts of previously taxed earnings and profits described in those paragraphs.

(4) *Certain acquisitions of stock to which a section 956 amount is attributable.* If the covered shareholder acquires ownership of stock of the foreign corporation during the relevant

taxable year but on or after the last relevant day of the relevant taxable year (for example, in a general successor transaction), and a portion of a section 956 amount of a United States shareholder is attributable to such stock, then treat such portion of the section 956 amount and any inclusion thereof in gross income of the United States shareholder as being of the covered shareholder for purposes of paragraphs (c)(1)(x) and (xi) of this section.

(5) *Currency rule.* All adjustments to annual PTEP accounts are made in the functional currency of the foreign corporation, determined, as applicable, by translating an inclusion described in paragraph (c)(1)(ii) of this section into functional currency at the average exchange rate for the relevant taxable year (see § 1.951A–5(b)(3)) and by translating previously taxed earnings and profits described in paragraph (c)(1)(iii) of this section into functional currency at the spot rate on the day of the distribution (see section 989(b)). See also § 1.961–9 (determining previously taxed earnings and profits described in paragraph (c)(1)(iv) of this section in functional currency), and § 1.959–6 (determining current year taxes described in paragraph (c)(1)(v) of this section in functional currency).

(d) *Adjustments to dollar basis pools—*(1) *In general—*(i) *Increases for U.S. dollar amount of income inclusions under sections 951(a), 951A(a), and 1248(a) or (f).* For each addition pursuant to paragraph (c)(1)(i), (ii), (vii), or (xi) of this section of previously taxed earnings and profits relating to a single dollar basis pool, add an amount of basis equal to the income inclusion under section 951(a), 951A(a), or 1248(a) or (f) giving rise to such previously taxed earnings and profits to the dollar basis pool.

(ii) *Increases for dollar basis of received or resulting previously taxed earnings and profits.* For each addition pursuant to paragraph (c)(1)(iii) or (iv) of this section of previously taxed earnings and profits relating to a single dollar basis pool, add the dollar basis of such previously taxed earnings and profits (determined under § 1.959–4 or 1.961–9, as applicable) to the dollar basis pool.

(iii) *Decreases for current year taxes.* For each reduction pursuant to paragraph (c)(1)(v) of this section to previously taxed earnings and profits relating to a single dollar basis pool, reduce the basis in the dollar basis pool by the amount of the current year taxes giving rise to the reduction.

(iv) *Decreases for dollar basis of distributed or transferred previously taxed earnings and profits.* For each

removal pursuant to paragraph (c)(1)(vi) or (viii) of this section of previously taxed earnings and profits relating to a single dollar basis pool, remove the dollar basis of such previously taxed earnings and profits (determined under § 1.959–4 or 1.959–7, as applicable) from the dollar basis pool.

(v) *Increases for dollar basis of transferred previously taxed earnings and profits, adjusted for foreign currency gain or loss.* For each addition pursuant to paragraph (c)(1)(ix) of this section of previously taxed earnings and profits relating to a single dollar basis pool, add the dollar basis of such previously taxed earnings and profits (determined under § 1.959–7 and adjusted in accordance with the next sentence) to the dollar basis pool. In applying the preceding sentence, increase (or decrease) the dollar basis of transferred previously taxed earnings and profits by foreign currency gain (or foreign currency loss) that the transferor covered shareholder recognizes with respect to the previously taxed earnings and profits. In addition, determine such foreign currency gain or loss without regard to § 1.986–1(c)(3)(i) and (ii) (limitations for previously taxed earnings and profits resulting from section 965) and by treating the deemed covered shareholder in the same manner as a covered shareholder.

(vi) *Adjustments for dollar basis of previously taxed earnings and profits to which a section 956 amount is allocated.* For each reassignment pursuant to paragraph (c)(1)(x) of this section of previously taxed earnings and profits relating to a single dollar basis pool, remove the dollar basis of such previously taxed earnings and profits (determined under § 1.959–5) from the dollar basis pool relating to the section 959(c)(2) PTEP group from which the previously taxed earnings and profits are reassigned and add such basis to the dollar basis pool relating to the section 959(c)(1) PTEP group to which the previously taxed earnings and profits are reassigned.

(2) *Currency rule.* All adjustments to dollar basis pools are made in U.S. dollars, determined, as applicable, by translating inclusions described in paragraph (d)(1)(i) of this section into U.S. dollars in accordance with section 989(b) and current year taxes described in paragraph (d)(1)(iii) of this section into U.S. dollars in accordance with section 986(a) and § 1.986(a)–1.

(e) *Adjustments to PTEP tax pools—*(1) *In general—*(i) *Increases for foreign income taxes associated with previously taxed earnings and profits received.* For each addition pursuant to paragraph (c)(1)(iii) of this section of previously

taxed earnings and profits relating to a single PTEP tax pool, add the foreign income taxes that are associated with such previously taxed earnings and profits (determined under § 1.959–4(g)) to the PTEP tax pool. Assign such associated foreign income taxes to the creditable PTEP tax group only to the extent the foreign corporation is deemed to pay the taxes under section 960(b)(2) and § 1.960–3(c). *See* paragraph (e)(1)(ii) of this section for increases to PTEP tax pools for current year taxes paid or accrued by the foreign corporation on the receipt of the previously taxed earnings and profits.

(ii) *Increases for current year taxes.* For each reduction pursuant to paragraph (c)(1)(v) of this section to previously taxed earnings and profits relating to a single PTEP tax pool, add to the PTEP tax pool the current year taxes giving rise to the reduction. Assign such current year taxes to the creditable PTEP tax group only if the foreign corporation is a controlled foreign corporation when the taxes are paid or accrued and a credit for the taxes is not disallowed or suspended at the level of the controlled foreign corporation (*see, for example*, section 245A(e)(3) and § 1.245A(d)–1(a)(2) and sections 901(k)(1), (l), and (m), 909, and 6038(c)(1)(B)).

(iii) *Decreases for foreign income taxes associated with distributed or*

transferred previously taxed earnings and profits. For each removal pursuant to paragraph (c)(1)(vi) or (viii) of this section of previously taxed earnings and profits relating to a single PTEP tax pool, remove the foreign income taxes that are associated with such previously taxed earnings and profits (determined under § 1.959–4 or 1.959–7, as applicable) from the PTEP tax pool.

(iv) *Increases for foreign income taxes associated with transferred previously taxed earnings and profits.* For each addition pursuant to paragraph (c)(1)(ix) of this section of previously taxed earnings and profits relating to a single PTEP tax pool, add the foreign income taxes that are associated with such previously taxed earnings and profits (determined under § 1.959–7) to the PTEP tax pool. Assign such associated foreign income taxes to the creditable PTEP tax group only to the extent the taxes relate to the creditable PTEP tax group immediately before the general successor transaction.

(v) *Adjustments for foreign income taxes associated with previously taxed earnings and profits to which a section 956 amount is allocated.* For each reassignment pursuant to paragraph (c)(1)(x) of this section of previously taxed earnings and profits relating to a single PTEP tax pool, remove the foreign income taxes that are associated with such previously taxed earnings and

profits (determined under § 1.959–5) from the PTEP tax pool relating to the section 959(c)(2) PTEP group from which the previously taxed earnings and profits are reassigned and add such foreign income taxes to the PTEP tax pool relating to the section 959(c)(1) PTEP group to which the previously taxed earnings and profits are reassigned. Assign such associated foreign income taxes to the creditable PTEP tax group only to the extent the taxes relate to the creditable PTEP tax group immediately before the reassignment.

(2) *Currency rule.* All adjustments to PTEP tax pools are made in U.S. dollars, determined, as applicable, by translating current year taxes described in paragraph (e)(1)(ii) of this section into U.S. dollars in accordance with section 986(a) and § 1.986(a)–1.

(f) *Timing of adjustments*—(1) *Annual PTEP accounts.* An adjustment to an annual PTEP account is treated as made in accordance with the timing rules in the following table. In the case of adjustments described in paragraphs (c)(1)(iii) through (xi) of this section that are treated as made at the same time, such adjustments are treated as made at that time in sequence (starting with the adjustment in the earliest paragraph).

TABLE 1 TO PARAGRAPH (f)(1) OF THIS SECTION—TIMING OF ANNUAL PTEP ACCOUNT ADJUSTMENTS

Adjustment described in this section	Description	When adjustment is treated as made
Paragraph (c)(1)(i)	Increases for amounts included in gross income under section 951(a)(1)(A).	Beginning of the first day of the relevant taxable year.
Paragraph (c)(1)(ii)	Increases for amounts included in gross income under section 951A(a).	
Paragraph (c)(1)(iii)	Increases for receipt of distributed previously taxed earnings and profits.	
Paragraph (c)(1)(iv)	Increases for previously taxed earnings and profits resulting from section 961(c) basis.	
Paragraph (c)(1)(v)	Decreases for current year taxes.	Concurrently with the covered distribution.
Paragraph (c)(1)(vi)	Decreases for distributed previously taxed earnings and profits.	
Paragraph (c)(1)(vii)	Increases for amounts included in gross income as a dividend under section 1248.	Concurrently with the sale or exchange.
Paragraph (c)(1)(viii)	Decreases for transferred previously taxed earnings and profits.	Concurrently with the general successor transaction.
Paragraph (c)(1)(ix)	Increases for transferred previously taxed earnings and profits.	
Paragraph (c)(1)(x)	Reassignments for previously taxed earnings and profits to which a section 956 amount is allocated.	End of the last day of the relevant taxable year.
Paragraph (c)(1)(xi)	Increases for amounts included in gross income under section 951(a)(1)(B).	

(2) *Dollar basis pools.* An adjustment to a dollar basis pool is treated as made concurrently with the related adjustment described in paragraph (c) of this section.

(3) *PTEP tax pools.* An adjustment to a PTEP tax pool is treated as made concurrently with the related adjustment described in paragraph (c) of this section.

(g) *Bottom-up application to tiered foreign corporations.* For purposes of applying this section to tiered foreign corporations, this section is applied first to the foreign corporation at the lowest

tier, then to the foreign corporation at the next lowest tier, and so on.

■ **Par. 21.** Section 1.959–4 is revised to read as follows:

§ 1.959–4 Exclusion from gross income of previously taxed earnings and profits received in a distribution.

(a) *Scope.* This section provides the rules for distributions of previously taxed earnings and profits under section 959. Paragraph (b) of this section excludes previously taxed earnings and profits received by a covered shareholder or controlled foreign corporation in a distribution from gross income. Paragraph (c) of this section defines a covered distribution. Paragraph (d) of this section describes rules for analyzing a covered distribution, including rules for determining the extent to which a covered distribution is a distribution of previously taxed earnings and profits. Paragraph (e) of this section provides rules for allocating covered distributions to earnings and profits. Paragraph (f) of this section provides a dollar basis rule. Paragraph (g) of this section provides an associated foreign income taxes rule. *See* § 1.959–10(c)(1) and (2) (*Examples 1 and 2*) for examples illustrating the application of this section. *See also* §§ 1.367(b)–2(j)(2)(ii) and 1.367(b)–3(g)(1) for deemed distributions of previously taxed earnings and profits under other provisions of the Code.

(b) *Exclusion from gross income—(1) Distribution by a foreign corporation to a covered shareholder.* Previously taxed earnings and profits that are distributed to a covered shareholder, other than previously taxed earnings and profits relating to the taxable section 962 PTEP subgroup, are excluded from the covered shareholder's gross income.

(2) *Distribution by a controlled foreign corporation to another controlled foreign corporation—(i) In general.* Previously taxed earnings and profits that are distributed by a controlled foreign corporation to another controlled foreign corporation are excluded from the recipient controlled foreign corporation's gross income, solely for purposes of determining the recipient controlled foreign corporation's subpart F income and tested income or tested loss, and provided that the covered shareholder to which the previously taxed earnings and profits relate is a United States shareholder in both controlled foreign corporations.

(ii) *Treatment of a specified foreign corporation as a controlled foreign corporation.* A specified foreign corporation (as defined in § 1.965–1(f)(45)(i)(B)) that is not otherwise a

controlled foreign corporation is treated as a controlled foreign corporation for purposes of applying paragraph (b)(2)(i) of this section to previously taxed earnings and profits resulting from the application of section 965 that are distributed by the specified foreign corporation.

(3) *Additional consequences.* Upon a distribution of previously taxed earnings and profits, *see* paragraph (d)(5) of this section for adjustments to previously taxed earnings and profits, § 1.961–4 for basis adjustments, § 1.986(c)–1 for recognition of foreign currency gain or loss if the distribution is to a covered shareholder, and § 1.960–3 for deemed paid foreign income taxes if the distribution is to a United States shareholder that is a corporation or to a controlled foreign corporation. *See also* section 962(d) (previously taxed earnings and profits distributed to a covered shareholder and relating to the taxable section 962 PTEP subgroup are included in gross income); § 1.1411–10(c)(1)(i)(A)(1) (previously taxed earnings and profits distributed to a covered shareholder and relating to the taxable section 1411 subgroup are included in net investment income).

(c) *Covered distribution—(1) In general.* A covered distribution is a distribution of property made by a foreign corporation to its shareholders with respect to its stock, to the extent that the distribution is a dividend (as defined in section 316), determined without regard to section 959(d), and not including an amount treated as a dividend by reason of section 78, 367(b), 964(e)(1), or 1248. In a covered distribution, previously taxed earnings and profits are distributed in accordance with the rules described in paragraph (d) of this section.

(2) [Reserved]

(3) *Treatment of a partner's distributive share of a covered distribution.* For purposes of the section 959 regulations, if a portion of a covered distribution is made or is treated as made under this paragraph (c)(3) to a partnership, a partner's distributive share of such portion is treated as a portion of the covered distribution made to the partner.

(d) *Rules for analyzing a covered distribution—(1) Determine each covered shareholder's share of the covered distribution.* First, determine each covered shareholder's share of the covered distribution, computed as the sum of—

(i) Any portion of the covered distribution that is made to the covered shareholder, and

(ii) Any portions of the covered distribution that are made to upper-tier

foreign corporations and assigned to the covered shareholder under § 1.951–2.

(2) *Determine distributed previously taxed earnings and profits.* Second, determine the extent to which each covered shareholder's share of the covered distribution is a distribution of previously taxed earnings and profits in accordance with paragraph (e) of this section.

(3) *Determine dollar basis and associated foreign income taxes.* Third, determine the dollar basis of, and foreign income taxes associated with, distributed previously taxed earnings and profits in accordance with paragraphs (f) and (g) of this section.

(4) *Treat distributed previously taxed earnings and profits as distributed pro rata with respect to shares of stock of the foreign corporation.* Fourth, treat a pro rata portion of all previously taxed earnings and profits distributed in each covered shareholder's share of the covered distribution as distributed with respect to each share of stock of the foreign corporation owned by the covered shareholder, determined by multiplying all such previously taxed earnings and profits by a fraction. The numerator of the fraction is the sum of any portion of the covered distribution that is made with respect to the share of stock to the covered shareholder and any portions of the covered distribution that are made with respect to the share of stock to upper-tier foreign corporations and assigned to the covered shareholder under § 1.951–2. The denominator of the fraction is the amount of the covered shareholder's share of the covered distribution.

(5) *Adjust previously taxed earnings and profits and make related account adjustments.* Fifth, decrease the distributing foreign corporation's previously taxed earnings and profits, and if applicable increase a recipient foreign corporation's previously taxed earnings and profits, to reflect the covered distribution and make the related adjustments described in § 1.959–3 to each covered shareholder's accounts.

(e) *Allocation of distributions—(1) In general.* A covered shareholder's share of a covered distribution (determined under paragraph (d)(1) of this section) is first allocated to previously taxed earnings and profits of the foreign corporation that are with respect to the covered shareholder immediately before the covered distribution (as reflected in the covered shareholder's annual PTEP accounts with respect to the foreign corporation), to the extent thereof and in accordance with paragraphs (e)(2) through (5) of this section. Any remaining portion of such share is

allocated to the foreign corporation's earnings and profits described in section 959(c)(3).

(2) *Priority rules*—(i) *Section 959(c)(1) rule*. Allocate the covered shareholder's share of the covered distribution first to previously taxed earnings and profits assigned to a section 959(c)(1) PTEP group and then to previously taxed earnings and profits assigned to a section 959(c)(2) PTEP group.

(ii) *Rules within section 959(c)(1) PTEP groups*. In allocating the covered shareholder's share of the covered distribution to previously taxed earnings and profits assigned to section 959(c)(1) PTEP groups, allocate first to previously taxed earnings and profits assigned to the reclassified section 965(a) PTEP group, then to previously taxed earnings and profits assigned to the reclassified section 965(b) PTEP group, and finally to previously taxed earnings and profits assigned to the remaining section 959(c)(1) PTEP groups.

(iii) *Rules within section 959(c)(2) PTEP groups*. In allocating the covered shareholder's share of the covered distribution to previously taxed earnings and profits assigned to section 959(c)(2) PTEP groups, allocate first to previously taxed earnings and profits assigned to the section 965(a) PTEP group, then to previously taxed earnings and profits assigned to the section 965(b) PTEP group, and finally to previously taxed earnings and profits assigned to the remaining section 959(c)(2) PTEP groups.

(3) *Last-in, first-out rule*. In allocating the covered shareholder's share of the covered distribution to previously taxed earnings and profits assigned to a single PTEP group or PTEP groups with the same priority (for example, the section 951(a)(1)(A) PTEP group, section 951A PTEP group, and section 245A(d) PTEP group), allocate first to previously taxed earnings and profits that relate to the most recent taxable year, then to previously taxed earnings and profits that relate to the next most recent taxable year, and so on.

(4) *Section 962 ordering rule*. In allocating the covered shareholder's share of the covered distribution to previously taxed earnings and profits that are assigned to a single PTEP group or PTEP groups with the same priority and that relate to the same taxable year, allocate first to previously taxed earnings and profits that are not assigned to the taxable section 962 PTEP subgroup, and then to previously taxed earnings and profits that are assigned to such subgroup.

(5) *Pro rata rule*. In allocating the covered shareholder's share of the

covered distribution to previously taxed earnings and profits that are assigned to a single PTEP group or PTEP groups with the same priority and that relate to the same taxable year and have the same classification for section 962 purposes (*same priority PTEP*), allocate to a pro rata portion of same priority PTEP, determined by multiplying all same priority PTEP by a fraction, the numerator of which is the amount to be allocated to same priority PTEP, and the denominator of which is the amount of same priority PTEP.

(f) *Dollar basis rule*. The dollar basis of previously taxed earnings and profits distributed in a covered shareholder's share of a covered distribution (determined under paragraph (d)(2) of this section) is computed separately with respect to previously taxed earnings and profits relating to a single dollar basis pool, and in each case is equal to a pro rata portion of the dollar basis pool immediately before the covered distribution. The pro rata portion is determined by multiplying all basis in the dollar basis pool by a fraction, the numerator of which is previously taxed earnings and profits distributed in the covered shareholder's share of the covered distribution and relating to the dollar basis pool, and the denominator of which is all previously taxed earnings and profits relating to the dollar basis pool.

(g) *Associated foreign income taxes rule*. The foreign income taxes that are associated with previously taxed earnings and profits distributed in a covered shareholder's share of a covered distribution (determined under paragraph (d)(2) of this section) are computed separately with respect to previously taxed earnings and profits relating to a single PTEP tax pool, and in each case are equal to a pro rata portion of the PTEP tax pool immediately before the covered distribution. The pro rata portion is determined by multiplying all foreign income taxes in the PTEP tax pool by a fraction, the numerator of which is previously taxed earnings and profits distributed in the covered shareholder's share of the covered distribution and relating to the PTEP tax pool, and the denominator of which is all previously taxed earnings and profits relating to the PTEP tax pool. Thus, associated foreign income taxes are sourced pro rata from foreign income taxes assigned to the creditable PTEP tax group in the PTEP tax pool and other foreign income taxes in the PTEP tax pool.

■ **Par. 22.** Sections 1.959–5 through 1.959–12 are added to read as follows:

Sec.

* * * * *

1.959–5 Exclusion of a section 956 amount from gross income to the extent allocated to previously taxed earnings and profits.

1.959–6 Allocating and apportioning current year taxes to previously taxed earnings and profits of a foreign corporation.

1.959–7 General successor transactions.

1.959–8 and 1.959–9 [Reserved]

1.959–10 Examples.

1.959–11 Transition rules.

1.959–12 Applicability dates.

* * * * *

§ 1.959–5 Exclusion of a section 956 amount from gross income to the extent allocated to previously taxed earnings and profits.

(a) *Scope*. This section provides rules for previously taxed earnings and profits to which a section 956 amount is allocated. Paragraph (b) of this section defines a section 956 amount. Paragraph (c) of this section describes rules for analyzing a section 956 amount, including rules for determining the extent to which a section 956 amount is excluded from gross income under section 959(a)(2). Paragraph (d) of this section provides rules for allocating a section 956 amount to previously taxed earnings and profits. Paragraph (e) of this section provides a dollar basis rule. Paragraph (f) of this section provides an associated foreign income taxes rule. See § 1.959–10(c)(4) (*Example 4*) for an example illustrating the application of this section.

(b) *Section 956 amount*. A *section 956 amount* is the amount determined under section 956 and § 1.956–1 with respect to a covered shareholder and a controlled foreign corporation. A section 956 amount is excluded from gross income in accordance with the rules described in paragraph (c) of this section.

(c) *Rules for analyzing a section 956 amount*—(1) *Determine the portion of the section 956 amount excluded from gross income under section 959(a)(2)*. First, the portion of the section 956 amount that it is allocated to section 959(c)(2) previously taxed earnings and profits, which is determined in accordance with paragraph (d) of this section, is excluded from the covered shareholder's gross income.

(2) *Determine dollar basis and associated foreign income taxes*. Second, determine the dollar basis of, and foreign income taxes associated with, previously taxed earnings and profits to which the section 956 amount is allocated in accordance with paragraphs (e) and (f) of this section.

(3) *Adjust previously taxed earnings and profits and make related account*

adjustments. Third, reassign the controlled foreign corporation's previously taxed earnings and profits to which the section 956 amount is allocated from section 959(c)(2) PTEP groups to section 959(c)(1) PTEP groups, and if applicable increase the controlled foreign corporation's previously taxed earnings and profits assigned to the general section 959(c)(1) PTEP group by reason of section 951(a)(1)(B), to reflect the section 956 amount and make the related adjustments described in § 1.959-3.

(d) *Allocation of section 956 amounts*—(1) *In general.* A covered shareholder's section 956 amount is first allocated to previously taxed earnings and profits of the controlled foreign corporation that are with respect to the covered shareholder and assigned to section 959(c)(2) PTEP groups (determined as described in paragraph (d)(2) of this section)), to the extent thereof and in accordance with the principles of § 1.959-4(e)(2)(iii) through (5). Any remaining portion of the section 956 amount is allocated to the controlled foreign corporation's earnings and profits described in section 959(c)(3).

(2) *Determination of previously taxed earnings and profits.* In applying paragraph (d)(1) of this section, previously taxed earnings and profits are determined on the last relevant day of the controlled foreign corporation's taxable year to which the section 956 amount relates, but are reduced to the extent distributed during the taxable year, and are determined without regard to any transfer of previously taxed earnings and profits from the covered shareholder on (or after) the last relevant day of the taxable year.

(e) *Dollar basis rule.* The dollar basis of previously taxed earnings and profits to which a covered shareholder's section 956 amount is allocated (determined under paragraph (d)(1) of this section) is computed separately with respect to previously taxed earnings and profits relating to a single dollar basis pool, and in each case is equal to a pro rata portion of the dollar basis pool determined in the same manner as previously taxed earnings and profits are determined in paragraph (d)(2) of this section. The pro rata portion is determined by multiplying all basis in the dollar basis pool by a fraction, the numerator of which is previously taxed earnings and profits to which the section 956 amount is allocated and relating to the dollar basis pool, and the denominator of the which is all previously taxed earnings and profits relating to the dollar basis pool.

(f) *Associated foreign income taxes rule.* The foreign income taxes that are associated with previously taxed earnings and profits to which a covered shareholder's section 956 amount is allocated (determined under paragraph (d)(1) of this section) are computed separately with respect to previously taxed earnings and profits relating to a single PTEP tax pool, and in each case are equal to a pro rata portion of the PTEP tax pool determined in the same manner as previously taxed earnings and profits are determined in paragraph (d)(2) of this section. The pro rata portion is determined by multiplying all foreign income taxes in the PTEP tax pool by a fraction, the numerator of which is previously taxed earnings and profits to which the section 956 amount is allocated and relating to the PTEP tax pool, and the denominator of which is all previously taxed earnings and profits relating to the PTEP tax pool. Thus, associated foreign income taxes are sourced pro rata from foreign income taxes assigned to the creditable PTEP tax group in the PTEP tax pool and other foreign income taxes in the PTEP tax pool.

§ 1.959-6 Allocating and apportioning current year taxes to previously taxed earnings and profits of a foreign corporation.

(a) *Scope.* This section provides rules for allocating and apportioning current year taxes for purposes of sections 959 and 960(b). Paragraph (b) of this section provides the general rule for determining which foreign income taxes paid or accrued by a foreign corporation may be allocated and apportioned to previously taxed earnings and profits. Paragraph (c) of this section provides rules for the application of § 1.861-20 to allocate and apportion current year taxes among corporate PTEP accounts. Paragraph (d) of this section provides additional rules regarding the allocation and apportionment of deductions to previously taxed earnings and profits and a currency translation rule. *See* § 1.959-10(c)(3) (*Example 3*) for an example illustrating the application of this section.

(b) *In general.* Current year taxes that a foreign corporation pays or accrues during its taxable year by reason of a PTEP realization event that occurs during the same taxable year are allocated and apportioned to the statutory groupings (as generally described in § 1.861-8(a)(4)) of previously taxed earnings and profits of the foreign corporation and to the residual grouping in accordance with the rules of paragraph (c) of this section. For purposes of this section, the

statutory groupings are the corporate PTEP accounts of the foreign corporation described in § 1.959-2(d)(1). A *PTEP realization event* is an increase to the previously taxed earnings and profits of a foreign corporation by reason of its receipt of a covered distribution (as determined under § 1.959-4) or the application of section 961(c) basis of the foreign corporation to covered gain (as determined under § 1.961-9) during the taxable year, as determined under § 1.959-2(d)(1). Current year taxes that are paid or accrued with respect to a PTEP realization event that occurs in a different taxable year may not be allocated and apportioned to the corporate PTEP accounts of a foreign corporation. *See* § 1.960-1(d)(3)(ii)(B) for rules regarding the assignment of foreign gross income to the statutory and residual groupings of income of a controlled foreign corporation when the controlled foreign corporation pays or accrues current year taxes with respect to a PTEP realization event that occurs in a different taxable year.

(c) *Rules for allocating and apportioning current year taxes to previously taxed earnings and profits.* Allocate and apportion current year taxes that a foreign corporation pays or accrues during its taxable year by reason of a PTEP realization event that occurs during the same taxable year (translated, if applicable, into the foreign corporation's functional currency as described in paragraph (d)(3) of this section) to its statutory groupings of previously taxed earnings and profits and to the residual grouping in accordance with the rules of § 1.861-20. For this purpose, foreign gross income that a foreign corporation includes under foreign law by reason of a distribution that it receives, or by reason of its disposition of stock, is assigned to its statutory groupings of previously taxed earnings and profits by treating previously taxed earnings and profits arising from the distribution or disposition as included in the U.S. dividend amount or the U.S. capital gain amount, respectively, for purposes of applying § 1.861-20(d)(1). For the definitions of U.S. dividend amount and U.S. capital gain amount, *see* § 1.861-20(b).

(d) *Additional rules*—(1) *No deductions other than deductions for current year taxes paid or accrued with respect to a PTEP realization event that occurs in the same taxable year are allocated or apportioned to the statutory groupings of previously taxed earnings and profits of a foreign corporation.* No deductions of a foreign corporation, other than deductions for current year

taxes that the foreign corporation pays or accrues during its taxable year with respect to a PTEP realization event that occurs in the same taxable year, may be allocated or apportioned under section 861 to the statutory groupings of previously taxed earnings and profits of the foreign corporation.

(2) *Currency rule.* For purposes of this section, if current year taxes that a foreign corporation pays or accrues are denominated in a currency other than the foreign corporation's functional currency, then the current year taxes are translated into the foreign corporation's functional currency at the spot rate on the day on which the current year taxes are paid or accrued. See section 986(a) and § 1.986(a)–1 for rules translating current year taxes into U.S. dollars.

§ 1.959–7 General successor transactions.

(a) *Scope.* This section identifies certain transactions in which a foreign corporation's previously taxed earnings and profits with respect to a covered shareholder transfer to (and thus become previously taxed earnings and profits with respect to) another covered shareholder under section 959 (defined as general successor transactions) and provides rules for determining the previously taxed earnings and profits that transfer. Paragraph (b) of this section provides definitions. Paragraph (c) of this section describes rules for analyzing a general successor transaction, including rules for determining previously taxed earnings and profits that transfer in the general successor transaction. Paragraph (d) of this section describes a fraction determining the pro rata portion of certain previously taxed earnings and profits that transfer. Paragraph (e) of this section provides a dollar basis rule. Paragraph (f) of this section provides an associated foreign income taxes rule. Paragraph (g) of this section provides rules regarding the deemed covered shareholder. See § 1.959–10(c)(5) (Example 5) for an example illustrating the application of this section. See also §§ 1.959–8 and 1.959–9, regarding the extent to which previously taxed earnings and profits transfer under section 959 in a transaction other than a general successor transaction.

(b) *General successor transaction*—(1) *In general.* A general successor transaction is any transaction in which a covered shareholder (the *successor covered shareholder*) acquires ownership of stock of one or more foreign corporations (each, an *acquired foreign corporation*) that, immediately before the transaction, is owned by another covered shareholder (the *transferor covered shareholder*),

determined without regard to any portion of an acquisition of ownership of stock that results from a transaction described in paragraph (b)(2) of this section. In a general successor transaction, previously taxed earnings and profits of each acquired foreign corporation transfer from the transferor covered shareholder to the successor covered shareholder (and thus become with respect to the successor covered shareholder) in accordance with the rules described in paragraph (c) of this section.

(2) *Certain transactions.* A transaction is described in this paragraph (b)(2) if the transaction is—

(i) An issuance of stock or a partnership interest,

(ii) A redemption of stock (within the meaning of section 317(b)) or a liquidating distribution in redemption of a partnership interest, or

(iii) A transfer of stock of a foreign corporation, or any property through which stock of a foreign corporation is owned, if such stock or property is substituted basis property.

(3) *Additional consequences.* Upon a general successor transaction, see § 1.961–5 for basis adjustments and § 1.986(c)–1 for recognition of foreign currency gain or loss by the transferor covered shareholder.

(c) *Rules for analyzing a general successor transaction*—(1) *Determine general successor PTEP*—(i) *In general.* First, determine *general successor PTEP*, which for each acquired foreign corporation is computed by multiplying all previously taxed earnings and profits of the acquired foreign corporation that are with respect to the transferor covered shareholder immediately before the general successor transaction by the fraction computed in accordance with paragraph (d) of this section.

(ii) *Previously taxed earnings and profits not eligible to transfer if the general successor transaction is before the last relevant day.* In applying paragraph (c)(1)(i) of this section, if the general successor transaction is before the last relevant day of the acquired foreign corporation's taxable year that includes the general successor transaction, then do not take into account (and thus do not transfer to the successor covered shareholder) any previously taxed earnings and profits that result from an income inclusion of the transferor covered shareholder under section 951(a)(1)(A) or 951A(a) for such taxable year (as accounted for in adjusting annual PTEP accounts pursuant to § 1.959–3(c)(1)(i) and (ii)). For example, if the successor covered shareholder acquires less than all of the transferor covered shareholder's stock of

the acquired foreign corporation, and the transferor covered shareholder continues to own the retained stock on the last relevant day, then any previously taxed earnings and profits resulting from the transferor covered shareholder's income inclusions under section 951(a)(1)(A) and 951A for the acquired foreign corporation's taxable year do not transfer in the general successor transaction.

(2) *Determine section 959(e) successor PTEP.* Second, determine *section 959(e) successor PTEP*, which for each acquired foreign corporation is all the previously taxed earnings and profits of the acquired foreign corporation that, under section 959(e), result from the application of section 1248 to gain recognized by the transferor covered shareholder in the general successor transaction (as accounted for in adjusting annual PTEP accounts pursuant to § 1.959–3(c)(1)(vii)).

(3) *Determine dollar basis and associated foreign income taxes.* Third, determine the dollar basis of, and foreign income taxes associated with, general successor PTEP and section 959(e) successor PTEP in accordance with paragraph (e) of this section.

(4) *Transfer previously taxed earnings and profits and make related account adjustments.* Fourth, transfer general successor PTEP and section 959(e) successor PTEP from the transferor covered shareholder to the successor covered shareholder and make the related adjustments described in § 1.959–3.

(d) *Fraction in determining general successor PTEP*—(1) *In general.* In determining general successor PTEP of an acquired foreign corporation, the fraction described in paragraph (c)(1)(i) of this section is computed as follows. The numerator of the fraction is the portion of the acquired foreign corporation's hypothetical distribution described in paragraph (d)(2) of this section that, under the principles of § 1.951–1(e)(2) through (6), would be distributed with respect to the stock of the acquired foreign corporation the ownership of which is acquired by the successor covered shareholder in the general successor transaction. The denominator of the fraction is the amount of such hypothetical distribution. However, if the denominator of the fraction would be zero, then the fraction is considered to be zero.

(2) *Hypothetical distribution.* The hypothetical distribution described in this paragraph (d)(2) is a hypothetical distribution treated as made by the acquired foreign corporation with respect to stock of the acquired foreign

corporation, immediately before the general successor transaction and in an amount equal to the acquired foreign corporation's previously taxed earnings and profits with respect to the transferor covered shareholder (determined as described in paragraph (c)(1) of this section). In the hypothetical distribution, stock of the acquired foreign corporation is taken into account only to the extent owned by the transferor covered shareholder immediately before the general successor transaction, and the earnings and profits of the acquired foreign corporation are treated as equal to the amount of the hypothetical distribution.

(e) *Dollar basis rule*—(1) *General successor PTEP*. The dollar basis of previously taxed earnings and profits composing general successor PTEP (determined under paragraph (c)(1) of this section) is computed separately with respect to previously taxed earnings and profits relating to a single dollar basis pool, and in each case is equal to a pro rata portion of the dollar basis pool immediately before the general successor transaction. The pro rata portion is determined by multiplying all basis in the dollar basis pool by a fraction, the numerator of which is previously taxed earnings and profits composing general successor PTEP and relating to the dollar basis pool, and the denominator of which is all previously taxed earnings and profits relating to the dollar basis pool.

(2) *Section 959(e) successor PTEP*. The dollar basis of previously taxed earnings and profits composing section 959(e) successor PTEP (determined under paragraph (c)(2) of this section) is equal to the U.S. dollar amount of the income inclusion giving rise to the previously taxed earnings and profits (as accounted for in increasing dollar basis pools pursuant to § 1.959–3(d)(1)(i)).

(f) *Associated foreign income taxes rule*—(1) *General successor PTEP*. The foreign income taxes that are associated with previously taxed earnings and profits composing general successor PTEP (determined under paragraph (c)(1) of this section) are computed separately with respect to previously taxed earnings and profits relating to a single PTEP tax pool, and in each case are equal to a pro rata portion of the PTEP tax pool immediately before the general successor transaction. The pro rata portion is determined by multiplying all foreign income taxes in the PTEP tax pool by a fraction, the numerator of which is previously taxed earnings and profits composing general successor PTEP and relating to the PTEP tax pool, and the denominator of which is all previously taxed earnings and

profits relating to the PTEP tax pool. Thus, associated foreign income taxes are sourced pro rata from foreign income taxes assigned to the creditable PTEP tax group in the PTEP tax pool and other foreign income taxes in the PTEP tax pool.

(2) *Section 959(e) successor PTEP*. The foreign income taxes associated with previously taxed earnings and profits composing section 959(e) successor PTEP (determined under paragraph (c)(2) of this section) are zero.

(g) *Deemed covered shareholder*—(1) *In general*. The *deemed covered shareholder* is a hypothetical person that is treated as owning all the stock of any foreign corporation that is not owned by a covered shareholder. For purposes of transferring previously taxed earnings and profits under section 959, the deemed covered shareholder is treated in the same manner as a covered shareholder and a reference to a covered shareholder includes the deemed covered shareholder. Thus, for example, if a covered shareholder sells stock of a foreign corporation to a nonresident alien individual, then the sale is a general successor transaction and previously taxed earnings and profits of the foreign corporation transfer from the seller covered shareholder to the deemed covered shareholder under this section. Moreover, if the individual subsequently sells stock of the foreign corporation to a covered shareholder, then previously taxed earnings and profits of the foreign corporation (adjusted consistent with § 1.959–3, including to reflect distributions from the foreign corporation to the individual) transfer from the deemed covered shareholder to the buyer covered shareholder under this section.

(2) *Determining previously taxed earnings and profits that transfer from the deemed covered shareholder*. In a transaction in which previously taxed earnings and profits of a foreign corporation transfer from the deemed covered shareholder to a covered shareholder, the covered shareholder must use a reasonable method in determining the amount and character of the transferred previously taxed earnings and profits and in determining the foreign income taxes associated with the transferred previously taxed earnings and profits. Such method must take into account adjustments to previously taxed earnings and profits with respect to the deemed covered shareholder that would have been made under § 1.959–3 if the previously taxed earnings and profits were respect to a covered shareholder.

§§ 1.959–8 and 1.959–9 [Reserved]

§ 1.959–10 Examples.

(a) *In general*. This section provides examples that illustrate the application of §§ 1.959–1 through 1.959–9.

(b) *Assumed facts*. For purposes of the examples in this section, unless otherwise indicated, the following facts are assumed:

(1) US1 and US2 are unrelated domestic corporations that are covered shareholders, each of which uses the U.S. dollar as its functional currency and has a combined pool election in effect under § 1.959–2(c). Neither US1 nor US2 is a member of a consolidated group (as defined in § 1.1502–1(h)).

(2) F1 and F2 are foreign corporations, each of which is a controlled foreign corporation and uses the British pound (£) as its functional currency.

(3) PRS is a partnership.

(4) Each entity uses the calendar year as its taxable year, and no entity has a short taxable year.

(5) Tables depicting annual PTEP accounts, dollar basis pools, or PTEP tax pools do not depict accounts or PTEP groups with a balance of zero.

(c) *Examples*—(1) *Example 1: Exclusion from gross income of previously taxed earnings and profits distributed in a covered distribution*—(i) *Facts*. US1 directly owns all 100 shares of the single class of outstanding stock of F1. In year 3, F1 makes a £300x distribution of money with respect to its stock (£3x with respect to each share), and the entirety of this £300x is a covered distribution (a dividend as defined in section 316, determined without regard to section 959(d)). Immediately before the covered distribution, F1 has £180x of previously taxed earnings and profits with respect to US1, none of which is assigned to the taxable section 962 PTEP group. This example only analyzes the extent to which previously taxed earnings and profits are distributed and excluded from gross income under section 959. See paragraph (c)(2) of this section (*Example 2*) for an illustration of composition, dollar basis, and associated foreign income taxes of distributed previously taxed earnings and profits, along with foreign currency gain or loss under section 986(c) and deemed paid taxes under section 960(b). See also § 1.961–4 (basis reductions and gain recognition for distributions of previously taxed earnings and profits).

(ii) *Analysis*. For purposes of analyzing the covered distribution, US1's share of the covered distribution is the entire £300x because that amount of the covered distribution is made to US1. See § 1.959–4(d)(1). Such share is

allocated first to F1's previously taxed earnings and profits that are with respect to US1 immediately before the covered distribution (£180x) and then to F1's earnings and profits described in section 959(c)(3) and, therefore, is a distribution of £180x of previously taxed earnings and profits and £120x of earnings and profits described in section 959(c)(3). See § 1.959-4(d)(2) and (e)(1). These previously taxed earnings and profits are treated as distributed pro rata with respect to the stock of F1 on which US1's share of the covered distribution is made. See § 1.959-4(d)(4).

Accordingly, £1.8x of previously taxed earnings and profits is treated as distributed with respect to each share of F1 stock, computed by multiplying the £180x distributed previously taxed earnings and profits by a fraction, the numerator of which is the portion of US1's share of the covered distribution that is made with respect to the share of F1 stock (£3x), and the denominator of which is the amount of US1's share of the covered distribution (£300x). See *id.* US1 excludes the £180x of previously taxed earnings and profits distributed to it from its gross income. See § 1.959-4(b)(1); see also § 1.312-8(c) (US1's receipt of previously taxed earnings and profits does not increase its earnings and profits).

(iii) *Alternative facts: split-ownership—(A) Facts.* The facts are the same as in paragraph (c)(1)(i) of this section (*Example 1*), except as follows. US1 owns all the outstanding stock of F2, and US1 directly owns 80%, and F2 directly owns 20%, of the stock of F1. Thus, US1 receives a £240x portion, and F2 receives a £60x portion, of the £300x covered distribution made by F1. Under § 1.951-2, US1 is assigned the entirety of the £60x portion of the covered distribution received by F2.

(B) *Analysis.* For purposes of analyzing the covered distribution, US1's share of the covered distribution is the entire £300x, the sum of the portion of the covered distribution that is made to US1 (£240x) and the portion of the covered distribution that is made to F2 and assigned to US1 under § 1.951-2 (£60x). See § 1.959-4(d)(1). As is the case in paragraph (c)(1)(ii) of this section, such share is treated as a

distribution of £1.8x of previously taxed earnings and profits with respect to each share of F1 stock (and F1's previously taxed earnings and profits with respect to US1 are reduced by the £180x of distributed previously taxed earnings and profits). Accordingly, US1 is treated as receiving £144x of previously taxed earnings and profits (£1.8x × 80 shares of F1 stock directly owned by US1) and F2 is treated as receiving £36x of previously taxed earnings and profits (£1.8x × 20 shares of F1 stock directly owned by F2). US1 excludes the £144x of previously taxed earnings and profits distributed to it from its gross income. See § 1.959-4(b)(1). F2 excludes the £36x of previously taxed earnings distributed to it from its gross income, solely for purposes of determining its subpart F income and tested income or tested loss. See § 1.959-4(b)(2)(i).

(iv) *Alternative facts: partnership-structure—(A) Facts.* The facts are the same as in paragraph (c)(1)(i) of this section (*Example 1*), except as follows. PRS directly owns all the stock of F1. US1 and US2, in the aggregate, directly own all the interests in PRS, and PRS's partnership agreement provides that US1 has a 60% share, and US2 has a 40% share, of any of PRS's items of income, gain, deduction, or loss. The covered distribution made by F1 is equal to £500x (£5x with respect to each share) and thus gives rise to £500x of dividend income to PRS, of which US1 has a £300x distributive share (£500x × 60%) and US2 has a £200x distributive share (£500x × 40%). Immediately before the covered distribution, F1 has no previously taxed earnings and profits with respect to US2.

(B) *Analysis—(1) US1's share of the covered distribution.* US1 is treated as receiving £300x of the covered distribution, equal to its distributive share of the covered distribution. See § 1.959-4(c)(3). Therefore, for purposes of analyzing the covered distribution, US1's share of the covered distribution is £300x (the amount of the covered distribution treated as made to US1). See § 1.959-4(d)(1). For such share, the results are the same as in paragraph (c)(1)(ii) of this section.

(2) *US2's share of the covered distribution.* US2 is treated as receiving

£200x of the covered distribution, equal to its distributive share of the covered distribution. See § 1.959-4(c)(3). Therefore, for purposes of analyzing the covered distribution, US2's share of the covered distribution is £200x (the amount of the covered distribution treated as made to US2). See § 1.959-4(d)(1). The entirety of such share is a distribution of earnings and profits described in section 959(c)(3) because F1 has no previously taxed earnings and profits with respect to US2. See § 1.959-4(d)(2) and (e)(1). US2 excludes none of its £200x distributive share of the covered distribution from its gross income under section 959 because none of the covered distribution received by US2 is previously taxed earnings and profits.

(2) *Example 2: Composition, dollar basis, and associated foreign income taxes of distributed previously taxed earnings and profits—(i) Facts.* US1 directly owns all 100 shares of the single class of outstanding stock of F1. In year 8, F1 makes a £225x distribution of money with respect to its stock (£2.25x with respect to each share), and the entirety of this £225x is a covered distribution. On the day of the covered distribution, the spot rate is \$1:£0.4. Tables 1 through 3 in this paragraph (c)(2)(i) provide F1's previously taxed earnings and profits with respect to US1, determined immediately before the covered distribution and thus reflecting adjustments pursuant to § 1.959-3 for US1's income inclusions under sections 951(a)(1)(A) and 951A (£80x and £70x, respectively) for F1's taxable year ending on December 31 of year 8. Some of the previously taxed earnings and profits are previously taxed earnings and profits that were distributed to F1 by other foreign corporations in earlier years. The adjusted applicable percentage with respect to previously taxed earnings and profits that resulted from section 965(a) or (b) and relate to the general category is 60%, and the section 965(c) deduction percentage with respect to previously taxed earnings and profits that resulted from 965(a) and relate to the general category is 60%.

Other taxes				4x		

(ii) *Analysis*—(A) *Distributed previously taxed earnings and profits*. The entirety of US1's share of the covered distribution (£225x) is allocated to F1's previously taxed earnings and profits that are with respect to US1 immediately before the covered distribution because such previously taxed earnings and profits (£285x, computed as £150x + £75x + £60x, as set forth in table 1 in paragraph (c)(2)(i) of this section), are at least equal to such share. See § 1.959–4(d)(2) and (e)(1). Specifically, US1's share of the covered distribution is allocated first to the £65x of previously taxed earnings and profits assigned to the reclassified section 951A PTEP group, second to the £20x of previously taxed earnings and profits assigned to the section 965(a) PTEP group, and third to the £20x of previously taxed earnings and profits assigned to the section 965(b) PTEP group. See § 1.959–4(e)(2). The remaining portion of US1's share of the covered distribution (£120x, computed as £225x – £65x – £20x – £20x) is allocated pro rata to previously taxed earnings and profits that relate to year 8 and, therefore, is allocated to £40x of previously taxed earnings and profits assigned to the section 951(a)(1)(A)

PTEP group and relating to year 8 and the general category (computed as £50x × £120x/£150x), £24x of previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group and relating to year 8 and the passive category (computed as £30x × £120x/£150x), and £56x of previously taxed earnings and profits assigned to the section 951A PTEP group and relating to year 8 and the section 951A category (computed as £70x × £120x/£150x). See § 1.959–4(e)(3) and (e)(5). US1 excludes the £225x of previously taxed earnings and profits distributed to it from its gross income. See § 1.959–4(b)(1); see also § 1.961–4 (basis reductions and gain recognition for distributions of previously taxed earnings and profits).

(B) *Dollar basis and foreign currency gain or loss*. The dollar basis of previously taxed earnings and profits distributed in US1's share of the covered distribution (described in paragraph (c)(2)(ii)(A) of this section) is computed separately with respect to previously taxed earnings and profits relating to a single dollar basis pool, and in each case is equal to a pro rata portion of the dollar basis pool immediately before the covered distribution (determined by multiplying all basis in the dollar basis pool by a

fraction, the numerator of which is previously taxed earnings and profits distributed in the US1's share of the covered distribution and relating to the dollar basis pool, and the denominator of which is all previously taxed earnings and profits relating to the dollar basis pool). See § 1.959–4(f). Under § 1.986(c)–1, US1 recognizes foreign currency gain or loss with respect to previously taxed earnings and profits distributed to it, determined by translating the previously taxed earnings and profits into U.S. dollars using the spot rate on the day of the covered distribution and then subtracting from that U.S. dollar amount the dollar basis of the previously taxed earnings and profits. US1 does not recognize 60% (the section 965(c) deduction percentage) of the foreign currency gain or loss with respect to the previously taxed earnings and profits relating to the section 965(a) PTEP group. Table 1 in this paragraph (c)(2)(ii)(B) provides computations for dollar basis and foreign currency gain or loss with respect to each group of distributed previously taxed earnings and profits. Thus, US1 recognizes a total of \$8.8x of foreign currency gain and \$28.8x of foreign currency loss.

TABLE 1 TO PARAGRAPH (c)(2)(ii)(B) OF THIS SECTION—DOLLAR BASIS AND FOREIGN CURRENCY (FX) GAIN OR LOSS OF DISTRIBUTED PTEP

Taxable year	§ 904 category					
	General category			Passive category	§ 951A category	
	§ 965(a) PTEP group	§ 965(b) PTEP group	§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	Reclassified § 951A PTEP group	§ 951A PTEP group
Year 8: Distributed PTEP. Dollar basis ... FX gain or loss.			£40x \$100x (\$125x × £40x/ £50x). \$0 (£40x × \$1/ *£0.4 – \$100x).	£24x \$55.2x (\$115x × £24x/ £50x). \$4.8x gain (£24x × \$1 £0.4 – \$55.2x).		£56x \$142.8x (\$204x × £56x/ £80x) \$2.8x loss (£56x × \$1/ £0.4 – \$142.8x)
Year 3: Distributed PTEP. Dollar basis ... FX gain or loss.					£56x. \$188.5x (\$188.5x × £65x/£65x). \$26x loss (£65x × \$1/ £0.4 – \$188.5x).	
Year 1: Distributed PTEP. Dollar basis ... FX gain or loss.	£20x \$40x (\$40x × £20x/£20x). \$4x gain ((£20x × \$1/£0.4 – \$40x) × (100% – 60%)).	£20x. \$40x (\$40x × £20x/£20x). Not applicable.				

(C) *Associated foreign income taxes.* The foreign income taxes that are associated with previously taxed earnings and profits distributed in US1's share of the covered distribution (described in paragraph (c)(2)(ii)(A) of this section) are computed separately with respect to previously taxed earnings and profits relating to a single PTEP tax pool, and in each case are

equal to a pro rata portion of the PTEP tax pool immediately before the covered distribution (determined by multiplying all foreign income taxes in the PTEP tax pool by a fraction, the numerator of which is previously taxed earnings and profits distributed in US1's share of the covered distribution and relating to the PTEP tax pool, and the denominator of which is all previously taxed earnings

and profits relating to the PTEP tax pool). See § 1.959–4(g). Table 1 in this paragraph (c)(2)(ii)(C) provides these computations (and refers to associated foreign income taxes sourced from the creditable PTEP tax group as “creditable taxes” and associated foreign income taxes not sourced from the creditable PTEP tax group as “other taxes”).

TABLE 1 TO PARAGRAPH (c)(2)(ii)(C) OF THIS SECTION—ASSOCIATED FOREIGN INCOME TAXES OF DISTRIBUTED PTEP

Taxable year	§ 904 category					
	General category			Passive category	§ 951A category	
	§ 965(a) PTEP group	§ 965(b) PTEP group	§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	Reclassified § 951A PTEP group	§ 951A PTEP group
Year 8: Distributed PTEP Creditable Taxes Other Taxes			£40x \$0	£24x \$2.9x (\$6x × £24x/ £50x). \$1.9x (\$4x × £24x/ £50x).		£56x. \$2.8x (\$4x × £56x/ £80x).
Year 3: Distributed PTEP Creditable Taxes Other Taxes.					£65x. \$26x (\$26x × £65x/ £65x).	
Year 1: Distributed PTEP Creditable Taxes Other Taxes.	£20x \$10x (\$10x × £20x/ £20x).	£20x. \$10x (\$10x × £20x/ £20x).				

(D) *Deemed paid taxes.* Under section 960(b), because F1 is a controlled foreign corporation in which US1 is a United States shareholder, US1 is deemed to pay the foreign income taxes properly attributable to previously taxed earnings and profits distributed to it,

which are the foreign income taxes that are both associated with the previously taxed earnings and profits and sourced from the creditable PTEP tax group. See § 1.960–3(b). Thus, US1 is deemed to pay \$51.7x of foreign income taxes (\$2.9x + \$2.8x + \$26x + \$10x + \$10x).

Under § 1.965–5(c), US1 is disallowed a credit for 60% (the adjusted applicable percentage) of the foreign income taxes deemed paid with respect to the previously taxed earnings and profits relating to the section 965(a) PTEP group or section 965(b) PTEP group,

with the result that in each case US1 is disallowed a credit for \$6x of the foreign income taxes deemed paid with respect to each of those groups of previously taxed earnings and profits (\$10x × 60%).

(E) *Account adjustments.* To reflect the covered distribution, the distributed previously taxed earnings and profits, the dollar basis of the distributed previously taxed earnings and profits, and the foreign income taxes associated with the distributed previously taxed earnings and profits are removed from US1's annual PTEP accounts, dollar basis pools, and PTEP tax pools with respect to F1. See § 1.959–3(c)(1)(vi), (d)(1)(iv), and (e)(1)(iii). These adjustments are treated as made concurrently with the covered distribution. See § 1.959–3(f). In addition, the distributed previously taxed earnings and profits, and the foreign income taxes associated with distributed previously taxed earnings and profits, are removed from F1's corporate PTEP accounts and corporate PTEP tax pools for US1, and these adjustments are also treated as made concurrently with the covered distribution. See § 1.959–2(d).

(iii) *Alternative facts: distribution of built-in loss property—(A) Facts.* The facts are the same as in paragraph (c)(2)(i) of this section (*Example 2*), except that, in the covered distribution (which continues to be £225x), F1 distributes property other than money. At the time of the covered distribution, the fair market value of the property is £225x and F1's adjusted basis of the property is £250x. Thus, the covered distribution decreases F1's earnings and profits by £250x. See sections 301(b)(1) and 312(a)(3).

(B) *Analysis.* The results are the same as in paragraph (c)(2)(ii) of this section and thus the covered distribution decreases F1's previously taxed earnings and profits by £225x. The remainder of the £250x decrease to F1's earnings and profits under section 312(a)(3) is accounted for by decreasing (including below zero, if applicable) F1's earnings and profits described in section 959(c)(3) by £25x.

(iv) *Alternative facts: distribution to a foreign corporation—(A) Facts.* The facts are the same as in paragraph (c)(2)(i) of this section (*Example 2*),

except as follows. US1 directly owns all the stock of F2, and F2 directly owns all 100 shares of the single class of stock of F1. Thus, F2 receives the entirety of the £225x covered distribution made by F1. Under § 1.951–2, US1 is assigned the entirety of the £225x covered distribution received by F2.

(B) *Analysis.* The results are the same as described in paragraph (c)(2)(ii) of this section, except that F2 excludes the £225x of distributed previously taxed earnings and profits from its gross income in accordance with § 1.959–4(b)(2), US1 does not recognize foreign currency gain or loss with respect to the distributed previously taxed earnings and profits in accordance with § 1.986(c)–1(c), and F2 is deemed to pay the \$51.7x of foreign income taxes that are both associated with the distributed previously taxed earnings and profits and sourced from the creditable PTEP tax group in accordance with § 1.960–3(c). In addition, the distributed previously taxed earnings and profits (£225x), the dollar basis of the distributed previously taxed earnings and profits (\$566.5x), and the foreign income taxes associated with the distributed previously taxed earnings and profits (\$51.7x + \$1.9x = \$53.6x) are added to US1's annual PTEP accounts, dollar basis pools, and PTEP tax pools with respect to F2. See § 1.959–3(c)(1)(iii), (d)(1)(ii), and (e)(1)(i). Only the \$51.7x portion of the associated foreign income taxes that F2 is deemed to pay are assigned to the creditable PTEP tax group within US1's PTEP tax pools with respect to F2. See § 1.959–3(e)(1)(i). These adjustments are treated as made at the beginning of F2's taxable year ending on December 31 of year 8. See § 1.959–3(f). In addition, the distributed previously taxed earnings and profits, and the foreign income taxes associated with the distributed previously taxed earnings and profits, are added to F2's corporate PTEP accounts and corporate PTEP tax pools for US1, and these adjustments are also treated as made at the beginning of F2's taxable year ending on December 31 of year 8. See § 1.959–2(d).

(3) *Example 3: Current year taxes imposed on a covered distribution—(i) Facts.* US1 directly owns 60%, and US2 directly owns 40%, of the single class of

outstanding stock of F2. F2 owns all the outstanding stock of F1. In year 3, F1 makes a £500x covered distribution to F2. Foreign withholding taxes of £75x (£500x × 15%) are paid on the covered distribution. F2 takes foreign income taxes into account when paid, the withholding taxes meet the definition of current year taxes for F2's taxable year ending on December 31 of year 3, and, other than pursuant to section 245A(d), no credits for taxes are disallowed or suspended at the level of F2. On the day of the covered distribution, the spot rate is \$1:£0.5. Under § 1.959–4, the entirety of US1's £300x share of the covered distribution (£500x × 60%) is a distribution of F1's previously taxed earnings and profits with respect to US1, and none of US2's £200x share of the covered distribution (£500x × 40%) is a distribution of previously taxed earnings and profits. The distributed previously taxed earnings and profits consist of £120x of previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group and relating to year 2 and the passive category (*Character A PTEP*), £80x of previously taxed earnings and profits assigned to the section 245A(d) PTEP group and relating to year 2 and the passive category (*Character B PTEP*), £70x of previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group and relating to year 1 and the general category (*Character C PTEP*), and £30x of previously taxed earnings and profits assigned to the section 951(a)(1)(A) PTEP group and relating to year 1 and the passive category (*Character D PTEP*), as summarized in table 1 in this paragraph (c)(3)(i). This example only analyzes the allocation and apportionment of the current year taxes and related adjustments to previously taxed earnings and profits accounts. See also § 1.959–4 (exclusion from gross income of previously taxed earnings and profits received in a distribution); § 1.986(c)–1(c) (no foreign currency gain or loss recognized in distributions of previously taxed earnings and profits to a foreign corporation); § 1.961–4 (basis reductions and gain recognition for distributions of previously taxed earnings and profits).

TABLE 1 TO PARAGRAPH (c)(3)(i) OF THIS SECTION—DISTRIBUTED PTEP

Taxable year	§ 904 category		
	General category	Passive category	
	§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group
Year 2		£120x (Character A)	£80x (Character B).

TABLE 1 TO PARAGRAPH (c)(3)(i) OF THIS SECTION—DISTRIBUTED PTEP—Continued

Taxable year	§ 904 category		
	General category	Passive category	
	§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group
Year 1	£70x (Character C)	£30x (Character D).	

(ii) *Analysis*—(A) *In general.* As a result of the covered distribution, which is a PTEP realization event, F2 has £300x of previously taxed earnings and profits with respect to US1 and £0 of previously taxed earnings and profits with respect to US2. The foreign gross income that F2 includes by reason of its receipt of the covered distribution is assigned to the statutory groupings, which are described in § 1.959–2(d)(1), and residual grouping by treating the previously taxed earnings and profits arising from such distribution as included in the U.S. dividend amount for purposes of § 1.861–20(d)(1). *See* § 1.959–6(c). The relevant statutory groupings are F2’s corporate PTEP accounts that were increased by reason of its receipt of a covered distribution which was previously taxed earnings and profits with respect to US1 and the remaining portion of the covered distribution is assigned to the residual income grouping. *See id.* The £75x of current year taxes imposed on the covered distribution is allocated and apportioned to the previously taxed earnings and profits (US1’s share of the covered distribution) and the residual income grouping (US2’s share of the covered distribution) pro rata, with the

result that £45x (£75x × £300x/£500x) is allocated and apportioned to previously taxed earnings and profits arising from the covered distribution and the remaining £30 (£75x × £200x/£500x) is assigned to the residual income grouping. *See id.*

(B) *Allocation and apportionment of current year taxes among PTEP groups.* The £45x of current year taxes allocated and apportioned to the previously taxed earnings and profits arising from the PTEP realization event with respect to US1 is further allocated and apportioned among the section 904 categories and PTEP groups within each corporate PTEP account that is increased by reason of F2’s PTEP realization event. *See* § 1.959–6(b) and (c). Accordingly, £18x of current year taxes is allocated and apportioned to Character A PTEP (£45x × £120x/£300x), £12x of current year taxes is allocated and apportioned to Character B PTEP (£45x × £80x/£300x), £10.5x of current year taxes is allocated and apportioned to Character C PTEP (£45x × £70x/£300x), and £4.5x of current year taxes is allocated and apportioned to Character D PTEP (£45x × £30x/£300x), each within F2’s corporate PTEP account with respect to US1.

(C) *Account adjustments*—(1) *Shareholder-level accounts.* After the current year taxes are allocated and apportioned to the corporate PTEP accounts of F2 with respect to US1, the previously taxed earnings and profits in US1’s PTEP groups within its annual PTEP accounts are reduced to reflect the current year taxes allocated and apportioned to the corresponding PTEP groups of F2. *See* § 1.959–3(c)(1)(v). These adjustments are treated as made at the beginning of F2’s taxable year ending on December 31 of year 3. *See* § 1.959–3(f). Concurrently with this reduction, US1’s dollar basis pools with respect to F2 are reduced by \$90x, the U.S. dollar amount of the reduction that reflects the current year taxes allocated and apportioned to the distributed previously taxed earnings and profits (£45x × \$1/£0.5), and \$90x of current year taxes is added to US1’s PTEP tax pools with respect to F2. *See* § 1.959–3(d)(1)(iii) and (d)(2), (e)(1)(ii) and (e)(2); *see also* section 986(a) and § 1.986(a)–1 (translation of foreign income taxes into U.S. dollars). Tables 1 through 3 in this paragraph (c)(3)(ii)(C) summarize the adjustments to US1’s accounts to reflect the current year taxes.

TABLE 1 TO PARAGRAPH (c)(3)(ii)(C)(1) OF THIS SECTION—US1’S ANNUAL PTEP ACCOUNTS WITH RESPECT TO F2—ADJUSTMENTS FOR CURRENT YEAR TAXES

Taxable year	§ 904 category		
	General category	Passive category	
	§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group
Year 2		£18x reduction	£12x reduction.
Year 1	£10.5x reduction	£4.5x reduction.	

TABLE 2 TO PARAGRAPH (c)(3)(ii)(C)(1) OF THIS SECTION—US1’S DOLLAR BASIS POOLS WITH RESPECT TO F2 (COMBINED POOL ELECTION)—ADJUSTMENTS FOR CURRENT YEAR TAXES

§ 904 category		
General category	Passive category	
§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group
\$21x reduction (£10.5x × \$1/£0.5)	\$45x reduction ((£18x + £4.5x) × \$1/£0.5)	\$24x reduction (£12x × \$1/£0.5).

TABLE 3 TO PARAGRAPH (c)(3)(ii)(C)(1) OF THIS SECTION—US1'S PTEP TAX POOLS WITH RESPECT TO F2 (COMBINED POOL ELECTION)—ADJUSTMENTS FOR CURRENT YEAR TAXES

	§ 904 category		
	General category	Passive category	
	§ 951(a)(1)(A) PTEP group	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group
Creditable PTEP tax group	\$21x increase (£10.5x × \$1/£0.5)	\$45x increase ((£18x + £4.5x) × \$1/£0.5).	
Other taxes			\$24x increase (£12x × \$1/£0.5).

(2) *Corporate-level accounts.*

Concurrently with the adjustments described in paragraph (c)(3)(ii)(C)(1) of this section, the previously taxed earnings and profits in F2's corporate PTEP accounts for US1 are reduced by £45x and the foreign income taxes in F2's corporate PTEP tax pools for US1 are increased by \$90x. See § 1.959–2(d).

(4) *Example 4: Section 956 amount—(i) Facts.* Individual A, a citizen of the United States, owns all the outstanding stock of F1 and does not make an election to apply the provisions of section 962 for any taxable year. For F1's taxable year ending on December 31 of year 3, the last relevant day is December 31 and Individual A's section 956 amount (amount determined under section 956 and § 1.956–1) is £200x. At the beginning of the last relevant day, F1 has £125x of previously taxed earnings and profits with respect to Individual A, all of which relate to F1's taxable year ending on December 31 of year 1 and are assigned to section 959(c)(2) PTEP groups. On the last relevant day, F1 makes a £75x covered distribution to Individual A, the entirety of which is allocated to (and thus is a distribution of) F1's previously taxed earnings and profits with respect to Individual A under § 1.959–4. This example only analyzes the extent to which the section 956 amount is allocated to previously taxed earnings and profits and excluded from gross income under section 959, along with related adjustments to annual PTEP accounts. See also § 1.959–3(d) and (e) (related adjustments to dollar basis pools and PTEP tax pools).

(ii) *Analysis—(A) Allocation to previously taxed earnings and profits.* Individual A's section 956 amount is first allocated to F1's previously taxed earnings and profits that are with respect to Individual A and assigned to section 959(c)(2) PTEP groups on the last relevant day, but reduced to reflect the covered distribution (£50x, computed as £125x – £75x). See § 1.959–5(c)(1) and (d). The £50x portion of the section 956 amount allocated to previously taxed earnings and profits is excluded from Individual

A's gross income. See § 1.959–5(c)(1). Under section 951(a)(1)(B), Individual A includes the remaining £150x of the section 956 amount (translated into U.S. dollars in accordance with section 989(b)) in its gross income.

(B) *Annual PTEP account adjustments.* To reflect the section 956 amount, the £50x of previously taxed earnings and profits to which the section 956 amount is allocated are reassigned from section 959(c)(2) PTEP groups to section 959(c)(1) PTEP groups within Individual A's annual PTEP accounts relating to F1's taxable year ending on December 31 of year 1, and then £150x of previously taxed earnings and profits are added to Individual A's annual PTEP accounts relating to F1's taxable year ending on December 31 of year 3, where they are assigned to the general section 959(c)(1) PTEP group. See § 1.959–3(c)(1)(x) and (xi). These adjustments are treated as made at the end of the last day of F1's taxable year ending on December 31 of year 3. See § 1.959–3(f)(1).

(5) *Example 5: General successor transaction—(i) Facts.* US1 directly owns all 100 shares of the single class of outstanding stock of F1. On June 30 of year 3, US1 sells 40 shares of stock of F1 to US2 for money equal to the fair market value of the shares. Section 304 does not apply to the sale. Immediately before the sale, F1 has £180x of previously taxed earnings and profits with respect to US1, none of which resulted from an income inclusion of US1 for F1's taxable year ending on December 31 of year 3 under section 951(a)(1)(A) or 951A(a) because F1 has no subpart F income or tested income for such taxable year. As a result of gain that US1 recognizes on the sale and includes in gross income as a dividend under section 1248(a) by reason of F1's earnings and profits described in section 959(c)(3), F1's previously taxed earnings and profits with respect to US1 are increased by £20x under section 959(e) and § 1.959–3(c)(1)(vii), concurrently with the sale. This example only discusses the extent to which previously taxed earnings and profits transfer under section 959. See also § 1.959–3

(related adjustments to annual PTEP accounts, dollar basis pools, and PTEP tax pools); § 1.986(c)–1 (recognition of foreign currency gain or loss with respect to transferred previously taxed earnings and profits).

(ii) *Analysis—(A) In general.* The sale is a general successor transaction in which F1 is an acquired foreign corporation, US1 is the transferor covered shareholder, and US2 is the successor covered shareholder. See § 1.959–7(b)(1). As described in paragraphs (c)(5)(ii)(B) and (C) of this section, there is £72x of general successor PTEP and £20x of section 959(e) successor PTEP. Such previously taxed earnings and profits transfer from US1 to US2, concurrently with the general successor transaction. See § 1.959–3(f)(1).

(B) *General successor PTEP.* General successor PTEP is a pro rata portion of F1's previously taxed earnings and profits that are with respect to US1 immediately before the general successor transaction (£180x), determined by multiplying all such previously taxed earnings and profits by 40%, which is the percentage of a £180x hypothetical distribution treated as made by F1 immediately before the general successor transaction that would be distributed with respect to stock of F1 that US2 acquires in the general successor transaction. See § 1.959–7(c)(1)(i) and (d). Thus, there is £72x of general successor PTEP, sourced pro rata from each PTEP group within each of US1's annual PTEP accounts with respect to F1. See also § 1.959–7(e)(1) and (f)(1) (rules for determining the dollar basis and associated foreign income taxes of general successor PTEP).

(C) *Section 959(e) successor PTEP.* Section 959(e) successor PTEP is all £20x of F1's previously taxed earnings and profits with respect to US1 that, under section 959(e), result from the application of section 1248 to gain recognized by US1 in the general successor transaction. See § 1.959–7(c)(2); see also § 1.959–7(e)(2) and (f)(2) (providing the dollar basis of section 959(e) successor PTEP, and providing

that the foreign income taxes associated with section 959(e) successor PTEP is zero).

(iii) *Alternative facts: previously taxed earnings and profits not eligible to transfer—(A) Facts.* The facts are the same as in paragraph (c)(5)(i) of this section (*Example 5*), except as follows. F1 has £10x of subpart F income for its taxable year ending on December 31 of year 3 and thus US1 includes £6x (£10x × 60% of stock of F1 retained by US1) in its gross income for such taxable year under section 951(a)(1)(A). Consequently, F1 has an additional £6x of previously taxed earnings and profits with respect to US1 immediately before the sale.

(B) *Analysis.* The results are the same as described in paragraph (c)(5)(ii) of this section. None of the additional £6x of previously taxed earnings and profits transfer to US2 because the general successor transaction is before December 31 of year 3, the last relevant day of F1's taxable year that includes the general successor transaction. See § 1.959–7(c)(1)(ii).

(iv) *Alternative facts: deemed covered shareholder—(A) Facts.* The facts are the same as in paragraph (c)(5)(i) of this section (*Example 5*), except that the purchaser of the shares of stock of F1 is a nonresident alien individual (Individual B).

(B) *Analysis.* The results are the same as described in paragraph (c)(5)(ii) of this section, applied by substituting *the deemed covered shareholder* (who is a hypothetical person treated as owning all the stock of F1 owned by Individual B) for *US2*. See § 1.959–7(g). Thus, if a covered shareholder subsequently acquires a portion of Individual B's stock of F1, then a portion of F1's previously taxed earnings and profits with respect to the deemed covered shareholder (adjusted consistent with § 1.959–3, including to reflect any distributions from F1 to Individual B) transfer from the deemed covered shareholder to the acquirer covered shareholder.

§ 1.959–11 Transition rules.

(a) *Scope.* This section sets forth transition rules for the section 959 regulations. Paragraph (b) of this section addresses the establishment of annual PTEP accounts, dollar basis pools, and corporate PTEP accounts and provides for adjustments to reflect the transition tax under section 965. Paragraph (c) of this section addresses the establishment of PTEP tax pools, corporate PTEP tax pools, adjusted applicable percentages, and section 965(c) deduction percentages. Paragraph (d) of this section treats a domestic partnership

(including an S corporation) as a covered shareholder for periods in which § 1.958–1(d)(1) does not apply. Paragraph (e) converts accounts of a domestic partnership (including an S corporation) to accounts of covered shareholders owning interests in the domestic partnership when both § 1.958–1(d)(1) and the section 959 regulations apply.

(b) *Establishing annual PTEP accounts, dollar basis pools, and corporate PTEP accounts and adjustments for section 965 transition tax—(1) In general.* When applying the 2019 notice provisions pursuant to § 1.959–12(c) (interim application of 2019 notice provisions), or the section 959 regulations (other than §§ 1.959–8 and 1.959–9) pursuant to § 1.959–12(d) (optional early application), to a taxable year of a foreign corporation, annual PTEP accounts, dollar basis pools, and corporate PTEP accounts are established and adjusted in accordance with the rules described in paragraphs (b)(2) and (3) of this section.

(2) *Establishment of accounts—(i) In general.* As of the beginning of the first taxable year of the foreign corporation to which the 2019 notice provisions apply, or, if earlier, the first taxable year of the foreign corporation to which the section 959 regulations (other than §§ 1.959–8 and 1.959–9) apply, a reasonable method (consistently applied) must be used to establish annual PTEP accounts, dollar basis pools, and corporate PTEP accounts reflecting the foreign corporation's previously taxed earnings and profits, including to reflect adjustments to previously taxed earnings and profits that would have been made if the principles of §§ 1.959–2 through 1.959–5 and 1.959–7 were to have previously applied. Establishing accounts in accordance with the preceding sentence includes conforming any of a covered shareholder's existing previously taxed earnings and profits accounts with respect to the foreign corporation, or dollar basis accounts with respect to the previously taxed earnings and profits, to the requirements of § 1.959–2. In addition, a covered shareholder is treated as consistently applying a reasonable method only if the covered shareholder and any covered shareholders with which the covered shareholder joins in filing a Federal income tax return apply that method with respect to all foreign corporations in which the covered shareholders own stock.

(ii) *Multi-year accounts—(A) Previously taxed earnings and profits.* To the extent a covered shareholder has an account reflecting previously taxed earnings and profits of the foreign

corporation that relate to two or more taxable years and are described in the next sentence (*multi-year PTEP account*), a reasonable method to conforming the multi-year PTEP account to the requirements of § 1.959–2 includes treating such previously taxed earnings and profits as assigned to the general section 959(c)(1) PTEP group or the section 951(a)(1)(A) PTEP group (as applicable) within an annual PTEP account that relates to the last taxable year of the foreign corporation ending on or before December 31, 2017, and the section 904 category to which the multi-year PTEP account relates. Previously taxed earnings and profits are described in this sentence to the extent they are described in section 959(c)(1)(A) by reason of section 951(a)(1)(B) and not by reason of section 959(a)(2); described in section 959(c)(1)(B), including by reason of section 959(a)(3) (before its repeal); or described in section 959(c)(2) by reason of section 951(a)(1)(A) and without regard to section 965(a), 965(b)(4)(A), 951A(f)(2), 245A(e)(2), 959(e), or 964(e)(4).

(B) *Dollar basis.* To the extent a covered shareholder has an account reflecting the dollar basis of previously taxed earnings and profits of the foreign corporation that relate to two or more taxable years (*multi-year dollar basis account*), a reasonable method for conforming the multi-year dollar basis account to the requirements of § 1.959–2 includes treating previously taxed earnings and profits to which the multi-year dollar basis account relates as having a dollar basis equal to a pro rata portion of the multi-year dollar basis account, and placing that dollar basis into the related dollar basis pool. The pro rata portion is determined by multiplying the multi-year dollar basis account by a fraction, the numerator of which is previously taxed earnings and profits to which the multi-year dollar basis account relates, and the denominator of which is all previously taxed earnings and profits to which the multi-year dollar basis account relates.

(3) *Adjustments for section 965 transition tax—(i) Increases for amounts included in gross income under section 951(a)(1)(A) by reason of section 965(a).* When adding previously taxed earnings and profits to annual PTEP accounts to reflect an amount a covered shareholder includes in gross income under section 951(a)(1)(A) with respect to the foreign corporation by reason of section 965(a), assign such previously taxed earnings and profits to the section 965(a) PTEP group (rather than the section 951(a)(1)(A) PTEP group).

(ii) *Increases for section 965(b) reductions.* For purposes of adjusting

annual PTEP accounts and dollar basis pools, treat an amount that a covered shareholder would have included in gross income under section 951(a)(1)(A) with respect to the foreign corporation but for section 965(b) and § 1.965–1(b)(2) or 1.965–8(b), as applicable, as included in the covered shareholder's gross income under section 951(a)(1)(A) with respect to the foreign corporation, and assign previously taxed earnings and profits resulting from such treatment to the section 965(b) PTEP group (rather than the section 951(a)(1)(A) PTEP group).

(c) *Establishing PTEP tax pools, corporate PTEP tax pools, adjusted applicable percentages, and section 965(c) deduction percentages*—(1) *In general.* As of the beginning of the first taxable year of a foreign corporation to which the section 959 regulations (other than §§ 1.959–8 and 1.959–9) apply pursuant to § 1.959–12(b) (general applicability date) or, if applicable, § 1.959–12(d) (optional early application), PTEP tax pools, corporate PTEP tax pools, adjusted applicable percentages, and section 965(c) deduction percentages reflecting the foreign corporation's previously taxed earnings and profits must be established in accordance with the rules described in paragraphs (c)(2) through (4) of this section.

(2) *PTEP tax pools and corporate PTEP tax pools.* PTEP tax pools and corporate PTEP tax pools are established by adding a pro rata portion of the foreign corporation's prior-law PTEP group taxes with respect to a prior-law PTEP group (defined in this paragraph (c)(2)) to each PTEP tax pool with respect to the foreign corporation, determined by multiplying such prior-law PTEP group taxes by a fraction. The numerator of the fraction is the balance of the prior-law PTEP group that is previously taxed earnings and profits relating to the PTEP tax pool, and the denominator of the fraction is the balance of the prior-law PTEP group. For purposes of this paragraph (c)(2), *prior-law PTEP group taxes and prior-law PTEP groups* mean PTEP group taxes and PTEP groups, respectively, as defined in § 1.960–3 as contained in 26 CFR part 1 revised as of April 1, 2024.

(3) *Adjusted applicable percentage.* An adjusted applicable percentage is established with respect to all of the foreign corporation's previously taxed earnings and profits assigned to the reclassified section 965(a) PTEP group, reclassified section 965(b) PTEP group, section 965(a) PTEP group, and section 965(b) PTEP group within a covered shareholder's annual PTEP accounts relating to the same section 904 category

by calculating a weighted average of the applicable percentages (as defined in § 1.965–5(d)) with respect to the previously taxed earnings and profits. The weighted average is determined as the sum of the product of each such applicable percentage and the amount of previously taxed earnings and profits to which the applicable percentage relates, divided by the sum of the amount of previously taxed earnings and profits described in the preceding sentence. For purposes of this paragraph (c)(3), applicable percentages and previously taxed earnings and profits are determined as of the beginning of the taxable year.

(4) *Section 965(c) deduction percentage.* A section 965(c) deduction percentage is established with respect to all of the foreign corporation's previously taxed earnings and profits assigned to the reclassified section 965(a) PTEP group and section 965(a) PTEP group within a covered shareholder's annual PTEP accounts relating to the same section 904 category by calculating a weighted average of the percentages for which foreign currency gain or loss recognized under section 986(c) with respect to distributions of the previously taxed earnings and profits would be reduced under § 1.986(c)–1 as contained in 26 CFR part 1 revised as of April 1, 2024. The weighted average is determined as the sum of the product of each such percentage and the amount of previously taxed earnings and profits to which the percentage relates, divided by the sum of the amount of previously taxed earnings and profits described in the preceding sentence. For purposes of this paragraph (c)(4), percentages for which foreign currency gain or loss would be reduced under § 1.986(c)–1 and previously taxed earnings and profits are determined as of the beginning of the taxable year.

(d) *Treatment of domestic partnerships (including S corporations) before application of § 1.958–1(d)(1).*

For purposes of the section 959 regulations, a domestic partnership (including an S corporation) is treated as a covered shareholder for any taxable year of the domestic partnership to which § 1.958–1(d)(1) does not apply. If a domestic partnership is treated as a covered shareholder, then rules regarding distributions of previously taxed earnings and profits apply to the domestic partnership in its capacity as a covered shareholder before those rules apply to covered shareholders that own interests in the domestic partnership. In such a case, for example, a covered distribution made to the domestic partnership is first a distribution of the

distributing foreign corporation's previously taxed earnings and profits with respect to the partnership and then, to the extent remaining, a distribution of the distributing foreign corporation's previously taxed earnings and profits with respect to covered shareholders owning interests in the partnership.

(e) *Converting domestic partnership-level (including S corporation-level) accounts to partner-level accounts after the application of § 1.958–1(d)(1)—(1) In general.* As of the beginning of the first taxable year of a domestic partnership (including an S corporation) to which both § 1.958–1(d)(1) and the section 959 regulations (other than §§ 1.959–8 and 1.959–9) apply (pursuant to § 1.959–12(c) (general applicability date) or (d) (optional early application)), the domestic partnership's accounts described in § 1.959–2 with respect to a foreign corporation are converted to accounts of covered shareholders owning interests in the partnership in accordance with the rules described in paragraphs (e)(2) through (4) of this section.

(2) *Rules for converting accounts*—(i) *Allocate previously taxed earnings and profits to each covered shareholder*—(A) *In general.* First, allocate a pro rata portion of the foreign corporation's previously taxed earnings and profits with respect to the domestic partnership to each covered shareholder owning an interest in the partnership at the beginning of the taxable year, determined by multiplying all the foreign corporation's previously taxed earnings and profits with respect to the partnership by a fraction. The numerator of the fraction is the liquidation value of the covered shareholder's interest in the partnership, and the denominator of the fraction is the aggregate liquidation value of all partners' interests in the partnership (determined in each case under paragraph (e)(2)(i)(B) of this section).

(B) *Liquidation value.* For purposes of this paragraph (e)(2)(i), the liquidation value of a partner's interest in the partnership is the amount of cash the partner would receive with respect to the interest if, at the beginning of the taxable year, the partnership (and any partnership through which the partner indirectly owns an interest in the partnership) sold all of its property for an amount of cash equal to the fair market value of the property (taking into account section 7701(g)), satisfied all of its liabilities (other than those described in § 1.752–7), paid an unrelated third party to assume all of its § 1.752–7 liabilities in a fully taxable transaction,

and then the partnership (and any partnership through which the partner indirectly owns an interest in the partnership) liquidated. Moreover, any change to a partnership agreement made with a principal purpose of altering the allocation of previously taxed earnings and profits under this paragraph (e)(2)(i) is disregarded.

(ii) *Compute dollar basis and associated foreign income taxes.* Second, treat the dollar basis of, or foreign income taxes associated with, previously taxed earnings and profits allocated to each covered shareholder as the same as what would be the dollar basis of, or foreign income taxes associated with, the previously taxed earnings and profits under § 1.959–4 if the previously taxed earnings and profits were distributed at the beginning of the taxable year.

(iii) *Eliminate the domestic partnership's accounts and increase covered shareholders' accounts.* Third, eliminate the domestic partnership's annual PTEP accounts, dollar basis pools, and PTEP tax pools with respect to the foreign corporation. Concurrently with such eliminations, increase each covered shareholder's annual PTEP accounts, dollar basis pools, and PTEP tax pools with respect to the foreign corporation to reflect the foreign corporation's previously taxed earnings and profits that are allocated to the covered shareholder or the dollar basis of, or foreign income taxes associated with, the previously taxed earnings and profits, as applicable.

(3) *Coordination with section 986(c).* No foreign currency gain or loss is recognized with respect to previously

taxed earnings and profits under section 986(c) as a result of previously taxed earnings and profits ceasing to be with respect to the domestic partnership pursuant to this paragraph (e) (notwithstanding § 1.986(c)–1).

(4) *Coordination with deemed covered shareholder rules.* The portion, if any, of the foreign corporation's previously taxed earnings and profits with respect to the domestic partnership that does not give rise to an increase to a covered shareholder's annual PTEP accounts with respect to the foreign corporation under paragraph (e)(1) of this section becomes previously taxed earnings and profits of the foreign corporation with respect to the deemed covered shareholder for purposes of subsequently transferring the previously taxed earnings and profits under section 959. See § 1.959–7(g) for rules regarding the deemed covered shareholder.

§ 1.959–12 Applicability dates.

(a) *Scope.* This section sets forth applicability dates for the section 959 regulations. Paragraph (b) of this section provides the general applicability dates. Paragraph (c) of this section provides interim application for certain provisions. Paragraph (d) of this section allows early application.

(b) *In general.* Sections 1.959–1 through 1.959–7 and 1.959–10 and 1.959–11 apply to taxable years of foreign corporations beginning on or after [date of publication of final regulations in the **Federal Register**] and to taxable years of persons for which such taxable years of those foreign corporations are relevant.

(c) *Interim application of 2019 notice provisions—*(1) *In general.* For taxable

years of United States shareholders (and successors in interest) ending after December 14, 2018, and to which §§ 1.959–1 through 1.959–7 and 1.959–10 and 1.959–11 do not apply pursuant to paragraph (b) or (d) of this section, and taxable years of foreign corporations ending with or within such taxable years, the 2019 notice provisions (defined in paragraph (c)(2) of this section) and § 1.959–11 apply.

(2) *2019 notice provisions.* The 2019 notice provisions means §§ 1.959–1(c) (treatment of an S corporation), 1.959–2 (accounting of previously taxed earnings and profits), 1.959–3 (adjustments to shareholder-level accounts and, consequently, foreign corporation-level accounts), 1.959–4(e) and 1.959–5(d) (allocation of distributions and section 956 amounts), and the relevant definitions in § 1.959–1(b), along with treating previously taxed earnings and profits as distributed under section 959 only to the extent that the distribution is a dividend (as defined in section 316), determined without regard to section 959(d). For purposes of applying the 2019 notice provisions, the PTEP groups listed in the following table may be used in lieu of the PTEP groups listed in § 1.959–2, the portions of §§ 1.959–2 and 1.959–3 relating to PTEP tax pools, corporate PTEP tax pools, adjusted applicable percentages, and section 965(c) deduction percentages do not apply, and the portions of §§ 1.959–3 through 1.959–5 and 1.959–7 relating to the timing of adjustments and determinations do not apply.

TABLE 1 TO PARAGRAPH (C)(2) OF THIS SECTION—2019 NOTICE PTEP GROUPS

Section 959(c)(1) PTEP groups		Section 959(c)(2) PTEP groups	
Group	Description	Group	Description
<i>Reclassified section 965(a) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 965(a).	<i>Section 965(a) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 965(a).
<i>Reclassified section 965(b) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 965(b)(4)(A).	<i>Section 965(b) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 965(b)(4)(A).
<i>Section 951(a)(1)(B) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) by reason of section 951(a)(1)(B) and not by reason of section 959(a)(2).		
<i>Reclassified section 951A PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 951A(f)(2).	<i>Section 951A PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 951A(f)(2).
<i>Reclassified section 245A(e)(2) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 245A(e)(2).	<i>Section 245A(e)(2) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 245A(e)(2).
<i>Reclassified section 959(e) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 959(e).	<i>Section 959(e) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 959(e).
<i>Reclassified section 964(e)(4) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 964(e)(4).	<i>Section 964(e) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 964(e)(4).

TABLE 1 TO PARAGRAPH (c)(2) OF THIS SECTION—2019 NOTICE PTEP GROUPS—Continued

Section 959(c)(1) PTEP groups		Section 959(c)(2) PTEP groups	
Group	Description	Group	Description
<i>Reclassified section 951(a)(1)(A) PTEP group.</i>	Earnings and profits described in section 959(c)(1)(A) that were initially described in section 959(c)(2) by reason of section 951(a)(1)(A) and not described in another PTEP group.	<i>Section 951(a)(1)(A) PTEP group.</i>	Earnings and profits described in section 959(c)(2) by reason of section 951(a)(1)(A) and not described in another PTEP group.
<i>Section 956A PTEP group</i>	Earnings and profits described in section 959(c)(1)(B), including by reason of section 959(a)(3) (before its repeal).		

(d) *Early application*—(1) *In general.* Sections 1.959–1 through 1.959–7 and 1.959–10 and 1.959–11 may be applied to a taxable year of a foreign corporation not described in paragraph (b) of this section, and then must be applied to all succeeding taxable years of the foreign corporation not described in paragraph (b) of this section, if the conditions described in paragraphs (d)(2) through (4) of this section are satisfied. The foreign corporation described in the preceding sentence is the *early application corporation* and any taxable years to which the early application corporation applies §§ 1.959–1 through 1.959–7, 1.959–10, and 1.959–11 pursuant to the preceding sentence are the *early application years*.

(2) *Consistent application condition*—(i) *In general.* The provisions described in paragraph (d)(2)(ii) of this section are applied in their entirety to the early application years and all taxable years of covered shareholders for which the early application years are relevant. In addition, §§ 1.959–1 through 1.959–7, 1.959–10, and 1.959–11 are applied in their entirety pursuant to paragraph (d) of this section to all taxable years that both are of foreign corporations that are related to the early application corporation and end on or after the later of the last day of the first early application year and the first day on which the foreign corporations are related to the early application corporation. For purposes of the preceding sentence, foreign corporations are related if the foreign corporations bear a relationship to each other described in section 267(b).

(ii) *Provisions.* The provisions described in this paragraph (d)(2)(ii) are §§ 1.163(j)–7(g)(2)(ii), 1.245A(d)–1(d), 1.312–6(f), 1.312–8(c), 1.861–20, 1.904–6(e), 1.905–3, 1.905–4(c)(6), 1.951–1, 1.951–2, 1.951A–1(d), 1.951A–2(c)(1)(vi), 1.952–1(c)(4), 1.954–1(c)(1)(iii)(C), 1.959–1 through 1.959–7, 1.959–10, 1.959–11, 1.960–1, 1.960–3, 1.961–1 through 1.961–5, 1.961–8 through 1.961–13, 1.965–5(d)(5), 1.986(a)–1, 1.986(c)–1, and 1.1502–59.

(3) *Open period of limitations condition.* The period of limitations on

assessment for each taxable year described in paragraph (d)(2) of this section is open under section 6501.

(4) *Written consent condition.* Each covered shareholder described in paragraph (d)(2) of this section provides to the early application corporation a written statement in which the covered shareholder consents to apply the rules described in paragraph (d)(2) of this section to the taxable years of the covered shareholder described in paragraph (d)(2) of this section and affirms that the period of limitations on assessment for each such taxable year is open under section 6501.

■ **Par. 23.** Section 1.960–1 is amended by:

- 1. Revising paragraph (a)(1);
- 2. Revising paragraphs (b)(1) and (b)(3);
- 3. Removing paragraph (b)(12);
- 4. Redesignating paragraphs (b)(13) through (b)(16) as paragraphs (b)(12) through (b)(15), respectively;
- 5. Revising newly redesignated paragraph (b)(15);
- 6. Redesignating paragraph (b)(17) as paragraph (b)(16), and revising newly redesignated paragraph (b)(16);
- 7. Adding a new paragraph (b)(17);
- 8. Removing paragraphs (b)(18) through (b)(21);
- 9. Redesignating paragraphs (b)(22) through (b)(24) as paragraphs (b)(18) through (b)(20), respectively;
- 10. Removing paragraph (b)(25);
- 11. Redesignating paragraphs (b)(26) and (b)(27) as paragraphs (b)(21) and (b)(22), respectively, and revising newly redesignated paragraphs (b)(21) and (b)(22);
- 12. Removing paragraph (b)(28);
- 13. Redesignating paragraphs (b)(29) through (b)(38) as paragraphs (b)(23) through (b)(32), respectively;
- 14. Revising paragraphs (c)(1)(i) through (iii);
- 15. In paragraph (c)(1)(iv), removing the language “§ 1.960–3(b)” and adding the language “§ 1.960–3” in its place;
- 16. Removing paragraph (c)(1)(v);
- 17. Redesignating paragraphs (c)(1)(vi) and (vii) as paragraphs (c)(1)(v) and (c)(1)(vi), respectively;
- 18. Revising newly redesignated paragraphs (c)(1)(v) and (vi);

- 19. Revising paragraph (c)(2);
- 20. Revising paragraph (d)(1);
- 21. Revising paragraphs (d)(2)(i) and (d)(2)(ii)(A) and (D);
- 22. Revising the heading of paragraph (d)(3) and the introductory text of paragraph (d)(3)(i);
- 23. Revising the last sentence of paragraph (d)(3)(i)(A) and the last two sentences of paragraph (d)(3)(ii)(A);
- 24. Revising paragraph (d)(3)(ii)(B); and
- 25. Revising paragraphs (e) and (f).

The additions and revisions read as follows:

§ 1.960–1 Overview, definitions, and computational rules for determining foreign income taxes deemed paid under section 960(a), (b), and (d).

(a) *Overview*—(1) *Scope of §§ 1.960–1 through 1.960–3.* This section and § 1.960–2 provide rules for attributing foreign income taxes paid or accrued by a controlled foreign corporation to its income that a corporate United States shareholder of the controlled foreign corporation takes into account in determining its subpart F inclusion or GILTI inclusion amount. This section provides definitions, identifies the statutory and residual groupings for purposes of section 960(a) and (d), and sets forth computational rules for determining the amount of income and taxes assigned to each grouping. Section 1.960–2 provides rules for computing the amount of foreign income taxes deemed paid by a corporate United States shareholder of a controlled foreign corporation under section 960(a) and (d). Section 1.960–3 provides rules for determining the foreign income taxes that are deemed paid by a corporate United States shareholder in a controlled foreign corporation, or by a controlled foreign corporation that is a shareholder in another controlled foreign corporation, under section 960(b). This section, § 1.960–2, and § 1.960–3 provide the exclusive rules for determining the foreign income taxes deemed paid by a domestic corporation or controlled foreign corporation under section 960. Only foreign income taxes paid or accrued by a controlled foreign

corporation that are properly attributable under these rules to an item of income that a corporate United States shareholder of the controlled foreign corporation includes as a subpart F inclusion or GILTI inclusion amount may be deemed paid by the domestic corporation under section 960(a) or (d). Only foreign income taxes that are properly attributable under § 1.960–3 to previously taxed earnings and profits that are distributed by a controlled foreign corporation may be deemed paid by a domestic corporation or a controlled foreign corporation under section 960(b). This section, § 1.960–2, and § 1.960–3 also apply for purposes of any provision that treats a taxpayer as a domestic corporation that is deemed to pay foreign income taxes or treats a foreign corporation as a controlled foreign corporation for purposes of section 960. *See, for example,* sections 962(a)(2) and 1293(f).

* * * * *

(b) * * *

(1) *Annual PTEP account.* The term *annual PTEP account* has the meaning provided in § 1.959–1(b).

* * * * *

(3) *Current taxable year.* The term *current taxable year* means the U.S. taxable year of a controlled foreign corporation which ends with or within the U.S. taxable year of a United States shareholder of the controlled foreign corporation.

* * * * *

(15) *Previously taxed earnings and profits.* The term *previously taxed earnings and profits* has the meaning provided in § 1.959–1(b).

(16) *PTEP group.* The term *PTEP group* has the meaning provided in § 1.959–1(b).

(17) *PTEP realization event.* The term *PTEP realization event* has the meaning provided in § 1.959–1(b).

* * * * *

(21) *Specified section 959(a) distribution.* The term *specified section 959(a) distribution* means a distribution of previously taxed earnings and profits, as determined under § 1.959–4, that a domestic corporation that is a United States shareholder in a controlled foreign corporation receives (or is treated as receiving pursuant to § 1.959–4(c)(3)) from the controlled foreign corporation and that is excluded from the income of the recipient domestic corporation under § 1.959–4(b)(1).

(22) *Section 959(b) distribution.* The term *section 959(b) distribution* means a distribution of previously taxed earnings and profits, as determined under § 1.959–4, that a controlled foreign corporation receives from

another controlled foreign corporation and that is excluded from the income of the recipient controlled foreign corporation for purposes of determining the recipient controlled foreign corporation's subpart F income and tested income or tested loss under § 1.959–4(b)(2).

* * * * *

(c) * * *

(1) * * *

(i) First, items of gross income of a controlled foreign corporation for the current taxable year are assigned to section 904 categories and included in income groups within those section 904 categories under the rules in paragraph (d)(2) of this section. *See* section 959 and the regulations thereunder for rules regarding the receipt of a section 959(b) distribution by a controlled foreign corporation.

(ii) Second, deductions (other than for current year taxes) of a controlled foreign corporation for the current taxable year are allocated and apportioned to reduce gross income in the section 904 categories and the income groups within a section 904 category. *See* paragraph (d)(3)(i) of this section. Additionally, the functional currency amounts of current year taxes are allocated and apportioned to reduce gross income in the section 904 categories and the income groups within a section 904 category. *See* paragraph (d)(3)(ii) of this section. For rules regarding the allocation and apportionment of foreign income taxes paid or accrued by a foreign corporation to previously taxed earnings and profits, *see* § 1.959–6.

(iii) Third, for purposes of computing foreign income taxes deemed paid under section 960(a) and (d), eligible current year taxes that were allocated and apportioned to income groups in the section 904 categories are translated into U.S. dollars in accordance with section 986(a) and § 1.986(a)–1.

* * * * *

(v) Fifth, paragraphs (c)(1)(i) through (iv) of this section are repeated for each next higher-tier controlled foreign corporation in the chain.

(vi) Sixth, with respect to the highest-tier controlled foreign corporation in a chain that is owned directly (or indirectly through one or more partnerships) by the domestic corporation, foreign income taxes that are deemed paid under section 960(b)(1) in connection with the receipt of a specified section 959(a) distribution by the domestic corporation are computed under the rules of § 1.960–3.

(2) *Current taxable year items.* For a current taxable year, the items of

income and deductions (including for taxes), and the U.S. dollar amounts of current year taxes, that are included in the computations described in this section are the items that a controlled foreign corporation accrues and takes into account during the current taxable year. An item of income with respect to a current taxable year does not include an amount included as subpart F income of a controlled foreign corporation by reason of the recharacterization of a recapture account established in a prior U.S. taxable year (and the corresponding earnings and profits) of the controlled foreign corporation under section 952(c)(2) and § 1.952–1(f).

* * * * *

(d) * * *

(1) *Scope.* This paragraph (d) provides rules for assigning gross income (including gains) of a controlled foreign corporation for the current taxable year to a section 904 category and income group within a section 904 category, and for allocating and apportioning deductions (including losses and current year taxes) and the U.S. dollar amount of eligible current year taxes of the controlled foreign corporation for the current taxable year among the section 904 categories and income groups within a section 904 category. *See* § 1.959–6 for rules for allocating and apportioning foreign income taxes paid or accrued by a foreign corporation to previously taxed earnings and profits.

(2) * * *

(i) *Assigning items of gross income to section 904 categories.* Items of gross income of a controlled foreign corporation for the current taxable year are first assigned to a section 904 category of the controlled foreign corporation under §§ 1.904–4 and 1.904–5. Income of a controlled foreign corporation cannot be assigned to the section 951A category. *See* § 1.904–4(g). *But see* § 1.959–2(b)(2)(i) for rules relating to the assignment of previously taxed earnings and profits to PTEP groups within an annual PTEP account, which may assign previously taxed earnings and profits to the section 951A PTEP group.

(ii) * * *

(A) *In general.* Gross income within a section 904 category is assigned to a subpart F income group, tested income group, or residual income group under the rules of this paragraph (d)(2)(ii). *See* § 1.959–2(d) for rules regarding the accounting of previously taxed earnings and profits by a foreign corporation.

* * * * *

(D) *Residual income group.* The term *residual income group* means the

income group within a section 904 category that is not in a subpart F income group or tested income group. For purposes of this paragraph (d)(2)(ii)(D), treat items of gross income that give rise to previously taxed earnings and profits described in § 1.959–6(b) as gross income in a residual income group. *See* paragraph (d)(3)(ii)(B) of this section for rules regarding the assignment of foreign gross income to the statutory and residual groupings of income of a controlled foreign corporation when the controlled foreign corporation pays or accrues current year taxes with respect to a PTEP realization event that occurs in a different taxable year.

* * * * *

(3) *Allocation and apportionment of deductions among section 904 categories and income groups within a section 904 category*—(i) *In general.* Gross income of a controlled foreign corporation in each income group within each section 904 category is reduced by deductions (including losses and current year taxes) of the controlled foreign corporation for the current taxable year under the rules in this paragraph (d)(3)(i). For purposes of this paragraph (d)(3), allocate and apportion current year taxes arising by reason of a PTEP realization event that occurs in the same taxable year to the residual income group within a section 904 category under § 1.959–6(c). For additional rules regarding the allocation and apportionment of deductions (including foreign income taxes) paid or accrued by a foreign corporation to previously taxed earnings and profits, *see* § 1.959–6.

(A) * * * *See* paragraph (d)(3)(ii) of this section for special rules for allocating and apportioning current year taxes to section 904 categories and income groups.

* * * * *

(ii) * * *

(A) * * * For special rules regarding current year taxes paid or accrued with respect to a PTEP realization event that occurs in a different taxable year, *see* paragraph (d)(3)(ii)(B) of this section. For purposes of determining foreign income taxes deemed paid under section 960(a) and (d) and § 1.960–2, the U.S. dollar amount of eligible current year taxes is assigned to the section 904 categories and income groups to which the eligible current year taxes are allocated and apportioned.

(B) *Current year taxes that a controlled foreign corporation pays or accrues that relate to a PTEP realization event that occurs in a different U.S. taxable year.* If a current year tax is

allocated and apportioned by reference to foreign gross income that includes previously taxed earnings and profits with respect to a PTEP realization event that occurs in a different taxable year, the foreign gross income is assigned to the subpart F income group, tested income group, or residual income group to which the income that gave rise to the previously taxed earnings and profits would be assigned if that income were recognized by that controlled foreign corporation under Federal income tax principles in the current taxable year. For example, a net basis tax paid or accrued with respect to a section 959(b) distribution that occurred in the preceding taxable year would be assigned to a section 904 category and to a subpart F income group, tested income group, or residual income group by reference to the income that gave rise to the previously taxed earnings and profits.

(e) *Current year taxes related to a residual income group are not deemed paid.* Current year taxes paid or accrued by a controlled foreign corporation that are allocated and apportioned under paragraph (d)(3)(ii) of this section to a residual income group cannot be deemed paid under section 960 for any taxable year, except to the extent such taxes are allocated and apportioned to previously taxed earnings and profits under § 1.959–6 and deemed paid by a domestic corporation under § 1.960–3.

(f) *Example.* The following example illustrates the application of this section and § 1.960–3.

(1) *Facts*—(i) *CFC1 and CFC2.* CFC1, a controlled foreign corporation, conducts business in Country X. CFC1 uses the “u” as its functional currency. At all relevant times, 1u = \$1. CFC1 owns all the stock of CFC2, a controlled foreign corporation. All the stock of CFC1 and CFC2 is owned (within the meaning of section 958(a)) by corporate United States shareholders that use the calendar year as their U.S. taxable year. CFC1 and CFC2 both use the calendar year as their U.S. and foreign taxable years.

(ii) *Income of CFC1 and CFC2.* In Year 3, CFC1 earns 2,000,000u of gross income that is foreign base company sales income, and 1,000,000u of interest income from unrelated persons, for both U.S. and Country X tax law purposes. Under Country X tax law, CFC1’s interest income is exempt from tax. In Year 3, CFC1 also receives a section 959(b) distribution from CFC2 of 4,000,000u of previously taxed earnings and profits, in the general category and relating to a single PTEP group and taxable year. There are no foreign income taxes associated with the

previously taxed earnings and profits distributed by CFC2 at the level of CFC2 under § 1.959–4. The section 959(b) distribution is treated as a dividend taxable to CFC1 under Country X tax law. In Year 3, CFC2 earns no gross income and receives no distributions.

(iii) *Deductions of CFC1 and CFC2 other than taxes.* For both U.S. and Country X tax purposes, in Year 3, CFC1 incurs 1,500,000u of deductible expenses other than current year taxes that are allocable to all gross income. For U.S. tax purposes, under §§ 1.861–8 through 1.861–14T, 1,000,000u of the deductions are apportioned to CFC1’s foreign base company sales income and 500,000u of the deductions are apportioned to CFC1’s interest income. Under Country X tax law, 1,000,000u of deductions are apportioned to the 4,000,000u treated as a dividend, and 500,000u of deductions are apportioned to the 2,000,000u of foreign base company sales income. Under Country X tax law, no deductions are apportioned to the interest income. Under Country X tax law, CFC1 pays eligible current year taxes of 900,000u on a base of 4,500,000u (7,000,000u gross income – 1,000,000u exemption and 1,500,000u deductions) consisting of 3,000,000u (4,000,000u – 1,000,000u) of previously taxed earnings and profits, 1,000,000u of interest income (exempt from tax under Country X law), and 1,500,000u (2,000,000u – 500,000u) of foreign base company sales income. In Year 3, CFC2 has no expenses (including current year taxes).

(2) *Analysis*—(i) *CFC2.* Under paragraph (c)(1) of this section, the computational rules of paragraph (c)(1) of this section are applied beginning with CFC2. However, CFC2 has no gross income or expenses in Year 3. Accordingly, the computational rules in paragraphs (c)(1)(i) through (iv) of this section are not relevant with respect to CFC2. Under paragraph (c)(1)(v) of this section, the rules in paragraph (c)(1)(i) through (iv) of this section are then applied to CFC1.

(ii) *CFC1*—(A) *Step 1.* Under paragraph (c)(1)(i) of this section, CFC1’s items of gross income for the current taxable year are assigned to section 904 categories and included in income groups within those section 904 categories. Under paragraph (d)(2)(i) of this section and § 1.904–4, the interest income is passive category income and the foreign base company sales income is general category income. Under paragraph (d)(2)(ii) of this section, the 1,000,000u of interest income is assigned to a subpart F income group (the “FPHCI income group”) within the passive category because it is foreign

personal holding company income described in § 1.954–1(c)(1)(iii)(A)(1)(i) that falls within a single group of income under § 1.904–4(c)(3)(iii) for passive income that is subject to no withholding tax or other foreign tax. The 2,000,000u of foreign base company sales income is assigned to a subpart F income group within the general category (the “FBCSI income group”), because it is foreign base company income described in § 1.954–1(c)(1)(iii)(A)(2)(i). Under paragraph (d)(2) of this section, the 4,000,000u of previously taxed earnings and profits is treated as a U.S. dividend amount (as defined in § 1.861–20(b)(21)) and is assigned to the residual income group within the general category for purposes of applying section 960(a) and (d) and §§ 1.960–1 and 1.960–2.

(B) *Step 2—(1) Allocation and apportionment of deductions other than taxes.* Under paragraph (c)(1)(ii) of this section, CFC1’s deductions for the current taxable year are allocated and apportioned among the section 904 categories and income groups within a section 904 category that were increased as provided in paragraph (c)(1)(i) of this section. Under paragraph (d)(3)(i) of this section and §§ 1.861–8 through 1.861–14T, 1,000,000u of deductions are allocated and apportioned to the FBCSI income group within the general category, and 500,000u of deductions are allocated and apportioned to the FPHCI income group within the passive category. Therefore, CFC1 has 1,000,000u (2,000,000u – 1,000,000u) of pre-tax income attributable to the FBCSI income group within the general category and 500,000u (1,000,000u – 500,000u) of pre-tax income attributable to the FPHCI income group within the passive category. For U.S. tax purposes, no deductions other than eligible current year taxes are allocated and apportioned to the 4,000,000u of previously taxed earnings and profits in CFC1’s residual income group within the general category because no deductions of CFC1 other than deductions for current year taxes are allocated and apportioned to previously taxed earnings and profits under section 861. See paragraph (d)(3)(i) of this section and § 1.959–6(d)(1).

(2) *Allocation and apportionment of current year taxes.* Under paragraph (c)(1)(ii) of this section, CFC1’s current year taxes are allocated and apportioned among the section 904 categories and income groups within a section 904 category that were increased as provided in paragraph (c)(1)(i) of this section. Under paragraphs (d)(3)(i) and (ii) of this section, for purposes of allocating and apportioning taxes to

reduce the income in a section 904 category or an income group, § 1.861–20 (as modified by § 1.904–6(c)) is applied to determine the amount of foreign taxable income, computed under Country X tax law but characterized under Federal income tax law, in each section 904 category and income group that is included in the Country X tax base. For Country X tax purposes, 1,000,000u of deductions are allocated and apportioned to CFC1’s 4,000,000u of previously taxed earnings and profits, which is assigned to the residual income grouping within the general category, 500,000u of deductions are allocated and apportioned to the FBCSI income group within the general category, and no deductions are allocated and apportioned to the FPHCI income group in the passive category. Therefore, for Country X tax purposes, CFC1 has 3,000,000u of foreign taxable income assigned to the residual income group within the general category, 1,500,000u of foreign taxable income assigned to the FBCSI income group within the general category, and no taxable income assigned to the FPHCI income group within the passive category. Under paragraphs (d)(3)(i) and (ii) of this section and § 1.959–6, 600,000u (3,000,000u/4,500,000u × 900,000u) of the 900,000u eligible current year taxes paid by CFC1 are related to the residual income group within the general category, and 300,000u (1,500,000u/4,500,000u × 900,000u) are related to the FBCSI income group within the general category. No current year taxes are allocated or apportioned to the FPHCI income group within the passive category because the interest expense is exempt from Country X tax. See § 1.959–6 for rules allocating and apportioning the 600,000u of current year taxes among the corporate PTEP accounts, section 904 categories, and PTEP groups. Thus, for U.S. tax purposes, CFC1 has 3,400,000u of previously taxed earnings and profits (4,000,000u – 600,000u) in the residual income group within the general category (see §§ 1.959–2 and 1.959–3 for rules relating to accounting for previously taxed earnings and profits), 500,000u of income in the FPHCI income group within the passive category, and 700,000u of income (1,000,000u – 300,000u) in the FBCSI income group within the general category.

(C) *Step 3.* Under paragraph (c)(1)(iii) of this section, for purposes of computing foreign income taxes deemed paid under section 960(a), CFC1 has \$300,000 of current year taxes in the

FBCSI income group within the general category. Under paragraph (e) of this section, the United States shareholders of CFC1 cannot claim a credit with respect to the \$600,000 of taxes on CFC1’s income in the residual income group under section 960, except to the extent the taxes are allocated and apportioned to previously taxed earnings and profits under § 1.959–6 and deemed paid by a domestic corporation under section 960(b) and § 1.960–3.

(D) *Step 4.* Under paragraph (c)(1)(iv) of this section, the United States shareholders of CFC1 compute current year taxes deemed paid under section 960(a) and (d) and the rules of § 1.960–2. None of the Country X tax is allocated to CFC1’s FPHCI income group. Therefore, there are no current year taxes deemed paid by CFC1’s United States shareholders with respect to their passive category subpart F inclusions. Country X tax equal to \$300,000 is allocated and apportioned to CFC1’s FBCSI income group. Therefore, \$300,000 of the current year taxes are deemed paid by CFC1’s United States shareholders with respect to their general category subpart F inclusions. See § 1.960–2(b)(5) and (c)(7) for examples of the application of section 960(a) and (d) and the rules in § 1.960–2. The remaining \$600,000 of Country X tax is allocated and apportioned to the residual income group within the general category with respect to the previously taxed earnings and profits and will generally be allocated and apportioned to previously taxed earnings and profits under the rules in § 1.959–6.

(E) *Step 5.* Paragraph (c)(1)(v) of this section does not apply because CFC1 is the highest-tier controlled foreign corporation in the chain.

(F) *Step 6.* Paragraph (c)(1)(vi) of this section does not apply because CFC1 did not make a specified section 959(a) distribution.

■ **Par. 24.** Section 1.960–3 is revised to read as follows:

§ 1.960–3 Foreign income taxes deemed paid under section 960(b).

(a) *Scope.* This section provides rules for determining foreign income taxes that are deemed paid under section 960(b) with respect to the receipt of distributions of previously taxed earnings and profits. Paragraph (b) of this section describes the foreign income taxes that a domestic corporation is deemed to pay with respect to its receipt of a specified section 959(a) distribution. Paragraph (c) of this section describes the foreign income taxes that a controlled foreign

corporation is deemed to pay with respect to its receipt of a section 959(b) distribution. For rules regarding the maintenance and adjustment by a foreign corporation of corporate PTEP accounts and corporate PTEP tax pools with respect to each of its covered shareholders, *see* § 1.959–2(d). For rules regarding the maintenance and adjustment by a covered shareholder of annual PTEP accounts and PTEP tax pools with respect to a foreign corporation in which it owns stock, *see* §§ 1.959–2(b) and 1.959–3(c) and (e).

(b) *Foreign income taxes deemed paid under section 960(b)(1)—(1) In general.* A domestic corporation that is a United States shareholder of a controlled foreign corporation is deemed to have paid the foreign income taxes that are properly attributable to a specified section 959(a) distribution that it receives from the controlled foreign corporation and that have not been deemed to have been paid by a domestic corporation under section 960 for the current taxable year or any prior taxable year. A credit for foreign income taxes deemed paid under this section may be subject to disallowance under other provisions of the Code or regulations in this title that apply at the level of the United States shareholder.

(2) *Properly attributable.* The foreign income taxes that are properly attributable to a specified section 959(a) distribution are the foreign income taxes that are removed under §§ 1.959–2(d)(2) and 1.959–3(e)(1)(iii) from each creditable PTEP tax group (as defined in § 1.959–2(b)(4)(ii)) by reason of the specified section 959(a) distribution.

(c) *Foreign income taxes deemed paid under section 960(b)(2)—(1) In general.* A controlled foreign corporation is deemed to have paid the foreign income taxes that are properly attributable to a section 959(b) distribution that it receives from another controlled foreign corporation and that have not been deemed to have been paid by a domestic corporation under section 960 for the current taxable year or any prior taxable year.

(2) *Properly attributable.* The foreign income taxes that are properly attributable to a section 959(b) distribution received by a controlled foreign corporation are the foreign income taxes that are removed under §§ 1.959–2(d)(2) and 1.959–3(e)(1)(iii) from each creditable PTEP tax group (as defined in § 1.959–1(b)) by reason of the section 959(b) distribution.

■ **Par. 25.** Section 1.960–7 is amended by:

■ 1. In the first sentence of paragraph (a), removing the language “paragraph (b)” and adding the language

“paragraphs (b) and (c)” in its place; and

■ 2. Adding a new paragraph (c).

The addition reads as follows:

§ 1.960–7 Applicability dates.

* * * * *

(c) Sections 1.960–1 and 1.960–3 apply to taxable years of a foreign corporation that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959–12(d)), and to taxable years of a domestic corporation that is a United States shareholder of the foreign corporation in which or with which such taxable years of such foreign corporation end. *See* §§ 1.960–1 and 1.960–3 as contained in 26 CFR part 1 revised as of April 1, 2024, for a version of these sections applicable to prior taxable years.

■ **Par. 26.** Section 1.961–1 is revised to read as follows:

§ 1.961–1 Overview, definitions, and rules of general applicability.

(a) *Overview—(1) In general.* The section 961 regulations provide rules for basis adjustments related to previously taxed earnings and profits. Section 1.961–1 sets forth definitions and rules of general applicability. Section 1.961–2 describes the types of property units and types of basis for purposes of applying section 961. Section 1.961–3 provides basis increases for income inclusions. Section 1.961–4 provides reductions to basis and gain recognition for distributions of previously taxed earnings and profits. Section 1.961–5 provides basis adjustments for foreign currency gain or loss and for general successor transactions. Sections 1.961–6 and 1.961–7 are reserved. Section 1.961–8 describes the consequences of positive derived basis. Section 1.961–9 describes the consequences of positive section 961(c) basis. Section 1.961–10 describes the consequences of negative derived basis and negative section 961(c) basis. Section 1.961–11 provides for the inclusion by United States shareholders in a controlled foreign corporation of the controlled foreign corporation’s income arising under section 961(c). Section 1.961–12 provides examples illustrating the application of the section 961 regulations. Section 1.961–13 sets forth transition rules. Section 1.961–14 sets forth applicability dates. *See* § 1.1502–59 for additional rules for a consolidated group.

(2) *Scope.* This section sets forth definitions and rules of general applicability for purposes of the section 961 regulations. Paragraph (b) of this

section provides definitions. Paragraph (c) of this section provides rules relating to S corporations. Paragraph (d) of this section provides an anti-avoidance rule.

(b) *Definitions.* The definitions in § 1.959–1(b) apply for purposes of the section 961 regulations, with the following additions.

Acquired partnership. The term *acquired partnership* has the meaning provided in § 1.961–5(c)(1).

Common basis. The term *common basis* means a partnership’s adjusted basis of an item of property, excluding any basis that is solely with respect to a specific partner (for example, a section 743(b) basis adjustment or derived basis).

Covered gain. The term *covered gain* has the meaning provided in § 1.961–9(c)(1).

Derived basis. The term *derived basis* means basis described in § 1.961–2(d)(2).

Derivative ownership unit. The term *derivative ownership unit* has the meaning provided in § 1.961–2(d)(1).

Lookback PTEP. The term *lookback PTEP* has the meaning provided in § 1.961–9(f)(3)(ii).

Lower-tier partnership interest. The term *lower-tier partnership interest* has the meaning provided in § 1.961–8(d).

Midyear transaction. The term *midyear transaction* has the meaning provided in § 1.961–3(c)(2).

Mirrored PTEP. The term *mirrored PTEP* has the meaning provided in § 1.961–9(f)(2)(ii).

Negative derived basis. The term *negative derived basis* means the amount by which derived basis with respect to a covered shareholder of a derivative ownership unit is less than zero.

Negative section 961(c) basis. The term *negative section 961(c) basis* means the amount by which section 961(c) basis with respect to a covered shareholder of a section 961(c) ownership unit is less than zero.

Net foreign currency gain. The term *net foreign currency gain* has the meaning provided in § 1.961–5(b)(2).

Net foreign currency loss. The term *net foreign currency loss* has the meaning provided in § 1.961–5(b)(2).

Nonrecognition transaction. The term *nonrecognition transaction* has the meaning provided in section 7701(a)(45).

Positive derived basis. The term *positive derived basis* means the amount by which derived basis with respect to a covered shareholder of a derivative ownership unit is greater than zero.

Positive section 961(c) basis. The term *positive section 961(c) basis* means the amount by which section 961(c) basis

with respect to a covered shareholder of a section 961(c) ownership unit is greater than zero.

Property unit. The term *property unit* has the meaning provided in § 1.961–2(b).

Relevant taxable year. The term *relevant taxable year* has the meaning provided in § 1.961–3(b).

Section 951(a)(1)(A) inclusion amount. The term *section 951(a)(1)(A) inclusion amount* has the meaning provided in § 1.961–3(c)(1)(ii).

Section 951(a)(1)(B) inclusion amount. The term *section 951(a)(1)(B) inclusion amount* has the meaning provided in § 1.961–3(c)(1)(iii).

Section 961 regulations. The term *section 961 regulations* means the regulations in this part issued under section 961.

Section 961(a) ownership unit. The term *section 961(a) ownership unit* has the meaning provided in § 1.961–2(c).

Section 961(c) basis. The term *section 961(c) basis* means basis described in § 1.961–2(e)(2).

Section 961(c) income. The term *section 961(c) income* has the meaning provided in § 1.961–11(b).

Section 961(c) ownership unit. The term *section 961(c) ownership unit* has the meaning provided in § 1.961–2(e)(1).

Section 961(c) PTEP. The term *section 961(c) PTEP* has the meaning provided in § 1.961–9(f)(1).

Transferred units. The term *transferred units* has the meaning provided in § 1.961–8(b)(1) or § 1.961–9(c)(1), as applicable.

Transferring partnership. The term *transferring partnership* has the meaning provided in § 1.961–8(b)(1).

Upper-tier partnership. The term *upper-tier partnership* has the meaning provided in § 1.961–8(d).

(c) *Treatment of an S corporation—(1) In general.* Except as provided in paragraph (c)(2) of this section, for purposes of the section 961 regulations, an S corporation is treated in the same manner as a domestic partnership, a reference to a domestic partnership includes an S corporation, and shareholders of an S corporation are treated as partners of such partnership. See section 1373(a). As applicable, the treatment of an S corporation and its shareholders under the preceding sentence is determined by replacing any partnership-specific provision with the equivalent provision for S corporations (for example, a reference to an adjustment under section 705 to a partner's basis in its partnership interest refers to the adjustment under section 1367 to a shareholder's basis in its stock of an S corporation).

(2) *Treatment as a covered shareholder for taxable years for which elective entity treatment applies for § 1.958–1(d)(1) purposes.* See § 1.961–13(c) for a rule treating an S corporation as a covered shareholder for any taxable year of the S corporation for which § 1.958–1(d)(1) does not apply and § 1.961–13(d) for a transition rule converting basis with respect to an S corporation to basis with respect to covered shareholders owning interests in the S corporation once the S corporation is no longer treated as a covered shareholder.

(d) *Anti-avoidance rule.* If a transaction, series of transactions, plan, or arrangement is engaged in with a principal purpose of avoiding the purposes of section 961 and the section 961 regulations, then appropriate adjustments are made, which may include adjustments to disregard the transaction, series of transactions, plan, or arrangement.

■ **Par. 27.** Section 1.961–2 is revised to read as follows:

§ 1.961–2 Types of property units and basis.

(a) *Scope.* This section describes the types of property units and types of basis for purposes of applying section 961. Paragraph (b) of this section defines a property unit and provides the general rule for basis of a property unit. Paragraphs (c) through (e) of this section provide definitions and rules for section 961(a) ownership units, derivative ownership units, and section 961(c) ownership units, respectively. See §§ 1.961–3 through 1.961–11 for basis adjustments and the effects of basis and § 1.961–12(c)(1) (*Example 1*) for an example illustrating the application of this section.

(b) *Property unit.* A *property unit* is a section 961(a) ownership unit, derivative ownership unit, or section 961(c) ownership unit, as applicable (defined in paragraphs (c) through (e) of this section). Basis in a property unit must be established and maintained in U.S. dollars in accordance with this section and the adjustments prescribed in the section 961 regulations.

(c) *Section 961(a) ownership unit.* A *section 961(a) ownership unit* is a share of stock of a foreign corporation directly owned by a covered shareholder, or an interest in a partnership directly owned by a covered shareholder and through which the covered shareholder owns stock of a foreign corporation. A covered shareholder is provided adjusted basis in a section 961(a) ownership unit.

(d) *Derivative ownership unit—(1) In general.* A *derivative ownership unit* is a share of stock of a foreign corporation

directly owned by a partnership and owned (indirectly) by one or more covered shareholders through only one or more partnerships, or an interest in a partnership directly owned by another partnership and through which one or more covered shareholders own stock of a foreign corporation through only partnerships. A partnership is provided derived basis in a derivative ownership unit in accordance with paragraph (d)(2) of this section.

(2) *Derived basis.* *Derived basis* is basis of a derivative ownership unit that must be established and maintained separately with respect to each covered shareholder that owns the derivative ownership unit through only one or more partnerships. Derived basis with respect to a covered shareholder may be a positive or negative amount and is treated as an attribute of the partnership that directly owns the derivative ownership unit.

(e) *Section 961(c) ownership unit—(1) In general.* A *section 961(c) ownership unit* is a share of stock of a foreign corporation directly owned by a controlled foreign corporation and owned (indirectly) by one or more covered shareholders. A controlled foreign corporation is provided section 961(c) basis in a section 961(c) ownership unit in accordance with paragraph (e)(2) of this section.

(2) *Section 961(c) basis.* *Section 961(c) basis* is basis of a section 961(c) ownership unit that must be established and maintained separately with respect to each covered shareholder that owns the section 961(c) ownership unit. Section 961(c) basis with respect to a covered shareholder may be a positive or negative amount and is treated as an attribute of the controlled foreign corporation that directly owns the section 961(c) ownership unit. Section 961(c) basis applies only for the purposes prescribed in the section 961 regulations and, therefore, for example does not affect the amount of the controlled foreign corporation's gross income or the amount of its earnings and profits.

■ **Par. 28.** Sections 1.961–3 through 1.961–14 are added to read as follows:

Sec.	*	*	*	*	*
1.961–3	Basis increases for certain income inclusions.				
1.961–4	Basis reductions and gain recognition for distributions.				
1.961–5	Basis adjustments for foreign currency gain or loss and for general successor transactions.				
1.961–6 and 1.961–7	[Reserved]				
1.961–8	Application of positive derived basis to covered shareholders' distributive shares of gain or loss.				

1.961–9 Exclusion from gross income of previously taxed earnings and profits resulting from positive section 961(c) basis.

1.961–10 Gain recognition for negative basis.

1.961–11 Amounts included in gross income of United States shareholders.

1.961–12 Examples.

1.961–13 Transition rules.

1.961–14 Applicability dates.

* * * * *

§ 1.961–3 Basis increases for certain income inclusions.

(a) *Scope.* This section provides the increases to basis under section 961 for inclusions under sections 951(a) and 951A(a) and § 1.961–11. Paragraph (b) of this section provides the general rule, pursuant to which, to reflect a covered shareholder's income inclusions for a controlled foreign corporation's taxable year, basis of certain property units (shares of stock of the controlled foreign corporation directly owned by the covered shareholder, property through which the covered shareholder owns (indirectly) stock of the controlled foreign corporation, and shares of stock of the controlled foreign corporation owned (indirectly) by the covered shareholder), is increased. Paragraph (c) of this section describes the specific rules for increasing basis pursuant to paragraph (b) of this section. Paragraph (d) of this section determines certain basis increases based on distributions of previously taxed earnings and profits by the controlled foreign corporation during the taxable year. Paragraph (e) of this section determines certain basis increases based on a hypothetical distribution, to the extent paragraph (d) of this section does not increase basis. Paragraph (f) of this section provides limitations on basis increases in certain cases. See § 1.961–12(c)(2) (*Example 2*) for an example illustrating the application of this section.

(b) *In general.* To reflect a covered shareholder's income inclusions for a taxable year of a controlled foreign corporation (such taxable year for which this section is being applied, the *relevant taxable year*), basis of property units that are shares of stock of the controlled foreign corporation owned by the covered shareholder, and basis of any property units through which the covered shareholder owns stock of the controlled foreign corporation, is in each case increased in accordance with the rules described in paragraph (c) of this section. Generally, under those rules, basis increases begin at the level of stock of the controlled foreign corporation and then tier through property units through which the covered shareholder owns such stock,

with at each level basis increases allocated among property units based on how previously taxed earnings and profits resulting from the income inclusions are, or likely will be, distributed on the property units (thus, the allocations may differ from the extent to which the income inclusions are attributable to the property units). Solely for purposes of this section, a reference to the basis of a property unit means adjusted basis in the case of a section 961(a) ownership unit, derived basis with respect to the covered shareholder in the case of a derivative ownership unit, or section 961(c) basis with respect to the covered shareholder in the case of a section 961(c) ownership unit.

(c) *Rules for increasing basis—(1) Determine amount of income inclusions giving rise to increases to basis—(i) In general.* First, determine the amount of the covered shareholder's income inclusions with respect to the controlled foreign corporation for the relevant taxable year that give rise to increases to basis under section 961, computed as the sum of the section 951(a)(1)(A) inclusion amount and section 951(a)(1)(B) inclusion amount (defined in paragraphs (c)(1)(ii) and (iii) of this section).

(ii) *Section 951(a)(1)(A) inclusion amount.* The *section 951(a)(1)(A) inclusion amount* is the sum of any amount (in U.S. dollars) that the covered shareholder includes in gross income with respect to the controlled foreign corporation for the relevant taxable year under section 951(a)(1)(A) or 951A(a) or § 1.961–11.

(iii) *Section 951(a)(1)(B) inclusion amount.* The *section 951(a)(1)(B) inclusion amount* is the amount (in U.S. dollars) that the covered shareholder includes in gross income with respect to the controlled foreign corporation for the relevant taxable year under section 951(a)(1)(B).

(2) *Determine if any midyear transactions occur.* Second, determine if any midyear transactions (which affect the timing of certain basis adjustments under paragraphs (d) and (e) of this section) occur within the relevant taxable year. A *midyear transaction* is any sale, exchange, or other disposition (including an issuance or redemption) occurring before the last relevant day of the relevant taxable year and involving one or more items of property that, immediately before or after the sale, exchange, or other disposition are stock of the controlled foreign corporation owned by the covered shareholder or property through which the covered shareholder owns stock of the controlled foreign corporation.

(3) *Apply actual distribution rule.*

Third, if, before the last relevant day of the relevant taxable year, the controlled foreign corporation distributes previously taxed earnings and profits with respect to the covered shareholder in a covered distribution (determined under § 1.959–4), then increase basis for a portion of the section 951(a)(1)(A) inclusion amount in accordance with paragraph (d) of this section.

(4) *Apply hypothetical distribution rule.* Fourth, increase basis for any remaining portion of the section 951(a)(1)(A) inclusion amount and the section 951(a)(1)(B) inclusion amount in accordance with paragraph (e) of this section.

(d) *Actual distribution rule—(1) In general.* For each distribution described in paragraph (c)(3) of this section (starting with the earliest distribution), increase basis of property units that are shares of stock of the controlled foreign corporation and, if applicable, property units through which the covered shareholder owns such shares, in accordance with paragraphs (d)(2) and (3) of this section. Treat each such increase to basis as made at the beginning of the first day of the relevant taxable year, unless the distribution is made after any midyear transactions, in which case treat each such increase as made immediately after the midyear transaction that most recently precedes the distribution.

(2) *Increases to basis of shares of stock of the controlled foreign corporation.* Increase the basis of each property unit that is a share of stock of the controlled foreign corporation that the covered shareholder owns on the last relevant day of the relevant taxable year by the amount of the adjustment required under § 1.961–4 (basis reductions and gain recognition for distributions) to such basis by reason of the distribution, subject to the following limitation. Do not increase the basis of the share by an amount greater than the product of the section 951(a)(1)(A) inclusion amount, reduced by all increases to basis under this paragraph (d)(2) by reason of earlier distributions, and a fraction, the numerator of which is the portion of the distribution that is made with respect to the share, and the denominator of which is the amount of the distribution.

(3) *Increases to basis of property units through which the covered shareholder owns stock of the controlled foreign corporation.* If, when the distribution is made, the covered shareholder owns stock of the controlled foreign corporation through one or more property units, then increase the basis of each such property unit by the portion

of the hypothetical distribution described in paragraph (e)(2) of this section (modified as described in the next sentence) that would be distributed with respect to the property unit in accordance with paragraph (e)(3) of this section, subject to the limitations in paragraph (f) of this section. For purposes of this paragraph (d)(3), the hypothetical distribution is treated as made when the distribution of previously taxed earnings and profits is made, the amount of the hypothetical distribution is equal to the increase to basis under paragraph (d)(2) of this section by reason of the distribution of previously taxed earnings and profits, and, at the level of the controlled foreign corporation, the hypothetical distribution is made in the same manner as the distribution of previously taxed earnings and profits.

(e) *Hypothetical distribution rule*—(1) *In general.* Increase the basis of each property unit that the covered shareholder owns on the last relevant day of the relevant taxable year by the portion of the hypothetical distribution described in paragraph (e)(2) of this section that would be distributed with respect to the property unit in accordance with paragraph (e)(3) of this section, subject to the limitations in paragraph (f) of this section. Except as provided in paragraph (e)(4) of this section, treat a portion of each such increase to basis as made at the end of the last day of the relevant taxable year, determined by multiplying the amount of the increase to basis by a fraction, the numerator of which is the section 951(a)(1)(B) inclusion amount, and the denominator of which is the amount of the hypothetical distribution. Treat the remaining portion of each such increase to basis as made at the beginning of the first day of the relevant taxable year on which the covered shareholder owns the property unit, unless there are any midyear transactions, in which case treat each such remaining portion as made immediately after the last midyear transaction occurring during the relevant taxable year.

(2) *Hypothetical distribution.* The hypothetical distribution described in this paragraph (e)(2) is a hypothetical distribution treated as made by the controlled foreign corporation, through all property (if any) through which the covered shareholder owns stock of the controlled foreign corporation, to the covered shareholder on the last relevant day of the relevant taxable year. The amount of the hypothetical distribution is equal to the section 951(a)(1)(A) inclusion amount, reduced by any increases to basis under paragraph (d)(2) of this section, plus the section

951(a)(1)(B) inclusion amount. In the hypothetical distribution, stock of the controlled foreign corporation and other property is taken into account only to the extent owned by the covered shareholder on the last relevant day, and the earnings and profits of the controlled foreign corporation and any foreign corporations through which the hypothetical distribution is treated as made are in each case treated as equal to the amount of the hypothetical distribution.

(3) *Distribution rights.* The portion of the hypothetical distribution that would be distributed with respect to a property unit is determined under the principles of § 1.951–1(e)(2) through (6). However, an earlier distribution affects property units' distribution rights for purposes of the hypothetical distribution to the extent such earlier distribution results in the section 951(a)(1)(A) inclusion amount increasing basis under paragraph (d) of this section.

(4) *Certain increase to basis for section 951(a)(1)(B) inclusion amount.* If basis of a property unit is increased pursuant to the second sentence of paragraph (e)(1) of this section, and at the end of the last day of the relevant taxable year the covered shareholder either does not own the property unit or owns the property unit in a manner different than how the covered shareholder owns the property unit at the time of the hypothetical distribution described in paragraph (e)(2) of this section, then treat such increase to basis as made immediately before the transaction in which the covered shareholder ceases to own the property unit in the same manner as it owns the property unit at the time of such hypothetical distribution. In addition, treat such increase to basis as made after the determination of any amount that must be included in gross income as a dividend (for example, under section 1248 or § 1.367(b)–4) as a result of such transaction.

(f) *Limitations*—(1) *Section 961(c) ownership units that are not stock of a controlled foreign corporation.* Section 961(c) basis of a section 961(c) ownership unit is increased only if the section 961(c) ownership unit is a share of stock of a controlled foreign corporation.

(2) *Taxable section 962 previously taxed earnings and profits.* The portion of an income inclusion that gives rise to previously taxed earnings and profits relating to the taxable section 962 PTEP subgroup does not increase adjusted basis of a section 961(a) ownership unit or derived basis of a derivative ownership unit.

(3) *Derivative ownership units that are partially owned by foreign corporations.* If a derivative ownership unit is owned (indirectly) by one or more foreign corporations, then an increase to derived basis of the derivative ownership unit resulting from a hypothetical distribution described in paragraph (d)(3) or (e)(2) of this section cannot exceed the portion of the hypothetical distribution that would be distributed to the covered shareholder through only the derivative ownership unit and any interests in partnerships.

§ 1.961–4 Basis reductions and gain recognition for distributions.

(a) *Scope.* This section sets forth the rules for reducing basis and recognizing gain under section 961 for distributions of previously taxed earnings and profits. Paragraph (b) of this section describes adjustments to section 961(a) ownership units in the case of distributions of previously taxed earnings and profits to a covered shareholder. Paragraph (c) of this section describes adjustments to derivative ownership units in the case of distributions of previously taxed earnings and profits through one or more partnerships to one or more covered shareholders. Paragraph (d) of this section describes adjustments to section 961(c) ownership units in the case of distributions of previously taxed earnings and profits to a controlled foreign corporation. Paragraph (e) of this section provides timing rules for when adjustments are treated as made. Paragraph (f) of this section provides rules regarding the treatment of gain recognized under this section. See § 1.961–12(c)(3) (*Example 3*) for an example illustrating the application of this section.

(b) *Adjustments to section 961(a) ownership units*—(1) *In general.* If a covered shareholder receives previously taxed earnings and profits that are excluded from its gross income under section 959(a) and § 1.959–4, then the resulting adjustments under section 961 to the covered shareholder's adjusted basis of section 961(a) ownership units are determined in accordance with the rules described in paragraph (b)(2) of this section.

(2) *Rules for adjusting basis*—(i) *Determine amounts of adjustments.* First, determine the amount of the adjustment to the covered shareholder's adjusted basis of each section 961(a) ownership unit, which is equal to the dollar basis of, and foreign income taxes associated with, previously taxed earnings and profits that are received with respect to such section 961(a) ownership unit (determined under § 1.959–4), but only including foreign

income taxes for which the covered shareholder is allowed a credit under section 901.

(ii) *Reduce basis.* Second, reduce the covered shareholder's adjusted basis of each section 961(a) ownership unit by the amount of the adjustment to such adjusted basis (determined under paragraph (b)(2)(i) of this section), but not below zero.

(iii) *Recognize gain.* Third, to the extent that the amount of an adjustment to the covered shareholder's adjusted basis of a section 961(a) ownership unit (determined under paragraph (b)(2)(i) of this section) exceeds such adjusted basis, treat the covered shareholder as recognizing gain with respect to such section 961(a) ownership unit in accordance with paragraph (f) of this section.

(c) *Adjustments to derivative ownership units—(1) In general.* If, through a partnership, one or more covered shareholders receive previously taxed earnings and profits that are excluded from the covered shareholders' gross income under section 959(a) and § 1.959–4, then the resulting adjustments under section 961 to the partnership's derived basis of derivative ownership units are determined in accordance with the rules described in paragraph (c)(2) of this section. In the case of tiered partnerships, each tiered partnership's derived basis of derivative ownership units is adjusted as described in paragraph (c)(2) of this section, starting with the partnership at the lowest tier.

(2) *Rules for adjusting basis—(i) Determine amounts of adjustments.* First, determine the amount of the adjustment to the partnership's derived basis with respect to each covered shareholder of each derivative ownership unit, which is equal to the dollar basis of, and foreign income taxes associated with, previously taxed earnings and profits that are both with respect to such covered shareholder and received with respect to such derivative ownership unit (determined under § 1.959–4).

(ii) *Reduce positive derived basis.* Second, reduce the partnership's derived basis with respect to each covered shareholder of each derivative ownership unit by the amount of the adjustment to such derived basis (determined under paragraph (c)(2)(i) of this section), but not below zero.

(iii) *Reduce positive section 743(b) basis (if applicable) and increase negative derived basis.* Third, to the extent that the amount of an adjustment to the partnership's derived basis with respect to a covered shareholder of a derivative ownership unit (determined

under paragraph (c)(2)(i) of this section) exceeds the related reduction to positive derived basis (determined under paragraph (c)(2)(ii) of this section), reduce the covered shareholder's positive section 743(b) basis adjustment of such derivative ownership unit (if applicable), but not below zero, and then, if applicable, reduce such derived basis below zero, but only to the extent permitted under paragraph (c)(3) of this section.

(iv) *Recognize and allocate gain.* Fourth, to the extent that the amount of an adjustment to the partnership's derived basis with respect to a covered shareholder of a derivative ownership unit (determined under paragraph (c)(2)(i) of this section) exceeds the aggregate of the related reductions to derived basis (determined under paragraphs (c)(2)(ii) and (iii) of this section) and positive section 743(b) basis (determined under paragraph (c)(2)(iii) of this section), treat the partnership as recognizing gain with respect to such derivative ownership unit in accordance with paragraph (f) of this section, and allocate the gain solely to the covered shareholder.

(3) *Limitation on reducing derived basis—(i) In general.* An adjustment to a partnership's derived basis with respect to a covered shareholder of a derivative ownership unit can reduce (or further reduce) such derived basis below zero only to the extent of the amount of common basis of such derivative ownership unit available with respect to the covered shareholder (determined under paragraph (c)(3)(ii) of this section), less, if applicable, the covered shareholder's negative section 743(b) basis adjustment of the derivative ownership unit (expressed as a positive amount).

(ii) *Determining common basis available with respect to the covered shareholder.* In applying paragraph (c)(3)(i) of this section, the amount of common basis of the derivative ownership unit available with respect to the covered shareholder is equal to the product of the following amounts—

(A) The partnership's common basis of the derivative ownership unit (translated, if applicable, into U.S. dollars at the spot rate on the day on which the adjustment described in paragraph (c)(3)(i) of this section would be treated as reducing basis), reduced by all negative derived basis of the derivative ownership unit (determined immediately before the adjustment described in paragraph (c)(3)(i) of this section would be treated as made); and

(B) A fraction, the numerator of which is the amount by which the adjustment described in paragraph (c)(3)(i) of this

section would reduce derived basis with respect to the covered shareholder below zero if derived basis could be reduced without limitation, and the denominator of which is the sum of the amounts by which the adjustment described in paragraph (c)(3)(i) of this section and any concurrent adjustments to derived basis with respect to other covered shareholders would reduce derived basis of the derivative ownership unit below zero if derived basis could be reduced without limitation.

(d) *Adjustments to section 961(c) ownership units—(1) In general.* If a controlled foreign corporation receives previously taxed earnings and profits that are excluded from its gross income under section 959(b) and § 1.959–4, then the resulting adjustments under section 961 to the controlled foreign corporation's section 961(c) basis of section 961(c) ownership units are determined in accordance with the rules described in paragraph (d)(2) of this section.

(2) *Rules for adjusting basis—(i) Determine amounts of adjustments.* First, determine the amount of the adjustment to the controlled foreign corporation's section 961(c) basis with respect to each covered shareholder of each section 961(c) ownership unit, which is equal to the dollar basis of, and foreign income taxes associated with, previously taxed earnings and profits that are both with respect to such covered shareholder and received with respect to such section 961(c) ownership unit (determined under § 1.959–4).

(ii) *Reduce basis.* Second, reduce the controlled foreign corporation's section 961(c) basis with respect to each covered shareholder of each section 961(c) ownership unit by the amount of the adjustment to such section 961(c) basis, including below zero, but only to the extent permitted under paragraph (d)(3) of this section.

(iii) *Recognize and assign gain.* Third, to the extent that the amount of an adjustment to the controlled foreign corporation's section 961(c) basis with respect to a covered shareholder of a section 961(c) ownership unit (determined under paragraph (d)(2)(i) of this section) exceeds the related reduction to section 961(c) basis (determined under paragraph (d)(2)(ii) of this section), treat the controlled foreign corporation as recognizing gain with respect to such section 961(c) ownership unit in accordance with paragraph (f) of this section, and assign the gain solely to the covered shareholder.

(3) *Limitation on reducing section 961(c) basis*—(i) *In general.* An adjustment to a controlled foreign corporation's section 961(c) basis with respect to a covered shareholder of a section 961(c) ownership unit can reduce (or further reduce) such section 961(c) basis below zero only to the extent of the amount of adjusted basis of such section 961(c) ownership unit available with respect to the covered shareholder (determined under paragraph (d)(3)(ii) of this section).

(ii) *Determining adjusted basis available with respect to the covered shareholder.* In applying paragraph (d)(3)(i) of this section, the amount of adjusted basis of the section 961(c) ownership unit available with respect to the covered shareholder is equal to the product of the following amounts—

(A) The controlled foreign corporation's adjusted basis of the section 961(c) ownership unit (translated, if applicable, into U.S. dollars at the spot rate on the day on which the adjustment described in paragraph (d)(3)(i) of this section would be treated as reducing basis), reduced by all negative section 961(c) basis of the section 961(c) ownership unit (determined immediately before the adjustment described in paragraph (d)(3)(i) of this section would be treated as made); and

(B) A fraction, the numerator of which is the amount by which the adjustment described in paragraph (d)(3)(i) of this section would reduce section 961(c) basis with respect to the covered shareholder below zero if section 961(c) basis could be reduced without limitation, and the denominator of which is the sum of the amounts by which the adjustment described in paragraph (d)(3)(i) of this section and any concurrent adjustments to section 961(c) basis with respect to other covered shareholders would reduce section 961(c) basis of the section 961(c) ownership unit below zero if section 961(c) basis could be reduced below zero without limitation.

(e) *Timing of basis reductions*—(1) *Basis of stock.* A reduction to basis of stock of a foreign corporation under paragraph (b), (c), or (d) of this section is treated as made concurrently with the distribution giving rise to the basis reduction (and before any other adjustment to basis by reason of the distribution, for example, under section 301(c)(2)).

(2) *Basis of partnership interests.* A reduction to basis of an interest in a partnership under paragraph (b) or (c) of this section is treated as made concurrently with the adjustment under section 705 to such interest in the

partnership by reason of the distribution giving rise to the basis reduction.

(f) *Treatment of gain*—(1) *In general.* Gain treated as recognized with respect to a section 961(a) ownership unit, derivative ownership unit, or section 961(c) ownership unit under paragraph (b), (c), or (d) of this section is treated as gain from a sale or exchange of such ownership unit occurring concurrent with when the adjustment described in that paragraph would be treated as reducing basis.

(2) *Gain recognized by a partnership.* Gain treated as recognized by a partnership under paragraph (c) of this section constitutes an item of gain solely with respect to the covered shareholder to which it is allocated and has no effect on any partnership's computation or allocation of any other item under section 703 or 704 or on the covered shareholder's capital account. The gain is treated as the covered shareholder's distributive share of gain of the partnership (derived through each partnership through which the covered shareholder owns the partnership recognizing the gain, if applicable) and is taken into account in adjusting basis under section 705.

(3) *Gain recognized by a controlled foreign corporation.* Gain treated as recognized by a controlled foreign corporation under paragraph (d) of this section is gain recognized pursuant to section 961(c). Such gain applies only for purposes of determining amounts included in gross income of United States shareholders of the controlled foreign corporation under § 1.961–11 and, therefore, for example does not affect the controlled foreign corporation's items of gross income for purposes of section 952 or 951A or its earnings and profits.

(4) *Translation rule.* If applicable, gain treated as recognized by a partnership or controlled foreign corporation under paragraph (c) or (d) of this section is translated into functional currency at the spot rate on the day on which the gain is treated as recognized.

§ 1.961–5 Basis adjustments for foreign currency gain or loss and for general successor transactions.

(a) *Scope.* This section sets forth the rules for adjusting basis under section 961 for foreign currency gain or loss recognized with respect to previously taxed earnings and profits under section 986(c) and for general successor transactions. Paragraph (b) of this section provides the adjustments for foreign currency gain or loss. Paragraph (c) of this section provides the adjustments for general successor

transactions. Paragraph (d) of this section coordinates with section 743(b).

(b) *Adjustments for foreign currency gain or loss*—(1) *In general.* If a covered shareholder recognizes foreign currency gain or loss with respect to a foreign corporation's previously taxed earnings and profits under § 1.986(c)–1 in a transaction other than a distribution of the previously taxed earnings and profits, then basis of property units that are shares of stock of the foreign corporation owned by the covered shareholder, and basis of any property units through which the covered shareholder owns stock of the foreign corporation, is in each case adjusted in accordance with the rules described in paragraphs (b)(2) through (4) of this section. Generally, under those rules, basis adjustments begin at the level of stock of the foreign corporation and then tier through property units through which the covered shareholder owns such stock, with at each level basis adjustments allocated among property units based on proportionate shares of foreign currency gain or loss. Solely for purposes of this paragraph (b), a reference to the basis of a property unit means adjusted basis in the case of a section 961(a) ownership unit, derived basis with respect to the covered shareholder in the case of a derivative ownership unit, or section 961(c) basis with respect to the covered shareholder in the case of a section 961(c) ownership unit.

(2) *Determine net foreign currency gain or loss.* First, determine the amount of foreign currency gain or loss that gives rise to adjustments to basis, computed by comparing the sum of all foreign currency gain and the sum of all foreign currency loss that the covered shareholder recognizes with respect to the foreign corporation's previously taxed earnings and profits in the transaction under § 1.986(c)–1(b), without regard to § 1.986(c)–1(b)(3)(i) and (ii) (limitations for previously taxed earnings and profits resulting from section 965). The excess of the sum of foreign currency gain over the sum of foreign currency loss is *net foreign currency gain*, and the excess of the sum of foreign currency loss over the sum of foreign currency gain is *net foreign currency loss*.

(3) *Determine each property unit's share of net foreign currency gain or loss*—(i) *In general.* Second, determine each property unit's share of net foreign currency gain or net foreign currency loss by multiplying the net foreign currency gain or net foreign currency loss, as applicable, by a fraction (which is based on a hypothetical distribution by the foreign corporation of previously

taxed earnings and profits with respect to which the covered shareholder recognizes, or would recognize, foreign currency gain or loss in the transaction). The numerator of the fraction is the portion of the hypothetical distribution described in paragraph (b)(3)(ii) of this section that, under the principles of § 1.951–1(e)(2) through (6), would be distributed with respect to the property unit, and the denominator of the fraction is the amount of such hypothetical distribution.

(ii) *Hypothetical distribution.* The hypothetical distribution described in this paragraph (b)(3)(ii) is a hypothetical distribution treated as made by the foreign corporation, through all property (if any) through which the covered shareholder owns stock of the foreign corporation, to the covered shareholder immediately before the transaction. The amount of the hypothetical distribution is equal to all previously taxed earnings and profits of the foreign corporation with respect to which the covered shareholder recognizes (or, but for § 1.986(c)–1(b)(3)(i) and (ii), would recognize) any foreign currency gain or loss in the transaction. In the hypothetical distribution, stock of the foreign corporation is taken into account only to the extent owned by the covered shareholder immediately before but not immediately after the transaction, and other property is taken into account only to the extent owned by the covered shareholder immediately before the transaction. The earnings and profits of the foreign corporation and any foreign corporations through which the hypothetical distribution is treated as made are in each case treated as equal to the amount of the hypothetical distribution.

(4) *Adjust basis*—(i) *In general.* Third, adjust the basis of each property unit in accordance with paragraph (b)(4)(ii) or (iii) of this section, as applicable, starting with property units at the lowest tier and subject to the limitation in paragraph (b)(4)(iv) of this section. Treat each such adjustment to basis as made immediately before the transaction (and therefore take the adjustments into account in determining the Federal income tax consequences of the transaction).

(ii) *Basis increases for net foreign currency gain.* In the case of net foreign currency gain, increase the basis of each property unit by the property unit's share of the net foreign currency gain (determined under paragraph (b)(3) of this section).

(iii) *Basis reductions and gain recognition for net foreign currency loss.* In the case of net foreign currency loss, reduce the basis of each property unit

by the property unit's share of net foreign currency loss (determined under paragraph (b)(3) of this section) or recognize gain in accordance with the principles of § 1.961–4 (applied by treating such share of net foreign currency loss as the amount of the adjustment to basis described in § 1.961–4(b)(2)(i), (c)(2)(i), or (d)(2)(i), as applicable).

(iv) *Limitation for section 961(c) ownership units.* Section 961(c) basis of a section 961(c) ownership unit is adjusted only if the section 961(c) ownership unit is a share of stock of a controlled foreign corporation. A specified foreign corporation (as defined in § 1.965–1(f)(45)(i)(B)) that is not otherwise a controlled foreign corporation is treated as a controlled foreign corporation for purposes of applying this paragraph (b)(4) to foreign currency gain or loss with respect to previously taxed earnings and profits resulting from the application of section 965(a).

(c) *Successor basis*—(1) *In general.* In a general successor transaction, derived basis of each partnership in which the successor covered shareholder acquires ownership of a partnership interest (each an *acquired partnership*), and section 961(c) basis of each acquired foreign corporation, transfers from the transferor covered shareholder to the successor covered shareholder (and thus becomes derived basis or section 961(c) basis with respect to the successor covered shareholder) in accordance with the rules described in paragraph (c)(2) this section. Solely for purposes of this paragraph (c), a reference to the basis of a property unit means derived basis with respect to the transferor covered shareholder in the case of a derivative ownership unit, or section 961(c) basis with respect to the transferor covered shareholder in the case of a section 961(c) ownership unit.

(2) *Rules for transferring basis*—(i) *Allocate basis before adjustment for foreign currency gain or loss.* First, for each property unit directly owned by an acquired partnership or acquired foreign corporation, allocate to the successor covered shareholder a pro rata portion of the basis of the property unit immediately before the adjustments pursuant to paragraph (b) of this section by reason of the general successor transaction, determined by multiplying such basis by a fraction. The numerator of the fraction is the value of the interest in the acquired partnership or stock of the acquired corporation, as applicable, ownership of which is acquired by the successor covered shareholder in the general successor transaction. The denominator of the fraction is the total

value of all the interests of the acquired partnership or all the stock of the acquired foreign corporation, as applicable, that the transferor covered shareholder owns immediately before the general successor transaction.

(ii) *Adjust allocations for foreign currency gain or loss.* Second, adjust the allocation of basis of each property unit as follows. Increase the allocation to the successor covered shareholder by the amount of the increase to basis of the property unit pursuant to paragraph (b) of this section by reason of the general successor transaction. Decrease the allocation to the successor covered shareholder by the amount of the reduction to basis of the property unit pursuant to paragraph (b) of this section by reason of the general successor transaction.

(iii) *Transfer of successor basis.* Third, transfer basis from the transferor covered shareholder to the successor covered shareholder by reducing basis with respect to the transferor covered shareholder, and increasing basis with respect to the successor covered shareholder, of each property unit by the amount of basis of the property unit allocated to the successor covered shareholder under paragraphs (c)(2)(i) and (ii) of this section (if such amount is positive) or, if such amount is negative, by increasing basis with respect to the transferor covered shareholder and reducing basis with respect to the successor covered shareholder by such amount, expressed as a positive number. Treat each such transfer of basis as made concurrently with the general successor transaction.

(3) *Deemed covered shareholder*—(i) *In general.* For purposes of transferring basis under this paragraph (c), the deemed covered shareholder is treated in the same manner as a covered shareholder and a reference to a covered shareholder includes the deemed covered shareholder. Thus, for example, if a covered shareholder sells an interest in a partnership that directly owns stock of a foreign corporation to a nonresident alien individual in a general successor transaction, then derived basis of the partnership transfers from the seller covered shareholder to the deemed covered shareholder under this paragraph (c). Moreover, if the individual subsequently sells the partnership interest to a covered shareholder, then derived basis of the partnership (adjusted consistent with the section 961 regulations, including to reflect distributions from the foreign corporation to the individual) transfers from the deemed covered shareholder to the buyer covered shareholder under this paragraph (c).

(ii) *Treatment as controlled foreign corporation stock.* Solely for purposes of determining section 961(c) basis that transfers to or from the deemed covered shareholder under this paragraph (c), any foreign corporation in which the deemed covered shareholder is treated as owning stock is treated as a controlled foreign corporation (to the extent the foreign corporation is not otherwise a controlled foreign corporation). Thus, for example, if a covered shareholder sells stock of an upper-tier foreign corporation that directly owns stock of a lower-tier foreign corporation to a nonresident alien individual in a general successor transaction, the upper-tier foreign corporation's shares of stock in the lower-tier foreign corporation remain section 961(c) ownership units and section 961(c) basis of the upper-tier foreign corporation transfers from the seller covered shareholder to the deemed covered shareholder under this paragraph (c) even if the upper-tier foreign corporation ceases to be a controlled foreign corporation as a result of the sale. Consequently, if the individual subsequently sells the stock of the upper-tier foreign corporation to a covered shareholder and, as a result, the upper-tier foreign corporation becomes a controlled foreign corporation, then section 961(c) basis of the upper-tier foreign corporation (adjusted consistent with the section 961 regulations, including to reflect distributions from the lower-tier foreign corporation to the upper-tier foreign corporation) transfers from the deemed covered shareholder to the buyer covered shareholder under this paragraph (c).

(iii) *Determining basis that transfers from the deemed covered shareholder.* In a transaction in which basis of a derivative ownership unit or section 961(c) ownership unit transfers from the deemed covered shareholder to a covered shareholder, the covered shareholder must use a reasonable method in determining the amount of transferred basis. Such method must take into account adjustments to basis with respect to the deemed covered shareholder that would have been made under the section 961 regulations if the basis were with respect to a covered shareholder during the time that it was with respect to the deemed covered shareholder.

(d) *Coordination of successor derived basis with section 743(b).* For purposes of a basis adjustment under section 743(b) with respect to a derivative ownership unit directly owned by an acquired partnership, the amount of any basis adjustment with respect to the

successor covered shareholder to the acquired partnership's assets is calculated under § 1.743–1(d) and allocated under § 1.755–1(b) by including any derived basis in the basis of the derivative ownership unit that is transferred to the successor covered shareholder under paragraph (c)(2) of this section for purposes of gain and loss calculations and basis allocations under those provisions.

§§ 1.961–6 and 1.961–7 [Reserved].

§ 1.961–8 Application of positive derived basis to covered shareholders' distributive shares of gain or loss.

(a) *Scope.* This section describes the consequences of a partnership's positive derived basis. Paragraph (b) of this section applies positive derived basis to covered shareholders' distributive shares of gain or loss recognized by a partnership on a sale, exchange, or other disposition of derivative ownership units. Paragraph (c) of this section describes related basis adjustments to certain partnership interests directly owned by a covered shareholder. Paragraph (d) of this section describes related basis adjustments to certain lower-tier partnership interests directly owned by an upper-tier partnership. See § 1.961–12(c)(4) (*Example 4*) for an example illustrating the application of this section.

(b) *Sale, exchange, or other disposition of derivative ownership units with positive derived basis—(1) In general.* In a sale, exchange, or other disposition by a partnership (*transferring partnership*) of one or more derivative ownership units (*transferred units*), each partner's distributive share of gain or loss recognized by the transferring partnership on the sale, exchange, or other disposition is first determined without regard to derived basis (taking into a partner's section 743(b) basis adjustment). Then, positive derived basis is applied to each covered shareholder's distributive share of such gain or loss in accordance with paragraph (b)(2) of this section. Such application of positive derived basis to a covered shareholder's distributive share is treated as an application of positive derived basis by the transferring partnership, unless the covered shareholder owns the transferred units through multiple partnerships, in which case only partnerships in which the covered shareholder directly owns an interest are treated as applying the positive derived basis.

(2) *Application of positive derived basis—(i) In general.* A covered shareholder's distributive share of gain

or loss with respect to transferred units (determined without regard to derived basis, and expressed as a negative amount in the case of a distributive share of loss) is adjusted by subtracting the transferring partnership's positive derived basis with respect to the covered shareholder of the transferred units, subject to the limitations in paragraphs (b)(2)(ii) and (iii) of this section, as applicable.

(ii) *Limitation in nonrecognition transactions.* In a nonrecognition transaction, the amount of positive derived basis that is taken into account in applying paragraph (b)(2)(i) of this section with respect to the covered shareholder is limited to the excess of the amount of positive derived basis that would be taken into account by the covered shareholder but for this paragraph (b)(2)(ii) over the covered shareholder's share of the gain realized but not recognized by the transferring partnership with respect to the transferred units. The covered shareholder's share of such realized-but-not-recognized gain is determined by multiplying the amount of that gain of the transferring partnership by a fraction, the numerator of which is the covered shareholder's distributive share of gain recognized by the transferring partnership with respect to the transferred units (determined without regard to derived basis), and the denominator of which is the amount of gain recognized by the transferring partnership with respect to the transferred units (determined without regard to derived basis).

(iii) *Limitation on loss.* Positive derived basis can create or increase a distributive share of loss only if loss is, or would be if there were a loss, recognized by the transferring partnership on the sale, exchange, or other disposition of the transferred units and a current deduction in respect of the loss is, or would be, allowable.

(iv) *Translation rule.* If applicable, positive derived basis is translated into functional currency at the spot rate on the day on which the sale, exchange, or other disposition occurs.

(c) *Basis adjustment to top-tier partnership interest.* In the case of a partnership interest that is directly owned by a covered shareholder and through which the covered shareholder owns the transferred units described in paragraph (b) of this section, adjusted basis of such interest is adjusted under section 705 after taking into account the partnership's application of positive derived basis to the covered shareholder's distributive share of gain or loss with respect to the transferred

units (determined under paragraph (b)(2) of this section).

(d) *Basis adjustments to lower-tier partnership interests.* In the case of a partnership interest (*lower-tier partnership interest*) that is directly owned by another partnership (*upper-tier partnership*) and through which a covered shareholder owns the transferred units described in paragraph (b) of this section, the upper-tier partnership's basis in such lower-tier partnership interest is adjusted as described in this paragraph (d). Common basis in the lower-tier partnership interest is adjusted under section 705 without regard to the application of positive derived basis to the covered shareholder's distributive share of gain or loss with respect to the transferred units (determined under paragraph (b)(2) of this section). Concurrently with and taking into account the adjustment under section 705, derived basis with respect to the covered shareholder of the lower-tier partnership interest is reduced by the amount of positive derived basis applied to the covered shareholder's distributive share of gain or loss with respect to the transferred units (determined under paragraph (b)(2) of this section) or gain is recognized in accordance with the principles of § 1.961-4 (applied by treating such amount of applied positive derived basis as the amount of the adjustment to basis described in § 1.961-4(c)(2)(i)). If there is more than one lower-tier partnership, adjustments to derived basis under this paragraph (d) are made starting with the partnership at the lowest tier.

§ 1.961-9 Exclusion from gross income of previously taxed earnings and profits resulting from positive section 961(c) basis.

(a) *Scope.* This section describes the consequences of positive section 961(c) basis. Paragraph (b) of this section excludes from gross income previously taxed earnings and profits resulting from the application of section 961(c) basis to covered gain. Paragraph (c) of this section defines covered gain. Paragraph (d) of this section describes rules for analyzing covered gain. Paragraph (e) of this section provides rules for applying positive section 961(c) basis to covered gain. Paragraph (f) of this section provides rules characterizing covered gain as previously taxed earnings and profits. Paragraph (g) of this section provides a dollar basis rule. Paragraph (h) of this section provides a rule allocating previously taxed earnings and profits to shares of stock. See § 1.961-12(c)(5)

(*Example 5*) for an example illustrating the application of this section.

(b) *Exclusion from gross income of previously taxed earnings and profits resulting from section 961(c) basis.* Previously taxed earnings and profits that result from the application of a controlled foreign corporation's section 961(c) basis to covered gain are excluded from the controlled foreign corporation's gross income, solely for purposes of determining the controlled foreign corporation's subpart F income and tested income or tested loss, and provided that the covered shareholder to which the previously taxed earnings and profits relate is a United States shareholder in the controlled foreign corporation.

(c) *Covered gain—(1) In general.* Covered gain is all gain recognized by a controlled foreign corporation on a sale, exchange, or other disposition of one or more section 961(c) ownership units that are shares of stock of a single corporation (*transferred units*), determined without regard to loss recognized on any transferred unit and without regard to section 961(c) basis. Covered gain includes amounts treated as gain from a sale, exchange, or other disposition (for example, under section 301(c)(3)), other than gain recognized pursuant to section 961(c) (for example, for distributions of previously taxed earnings and profits in excess of basis under § 1.961-4(d)). Section 961(c) basis is applied to covered gain, and previously taxed earnings and profits result from such application of section 961(c) basis, in accordance with the rules described in paragraph (d) of this section.

(2) *Coordination with dividend recharacterization provisions.* Section 964(e)(1) (or any provision of the Code or regulations in this title that would treat covered gain as a dividend in whole or in part) does not apply to the portion of covered gain to which section 961(c) basis is applied and that, consequently, is previously taxed earnings and profits.

(d) *Rules for analyzing covered gain—(1) Determine each covered shareholder's share of the covered gain.* First, determine each covered shareholder's share of the covered gain, computed as the portion of the covered gain that is assigned to the covered shareholder under § 1.951-2.

(2) *Apply section 961(c) basis.* Second, apply the controlled foreign corporation's positive section 961(c) basis to each covered shareholder's share of the covered gain in accordance with paragraph (e) of this section.

(3) *Characterize covered gain as previously taxed earnings and profits.*

Third, characterize the portion of each covered shareholder's share of the covered gain to which section 961(c) basis is applied as previously taxed earnings and profits of the controlled foreign corporation in accordance with paragraph (f) of this section. Such characterization does not reduce previously taxed earnings and profits of the foreign corporation in which shares of stock are transferred units or any foreign corporation in which stock is owned through the transferred units.

(4) *Determine dollar basis.* Fourth, determine the dollar basis of previously taxed earnings and profits resulting from section 961(c) basis in accordance with paragraph (g) of this section.

(5) *Treat resulting previously taxed earnings and profits as recognized with respect to particular transferred units.* Fifth, treat previously taxed earnings and profits resulting from section 961(c) basis as recognized with respect to particular transferred units by allocating such previously taxed earnings and profits in accordance with paragraph (h) of this section. Such allocation is taken into account, for example, in applying section 964(e)(1) (taking into account paragraph (c)(2) of this section) to gain recognized with respect to a particular transferred unit.

(6) *Adjust previously taxed earnings and profits and make related account adjustments.* Sixth, increase the controlled foreign corporation's previously taxed earnings and profits to reflect previously taxed earnings and profits resulting from section 961(c) basis and make the related adjustments described in § 1.959-3 to each covered shareholder's accounts.

(e) *Application of positive section 961(c) basis—(1) In general.* In a sale, exchange, or other disposition in which a controlled foreign corporation recognizes covered gain, the controlled foreign corporation's positive section 961(c) basis with respect to a covered shareholder of the transferred units is applied to such covered shareholder's share of the covered gain (determined under paragraph (d)(1) of this section), to the extent thereof and subject to the limitation in paragraph (e)(2) of this section.

(2) *Limitation in nonrecognition transactions.* In a nonrecognition transaction, the amount of positive section 961(c) basis that is taken into account in applying paragraph (e)(1) of this section with respect to the covered shareholder is limited to the excess of the amount of positive section 961(c) basis that would be taken into account by the covered shareholder but for this paragraph (e)(2) over the covered shareholder's share of the gain realized

but not recognized by the controlled foreign corporation with respect to the transferred units. The covered shareholder's share of such realized-but-not-recognized gain is determined by multiplying the amount of that gain of the controlled foreign corporation by a fraction, the numerator of which is the covered shareholder's share of covered gain with respect to the transferred units (determined under paragraph (d)(1) of this section), and the denominator of which is the amount of covered gain with respect to the transferred units (determined under paragraph (c)(1) of this section).

(3) *Translation rule.* If applicable, positive section 961(c) basis is translated into functional currency of the controlled foreign corporation at the spot rate on the day on which the sale, exchange, or other disposition occurs.

(4) *Unused positive section 961(c) basis.* See § 1.961–11(c)(2) and (e) for rules applying positive section 961(c) basis in excess of covered gain to gain recognized pursuant to section 961(c).

(f) *Characterization of covered gain as previously taxed earnings and profits—*

(1) *In general.* The portion of a covered shareholder's share of covered gain to which section 961(c) basis is applied (determined under paragraph (d)(2) of this section) is characterized as previously taxed earnings and profits with respect to the covered shareholder (section 961(c) PTEP) in accordance with the rules described in paragraphs (f)(2) through (4) of this section.

(2) *Mirroring rule—*(i) *In general.* The portion of section 961(c) PTEP that does not exceed the amount of mirrored PTEP (defined in paragraph (f)(2)(ii) of this section) has the same character as a pro rata portion of mirrored PTEP. The pro rata portion is determined by multiplying mirrored PTEP by a fraction, the numerator of which is the portion of section 961(c) PTEP described in the preceding sentence and the denominator of which is the amount of mirrored PTEP.

(ii) *Mirrored PTEP.* For purposes of this paragraph (f)(2), mirrored PTEP is—

(A) All previously taxed earnings and profits that transfer from the covered shareholder under § 1.959–7 in the sale, exchange, or other disposition in which the covered gain is recognized (or that would so transfer if the transferred units were sold in a general successor transaction); and

(B) All previously taxed earnings and profits that would exist if foreign income taxes associated with previously taxed earnings and profits described in paragraph (f)(2)(ii)(A) of this section (determined under § 1.959–7 and, if applicable, translated into the

functional currency of the foreign corporation to which the previously taxed earnings and profits would relate at the spot rate on the day on which the sale, exchange, or other disposition occurs) were treated as an additional amount of such previously taxed earnings and profits.

(iii) *Currency rule.* For purposes of this paragraph (f)(2), if any previously taxed earnings and profits described in paragraph (f)(2)(ii) of this section are denominated in a currency other than the functional currency of the controlled foreign corporation recognizing the covered gain, then such previously taxed earnings and profits are translated into such controlled foreign corporation's functional currency at the spot rate on the day on which the covered gain is recognized.

(3) *Lookback rule—*(i) *In general.* The portion of section 961(c) PTEP that is not characterized under paragraph (f)(2) of this section, if any, and that does not exceed the amount of lookback PTEP (defined in paragraph (f)(3)(ii) of this section) has the same character as a pro rata portion of lookback PTEP. The pro rata portion is determined by multiplying lookback PTEP by a fraction, the numerator of which is the portion of section 961(c) PTEP described in the preceding sentence and the denominator of which is the amount of lookback PTEP.

(ii) *Lookback PTEP.* For purposes of this paragraph (f)(3), lookback PTEP is all previously taxed earnings and profits that both—

(A) Resulted from an income inclusion under section 951(a) or 951A(a) of the covered shareholder attributable to the transferred units (including stock owned through the transferred units); and

(B) Were related to a taxable year of a foreign corporation ending during the 36-month period that ends on the day on which the covered gain is recognized.

(iii) *Currency rule.* For purposes of this paragraph (f)(3), if any previously taxed earnings and profits described in paragraph (f)(3)(ii) of this section are denominated in a currency other than the functional currency of the controlled foreign corporation recognizing the covered gain, then such previously taxed earnings and profits are translated into such controlled foreign corporation's functional currency by translating the U.S. dollar amount of the income inclusion giving rise to the previously taxed earnings and profits at the spot rate on the day on which the covered gain is recognized.

(4) *Section 245A(d) PTEP rule.* The portion of section 961(c) PTEP that is

not characterized under paragraphs (f)(2) and (3) of this section, if any, is characterized as relating to the section 245A(d) PTEP group, the taxable year of the controlled foreign corporation in which the covered gain is recognized, and the general category income under section 904(d)(1)(D).

(g) *Dollar basis rule.* The dollar basis of previously taxed earnings and profits with respect to a covered shareholder that result from section 961(c) basis (determined under paragraph (d)(3) of this section) is equal to the U.S. dollar amount of the section 961(c) basis giving rise to such previously taxed earnings and profits.

(h) *Allocation of previously taxed earnings and profits—*(1) *In general.* Previously taxed earnings and profits with respect to a covered shareholder that result from section 961(c) basis (determined under paragraph (d)(3) of this section) are allocated to transferred units in accordance with the rules of paragraph (h)(2) of this section.

(2) *Rules—*(i) *Stacking rule.* First, allocate to each transferred unit an amount of previously taxed earnings and profits equal to the lesser of the amount of positive section 961(c) basis with respect to the covered shareholder of the transferred unit (to the extent taken into account in applying paragraph (e)(1) of this section) and the portion of the covered shareholder's share of the covered gain that is recognized with respect to the transferred unit.

(ii) *Pro rata rule.* Second, allocate to each transferred unit a pro rata portion of any amount of previously taxed earnings and profits not allocated under paragraph (h)(2)(i) of this section, determined by multiplying such amount by a fraction. The numerator of the fraction is the portion of the covered shareholder's share of the covered gain that is recognized with respect to the transferred unit, less the amount of previously taxed earnings and profits allocated to the transferred unit under paragraph (h)(2)(i) of this section. The denominator of the fraction is the amount of previously taxed earnings and profits not allocated under paragraph (h)(2)(i) of this section.

§ 1.961–10 Gain recognition for negative basis.

(a) *Scope.* This section describes the consequences of negative derived basis and negative section 961(c) basis. Paragraph (b) of this section sets forth a rule requiring gain recognition for negative derived basis. Paragraph (c) of this section sets forth a rule requiring gain recognition for negative section 961(c) basis. See § 1.961–12(c)(6) and (7)

(Examples 6 and 7) for examples illustrating the application of this section.

(b) *Gain recognition for negative derived basis*—(1) *In general.* If a partnership has negative derived basis of a derivative ownership unit, then, in any transaction involving the derivative ownership unit (for example, a sale, exchange, or distribution under section 301(c)(2)), the partnership is treated as recognizing gain with respect to the derivative ownership unit in accordance with the rules described in paragraphs (b)(2) through (5) of this section.

(2) *Amount of gain*—(i) *In general.* The amount of the gain recognized is equal to the additional amount of gain, plus the lesser amount of loss (expressed as a positive amount), that the partnership would have recognized in the transaction if, immediately before the transaction, the partnership's common basis of the derivative ownership unit were reduced by all negative derived basis of the derivative ownership unit. Thus, for example, in a sale of the derivative ownership unit, the amount of the gain recognized is generally equal to the sum of all negative derived basis of the derivative ownership unit and, in a nonrecognition transaction, the amount of the gain recognized may be less than the sum of all negative derived basis of the derivative ownership unit.

(ii) *Special rule if derivative ownership unit ceases to be a derivative ownership unit.* If the derivative ownership unit is not a derivative ownership unit immediately after the transaction (including, for example, because the derivative ownership unit is redeemed, or becomes directly owned by a foreign corporation or covered shareholder, in the transaction), then, notwithstanding paragraph (b)(2)(i) of this section, the amount of the gain recognized is equal to the sum of all negative derived basis of the derivative ownership unit.

(iii) *Translation rule.* If applicable, negative derived basis is translated into functional currency at the spot rate on the day on which the transaction involving the derivative ownership unit occurs.

(3) *Allocation of gain.* A pro rata portion of the gain is allocated to each covered shareholder, determined by multiplying the amount of such gain by a fraction. The numerator of the fraction is the negative derived basis with respect to the covered shareholder of the derivative ownership unit, and the denominator of the fraction is the sum of all negative derived basis of the derivative ownership unit.

(4) *Treatment of gain.* The gain is treated in the same manner as gain recognized under § 1.961–4(c) for distributions of previously taxed earnings and profits in excess of basis (and thus the rules in § 1.961–4(f) apply to the gain), except that the gain is recognized concurrently with, but separate from, the transaction.

(5) *Negative derived basis eliminated to the extent it gives rise to gain.* Negative derived basis is eliminated to the extent it increases the amount of gain recognized under this paragraph (b), concurrent with the transaction.

(c) *Gain recognition for negative section 961(c) basis*—(1) *In general.* If a controlled foreign corporation has negative section 961(c) basis of a section 961(c) ownership unit, then, in any transaction involving the section 961(c) ownership unit (for example, a sale, exchange, or distribution under section 301(c)(2)), the controlled foreign corporation is treated as recognizing gain with respect to the section 961(c) ownership unit in accordance with the rules described in paragraphs (c)(2) through (5) of this section.

(2) *Amount of gain*—(i) *In general.* The amount of the gain recognized is equal to the additional amount of gain, plus the lesser amount of loss (expressed as a positive amount), that the controlled foreign corporation would have recognized in the transaction if, immediately before the transaction, the controlled foreign corporation's adjusted basis of the section 961(c) ownership unit were reduced by all negative section 961(c) basis of the section 961(c) ownership unit. Thus, for example, in a sale of the section 961(c) ownership unit, the amount of the gain recognized is generally equal to the sum of all negative section 961(c) basis of the section 961(c) ownership unit and, in a nonrecognition transaction, the amount of the gain recognized may be less than the sum of all negative section 961(c) basis of the section 961(c) ownership unit.

(ii) *Special rule if section 961(c) ownership unit ceases to be a section 961(c) ownership unit.* If the section 961(c) ownership unit is not a section 961(c) ownership unit immediately after the transaction (including, for example, because the section 961(c) ownership unit is redeemed, or becomes directly owned by a covered shareholder, in the transaction), then, notwithstanding paragraph (c)(2)(i) of this section, the amount of the gain recognized is equal to the sum of all negative section 961(c) basis of the section 961(c) ownership unit.

(iii) *Translation rule.* If applicable, negative section 961(c) basis is translated into functional currency of the controlled foreign corporation at the spot rate on the day on which the transaction involving the section 961(c) ownership unit occurs.

(3) *Assignment of gain.* A pro rata portion of the gain is assigned to each covered shareholder, determined by multiplying the amount of such gain by a fraction. The numerator of the fraction is the negative section 961(c) basis with respect to the covered shareholder of the section 961(c) ownership unit, and the denominator of the fraction is the sum of all negative section 961(c) basis of the section 961(c) ownership unit.

(4) *Treatment of gain.* The gain is treated in the same manner as gain recognized under § 1.961–4(d) for distributions of previously taxed earnings and profits in excess of basis (and thus the rules in § 1.961–4(f) apply to the gain), except that the gain is recognized concurrently with, but separate from, the transaction. Thus, the gain is recognized pursuant to section 961(c) and therefore applies only for purposes of determining amounts included in gross income of United States shareholders of the controlled foreign corporation under § 1.961–11.

(5) *Negative section 961(c) basis eliminated to the extent it gives rise to gain.* Negative section 961(c) basis is eliminated to the extent it increases the amount of gain recognized under this paragraph (c), concurrent with the transaction.

§ 1.961–11 Amounts included in gross income of United States shareholders.

(a) *Scope.* This section sets forth rules regarding amounts that United States shareholders of a controlled foreign corporation must include in gross income under section 961(c) to account for gain recognized by the controlled foreign corporation pursuant to section 961(c) (for distributions of previously taxed earnings and profits in excess of basis under § 1.961–4(d), for foreign currency loss in excess of basis under § 1.961–5(b), or for negative section 961(c) basis under § 1.961–10(c)). Paragraph (b) of this section provides the general rule. Paragraph (c) of this section allocates gain recognized pursuant to section 961(c) to a United States shareholder. Paragraph (d) of this section adjusts allocations of gain to reflect transfers of stock of the controlled foreign corporation. Paragraph (e) of this section determines loss recognized under section 961(c) with respect to a United States shareholder. See § 1.961–12(c)(8) (Example 8) for an example illustrating

the application of this section. *See also* § 1.961–3, regarding basis increases for an inclusion under this section.

(b) *In general.* If a United States shareholder owns stock of a controlled foreign corporation on the last relevant day of a taxable year of the controlled foreign corporation, and the controlled foreign corporation recognizes gain pursuant to section 961(c) within that taxable year (all such gain, *section 961(c) income*), then the United States shareholder includes in gross income the amount of section 961(c) income that is allocated to the United States shareholder (determined under paragraph (c) of this section). The inclusion is for the United States shareholder's taxable year in which or with which the controlled foreign corporation's taxable year ends and is treated in the same manner as an amount included in gross income under section 951(a)(1)(A) solely for purposes of increasing basis under § 1.961–3 and translation into U.S. dollars under 989(b).

(c) *Allocation of section 961(c) income.* For purposes of paragraph (b) of this section, the amount of the controlled foreign corporation's section 961(c) income that is allocated to a United States shareholder is the excess (if any) of—

(1) The sum of any portions of section 961(c) income that are assigned to the United States shareholder under § 1.961–4, 1.961–5, or 1.961–10, adjusted, if applicable, in accordance with paragraph (d) of this section as a result of transfers of stock of the controlled foreign corporation; over

(2) The amount of loss that the controlled foreign corporation is treated as recognizing under section 961(c) with respect to the United shareholder in accordance with paragraph (e) of this section.

(d) *Rules for transfers of stock of the controlled foreign corporation—*(1) *General successor transactions—*(i) *General successor transaction occurring before the last relevant day.* For purposes of paragraph (c)(1) of this section, if the controlled foreign corporation is an acquired foreign corporation in a general successor transaction that occurs before the last relevant day of the controlled foreign corporation's taxable year, then treat a pro rata portion of section 961(c) income that is both recognized before the general successor transaction and assigned to the transferor covered shareholder under § 1.961–4, 1.961–5, or 1.961–10 as instead assigned to the successor covered shareholder, determined by multiplying such section 961(c) income by the fraction described

in § 1.961–5(c)(2)(i) for determining the controlled foreign corporation's section 961(c) basis that transfers in the general successor transaction.

(ii) *General successor transaction occurring on or after the last relevant day.* For purposes of paragraph (c)(1) of this section, if the controlled foreign corporation is an acquired foreign corporation in a general successor transaction that occurs on or after the last relevant day of the controlled foreign corporation's taxable year, then treat a pro rata portion of section 961(c) income that is both recognized after the general successor transaction and assigned to the successor covered shareholder under § 1.961–4, 1.961–5, or 1.961–10 as instead assigned to the transferor covered shareholder, determined by multiplying such section 961(c) income by the fraction described in § 1.961–5(c)(2)(i) for determining the controlled foreign corporation's section 961(c) basis that transfers in the general successor transaction.

(2) *Other transfers.* The principles of paragraph (d)(1) of this section apply to transactions, other than general successor transactions, in which the controlled foreign corporation's 961(c) basis transfers to another covered shareholder.

(e) *Determining loss under section 961(c)—*(1) *In general.* For purposes of paragraph (c)(2) of this section, the amount of loss that the controlled foreign corporation is treated as recognizing under section 961(c) with respect to the United States shareholder is, subject to the limitations in paragraph (e)(2) of this section, equal to the sum of the controlled foreign corporation's positive section 961(c) basis with respect to the United States shareholder of section 961(c) ownership units that are sold, exchanged, or otherwise disposed of by the controlled foreign corporation within the controlled foreign corporation's taxable year, reduced by the amount of such positive section 961(c) basis that is applied to covered gain under § 1.961–9.

(2) *Limitations—*(i) *In general.* Positive section 961(c) basis of section 961(c) ownership units increases the amount of loss that the controlled foreign corporation is treated as recognizing under section 961(c) only if loss is, or would be if there were a loss, recognized by the controlled foreign corporation on the sale, exchange, or other disposition of the section 961(c) ownership units and a current deduction in respect of the loss is, or would be, allowable.

(ii) *Loss recognized only to the extent of certain gain.* Positive section 961(c)

basis of section 961(c) ownership units that are shares of stock of a single foreign corporation increases the amount of loss that the controlled foreign corporation is treated as recognizing under section 961(c) only to the extent of the portion of the amount described in paragraph (c)(1) of this section that is recognized with respect to stock of such foreign corporation.

(3) *Translation rule.* If applicable, positive section 961(c) basis of section 961(c) ownership units is translated into the controlled foreign corporation's functional currency at the spot rate on the day of the sale, exchange, or other disposition of the section 961(c) ownership units.

§ 1.961–12 Examples.

(a) *In general.* This section provides examples that illustrate the application of §§ 1.961–1 through 1.961–11.

(b) *Assumed facts.* For purposes of the examples in this section, unless otherwise indicated, the following facts are assumed for U.S. tax purposes:

(1) US1 and US2 are unrelated domestic corporations that are covered shareholders, each of which uses the U.S. dollar as its functional currency and chooses to claim a credit for foreign income taxes pursuant to section 901. Neither US1 nor US2 is a member of a consolidated group (as defined in § 1.1502–1(h)).

(2) F1, F2, and F3 are foreign corporations, each of which is a controlled foreign corporation and uses the British pound (£) as its functional currency.

(3) PRS1 and PRS2 are partnerships.

(4) Each entity uses the calendar year as its taxable year, and no entity has a short taxable year.

(5) There are no adjustments under section 743(b) to the basis of any partnership property.

(c) *Examples—*(1) *Example 1: Types of property units and basis—*(i) *Facts.* US1 directly owns 60, and US2 directly owns 40, of the 100 shares of the single class of outstanding stock of F1. F1 directly owns all 50 shares of the single class of outstanding stock of F2. This example only analyzes the types of basis provided under section 961 in the items of property.

(ii) *Analysis.* Each of the 60 shares of stock of F1 directly owned by US1 and the 40 shares of stock of F1 directly owned by US2 is a section 961(a) ownership unit in which the covered shareholder (US1 or US2) is provided adjusted basis. *See* § 1.961–2(c). In addition, each of the 50 shares of stock of F2 directly owned by F1, a controlled foreign corporation, is a section 961(c) ownership unit in which F1 is provided

section 961(c) basis. *See* § 1.961–2(e)(1). F1’s section 961(c) basis in each section 961(c) ownership unit is maintained separately with respect to each of US1 and US2. *See* § 1.961–2(e)(2). Further, each of the section 961(a) ownership units and section 961(c) ownership units is a property unit, and adjusted basis or section 961(c) basis in the property unit, as applicable, is maintained in U.S. dollars. *See* § 1.961–2(b).

(iii) *Alternative facts: partnership structure—(A) Facts.* The facts are the same as paragraph (c)(1)(i) of this section (*Example 1*), except that US1 and US2, in the aggregate, directly own all the interests in PRS1, and PRS1 directly owns all 100 of the shares of stock of F1.

(B) *Analysis.* The interest in PRS1 directly owned by each of US1 and US2 is a section 961(a) ownership unit in which the covered shareholder (US1 or US2) is provided adjusted basis. *See* § 1.961–2(c). In addition, each of the 100 shares of stock of F1 directly owned by PRS1 is a derivative ownership unit in which PRS1 is provided derived basis. *See* § 1.961–2(d)(1). PRS1’s derived basis in each derivative ownership unit is established and maintained separately with respect to each of US1 and US2. *See* § 1.961–2(d)(2). Further, as is the case in paragraph (c)(1)(ii) of this section, each of the 50 shares of stock of F2 directly owned by F1, a controlled foreign corporation, is a section 961(c) ownership unit in which F1 is provided section 961(c) basis, and that basis is maintained separately with respect to each of US1 and US2. Moreover, each of the section 961(a) ownership units, derivative ownership units, and section 961(c) ownership units is a property unit, and adjusted basis, derived basis, or section 961(c) basis in the property unit, as applicable, is maintained in U.S. dollars. *See* § 1.961–2(b).

(2) *Example 2: Basis increases for income inclusions—(i) Facts.* US1 directly owns all 100 shares of the single class of outstanding stock of F1, and F1 directly owns all 50 shares of the single class of outstanding stock of F2. Thus, the shares of stock of F1 directly owned by US1 are section 961(a) ownership units, and the shares of stock of F2 directly owned by F1 are section 961(c) ownership units. For F2’s taxable year ending on December 31 of year 3, the last relevant day is December 31 and US1 includes \$80x in gross income under section 951(a)(1)(A) (its pro rata share of F2’s subpart F income, translated into U.S. dollars in accordance with section 989(b)) and \$120x in gross income under section 951A(a) (the portion of its GILTI

inclusion amount that is treated as with respect to F2 for the taxable year under section 951A(f)(2)). F2 does not make any covered distributions, and therefore does not distribute any previously taxed earnings and profits, during the taxable year. This example only analyzes basis increases for the income inclusions. *See also* § 1.312–6(f) (income inclusions increase US1’s earnings and profits); § 1.959–3 (adjustments to previously taxed earnings and profits accounts).

(ii) *Analysis—(A) In general.* To reflect US1’s income inclusions for F2’s taxable year ending on December 31 of year 3, basis of shares of stock of F2, and basis of shares of stock of F1 (property units through which US1 owns stock of F2), is in each case increased in accordance with § 1.961–3. *See* § 1.961–3(b). In the case of stock of F2, F1’s section 961(c) basis with respect to US1 is increased because shares of stock of F2 are section 961(c) ownership units and F2 is a controlled foreign corporation, as required by § 1.961–3(f)(1). In the case of stock of F1, US1’s adjusted basis is increased because shares of stock of F1 are section 961(a) ownership units. Paragraph (c)(2)(ii)(B) of this section provides the specific increases to basis.

(B) *Increases to basis of each property unit.* The amount of US1’s income inclusions with respect to F2 that give rise to increases to basis under section 961 is \$200x (\$80x + \$120x). *See* § 1.961–3(c)(1). In determining the specific increases to basis, the actual distribution rule in § 1.961–3(d) does not apply because F2 does not distribute any previously taxed earnings and profits before the last relevant day. *See* § 1.961–3(c)(3). Thus, the hypothetical distribution rule in § 1.961–3(e) determines the entirety of the increases to basis for the income inclusions. *See* § 1.961–3(c)(4). Under the hypothetical distribution rule, the basis of each share of stock of F2 is increased by \$4x (\$200x ÷ 50 shares), and the basis of each share of stock of F1 is increased by \$2x (\$200x ÷ 100 shares), which in each case is equal to the portion of a \$200x hypothetical distribution treated as made by F2 through all tiers to US1 on the last relevant day that would be distributed with respect to the property unit. *See* § 1.961–3(e). These increases to basis are treated as made at the beginning of F2’s taxable year 3 because there are no midyear transactions and the entirety of the \$200x of income inclusions is under section 951(a)(1)(A) or 951A(a). *See* § 1.961–3(c)(2) and (e)(1). Accordingly, at the beginning of F2’s taxable year 3, F1 increases its section 961(c) basis with respect to US1 of each share of stock of F2 by \$4x, and

US1 increases its adjusted basis of each share of stock of F1 by \$2x.

(iii) *Alternative facts: midyear transaction and actual distribution rule—(A) Facts.* The facts are the same as in paragraph (c)(2)(i) of this section, except as follows. On January 1 of year 3, US1 directly owns all the stock of F2. On March 31 of year 3, F2 distributes previously taxed earnings and profits to US1 (pro rata with respect to the shares of stock of F2) and, consequently, US1 is required under § 1.961–4 (basis reductions and gain recognition for distributions) to adjust its adjusted basis of each share of stock of F2 by \$3x (the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are distributed on the share). On June 30 of year 3, F1 is formed and US1 immediately contributes all its stock of F2 to F1 in exchange for 100 shares of stock of F1. Thus, before the contribution, shares of stock of F2 are section 961(a) ownership units and, beginning as of the contribution, all the shares of stock of F1 are section 961(a) ownership units and all the shares of stock of F2 are section 961(c) ownership units.

(B) *Analysis—(1) In general.* To reflect US1’s income inclusions for F2’s taxable year ending on December 31 of year 3, basis of shares of stock of F2, and basis of shares of stock of F1 (property units through which US1 owns stock of F2), is in each case increased in accordance with § 1.961–3. *See* § 1.961–3(b). In the case of stock of F2, because shares of the stock are section 961(a) ownership units before the contribution and section 961(c) ownership units after the contribution, the type of basis that is increased depends on the timing of adjustments. Specifically, in the case of stock of F2 and an increase to basis that is treated as made before the contribution, the basis that is increased is US1’s adjusted basis because shares of stock of F2 are section 961(a) ownership units before the contribution. In the case of stock of F2 and an increase to basis that is treated as made after the contribution, the basis that is increased is F1’s section 961(c) basis with respect to US1 because shares of stock of F2 are section 961(c) ownership units after the contribution and F2 is a controlled foreign corporation, as required by § 1.961–3(f)(1). In the case of stock of F1, US1’s adjusted basis is increased because shares of stock of F1 are section 961(a) ownership units. Paragraph (c)(2)(iii)(B)(2) of this section provides the specific increases to basis.

(2) *Increases to basis of each property unit.* The amount of US1’s income inclusions with respect to F2 that give

rise to increases to basis under section 961 is \$200x (\$80x + \$120x). *See* § 1.961–3(c)(1). In determining the specific increases to basis for the income inclusions, the actual distribution rule in § 1.961–3(d) applies because F2's distribution of previously taxed earnings and profits is made before the last relevant day. *See* § 1.961–3(c)(3). Under the actual distribution rule, basis of each share of stock of F2 is increased by \$3x, which is equal to the adjustment required under § 1.961–4 to the basis of such share by reason of the distribution, and thus basis of stock of F2 increases by \$150x in total

(\$3x × 50 shares). *See* § 1.961–3(d)(2). These increases to basis are treated as made at the beginning of F2's taxable year because the distribution is made before the contribution of all the stock of F2 to F1, the sole midyear transaction occurring within the taxable year. *See* § 1.961–3(c)(2) and (d)(1). Then, the hypothetical distribution rule in § 1.961–3(e) determines increases to basis for the remaining \$50x of income inclusions (\$200x of income inclusions – \$150x of basis increases to stock of F2 under the actual distribution rule). *See* § 1.961–3(c)(4). Under the hypothetical distribution rule, the basis

of each share of stock of F2, and the basis of each share of stock of F1, is increased by the portion of a \$50x hypothetical distribution treated as made by F2 through all tiers to US1 on the last relevant day that would be distributed with respect to the property unit. *See* § 1.961–3(e). These increases to basis are treated as made immediately after the contribution (the sole midyear transaction occurring within F2's taxable year). *See* § 1.961–3(e)(1). Table 1 in this paragraph (c)(2)(iii)(B)(2) provides the increases to basis.

TABLE 1 TO PARAGRAPH (c)(2)(iii)(B)(2) OF THIS SECTION—BASIS INCREASES TO REFLECT US1'S INCOME INCLUSIONS WITH RESPECT TO F2

	Basis increases	
	January 1 of year 3	June 30 of year 3
US1's adjusted basis of stock of F1 (100 shares)		\$0.5x increase for each share (\$50x hypothetical distribution ÷ 100 shares).
Stock of F2 (50 shares):		
US1's adjusted basis (before contribution)	\$3x increase for each share (actual distribution rule).	
F1's section 961(c) basis with respect to US1 (as of contribution)		\$1x increase for each share (\$50x hypothetical distribution ÷ 50 shares).

(iv) *Alternative facts: partnership structure and section 951(a)(1)(B) inclusion*—(A) *Facts*. The facts are the same as in paragraph (c)(2)(i) of this section (*Example 2*), except as follows. US1 is a citizen of the United States (rather than a domestic corporation), referred to as Individual A for purposes of the rest of this paragraph (c)(2)(iv), and does not make an election to apply the provisions of section 962 for any taxable year. PRS1 directly owns all the stock of F1, and Individual A owns 60%, and a nonresident alien individual owns 40%, of the interests in PRS1. Thus, the interest in PRS1 directly owned by Individual A is a section 961(a) ownership unit, the shares of stock of F1 directly owned by PRS1 are derivative ownership units, and the shares of stock of F2 directly owned by F1 are section 961(c) ownership units. In addition, for F2's taxable year ending on December 31 of year 3, Individual A includes \$80x in gross income under section 951(a)(1)(A) (its pro rata share of F2's subpart F income, translated into U.S. dollars in accordance with section 989(b)), \$120x in gross income under section 951A(a) (the portion of its GILTI inclusion amount that is treated as with respect to F2 for the taxable year under section 951A(f)(2)), and \$50x in gross income under section 951(a)(1)(B) (the portion of its section 956 amount that is not allocated to previously taxed

earnings and profits, translated into U.S. dollars in accordance with section 989(b)).

(B) *Analysis*—(1) *In general*. To reflect Individual A's income inclusions for F2's taxable year ending on December 31 of year 3, basis of shares of stock of F2, and basis of shares of stock of F1 and basis of Individual A's interest in PRS1 (property units through which Individual A owns stock of F2), is in each case increased in accordance with § 1.961–3. *See* § 1.961–3(b). In the case of stock of F2, the basis that is increased is F1's section 961(c) basis with respect to Individual A because shares of stock of F2 are section 961(c) ownership units and F2 is a controlled foreign corporation, as required by § 1.961–3(f)(1). In the case of stock of F1, PRS1's derived basis with respect to Individual A is increased because shares of stock of F1 are derivative ownership units. In the case of Individual A's interest in PRS1, Individual A's adjusted basis is increased because its interest in PRS1 is a section 961(a) ownership unit. Paragraph (c)(2)(iv)(B) of this section provides the specific increases to basis.

(2) *Increases to basis of each property unit*. The amount of Individual A's income inclusions with respect to F2 that give rise to increases to basis under section 961 is \$250x (\$80x + \$120x + \$50x). *See* § 1.961–3(c)(1). The hypothetical distribution rule in

§ 1.961–3(e) determines the entirety of the increases to basis for the income inclusions. *See* § 1.961–3(c)(3) and (4). Under the hypothetical distribution rule, the basis of each property unit is increased by the portion of a \$250x hypothetical distribution treated as made by F2 through all tiers to Individual A on the last relevant day that would be distributed with respect to the property unit (determined by regarding stock of F2 and other property only to the extent owned by Individual A on the last relevant day). *See* § 1.961–3(e). In addition, because 20% of the \$250x of income inclusions is under section 951(a)(1)(B) (\$50x/\$250x), 20% of each increase to basis is treated as made at the end of the last day of F2's taxable year (which is when the previously taxed earnings and profits resulting from the income inclusion under section 951(a)(1)(B) are added to previously taxed earnings and profits accounts), with the remaining 80% treated as made at the beginning of the taxable year (which is when the previously taxed earnings and profits resulting from the income inclusions under sections 951(a)(1)(A) and 951A(a) are added to previously taxed earnings and profits accounts). *See* § 1.961–3(e)(1). Table 1 in this paragraph (c)(2)(iii)(B)(2) provides the increases to basis.

TABLE 1 TO PARAGRAPH (c)(2)(iv)(B)(2) OF THIS SECTION—BASIS INCREASES TO REFLECT INDIVIDUAL A'S INCOME INCLUSIONS WITH RESPECT TO F2

	Basis increases	
	January 1 of year 3	December 31 of year 3
Individual A's adjusted basis of its interest in PRS1	\$200x increase (\$250x × 80%)	\$50x increase (\$250x × 20%).
PRS1's derived basis with respect to Individual A of stock of F1 (100 shares).	\$2x increase for each share (\$250x + 100 shares × 80%).	\$0.5 increase for each share (\$250x + 100 shares × 20%).
F1's section 961(c) basis with respect to Individual A of stock of F2 (50 shares).	\$4x increase for each share (\$250x + 50 shares × 80%).	\$1x increase for each share (\$250x + 50 shares × 20%).

(3) *Example 3: Basis reductions and gain recognition for distributions—(i) Facts.* US1 and US2, in the aggregate, directly own all the shares of the single class of outstanding stock of F1. In year 3, F1 makes a covered distribution (pro rata with respect to the shares of stock of F1). Under § 1.959–4, the entirety of the portion of the covered distribution received by each of US1 and US2 is previously taxed earnings and profits excluded from the covered shareholder's (US1's or US2's) gross income. In addition, the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are distributed on each share of stock of F1 owned by US1 is \$6x, and the sum of the dollar

basis and associated foreign income taxes of the previously taxed earnings and profits that are distributed on each share of stock of F1 owned by US2 is \$4x. Immediately before the covered distribution, US1's adjusted basis of each of its shares of stock of F1 is \$4.5x, and US2's adjusted basis of each of its shares of stock of F1 is \$3x. Each of US1 and US2 is deemed to pay the entirety of the associated foreign income taxes of the previously taxed earnings and profits distributed to it under section 960(b) (because all such taxes are sourced from the creditable PTEP tax group and the covered shareholder is a United States shareholder of F1) and is allowed a credit under section 901 for the entirety of such taxes. This example

only analyzes adjustments to basis of US1's and US2's shares of stock of F1 (section 961(a) ownership units) under section 961. *See also* § 1.959–3 (adjustments to previously taxed earnings and profits accounts).

(ii) *Analysis—(A) In general.* Under § 1.961–4(b), each of US1 and US2 reduces its adjusted basis of, and if applicable recognizes gain with respect to, each share of stock of F1 on which it receives previously taxed earnings and profits. The specific adjustments are provided in paragraphs (c)(3)(ii)(B) through (D) of this section and summarized in table 1 in this paragraph (c)(3)(ii)(A).

TABLE 1 TO PARAGRAPH (c)(3)(ii)(A) OF THIS SECTION—BASIS ADJUSTMENTS RESULTING FROM F1'S DISTRIBUTION OF PTEP

	Basis immediately before the covered distribution	Adjustments to basis under § 1.961–4(b)	
US1's adjusted basis of its shares of stock of F1.	\$4.5x for each share	\$6x adjustment for each share	\$4.5x reduction to basis (to \$0). \$1.5x gain recognized.
US2's adjusted basis of its shares of stock of F1.	\$3x for each share	\$4x adjustment for each share	\$3x reduction to basis (to \$0). \$1x gain recognized.

(B) *US1's receipt of previously taxed earnings and profits.* As a result of US1's receipt of previously taxed earnings and profits, the amount of the adjustment to US1's adjusted basis of each of its shares of stock of F1 is \$6x, the dollar basis and associated foreign income taxes of the previously taxed earnings and profits received on the share. *See* § 1.961–4(b)(2)(i). Consequently, US1 reduces its adjusted basis of each of its shares of stock of F1 (\$4.5x) to \$0 and then is treated as recognizing \$1.5x of gain with respect to the share (computed as the excess of the \$6x adjustment to basis over the \$4.5x reduction to basis). *See* § 1.961–4(b)(2)(ii) and (iii).

(C) *US2's receipt of previously taxed earnings and profits.* As a result of US2's receipt of previously taxed earnings and profits, the amount of the adjustment to US2's adjusted basis of each of its shares of stock of F1 is \$4x, the dollar basis and associated foreign

income taxes of the previously taxed earnings and profits received on the share. *See* § 1.961–4(b)(2)(i). Consequently, US2 reduces its adjusted basis of each of its shares of stock of F1 (\$3x) to \$0 and then is treated as recognizing \$1x of gain with respect to the share (computed as the excess of the \$4x adjustment to basis over the \$3x reduction to basis). *See* § 1.961–4(b)(2)(ii) and (iii).

(D) *Timing of adjustments.* The reductions to adjusted basis described in paragraphs (c)(3)(ii)(B) and (C) of this section are treated as made, and the gains described in those paragraphs are treated as recognized, concurrently with the covered distribution. *See* § 1.961–4(e)(1) and (f)(1).

(iii) *Alternative facts: previously taxed earnings and profits received through a partnership—(A) Facts.* The facts are the same as in paragraph (c)(3)(i) of this section (*Example 3*), except as follows. PRS1 directly owns all the shares of the

single class of outstanding stock of F1, and US1 and US2, in the aggregate, directly own all the interests in PRS1. Under § 1.959–4, the entirety of the portion of the covered distribution treated as received by each of US1 and US2 through PRS1 is previously taxed earnings and profits excluded from the covered shareholder's (US1's or US2's) gross income. In addition, the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US1 and distributed on each share of stock of F1 is \$6x, and the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US2 and distributed on each share of stock of F1 is \$4x. Immediately before the covered distribution, for each share of stock of F1, PRS1's common basis is \$2.5x, its derived basis with respect to US1 is \$3x, and its derived basis with respect to US2 is \$2x. This

paragraph (c)(3)(iii) analyzes adjustments to basis of PRS1's shares of stock of F1 (derivative ownership units) under section 961. *See also* § 1.961–4(b) (related adjustments to basis of US1's and US2's interests in PRS1).

(B) *Analysis*—(1) *In general.* Under § 1.961–4(c), PRS1 reduces its derived basis of, and if applicable recognizes gain with respect to, each share of stock of F1 on which US1 or US2 receives previously taxed earnings and profits

through PRS1. The specific adjustments are provided in paragraphs (c)(3)(iii)(B)(2) through (5) of this section and summarized in table 1 in this paragraph (c)(3)(iii)(B)(1).

TABLE 1 TO PARAGRAPH (c)(3)(iii)(B)(1) OF THIS SECTION—BASIS ADJUSTMENTS RESULTING FROM F1'S DISTRIBUTION OF PTEP

	PRS1 derived basis immediately before the covered distribution	Adjustments to PRS1 derived basis under § 1.961–4(c)	
PRS1's derived basis with respect to US1 of its shares of stock of F1.	\$3x for each share	\$6x adjustment for each share	\$4.5x reduction to basis (to negative \$1.5x). \$1.5x gain recognized.
PRS1's derived basis with respect to US2 of its shares of stock of F1.	\$2x for each share	\$4x adjustment for each share	\$3x reduction to basis (to negative \$1x). \$1x gain recognized.

(2) *US1's receipt of previously taxed earnings and profits through PRS1.* As a result of US1's receipt of previously taxed earnings and profits through PRS1, the amount of the adjustment to PRS1's derived basis with respect to US1 of each of PRS1's shares of stock of F1 is \$6x, the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US1 and received on the share. *See* § 1.961–4(c)(2)(i). Consequently, PRS1 reduces its derived basis with respect to US1 of each of its shares of stock of F1 (\$3x) to \$0 and then reduces such derived basis below zero in accordance with the limitation in § 1.961–4(c)(3), which permits a \$1.5x reduction below zero to the derived basis because \$1.5x of PRS1's common basis of the share is available with respect to US1 (as described in paragraph (c)(3)(iii)(B)(4) of this section). *See* § 1.961–4(c)(2)(ii) and (iii), (c)(3)(i). Further, PRS1 is treated as recognizing \$1.5x of gain with respect to each of its shares of stock of F1 (computed as the excess of the \$6x adjustment to basis over the sum of the \$3x reduction to positive derived basis and the \$1.5x reduction of derived basis below zero), and this gain is allocated solely to US1. *See* § 1.961–4(c)(2)(iv); *see also* § 1.961–4(f)(2) (taking the gain into account in adjusting US1's basis in its interest in PRS1 under section 705).

(3) *US2's receipt of previously taxed earnings and profits through PRS1.* As a result of US2's receipt of previously taxed earnings and profits through PRS1, the amount of the adjustment to PRS1's derived basis with respect to US2 of each of PRS1's shares of stock of F1 is \$4x, the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US2 and received on the share. *See* § 1.961–4(c)(2)(i). Consequently, PRS1 reduces

its derived basis with respect to US2 of each of its shares of stock of F1 (\$2x) to \$0 and then reduces such derived basis below zero in accordance with the limitation in § 1.961–4(c)(3), which permits a \$1x reduction below zero to the derived basis because \$1x of PRS1's common basis of the share is available with respect to US2 (as described in paragraph (c)(3)(iii)(B)(4) of this section). *See* § 1.961–4(c)(2)(ii) and (iii) and (c)(3)(i). Further, PRS1 is treated as recognizing \$1x of gain with respect to each of its shares of stock of F1 (computed as the excess of the \$4x adjustment to basis over the sum of the \$2x reduction to positive derived basis and the \$1x reduction of derived basis below zero), and this gain is allocated solely to US2. *See* § 1.961–4(c)(2)(iv); *see also* § 1.961–4(f)(2) (taking the gain into account in adjusting US2's basis in its interest in PRS1 under section 705).

(4) *Available common basis.* For each of PRS1's shares of stock of F1, the amount of common basis of the share that is available with respect to each of US1 and US2 is determined by multiplying \$2.5x (the common basis of the share, reduced by all negative derived basis of the share existing immediately before the distribution being analyzed, of which there is none) by a fraction. *See* § 1.961–4(c)(3)(ii). The numerator of the fraction is the amount by which PRS1's derived basis with respect to the covered shareholder of the share would be reduced below zero if derived basis could be reduced without limitation and, accordingly, is \$3x in the case of the derived basis with respect to US1 (computed as the excess of the \$6x adjustment to basis over the \$3x reduction to positive derived basis) and is \$2x in the case of derived basis with respect to US2 (computed as the excess of the \$4x adjustment to basis over the \$2x reduction to positive derived basis). The denominator of the

fraction is the sum of the amounts by which any of PRS1's derived basis of the share would be reduced below zero if derived basis could be reduced without limitation (\$5x, computed as the \$3x with respect to US1 plus the \$2x with respect to US2). Therefore, for each of PRS1's shares of stock of F1, there is \$1.5x of common basis available with respect to US1 (\$2.5x × \$3x/\$5x) and \$1x of common basis available with respect to US2 (\$2.5x × \$2x/\$5x), and this common basis permits a \$1.5x and \$1x reduction below zero to derived basis with respect to US1 and US2, respectively (as described in paragraphs (c)(3)(iii)(B)(2) and (3) of this section). *See also* § 1.961–10(b) (gain resulting from negative derived basis is allocated to covered shareholders in proportion to relative negative derived basis).

(5) *Timing of adjustments.* The reductions to derived basis described in paragraphs (c)(3)(iii)(B)(2) and (3) of this section are treated as made, and the gains described in those paragraphs are treated as recognized, concurrently with the covered distribution. *See* § 1.961–4(e)(1) and (f)(1).

(iv) *Alternative facts: previously taxed earnings and profits received by a controlled foreign corporation*—(A) *Facts.* The facts are the same as in paragraph (c)(3)(i) of this section (*Example 3*), except as follows. US1 and US2, in the aggregate, directly own all the outstanding stock of F2 and are United States shareholders of F2. F2 directly owns all the shares of the single class of outstanding stock of F1. Under § 1.959–4, the entirety of each of US1's and US2's share of F1's covered distribution is previously taxed earnings and profits excluded from F2's gross income for purposes of determining its subpart F income and tested income or tested loss. In addition, the sum of the dollar basis and associated foreign income taxes of the previously taxed

earnings and profits that are both with respect to US1 and distributed on each share of stock of F1 is \$6x, and the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US2 and distributed on each share of stock of F1 is \$4x. Immediately before the covered distribution, for each share of stock of F1, F2's adjusted basis

is £1.25x, its section 961(c) basis with respect to US1 is \$3x, and its section 961(c) basis with respect to US2 is \$2x. On the day of the covered distribution, the spot rate is \$1:£0.5. This paragraph (c)(3)(iv) analyzes adjustments to basis of F2's shares of stock of F1 (section 961(c) ownership units) under section 961.

(B) *Analysis*—(1) *In general*. Under § 1.961–4(d), F2 reduces its section 961(c) basis of, and if applicable recognizes gain with respect to, each share of stock of F1 on which it receives previously taxed earnings and profits. The specific adjustments are provided in paragraphs (c)(3)(iv)(B)(2) through (5) of this section and summarized in table 1 in this paragraph (c)(3)(iv)(B)(1).

TABLE 1 TO PARAGRAPH (c)(3)(iv)(B)(1) OF THIS SECTION—BASIS ADJUSTMENTS RESULTING FROM F1'S DISTRIBUTION OF PTEP

	F2 section 961(c) basis immediately before the covered distribution	Adjustments to F2 section 961(c) basis under § 1.961–4(d)	
F2's section 961(c) basis with respect to US1 of its shares of stock of F1.	\$3x for each share	\$6x adjustment for each share	\$4.5x reduction to basis (to negative \$1.5x). \$1.5x gain recognized.
F2's section 961(c) basis with respect to US2 of its shares of stock of F1.	\$2x for each share	\$4x adjustment for each share	\$3x reduction to basis (to negative \$1x). \$1x gain recognized.

(2) *F2's receipt of previously taxed earnings and profits with respect to US1*. As a result of F2's receipt of previously taxed earnings and profits with respect to US1, the amount of the adjustment to F2's section 961(c) basis with respect to US1 of each of F2's shares of stock of F1 is \$6x, the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US1 and received on the share. *See* § 1.961–4(d)(2)(i). Consequently, F2 reduces its section 961(c) basis with respect to US1 of each of its shares of stock of F1 (\$3x) to \$0 and then reduces such section 961(c) basis below zero in accordance with the limitation in § 1.961–4(d)(3), which permits a \$1.5x reduction below zero to the section 961(c) basis because \$1.5x of F2's adjusted basis of the share is available with respect to US1 (as described in paragraph (c)(3)(iv)(B)(4) of this section). *See* § 1.961–4(d)(2)(ii) and (d)(3)(i). Further, F2 is treated as recognizing £0.75x of gain with respect to each of its shares of stock of F1 (computed as the excess of the \$6x adjustment to basis over the sum of the \$3x reduction to positive section 961(c) basis and the \$1.5x reduction of section 961(c) basis below zero (\$1.5x excess), with such excess of \$1.5x translated into British pounds at \$1:£0.5), and this gain is assigned solely to US1. *See* § 1.961–4(d)(2)(iii) and (f)(4). Moreover, the gain applies only for purposes of determining amounts included in gross income of US1 and US2 (the United States shareholders of F2) under § 1.961–11. *See* § 1.961–4(f)(3).

(3) *F2's receipt of previously taxed earnings and profits with respect to*

US2. As a result of F2's receipt of previously taxed earnings and profits with respect to US2, the amount of the adjustment to F2's section 961(c) basis with respect to US2 of each of F2's shares of stock of F1 is \$4x, the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are both with respect to US2 and received on the share. *See* § 1.961–4(d)(2)(i). Consequently, F2 reduces its section 961(c) basis with respect to US2 of each of its shares of stock of F1 (\$2x) to \$0 and then reduces such section 961(c) basis below zero in accordance with the limitation in § 1.961–4(d)(3), which permits a \$1x reduction below zero to the section 961(c) basis because \$1x of F2's adjusted basis of the share is available with respect to US2 (as described in paragraph (c)(3)(iv)(B)(4) of this section). *See* § 1.961–4(d)(2)(ii) and (d)(3)(i). Further, F2 is treated as recognizing £0.5x of gain with respect to each of its shares of stock of F1 (computed as the excess of the \$4x adjustment to basis over the sum of the \$2x reduction to positive section 961(c) basis and the \$1x reduction of section 961(c) basis below zero (\$1x excess), with such excess of \$1x translated into British pounds at \$1:£0.5), and this gain is assigned solely to US2. *See* § 1.961–4(d)(2)(iii) and (f)(4). Moreover, the gain applies only for purposes of determining amounts included in gross income of US1 and US2 (the United States shareholders of F2) under § 1.961–11. *See* § 1.961–4(f)(3).

(4) *Available adjusted basis*. For each of F2's shares of stock of F1, the amount of adjusted basis of the share that is available with respect to each of US1

and US2 is determined by multiplying \$2.5x (the £1.25x of adjusted basis of the share translated into U.S. dollars at \$1:£0.5, reduced by all negative derived basis of the share existing immediately before the distribution being analyzed, of which there is none) by a fraction. *See* § 1.961–4(d)(3)(ii). The numerator of the fraction is the amount by which F2's section 961(c) basis with respect to the covered shareholder of the share would be reduced below zero if section 961(c) basis could be reduced without limitation and, accordingly, is \$3x in the case of the section 961(c) basis with respect to US1 (computed as the excess of the \$6x adjustment to basis over the \$3x reduction to positive section 961(c) basis) and is \$2x in the case of section 961(c) basis with respect to US2 (computed as the excess of the \$4x adjustment to basis over the \$2x reduction to positive section 961(c) basis). The denominator of the fraction is the sum of the amounts by which any of F2's section 961(c) basis of the share would be reduced below zero if section 961(c) basis could be reduced without limitation (\$5x, computed as the \$3x with respect to US1 plus the \$2x with respect to US2). Therefore, for each of F2's shares of stock of F1, there is \$1.5x of adjusted basis available with respect to US1 ($\$2.5x \times \$3x/\$5x$) and \$1x of adjusted basis available with respect to US2 ($\$2.5x \times \$2x/\$5x$), and this adjusted basis permits a \$1.5x and \$1x reduction below zero to section 961(c) basis with respect to US1 and US2, respectively (as described in paragraphs (c)(3)(iv)(B)(2) and (3) of this section). *See also* § 1.961–10(c) (gain resulting from negative section 961(c) basis is allocated to

covered shareholders in proportion to relative negative section 961(c) basis).

(5) *Timing of adjustments.* The reductions to section 961(c) basis described in paragraphs (c)(3)(iv)(B)(2) and (3) of this section are treated as made, and the gains described in those paragraphs are treated as recognized, concurrently with the covered distribution. *See* § 1.961–4(e)(1) and (f)(1).

(4) *Example 4: Use of positive derived basis—(i) Facts.* US1 and a nonresident alien individual, in the aggregate, directly own all the interests in PRS1. PRS1 directly owns all the shares of the single class of outstanding stock of F1 (derivative ownership units). In year 3, PRS1 sells all the stock of F1 for money equal to the stock's fair market value. Section 304 does not apply to the sale. US1's distributive share of gain recognized by PRS1 on the sale is \$60x, determined without regard to derived basis. Immediately before the sale (and taking into account any adjustments under § 1.961–5(b) resulting from the sale), PRS1's positive derived basis with respect to US1 of the shares of stock of F1 is \$50x in total. In addition, PRS1 has no negative derived basis in any of the shares. This example only analyzes the application of positive derived basis to US1's distributive share of gain on the sale. *See also* § 1.959–3 (adjustments to previously taxed earnings and profits accounts); § 1.959–7 (transfer of previously taxed earnings and profits in general successor transactions); § 1.986(c)–1 (foreign currency gain or loss recognized in general successor transactions).

(ii) *Analysis.* PRS1 is treated as applying its \$50x of positive derived basis with respect to US1 of the stock of F1 to US1's \$60x distributive share of gain on the sale. *See* § 1.961–8(b). As result, US1's distributive share of gain on the sale is adjusted by \$50x, to a \$10x distributive share of gain. *See also* § 1.961–8(c) (for purposes of adjusting US1's adjusted basis of its interest in PRS1 under section 705, US1's distributive share on the sale is \$10x of gain).

(iii) *Alternative facts: positive derived basis creates a distributive share of loss—(A) Facts.* The facts are the same as in paragraph (c)(4)(i) of this section, except that PRS1's positive derived basis with respect to US1 of the shares of stock of F1 is \$75x in total. In addition, if there were a loss in PRS1's stock of F1, PRS1 would recognize all such loss in the sale and a current deduction in respect of the loss would be allowable.

(B) *Analysis.* PRS1 is treated as applying its \$75x of positive derived basis with respect to US1 of the stock of F1 to US1's \$60x distributive share of gain on the sale. *See* § 1.961–8(b). As result, US1's distributive share of the gain on the sale is adjusted by \$75x, to a \$15x distributive share of loss. *See also* § 1.961–8(c) (for purposes of adjusting US1's adjusted basis of its interest in PRS1 under section 705, US1's distributive share on the sale is \$15x of loss).

(iv) *Alternative facts: tiered partnerships—(A) Facts.* The facts are the same as in paragraph (c)(4)(i) of this section (*Example 4*), except as follows. US1 and a nonresident alien individual, in the aggregate, directly own all the interests in PRS2. PRS2 and a nonresident alien individual, in the aggregate, directly own all the interests in PRS1. US1's distributive share of gain recognized by PRS1 on the sale (through its interest in PRS2) is \$55x, determined without regard to derived basis.

(B) *Analysis.* PRS2 is treated as applying PRS1's \$50x of positive derived basis with respect to US1 of the stock of F1 to US1's \$55x distributive share of gain on the sale. *See* § 1.961–8(b). As result, US1's distributive share of gain on the sale is adjusted by \$50x, to a \$5x distributive share of gain. *See also* § 1.961–8(c) (for purposes of adjusting US1's adjusted basis of its interest in PRS2 under section 705, US1's distributive share on the sale is \$5x of gain); § 1.961–8(d) (for purposes of adjusting PRS2's common basis of its interest in PRS1 under section 705, PRS2's distributive share of gain is determined without regard to the application of positive derived basis;

concurrently with the adjustment under section 705, reducing PRS2's derived basis with respect to US1 of the interest in PRS1 by \$50x, the amount of positive derived basis applied to US1's distributive share of gain).

(5) *Example 5: Use of positive section 961(c) basis—(i) Facts.* US1 and a nonresident alien individual, in the aggregate, directly own all the shares of the single class of outstanding stock of F1. F1 directly owns all the shares of the single class of outstanding stock of F2 (section 961(c) ownership units). In year 3, F1 sells all the stock of F2 for money equal to the stock's fair market value. Section 304 does not apply to the sale. F1 recognizes £100x of gain on the sale, determined without regard to loss recognized on any share and without regard to section 961(c) basis. This £100x is covered gain and US1 is assigned a £60x portion of the covered gain under § 1.951–2. Immediately before the sale (and taking into account any adjustments under § 1.961–5(b) resulting from the sale), F1's positive section 961(c) basis with respect to US1 of the shares of stock of F2 is £50x in total (as translated from U.S. dollars into British pounds at the spot rate on the day of the sale). In addition, F1 has no negative section 961(c) basis in any of the shares. Table 1 in this paragraph (c)(5)(i) provides the previously taxed earnings and profits of F2 that transfer from US1 in the sale to a successor covered shareholder under § 1.959–7 (total of £44x), along with the foreign income taxes that are associated with such previously taxed earnings and profits (total of £6x, as translated from U.S. dollars into British pounds at the spot rate on the day of the sale for purposes of § 1.961–9(f)(2)). This example only analyzes the extent to which previously taxed earnings and profits result from the application of F1's section 961(c) basis and are excluded from F1's gross income under section 961(c). *See also* § 1.959–3 (adjustments to previously taxed earnings and profits accounts); § 1.986(c)–1 (foreign currency gain or loss recognized in general successor transactions).

TABLE 1 TO PARAGRAPH (c)(5)(i) OF THIS SECTION—F2 PTEP TRANSFERRING FROM US1 & ASSOCIATED FOREIGN INCOME TAXES—Continued

Taxable year	§ 904 category			
	General category		Passive category	§ 951A category
	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group	§ 951(a)(1)(A) PTEP group	§ 951A PTEP group
Year 1:				
Transferred PTEP	£7.2x	£4x	£4.8x	18x
Taxes	1.8x	1x	1.2x	2x

(ii) *Analysis*—(A) *In general*. For purposes of analyzing the covered gain, US1's share of the covered gain is £60x because that amount of the covered gain is assigned to US1 under § 1.951–2. See § 1.961–9(d)(1). All £50x of F1's positive section 961(c) basis with respect to US1 of the stock of F2 is applied to such share. See § 1.961–9(d)(2) and (e)(1). As a result, £50x of the covered gain is previously taxed earnings and profits of F1 with respect to US1, characterized as described in paragraph (c)(5)(ii)(B) of this section. See § 1.961–9(d)(3) and (f)(1). F1 excludes the £50x of previously taxed earnings resulting from section 961(c) basis from its gross

income, solely for purposes of determining its subpart F income and tested income or tested loss. See § 1.961–9(b).

(B) *Character of previously taxed earnings and profits resulting from section 961(c) basis*. The mirroring rule in § 1.961–9(f)(2) determines the specific character of all £50x of F1's previously taxed earnings and profits resulting from section 961(c) basis because the amount of such previously taxed earnings and profits does not exceed the amount of mirrored PTEP, of which there is £50x. See § 1.961–9(f)(2)(i). The mirrored PTEP is the previously taxed earnings and profits

described in table 1 to paragraph (c)(5)(i) of this section, determined by treating foreign income taxes associated with transferred previously taxed earnings and profits as additional previously taxed earnings and profits (£44x + £6x). See § 1.961–9(f)(2)(ii). Under the mirroring rule, the £50x of previously taxed earnings and profits resulting from section 961(c) basis have the same character as the £50x of mirrored PTEP, as summarized in table 1 in this paragraph (c)(5)(ii)(B). See § 1.961–9(f)(2)(i); see also § 1.961–9(g) and (h) (dollar basis rule and rule for allocating previously taxed earnings and profits to specific shares of stock).

TABLE 1 TO PARAGRAPH (c)(5)(ii)(B) OF THIS SECTION—F1 PTEP RESULTING FROM § 961(C) BASIS

Taxable year	§ 904 category			
	General category		Passive category	§ 951A category
	§ 951(a)(1)(A) PTEP group	§ 245A(d) PTEP group	§ 951(a)(1)(A) PTEP group	§ 951A PTEP group
Year 2				£10x (£10x + £0).
Year 1	£9x	£5x	£6x	£20x
	(£7.2x + £1.8x)	(£4x + £1x)	(£4.8x + £1.2x)	(£18x + £2x).

(iii) *Alternative facts: unused section 961(c) basis*—(A) *Facts*. The facts are the same as in paragraph (c)(5)(i) of this section (*Example 5*), except that the amount of F1's covered gain is £70x (instead of £100x) and US1 is assigned a £42x (instead of £60x) portion of the covered gain under § 1.951–2.

(B) *Analysis*. For purposes of analyzing the covered gain, US1's share of the covered gain is £42x, and £42x of F1's £50x of positive section 961(c) basis with respect to US1 of the stock of F2 is applied to such share. See § 1.961–9(d)(1) and (2), (e)(1). As a result, £42x of the covered gain is previously taxed earnings and profits of F1 with respect to US1, with the same character as a pro rata portion of the previously taxed earnings and profits set forth in table 1 to paragraph (c)(5)(ii)(B) of this section, determined by multiplying all such previously taxed earnings and profits by 84% (computed as \$42x of previously taxed earnings

and profits resulting from section 961(c) basis divided by £50x of mirrored PTEP). See § 1.961–9(d)(3), (f)(1) and (2). Moreover, the £8x of F1's positive section 961(c) basis that is not applied to the covered gain is taken into account only for purposes of determining amounts included in gross income of United States shareholders of F1 under § 1.961–11.

(6) *Example 6: Gain recognition for negative derived basis*—(i) *Facts*. US1 and US2, in the aggregate, directly own all the interests in PRS1. PRS1 directly owns all the shares of the single class of stock of F1 (derivative ownership units). In year 3, PRS1 sells all the stock of F1 for money equal to the stock's fair market value. Section 304 does not apply to the sale, and the shares of stock of F1 remain derivative ownership units immediately after the sale (because the buyer is a partnership the interests in which are owned by one or more covered shareholders). PRS1 recognizes

\$2x of loss with respect to each share of stock of F1, determined without regard to derived basis and allocated to US1 and US2 in accordance with section 704. Immediately before the sale (and taking into account any adjustments under § 1.961–5(b) resulting from the sale), for each share of stock of F1, PRS1's derived basis with respect to US1 is negative \$1.5x and its derived basis with respect to US2 is negative \$1x. This example only analyzes the consequences of negative derived basis in the sale. See also § 1.959–3 (adjustments to previously taxed earnings and profits accounts); § 1.959–7 (transfer of previously taxed earnings and profits in general successor transactions); § 1.986(c)–1 (foreign currency gain or loss recognized in general successor transactions).

(ii) *Analysis*. As a result of negative derived basis, PRS1 is treated as recognizing gain with respect to each share of stock of F1. See § 1.961–

10(b)(1). For each share of stock of F1, the amount of such gain is \$2.5x, which is the lesser amount of loss (\$2x, expressed as a positive amount), plus the additional amount of gain (\$0.5x), that PRS1 would have recognized with respect to the share if PRS1's common basis of the share were reduced by \$2.5x (the sum of all PRS1's negative derived basis of the share), and thus all negative derived basis gives rise to gain. *See* § 1.961–10(b)(2)(i); *compare* paragraph (c)(6)(iii) of this section (scenario where less than all negative derived basis gives rise to gain). A pro rata portion of the \$2.5x of gain treated as recognized with respect to each share of stock of F1 is allocated to US1 and US2 by multiplying the amount of such gain by a fraction, the numerator of which is PRS1's negative derived basis with respect to the covered shareholder of the share (\$1.5x in the case of US1, and \$1x in the case of US2), and the denominator of which is the sum of all PRS1's negative derived basis of the share (\$2.5x). *See* § 1.961–10(b)(3). Thus, in addition to the allocation in accordance with section 704 of the \$2x of loss that PRS1 recognizes with respect to each share of stock of F1, US1 is allocated \$1.5x, and US2 is allocated \$1x, of the \$2.5x of gain treated as recognized by PRS1 with respect to each share of stock of F1. *See* § 1.961–10(b)(4); *see also* § 1.961–4(f)(2) (gain allocated to US1 or US2 is taken into account in adjusting US1's or US2's basis in its interest in PRS1 under section 705).

(iii) *Alternative facts: section 301(c)(2) distribution—(A) Facts.* The facts are the same as in paragraph (c)(6)(i) of this section (*Example 6*), except as follows. PRS1 does not sell any stock of F1. In year 3, F1 makes a distribution that is \$10x with respect to each share of its stock. None of the distribution is a covered distribution because F1 has no accumulated or current year earnings and profits in year 3. Immediately before the distribution, for each share of stock of F1, PRS1's common basis is \$12x, its derived basis with respect to US1 is negative \$1.5x, and its derived basis with respect to US2 is negative \$1x. Thus, section 301(c)(2) applies to the entirety of the \$10x that is distributed with respect to each share of stock of F1. This example only analyzes the consequences of negative derived basis in the distribution.

(B) *Analysis.* PRS1 determines the amount of gain it is treated as recognizing as a result of negative derived basis by calculating the additional amount of gain that it would have recognized with respect to each share of stock of F1 under section

301(c)(3) if its common basis of the share were reduced by \$2.5x (the sum of all PRS1's negative derived basis of the share). *See* § 1.961–10(b)(2)(i). Specifically, if PRS1's common basis of each share were reduced by \$2.5x, the common basis would be \$9.5x (\$12x – \$2.5x), such that the distribution of \$10x on the share would result in \$9.5x being treated as a return of basis under section 301(c)(2) and \$0.5x being treated as gain recognized under section 301(c)(3). Thus, PRS1 is treated as recognizing \$0.5x of gain with respect to each share as a result of the \$2.5x of negative derived basis of the share, and PRS1 retains the remaining \$2x of negative derived basis of the share (which, under these facts, is equal to the portion of the common basis of the share that is not reduced by the distribution under section 301(c)(2) (\$12x – \$10x, or \$2x)). A pro rata portion of the \$0.5x of gain treated as recognized with respect to each share of stock of F1 is allocated to US1 and US2 by multiplying the amount of such gain by a fraction, the numerator of which is PRS1's negative derived basis with respect to the covered shareholder of the share (\$1.5x in the case of US1, and \$1x in the case of US2), and the denominator of which is the sum of all PRS1's negative derived basis of the share (\$2.5x). *See* § 1.961–10(b)(3). Thus, US1 is allocated \$0.3x, and US2 is allocated \$0.2x, of the \$0.5x of gain treated as recognized by PRS1 with respect to each share of stock of F1. *See* § 1.961–10(b)(4); *see also* § 1.961–4(f)(2) (gain allocated to US1 or US2 is taken into account in adjusting US1's or US2's basis in its interest in PRS1 under section 705). Immediately after the distribution, for each share of stock of F1, PRS1's derived basis with respect to US1 is negative \$1.2x (negative \$1.5x + \$0.3x) and its derived basis with respect to US2 is negative \$0.8x (negative \$1x + \$0.2x). *See* § 1.961–10(b)(5).

(7) *Example 7: Gain recognition for negative section 961(c) basis—(i) Facts.* US1 and US2, in the aggregate, directly own all the shares of the single class of stock of F1 and are United States shareholders of F1. F1 directly owns all the shares of the single class of stock of F2 (section 961(c) ownership units). In year 3, F1 sells all the stock of F2 for money equal to the stock's fair market value. Section 304 does not apply to the sale, and the shares of stock of F2 remain section 961(c) ownership units immediately after the sale (because the buyer is a controlled foreign corporation). F1 recognizes £2x of loss with respect to each share of stock of F2, determined without regard to section

961(c) basis. Immediately before the sale (and taking into account any adjustments under § 1.961–5(b) resulting from the sale), for each share of stock of F2, F1's section 961(c) basis with respect to US1 is negative £1.5x and its section 961(c) basis with respect to US2 is negative £1x (as translated from U.S. dollars into British pounds at the spot rate on the day of the sale). This example only analyzes the consequences of negative section 961(c) basis in the sale. *See also* § 1.959–3 (adjustments to previously taxed earnings and profits accounts); § 1.959–7 (transfer of previously taxed earnings and profits in general successor transactions); § 1.986(c)–1 (foreign currency gain or loss recognized in general successor transactions).

(ii) *Analysis.* As a result of negative section 961(c) basis, F1 is treated as recognizing gain with respect to each share of stock of F2. *See* § 1.961–10(c)(1). For each share of stock of F2, the amount of such gain is £2.5x, which is the lesser amount of loss (£2x, expressed as a positive amount), plus the additional amount of gain (£0.5x), that F1 would have recognized with respect to the share if F1's adjusted basis of the share were reduced by £2.5x (the sum of all F1's negative section 961(c) basis of the share), and thus all negative section 961(c) basis gives rise to gain. *See* § 1.961–10(c)(2)(i); *compare* paragraph (c)(7)(iii) of this section (scenario where less than all negative section 961(c) basis gives rise to gain). A pro rata portion of the £2.5x of gain treated as recognized with respect to each share of stock of F2 is assigned to US1 and US2 by multiplying the amount of such gain by a fraction, the numerator of which is F1's negative section 961(c) basis with respect to the covered shareholder of the share (£1.5x in the case of US1, and £1x in the case of US2), and the denominator of which is the sum of all F1's negative section 961(c) basis of the share (£2.5x). *See* § 1.961–10(c)(3). Thus, US1 is assigned £1.5x, and US2 is assigned £1x, of the £2.5x of gain treated as recognized by F1 with respect to each share of stock of F2. Moreover, the gain applies only for purposes of determining amounts included in gross income of US1 and US2 (the United States shareholders of F1) under § 1.961–11. *See* § 1.961–10(c)(4); *see also* §§ 1.961–4(f)(3) (the gain does not affect F1's items of gross income for purposes of section 952 or 951A or its earnings and profits).

(iii) *Alternative facts: section 351 exchange with boot—(A) Facts.* The facts are the same as in paragraph (c)(7)(i) of this section (*Example 7*), except as follows. Instead of the sale, F1

contributes property, including all its stock of F2, to F3, a controlled foreign corporation, in exchange for stock of F3 and money equal, in the aggregate, to the fair market value of the contributed property. Other unrelated persons also contribute property to F3 in exchange for stock of F3 as part of the same transaction. Section 351(b) applies to F1's exchange, but sections 304 and 362(e) do not, and no income inclusions are required under § 1.367(b)–4. The shares of stock of F2 remain section 961(c) ownership units immediately after the contribution (because F3 is a controlled foreign corporation). In the exchange, for each share of stock of F2, F1 receives stock of F3 and £10x of money but recognizes no gain because F1's adjusted basis of the share is £2x greater than the fair market value of the share. Immediately before the exchange (and taking into account any adjustments under § 1.961–5(b) resulting from the exchange), for each share of stock of F2, F1's section 961(c) basis with respect to US1 is negative £1.5x and its section 961(c) basis with respect to US2 is negative £1x (as translated from U.S. dollars into British pounds at the spot rate on the day of the exchange). This example only analyzes the consequences of negative section 961(c) basis in the exchange.

(B) *Analysis.* F1 determines the amount of gain it is treated as recognizing as a result of negative section 961(c) basis by calculating the additional amount of gain that it would have recognized with respect to each share of stock of F2 under section 351(b) if its adjusted basis of the share were reduced by £2.5x (the sum of all F1's negative section 961(c) basis of the share). See § 1.961–10(c)(2)(i). Specifically, a £2.5x reduction to F1's adjusted basis of each share would convert a £2x loss on the share into a £0.5x gain, which would then be recognized pursuant to section 351(b) in the exchange. Thus, F1 is treated as recognizing £0.5x of gain with respect to each share as a result of the £2.5x of negative section 961(c) basis of the share, and the remaining £2x of negative section 961(c) basis of the share is retained (which, under these facts, is equal to the loss in the share that is not recognized in the exchange (£2x, the excess of the adjusted basis of the share over the fair market value of the share)). A pro rata portion of the £0.5x of gain treated as recognized with respect to each share of stock of F2 is assigned to US1 and US2 by multiplying the amount of such gain by a fraction, the numerator of which is F1's negative section 961(c) basis with respect to the

covered shareholder of the share (£1.5x in the case of US1, and £1x in the case of US2), and the denominator of which is the sum of all F1's negative section 961(c) basis of the share (£2.5x). See § 1.961–10(c)(3). Thus, US1 is assigned £0.3x, and US2 is assigned £0.2x, of the £0.5x of gain treated as recognized by F1 with respect to each share of stock of F2. Moreover, the gain applies only for purposes of determining amounts included in gross income of US1 and US2 (the United States shareholders of F1) under § 1.961–11. See § 1.961–10(c)(4); see also §§ 1.961–4(f)(3) (the gain does not affect F1's items of gross income for purposes of section 952 or 951A or its earnings and profits). Immediately after the exchange, for each share of stock of F2, the functional currency amount of F3's section 961(c) basis with respect to US1 is negative £1.2x (negative £1.5x + £0.3x) and its section 961(c) basis with respect to US2 is negative £0.8x (negative £1x + £0.2x). See § 1.961–10(c)(5).

(8) *Example 8: Amounts included in gross income of United States shareholders*—(i) *Facts.* US1 and US2, in the aggregate, directly own all the shares of the single class of stock of F1 and are United States shareholders of F1. F1 directly owns all the shares of the single class of stock of each of F2 and F3 (section 961(c) ownership units). For F1's taxable year ending on December 31 of year 3, F1 recognizes £50x of section 961(c) income. The section 961(c) income consists of £10x of gain recognized as a result of F1's receipt of previously taxed earnings and profits from F2 and £40x of gain recognized as a result of F1's sale of stock of F3 with negative section 961(c) basis. US1 and US2 are assigned equal portions of the £10x gain under § 1.961–4(d) (basis reductions and gain recognition for distributions) and US2 is assigned all the £40x gain under § 1.961–10(c) (gain recognition for negative basis). F1 has no positive section 961(c) basis in any of the sold shares of stock of F3. This example only analyzes the allocation of F1's section 961(c) income and resulting inclusions in gross income of United States shareholders under section 961(c).

(ii) *Analysis.* Under § 1.961–11, F1's £50x of section 961(c) income is allocated to each of US1 and US2 by adding up the amounts of the section 961(c) income that are assigned to each United States shareholder. See § 1.961–11(c). No additional computations are required because F1 does not recognize any loss under section 961(c) and there are no transfers of stock of F1. See *id.* Thus, US1 is allocated £5x (£5x of gain with respect to stock of F2 plus £0 of

gain with respect to stock of F3), and US2 is allocated £45x (£5x of gain with respect to stock of F2 plus £40x of gain with respect to stock of F3), of the section 961(c) income. Accordingly, US1 includes £5x in its gross income and US2 includes £45x in its gross income, in each case for the United States shareholder's (US1's or US2's) taxable year ending on December 31 of year 3 and translated into U.S. dollars in accordance with section 989(b). See § 1.961–11(b). Under § 1.961–3, each of US1's and US2's income inclusion increases its adjusted basis of its stock of F1 by the U.S. dollar amount of the inclusion.

(iii) *Alternative facts: loss under section 961(c)*—(A) *Facts.* The facts are the same as in paragraph (c)(8)(i) of this section (*Example 8*), except as follows. F1 is treated as recognizing £7x of loss under section 961(c) with respect to US2 because F1 has positive section 961(c) basis with respect to US2 in some of the sold shares of stock of F3 and, under § 1.961–9, all but £7x of such positive section 961(c) basis is applied to US2's share of covered gain recognized by F1 on the sale of stock of F3.

(B) *Analysis.* Under § 1.961–11, F1's £50x of section 961(c) income is allocated to each of US1 and US2 by first adding up the amounts of the section 961(c) income that are assigned to the United States shareholder (£5x in the case of US1, and £45x in the case of US2) and then reducing (but not below zero) such sum by the amount of loss F1 is treated as recognizing under section 961(c) with respect to the United States shareholder (£0 in the case of US1, and £7x in the case of US2). See § 1.961–11(c). Thus, US1 is allocated £5x (£5x – £0), and US2 is allocated £38x (£45x – £7x), of the section 961(c) income. Accordingly, US1 includes £5x in its gross income and US2 includes £38x in its gross income, in each case for the United States shareholder's (US1's or US2's) taxable year ending on December 31 of year 3 and translated into U.S. dollars in accordance with section 989(b). See § 1.961–11(b). Under § 1.961–3, each of US1's and US2's income inclusion increases its adjusted basis of its stock of F1 by the U.S. dollar amount of the inclusion.

§ 1.961–13 Transition rules.

(a) *Scope.* This section sets forth transition rules for the section 961 regulations. Paragraph (b) of this section addresses the establishment of derived basis of a partnership and section 961(c) basis of a controlled foreign corporation. Paragraph (c) of this section treats a domestic partnership (including an S

corporation) as a covered shareholder for periods in which § 1.958–1(d)(1) does not apply. Paragraph (d) of this section converts basis with respect to a domestic partnership (including an S corporation) to basis with respect to covered shareholders owning interests in the domestic partnership when both § 1.958–1(d)(1) and the section 961 regulations first apply.

(b) *Establishing derived basis of a partnership and section 961(c) basis of a controlled foreign corporation—(1) In general.* As of the beginning of the first taxable year of a foreign corporation to which the section 961 regulations (other than §§ 1.961–6 and 1.961–7) apply pursuant to § 1.961–14(b), a partnership's derived basis of derivative ownership units, and a controlled foreign corporation's section 961(c) basis of section 961(c) ownership units, that are shares of stock of the foreign corporation or property through one or more covered shareholders own stock of the foreign corporation must be established in accordance with the rules described in paragraphs (b)(2) through (5) of this section.

(2) *Derived basis—(i) In general.* The partnership's derived basis of each derivative ownership unit is established by increasing derived basis with respect to each covered shareholder by the U.S. dollar amount of derived basis with respect to the covered shareholder that would exist at the beginning of the taxable year (and therefore would not have been decreased in a distribution or general successor transaction, for example) if the principles of §§ 1.961–2 through 1.961–5, 1.961–8, and 1.961–10 were to have previously applied, determined using a reasonable method (consistently applied to each foreign corporation whose stock is owned by the partnership and with respect to each covered shareholder that owns an interest in the partnership). In the case of a domestic partnership, the increase described in the preceding sentence is determined without regard to an income inclusion of the domestic partnership or any lower-tier domestic partnership (for example, an income inclusion of the domestic partnership under section 951(a)(1)(A) that occurs in a period before § 1.958–1(d) applies to the domestic partnership).

(3) *Section 961(c) basis.* The controlled foreign corporation's section 961(c) basis of each section 961(c) ownership unit is established by increasing section 961(c) basis with respect to each covered shareholder by the U.S. dollar amount of section 961(c) basis with respect to the covered shareholder that would exist at the beginning of the taxable year (and

therefore would not have been decreased in a distribution or general successor transaction, for example) if the principles of §§ 1.961–2 through 1.961–5, 1.961–9, 1.961–10, and 1.961–11 were to have previously applied, determined using a reasonable method (consistently applied to each foreign corporation whose stock is owned by the controlled foreign corporation and with respect to each covered shareholder that owns stock in the controlled foreign corporation).

(4) *Treatment of a specified foreign corporation as a controlled foreign corporation.* A specified foreign corporation (as defined in § 1.965–1(f)(45)(i)(B)) that is not otherwise a controlled foreign corporation is treated as a controlled foreign corporation for purposes of the application of the principles of § 1.961–3 to an income inclusion under section 951(a)(1)(A) by reason of section 965(a).

(5) *Anti-duplication rule.* Derived basis or section 961(c) basis is increased under this paragraph (b) to reflect an income inclusion under section 951(a)(1)(A) or 951A(a) only to the extent such an increase would not duplicate basis (including basis previously used) at the level of the partnership or the controlled foreign corporation, as applicable, to reflect the income inclusion (for example, in the case of a foreign partnership, basis previously provided under § 1.965–2(h)(5)(ii)).

(c) *Treatment of domestic partnerships (including S corporations) before application of § 1.958–1(d)(1).* For purposes of the section 961 regulations, a domestic partnership (including an S corporation) is treated as a covered shareholder for any taxable year of the domestic partnership to which § 1.958–1(d)(1) does not apply. If a domestic partnership is treated as a covered shareholder, then rules regarding derived basis (of a partnership that is owned by the domestic partnership) or section 961(c) basis (of a controlled foreign corporation that is owned by the domestic partnership) apply to the domestic partnership in its capacity as a covered shareholder before those rules apply to a covered shareholder that owns interests in the domestic partnership. In such a case, for example, covered gain recognized by a controlled foreign corporation and assigned to the domestic partnership is first previously taxed earnings and profits by reason of the controlled foreign corporation's positive section 961(c) basis with respect to the domestic partnership and then, to the extent remaining, previously taxed earnings and profits by reason of positive section

961(c) basis with respect to covered shareholders owning interests in the domestic partnership.

(d) *Converting basis with respect to domestic partnerships (including S corporations) to basis with respect to partners (or shareholders) after the application of § 1.958–1(d)(1)—(1) In general.* As of the beginning of the first taxable year of a domestic partnership (including an S corporation) to which both § 1.958–1(d)(1) and the section 961 regulations (other than §§ 1.961–6 and 1.961–7) apply (pursuant to § 1.961–14(b)), the rules described in paragraphs (d)(2) through (4) of this section apply to convert—

(i) A lower-tier partnership's derived basis with respect to the domestic partnership of derivative ownership units (if such derived basis was earlier established pursuant to paragraphs (b)(2) and (c) of this section) to derived basis with respect to covered shareholders owning interests in the domestic partnership; and

(ii) A controlled foreign corporation's section 961(c) basis with respect to the domestic partnership of section 961(c) ownership units (if such section 961(c) basis was earlier established pursuant to paragraphs (b)(3) and (c) of this section) to section 961(c) basis with respect to covered shareholders owning interests in the domestic partnership.

(2) *Rules for converting derived basis with respect to a domestic partnership—*

(i) *Allocate derived basis to each covered shareholder.* First, allocate a pro rata portion of the lower-tier partnership's derived basis with respect to the domestic partnership of each derivative ownership unit to each covered shareholder owning an interest in the domestic partnership at the beginning of the taxable year, determined by multiplying the derived basis with respect to the domestic partnership by the fraction described in § 1.959–11(e)(2)(i)(A) for the covered shareholder and the domestic partnership.

(ii) *Transfer derived basis.* Second, transfer to each covered shareholder the portion of the lower-tier partnership's derived basis with respect to the domestic partnership of each derivative ownership unit that is allocated to the covered shareholder under paragraph (d)(2)(i) of this section.

(3) *Rules for converting section 961(c) basis with respect to a domestic partnership—(i) Allocate section 961(c) basis to each covered shareholder.* First, allocate a pro rata portion of the controlled foreign corporation's section 961(c) basis with respect to the domestic partnership of each section 961(c) ownership unit to each covered

shareholder owning an interest in the domestic partnership at the beginning of the taxable year, determined by multiplying the section 961(c) basis with respect to the domestic partnership by the fraction described in § 1.959–11(e)(2)(i)(A) for the covered shareholder and the domestic partnership.

(ii) *Transfer section 961(c) basis.*

Second, transfer to each covered shareholder the portion of the controlled foreign corporation's section 961(c) basis with respect to the domestic partnership of each section 961(c) ownership unit that is allocated to the covered shareholder under paragraph (d)(3)(i) of this section.

(4) *Coordination with deemed covered shareholder rules.* The portion, if any, of the lower-tier partnership's derived basis with respect to the domestic partnership, or the controlled foreign corporation's section 961(c) basis with respect to the domestic partnership, that does not increase derived basis or section 961(c) basis with respect to a covered shareholder becomes with respect to the deemed covered shareholder for purposes of subsequently transferring the basis under § 1.961–5(c).

§ 1.961–14 Applicability dates.

(a) *Scope.* This section sets forth applicability dates for the section 961 regulations. Paragraph (b) of this section provides the applicability dates.

(b) *Applicability dates.* Sections 1.961–1 through 1.961–5 and 1.961–8 through 1.961–13 apply to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959–12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant.

■ **Par. 29.** Section 1.962–1 is amended by:

- 1. Removing the last sentence in paragraph (a)(3); and
- 2. Adding paragraph (a)(4).

The addition reads as follows:

§ 1.962–1 Limitation of tax for individuals on amounts included in gross income under section 951(a).

(a) * * *

(4) *See* section 959 and the regulations in this part issued under section 959 for rules regarding previously taxed earnings and profits, including previously taxed earnings and profits assigned to the taxable section 962 PTEP subgroup (as defined in § 1.959–2(b)(2)(ii)(A)).

* * * * *

§ 1.962–3 [Removed].

■ **Par. 30.** Section 1.962–3 is removed.

■ **Par. 31.** Section 1.965–5 is amended by:

- 1. In the introductory text of paragraph (d)(1), removing the language “and (d)(3)” and adding the language “through (d)(5)” in its place; and
- 2. Adding paragraph (d)(5).

The addition reads as follows:

§ 1.965–5 Allowance of credit or deduction for foreign income taxes.

* * * * *

(d) * * *

(5) *Adjusted applicable percentage for certain taxable years.* For taxable years to which §§ 1.959–1 through 1.959–7 and 1.959–10 and 1.959–11 apply (*see* § 1.959–12), the term applicable percentage means “adjusted applicable percentage” as defined in § 1.959–2(b)(2)(iii)(A), except for purposes of § 1.959–11(c)(3) (initial determination of the adjusted applicable percentage).

■ **Par. 32.** Section 1.965–9 is amended by adding paragraph (d) to read as follows:

§ 1.965–9 Applicability Dates.

* * * * *

(d) *Applicability date for adjusted applicable percentage.* Section 1.965–5(d)(5) applies to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959–12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant.

§ 1.985–5 [Amended].

■ **Par. 33.** Section 1.985–5 is amended by removing the language “(e)(2),” from the last sentence in paragraph (a) and removing and reserving paragraph (e)(2).

§ 1.986(a)–1 [Amended].

■ **Par. 34.** Section 1.986(a)–1 is amended by:

- 1. In paragraph (c), removing the language “PTEP group taxes (as defined in § 1.960–3(d)(1))” from the first sentence and adding the language “the corporate PTEP tax pool (as defined in § 1.959–1(b)) or any covered shareholder's PTEP tax pool (as defined in § 1.959–1(b))” in its place.
- 2. In paragraph (e)(1) removing the language “PTEP group taxes” and adding the language “a PTEP tax pool” in its place.
- 3. In paragraph (e)(2) removing the language “PTEP group taxes (as defined in § 1.960–3(d)(1))” in the first sentence and adding the language “the corporate PTEP tax pool (as defined in § 1.959–1(b)) or any covered shareholder's PTEP

tax pool (as defined in § 1.959–1(b))” in its place, and removing the language “PTEP group taxes” in the second sentence and adding the language “a PTEP tax pool” in its place.

■ 4. In paragraph (e)(3) removing the language “PTEP group taxes” in the last sentence and adding the language “a PTEP tax pool” in its place.

■ **Par. 35.** Section 1.986(c)–1 is revised to read as follows:

§ 1.986(c)–1 Foreign currency gain or loss with respect to previously taxed earnings and profits.

(a) *Scope.* This section provides rules for the recognition of foreign currency gain or loss with respect to previously taxed earnings and profits (as described in section 959) under section 986(c). Paragraph (b) of this section provides rules for distributions of previously taxed earnings and profits to a covered shareholder and certain transactions that transfer or eliminate previously taxed earnings and profits. Paragraph (c) of this section provides a rule for distributions of previously taxed earnings and profits to a foreign corporation. Paragraph (d) of this section provides definitions. Paragraph (e) of this section provides the applicability date of this section. *See* § 1.961–5 for related basis adjustments in certain cases and § 1.959–10(c)(2) (*Example 2*) for an example illustrating the application of this section. *See also* § 1.367(b)–2(j)(2) for the interaction of certain nonrecognition transactions and section 986(c).

(b) *Recognition of foreign currency gain or loss—(1) In general.* If, in any transaction, previously taxed earnings and profits with respect to a covered shareholder are distributed to the covered shareholder or cease to be with respect to the covered shareholder (for example, because the previously taxed earnings and profits transfer from the covered shareholder in a general successor transaction or are eliminated by reason of an election under section 338(g)), then the covered shareholder recognizes foreign currency gain or loss with respect to such previously taxed earnings and profits in accordance with the rules described in paragraphs (b)(2) through (4) of this section, subject to the exception in paragraph (b)(5) of this section for transfers of previously taxed earnings and profits other than in a general successor transaction.

(2) *Determining foreign currency gain or loss.* Foreign currency gain or loss is determined by comparing the U.S. dollar amount of the previously taxed earnings and profits described in paragraph (b)(1) of this section on the day on which the transaction occurs to

the dollar basis of the previously taxed earnings and profits. If the U.S. dollar amount exceeds the dollar basis, the excess is foreign currency gain. If the dollar basis exceeds the U.S. dollar amount, the excess is foreign currency loss. If applicable, the U.S. dollar amount is determined by translating the previously taxed earnings and profits into U.S. dollars at the spot rate on the day on which the transaction occurs. See §§ 1.959–4 and 1.959–7 for determining dollar basis in distributions and general successor transactions, respectively.

(3) *Limitations*—(i) *Section 965(a) previously taxed earnings and profits*. In the case of previously taxed earnings and profits that are described in paragraph (b)(1) of this section and relate to the reclassified section 965(a) PTEP group or section 965(a) PTEP group, only a portion of foreign currency gain or loss with respect to the previously taxed earnings and profits is recognized, determined by multiplying the amount of the foreign currency gain or loss by the excess of 100 percent over the section 965(c) deduction percentage with respect to the previously taxed earnings and profits.

(ii) *Section 965(b) previously taxed earnings and profits*. No foreign currency gain or loss is recognized with respect to previously taxed earnings and profits that are described in paragraph (b)(1) of this section and relate to the reclassified section 965(b) PTEP group or section 965(b) PTEP group.

(iii) *Taxable section 962 earnings and profits*. No foreign currency gain or loss is recognized with respect to previously taxed earnings and profits that are described in paragraph (b)(1) of this section and relate to the taxable section 962 PTEP subgroup.

(4) *Treatment of foreign currency gain or loss*. Foreign currency gain or loss described in paragraph (b)(1) of this section is recognized concurrently with the transaction and is treated as ordinary income or loss from the same source, and relating to the same section 904 category, as the income inclusion to which the previously taxed earnings and profits are attributable.

(5) *Exception for transfer of previously taxed earnings and profits other than in a general successor transaction*. Except as provided in § 1.367(b)–2(j)(2)(i), no foreign currency gain or loss is recognized with respect to previously taxed earnings and profits when the previously taxed earnings and profits transfer to another covered shareholder in a transaction other than a general successor transaction.

(c) *Distributions of previously taxed earnings and profits to a foreign*

corporation. No foreign currency gain or loss is recognized with respect to previously taxed earnings and profits when the previously taxed earnings and profits are distributed to a foreign corporation.

(d) *Definitions*. The definitions in § 1.959–1(b) apply for purposes of this section.

(e) *Applicability date*. This section applies to taxable years of foreign corporations that begin on or after [date of publication of final regulations in the **Federal Register**] or are early application years (as described in § 1.959–12(d)) and to taxable years of persons for which such taxable years of those foreign corporations are relevant. See § 1.986(c)–1 as contained in 26 CFR part 1 revised as of April 1, 2024, for a version of this section applicable to prior taxable years.

■ **Par. 36.** Section 1.1411–10 is amended by adding a sentence at the end of paragraph (c)(1)(i)(A)(1) to read as follows:

§ 1.1411–10 Controlled foreign corporations and passive foreign investment companies.

* * * * *

(c) * * *

(1) * * *

(i) * * *

(A) * * *

(1) * * * See section 959 and the regulations in this part issued under section 959 for rules regarding previously taxed earnings and profits, including previously taxed earnings and profits assigned to the taxable section 1411 PTEP subgroup (as defined in § 1.959–2(b)(2)(ii)(A)).

* * * * *

■ **Par. 37.** Section 1.1502–59 is added to read as follows:

§ 1.1502–59 Previously taxed earnings and profits and related basis adjustments.

(a) *Overview and scope*. This section addresses the consequences to consolidated groups of previously taxed earnings and profits of foreign corporations, including under section 959 (regarding exclusions from gross income of distributions of previously taxed earnings and profits of foreign corporations) and section 961 (regarding basis adjustments to the stock of foreign corporations and other property). Paragraph (b) of this section provides definitions. Paragraph (c) of this section provides rules to treat a consolidated group as a single covered shareholder for purposes of the rules relating to previously taxed earnings and profits. Paragraph (d) of this section addresses the application of section 961 to consolidated groups. Paragraph (e) of

this section addresses members that join or leave a consolidated group. Paragraph (f) of this section contains examples. Paragraph (g) of this section provides the applicability date of this section.

(b) *Definitions*. The definitions and rules of general applicability in §§ 1.959–1 and 1.961–1 apply for purposes of this section, with the following additions:

(1) *Departing transaction*. The term *departing transaction* has the meaning provided in paragraph (e)(3) of this section.

(2) *Group derived basis*. The term *group derived basis* has the meaning provided in paragraph (d)(2)(ii) of this section.

(3) *Group section 961(c) basis*. The term *group section 961(c) basis* has the meaning provided in paragraph (d)(2)(ii) of this section.

(4) *Joining transaction*. The term *joining transaction* has the meaning provided in paragraph (e)(2) of this section.

(5) *Member shareholder*. The term *member shareholder* means a member that owns stock of a foreign corporation.

(6) *Section 959 rules*. The term *section 959 rules* means section 959 and the section 959 regulations.

(7) *Section 961 rules*. The term *section 961 rules* means section 961 and the section 961 regulations.

(c) *Single covered shareholder treatment under section 959*—(1) *Overview*. This paragraph (c) addresses the application of the section 959 rules to a consolidated group. Paragraph (c)(2) of this section provides the general rule that treats the group as a single covered shareholder. Paragraphs (c)(3) through (5) of this section describe the application of this general rule: paragraph (c)(3) of this section addresses the maintenance of group PTEP accounts; paragraph (c)(4) of this section provides for the allocation of PTEP among members; and paragraph (c)(5) of this section addresses intercompany transfers of foreign corporation stock. Where other provisions of the Code or regulations reference the section 959 rules (for example, sections 960(b) and 986(c)), the treatment described in this paragraph (c) applies for purposes of the application of those provisions.

(2) *In general*. For purposes of applying the section 959 rules, members of a consolidated group are treated as a single covered shareholder. However, each member computes and takes into account its own items with respect to the stock of foreign corporations (including items allocated by a partnership, or assigned from a controlled foreign corporation, to the

member). For example, if a member receives a distribution from a foreign corporation, that member takes into account the tax consequences of the distribution.

(3) *PTEP accounting.* For purposes of applying §§ 1.959–2 (regarding accounting of previously taxed earnings and profits) and 1.959–3 (regarding adjustments to shareholder-level accounts relating to previously taxed earnings and profits)—

(i) A consolidated group establishes and maintains a single set of annual PTEP accounts, dollar basis pools, and PTEP tax pools with respect to a foreign corporation whose stock is owned by one or more members (for example, a consolidated group has a single combined pool election under § 1.959–2(c)); and

(ii) A foreign corporation establishes and maintains a single corporate PTEP account and corporate PTEP tax pool with respect to a consolidated group.

(4) *Allocation of group accounts—(i) In general.* When necessary (for example, to determine a member shareholder's section 956 amount or foreign currency gain or loss under section 986(c)), the relevant amount of the consolidated group's accounts described in paragraph (c)(3) of this section is allocated among the member shareholders. The relevant amount is the amount that the single covered shareholder would access if all members of a consolidated group were treated as a single covered shareholder. The allocation is made in proportion to each member shareholder's share of the item at issue relative to the total amount of the item for all member shareholders.

(ii) *Application to covered distributions—(A) Overview.* The allocation rule in paragraph (c)(4)(i) of this section applies if one or more member shareholders receive, or are assigned under § 1.951–2, a portion of a covered distribution (each, a *member's portion*), then each member shareholder is allocated a portion of the group's accounts described in paragraph (c)(3) of this section to determine the extent to which the member's portion is previously taxed earnings and profits under § 1.959–4.

(B) *The relevant amount of the covered distribution.* For purposes of allocating the group accounts, the relevant amount is the amount of the total portion of the covered distribution received by or assigned to all member shareholders (*group's portion*) that would be previously taxed earnings and profits to a single covered shareholder. This amount is determined under § 1.959–4 based on the consolidated

group's accounts described in paragraph (c)(3) of this section.

(C) *Member shareholder's PTEP amount for covered distribution.* The extent to which the member's portion is previously taxed earnings and profits under § 1.959–4 is determined by multiplying the amount determined under paragraph (c)(4)(ii)(B) of this section by a fraction. The numerator of the fraction is the member's portion, and the denominator is the group's portion.

(5) *Intercompany transfers.* Because a group maintains a single set of accounts under paragraph (c)(3) of this section (that is, member shareholders do not have their own accounts), an intercompany transfer (within the meaning of § 1.1502–13(b)(1)) of the stock of a foreign corporation is not a general successor transaction as defined in § 1.959–7(b).

(d) *Basis under section 961—(1) Overview.* This paragraph (d) addresses the application of the section 961 rules to consolidated groups. Paragraph (d)(2) of this section contains the general rule providing for single- or separate-entity treatment of the group with respect to different types of property units. Paragraphs (d)(3) and (4) of this section, respectively, address basis increases and reductions under section 961. Paragraph (d)(5) of this section addresses the use of the group's basis to determine gain or loss on a property unit.

(2) *Treatment of property units—(i) Section 961(a) ownership units.* Because member shareholders directly own section 961(a) ownership units, adjustments to these ownership units under the section 961 rules are made separately to member shareholders' actual ownership interests.

(ii) *Derivative ownership units and section 961(c) ownership units.* Members of a consolidated group are treated as a single covered shareholder for purposes of accounting for the basis of derivative ownership units and section 961(c) ownership units. Therefore, a partnership has a single derived basis with respect to a consolidated group in a derivative ownership unit (*group derived basis*), and a controlled foreign corporation has a single section 961(c) basis with respect to a consolidated group in a section 961(c) ownership unit (*group section 961(c) basis*).

(3) *Basis increases for income inclusions and gains—(i) In general.* Adjustments under §§ 1.961–3 (for inclusions under sections 951(a), 951A(a), and 961) and 1.961–5(b) (relating to foreign currency gain) are determined based on each member shareholder's respective income

inclusions under sections 951(a) and 951A(a), foreign currency gain under section 986(c), or income inclusions under § 1.961–11. To the extent the adjustment is to a section 961(a) ownership unit, the adjustments are made separately to each member shareholder's section 961(a) ownership unit. In contrast, to the extent the adjustment is to a derivative ownership unit or a section 961(c) ownership unit, the adjustment is made to the group derived basis or the group section 961(c) basis.

(ii) *Example.* A member (M1) directly owns all the stock of a foreign corporation (CFC1), which directly owns all the preferred stock in another foreign corporation (CFC3). Another member (M2) owns all the stock of a foreign corporation (CFC2), which owns all the common stock of CFC3. M1 and M2 have section 951(a) inclusions resulting from CFC3's subpart F income. M1's basis in its CFC1 stock, which is determined separately with respect to M1, and the group section 961(c) basis in CFC1's preferred stock in CFC3, are both adjusted based on M1's inclusion. Similarly, M2's basis in its CFC2 stock, which is determined separately with respect to M2, and the group section 961(c) basis in CFC2's common stock in CFC3, are both adjusted based on M2's inclusion.

(4) *Basis reductions—(i) Reductions to basis of section 961(a) ownership units.* Reductions to the basis of section 961(a) ownership units under §§ 1.961–4 (for distributions of previously taxed earnings and profits) and 1.961–5(b) (relating to foreign currency loss) are determined on a separate-entity basis. See paragraph (d)(2)(i) of this section.

(ii) *Reductions to derived basis or section 961(c) basis.* This paragraph (d)(4)(ii) coordinates the application of the section 961 rules to determine how to reduce group derived basis and group section 961(c) basis under §§ 1.961–4 and 1.961–5.

(A) *Step 1: Proportionate allocation of derived basis and section 961(c) basis.* When the section 961 rules apply to reduce derived basis or section 961(c) basis, the group derived basis and group section 961(c) basis is allocated to the member shareholders. The allocation is made in proportion to each member shareholder's share of the item at issue relative to the total for all member shareholders (for example, in proportion to a member shareholder's PTEP amount for a covered distribution, as described in paragraph (c)(4)(ii)(C) of this section).

(B) *Step 2: Separate entity basis reduction.* The member shareholders separately apply the section 961 rules to make the necessary basis reductions,

taking into account the amount of group derived basis and group section 961(c) basis allocated to that member in paragraph (d)(4)(ii)(A) of this section (step 1) (for example, *see* § 1.961–4(d) for adjustments to section 961(c) ownership units for distributions of previously taxed earnings and profits to a controlled foreign corporation owned by member shareholders). To the extent the basis reduction exceeds the relevant basis in the ownership unit with respect to the member shareholder, the partnership or controlled foreign corporation recognizes gain (for example, *see* § 1.961–4(f)), which is allocated or assigned to the member shareholder.

(C) *Step 3: Recombination of derived basis and section 961(c) basis.* After applying the rules in paragraphs (d)(4)(ii)(A) and (B) of this section, to the extent there is any remaining positive derived basis or positive section 961(c) basis, or any resulting negative derived basis or negative section 961(c) basis, those bases are combined to produce the group derived basis or group section 961(c) basis for the relevant ownership unit.

(5) *Use of group derived basis and group section 961(c) basis to determine gain or loss—(i) Section 1.961–8(b)(1) gain or loss.* This paragraph (d)(5)(i) applies when a member shareholder is allocated a distributive share of gain or loss as described in § 1.961–8(b)(1). For purposes of applying positive derived basis under § 1.961–8(b)(2), the member shareholder is allocated a portion of the relevant group derived basis in proportion to the member shareholder's ownership interest in the foreign corporation described in § 1.961–8(b)(1) relative to the aggregate of all ownership interests in the foreign corporation of all member shareholders. The relevant group derived basis is the amount of derived basis the single covered shareholder would access if all members of the consolidated group were treated as a single covered shareholder.

(ii) *Section 1.961–9(c) covered gain.* This paragraph (d)(5)(ii) applies when a member shareholder is assigned a share of covered gain under § 1.951–2. For purposes of applying positive section 961(c) basis under § 1.961–9(e), the member shareholder is allocated a portion of the relevant group section 961(c) basis in proportion to the member shareholder's share of covered gain relative to the total for all member shareholders. The relevant group section 961(c) basis is the amount of section 961(c) basis the single covered shareholder would access if all members of a consolidated group were treated as a single covered shareholder.

(e) *Consequences of joining or leaving a consolidated group—(1) In general.* For purposes of applying the section 959 rules and the section 961 rules, a transaction in which a member shareholder joins or leaves a consolidated group is treated in the same manner as an acquisition or disposition of the stock of a foreign corporation owned by the member at the time the member joins or leaves the consolidated group, as applicable. Paragraphs (e)(2) and (3) of this section coordinate the application of §§ 1.959–7 (general successor transaction rules) and 1.961–5 (successor basis rules) to transactions in which a member shareholder joins or leaves a consolidated group, respectively. Paragraph (e)(4) of this section coordinates the application of section 986(c) to such transactions. The rules of this paragraph (e) apply only to transactions treated as acquisitions or dispositions of stock of the member shareholder (for example, if a member shareholder is sold to an unrelated party and an election under section 338(h)(10) is made, paragraph (e)(3) of this section does not apply).

(2) *Joining transactions—(i) In general.* A transaction (*joining transaction*) in which a corporation (*joining member*) becomes a member of a consolidated group is treated in the same manner as a general successor transaction. In the joining transaction, the transferor covered shareholder is the joining member, the successor covered shareholder is the consolidated group, and the consolidated group is treated as acquiring ownership of all the stock of foreign corporations owned by the joining member. Thus, for example, any previously taxed earnings and profits in the joining member's annual PTEP accounts with respect to a foreign corporation are added to the consolidated group's annual PTEP accounts with respect to the foreign corporation. Similarly, a controlled foreign corporation's section 961(c) basis with respect to the joining member in a section 961(c) ownership unit is added to the controlled foreign corporation's section 961(c) basis with respect to the consolidated group in that unit, and a partnership's derived basis with respect to the joining member in a derivative ownership unit is added to the partnership's derived basis with respect to the consolidated group in that unit.

(ii) *Combined pool election.* The consolidated group's combined pool election status pursuant to § 1.959–2(c) controls after a joining transaction.

(3) *Departing transactions—(i) In general.* A transaction (*departing*

transaction) in which a member shareholder (*departing member*) ceases to be a member of a consolidated group is treated in the same manner as a general successor transaction. In the departing transaction, the transferor covered shareholder is the consolidated group, the successor covered shareholder is the departing member, and the departing member is treated as acquiring ownership of all the stock of foreign corporations owned by the departing member at the time of the departing transaction. Thus, for example, any previously taxed earnings and profits in the consolidated group's annual PTEP accounts with respect to the foreign corporation are allocated between the consolidated group and the departing member shareholder. Similarly, a controlled foreign corporation's section 961(c) basis in a section 961(c) ownership unit with respect to the consolidated group is allocated between the consolidated group and the departing member, and a partnership's derived basis in a derivative ownership unit with respect to the consolidated group is allocated between the consolidated group and the departing member.

(ii) *Combined pool election.* The departing member retains the consolidated group's combined pool election status under § 1.959–2(c). However, if the departing member joins a new consolidated group, paragraph (e)(2)(ii) of this section applies to the new consolidated group.

(4) *Coordination with section 986(c).* Joining transactions and departing transactions do not result in recognition of foreign currency gain or loss under section 986(c) (notwithstanding § 1.986(c)–1). Thus, for example, the dollar basis of previously taxed earnings and profits in a joining member's annual PTEP accounts carries over when adding the previously taxed earnings and profits to the consolidated group's annual PTEP accounts pursuant to paragraph (e)(2)(i) of this section.

(f) *Examples—(1) In general.* This paragraph (f) provides examples illustrating the application of this section. These examples do not discuss every consequence of the transactions under related provisions of the Code and regulations.

(2) *Assumed facts.* For purposes of the examples in this paragraph (f), unless otherwise indicated, the following facts are assumed:

(i) USP, USS1, and USS2 are domestic corporations, each of which uses the U.S. dollar as its functional currency. USP is the common parent of the P consolidated group (P group), USS1 and USS2 are members of the P group, and

all the stock of USS1 and USS2 is owned by USP.

(ii) F1 and F2 are controlled foreign corporations, each of which uses the British pound (£) as its functional currency.

(iii) PRS1 is a partnership.

(iv) Each entity uses the calendar year as its taxable year, and no entity has a short taxable year.

(v) There are no adjustments under section 743(b) to the basis of any partnership property.

(3) *Example 1: Exclusion from gross income of distributed previously taxed earnings and profits*—(i) *Facts.* Each of USS1 and USS2 directly owns 50 of the 100 shares of the single class of outstanding stock of F1. In year 3, F1 makes a £300x distribution of money with respect to its stock (£3x with respect to each share), and the entirety of this £300x is a covered distribution (a dividend as defined in section 316, determined without regard to section 959(d)). Immediately before the covered distribution, F1 has £180x of previously taxed earnings and profits with respect to the P group, none of which is assigned to the taxable section 962 PTEP group.

(ii) *Analysis.* For purposes of analyzing the covered distribution under § 1.959–4, the P group is treated as a single covered shareholder. See paragraph (c)(2) of this section. The P group's share of the covered distribution is the entire £300x because the entire covered distribution is made to members of the P group (£150x to USS1 plus £150x to USS2). See § 1.959–4(d)(1). The £300x are allocated first to F1's previously taxed earnings and profits that are with respect to the P group immediately before the covered distribution (£180x), and then to F1's earnings and profits described in section 959(c)(3). Therefore, the £300x consist of £180x of previously taxed earnings and profits and £120x of earnings and profits described in section 959(c)(3). See § 1.959–4(d)(2) and (e)(1). These previously taxed earnings and profits are treated as distributed pro rata with respect to the F1 stock on which the P group's share of the covered distribution is made. See § 1.959–4(d)(4) and paragraph (c)(4)(ii) of this section. Accordingly, £1.8x of previously taxed earnings and profits is treated as distributed with respect to each share of F1 stock. See *id.* USS1 and USS2 each excludes the £90x ((£150x + £300x) × £180x) of previously taxed earnings and profits distributed to it from its gross income. See § 1.959–4(b)(1) and paragraph (c)(4)(ii) of this section. Moreover, the distributions of previously taxed earnings and profits to

USS1 and USS2 do not result in any investment adjustments under § 1.1502–32 (see § 1.1502–32(b)(5)(ii), *Example 9*) or adjustments to earnings and profits (see §§ 1.312–8(c) and 1.1502–33). Because this analysis depends only on F1's PTEP with respect to the P group, these results do not depend on whether USS1 or USS2 owned F1 stock or had income inclusions with respect to F1 during the taxable years to which the distributed previously taxed earnings and profits relate.

(4) *Example 2: Basis increases for income inclusions*—(i) *Facts.* F1 has two classes of stock outstanding. USS1 directly owns all 100 shares of F1 common stock, and USS2 directly owns all 100 shares of F1 preferred stock. F1 directly owns all 50 shares of the single class of outstanding stock of F2. The shares of F1 stock directly owned by USS1 or USS2 are section 961(a) ownership units, and the shares of F2 stock directly owned by F1 are section 961(c) ownership units. For year 3, USS1 includes \$60x and USS2 includes \$40x in gross income under section 951(a)(1)(A) with respect to F2 (their pro rata shares of F2's subpart F income, translated into U.S. dollars in accordance with section 989(b)). F2 does not make any covered distributions, and therefore does not distribute any previously taxed earnings and profits, during the taxable year.

(ii) *Analysis*—(A) *In general.* To reflect USS1's and USS2's income inclusions for year 3, the basis of the F2 stock and F1 stock is increased in accordance with § 1.961–3. See § 1.961–3(b). F1's section 961(c) basis in the F2 stock with respect to the P group is increased based on the total inclusions of the P group, because members of a consolidated group are treated as a single covered shareholder for purposes of accounting for basis of section 961(c) ownership units, and because all of the P group's inclusions arise with respect to this F2 stock. See paragraphs (d)(2)(ii) and (d)(3)(i) of this section. USS1's adjusted basis in the F1 common stock and USS2's adjusted basis in the F1 preferred stock are increased based on each member's separate inclusion, because adjustments to section 961(a) ownership units are made separately to member shareholders' actual ownership interests. See paragraphs (d)(2)(i) and (d)(3)(i) of this section.

(B) *Increases to basis of each property unit.* The amount of the P group's income inclusions with respect to F2 that give rise to increases to basis under section 961 is \$100x (\$60x + \$40x). See § 1.961–3(c)(1) and paragraph (d)(3) of this section. Under § 1.961–3(e), the section 961(c) basis with respect to the

P group of each share of F2 stock is increased by \$2x (\$100x ÷ 50 shares). The basis of each share of F1 common stock owned by USS1 is increased by \$0.60x (\$60x ÷ 100 shares) and the basis of each share of F1 preferred stock owned by USS2 is increased by \$0.40x (\$40x ÷ 100 shares). These increases to basis are treated as made at the beginning of F2's taxable year. See § 1.961–3(c)(2) and (e)(1). These adjustments to the basis of the section 961(a) ownership units may be different from the adjustments that would be made under § 1.961–3(e) if they were all held by a single owner.

(C) *Section 1502 basis and E&P adjustments.* USP increases its basis in its USS1 stock by \$60x and in its USS2 stock by \$40x, reflecting each member's inclusion in income under section 951(a)(1)(A). See § 1.1502–32(b)(2)(i). Because the income inclusions increase USS1's and USS2's earnings and profits (see § 1.312–6(f)), USP's earnings and profits are increased under § 1.1502–33(b)(1).

(5) *Example 3: Basis reductions and gain recognition for distributions from upper-tier foreign corporation*—(i) *Facts.* USS1 and USS2 directly own all the shares of the single class of outstanding stock of F1, with USS1 owning 60 shares and USS2 owning 40 shares. In year 3, F1 makes a pro rata covered distribution to USS1 and USS2. Under § 1.959–4, the entirety of the covered distribution is previously taxed earnings and profits with respect to the P group and excluded from the members' gross income. In addition, the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are distributed on each share of F1 stock is \$6x. Immediately before the covered distribution, USS1's adjusted basis in each share of its F1 stock is \$8x, and USS2's adjusted basis in each share of its F1 stock is \$5x. Each of USS1 and USS2 is deemed to pay the entirety of the associated foreign income taxes of the previously taxed earnings and profits distributed to it under section 960(b) (because all such taxes are sourced from the creditable PTEP tax group and the member is a United States shareholder of F1) and is allowed a credit under section 901 for the entirety of such taxes.

(ii) *Analysis.* Under § 1.961–4(b), each of USS1 and USS2 separately reduces its adjusted basis in each share of F1 stock on which it receives previously taxed earnings and profits and, if applicable, recognizes gain with respect to those shares. See paragraph (d)(4)(i) of this section. The adjustment to each share of F1 stock is \$6x, the sum of the

dollar basis and associated foreign income taxes of the previously taxed earnings and profits received by the member on the share. *See* § 1.961–4(b)(2)(i). The basis of each of USS1’s shares of F1 stock is reduced to \$2x (\$8x original basis – \$6x adjustment). *See* § 1.961–4(b)(2)(ii). The basis of each of USS2’s shares of F1 stock is reduced to \$0x, and USS2 recognizes \$1x of gain per share (\$5x original basis – \$6x adjustment). *See* § 1.961–4(b)(2)(ii) and (iii). These adjustments are treated as made concurrently with the covered distribution. *See* § 1.961–4(e)(1) and (f)(1).

(6) *Example 4: Basis reductions and gain recognition for distributions from lower-tier foreign corporation*—(i) *Facts*. USS1 and USS2 directly own all the shares of the single class of outstanding stock of F1, with USS1 owning 60 shares and USS2 owning 40 shares. F1 directly owns all the shares of the single class of outstanding stock of F2. In year 3, F2 makes a covered distribution to F1. Under § 1.959–4, the entirety of the covered distribution is previously taxed earnings and profits that are with respect to the P group and excluded from F1’s gross income for purposes of determining its subpart F income and its tested income or tested loss. In addition, the sum of the dollar basis and associated foreign income taxes of the previously taxed earnings and profits that are distributed on each share of F2 stock is \$6x. Immediately before the covered distribution, F1’s adjusted basis in each share of F2 stock is £1.50x, and its section 961(c) basis with respect to the P group in each share is \$5x. On the day of the covered distribution, the spot rate is \$1:£0.5.

(ii) *Analysis*. Under § 1.961–4(d), F1 reduces its section 961(c) basis in each share of F2 stock on which it receives previously taxed earnings and profits. If applicable, F1 recognizes gain with respect to those shares. These adjustments are made separately with respect to USS1 and USS2. *See* paragraph (d)(4)(ii) of this section. First, under paragraph (d)(4)(ii)(A) of this section, for each share of F2 stock, F1’s section 961(c) basis with respect to the P group is allocated proportionately to USS1 (\$3x, or 60%) and USS2 (\$2x, or 40%). Next, under paragraph (d)(4)(ii)(B) of this section, the basis reductions are made separately for each of USS1 and USS2. For each share of F2 stock, USS1’s portion of F1’s section 961(c) basis (\$3x) is reduced by USS1’s share of the dollar basis and associated foreign income taxes (\$3.60x = 60% × \$6x). *See* § 1.961–4(d)(2). Because the reduction exceeds the positive section 961(c) basis, it must be tested against

the limitation in § 1.961–4(d)(3). The amount of F1’s adjusted basis in each share that is available with respect to USS1 is £0.90x (60% × £1.50x), which is equal to \$1.80x. Because \$1.80x is greater than \$0.60x, USS1’s portion of F1’s section 961(c) basis is reduced to negative \$0.60x (\$3x – \$3.60x), and no gain is recognized under § 1.961–4(d)(2)(iii). Similarly, USS2’s share of F1’s section 961(c) basis in each share of F2 stock (\$2x) is reduced by its share of the dollar basis and associated foreign income taxes (\$2.40x = 40% × \$6x). The amount of F1’s adjusted basis in each share that is available with respect to USS2 is £0.60x (40% × £1.50x), which is equal to \$1.20x. Therefore, USS2’s portion of F1’s section 961(c) basis is reduced to negative \$0.40x (\$2x – \$2.40x), and no gain is recognized under § 1.961–4(d)(2)(iii). Finally, under paragraph (d)(4)(ii)(C) of this section, the separately computed section 961(c) bases are recombined. As a result, F1’s section 961(c) basis with respect to the P group in each share of F2 stock is negative \$1x (negative \$0.60x + negative \$0.40x = negative \$1x). The reductions to section 961(c) basis are treated as made concurrently with the covered distribution. *See* § 1.961–4(e)(1) and (f)(1).

(iii) *Alternative facts: distribution in excess of basis*. The facts are the same as in paragraph (f)(6)(i) of this section (*Example 4*), except that the sum of the dollar basis and associated foreign income taxes per share of F2 stock is \$9x instead of \$6x. The application of paragraph (d)(4)(ii)(A) of this section is the same as in paragraph (f)(6)(ii) of this section. When applying paragraph (d)(4)(ii)(B) of this section, the basis reductions per share are \$5.40x (60% × \$9x) for USS1 and \$3.60x (40% × \$9x) for USS2. Because the reductions again exceed the positive section 961(c) basis, they must be tested against the limitation in § 1.961–4(d)(3). The amounts of F1’s adjusted basis in each share that are available with respect to each member are the same as in paragraph (f)(6)(ii) of this section. For USS1, because the \$1.80x limitation is less than \$2.40x (\$3x section 961(c) basis – \$5.40x adjustment), USS1’s portion of F1’s section 961(c) basis per share is reduced to negative \$1.80x, and \$0.60x (\$2.40x – \$1.80x) of gain per share is recognized under § 1.961–4(d)(2)(iii), with this gain assigned solely to USS1. Similarly, for USS2, the \$1.20x limitation is less than \$1.60x (\$2x section 961(c) basis – \$3.60x adjustment). Therefore, USS2’s portion of F1’s section 961(c) basis per share is reduced to negative \$1.20x, and \$0.40x

(\$1.60x – \$1.20x) of gain per share is recognized under § 1.961–4(d)(2)(iii), with this gain assigned solely to USS2. The basis of USS1 and USS2’s F1 stock is increased under § 1.961–3 to reflect the gains recognized by F1 and included in the member’s gross income pursuant to § 1.961–11. Finally, under paragraph (d)(4)(ii)(C) of this section, the separately computed section 961(c) bases are recombined. As a result, F1’s section 961(c) basis with respect to the P group in each share of F2 stock is negative \$3x (negative \$1.80x + negative \$1.20x = negative \$3x).

(7) *Example 5: Use of positive derived basis*—(i) *Facts*. USS1, USS2, and a nonresident alien individual, in the aggregate, directly own all the interests in PRS1, with USS1 and USS2 owning equal interests in PRS1. PRS1 directly owns all the shares of the single class of outstanding stock of F1 (derivative ownership units). In year 3, PRS1 sells all the F1 stock to an unrelated party for money. The distributive share of the gain recognized by PRS1 is \$30x to each of USS1 and USS2, determined without regard to derived basis. Immediately before the sale (and taking into account any adjustments under § 1.961–5(b) resulting from the sale), PRS1’s positive derived basis with respect to the P group in the F1 stock is \$50x in total. In addition, PRS1 has no negative derived basis with respect to the P group in any of the shares.

(ii) *Analysis*. In applying PRS1’s positive derived basis with respect to the P group in the F1 stock, a pro rata portion of such derived basis is taken into account with respect to each member. *See* paragraph (d)(5)(i) of this section. Thus, because USS1 and USS2 own equal interests in PRS1, \$25x (or 50%) of the derived basis is taken into account with respect to each of USS1 and USS2. Accordingly, for each of USS1 and USS2, PRS1 is treated as applying \$25x of derived basis to the member’s \$30x distributive share of gain on the sale. *See* § 1.961–8(b). As result, each member’s distributive share of gain on the sale is adjusted by \$25x, to a \$5x distributive share of gain. *See also* § 1.961–8(c) (for purposes of adjusting each member’s adjusted basis in its PRS1 interest under section 705, the member’s distributive share of gain on the sale is \$5x).

(8) *Example 6: Use of positive section 961(c) basis*—(i) *Facts*. USS1, USS2, and a nonresident alien individual, in the aggregate, directly own all the shares of the single class of outstanding stock of F1. USS1 and USS2 own an equal number of shares of F1. F1 directly owns all the shares of the single class of outstanding stock of F2 (section 961(c)

ownership units). In year 3, F1 sells all the F2 stock to an unrelated party for money. F1 recognizes £100x of gain on the sale, determined without regard to loss recognized on any share and without regard to section 961(c) basis. This £100x is covered gain, and each of USS1 and USS2 is assigned a £30x portion of the covered gain under § 1.951–2. Immediately before the sale (and taking into account any adjustments under § 1.961–5(b) resulting from the sale), F1’s positive section 961(c) basis in the F2 stock with respect to the P group is £50x (as translated from U.S. dollars into British pounds at the spot rate on the day of the sale). In addition, F1 has no negative section 961(c) basis with respect to the P group in any of the shares.

(ii) *Analysis*. In applying F1’s positive section 961(c) basis with respect to the

P group of the F2 stock, a pro rata portion of such section 961(c) basis is taken into account with respect to each member. *See* paragraph (d)(5)(ii) of this section. Thus, because USS1 and USS2 own equal interests in F1, £25x (£30x ÷ £60x, or 50%) of the section 961(c) basis is taken into account with respect to each of USS1 and USS2. All £25x of the section 961(c) basis taken into account with respect to each of USS1 and USS2 is applied to the member’s £30x share of the covered gain. *See* § 1.961–9(d)(2) and (e)(1). As a result, a total of £50x of the covered gain is previously taxed earnings and profits of F1 with respect to the P group, characterized in accordance with § 1.961–9(f)(2) through (4). *See* § 1.961–9(d)(3), (f)(1) and paragraph (c)(1) of this section. F1 excludes the £50x of previously taxed earnings resulting from section 961(c)

basis from its gross income, solely for purposes of determining its subpart F income and tested income or tested loss. *See* § 1.961–9(b).

(g) *Applicability date*. This section applies to a taxable year of a consolidated group for which a taxable year of a foreign corporation is relevant if such taxable year of the foreign corporation begins on or after [date of publication of final regulations in the **Federal Register**] or is an early application year (as described in § 1.959–12(d)).

Heather C. Maloy,

Acting Deputy Commissioner.

[Doc. No. AMS-DA-23-0031]

Milk in the Northeast and Other Marketing Areas; Final Decision on Proposed Amendments to Marketing Agreements and Orders

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Proposed rule; final decision.

SUMMARY: This proposed rule is the Secretary's final decision in this proceeding and recommends amendments to the pricing provisions in the 11 Federal Milk Marketing Orders (FMMOs). AMS will determine if producers approve of the proposed amended orders, as required by regulation.

DATES: The representative period for ascertaining producer approval is January 2024.

ADDRESSES: To review the hearing record, please see <https://www.ams.usda.gov/rules-regulations/moa/dairy/hearings/national-fmmo-pricing-hearing>. Webinars with information on the proposed amendments and the referendum process are also available on the hearing website.

FOR FURTHER INFORMATION CONTACT: Erin Taylor, USDA/AMS/Dairy Program, Order Formulation and Enforcement Branch, STOP 0231–Room 2530, 1400 Independence Avenue SW, Washington, DC 20250–0231; telephone: (202) 720–4392; email address: Erin.Taylor@usda.gov.

SUPPLEMENTARY INFORMATION: This proposed rule, in accordance with 7 CFR 900.13a, is the Secretary's final decision in this proceeding and proposes the issuance of marketing orders as defined in 7 CFR 900.2(j). AMS continues to find that amendments to five milk pricing categories would provide more orderly marketing in the 11 FMMOs. The final decision reflects changes to the make allowances and, to a very limited extent, the Class I differentials included in the recommended decision. This final decision recommends amendments to:

1. Milk Composition Factors. Update the factors to 3.3 percent true protein, 6 percent other solids, and 9.3 percent nonfat solids.

2. Surveyed Commodity Products. Remove 500-pound barrel cheddar

cheese prices from the Dairy Products Mandatory Reporting Program (DPMRP) survey and rely solely on the 40-pound block cheddar cheese price to determine the monthly average cheese price used in the formulas.

3. Class III and Class IV Formula Factors. Update the manufacturing allowances to: Cheese: \$0.2519; Butter: \$0.2272; Nonfat Dry Milk (NFDm): \$0.2393; and Dry Whey: \$0.2668. This decision also proposes updating the butterfat recovery factor to 91 percent.

4. Base Class I Skim Milk Price. Update the formula as follows: the base Class I skim milk price would be the higher-of the advanced Class III or Class IV skim milk prices for the month. In addition, adopt a Class I extended shelf life (ESL) adjustment equating to a Class I price for all ESL products equal to the average-of mover, plus a 24-month rolling average adjuster with a 12-month lag.

5. Class I and Class II differentials. Keep the \$1.60 base differential and adopt modified location specific Class I differential values.

The Agricultural Marketing Service (AMS) will determine if producers approve of each proposed amended order, as required by regulation. If at least two-thirds of the producers or two-thirds of the milk represented in the vote approve of an amended order, AMS will issue a final rule implementing the changes. If an order is not approved as amended, AMS will initiate steps to terminate the order.

In conjunction with this final decision, the AMS conducted a Regulatory Economic Impact Analysis to determine the potential impact of amending FMMO pricing formulas on producer revenue and marketwide pool values. AMS used a static analysis incorporating actual data reported from January 2019 to December 2023 to determine the estimated price impacts of the package of amendments included in this final decision. The full text of the Regulatory Economic Impact Analysis may be accessed at <https://www.regulations.gov> or <https://www.ams.usda.gov/rules-regulations/moa/dairy/hearings/national-fmmo-pricing-hearing>.

Prior Documents in This Proceeding

Notice of Hearing: Published July 24, 2023 (88 FR 47396).

Notice of Reconvened Hearing: Published November 6, 2023 (88 FR 76143).

Notice of Reconvened Hearing: Published December 29, 2023 (88 FR 90134).

Recommended Decision: Published July 15, 2024 (89 FR 57580).

This administrative action is governed by sections 556 and 557 of title 5 of the United States Code and, therefore, is excluded from the requirements of Executive Orders 12866, 13563, and 13175.

The amendments to the regulations proposed herein have been reviewed under Executive Order 12988, Civil Justice Reform. They are not intended to have a retroactive effect. If adopted, the proposed amendments would not preempt any state or local laws, regulations, or policies, unless they present an irreconcilable conflict with this rule.

The Agricultural Marketing Agreement Act of 1937 (AMAA), as amended (7 U.S.C. 601–674), provides that administrative proceedings must be exhausted before parties may file suit in court. Under section 608c(15)(A) of the AMAA, any handler subject to an order may request modification or exemption from such order by filing a petition with the USDA stating that the order, any provision of the order, or any obligation imposed in connection with the order is not in accordance with the law. A handler is afforded the opportunity for a hearing on the petition. After a hearing, USDA would rule on the petition. The AMAA provides that the district court of the United States in any district in which the handler is an inhabitant, or has its principal place of business, has jurisdiction in equity to review USDA's ruling on the petition, provided a bill in equity is filed not later than 20 days after the date of the entry of the ruling.

Civil Rights Impact Analysis

AMS has reviewed this rulemaking in accordance with USDA Departmental Regulation 4300–004, Civil Rights Impact Analysis, to identify any major civil rights impacts the rule might have on FMMO participants on the basis of race, color, national origin, disability, sex, gender identity, political beliefs, age, marital, family/parental status, religion, sexual orientation, reprisal, or because of an individuals' income is derived from any public assistance program. Based on the review and analysis of the rule and all available data, issuance of this proposed rule is not likely to negatively impact low and moderate-income populations, minority populations, women, Tribes or persons with disabilities, by virtue of their age, race, color, national origin, sex, disability, or marital or familial status. No major civil rights impact is likely to result from this proposed rule.

Regulatory Flexibility Act and Paperwork Reduction Act

In accordance with the Regulatory Flexibility Act (RFA) (5 U.S.C. 601 *et seq.*), the AMS has considered the economic impact of this action on small entities. Accordingly, AMS has prepared this initial regulatory

flexibility analysis. The purpose of the RFA is to fit regulatory actions to the scale of businesses subject to such actions so that small businesses will not be unduly or disproportionately burdened. Marketing orders and amendments thereto are unique in that they are normally brought about through group action of essentially small entities

for their own benefit. A small dairy farm as defined by the Small Business Administration (SBA) (13 CFR 121.201) (NAICS Code 112120) is one that has an annual gross revenue of \$3.75 million or less, and a small dairy products manufacturer is one that has no more than the number of employees listed in the chart below:

NAICS code	NAICS U.S. industry title	Size standards in number of employees
311511	Fluid Milk Manufacturing	1,150
311512	Creamery Butter Manufacturing	750
311513	Cheese Manufacturing	1,250
311514	Dry, Condensed, and Evaporated Dairy Product Manufacturing ...	1,000

To determine which dairy farms are “small businesses,” the \$3.75 million per year income limit was used to establish an annual milk marketing threshold of 18.3 million pounds. Although this threshold does not factor in additional monies that may be received by dairy producers, it should be an accurate standard for most “small” dairy farmers. Based on the U.S. 2023 average yield per cow and 2023 NASS average All-Milk price, a dairy farm with approximately 780 cows or fewer would meet the definition of a small business. In 2022, the most recent year with statistics available, there were 24,470 dairy farms with milk sales, of which approximately 19,576 had milk regulated on an FMMO for at least one month of the year. Based on the 2022 Census of Agriculture, Milk Cow Herd Size by Inventory and Sales, an estimated 89 percent of operations with milk sales are likely to be small businesses.

To determine a handler’s size, if the plant is part of a larger company operating multiple plants that collectively exceed the 750-employee limit for creamery butter manufacturing; the 1,000-employee limit for dry, condensed, and evaporated dairy product manufacturing; the 1,150-employee limit for fluid milk manufacturing; or the 1,250-employee limit for cheese manufacturing; the plant was considered a large business even if the local plant does not exceed the 750, 1,000, 1,150, or 1,250-employee limit, respectively.

In 2022, the following number of plants were regulated for at least one month of the year in each FMMO: 66 plants on the Northeast, 19 plants on the Appalachian, 9 plants on the Florida, 20 plants on the Southeast, 58 plants on the Upper Midwest, 32 plants on the Central, 43 plants on the Mideast, 24 plants on California, 17 plants on the Pacific Northwest, 26 plants on the

Southwest, and 8 plants on Arizona. According to the 2022 Census of Agriculture, approximately 86 percent of fluid milk manufacturing plants, approximately 96 percent of cheese plants, approximately 82 percent of dry products plants, and approximately 78 percent of butter plants met the SBA definition of small businesses.

How FMMO Pricing Provisions Currently Operate

The proposed amendments in this decision cover five milk pricing subject areas: Milk Composition Factors, Surveyed Commodity Products, Class III and Class IV Formula Factors, base Class I skim milk price (Class I mover), and Class I and II Differentials. This decision proposes to amend provisions in all five pricing subject areas. The amendments are intended to update formulas and factors in response to industry changes over time, many of which have not been updated since the provisions were adopted on January 1, 2000, to ensure USDA is carrying out the purposes of the AMAA.

Milk Composition Factors. FMMO milk prices are based on three primary components—protein, other solids, and nonfat solids. Skim milk composition factors in the current price formulas codified in the FMMO regulations were adopted in 2000: 3.1 percent protein, 5.9 percent other solids, and 9 percent nonfat solids. The proposed amendments would increase milk composition factors to 3.3 percent protein, 6.0 percent other solids, and 9.3 percent nonfat solids. Actual component tests of skim milk have increased since 2000, with more significant increases beginning in 2016. The amendments are intended to more accurately represent component levels in milk produced.

Surveyed Commodity Products. Milk prices under FMMOs are related to wholesale prices for butter, cheese,

nonfat dry milk, and dry whey. The formulas use USDA-surveyed average wholesale prices to calculate milk component prices (butterfat, protein, nonfat solids, and other solids) that are converted to Class III and IV milk prices. The protein value in cheese is a component of the Class III price. Currently, the prices of commodity cheddar cheese packaged in 40-lb blocks (“blocks”) and 500-lb barrels (“barrels”) are collected weekly by AMS through the DPMRP survey. A monthly average of those prices is used to represent commodity cheese in the Class III price formula. The butterfat value in commodity salted butter is the driver of the butterfat price used in all classified prices. The proposed amendments would eliminate 500-lb barrels from the DPMRP survey and rely solely on the monthly average survey price for 40-lb cheddar blocks. The amendment is intended to provide for more orderly marketing through a survey of only one product.

Class III and IV Formulas Factors. Make allowances are a factor in the FMMO pricing formulas representing the cost of converting raw milk into the four manufactured dairy products surveyed by USDA (butter, cheese, nonfat dry milk, and dry whey). Make allowances were last updated in 2008 following a rulemaking proceeding in 2007. The proposed amendments would update the make allowances in the FMMO Class III and IV formulas to the following: \$0.2519 for cheese; \$0.2272 for butter; \$0.2393 for NFDM; and \$0.2668 for dry whey. The proposed amendments would also update the butterfat recovery factor in the Class III formula to 91 percent. The amendments are intended to update the formula factors to be more representative of current costs and butterfat recovery observed in dairy product manufacturing.

Class I mover. The Class I mover is the base price for the skim milk portion of raw milk used in the production of Class I products. Agriculture Improvement Act of 2018 (2018 Farm Bill) amended the Class I skim milk price mover from the “higher of” Class III or Class IV skim prices to a simple average of the two classes plus \$0.74, referred to as the “average of” mover. The proposed amendments would return the base Class I skim milk price calculation to the higher-of Class III or Class IV skim prices. The proposed amendments would also adopt a rolling monthly Class I ESL adjustment equating to a Class I price for all ESL products equal to the average-of the Class III and Class IV advance prices, plus a 24-month rolling average adjuster, with a 12-month lag. The monthly Class I ESL adjustment would be calculated as the average of the differences between the higher-of and the average-of calculations for the prior 13 to 36 months. The amendments are intended to provide for more orderly marketing by returning to the higher-of mover; while the Class I ESL adjustment would provide better price equity for ESL products whose marketing characteristics are distinct from other Class I products.

Class I and II Differentials. FMMO Class I prices are calculated as the average of the advanced Class III and Class IV prices, plus \$0.74, plus a location-specific differential referred to as a Class I differential. As the value of milk varies by location, Class I differentials have been determined for every county in the continental U.S. Current Class I differential levels were implemented January 1, 2000, with updates to the differentials in the three southeastern orders taking effect May 1, 2008. The proposed amendments would retain the \$1.60 base differential and adopt modified location-specific Class I differential values. The amendments are intended to recognize the evolution of the dairy industry since 2000 and the increased cost of servicing the Class I market given current transportation costs and plant and producer locations.

This decision continues to find these amendments are necessary. The evidentiary record reflected testimony from a broad range of stakeholder views that updates are necessary in all five pricing subject areas to reflect current market conditions.

Impact on Small Businesses

An economic analysis has been performed on impacts the proposed amendments will have on industry participants, including producers and handlers. It can be found on the AMS

website at <https://www.ams.usda.gov/rules-regulations/moa/dairy/hearings/national-fmmo-pricing-hearing>. The proposed amendments would be applied identically to all proprietary and cooperative handlers regulated by FMMOs, regardless of their size. The proposed amendments would implement prices that more accurately reflect current market conditions, providing for more orderly marketing for both small and large producers and handlers.

AMS considered alternatives to each of the proposed amendments. Over 49 days of hearing, dozens of witnesses from 9 industry stakeholder groups presented testimony and evidence on 21 proposals in the 5 pricing subject areas. AMS considered all evidence and testimony, including alternative proposals presented, in making its recommendations.

A review of reporting requirements was completed under the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35). It was determined that these proposed amendments would have no impact on reporting, recordkeeping, or other compliance requirements because they would remain identical to the current requirements. No new forms are proposed, and no additional reporting requirements would be necessary.

This proposed rule does not require additional information collection that requires clearance by the Office of Management and Budget (OMB) beyond currently approved information collection. The primary sources of data used to complete the forms are routinely used in most business transactions. Forms require only a minimal amount of information which can be supplied without data processing equipment or a trained statistical staff. Thus, since the information is already provided, no new information collection requirements are needed, and the current information collection and reporting burden is relatively small. Requiring the same reports for all handlers does not significantly disadvantage any handler that is smaller than the industry average.

AMS is committed to complying with the E-Government Act, to promote the use of the internet and other information technologies to provide increased opportunities for citizen access to Government information and services, and for other purposes.

No other burdens are expected to fall on the dairy industry as a result of this rulemaking. This rulemaking does not duplicate, overlap, or conflict with any existing Federal rules.

Preliminary Statement

A public hearing was held upon proposed amendments to the marketing agreements and orders regulating the handling of milk in all 11 Federal milk marketing areas. The hearing was held pursuant to the provisions of the AMAA, as amended (7 U.S.C. 601–674), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR part 900).

The proposed amendments set forth below are based on the record of a public hearing held in Carmel, IN, from August 23–October 11, 2023, November 27–December 8, 2023, January 16–19, 2024, and January 29–31, 2024, pursuant to a notice of hearing published July 24, 2023 (88 FR 47396), a notice of reconvened hearing published November 6, 2023 (88 FR 76143), and a second notice of reconvened hearing, published December 29, 2023 (88 FR 90134).

The hearing was held to receive evidence on 21 proposals submitted by dairy farmers, handlers, and other interested parties. A total of 165 witnesses testified over the course of the 49-day hearing. Witnesses provided an overview of the complexity of the U.S. dairy industry and submitted 511 exhibits containing supporting data, analyses, and historical information.

The material issues, related to FMMO pricing formulas, presented on the record of hearing are as follows:

1. Milk Composition Factors
2. Surveyed Commodity Products
3. Class III and Class IV Formula Factors
4. Base Class I Skim Milk Price
5. Class I and Class II differentials

Summary of Testimony

Milk Composition

Two proposals seeking to amend the milk composition standards are being considered in this rulemaking. Proposal 1, submitted by the National Milk Producers Federation (NMPF) seeks to increase the skim component factors, with a 12-month implementation lag. The proposed standards are as follows: increase the nonfat solids assumption from 9.0 to 9.41 per hundredweight (cwt) of Class IV skim milk; increase the protein assumption from 3.1 to 3.39 per cwt of Class III skim milk; and increase the other solids assumption from 5.9 to 6.02 per cwt of Class III skim milk. Proposal 1 also contains an updating methodology that would automatically update the standards no more than once every three years once the nonfat solids component for the prior three years changes by at least .07 percentage points.

Proposal 2, submitted on behalf of National All-Jersey (NAJ), is identical to Proposal 1, except for the automatic update methodology. The proposal would update the standards annually using the previous year's weighted averages, with a 12-month implementation lag.

A witness from NMPF, a trade association representing dairy farmer-owned cooperative marketing associations throughout the United States, testified in support of updating the skim milk price milk component factors, as contained in Proposal 1. The witness explained how the U.S. dairy industry has undergone dynamic structural change since 2000, while FMMO product price formulas have generally remained static. The witness stated dairy farmers have responded to component pricing by significantly increasing the butterfat, protein, and other solid levels in their milking herds. According to the USDA's National Agricultural Statistics Service (NASS), said the witness, average butterfat tests have increased 10.9 percent from 2000 to 2022, and USDA's Economic Research Service (ERS) reported average skim milk solids content of U.S. milk production increased 0.31 percent during the same period. The witness said average protein, other solids, and nonfat solids (NFS) in milk pooled on FMMOs in 2022 were 3.39 percent, 6.02 percent, and 9.41 percent, respectively.

The NMPF witness asserted the static component levels contained in the formulas result in underpayments to producers in all FMMOs for the value of their Class I skim milk. Therefore, NMPF proposes to increase the milk composition factors in skim milk to 2022 levels. The NMPF witness analyzed 2013–2022 FMMO product prices and concluded adoption of Proposal 1 would have increased the Class III skim price by \$0.80 per cwt and the Class IV skim milk price by \$0.41 per cwt. An increase from the 2022-based skim milk component factors by the proposed 0.07 percentage point threshold level, the witness added, would have increased the Class III and Class IV prices by \$0.14 and \$0.07 per cwt, respectively.

Another NMPF witness testified the announced FMMO Class III and Class IV skim milk values do not reflect the current component levels of producer milk, resulting in announced prices being lower than actual market values. The witness said this leads to a misalignment of fluid and manufacturing milk, possibly leading to disorderly marketing conditions. This occurs because the Class I Mover skim milk price is calculated based on skim

milk component levels based on 2000 levels, narrowing the difference between Class I prices and manufacturing milk prices (Classes III and IV) and resulting in more instances of price inversions and depooling.

Several NMPF dairy farmer witnesses testified in support of Proposal 1. The witnesses stated improved genetics and feed quality have caused component levels in the milk they market to increase. The witnesses stated component levels in the pricing formulas should be updated to reflect the additional protein produced.

An NMPF witness testified regarding their work as a business consultant with dairy farmers. The witness said dairy farming costs have been consistently increasing due to higher feed prices, overall inflation, interest rate increases, and rising costs associated with labor and environmental regulations. The witness estimated the average margin per cwt of milk produced over the past decade was less than \$1, or approximately 4 to 7 percent of the average milk price. The witness opined that financially sustainable margins are necessary to avoid further consolidation in the industry.

An NMPF dairy farmer witness testified that monthly pay price volatility has increased since 2000. According to the witness, in 2000 their pay price varied \$0.52, from a high of \$12.95 to a low of \$12.43. In the 12 months prior to August 2023, the witness said the variance was \$7.46, ranging from \$22.50 to \$15.04, while costs continued to rise, including the price of corn and soybean meal more than doubling. The witness said that during the same 12-month period their milk output rose over 10,000 pounds. The witness attributed improvements in cow comfort, genetics, and feed quality to the increases in milk output and component levels but opined low component standards were depressing producer price differentials (PPDs) and discouraging milk from supplying the Class I market.

NMPF, in their post-hearing brief, offered additional support for Proposal 1. The brief credited significant advances related to animal genetics, farm management, and cow nutrition as contributing to rising skim milk component levels. NMPF reiterated hearing testimony regarding the static component levels in the formulas leading to a narrowing of the difference between Class I and manufacturing milk prices resulting in more price inversions, larger volumes of depooled milk, and resulting in disorderly marketing. NMPF stated higher skim milk component levels have value in the

competitive manufacturing dairy market, which is the basis for determining Class I values. NMPF stated that increasing the skim milk components in the formulas to reflect current levels would recognize the current average value of producer milk used for manufacturing dairy products and result in a Class I price that properly reflects base milk values. Additionally, NMPF argued delayed implementation of updated component level factors is necessary because of dairy farmers' use of risk management programs. Such a delay would allow for the completion of most transactions placed prior to announcement of the change.

A Dairy Farmers of America, Inc. (DFA) witness, appearing on behalf of NMPF, testified the failure to delay an update in skim component standards would cause financial harm to dairy farmers, milk plants, end users, and others who entered into risk-management transactions. DFA is a dairy farmer cooperative and owns and operates 14 manufacturing plants which produce liquid whey, Italian cheese, skim milk powder, whole milk powder, American-style cheese, condensed milk, cream, nonfat dry milk, milk protein concentrate (MPC), sweetened condensed milk, and dry whey. The witness testified that failure to delay implementation would affect the basis, or the profit margin for milk being hedged. The witness testified that 35 to 45 percent of the U.S. milk supply was hedged by dairy farmers and there is a growing demand for risk management services among larger-sized dairies.

A witness representing the American Farm Bureau Federation (AFBF), a farmer advocacy organization with approximately 6 million members throughout the U.S., testified in support of Proposal 1. The witness estimated that raising the skim component standards would increase the Class I price by an average of \$0.70 per cwt, based on 2022 data. Consequently, raising the skim component standards would help bring the Class I, III, and IV prices in alignment, reduce the frequency of negative PPDs, and reduce the incentives for depooling, which the witness said undermines orderly marketing. The witness stated that raising the value of the skim milk in the manufacturing classes for the skim and butterfat markets would reduce the incentive of manufacturing plants in the multiple component pricing (MCP) orders to pool milk, which would lower the producer's price and discourage milk from entering a milk deficit region. The witness testified that updating component standards would address

some price misalignment issues and is preferred to prevent handlers from depooling.

AFBF offered support in their post-hearing brief stating Proposal 1 would more accurately define the market value of skim milk pooled on FMMOs. The brief asserted the resulting increase in Class I prices would reduce the incidences of price misalignment with Class III and IV prices, reduce the size and frequency of negative PPDs, and reduce depooling incentives. AFBF supported periodic adjustments to component levels, as contained in Proposal 1, to account for the continuing increases in the component levels but specified these levels should only be changed in the positive direction. In AFBF's opinion, more frequent updates, as contained in Proposal 2, would be disruptive.

A witness representing NAJ, an organization representing the interests of Jersey cattle breeders, testified in support of Proposal 2, which proposes the same milk composition levels as Proposal 1, with automatic annual updates. The witness said many factors have contributed to increased component levels, including improved genomics, increased use of gender-selected semen, and volume-based programs such as base/excess programs. The witness testified an annual update would provide improved accuracy because of the recently accelerated pace of component increases and would have better alignment with pricing between butterfat/skim and multiple component pricing FMMOs. Additionally, the witness stated a 1-year lag on implementing these updates would allow for greater risk management which is becoming increasingly more important to producers and processors.

NAJ's post-hearing brief reiterated their support for Proposal 2, arguing record evidence shows protein and other solids levels in producer milk have progressively and significantly increased since FMMO reform in the late 1990s. NAJ stated the trend of higher solids components in skim milk was expected to continue due to economic signals to producers from component values and improved production techniques. NAJ argued amendments of standard skim milk composition factors is necessary to help avoid periods of price inversions, depooling, undervaluing Class I milk, milk supply inefficiency, and disincentives to supply milk for Class I use. NAJ stated a change to the skim milk component levels should be announced at least 11 months in advance of implementation due to risk management practices used by

producers and processors. NAJ argued annual updates better serve risk management practices because it would lead to smaller incremental changes and less adverse impact on risk management contracts with more than 12-months open interest at the time component changes are announced.

A witness representing Edge Dairy Farmer Cooperative (Edge), a Wisconsin-based dairy milk test verification cooperative, testified in support of Proposals 1 and 2. The witness supported increasing the implementation lag to 15.5 months to support longer contract hedging. The witness was of the opinion the standard butterfat test also should be updated from 3.5 percent to 4.06 percent, the 2022 average butterfat for all markets combined as published by the USDA's AMS. According to the witness, this would more accurately reflect current butterfat levels and better align the butterfat to protein ratio used in the formula, ensuring more effective risk management tools, as farmers' ability to manage their gross pay price risk would improve.

Edge, in their post-hearing brief, reiterated hearing testimony that failure to adjust the butterfat level when updating skim component levels would cause disorderly milk marketing, as it undermines effective risk-management tools for dairy farmers. Edge argued that without the corresponding change, producers hedging milk revenue using risk management products based on Class III milk or Class IV milk prices, will tend to be under protected against the decline in butterfat prices. Edge added that changing the butterfat level would not affect handler obligations to the producer settlement fund, PPDs, or uniform producer prices.

A witness representing the International Dairy Foods Association (IDFA) testified in opposition to Proposals 1 and 2, stating that updating the component standards would increase the Class I skim price by \$0.60 per cwt, a value that cannot be recovered in the marketplace. IDFA is a trade organization representing manufacturers of milk, cheese, ice cream, yogurt, cultured products, and dairy ingredients. The IDFA witness testified consumers choose finished Class I products based on desired fat level, freshness, and price, not higher nonfat solids levels. The witness estimated that updating component levels in the formulas would result in manufacturing handlers in butterfat/skim FMMOs paying an additional \$0.40 to \$0.80 per cwt, even though the component levels of milk delivered to those plants was less than those

proposed. The witness cited National Dairy Herd Information Association (DHI) data showing 2020 to 2022 average skim protein levels in butterfat/skim FMMOs below the levels contained in Proposals 1 and 2. The witness attributed the lower observed component levels to the fact that producer payments in these orders are made on the basis of the fat and skim content of their milk, leaving no financial incentive to produce higher component milk.

A witness from Saputo Cheese USA (Saputo), appearing on behalf of IDFA, also testified in opposition of Proposals 1 and 2. Saputo is a dairy processor and manufacturer operating 29 plants throughout the U.S. The witness said Saputo operates three plants located in the skim/fat orders, and in 2022 the average NFS level of milk received at those plants was 9.1070 percent, which is less than what is proposed in Proposals 1 and 2. The witness explained Saputo purchases skim solids to add to its skim milk in order to ensure the Class II products it manufactures contain the skim solids necessary to meet standard of identity requirements for those products. Updating the component levels in the formula would only result in Saputo paying for skim solids not received, but it would not lower the amount of skim solids Saputo must purchase, explained the witness.

A post-hearing brief submitted by IDFA reiterated its opposition to Proposals 1 and 2, arguing that increased component levels have no financial benefit or economic value to Class I handlers who would be the primary entities impacted by adoption of these proposals. IDFA stated the current FMMO system of pricing Class I milk on a skim/fat basis versus Classes II, III, and IV milk on a component basis does not create disorderly marketing.

The Milk Innovation Group (MIG) is a group of fluid milk processors and producers that market value added dairy based products. MIG's members include Anderson Erickson Dairy (AE), Aurora Organic Dairy (Aurora), Crystal Creamery, Danone North America (Danone), fairlife, HP Hood LLC (HP Hood), Organic Valley/CROPP Cooperative (Organic Valley), Shamrock Foods Company (Shamrock), Shehadey Family Foods LLC (Shehadey), and Turner Dairy Farms (Turner Dairy). Crystal Creamery is a California fluid milk processor producing Class I, II, and IV conventional and organic milk products. Danone is a food and beverage company operating seven plants in the U.S. Fairlife is a fluid milk processor of ultra-filtered lactose free milk, and other

high protein products. Organic Valley is a dairy farmer-owned organic cooperative producing more than 30 percent of the organic milk sold in the U.S.

Seven witnesses representing MIG, including witnesses from HP Hood, Shehadey, Saputo, Shamrock, AE, Turner Dairy, and Aurora, testified in opposition to Proposals 1 and 2. HP Hood is a fluid milk processor operating five ESL plants and four high-temperature, short-time (HTST) plants in the Northeast and California. Shehadey operates four manufacturing plants in California, Nevada, and Oregon, producing Class I and Class II products. Shamrock is a fluid milk processor of HTST and ESL products with processing facilities in Arizona and Virginia, and a 20,000-head dairy farm located in Arizona. AE is an Iowa fluid milk processor producing both Class I and II products. Aurora is a vertically integrated organic milk supplier with four organic dairy farms located in Colorado and Texas. Turner Dairy is a small fluid milk processor with full or partial ownership of two fluid milk plants, as well as a standalone Class II plant, all located in western Pennsylvania.

Six witnesses testified their plants regularly receive milk with components below the proposed levels. One witness offered that component levels received ranged from 3.09 to 3.63 percent protein, 5.83 to 6.10 percent other solids, and 8.92 to 9.65 percent NFS. MIG members testified that increasing the component levels in the formulas would increase their raw milk costs, requiring them to pay for milk components not received. One witness stated that adoption of Proposals 1 and 2 would increase costs between \$0.60 and \$0.75 per cwt. All MIG witnesses claimed that fluid milk processors, even if they did receive higher component milk, are unable to convert those higher components into additional market revenue as Class I products are sold on a volume, not component basis.

Another MIG witness testified on a survey conducted of MIG members plus two additional large grocery retailers who own their own fluid milk processing plants. According to the witness, using component data from 32 out of the 36 plants surveyed, these plants frequently received milk with components below the proposed levels. As data was confidential, no specific data was provided. The witness also noted the data showed component levels changed due to seasonality and geographics, demonstrating inconsistent levels received by plants. The witness testified the adoption of Proposals 1 or

2 would raise Class I prices and make it more challenging for these plants to recover costs. Should USDA decide to change the standard component levels in the pricing formulas, the witness testified component minimums should be used instead of averages because FMMOs are meant to provide minimum prices.

A post-hearing brief filed on behalf of MIG argued it would be disorderly for Class I fluid milk processors, the only mandatory participant of FMMOs, to be forced to pay for component levels regardless of what is actually received. MIG opined consumers do not value additional skim component levels in fluid milk products, therefore Class I processors are unable to recoup additional revenue out of the market. MIG was of the opinion no record evidence was provided at the hearing that the current skim component formula factors are causing disorderly marketing and added that although they oppose Proposals 1 and 2, if any part of these proposals are adopted there should be a 12-month implementation delay.

A witness representing the CME Group (CME) testified to explain various dairy risk management tools offered through the exchange, including futures and options contracts. The witness explained the CME is a derivatives marketplace offering a range of futures exchanges to meet private risk management needs. The witness explained a futures contract is a legally binding agreement to buy or sell a standardized asset on a specific date or during a specific month. An option on a futures contract is the right, but not the obligation, to buy or sell the underlying futures contract at a predetermined price on or before a given date in the future. The witness stated 97.43 percent of contracts in the futures and options market are for 12-month periods, and in a previous change to futures contracts there was an 18-month lag on implementation to be beyond open interest. The witness testified that Dairy Revenue Protection (DRP) is one of many programs that rely on CME markets and advocated USDA to consider futures and options markets when establishing implementation plans.

In its post-hearing brief, CME reiterated its neutrality on all proposals under consideration. They stated any change modifying the current Class III and Class IV formulas would be considered a material change affecting current contracts. CME stressed the importance of sufficient and transparent notice of any changes.

A post-hearing brief was submitted on behalf of Select Milk Producers (Select), a dairy-farmer owned cooperative which owns and operates eight processing plants in Texas, New Mexico, and Michigan, manufacturing ESL fluid milk products and a variety of cheese, butter, and NFDM products. Select offered support for Proposal 1 and took exception to the assertion there is no value in higher protein levels in Class I products, as it is belied by the success of specialty fluid milk products such as fairlife, and the higher milk solids required for California fluid milk. Although Select supported adoption of Proposal 1, they do not support a delay in implementation, nor the annual update as contained in Proposal 2.

Lamers Dairy Inc. (Lamers), a Wisconsin based HTST fluid milk processor, submitted a post-hearing brief in opposition to Proposals 1 and 2. Lamers stated component levels can vary both regionally and from farm to farm. Lamers opined that USDA is statutorily required to conduct a study of component levels before any change could be made and argued adoption of Proposals 1 and 2 should not be considered.

New Dairy OPCO LLC (New Dairy), a fluid milk processor operating four fully regulated distributing plants (three of which are located in the southeastern U.S.), submitted a post-hearing brief in opposition to Proposals 1 and 2. New Dairy offered support for arguments made by IDFA and MIG that fluid milk processors would be unable to recoup the additional cost of components should Proposals 1 or 2 be adopted. They purport that charging fluid milk processors for components not actually received would be disorderly. New Dairy said raising component levels in the formulas would harm its southeastern plants as they pay on a skim/fat basis which provides no incentive to producer to increase components to match the national average.

In its post-hearing brief, NMPF opposed the annual updating feature contained in Proposal 2. NMPF stated that by limiting changes to the standard component levels to a periodic basis and relying on 3-year weighted average, Proposal 1 is more likely to produce accurate component values and avoid disruption from more frequent changes.

Surveyed Commodity Products

This rulemaking proceeding considers four proposals, and a modified proposal submitted during the hearing, that would add or remove a variety of products in the DPMRP survey, which are then reported in the National Dairy

Product Sales Report (NDPSR) and used to establish FMMO classified prices. The proposals are as follows:

Proposal 3, submitted by NMPF, seeks to eliminate the Cheddar cheese barrel price from the cheese price formula.

Proposal 4, submitted by AFBF, seeks to add Cheddar cheese 640-pound block price series to the cheese price formula.

Proposal 5, submitted by AFBF, seeks to add unsalted butter to the butterfat and cheese price formulas.

Proposal 6, submitted by the California Dairy Campaign (CDC), seeks to add a price series for mozzarella to the cheese price formula.

Edge offered a proposal modification during the hearing to adopt different weighting methodology which would reweigh 40-pound blocks and 500-pound barrels in the DPMRP survey by all U.S. cheddar block and barrel production volumes.

NMPF witnesses from Foremost Farms USA (Foremost), Ellsworth Cooperative Creamery (Ellsworth), Land O'Lakes (LOL), and DFA testified in support of Proposal 3. Foremost is a cooperative with 850 members located in Wisconsin, Michigan, Iowa, Minnesota, Indiana, Ohio, and Illinois, and operating eight manufacturing plants producing cheese and butter.

Ellsworth is a Wisconsin-based cheese manufacturer producing a significant volume of barrel cheese and a variety of specialized cheeses and cheese curds from 250 dairy-farmer members. LOL is a dairy farmer-owned cooperative with more than 1,000 dairy farmer members, primarily producing butter and cheese.

The witnesses explained the current cheese price formula includes both block and barrel cheese in the computation. They asserted the cheese price formula provides for orderly marketing if the difference, known as the "spread," in the respective market prices of blocks and barrels remains close to the assumed \$0.03 per pound cost difference, which occurred from 2000 to 2016. However, since 2017 the spread between the block and barrel prices has been volatile. One witness stated the weighted average spread published in the weekly NDPSR during January 2017 through July 2023 was \$0.120 per pound, with a much wider and more volatile range per pound. The LOL witness opined that the DPMRP survey could continue to include and publish prices of 500-pound barrel cheese without necessitating its inclusion in the Class III protein price calculation.

An NMPF witness testified the CME block cheddar price is used as a pricing index for most cheese produced in the U.S., including cheddar, 40-pound

block, 640-pound block, mozzarella, other American-type cheese, and other cheese including cream cheese, and Hispanic cheese. They estimated 90 percent of natural cheese produced in the U.S. is sold using the CME 40-pound block cheddar price as a pricing index. The witness estimated the CME barrel cheese price is used to price only about 9 percent of total domestically produced natural cheeses, including barrels themselves. They said DPMRP survey volumes of barrel cheese between 2013 and 2022 ranged from 44 to 52 percent, resulting in an overrepresentation of 500-pound barrels compared to the actual volume of cheese that is priced off of barrels. The witness testified that since 2017, the significantly wider and increasingly volatile block-barrel spread has caused instability in the cheese market. Consequently, the witness said, dairy farmer revenue has been reduced as the over representation of 500-pound barrels lowered the Class III price. The Foremost witness estimated the undervaluation represented \$2 billion since 2017, claiming the value would have been greater if not for the large volume of Class III milk not pooled in 2020 and 2021.

The NMPF witness testified eliminating 500-pound barrel prices from the Class III price would create more orderly marketing in FMMOs by reducing the financial uncertainty for dairy producers and manufacturers and ensuring the cheese price in the protein component formula represents the single commodity cheddar cheese product. The witness described how barrel cheese manufacturers are harmed when they must account to the pool at an FMMO cheese price higher than the revenue generated from barrel cheese product. The witness said eliminating the 500-pound barrels would have increased the Class III price by \$0.41 per cwt, using average product prices for 2017 to 2022.

An NMPF witness testified that removing 500-pound barrels had been addressed in prior rulemakings but denied by USDA in the rulemaking. However, current market conditions have significantly changed, necessitating a re-evaluation. The witness attributed the increased volatility in the block-barrel price spread since 2017 to a variety of factors, including increased 500-pound barrel production capacity that may be due to increasing values of its white whey by-product.

NMPF witnesses testified eliminating 500-pound barrel cheese from the protein component price (PCP) formula would still provide adequate volume of cheddar cheese for price discovery

purposes as 40-pound block cheese surveyed represents approximately 16 percent of total U.S. natural cheddar cheese production. The witness also said this methodology change would bring the cheese price into conformity with the price for butter, NFDM, and dry whey, which utilize only one surveyed product for price discovery purposes.

The witness testifying on behalf of Ellsworth stated 40-pound blocks and 500-pound barrels are not interchangeable products. The witness said while 40-pound block cheddar has many markets and uses, 500-pound barrel cheddar is used for processed cheese, a market driven by few processors and purchasers. As a result, the witness said, surveying barrel cheese prices skews the FMMO cheese price towards a smaller market that is not representative of the rest of the cheese market. The witness estimated the volatility in the block-barrel spread since 2017 cost Ellsworth producers \$0.84 per cwt. The witness said barrel cheese manufacturers would adjust to the elimination of barrel prices from the survey and eventually transition to prices based on the 40-pound block cheese price.

Witnesses representing IDFA, Leprino Foods Company (Leprino), and Associated Milk Producers, Inc. (AMPI) testified in opposition to Proposal 3. Leprino operates nine plants in the U.S., manufacturing mozzarella cheese, whey products, and NFDM. AMPI owns and operates eight manufacturing plants processing cheese, butter and powdered dairy products from member farms in Wisconsin, Minnesota, Iowa, Nebraska, South Dakota, and North Dakota.

The witnesses said sales of both block and barrel cheddar cheese are robust and each play a significant role in setting the market value of cheddar cheese. They argued eliminating 500-pound barrels would reduce by more than half the cheese market price contained in the survey and would result in a distorted picture of the total commodity cheddar market. The witness said opposition to removing barrels was not related to the presumed effect on the Class III price as the NDPSR weighted average cheese price (reflecting block and barrel cheese) was higher than the 40-pound block price in 9 of 14 years from 2009 to 2022. One witness opined additional cheddar block plant capacity is coming on-line in the next couple of years, increasing 40-pound block volumes, and would reduce the block-barrel spread to historical levels under normal supply-demand behavior.

The IDFA witness speculated cheddar barrel manufacturers may opt not to pool milk if the barrel price is no longer surveyed because they would be unable to garner sufficient market revenue in order to account to the pool and the Class III price.

Two Leprino witnesses testified eliminating 500-pound barrels from the Class III price formula removes the product most closely capturing the supply and demand balance. They opined that removing 500-pound barrels would both shrink the survey volume and likely result in greater cheddar block production to clear the market. The witnesses testified this would add volatility to the block market, cause unnecessary stress to the U.S. marketplace, and make U.S. cheese less attractive to global buyers.

The Leprino witnesses said dropping 500-pound barrels from the survey would create a presumption within the Class III formula that all cheese, including barrels, would then be priced off blocks. The witnesses asserted barrels and blocks have different supply and demand functions and eliminating barrels from the Class III formula would force barrels to be priced off blocks, adding dysfunction to the barrel market. The witnesses argued barrels are the market-clearing cheese, and instead 40-pound blocks should be eliminated from the price formula to be more consistent with the minimum pricing provisions.

In its post-hearing brief, NMPF reiterated testimony regarding price differences between 40-pound blocks and 500-pound barrels becoming more volatile since 2017. Historically, NMPF wrote, using both block and barrel prices in the Class III pricing formula increased the volume of cheddar cheese reported in the NDPSR. However, the increased price spread has caused instability in the cheese market, reducing revenue for dairy farmers as the barrel price is a disproportionately large share of the cheese price compared to its volume sold. NMPF estimated 90 percent of the natural cheese produced in the U.S. is priced using the CME 40-pound block price, while the remaining is priced off the CME barrel cheese price. As a result, NMPF wrote, the Class III milk price has been undervalued and lowered producer revenue.

Leprino submitted a post-hearing brief reiterating the important balancing function barrels provide and opined removing them would push 40-pound blocks into the balancing role and would increase price volatility for cheddar blocks.

Select submitted a post-hearing brief in support of Proposal 3, arguing 500-

pound barrels no longer represent the commodity cheddar market and 40-pound blocks are an appropriate commodity to establish the protein price. According to Select's brief, current formulas dramatically overweight the barrel price relative to the market's actual barrel use.

The AFBF submitted a post-hearing brief in support of Proposal 3 reiterating hearing testimony that barrels represent roughly 50 percent of the NDPSR volume but are used to set prices for only 10 percent of U.S. cheese. The AFBF stressed use of barrels in the cheddar cheese price formula creates a price not representative of the value of 90 percent of cheddar cheese produced.

In their post-hearing brief, IDFA opposed Proposal 3, arguing its adoption would make 500-pound barrel production uneconomical. This, they explained, would result in barrel-makers going out of business or switching to block production, which would destabilize the block market. IDFA wrote that 40-pound blocks and 500-pound barrels serve materially different functions in the market and the failure to include both in the survey would distort the commodity cheddar cheese market.

NAJ submitted a post-hearing brief in opposition to Proposal 3. NAJ cited hearing evidence showing the market price of block and barrel cheese has diverged significantly since 2017, with barrel cheese priced about \$0.11 per pound less than block cheese from 2017–2022. NAJ stated blocks and barrels have different uses, different buyer markets, and limited substitutability. With an expected increase in block production in the coming years, NAJ wrote, there may be many months in which barrels are more per pound and should remain part of the cheese price formula.

A witness representing the AFBF testified in support of adding 640-pound cheddar blocks to the Class III formula, as contained in Proposal 4. The witness said adding 640-pound blocks would expand the volume of cheese surveyed and better reflect U.S. block and barrel production volumes. The witness was of the opinion there has been a pronounced production shift from 40-pound blocks to 640-pound blocks and adding 640-pound blocks would provide more survey volume to avoid future rulemaking to address the dwindling 40-pound block survey volume. The witness testified that 40-pound and 640-pound blocks are largely interchangeable in price, use, and storage, and therefore it is appropriate those prices be reflected in the Class III price.

A witness representing IDFA testified in opposition to Proposal 4. The witness said the DPMRP cheese survey encompassed more than 1.34 billion pounds of sales in 2022, divided almost evenly between 40-pound blocks and 500-pound barrels. The witness testified the data set is sufficient to determine prices in the market and, since 640-pound blocks typically trade off the 40-pound block price, its addition would provide little additional price discovery information. The witness opined that only a small percentage of the 640-pound block market would meet survey specifications because of the nature of how the product is manufactured and sold.

The two Leprino witnesses argued it would be inappropriate to add 640-pound blocks as the market is largely make-to-order and the lack of equipment to handle 640-pound blocks limits sales to a narrow group of buyers. The witnesses noted the 640-pound block market is balanced through the cutting down of 640-pound blocks into 40-pound blocks, so the 40-pound block cheddar market is already reflected in its pricing.

A witness representing Glanbia PLC (Glanbia), testified in opposition to Proposal 4. Glanbia owns four dairy plants in Idaho and partially owns two joint venture plants in New Mexico and Michigan, processing 34 million pounds of milk daily into barrel cheese, block cheese, whey protein concentrates, proprietary protein blends, and lactose. The witness testified Glanbia plants manufacture 40-pound and 640-pound blocks, both priced off the CME 40-pound block price and opined that adding 640-pound blocks would not add new information to the survey.

A witness representing the Wisconsin Cheese Makers Association (WCMA), whose 81 members include cheese manufacturers making 40-pound blocks, 640-pound blocks, and 500-pound barrels, testified in opposition to Proposal 4. The witness testified the industry uses the 40-pound block price to price 640-pound blocks, and since 40-pounds blocks are already used in the protein formula, adding 640-pound blocks would add no new price information.

A DFA witness representing NMPF, testifying in opposition to Proposal 4, said the 40-pound block volume provides an adequate data set and the sole inclusion of 40-pound blocks is sufficient for cheese price discovery, making adoption of Proposal 4 unnecessary. The witness stated the daily CME cash block cheese market is widely recognized by market participants as heavily influencing the

price of cheese. The witness concluded that because annual CME block cheese traded volumes are not as large as NDPSR block survey volumes, the volume of 40-pound blocks reported in the NDPSR is more than adequate to determine the FMMO cheese price. The witness testified that incorporating 640-pound blocks into the NDPSR data set could promote the same disorderly market conditions currently observed with the inclusion of 500-pound barrels.

The AFBF reiterated their support of Proposal 4 in their post-hearing brief. The AFBF indicated 640-pound blocks are priced identically, or nearly identically, to 40-pound blocks, and are a standardized commodity cheddar cheese product. Including the 640-pound blocks in the NDPSR survey, they argued, would help make the survey more robust.

Select, in their post-hearing brief, expressed support for Proposal 4 agreeing with proponents that its inclusion would increase DPMRP survey volume. Select mentioned that, with new cheese processing capacity starting in upcoming years in Minnesota, New Mexico, Michigan, and Texas, 640-pound blocks would become a larger proportion of the commodity cheddar market, and it would be prudent to incorporate their prices and volume in the survey.

IDFA reiterated opposition to Proposal 4 in its post-hearing brief. IDFA highlighted evidence describing how 640-pound blocks are typically made to customer order as there is only a small number of cheese buyers who are able to purchase and process them. Since manufacturers of 640-pound blocks often balance the 640-pound block market by cutting them down to 40-pound blocks, IDFA said no new price information would be gained from including 640-pound blocks in the survey.

WCMA also expressed opposition to Proposal 4 in their post-hearing brief and wrote that because 640-pound blocks do not have a unique price discovery mechanism, they would add no new price information to the formulas.

A witness representing the AFBF testified in support of Proposal 5, seeking to add unsalted butter to the DPMRP butter survey. The witness said because of the growing volume of unsalted butter production and use in the U.S., the DPMRP salted-only butter price collection increasingly underrepresents the value of U.S. butter. According to the witness, the amount of butter captured by the NDPSR as a percentage of total butter production has been declining, from 16 percent in 1999

to 9.4 percent in 2022. The witness expected this trend to continue without the addition of unsalted butter.

Citing USDA voluntarily graded salted and unsalted butter volumes, the AFBF witness said one reason for declining butter survey volumes is the increase in U.S. unsalted butter production. The AFBF witness testified the exclusion of unsalted butter is unnecessarily restrictive for the purposes of the DPMRP survey. The witness cited U.S. butter export data showing 2,000 metric tons exported in 2000, to over 65,000 metric tons in 2022, estimating almost all the exports were unsalted. The witness said incorporating unsalted butter prices into the FMMO butterfat formula would make the survey more representative of the evolving butter market, allow for better market transparency, and provide for more orderly marketing of butter and milk. The witness claimed salted and unsalted butter are production substitutes, as the same production line can be used for both without substantial interruption. The witness clarified Proposal 5 is not intended to change the current 80 percent butterfat reporting standard for butter, and therefore exported unsalted butter at 82 percent butterfat would continue to be excluded.

A witness representing CDC expressed support for Proposal 5, without additional testimony. The CDC represents dairy farmers throughout California and is a state chapter of the National Farmers Union.

A witness representing IDFA testified in opposition to Proposal 5. The witness testified there is no uniform specification for unsalted butter, so it is impossible to derive a uniform price for purposes of an FMMO pricing formula. The witness explained unsalted butter does not store as well compared to salted butter, rendering unsalted butter less capable of providing useful uniform price information. The witness also testified unsalted butter tends to be priced off the CME Grade AA salted butter price, and therefore does not bring any new pricing information. As substantial quantities of unsalted butter are exported through premium-assisted sales, which would not be included in the DPMRP survey, emphasizing unsalted butter should not be relied on for determining the market price of butter. Moreover, the witness considered the current volume of salted butter reported in the DPMRP to be a robust quantity of butter sales.

A witness representing the Dairy Institute of California (DIC) testified in opposition to Proposal 5. The DIC is a trade association, representing fluid

milk and dairy product processing plants in California. The witness asserted most unsalted butter is 82 percent butterfat and exported and should be considered substantively different from domestically consumed butter which contains 80 percent butterfat. The witness referenced a lack of clarity on how subsidies on exported butter would be handled in the product price reporting as another reason for their opposition.

A California Dairies, Inc. (CDI) witness, representing NMPF, testified in opposition to Proposal 5. CDI is a California dairy farmer-owned cooperative with 258 members producing and marketing 41 percent of California's total milk production and operating six butter and milk powder manufacturing facilities in the state. The witness disagreed with the assertion that salted butter at 80 percent butterfat no longer represents an adequate survey volume. The witness testified CDI manufactures both types of butter, and unlike salted butter, unsalted butter is manufactured exclusively for customer order. The witness argued sales of the two types of butter are not interchangeable. The witness stressed the addition of salt allows salted butter to be stored for long periods, making it a market clearing product, whereas the nature of unsalted butter requires it to be sold and consumed in a significantly shorter period of time. The witness was of the opinion introducing unsalted butter into the survey may result in volatility in the relationship between salted and unsalted butter similar to the current volatile relationship between 40-pound block and 500-pound cheddar barrels. The witness said it was preferable to have one product generate the singular commodity reference price for purposes of calculating the minimum FMMO prices.

In post-hearing briefs, the AFBF offered additional support for Proposal 5, stating the growing volume of unsalted butter production and use in the U.S. markets results in a salted-only butter price collection in the NDPSR survey which increasingly underrepresents the value of U.S. butter. The AFBF argued the declining trend in butter survey volume as a percent of actual production would continue, as butter survey volume has fallen from 16 percent of total production in the 1999 to 9.4 percent in 2022.

Select expressed opposition to Proposal 5 in its post-hearing brief. Select argued that despite the growth of unsalted butter products, it should not be included in the survey because it lacks a uniform specification, is typically produced for special orders,

has no active commodity market, is often made with 82 percent butterfat versus 80 percent, and is viewed as a higher-value product.

IDFA's post-hearing brief reiterated their opposition to Proposal 5 stating the Grade AA salted butter survey volume is robust and the product is traded on the CME. IDFA wrote that a majority of unsalted butter is exported through government or private assisted sales, such as Dairy Export Incentive Program or Cooperatives Working Together, which would disqualify such sales from being reported. IDFA also stated unsalted butter does not store as well as salted butter, making it more likely to be made to order to a particular buyer's specifications.

A witness representing the CDC testified in support of adding mozzarella prices to the FMMO cheese price, as contained in Proposal 6. The witness was of the opinion that adding mozzarella would make the FMMO Class III price more reflective of all U.S. cheese production. The witness asserted that because the volume of mozzarella production significantly exceeds cheddar production it should be reflected in the FMMO cheese price to improve price transparency and increase dairy farmer revenue. The CDC witness also stated mozzarella production is the largest category of cheese produced today and deserves a standard specification determined by the volume of mozzarella produced today.

The CDC witness proposed adding mozzarella to the FMMO protein price based on the Van Slyke cheese yield formula, a formula for predicting cheddar cheese yields from milk on the basis of its fat and casein content. The witness submitted numerous USDA Specifications of Mozzarella Cheese for the Department to consider when determining an acceptable moisture and fat content of mozzarella cheese to be surveyed. The specification detailed requirements for six variations of mozzarella types in four forms (loaf, sliced, shredded, or diced). The witness testified that 5 to 6-pound loaves of mozzarella would be representative of a wholesale commodity mozzarella product and reasonable for inclusion in the survey.

A California dairy farmer testified in support of Proposal 6. The witness said including mozzarella in the survey would create a Class III price that more accurately reflects the value of the current cheese market. The witness attributed the ongoing decline in the number of California dairy farms to negative margins and price volatility and stressed the urgency in capturing

the additional value of mozzarella. A Wisconsin dairy farmer also supported inclusion of mozzarella for similar reasons.

A witness representing IDFA testified in opposition to Proposal 6. The witness described the difficulty in selecting appropriate mozzarella product specifications, yield assumptions, and manufacturing costs to include in the formulas whose factors currently reflect only cheddar production. The witness also testified the commercial mozzarella cheese market contains wide product variability, including varying fat and moisture parameters demanded by mozzarella customers. The witness testified that unlike bulk cheddar products, mozzarella is not a market-clearing product, is often sold to meet the customer specifications, is not traded on the CME, and is not storable for extended periods.

Witnesses from Leprino and Glanbia testified in opposition to Proposal 6, asserting the proposal lacked critical details making it difficult to interpret and evaluate. The witnesses explained the equipment, production, and yield difference between mozzarella and commodity cheddar. The witnesses said Proposal 6 does not define the type of mozzarella to be surveyed or how USDA should address the diversity of mozzarella cheese types and packages. The witnesses stated significant volumes of mozzarella are manufactured into value-added forms, whether as shred, string, or smaller retail or foodservice loaves by the primary manufacturer. The witnesses also noted most mozzarella is not market-clearing and is stored in refrigerated form with limited shelf life reducing its role as a market clearing product. The witnesses added that the volume of mozzarella production sold by the primary manufacturer in bulk format is comparatively small, in contrast to cheddar, in which most shredding, processing into consumer packaging, and conversion to other forms is performed by different companies rather than the original manufacturer. The witnesses opined cheddar remains the most appropriate Class III cheese product.

Leprino reiterated their opposition to Proposal 6 in their post-hearing brief. Leprino argued mozzarella cheese is a grouping or collection of similar products with diverse specifications, and that the assumption mozzarella production volume represents a single defined bulk product is incorrect. Leprino further stated mozzarella has different manufacturing processes, costs, and product yields. Therefore, if mozzarella was added to the Class III

pricing formula, the formula would become substantially more complicated with little incremental benefit.

A Foremost witness, testifying on behalf of NMPF, testified in opposition to Proposal 6, urging USDA to only utilize one commodity price series to represent each of the four dairy prices: cheese, butter, NFD, and dry whey, to ensure orderly marketing. The witness noted the many mozzarella composition types, and purported deriving a 40-pound block cheddar equivalent price would be difficult. The witness added mozzarella manufacturing costs are different and no data exists to determine how those costs should be reflected in the cheese make allowance. The witness said including mozzarella pricing into the protein price calculation would not enhance price discovery as mozzarella prices already move with the 40-pound cheddar market. Other NMPF witnesses testified to the appropriateness of limiting the cheese price to one survey product, cheddar. Witnesses representing the AFBF and WCMA opposed the inclusion of mozzarella due to the lack of standard format that could be surveyed.

Select's post-hearing brief opposed Proposal 6 because no workable framework for incorporating mozzarella into the price formula was provided on the record.

IDFA's post-hearing brief reiterated their opposition of Proposal 6 as mozzarella lacks uniformity in compositional specifications and yields and is not traded on the CME. IDFA wrote the U.S. Food and Drug Administration (FDA) Standards of Identity provide four different variants of mozzarella cheese, with a wide variety of fat and moisture levels. IDFA also stated that while proponents advocated use of the Van Slyke formula to determine yields, the record lacked evidence as to how the formula should be revised to incorporate mozzarella cheese.

WCMA opposed Proposal 6 in their post-hearing brief. WCMA members argued that there is no FDA Standard of Identity for mozzarella and are concerned over the vast variety of forms and functionality of each mozzarella manufacturer.

A witness testifying on behalf of the CME offered information regarding its dairy futures and options markets which utilize FMMO prices. The witness did not appear in support or in opposition to any proposal under consideration. The witness testified that the CME dairy product portfolio, which began in 1996, includes Class III and Class IV milk futures and options, cash-settled cheese, 40-pound block cheese, cash-settled

butter, NFDM, and dry whey. The witness said the relationship between Class III and Class IV milk futures can serve as a mechanism to manage both input and output costs and provide the dairy trading community with an opportunity to provide liquidity to the market while managing risk. The witness testified any changes to FMMO formulas, or underlying DPMRP survey methodology could result in a material change to the valuation of the contracts. A post-hearing brief filed by CME reiterated its hearing testimony and stressed that the Department consider the impact to futures and options markets when determining the implementation timeframe for any FMMO price formula changes.

A witness representing Edge offered the modified proposal that would reweight 40-pound blocks and 500-pound barrels by U.S. production volumes, not DPMRP survey volumes. The witness said this alternative weighting methodology would reduce the weight of barrel cheese as most cheddar cheese is manufactured into blocks. The witness explained that since a significant volume of block cheddar cheese does not qualify for inclusion in the NDPSR, barrels have a weight disproportionate to their true market share of the cheddar market. The witness was of the opinion the protein price should primarily reflect the block cheddar cheese market as it is estimated 70 to 75 percent of all cheddar cheese

is produced into 40-pound or 640-pound blocks.

The Edge witness predicted that the block-barrel spread could invert in 2025 due to the growth of block cheese production. The witness expects cheese manufacturers who can make either blocks or barrels will react to profitable opportunities, thus reducing the spread between block and barrel prices by altering their production schedules. The witness argued that, given the anticipated trends over the next 3 to 5 years, it would be more prudent to reduce the weight of barrels today and revisit the topic of removing barrels in 5 years.

Edge reiterated their support for the weighting methodology in its post-hearing brief, as an alternative to eliminating barrel cheese or adding 640-pound blocks to the survey. Edge explained that, in practice, the Department would survey all barrel cheese production volume on an annual basis, including forward contracted cheese volumes, to determine the percentage of barrel cheese produced in relation to the NASS total U.S. cheddar cheese production estimates. Edge proposed the percentage be rounded to the nearest 5 percent, and the inverse would be assumed to represent block production. This calculated weight would be announced by September 15 and be applicable for the following calendar year. Survey prices would then be weighted by these percentages to

determine weighted average cheese prices.

IDFA, in their post-hearing brief, opposed Edge’s modified proposal, arguing that it ignores market clearing, minimum pricing principles. IDFA opposed the idea of Class III prices being predominantly determined through a 40-pound block cheddar price.

A post-hearing brief submitted by NMPF opposed Proposals 4, 5, 6, and Edge’s modified proposal on the grounds the proposals perpetuate the problem Proposal 3 seeks to fix, which is to have only one product surveyed to determine a wholesale commodity price.

Class III and Class IV Formula Factors

a. Make Allowances

Proponents submitted three proposals to amend the make allowances in the Class III and IV formulas. Proposal 7, submitted by NMPF, seeks to update make allowances to the following: cheese, \$0.2400; dry whey, \$0.2300; NFDM, \$0.2100; butter, \$0.0210. WCMA and IDFA submitted Proposal 8 and identical Proposal 9, respectively, to update make allowances as described in the below table. The proposals contain a four-year implementation schedule with 50 percent of the increase implemented in year 1 and the remaining 50 percent implemented evenly across the following 3 years.

IDFA/WCMA PROPOSED MAKE ALLOWANCES

Product	Year 1	Year 2	Year 3	Year 4
Cheese	\$0.2422	\$0.2561	\$0.2701	\$0.2840
Dry Whey	0.2582	0.2778	0.2976	0.3172
NFDM	0.2198	0.2370	0.2544	0.2716
Butter	0.2251	0.2428	0.2607	0.2785

A former University of Wisconsin economics professor testified regarding separate manufacturing cost surveys they conducted on behalf of USDA and IDFA in 2021 and 2023, respectively. Each survey collected data submitted voluntarily from plants producing commodity cheddar cheese, dry whey, butter, and NFDM. The witness previously conducted similar surveys used by the Department in determining make allowance levels. The witness did not testify in support or opposition to any manufacturing allowance proposals under consideration.

The witness explained that only plants manufacturing commodity products meeting DPMRP product specifications were eligible to participate. As plant participation was

voluntary, the sample of plants and respective volumes varied by product and between surveys, with increasing cost variation between plants over time. The witness noted more observed cost variation across plants can occur due to newer automation technology employed in some plants, varying utility costs over time, and economies of scale achieved by some plants who negotiate input costs. The witness explained that dairy-based raw product costs, such as raw milk or purchased cream, are excluded, while costs of non-dairy ingredients needed to transform the raw milk into a manufactured product, such as salt and enzymes, are collected and included in the survey results. According to the witness, costs, such as labor and utility, through the product-

packaging stage are incorporated, but post-packaging costs, such as long-term storage or distribution and sales costs, are not. The witness explained an economic depreciation factor, not consistent with taxable depreciation, is incorporated to cover consumed capital, and the asset’s return on investment is included to capture opportunity costs.

The witness explained two different methodologies used for allocating costs in multi-product plants that could not be associated with a specific product (unallocated costs). The witness said the 2021 survey utilized a degree-of-transformation factor to allocate costs based on degree of transformation raw milk must undergo to be manufactured into the wholesale product. Transformation factors were assigned

subjectively, based on knowledge of manufacturing processes. As a result, the witness said, unallocated costs were weighted towards heavily transformed products, such as NFDM, while products undergoing less transformation, for example, butter, were assigned a lower portion of the unallocated costs. Due to questions from the industry regarding this methodology, the witness said the 2023 survey reverted to allocating costs on a solids basis, a methodology more familiar to industry stakeholders. The witness said the 2021 survey showed more variation of costs when compared to current make allowance levels, ranging from an 18 percent decrease in butter costs to a 75 percent increase in NFDM costs. The 2023 survey results revealed a more consistent cost change when compared to current FMMO levels, ranging from a 65 percent increase in NFDM costs to a 72 percent increase in butter costs.

The witness attributed much of the survey result differences to the plant samples. For NFDM, the 2021 survey had 27 participating plants, whereas the 2023 survey had 15, with larger average volume per plant, according to the witness. For cheese, the 2023 survey included 18 plants compared to 10 in the 2021 survey. Further, the witness elaborated that the cheese plants surveyed were much larger on average and represented a significant proportion of the NDPSR volume when compared to the 2021 survey.

The witness testified the data on butter highlighted the importance of sample composition. Both surveys sampled a similar numbers of butter plants, 13 in 2023 and 12 in 2021, and represented roughly the same total volume. However, the witness stated the 2023 survey had more variation in production volumes whereas in the 2021 survey, butter plants were more similarly sized. Finally, the witness testified the dry whey surveys had similar numbers of participating plants, 9 in 2023 and 8 in 2021, but the surveyed volume in the 2023 survey was nearly 50 percent more than that contained in the 2021 survey.

NMPF offered Proposal 7 as one option for amending FMMO make allowance levels. Eleven NMPF witnesses representing the manufacturing interests of cooperatives testified in support of Proposal 7. The witnesses testified the current FMMO make allowances do not resemble manufacturing costs currently experienced in their plants. The witnesses provided detailed testimony on the impact of inadequate make allowances, which consisted of similar

themes. First, they opined inadequate make allowances cause the FMMOs to overvalue raw milk. Consequently, the witnesses said many cooperatives have rebledened cooperative revenues to members as a way of recouping manufacturing costs not covered by current FMMO make allowances. Second, the witnesses said insufficient make allowances disincentivize plant investment, whether it be in current or potential new plants.

The NMPF witnesses testified the industry lacks consensus on reliable data to determine make allowances due to inconsistencies in cost allocation and reporting across operations. The witnesses were of the opinion the available manufacturing cost surveys are not comprehensive or reliable enough to justify large make allowance increases. The witnesses all stressed increasing make allowances to levels above actual costs could cause untenable financial harm to producers, putting many out of business and jeopardizing the milk supply. One NMPF witness described how an informal manufacturing cost survey of some NMPF members was used in the development of Proposal 7.

A CDI witness testified regarding the impact insufficient make allowances have had on their member farms and six butter and milk powder manufacturing facilities. According to the CDI witness, the NFDM and butter make allowances in Proposal 7 are transformations of the 2021 survey results, using the combined costs and yields of the two products. An LOL witness testified inadequate make allowances have led to disorderly market conditions, including lack of investment in manufacturing plants to process and balance milk supplies and inequitable producer pay prices between producers of different cooperatives and between cooperative and nonmember producers.

A witness from Agri-Mark, a dairy farmer-owned cooperative with over 550 members, 3 cheese manufacturing plants and 1 butter-powder plant in the Northeast, said current make allowances overvalue producer milk and make it difficult for cooperatives with manufacturing facilities to remain profitable and pay the FMMO blend price. Consequently, the witness said, cooperatives must re-blend proceeds to recoup manufacturing costs, resulting in producer pay prices often less than FMMO blend prices.

A Foremost witness attributed higher operating costs seen in their plants to inflation since 2008, adding that in the last 2 years, they have experienced particularly acute price increases in all categories. A witness representing FarmFirst Dairy Cooperative

(FarmFirst), a cooperative operating in the Upper Midwest with 2,600 dairy farmer members, testified negotiated over-order premiums have diminished by 24 percent since 2020 due to their processor's compressed margins, partly a result of inadequate make allowance levels. In addition to reducing premiums, the FarmFirst witness attested the current make allowances overvalue producer milk and have contributed to an oversupply of milk in the Upper Midwest, resulting in milk dumping, negative PPDs, depooling, and milk selling at below Class III prices.

A Northwest Dairy Association (NDA) witness testified in support of Proposal 7. NDA is a dairy farmer-owned cooperative located in the Pacific Northwest with approximately 295 members, whose subsidiary (Darigold) operates 5 fluid milk bottling plants and 7 manufacturing plants making butter, cheese, dry whey, and dry milk products. The witness testified Darigold's manufacturing costs increased 80 percent between 2008 and 2022. The witness said inadequate or delayed investment in manufacturing plant capacity increases transportation costs, which are borne by producers, since milk must be shipped farther distances to find an available manufacturing market. A witness representing Maryland and Virginia Milk Producers Cooperative, Inc. (MDVA), a dairy farmer-owned cooperative located in the Mid-Atlantic that operates three pool distributing plants and two pool supply plants manufacturing bulk butter and NFDM, testified costs had increased compared to 2008 levels, with NFDM conversion costs increasing 64 percent over the period. According to the MDVA witness, Proposal 7 would reduce, but not eliminate, the manufacturing losses incurred in balancing their milk supply. A witness representing Lone Star Milk Producers (Lone Star), a dairy-farmer owned cooperative marketing milk on the Appalachian, Southeast, Central, and Southwest FMMOs, testified that manufacturing costs at their butter and NFDM plant have risen since commencing operation in 2017. A witness representing Ellsworth testified to the increasing costs of production at their cheese and dry whey operation. Lastly, a DFA witness testified in support of Proposal 7 and provided dairy farm cost of production data, arguing this data should be considered when determining make allowances.

A dairy economist from the University of Missouri, appearing on behalf of NMPF, testified on the estimated economic impact of Proposal 7. Using an econometric model, the

witness estimated the proposed make allowances would lead to a \$0.30 decline in the All-Milk Price and a 200-million-pound milk production decline in the first year of implementation, with a further milk production decline of 400 million pounds in the second year. In the long run, the witness forecasted the decline in the All-Milk Price would moderate to \$0.04 as markets adjusted to lowered milk production.

A dairy farm accountant, testifying on behalf of NMPF, presented various statistics related to their dairy farmer clientele. The witness testified average total income from their clients' operations was \$5.50 per cwt in 2022, with a break-even milk price of \$19.78 per cwt. According to the witness, the average net income from 2006 to 2023 was \$1.23 per cwt, on an average milk production of 995,115 cwt, yielding an average net income of approximately \$1.2 million. The witness later stated that a 3,300-milking cow herd would require an investment of approximately \$40 million.

An economist from Cornell University, on behalf of NMPF, testified on the topics of dairy farm profitability, cost of production measures, and farm data from the Cornell Dairy Farm Business Summary, Michigan State University, and the University of Wisconsin. The witness warned that setting make allowances "too high" would lead to unwarranted investments in processing facilities while setting make allowances "too low" would lead to insufficient plant investments and cooperative deductions on member milk checks.

Numerous dairy farmers testified in support of Proposal 7, recognizing the need for increased make allowances despite what they acknowledge would be a decrease in FMMO producer prices. These witnesses testified to recent decreased farm margins due to a declining All-Milk Price, falling net pay prices, higher feed costs, and increasing production costs, leading to near negative operating incomes. While make allowance increases would hasten this trend, the witnesses said, Proposal 7 accounts for these factors, balancing producer and processor needs. Multiple witnesses expressed doubt in the available manufacturing cost survey data due to its voluntary and unaudited nature, as well as observations of cheese manufacturing profitability and continued investment.

Dairy farmer witnesses testified that inadequate make allowances have disadvantaged dairy farmer-members of cooperatives who own manufacturing plants compared to dairy farmer-members of cooperatives who own no

plants. Several dairy farmer witnesses said that the prevalence of market adjustment deductions from their member milk check signifies negative returns on the cooperatives' manufacturing assets due to inadequate make allowances. Another dairy farmer testified processing costs for Agri-Mark's four manufacturing plants producing cheese, butter, NFD, and whey have increased by an average of 20 percent since 2008, and insufficient make allowances have resulted in deductions to member milk checks to cover processing costs. According to the Agri-Mark witness, this has led to disorderly market conditions, which impair plant investment and disadvantage cooperative members. A CDI dairy farmer witness testified to the financial difficulties of operating CDI's balancing plants given current make allowance levels.

A witness from the Milk Producers Council (MPC), an organization representing California dairy farms, testified Proposal 7's proposed make allowances balance producer and processor needs. The witness said the cost survey information entered into evidence is of limited value due to its voluntary, unaudited nature and the lack of transparency in cost allocation for multi-product plants. The witness argued differences between the All-Milk Price and the Mailbox Price indicate a need for increased make allowances and a guideline to the resulting impact on producer pay prices, currently estimated at \$0.75 per cwt.

In its post-hearing brief, NMPF reiterated its arguments for adopting the make allowance levels contained in Proposal 7, writing it is the only option accounting for an increased cost in manufacturing while protecting producer pay prices. NMPF stated there has never been a make allowance adjustment greater than \$0.35 per cwt, and the changes contained in Proposal 7 would decrease farmer milk prices by approximately \$0.50 per cwt.

NMPF presented in its brief the aggregated costs cooperatives with manufacturing capacity shared on the record, emphasizing the increases across cost categories since make allowances were last updated. While the need to update make allowances to reflect higher costs is necessary, NMPF stated, the data on the record is not sufficiently comprehensive, verifiable, or unambiguous to determine make allowances above those offered in Proposal 7. In its post-hearing brief, Agri-Mark reiterated support for Proposal 7 as the most balanced approach to updating make allowances, despite acknowledging the proposed

levels are not sufficient to cover all manufacturing costs.

Opponents to Proposal 7, primarily representatives for IDFA or WCMA, echoed similar concerns from cooperative manufacturers regarding inadequate make allowances, claiming the inability to recover manufacturing costs on wholesale commodity products has led to a lack of investment in manufacturing capacity. These witnesses testified on the importance of make allowances fully covering manufacturing costs, rather than a portion of costs as proposed in Proposal 7. Witnesses testified that continued capital investment in plant yield and efficiency gains have not fully countered the effects of insufficient make allowances as costs have continued to increase. Without make allowances accurately reflecting costs, the witness said, manufacturers receive inaccurate financial signals, which impact investments, capital distribution, and FMMO pooling decisions. Additionally, they argued the competitive advantage gained by manufacturing plants not regulated by an FMMO leads to more investments into operations unaffiliated with the FMMO system. Only make allowance increases that reasonably cover commodity product manufacturing costs, according to these witnesses, can counteract these effects.

In its post-hearing brief, IDFA reiterated opposition for Proposal 7, writing that the proposed make allowance levels are inadequate and not grounded in observed data. IDFA stressed that make allowances are defined as covering the entire cost of converting raw milk to a given dairy product, not a portion. In its brief, IDFA pointed to NMPF's recognition that Proposal 7's make allowances do not fully cover actual costs but instead represent a balance dairy farmers can withstand. IDFA objected to the consideration of farm production costs when determining make allowance levels. IDFA reiterated FMMOs are not a price support or income support program, and the prices must reflect the market price of end-dairy products. IDFA explained manufacturers cannot raise the prices of commodity dairy products to offset higher manufacturing costs because the wholesale prices are captured in the NDPSR and would raise the reference price by the same amount. In its post-hearing brief, AMPI reiterated opposition for Proposal 7 as failing to reflect 2022 manufacturing costs. AMPI argued that USDA should not delay increasing make allowances on the possibility that legislation will give

USDA the authority to conduct a mandatory audited survey.

A witness from DIC testified in support of Proposals 8 and 9. The witness testified that setting minimum prices too high incentivizes excess milk production, while a low minimum price through higher make allowances allows for over-order premiums to set a competitive market price. The witness argued Class III and IV prices should allow manufacturing plants to clear the market and operate profitably.

The DIC witness entered data concerning its 2022 California dairy manufacturing cost forecast (2022 CA Forecast). The witness testified the 2022 CA Forecast used a combination of 2003–2016 California Department of Food and Agriculture (CDFA) data, state and national indices, and market developments to measure how changes in labor, utility, and other costs historically moved the actual CDFA cost data. The model then used that information to forecast California-specific 2017–2022 manufacturing costs, according to the witness. According to the witness, while the model forecasts costs, the range of actual costs around those forecasts could be relatively wide given the relatively few observations (14 years) used to estimate the model. For example, the expert witness elaborated, CDFA only collected dry whey costs until 2006, when they surveyed fewer than three dry whey plants, which is why the CA analysis did not forecast dry whey costs. The DIC witness opined the best approach to determine manufacturing allowance levels is using observed cost data but offered the 2022 CA Forecast as another methodology for use with the other cost surveys and testimony presented.

An IDFA witness testified in support of Proposals 8 and 9, stating make allowances should be updated to reflect increased costs in manufacturing dairy products. While end-product-prices change monthly to reflect the current market, the witness said, make allowances are fixed at 2006 cost levels, forcing dairy manufacturers to lose money or stop production. The witness stressed the need for relief from the current inadequate make allowances that do not reflect rising industry costs, adding losses are not sustainable for plants or dairy farmers who depend on these manufacturing outlets for their milk. The witness explained IDFA's proposed make allowances are simple averages of the 2023 survey and 2022 CA Forecast plus a \$0.0015 marketing cost.

The IDFA and WCMA witnesses asserted accurate make allowances need to be adopted quickly as current make

allowances are based on 2005/2006 cost data. The IDFA witness clarified their staggered implementation proposal, which would implement proposed year 1 levels shortly after the final decision is published. According to both IDFA and WCMA witnesses, the staggered implementation is designed to recognize the impact significant make allowance increases would have on producer prices. However, if there is any delay in implementing changes, both witnesses stressed the staggered implementation approach should be abandoned and the proposed year 4 levels should be implemented.

The WCMA witness stated the use of audited California manufacturing cost data in the 2022 CA Forecast should alleviate any data validity concerns; further, the 2023 survey methodology follows precedent used to determine the current make allowance levels. The witness noted the risk of using a simple average of the 2022 CA Forecast and the 2023 survey to determine proposed make allowances is the potential of the result being skewed towards California costs, since California plants are represented in both surveys.

A dairy farmer witness, who is a member of AMPI, testified on behalf of IDFA and expressed support of Proposals 8 and 9. The witness testified that AMPI, who participated in the 2023 survey, experienced cheese manufacturing costs close to the study average despite plant sizes that were smaller than the survey average plant size. According to the witness, their manufacturing costs of bulk cheese products are 47 percent higher and general plant expenses are up 62 percent in 2022, compared to 2008.

Several dairy manufacturer witnesses representing Hilmar Cheese Company (Hilmar), Glanbia, Saputo, and Leprino testified in support of Proposals 8 and 9. Hilmar is a cheese and whey manufacturer with processing locations in California and Texas. According to these witnesses, dairy processing costs have increased, particularly of late because of inflation, noting Hilmar's natural gas costs were 45.1 percent above the 20-year average. The Saputo witness echoed testimony on increasing costs, citing the St. Louis Federal Reserve data series for labor, energy, packaging, and maintenance costs. The witness said these costs, comprising 20 percent of the total cost to manufacture a finished cheese product, rose 60 percent, on average since 2006.

According to the Saputo witness, its manufacturing costs align with the 2021 and 2023 survey results. The Hilmar witness testified their manufacturing cost increases correlate with the results

of the 2022 CA Forecast. The Leprino witness stated the 2021 survey and 2023 survey had robust participation, and the 2022 CA Forecast, which used CDFA audited mandatory data, leveraged a widely accepted statistical modeling approach. All four witnesses stressed the urgency of updating make allowances. The manufacturer witnesses generally agreed that inaccurate make allowances distort pricing signals for farmers, processors, and ultimately consumers.

Witnesses representing Nasonville Dairy and Cedar Grove Cheese, two proprietary specialty and commodity cheese manufacturer members of WCMA, testified to rising manufacturing costs by outlining costs in a similar manner to the 2021 and 2023 surveys. According to the witnesses, their costs have risen \$0.3226 and \$0.77 per pound, respectively, far beyond the fully implemented Proposal 8 levels. The witnesses testified that insufficient make allowances negatively impact cheese processing investments and increase the production of higher-cost specialty products unable to play the same balancing or foodservice roles as commodity products. They added current make allowance levels impair the ability of proprietary manufacturers to participate in the FMMO pool and deprives producers the benefits of having their milk pooled.

In their post-hearing briefs, WCMA and IDFA reiterated their support for Proposals 8 and 9. IDFA wrote that USDA has consistently set make allowances to reflect the most recent and reliable actual cost data, using multiple surveys, as in Proposals 8 and 9. Further, IDFA stressed in its brief, the 2023 survey is the most robust of all of the author's previous surveys used to set make allowances. IDFA refuted the notion the 2022 CA Forecast is inappropriate to use for determining make allowances, explaining the underlying data is robust audited California manufacturing data and the econometric techniques are widely accepted. IDFA contended that the 2022 CA Forecast and 2023 survey averages are lower than the cooperative manufacturing costs shared on the record. Even if inflation has subsided since 2022, IDFA added in its brief, there would have to be deflation to arrive below pre-2022 levels.

IDFA clarified in its brief the proposed schedule for phasing in make allowance changes, which is designed to accommodate farmers. When addressing implementation timing, IDFA refuted the CME's points about incorporating risk management in the timing of implementation, arguing that CME's

interests do not necessarily align with those of the broader dairy industry because of the fee revenue they generate.

In its brief, IDFA emphasized the destabilizing effect of current make allowances on processors and farmers. IDFA shared charts from the hearing, showing how the Mailbox Price is in close proximity to FMMO blend price, which it says indicates FMMO prices are too high. IDFA refuted NMPF's argument that Proposals 8 and 9 will result in a \$1.42 per cwt decrease in the All-Milk Price because FMMO prices are minimum prices and don't reflect premiums received. Further, IDFA wrote in its brief that dairy farmers whose cooperatives own processing facilities are receiving depressed prices when make allowances are too low.

IDFA said the best method to update make allowances is through a mandatory and audited USDA survey; however, USDA does not currently have the authority and IDFA estimates it would take approximately five years before new make allowances could be adopted once the authority was granted. IDFA reiterated arguments that make allowances under-representing actual costs harm both dairy farmers and manufacturers.

In its post-hearing brief, AMPI reiterated support for the make allowance levels in Proposals 8 and 9, contending they accurately reflect the changes in costs. AMPI added it supports immediate implementation, rather than the phased 4-year approach. AMPI wrote the 2023 survey had the largest product volumes of any previous surveys and highlighted other manufacturing cooperative testimony describing increased manufacturing costs. AMPI opined continued high manufacturing costs and farm bill delays have made make allowance updates more urgent.

Leprino's post-hearing brief reiterated its support of Proposals 8 and 9, emphasizing the importance of implementing make allowance changes immediately. Leprino stressed 2023 cost levels have continued to climb and offered its own updated cost increases, compared to 2022: 11 percent for labor, 17 percent for property insurance, and 9 percent for liability insurance.

A witness representing the AFBF testified in opposition to Proposals 8 and 9, opining the 2021 and 2023 survey data may be biased due to its unaudited nature and the known potential to be used for rulemaking, stating the incentive to overestimate reported costs for commodity goods disqualifies this voluntary data. The witness testified only the 2016 CDFA

survey results can be verified as accurate enough to be used for determining make allowances. According to the witness, the relatively complicated 2022 CA Forecast model using a small number of observations (14 years) to forecast 2022 costs (6 years out from the actual data) could be overfitted to the 2000–2016 data and unreliable to predict future costs.

Numerous dairy farmer witnesses testified in opposition to Proposals 8 and 9, focusing on the negative effect significant make allowance increases would have on producer pay prices. A DFA farmer witness from New Mexico testified the make allowance increases contained in Proposals 8 and 9 would result in negative operating income over the next 10 years, making continued operation of their farm unsustainable. The witness said any make allowance increases would severely and disproportionately impact producers in the southwest due to the share of milk going into manufacturing products. A LOL dairy farmer testified significant increases in make allowances would be difficult for farms in California to absorb, where water scarcity has led to high forage costs. According to the witness, large make allowance increases would put adequate milk supply at risk, all the while guaranteeing profit for commodity manufacturers and leading to over production of manufactured dairy products.

Two dairy farmer witnesses, a member of the CDC and a small Maryland dairy farmer, testified against increases in make allowances due to the impact on producer pay prices and lack of accounting for dairy farm production costs. According to the witnesses, while processors can pass on costs to customers up the supply chain, producer margins are too thin to sustain substantial price decreases from increased make allowances. The witnesses testified that further declines to producer margins will cause more producer exits and disruption to the milk supply. According to a dairy farmer witness representing Edge, any change in make allowances should require a 15.5-month delay, be restrained by the impact on producer pay prices, and cover only the most efficient plants.

In its post-hearing brief, NMPF reiterated its arguments in opposition to Proposals 8 and 9. NMPF argued that these proposed changes would decrease dairy farmer milk prices by approximately \$1.45 per cwt, further narrowing producer margins and causing disorderly marketing.

NMPF cited ongoing plant investment as an indication current make

allowances are not too low as portrayed by proprietary manufacturers. NMPF emphasized proprietary manufacturers are not required to be regulated and, thus, can choose not to participate in the FMMO and avoid paying minimum prices they contend are too high because of inadequate make allowance levels. NMPF opined about the lack of evidence to merit raising make allowances to levels contained in Proposals 8 and 9.

In its brief, NMPF refuted the studies used as a basis for Proposals 8 and 9. NMPF cited hearing testimony regarding the insufficiency of some plant sample sizes in the 2023 survey. Further, NMPF argued the 2023 survey does not capture how manufacturing costs are skewed by plants that serve a balancing role. NMPF stated if make allowances are set too high, balancing plants would be incentivized to run at maximum capacity, rather than running at less than full capacity to provide critical balancing services to the market. NMPF voiced concerns with the 2022 CA Forecast, noting the proposed make allowances in Proposals 8 and 9 are duplicative since the 2023 survey included California data. Further, NMPF opined that the 2022 CA Forecast is of little utility as it did not account for basic changes to the California dairy manufacturing sector since 2016, such as plant openings and closings and productivity improvements.

In its post-hearing brief, Select also opposed Proposals 8 and 9, on the basis of the 2022 CA Forecast being inappropriate to use in determining make allowances. Select echoed NMPF's argument that use of the forecast would be duplicative of California data. Further, Select argued indexing does not account for improvements to plant efficiencies and the Department has not previously used indexing to determine make allowances.

In its brief, the AFBF opposed any increase to make allowances, instead advocating they only be increased once a mandatory, audited cost survey was administered by the Department. The AFBF opined that both the 2021 and 2023 surveys were biased because there was a clear intention the surveys would be used in a rulemaking proceeding. The AFBF opposed the use of indexing to set make allowances, as was done in the 2022 CA Forecast, because it fails to recognize productivity improvements over time. The AFBF echoed other brief arguments that continued processor investment is evidence that make allowances are not too low.

The Midwest Dairy Coalition (MDC), an alliance of six dairy farmer-owned cooperatives operating in the Midwest,

filed a post-hearing brief stating make allowance updates are long overdue, but took the position the Department should be granted legislative authority to conduct a mandatory and audited cost survey. MDC did not offer support or opposition to any make allowance related proposals. In its post-hearing brief, Edge also did not support or oppose any make allowance related proposals but cautioned against setting make allowances too high. Until there is a mandatory and audited USDA-administered survey, Edge stated, the Department should err on the side of caution to not subsidize commodity manufacturing.

In its post-hearing brief, Select offered an alternative methodology for determining the make allowance levels using what Select argued was the most reliable record data. Select suggested taking the average of the 2021 survey and 2023 survey, subtracting the current make allowance level, and taking half that difference to add to current make allowance levels. As a result, Select proposed the following: cheddar cheese, \$0.2281; butter, \$0.2004; NFDM, \$0.2260; and dry whey, \$0.2498.

In its post-hearing brief, CME noted any make allowance changes would be considered material changes, and USDA should consider an implementation timeframe that mitigates risks to those involved in futures and options trading.

b. Yield Factors

Submitted by Select, Proposal 10 seeks to amend the cheese price formula by increasing the butterfat recovery rate in the cheese yield, from 90 to 93 percent. A Select witness testified in support of Proposal 10 and clarified a butterfat recovery rate of 93 percent would also necessitate an increase in the butterfat yield factor in the protein price formula from 1.572 to 1.624. According to the witness, these changes would result in a modest increase in the Class III price, estimated at \$0.04 per cwt. The witness stressed USDA should not be guided by price impacts but rather by achieving formulas to better reflect manufacturing realities and the actual value of raw milk. Select reiterated support for this proposal in its post-hearing brief.

An independent expert witness, retained by Select, testified advancements in vat technology, coagulants, and curd handling have enabled manufacturers to achieve recovery rates higher than the currently assumed 90 percent. The witness described how modern, horizontal vats attain butterfat recoveries far exceeding both open and enclosed horizontal vats, and how most commodity cheddar

manufacturers use advancements in coagulants and curd handling to attain greater than 93 percent butterfat recovery. Additionally, the witness said, whey cream can be reintroduced into the cheesemaking vat to increase cheese yield and revenue, ultimately increasing butterfat recovery.

In its post-hearing brief, the AFBF wrote in support of Proposal 10 to increase the butterfat recovery factor. The AFBF pointed to evidence on the record of increasing plant efficiencies, justifying updating the butterfat recovery factor to the level in Proposal 10.

Six witnesses, representing Glanbia, Leprino, IDFA, CDI, DIC, and MPC, testified in opposition to Proposal 10. The Glanbia witness described a broad range of industry fat recovery based on plant age and processing techniques, and acknowledged many modern plants, including Glanbia plants, can achieve 93 percent cheddar fat recovery. The witness testified Proposal 10 is being offered to enhance prices while ignoring other parts of the formula that overvalue milk. The witness contended lost solids within the manufacturing plant and the discounted price of whey cream, should they be considered, outweigh the effects of Proposal 10 on milk prices. The Leprino witness testified any changes to the yield factor should only occur after a comprehensive review of all yield assumptions. The witness agreed 93 percent butterfat retention is achievable in some plants but does not believe it is possible across the entire industry.

The IDFA witness contended Proposal 10 takes a piecemeal approach to changes in the yield formula and selectively focuses on dairy farmer revenue enhancements only. The witness opined whey cream is overvalued in the current formula, as butterfat not going into cheese is currently valued as Grade AA butter despite regulation that whey cream cannot be used in Grade AA butter. According to the witness, whey cream is discounted 20 percent or more compared to fresh cream. In addition, the witness claimed, in-plant milkfat losses are not recognized in the current formula, something that should be considered when evaluating yield factor changes. The witness testified any decreases in the Class III prices that result from accurately accounting for both processing losses and whey cream values would more than offset the increases in Class III prices proposed by Select.

A witness from the Center for Dairy Research (CDR), appearing on behalf of IDFA, testified to observing improvements in butterfat retentions

over the past 40 years, mostly due to improved vat design and technology. The CDR, with a dairy plant on the University of Wisconsin-Madison campus, supports the U.S. dairy industry with expertise in cheese, dairy ingredients, cultured products, dairy beverages, quality/safety, and dairy processing. The witness noted a range of butterfat losses at the cutting stage including 9 to 10 percent fat loss in open vats, 7 percent fat loss in Double O vats, 6 percent fat loss in horizontal vats, and 5 percent fat loss in modern vats. While large modern plants are installing newer, more efficient vats, the witness claimed, old, less efficient vats are not leaving production, and are being repurposed and installed in medium and small plants throughout the country. The witness noted there is still a large variety of vats being used in the industry and stressed the latest vat design does not ensure optimal butterfat retention, as the experience of the cheesemaker and product handling practices could also lower butterfat recovery.

Based on current observations and work within the industry, the CDR witness provided best estimates for fat recoveries in cheddar cheesemaking as 91 to 93 percent retention in well-run factories with modern vats, 90 to 92 percent retention in well-run factories with vertical Double O vats, and 88 to 91 percent retention in factories with open vats. The witness said, based on their experience, 91 percent could be considered the industry average butterfat recovery for cheddar cheese plants.

A CDI witness, appearing on behalf of NMPF, testified to the lack of yield data available to support the proposed recovery rate contained in Proposal 10. The witness supported a tempered update to the cheese make allowance that does not include an update to the yield factor. A witness representing DIC testified the current 90 percent butterfat recovery rate is reasonable because, despite some newer, more efficient plants achieving higher fat recovery, older plants may not be able to achieve the higher rates. The DIC witness stated fat recovery data is lacking across the industry and further asserted the current 90 percent butterfat recovery should be retained. The witness representing MPC testified the current formula should remain in place until the industry tackles the mechanics of the Class III formula, and the big issue is how butterfat not being retained in the cheesemaking process is valued.

A witness representing AMPI provided testimony supporting the improvement seen in butterfat recovery

due to new vat technology. According to the witness, AMPI installed cheesemaking equipment that facilitates the recovery of fat; however, they did not provide specific data.

Submitted by Select, Proposal 11 seeks to eliminate farm-to-plant shrinkage from the yield factors in the FMMO Class III and IV price formulas. A witness appearing on behalf of Select testified USDA's decision to include shrinkage in the formula was premised on the concept that such losses were not in the handler's control and are unavoidable and common. The Select witness opined that producers, cooperatives, and handlers do have the ability to address and stem losses in the transportation of milk from the farm to the plant. The witness said, historically, as the number of farms on a milk route increased, the probability for discrepancies between farm weights and plant weights also increased, as each stop offered potential for spillage, loss within piping, and errors in measurement. The witness shared statistics on the increasing size of U.S. dairy farms, stating that in 2016, three-quarters of all U.S. milk production came from farms that could fill a full tanker, whereas in 2000, less than half of U.S. production came from farms filling a full tanker. The witness estimated 80 percent of the current milk volume in the U.S. comes from farms able to fill full tankers on every-other-day pickup schedules. Consequently, the witness said, the occurrence of shrinkage is decreasing. As an example, the witness explained, Select's members are large enough to ship full tanker loads of milk, meaning Select does not experience the same risks of milk loss which occur on multi-stop routes.

Other than milk losses occurring with hoses, the Select witness was unaware of any inherent, unavoidable, farm-to-plant losses that could occur within the pick-up process. The witness said even farms without the ability to fill a tanker can adopt farm scales, flow measurement, and other technologies to minimize imprecision and inaccuracy. The witness testified the cost of implementing these improvements would be offset by the anticipated price impacts of adopting Proposal 11, which the witness estimated to be \$0.07 per cwt.

A second Select witness presented an analysis of Select plant data from August 2022 to July 2023, representing 171,240 milk shipments and a total of 9.8 billion pounds. The witness stated approximately half of their customers do not report plant weights back to Select. For those plants who do report, the witness said reported plant weights

exceeded farm weights about half of the time. The witness stated non-shrink factors, such as scale calibration or weather, typically cause the large discrepancy between farm and plant weights. The witness concluded that for the subset of loads where differences occurred between farm and plant weights, the net variance across all loads was less than 0.1 percent.

A witness testifying on behalf of Continental Dairy Facilities (CDF) and Continental Dairy Facilities Southwest (CDF SW), two wholly owned subsidiary plants of Select in Michigan and Texas, manufacturing NFDM, butter, and buttermilk powder, presented farm-to-plant loss data to support Proposal 11. The witness analyzed farm-to-plant losses in milk deliveries to the two CDF facilities from August 2022 through July 2023, comprised of both single and multi-farm pickups. The witness stated that in total, plant weights averaged 0.15 percent lower than farm weights for CDF and 0.10 percent lower for CDF SW. The discrepancies ranged from a negative 0.32 percent (plant weights were 0.32 percent lower than farm weights) to 0.67 percent (plants weights were 0.67 percent lower than farm weights). Since many of the non-Select shipments to CDF are multi-farm pickups, the witness said management for farm-to-plant shrink is not unique to Select or larger farms, generally. The witness described improperly calibrated scales, input or transposition errors by milk haulers, changes in equipment or personnel when weighing loads, or snow settled on scales or tanks when weighing, as reasons for weight discrepancies. The witness testified these variances are not inherent and can be addressed. Select reiterated its arguments supporting Proposal 11 in its post-hearing brief.

The AFBF expressed support for Proposal 11 in its post-hearing brief. The AFBF contended that data on farm-to-plant shrinkage contained in evidence is similar to what was used to determine the original farm-to-plant shrinkage factor. The AFBF argued that this issue does not merit a formal data collection, but a one-time adjustment to reflect that farm-to-plant shrinkage is much less significant than it used to be.

Five witnesses representing IDFA, Leprino, CDI, DIC, and MPC testified in opposition to Proposal 11. The witnesses asserted Select's minimal farm-to-plant shrinkage is not the reality for much of the dairy industry, noting the lack of industry-wide data on farm-to-plant shrinkage and the differing nature of measuring components at the farm, rather than at the plant, are reasons Proposal 11 should not be

adopted. The witnesses further testified FMMO yield factors should not be based on one company's experience, especially one, they argued, that was an industry leader in this area.

The Leprino witness testified that while Select has been able to limit their own farm-to-plant loss through increasing herd sizes and improvements in milk weighing and sampling, this is not a representation of the nationwide dairy industry. Additionally, the witness argued that the scientific characteristic of milk fat clinging to the walls of stainless steel has not changed; as such, volume and fat loss still occur, even at the most innovative plants. The IDFA witness claimed less than 10 percent of all farms produce enough milk to fill entire tanker loads, so it is reasonable to conclude the losses experienced when the formulas were adopted are still happening today. According to the witness, failure to account for the diversity of farm size may further incentivize manufacturers to prefer larger farms over smaller farms.

Submitted by Select, Proposal 12 recommends amending the nonfat solids price formula by increasing the NFDM yield factor from 0.99 to 1.03. A Select witness, testifying in support of Proposal 12, said it would correct the NFS yield factor by including the value of milk solids utilized in buttermilk powder, as they said producers are not currently paid accurately from a price calculated on NFDM prices alone. According to the witness, a proper yield factor for NFDM should account for all milk solids, including the milk solids remaining in cream after separation and used in butter or buttermilk. The witness stressed the initial NFS formula, correctly adopted in 2000, included buttermilk powder.

A witness for CDF and CDF SW testified on price alignment and processing differences between NFDM and buttermilk powder. The witness stated sales and regional prices observed at the two plants for buttermilk powder and low-heat NFDM are closely aligned, as well as consistent with prices reported by AMS' Dairy Market News (DMN) from January 2023 through June 2023. Further, according to the witness, the process of drying buttermilk utilizes the same equipment as that of drying skim milk but requires a thorough cleaning of equipment when changing product lines, higher temperature, and additional drying time due to buttermilk's higher butterfat content. The witness said this leads to increased utility costs of approximately \$0.02. The witness testified the NFS yield factor should consider all powder products, including buttermilk powder whose

yield is lower than NFDM. Select reiterated its arguments in support of Proposal 12 in its post-hearing brief.

In its post-hearing brief, the AFBF expressed support for Proposal 12 as it believes it reflects the long-term market shift toward valuing buttermilk near the NFDM price. The AFBF stated that a formal extensive data collection is not necessary for this proposal to be adopted because there is a clear record of buttermilk values.

Two witnesses, representing Leprino and IDFA, testified in opposition to Proposal 12. The witnesses testified Proposal 12 is based upon a theoretical yield approach which assumes a perfect system with no in-plant component losses in the conversion of NFS to NFDM. The witness said in-plant losses exist even in the most modern and efficient manufacturing facilities and should be recognized in the price formulas. The witnesses gave an example of the portion of NFS remaining in cream after separation, which cannot be processed into NFDM. The Leprino witness argued the FMMO system is predicated on the notion processors should pay for milk based on the revenue they can derive from selling products manufactured from that milk. The witness said milk routinely lost in processing does not end up in finished products, which should continue to be accounted for in the formulas. The IDFA witness testified product yields should incorporate manufacturing losses, and overestimating the quantity of NFDM manufactured from NFS by accounting for buttermilk powder would overvalue the market-clearing of NFDM and contribute to disorderly marketing.

A witness from CDI testified on behalf of NMPF in opposition to Proposal 12. The witness testified CDI supports evaluating all factors in the Class III and IV formulas, and yield factors should only be updated once industry-wide data on product yields are available. The witness stated the NFS price formula is based on NFDM and the yield factor correctly reflects the yield of NFDM only, without an adjustment for buttermilk powder. The witness said Proposal 12 would adjust the NFDM yield factor to represent a composite yield for multiple products which differ in terms of component composition, uses, cost of manufacture, and market prices. While acknowledging buttermilk powder's processing costs are likely higher than NFDM's, the CDI witness testified there was not enough data to quantify the difference in processing costs; further, data presented from DMN and by Select witnesses are not sufficient to determine the alignment of prices between buttermilk powder and

NFDM. The witness clarified that buyers of butterfat and NFS must account for all solids utilized at the minimum component prices, regardless of whether the solids are used in the surveyed products of butter and NFDM or in other Class IV products such as buttermilk powder.

A witness from the DIC testified in opposition to Proposal 12. According to the witness, while NFDM yields are likely higher than the current yield factor of 0.99, not all NFS in producer milk end up in NFDM, with some NFS from cream remaining in buttermilk. The DIC witness claimed the lower yield factor is to compensate for generally lower buttermilk powder prices compared to NFDM but acknowledged DMN data suggested a buttermilk powder price discount relative to NFDM narrowing in recent years. A witness from MPC testified in opposition to Proposal 12, stating they were opposed largely due to a lack of adequate data.

In their post-hearing briefs, IDFA and NMPF opposed Proposals 10, 11, and 12. IDFA argued the three proposals are not representative of industry-wide experience, but rather on what is possible given modern technology and equipment. NMPF echoed IDFA's opposition in its brief, citing insufficient data to justify the proposed changes. IDFA specifically objected to Proposal 11, stating it would place an unfair burden on small farms that cannot fill a tanker and, thus, continue to experience shrinkage. Proposal 11 was also opposed by WCMA in its post-hearing brief. Lastly, IDFA contended Proposal 12 should be rejected because it overvalues buttermilk powder.

Base Class I Skim Milk Price

Six proposals to amend the base Class I skim milk price were considered in this proceeding. Proposal 13, submitted by NMPF, seeks to return the base Class I skim milk price to the higher-of the Class III or Class IV advanced skim milk price, referred to as the "higher-of" mover. Proposal 14, submitted by IDFA, would use an average of the advanced Class III and Class IV skim milk prices, plus an adjuster that resets every January. The adjuster would be the higher of either: (1) \$0.74; or (2) the 24-month average difference between the higher-of and the average-of the advanced Class III and Class IV skim milk pricing factors. The 24-month calculation would run from August of the three years prior to July of the previous year. Proposal 15, submitted by MIG, would amend the current average-of mover from a \$0.74 adjuster to a monthly rolling average adjuster

calculated as the difference between the higher-of and the average-of, for 24 months, with a 12-month lag.

Proposal 16, referred to as "Class III plus," submitted by Edge, would start with the announced Class III price and incorporate a 36-month rolling adjuster averaging the monthly differences between the higher-of the advanced Class III or advanced Class IV skim milk prices, and the Class III skim milk price. The proposal would eliminate advanced prices. Proposal 17, also submitted by Edge, would return to the higher-of mover but would use announced rather than advanced prices. Proposal 18, submitted by the AFBF, would return to the higher-of mover and would eliminate the advanced pricing of Class I skim milk, Class I butterfat and Class II skim milk.

An NMPF witness testified in support of Proposal 13. The witness reviewed the 2000 Federal Order Reform (Order Reform) rulemaking and summarized the higher-of methodology as accurately reflecting the value of the different milk use categories and ensuring shifts in demand for any one manufactured product does not lower Class I prices. The witness said the Department determined during Order Reform that the higher-of mover addresses disorderly marketing by reducing volatility in milk prices, reducing class price inversions and depooling, and assisting Class I handlers in competing for a milk supply.

The NMPF witness testified the 2019 change to the average-of was designed to facilitate price risk management strategies for fluid milk processors, which, the witness stated, is not an objective of FMMOs. The witness said the intent of the change was to be roughly revenue neutral, while allowing handlers to better manage volatility in monthly Class I skim milk prices using Class III and Class IV milk futures and options contracts. The witness claimed the 2019 change has not functioned as intended or anticipated by NMPF, has exacerbated disorderly marketing conditions, has not been revenue neutral, and will continue to have deleterious effects on the dairy industry. The witness described the asymmetrical risk to producers which was not anticipated when the mover change occurred. The witness explained the higher-of exceeds the average-of calculation whenever the Class III and IV advanced skim milk pricing factors differ by more than \$1.48 per cwt, regardless of which factor is higher. The witness noted the reverse is true when the advanced skim pricing factors differ by less than \$1.48 per cwt.

A witness from Southeast Milk, Inc. (SMI), an NMPF cooperative member with 114 dairy farmer members, testified that when the two advanced skim milk pricing factors are equal, the maximum amount by which the average-of can exceed the higher-of Class I mover is \$0.74 per cwt, but there is no limit by which the average-of can fall below the higher-of Class I mover. The NMPF witness testified that in 2020 and 2022, there were instances when the average-of mover fell below what the higher-of mover would have been, in which the difference was at times significant. The witnesses testified the maximum divergence recorded between the current average-of mover and the higher-of mover was a \$5.19 lower average-of mover in December 2020, when Classes II, III, and IV skim prices differed by approximately \$11 per cwt. In comparison, the witness said, the maximum gain during that time was capped at \$0.74. The SMI witness said because the upside is capped, but the downside is not, it is difficult to ever return to revenue neutrality under the average-of mover.

The SMI witness testified the average-of mover has lowered dairy farmer revenue compared to what they would have received under the higher-of mover, with estimated cumulative market losses totaling \$998.3 million from May 2019 through August 2023. The witness said that for the same period, the average-of mover decreased revenue to the southeastern FMMO producers by more than \$192 million. The NMPF witness reviewed data during periods of relative price stability, revealing the average-of mover generated modest gains over the higher-of mover. However, in periods of price volatility, there were substantial revenue losses in months when the average-of mover was less than the calculated higher-of mover, which resulted in significant cumulative losses to producers over time.

The NMPF witness claimed the change to the average-of mover increased disorderly marketing by reducing Class I prices relative to the other classes and creating greater incentives for handlers to depool milk. The witness said that in 2020, the enhanced demand for cheese relative to the demand for butter and NFDM widened the spread between Classes III and IV well beyond \$1.48, substantially lowering Class I prices compared to what they would have been under the higher-of mover. The SMI witness testified that between May 2019 and June 2023, the Class III skim value exceeded the Class IV skim value by over \$1.48 per cwt in 16 months, and

the Class IV skim value exceed Class III skim value by \$1.48 or more per cwt in 11 months. In 2023, according to the SMI witness, the average-of continued to be lower than the higher-of in some months, which had a more significant impact to dairy farmers because it occurred during a time of extremely low dairy farm margins. The witness said they expect to see more volatility and larger spreads between Class III and Class IV prices in the future because of anticipated higher butterfat prices which will lower the Class III skim value.

The NMPF witness testified that adoption of the average-of mover created class price inversions and resulted in significant volumes of depooled Class III milk during the second half of 2020. Class price inversions occurred again in 2022 and 2023, said the witness, resulting in price volatility and substantial depooling of Class IV milk. The witness opined a wide variety of market conditions have proven capable of generating market volatility, driving a wedge between Class III and IV skim milk prices, and resulting in an average-of mover of more than \$1 per cwt below what the higher-of mover calculation would have been.

The NMPF witness said the average-of mover has not resulted in increased risk management activity at a value to handlers anywhere near the losses experienced by dairy farmers.

Numerous witnesses testified their fluid milk customers have shown very little interest in hedging milk since the average-of mover was implemented.

NMPF witnesses testified other Class I mover proposals under consideration in this proceeding use the higher-of mover calculation as the benchmark for determining adequate Class I skim milk price revenue. They testified those proposals provide producers revenue in an after-the-fact-manner that fails to maintain the maximum monthly separation between advanced Class I prices and the manufacturing class prices, a goal expressed by the Department when it recommended the higher-of mover during Order Reform.

The SMI witness testified that because of the change to the average-of mover, the southeastern FMMOs experienced disproportionately large reductions in blend prices due to the higher Class I utilization in the region, making it harder to attract supplemental milk the region requires to meet fluid demand. The witness noted that using an average-of mover to establish a Class I skim price makes it more difficult for Class I handlers to procure milk from plants with higher-value manufactured products because the price difference is

not large enough to draw milk away from manufacturing. The witness opined a Class I skim mover should provide for orderly marketing by ensuring an adequate supply of raw milk for fluid plants, producer price equity including prompt and uniform payments to farmers and cooperatives, and stability for dairy farms. The witness argued the current average-of mover makes it more difficult for FMMOs to achieve those purposes.

An NMPF consultant witness testified the higher-of mover is necessary to transmit market signals in real time. The witness said a higher Class I milk price relative to other class prices sends market signals to move milk from surplus to deficit regions to ensure adequate fluid milk supplies.

Additionally, the witness continued, disorderly marketing caused by prolonged depooling occurs when the Class I price is lower than Class II, III, or IV prices. The witness asserted prolonged periods of depooling create market disorder. Since the change in 2019, claimed the witness, the Class I mover has facilitated persistent long-term periods of depooling because there is no guarantee Class I prices will exceed the other class prices over time. In contrast, the witness asserted that under the higher-of mover, if Class III and IV advance skim prices increased, the Class I price would remain higher and depooling would moderate.

The NMPF witness presented data to demonstrate the objective of adopting the average-of mover, to allow for greater risk management, has not been accomplished, and prolonged periods of depooling have made it difficult for producers to hedge their farm margins. The witness stated that when milk is not pooled, producer hedging losses cannot be offset by gains on milk checks because revenue from the higher valued manufacturing milk is not shared with the marketwide pool. The witness asserted risk-management performance is relatively similar under the higher-of and average-of movers, entering data they believed showed how Class III futures contracts would similarly mitigate risk. The witness contended other proposals do not adequately replicate the higher-of price in future periods; nor do they share equally among dairy producers and others, necessitating periodic recalibration. Rather than recognize the average-of limitations, the witness said, other proposals seek to align the average-of and higher-of performance. The witness testified an average-of mover with an adjuster causes past market conditions to influence current prices, sending pricing misinformation to the market

and causing disorderly marketing. The witness concluded that without immediate market signals from the advanced Class III and IV milk prices, any of the average-of or Class III plus movers would struggle to replicate the higher-of mover performance.

An NMPF witness representing Prairie Farms testified producer revenue has been significantly reduced, without recovery, since the change to the average-of mover. Prairie Farms is an Illinois based farmer-owned milk cooperative with over 600 dairy farmer members operating fluid milk processing and manufacturing facilities that produce a variety of fluid and manufactured dairy products. Increased depooling in the last few years because of the average-of mover has resulted in increased price volatility, the witness said. The witness testified that with the average-of mover either Class III or Class IV milk is not pooled, depending on which class is higher, because the manufacturer is able to keep the additional market revenue instead of sharing it among pooled producers.

The Prairie Farms witness testified dairy producers want a pricing system that gives real-time market signals, which is accomplished with the higher-of mover. The witness testified Prairie Farms supported the change to the average-of mover believing it would facilitate their customers' ability to hedge Class I milk. However, Class I processors have generally not increased their use of hedging, said the witness, while dairy producers have taken on additional risk by giving up a higher Class I price. The witness stated one reason they believe their customers do not utilize hedging is because of fear of incurring a price disadvantage compared to their competitor. The witness added that of the Prairie Farms dairy farmer members engaged in risk management, there has been a decrease in the use of forward contracting since the implementation of the average-of mover because of negative PPDs, as they create a negative basis dairy producers are unable to account for in their risk management decisions. The witness presented data showing negative PPDs have become larger and more frequent under the average-of mover, which has increased the volume of depooled milk and significantly reduced revenue to farmers.

Another NMPF witness representing Upstate Niagara Cooperative (Upstate Niagara) testified the average-of mover has not operated as intended, has negatively impacted producer revenue, and has exacerbated disorderly conditions. Upstate Niagara is a dairy farmer-owned cooperative marketing the

milk of approximately 250 members and operating eight fluid processing and manufacturing plants in New York and Pennsylvania. According to the witness, under the average-of mover, producers pooled on FMMOs with higher Class I utilization were most severely impacted due to the depressed Class I milk prices and no ability to benefit from the higher priced manufacturing milk. Similar to other witnesses, the Upstate Niagara witness described the asymmetric price risk of the average-of mover.

From interactions with fluid milk customers, the Upstate Niagara witness said there is widespread acceptance of prices based on FMMO monthly price announcements by their conventional customers. The witness said conventional customers have been less interested in pursuing a fixed price if there was any chance it could result in a competitive disadvantage in any given month. The witness recognized there may be some processors or end users in specialized Class I product channels that may utilize hedging but contended it is a relatively small portion of total Class I sales.

A University of Missouri professor testifying on behalf of NMPF presented results of an analysis conducted to evaluate the impact of adopting Proposal 13. The witness testified, under the higher-of mover, Class I prices would increase every year between \$0.32 and \$0.50 per cwt; the Class II price would be between \$0.08 and \$0.12 per cwt less annually; the Class III price would be between \$0.06 and \$0.13 per cwt less annually; the Class IV price would be between \$0.08 and \$0.12 per cwt less annually; and the all-milk price would be between \$0.01 or \$0.02 per cwt higher annually, except for a more significant increase of \$0.06 per cwt in the first year. The witness said the model forecasted the effect on the all-milk price to moderate over time as production expands.

Twenty dairy farmers testified in support of Proposal 13. Many dairy farmers testified blend prices have been lower and their milk prices have been reduced since the average-of mover was implemented. They said only when Class III and Class IV prices are within a narrow range of each other is the average-of mover equal to or outperforming the higher-of mover. The witnesses said their experience supports NMPF's assertion that farmers' milk prices have been reduced by \$950 million, and the reduction is not just a COVID-era anomaly. Dairy farmer witnesses said the losses demonstrate the goal of revenue neutrality with the change to the average-of has not been achieved. One witness asserted that in

29 of the 52 months since the average-of was adopted, Class I prices averaged \$1.30 per cwt less than what the price would have been under the higher-of mover. In comparison, said the witness, in the remaining 23 of the 52 months the average-of returned a price only \$0.42 higher per cwt. The witnesses testified to near-universal support by dairy farmers for a return to either the higher-of or, under the average-of, a mechanism to be equal to the higher-of over a period of time, such as 24 months.

Several dairy farmers urged a return to the higher-of mover, claiming a need for financial relief as dramatic shifts in milk markets since implementation of the average-of mover have caused significant financial losses to dairy farmers. Dairy farmers reiterated the average-of mover change affects 100 percent of pooled producer milk while it is unlikely fluid milk processors are covering 100 percent of their products with risk management tools. A dairy farmer testified they were assured the change to the average-of would be net neutral or net positive, but it has not been. Many dairy farmer witnesses described losses to dairy farmers under the average-of compared to what the Class I mover would have been under the higher-of and testified to receiving lower blend prices. The dairy farmers were concerned about receiving a delayed value of milk from a Class I mover with a rolling average methodology because they believe they cannot afford to wait months or years for the added revenue. They testified restoring the higher-of mover through adoption of Proposal 13 would help to reduce the volatility in monthly milk prices, bringing more stability and predictability to farmer income.

Dairy farmers of all sizes testified to relying on risk-management tools, such as Dairy Margin Coverage (DMC), Dairy Revenue Protection (DRP), and CME futures and options markets because it is difficult to manage their farms through periods of significant price volatility. Dairy farmers' testimonies described a range of contract periods, anywhere from 3–18 months, depending on the individual farmers' risk-management strategy and risk tolerance. In its post-hearing brief, NMPF reiterated hearing testimony arguing the average-of mover does not meet the standards set forth in Order Reform, and the change has not been revenue neutral as originally assumed. NMPF restated that under the average-of mover, price inversions, volatility, and depooling have increased, and Class I prices have been less effective at incenting milk to fluid processors relative to

manufacturing. NMPF reiterated the asymmetrical risk borne by dairy farmers with the average-of mover and the frequency of which the difference between Class III and IV prices exceeded \$1.48 per cwt, effectuating that risk.

NMPF reiterated the average-of mover failed to send appropriate market signals to participants because the fixed adjuster could not maintain the maximum monthly separation between the advanced Class I and the manufacturing class prices. NMPF wrote this increased the likelihood manufacturing classes would have a higher value than milk used in Class I and resulted in increased volumes of depooled milk. Under the higher-of mover on the other hand, NMPF argued, when a particular manufacturing class price is rising, the Class I price also rises and tends to maintain Class I as the highest priced class. To dampen the effect volatility in the manufacturing classes has on Class I, the highest priced manufacturing class should provide the foundation for ensuring the Class I price remains above the manufacturing classes almost every month, reducing the incentive to depool, which is disorderly.

The demand for Class I hedging is not clear, NMPF asserted in its brief, and no evidence was presented to suggest more than a small minority of the overall fluid market utilizes hedging, especially beyond ESL handlers. NMPF argued in its brief that while facilitating risk management for fluid processors may have merit, it is not an objective of FMMOs. In regulating processors, the AMAA only considers price uniformity to processors, NMPF asserted. Finally, NMPF restated in its brief the widespread support of producers for a return to the higher-of mover.

The Dairy Cooperative Marketing Association, Inc. (DCMA), a Capper-Volstead Marketing Agency in Common with nine cooperative members in the southeastern U.S., submitted a post-hearing brief in support of Proposal 13. In its brief, DCMA argued the change to the average-of mover has not been revenue neutral to dairy farmers, nor provided benefits to the industry as originally intended. According to DCMA, the hearing record demonstrates that little Class I hedging occurs, especially on HTST milk, and includes no evidence that the use of hedging is more prevalent now than prior to the change. DCMA stated most testimony demonstrated HTST milk is sold based on FMMO announced prices each month plus a fixed margin. Because revenue on packaged milk sales flows back to the processor in step with the

monthly changes in the FMMO announced prices, there is no price risk to the Class I processor under this system, according to DCMA. In its brief, DCMA described the pronounced losses in the southeastern region as a result of the change to the average-of mover.

The MDC submitted a post-hearing brief in support of Proposal 13, expressing the importance of making the changes as part of the FMMO reform process underway. MDC conveyed in its brief the importance of ensuring all reforms are considered in concert since all changes have ripple effects throughout the entire system and across all classes of milk.

In its post-hearing brief in support of Proposal 13, Select reiterated the proposal would support the priorities expressed by the Department in Order Reform, the rationales of which remain true today. Select cited billions of dollars lost to producers, an increase in depooling, and a lack of Class I handlers hedging their milk costs as reasons the average-of has failed.

In both witness testimony and briefs, IDFA and MIG strongly opposed a return to a higher-of mover. A majority of their opposition was contained in supporting testimony and evidence for Proposals 14 and 15, as detailed below.

A witness representing IDFA testified in support of Proposal 14. The witness said the goal of Proposal 14 is to keep producer Class I revenue consistent with what would be experienced under the previous higher-of mover, while allowing for effective and affordable Class I risk-management strategies.

The IDFA witness claimed that in the long-run, the proposed Class I mover would never fall below what the Class I skim milk price would have been under the higher-of mover. According to the witness, Proposal 14 would have paid more than the higher-of mover in 13 of the past 21 years. The witness asserted dairy farmers are “made whole” as compared to the higher-of mover over time through the annual adjuster calculation. The witness presented data from 2003 through 2019 showing Proposal 14 would have yielded a Class I price \$0.08 greater than the higher-of mover. For 2004 through 2023, the witness said Proposal 14 would have yielded a Class I price \$0.05 higher, due to the \$0.74 floor.

The IDFA witness entered data and analysis to show the volume of milk not pooled would be slightly less under Proposal 14 than Proposal 13, and the Class I price would be lower than Class III or Class IV prices in nearly the same number of months under both proposals. The IDFA witness presented an analysis showing Proposal 14 would

have reduced price volatility with the only exception of very high cheese prices in 2020. According to the witness, volatility equates to greater price risk, which increases hedging costs, and ultimately higher consumer prices.

The IDFA witness countered claims the higher-of mover sends important price signals to dairy farmers through the Class I price, instead claiming the blend price sends more important price signals because it is the price farmers receive. The witness alleged there is little difference between signals sent by the blend price under Proposals 13 and 14, arguing that from 2012 to 2022, Proposal 13 would average 31.9 percent of the Class I value in the blend price while Proposal 14 would average 31.8 percent. As the impact on the blend prices is very similar, over time there is little difference in price signals between the proposals, the witness said.

Regarding the delay incorporated by the rolling adjuster and farmers possibly not receiving the make-up payments, the IDFA witness noted farmers go out of business for many reasons, and some may go into the business or expand and benefit from higher payments. The witness said this issue is no different than handlers going out of business before the make allowances are raised.

The IDFA witness testified hedging is a critical tool for the subset of innovation and value-added milk manufacturers to remain competitive with alternative beverages. In the few growing segments of the milk market, especially ESL and higher value-added products, retailers are demanding processors provide long-term fixed price contracts, rather than contracts with fluctuating monthly prices, the witness said. Since processors cannot enter into a fixed purchase price for raw milk with their milk suppliers, hedging allows processors to take on the risk of entering into a fixed sales price for its finished products and cover the risk of raw milk prices rising during the contract period, the witness testified.

The IDFA witness noted several ESL processors formed and quickly implemented risk management plans in anticipation of the change to the average-of mover. The witness noted ESL processors are interested in hedging because of the longer product shelf-life. According to the witness, a risk management plan allows a processor to level out what could otherwise be very different costs of milk products that could have been produced at significantly different times but are being sold to the customer at the same point in time. The witness noted more hedging of HTST products is done by

end users, such as foodservice customers, not processors. The witness testified that while risk management is not a stated objective of the AMAA, a stable price, promotion, and growth of the sale of milk are, and the ability to use risk management tools results in stable prices and increased sales.

The witness testified IDFA would support a rolling average longer or shorter than 24 months, but the 12-month implementation lag is essential to allow for hedging. The witness testified Proposal 14 calculates the adjuster from August through July because long term Class I sales contracts between processors and retailers are often negotiated and entered into during the final months of the calendar year. To allow for effective hedging for those contracts, Class I processors would need to know at the time of the contract negotiations what the adjuster would be for the next calendar year. The witness supported Proposal 15 as an acceptable alternative to Proposal 14.

A dairy processor witness representing Schreiber Foods (Schreiber) testified in support of Proposal 14 or 15. Schreiber is a fluid milk processor primarily manufacturing Class II and Class III products, with approximately 5 percent of their products sold as ESL Class I products. The witness testified that over the past 20 years risk management has become a necessary tool for companies with exposure to dairy market volatility. The witness said that only since the change to the average-of mover in 2019 have milk processors had a viable way to manage risk. The witness testified that, in response to requests from foodservice and retail customers to manage Class I costs, Schreiber has offered Class I forward contracts since 2019. Prior to 2019, the witness said creating an effective hedge for Class I milk was challenging as it was unknown whether Class III or Class IV would be the mover. The witness stressed the change to the average-of allows purchasers to use a combination of Class III and Class IV hedge positions, which gives everyone in the supply chain the ability to control their market risk in a way that was not previously possible under the higher-of.

According to the witness, Schreiber hedges price risk for its ESL production through a combination of Class III and IV futures and swaps, and Class I swaps, which typically go out 12 to 18 months. Under Proposal 14, the witness explained, market participants will know the fixed adjuster in advance of the calendar year in order to conduct their hedging analyses for the coming year. If the Class I mover were to revert to the higher-of, the witness testified

they would have to either find a different way to hedge or cease offering forward contracts on their ESL products.

A witness representing Nestlé USA (Nestlé) testified in support of Proposal 14. Nestlé is a fluid milk processor operating one plant regulated by the FMMO system. The witness testified that Nestlé procures milk from cooperatives using contract agreements and offers its customers an annual fixed price contract for their primary Class I product, an ESL product. The witness stressed the importance of hedging to manage risk and compete in the market against nondairy beverages. The witness stated Nestlé did not use hedging for Class I under the higher-of mover because not knowing which class price would be higher caused uncertainty. The witness testified Nestlé currently hedges all its Class I milk purchases using Classes III and IV futures contracts, and while they have an 18-month outlook they typically hedge Class I milk 6 months out. If USDA returns to the higher-of mover, the witness testified, Nestlé would not be able to continue hedging its Class I milk. The witness testified price volatility has specific impacts on ESL products, as it is challenging for retailers to set different prices due to monthly milk price fluctuations for two identical products sold at the same time but produced in different months.

A witness representing Lamers testified in support of Proposals 14 and 15 stating those proposals would help smooth out the volatility in the pricing of Class III and Class IV.

In its post-hearing brief, IDFA reiterated the importance of hedging to processors for managing price risk and volatility and claimed effective hedging could only be achieved with an average-of mover. IDFA noted that when price uncertainty does not allow fluid milk processors to manage risk 6 to 12 months out, they risk losing shelf space to plant-based and other alternative beverage products that can offer fixed prices. IDFA argued that the choice for a fluid milk processor, especially with respect to ESL products, higher value-added products, and foodservice, is increasingly between offering stable pricing and long-term contracts demanded by customers or losing shelf space to competing beverages. Pricing stability and long-term contracting are facilitated by hedging, according to IDFA. IDFA stressed the growing need for Class I hedging because of increased volatility between the manufacturing classes.

In response to criticism of Proposal 14, IDFA wrote the average-of mover does not create price inversions or lead

to milk not being pooled, arguing depooling occurs because of the price relationships between classes, and is caused by negative PPDs and pooling requirements. IDFA also wrote that the average-of mover does not increase price volatility, unlike a higher-of mover which routinely and unpredictably switches between Class III and Class IV. Finally, IDFA asserted the value of Class I products is not necessarily related to the value of Class III or IV products, thus, the higher-of does not better reflect the value of milk than the average-of mover.

NAJ submitted a post-hearing brief in support of Proposal 14, arguing it better protects long-term producer milk revenue, provides less Class I price volatility, and preserves equitable risk-management opportunities for Class I handlers who are required to participate in the FMMO system. NAJ noted the perception a return to the higher-of mover would produce higher producer Class I revenues is based on highly divergent Class III and IV price movers and an expectation this will continue in the future. However, NAJ argued in its brief this price divergence analysis does not account for composition factor amendments nor potential Class I differential amendments. With revised composition factors, NAJ asserted, a restored manufacturing to Class I price spread would mitigate price inversion and depooling.

A MIG witness testified in support of Proposal 15 seeking to amend the average-of mover from a \$0.74 adjuster to a rolling 24-month adjuster with a 12-month lag. The witness claimed the movers contained in Proposals 14 and 15 provide similar base Class I skim milk prices and have similar effects on producer prices. The witness explained in certain years Proposal 15 would return more money to farmers than the higher-of, and even if farmers do not experience the benefits of a high manufacturing price immediately, they will over time through the lagged adjuster. The witness presented data comparing the monthly average base Class I skim milk price calculated under the current mover, the higher-of mover, and Proposal 15 from 2003 to 2022 to show Proposal 15 would be revenue neutral in the long run.

The MIG witness testified Proposal 15 preserves risk-management opportunities for both producers and Class I processors, which is part of orderly marketing. The ability to hedge Class I milk became effective in 2019, followed by the pandemic and regulatory uncertainty as to whether the average-of would remain, and time, resources, and lack of knowledge

slowed the adoption of Class I risk-management strategies, the witness testified.

Five MIG member witnesses representing fairlife, HP Hood, Turner Dairy, Shehadey, and Crystal Creamery testified on the importance of hedging Class I milk. The fairlife and HP Hood witnesses said they primarily process ESL products, which they hedge using CME Class III and IV component and commodity futures. The HP Hood witness stated they do not hedge HTST milk because it is primarily sold through direct store delivery where the standard business practice is monthly pricing. However, ESL products are distributed primarily through grocery warehouses and buyers expect 60 to 90 days' notice for any price changes, the witness said. The HP Hood witness stated the ability to hedge has not changed their ESL pricing strategy but has allowed for fewer price increases. In earlier testimony a witness representing Shamrock, also a MIG member, said they manufacture both HTST and ESL products and hedge milk used in their ESL products.

A processor witness representing Shehadey testified contracts with retailers such as grocery stores use a fixed formula that changes monthly, quarterly, or semi-annually, and are based on FMMO prices. The witness testified Shehadey has only HTST Class I milk products and they do not use any form of risk-management tools to hedge their risk. The Turner Dairy and Crystal Creamery witnesses said their companies primarily process HTST Class I milk products which they currently do not hedge. Both witnesses expressed value in hedging HTST milk sold to foodservice, as foodservice customers prefer to know prices months to years in advance. The fairlife and HP Hood witnesses testified hedging under the higher-of mover was difficult due to price volatility and uncertainty, but the average-of mover allows them to offset the risk. The witnesses also testified it takes time to develop a robust hedging program. The HP Hood witness stated Class I hedging is primarily used by more sophisticated operators, but as Class I hedging becomes more accepted, the market should become more liquid, and more processors will likely use this risk-management tool. The fairlife witness said fairlife typically hedges its ESL Class I products, mainly 0 to 6 months out, but contracts could extend up to 12 months.

A MIG witness explained that the adoption of Proposal 15 would allow for less price volatility throughout the market and support industry growth by stabilizing the cost of milk for retailers

and consumers. Hedging, the witness said, is important to offering customers and consumers a more stable price, which could stem the declines in fluid milk as fluid milk competes with many beverages in the market. The fairlife witness testified that price certainty translates to price stability for both the retailer and the consumer. The HP Hood witness testified the goal of hedging is not to make a higher return, but instead to act as price risk insurance by removing some input price volatility and increasing margin certainty for end-product sales. The Turner Dairy witness testified the average-of mover results in more price stability which is beneficial to the Class I market. The witness said under the higher-of formula, the Class I price went up with every spike in butter, cheese, or powder markets, even though short-term changes in those product prices have no direct effect on the actual Class I market. The witness argued the price spikes necessitated raising prices to cover cost, without a market-based explanation to provide to customers.

The MIG and fairlife witnesses testified in support of the 12-month lagged adjuster contained in Proposal 15, stating it is critical to allow Class I processors to mitigate risk and hedge successfully. Knowing the adjuster 12 months in advance allows companies who hedge to reduce or eliminate basis risk, the witness said, while the 24-month rolling adjuster updates and provides dynamic market signals. The witnesses said Proposal 15 would stabilize prices by moving gradually and make fluid milk products a more reliable and steady purchase for customers. Proposal 15 has no floor or ceiling, as the witness testified MIG members believe floors and ceilings can create price distortions. The witnesses testified a lookback of less than 24 months would create more volatility, while a longer lookback does not transfer market signals well over time. The fairlife witness testified the 12-month lag is necessary to be able to buy futures 12 months out. The 24-month rolling average adjuster allows the system to recognize the difference between Class III and Class IV prices and what the higher-of mover would have been, the witness said, allowing the industry to know definitively what the premium structure is going to look like associated with the adjuster 12 months into the future.

In its post-hearing brief in support of Proposal 15, MIG argued USDA should first assess whether the current average-of formula has resulted in disorderly marketing. MIG wrote the current average-of mover ensures the market has

sufficient milk for both fluid and manufacturing uses and there is not disorderly competition for fluid market access. MIG argued a return to the higher-of under Proposal 13 would not provide higher returns to farmers, estimating a minimal impact of a \$0.01 to \$0.02 per cwt increase in the long term. However, MIG argued in its brief, the return to the higher-of mover would have significant negative impacts on the Class I market and the entire dairy industry. There is no asymmetrical risk inherent in Proposal 15, MIG argued in its brief, unlike the present average-of mover formula.

According to MIG, the use of risk management developed primarily after the average-of formula was adopted and is likely to grow in the future. MIG stated Class I processors do currently use risk-management tools to hedge ESL products, as this sector has historically utilized more fixed pricing, meaning hedging can be more easily adopted. MIG stated many HTST customers, such as grocery stores, have become accustomed to the monthly fluctuations of pass-through pricing, but HTST customers, such as school lunch programs or USDA feeding programs, would benefit from the increased price certainty that comes with an average-of calculated mover. The industry has not yet had time to widely adopt risk management, MIG reiterated in its brief, and regulatory uncertainty due to this proceeding has caused processors to hesitate further use of risk-management tools.

MIG noted in its brief that even though the AMAA does not specifically provide for hedging, a Class I formula that supports hedging helps serve the enumerated purpose of the AMAA of avoiding unreasonable price fluctuations and reducing milk price volatility. When Class I processors can better manage risk, they can offer more stable prices to customers and consumers, MIG argued in its brief.

In its brief, MIG reiterated hearing testimony that use of an average-of mover best ensures an orderly market, and sufficient supply of milk for fluid use, including the most accurate pricing signals for dairy farmers in a longer, and more appropriate, time. MIG took exception to arguments that the Class I price be used to address price inversions and depooling. Using a California pool example, MIG argued that record evidence shows the Department would have to increase the Class I price an impractical amount to incentivize both manufacturing classes to remain pooled. MIG reiterated many factors cause depooling and negative PPDs, and neither the Class I price nor

use of an average-of mover drive those results. Rather, according to MIG, the main drivers of depooling in the months reviewed in testimony were the Class III/IV spread and advanced pricing.

In its brief, MIG argued a return to the higher-of mover will not help Class I handlers in competing for milk supply as a higher pool obligation detracts from the incentive to service Class I plants. MIG reiterated hearing testimony that the current marketplace is sufficiently served using an average-of formula.

Lamers submitted a post-hearing brief in support of retaining an average-of mover. Lamers argued that because of the small percentage of Class IV use in the market, Class IV prices should not be a main driver for setting the Class I price, as an average-of mover is more representative of the entire manufacturing market. Lamers preferred the lower of the Class III and IV prices should be used when setting the mover as they believe the higher-of artificially raises Class I prices to consumers.

NMPF presented numerous witnesses who testified in opposition to the continuation of the average-of mover, embedded in the summary of their testimony and post-hearing brief presented above. An SMI witness opposed a modified average-of mover, testifying it would result in revenue losses to dairy farmers because the Class I price is paid back to dairy farmers over time and would not compensate dairy farmers that have exited the business.

Select expressed opposition to Proposals 14, 15, and 16 in its post-hearing brief. Select wrote that the higher-of more accurately reflects the value of milk in manufacturing classes, better manages shifts in demand for any one manufactured product, helps reduce milk price volatility, better addresses class price inversions and depooling, and makes it more difficult to draw milk away from Class I uses for manufacturing. Select noted most Class I handlers have not engaged in milk hedging under the average-of mover, and the average-of mover creates and exacerbates opportunistic depooling when Class III and IV prices diverge significantly. Select opined the average-of mover results in market disorder which they believe would continue until the higher-of mover is restored.

In its post-hearing brief, the AFBF opposed Proposals 14 and 15, arguing they do not address the key issue of class price misalignment. The AFBF believes handlers of all sizes can find alternative methods of managing risk under a higher-of mover.

A witness representing Edge testified in support of Proposals 16 and 17. The witness advocated for the adoption of

Proposal 16, referred to as a Class III plus proposal, because the Class III price is typically higher than the Class IV milk price. In times of rapidly declining dairy prices brought on by a decrease in demand, the witness said, government recovery efforts typically prioritize more perishable products, usually Class III. The witness said this would result in higher Class III prices in relation to Class IV, and consequently a base Class I skim price under Proposal 16 approximately equal to the higher-of mover. According to the witness, in situations where the Class IV skim milk price is higher than the Class III skim milk price, any lost revenue would be redistributed to producers over the next three years through the adjuster and would better support dairy farmers during years of lower profitability. The witness testified risk management under Proposal 16 is easy to implement and less expensive due to high liquidity of Class III milk futures, creating more predictable prices and making fluid milk products competitive with plant-based beverages. The witness testified Edge would support a monthly rolling adjuster in place of an annual adjuster.

The Edge witness testified that as Class I utilization rates continue to fall, advanced pricing would continue to cause disorderly marketing conditions such as opportunistic depooling. The witness said advanced prices are antiquated and anti-competitive and their elimination would encourage fluid plants to use risk management. The Edge witness entered data showing the contribution of various factors to negative PPDs. The witness testified that while the change to the average-of mover tended to make PPDs more negative, advanced prices and the spread between Class III and IV influenced pooling decisions, not the adoption of the average-of mover. The witness testified that if the Class I price was announced at the same time as the Class III and Class IV prices, it would prevent a for-profit Class I trading relationship between Class III and Class IV, and the CME group would be more likely to create a Class I futures contract. The witness expressed a strong preference for Proposal 16, which they argue balances producer, processor, and consumer needs and supports risk management which they said was critical for the success of the nation's dairy farmers, particularly fluid sector innovators.

The Edge witness also testified in support of Proposal 17, returning to the higher-of mover without advanced pricing. The witness said the proposal would allow the Class I futures price to be equal to the greater of the Class III

futures price and the Class IV futures price. Risk management players would have minimal risk in providing liquidity to Class I hedgers by spreading their position between Class I and the higher-of Class III or IV futures. The witness testified dairy producers may prefer the higher-of mover without advanced pricing, such as Proposal 17, as it provides real-time maximum income for Class I milk, whereas Proposal 16 is more of a compromise.

The Edge witness stated that since 2010, total fluid milk sales have been steadily declining, adding more instability and difficulties hedging under the higher-of mover. The witness entered data showing how much more risk and costs were involved to hedge under the higher-of mover than the average-of mover. The witness concluded a person hedging with futures contracts under the higher-of mover would have significant difficulties, but hedging under the average-of mover meets effectiveness standards required for hedge accounting.

Nine dairy farmer witnesses, located in Wisconsin, Minnesota, Iowa, and South Dakota, testified in support of Proposals 16 and 17. The dairy farmers opined Proposals 16 and 17 would decrease the frequency of negative PPDs and depooling and enhance their ability to manage price risk through hedging and other risk-management programs. One witness said using only the Class III skim price to set the Class I skim price is the best option because Class III milk futures carry more liquidity than Class IV and better represent Class I prices. The witnesses testified Proposal 16 would help keep prices steady, benefitting both plants and customers.

In its post-hearing brief, Edge objected to what it believes are goals of some proponents to maximize FMMO Class I handler obligations in order for the additional revenue to be used to offset the negative producer impact of increasing make allowances. Edge argued the Department should consider the following factors in its decision: there have not been any significant shortages in the supply of beverage milk to retail stores; Congress' reason for changing to the average-of mover to facilitate risk management by fluid milk processors which fluid milk processors testified is still relevant; advanced pricing is outdated and no longer necessary to facilitate supply chain coordination but instead facilitates opportunistic depooling; a mover resulting in the highest fluid milk price when the Class IV price substantially exceeds Class III is not in the best interest of consumers; and a mover

resulting in the highest fluid milk price when the Class IV price substantially exceeds Class III is not in the best interest of all dairy farmers. Edge argued dairy farmers located where Class I utilization is low may be worse off under a higher-of mover than an average-of or Class III-based pricing as proposed by Edge.

Edge reiterated Proposal 16 would facilitate risk management by fluid milk manufacturers and large commercial buyers, eliminate outdated advanced pricing and reduce the incidence and magnitude of opportunistic depooling, and best serve both producer and consumer interests.

A witness representing the AFBF testified in support of Proposal 18. The witness said the AFBF believes orderly pooling is the key to orderly marketing, and this is best accomplished by the proper alignment of the four class prices. The witness claimed advanced Class I pricing leads to increased Class III component values, a common factor contributing to negative PPDs. The witness said advanced prices reflect market conditions that are 25 to 40 days older than final prices, which are announced after the close of the month. When a market rally occurs between the announcement of advanced and final prices, the witness said it leads to low or negative PPDs and creates incentives for handlers to depool milk. The witness stated depooling results in elevated component prices not being shared with the pool, further depressing the PPD and undermining the FMMO principle of uniform producer prices. The witness testified advanced pricing may also cause price inversions when manufacturing prices are rising rapidly, making it difficult for Class I handlers to attract adequate milk supplies. The witness entered data showing the effects of advanced pricing on class price alignment from May 2019 to May 2023 under the current average-of, and under Proposals 13, 17, and 18. The witness said this data showed many months under the current average-of mover and Proposal 13 in which the manufacturing class prices exceeded the Class I price, testifying this created disorderly marketing conditions. On the other hand, according to the witness, the data showed elimination of advanced pricing under Proposals 17 and 18 resulted in more consistent alignment of class prices.

The AFBF witness testified the frequency of published commodity data allows handlers to estimate price changes regardless of when prices are announced, and as more products are available on the CME or other exchanges, processors and

manufacturers will have information needed to hedge and manage risk. The witness opined that the elimination of advanced pricing would allow for the introduction of Class III and IV spread options, providing an additional way to hedge Class I milk when both are used in combination. Three dairy farmers testified in support of Proposal 18, stating the proposal would reduce the incentive to depool brought on by low and negative PPDs.

The AFBF witness also testified that while they support the elimination of advanced pricing, they oppose Proposal 16 because it would delink Class I prices from Class IV prices, which they anticipate being higher than Class III in the future due to better export markets. The witness said tying the Class I price to only the Class III price could operate more like a "lower-of" formula. The witness stated the AFBF supports Proposal 17 because it is identical to Proposal 18 if combined with Proposal 13.

In its post-hearing brief, the AFBF reiterated its support for a return to the higher-of mover, which it argued would support class price alignment and substantially decrease negative PPDs and depooling.

The AFBF reiterated its hearing testimony that volatility has and continues to increase, contributing to price inversions and rapidly changing markets, resulting in competitive inequalities among dairy farmers. The AFBF said the CME has indicated a willingness to provide contracts catering to industry demand, and the fact that the industry is used to advanced pricing should not be a driving reason for its retention. The AFBF argued disorderly marketing conditions are present when producers do not receive uniform prices because of frequent depooling, and its proposals lead to the realignment of class prices, which encourage consistent pooling and uniform pricing.

An SMI witness, appearing on behalf of NMPF, testified in opposition to elimination of advanced pricing as contained in Proposals 16, 17, and 18. The witness said 90 percent of packaged fluid milk is highly perishable HTST milk which is processed, packaged, distributed, and sold in a relatively short period. The witness said these marketing characteristics require the price of the product to be known at the time of purchase, which advanced pricing of Class I milk provides. According to the witness, most HTST packaged fluid milk is priced monthly by fluid processors to their customers based on monthly FMMO Class I prices. This is materially different from cheese and butter products, the witness said,

the prices of which are typically based on CME daily cash prices. According to the witness, advanced pricing enables retailers to set store milk prices at the beginning of a month, allowing the fluid processor to know the price the plant would receive for the packaged fluid milk prior to the raw milk being processed, packaged, and sold.

The SMI witness also testified that if advanced pricing was eliminated, retailers would not know their fluid milk costs until the end of the month when FMMO Class I prices are announced. This would mean most fluid milk purchased by retailers would be sold during the month without knowing its minimum regulated price which, the witness said, from a retailer's perspective is not orderly marketing. The witness claimed that if there were significant month-to-month increases in the Class I price, retailers could seek price relief from the processor, and ultimately, cooperative suppliers, opening the potential for fluid milk processors in the same marketing area to have inequitable raw milk costs and non-uniform payments to producers. In its post-hearing brief, NMPF reiterated its opposition to the elimination of advanced pricing.

A witness representing IDFA opposed Proposals 16, 17 and 18. The witness objected to the elimination of advanced pricing as it would result in Class I handlers pricing milk products to their customer before knowing the minimum regulated milk price and impact a handler's ability to hedge. In its post-hearing brief, IDFA supported the feature of Proposal 16 that would create a predictable Class I price that could be hedged based off a hedged Class III price plus a known adjuster. However, IDFA maintained its opposition to the elimination of advanced pricing, arguing it is essential for non-hedging Class I handlers to know their milk cost before the start of the month. It is also an important part of planning for fluid milk retail customers to market milk, IDFA stated. IDFA noted in its brief that traditional fluid milk retail customers are not yet using hedging sufficiently to permit a regulatory change eliminating advanced pricing. IDFA reiterated their total opposition to Proposals 17 and 18 in that they would return to a higher-of mover and, according to the brief, eliminate any practical ability to hedge.

A MIG witness testified in opposition to eliminating advanced pricing. The witness said the industry is not yet using hedging sufficiently to permit this regulatory change, as advanced pricing remains critical for the dominant share of the fluid market as retailers expect to know the price in advance. The witness

also opposed Proposal 16, which would price Class I milk solely off the Class III price. The witness said the proposal would delink the fluid milk supply and demand from Class IV which MIG believes is critical for balancing. The witness opposed Proposals 17 and 18 as they limit risk-management opportunities for Class I processors. In its post-hearing brief, MIG reiterated its opposition to any proposal (Proposals 16, 17, and 18) seeking to eliminate advanced pricing, which MIG claimed is critical to Class I processors. MIG further argued that eliminating advanced pricing would negatively impact those market segments. With respect to Proposal 16, MIG expressed concern with pricing Class I milk solely off Class III prices as it would be a significant departure from the current practice and completely divorce fluid milk supply and demand from the Class IV market. According to MIG, the record contains testimony from cooperatives that Class IV remains the ultimate balancing utilization.

In testimony and in its post-hearing brief, MIG opposed a return to the higher-of mover under Proposals 13, 17, and 18 as it would severely limit risk-management opportunities. MIG argued in its brief that a return to the higher-of is unnecessary and not supported by the facts as the industry has acknowledged the higher-of does not work. Dairy farmers' concerns are not about the average-of, MIG asserted, but rather the fixed \$0.74 addition. USDA should support moving the industry forward, not revert to an outdated policy because it is familiar, MIG stated.

MIG argued NMPF introduced no evidence the average-of mover hinders a sufficient supply of milk for fluid uses. Rather, MIG wrote, a return to the higher-of mover would result in disorderly marketing as larger spreads between Classes III and IV would lead to higher prices under the higher-of mover and raise the uniform price, incentivizing the lower-priced manufacturing milk to remain pooled. In that situation, MIG argued, FMMOs should not be raising the uniform price paid out to the lower-priced manufacturing class, thus, encouraging it to remain pooled. This compensation, argued MIG, overvalues the lower-priced manufacturing milk in the marketplace and incentivizes milk to move to the lower manufacturing class instead of to a higher performing class. According to MIG, the average-of mover would better move milk between the manufacturing classes as the market needs. MIG argued the FMMOs are designed to ensure processors have sufficient milk supplies for fluid use,

but FMMOs should not be drawing milk away from Class III or IV when a manufacturing use would be the highest and best value for the milk. According to MIG, Class I does not need more milk, and FMMOs should not be disrupting the market to pull milk for fluid utilization. MIG argued in its brief that revenue neutrality is not a valid policy consideration without evidence to establish revenue neutrality is necessary to ensure a sufficient supply of fluid milk.

A witness representing Lamers testified in opposition to the elimination of advanced pricing in Proposals 16, 17, and 18. The witness stated Class I handlers need to know prices in advance so they can set wholesale pricing with their retail customers.

In its post-hearing brief, Select opposed the elimination of advanced pricing set forth in Proposals 17 and 18, arguing that testimony at the hearing made clear that the majority of producers prefer using the higher-of, and the majority of handlers prefer to maintain advanced pricing which Select believes is in the best interest of stability in the Class I market.

Class I and Class II Differentials

Numerous witnesses appeared on behalf of NMPF testifying in support of increasing the Class I differentials as provided for in Proposal 19. Witness testimony centered around the themes of increased hauling costs, changes in milk supply and demand locations, changes in supply patterns resulting in longer hauls, and insufficient over-order premiums to cover the full cost of servicing the Class I market. The witnesses said the outdated assumptions embedded in the current Class I differentials threaten the willingness of milk suppliers to serve the Class I market.

An NMPF witness argued current differentials are antiquated, since, other than the three southeast FMMOs, they have not been updated in almost 25 years. In that time, they said, fuel costs and hauling distances have increased due to changes in supply and demand locations. The witness stressed over-order premiums should not be considered an effective substitute for FMMO prices because they are very difficult to obtain and maintain at levels adequate to cover the cost of servicing the Class I market. The witness argued inadequate Class I differentials contribute to price inversions and incentives to depool, which further jeopardize the availability of milk to meet Class I demand.

The NMPF witness described the methodology used to arrive at the

proposed differential levels. According to the witness, NMPF requested an update of the U.S. Dairy Sector Simulator Model (USDSS) which was used during Order Reform as a basis for the differential levels adopted on January 1, 2000.

The USDSS model owners testified on the methodology, the updated data and parameters, and explained the results. They explained the USDSS model evaluates the geographic value of milk at fluid milk processing plants across the U.S. by finding the lowest cost solution of assembling milk at farms and delivering it to plants. They said the model accounts for approximately 90 percent of the U.S. dairy processing and manufacturing plant capacity, and considers such factors as milk supply locations, transportation costs (both variable and fixed) associated with raw milk assembly, final and intermediate product distribution, per capita demand by county population, and road weight limits. In the model, plant capacity, products produced, and milk components demanded at each plant are constrained by a variety of government and private sources. The resulting values, said the witnesses, represent the value of an additional load of milk at a specific plant location (otherwise known as the "marginal value").

The witnesses said two sets of USDSS model results were provided to NMPF, May and October 2021, to provide marginal values for both flush and deficit months. According to the witnesses, the results suggest considerable differences between the values of milk at fluid plants derived from spatial economic modeling and current Class I differential values, with differences as large as \$3.00 per cwt in some locations. The witnesses attributed these differences to changes in the location of milk production, the composition of dairy product demand, changes in the location of dairy product demand from regional population shifts, and the cost of transportation. Both witnesses discussed how modeling, even though complex, is a simplification of reality and that there may be unaccounted factors in some areas that would justify deviations from the model results, including local traffic congestion, geography, infrastructure restrictions, and price alignment across orders. The witnesses said the model does not account for other factors, such as existing business relationships and FMMO regulations, because they could cause a departure from a market efficient solution. Lastly, the witnesses noted the USDSS model does not produce a base differential value; it merely provides the additional value

needed to move milk to a particular location.

While NMPF cooperative member witnesses testified on how they used the USDSS model results to arrive at the proposed differentials, NMPF witnesses stated they followed the same iterative process applied during Order Reform, starting with the model results and adjusting for milk movements, plant locations and historic price relationships.

One witness explained that NMPF started with a base differential assumption of \$1.60 per cwt, as currently contained in the Class I differentials. The witness said the costs embedded in the base differential (Grade A maintenance, balancing, and a competitive factor) are still applicable and those costs have not decreased over the past 25 years. The witness said the base differential should also serve to limit class price inversions, incentivize Class I milk deliveries, and ensure class price alignment. To accomplish these goals, the witness said that in some parts of the country the base differential is recommended to increase to \$2.20 per cwt.

One NMPF witness testified regarding the cost to dairy farmers to maintain Grade A status. The witness said that in order to participate in the FMMO program, dairy farmers incur costs associated with obtaining and maintaining Grade A licenses. The witness was of the opinion partial cost reimbursement for maintaining a Grade A license, which currently represent \$0.40 per cwt in the base differential, should continue to be provided. The witness detailed standards for maintaining Grade A status, which include various infrastructure maintenance and sanitation requirements, and estimated a total current cost of \$1.30 per cwt to meet those requirements.

A series of NMPF witnesses testified on the regional considerations factored into the proposed Class I differentials contained in Proposal 19. During their testimony they also touched on balancing costs faced by NMPF cooperative members and the continued need to include a competitive factor in the base differential. One witness described how the average of the May and October 2021 results was used as a starting point. From there, NMPF formed regional committees to evaluate the USDSS model's average results and use their local market knowledge to derive the final proposed differential values. According to the witness, a series of 19 anchor cities were selected for their proximity near the border of where two regions abutted. The regional

committees used these anchor cities as common starting points to design a final Class I differential surface that ensured price alignment between orders. Each committee looked at current price relationships between plant locations and consumer demand areas, compared those to the USDSS model's averages, and designed a Class I differential structure that accounted for factors NMPF members thought were not adequately addressed in the model's results.

Northeast

A DFA witness testifying on behalf of NMPF discussed the changes in the northeast marketing area, including increased hauling costs, changes in the milk production and location of farm and fluid processing plants, and an overall increase in production costs. The witness said milk production in 11 of the 12 northeast states declined from 2000 to 2022, except for New York which saw a 31.4 percent increase, resulting in a small overall increase in the region's milk production of 2.2 percent. During this time, the witness said the resident population increased by 9.1 percent. The witness noted the geographic shift in where milk is processed due to the closure of fluid plants in urban areas since 2000. The witness surmised local milk supplies in the northeast are used to meet increasing Class II and Class III needs, necessitating milk to travel farther distances to meet fluid demand. The witness estimated transportation costs paid by producers in the region have increased \$0.70 per cwt.

An Agri-Mark witness also testified regarding the changing marketing conditions in the northeast region and described some of the proposed differential differences from the USDSS model. The witness opined that if the USDSS model's averages were adopted for Maine, it would incentivize producers in Maine to supply Massachusetts, instead of remaining available to meet local demand. Therefore, the witness said NMPF proposed to flatten the differentials in Maine to maintain current competitive relationships. NMPF also proposed lower differentials in northern Vermont and New York in order to incentivize milk movements south and east. The witness said these changes from the USDSS model's average results are needed to preserve current milk movements and to maintain competitive relationships.

Mid-Atlantic

An MDVA witness representing NMPF testified regarding the proposed

differentials in the Mid-Atlantic region. The witness said MDVA operates two balancing plants in the region that help balance the market's reserves in both the Northeast and Appalachian FMMOs. According to the witness, there are large seasonal swings in milk delivered to those balancing plants, which result in significant costs to the cooperative and its members. The witness was of the opinion the base Class I differential should provide some balancing cost reimbursement to its members through its distribution through the marketwide pool. Transportation costs have also increased significantly, the witness said, to a point where Class I differentials are less effective in attracting milk from reserve supply areas to Class I plants. In order to meet fluid demand, the witness said cooperative members must pay for the additional cost through milk check deductions without any additional compensation through the Class I differential.

The MDVA witness compared current and USDSS model average values for multiple plant locations in the region. According to the witness, the regional committee focused on the need to cover additional transportation costs of servicing the fluid market and maintaining current price relationships as principles when determining deviations from the USDSS model's average results. One example cited two plants in Landover, Maryland and Frederick, Maryland, located approximately 55 miles apart with a current difference in differential values of \$0.10. The witness said the USDSS model's average values would have resulted in a \$0.35 difference and created an artificial regulated cost advantage for the lower zoned plant in Frederick, Maryland. Another example was in the southeastern region where two Virginia plants located 15 miles apart and currently in the same differential zone would have seen a \$0.10 differential difference under the USDSS model's average scenario. In this case, said the witness, the committee decided to propose the same differential value for the two plants in order to preserve their competitive relationship.

Southeast

A DFA witness representing NMPF testified on the proposed differentials in the southeast region. Similar to other witnesses, their testimony centered on the decline in dairy farmers and the closure of fluid processing plants which necessitate longer milk hauls at a greater expense to dairy farmers, particularly cooperative members. The witness spoke to the unique marketing conditions in the southeast region, with

a growing population, local fluid demand, and a significant milk supply deficit requiring supplemental milk supplies to be acquired from outside the region. The witness said the supplemental milk supplies are obtained at great expense to DFA cooperative members. The witness stated it is typical for supplemental loads to travel between 500–650 miles or more, and while the transportation credits in the Southeast FMMO provide partial reimbursement, the fund is inadequate to cover the full cost. The witness said the proposed differentials contained in Proposal 19 would assist in covering transportation costs and support dairy farmers who supply the region.

Florida

An SMI witness representing NMPF testified on the proposed differential for the Florida FMMO. The witness said there is an inadequate milk supply available in Florida to meet its Class I needs, necessitating significant volumes of milk deliveries from outside the marketing area from Georgia, for example. According to the witness, Florida milk production is quickly shrinking, declining more than 10.9 percent in 2022, and necessitating more than 24 percent of its milk needs to come from other states.

The witness discussed Florida's significant population increase and high Class I utilization, which has averaged greater than 82 percent since 2000. The witness described significant seasonal swings in fluid milk needs and SMI's efforts to balance those needs through purchasing additional milk tankers, marketing milk to non-pool plants at below FMMO values when needed and buying supplemental loads at above FMMO values during other times of the year. The witness said weather and the seasonal population influxes also complicate the region's milk balancing efforts. These dynamics make supplying the Florida region particularly expensive, estimating that SMI balancing costs for the first half of 2023 were \$1.33 per cwt.

The SMI witness testified the proposed Florida differentials maintain the historical differential slope while more adequately reimbursing for transportation costs, which the witness estimated has more than doubled in the past 20 years, from \$2.31 in 2002 to \$5.98 in May 2023. The witness said the Florida differentials contained in Proposal 19 are similar to the averages of the May and October 2021 USDSS model results but were adjusted to preserve current competitive relationships. As a result, the witness

concluded the region would be assured an adequate supply of milk for fluid use and fluid milk buyers would be better assured of equal raw product costs.

The SMI witness was of the opinion the differentials should not be adjusted to reflect recently enacted Distributing Plant Delivery Credits in the Florida FMMO, as both are needed to ensure adequate supplies of fluid milk for the region.

Southeast/Southwest

A Lone Star witness representing NMPF testified regarding the differentials between the southwest and southeast regions. The witness said the eastern portion of the Southwest FMMO and the three southeastern FMMOs are milk deficit regions. The witness emphasized the differential recommendations are designed to provide proper financial incentives through a steeper differential slope to move milk into and within those regions. The witness said other factors considered included keeping current city-to-city price relationships as well as competitive relationships between plants often clustered around metropolitan areas. While differentials in some areas were increased relative to the USDSS model's average to reflect NMPF member knowledge of milk movements and related transportation costs in the region, other differentials were lowered. The witness noted NMPF members believe the model overestimated balancing costs for parts of Virginia and the Carolinas, and subsequently is proposing muted differential increases for those regions.

Regarding Florida, the witness said the NMPF members accepted the USDSS model average output of \$7.90 as the differential for Miami, Florida. They then worked up through the state with a priority of maintaining competitive relationships between plants. The only deviation the witness noted was Myakka City, Florida, whose current differential is \$0.40 higher than plants in the Tampa-Orlando corridor. The witness was of the opinion the spread was too large, and, consequently, Proposal 19 recommended the spread be reduced to \$0.20.

In the southwest region, the Lone Star witness said, milk must move significant distances from the supply region in the Texas panhandle and eastern New Mexico to the demand centers in east Texas. The witness said milk routinely travels anywhere from 400–650 miles to service the fluid needs of the state and stressed the current differentials in the region are inadequate in covering transportation costs for these routine milk movements.

Consequently, Proposal 19 generally contained higher proposed differentials than the USDSS model average, with greater increases moving northwest to southeast to incentivize milk to move where needed. The witness added there is a single differential level proposed for New Mexico, reflecting what the witness described as primarily a captive in-state market for milk.

Mideast

A DFA witness representing NMPF testified in detail on hauling assembly costs associated with the Mideast marketing area. The witness described the region's principal supply areas as central and northeast Michigan, northern Indiana and northwestern Ohio, and fluid demand areas centering around the region's large cities of Detroit, Grand Rapids, Indianapolis, Columbus, and Pittsburgh. The fluid plants compete for a milk supply with the numerous small to medium-sized cheese plants in northeast Ohio, two large cheese plants in central and western Michigan and one large cheese plant in western Pennsylvania, explained the witness.

The DFA witness testified the Mideast region has increased milk production 20 percent over the last 23 years, while simultaneously seeing a 66 percent reduction in dairy farms. The region's Class I utilization was 37 percent in 2022, supplied by approximately 33 distributing plants, down from 57 in 2000. The consolidation in both the supply and demand sectors, increased hauling distances to fluid plants, along with a robust manufacturing sector, has created challenges in encouraging milk to meet fluid demand.

The DFA witness estimated that Ohio assembly and delivery costs have increased approximately 69 percent from 2006 to 2023, attributing most of the increase to fuel, labor and equipment costs. The witness said current differentials do not provide enough financial incentive to move milk from supply regions to Class I plants. As a result, said the witness, the cost of supplying fluid milk needs is largely borne by cooperatives and their members.

For the Mideast area, the DFA witness said the committee concentrated on a select group of larger cities in the region to analyze the relative value differences. The overall objective was to determine the value needed to encourage milk to move from milk supply areas in the north and west to areas of demand. The committee started with Chicago, Illinois, and determined that even though no fluid plants operated in the Chicago region, its differential should align with

prices of locations that supply packaged milk, which are Grand Rapids, Michigan, Cedarburg Wisconsin, Rockford, Illinois, and Dubuque, Iowa. The committee ultimately determined a \$3.10 differential appropriate for Chicago (Cook County). From there, the witness reviewed a series of city pairs and provided justification for why the proposed differentials were adjusted from the USDSS model average. Reasons given for the changes centered on distance from larger population centers and/or milk supply areas and providing enough financial incentive, in the committee's opinion, to encourage milk to move where needed. The witness mentioned another consideration was the willingness of milk haulers to deliver, referring to resistance of milk haulers to make the long hauls needed to deliver milk to central Ohio, for example.

The DFA witness also detailed considerations for proposed differentials in western Pennsylvania, centering around plants in the Pittsburgh area, and plants in southwest Ohio and eastern Indiana. They said differentials were adjusted in those areas to account for what the committee believed were current competitive relationships. The witness said that, ultimately, the committee recommended more slope than the USDSS model by reducing the differential increases in the milk surplus areas of Michigan and increasing the slope when moving to the south and east.

Another DFA witness spoke to increased hauling costs in the Mideast area. The witness said that as the number of dairy farms in the area has declined, so has the number of available milk haulers. Compounding the issue is competition with other industries who also rely on commercial haulers. As a result, milk hauling rates have increased as the fewer number of milk haulers must travel farther distances to assemble and deliver milk loads. The witness presented data on various factors that contribute to overall transportation costs, such as wages, diesel fuel prices, and equipment purchase costs.

A witness from the Michigan Milk Producers Association (MMPA) testified on the unique Michigan marketing conditions that resulted in deviations from the USDSS model output. The witness said Michigan has experienced significant milk production growth, accounting for 68 percent of the region's growth. Michigan milk production serves as a reserve supply for states south and east, which are considerably longer routes than when the differentials were adopted in 2000, said the witness. They testified current

differentials are no longer adequate to cover current transportation costs and highlighted how the large flat differential zone in Michigan, covering 525 miles, makes it difficult to encourage milk to travel farther distances to supply fluid demand instead of satisfying local manufacturing plant demand. Therefore, NMPF proposed more, smaller pricing zones within the state to better reflect the cost to move milk. The witness estimated MMPA's hauling cost for transporting milk from mid-Michigan to eastern Ohio, approximately 287 miles, was \$1.06 per cwt per 100 miles.

The MMPA witness testified that it has been more difficult to obtain over-order premiums to cover increased costs because national retailers with more bargaining power have replaced local independent stores. Consequently, the witness said, national retailers with a wider geographic footprint and higher milk volume needs have put downward pressure on premiums. The witness concluded that increasing Class I differentials to better reflect the cost of supplying the fluid market would be more equitable than an increasing reliance on a dairy farmer's ability to negotiate over-order premiums in a magnitude large enough to fully cover costs.

Upper Midwest

A Prairie Farms witness representing NMPF discussed the proposed Minnesota and Wisconsin differentials. The witness said the USDSS model results had too much slope between the states that would have created too much financial incentive to move milk out of Minnesota, creating difficulties for Minnesota plants to compete for a milk supply. Consequently, the witness said NMPF is proposing fewer differential zones in the Upper Midwest FMMO region to ensure a local supply could be maintained. Further, in that region, NMPF was cognizant to propose differential levels that would minimize negative impacts on producer blend prices. This witness opined the differentials contained in Proposal 19 would not fully cover the cost of moving milk the long distances required to service the fluid market in regions where they operate. However, they said, the proposed differentials would encourage the availability of adequate milk supplies to support milk demand in distant markets.

Central

The Prairie Farms witness also testified on the proposed Class I differentials in the Illinois, Iowa, Missouri, and Nebraska areas. The

witness said that in the last 20 years the cooperative has become more dependent on supplemental milk supplies to serve markets in Illinois and Missouri, while Iowa has lost milk processing capacity in the eastern half of the state due to plant closures. In addition, the decline of milk production in southeast Iowa has made it more difficult for Prairie Farms to supply milk into the Appalachian and Southeast FMMOs to meet its supplemental milk needs. All these factors have contributed to changes in the region's milk movements and increased producer hauling costs, stressed the witness. The witness reviewed several equidistant Prairie Farms hauling routes and highlighted the disparity in differential gains. For example, some routes traveling approximately 300 miles may see a differential gain of \$0.90, while other routes traveling a similar distance may only see a gain of \$0.25. The witness stated the region's differentials need to be adjusted to remove some of the disparity and provide adequate financial incentive to supply fluid plants located in the south and east. The Prairie Farms witness said their cost to move milk to its four southern and southeastern fluid plants was approximately \$5.25 to \$5.50 per loaded mile, and costs to supply plants in central Illinois was similar.

A DFA witness also testified to differentials proposed for the Central FMMO region. The witness echoed other testimony regarding decreased farm numbers, longer distances traveled, and increased hauling expenses. The witness estimated DFA hauling costs in the region have increased 151 percent from 2005 to 2022. The witness spoke to the proposed differential increases in the region and explained that Proposal 19 would increase the current differential values by \$1.35 in Kansas City, \$1.15 in Omaha and \$1.65 in Wichita. The witness elaborated that the higher increase in Wichita reflects the area's lack of an adequate local milk supply. More specifically, the witness stated that only 27 percent of Wichita's demand is delivered from within a 150-mile radius, while in Kansas City and Omaha, 47 percent and 55 percent, respectively, comes from within 150 miles.

Numerous NMPF witnesses testified about the proposed Colorado differentials. One DFA witness testified the USDSS model overestimated the amount of milk in Colorado available to meet the State's fluid needs because of private contractual relationships with manufacturing plants. Consequently, NMPF recommends deviations from the model to recognize current competitive

relationships, said the witness. The witness also discussed population, milk production, and fluid demand similarities between Denver and other regional cities to justify increasing the Denver area differentials to more closely align with differentials in those cities. The witness said adoption of the USDSS model output for Colorado, without adjustments, when combined with other changes that could result from this rulemaking would result in significant, unsustainable decreases in producer pay prices and, thus, blend price equity must be considered when making differential adjustments.

Other DFA witnesses spoke in more detail on the potential producer price impact on Colorado dairy farmers. The witnesses testified hauling and feed costs in Colorado are higher than other parts of the region, which they believe were not properly accounted for in the USDSS model. One witness said producer prices in Colorado currently exceed those of the FMMO's base zone, however, if the USDSS model average were adopted, it would result in producer blend prices lower than prices announced at the base zone, causing significant financial harm to Colorado dairy farmers.

Arizona

A United Dairymen of Arizona (UDA) witness representing NMPF testified in support of Proposal 19. UDA is a dairy farmer-owned cooperative association, with 36 cooperative members and a manufacturing plant located in Arizona. The witness cited many factors, such as weather, climate, transportation, fuel, and increased costs of producing Grade A milk as challenges for Arizona dairy farmers. The witness stressed the costs of maintaining Grade A status in the state exceeded \$2.35 per cwt. According to the UDA witness, the proposed Arizona Class I differentials: generally follow the USDSS model, with deviations made to reflect local market conditions; maintain current price relationships between handlers within Arizona and the surrounding states; and establish a smooth differential transition from surrounding areas.

The witness noted UDA operates a plant in Tempe, Arizona, that serves as a balancing plant for the market. The witness said the cost of operating the plant does increase in the summer months as less milk volume is run through the plant when milk supplies are lower.

California

A CDI witness testified on the process for determining the proposed California differentials. The witness said the goal

of the California differentials was to recognize regional cost drivers and local market conditions unique to servicing California urban areas, and to maintain price relationships with surrounding states. In the witness' opinion, the USDSS model did not account for the impact on producer prices, which could alter pool stability and incentives to supply the Class I market, and region-specific cost drivers such as geography or traffic. Those considerations form the basis for the deviations from the USDSS model output NMPF proposed.

The CDI witness provided an overview of the similarities between the California Central Valley and Upper Midwest milksheds to justify the position that the lowest differential in both regions should remain similar. For that reason, said the witness, NMPF proposes a minimum differential zone of \$2.50 in California, which is similar to the lowest Upper Midwest FMMO differential zone of \$2.55. The witness also discussed dwindling milk supplies, increased population, pervasive traffic congestion, and the closure of manufacturing plants in southern California as reasons for making off-model adjustments. The witness described changes made in three California regions (Central Valley, Bay Area, and Southern California) to provide incentives for dairy farmers to serve the Class I market in urban areas.

A DFA witness also testified on the proposed Class I differentials for California and northern Nevada. The witness advocated the maintenance of competitive equity between Class I and manufacturing plants in northern Nevada and California counties. The witness was of the opinion the USDSS model fell short in adequately capturing the cost of producing milk in California. The witness said the current \$0.10 difference in zones is not sufficient as it does not reflect the actual movements of milk or unique California State regulations, taxes, geography, and high milk production costs. The witness stated the current differentials do not cover the hauling costs in a state with high gas prices, heavy traffic, and road weight limits. The witness supported testimony from the CDI witness justifying the proposed California differentials. The DFA witness also expressed northern Nevada counties have a historic competitive relationship with northern California, which should be preserved. The witness noted that Proposal 19 recognizes this dynamic by proposing a \$2.90 differential for the region.

Pacific Northwest

A witness representing Northwest Dairy Association (NDA) testified on behalf of NMPF regarding the proposed differentials in the Pacific Northwest region, which includes the States of Washington, Oregon, Idaho and Montana. NDA is a dairy farmer-owned cooperative that markets the milk of approximately 295 dairy farmers in Washington, Oregon, Idaho, and Montana, and conducts all processing and marketing operations through the wholly owned subsidiary Darigold. The witness described regional competitiveness at the farm level, ensuring incentives to supply Class I markets, and geographic and population-influenced cost factors were the primary reasons the proposed differentials deviate from the USDSS model's averages. The witness was of the opinion proposed differentials in the Pacific Northwest FMMO urban areas should mirror those of the Central FMMO, as the urban areas of the two regions operate similarly. To ensure competitive equity and the balancing needs of distinct areas within the region, the witness said Proposal 19 recommended fewer pricing zones than produced by the USDSS model.

The NDA witness also described market changes similar to those of other witnesses: declining milk production, increased population, longer haul distances, and increased transportation costs. The witness estimated NDA transportation costs for servicing Pacific Northwest Class I plants has increased \$1.10 per cwt in the last 15 years.

Regarding the unregulated areas of the northwest, the witness used King County, Washington, as the base at \$3.00 per cwt, and kept the zones the same as they currently exist. In counties with little to no milk production, the differential was reduced to as low as \$2.20 in Idaho. For areas with higher milk production, the differentials were proposed at \$2.55, reflecting the same level of differentials in South Dakota.

In its post-hearing brief, NMPF emphasized adoption of Proposal 19 was necessary to ensure Class I differentials would be more reflective of the current costs of supplying the Class I market. NMPF maintained that the proposal would result in Class I differentials below actual costs, keeping with the FMMO principle of minimum pricing. NMPF reiterated testimony given at the hearing regarding the continued relevancy of the costs associated with the base differential and stressed that costs have increased since it was first adopted in 2000. NMPF reviewed its own testimony at the

hearing on what it believed were the appropriate regional considerations used to propose deviations from the USDSS model results. According to NMPF, adoption of Proposal 19 would only raise the regulated cost of Class I milk under FMMOs by slightly less than 8 percent.

NMPF reiterated the importance of Class I prices remaining the highest priced class to ensure producers move surplus milk to deficit regions to meet Class I demand. Without such pricing hierarchy, NMPF stated, milk in the higher-valued use class would not be pooled and it would result in non-uniform prices to producers.

A witness representing the AFBF testified in support of Proposal 19. The witness concurred with NMPF testimony on the increased costs of servicing the market since the differentials were adopted in 2000. In offering support for the differential adjustments, the witness said the purpose of the USDSS model was to mimic an ideal market solution, so it would be expected that actual market costs are higher. The witness mentioned that given the seasonality of milk demand, it could be considered more appropriate to start with the USDSS model's October 2021 results, rather than the average of May and October. In its post-hearing brief, the AFBF stressed that regulated Class I differentials provide for long-term stability; something that cannot be assured if a larger portion of milk prices is negotiated through over-order premiums.

A witness representing IDFA testified in opposition to Proposal 19. The witness was of the opinion NMPF did not use a consistent methodology when determining differential level adjustments from the USDSS model results. Additionally, stressed the witness, some of the factors NMPF considered were not relevant and/or were unevenly applied (dairy farm production costs, private business relationships, blend price impacts, and regional dairy farm competitiveness), or were already factored into the USDSS model (transportation costs and maintaining handler equity). The witness was of the opinion that if milk suppliers and cooperatives experienced transportation costs higher than those provided for in the differentials, the additional cost reimbursement should be negotiated through over-order premiums with milk buyers. The witness also took issue with what they deemed an undefined base differential, proposed at \$1.60 in some areas and \$2.20 in other areas, because they

opined, there was no cost justification for the difference.

The IDFA witness argued the purpose of Class I differentials is to bring forth an adequate supply of milk for fluid use. According to the witness, with an FMMO Class I utilization of 27 percent, the current milk supply is more than adequate to serve Class I needs and there is no justification for increasing Class I differentials. The IDFA witness cited a recent retail milk demand study that found milk demand is elastic and, thus, the quantity demanded is sensitive to price changes. The witness argued any increase in price would not only hurt Class I sales, but also increase government purchase costs for milk used in nutrition and feeding programs. The witness stressed retail fluid milk sales are declining and USDA should not hasten the decline by increasing Class I prices. The witness also added that eliminating or reducing the depooling of milk should not be a consideration when evaluating Class I differential levels. The witness said depooling is a necessary tool for manufacturing handlers when the Class III or Class IV price exceeds the blend price. They estimated that in some FMMO areas the Class I differential would have to increase to \$41.32 per cwt in order to disincentivize depooling.

The IDFA witness was of the opinion that if USDA recommends differential increases, they should not be increased in the three southeastern FMMOs as those provisions already require fluid milk handlers to pay transportation credits and distributing plant delivery credit assessments to encourage producers to service Class I demand in those deficit markets. The witness estimated those assessments already account for approximately 42 to 46 percent of the differential increases contained in Proposal 19.

The IDFA witness also argued the \$0.40 portion of the base differential attributed to maintaining Grade A status is no longer relevant given over 99 percent of all milk currently produced is Grade A. Consequently, said the witness, there is no longer a need to incentivize farms to become Grade A in order to service the Class I market and the base differential should be lowered to \$1.20 per cwt.

Two witnesses representing IDFA, Saputo and Plains Dairy, testified in opposition to Proposal 19 and offered support for the arguments put forth by the IDFA witness. The Saputo witness said increasing fluid milk prices may reduce the retail price spread between fluid milk and plant-based products, further depress fluid milk sales, and

ultimately force fluid plants to switch from HTST to ESL processing. The witness speculated a further decline in HTST facilities will force cultured products to be made elsewhere and increase costs to consumers. In regard to obtaining milk supplies, the witness said Saputo pays over-order premiums when necessary. The witness also opposed any increases in minimum regulated prices on the grounds that nonuniform increases would put some of its plants at a cost disadvantage. The Plains Dairy witness stated the increase from the model average results would impact consumer prices by \$0.07 per gallon. Plains Dairy is a fluid milk processing facility in Texas.

A witness representing MIG also testified in opposition to Proposal 19 for many of the same reasons articulated by the IDFA witness. The MIG witness said NMPF failed to cost-justify any elements of the base differential, either at the \$1.60 or \$2.20 level, to support why it should be maintained. In echoing IDFA's arguments, the MIG witness also objected to NMPF's use of the USDSS model's averages as a starting point. As the FMMO system provides for minimum prices, the witness was of the opinion any evaluation of differential changes should start with the USDSS model's May results, which represent the flush season for milk production. The witness said Proposal 19's problems are compounded because NMPF failed to use a consistent set of principles to justify its deviations from the USDSS model results. In addition, many of the factors used to justify deviations, the witness said, were already factors considered by the model and, thus, are being double counted.

The MIG witness characterized the NMPF deviations as substantial and presented a series of maps to visualize the magnitude of the disparate changes. The witness also pointed to areas where price changes are more dramatic between neighboring counties and suggested such price disparities could create incentives for disorderly marketing. The witness deemed the Proposal 19 differentials to be significantly different from current differentials and argued the increases were proposed despite a lack of evidence from NMPF that there is a shortage of milk available to meet Class I demand. Class I differentials should reflect the minimum cost of supplying Class I milk, stressed the witness. If there are additional transportation costs not provided for under the current differential, as alleged by NMPF, the witness testified, those would be reflected in negotiated over-order premiums in the market. Instead, many

areas of the country have no over-order premiums, which the MIG witness interpreted as an indication that FMMO prices are not minimums, but price enhancing. Similar to the IDFA witness, the MIG witness was of the opinion no changes should be made to the differentials in the three southeastern FMMOs until the full impact of the recent amendments to the transportation credits and establishment of the distributing plant delivery credits are known.

Three witnesses representing Organic Valley testified in opposition to Proposal 19. Organic Valley consists of 1,600 farmer-owners who produce certified organic milk, three dairy manufacturing facilities which make Class III and IV products and a network of co-packers to process and distribute Class I products. The witnesses opposed the NMPF proposed differentials as they would increase Organic Valley's obligation to FMMO marketwide pools.

The Organic Valley witnesses described the differences between the organic and conventional milk markets (both at the producer and processor levels). They were of the opinion Proposal 19 failed to account for these differences and would result in inefficient milk movements if adopted. The witnesses countered arguments that the conventional market balances the organic market, claiming only around 2 percent of organic milk finds its way into conventional products.

A witness from Aurora testified in opposition to Proposal 19. Aurora is a vertically integrated organic milk supplier with four organic dairy farms located in Colorado and Texas. The witness was of the opinion no justification exists to increase Class I differentials as the areas surrounding the Aurora plants have adequate organic milk supplies, something that was not accounted for in the USDSS model. The witness described the organic milk market and argued its structural differences from the conventional milk market make any change to the Class I differentials as applied to organic milk unwarranted. Similar arguments were made by a MIG witness on behalf of Danone and Crystal Creamery.

A witness for Maple Hill Creamery (Maple Hill) testified in opposition to Proposal 19. Maple Hill purchases grass-fed organic milk for processing and national distribution but does not own a fluid milk plant. The witness opposed the proposed Class I differentials and estimated their Class I marketwide pool obligation could increase up to 80 percent as a result. The witness made arguments similar to other organic processors and concluded that

increasing Class I differentials would result in a choice between paying a lower organic fixed price to its dairy farm suppliers and jeopardizing supply or raising retail prices and jeopardizing sales.

A witness representing Shamrock, a member of MIG, testified in opposition to Proposal 19. The witness said adoption of Proposal 19 would increase their raw milk costs anywhere from 29 to 62 percent. The witness testified Shamrock pays over-order premiums which they believed cover any additional costs associated with servicing their plants in excess of the Class I differential value. The witness noted an inconsistency in NMPF methodology, as the differential for their Virginia plant is proposed at the USDSS model average, while the differential at their Arizona plant is \$0.65 greater than the average.

A witness for AE, a MIG member, also testified in opposition to Proposal 19. The witness was of the opinion NMPF had not provided justification for the Class I differential increases. They specifically objected to the Class I differential changes that would, in the witness' opinion, give its nearest competitor a \$0.15 greater advantage than currently exists.

A MIG member witness for HP Hood testified in opposition to Proposal 19. HP Hood also operates four standalone Class II plants in the northeast. Similar to the AE witness, the HP Hood witness testified the proposed Class I differentials would create competitive disadvantages for their plants in relation to nearby cooperative owned plants. The witness criticized what they believed was the lack of uniformity used by NMPF in developing differentials that deviated from USDSS model results. The witness said there were ample milk supplies to meet Class I needs and any increase in the Class I price would only serve to decrease fluid milk sales.

A witness from Turner Dairy, a MIG member, testified in opposition of Proposal 19. The witness objected to the continued relevance of the three base differential components. The witness said Turner Dairy had not had difficulty finding adequate milk supplies through its independent dairy farm supply. The witness said any Class I differential increases would be paid into the FMMO marketwide pool, not to its direct suppliers. The witness said this would make it harder to compete for dairy farm suppliers, particularly with competitors in the unregulated area to their east. Similar to other witnesses, the Turner Dairy witness detailed how the proposed Class I differentials created

competitive disadvantages for their plants relative to nearby cooperative plants and would decrease fluid milk consumption.

A MIG witness testifying on behalf of fairlife opposed Proposal 19. The witness argued that if more money is needed to attract fluid milk supplies, it should be negotiated in the marketplace, not mandated in FMMO pricing provisions. The witness said fairlife regularly pays over-order premiums for even day receiving, transportation costs, and quality attributes. In the witness' opinion, there were ample fluid milk supplies and any increase in differential would only serve to create market winners and losers.

A witness from Shehadey, testified in opposition to Proposal 19. Shehadey operates four manufacturing plants in California, Nevada, and Oregon, producing Class I and Class II products. The witness argued the Class I differentials proposed for their plant locations should not be increased as the local milk supply was adequate to meet their fluid needs. The witness took particular objection with the disproportionate increase by the Fresno, California, plant in relation to their competitors located farther from the state's primary milk supply in the Central Valley. The witness added that their Oregon plant has a more distant milk supply relative to their other plants, and over-order premiums are used to compensate dairy farmers for the additional costs of servicing the plant.

A witness representing United Dairy, Inc. (United) testified in opposition to Proposal 19. United is a fluid milk processor operating three plants in West Virginia, Ohio, and Pennsylvania, which are primarily supplied by independent dairy farms. The witness testified their plants received adequate milk supplies and pay over-order premiums when needed to ensure their milk needs are met. The witness opined the market should depend on over-order premiums, not unduly high regulated prices, to direct milk where needed. Similar to other witnesses, the United witness argued FMMO prices should not be increased because it would negatively impact Class I sales. The witness objected to the uneven application of differential increases, highlighting the differential increases for the United plants are higher than every other plant in the region, even when United has had no milk supply shortages. A West Virginia independent dairy farm supplier of United also testified in opposition to Proposal 19. The witness expressed concern the proposed differential increases would ultimately

lead to the closure of the independent fluid milk processors in the State, leaving local dairy farmers with few, if any, local market outlets, and would widen the nutritional gap that already exists in the Appalachian area as higher prices would reduce fluid milk consumption.

A witness representing Lamers testified in opposition to Proposal 19. The witness said increasing Class I differentials would not benefit consumers or processors as higher prices would lead to a decline in fluid milk consumption and the closure of more fluid milk plants. The witness was of the opinion that limiting or disallowing the depooling of manufacturing milk would be a more beneficial change for all dairy stakeholders. A post-hearing brief filed by Lamers contended the hearing record contained no evidence of Class I demand not being fulfilled, thus, any increase in Class I prices was not justified. The brief argued that if additional transportation costs of moving milk to Class I plants exist, they should be negotiated through over-order premiums.

A series of academic researchers testified regarding milk price elasticity. One researcher testified on behalf of NMPF regarding the potential impact to fluid milk demand as a result of regulated price changes. The witness referred to this as price elasticity, which estimates the percentage change in demand (quantity) due to a 1 percent change in price. The witness said any price elasticity less than the absolute value of 1 is considered price inelastic—a 1 percent change in price would result in less than a 1 percent change in demand—implying increased revenue due to the price change would more than offset the decreased revenue from fewer sales.

The NMPF witness reviewed 38 empirical studies, conducted between 1964 and 2022, measuring milk price elasticity at the retail level. The witness found the study average elasticity of 0.35 percent, and a median of 0.2 percent, concluding milk demand is inelastic. The witness said consumers remain price insensitive because milk continues to be considered a staple food. To illustrate its price inelasticity, the witness elaborated the real price of milk relative to all goods and services has declined 7 percent since 2013, during which time milk demand has decreased 18.3 percent. If milk was elastic, said the witness, a decline in price should have resulted in an increase in demand. The witness reviewed other factors which they believed were driving decreased milk

consumption, including increased competition in the beverage market from new products and alternative beverages, an increase in the amount of food consumed away from home, and the lower proportion of young kids in the population.

The NMPF witness evaluated the average increase in differentials contained in Proposal 19, \$1.49 or an 8.6 percent Class I price increase, to estimate the impact on demand. Assuming a 55 percent retail price transmission rate (1 percent change in the Class I price would cause a 0.55 percent change in the retail price), the witness estimated Proposal 19 would lead to a 1.6 percent decrease in demand. The witness concluded the decrease in demand would be lower than the increase in Class I revenue, resulting in a net increase of dairy farmer revenue.

Another researcher testified on behalf of IDFA. The witness presented the results of a study evaluating the impact milk price changes have on the consumption of milk (in five disaggregated varieties) and various alternatives, including soft drinks, bottled, water, juices, and for the first time considered plant-based alternatives. The witness utilized weekly scanner data from 2017 through August 2023 to evaluate three distinct time periods (pre-COVID, COVID and post-COVID). The witness estimated the data represented approximately 84 percent of the milk volume sold at retail outlets, or 64 percent of overall milk volume. The witness attributed the remaining 36 percent to milk sales through untracked retail, foodservice, schools, and shrinkage. The witness noted it is likely the elasticity for the unaccounted milk volume was highly inelastic.

The IDFA witness said the study found the own-price elasticities for traditional white, flavored, and lactose-free milk to be elastic, and when all five categories of milk were combined, it had an elasticity of -1.26 in the post-COVID time period. Utilizing some of the NMPF researcher's assumptions (8.6 percent increase in Class I prices and a retail price transmission rate of .55 percent), the witness estimated adoption of Proposal 19 would result in an overall 5.98 percent decrease in fluid milk sales and a 2.1 percent increase in gross dairy farmer revenue. The witness concluded this study revealed retail fluid milk sales are more sensitive to price changes than previously thought. The witness also noted other demand studies that utilize AMS estimated fluid milk sales, not weekly scanner data, do not reflect the current retail marketplace

because they incorporate highly inelastic sales to schools, colleges and universities, long-term care and senior living facilities, hospitals, and correctional institutions.

A third academic researcher, also testifying on behalf of IDFA, provided results of a study evaluating the market effects of Proposal 19. Looking at milk production, fluid milk consumption, and producer price statistics since 2000, the witness concluded there are sufficient milk supplies nationally to meet Class I demands. The witness was also of the opinion sufficient milk supplies, at reasonable prices, exist for the high Class I utilization FMMOs (the Appalachian, Southeast, and Florida), because retail prices in the three markets were below those of a 30-city average retail milk price when compared to other regions of the country. The witness commented that elasticity studies not accounting for non-dairy alternatives were not representative of the current retail market. The witness reviewed recent fluid demand studies and concluded adoption of Proposal 19 would increase fluid milk prices, decrease consumption, and result in more milk use in manufactured products.

A post-hearing brief submitted on behalf of Select supported increasing Class I differentials, but not to the levels contained in Proposal 19. Select contended deviations from the USDSS model results made by NMPF may be appropriate but disagreed with the type and extent of those included in Proposal 19. Select took exception to the proposed adjustments in the mideast and southwest regions where they have member farms. Select noted reasons for making deviations were not applied uniformly, especially in areas that have similar supply and demand environments. Select stated increased transportation costs and shifts in milk production and processing locations justify increasing Class I differentials and offered support for using the average of the May and October 2021 USDSS results, with minor adjustments and smoothing of the surface as appropriate.

A post-hearing brief submitted on behalf of MIG opposed adoption of Proposal 19, arguing hearing evidence supported lowering, not raising, Class I differentials. MIG cites the abundance of milk available to serve the Class I market and FMMO adjustments to shipping percentages as evidence to deny Proposal 19. MIG reiterated its objection to the methodology used and deviations made by NMPF in developing the proposed differentials. The brief contended raising Class I

differentials would be disorderly because it would lower Class I demand and aggravate challenges already faced by fluid milk processors. MIG also noted Class I differential changes should not be considered until the impact of recent changes to transportation cost-related provisions in the Appalachian, Florida, and Southeast FMMOs were known.

A post-hearing brief submitted on behalf of IDFA opposed Proposal 19 on the grounds its adoption would cause market disorder by raising fluid milk prices, decreasing fluid milk consumption, harm consumers, and divert milk into manufacturing uses. IDFA reiterated hearing testimony in its brief regarding the price elasticity of fluid milk and concluded adopting Proposal 19 would reduce fluid milk consumption by 5.98 percent, resulting in over 2.2 billion pounds of milk being diverted to manufacturing uses.

Similarly, IDFA objected to NMPF's methodology in determining the differential levels offered in Proposal 19. IDFA objected to NMPF's use of dairy farm production costs to justify increases to the Class I differentials and referenced existing milk production as more than adequate to meet fluid milk demand. IDFA maintained Class I differentials should instead be lowered by \$0.40 per cwt because the Grade A maintenance cost consideration is obsolete and inaccurate.

A MIG witness testified in support of Proposal 20, seeking to reduce the base differential to \$0.00. The witness' testimony centered around the continued relevance of the cost components currently provided for in the base differential: Grade A maintenance, balancing, and Class I incentive costs. The witness was of the opinion the base differential results in market enhancing prices that induce overproduction and reduce fluid milk consumption. The witness said that since almost all U.S. produced milk meets Grade A standards, it is no longer necessary to provide compensation through Class I differentials for those costs as they are not unique to producers supplying the Class I market. They argued these costs are already provided for in market-clearing Class III and IV prices where most of the U.S. milk supply is utilized.

The MIG witness said the balancing cost factor is no longer justified as fluid milk processors have either invested in infrastructure to balance their own milk supply or pay over-order premiums to their suppliers for balancing services. The witness was of the opinion incorporating balancing costs within the Class I price results in processors paying for balancing services they do not

receive or paying twice for such services—once through the Class I price and again in an over-order premium. Lastly, the MIG witness argued the \$0.60 Class I incentive cost factor was no longer necessary to attract adequate supplies of fluid milk given the low, and continually declining Class I utilization.

Witnesses from MIG member companies testified in support of Proposal 20. MIG's members echoed the previous MIG testimony challenging the relevance of the base differential cost factors in the current market environment. In particular, the MIG witnesses argued that through plant investments, particularly ESL processing or additional milk silos, combined with over-order premiums paid to their milk suppliers, they were directly paying for their individual milk balancing needs. The witnesses all opined that through the base differential they were being double charged for such services. All MIG members testified that if additional monies are needed for balancing services or to obtain adequate milk supplies, it is more appropriate for those costs to be negotiated in the marketplace and paid directly to their milk suppliers, rather than as part of a regulated minimum price shared with all pooled producers.

Another MIG witness testified regarding the relevancy of the base differential in the current marketplace. The witness was of the opinion the base differential should be reduced to \$0.00, and if cost recovery is needed by producers, it can be negotiated with milk buyers. The witness utilized the USDSS model to compare the value of Class I and Class III milk at the county level. The witness presented the results and explained in some parts of the country, where Class III milk is more valuable, it would take additional incentives to service a Class I plant rather than remain at the higher valued manufacturing plant. In other areas of the country, namely the southeast, northeast, and California, the value of Class I is higher, representing the cost to balance the region's Class I demand. The witness said the national average value of the differences was negative \$0.38, indicating nationally, it is more valuable for milk to service Class III plants. The witness drew the conclusion this analysis supports the argument for lowering the base differential to \$0.00 and allowing fluid plants to negotiate and pay premiums directly to their milk suppliers.

A post-hearing brief submitted on behalf of MIG reiterated its witnesses' testimony that the base differential is no longer economically justified. MIG

argued the current oversupply of Class I milk is caused, in part, from high FMMO blend prices. According to MIG, adoption of Proposal 20 would correct this disorder by allowing a greater proportion of fluid milk costs to be negotiated and paid directly to suppliers. The brief reviewed MIG witness testimony on the relevancy of the costs associated with the base differential and the steps taken by its fluid milk processor members to balance and obtain a milk supply.

A Lone Star witness, appearing on behalf of NMPF, testified in opposition to Proposal 20. The witness argued a base differential of \$0.00 would result in the elimination of any Class I differential for large portions of the U.S., amounting to approximately \$650 million annually, with no guarantee the money could be recovered through over-order premiums. Additionally, said the witness, the lower differentials would lead to disorderly marketing conditions through increased occurrences of negative PPDs, higher volumes of depooled milk, and reduced or eliminated incentives to supply the Class I market. The witness stressed that costs to maintain Grade A status and balance the market's milk supply are real and significant. The witness said adoption of Proposal 20 would be akin to adopting individual handler pools in much of the country, an idea which they said has been found to cause disorderly marketing conditions.

The NMPF witness maintained that milk has an inelastic demand, so any reduction in Class I prices will not have a significant impact on Class I sales. The witness also said that despite opposition testimony regarding the perils of setting regulated prices too high, there are also negative consequences for setting the regulated price too low. In the witness's opinion, dairy farmers face a market power imbalance when negotiating prices above FMMO minimums, reiterating previous testimony on the difficulty cooperatives faced when negotiating and maintaining over-order premiums.

The NMPF witness concluded by emphasizing the objective of the FMMO system is to set prices to ensure a sufficient quantity of milk for fluid use. The witness stressed providing for prices that reflect the current costs of supplying the market as demonstrated through NMPF testimony should be a priority of this proceeding.

In their post-hearing brief, NMPF argued Proposal 20 incorrectly assumes the cost of servicing Class I demand has not increased and reiterated witness testimony on the continued relevancy and need for the base differential. NMPF

stressed that costs recognized in the base differential continued to be incurred by dairy farmers in servicing the Class I market and took exception with the position such costs could be adequately recovered through over-order premiums. NMPF maintained Class I demand is inelastic and reiterated the need for Class I prices to continue to be the highest priced class in order to ensure an adequate supply.

The AFBF witness also expressed opposition to Proposal 20. The witness testified the cost factors provided for in the base differential are still relevant and in fact higher than when the differential was adopted. The witness suggested the Department consider raising the base differential and provided current cost estimates for each of the three factors, which resulted in a base differential increase of approximately \$0.60 per cwt. The witness stressed the importance of the base differential in contributing to the proper alignment of classified prices which they considered a critical element of orderly marketing. The AFBF's post-hearing brief reiterated its witnesses' hearing testimony and concluded adoption of Proposal 20 would lead to disorderly marketing conditions.

A post-hearing brief filed by Lamers offered support for Proposal 20. Lamers stated its adoption would better reflect the real value of milk and all four classes would have a closer price relationship. Lamers asserted high Class I differentials were no longer needed to supply the fluid market given that 98 percent of milk produced is Grade A. A post-hearing brief submitted by New Dairy also offered support for Proposal 20.

Select's post-hearing brief expressed opposition to Proposal 20 and asserted a base differential of \$1.60 should be maintained. Select opined the cost of maintaining Grade A status still exists and has increased, as have the costs associated with balancing and competing for a milk supply.

A post-hearing brief submitted by Edge, while not offering support or opposition to Proposals 19 or 20, did contend Class I milk prices should not be raised beyond necessary levels and not be raised merely to offset the negative producer impact of increasing make allowances.

The AFBF witness also testified in support of Proposal 21, seeking to increase the Class II differential from \$0.70 to \$1.56 per cwt. The witness explained the proposed differential reflects updated drying costs based on the current NFDM make allowance. The witness did not believe the proposed

increase would lead to the substitution of Class IV powders in lieu of Class II fresh milk. The witness estimated that adoption of Proposal 21 would increase annual FMMO marketwide pool values by \$122 million and reduce the likelihood of negative PPDs and depooling. These views were reiterated in AFBF's post-hearing brief.

Several witnesses representing MIG including Turner Dairy; HP Hood; AE; Shamrock; CROPP; Aurora; Shehadey; Crystal Creamery; and fairlife testified in opposition to Proposal 21. The MIG witnesses indicated adoption of Proposal 21 would result in Class II standalone plants choosing not to participate in the FMMO system, putting fully regulated Class I plants with Class II production at a competitive disadvantage. This sentiment was emphasized by witnesses from Turner Dairy and Shehadey, whose fully regulated Class I plants also produced notable volumes of Class II products. The witness from Crystal Creamery provided an analysis of CME NFDM and Class II nonfat solids prices, projecting an increase of 20 to 50 percent in the use of Class IV nonfat solids if Proposal 21 was adopted. Lastly, a witness from fairlife predicted adoption of Proposal 21 would cause some manufacturers to reformulate products in order to avoid paying the higher Class II price.

In its post-hearing brief, MIG reiterated hearing testimony and added that cream, a Class II product, must be made with fluid milk in accordance with the standards of identity established by the U.S. Food and Drug Administration. As such, according to MIG, a pooled Class II manufacturer of cream could not reformulate and, further, would experience an estimated 3.5 percent increase in its FMMO marketwide pool obligations.

Several witnesses representing IDFA, including Saputo, Galloway, and Lakeview Farms, also testified in opposition to Proposal 21. The witness for Saputo indicated the demand for Class II skim solids is likely to decrease if Proposal 21 is adopted, as alternative milk solids would have a greater substitution value. Further, according to the witness, costs to consumers for cream would likely increase.

The witness for Galloway testified that adoption of Proposal 21 would not increase blend prices or limit depooling and negative PPDs, as alleged, because Class II manufacturers would instead utilize more Class IV powder ingredients in lieu of fresh milk. In the witness' opinion, increasing the Class II differential would only serve to promote disorderly marketing through the

displacement of the local milk supply and permanent investment in equipment to enable the use of Class IV ingredients. The witness said once a manufacturer makes the costly capital investment decision, they do not switch back to use fresh milk in the future. The witness estimated adoption of Proposal 21 would result in a \$99.4 million loss to producers through the use of lower valued Class IV ingredients. A witness from Lakeview Farms supported the statements of other witnesses, emphasizing the likely increase in costs to the customer. This witness added that innovation of more oil-based formulations to offset the price volatility of dairy fat would lead to a disruption in the dairy supply chain.

In its post-hearing brief, IDFA reiterated testimony from the hearing which stressed that there is already an adequate supply of milk for Class I and Class II needs and opined the current Class II price formula is working well as is. As such, according to IDFA, there is no evidence that suggests a need to increase the Class II differential. IDFA argued further that farmers are likely to receive lower net prices as a result of Proposal 21 due to the anticipated substitution of lower cost Class IV NFDM for Class II nonfat solids. Lastly, IDFA focused on the likely disproportionate impact of Proposal 21 on Class I handlers that also manufacture Class II products. Without the ability to depool, these handlers could not take advantage of lower NFDM prices, IDFA wrote.

An MMPA witness appearing on behalf of NMPF also testified in opposition to Proposal 21. The witness' testimony mirrored other witnesses cautioning that adoption could cause substitution with Class IV powder ingredients. The witness said not only does the Class II and Class IV price difference need to be considered, but so does the significantly lower transportation cost of powder versus fresh milk. Under the current Class II differential, Class II milk already has an incentive not to be pooled, said the witness. Increasing the differential would only heighten the incentive and create competitive disadvantages for Class I plants making Class II products, while simultaneously lowering marketwide pool values. In its post-hearing brief, NMPF added that adoption of Proposal 21 may incentivize the practice of substituting less expensive milk powder for fresh milk to make Class II products. NMPF also elaborated on its members' concerns regarding the likely increase in depooling of Class II milk if Proposal 21 was adopted.

USDA received post-hearing briefs related to Proposal 21 from three additional stakeholders: New Dairy, Select, and Lamers. New Dairy expressed its opposition to the AFBF's Proposal 21, emphasizing that the current milk supply is sufficient, and it shared the concerns of other hearing participants regarding the potential competitive disadvantages for Class I handlers manufacturing Class II products. Select explained that the AFBF's proposal deviates from the rationale and methodology USDA utilized to establish the Class II differential during Order Reform and, thus, according to Select, Proposal 21 likely overstates an appropriate Class II differential. Further, Select was of the opinion increasing the Class II differential would discourage the use of fresh milk and cream in lieu of Class IV ingredients. Lastly, Lamers expressed its concern that the adoption of Proposal 21 would lead to disorderly marketing and stated no evidence was presented to suggest a need to increase the Class II differential.

Discussion and Findings

An FMMO (or "order") is a regulation issued by the Secretary of Agriculture (Secretary) that places certain requirements on the handling of milk in a defined geographic marketing area. FMMOs are authorized by the AMAA. The declared policy of the AMAA is to ". . . establish and maintain such orderly marketing conditions for agricultural commodities in interstate commerce . . ." 7 U.S.C. 602(1). As specified by the AMAA, the principal means of meeting the objectives of the FMMO program are through classified milk pricing and the marketwide pooling of returns. This rulemaking concerns and is limited to classified milk pricing.

FMMOs announce prices each month for milk received by plants during that month, according to its use classification. Since 2000, the FMMO program has used product price formulas that rely on the wholesale price of bulk products to determine the minimum classified prices handlers pay for raw milk in the four classes of utilization. Class III and Class IV prices are announced on or before the 5th day of the following month to which they apply. The Class III and Class IV price formulas form the base, also known as the mover, from which Class I and Class II prices are determined.

The Class I price is announced in advance of the applicable month. It is determined by adding the Class I differential assigned to the plant's location, plus the average of advanced

Class III and Class IV prices (computed by using the most recent two weeks' DPMRP data released on or before the 23rd of the preceding month), plus \$0.74. The Class II skim milk price, announced at the same time as the Class I price, is determined by adding \$0.70 per cwt to the advanced Class IV skim milk price. Thus, the advanced prices pertaining to milk marketed in a particular month use the same formulae as the calculation of Class III and IV prices for milk marketed in that same month, but the specific data are from different time periods. The Class II butterfat price is announced at the end of the month, at the same time as the Class III and Class IV prices, by adding \$0.007 per pound to the Class IV butterfat price.

Component prices are based on prices for the selected bulk products collected through the AMS-administered DPMRP, which collects weekly wholesale prices for four manufactured dairy products in various bulk package sizes (cheese, butter, NFDM, and dry whey powder). Weekly average prices for cheddar cheese (the weighted average of block and barrel prices), butter, NFDM, and dry whey are reported in the NDPSR.¹ Butterfat prices for milk used in products in each of the four classes is determined through surveyed butter prices. Protein and other solids prices for milk used in Class III products are derived from surveyed cheese and dry whey prices, respectively. The nonfat solids price for milk used in Class II and Class IV products is calculated from surveyed NFDM product prices.

The butterfat, protein, other solids, and nonfat solids prices are derived through the weighted average monthly NDPSR survey prices of each corresponding commodity, minus a manufacturing (make) allowance, multiplied by a yield factor. The make allowance factor represents the fixed and variable processing costs manufacturers incur in making raw milk into one pound of product. The yield factor represents the approximate quantity of product that can be made from a cwt of milk received at the plant, assuming a certain component composition of the milk and the final products. Among other factors used to determine yield, the milk received at a plant is adjusted to reflect farm-to-plant shrinkage compared to farm weights. This relates to the basic question of how

much milk is required to make a pound of product.

This product pricing system was implemented as a part of Order Reform on January 1, 2000. 64 FR 70868 (Dec. 17, 1999). While individual pieces of the price formulas have been updated occasionally since that time, this proceeding is the first time since their adoption that the Department is considering a comprehensive update to all four classified price formulas. 68 FR 7063 (Feb. 12, 2003); 71 FR 78333 (Dec. 29, 2006); 78 FR 24334 (Apr. 25, 2013).

The objective of this proceeding is to evaluate whether market or other economic conditions have changed and if the price formulas need to be updated to reflect current conditions, including economic and technological factors related to processing, transportation, and other relevant market functions or services. Twenty-one proposals, divided into five main topic areas, were considered: milk composition factors—two proposals; surveyed commodity products—four proposals; Class III and Class IV formula factors—six proposals; base Class I skim milk price (often referred to as the "higher of")—six proposals; and Class I and Class II differentials—three proposals.

The record supports the findings that some price formula factors should be amended to reflect current market conditions that were evidenced in this proceeding. The proposed changes, which are discussed in detail below, include:

1. *Milk Composition Factors*: Update the factors to 3.3 percent true protein, 6.0 percent other solids, and 9.3 percent nonfat solids.

2. *Surveyed Commodity Products*: Remove 500-pound barrel cheddar cheese prices from the DPMRP survey and rely solely on the 40-pound block cheddar cheese price to determine the monthly average cheese price used in the formulas.

3. *Class III and Class IV Formula Factors*:

a. Update the manufacturing allowances as follows:

- i. Cheese: \$0.2519;
- ii. Butter: \$0.2272;
- iii. NFDM: \$0.2393; and
- iv. Dry Whey: \$0.2668.

b. Update the butterfat recovery factor to 91 percent.

4. *Base Class I Skim Milk Price*: updating the formula as follows:

a. Class I milk used in ESL products: The average of the advanced Class III and Class IV skim milk prices, plus a rolling monthly adjuster. The rolling monthly adjuster would be equal to the average of the difference between the

¹ Official Notice is taken of the Notice of Equivalent Price Series: 77 FR 22282 (April 18, 2012). The National Dairy Product Sales Report was deemed as equivalent to the price series previously released by the National Agricultural Statistics Service.

higher-of and the average-of, for 24 months, with a 12-month lag.

b. Milk used in all other Class I products: the higher-of the advanced Class III or Class IV skim milk prices for the month.

5. *Class I and Class II differentials:* Update the Class I differentials to generally reflect the United States Dairy Sector Simulator May results contained in evidence.

Milk Composition Factors

Milk composition factors contained in the product price formulas represent assumed component levels of skim milk on a cwt basis. These factors were adopted on January 1, 2000. Currently, the formulas assume 3.1 pounds of true protein, 5.9 pounds of other solids, and 9 pounds of nonfat solids in 100 pounds of skim milk.

The level of assumed components in milk ultimately impacts minimum regulated prices paid by handlers, although the impact varies since there are variations in how components are used to value milk between FMMOs. All handlers regulated by the Arizona, Southeast, Florida, and Appalachian FMMOs pay for milk used in all four classes on a volume (cwt) basis, regardless of the components contained in the skim milk they receive (referred to as skim/fat pricing). Simply put, handlers pay for the pounds of skim and pounds of butterfat in milk they purchase from dairy farmers, where the butterfat payment is calculated according to actual pounds of butterfat received but the skim milk is specified at a standardized composition. In the remaining seven FMMOs, handlers pay for manufacturing milk based on the actual pounds of components in milk they purchase (referred to as multiple component pricing). Milk used in fluid milk products (Class I) is paid on skim/fat basis as described above. Because of these pricing differences, changing the milk component factors primarily impacts Class I minimum prices paid by fluid milk processors in all 11 FMMOs, and to a lesser extent manufacturing handlers purchasing milk for Class II, III, and IV uses on skim/fat FMMOs.

Proponents of changing the milk component factors argue actual average milk component levels in farm milk have increased since January 1, 2000, and milk should be priced to buyers to reflect the value of those components. NMPF proposes (Proposal 1) component levels at observed 2022 levels (3.39 true protein, 6.02 other solids, and 9.41 pounds of nonfat solids). NMPF also proposes an updated methodology whereby components could be updated once every three years, without a

rulemaking proceeding, if the nonfat solids levels in FMMO producer skim milk changed by 0.07 percentage points or more from the level stated in regulation. In its proposal, NAJ seeks an automatic annual update, with no change threshold to be met (Proposal 2).

Both NMPF and NAJ argue that because component levels in producer milk have risen but are still accounted for in the price formulas at 2000 levels, the difference between Class I prices and manufacturing milk prices (Class III and IV) has narrowed. Put another way, milk used in manufacturing in the multiple component FMMOs is paid based on actual component levels, so producers are paid for all component pounds delivered to manufacturing plants (approximately 85 percent of FMMO manufacturing milk is pooled on the 7 multiple component orders). Consequently, payments for milk delivered to manufacturing plants increase as component levels delivered to those plants increase. However, milk delivered to Class I plants is paid on a skim/fat basis whose formulas contain component levels that are fixed and do not change either over time or across producer milk receipts. Thus, as milk component levels have risen, Class I plants have continued to pay for milk based on the static component levels contained in the formulas. Proponents argue the result has been a narrowing between fluid and manufacturing prices, thereby creating marketing challenges, one of which is a preference of suppliers to sell higher component milk to manufacturing handlers. They argue this is especially problematic in the milk deficit skim/fat markets in the southeastern region that must compete with manufacturing milk demands in multiple component orders to procure a supplemental Class I milk supply. Proponents also alleged the narrowing of the difference between Class I and manufacturing milk prices increases the occurrence of price inversions and depooling.

The record of this proceeding reveals FMMO component levels in raw milk have increased since January 1, 2000, most notably since the mid-2010s. National FMMO average component data before 2000 is not part of this hearing record. The Order Reform decision did not address specifically why the current assumptions were adopted, other than stating they were based on prevailing protein tests as reported by AMS/USDA, as correctly cited by NAJ in its brief and public comment. While a preliminary Basic Formula Price report does purport to provide average protein levels, none of the Reform related reports in evidence

in this proceeding provide an adequate level of detail as to what exactly the data used represented. However, given the data in evidence in this rulemaking shows component levels observed in FMMO skim milk in 2000 were 3.1 percent true protein, 5.9 percent other solids, and 9.0 percent nonfat solids, it is reasonable to assume they were set at those levels because at the time they were representative of all pooled milk in the FMMO system. Evidence from this proceeding reveals that from 2000, component levels were relatively flat with only a slight increase through the mid-2010s. Beginning in 2016, observed data shows a marked increase in component levels. The data also clearly shows component levels throughout the country vary by season, with levels lower in the spring and summer, and higher in the fall and winter. Hearing testimony revealed numerous reasons for the recently observed milk component increases, including genomics in dairy cattle selection and breeding, higher cull rates of less productive cattle, and improvements in cattle nutrition and animal husbandry.

Opponents of increasing component levels, primarily fluid milk handlers, argued three general reasons an increase is not justified. First, fluid milk handlers, who would be primarily impacted by these proposals, do not receive producer milk at the proposed component levels. They contend higher component milk is delivered to manufacturing plants, leaving the lower component milk for fluid milk handlers. Second, fluid milk handlers testified they receive no additional market revenue for higher components in milk because their customers purchase on a volume basis (e.g., gallons) not on the skim component levels in their fluid milk products. Therefore, they argued, they could not recover an increased cost for their raw material from a higher finished product price. Third, opponents argued updating component levels also would unduly harm manufacturing handlers in the skim/fat orders who pay for milk based on a skim/fat basis. They argued the proposed component levels are higher than those delivered to plants, both fluid and manufacturing, in the four skim/fat orders. An evaluation of the record evidence for each of these claims follows.

First, regarding the composition of producer milk received by Class I handlers, testimony from fluid milk handlers during the hearing was incomplete and mixed. Some fluid milk handlers would not reveal component levels for the Department to consider, citing confidentiality concerns. Other

fluid handlers offered data that showed a range of average component levels in skim milk received: true protein ranged from 3.09 to 3.63 and other solids ranged from 5.83 to 6.10. Many producers who testified also discussed the rise in their farm component levels because of the decisions and investments made at the farm. While some producers could cite data, for example true protein tests ranged from 3.12 to 3.83, many who could not cite specifics did contend a general increase in their component levels. The testimony supported an increase in skim milk component levels since 2000, but precise increases that apply to all milk or all Class I milk was not presented.

Second, regarding market compensation for higher skim components in finished Class I products, the record clearly shows fluid milk handlers sell fluid milk products based on volume. Proponents of changing the composition levels provided anecdotal evidence, such as marketing claims and product description, to assert that some fluid milk products can garner additional market revenue for higher component levels. However, no data was provided to prove there is a general industry-accepted norm or practice that allows handlers to recover a value for nonfat milk solids in excess of the nutrition label claim.

Finally, concerning the claim that the level of components assigned to skim milk can create disorder in the procurement of milk for manufacturing versus Class I uses, the record contains actual component tests of producer milk in the multiple component pricing orders. However, component data for the four skim/fat orders could only be estimated as producers in those orders are paid based on the volume of skim milk and butterfat produced, not component levels. Record evidence contains USDA estimated data showing component levels in milk have consistently been above the current assumptions in all four skim/fat orders. Estimated protein and other solids levels of skim milk pooled in the three southeastern orders have been above the assumed levels in most months since January 2018, and below the levels contained in Proposal 1 in all months. Estimated protein and other solids levels of skim milk pooled in the Arizona Order have been above the assumed levels in all months since January 2018, and above the levels contained in Proposal 1 some months. Dairy Herd Improvement Association (DHIA) component data was offered at the hearing. This data is from farms who elected to use DHIA services and are

neither a proper statistical sampling of the US nor a census of the US; however, it is a large data set that covers many farms of different sizes and locations. The DHIA data is consistent with estimated data provided by USDA. In the four skim/fat orders, average protein levels from 2020–2022 were above the current formula assumptions but below those contained in Proposal 1.

This decision is considering how the price formulas should be updated to reflect current market conditions. Milk composition levels are one piece of the formulas being addressed. However, as with all the factors adopted at the time of Order Reform and updated through subsequent rulemakings, the question before the Department is what level is representative of current supply and demand conditions, as required by the AMAA. Some parties argued milk composition factors should not be changed because not all milk would meet the levels proposed by NMPF. Price formulas in the FMMO system have never had factors that assumed all milk was identical, just as it has not been assumed that each plant has the same cost of manufacturing or yields. Because FMMOs utilize a national pricing system, price formulas have always relied on benchmarks to set levels representative of market conditions. The nature of any representative number is that some milk will fall above or below the specified level. This was true with the milk composition levels that were adopted in 2000, and similar to other factors used in the formulas such as make allowances, survey commodity prices, and butterfat recovery percentages.

While the record does not contain a comprehensive data set of milk component levels received at all fluid milk plants, it does contain data on milk component levels of all milk pooled on the FMMOs, as well as evidence submitted by some producers on the component levels in their milk, and information from some fluid milk handlers on the component levels they receive. Importantly, fluid plant operators testified the milk components received at their respective plants are higher than currently assumed in the formulas, but less than what was proposed by NMPF and NAJ.

The record clearly supports that producer milk now contains higher levels of skim milk components compared to when the current composition factors were established in 2000. As FMMO provisions should reflect current market conditions to ensure orderly marketing, the question becomes what specific composition standards best reflect the current market

and are consistent with the practice of specifying levels that ensure minimum prices are most consistent with supply and demand conditions. The review of record evidence described earlier reveals many factors should be considered: the component levels of pooled producer milk, the variability in milk components regionally and seasonally, the discrepancy in milk component levels received by fluid milk handlers compared to manufacturing handlers, and the variability of component levels from farm to farm. These factors were not specifically mentioned as being considered in the Order Reform decision when the current levels were set. However, given the evolution of the dairy industry in the past 24 years, milk composition benchmarks are relevant for consideration in this proceeding.

The record indicates milk composition levels should be increased, but the levels in Proposal 1 are not justified. Given the variability and seasonality of component level information contained in the record, this decision continues to find the average component levels in the FMMOs from 2016–2022 to be the most appropriate benchmark to represent producer skim milk components, and result in a valuation of skim milk reflecting current market conditions. Accordingly, this decision continues to recommend the following: 3.3 percent true protein, 6.0 percent other solids, and 9.3 percent nonfat solids.

Estimated data for the three southeastern orders shows component levels exceeding these proposed levels in recent months, thus addressing opponents' claims that manufacturing handlers in the southeastern orders receive lower component milk than other FMMOs.

In its comment on the recommended decision, NMPF suggested the 2018–2022 time period would be more appropriate. However, this decision continues to find the 2016–2022 time period the most appropriate as it maintains a proper balance between sellers' and buyers' concerns expressed in this rulemaking and would provide for more orderly marketing.

In public comments submitted on the recommended decision, IDFA and MIG reiterated previous arguments offered that fluid milk handlers do not receive milk with higher nonfat solids levels and, even if they did, cannot recover a higher value for them in traditional fluid milk products (*e.g.*, gallons and half gallons) which encompass a vast majority of Class I sales. They presented a number of arguments: (1) the Department failed to justify a policy

change as it had previously stated Class I prices should not be priced on components because there is no additional value in Class I products; (2) the Department failed to address why updated milk composition levels support orderly marketing and therefore meet the objective of the AMAA; and (3) the Department ignored fluid milk handler testimony regarding the components levels they receive.

On the other hand, NAJ's public comment argued that by not increasing composition standards to the levels proposed by NMPF and NAJ, the Department is artificially constraining the manufacturing and Class I milk price relationship and failing to address the resulting instances of disorderly price inversions and depooling.

This final decision is not recommending a Class I policy change, as some commenters suggest. This decision continues the Class I pricing policy adopted as part of Order Reform. Prior to Order Reform, FMMO prices were based on prices determined by the competition for Grade B milk supplies updated by a product price formula (referred to as the Basic Formula Price (BFP)). During Order Reform, the Department sought to find a replacement that would: (1) meet the supply and demand criteria set forth in the AMAA; (2) not deviate greatly from the general level of the current BFP; and (3) demonstrate the ability to change in response to changes in supply and demand. 64 FR 16026, 16091 (Apr. 2, 1999).

The BFP, and its predecessor Minnesota-Wisconsin price (M-W price), represented a competitive cost of Grade B milk in the Minnesota and Wisconsin area as it was the value for milk at the farm sold into manufacturing uses in those areas. A butterfat differential, reflecting the value of milkfat, was subtracted to determine the value of milk having no fat—i.e., skim milk. Class I skim prices at the time were determined by adding a location differential to the BFP skim price. As it was a survey of prices paid for raw milk in manufacturing, updated by the value of commodity products, the BFP met the objective of the AMAA to reflect market supply and demand conditions. The BFP had the ability to change in response to changes in milk component levels and their value to the manufacturer. By the same token, changes in a manufacturer's costs of manufacturing or yields could also be demand factors that could move the BFP. A change in the BFP due to any of these underlying factors, including milk composition, could be passed through to

the Class I price which was based off the BFP.

With the adoption of product price formulas to replace the BFP in 2000, Class prices became determined, in part, from the value of commodity dairy products in wholesale markets whose values were translated to an implied value for farm milk used in each Class. The Class I skim price became determined through the higher of the Class III or Class IV skim price. The new pricing system also required a new method for determining these Class III and Class IV skim milk values. Under the new system, a value of skim milk had to be built up from its underlying milk components as there was no farm milk price to start with, only product prices. Hence, specifying underlying composition levels of skim milk based on either a skim solids standard or protein plus other solids standards was necessary. At the time of the transition from BFP to product price formulas, the Class I price reflected the supply and demand conditions for all milk products, as the BFP replacement was designed to not deviate greatly from the BFP price levels at the time of Reform. As highlighted in the decision, "The supply and demand for Grade A milk is not limited to one category of products. The same milk may be used for fluid or soft manufactured products as well as the Class III and Class IV products used to determine the BFP. As a result, the minimum prices established for Class III and Class IV reflect supply and demand for the milk used in all products" (64 FR 16026, 16095).

The record of this current proceeding has highlighted that under the current product price formulas, the standard component assumptions in the Class III and Class IV formulas are not able to automatically adjust to reflect the value of milk used in all products. Data reveals the current formulas reflect the value of very few products in the market as current average FMMO milk composition levels are consistently exceeding the assumed standard levels. Further, as highlighted earlier, fluid milk handlers testified to routinely receiving milk at composition levels greater than the current assumptions. USDA data on MCP orders show market average components consistently above the current standard components since Order Reform, with a noticeable increase in the rate of change since 2016. When combining MCP order data with USDA estimated data for the fat/skim markets, market averages have exceeded the assumed standard component levels since 2021.

Some commenters claimed data entered by fluid milk plants was ignored

and that, instead, USDA relied on less relevant FMMO data. This decision rejects the claim that FMMO data is less relevant to the determination of skim milk composition standards in the formulas than the evidence presented by the plants in question. The current assumptions reflect FMMO data from when the standards were first adopted, and such consideration remains relevant as a change is being considered. As described earlier, the objective of the product price formulas is to represent the value of milk used in all products. Milk composition standards are part of that valuation, and as such, it remains valid to consider FMMO data that reflects the composition of milk used in all products.

As described earlier, aggregated data supplied by MIG through a survey of members of its fluid milk plants regulated by MCP Orders show components levels consistently exceeding current assumed levels but below those proposed by NMPF and NAJ. This information was specifically listed as a factor in determining the proposed skim milk composition levels.

This decision finds updating the skim milk composition standards will provide for more orderly marketing as they will better reflect the supply and demand conditions for milk used in all products, as was one of the stated objectives when the product price formulas were first adopted. As is the nature of fixed factors such as milk composition standards, much like make allowances, are changed through rulemaking. This decision continues to find updating milk composition, as described earlier, will ensure prices paid by handlers and received by producers reflect the supply and demand of milk, a tenet of the AMAA.

NAJ argued the decision ignored testimony presented on the impact of price inversion and depooling and insisted adoption of the proposed levels maintains a narrow spread between Class I and manufacturing prices. Much testimony was given on the impact of price inversions and depooling and attributed at least some cause to inadequate skim milk composition levels. While record evidence demonstrated the occurrence and magnitude of price inversions and depooling, such outcomes are not a reason for changing milk composition levels. This decision finds that milk composition levels should be increased to better reflect current market conditions. While this change may decrease the occurrence and/or magnitude of price inversions and depooling, this was not a determinant in proposing the change as this decision

does not find it an appropriate reason for updating the valuation of skim milk.

A comment filed by Crystal Creamery stated the proposed levels will cause a disproportionate burden for fluid milk handlers in California that must fortify Class I products to meet the State nonfat solids standard. As required by the AMAA, FMMO class prices are applied uniformly across all handlers regulated by a FMMO. Any additional costs a handler might incur due to State requirements are outside the purview of USDA, and outside the scope of this proceeding.

During the hearing and in its post-hearing brief, Edge proposed, in addition to updating skim component levels, that the assumed butterfat level of 3.5 percent should also be updated to facilitate risk management. This idea was not proposed by USDA in the recommended decision.

Edge's public comments on the recommended decision reiterated its request to update the butterfat standard, citing hearing testimony but providing no new arguments. A comment by Sabrosura Foods made the same request. Some commenters indicated not changing the butterfat standard would cause issues related to their risk management positions.

This decision continues to find changing the butterfat standard is not needed to maintain orderly marketing of milk within the FMMO system. Risk management programs, which often utilize FMMO prices, are maintained in the private sector. These programs can adapt as necessary to facilitate the use of updated FMMO price formulas. Additionally, the butterfat standard does not impact FMMO prices paid by handlers, both fluid and manufacturing, because in all orders handlers pay for the actual pounds of butterfat received. Therefore, the request to amend the butterfat standard continues to be denied.

The NMPF and NAI proposals contained alternative updating and implementation schedules for the skim milk composition levels. NMPF proposed the composition levels be updated once every three years, but only if there was a 0.07 percent or greater change in nonfat solids levels, compared to what was in regulation. For example, if Proposal 1 was adopted, milk composition factors could only be updated three years later if the average nonfat solids levels in pooled FMMO milk was 9.48 percent (9.41×1.007). NAI proposed the levels be updated annually, regardless of the magnitude of increase. Both proponents requested a 12-month implementation lag because of the implications such a change could

have on producer risk management positions. Edge proposed a longer implementation lag of 15½ months because of risk management positions tied to the DRP.

The development and use of dairy risk management tools is relatively new, and the Department has never before been asked to delay implementation of FMMO changes in consideration of risk management. However, testimony made clear producers' concern regarding the negative financial impact that could occur if regulatory changes did not account for the growing use of risk management tools.

Producers testified to the use of numerous market-based risk management tools, including the CME futures and options, and the two USDA-Risk Management Agency approved insurance products, DRP and Livestock Gross Margin—Dairy (LGM-Dairy). Use of risk management tools by producers testifying at the hearing varied, with some not using any tools, some only enrolling in the DMC program which does not involve futures prices, and fewer using DRP insurance or the CME hedging tools. The record reflects 32 percent of U.S. milk production was covered in 2022 under DRP, and with a much smaller use of LGM-Dairy.

Producers testifying were particularly concerned with the implementation schedule for the initial change, as risk management positions could be as far out as 18 to 24 months. Evidence shows that from 2018 through 2022, almost all CME contracts, 97.34 percent, expired within 12 months. According to producers, any change to the milk composition level assumptions during the contract period could result in basis risk to producers not covered by the hedge. A CME witness testified they saw a 54 percent drop in contracts with expiration dates over 360 days in 2022 as compared to 2018, which the CME attributed to the industry already anticipating a regulatory change based on the outcome of this hearing.

Record evidence depicted the concern regulatory changes could have on risk management tools, particularly the impact on the usability of these tools during a transition period. However, producer equity requires that risk management usage be considered against the interest of other producers who do not use risk management tools, because it would delay recognition of the higher components in producer milk.

Risk management issues are not an appropriate consideration in whether milk composition standards should be changed or to what level they should be changed. However, this decision finds

the timing of a regulatory change could impact producer hedging decisions made before a regulatory pricing change. This decision continues to find it appropriate to consider an implementation timeframe in an attempt to mitigate potential financial harm to producers who utilize risk management tools.

The recommended decision proposed a 12-month implementation lag, beginning when other changes from this proceeding become effective. The 12-month lag was selected to cover hedge positions for the vast majority of producers utilizing these tools. There was considerable public comment from six dairy farmers, five State Farm Bureaus, and four producer-led organizations opposing the 12-month implementation delay on the proposed skim milk composition levels. The producers and producer organizations requested the standards be implemented immediately so producers would be properly compensated for the components in their milk without delay. Some producers questioned why an implementation delay was proposed for skim milk composition standards but not for other factors such as make allowances that also impact Class III and Class IV prices. As noted in the summary of testimony, proponents of the delay explained they assume additional basis risk if a change in a price formula factor results in a price higher than what was locked in when they placed a hedge. As described in testimony, additional basis risk is not assumed if a price formula change results in a lower price.

Record testimony from the CME, as described earlier in the summary of testimony, indicated a decrease in the number of contracts with expiration dates over 12 months due to the regulatory uncertainty created by the unknown implementation timeline of this rulemaking proceeding. A comment submitted by the CME in response to the recommended decision noted a continuing decline in the volume of contracts over 12 months. This indicates the market is already adjusting to potential FMMO changes.

Accordingly, while this decision continues to find it appropriate to offer an implementation lag for the skim milk composition standards because of the impact to producer hedging positions, the record evidence indicates that shortening the implementation lag to 6 months is appropriate. When combined with the additional rulemaking steps still needed to determine producer approval and issuance of a final rule if approved by producers, this implementation timeframe still offers

adequate notice to the vast majority of producers utilizing risk management tools, while also allowing Class I skim milk prices to more quickly reflect milk supply and demand conditions. The implementation lag would still begin when the other changes from this rulemaking became effective.

Lastly, this decision does not support an automatic update of the milk composition levels, as contained in Proposal 1 or Proposal 2. It is clear from the record that many factors, as described earlier, should be considered when making a change. Those factors can only be considered through the course of a rulemaking. This is the same rationale for changes to make allowances and yield factors, the other two sets of fixed parameters in the pricing formulas, which data shows tend to change over the long term rather than short term (*i.e.*, monthly), but outside of the normal, predictable seasonal swings in milk components. The nature of all of these fixed parameters, including skim milk components, involve complexities that are difficult to anticipate, as discussed throughout this final decision, and therefore demand robust consideration through a rulemaking proceeding.

Surveyed Commodity Products

USDA administers the Dairy Product Mandatory Reporting Program to gather weekly wholesale prices of four manufactured dairy products. Average survey prices are released weekly in the National Dairy Product Sales Report, and monthly average commodity prices are released by AMS on or before the 5th of the following month. The monthly product prices are then used in the FMMO price formulas to determine component values in raw milk. The same four commodities have been surveyed since 2000. The National Agricultural Statistics Service administered the survey from 2000 to 2012; submitting data was voluntary until 2008, and then mandatory and verified from 2008 to 2012. AMS has administered the survey since 2012 with the data being mandatory and audited 73 FR 34175 (June 17, 2008).

This proceeding is considering four proposals that would add or remove a variety of products in the DPMRP survey. Because FMMOs enforce minimum raw milk pricing, the overarching question for the Department in this decision is whether the current surveyed commodities are an appropriate representation of market clearing, wholesale commodity products whose prices provide an accurate reflection of the minimum value of raw milk. DPMRP currently surveys cheddar

cheese, butter, nonfat dry milk, and dry whey. Proposals submitted in this proceeding offer changes to the cheese survey (Proposals 3, 4, and 6) and changes to the butter survey (Proposal 5). No proposals seek changes to the NFDM or dry whey surveys.

Cheese Survey

Currently, FMMOs utilize a weighted average DPMRP survey price of 40-lb cheddar cheese blocks and 500-lb cheddar cheese barrels to determine the protein price used in the Class III price formula. Although both products meet the definition of cheddar cheese, the different package styles reflect that their intended uses are different. Cheddar cheese barrels are intended to be further processed into processed cheeses. Cheddar cheese blocks can also be used for that purpose, but they are produced with the intention of use in a natural cheese with minimal further processing (for example cutting into consumer packages or shredding.) DPMRP weights the cheese price by the volume of surveyed blocks and barrels, which according to record evidence, is typically around 50 percent blocks and 50 percent barrels.

Proposal 3 seeks to drop barrels from the survey and solely rely on a survey of 40-lb blocks. Proponents offered a few reasons for dropping barrels. First, they believe barrels are overrepresented in the survey because the weighting methodology is based on the production percentages included in the survey and not actual production across the entire cheddar cheese market. Proponents believe the percentage of cheddar cheese manufactured and priced off 40-pound block prices is significantly higher than 50 percent of the U.S. natural cheese market. Second, proponents argue that having what amounts to two products in the survey results in an average price that is not representative of either blocks or barrels. They say this has been particularly evident since 2017, when market prices between blocks and barrels began to significantly diverge, both in magnitude and direction, from the historical average difference of \$0.03. Barrel prices were even occasionally higher than blocks (historically, block prices have been higher than barrel prices). Proponents argued that when barrel prices have been well below the assumed \$0.03 difference, the current weighting methodology results in a lower average cheddar price than would have been if the two prices were weighted in accordance with actual, total production of each product. Members of NMPF testified a block-only survey would

contain adequate survey volume to be representative of the cheese market.

Opponents of dropping barrels asserted: (1) it is not appropriate to eliminate approximately half of the current cheese survey volume; (2) barrels are a market-clearing product and should continue to be included in the survey; and (3) blocks and barrels together represent the national cheese market as they are both commodity products with different commercial uses. Opponents also disputed the claim that most cheese is priced off the block market.

During the hearing, Edge offered an alternative that would reweight the survey average price based on the U.S. production volume of blocks and barrels as determined by NASS, instead of volume from respondents to the AMS survey. They opined barrels should not be removed from the survey because in months where the barrel price exceeded blocks, the Class III price would have been lower than it otherwise was, and consequently producer revenue would be less. Instead, Edge argued a better solution to the issue of overweighting barrels was to use a weighting methodology reflective of actual U.S. cheddar cheese production.

Proposal 4, submitted by AFBF, seeks to add 640-lb blocks of cheddar cheese to the survey. This type of cheddar cheese is made using the same process as 40-lb blocks and differs only in the final container for the cheese curd. Both sizes represent an intermediate product requiring further processing before it can be consumed. The proponent's primary justification is the additional survey volume that would be added. The AFBF agreed with NMPF that barrels are overrepresented in the survey, and their proposed solution is to add survey volume through the addition of 640-lb blocks. This argument implicitly assumes the accuracy of milk valuation is improved when a larger volume of cheese is surveyed.

Opponents to adding 640-lb blocks argued: (1) most 640-lb blocks are already priced off 40-lb blocks, so their inclusion would not enhance price discovery; and (2) 640-lb blocks are typically customer-specific which would exclude those blocks from the survey. The opposition is premised on the additional survey volume not adding new price information either because the prices are already reflected in the 40-pound block price, or because the customized products are value-added and should not be included for minimum pricing.

Proposal 6, offered by CDC, seeks to add mozzarella cheese to the survey. Proponents argue mozzarella is the

largest volume of cheese produced in the U.S., and revenue from mozzarella products should be captured in the survey and ultimately reflected in prices paid by Class III handlers. Further, proponents argued a higher Class III price should be reflected in producer prices to offset increasing farm production costs.

Opponents argued there is no one standard of identity for mozzarella cheese, making it difficult to delineate what mozzarella product would have a substantial volume of reportable sales to represent the market value of mozzarella cheese. In addition, opponents stated no manufacturing cost data is available to be evaluated for inclusion in the manufacturing allowance calculation for cheese. Lastly, opponents asserted mozzarella is not a market-clearing product and therefore should not be considered when determining minimum prices.

While there were three proposals offering changes to the cheese survey, two of them lack data and evidence to support adoption. First, the addition of mozzarella is not supported by the record. The record reveals multiple standards for different mozzarella cheese products, but no evidence was presented to show which of those would be appropriate to survey as an improvement in finding a minimum value for milk. Furthermore, no evidence was presented on what would define a commodity mozzarella product, rather than a value-added product, which is a general rule for inclusion in the DPMRP. Proponents offered information on mozzarella in consumer sized packages (e.g. mozzarella sticks), but little to no evidence on what should be considered a commodity mozzarella product. Evidence shows that a majority of what is considered mozzarella production is driven by customer specification and would not meet any of the standards of identities offered, indicating it would be considered a value-added product and excluded from the survey. Lastly, the record indicates mozzarella products are already typically priced based on the 40-pound cheddar cheese block price. Therefore, adoption of Proposal 6 would only result in significant costs associated with determining a commodity mozzarella product to be surveyed and the ongoing cost of surveying said product, without adding measurable new price information to the DPMRP cheese survey.

Most public comments submitted regarding changes to the surveyed commodity products supported the continued exclusion of mozzarella cheese. A public comment submitted by

Leprino stated that continued exclusion of mozzarella cheese from the Class III price formula would limit complexity and more accurately reflect a standard market price. Two individual dairy farmers also submitted comments in support of excluding mozzarella cheese.

In its comments, CDC requested reevaluation of the decision, reiterating arguments expressed at the hearing that more products should be included in the DPMRP survey and inclusion of mozzarella would raise producer revenue. Similar comments were also submitted by the National Family Farm Coalition.

Ten dairy farmers from California and Wisconsin submitted public comments supporting the inclusion of mozzarella cheese. The farmers generally expressed that mozzarella should be included because it is a key milk price indicator, and its higher value should be reflected in their milk check. A Wisconsin dairy farmer was of the opinion the cheese value should not be determined from only one type of cheese.

This decision continues to find exclusion of mozzarella cheese appropriate. Hearing testimony and public comments made in support of including mozzarella primarily centered around generating additional revenue for producers as mozzarella garners a higher price in the market. FMMO prices represent minimum prices paid by handlers for milk used in market-clearing commodity products. The DPMRP survey specifically excludes value added products, and the record contains no evidence that mozzarella is considered a market-clearing commodity product. Consequently, Proposal 6 continues to be denied.

The record lacks evidence to support adoption of Proposal 4, adding 640-lb blocks. The record reflects widespread industry consensus that 640-lb blocks are typically priced off 40-lb blocks. Because of this price relationship, numerous industry witnesses testified that no new price information would be captured by including 640-lb blocks. In addition, several witnesses testified 640-lb blocks are largely made-to-order on long-term price contracts which would exclude the sales from the survey because of these marketing characteristics. No data was presented to evaluate whether any additional price information gained through inclusion of 640-lb blocks would offset the burden (lack of efficiency) to both the industry and USDA for their inclusion.

One individual dairy farmer and the AFBF submitted comments on the recommended decision taking exception with the continued exclusion of 640-lb blocks. The AFBF reiterated its

testimony that inclusion of 640-lb blocks would add volume to the survey to ensure more accurate and representative pricing. Similar comments were submitted by the New York, Michigan, Wisconsin, Minnesota, and Arizona Farm Bureaus. AFBF further claimed that without inclusion of 640-lb blocks, manufacturers switch between 40-lb and 640-lb block production to avoid reporting prices to the DPMRP survey. There is no evidence on the record to support that such price manipulation would or does happen given that 640-lb blocks are currently not reported. This decision continues to exclude 640-lb blocks as the record does not demonstrate price discovery is aided by its inclusion. In addition, this decision continues to find it appropriate that more orderly marketing conditions are best maintained through price discovery of a single commodity product, as further discussed below. Accordingly, Proposal 4 continues to be denied.

The Department considered the idea presented by Edge to reweight blocks and barrels in the survey to reflect total U.S. cheddar cheese production volumes by packaging type, instead of survey volumes. However, the record lacks evidence regarding the market dynamics of barrel production to analyze how this idea would be implemented, or the impact it may have on prices, to evaluate whether it would result in a more appropriate cheese price. In addition, as is made clear below, this final decision continues to find that surveying two cheese products is no longer an appropriate method for providing orderly marketing in today's marketplace, rendering further discussion of a more proper weighting methodology unnecessary.

A comment submitted by Edge in response to the recommended decision maintained reweighting blocks and barrels was a more appropriate alternative to removing 500-lb barrels from the survey. However, the comment did not address a methodology to determine how such a proposal would be implemented. This decision maintains that surveying two cheese products, regardless of how they were weighted in the survey, results in a cheese price that does not represent a single product.

What is left to consider is whether 500-lb barrels should remain in the survey. When determining which products are appropriate to be included in surveys, the Order Reform Final Decision is instructive. As described in the decision, "The importance of using minimum prices that are market-clearing for milk used to make cheese

and butter/nonfat dry milk cannot be overstated. The prices for milk used in these products must reflect supply and demand and must not exceed a level that would require handlers to pay more for milk than needed to clear the market and make a profit.” 64 FR 16026, 16094 (Apr. 2, 1999). To effectuate that objective, FMMOs use survey prices of market-clearing commodity products.

In the Order Reform decision, both block and barrel cheese were included in the survey to increase the sample size and give a better representation of the cheese market. Since Order Reform was implemented, an evaluation of which products should be included in the cheese survey has occurred twice. In 2000, shortly after implementation of Order Reform, the Department considered both the addition and subtraction of cheese products into the survey, which at that time was administered by the NASS. 65 FR 20094 (April 14, 2000). In 2007, the Department again considered changing the products in the cheese survey, including the removal of 500-lb cheddar cheese barrels. 72 FR 6179 (Feb. 9, 2007). In both proceedings, the Department maintained that inclusion of both 40-lb blocks and 500-lb barrels was representative of the cheese market at the time.

While not contained in the hearing notice of the 2000 proceeding, there was testimony at the hearing for incorporation of other cheeses in addition to cheddar. The idea was denied because “If the survey included other descriptions of cheddar and other types of cheese, such as mozzarella, it would not be possible to consider the reported price as representative of the value of any particular product.” 67 FR 67906, 67926 (Nov. 7, 2002). This reasoning illustrates an important consideration of which products should be contained in the survey; products whose resulting prices are representative of a distinct product.

For all other product pricing formulas (butter, nonfat dry milk, and dry whey), DPMRP only surveys one product. The butter survey collects prices of 80 percent salted Grade AA butter, the NFDM survey collects prices of USDA Extra Grade NFDM, and the dry whey survey collects prices for USDA Extra Grade dry whey. While all three of these products can be in varying bulk packaging sizes as specified in regulation, the product itself is essentially the same. 7 CFR 1170.8 Consequently, the resulting survey prices represent single, distinct products.

The same cannot be said of the two cheddar cheese products surveyed.

Forty-pound block cheddar cheese is typically colored, and primarily sent for further processing into consumer type packages such as “cut and wrap” and shredded products. Barrel cheese, on the other hand, is typically white (uncolored) and used primarily for processed cheese and cheese-flavored products. The hearing record demonstrates the two products are not interchangeable but rather are produced for two distinctly different uses which have their own supply and demand factors. These fundamental qualities have not significantly changed since Order Reform. At the time of Order Reform, and during the subsequent two rulemakings considering changes to the cheese survey, the prices of blocks and barrels were relatively close, and it was determined the additional volume added with the inclusion of barrels was a benefit to orderly marketing as it ensured a robust survey sample.

Testimony and evidence presented showed the historical price alignment of the two products, estimated at \$0.03 per pound, until 2017. Proponents argued the market changed significantly in 2017 when there was a dramatic increase in price volatility both within each product and in the relationship between the two products. To determine statistical validity of that claim, the differences in the monthly average block and barrel prices from 2001–2023 were analyzed to identify breaks in the structure of the block-barrel spread. The analysis found December 2016 to be a statistically significant month, indicating the period between 2001 to 2016 and 2017 to 2023 were statistically different in terms of the block-barrel spread volatility. Historically, prices for blocks and barrels were similarly priced. From 2001–2016, the block-barrel spread averaged \$0.01 per pound, while from 2017–2023 the spread significantly increased to \$0.115 per pound.

When surveying prices of two products that recently are so divergent, the resulting average cheese price does not represent either of the products surveyed. For example, in October 2020, cheddar block prices averaged \$2.5692 per pound and cheddar barrel prices averaged \$0.6052 per pound lower at \$1.9640 per pound. The weighted average cheese price for October used to compute FMMO component prices was \$2.2921, a price reflecting neither of the two survey products. Accordingly, after careful analysis of the record, this final decision continues to find the DPMRP cheese survey should only include 40-lb cheddar cheese blocks. Evidence reveals a clear and statistically significant shift in the cheddar markets

occurred in 2017, which witness testimony attributed to a number of market factors including plant investments and increased production of white whey. As a result, inclusion of both blocks and barrels in the cheese survey has resulted in average cheese prices used in FMMO formulas that are not representative of any one cheese product. Therefore, this decision continues to recommend adoption of Proposal 3.

Comments submitted by NMPF, Select, and DFA in response to the recommended decision supported the exclusion of 500-lb barrels to provide for an appropriate market clearing cheese price representative of a single product. Comments submitted by two individual dairy farmers and state Farm Bureaus from Arizona, Wisconsin, Minnesota, Michigan, and New York expressed concern that the exclusion of 500-lb barrels could affect market transparency and price accuracy. Prices used in the FMMO system are collected through the DPMRP, which has a robust reporting and auditing component to ensure reporting handlers are complying with program regulations and reporting all qualifiable products. In addition, Annual Validation surveys are conducted with all current and potentially qualifying plants (any entity marketing and selling one million pounds or more of product) to verify current reporters know and understand all reporting requirements and if potentially qualifying plants are still exempt from reporting. Consequently, given the safeguards described, this decision does not find price accuracy and market transparency will be negatively impacted by the exclusion of 500-lb barrels.

There was significant testimony regarding how cheddar barrel makers would be impacted if 500-lb barrels were no longer surveyed. It was clear there was no industry consensus, not even between barrel makers, on the impact. What is paramount to any rulemaking is to ensure FMMO provisions provide for orderly marketing conditions, as required by the AMAA. The ultimate consideration is which set of bulk, market-clearing, commodity type dairy products provide the most accurate and efficient means of determining the minimum value of milk components. One facet of this is to ensure prices used in the formula best represent the fundamental products selected for their purpose. As described above, that goal is not being met by using both blocks and barrels in the survey.

One concern expressed by some barrel cheese manufacturers is that the Class

III price resulting from a block-only calculation would often be too high to ensure a profitable return to barrel cheese makers. Multiple considerations are worth noting. One, there are numerous styles of cheese represented in Class III. Manufacturers of each have no guarantees on their net returns, and, hence, manage their business by taking minimum pricing into account. To that end, there are many steps remaining in this rulemaking process, including publication of a final decision, producer referendum, and if passed, an implementation period. These steps should allow barrel manufacturers ample time to determine if changes are needed in their business practices to adjust to the prices that would result from this recommended price survey. As FMMOs only enforce minimum regulated prices on pooled milk, it should not be overlooked that barrel manufacturers choose whether to pool milk subject to minimum prices.

Since this decision proposes to remove 500-lb barrels from the DPMRP survey, this decision also proposes a conforming change to the cheese pricing reporting specifications in the Dairy Product Mandatory Reporting Program regulations (7 CFR 1170.8).

Butter Survey

Currently, FMMOs utilize the monthly average DPMRP survey price of 80 percent salted Grade AA butter in 25-kilogram and 68-pound boxes to determine the butterfat price used in all 4 classified pricing formulas. Proposal 5 seeks to add unsalted butter to the survey. Proponents argue the volume of U.S. butter production captured by the survey has been decreasing, and adding unsalted butter would increase the sample size and yield more robust survey results.

Testimony in opposition to Proposal 5 asserted the production of unsalted butter is mostly manufactured to a particular customer order. Because the lack of salt results in a shorter shelf life, unsalted butter is generally not manufactured unless its sale is imminent. On the other hand, because salted butter can be stored, when milk needs to clear the market and butter manufacturers lack a buyer, they will make salted butter to store and sell later. Opponents also noted unsalted butter is typically exported, often facilitated through premium-assisted sales, rendering those sales unreportable.

The record lacks evidence to support adoption of Proposal 5. Although data was entered showing the amount of unsalted butter graded by the USDA Dairy Grading Program tripled between 2005 and 2022, the USDA butter grading

program is voluntary; hence, the data does not give a complete picture of the U.S. butter market. Furthermore, there was no indication regarding what percentage of the graded butter volume would be reportable given testimony noting the structure of the unsalted butter market would likely make a large share of it nonreportable. No data was presented to evaluate whether any additional price information gained through inclusion of unsalted butter would outweigh the burden to both the industry and USDA for its inclusion. In fact, the record demonstrates that unsalted butter is not a market clearing product given its shorter shelf-life and on-demand production.

The record evidence supports salted butter as the market clearing butter product and continuation as the only butter product in the survey. In addition, as discussed in evaluating the cheese survey, having two commodity products surveyed (such as blocks and barrels) can have the unintended consequence of resulting in a component price that does not represent either product produced. As no price information was entered into evidence to evaluate how salted and unsalted butter prices compare, the Department could not determine if a similar situation might occur by adding unsalted butter to the survey.

A comment submitted by CDC in response to the recommended decision advocated for increasing the number of products surveyed, including unsalted butter, but provided no additional arguments for why unsalted butter should be considered a market clearing product. Accordingly, Proposal 5 continues to be denied.

Class III and Class IV Formula Factors

The Class III and IV formula factors include four distinct elements—manufacturing (make) allowance, butterfat recovery, farm-to-plant shrinkage, and nonfat solids yield.

a. Make Allowances

Make allowances represent the costs of converting raw milk into the four manufactured dairy products surveyed by USDA. The current make allowance levels were determined through a 2007 rulemaking that became effective October 1, 2008, and are as follows (\$/per pound): cheese—0.2003; butter—0.1715; NFDM—0.1678; and dry whey—0.1991. The 2007 rulemaking used an average of two surveys: a voluntary, unaudited 2006 nationwide cost survey conducted by the Cornell Program on Dairy Markets and Policy (CPDMP), and a mandatory, audited 2006 cost survey of plants located in California

conducted by the CDFA. This proceeding must determine whether manufacturing costs have increased such that a change from the current levels is warranted, and if so, what are appropriate levels.

Four manufacturing cost data sets were entered into the record for consideration in this proceeding. The first was conducted by the University of Wisconsin, on behalf of USDA, and was a voluntary survey of manufacturing plants throughout the U.S. (2021 survey). This survey was similar to the 2006 CPDMP survey used to determine current make allowances, as the primary researcher authored both. The 2021 survey collected cost information provided from manufacturing plants of cheese (10 plants), butter (12 plants), NFDM (27 plants) and dry whey (8 plants). Annual data submitted by plants primarily represented calendar year 2019, and included labor, utilities, non-labor processing, packaging, general and administrative, and return on investment cost categories. The 2021 survey results were presented as total averages, and high and low-cost plant averages.

The 2021 survey methodology was similar to the 2006 study, except for the allocation of non-allocated costs. Some fixed or overhead costs could not be allocated directly. Some costs were inherently direct costs but were not collected in a manner that allowed them to be assigned to a particular processing activity or product. When that occurred in previous studies, unallocated costs were allocated on a solids basis, which testimony revealed to be a common practice, according to some manufacturers. In some facilities making multiple products, such as butter and powder plants, not all plant operators had the infrastructure to allocate costs to the different products. A common example was plant utilities wherein the plant only had a single electric meter. If an operator utilized 70 percent of the solids received at the plant in butter, then 70 percent of the unallocated costs (e.g. electricity) were allocated to butter production, and the remaining 30 percent were allocated to NFDM production. This allocation method was referred to by the study author as the “non-transformation” method.

In the 2021 survey, the author used what they believed to be a better method for addressing costs the manufacturer could not directly allocate. Unallocated costs were allocated based on an estimation of the degree of processing transformation the raw milk underwent to transform into a manufactured product. On a scale from 1 to 10, products with minimum processing

(liquid whey) were assigned a 1, while products with a high degree of transformation (whey protein concentrate) were assigned a 10. The survey author argued this somewhat subjective and ordinal measure of costs could provide a more logical allocation of certain costs that were inarguably not properly attributed through the non-transformation cost allocation method. The most obvious example was the highly energy consuming process of drying for NFDM powders. For example, operating a milk dryer requires significant energy, resulting in an assumption that it was more appropriate for a higher percentage of the plant's energy costs to be attributed to its powder production.

A second data set was a survey conducted by the same author, administered on behalf of IDFA, seeking to capture more current costs and increase the number of respondents. This survey, referred to as the 2023 survey, was similar to the 2021 survey, except for two elements. First, the plants that voluntarily submitted data were different in number and type: 18 cheese, 13 butter, 15 NFDM, and 9 dry whey plants participated. The survey author explained that while the number of participating plants were similar for butter and whey across both surveys, the structure of the plants was noticeably different. Consequently, most of the variability in average costs between the 2021 and 2023 surveys is

attributed to the plant sample, rather than actual cost increases over time. For example, the 2021 butter plants surveyed tended to be larger than the 2023 butter plants surveyed, accounting for a significant portion of the cost difference between the two surveys. Some witnesses at hearing also noted the 2023 survey captured 2022 costs, a time of historically high inflation which has since moderated.

The second notable difference was the 2023 survey used the non-transformation methodology of allocating unallocated costs on a solids basis. The survey author indicated mixed industry feedback on the transformation allocation methodology used in the 2021 survey, as many participants stated allocating costs on a solids basis is standard practice. To facilitate comparison of the two surveys the author also presented updated 2021 survey results using the non-transformation allocation methodology.

In support of a separate data set, mandatory and audited 2004–2016 California manufacturing cost survey results, conducted by the CDFA, were entered. These surveys formed the historical data used to forecast current costs in the CA Forecast described below. The 2006 CDFA study was used by USDA when determining the current FMMO make allowances.

The fourth data set, entered on behalf of IDFA, was a result of a statistical model that used data from the 2004–

2016 California manufacturing cost surveys and other known input prices and productivity data (for example, the producer price index) to project future California manufacturing costs, referred to hereinafter as the CA Forecast. The study author testified the model predictions were a better estimate of costs than a simple trend analysis since they accounted for the impacts of other factors, such as accelerating inflation, that are known to describe changes in manufacturing costs in California. Unlike the 2021 and 2023 surveys which evaluated six cost categories (processing labor, utilities, packaging, non-labor or utilities processing, general and administrative, and return on investment), the CA Forecast only estimated three cost categories (labor, utility, and other). Other costs were defined as the remaining costs after labor and utility costs were deducted. Inasmuch as the CDFA results were used by USDA when previously amending make allowances, proponents argued this statistical estimation of what CA manufacturing costs might have been for 2022 would be a helpful indicator to validate other manufacturing cost data entered into the record.

These data sets were the basis of the manufacturing allowance levels proposed by stakeholders at the hearing. Two sets of make allowance levels were offered (\$/pound):

Product	Proposal 7	Proposals 8 and 9			
	NMPF	IDFA/WCMA year 1	IDFA/WCMA year 2	IDFA/WCMA year 3	IDFA/WCMA year 4
Cheese	0.2400	0.2422	0.2561	0.2701	0.2840
Dry Whey	0.2300	0.2582	0.2778	0.2976	0.3172
NFDM	0.2100	0.2198	0.2370	0.2544	0.2716
Butter	0.2100	0.2251	0.2428	0.2607	0.2785

NMPF asserted that their proposed levels take a balanced approach between recognizing increased manufacturing costs and the impact to producers if there is a significant increase from current levels. They testified that while they evaluated the 2021 survey when developing their proposal, the levels they ultimately proposed were a consensus judgment of all NMPF members. By their own description, the proposal is not intended to reflect the entirety of current manufacturing costs. NMPF witnesses argued that their proposal would update make allowances to be a closer reflection of manufacturing costs, but further increases could not be justified because of the potential impact to producers.

They argued at the hearing, as well as in their public comments in response to the recommended decision, that until a mandatory cost survey can be conducted to provide assurances of accuracy in manufacturing cost calculations, any increases larger than they proposed would reduce producer revenue, lower already slim (if any) margins, and negatively impact the availability of adequate supplies of milk for fluid use. They considered such consequences disorderly.

NMPF stressed current make allowances are too low and have resulted in cooperative rebalancing as a method of sharing losses among cooperative members who own manufacturing plants. NMPF witnesses

also testified to receiving reduced premiums from manufacturing plant customers as they attempt to recoup costs not covered by the current make allowance levels. Reduced and/or deferred plant investment caused by inadequate make allowances was also a theme discussed by many witnesses. Cooperative witnesses spoke of the disproportionate burden on cooperatives with balancing plants, which inherently have higher manufacturing costs as they do not operate continuously at full capacity because of the market-wide balancing role they necessarily assume.

NMPF cooperative witnesses and dairy farmer members presented evidence on increasing farm production

costs and slim farm margins. They opined at the hearing, as well as in their public comments to the recommended decision, that the impact to producers' profitability should be considered when determining appropriate make allowance levels.

WCMA and IDFA offered separate, but identical, proposals. Their proposed make allowance levels were derived from the average of the 2023 study and the CA Forecast, plus a \$0.0015 marketing cost factor. The proposals contained a 4-year implementation schedule with 50 percent of the increase implemented in year 1 and the remaining 50 percent implemented evenly across the next 3 years. Proponents offered a phased implementation schedule in recognition of the impact that sudden, large increases in make allowances would have on producer revenue.

WCMA and IDFA witnesses asserted there are limits to a manufacturing handler's ability to lower costs through efficiencies. As make allowances have not been increased in over 15 years, the witnesses stated plants have reached the limit on capturing cost efficiencies, and inadequate make allowances are now impacting innovation and capital investments. Manufacturing handlers testified their costs of manufacturing have increased and are in line with the 2021 and 2023 survey results. As a consequence of inadequate make allowances, the witnesses said classified prices are overvaluing raw milk. To substantiate the claim, witnesses compared producer mailbox prices with FMMO blend prices. In regions where mailbox prices (which contain premiums and deductions reflecting reblending) are below blend prices, the witnesses asserted regulated prices are too high, as manufacturers have lowered market premiums to make up for high manufacturing costs.

The record clearly demonstrates that current make allowance levels are not reflective of the costs manufacturers incur in processing raw milk into the finished bulk products of cheese, butter, NFDM, and dry whey. This was one of the only facts to which all participating parties agreed and offered evidence in support, as discussed above. However, there were divergent views on what should constitute adequate make allowance values going forward.

Since 2000, when product pricing was adopted, FMMO decisions have consistently relied on surveys of observed manufacturing costs to determine proper make allowance levels. Previous make allowances have been derived in whole, or in combination with, surveys conducted

by CPDMP, CDFA, and the USDA Rural Business Cooperative Service. The importance of relying on actual, observed costs cannot be overstated. FMMO price formulas determine the classified prices handlers pay to dairy farmers. It is important that all variables reflect actual market conditions.

While the use of modeling is helpful for policy analysis, the evidentiary record of this proceeding contains adequate observed market data to determine make allowance levels without the need to rely on model assumptions. Modeling involves a host of assumptions made by the modeler, as was described by the CA Forecast author, which result in estimates with a wide confidence interval. In other words, cost estimates could have a wide range of possible values consistent with the model. The confidence interval for the cost estimates widens when some indexes used to forecast are not specific to dairy manufacturing. Economic modeling was considered and rejected during Order Reform as a replacement for the Basic Formula Price. This decision affirms the Department's long-held position that this type of modeling, requiring extensive assumptions, is not an appropriate methodology for determining make allowances when superior information is available. As it is common for participants to not reveal confidential information such as manufacturing costs, the cost surveys contained in evidence provide the best available information on observed costs for this proceeding. Accordingly, this decision does not find justification for using the CA Forecast in determining appropriate make allowances levels.

In opposition to Proposals 8 and 9, cooperatives and dairy farmer members offered substantial testimony regarding the potential impact to dairy farmers should make allowances be significantly increased. Accordingly, they recommend adoption of the NMPF proposal as it attempts to temper the impact to producers.

FMMOs are designed to provide for orderly marketing through classified prices paid by handlers and marketwide pooling to determine average minimum blend prices paid to producers. As FMMO formulas are market-oriented, the product prices that drive classified prices are chosen to reflect current supply and demand conditions. This was last reiterated by the Department in 2013, writing "when the supply of milk is insufficient to meet the demand for Class III and Class IV products, the prices for these products increase as do regulated minimum milk prices paid to dairy farmers; because the milk is more valuable, and the greater value is

captured in the pricing formulas." 78 FR 9248 (Feb. 7, 2013). Further, the Secretary is expressly authorized in the AMAA to set prices to reflect ". . . the price of feeds, the available supplies of feeds, and other economic conditions which affect market supply and demand for milk or its products. . . ." 7 U.S.C. 608c(18). This concept was discussed and validated by a federal court and is relevant to this proceeding. *Bridgewater Dairy, LLC et al. v. USDA*, No. 3:07-cv-104, 2007 WL 634059 (N.D. Ohio, 2007). Therefore, the potential impact to producers remains an inappropriate factor in determining make allowance levels. While many stakeholders look to the FMMO program to provide stability, it is not within FMMO authority to support dairy farmer income.

Accordingly, record evidence does not support adoption of Proposal 7, whose make allowances levels are not reflective of observed costs provided in evidence and is designed to dampen the impact to producers.

A vast majority of hearing participants supported a USDA-administered, mandatory, and audited survey as the most appropriate method for obtaining observed cost data to determine make allowance levels. Some witnesses asserted at the hearing, as well as in public comments to the recommended decision, that make allowances should not be changed until such a survey is administered and results published. Conducting such a survey is not currently authorized by law. The lack of a mandatory survey has not been reason to delay two previous updates to make allowance levels, and its continued lack of existence now is not a reason for delaying such an update in this proceeding. As discussed, the record of this proceeding clearly demonstrates manufacturing costs have increased since make allowance levels were last changed. Given the body of evidence, this final decision continues to find it appropriate to increase make allowances to ensure the price formulas better reflect manufacturing costs and provide for more orderly marketing conditions.

The record reveals the voluntary, unaudited nature of the 2021 and 2023 surveys are not considered an accurate representation of costs by some stakeholders, particularly the producer community. Forty dairy farmers located throughout the U.S. and 10 dairy farmer organizations who submitted comments to the recommended decision opposed the make allowances levels contained in the hearing notice and proposed by USDA due to the unaudited and voluntary nature of the surveys on which they were based; further, DFA and NMPF mentioned that the surveys

and hearing record do not include cost data from several large manufacturers, potentially leading to an upward bias in the make allowances contained in the recommended decision. The AFBF; the Arizona, Florida, New York, Michigan, and Tennessee Farm Bureaus; and some dairy farmers argued in their comments that make allowances should not be changed without a mandatory audited survey, reiterating testimony on the weaknesses of the 2021 and 2023 surveys. In their joint comment, the Wisconsin and Minnesota Farm Bureaus rejected raising make allowances, as the survey data is unaudited and voluntary. Raising make allowances, they commented, will be detrimental to dairy farmers in the Upper Midwest and other regions with high Class III and IV utilization, speeding up dairy farm consolidation and bankruptcies. NMPF and DFA comments expressed support of an increase in make allowance levels at this time but maintained the NMPF-proposed make allowances in Proposal 7 are best supported by the record until a mandatory survey can be conducted.

Questions regarding plant sampling, cost allocation methodology, and capturing a high-cost time period expressed in testimony and public comments are legitimate considerations. Issues with the results of voluntary, unaudited surveys are not new to the process of determining make allowances. Similar situations occurred in both the 2006 and 2007 rulemakings. In both instances, make allowances were determined by using parts of different survey results. The record of this proceeding continues to support the use of unaudited, voluntary surveys for determining make allowances, as has been done in the past.

What remains for the Department to consider is determining representative make allowance levels given the evidentiary survey data: the 2021 survey, the 2023 survey, and the 2016 CA survey. The record does not support consideration of the 2021 survey results that relied on the transformation cost allocation method for allocating unallocated costs. Hearing participants expressed skepticism of this method as it is standard industry practice to allocate costs on a solids basis. Although the study author explained how the transformation numbers were assigned to products, the record does not contain sufficient evidence to validate the new methodology. Whether or not the transformation methodology is theoretically more accurate is not relevant. What is germane is that manufacturers allocate costs, manage their plants, and make marketing and pricing decisions in accordance with the

traditional method of allocating fixed and unallocated costs on a pro-rata basis of milk solids in the final products. Accordingly, the 2021 survey results utilizing this methodology were not considered when determining the proposed levels in this decision. Select's alternative methodology presented in its post-hearing brief, which relied on the transformed 2021 survey numbers, was not considered further.

The recommended decision found usage of the revised non-transformed 2021 and 2023 surveys and the 2016 CA survey appropriate to determine the proposed make allowances. The decision found that relying on a combination of these survey results provided a consensus set of data to determine appropriate make allowance levels and was superior to relying only on one survey.

The Department received 75 comments regarding amendments to make allowances, submitted by dairy farmers (mostly small), cooperatives, processors, trade associations, and advocacy groups from 23 different states.

Dairy farmers and organizations representing dairy farmers, including the AFBF; state Farm Bureaus representing Florida, Michigan, Minnesota, New York, Tennessee, and Wisconsin; Farm Women United; the National Family Farm Coalition; and the Ohio Farmers Union opposed the make allowance levels in the recommended decision. The comments said increasing make allowances would reduce farm income, particularly for small and medium-sized farms, potentially leading to more closures and accelerating industry consolidation.

In their comments, NMPF and DFA also opposed the make allowance levels specified in the recommended decision and continued to advocate for the NMPF-proposed levels in Proposal 7. They reiterated hearing testimony that dairy farmer cost of production should be considered when determining make allowances to ensure orderly marketing conditions. In its comment, NMPF cited a 2008 amendment to the AMAA stipulating the price for feed and fuel should be considered when determining whether to adjust make allowances. (7 U.S.C. 608c(17)(G)). The provision cited by NMPF applies to hearings commencing prior to September 20, 2012, and the provision was not extended in the 2012 Farm Bill. The Department continues to find it to be inappropriate to consider producer income as a factor in determining make allowance levels.

In its comment to the recommended decision, Edge reiterated arguments

from its post-hearing brief that make allowances should be based on plants at the technological frontier, rather than inefficient plants they claim were represented in the voluntary surveys whose results are part of this hearing record. Since Edge offered no details in their comment on how this methodology would be implemented given this proceeding's evidence, no further consideration was given.

Also opposing the make allowances contained in the recommended decision, IDFA and WCMA advocated in their comments for use of the 2023 survey data only. IDFA and WCMA argued that after eliminating the 2022 CA Forecast from consideration, the only reasonable data remaining is the 2023 survey results. They both objected to the use of the 2021 survey to moderate the influence of prices during an inflationary period. According to IDFA and WCMA, unless price deflation occurred, which they argued did not, there is no reason for adopting anything other than the 2023 survey results for all four commodities.

Inflation describes a general price level increase across the whole economy, whereas deflation describes a general price level decrease. Price decreases can occur in an inflationary environment just as price increases can occur in a deflationary one, and producer price indexes (PPIs) are one way to evaluate such price movements. A series of Federal Reserve Bank of St. Louis input indexes and U.S. Energy Information Administration price data relevant to dairy commodity manufacturing, from June 2022 (marking the end of most pandemic-related programs) to June 2024 (the last full month before the recommended decision was issued) was evaluated to analyze IDFA and WCMA comments. While this decision does not find it appropriate to rely on indexing or forecasting to determine make allowances levels, the consideration of indexes can serve as a check that the proposed levels are reasonable and reflect current costs given the totality of evidence in this rulemaking.

As stated in the recommended decision, there have been price decreases in sectors relevant to the manufacturing process that indicate manufacturing costs were high in 2022 and thus are not reflective of current costs. The PPIs from June 2022 to June 2024 for Corrugated Materials, which declined approximately 14 percent, and Lumber, which declined more than 21 percent, as well as the Henry Hub (U.S. Energy Information Administration) average spot price for natural gas, which declined more than 67 percent, serve as

examples of prices that declined during an inflationary period. The PPI for All Commodities, which decreased nearly 9 percent from June 2022 to 2024, is another more general indicator that input prices for commodities were particularly high in 2022 compared to 2024. Other examples of elevated input prices highlighted in the IDFA and WCMA public comments include labor, legal, insurance, and administrative costs. The presence of cost categories that have not declined do not preclude objective declines in other categories. The record indicates that even after accounting for wage increases of nearly 9 percent, according to the Employment Cost Index from the U.S. Bureau of Labor Statistics, declines in other areas outweigh increased labor costs, leading to an overall decrease in manufacturing costs. These overall input price decreases are relevant to all surveyed products; thus, the Department continues to find sole reliance on the 2023 survey is inappropriate in determining make allowances that reflect current costs.

IDFA and Leprino commented the Department should continue to incorporate a \$0.0015 marketing

allowance in all make allowances, based on the necessary costs to get commodity products to market, historical precedent, and lack of supporting data to merit its removal. IDFA stated the \$0.0015 marketing allowance was first adopted as part of Order Reform to cover the cost of moving commodity products to market, which include maintaining and staffing warehouses, supporting a marketing and sales staff, and transporting product to market. Leprino commented that the marketing allowance is necessary to reflect commodity costs at the same stage in the value chain as commodity prices in the NDPSR. In its comment, Leprino pointed to the make allowance levels since Order Reform as examples of the rationale in maintaining the \$0.0015 marketing allowance without new data to merit its removal. IDFA commented that, while no specific data was offered to estimate the current marketing allowance cost level, a review of the record reveals no evidence to support its removal.

The Department reevaluated the record for testimony related to the marketing allowance. The 2021 and 2023 cost surveys included costs

through product packaging. Post-packaging costs such as warehousing and marketing were specifically excluded. Testimony from a cheese manufacturer estimated the \$0.0015 marketing allowance covers post-packaging costs unaccounted for in the 2021 and 2023 cost surveys. Further, the DPMRP requires manufacturers to report prices that incorporate all costs associated with the product before it is shipped to market. It is important that prices reported to DPMRP and released through the NDPSR relate to the costs accounted for in the make allowance. Since marketing costs are included in prices reported through DPMRP, it is appropriate for such costs to also be accounted for in the make allowance. Therefore, this decision finds it appropriate for make allowances to include a \$0.0015 marketing allowance.

Additional public comments were submitted which pertained to specific make allowance levels proposed in the recommended decision. Those comments are addressed in the respective sections below.

Cheese

	2021	2023	2016			
	Non-transformed	Non-transformed	CA survey	Current	USDA proposed (recommended decision)	USDA proposed (final decision-inc. marketing allowance)
Low Cost		\$0.2201				
High Cost		\$0.3181				
Average	\$0.2365	\$0.2643	\$0.2454	\$0.2003	\$0.2504	\$0.2519
# Plants	10	18	4			

The recommended decision proposed a \$0.2504 per pound cheese make allowance, derived from the average of the 2021 and 2023 non-transformed survey results. The 2023 survey incorporates a representative sample size, accounting for 55.6 percent of NASS cheddar cheese production. The record indicates the 2023 survey, which collected cost data primarily from 2022, covered a period of relatively high inflation and rising input costs. An example is packaging costs, including lumber and corrugated materials, which testimony indicates and the input index analysis described earlier confirms, have receded since peaking in 2022. Absent any other data on the record, this final decision continues to find it appropriate to utilize an average of the 2023 and 2021 non-transformed survey results to ensure the proposed cheese make allowance is not

disproportionately affected by higher 2022 costs that have since moderated. The decision continues to find use of the 2021 and 2023 surveys provides a manufacturing allowance reflective of the national cheddar cheese market. In 2022, California cheddar cheese production represented approximately 6.9 percent of reported NASS cheddar cheese production. As incorporation of the 2016 CA survey would result in an over representation of California cheese manufacturing costs, this decision does not support its consideration.

In its public comment, AFBF wrote the current cheese make allowance is clearly adequate as there has been considerable investment in cheese plants; thus, the recommended cheese make allowance is too high. While anecdotal testimony on investments in cheese plants was presented at the hearing, data on the record clearly

indicates costs of processing commodity cheese have increased since make allowances were last updated.

The AFBF, as well as dairy farmers from Iowa and Pennsylvania, commented in opposition of all make allowance increases, but specific to cheese they argued that only about half the number of DPMRP reporting manufacturing plants are represented in the data. The Department continues to find it appropriate to use the 2021 and 2023 survey results, as the two samples together provide a reasonable representation of cheddar cheese processing.

This final decision therefore recommends a \$0.2519 per pound cheese make allowance, derived from the average of the 2021 and 2023 non-transformed survey results plus the \$0.0015 marketing allowance.

Butter

	2021	2023	2016	Current	USDA proposed (recommended decision)	USDA proposed (final decision-inc. marketing allowance)
	Non-transformed	Non-transformed	CA survey			
Low Cost		\$0.2616	\$0.1838			
High Cost		\$0.4210	\$0.2149			
Average	\$0.1338	\$0.3176	\$0.1938	\$0.1715	\$0.2257	\$0.2272
# Plants	12	13	7			

The recommended decision proposed a \$0.2257 per pound butter make allowance, derived from the average of the 2021 and 2023 non-transformed survey results. While the 2021 and 2023 surveys had roughly the same number of reporting plants and represented roughly the same volume of NASS U.S. butter production (approximately 80–82 percent), the plant samples differed significantly. The study author claimed sampling was the main driver for the notably different survey results. The 2023 survey captured data from both smaller and larger plants while the 2021 survey consisted of a more homogenous sample of larger and more efficient plants. The record indicates the 2023 survey, which collected cost data primarily from 2022, covered a period of

relatively high inflation and rising input costs. According to the Producer Price Index for All Commodities (PPI), published by the Bureau of Labor Statistics, prices have moderated since their June 2022 peak. Thus, this final decision continues to find it appropriate to average the 2023 and 2021 non-transformed surveys to account for the differences in plant sampling, and to ensure the proposed butter make allowance is not disproportionately affected by higher 2022 input costs that have since moderated. The decision continues to find use of the 2021 and 2023 surveys provides a manufacturing allowance reflective of the national butter market, as both surveys represent over 80 percent of 2022 NASS butter production volumes. This decision does

not support incorporating the 2016 CA survey in the calculation as it would overrepresent California butter manufacturing costs.

The Department received no public comments in response to the recommended decision specifically addressing the butter make allowance. However, since this decision finds it appropriate to continue to incorporate a marketing allowance into all make allowances, the final decision recommends a \$0.2272 per pound butter make allowance, derived from the average of the 2021 and 2023 non-transformed survey results plus a \$0.0015 marketing allowance.

NFDM

	2021	2023	2016	Current	USDA proposed (recommended decision)	USDA proposed (final decision-inc. marketing allowance)
	Non-transformed	Non-transformed	CA survey			
Low Cost		\$0.2302	\$0.1854			
High Cost		\$0.3247	\$0.2786			
Average	\$0.2454	\$0.2750	\$0.2082	\$0.1678	\$0.2268	\$0.2393
# Plants	27	15	8			

The recommended decision proposed a \$0.2268 per pound NFDM make allowance, derived from the average of the 2021 non-transformed survey and 2016 CDFA cost of processing survey results. In 2022, California represented 43.7 percent of U.S. NFDM production. This supported hearing testimony describing the importance of California manufacturing facilities in the total U.S. production of NFDM powder. Therefore, the recommended decision found it appropriate to place more emphasis on California NFDM plant costs considering the dominant share of NFDM production by California plants. As stated previously, given all the cost surveys contained in the evidentiary record had shortcomings, the recommended decision found it appropriate to use an average of two surveys when recommending make allowances. The recommended decision concluded that it was best to combine

the 2021 survey and the 2016 CDFA cost of processing survey to determine the NFDM make allowance. The 2021 survey was selected over 2023 due to a better plant sample and because the 2023 survey represented costs during a period of high inflation, in particular for energy-intensive (natural gas) dried products like NFDM.

Comments from IDFA, CDI, and Agri-Mark specifically opposed the NFDM make allowance contained in the recommended decision, advocating for different methodologies to be applied. IDFA argued the NFDM make allowance should at least be based on a weighting of the 2021 non-transformed cost of production survey and the 2023 non-transformed cost of production survey for all plants, or at most an adjustment to the 2023 survey to address higher energy costs in 2022 could be made. Agri-Mark and CDI argued that data sources for the NFDM make allowance

should be reconsidered, questioning whether use of 2016 data was too old and not reflective of current costs, especially given its 50 percent weighting in the computation. While the 2023 survey was not used due to higher-than-normal natural gas prices that have since moderated, Agrimark argued in their comment, other cost categories have not similarly moderated. CDI commented that the NFDM make allowance should be determined using a similar methodology to dry whey, taking the simple average of the non-transformed 2021 survey and the 2023 low-cost survey, which would equal \$0.2378.

This decision continues to find it appropriate, given the shortcomings of the cost surveys in the record, to use an average of two surveys to determine appropriate make allowance levels. However, after a review of public comments and a reevaluation of record

evidence, this final decision finds it appropriate to apply a consistent methodology for NFDM and dry whey, as described in CDI's comment.

The 2023 survey represents the most recent cost data but significantly fewer participating plants than the 2021 survey. Additionally, as NFDM production is heavily reliant on natural gas, the 2023 survey captured the historically high energy costs, particularly natural gas. Natural gas prices increased substantially between 2019 and 2022. The Henry Hub Natural Gas Spot Price increased 153 percent between 2019 and 2022. However, prices declined from June 2022 to June 2024, with the spot price falling over 67 percent. Natural gas prices in 2024 were comparable to prices in 2019, with the

June 2024 spot price only 5 percent higher than in 2019. This data suggests current natural gas prices are similar to price levels observed during the 2021 survey. Cost breakdown of the 2023 survey show that utilities (energy) costs constituted 15 percent of the total manufacturing costs of dry whey. This is in contrast to utilities representing 7 percent of total costs for butter and 6 percent for cheese. As the record reveals the major component of this difference in utilities costs share is from drying the product, this cost category is sensitive to movements in natural gas prices.

The record reveals the 2021 survey represents more NFDM plants than the 2023 survey (27 vs. 15), while the 2023 survey represents a larger volume of NFDM production than the 2021 survey

(91.2 percent vs. 64.8 percent). Utilizing a simple average of the 2021 and the low-cost 2023 surveys results in a better representation of NFDM production across the universe of plants making the product, while moderating the influence of the high inflationary period in 2022 as described earlier in the PPI analysis, with particular consideration of declining utilities costs described above. Therefore, in the final decision, the Department recommends a \$0.2393 per pound NFDM make allowance, derived from the average of the 2021 non-transformed survey and the 2023 non-transformed low-cost survey result, plus a \$0.0015 marketing allowance.

Dry Whey

	2021	2023	2016			
	Non-transformed	Non-transformed	CA survey	Current	USDA proposed (recommended decision)	USDA proposed (final decision-inc. marketing allowance)
Low Cost		\$0.2848				
High Cost		\$0.3952				
Average	\$0.2457	\$0.3361		\$0.1991	\$0.2653	\$0.2668
# Plants	8	9				

The recommended decision proposed a \$0.2653 per pound dry whey make allowance, derived from the 2021 non-transformed survey and 2023 non-transformed low-cost survey result. Similar to NFDM, dry whey production is heavily energy (natural gas) dependent, and the same concerns regarding the 2023 survey results exist for dry whey, as discussed above. Absent any other data on the record, the recommended decision found it suitable to utilize the 2023 non-transformed low-cost average (\$0.2848) with the 2021 non-transformed survey to ensure the proposed dry whey make allowance is not disproportionately affected by higher 2022 natural gas and utilities costs that have since moderated.

Several comments were received specifically on the dry whey make allowance contained in the recommended decision. IDFA and WCMA opposed the methodology used and opined the dry whey make allowance should be based solely on the 2023 non-transformed cost of production survey for dry whey plants. Due to 2022 being a period of particularly high prices, this decision continues to maintain their proposed methodology is not appropriate. Earlier analysis of relevant price indices contained in the record support this conclusion.

In its public comment, the AFBF wrote that the current dry whey make allowance is clearly sufficient, as there has been considerable investment in dry whey plants; thus, the amended dry whey make allowance contained in the recommended decision is too high. While anecdotal testimony on investments in dry whey plants was presented at the hearing, data on the record clearly indicates costs of processing commodity dry whey have increased since make allowances were last updated.

The AFBF, as well as dairy farmers from Iowa and Pennsylvania, commented in opposition of all make allowances, but especially dry whey, as only about half the number of DPMRP reporting plants provided cost data. This decision continues to find it appropriate to use two surveys in the make allowance calculation, as together they provide sufficient representation of dry whey production.

A public comment filed by the American Dairy Coalition (ADC) opposed all make allowances in the recommended decision and advocated for reevaluation of all proposed changes. ADC specifically addressed the proposed increase in the dry whey make allowance relative to its small market price and advocated implementing a snubber to prevent negative producer values for other solids. Per ADC's

suggestion, if the market price for dry whey is less than the make allowance in a given month, the other solids price would be zero rather than a resulting negative value. For historical context, the Class III price formula briefly contained a similar snubber from Order Reform implementation (January 2000) to October 2001, but it was removed as it was found to mute market signals and arbitrarily adjust prices. There is insufficient evidence on the hearing record of this proceeding to support ADC's comment suggesting a change to the other solids snubber. Similar to NFDM, utilities represent a larger share of manufacturing costs for dry whey at 10 percent of total cost, rather than the 7 percent and 6 percent for butter and cheese, respectively, which are not dried during the manufacturing process. Accordingly, the same consideration of declining utility costs evaluated in the NFDM section apply to dry whey. Utilizing a simple average of the 2021 and low-cost 2023 surveys results in a better representation of dry whey production across the universe of plants making the product, while moderating the influence of the high inflationary period in 2022 as described earlier in the PPI analysis, with particular consideration of declining utilities cost since 2022. Therefore, this decision recommends a \$0.2668 per pound dry whey make allowance, based on the

average of the 2021 non-transformed survey and 2023 low-cost dry whey surveys, plus a \$0.0015 marketing allowance.

The Department finds the proposed make allowances in this final decision are more representative of manufacturing costs than current make allowances, which were last changed in 2008. Record evidence clearly supports updates. However, as previously mentioned, each of the observed costs surveys have weaknesses. The proposed make allowance levels are the best representation of manufacturing costs, given publicly available data and evidence contained in this proceeding's record.

b. Butterfat Recovery

Currently, the Class III formula contains a 90-percent butterfat recovery assumption. This represents the percentage of butterfat in raw milk that can be recovered during the cheesemaking process, recognizing that for both theoretical and practical reasons, 100% of utilization of butterfat (or any other raw milk component) in the production of a dairy product is impossible. Proposal 10 seeks to increase the butterfat recovery assumption to 93 percent. Proponents claimed modern cheesemaking equipment and better cheese handling techniques make a higher butterfat recovery not only attainable, but common in practice.

Opponents mainly consisted of manufacturers asserting that while some cheese plants attain butterfat recovery percentages in excess of 90 percent, yield assumptions that increase producer revenue, such as butterfat recovery, should not be amended outside a comprehensive review of all assumptions that determine yield factors. Multiple opponents mentioned the overvaluation of whey cream as an example of a potential issue.

This rulemaking proceeding sought to consider changes to the FMMO pricing formulas. Industry participants were invited to submit proposals concerning the current pricing provisions of the FMMOs. Those opposing changes to the butterfat recovery percentage had an opportunity to submit proposals on any of the yield factors, as they fall within the provisions of the pricing formulas. None, other than those submitted by Select, were received. This decision does not find it appropriate to deny consideration of any yield related proposal presented in this proceeding on the basis of a potential future evaluation of all yield factors.

The record contains testimony from several expert witnesses explaining the

cheesemaking process and use of more modern cheese equipment and technology, including improvements in coagulants and curd handling, allowing handlers the ability to capture a larger percentage of butterfat in cheese. Testimony also described how cheese fines, or small particles of cheese left in whey during the cheesemaking process, represent a significant source of fat loss to a cheese manufacturer, and are not returned to the finished cheese product due to concerns of bacterial contamination. As butterfat recovery numbers are considered confidential information, the record does not contain a well-developed picture of recovery levels currently attained in U.S. cheese plants. The record indicates the age of equipment and technology used in cheese plants varies widely. While evidence was submitted describing high butterfat retention rates that are achievable using new equipment, it does not demonstrate those rates are reflective of the general industry conditions. Other than a few new, very modern plants, the record does not support a 93 percent butterfat recovery factor as attainable by most cheese plants.

The record contains considerable testimony estimating current butterfat recovery rates in the universe of cheese plants with varying ages of equipment and technology. Expert witnesses estimated butterfat recovery in cheddar plants ranged from 88 to 93 percent, attributing much of the difference to cheddar vat equipment. It is important that the product price formulas reflect current, not theoretical, conditions for the general population of plants. Experts generally offered that most commodity cheddar cheese plants can obtain greater than 90 percent recovery, but few obtain 93 percent, with a 91 percent butterfat recovery rate considered the industry average. Accordingly, this decision recommends a 91 percent butterfat recovery rate. Such an increase necessitates a change to the butterfat yield factor in cheese from 1.572 to 1.589.

The Department received comments in support of the amended butterfat recovery factor contained in the recommended decision, including from several state Farm Bureaus (Arizona, Florida, Michigan, Minnesota, New York, Tennessee, and Wisconsin) and five California dairy farmers. These commenters support increasing the butterfat recovery factor from 90 to 91 percent, as it more accurately reflects modern cheesemaking technology and plant efficiencies.

Several comments were also submitted in opposition of the proposed

butterfat recovery factor. Commenting in opposition, Select continued to contend that the factor should be updated to 93 percent. Select pointed to testimony from its expert witness claiming that 93 percent butterfat recovery is attainable by most plants. Even with older cheese making equipment, Select reiterated 93 percent butterfat recovery can be achieved. This decision maintains that the butterfat recovery percentage should represent what is currently attained by the universe of U.S. cheese manufacturing plants, not what can theoretically be attained or may be attained in modern plants. Therefore, this decision maintains a proposed 91 percent butterfat recovery factor.

In its comment, Crystal Creamery argued that cheese moisture levels and other factors in the cheese making process should also be considered in the amended butterfat recovery factor and requested conforming changes to the butterfat-to-protein ratio, from 1.17 to 1.16. Sufficient testimony and evidence was not provided on the record to justify a change to the butterfat-to-protein ratio, therefore, the proposed conforming change is denied.

c. Farm-to-Plant Shrinkage

Currently, the FMMO formulas assume a farm-to-plant shrinkage factor of 0.25 percent and 0.015 pounds per cwt of additional butterfat loss. This represents normal milk losses that occur when milk is delivered from the farm to a plant. Under the FMMO system, most handlers purchase milk from producers based on farm weights and tests. The farm-to-plant shrinkage factor recognizes that when milk is pumped from a farm bulk tank to a milk tanker, and then from milk tanker to the plant silo, milk, and to a greater degree butterfat, sticks to the sides of the pipes and tanks. Milk and butterfat can also be lost in the milk hauling process when milk haulers must make multiple farm stops to fill a load. As a result, plants often physically receive less milk and butterfat than was measured at the farm. The record reflects that as the nature of milk and butterfat has not changed, it still sticks to equipment. In recognition of this reality, the yields are slightly reduced to reflect the amount of milk and butterfat actually available to make a product, as compared to the amount of milk picked up on farms.

The proponents asserted that producers shipping full tanker loads is common in the Southwest where they operate. They testified to and provided cooperative data regarding the steps they have taken to reduce shrinkage. Proponents said increased average farm size results in fewer stops by the milk

hauler to fill up a load, thus lowering overall shrinkage. They opined shrinkage should no longer be a reality for farms as losses can be managed on any size farm through adoption of farm scales, flow measurements, and other technologies to improve accuracy.

Opponents argued only a small percentage of dairy farms are able to produce enough milk to fill an entire tanker load. While the number of large farms has grown, opponents testified removing the shrinkage factor could further incentivize manufacturers to prefer large over small farms. Consequently, they opined the farm-to-plant shrinkage factor should remain.

Record evidence reveals most dairy farms are unable to fill a tanker load per day. According to the NASS, daily milk production per cow averaged 66.5 pounds in 2022. Assuming an average tanker load of milk is approximately 48,000 pounds, it would require a milking herd of 722 cows to fill a tanker. In 2022, of the 24,470 U.S. dairy farms with milk sales, only 3,451 farms (approximately 14 percent) had 500 or more milk cows, and 2,013 (approximately 8 percent) had 1,000 or more milk cows.

For the approximately 90 percent of farms that are not able to ship full tanker loads of milk, the record indicates farm-to-plant losses remain a reality for most producers and cooperatives operating within the FMMO system. As most handlers pay producers based on farm weights and tests, it remains appropriate to provide recognition in the formulas for milk solids paid for but not physically received at the handler's facility.

Leprino submitted a public comment in support of maintaining the farm-to-plant shrinkage. In contrast, Select commented in opposition of the amended shrinkage in the recommended decision, reiterating arguments in the hearing that it should be eliminated. According to Select, the recommended decision underestimates the number of farms capable of shipping a full tanker. Select contends that more than 75 percent of milk is produced on farms shipping full tanker loads and asserts the recommended decision did not address unsupported additional butterfat shrink.

While the recommended decision inadvertently failed to mention the 0.015 pounds per cwt of additional butterfat loss, the entirety of the farm-to-plant shrinkage within the formulas and the evidentiary record was evaluated. The record contains evidence that additional butterfat losses occur as butterfat naturally clings to equipment. While Select offered evidence its

cooperative has developed operating practices that have greatly reduced observed shrinkage, no other data was offered to validate that it is being attained by other industry stakeholders. Thus, this decision continues to find it appropriate to include the 0.25 percent shrinkage factor and the 0.015 pounds of additional butterfat loss in the formulas as these factors should be based on what is attained, on average, rather than only attainable by some. Accordingly, this decision continues to reject Proposal 11.

d. Nonfat Solids Yield

Currently, the FMMO Class IV price formula contains a NFDM yield factor of 0.99, representing the pounds of NFDM that can be made from one pound of nonfat solids of raw milk delivered from the farm. This factor is less than 1.0, as it recognizes both farm-to-plant shrinkage and the portion of nonfat solids utilized in NFDM.

Select offered Proposal 12 to adjust the NFDM yield factor to account for both the NFDM and buttermilk powder that can be manufactured from the same pound of nonfat solids, and proposed an NFDM yield factor of 1.03. Proponents claim producers are not compensated for nonfat solids that end up in buttermilk powder since such production is not accounted for in the yield factor.

A review of previous rulemakings reveals numerous changes to the NFDM yield factor both during and since Order Reform. The Order Reform recommended decision contained a nonfat solids yield factor of 0.96 as a divisor (equivalent to a 1.04 multiplier) in the nonfat solids price equation. It represented the percent of nonfat solids in a pound of NFDM. In other words, if a NFDM plant had 1 pound of nonfat solids, it could make 1.04 pounds of NFDM due to the moisture content in the final product. The factor was changed in the Order Reform final decision to a 1.02 divisor (equivalent to a 0.98 multiplier) as stakeholders commented it should represent both the NFDM and buttermilk powder that could be produced from one pound of nonfat solids. In other words, the yield factor, when converted to a multiplier, was less than one to reflect that only a portion of the nonfat solids that arrive at a plant are utilized in NFDM.

The nonfat solids yield factor was again considered in a 2000 rulemaking. Initially, the factor was amended to 1.00. 65 FR 82832 (Dec. 28, 2000). During that proceeding, stakeholders argued the yield factor should reflect that more than one pound of NFDM can be manufactured from one pound of

nonfat solids, resulting in a divisor less than one, or a multiplier greater than one. Evidence from that proceeding was used to demonstrate a calculation using only the NFDM price, NFDM make allowance, and a multiplier of 1.00 would be equivalent to a more complex formula attempting to combine the NFDM and buttermilk net prices using corresponding yield factors.

The final decision in the 2000 rulemaking changed all yield factors, including the nonfat solids yield, from divisors to multipliers. 67 FR 67906 (Nov. 7, 2002). Keeping in line with only reflecting the nonfat solids used in NFDM, the nonfat solids yield multiplier changed from 1.0 to 0.99, with the incorporation of a farm-to-plant shrinkage factor of 0.25 percent. As calculated, for 1 pound of nonfat solids leaving the farm, 0.9975 pounds entered the plant ($1.00 - 0.0025 = 0.9975$). Subtracting an estimated 0.0479 pounds of nonfat solids ending up in buttermilk powder left 0.9496 pounds of nonfat solids in NFDM ($0.9975 - 0.0479 = 0.9496$). It was assumed NFDM is 96.2 percent nonfat solids, resulting in a NFDM yield factor calculation of $0.9496/0.962 = 0.9871$, which was rounded to 0.99. The final decision made clear the 0.99 should be considered a NFDM yield factor, no longer a nonfat solids yield factor as was the case when Order Reform was implemented.

Proposal 12 requests buttermilk powder again be incorporated into the NFDM yield. Proponents testified that without accounting for buttermilk powder, producers are not compensated for all the nonfat solids they sell to a Class IV manufacturer. Record evidence does not support such a claim. Class IV manufacturers are required to pay the nonfat solids price for pooled milk purchased, regardless of whether those nonfat solids end up in NFDM, butter, buttermilk powder, or any other Class IV product. The same can be said for other classified products whose component prices are computed similarly, even if there are numerous products in the category. For example, the other solids price is determined through a survey of dry whey prices and a dry whey make allowance. Manufacturers pay the other solids price even if they are making other products in the category, such as whey protein concentrate or whey protein isolate.

Additionally, while the rulemaking history of the NFDM and nonfat solids yield factors is complex, the record evidence in this proceeding does not support reflecting two products (buttermilk powder and NFDM) in the NFDM yield would provide for more

orderly marketing conditions. As such, the recommended decision maintained the current NFDM yield factor to only reflect one product and did not propose the adoption of Proposal 12.

Leprino, as well as the Arizona Farm Bureau, offered comments on the recommended decision in favor of maintaining the 0.99 nonfat solids yield, as they said it properly reflects a widely attainable NFDM yield. In its comment, Select objected to the continuation of the 0.99 NFDM yield, and reiterated arguments presented at the hearing that the value of buttermilk powder should be included.

This decision maintains that yield factors are not intended to represent the value of milk components utilized in various products, but rather the quantity of a specific product that can be manufactured from a given quantity of milk components. As stated in the recommended decision, the NFDM yield factor represents the quantity of NFDM that can be produced from one pound of nonfat solids in producer milk. This decision continues to find the current NFDM yield factor, and the nonfat solids price formula, appropriately represent the value of NFDM to the nonfat solids utilized in manufacturing NFDM. This decision finds no basis to support the claim that powder manufacturers are not paying for solids in the buttermilk powder they produce. To the contrary, all nonfat solids entering a plant are accounted and paid for at the appropriate use classification. Thus, nonfat solids ending up in buttermilk powder are paid for at the nonfat solids price. This is similar to other products such as whey protein concentrate (WPC), whose other solids are priced at the FMMO other solids price which is based on dry whey yields and prices and does not specifically account for WPC yields and prices.

This decision continues to find it appropriate for component price formulas to utilize a single product price and an associated make allowance and yield factor to determine the value of milk components, which can then be used to value the components utilized in all products under a given class. Accordingly, this decision continues to find it appropriate to maintain the NFDM yield factor of 0.99.

Base Class I Skim Milk Price

Currently, the base Class I skim milk price, also referred to as the "Class I mover" or "mover," is the simple average of the monthly advanced Class III and Class IV skim milk pricing factors, plus an adjuster of \$0.74 per cwt. This formula was implemented under the 2018 Farm Bill, which

amended the AMAA to revise the provisions related to determining the monthly Class I skim milk price. Public Law 115–334, 132 Stat. 4490 § 1403. Congress exempted this amendment from the formal rulemaking process, and USDA implemented the change through a final rule. The formula has been in effect for milk marketed on and after May 1, 2019. 84 FR 8590 (March 11, 2019). Prior to the change, the base Class I skim milk price was the higher of the advanced Class III or Class IV skim milk prices (the "higher-of"), announced on or before the 23rd of the prior month. The higher-of formula had been in effect since January 1, 2000.

Industry stakeholders offered six proposals to amend the Class I mover. Proposal 13 would return to the previous higher-of Class I mover. NMPF explained the change to the average-of was supported at the time by both NMPF and IDFA, as it was intended to be revenue neutral for producers and provide Class I processors the ability to utilize hedging for risk management.

IDFA and MIG proposed maintaining the average-of mover but argued for different adjuster calculations. Proposal 14, offered by IDFA, incorporates an adjuster that resets every January and would be the higher of either: (1) \$0.74; or (2) the 24-month average difference between the higher-of and the average-of the advanced Class III and Class IV skim milk pricing factors. The 24-month calculation would run from August of three years prior to July of the previous year. For example: the 2024 adjuster would have been calculated by subtracting the average of the advanced Class III and IV skim pricing factors from the higher of the advanced Class III or Class IV skim pricing factor for each month of August 2021 through July 2023, then averaging the differences of the 24 months. The result for the August 2021 to July 2023 time period is \$0.95, which is higher than \$0.74, and thus would have been the adjuster effective January 1, 2024, for the calendar year. For the month of January 2024, the advanced Class III and IV skim pricing factors were \$5.74 per cwt and \$9.25 per cwt, respectively, averaging to \$7.50 per cwt. With the addition of the adjuster, the January 2024 base Class I skim milk price would have been \$8.45 per cwt (\$7.50 + \$0.95) under Proposal 14.

Proposal 15, offered by MIG, incorporates a monthly rolling average adjuster calculated as the difference between the higher-of and the average-of, for 24 months, with a 12-month lag. For example, the adjuster for January 2024 would have been \$1.01 per cwt, calculated from the 24-month average difference of the higher of the advanced

Class III or Class IV skim pricing factor less the average of the advanced Class III and IV skim pricing factors from January 2021 to December 2022. The January 2024 advanced Class III skim pricing factor was \$5.74 per cwt and advanced Class IV skim pricing factor was \$9.25 per cwt, resulting in an average of \$7.50 per cwt. The average-of, with the addition of the adjuster, would result in a January 2024 base Class I skim milk price of \$8.51 per cwt (\$7.50 + \$1.01) under Proposal 15.

Edge offered Proposals 16 and 17. The Class I mover in Proposal 16 would be the announced Class III skim milk price, plus an adjuster reflecting the 36-month average of the difference between the higher-of the advanced² Class III or Class IV skim milk prices and the announced³ Class III skim milk price from August of four years prior to July of the previous year. The adjuster would be calculated annually and be effective January of each year. For example: The adjuster for 2024 would be \$1.64 per cwt, calculated from the 36-month average difference of the higher of the advanced Class III or Class IV skim pricing factor and the announced Class III skim milk price from August 2020 to July 2023. The announced Class III skim milk price for January 2024 was \$4.92 per cwt, and with the addition of the adjuster would result in a January 2024 base Class I skim milk price of \$6.56 per cwt under Proposal 16. Proposal 17 would return to the previous higher-of calculation. Both Proposals 16 and 17 would eliminate advanced pricing for Class I and Class II milk. Edge preferred Proposal 16, stating it would facilitate Class I hedging.

The AFBF offered Proposal 18, which is nearly identical to Proposal 17. Both Edge and the AFBF stressed the importance of eliminating advanced pricing as a means for limiting price inversions that result in significant volumes of milk not pooled.

NMPF presented testimony describing how the 2019 mover change was not revenue neutral, which is why they seek a return to the higher-of. NMPF and dairy farmers described volatile markets in response to the COVID–19 pandemic. Even as the COVID–19 pandemic has ended, prices have remained volatile, and stakeholders opined they expect volatility to continue. NMPF witnesses asserted that because of the current formula and volatile markets, there is no way for the impact to dairy farmers to be revenue neutral in the long term.

² Advanced refers to prices announced on or before the 23rd of the prior month.

³ Announced refers to prices announced on or before the 5th of the following month.

According to NMPF, an unanticipated consequence of the average-of mover is the asymmetric risk borne by dairy farmers. NMPF explained the static nature of the \$0.74 adjuster means that dairy farmers only benefit from the average-of when the difference between the advanced Class III and Class IV skim milk prices is less than \$1.48. When the difference is greater, producers are paid less, sometimes significantly less, than they would have been under the higher-of mover. During the 50-month period from May 2019–June 2023, the average-of mover was lower than the higher-of in 27 months. NMPF asserted when the average-of exceeded the higher-of, it did so by no more than \$0.74, regardless of the magnitude of the difference between Class III and Class IV skim milk prices. However, when the average-of was lower than the higher-of, the reduction could be significantly more than \$0.74. NMPF cited October 2022 as an example. At that time, the average-of was lower than the higher-of by \$2.08. According to NMPF, from May 2019 to August 2023, producers were paid \$998.3 million less than they would have if the higher-of mover had been in place.

Both IDFA and MIG asserted their adjusters would result in revenue neutrality to producers over time because of regular updates to better reflect current market conditions, whereas the current static \$0.74 adjuster reflects market conditions from 2000–2018. IDFA further claimed the \$0.74 floor contained in Proposal 14 ensures producers would receive Class I skim milk prices at least equating to what they receive under the current formula. MIG opined a rolling average adjuster would provide better dynamic market signals while also stabilizing prices through more gradual monthly changes.

In justifying these methods to continue an average-of mover, IDFA and MIG witnesses stressed the importance of maintaining the ability for Class I processors to hedge their future prices. The use of an average-of mover would allow them to continue to spread risk by taking equal positions in the Class III and Class IV futures and options markets. IDFA and MIG maintained hedging is a critical tool for certain processors, particularly ESL, to remain competitive with alternative beverages, such as bottled water, juice, and milk alternatives that do not face the same regulatory pricing framework as fluid milk. The ability to lock in a future price makes their cost known and allows a longer price horizon. They further asserted promoting and growing the sale of milk is a goal of the AMAA, which can be achieved using hedging.

Both proponents explained a processor's ability to hedge is not negatively impacted by the adjuster calculation (whether monthly or annually), so long as it is announced well in advance. IDFA was amenable to either adjuster calculation, so long as the average-of mover is maintained.

Proponents of maintaining an average-of mover argued Congress amended the AMAA to facilitate risk management for Class I, and as it directed the Department to adopt the average-of mover, the Department must now continue that policy and refrain from taking action that would inhibit risk management. However, in the 2018 Farm Bill, Congress stipulated the average-of mover must be maintained for a period of not less than two years, at which time the formula could be modified through the standard FMMO amendment process. Congress did not direct that risk management consideration must be maintained beyond the two years following implementation of the 2018 Farm Bill.

To evaluate the NMPF claim regarding asymmetric risk, AMS analyzed May 2019–December 2023 prices (56 months). The analysis found the current average-of mover to be greater than the higher-of mover in 23 months, resulting in \$334 million in additional revenue paid to producers in those months. The two movers were equal in 2 months, and in the remaining 31 months, the average-of mover was less than the higher-of mover, resulting in \$1.4 billion less in revenue paid to producers in those months than would have been without the mover change. The net result to dairy farmers during those 56 months was negative \$1.066 billion. Further, in months when the average-of was more than the higher-of mover, the difference was never greater than \$0.74 and, mathematically, could never be greater than that amount under the current average-of system. However, in months when the average-of was less than the higher-of mover, the difference was as great as \$5.19. This analysis supports NMPF's assertion of the asymmetric risk borne by producers under the current mover calculation.

The record reveals the \$0.74 static adjuster was adopted because, at the time, it represented the additional value paid to producers through the higher-of versus what would have been the average-of mover from 2000–2017. Evidence shows \$0.74 is no longer representative of the additional higher-of value to producers as Class III and IV prices have become significantly more divergent in recent years. A comparison of advanced Class III skim and Class IV skim milk prices from January 2000–

April 2019 and from May 2019–December 2023 illustrates the increased volatility. From January 2000–April 2019, when the Class I skim milk price was determined by the higher-of mover, the monthly difference in advanced prices ranged from \$0 to \$6.77. From May 2019 through December 2023, the range was \$0 to \$11.86, equating to an increase of slightly more than 75 percent.

Testimony described rapidly changing Class III and IV prices resulting not only in months when the Class I mover was significantly lower than it would have been under the higher-of formula, but times when the Class I price (announced before the month) was less than the Class III and/or Class IV price (announced after the month). As handlers have the option to pool Class III and Class IV milk, this price inversion led to many months when the higher-valued manufacturing milk was not pooled. Testimony on the record described several consequences: (1) manufacturing handlers opted out of pool participation, keeping the higher market revenue instead of sharing it with all pooled producers; (2) instances when a manufacturing handler opted out of pool participation, and the historically high market revenue was not shared with their own producer suppliers; and (3) significant disparity in payments to pooled and nonpooled producers in some months.

Testimony detailed the conditions in 2020 when the demand for cheese relative to butter rapidly widened the spread between Class III and Class IV Prices. For example, the base Class I skim milk price for June 2020 (announced May 20, 2020) was \$7.08 (based on an \$6.68 advanced Class III skim milk price and an \$5.99 advanced Class IV skim milk price). Cheese prices rose rapidly during the month, resulting in a \$15.06 Class III skim milk price and \$6.62 Class IV skim milk price. According to record evidence, high volumes of Class III milk were not pooled in order to avoid paying the higher valued Class III price into the marketwide pool.

Record data reveals a significant increase in the estimated volume of milk not pooled in 2020 and 2021, which NMPF attributed to price volatility. Data shows milk volumes not pooled in 2020 and 2021 were approximately 60 percent greater than in 2019. Testimony and evidence pointed to pronounced price volatility being considered the norm, not the exception, going forward.

Record evidence also shows how the lower average-of mover value resulted in muted blend prices in some regions

of the county, making it difficult to attract milk supplies for fluid use. This was particularly a concern in the southeastern FMMOs which experienced a disproportionate reduction in blend prices relative to other FMMOs because of their high Class I utilization. Testimony described how blend prices between the Southeast FMMO and nearby orders narrowed, making it difficult to attract supplemental milk to meet the fluid demand in the milk deficit region.

During Order Reform, the Department considered numerous options for determining Class I prices as it evaluated an appropriate Class I pricing system. In the Order Reform recommended decision, several variations of an average mover were considered, including a moving average and a declining average weighted most heavily by the current month's price, along with a higher-of option based on the second preceding month's prices. When considering its recommendation, the Department evaluated each option's ability to improve price stability while maintaining appropriate producer price signals to ensure an adequate supply of milk for fluid use.

The Department initially recommended a 6-month declining average of the higher-of the Class III and Class IV skim milk prices. The goal was to "decrease monthly Class I price volatility while minimally affecting the long-run price." 63 FR 4802, 4886 (Jan. 30, 1998). Analysis of that option compared to the higher-of option showed only a two-cent difference based on data from 1992–1997, thus supporting the notion an average-of price would not impact prices in the long run. Public comments in response to the recommended decision cautioned the Class I price should be closely and directly linked to manufacturing prices. Commenters opposed a six-month declining average because it would delay the linkage with the Class I price, resulting in counter-cyclical pricing—something noted in the final decision, which stated that, for example, if Class I prices are undervalued, "it reduces producers' pay prices at a time when the producers should be receiving a positive price signal." 64 FR 16026, 16102 (Apr. 2, 1999). Analysis conducted for the Order Reform final decision evaluated prices post-1998 and found using a 6-month average mover during times of increased price volatility would have led to price inversions. The decision explained how price inversions could lead to depooling under which disorderly marketing conditions may arise. As a result, the final decision also articulated, on the same page as the

most recently noted quotation, "because handlers compete for the same milk for different uses, Class I prices should exceed Class III and Class IV prices to assure an adequate supply of milk for fluid use." Accordingly, the final decision recommended the higher-of mover which remained in place until May 2019.

Record evidence clearly shows that the price inversions and depooling predicted in the Order Reform final decision occurred after the average-of mover was implemented in 2019. The principle of maintaining a proper link between Class I and manufacturing prices to avoid price inversions and depooling remains an important consideration in evaluating change to the Class I mover in this rulemaking.

Proponents offering modifications to the average-of mover acknowledge price inversions and depooling have occurred with greater frequency and duration. However, they maintain hedging is a critical risk management tool that should be preserved and cannot be achieved using the higher-of mover. Record evidence highlights that although both HTST and ESL are fluid milk products, there are notable differences between HTST and ESL processing and sales. ESL products require unique processing techniques and packaging that significantly increase product shelf-life. The record indicates ESL products have a shelf-life of at least 65 days; some ESL processors stated their products have a shelf-life of 120 days or more.

ESL processors described marketing differences between the two types of products. ESL products: (1) have a longer shelf-life which facilitates a wider distribution; (2) are typically shipped to centralized retail warehouses (distribution centers) and from there are distributed to individual stores by the store owners; and (3) are sold to retail customers who prefer long-term contracts and a long lead time for any price changes, often 60–90 days or more. This is significantly different than HTST products that: (1) have a significantly shorter self-life (common range is 14–21 days) necessitating more local distribution; (2) are typically distributed through direct-store-delivery (DSD); and (3) whose retail customers are accepting of FMMO Class I prices that vary monthly.

ESL processors explained the average-of mover has enabled them to meet customer demand for long-term price-fixed contracts by using the futures and options market to hedge the risk associated with changes in monthly FMMO Class I prices. They credit the ability to manage risk as a factor in the

growth of ESL products. Before adoption of the average-of mover, processors of ESL products took on a significant amount of price risk to meet the long-term, fixed price contracts required by customers because they had no way of knowing when they negotiated contracts whether the advanced Class III or Class IV price would become the base Class I skim milk price. The record contains no similar evidence that HTST processors face the same constraints. In fact, record evidence shows advanced Class I pricing with monthly sales negotiations was, and remains, standard practice for these products.

Given all the record evidence, this decision must determine the best method for determining Class I skim milk prices that ensure adequate fluid milk supplies and orderly marketing conditions. The earlier discussion of record evidence clearly highlights the disorderly marketing conditions that occurred as a result of the average-of mover. However, when considering how to provide for more orderly marketing conditions, this decision cannot ignore how the Class I market has evolved since 2000.

Prior to FMMO Reform, fluid milk products were almost exclusively HTST, which have a shorter shelf-life and move from farm to retail in a relatively short time. Advanced pricing ensures equity among fluid milk handlers, allowing them to know their regulated minimum raw milk cost at the time they negotiate prices with their buyers and ensure equal raw milk cost between similarly situated handlers.

The record reflects significant development and growth of ESL products since Order Reform. The record also highlights marketing ESL products is significantly different than HTST products. Evidence shows the different distribution pattern (warehouse v. DSD) and longer shelf-life (65–120 days) facilitates wider geographic, rather than local, marketing and distribution. In addition, it is common for competing ESL products being sold in the same month to have been processed during a range of previous months. As a result, processors of ESL products do not necessarily have the same regulated minimum raw milk prices for products sold during the same month. This undermines handler equity between processors of ESL products as they do not have equal raw milk costs for products competing for sales in the same month. This decision supports a hybrid solution that will ensure adequate supplies of milk for fluid use, while also accounting for the inequities between processors of ESL products.

FMMOs are tasked with ensuring minimum prices reflect supply and demand conditions, which is accomplished, in part, through weekly surveys of wholesale bulk commodity products. Weekly survey prices provide signals to market participants on the changing value relationships between dairy product markets. FMMOs do not control those market-based relationships. As monthly average prices are determinants of Class III and IV prices, it is expected there will be periods when Class III values will be higher, and other times when Class IV values will be higher. Under a monthly pricing system that allows for voluntary pooling of manufactured milk and advanced Class I pricing, there will be occasions when these value differences are large enough to have price inversions and/or incentivize handlers to not pool milk during a particular month. The record clearly shows such situations occurred prior to May 2019. However, record data highlights the shift in duration and magnitude of these occurrences since the average-of mover was adopted. The record reveals large and prolonged value differences can cause significant differences in pay prices between producers and reduced willingness to supply the Class I market. The record of this proceeding supports returning to the higher-of Class I mover for HTST products. The higher-of would provide a better link between Class I and manufacturing prices and better ensure Class I prices remain the highest to bring forth an adequate supply of fluid milk. Therefore, this decision continues to recommend adoption of Proposal 13 for HTST fluid milk products.

AMS received 29 comments that specifically supported a return to the higher-of mover. Comments in support of the higher-of mover were submitted by: NMPF; Select; AFBF; ADC; the state Farm Bureaus of Arizona, Michigan, New York, Michigan, Wisconsin, Minnesota, and Tennessee; Georgia Milk Producers, Inc.; Northeast Dairy Producers Association (NDPA); National Family Farm Coalition; Farm Women United; and 15 individual dairy farmers. Seven commenters, including NMPF, ADC, NDPA, and four individual dairy farmers, expressed the higher-of keeps dairy markets more orderly. NDPA noted the return to the higher-of would have an immediate positive impact on farmers. The Wisconsin and Minnesota Farm Bureaus commented the higher-of often provided better financial returns to farmers in the past. One dairy farmer praised a return to the higher-of, arguing its removal in 2019 decreased revenue.

In its comment, AFBF reiterated arguments that the return to the higher-of is critical for ensuring dairy farmers receive fair and adequate compensation for their milk, especially in the face of volatile market conditions. AFBF continued to argue that most fluid milk processors have not increased or even begun the use of hedging, which was the intent of adoption of the average-of mover. The Michigan Farm Bureau commented that a return to the higher-of would better reflect current market conditions and improve overall pricing for farmers. Georgia Milk Producers, Inc., stated the return to the higher-of is critical to the success of its producers, who were disproportionately impacted by the change to the average-of mover. A dairy farmer commenter advocated for a simple and stable price program that uses the higher-of.

CDC and two dairy farmers specifically requested the higher-of mover alone, without the proposed ESL adjustment, apply to all Class I milk. AFBF; the state Farm Bureaus of Arizona, Florida, New York, and Tennessee; and the two dairy farmers requested a return to the higher-of on an expedited basis.

In their comments on the recommended decision, MIG and Crystal Creamery opposed a return to a higher-of Class I mover. MIG reiterated its hearing testimony that the return to the higher-of on HTST milk prohibits effective hedging.

This decision continues to find that returning to the higher-of mover for ESL products would deepen the pricing inequity that naturally exists for those products, as described earlier. For example, under the higher-of mover, a handler processing and selling an ESL product in January 2023 would have faced a base Class I skim milk price of \$11.62 per cwt. However, handlers who processed ESL products two or four months before, which are also being sold in January 2023, would have faced a base Class I skim milk price of \$12.61 and \$13.82 per cwt, respectively. This results in a difference of base raw milk costs of up to \$2.20 per cwt for ESL products competing for sales during January 2023.

Given the marketing characteristics of ESL products, short of providing for fixed minimum prices, price differences between these competing products will always exist. However, this decision strives to recognize the evolution of the ESL market since Order Reform with a pricing structure for ESL products that would narrow differences, make them more predictable, and provide for more orderly marketing conditions.

This decision continues to find pricing differences would be reduced through adoption of a Class I ESL adjustment that would equate to a Class I price for all ESL products equal to the average-of mover contained in Proposal 15. The recommended Class I ESL adjustment would provide more long-run pricing equity for ESL product by better ensuring handlers whose ESL products compete for sales during the same month, but whose raw milk may have been purchased and processed during different time periods, have more similar costs.

This decision continues to find adoption of the higher-of mover and Class I ESL adjustment appropriate to provide for more orderly marketing and better ensure price equity for handlers of similar Class I products. As set forth in the recommended decision, the higher-of Class I mover would be announced on or before the 23rd of the prior month. A Class I ESL adjustment would be announced at the same time and equal the difference between the higher-of mover and the average-of the advanced Class III and Class IV skim pricing factors plus a rolling monthly adjuster. The rolling monthly adjuster would be calculated as the average of the differences between the higher-of and the average-of calculations for the prior 13 to 36 months and could be positive or negative.

The recommended decision described milk subject to the ESL adjustment as all milk used in ESL products with a shelf-life no less than 60 days, regardless of the type of Class I plant in which they are made.⁴ This decision continues to propose an ESL adjustment that would be added to or subtracted from the handler's pool obligation applicable to the amount of milk used in ESL products. The rolling adjuster would be computed in advance and announced on or before the 23rd of the month 12 months in advance of its application (*i.e.*, January 2023 rolling adjuster would have been announced on or before December 23, 2021).

For example, the advanced Class III and IV skim pricing factors for January 2023 were \$9.54 per cwt and \$11.62 per cwt, respectively.

- The average-of the two factors (applicable to ESL milk) would have been \$10.58 plus the rolling adjuster reflecting the average of the differences between the higher-of and the average-of from January 2020 to December 2021 (\$1.58 per cwt), for a total of \$12.16 per cwt.

⁴ 1xxx.7(a) or 1xxx.7(b).

- The higher-of mover (applicable to HTST milk) would have been \$11.62 per cwt.

- The January 2023 Class I ESL adjustment would have been \$0.54 (\$12.16 – \$11.62), calculated by subtracting the higher-of announced price from the average plus rolling average calculation.

The effect of the adjustment would be a base Class I skim price for HTST milk of \$11.62, and an effective base Class I skim milk price for ESL milk of \$12.16. While this example computes a positive adjustment resulting in a higher effective price for ESL milk, it is to be expected in some months the adjustment will be negative, resulting in a lower effective price. The objective of the ESL adjustment is not to create a higher or lower effective Class I price, but rather to reduce the range of base Class I skim prices paid for milk used in ESL products being sold during a month. Evidence on the record indicates the Class I ESL adjustment would tend to moderate the price highs and lows, thus providing improved price equity between handlers of ESL products. The record indicates ESL products represent approximately 8 to 10 percent of the Class I market and would be subject to the Class I ESL adjustment.

Comments to the recommended decision submitted by Select, Edge, Nestle, IDFA, and MIG supported the inclusion of the ESL adjustment as part of the Class I mover. MIG and IDFA further advocated for implementation of a base Class I skim milk price that supports risk management for all Class I milk products, not only ESL products. Both groups expressed that all Class I processors should benefit from the new formula, which they maintained is revenue-neutral with the higher-of formula over time.

In its comment, MIG stated the ESL adjustment would allow processors of ultra-pasteurized or aseptically processed and packaged fluid milk to continue to hedge price risk. MIG credited use of an average-of formula with allowing ESL processors to offer stable pricing, which in turn allows ESL products to more effectively compete with non-dairy alternatives including plant-based beverages.

Select stated the ESL adjustment would accommodate the expressed desire of handlers of ESL products to hedge their raw milk costs while providing dairy farmers the necessary stability of an overall higher-of Class I mover. Nestle opined the average-of formula utilized in the ESL adjuster provides holistic solutions for the industry and provides dairy farmers with assurances on the sale of their

product before the milk is produced. These factors, Nestle wrote, create pricing stability for both retailers and end consumers.

Many comments submitted expressed support for a return to the higher-of mover, but either opposed inclusion of the Class I ESL adjustment or expressed concern the provision could be abused. NMPF, AFBF, Michigan Farm Bureau, ADC, and seven individual dairy farmers stated the milk to which the ESL adjustment would apply was not well defined in the recommended decision, or that ESL itself was not clearly defined. Three commenters noted that the parameters of an ESL product are vague, including the recommended use of shelf-life to define qualifying products. NMPF, AFBF, Michigan Farm Bureau, Upstate Niagara, and an individual dairy farmer expressed concern that handlers could potentially abuse or manipulate the system, for example, by labeling a product with a shelf life of 59 days to benefit from a lower mover price when it is advantageous to do so. Such scenarios, AFBF noted, create a risk of inconsistent application and the potential for market distortions.

AFBF, Michigan Farm Bureau, Upstate Niagara, and five individual dairy farmers expressed concern that the inclusion of the ESL adjustment creates a potential for handlers to take advantage of the ESL adjustment by opting in or out of an adjustment on a monthly basis when favorable. Some commenters expressed concern over handlers attempting to qualify milk for the more favorable mover in a month in order to reduce payments to producers, likening it to depooling. AFBF and other commenters noted the possible range of a 95-cent reduction to a \$1.18 increase per cwt difference in base Class I price creates an incentive for handlers to take advantage of the system.

Several commenters, including NMPF, requested a clear definition of ESL products based on processing characteristics, not product or marketing characteristics such as shelf life. While the recommended decision highlighted the marketing characteristics of ESL, including the significantly longer shelf-life, the record reflects it is the processing technique that enables ESL products to have these marketing characteristics which facilitate wider distribution, shipping to centralized retail warehouses before distribution to individual stores, and most often, long-term sales contracts. In recognition of the possibility the ESL adjustment may be abused by adjusting the shelf life of a product as highlighted in the comments received, this decision finds

it appropriate to rely solely on the definition of the processing technique to define milk eligible to receive the ESL adjustment. While it is an industry term to refer to ESL products, the method of achieving ESL is accomplished through specific temperature and time thresholds which are contained in the ultra-pasteurized definition. As described in the Pasteurized Milk Ordinance, the process of ultra-pasteurization involves heating milk “at or above 138 °C (280 °F) for at least 2 seconds . . . so as to produce a milk or milk product, which has an extended shelf-life under refrigerated conditions.” This process of obtaining ESL products is to what witnesses testified. Accordingly, this decision finds it appropriate that ultra-pasteurized milk as defined in 21 CFR 131.3(c) would receive the ESL adjustment. The regulatory definition also encompasses aseptically packaged milk products, as the process of aseptic packaging requires milk to first be ultra pasteurized. As a provision defining a shelf-life threshold was not part of the original proposed order language, no changes to the proposed order language are necessary.

AFBF, Michigan Farm Bureau, and Upstate Niagara expressed concern about the potential for the ESL adjustment to set precedent for other types of adjustments for marketing claims for various production practices at the farm level. The proposed ESL adjustment would apply to a specific processing technique at the plant which the record demonstrates results in market characteristics that differentiate ESL products from HTST products.

NMPF requested clear guidance on how handlers report and account for Class I milk to ensure handlers cannot take advantage of the ESL adjustment by only applying it when advantageous. In its comment, ADC requested qualifying Class I fluid products remain with the ESL designation to avoid opportunistic use of the ESL adjustment that could reduce pool payment obligations. Several other commenters requested a review process be incorporated into the ESL adjustment provisions. Upstate Niagara commented many plants have the capacity to process both HTST and ESL products and expressed concern whether the Department would be able to prevent plants switching the type of processing for a pricing advantage.

This decision clarifies that the ESL adjustment would apply to all ESL milk meeting the ultra-pasteurized definition. Current handler reporting provisions in the regulations require handlers that process skim milk classified under 7 CFR 1000.44, both ultra-pasteurized and

HTST, to report monthly utilization for Class I utilization as defined in § 1xxx.30(a). Handlers report the type of product, how much product is sold or distributed within, and outside, the marketing area, as well as any other information pertaining to milk receipts and utilization the Market Administrator requires. If the ESL adjustment is adopted, handlers would report HTST and ESL products separately, ensuring accurate handler utilization is accounted for.

The FMMO program has a robust component that audits all handler reports filed with the Market Administrator. As part of an ESL handler's audit plan, FMMO auditors would review and verify handler records currently maintained under 7 CFR 1000.27(a) to ensure the raw milk was processed using ultra-pasteurized equipment, in accordance with the reported utilization. FMMO auditors would use documents such as pasteurization reports and State health department inspection records identifying equipment used for processing as verification.

Handlers producing ESL products would not determine when the Class I ESL adjustment would apply. The Class I ESL adjustment would apply automatically to milk used in ESL products. Handlers found misreporting ESL milk would be subject to an audit adjustment to the FMMO Producer Settlement Fund, as well as any other remedies authorized by current regulations.

Upstate Niagara; AFBF; the state Farm Bureaus of Arizona, Georgia, and Michigan; the Kentucky Dairy Development Council; Pennsylvania Association of Milk Dealers (PAMD); CDC; and 10 individual dairy farmers claimed the recommended ESL adjustment was not discussed or evaluated at the hearing, and no justification was presented. The Michigan Farm Bureau commented no testimony specifically supporting this type of adjustment was offered during the hearing process, making it difficult to recognize the necessity of its inclusion.

The commenters expressed concern that the impact of the package of proposed changes to the Class I mover provisions was not fully analyzed. Several expressed concern the proposed adjustment could have unintended consequences similar to those resulting from the Congressionally mandated change to the average-of mover in 2019. Upstate Niagara commented that as the percentage of ESL products in the market grows, the ESL adjustment would apply to an increasing volume of

milk. As a result, Upstate Niagara claimed, while the adjuster could mute price volatility over the long term for processors, it could also impact FMMO pools and producer pay in real-time.

Two commenters, PAMD and Upstate Niagara, claimed that because the combination of higher-of and ESL adjuster proposal was not specifically discussed at the hearing, the outcome was not properly noticed. The PAMD, a group representing fluid milk processors that own 14 processing plants located in and around Pennsylvania, opposed the return to the higher-of mover with the ESL adjustment. PAMD stated had the idea been noticed, it would have presented opposing evidence at the hearing. Additionally, PAMD argued the same advantages of less volatility and the opportunity to engage in risk management should apply to HTST processors as well as ESL processors in order to avoid competitive issues that would occur.

As set forth in the hearing notice, the base Class I skim milk price was open for testimony and evidence to be offered on the record for amendments. All FMMO regulated handlers received notice that changes to how milk in Class I products was priced were being considered. The recommended Class I mover is a combination of two proposals noticed and examined through testimony at the hearing. While the mechanics of adding an ESL adjustment to a higher-of mover are slightly different than proposals presented, the record contains extensive testimony and evidence on the processing and marketing of HTST and ESL products. Based on this evidence, this decision continues to find the recommended mover best promotes orderly marketing.

AFBF, Michigan Farm Bureau, ADC, and seven individual dairy farmers claimed the recommendation of a higher-of mover in combination with an ESL adjustment creates a "fifth" or "new" class of milk. Upstate Niagara, AFBF, the state Farm Bureaus of Arizona and Michigan, ADC, and four individual dairy farmers stated that the addition of an ESL adjustment introduces significant complications to an already complex Class I pricing system. AFBF and Michigan Farm Bureau commented the ESL adjuster creates a dual pricing system and adds an additional layer of complexity to an already intricate system. Some commenters asserted the proposed Class I mover provisions would likely create disparities between processors operating at the same location and undermine the FMMO principle of uniform prices.

Edge maintained the adjustment does not create a new classification of milk

but is an innovative approach to allow ESL handlers the ability to continue to use risk management in a changing industry.

Fluid milk products are defined in the current regulations as ". . . any milk products in fluid or frozen form that are intended to be used as beverages containing less than 9 percent butterfat and 6.5 percent or more nonfat solids or 2.25 percent or more true milk protein . . ." 7 CFR 1000.15(a). Milk used in both HTST and ESL products meets this definition of a fluid milk product and, therefore, a new or separate class of milk is not being proposed. Inclusion of the ESL adjustment to the Class I mover reflects the substantial record evidence demonstrating the unique ultra-pasteurization milk product characteristics warranting recognition in the pricing provisions. The ESL adjustment to a handler's pool obligation meets current needs of the industry seeking to update the price formula provisions to reflect current market conditions. While the adjustment adds a new component to the Class I mover, the Department calculates the Class I base price and an ESL handler's adjustment. Handlers already report to the Department the types of products they distribute and would not incur any new reporting as a result of the ESL adjustment.

In its comment, NMPF noted that until 36 months after implementation, some or all of the look-back calculation for the ESL adjuster would be based on the announced Class III and Class IV skim milk pricing factors prior to the regulatory changes stemming from this proceeding. NMPF requested in its comment the prices used to compute the rolling adjuster prior to the implementation of the Final Rule be recalculated based on the regulatory changes proposed in this rulemaking. The record does not contain evidence explaining why historical prices should be recalculated. Therefore, this decision does not find it is appropriate to recalculate the look-back portion of the ESL adjuster with updates for other amendments to the FMMOs.

In its comment opposing a return to the higher-of, Crystal Creamery maintained the higher-of mover would provide no financial value to mandatorily pooled handlers and would not incentivize service to the Class I market. Further, Crystal Creamery argued, the higher-of would distort market signals and cause greater imbalances in manufacturing markets, leading to disorderly marketing and increased prices to consumers. Crystal Creamery reiterated a return to the higher-of would incentivize the lower-

value manufacturing class milk to remain pooled because of the payment it receives from the producer settlement fund as a result of marketwide pooling.

Marketwide pooling is a cornerstone of the FMMO program. As the record reveals, dairy farmers sell milk to a wide variety of handlers whose products have distinctly different supply, demand, and market conditions. Marketwide pooling provides for more orderly marketing by ensuring a minimum uniform price is paid to producers whose milk is used in distinctively different products, thus preventing destructive competition among producers. While some commenters allege the higher-of will cause disorderly marketing, the evidentiary record shows the adoption of the higher-of would result in greater value differences between Class I and manufacturing prices for shorter time periods, leading to fewer and smaller price inversions, less depooling, and more orderly marketing conditions.

An individual dairy farmer commented the ESL adjustment would incentivize a large spread between Class III and Class IV in the short term, resulting in increased price volatility between ESL and HTST milk, against the intended purpose of FMMOs. The farmer claimed pricing Class I milk using two formulas could result in periods where the price for one product is increasing month-to-month while the other is decreasing, depending on the direction the adjuster moved.

This decision does not find use of an ESL adjustment would incentivize large Class III and Class IV price spreads. The record of this proceeding reveals that farm milk used to produce products in each of the four classifications have distinct supply and demand conditions. The record does not contain evidence to support the implication that manufacturers of dairy products, the majority of which do not manufacture ESL products, would make business decisions to gain an advantage in the fluid market where they do compete.

In its comment, MIG requested two changes to the proposed order language. MIG first requested a reference be added to the proposed Class I ESL adjustment in section 1000.50(r) to refer to section 1000.43(e) General classification rules, in order to link the pricing provision and eligible Class I milk. This decision does not find this change necessary because section 1000.43(e) is referenced in the section 10xx.60(i) Handler's value of milk. The reference in section 10xx.60(i) provides the requested link between the eligible Class I milk and the pricing provision.

MIG also requested clarifying language be added to section 1xxx.60(i)

that the ESL adjustment may be a positive or negative value. This decision finds such technical change warranted but finds the clarifying clause more appropriate in section 1000.50(r). The language is contained in the proposed regulations below.

This decision also continues to propose maintaining advanced Class I pricing. Proponents of Proposals 16, 17, and 18 argued advanced pricing should be eliminated to prevent short term inversions between the monthly Class I price and Class III and/or IV prices, and subsequent incentives for depooling. In their comments, AFBF, and the state Farm Bureaus of Arizona, Michigan, and New York expressed disappointment this decision did not eliminate advanced pricing. Commenters reiterated arguments in testimony that advanced pricing has contributed to discrepancies in milk prices, has increased price volatility, and has caused price inversions and depooling, resulting in lower payments to pooled producers. Eliminating advanced pricing would mitigate these issues, commenters argued, by improving class alignment.

Opponents, both independent and cooperative Class I processors along with a majority of producers, supported the continued use of advanced pricing. As discussed previously, advanced Class I pricing provides equity to regulated Class I processors by informing them of their regulated minimum raw milk cost in advance of the sale of their product. This ensures all dairy processors have an opportunity to align their raw milk costs with the sale prices of their products, which are generally negotiated before the start of the month. In the case of Class I products and the nonfat solids portion of Class II products, this alignment is facilitated by advanced pricing. Accordingly, Proposals 16, 17, and 18 are denied.

Class I and Class II Differentials

a. Class I Differentials

The current Class I price structure was developed during the Order Reform process when Congress directed the Department to review the Class I price structure as part of larger FMMO consolidation efforts. Federal Agriculture Improvement and Reform Act of 1996, Public Law 104–127, 110 Stat. 888. As stated in the recommended decision, the Department considered several objectives when determining an appropriate Class I price surface, including: being national in scope, while also accounting for local and regional conditions; recognizing the

location value of milk; recognizing all uses of milk; and meeting AMAA requirements. The Department met AMAA requirements governing classified pricing by ensuring the price surface would “reflect enough of the milk value to maintain sufficient revenue for producers to maintain an adequate supply of milk and provide equity to handlers with regards to raw product costs.” 64 FR 16026, 16109 (Apr. 2, 1999).⁵ The Class I price surface adopted on January 1, 2000, met those objectives.

Class I milk pricing consists of two pieces: the base Class I mover applied uniformly to all Class I milk (as discussed previously) and a location specific differential which represents the value of milk at a specific plant location. The differentials provide producers a financial incentive to supply the Class I market, which tends to be closer to the population centers, rather than delivering milk to a manufacturing plant typically closer to the farm. The location specific differential consists of two parts: a base value (also referred to as the “base differential”) applied uniformly to all Class I milk, and a location value.

The base differential is currently \$1.60 per cwt, representing three costs whose values were determined to reflect market conditions during the late 1990s. First, the cost of maintaining Grade A farm status (\$0.40) which includes costs associated with the labor, resources and utility expenses for maintaining required equipment and facilities, and adherence to certain management practices. Second, marketing costs (also referred to as balancing costs) (\$0.60) which include, among other things, the costs associated with seasonal and daily reserve balancing of milk supplies and transportation to more distant processing plants. Lastly, a competitive factor (\$0.60) is included to represent a portion of the competitive costs incurred by fluid plants to compete with manufacturing plants for a milk supply.

The location values were developed during the Order Reform process through an analysis conducted with the USDSS model, maintained at the time by Cornell University. The USDSS model was used to evaluate the geographic or “spatial” value of milk and milk components across the U.S. under the assumption of efficient markets. The model used 240 supply locations, 334 consumption locations, 622 dairy processing plant locations, 5 product groups, 2 milk components, and transportation and distribution costs among all locations to determine

⁵ Order Reform Final Decision.

mathematically consistent location values for milk and components. Model results provided county-specific information regarding the relationship of prices between geographic locations based on May and October 1995 data.

Since adoption on January 1, 2000, only differentials in the Appalachian, Florida, and Southeast FMMOs have been amended. The amendments, effective May 1, 2008, were the result of a region-specific rulemaking evaluating transportation costs in servicing those milk deficit orders 73 FR 14153 (Mar. 17, 2008).

The record reflects consensus among hearing participants that the dairy marketplace has evolved significantly over the past 25 years. However, there remains strong disagreement on how the market changes should be interpreted and recognized in the Class I differentials. The producer community argued Class I differentials no longer reflect the cost of servicing fluid milk demand and should be updated to reflect the current structure and significantly higher transportation costs through adoption of Proposal 19. The processing and manufacturing community argued certain cost factors contained in the differentials are no longer relevant and should be eliminated through adoption of Proposal 20. They stressed that if the costs of servicing the Class I market exceed those of the proposed reduced Class I differential values, they can be negotiated between buyers and sellers through over-order premiums.

Proposal 19 would increase the Class I differentials based in part on updated USDSS model results reflecting the current dairy market structure and transportation costs. NMPF witnesses explained model result averages were the foundation of their deliberations, and deviations were made to account for a variety of factors they believed were not accounted for, including producer price impacts, competitive relationships, blend price alignment, private supply arrangements, and unique local market conditions such as traffic or geography. Although NMPF began with results from a mathematical model, the process thereafter was primarily subjective. They started by selecting a series of cities, which they called "anchor cities," to represent areas which bordered multiple FMMO regions. Then, regional committees adjusted model-derived location values to better align location values and reflect local marketing and transportation conditions within their region, respecting the anchor cities as starting points. NMPF combined the independently derived regional results

and made further refinements to ensure smooth pricing transitions between the regions. Ultimately, NMPF proposed the lowest differential increase from \$1.60 per cwt to \$2.20 per cwt. NMPF maintained the cost factors provided for in the base differential value remain relevant and presented testimony from member cooperatives that such costs have increased.

Opposition to Proposal 19 centered on several areas. First, opponents argued there is more than an adequate supply of milk nationally to meet Class I needs, therefore, adoption of Proposal 19, or any increase to Class I differentials, is not warranted. Second, opponents contended raising Class I prices would be disorderly because it would further decrease already declining Class I consumption and, they argued, the FMMO objective of ensuring adequate milk supplies implies FMMOs should adopt provisions that encourage Class I consumption. One such opponent presented an econometric study which found fluid milk demand is elastic, concluding that increasing Class I prices would decrease consumption and violate FMMO objectives. Third, opponents took exception to NMPF's proposal development process and what they considered a lack of unifying principles used to adjust the USDSS model results, believing NMPF had failed to provide cost justification for maintaining a base differential. Independent fluid milk processors further argued the entire development process led to results with a favorable bias towards NMPF member-owned plants. Lastly, organic milk processors and some organic cooperatives argued organic milk should not be treated similarly to conventional milk in the FMMO program because it has different and unrelated market structures. In its post-hearing brief, MIG reiterated its position on organic milk and further argued that because NMPF did not demonstrate that current Class I differentials create disorderly marketing conditions the evidentiary threshold for increasing differentials had not been met.

MIG offered Proposal 20, which would lower the base differential value to \$0.00, contending FMMO Class I prices are too high and have resulted in an oversupply of milk that they believe is disorderly. According to MIG, there is more than an adequate supply of milk to meet fluid demand. Given 99 percent of U.S. milk production meets Grade A standards, MIG argued compensation for Grade A maintenance is already provided for in manufacturing milk prices and, therefore, the \$0.40 Grade A factor is no longer justified.

Additionally, MIG member testimonies detailed efforts they have adopted to balance their own milk supply, including infrastructure investments, creating more uniform receiving and processing schedules, and paying over-order premiums. Organic and ESL MIG members testified their fluid milk products function as wholly distinct markets with their own balancing and supply challenges. Therefore, MIG concluded the balancing cost and Class I competitive factors should no longer be recognized in the Class I price. Lastly, MIG and its members, and Lamers Dairy, argued that if additional money is needed to compensate dairy farmers and cooperatives for balancing costs or to incentivize milk to serve Class I plants, those costs should be negotiated between the buyer and seller and paid through over-order premiums, not as part of the regulated price.

A vast majority of producers and their cooperatives opposed Proposal 20. They maintained, both in witness testimony and post-hearing briefs, there is relevancy of costs associated with the base differential. NMPF stressed the costs, while difficult to precisely quantify, are still relevant and have increased since adopted in 2000. NMPF described the disorder that would arise if the base differential was reduced to \$0.00 and a greater portion of market-wide cost reimbursement was forced to be negotiated in the market. While some NMPF members testified to receiving over-order premiums, they stressed establishing and maintaining premiums is difficult because there remains a market imbalance of power between milk sellers and buyers.

Opponents of any change to Class I prices, either through a change to Class I differentials or other FMMO amendments, raised several overarching objections. First, they alleged disorderly marketing must first be proven to justify any changes to FMMO provisions. They cited a lack of instances of fluid demand not being met as an indication disorder is not present in the fluid milk market.

The declared policy of the AMAA is to ". . . establish and maintain such orderly marketing conditions for agricultural commodities in interstate commerce . . ." FMMOs accomplish this mandate through the classified pricing of milk products and marketwide pooling of those classified use values. Through these mechanisms, orderly marketing conditions are provided so handlers are assured of uniform minimum raw milk costs and producers receive minimum uniform payments for their raw milk, regardless of its use. While previous FMMO

amendatory proceedings may have found market disorder to warrant changes to provisions, the AMAA does not contain an express or implied declaration that a finding of disorderly marketing conditions is required before an order can be amended.

Second, opponents argued Class I prices cannot be amended until the FMMO system is modified to recognize the organic milk sector. However, potential amendments that would adopt disparate treatment of organic milk were not within the scope of this proceeding, as defined in the hearing notice.

Finally, opponents testified that milk is typically more valuable when used in Class III products, rather than Class I, and therefore the record lacks justification to increase Class I differentials. Testimony was given comparing USDSS model results (utilizing 2016 data) showing, outside of the southeastern region, higher marginal location values for milk used at Class III manufacturing locations than for milk used in Class I processing in the same locations. No evidence was presented as to how the Class III location values could or should be implemented to achieve the purposes of the AMAA. Unlike estimated Class I location values which have been historically relied upon to determine Class I differentials, this was the first time the USDSS model results were utilized to calculate location values for Class III milk, and the first time testimony was offered to suggest how the correlation between Class III and Class I location values should impact pricing decisions. The record lacks evidence to validate the interpretation of Class III location values, as further indicated by the differing views of the study authors as to whether this would be an appropriate interpretation of the various sets of USDSS model results.

The Department received 33 comments from stakeholders concerning amendments to the Class I differentials in the recommended decision. This included general comments as well as specific requests to reevaluate the proposed Class I differentials in certain counties, as discussed in greater detail by region below. In sum, the Department received 20 comments in support of and 13 comments in opposition to the Class I differentials as proposed in the recommended decision.

Seven individual dairy farmers; AFBF; NMPF; Georgia Milk Producers, Inc.; Maine Dairy Industry Association (MDIA); the Arizona, Michigan, Tennessee, Wisconsin, and Minnesota State Farm Bureau Federations; Upstate Niagara; Select; and Plains Dairy commented in support of the

recommended decision with some location-specific changes requested. These groups largely expressed support for the decision's use of the USDSS model's May results as the baseline for Class I differential changes, as well as the decision to maintain the current base differential of \$1.60. They also pointed to record evidence from producer organizations supporting the need to update the Class I differentials from the levels set nearly 25 years ago. Supporters stated that the increases in the proposed differentials accurately reflect current costs and would ensure an adequate supply of fluid milk nationwide and orderly marketing conditions.

Crystal Creamery; United Dairy; Nestle USA; New Dairy; Lamers Dairy; IDFA; MIG; Pennsylvania Association of Milk Dealers (PAMD); West Virginia Department of Agriculture; and Family Farm Defenders submitted comments objecting to the proposed amendments to the location-specific Class I differentials in the recommended decision and some specifically objected to the continuation of the \$1.60 base differential. DFA, the DFA Mountain Area Council (separately), and an individual DFA producer submitted comments specifically objecting to the Department's reliance on the USDSS model's May results as the basis for determining Class I differentials. They argued the USDSS model does not take into account the unique relationships between dairy farmers and Class I manufacturers in Colorado and the proposed Class I differential levels in Colorado should be raised.

MIG made numerous assertions regarding what it believed were arbitrary and capricious changes proposed in the recommended decision, particularly concerning any deviations from the USDSS model. MIG also continued to express strong opposition to the costs accounted for in the \$1.60 base differential, stating that the record lacks sufficient evidence to continue to account for the Grade A and Class I incentive costs, in particular. IDFA also commented that, in its view, there is no record evidence to support that Class I demand is not met and, thus, the decision to increase Class I differentials to incentivize supply to the Class I market is unsubstantiated.

Comments by Crystal Creamery and Lamers Dairy also expressed additional concerns with the proposed Class I differentials. Crystal Creamery reiterated its support for MIG's proposal to eliminate the base differential, which they believed would allow over-order premiums to incentivize supply to fluid plants. However, Crystal Creamery

stated that if the Department continued to propose Class I differential increases, it believed the use of the USDSS model results, with no additional adjustments, was the best tool available for determining location differentials. Lamers Dairy expressed its continued opposition to any increase in the Class I differentials and criticized the Department's determination not to account for over-order premiums in its recommended decision because they are, in its view, the real incentive to supplying fluid milk plants.

Considering comments received on the recommended decision and all record evidence, this decision continues to find that the cost of servicing the Class I market is no longer sufficiently reflected by existing Class I differentials. This was evident in the USDSS model results and validated through firsthand testimony of cooperative milk suppliers who described increased servicing costs. Current Class I differentials were established based on 1995 data. In the nearly thirty years since, the record reflects the market has substantially changed in size and structure. While milk production by volume has increased approximately 45 percent from 1995 until 2022, during the same time period the number of dairy farms has decreased by approximately 74 percent, and the average herd size has increased from 68 to 261 cows.

Consolidation has also occurred on the processing and manufacturing side. The record describes plant closures, particularly on the fluid processing side, and plant investment, especially in large manufacturing plants. Considerable testimony and evidence were given describing increased distances milk must travel to find a market outlet. Because of the greater distances between supply locations and fluid processing plants, cooperative witnesses testified to increased costs to ensure fluid demand is met. The witnesses also described in detail how the increased costs are disproportionately borne by cooperative members who often see deductions on their milk checks to cover increased organizational and individual transportation costs, which some witnesses attested more than doubled in the past 20 years.

There was little to no rebuttal to the claim the market has consolidated on both the producer and processor side, resulting in increased transportation costs. The USDSS study authors themselves attributed the observed differences in the 2022 results, when compared to the current differentials, to four primary factors: change in milk production locations, change in compositions of dairy product demand,

change in demand locations, and increased transportation costs per mile. What is at issue is the justification for increasing Class I differentials. While only one witness described a situation in which they were unable to procure enough milk to meet the demand of their fluid milk processor, the record is full of testimony on the difficulty cooperatives have faced to ensure fluid milk demand is met. Cooperative witnesses discussed needing to reach out to more distant supply locations to find available milk supplies willing to serve the Class I market instead of remaining at a manufacturing plant, and the inability to recoup a large portion of the additional transportation costs through over-order premiums.

FMMOs were established in the 1930s when the market contained many sellers and few buyers of milk. The highly perishable nature of raw milk resulted in producers engaging in pricing behavior that lowered farm prices as producers undercut one another in order to find a market outlet, a condition generally described as destructive competition. This unavoidable competitive behavior was among the reasons producers petitioned Congress to authorize a marketing order program to provide orderly marketing through known terms of trade and the pooling of market returns, which in turn provided a more equitable balance of power between buyers and sellers.

While the record of this proceeding reveals continued consolidation on both the producer and processing sides of the market, it also contains evidence the fundamental elements that were the genesis of the FMMO program still exist. Raw milk remains a highly perishable product, produced every day, that cannot be stored for any significant length of time and incurs high costs when transported over long distances. No substantive evidence was presented to indicate there is no longer an imbalance of market power between buyers and sellers. Processors spoke of the abundance of milk produced as a reason Class I prices should not be increased. However, that reality also highlights how the dairy marketplace continues to place processors in a price setting role. As a price taker, the record reflects considerable testimony attesting to the difficulty dairy farmers have had and continue to have in obtaining and maintaining over-order premiums at levels sufficient to cover actual and/or opportunity costs.

It is natural for buyers of milk to want to pay less and for sellers of milk to want to be paid more. The role of FMMOs is to determine minimum prices that provide for orderly

marketing conditions that balance these natural competitive desires. The AMAA expressly authorizes nationwide pooling of classified prices as a tool for accomplishing orderly marketing. In determining appropriate classified prices, the Department cannot place an undue reliance on over-order premiums which diminish the role of nationwide revenue pooling and can lead to disorderly marketing conditions. Accordingly, this decision recommends changes to the Class I differentials to better reflect the various aspects of the current marketplace.

The first step in evaluating appropriate Class I differential levels is the base differential. While the USDSS model is appropriate to show the value differences of milk between two fluid plant locations, as will be discussed later, it is not designed to inform the level of the minimum value needed to service Class I plants. Proposal 20 seeks to reduce the base differential to \$0.00 on the premise the costs represented either are no longer relevant (Grade A maintenance) or should be left up to negotiation with the fluid milk processor and their supplier (balancing and Class I incentive cost). This decision continues to find that while the record does not precisely describe how much the cost components of the base differential have increased, it lacks evidence to demonstrate those costs have decreased. In fact, discussion of various costs throughout the proceeding indicates that costs have instead increased. Given the lack of clear record evidence specific to costs accounted for in the base differential, this decision continues to recommend that the \$1.60 per cwt base differential remain.

Despite arguments Grade A maintenance costs should no longer be covered because 99 percent of U.S. milk production is Grade A, this decision continues to find it appropriate to recognize the additional costs for maintaining Grade A status in a regulatory pricing system requiring Grade A standards be met for participation. When the Grade A factor was incorporated into the base differential, it was specifically for Grade A maintenance costs, not costs associated with conversion to Grade A status. Proponents argue that because almost all milk meets Grade A standards, it is no longer necessary to provide a recognition of that cost in the base differential. Whether 99 percent of milk production today is Grade A, or 96 percent as it was at the time of Order Reform, is irrelevant. The record demonstrates dairy producers incur costs to maintain Grade A standards which are a requirement for

participating in the FMMO system. As only Class I milk is required to participate and raw milk used in fluid milk products is required to meet Grade A standards, it is appropriate for the Class I price to continue to recognize those costs.

The record does not demonstrate the remaining two base differential factors, balancing costs and additional monies needed to compete for a milk supply, are no longer relevant. All parties testified to their continued existence. Proposal 20 would require those costs to be negotiated in the market.

Proponents of Proposal 20 argued they have made capital investments to balance their supply and/or pay over-order premiums to their suppliers to meet their milk needs, and/or provide balancing services. While their testimony acknowledges these costs exist, proponents argued the FMMO is making them pay twice for such services—once through the regulated price and again through their negotiated over-order premium. They further argued that if cost reimbursement is needed for such services, they should be able to pay that value to their suppliers directly through over-order premiums, not into the nationwide pool.

Cooperative witnesses testified at length on the costs associated with ensuring daily, weekly, monthly, and seasonal fluctuating needs of the fluid market are met. While their balancing costs were considered confidential information, cooperative witnesses testified to the overall increase in costs associated with providing those services. In particular, cooperative witnesses spoke to the higher costs incurred to operate regional balancing plants. These plants often do not run at full capacity year-round in order to ensure capacity to balance excess supply during flush periods or provide additional milk to fluid processing plants during months of increased demand. The record reflects these marketing costs are incurred for the benefit of balancing the entire market's milk supplies, thus, providing for the orderly marketing of milk for fluid use. It has always been the case that an individual processor may find it necessary and/or advantageous to pay premiums above the minimum value to suit their individual and fluctuating needs. FMMO pricing balances the value needed to be reflected in the minimum regulated prices, without an over-reliance on over-order premiums that can undermine nationwide revenue pooling and lead to unequal raw product costs between similarly situated handlers and non-uniform payments to producers.

An additional function of the base differential, as described in the Order Reform Recommended Decision, is to generate the additional monies necessary for the FMMO pools to balance the reliance on over-order premiums. This was of particular concern in marketing orders with low Class I differentials and low Class I utilization, for which the decision noted “there is a risk that handlers may not face equal raw product costs for various reasons. Thus, having a larger proportion of the actual value of Class I milk in the market order pool in these areas, than is now the case, should promote pricing equity among market participants.” 63 FR 4802, 4909 (Jan. 30, 1998). As this decision seeks to update Class I differentials, maintaining the balance of what proportion of the value of Class I should be reflected in the marketwide pool remains a consideration. Negotiations for over-order premiums are not conducted in a vacuum but are done with the benefit of both parties knowing minimum FMMO values and the costs represented in the minimum values the plant is responsible for paying. If Class I processors believe they are being double charged, they can use that information in their over-order premium negotiations.

Maintaining the \$1.60 per cwt base differential would ensure Class I prices typically remain the highest, which is of particular importance in locations where the base differential is the effective differential. Without a base differential value in these locations, there would be little difference between the Class I price and the manufacturing price, and, thus, no financial incentive to supply the fluid market would exist to ensure the FMMO policy objective is met. Accordingly, this decision finds a \$1.60 per cwt base differential remains an appropriate minimum value to ensure Class I demand is met.

While the Department appreciates the effort put forth to submit a comprehensive option in Proposal 19, the record of this proceeding does not support its adoption. Proposal 19 contains a base differential of \$2.20, which is an increase of \$0.60 from the current level. However, the record lacks data to quantify costs in excess of the \$1.60 base value.

Proponents described using the average of the USDSS model’s May and October results as a starting point for consideration but did not provide evidence as to why, under a minimum pricing system, the average rather than the minimum values observed in the May results was appropriate or preferable. Furthermore, the record does

not contain evidence to support how the deviations made from the model’s averages are appropriate. Proponents described their own marketing expertise but presented insufficient evidence to determine if the proposed differentials would result in Class I prices in excess of what is appropriate for a minimum pricing system. Accordingly, this decision does not recommend adoption of Proposal 19.

However, this decision continues to find there is record evidence to support raising the Class I differentials from current levels. The record of this proceeding demonstrates the cost of servicing the Class I market has increased since the Class I differentials were adopted in 2000 and amended in the southeastern FMMOs in 2008. Evidence reflects the market structure of Class I plants and the milk supply have changed considerably in the last 25 years. That was supported in witness testimony, as well as USDSS model results, which clearly show the location value of milk has changed. The Department continues to find the USDSS model to be the best available tool for determining the location value of milk given the vast array of factors that contribute to how milk is produced, transported, processed, and distributed in the U.S.

When the differentials were adopted during Order Reform, testimony reflects the Department used USDSS model results as a starting point and made adjustments for various reasons. The Order Reform Recommended Decision described several options the Department considered. Of the differential surface ultimately adopted, AMS wrote, “. . . [n]ine differential zones provide the basis for establishing the price structure. These zones were established based on results of the USDSS model, knowledge of current supply and demand conditions, and recognition of other marketing conditions such as fluid versus manufacturing markets, urban versus rural areas, and surplus versus deficit markets.” 63 FR 4802, 4905 (Jan. 30, 1998). The decision went on to outline additional reasons for adjustments including ensuring price alignment with neighboring zones and adequate marketwide pool draws.

The USDSS model estimates results for an efficient milk supply and distribution network, provided at its lowest cost. The USDSS study authors acknowledged when using the model results to determine Class I differentials, adjustments would be appropriate as there are factors unaccounted for in the model, such as FMMO provisions,

abnormal traffic patterns, and competitive relationships.

Accordingly, this decision continues to recommend that Class I differentials be amended, as appropriate, to better reflect the current cost of serving the Class I market. When determining appropriate levels, the Department began with the USDSS model’s May results, referred to hereinafter as “May results.” The May results are the lower of the two months provided in evidence, which is an appropriate starting point for determining minimum prices. The Department then evaluated the results on a regional basis and made adjustments based on three principles and two additional considerations.

First, adjustments were made where necessary to better align Class I handler equity. This means the proposed Class I differentials should not give one handler an uneconomic cost advantage relative to an actual or potential competing handler. Second, adjustments were made to maintain producer equity and prevent uneconomic rewards or penalties to producers who deliver or could deliver milk to the same plant or market. Third, adjustments were made to ensure the marketwide pools continue to provide orderly marketing conditions. The combination of handler and producer equity goals is further achieved through the size and shape of pricing zones. The model results are determined at specific locations, or “nodes,” in the model. Model results can be displayed on a map or in a list of counties to convey the price surface, but the methodology for doing so, as explained by the study authors, was a mathematical tool which interpolated values between distances. Additional information about markets can be added to the model results through knowledge about the economic or geographic (roads, natural barriers, etc.) conditions in specific locations. This may lead to a decision to change the shape or contours of the pricing surface that is estimated from the model results. Lastly, adjustments were made to reflect unique challenges associated with servicing dense urban environments. The changes by regions and any changes from the recommended decision for specific locations—made in this final decision are described below.

The general process began with roughly \$0.20 differential bands generated from the May results. The May and October results formed a soft boundary for differential adjustments. The current differentials formed a hard lower boundary, which were rounded to the nearest dime to eliminate \$0.05 differences between zones, consistent

with the USDSS model results which were in \$0.10 increments.

Northeast

The recommended Class I differentials in the Northeast region continue to largely follow the May results with minimal changes. The differential for Portland, Maine, continues to be raised to \$4.50 to match the results in Concord, New Hampshire, and ensure handler equity. Albany County, New York, and Rensselaer County, New York, were moved to the same differential by increasing the Albany differential \$0.10 to meet the Rensselaer differential, as plants in those counties are located just across a bridge from one another but were assigned different prices by the model.

Comments on the recommended decision from NMPF and Upstate Niagara expressed concern with inconsistent Class I differentials across the area of western New York. NMPF and Upstate Niagara commented that the proposed differentials in the recommended decision would require milk supplying Class I destinations in that region to move from higher to lower differential zones, largely due to the geography of the Great Lakes. They requested the Department consider a flatter differential area by raising some counties from \$3.80 to \$3.90 and decreasing others from \$4.00 to \$3.90 to facilitate the movement of milk in different directions. Without an adjustment, they argue, producers will not have the necessary incentive to supply Class I handlers in the region.

After closer review of the record, this decision recommends increasing the Class I differentials in the following counties from \$3.80 to \$3.90: Niagara, Erie, Orleans, Genesee, Wyoming, Livingston, Yates, Ontario, Monroe, and Wayne. This decision also recommends decreasing the currently proposed Class I differentials from \$4.00 to \$3.90 in the counties of Lewis, Jefferson, and St. Lawrence. These changes will create a consistent \$3.90 zone that addresses milk movements in the region. This decision is consistent with record testimony concerning the market in western New York and expected increases in capacity and demand in the region which may potentially require milk to be sourced from outside of the immediate local area.

MDIA, NMPF, and MIG commented on the recommended decision's proposed Class I differentials in Maine and New Hampshire. MDIA requested that the proposed Class I differential for Cumberland County, Maine, be increased from \$4.50 to \$4.85 to restore the previous \$0.25 variance between the

Portland and Boston areas and ensure handler equity in the region. The current spread, MDIA argued, will incentivize Maine producers to ship to handlers in Boston, rather than those located in Cumberland County, Maine (Portland). Similarly, NMPF requested an increase from \$4.50 to \$4.70 for 6 counties in Maine and New Hampshire to maintain producer and handler equity. Lastly, MIG commented in opposition to the Department's proposal to align certain counties in Maine and New Hampshire, at levels \$0.20 above the model results.

The Department considered MDIA, NMPF, and MIG's comments in the context of the overall marketing dynamic in the northeast marketing areas and concluded that the Class I differential for Cumberland County, Maine should remain at \$4.50, as indicated in the recommended decision. This will align the Portland area with nearby Merrimack County, New Hampshire (Concord) to ensure handler equity in the region. The larger increase in Suffolk County, Massachusetts (Boston) reflects the increase in costs to service that market and fluid milk demand. Accordingly, no changes were made to the Class I differentials assigned in this region from the recommended decision to the final decision.

Differentials in most New Jersey counties are proposed to be \$0.10 to \$0.20 above the May results, but within the May and October range, to reflect testimony on the cost of servicing urban areas and transportation concerns. NMPF requested the differentials be aligned across southern New Jersey to ensure handlers competing in the same market face the same raw milk costs. The recommended decision proposed changes to the current Class I differentials at varied levels for certain counties in southern New Jersey. More specifically, the proposal for Cumberland County, New Jersey was \$4.70, while the proposal for neighboring Burlington, Atlantic and Cape May counties was \$4.80. However, a review of the record reveals these fluid milk plants compete for sales in the same market and should face similar raw milk costs. Therefore, this decision decreases the Class I differentials for Burlington, Atlantic, and Cape May counties from \$4.80 to \$4.70. This change will also align the differentials with the May results and maintain uniform Class I differentials across the region, as has been the case historically.

The differential for Washington, DC, continues to be \$0.10 above the May result to reflect testimony on servicing an urban area.

In eastern Pennsylvania and northern Maryland, NMPF's comments to the recommended decision requested a \$0.10 increase for 7 counties to maintain a historical \$0.10 price difference with Berks County, Pennsylvania, and to promote handler equity. Similarly, in the Philadelphia and Baltimore corridor, which includes areas in Maryland, Delaware, and southern Pennsylvania, NMPF requested \$0.10 to \$0.20 increases in 15 counties due to milk movements in the region and handler equity concerns. The Department considered NMPF's requests to increase the differentials in Pennsylvania, Maryland, and Delaware. However, the proposed differentials are aligned with the USDSS model results and record evidence does not support the requested increases. Accordingly, no additional changes were made to the Class I differentials proposed in Pennsylvania, Maryland, and Delaware from the recommended decision to the final decision.

Appalachian

The variation between the model results in May and October are more significant in the three southeastern orders. As discussed by several witnesses, this region experiences unique marketing conditions with high Class I utilization and deficit local milk supply. Due to the substantial seasonality of the local milk supply, it requires significant but variable volumes of supplemental milk supplies from outside the region as well as changes in milk movements of regular suppliers to the market throughout the year. The Transportation Credit Balancing Fund (TCBF) and the recently implemented Distributing Plant Delivery Credit (DPDC) are programs to compensate handlers for some of the additional and variable transportation costs associated with supplying the Class I markets in these orders during different periods of the year. The reimbursement rates for these programs include adjustments for any gain in Class I differentials from supply point to receiving plant. Therefore, any changes in the difference between Class I differentials would be reflected in the calculated rate for eligible payments in both the TCBF and DPDC in all three southeastern orders.

The Class I differentials in the Appalachian region are largely formed in \$0.20 and \$0.30 bands based on the May results starting with \$3.70 in southern Indiana and, moving southeast, increasing to \$6.00 along the North and South Carolina coasts. In most areas, the proposed differentials are within \$0.10 (+/-) of the May

results. There are a few exceptions where the proposed differentials are \$0.20 less than the May results to better align handler equity. For example, in Spartanburg County, South Carolina, the proposed differential is \$5.60, \$0.20 less than the May results. This maintains the current competitive relationship between this area and the Atlanta, Georgia area, and with the competing handlers in North Carolina.

The Department received comments on the Class I differentials proposed in the recommended decision in the Appalachian region from NMPF, IDFA, MIG, and New Dairy. NMPF requested a \$0.20 increase in 9 Virginia counties to align with the differential proposed for nearby Kanawha County, West Virginia. NMPF explained that the handlers in these areas all compete for the same market and receive milk from the same milkshed. NMPF also requested a \$0.20 increase to 40 additional Virginia counties to reduce the spread in the proposed differentials in Virginia and northern North Carolina, as well as a series of changes to the proposed differentials in other Virginia, West Virginia, and North Carolina counties considering logistical and geographical challenges. Conversely, IDFA, MIG, and New Dairy commented in strong opposition to the proposed increases and requested general downward adjustments.

The Department considered all comments on the Class I differentials proposed for the Appalachian region. First, rather than increasing the differentials for certain Virginia counties by \$0.20 to align with Kanawha County, West Virginia, this final decision decreases the proposed differentials for Kanawha County, West Virginia by \$0.20 to \$4.30. As discussed later in this decision with regard to the Mideast region, this change effectively aligns the region and addresses handler equity concerns described on the record in both West Virginia and neighboring Ohio counties that compete in the same market. Second, with regard to all other requested adjustments in this region, this decision finds that the Class I differentials proposed in the recommended decision are aligned with the model results and record evidence does not support additional changes. As such, no additional changes were made to the Class I differentials assigned in this region from the recommended decision to the final decision.

Southeast

The proposed Class I differentials in the Southeast FMMO start at \$3.20 in southwest Missouri and increase moving southeast to \$6.00 in southeast

Georgia. The proposed differentials continue to follow the May results closely, within \$0.10 (+/-), with a few modifications. The East Baton Rouge Parish differential was reduced by \$0.20 from the May results to be consistent with the May result of \$5.20 for competing areas such as Lafayette Parish. Tangipahoa Parish was placed in the \$5.40 zone, or \$0.30 below the May result. These decreases are meant to ensure handler equity while still acknowledging the thinner and steeper surface reflected in the May results in the southeastern U.S.

Rutherford County, Tennessee, is also proposed to be modified to be consistent with neighboring Davidson County, Tennessee, at \$4.60 (\$0.20 below the May result) to provide for handler equity. In Missouri, Webster County was placed in the \$3.20 zone to match the Greene, Hickory, and Polk County differentials. This addresses handler equity concerns and results in a \$0.10 proposed decrease for Webster County from the May result.

NMPF provided specific comments on the Class I differentials proposed in the recommended decision for the southeast region and requested a series of increases in 12 counties located in Tennessee and Kentucky. NMPF's rationale for these requests was based on historical and expected milk movements and known producer equity concerns among those delivering milk from the same milkshed to the same plant locations. The Department considered NMPF's request to increase the Class I differentials in this region. However, the differentials proposed in the recommended decision are aligned with the model results and record evidence does not support the requested increases. Accordingly, no changes were made to the Class I differentials assigned in this region from the recommended decision to the final decision.

Florida

The proposed Class I differentials for Florida largely follow the May results with modification to address handler equity concerns. The differentials start at \$6.00 in the Florida panhandle region and increase going south with mostly \$0.40 bands ending at \$7.40 in south Florida. Processing plants in central Florida were placed in the same \$6.80 band to match the May result in Volusia County due to handler equity concerns. This necessitated decreases from the May results of \$0.10 in Orange County, \$0.10 in Hillsborough County, and \$0.20 in Polk County. For similar handler equity concerns, Broward County is proposed to match the May result in

Dade County of \$7.40 in the southernmost part of Florida.

In its comments on the recommended decision, NMPF requested a series of increases of \$0.20 to \$0.40 to the Class I differentials proposed for 14 Florida counties. NMPF cited producer equity concerns and their ability to ensure a sufficient supply of fluid milk to meet consumer demand in high-population areas such as Miami. The Department considered NMPF's requests to increase the differentials in Florida. However, the proposed differentials are generally aligned with the model results and record evidence does not support additional increases. Accordingly, no changes were made to the Class I differentials proposed in this region from the recommended decision to the final decision.

Upper Midwest

In the Upper Midwest region, this decision continues to propose deviations from the May results to ensure producer equity and ensure the marketwide pool provides for orderly marketing. The Upper Midwest FMMO is unique in its low Class I utilization, which creates challenges in setting a differential surface that sends the proper signals to producers supplying the Class I market, while also ensuring producer equity and orderly marketing among producers supplying the region's plants. Record evidence indicates a large differential range in the region would not result in equity between producers and could result in disorderly marketing. Therefore, the differential surface was flattened from the May results, in general, by raising the Class I differentials in the western part of the region—in the eastern Dakotas and much of Minnesota—and lowering the differentials in the eastern part—in northern Illinois, southeastern Minnesota, and Wisconsin.

Differentials in five counties, Dakota, Hennepin, Ramsey, Scott, and Washington, in the Minneapolis/St. Paul metropolitan area of Minnesota, are raised \$0.10 higher than neighboring counties to reflect higher costs of serving an urban area and incentivize Class I service relative to surrounding manufacturing plants. In addition, they are set at the same differential of \$2.90 to promote handler equity among fluid processing plants in the metropolitan area. The new differential for these counties, except for Hennepin, are \$0.10 to \$0.20 above the May results. The differential for Hennepin, \$0.30 above the May results, is set the same as its peer counties to ensure that handlers in this county are able to compete for

available milk supplies on an equitable basis.

Differentials in the regions supplying the Chicago, Illinois, area are adjusted to ensure handler equity. Generally, the differentials in this area are set at \$3.10 to \$3.20. The record reflects bottling plants in eastern Iowa, northern Illinois, southeastern Wisconsin, northern Indiana, and southwest Michigan all compete for Class I sales into the Chicago area. Thus, Class I differentials in northern Illinois are lowered \$0.20 and \$0.10 in Kane and Winnebago counties, respectively, from the May results. Similarly, comparisons and adjustments were made to the May results to align with northern Indiana and southwest Michigan counties supplying the Chicago area.

The Department received a comment from NMPF concerning the Class I differentials assigned to eastern North Dakota and western Minnesota. NMPF stated the Department's recommended decision changed the historical relationship in the Class I differentials assigned to Cass County, North Dakota, and four, adjacent western Minnesota counties compared to the rest of western Minnesota. More specifically, these counties were proposed at \$2.70, while the surrounding counties were proposed at \$2.80. Without a change, NMPF commented, dairy farmers would be disincentivized to supply Class I handlers in the recommended \$2.70 zone. Considering these comments, this decision increases the Class I differentials for Cass County, North Dakota, and Clay, Becker, Hubbard, and Wilkin counties in Minnesota from \$2.70 to \$2.80. These changes will help to align these counties with the neighboring counties in Minnesota where the record reveals the reserve supply is located. The increase will also incentivize the supply of milk to Class I plants in the area to ensure fluid milk availability to populations throughout North Dakota and northwestern Minnesota.

Central

The proposed Class I differentials in the Central FMMO start at \$2.30 in western Colorado and increase moving east to \$4.00 in southern Illinois. This decision continues to align the production area of northern Colorado with the large production areas of New Mexico, the Texas Panhandle, and southwest Kansas at \$2.50. This required increasing the differential in Weld, Boulder, and Morgan counties of Colorado by \$0.10 to \$0.20 from the May model results. In order to encourage milk to service Class I demand, some counties in the greater

Denver area, including Colorado Springs, are proposed to remain aligned with the May results of \$2.70, while others are proposed to increase as much as \$0.20 above the May results to provide for handler equity.

In southern Illinois, testimony reflects plants compete for sales within a similar distribution area. Therefore, counties were grouped into a \$3.60 zone. This represents an increase of \$0.10 for some plants, while others remained at the May result of \$3.60. In Iowa, all counties with distributing plants remain aligned with the May result of \$2.70.

Douglas County, Nebraska, and Minnehaha County, South Dakota, proposed Class I differentials are \$2.70 and \$2.60, an increase of \$0.20 and \$0.10, respectively, from the May results. These increases continue to recognize handler equity both to the east with Polk County, Iowa, and to the north with Cass County, North Dakota.

In Kansas, the two counties with distributing plants, Reno and Sedgwick, are proposed to be aligned at \$2.90; as they are neighboring counties, the same differential levels would provide for handler equity. This increase also provides handler equity and price alignment with Oklahoma plants to the south.

In Oklahoma, Lincoln, Cleveland, and Grady counties continue to be proposed at the same differential of \$3.30. Lincoln and Cleveland counties continue to be proposed in alignment with the May results, which represents a \$0.20 increase for Grady County. The \$3.30 differential for these three counties provides for handler equity and price alignment both to the north in Kansas and the south in Texas.

The Department received specific comments on the Class I differentials proposed in the recommended decision for the Central FMMO region from NMPF, DFA, and DFA's Mountain Area Council in collaboration with Colorado dairy farmers. NMPF's comments focused on producer and handler equity concerns in the region and included a request for a \$0.20 increase in the proposed Class I differentials for 23 Colorado counties. DFA and its Mountain Area Council provided similar comments and argued further that the USDSS model is inappropriate for the Colorado market because of the unique circumstances in that market where a single Class III handler absorbs nearly all the milk produced in Colorado. The DFA Mountain Area Council also reiterated hearing testimony on Colorado milk production costs.

The Department considered all comments received on the Class I

differentials in the State of Colorado. Record evidence, however, does not justify a change in the proposed differentials. While the record reflects the USDSS model did not account for a variety of milk cost of production factors and plant supply relationships, this decision has consistently articulated consideration of producer costs is not appropriate when determining Class I differential levels. As such, no changes were made to the Class I differentials proposed in Colorado from the recommended decision to the final decision.

NMPF also commented on the Class I differentials proposed for 35 counties across Oklahoma, Missouri, and Arkansas, covered by both the Central and Southeast FMMOs. NMPF requested that the Department align these counties at \$3.40 because handlers in the tri-state area all compete for the same markets and are supplied by the same milkshed. This decision finds, however, that record evidence does not justify an additional increase or a reason to align the tri-state area at \$3.40, as the proposed differentials generally follow the model results. As such, no changes were made to the Class I differentials proposed in this region from the recommended decision to the final decision.

Mideast

Differentials in the Mideast region were evaluated on a state-by-state basis. Michigan differentials are set at the May results, \$3.00 in the upper peninsula and \$3.30 in the lower peninsula, because there were no additional producer or handler equity issues to address. Indiana is divided into three differential zones moving north to south (\$3.30, \$3.60, and \$3.70) which align with the May results. This decision continues to propose Class I differentials for Lake and Huntington counties \$0.40 and \$0.10 lower, respectively, from the May results to provide handler equity in the northern Indiana zone. This decision continues to propose an increase to the Class I differentials in Madison and Wayne counties by \$0.10 and \$0.20, respectively, from the May results to provide handler equity in the central Indiana zone of \$3.60. Southern Indiana counties are proposed at the May result of \$3.70.

Proposed differentials in Ohio generally follow the May results within \$0.10 (+/-) and zones were determined based on handler equity concerns. Moving northwest to southeast, proposed differential zones are \$3.30, \$3.60, \$3.80, \$4.00, and \$4.30. The five differential zones align within a \$0.10

(+/-) range of the May results. The exception is Cuyahoga County with a proposed \$0.20 decrease from the May result to provide for handler equity with Wayne and Stark counties.

Considering additional handler equity concerns in southern Ohio, as expressed in comments received from United Dairy, and competition among plants in the region as revealed in hearing testimony, this decision decreases the Class I differentials from \$4.00 to \$3.80 in the counties of Noble, Belmont, Morgan, Jefferson, and Perry, Ohio. United Dairy noted in its comments that current Class I differentials in the region are aligned, yet the recommended decision amended the differentials at higher levels for some counties. United Dairy added that the proposed Class I differentials in the recommended decision set the minimum raw milk price for some Class I handlers located in southern Ohio \$0.20 higher than those in neighboring central Ohio counties. United Dairy asserted that with such a large price difference, it would be at a competitive disadvantage relative to its current price relationships with competitors. Upon further review, this decision finds the Class I differentials proposed in the recommended decision would create competitive disadvantages for plants located in southern Ohio and, thus, a decrease in these counties was appropriate.

West Virginia differentials range from \$4.00 to \$4.80, moving northwest to southeast, and are largely consistent with the May results. However, considering handler equity concerns in West Virginia, as expressed in comments received from NMPF, United Dairy, and the West Virginia Department of Agriculture, this decision decreases the Class I differentials in Cabell, Putnam, Clay, and Kanawha Counties in West Virginia from \$4.50 to \$4.30. NMPF, United Dairy, and the West Virginia Department of Agriculture all highlighted handler equity concerns in their comments because of significantly higher differentials in Kanawha County, West Virginia compared to neighboring West Virginia, Virginia, and southern Ohio counties. To address these concerns, this decision will align the Class I differentials in Cabell, Putnam, Clay, and Kanawha Counties in West Virginia with nearby counties that compete in the same market.

MIG provided specific comments regarding Pennsylvania, urging the Department to lower additional Class I differentials to ensure handler equity with unregulated areas of the State. The Department reviewed relevant record

evidence and found no justification to modify the proposed Class I differentials from the recommended decision to the final decision. While the proposed differentials in western Pennsylvania are higher than the May results, they generally follow the model results that showed multiple differential zones through the state moving west to east. As such, this decision continues to propose a Class I differential for Butler, Fayette, Lawrence, and Mercer counties of \$4.00, \$0.10 lower than the May results, to encourage service to the demand areas of Western Pennsylvania.

Southwest

The proposed Class I differentials in the Southwest FMMO start at \$2.30 in northwest New Mexico and increase moving southeast to \$4.80 in southeast Texas. Testimony reflects the Texas Panhandle and southeastern New Mexico regions contain mostly manufacturing plants and draw milk from the same supply region in the Panhandle. For producer equity concerns, these regions are proposed to be in a \$2.50 zone. This aligns with the May results for the eastern New Mexico plant locations, necessitating a proposed increase of \$0.10 to \$0.30 in counties within the Panhandle region to reach a uniform \$2.50 zone. In Lubbock County, Texas, the differential is proposed at \$2.60, a decrease of \$0.20 from the May result, recognizing handler equity in the Panhandle region and producer equity considerations with manufacturing plants competing for milk supplies. Dallas County, Texas, continues to be proposed in alignment with the May result of \$3.70 and a \$0.10 increase is proposed for Tarrant County to maintain handler equity. Bexar County, Texas is proposed at \$4.30, a \$0.10 increase from the May result, and Harris and Montgomery counties are proposed at \$4.80, a \$0.20 increase from the May result to reflect difficulties in servicing congested urban areas.

Upon review of comments received from NMPF and Plains Dairy regarding Class I differentials in New Mexico, this decision proposes to increase the Class I differentials for Bernalillo, Los Alamos, Sandoval, Santa Fe, Socorro, Torrance, and Valencia counties from \$2.40 to \$2.50. NMPF commented specifically that, as proposed in the recommended decision, there would be a \$0.10 disincentive to supply the Class I market in Bernalillo County, New Mexico (Albuquerque). NMPF argued an increase is needed in these counties to ensure there remains an incentive to supply the Class I market in Albuquerque from the reserve supply available in New Mexico, as reflected in

hearing testimony. This change aligns the differentials for the fluid market of Albuquerque with nearby manufacturing markets that compete for the same milk supply and would not disincentivize service to the Class I market in Albuquerque.

Plains Dairy was the only Class I handler to comment in support of the recommended Class I differentials and for use of the USDSS model results. Plains Dairy requested a series of decreases in the southwest region to align with the May results. While this decision increases some of the Class I differentials included in Plains Dairy's comments, it creates a consistent \$2.50 zone in New Mexico so as to not disincentivize milk movements to the milk demand location in Bernalillo County, New Mexico. This change is supported by record testimony concerning the location of the milk supply and demand locations in New Mexico.

This decision also recognizes the competitive relationship between plants located in the Texas panhandle that draw from a common local milk supply, as also discussed by Plains Dairy in its comments. While Plains Dairy requests decreases in some locations, NMPF requests increases in other locations in Texas and neighboring Oklahoma counties. Because processors and manufacturing plants located in the panhandle compete for a shared milk supply, as revealed in the hearing record, this decision finds lowering the differentials in the region to the May results would both disrupt this competitive relationship and disincentivize service to the Class I market. Considering resulting producer and handler equity concerns, deviations from the model results are appropriate for the Southwest region.

MIG also provided specific comments questioning the Department's proposed Class I differentials in certain Texas and New Mexico counties where the model suggested a Class I differential lower than current levels, but the Department proposed an increase. The record of this proceeding reflects the model estimates for some supply locations in Texas and New Mexico were higher than the demand areas where the bottling plants are located. The record does not indicate why such a price relationship is suggested given that economic theory would assume the opposite—the demand areas should have higher differential levels to incentivize milk to supply bottling plants in those locations. During the national hearing, the model authors testified that while the model results entered into evidence give estimates for the 3,108 counties in

the contiguous United States, the model only produces estimates for 663 demand locations. The model then uses a Kriging process which interpolates estimates for the counties between the demand locations. As such, when determining the proposed differentials, adjustments from the model were made to some demand locations in the Texas and New Mexico areas to not disincentivize milk movements from supply to demand locations.

Arizona

In Arizona, the metropolitan area of Phoenix encompasses both Maricopa and Pinal counties. This decision continues to propose an increase to the Class I differentials for these counties by \$0.30 and \$0.20, respectively, above the May results to reflect the higher cost of servicing an urban area, in addition to providing handler equity with Clark County, Nevada. The differential for Yuma County is proposed at \$2.50, an increase of \$0.40 from the May result to maintain handler equity between Maricopa County, Arizona, and Los Angeles, California.

In its comments on the recommended decision, MIG indicated its opposition to the proposed increase in Kern County, California to align with Yuma County, Arizona. The record reflects there are additional costs to service the Los Angeles market that are not accounted for in the USDSS model and, thus, the differentials as proposed in the recommended decision would incentivize milk to service the Los Angeles market. MIG argued the proposed differentials will incentivize dairy farmers in Arizona to supply the California market rather than the Phoenix area, where demand is high. However, the record does not indicate the proposed differentials would cause a milk shortage for the Phoenix market as hearing evidence demonstrates the supply for Phoenix comes from its surrounding area.

Considering the same urban area, NMPF requested an increase from \$2.60 to \$2.80 in Maricopa County, Arizona due to a number of logistical, geographical and climate-related challenges when servicing Phoenix. The Department considered NMPF's comments, however, this decision finds that record evidence does not justify a change in the proposed differentials. Additional costs of servicing the urban area were already considered in determining the proposed differentials, and as already articulated in the decision, producer costs are not an appropriate consideration when determining Class I differential levels. As such, no changes were made to the

Class I differentials assigned in this region from the recommended decision to the final decision.

California

For California, testimony was given regarding additional transportation costs from excessive traffic congestion and geographic obstacles in southern California that were not accounted for in the model. Accordingly, this decision continues to propose an increase to the Class I differential in San Diego by \$0.20 from the May result to \$2.80. To maintain handler equity within the southern California region, the differentials for Orange, Riverside, and Los Angeles counties are proposed to be \$2.80. This is \$0.40, \$0.50 and \$0.60 above the May results in Orange, Riverside, and Los Angeles counties, respectively. Ventura County is proposed to increase \$0.40 from the May result, to \$2.60, to address producer equity concerns and ensure price alignment with the surrounding counties. For Kern County, the primary milk supply area for much of this region, the differential is proposed to be \$2.50. This also serves to encourage Kern County milk to move south to distributing plants, rather than north to manufacturing plants where the proposed differential is \$2.20.

The differentials in the remaining San Joaquin Valley counties, Tulare, Kings, Fresno, Madera, Merced, Stanislaus, and San Joaquin, are proposed to be \$2.20 based on testimony indicating these counties are considered one supply area. Of these counties, Madera County has the highest increase from the May result, \$0.40, to maintain handler equity as well as maintain producer equity for the producer milk in this area.

The proposed \$2.20 differential zone is then carried into the Sacramento Valley counties of Sacramento, Yolo, Colusa, and Glenn, an increase of \$0.20 to \$0.30 from the May results. These counties, along with those in the San Joaquin Valley, supply milk for distributing plants in the San Francisco Bay area. The proposed Class I differentials for Alameda, Contra Costa, Solano, Napa, Marin, and Sonoma counties continue to be proposed at \$2.40 to encourage milk to service the San Francisco Bay area. This represents an increase of \$0.40 to \$0.50 from the May model results for these supply counties to maintain handler equity.

San Francisco and counties south along the central California coast are further from a milk supply. The differentials in that area are proposed at \$2.50 and include San Francisco, San Mateo, Santa Cruz, Santa Clara, San Benito, Monterey, San Luis Obispo, and

Santa Barbara counties, representing increases from the May results of \$0.20 to \$0.50.

Similar to the Sacramento Valley, the differentials for the counties of Mendocino, Lake, and Humboldt, which are located along the northeast California coast and supply the San Francisco Bay area, are proposed to be \$2.20 to provide for producer equity.

The Department received specific comments from MIG, NMPF, and Crystal Creamery regarding the Class I differentials proposed in California. MIG and Crystal Creamery commented in opposition to the Department's deviations from the USDSS model results in the region and emphasized specific concerns with the Class I differentials proposed for the Fresno area. NMPF requested an increase from \$2.60 to \$2.80 to the Class I differentials for San Bernardino County to align with neighboring counties where handlers compete for the same milk supply.

The Department reviewed and considered these comments and reexamined relevant record evidence. The proposed differentials reflect consideration of the cost to supply the multiple California metropolitan demand centers given its unique geography and significant logistical supply challenges. Witnesses testified and the model authors indicated the USDSS model was not capable of taking these factors into consideration. Therefore, the record supported differential levels higher than the model results. The differentials in the metropolitan areas were raised with consideration for record evidence pertaining to handler equity, geography and traffic congestion. These increases then necessitated changes to the supply regions. A review of the record evidence regarding milk movements in southern California similarly finds no justification for change. Given the large size of San Bernadino County, the largest county in the state, this decision does not find justification to increase the differential applicable to the entire county, given only a small portion is located next to Los Angeles County. Considering this analysis, no changes were made to the Class I differentials assigned in this region from the recommended decision to the final decision.

Western Unregulated States

Differentials in Nevada generally follow the May results, except for a few modifications. In northern Nevada, to provide for handler equity, Washoe County is proposed to increase \$0.10 from the May result to align with the neighboring \$2.00 California zone.

Eureka, Nye, and Esmerelda counties are proposed at \$2.20, resulting in changes from the May results of plus or minus \$0.10.

The proposed Class I differentials in Utah start at \$2.00 in the north and increase moving south up to \$2.50 in the southwest part of the State. While most of the proposed differentials are aligned with the May results, the counties of Davis, Morgan, Salt Lake, Tooele, Utah, and Weber are recommended at \$2.20, an increase of \$0.10. This aligns those counties with counties to the north and west, ensuring both producer and handler equity.

The proposed Class I differentials in the state of Montana start at \$1.70 and increase to \$2.40 in the southeast part of the state. Most of the proposed differentials are aligned with the May results. The only county with a proposed differential that is more than \$0.10 different from the May result is Golden Valley which is lowered \$0.20 to ensure handler equity with the counties to its north and south.

The proposed differentials in the unregulated portions of the state of Idaho start at \$1.70 and increase to \$2.20. While most of the proposed differentials are within \$0.10 of the May results, the county of Cassia is decreased \$0.20 for handler equity with plants to the south into Utah. This brings the unregulated Idaho counties in alignment with counties to the north and south, ensuring both producer and handler equity with those areas.

Lastly, the proposed differentials in Wyoming generally follow the May results as there were no producer or handler equity concerns to address. Except for Laramie, Wyoming, which is proposed at \$2.50 to align with neighboring Northeast Colorado. This

represents a \$0.20 increase compared to the May results.

The Department received specific requests from NMPF, DFA, and an individual dairy farmer for changes to the Class I differentials proposed for certain counties in northwestern Nevada to address alleged producer equity concerns. NMPF and DFA suggested a flat pricing surface of \$2.20 for 6 Nevada counties, while the dairy farmer requested a \$0.30 increase for Churchill County, Nevada, specifically. The Department reviewed record evidence relevant to the requested changes in Nevada and found no justification for change. The proposed differentials generally follow the May results with a slight increase in Washoe county to encourage milk movements to service the demand in Reno, NV. As such, no changes were made to the Class I differentials assigned in this region from the recommended decision to the final decision.

Pacific Northwest

In the Pacific Northwest, the proposed Class I differential in Seattle increased \$0.30 above the May result to reflect unique geography and the cost of serving an urban market. Likewise, the proposed differential in Portland, Oregon, was increased from the May result to align with Seattle to provide for producer and handler equity. Testimony reflected both cities are equidistant to milk supplies in south central Washington, and both have similar supply issues. The remaining proposed differentials reflect a \$0.20 banding around the May results.

MIG commented that the Department deviated from the model results in the Pacific Northwest without justification. It also stated that the \$0.20 banding of the Class I differentials is inconsistent

with the Department’s proposals for other regions and highlighted several specific differentials of concern. The Department reviewed the record regarding the differentials in the Pacific Northwest FMMO. While MIG contends Portland and Seattle are not comparable demand areas, the record shows similar population areas facing similar geographic and traffic congestion issues that cause milk supply logistical issues necessitating an increase over the model results. The differential for Spokane, Washington was proposed at the model result as it does not face some of the same logistical challenges. The model-recommended \$2.40 differential for Spokane, which is higher than the surrounding areas, will encourage milk to move to the demand location. As for the banding of differentials in the middle of the Pacific Northwest-marketing area, as referenced in MIGs comment, the model suggested a more gradual differential gradient between the milk supply and demand centers. However, the record does not demonstrate that there are plants located in many of those areas to justify the numerous differential areas. The decision does not find such additional differential values necessary to move milk from supply and demand areas. As such, no changes were made to the Class I differentials assigned in this region from the recommended decision to the final decision.

Summary

In total, the Class I differentials proposed in this decision reflect a simple average of \$0.01 higher than the May results (\$3.81 versus \$3.80) for the 3,108 counties in the contiguous U.S.

The following is a general description of the changes from the May results:

Number of counties	Range of difference	Number of plants
5	–\$0.40 to –\$0.60	1
227	–\$0.20 to –\$0.30	13
2,648	–\$0.10 to +\$0.10	171
187	+\$0.20 to +\$0.30	34
41	+\$0.40 to \$0.60	23

An analysis shows the proposed differentials, on a weighted average basis for FMMO Class I milk (2019–2023), increased \$1.24 per cwt. Based on pooled Class I milk during 2019–2023, the current weighted Class I differential was \$2.63 per cwt. The differentials proposed in this decision would have increased the weighted average to \$3.87 per cwt.

This final decision details all requested changes to the proposed Class

I differentials from the recommended decision to the final decision. The Department reviewed and considered all 33 comments received on the Class I differentials but found, as detailed by region above, that any additional changes not made in this final decision were either already considered or were not supported by record evidence.

Other Issues

In post-hearing briefs, some stakeholders objected to NMPF’s use of producer costs of production for proposing updated Class I differential levels. As described above, such costs were not considered in the development of the Class I differentials recommended in this decision.

As discussed above, with regard to the Appalachian region, another argument made in post-hearing briefs and in

comments centered on the amended TCBF provisions in the Appalachian and Southeast FMMOs and newly established DPDC provisions in the Appalachian, Florida, and Southeast FMMOs. These provisions became effective March 1, 2024, and were a result of a regional rulemaking proceeding to address the chronic milk supply issues of those regions 89 FR 6401 (Feb.1, 2024). As the proceeding resulted in increased transportation cost related assessments on Class I handlers, some stakeholders argue no changes should be made to the Class I differentials until the impact of these regional changes can be observed. MIG, New Dairy, NMPF, and IDFA reiterated these concerns in their comments on the recommended decision and requested the Class I differentials in these orders be reduced by the amount of the TCBF and DPDC payments.

The Appalachian, Florida, and Southeast FMMOs adopted marketwide service payment provisions that authorize year-round assessments on Class I milk, paid by handlers, for payment to handlers for Class I deliveries made to their plants according to the TCBF and DPDC provisions. Under the marketwide service provisions of the AMAA, marketwide service programs are only authorized to pay monies to handlers 7 U.S.C. 608c(5)(j). Therefore, it would not be appropriate to delay consideration of Class I differential levels, monies which are paid to producers (both cooperative and independent), for TCBF and DPDC payments which are made only to handlers. As was stated in the recommended decision, if Class I differential levels are changed as a result of this proceeding, thus, impacting the market conditions which led to the creation of the marketwide service programs, stakeholders could petition USDA to make changes to the TCBF and DPDC provisions.

Demand Elasticity

IDFA, and Nestle USA, commented that Class I differentials should not be increased until a thorough econometric study is conducted to inform decision-making. This study, they argued, should center around the relationship between fluid milk prices and retail consumer demand, otherwise referred to by these and other commentators as changes in demand elasticity. Several Class I processors such as United Dairy, Crystal Creamery, New Dairy, and Lamers Dairy, as well as the trade association Pennsylvania Association of Milk Dealers, provided similar comments that described, in their view, changes in

consumer demand because of higher prices and competition from alternative beverages in the marketplace. MIG, IDFA, and PAMD go further in their comments, repeating arguments made at the hearing and in post-hearing briefs centered around the notion that USDA is not authorized to raise differentials because it would decrease demand, which they believe is a violation of the AMAA. More specifically, IDFA and MIG commented that the AMAA requires that FMMOs: (1) consider economic conditions which affect market supply and consumer demand, and (2) be in the public interest. IDFA acknowledged the Department's explanation in the recommended decision that the AMAA does not explicitly state that FMMO provisions should encourage Class I sales. However, IDFA opined that the AMAA does so implicitly. In its view, per the AMAA, FMMOs should never reduce quantity demanded by consumers.

During the hearing and in post-hearing briefs, Class I processors and manufacturers similarly argued that the Department should consider the impact to Class I sales when evaluating changes as they allege the AMAA objective of ensuring adequate milk supplies implies the FMMO should encourage fluid consumption. They further argued that consumer demand for fluid milk is elastic and, therefore, raising Class I differentials would be disorderly as it would result in a decline in Class I sales.

As to whether fluid milk has an inelastic or elastic demand, four studies were entered onto the record, some drawing opposite conclusions. One study found the consumer demand for regular milk to be inelastic, while specialty milk (*i.e.*, lactose free) to be price elastic. A second study concluded consumer demand was elastic, but less so than was determined in the fourth study on the record. Another witness reviewed time series data published within the last 20 years, concluding that consumer demand for fluid milk remains inelastic with respect to milk prices.

The recommended decision highlighted the fourth study which looked at cross-sectional data over relatively short periods of time as an example. This econometric study, entered on behalf of IDFA and emphasized by IDFA and MIG in their comments on the recommended decision, found the retail level demand for fluid milk to be elastic. An analysis of the IDFA study indicates that other than product prices and quantities, no other variables were considered that could explain changes in demand. Some

variables that are generally recognized to be determinants of demand outside of price include, but are not limited to, household income, demographics, and measures of preferences. While the IDFA study found retail price affects retail milk demand, it did not demonstrate price was the only factor that impacts demand. By design, the study estimated that only prices for milk and competing products could account for changes in quantities sold. Certainly, more studies may be warranted given the evolution of the dairy industry in the last 25 years. However, a conclusion of the long-term consumer demand elasticity of fluid milk cannot be drawn from the varying results of the four studies contained in the record.

MIG and IDFA arguments around elasticity rely on the premise that fluid milk product demand at the retail level is elastic and thus, any increase in Class I prices would lower consumer demand, which they assert would not be in the public interest and violate the AMAA policy objective. The AMAA authorizes marketing orders to provide for more orderly marketing conditions. In the context of milk prices, the AMAA states FMMOs shall “. . . insure a sufficient quantity of pure and wholesome milk, and be in the public interest . . .” 7 U.S.C. 608c(18). This decision emphasizes that one objective of FMMOs is to ensure minimum milk prices reflect supply and demand conditions. In so doing, FMMOs satisfy the AMAA's public interest requirement by ensuring buyers are purchasing raw milk at minimum prices that reflect current market conditions.

Upon review of comments received and all record evidence, the Department maintains the changes proposed in this decision would ensure the FMMO pricing provisions reflect current supply and demand conditions. This decision does not find that the AMAA explicitly states or implies FMMO provisions should encourage Class I sales and thus, a determination of fluid milk consumer demand elasticity is not required. As described in detail throughout this decision, the record of this proceeding reveals the cost of supplying the Class I market has increased. This was demonstrated through the USDSS model, which was an academic exercise to quantify the location-specific cost of servicing Class I plants, and corroborated through witness testimony concerning increasing transportation costs and distances traveled for milk to supply Class I plants.

b. Class II Differential

The FMMO system currently prices milk used in Class II products

uniformly. The Class II skim milk price is computed as the advanced Class IV skim price plus \$0.70 per cwt. The Class II butterfat price is the Class III butterfat price for the month, plus the same amount expressed as \$0.007 per pound. The \$0.70 differential between the Class IV and Class II skim milk prices, adopted in the Order Reform Final Decision, was based on an estimate of the cost of drying condensed milk and re-wetting the solids for use in Class II products, which was seen as an economic, upper-bound constraint on the use of fresh milk in Class II processing.

Proposal 21, submitted by AFBF, seeks to update the Class II differential to \$1.56 per cwt. AFBF derived the proposed level by updating the factors originally used to determine drying cost. Those include the NFDM make allowance and the nonfat solids yield factor used in the FMMO formulas, and butterfat and nonfat solids levels in FMMO pooled milk. As rewetting solids, the practice of first reconstituting powdered milk with water, is no longer a common practice, AFBF argued such cost no longer needs to be considered. AFBF opined a \$1.56 Class II differential would not be high enough to incentivize the substitution of Class IV products for fresh milk. AFBF claimed the additional Class II value added to the marketwide pool because of the higher differential would reduce the occurrence of negative PPDs and depooling.

Opponents of Proposal 21 argued such a large Class II differential increase would incentivize the substitution of Class IV products in the manufacture of Class II products. Class I processors, who also have Class II production, argued such an increase would put them at a competitive disadvantage with standalone Class II manufacturers. They indicated processors who produce both products are required to pool all milk received at the plant but processors who only produce Class II products can opt to pool milk.

As indicated in the recommended decision, record evidence does not support adoption of Proposal 21. Mathematically, the formula used by AFBF to compute an updated Class II differential mimics the calculation from Order Reform. However, it is clear from record testimony that more than doubling the current Class II differential, as proposed by AFBF, would result in handler equity issues and increased substitution of Class IV products in lieu of fresh fluid milk in Class II products. Class II production is unusual, if not unique, among dairy processing facilities as some products

are produced at Class I plants, and others at standalone Class II plants. Because all milk received at Class I plants is required to be pooled, regardless of use, this can result in the same products having different regulatory burdens depending on the type of plant where it was produced. That phenomenon has existed since 2000. However, the record shows that instances of milk in Class II products produced from Class II plants not being pooled could dramatically increase with adoption of Proposal 21. The result would be a competitive disadvantage for Class I plants by creating a pricing inequity that would produce disorderly marketing conditions.

AMS received four comments specific to the Class II differential. NMPF and the Arizona Farm Bureau Federation commented in support of the decision to maintain the current Class II differential. Comments filed in opposition to the recommended decision, from AFBF and the Tennessee Farm Bureau, requested that USDA reconsider increasing the Class II differential for the final decision for reasons previously communicated on the record, which were specifically addressed and rejected in the recommended decision. Therefore, this final decision continues to find it appropriate to maintain the current Class II differential. Accordingly, Proposal 21 is denied.

Conforming Changes

Proposal 22, authored by AMS, would authorize changes, where necessary, in the respective marketing orders to conform with any amendments resulting from this proceeding. The record contains no opposition to the proposal. Accordingly, this decision recommends a series of conforming changes to ensure the proposed amendments to the uniform pricing formulas applicable to the respective marketing orders can be effectuated. The proposed changes are as follows:

1. Amending 7 CFR 1000.43 to remove references to 1135.11, as the order is no longer in effect. Also adding 7 CFR 1000.43(e) which would define skim milk used in ultra-pasteurized or aseptically processed and packaged fluid milk products eligible for the Class I ESL adjustment be limited to available Class I producer milk classified pursuant to the allocation process contained in Section 1000.44(a);

2. Amending 7 CFR 1000.50 to remove all references to NASS and replace them with AMS;

3. Amending the following counties (and FIPS code) in 7 CFR 1000.52, to be consistent with the Federal Information

Procession Series maintained by the Federal Communication Commission: Yellowstone, MT (30113) has been merged into Gallatin and Park Counties, MT (30031) (30067), Shannon, SD (46113) has been renamed Oglala Lakota, SD (46102), Bedford City, VA (51515) has been merged into Bedford County, VA (51019), and Clifton Forge City, VA (51560) has been merged into Alleghany County, VA (51005). Additionally, amending the FIPS code for Pierce, WA (53053) as it was original printed incorrectly. The differentials are also listed in order of FIPS code, not state abbreviation, in order to be listed alphabetically by state;

4. Amending 7 CFR 1000.76, provisions governing partially regulated distributing plants to add "applicable" to references to the Class I price throughout the section to indicate application of a Class I ESL adjustment, when applicable, and remove the reference in 7 CFR 1000.76(b)(1)(i) to 7 CFR 1135.11 as the latter is no longer in effect;

5. Amend the introductory paragraphs of 7 CFR 1001.60, 1005.60, 1006.60, 1007.60, 1030.60, 1032.60, 1033.60, 1051.60, 1124.60, 1126.60, and 1131.60, sections which calculate the handler's value of milk in each FMMO. Section .60 of each order would be revised with the addition of an instruction to compute an adjustment to a handler's producer milk obligation for Class I producer milk eligible for the Class I ESL adjustment. The adjustment would be calculated by multiplying the monthly Class I ESL adjustment by the monthly pounds of eligible Class I skim milk. The instruction would be inserted prior to the instruction regarding reconstituted milk for each order. Other paragraphs are proposed to be redesignated to reflect the insertion;

6. Further amending 7 CFR 1005.60(g), 1006.60(g)–(i), and 1007.60(g) to remove language pertaining to transportation cost reimbursement during the months of January 2005 through March 2005 and September 2017, which is no longer in effect;

7. Amending 7 CFR 1005.51, 1006.51, and 1007.51 to remove Class I price adjustments in the Appalachian, Florida, and Southeast FMMOs. The order language would no longer be necessary with the proposed amendments to the Class I differentials; and

8. Amending 7 CFR 1170.8 to remove the collection of 500-pound barrel price information. The order language would no longer be necessary with the proposed amendments to cheese survey.

Rulings on Proposed Findings and Conclusions

AMS has also considered proposed findings submitted in post-hearing briefs, officially noticed documents, and comments and exceptions filed in response to the recommended decision to formulate this proposed FMMO. These briefs, proposed findings and conclusions, comments and exceptions, and the evidence in the record were considered in making the findings and conclusions set forth above. To the extent that the suggested findings and conclusions filed by interested parties are inconsistent with the findings and conclusions set forth herein, the claims to make such findings or reach such conclusions are denied for the reasons previously stated in this decision.

General Findings

The findings and determinations hereinafter set forth supplement those that were made when the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona FMMOs were first issued and when they were amended. The previous findings and determinations are hereby ratified and confirmed, except where they may conflict with those set forth herein.

The following findings are hereby made with respect to the aforementioned marketing agreements and orders:

a. The tentative marketing agreements and the orders, as hereby proposed to be amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the Act;

b. The parity prices of milk as determined pursuant to section 2 of the Act are not reasonable with respect to the price of feeds, available supplies of feeds, and other economic conditions that affect market supply and demand for milk in the marketing area, and the minimum prices specified in the proposed marketing agreements and the orders are such prices as will reflect the aforesaid factors, ensure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

c. The proposed marketing agreements and the orders will regulate the handling of milk in the same manner as and will be applicable only to persons in the respective classes of industrial and commercial activity specified in, the marketing agreements upon which a hearing have been held.

d. All milk and milk products handled by handlers, as defined in the marketing agreements and the orders as hereby proposed to be amended, are in the current of interstate commerce or

directly burden, obstruct, or affect interstate commerce in milk or its products.

Recommended Marketing Agreements and Orders

The recommended marketing agreements are not included in this decision because the regulatory provisions thereof would be the same as those contained in the orders, as hereby proposed to be amended. The following orders regulating the handling of milk in the Northeast, Appalachian, Florida, Southeast, Upper Midwest, Central, Mideast, California, Pacific Northwest, Southwest, and Arizona marketing areas are recommended as the detailed and appropriate means by which the foregoing conclusions may be carried out.

January 2024 is hereby determined to be the representative period for the purpose of ascertaining whether the issuance of the orders, as amended and as hereby proposed to be amended the uniform pricing provisions in the Northeast, Appalachian, Florida, Southeast, Upper Midwest, Central, Mideast, California, Pacific Northwest, Southwest, and Arizona FMMOs, are approved or favored by producers, as defined under the terms of the orders (as amended and as hereby proposed to be amended), who during such representative period were engaged in the production of milk for sale within the aforesaid marketing areas.

Referendum Order To Determine Producer Approval; Determination of Representative Period; and Designation of Referendum Agent

It is hereby directed that a referendum be conducted and completed on December 31, 2024, in accordance with the procedures for the conduct of referenda (7 CFR 900.300–311), to determine whether the issuance of the order regulating the handling of milk in the Northeast, Appalachian, Florida, Southeast, Upper Midwest, Central, Mideast, California, Pacific Northwest, Southwest, and Arizona marketing areas is approved or favored by producers, as defined under the terms of the order, who during such representative period were engaged in the production of milk for sale within the aforesaid marketing area. The representative period for the conduct of such referenda is hereby determined to be January 2024. The agent of the Secretary of Agriculture to conduct such referenda is hereby designated to be the Director of Operations and Accountability, Dairy Program, AMS, USDA.

List of Subjects in 7 CFR Parts 1000, 1001, 1005, 1006, 1007, 1030, 1032, 1033, 1051, 1124, 1126, 1131, and 1170

Milk marketing orders.

Order Amending the Orders Regulating the Handling of Milk in the Northeast, Appalachian, Florida, Southeast, Upper Midwest, Central, Mideast, California, Pacific Northwest, Southwest, and Arizona Marketing Areas

(This order shall not become effective unless and until the requirements of § 900.14 of the rules of practice and procedure governing proceedings to formulate marketing agreements and marketing orders have been met.)

Findings and Determinations

The findings and determinations hereinafter set forth supplement those that were made when the orders were first issued and when they were amended. The previous findings and determinations are hereby ratified and confirmed, except where they may conflict with those set forth herein.

(a) Findings. A public hearing was held upon certain proposed amendments to the marketing agreement and to the orders regulating the handling of milk in the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona marketing areas. The hearing was held pursuant to the provisions of the AMAA, as amended (7 U.S.C. 601–674), and the applicable rules of practice and procedure governing the formulation of marketing agreements and marketing orders (7 CFR part 900).

Upon the basis of the evidence introduced at such hearing and the record thereof, it is determined that:

(1) The said orders as hereby amended, and all of the terms and conditions thereof, will tend to effectuate the declared policy of the AMAA;

(2) The parity prices of milk, as determined pursuant to section 2 of the AMAA, are not reasonable in view of the price of feeds, available supplies of feeds, and other economic conditions which affect market supply and demand for milk in the aforesaid marketing area. The minimum prices specified in the orders as hereby amended are such prices as will reflect the aforesaid factors, ensure a sufficient quantity of pure and wholesome milk, and be in the public interest; and

(3) The said orders, as hereby amended, regulate the handling of milk in the same manner as and are applicable only to persons in the respective classes of industrial or

commercial activity specified in, marketing agreements upon which a hearing has been held.

Order Relative to Handling

It is therefore ordered, that on and after the effective date hereof, the handling of milk in the Northeast, Southeast, Appalachian, Florida, Upper Midwest, Central, Mideast, California, Southwest, Pacific Northwest, and Arizona marketing areas shall be in conformity to and in compliance with the terms and conditions of the orders, as amended, and as hereby amended, as follows:

For the reasons set forth in the preamble, AMS proposes to amend 7 CFR chapter X as follows:

PART 1000—GENERAL PROVISIONS OF FEDERAL MILK MARKETING ORDERS

■ 1. The authority citation for 7 CFR part 1000 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 2. Amend § 1000.43 by:

■ a. In paragraph (a) and paragraph (b) introductory text, removing the words “and § 1135.11 of this chapter”;

■ b. In paragraph (b)(2) removing the words “or § 1135.11 of this chapter”; and

■ c. Adding paragraph (e).

The addition reads as follows:

§ 1000.43 General classification rules.

* * * * *

(e) Any skim milk used in ultra-pasteurized or aseptically processed and packaged fluid milk products shall be allocated in combination with Class I milk and the quantity of producer milk eligible to be priced shall be limited to available Class I producer milk classified pursuant to § 1000.44(a).

■ 3. Revise and republish § 1000.50 to read as follows:

§ 1000.50 Class prices, component prices, and advanced pricing factors.

Class prices per hundredweight of milk containing 3.5 percent butterfat, component prices, and advanced pricing factors shall be as follows. The prices and pricing factors described in paragraphs (a), (b), (c), (e), (f), and (g) of this section shall be based on a weighted average of the most recent 2 weekly prices announced by the Agricultural Marketing Service (AMS) before the 24th day of the month. These prices shall be announced on or before the 23rd day of the month and shall apply to milk received during the following month. The prices described in paragraphs (g) through (p) of this section shall be based on a weighted

average for the preceding month of weekly prices announced by AMS on or before the 5th day of the month and shall apply to milk received during the preceding month. The price described in paragraph (d) of this section shall be derived from the Class II skim milk price announced on or before the 23rd day of the month preceding the month to which it applies and the butterfat price announced on or before the 5th day of the month following the month to which it applies.

(a) *Class I price.* The Class I price per hundredweight, rounded to the nearest cent, shall be 0.965 times the Class I skim milk price plus 3.5 times the Class I butterfat price.

(b) *Class I skim milk price.* The Class I skim milk price per hundredweight shall be the adjusted Class I differential specified in § 1000.52, plus the higher of the advanced pricing factors computed in paragraph (q)(1) or (2) of this section rounded to the nearest cent.

(c) *Class I butterfat price.* The Class I butterfat price per pound shall be the adjusted Class I differential specified in § 1000.52 divided by 100, plus the advanced butterfat price computed in paragraph (q)(3) of this section.

(d) *Class II price.* The Class II price per hundredweight, rounded to the nearest cent, shall be .965 times the Class II skim milk price plus 3.5 times the Class II butterfat price.

(e) *Class II skim milk price.* The Class II skim milk price per hundredweight shall be the advanced Class IV skim milk price computed in paragraph (q)(2) of this section plus 70 cents.

(f) *Class II nonfat solids price.* The Class II nonfat solids price per pound, rounded to the nearest one-hundredth cent, shall be the Class II skim milk price divided by 9.3.

(g) *Class II butterfat price.* The Class II butterfat price per pound shall be the butterfat price plus \$0.007.

(h) *Class III price.* The Class III price per hundredweight, rounded to the nearest cent, shall be 0.965 times the Class III skim milk price plus 3.5 times the butterfat price.

(i) *Class III skim milk price.* The Class III skim milk price per hundredweight, rounded to the nearest cent, shall be the protein price per pound times 3.30 plus the other solids price per pound times 6.00.

(j) *Class IV price.* The Class IV price per hundredweight, rounded to the nearest cent, shall be 0.965 times the Class IV skim milk price plus 3.5 times the butterfat price.

(k) *Class IV skim milk price.* The Class IV skim milk price per hundredweight, rounded to the nearest cent, shall be the

nonfat solids price per pound times 9.30.

(l) *Butterfat price.* The butterfat price per pound, rounded to the nearest one-hundredth cent, shall be the U.S. average AMS AA Butter survey price reported by the Department for the month, less 22.72 cents, with the result multiplied by 1.211.

(m) *Nonfat solids price.* The nonfat solids price per pound, rounded to the nearest one-hundredth cent, shall be the U.S. average AMS nonfat dry milk survey price reported by the Department for the month, less 23.93 cents and multiplying the result by 0.99.

(n) *Protein price.* The protein price per pound, rounded to the nearest one-hundredth cent, shall be computed as follows:

(1) The U.S. average AMS survey price for 40-lb. block cheese reported by the Department for the month;

(2) Subtract 25.19 cents from the price computed pursuant to paragraph (n)(1) of this section and multiply the result by 1.383;

(3) Add to the amount computed pursuant to paragraph (n)(2) of this section an amount computed as follows:

(i) Subtract 25.19 cents from the price computed pursuant to paragraph (n)(1) of this section and multiply the result by 1.589; and

(ii) Subtract 0.91 times the butterfat price computed pursuant to paragraph (l) of this section from the amount computed pursuant to paragraph (n)(3)(i) of this section; and

(iii) Multiply the amount computed pursuant to paragraph (n)(3)(ii) of this section by 1.17.

(o) *Other solids price.* The other solids price per pound, rounded to the nearest one-hundredth cent, shall be the U.S. average AMS dry whey survey price reported by the Department for the month minus 26.68 cents, with the result multiplied by 1.03.

(p) *Somatic cell adjustment.* The somatic cell adjustment per hundredweight of milk shall be determined as follows:

(1) Multiply 0.0005 by the weighted average price computed pursuant to paragraph (n)(1) of this section and round to the 5th decimal place;

(2) Subtract the somatic cell count of the milk (reported in thousands) from 350; and

(3) Multiply the amount computed in paragraph (p)(1) of this section by the amount computed in paragraph (p)(2) of this section and round to the nearest full cent.

(q) *Advanced pricing factors.* For the purpose of computing the Class I skim milk price, the Class II skim milk price, the Class II nonfat solids price, and the

Class I butterfat price for the following month, the following pricing factors shall be computed using the weighted average of the 2 most recent AMS U.S. average weekly survey prices announced before the 24th day of the month:

(1) An advanced Class III skim milk price per hundredweight, rounded to the nearest cent, shall be computed as follows:

(i) Following the procedure set forth in paragraphs (n) and (o) of this section, but using the weighted average of the 2 most recent AMS U.S. average weekly survey prices announced before the 24th day of the month, compute a protein price and an other solids price;

(ii) Multiply the protein price computed in paragraph (q)(1)(i) of this section by 3.30;

(iii) Multiply the other solids price per pound computed in paragraph (q)(1)(i) of this section by 6.0; and

(iv) Add the amounts computed in paragraphs (q)(1)(ii) and (iii) of this section.

(2) An advanced Class IV skim milk price per hundredweight, rounded to

the nearest cent, shall be computed as follows:

(i) Following the procedure set forth in paragraph (m) of this section, but using the weighted average of the 2 most recent AMS U.S. average weekly survey prices announced before the 24th day of the month, compute a nonfat solids price; and

(ii) Multiply the nonfat solids price computed in paragraph (q)(2)(i) of this section by 9.30.

(3) An advanced butterfat price per pound rounded to the nearest one-hundredth cent, shall be calculated by computing a weighted average of the 2 most recent U.S. average AMS AA Butter survey prices announced before the 24th day of the month, subtracting 22.72 cents from this average, and multiplying the result by 1.211.

(r) *Class I Extended Shelf Life (ESL) adjustment.* The Class I ESL adjustment, whether positive or negative, rounded to the nearest cent, shall be computed as follows:

(1) Compute the simple average of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section;

(2) Add the following:

(i) Determine the higher of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section, for each of the preceding 13 to 36 months;

(ii) Calculate the average of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section, for each of the preceding 13 to 36 months;

(iii) For each of the preceding 13 to 36 months, subtract the amount computed in paragraph (r)(2)(ii) of this section from the amount computed in paragraph (r)(2)(i) of this section; and

(iv) Compute the average of the differences computed in paragraph (r)(2)(iii) of this section.

(3) Subtract the higher of the advanced pricing factors computed in paragraphs (q)(1) and (2) of this section. ■ 4. Revise and republish § 1000.52 to read as follows:

§ 1000.52 Adjusted Class I differentials.

The Class I differential adjusted for location to be used in § 1000.50(b) and (c) shall be as follows:

County/parish/city	State	FIPS code	Class I differential adjusted for location

■ 5. Amend § 1000.76 by

■ a. Removing the words “and § 1135.11 of this chapter” wherever they appear; and

■ b. Revising and republishing paragraphs (a)(2) through (4) and paragraph (c).

The revisions and republications read as follows:

§ 1000.76 Payments by a handler operating a partially regulated distributing plant.

* * * * *

(a) * * *

(2) For orders with multiple component pricing, compute a Class I differential price by subtracting Class III price from the current month's applicable Class I price. Multiply the pounds remaining after the computation in paragraph (a)(1)(iii) of this section by the amount by which the Class I differential price exceeds the producer price differential, both prices to be applicable at the location of the partially regulated distributing plant except that neither the adjusted Class I differential price nor the adjusted producer price differential shall be less than zero;

(3) For orders with skim milk and butterfat pricing, multiply the remaining pounds by the amount by which the applicable Class I price exceeds the uniform price, both prices to be applicable at the location of the partially regulated distributing plant except that neither the adjusted Class I price nor the adjusted uniform price differential shall be less than the lowest announced class price; and

(4) Unless the payment option described in paragraph (d) of this section is selected, add the amount obtained from multiplying the pounds of labeled reconstituted milk included

in paragraph (a)(1)(iii) of this section by any positive difference between the applicable Class I price at the location of the partially regulated distributing plant (less \$1.00 if the reconstituted milk is labeled as such) and the Class IV price.

* * * * *

(c) The operator of a partially regulated distributing plant that is subject to marketwide pooling of returns under a milk classification and pricing program that is imposed under the authority of a State government shall pay on or before the 25th day after the end of the month (except as provided in § 1000.90) to the market administrator for the producer-settlement fund an amount computed as follows: after completing the computations described in paragraphs (a)(1)(i) and (ii) of this section, determine the value of the remaining pounds of fluid milk products disposed of as route disposition in the marketing area by multiplying the hundredweight of such pounds by the amount, if greater than zero, that remains after subtracting the State program's class prices applicable to such products at the plant's location from the applicable Federal order Class I price at the location of the plant.

* * * * *

PART 1001—MILK IN THE NORTHEAST MARKETING AREA

■ 6. The authority citation for part 1001 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 7. Amend § 1001.60 by:

■ a. Revising the introductory text;

■ b. Redesignating paragraph (i) as paragraph (j); and

■ c. Adding new paragraph (i).

The revision and addition read as follows:

§ 1001.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (i) of this section and subtracting from that total amount the value computed in paragraph (j) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(i) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1005—MILK IN THE
APPLACHIAN MARKETING AREA**

■ 8. The authority citation for part 1005 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 9. Amend § 1005.51 by revising paragraph (a) and removing and reserving paragraph (b) to read as follows:

§ 1005.51 Class I differential, adjustments to Class I prices, and Class I price.

(a) The Class I differential shall be the differential established for Mecklenburg County, North Carolina, which is reported in § 1000.52 of this chapter. The Class I price shall be the price computed pursuant to § 1000.50(a) of this chapter for Mecklenburg County, North Carolina.

(b) [Reserved]

■ 10. Amend § 1005.60 by:

- a. Revising the introductory text and paragraph (a);
- b. Removing paragraph (g);
- c. Redesignating paragraph (f) as paragraph (g); and
- d. Adding new paragraph (f).

The revisions and addition read as follows:

§ 1005.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) of this chapter by the applicable skim milk and butterfat prices, and add the resulting amounts;

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1006—MILK IN THE FLORIDA
MARKETING AREA**

■ 11. The authority citation for part 1006 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 12. Amend § 1006.51 by revising paragraph (a), removing and reserving paragraph (b), and removing paragraph (c) to read as follows:

§ 1006.51 Class I differential, adjustments to Class I prices, and Class I price.

(a) The Class I differential shall be the differential established for Hillsborough County, Florida, which is reported in § 1000.52 of this chapter. The Class I price shall be the price computed pursuant to § 1000.50(a) of this chapter for Hillsborough County, Florida.

(b) [Reserved]

■ 13. Amend § 1006.60 by:

- a. Revising the introductory text and paragraph (a);
- b. Removing paragraphs (g) through (i);
- c. Redesignating paragraph (f) as paragraph (g); and
- d. Adding new paragraph (f).

The revisions and addition read as follows:

§ 1006.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) of this chapter by the applicable skim milk and butterfat prices, and add the resulting amounts;

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1007—MILK IN THE SOUTHEAST
MARKETING AREA**

■ 14. The authority citation for part 1007 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 15. Amend § 1007.51 by revising paragraph (a) and removing and reserving paragraph (b) to read as follows:

§ 1007.51 Class I differential, adjustments to Class I prices, and Class I price.

(a) The Class I differential shall be the differential established for Fulton County, Georgia, which is reported in § 1000.52 of this chapter. The Class I price shall be the price computed pursuant to § 1000.50(a) of this chapter for Fulton County, Georgia.

(b) [Reserved]

■ 16. Amend § 1007.60 by:

- a. Revising the introductory text and paragraph (a);
- b. Removing paragraph (g);
- c. Redesignating paragraph (f) as paragraph (g); and
- d. Adding new paragraph (f).

The revisions and addition read as follows:

§ 1007.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

(a) Multiply the pounds of skim milk and butterfat in producer milk that were classified in each class pursuant to § 1000.44(c) of this chapter by the applicable skim milk and butterfat prices, and add the resulting amounts;

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1030—MILK IN THE UPPER
MIDWEST MARKETING AREA**

■ 17. The authority citation for part 1030 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 18. Amend § 1030.60 by:

- a. Revising the introductory text;
- b. Redesignating paragraphs (j) and (k) as paragraphs (k) and (l); and
- c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1030.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the values computed in paragraphs (k) and (l) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1032—MILK IN THE CENTRAL
MARKETING AREA**

■ 19. The authority citation for part 1032 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 20. Amend § 1032.60 by:

- a. Revising the introductory text;
- b. Redesignating paragraph (j) as paragraph (k); and
- c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1032.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the value computed in paragraph (k) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1033—MILK IN THE MIDEAST
MARKETING AREA**

■ 21. The authority citation for part 1033 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 22. Amend § 1033.60 by:

- a. Revising the introductory text;
- b. Redesignating paragraph (j) as paragraph (k); and
- c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1033.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount

the value computed in paragraph (k) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

**PART 1051—MILK IN THE CALIFORNIA
MARKETING AREA**

■ 23. The authority citation for part 1051 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 24. Amend § 1051.60 by:

- a. Revising the introductory text;
- b. Redesignating paragraph (i) as paragraph (j); and
- c. Adding new paragraph (i).

The revision and addition read as follows:

§ 1051.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (i) of this section and subtracting from that total amount the value computed in paragraph (j) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted

milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(i) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1124—MILK IN THE PACIFIC NORTHWEST MARKETING AREA

■ 25. The authority citation for part 1124 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 26. Amend § 1124.60 by:

- a. Revising the introductory text;
- b. Redesignating paragraph (i) as paragraph (j); and
- c. Adding new paragraph (i).

The revision and addition read as follows:

§ 1124.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (i) of this section and subtracting from that total amount the value computed in paragraph (j) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(i) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this

chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1126—MILK IN THE SOUTHWEST MARKETING AREA

■ 27. The authority citation for part 1126 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 28. Amend § 1126.60 by:

- a. Revising the introductory text;
- b. Redesignating paragraph (j) as paragraph (k); and
- c. Adding new paragraph (j).

The revision and addition read as follows:

§ 1126.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (j) of this section and subtracting from that total amount the value computed in paragraph (k) of this section. Unless otherwise specified, the skim milk, butterfat, and the combined pounds of skim milk and butterfat referred to in this section shall result from the steps set forth in § 1000.44(a), (b), and (c) of this chapter, respectively, and the nonfat components of producer milk in each class shall be based upon the proportion of such components in producer skim milk. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(j) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1131—MILK IN THE ARIZONA MARKETING AREA

■ 29. The authority citation for part 1131 continues to read as follows:

Authority: 7 U.S.C. 601–674, and 7253.

■ 30. Amend § 1131.60 by:

- a. Revising the introductory paragraph;

■ b. Redesignating paragraph (f) as paragraph (g); and

■ c. Adding new paragraph (f).

The revision and addition read as follows:

§ 1131.60 Handler's value of milk.

For the purpose of computing a handler's obligation for producer milk, the market administrator shall determine for each month the value of milk of each handler with respect to each of the handler's pool plants and of each handler described in § 1000.9(c) of this chapter with respect to milk that was not received at a pool plant by adding the amounts computed in paragraphs (a) through (f) of this section and subtracting from that total amount the value computed in paragraph (g) of this section. Receipts of nonfluid milk products that are distributed as labeled reconstituted milk for which payments are made to the producer-settlement fund of another Federal order under § 1000.76(a)(4) or (d) of this chapter shall be excluded from pricing under this section.

* * * * *

(f) Compute an adjustment for eligible Class I producer milk pursuant to § 1000.43(e) of this chapter by multiplying the Class I skim milk price adjuster computed in § 1000.50(r) of this chapter by the pounds of skim milk eligible in Class I.

* * * * *

PART 1170—DAIRY PRODUCT MANDATORY REPORTING

■ 31. The authority citation for part 1170 continues to read as follows:

Authority: 7 U.S.C. 1637–1637b, as amended by Pub. L. 106–532, 114 Stat. 2541; Pub. L. 107–171, 116 Stat. 207; and Pub. L. 111–239, 124 Stat. 2501.

■ 32. Revise and republish § 1170.8(a) to read as follows:

§ 1170.8 Price reporting specifications.

* * * * *

(a) Specifications for Cheddar Cheese Prices:

- (1) Variety: Cheddar cheese.
- (2) Style: 40-pound blocks.
- (3) Age: Not less than 4 days or more than 30 days on date of sale. Exclude cheese that will be aged.
- (4) Grade: Product meets Wisconsin State Brand or USDA Grade A or better standards.
- (5) Color: Colored and within the color range of 6–8 on the National Cheese Institute color chart.
- (6) Packaging: Price should reflect cheese wrapped in a sealed, airtight package in corrugated or solid fiberboard containers with a reinforcing

inner liner or sleeve. Exclude all other packaging costs from the reported price.

(7) Exclude: Intra-company sales, resales of purchased cheese, forward pricing sales (sales in which the selling price was set [not adjusted] 30 or more days before the transaction was completed), cheese produced under faith-based close supervision and marketed at a higher price than the manufacturer's wholesale market price for the basic commodity (for example, kosher cheese produced with a rabbi on site who is actively involved in supervision of the production process), sales under the Dairy Export Incentive Program or other premium-assisted sales (for example, export assistance sales through the Cooperatives Working Together program), and cheese certified as organic by a USDA-accredited certifying agent.

[Note: The following will not appear in the Code of Federal Regulations.]

Marketing Agreement Regulating the Handling of Milk in Certain Marketing Areas

The parties hereto, in order to effectuate the declared policy of the Act, and in accordance with the rules of

practice and procedure effective thereunder (7 CFR part 900), desire to enter into this marketing agreement and do hereby agree that the provisions referred to in paragraph I hereof as augmented by the provisions specified in paragraph II hereof, shall be and are the provisions of this marketing agreement as if set out in full herein.

I. The findings and determinations, order relative to handling, and the provisions of §§ ___ to ___,⁶ all inclusive, of the order regulating the handling of milk in the ___⁷ marketing area (7 CFR part ___)⁸ which is annexed hereto; and

II. The following provisions: § ___⁹ Record of milk handled and authorization to correct typographical errors.

(a) Record of milk handled. The undersigned certifies that he/she handled during the month of ___,¹⁰ hundredweight of milk covered by this marketing agreement.

(b) Authorization to correct typographical errors. The undersigned

hereby authorizes the Deputy Administrator, or Acting Deputy Administrator, Dairy Programs, Agricultural Marketing Service, to correct any typographical errors which may have been made in this marketing agreement.

Effective date. This marketing agreement shall become effective upon the execution of a counterpart hereof by the Secretary in accordance with § 900.14(a) of the aforesaid rules of practice and procedure.

In Witness Whereof, the contracting handlers, acting under the provisions of the Act, for the purposes and subject to the limitations herein contained and not otherwise, have hereunto set their respective hands and seals.

Department of the Interior

Fish and Wildlife Service

50 CFR Part 80

Administrative Requirements; Pittman-Robertson Wildlife Restoration and
Dingell-Johnson Sport Fish Restoration Acts; Proposed Rule

DEPARTMENT OF THE INTERIOR**Fish and Wildlife Service****50 CFR Part 80**

[FWS-HQ-WSFR-2023-0125;
FVWF5110090000-XXX-FF09W11000;
FVWF9410090000-XXX-FF09W11000]

RIN 1018-BB84

Administrative Requirements; Pittman-Robertson Wildlife Restoration and Dingell-Johnson Sport Fish Restoration Acts

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule.

SUMMARY: We, the U.S. Fish and Wildlife Service, are proposing to update the regulations pertaining to Federal financial assistance programs and subprograms authorized under the Pittman-Robertson Wildlife Restoration Act and the Dingell-Johnson Sport Fish Restoration Act. We propose these updates to our regulations to ensure they reflect recent legislation; to align with the Office of Management and Budget's administrative rules for Federal financial assistance; to align with other laws, standards, and administrative processes; to respond to comments and feedback on our 2019 rulemaking action; and to provide clarity to help ensure consistency in administering our financial assistance programs and subprograms across the Nation.

DATES: We will accept comments received or postmarked on or before January 31, 2025.

Information collection requirements: If you wish to comment on the information collection requirements in this proposed rule, please note that the Office of Management and Budget (OMB) is required to make a decision concerning the collection of information contained in this proposed rule between 30 and 60 days after the date of publication of this proposed rule in the **Federal Register**. Therefore, comments should be submitted to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, (see "Information collection requirements" below under **ADDRESSES**) by January 31, 2025.

ADDRESSES: You may submit comments, identified by the regulation identifier number 1018-BB84, by any of the following methods:

(1) **Electronically:** Go to the Federal eRulemaking Portal: <https://www.regulations.gov>. In the Search box, enter FWS-HQ-WSFR-2023-0125,

which is the docket number for this rulemaking. Then, click on the Search button. On the resulting page, in the panel on the left side of the screen, under the Document Type heading, check the Proposed Rule box to locate this document. You may submit a comment by clicking on "Comment."

(2) **By hard copy:** Submit by U.S. mail to: Public Comments Processing, Attn: FWS-HQ-WSFR-2023-0125, U.S. Fish and Wildlife Service, MS: PRB/3W, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

We request that you send comments only by the methods described above. We will post all comments on <https://www.regulations.gov>. This generally means that we will post any personal information you provide us (see Request for Comments, below, for more information).

Information collection requirements: Send your comments on the information collection request by mail to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, by email to Info_Coll@fws.gov; or by mail to 5275 Leesburg Pike, MS: PRB (JAO/3W), Falls Church, VA 22041-3803. Please reference OMB Control Number 1018-0100 in the subject line of your comments.

FOR FURTHER INFORMATION CONTACT: Diana Swan-Pinion, Wildlife and Sport Fish Restoration Program, Policy, and Programs Branch at diana_swan-pinion@fws.gov or (404) 821-6844. Individuals in the United States who are deaf, deafblind, hard of hearing, or have a speech disability may dial 711 (TTY, TDD, or TeleBraille) to access telecommunications relay services. Individuals outside the United States should use the relay services offered within their country to make international calls to the point-of-contact in the United States. In compliance with the Providing Accountability Through Transparency Act of 2023, please see docket FWS-HQ-WSFR-2023-0125 on <https://www.regulations.gov> for a document that summarizes this proposed rule.

SUPPLEMENTARY INFORMATION:**Background**

The U.S. Fish and Wildlife Service's (Service) Wildlife and Sport Fish Restoration Program (WSFR) annually apportions to fish and wildlife agencies of States, Territories, and the District of Columbia more than \$1.6 billion for programs and subprograms under the Pittman-Robertson Wildlife Restoration Act (Wildlife Restoration Act, 50 Stat. 917, as amended; 16 U.S.C. 669 *et seq.*) and the Dingell-Johnson Sport Fish

Restoration Act (Sport Fish Restoration Act, 64 Stat. 430, as amended; 16 U.S.C. 777-777m, except 777e-1 and g-1) (Acts). We are proposing to update the regulations in title 50 of the Code of Federal Regulations (CFR) at part 80, which is titled, "Administrative Requirements, Pittman-Robertson Wildlife Restoration and Dingell-Johnson Sport Fish Restoration Acts."

The primary users of these regulations are the fish and wildlife agencies of the 50 States; the Commonwealths of Puerto Rico and the Northern Mariana Islands; the territories of Guam, the U.S. Virgin Islands, and American Samoa; and the District of Columbia (DC). We use "State" or "States" collectively to refer to these entities. The Wildlife Restoration Act does not authorize funding for DC, which receives funds only under the Sport Fish Restoration Act.

These regulations tell States how they may receive annual apportionments from the Federal Aid to Wildlife Restoration Fund (16 U.S.C. 669b) and the Sport Fish Restoration and Boating Trust Fund (26 U.S.C. 9504), how they may use hunting and fishing license revenues, and what requirements States must follow when participating in the programs and subprograms under the Acts. These programs and subprograms provide financial assistance to State fish and wildlife agencies to restore or manage wildlife and sport fish and associated habitats; offer hunter and recreational shooter education and safety programs, development, recruitment, retention, and reactivation; develop and increase recreational boating access; enhance the public's understanding of water resources, aquatic life forms, and sport fishing; and develop responsible attitudes and ethics toward aquatic and related environments.

Assistance Listings for these programs may be found at: <https://sam.gov/content/assistance-listings>. On that website, search for numbers 15.605, 15.611, and 15.626 using the "Search Assistance Listings" function.

We published the last revision of these regulations with a proposed rule in 2017 (82 FR 59564, December 15, 2017) and a final rule in 2019 (84 FR 44772, August 27, 2019; referred to below as "the 2019 final rule"). Our December 15, 2017, proposed rule was intended to be the first step in a phased approach to updating 50 CFR part 80 over a period of a few years, addressing multiple topics of concern, and ultimately leading to publishing a final rule that addressed all issues identified as important to resolve. A team of Federal and State subject matter experts

were engaged in developing the strategy and topics to be addressed. Unfortunately, that process was stalled, and we were unable to complete the phased approach, so we published a final rule in 2019 that did not include all identified topics.

The passage of two new laws in 2019 that amended the Wildlife Restoration Act compels the Service to reflect those changes in this proposed rule. In 2019, the Target Practice and Marksmanship Training Support Act (Pub. L. 116–17, May 10, 2019) amended the Wildlife Restoration Act to provide administrative advantages for States engaged in acquiring land for, expanding, and constructing public target ranges, and the Modernizing the Pittman-Robertson Fund for Tomorrow's Needs Act (Pub. L. 116–94, December 20, 2019) amended the Wildlife Restoration Act to provide additional eligible activities focused on increasing communication and participation in hunting and recreational shooting. This statutory update also provided the Service the opportunity to consider topics that were left unresolved from the phased approach begun with our 2017–2019 rulemaking process, as well as to incorporate principles established through continued collaborative engagement between the Service, States, and partners into the rulemaking process.

On September 30, 2019, the Service issued “Interim Guidance for Applying Public Law 116–17, the Target Practice and Marksmanship Training Support Act, to the Pittman-Robertson Wildlife Restoration Act” (interim guidance; <https://www.fws.gov/guidance/sites/guidance/files/documents/WSFR%20Interim%20Guidance%20Implementing%20PL%20116/17-FINAL.pdf>), and on July 14, 2021, the Service issued “Implementing the Modernizing the Pittman-Robertson Fund for Tomorrow's Needs Act” (https://www.fws.gov/guidance/sites/guidance/files/documents/Implementing_the_Modernizing_the_PittmanRobertson_Act.pdf). Each of these documents has provided WSFR and States with guidance for how to apply the amendments to the Acts to grants, enhance understanding, and strive for consistency, while we developed proposed updates to the regulations. When published and effective, the final rule for this proposed rule will supersede these guidance documents where there are differences;

however, we intend for the guidance documents and any updates to them to continue to provide supplemental information that will assist WSFR and States in administering financial assistance awards. WSFR intends to continue to provide policy and training support on eligible activities under the Acts.

The Service was assisted in this rulemaking by the Joint Federal/State Task Force on Federal Assistance Policy (JTF), an advisory group that was chartered on September 5, 2002, under an agreement between the Service and the Association of Fish and Wildlife Agencies to support the cooperation between the Service and State fish and wildlife agencies in wildlife and sport fish restoration and management projects. The JTF is exempt from the Federal Advisory Committee Act (Pub. L. 92–463, as amended; 5 U.S.C. 1001 *et seq.*) through the Acts. The role of the JTF is to consider operational policies and administrative problems and to recommend solutions. The JTF supported this rulemaking action by nominating State and Federal subject matter experts to serve on a pre-regulatory review team to consider proposed changes and assess them for viability, clarity, applicability, gaps in understanding, and potential controversy, and provide other support as requested. The team began work on this endeavor in September 2021 and had its last meeting in May 2023. During this period, the Service offered two review-and-comment periods to gather input and encourage engagement from Service staff in WSFR, State fish and wildlife agencies, and partners in wildlife and sport fish restoration and associated outdoor recreation. WSFR also provided six open forums to encourage active participation and discussion on topics of interest in the rulemaking process.

In 2013, the Office of Management and Budget (OMB) published regulations at 2 CFR part 200 (Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards) that updated and amended rules for Federal financial assistance for all Federal agencies (78 FR 78608, December 26, 2013). In this proposed rule to update 50 CFR part 80, we align the terminology we use for administering financial assistance under the Acts to the terms used in 2 CFR part 200. These proposed revisions would provide consistency across Federal

financial assistance regulations and improve understanding of applicable Service requirements.

We propose these updates to our regulations to improve clarity, consistency, readability, and alignment with current administrative practices, and to reflect the currently applicable laws, standards, and practices.

Proposed Amendments to Existing Regulations

Even though we are not proposing revisions or additions to every section in 50 CFR part 80 in this proposed rule, for clarity and readability, we are setting forth the entire part in this proposed rule (see Proposed Regulation Promulgation, below).

The regulations at 2 CFR part 200 have a goal to standardize terms to support standardizing grant management business processes. To support those efforts and to assist grant management practitioners, we propose to amend the following terms to align them more accurately with 2 CFR part 200: *Award* and *subaward* (primarily replacing *grant*), *recipient* and *subrecipient* (replacing *grantee* and *subgrantee*), and *period of performance* (replacing *grant period*). We propose to insert the amended terms throughout 50 CFR part 80. We also propose to incorporate helpful references in 50 CFR part 80 to applicable sections of 2 CFR part 200.

In the information below, we do not discuss in detail editorial changes that we propose to improve readability, clarity, consistency, or continuity. We instead focus on substantive changes to the current regulations.

Proposed amendments and the rationale for changes are described here.

I. Subpart A—General

Section 80.1—What does this part do?

We propose to update § 80.1 to include a new purpose under the Wildlife Restoration Act to facilitate the construction and expansion of public target ranges (per Pub. L. 116–17) and to add reference to activities for hunter recruitment and recreational shooter recruitment (per Pub. L. 116–94).

Section 80.2—What terms do I need to know?

We propose to add the following terms to the definitions section of the regulations for the following reasons:

Proposed new term	Purpose
90/10/5	In describing activities associated with Public Law 116–17 where the Federal cost share is up to 90 percent (and, therefore, the non-Federal cost share is 10 percent or more) and the period of availability of funds is 5 years when specifically engaging in activities for acquiring land for, expanding, or constructing public target ranges, we propose to abbreviate this concept as “90/10/5”.
Acquisition	Supporting activities associated with Public Law 116–17 for acquiring real property for public target ranges, as well as the sections of the regulations pertaining to real property.
Allocate	Supporting the financial action of assigning funds to associated, eligible activities.
Allowable	Clarifying how we address permissibility of activities and costs under 2 CFR part 200 (distinguished from 50 CFR part 80).
Apportioned funds	Enhancing understanding of the grant process and how funds are disbursed to States.
Eligible	Clarifying how we address permissibility of funding activities under 50 CFR part 80 (distinguished from 2 CFR part 200).
Equipment	Responding to a request to include this term as defined at 2 CFR part 200 in the regulations at 50 CFR part 80.
Expanding	Supporting activities associated with Public Law 116–17 for physically expanding access to public target ranges, to mean acquiring land for or constructing public target ranges, or physical improvements to an existing public target range that add to the utility of the range in a manner that ultimately increases range capacity to accommodate more participants.
Facility	Supporting understanding and consistency throughout the rule.
Federal fiscal year	Differentiating the Federal definition from the State equivalent term.
Fiscal year	Adding as defined under Public Law 116–94 for State license years.
Fish restoration and management project	Adding a condensed version from the Sport Fish Restoration Act to provide parity to the definition of <i>Wild-life restoration project</i> (see below).
Hunter recruitment and recreational shooter recruitment	Adding as defined under Public Law 116–94, included in the Act under 16 U.S.C. 669c(c)(4).
Law enforcement	Resolving a longstanding issue that has caused confusion and inconsistencies for what activities may be eligible under the Acts; clarifying these parameters would allow us to broaden the scope of eligible activities that support the Acts but do not fall into the ineligible categories.
Maintenance	Clarifying for those instances where maintenance and operations are not both eligible activities under a funding source.
Operations	Clarifying for those instances where maintenance and operations are not both eligible activities under a funding source, such as under 90/10/5 funding where operational activities are ineligible.
Public	Resolving a longstanding issue as to what constitutes “the public” because using Federal assistance funds for a project and then limiting access to an exclusive group is not permissible.
Public access	Resolving a longstanding issue as to physical access to projects funded under the Acts; supported also by 50 CFR 80.58.
Public relations	Adding because Public Law 116–94 removed public relations as a prohibited activity but 2 CFR part 200 restricts allowability, meaning public relations activities are not always eligible.
Public target range	Adding as defined under Public Law 116–17.
R3	Adding as an abbreviation for “recruiting, retaining, or reactivating” and applicable to both Acts, to support activities under Public Law 116–94.
Traditional Wildlife Restoration program	Adding to mean the activities that are funded under apportionments authorized at 16 U.S.C. 669c(b), which reflects the original program funded under the Wildlife Restoration Act, to support distinctions in funding sources due to passage of Public Law 116–17 and Public Law 116–94.
Wildlife restoration project	Supporting the part of the definition from the Wildlife Restoration Act that is applicable to the Wildlife Restoration Program, and not the sections of the Act amended by Public Law 106–553 to create the Wildlife Conservation and Restoration Program.

In this proposed rule, we propose to remove a term only when we replace it with a term that better aligns with 2 CFR part 200 and current grant management processes. We propose to amend some terms to update to current standards, such as adding a clause to the term “construction” to accommodate projects under Public Law 116–17 for constructing public target ranges. Upon the advice of State representatives, we propose to simplify the list of terms by removing the term “agency” as a separate definition and instead adding “(agency)” after the term “State fish and wildlife agency” to indicate that those terms mean the same thing. We propose to amend the term “angler” to acknowledge applicable Federal law, as one State reviewer commented that sometimes fishing in a State involves

meeting standards of both State and Federal laws. Five of the 50 U.S. States apply for Federal funds using a “comprehensive management system (CMS)” method of operations, which we define at § 80.2. We consulted representatives from those States to inform the proposed updates to this term in this proposed rule. We propose to update the term “personal property” to align better with the definition and use of that term in the Service Manual chapter at 520 FW 6, “Real Property—Overview.” We propose to clarify the term “subaccount” based on recommendations from the pre-regulatory review team. We propose to amend the term “useful life” to apply to a capital asset or equipment in addition to a capital improvement, based on definitions and other regulatory

requirements provided in 2 CFR part 200.

II. Subpart B—State Fish and Wildlife Agency Eligibility

We are not proposing any substantive changes to subpart B.

III. Subpart C—License Revenue

We are not proposing any substantive changes to subpart C.

IV. Subpart D—Certifying License Holders

In our August 27, 2019, final rule (84 FR 44772), we made significant changes to subpart D. Those regulatory changes included a compliance date of September 27, 2021 (2 years from the effective date of the 2019 final rule), for State fish and wildlife agencies to make the needed changes in their laws and

processes to accommodate the new standards to licenses for the purposes of certifying paid license holders during the annual certification period.

Certifying license holders is an important component to both the Wildlife Restoration and the Sport Fish Restoration programs because, under the Acts, annual apportionment to State fish and wildlife agencies is based in part, under the mandatory funding formulae in the Acts, on the number of paid hunting and fishing license holders that the agency certifies.

We propose to make some editorial changes to subpart D to change the title to reflect active voice, place more emphasis on “individual paid license holders,” and improve clarity and consistency in how we present information. At § 80.33, *How does a State fish and wildlife agency decide who to count as paid license holders in the annual certification?*, we propose to address some misunderstandings that have come to our attention as to how different types of licenses allow license holders to be counted in the annual certification. State fish and wildlife agencies develop many varying structures for how they package and sell hunting and fishing licenses in their State.

As an example of the disparities and how we address them, consider these two scenarios. State A and State B both have “fiscal/license years” that are June 1–May 31. This is the “certification period” for both States when reporting individual paid license holders. However, State A and State B follow different processes for issuing licenses:

- State A sells annual licenses that, regardless of when you purchase your license, are valid only during the “fiscal/license year.” For example, if you purchase your license on April 1, it will expire May 31 if you are buying that license for the current license year, or it will not be valid until June 1 if you are buying that license for the next license year.

- State B sells annual licenses that, regardless of when you purchase your license, are valid for a full year starting with the day you purchase the license and ending 1 year later (this type of license is also known as a “365-day license”). For example, if you purchase your license on April 1, it is good from that day (April 1) through the following March 31.

State A can easily determine which individual paid license holders may be counted during the certification period as they all fall into the fiscal/license year. However, State B has individual paid license holders that are holding a valid license in two different fiscal/

license years. It would not be fair if State B certified license holders in two certification periods for licenses that are essentially the same in both States.

To align these scenarios, we propose to clearly state the following:

- An individual paid license holder may be counted only in the certification period in which the license first becomes valid.
- A single-year license may be valid for any period from 1 day up to 2 years.
- A license that is valid for 2 years or more is considered a multiyear license.
- A license holder cannot be counted in more certification periods than a license is valid, *i.e.*, if holding a 5-year license, the holder can be counted only in five certification periods for that license.
- A license holder may be counted only for certification periods that align with the years the license is valid, *i.e.*, if a 5-year license is valid from June 1, 2018, through May 31, 2023, the license holder may not be counted for that license for the certification period that ends between October 1, 2024, and September 30, 2025, or any certification period after that.

The criterion above becomes important when considering multiyear licenses that were sold before the 2019 final rule became effective on September 26, 2019, and a State fish and wildlife agency is recalculating to determine if it may certify the license holder in an upcoming certification period. For example, a 10-year license that was sold in 2016 for \$100 could be counted only once under the regulations in effect at that time. Under the 2019 final rule, the State fish and wildlife agency may apply the current standards in § 80.34 to that license and count the license holder in the certification periods that include 2019 until the license expires in 2025, so that license holder may potentially be counted in seven additional certification periods. The State agency cannot certify that license holder beyond that date, for that license, as it is no longer valid. Using the same example, except for a lifetime license, under the 2019 final rule, the State agency may certify the license holder for up to an additional 49 years, provided the license holder is still alive.

Under this proposal, a State would be allowed to certify a license holder only for the number of years that the license is valid and only in the certification years that correspond to the period that the license is valid.

At § 80.34, *Must a State fish and wildlife agency receive a minimum amount of revenue for each license holder certified?*, we propose to remove the statement that all States must be

following the requirements in § 80.34(b) by September 27, 2021, as that date is now in the past. The subpart includes other references to that date, and we propose revisions to update the regulations appropriately.

We propose to amend § 80.35, *What additional requirements apply to multiyear licenses?*, based on comments we have received since the 2019 final rule that certain language set forth by the 2019 final rule is unclear or confusing. We propose no changes to the basic principles established in § 80.35 by the 2019 final rule; rather we propose revisions similar to those we are proposing for § 80.34 in removing language identifying dates for regulatory compliance that are no longer relevant. We also propose revisions for simplicity and clarity, to encourage consistent understanding and implementation of the regulations.

At § 80.37, which pertains to the question of whether the State fish and wildlife agency can certify a license sold at a discount, we propose to remove the phrase “when combined with another license or privilege,” as the answer to the question does not depend on combining the license with another privilege. It can be discounted under other circumstances. We also propose to amend the heading of § 80.38, which asks whether an entity other than the State fish and wildlife agency may offer a discounted or free license under any circumstances, to instead ask whether a State fish and wildlife agency can certify a license when an entity other than the agency offers a discounted or free license. The emphasis would be placed on the ability to certify the license holder, which ultimately is the concept that we want to establish throughout the regulations in subpart D.

Proposed amendments to the regulations in subpart D were presented to the JTF in December 2021 for review and input. Prior to the 2019 final rule, the Service relied on the advice of the JTF to inform the new standards for certifying license holders with the goal of establishing rules that were fair and could be consistently applied by State fish and wildlife agencies. The JTF again had the opportunity to review proposed subpart D regulations during one of the preliminary review and comment periods on the proposed rule.

V. Subpart E—Eligible Activities

We propose to amend subpart E by editing the regulations for active voice, clarity, and better readability. We propose to strategically amend the regulations in subpart E more than those in any other subpart in 50 CFR part 80 to accommodate activities newly

eligible under the 2019 amendments to the Wildlife Restoration Act. The WSFR pre-rulemaking policy process and preliminary guidance developed to address the amendments to the Act greatly informed the proposed changes to this subpart.

We describe here several areas of focus that greatly expand eligible activities set forth in subpart E, how we are proposing to reformat the regulations in this subpart, the analyses we engaged in to determine how to improve the current regulations, and how we support certain concepts throughout this proposed rule.

Background Information on the Wildlife Restoration Act

To better understand amendments to the Wildlife Restoration Act for programs and subprograms, additional eligible activities, and how all eligible activities under the Act intersect with funding sources under the Act and the Service's administration of awards, we provide some background on the Wildlife Restoration Act.

The Federal Aid in Wildlife Restoration Act (Sept. 2, 1937, ch. 899, section 1, 50 Stat. 917) set forth a program that apportioned funds to State fish and wildlife agencies for eligible activities related to acquiring land, improving habitat, and conducting research associated with wildlife restoration and management. Funding was available from revenue accrued during the Federal fiscal year (FFY) on taxes imposed on firearms, shells, and cartridges under the Revenue Act of 1932 (47 Stat. 169) and deposited into "the Federal aid to wildlife restoration fund," which we now refer to as the Wildlife Restoration Trust Fund.

Each of the Act's programs and subprograms has specific eligible activities, and costs must be assigned to separate fiscal subaccounts to support accurate administration of the funds. The Service tracks apportionments and available funding using the Department of the Interior's Financial and Business Management System (FBMS), which supports business management processes related to financial management, grants and cooperative agreements, real and personal property management, and several other functions. FBMS employs the use of subaccounts, which allows the Service to use a "first-in, first-out" method of accounting.

The Service also uses subaccounts to administer the specific use requirements for program and subprogram funding sources under the Act. States that have funding that has not been obligated to an award within the period of

availability may encounter the possibility of having to return apportioned funds to the Service (see table 1 to § 80.92 under Proposed Regulation Promulgation, below, for information on how the Service disburses returned funds). The Service uses a "safety margin" system to track apportioned funds, obligated funds, and periods of availability and will alert a State agency if the agency is approaching a situation where they may need to return funds. (*Note:* the formulas for awarding funds and cost share requirements for insular areas, the Commonwealth of Puerto Rico, and the District of Columbia vary from the formula applied to the 50 States.)

Since enactment of the Wildlife Restoration Act, several amendments have revised the original eligibilities that impact changes addressed in this proposed rule:

- The addition of maintenance of wildlife restoration projects as eligible (Pub. L. 79–533, July 24, 1946).
- Law enforcement and public relations excluded as eligible activities (Pub. L. 84–375, August 12, 1955).
- The addition of the Basic Hunter Education and Safety subprogram to the Act (Pub. L. 91–503, October 23, 1970).
- The addition of the Enhanced Hunter Education and Safety program to the Act (Pub. L. 106–408, November 1, 2000; also known as "the Improvement Act").
- The addition of an administrative funding advantage to encourage and assist States in acquiring land for, expanding, and constructing public target ranges, under the Target Practice and Marksmanship Training Support Act (Pub. L. 116–17, May 10, 2019), which we refer to as "90/10/5."
- The addition of new eligible activities for hunter recruitment and recreational shooter recruitment (which we refer to as "R3") under the Modernizing the Pittman-Robertson Fund for Tomorrow's Needs Act (Pub. L. 116–94, December 20, 2019), which also removed the exclusion of public relations activities that was added to the Act in 1955.

Section 80.50—What activities are eligible for funding under the Wildlife Restoration Act?

Updated Terms and Arrangement

As noted above, we propose to begin using the term "Traditional Wildlife Restoration program" to refer to the original program that is funded under 16 U.S.C. 669c(b) and "90/10/5" to refer to activities for acquiring land for, expanding, or constructing public target ranges that qualify for the

administrative advantage of a 90 percent Federal/10 percent non-Federal cost share, with a period of availability to obligate funds of 5 years.

We propose to reorganize the regulations at § 80.50(b) under the general categories of Basic Hunter Education and Safety subprogram and Hunter Recruitment and Recreational Shooter Recruitment, and separate eligible activities for the Basic Hunter Education and Safety subprogram into § 80.50(b)(1) and eligible activities for recruiting, retaining, or reactivating hunters and recreational shooters (R3) into a new § 80.50(b)(2). This proposed revision would allow us to recognize the common funding source, while providing the distinctions between eligible activities under each. We also propose to remove regulations that describe activities that are eligible under all programs under the Acts from current § 80.50 and add them to proposed § 80.52.

Traditional Wildlife Restoration Program

We propose that eligible research may include social sciences, to assist States in improving communication and benefits to the public they serve. We also propose that a State may use funds under a Traditional Wildlife Restoration program award for maintaining and operating projects or equipment under the ownership or management control of the State fish and wildlife agency and that support eligible activities under the Wildlife Restoration Act. This proposed change is intended to support the ability for State agencies to use Traditional Wildlife Restoration program funds for eligible maintenance and operations on projects or activities on Traditional Wildlife Restoration-managed land that may have been funded in accordance with regulations in another subpart or from an external source. As an example, a wildlife management area has a public target range. Maintenance activities such as mowing the lawn or operations such as providing lighting to the facility would be eligible activities using Traditional Wildlife Restoration program funds, as they are eligible Traditional Wildlife Restoration program activities, without the need to allocate costs to other funding sources. However, activities such as constructing a public target range or providing staff to run and operate the public target range would not be eligible Traditional Wildlife Restoration program activities and must be charged to an eligible funding source.

We also propose to add to § 80.50 that a State agency may use funds under a Traditional Wildlife Restoration

program award for maintaining and operating projects or equipment that a third party owns or manages provided a third-party binding agreement is in place that ensures the project continues to serve the intended purposes under the award. This third-party binding agreement may be in the form of a subaward.

Communication and Public Relations

With the passage of Public Law 116–94, the prohibition for funding public relations activities was removed from the Wildlife Restoration Act, making public relations potentially an eligible activity. The regulations at 2 CFR part 200 specifically define public relations and provide principles establishing when these costs are and are not allowable. We have considered that perhaps the overlap of public relations with other communication terms (such as “outreach,” “marketing,” and “advertising”) would cause confusion and inconsistencies in determining which associated activities may be funded under the Acts. Using preliminary guidance that we already have developed (“Implementing the Modernizing the Pittman-Robertson Fund for Tomorrow’s Needs Act,” July 14, 2021), in this proposed rule we focus on public relations and other activities that would be considered eligible for communicating with the public.

We propose to define the term “public relations” by referencing 2 CFR part 200; therefore, “public relations” would mean activities that are dedicated to maintaining the image of the State fish and wildlife agency or subrecipient or to maintaining or promoting understanding and favorable relations with the community or public at large or any segment of the public. As “public relations” activities are described in 2 CFR part 200, costs for the activities are unallowable unless meeting the objectives of, or necessary for the performance of, a Federal award, or when conducting general liaison on matters of public concern. To clarify, if the form of communication solely benefits the State or the State agency, then the costs are unallowable, but if the form of communication supports the objectives or performance of the Federal award then costs would likely be allowable. We propose to include at § 80.50(a)(8) examples of eligible communication types that support a State’s ability to have an informed and engaged public. We would describe at proposed § 80.50(a)(9) what communication activities require prior approval.

Some of the eligible communication activities we describe in this proposed rule are prompted by our engagement in the newly introduced activities associated with R3, but we do not limit the opportunity to expand on eligible communication activities to strictly R3. We propose amendments throughout the regulations that clarify and allow for expanded communication activities that support other eligible activities.

Law Enforcement and Eligible Activities

We propose to begin foundationally at § 80.2, as described above, by defining the term “law enforcement” to mean enforcing laws, orders, and regulations. We also would describe at proposed § 80.55 how activities for both law enforcement and the process of making State laws are ineligible for funding. Using these two standards of ineligible activities under the Acts allows us to take an approach with this proposed rulemaking to clarify and more distinctly define those activities that are eligible, as the prohibition of activities connected to law enforcement has been interpreted over the years to extend beyond these restrictions. Based on this approach, we propose to include the following activities in the regulation as eligible:

- Research, data collection, surveys, meeting with boards, and other preliminary activities that State agency staff do to collect information, make assessments, develop internal recommendations, and inform legislators, who then use the information when engaging in the ineligible activity associated with a formal legislative process for making public policy. These eligible activities are also supported under both Acts. When defining “wildlife restoration project” and “fish restoration and management project,” the Acts include, respectively, “research into problems of wildlife management as may be necessary to efficient administration affecting wildlife resources” (16 U.S.C. 669a(11)) and “acquisition of such facts as are necessary to guide and direct the regulation of fishing by law” (16 U.S.C. 777a(1)(B)).

- Activities that are otherwise eligible being conducted by law enforcement personnel. Examples are activities such as participating in hunter education and safety courses, supporting public access at boat ramps, or conducting outreach to educate the public or for R3 purposes. If an activity is eligible, the staff involved with conducting the activity, even if law enforcement, may be included as an eligible part of an award. Of course, if law enforcement staff are involved in an eligible activity, and

something occurs that activates them to conduct law enforcement activities, the State or subrecipient would have to prorate costs accordingly and charge only eligible activities to the award or subaward.

- Interpreting, translating, printing, or disseminating published State hunting regulations to inform and educate the public about their responsibilities to comply with laws, orders, and regulations. Once the laws are published in the official legal registry (State Register or other), the lawmaking process is complete. However, the State agency should then make this information readily available to members of the public in a manner they can understand. Such efforts to simplify the rules in a different format, translate the law into other languages, include information on the laws in hunter or angler guides, and other associated projects would be eligible.

Technology

Considering that State agencies may provide many forms of innovation in communication with the public, such as phone applications (apps), social media, websites, software products, and whatever is on the horizon, we propose to add the flexibility for States to employ these methods and tools when associated with an eligible activity.

R3 Flexibility

We understand that the ability to use funds under these Acts for R3 activities will provide State fish and wildlife agencies opportunities to be somewhat creative in finding various ways to approach different audiences, thereby helping the agencies achieve the R3 success they are seeking. We want to provide flexibility in the regulations for States to take advantage of those opportunities as much as possible, while still meeting the requirements for being necessary and reasonable and supporting objectives in an award. We, therefore, propose to list eligible activities that support R3 for items such as hiring shooting trainers and hunting guides, paying for optimizing State websites, acquiring supplies that help enhance the experience and skills of participants, and various types of education to include mentoring, field demonstrations, and training simulators. Many of the activities for R3 under Wildlife Restoration can be applied similarly to R3 under Sport Fish Restoration. We propose to leave sufficient flexibility to allow a State agency to have an award approved for activities that the agency can clearly demonstrate are targeted toward eligible R3 objectives.

Section 80.51—What activities are eligible for funding under the Sport Fish Restoration Act?

We propose to amend eligible activities in § 80.51 to align with those in the proposed revised § 80.50, as appropriate, including expansion of eligible activities for communication.

Recreational Boating Access Subprogram

We propose to add some activities to provide more context, based on the Service Manual chapter at 517 FW 7. Based on recommendations from States, we would clarify that projects may be for motorized or nonmotorized vessels and users.

State Outreach and Communications Subprogram

We propose to add the word “State” to this subprogram. The Act provides for a National Outreach and Communications Program, which is a competitive program administered out of the Service’s Headquarters Office. The Act also provides for a State Outreach and Communications program (an R3 program), which is to be an extension of the National program focused on State priorities. Each State may use up to 15 percent of its Sport Fish Restoration program apportioned funds (16 U.S.C. 777c) for the costs of the combined Aquatic Resources Education and State Outreach and Communications subprograms. We propose to add a provision for “Interpreting, translating, printing, or disseminating published State fishing regulations to inform and educate the public about their responsibilities to comply with laws, orders, and regulations” to the regulations to provide parity with eligible activities under proposed revised § 80.50.

Section 80.52—What activities are eligible for funding under all programs and subprograms under the Acts?

We propose to add this new section to the regulations as we identified multiple activities currently discussed in §§ 80.50 and 80.51 and in this proposed rule that are eligible to all programs and subprograms. Below we describe two new proposed provisions to accommodate activities newly eligible under the 2019 amendments to the Wildlife Restoration Act.

State Electronic Data Systems

License sales are an important component of the congressionally mandated funding formula the Service uses for awarding annual apportionments to State agencies. Originally a manual process, tracking of

license sales became automated as technology improved and State agencies began using automated point of sale or electronic licensing systems for collecting payments for hunting and fishing licenses and accounting for license sales. As the primary purpose for these electronic systems was management of hunting and fishing license revenue for the State fish and wildlife agency, using grant funds to support the system was considered ineligible for funding as activities conducted for the primary purpose of producing income (see 50 CFR 80.54(c)), and all associated costs, are ineligible. As technology has further improved and agency activities expanded over the years, traditional licensing systems evolved to accommodate a variety of needs and purposes and have been combined with other public-facing electronic systems designed to collect and share data and information as a public interface. A Director’s Memorandum issued on July 11, 1996 (Automated Sportsman’s Data Systems (ASDS)—Formerly Point of Sale), describes the Service’s awareness of the changing technology and the potential eligibility of some costs associated with the expanding system. More than 25 years later, systems have become a tool for a variety of actions related to the conservation of fish and wildlife resources and associated administration of a State agency. Some electronic systems may be combined within a State to accommodate multiple purposes or be used in conjunction with other State agencies. States are using technology to increase efficiency and generate cost savings, so it is possible that the electronic system that sells hunting and fishing licenses may include components for collecting data and funds, distributing information, or administering activities for other purposes such as driver’s licenses, vehicle registrations, park entry permits, and other sources of revenue for States.

In June 2021, WSFR published guidance that describes how States may apply costs of an electronic system that support eligible activities to a Wildlife Restoration or Sport Fish Restoration award. As we have had 2 years to implement and receive feedback on this guidance and have received no negative responses from States, we propose to add such costs to the list of eligible activities in the regulations. The processes in the guidance would still have to be followed for costs to be eligible.

Oversight Activities

We propose to add provisions to the regulations that clarify as eligible those

activities pertaining to oversight, such as monitoring, evaluating, and reporting. We would include as eligible the costs associated with monitoring and compliance activities when they lead to the discovery of an area of noncompliance with an award, a potential diversion of funds under the Acts, or a situation where property acquired under the Acts is infringed upon—improprieties that could result in an action in the legal system. This proposed regulatory change would continue to build on the flexibilities for activities that do not fall into the category of law enforcement or State lawmaking. The State agency would still be unable to use award funds for conducting law enforcement activities, such as issuing a citation, but the agency could use award funds for obtaining evidence, testifying in court, meeting with attorneys, and other activities to protect resource and property interests under an award. Here is an example: While a State is monitoring real property holdings that were acquired under an award, the State finds that an adjacent landowner has put a shed on a State-owned property. Eligible activities would include the work that non-law enforcement staff do to collect information and evidence (*i.e.*, take photographs, check lot lines in the files, etc.), notify managers and officials, write letters to the other party informing them of the situation and offering an opportunity to correct, consult with attorneys to assess the situation and potential alternatives, and, if needed, testify and provide evidence in a court of law.

Section 80.53—May an activity be eligible for funding if it is not explicitly eligible in this part?

We propose to add in § 80.53 that an activity must be allowable under 2 CFR part 200 to be eligible if the activity is not explicitly described as eligible in the regulations in part 80.

Section 80.55—What activities are ineligible for funding?

We propose to expand on the prohibition for law enforcement to include the definition of “law enforcement” but also the making of laws. We also propose to remove “public relations” as ineligible under the Acts in response to Public Law 116–94.

State Lawmaking as Ineligible

We propose to clearly describe as an ineligible activity participation in the State lawmaking process using Federal funds under an award. This provision is primarily because State agencies need to

retain their State law authority to make policy decisions, and once these activities are included in a grant and paid for with Federal financial assistance funds, they are “federalized,” creating a Federal nexus to what is inherently a State responsibility. When a federally funded project includes the making of State laws, a Federal compliance review is automatically triggered. Even if the project is determined to be categorically excluded from some Federal compliance requirements, the Federal nexus on a State’s responsibility and authority to promulgate laws is inappropriate and is deemed ineligible. Therefore, this proposed rule would clarify and more distinctly define what law-related activities are eligible and ineligible under the Acts.

Public Access Denied

We also propose to add that when public access is required under an award and is not provided, the project becomes ineligible for funding. This provision does not include temporary closings or closings because of reasons established at proposed § 80.58 but refers to blatant exclusion or denial of public access when that access is required under an award.

Section 80.57—How does a proposed project qualify as substantial in character and design?

We propose to add to § 80.57 planned approaches, appropriate procedures, and accepted principles that would relate to R3, access, and communication to accommodate additional eligible activities described in this proposed rule.

Section 80.58—What are public access requirements for activities in an approved award under the Wildlife Restoration or Sport Fish Restoration programs?

The parameters for public access have been a longstanding issue for the Service and States, and we propose to set some basic principles in the regulations to assist with understanding and encourage consistent application. We propose to start with stating that there are certain eligible activities under an award for which the primary purpose is to provide public access. A prime example of such an activity is public target ranges, which are prominent in both Public Law 116–17, which focuses on offering advantages to States to encourage further development of such facilities, and Public Law 116–94, which seeks to provide public target ranges and other support to recruit, retain, or reactivate members of the

public in hunting and recreational shooting activities. We have encountered situations where potential subrecipients were actively seeking to partner with States in using funds under the Wildlife Restoration Act for range projects but did not want the range open to the public. Often, we encounter situations where the desire is to limit access to members only, and membership costs are very high, or memberships are not offered to all. This includes projects under both Acts.

From the public side, we also have encountered situations where certain groups with specific interests want to access property acquired under an award for various purposes that are not consistent with the purposes of the award under which they were acquired. For example, a real property acquisition for the purposes of conserving a sensitive species in recovery may not be compatible with all-terrain vehicle use or horseback riding on that property. Proposed § 80.58 would give the State agency authority, within the purposes of the Acts, to set parameters for public access. We understand that many States have standards for public access already institutionalized in their laws and practices. Proposed § 80.58 would also describe how a State agency may work under a third-party binding agreement (which may be accomplished as a subaward) to partner with non-State entities on projects that must provide public access.

We purposely do not discuss in the proposed regulations any set formulas for determining the amount of public access to provide when the project with a third party is not available for public access 100 percent of the time. In May 2017, the Service published Best Practices for Third-Party Agreements guidance (best practices guidance), which we updated in September 2019. In the best practices guidance, we describe that the determination as to the adequacy of public access will be accomplished on a case-by-case basis and will be considered as follows:

The WSFR-prescribed method used to determine the amount of public access is:

(1) A reasonable number of regularly scheduled and posted hours of availability must be available to the public that reflects, at minimum, the amount of the Federal and State investment;

(2) Hours of operation may take into consideration safety and security issues, but must not impose impediments such as mandatory membership or excessive fees beyond those needed to offset maintenance and management costs;

(3) If there is potential for closing a site for targeted, non-public use, the recipient must define a process whereby the third party must notify the public of any changes in availability and must compensate the recipient when it reduces the minimum public access defined in the agreement (the preferred method is for the third party to offer additional public access at an alternate time that compensates for the interruption); and

(4) If there are gates, locks, or other controls to access, the third party must clearly indicate at the control point how the public may gain access to the facility.

VI. Subpart F—Allocation of Funds by an Agency

With the passage of Public Law 116–17 and Public Law 116–94, many more interrelationships are available for developing projects and engaging in eligible activities that could potentially include using funds from a different funding source under the Wildlife Restoration Act. Because these statutory changes prompted a more holistic approach in subpart F, we propose to expand current § 80.60 and add three new sections as follows:

- Proposed § 80.60—What is the relationship between the Traditional Wildlife Restoration Program, the Basic Hunter Education and Safety subprogram (Basic Hunter Education), and the Enhanced Hunter Education and Safety program (Enhanced Hunter Education) for acquiring land for, expanding, or constructing public target ranges?

- Proposed § 80.61—What sources of funding in the Wildlife Restoration Act may a State fish and wildlife agency use to support public target range projects, and may funds from multiple sources be used in a single award?

- Proposed § 80.62—What are eligible and ineligible 90/10/5 activities?

- Proposed § 80.63—What exception is provided for Enhanced Hunter Education and Safety funds in relation to Basic Hunter Education and Safety funds?

We propose in these sections, based on the “Interim Guidance for Applying Public Law 116–17, the Target Practice and Marksmanship Training Support Act, to the Pittman-Robertson Wildlife Restoration Act” (interim guidance), how a State may apply the 90 percent Federal/10 percent non-Federal cost share and period of availability of up to 5 years to eligible public target range projects. The proposed sections also describe what amount of funds, if any, a State may allocate to public target range projects and the process a State

agency must take when applying apportioned Traditional Wildlife Restoration program funds to those projects. The current regulations at § 80.60 focus on the differences between the Basic Hunter Education and Safety subprogram and the Enhanced Hunter Education and Safety program. We propose to address the relationship between the two programs and one subprogram that may include public target range activities using the 90/10/5 approach as allowable under the amendments from Public Law 116–17.

Proposed § 80.61 would engage with all the options that a State may use when funding public target range projects. We would identify, in a table to proposed § 80.61, seven different potential approaches to use under the regulations.

Proposed § 80.62 would describe eligible and ineligible 90/10/5 activities. The proposed revisions would include a topic that we need to address as, following a legal review of Public Law 116–17, it became clear that the intent of the law is to increase physical access to more or expanded public target ranges. In the interim guidance and this proposed rule, we make it clear that “expanding” means, for the purposes of projects for acquiring land for, expanding, or constructing public target ranges (90/10/5), physical improvements to an existing public target range that add to the utility of the range in a manner that ultimately increases range capacity to accommodate more participants. Physical improvements do not necessarily have to increase the size of the facility but must result in an increase in physical usability that will accommodate more participants. This legal interpretation led us to include in this proposed rule definitions for the terms “maintenance” and “operations.”

In the grant programs under the Acts, we tend to combine operations and maintenance under single awards, and this approach is acceptable for most of the eligible activities under the Acts. However, for 90/10/5 awards, an activity defined as “operations” is not an eligible activity. An activity defined as “maintenance” may be, depending on whether it integrally supports a construction or expansion project. For example, if a project includes activities to expand a 6-stall range to a 12-stall range, but the roof and structure of the existing 6 lanes need repair and maintenance at the same time to allow for successful construction, it may be necessary and reasonable to support the expansion project and ensure that all 12 lanes will be accessible to the public. Other examples may include when a

safety feature of a public target range needs maintenance, and closure of the facility will occur if the need is not resolved. When combined with other activities for expanding the range, this maintenance activity may be included as necessary and reasonable. A State fish and wildlife agency would have to clearly justify how the maintenance activity supports the 90/10/5 objectives and is not just a stand-alone maintenance activity that does nothing to increase range capacity for more participants.

We include in this proposed rule that public target ranges may be on property where title is held by a third party provided the State agency holds a lease or other binding agreement that ensures the terms and conditions of the award will be met. Mobile public target ranges would also be eligible. Although personnel and administrative costs for managing and operating a public target range once the project is completed would be ineligible, personnel and administrative costs associated with activities that directly support development of public target ranges, such as acquiring land and construction, would be eligible. Examples include those activities associated with planning for projects, which may include identifying potential parcels of land, investigating and obtaining permits, conducting real property appraisals, engineering, coordinating projects on a State level, and administering specific projects. Costs that are also eligible when combined with an expansion or construction project are the associated amenities that are necessary and reasonable to ensure the public can fully access and utilize the public target range, such as public restrooms, storage facilities, safety amenities, signs, roads and parking lots, and infrastructure for utilities. We also propose to include as eligible the possibility to justify a project using the 90/10/5 approach when the range has deteriorated to a condition where it is no longer operable or accessible. We do not expect this situation to happen often, and anyone considering this option would have to consult the regional WSFR office.

We would list the following activities as ineligible: operations, maintenance unless necessary for completing a construction or expansion project, long-term monitoring, and any other activities that are not directly related to the goals of 90/10/5 for providing new or increased physical capacity for public target ranges.

Proposed § 80.63 would describe the exception that is in the Wildlife Restoration Act (16 U.S.C. 669 *et seq.*) for use of Enhanced Hunter Education

and Safety funds. The amendments to the Act from Public Law 116–94 complicate administration in some respects. The funding source for both the Basic Hunter Education and Safety subprogram and the newly added hunter recruitment and recreational shooter recruitment (which we refer to as “R3”) activities is described in the Act at 16 U.S.C. 669c(c)(1)–(3). When applied to the Basic Hunter Education and Safety subprogram, the eligible activities are described in the Act at 16 U.S.C. 669g(b). The new eligible activities for R3 are included in the Act under 16 U.S.C. 669c(c)(4). The Act also includes an exception for the Enhanced Hunter Education and Safety program that, if a State uses all its Basic Hunter Education and Safety subprogram funds for purposes under 16 U.S.C. 669g(b) during the FFY, the State may then use its Enhanced Hunter Education and Safety program funds for any purpose under the Act. When applying the amendments for R3 activities in the Act, if a State uses any of its funds under 16 U.S.C. 669c(c) for R3 activities, it voids the exception, and the State must use all its Enhanced Hunter Education and Safety program funds for Enhanced Hunter Education and Safety program purposes. We propose to revise § 80.63 to explain and clarify the exception and associated restrictions when using those funds for R3 activities.

Section 80.64—What requirements apply to funds for the Recreational Boating Access subprogram?

We propose to update § 80.64 to clarify that a State need not set aside funds out of each annual apportionment for this subprogram, provided that the standard is accomplished within the designated 5-year period. We propose to update the 5-year periods starting with 2023.

Section 80.66—Must a State fish and wildlife agency allocate costs in multipurpose projects and facilities? And section 80.67—How does a State fish and wildlife agency allocate costs to an award in multipurpose projects and facilities?

We propose to amend §§ 80.66 and 80.67 slightly to accommodate for various funding sources within the Acts and to support that a State agency may describe ineligible activities in a proposal that supports eligible activities provided that the proposal clearly shows that no costs for ineligible activities are part of the award. The Service has had a few instances in which auditors have identified any discussion of ineligible activities in a proposal as making the award ineligible.

This determination is inaccurate. In many multipurpose projects, eligible and ineligible activities work together for the success of the overall project, and describing the ineligible activities makes it clearer to the grant reviewer how the entire project is supported. Therefore, this is an acceptable approach that supports the information required at § 80.82(b).

Section 80.69—What requirements apply to allocation of funds between marine and freshwater fisheries projects?

We propose to amend § 80.69 to remove the term “obligated” and replace it with the term “allocated” to better align with current administrative practices.

VII. Subpart G—Applying for an Award

We propose to amend the title of subpart G to reflect active voice and to replace the term “grant” with “award” to align with 2 CFR part 200.

The Service has had several changes to systems and processes for States applying for an award and for Service staff administering awards. In response to these changed circumstances, we propose to revise subpart G to become more generic in some places, not referencing specific systems and processes and referring applicants to the notice of funding opportunity for specific information. As many actions that used to require hardcopy submissions and signatures are now accomplished electronically, we also propose changes to reflect modern procedures. Effective January 1, 2020, *SAM.gov* (<https://sam.gov/content/home>) became the central repository for common certifications and representations required of Federal grants recipients. Effective October 28, 2022, the Service no longer requires applicants to submit the “Assurances for Non-Construction Programs (SF-424B)” form or the “Assurances for Construction Programs (SF-424D)” form with their applications. Therefore, we propose to remove this requirement from the regulations.

Section 80.83—What is the Federal share of allowable costs? And section 80.84—How does the Service establish the non-Federal share of allowable costs?

On October 22, 2022, the U.S. Department of the Interior issued a notification (DOI–PGM–PAN Reference No: 2023–0022) that the Office of the Solicitor has determined Public Law 96–205, title VI, section 601, as amended, in conjunction with 48 U.S.C.

1469a(d), requires Department of the Interior offices and bureaus to waive the cost sharing requirement for grants to the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands, commonly called “insular areas.” Based on this determination, we propose to amend these sections of the regulations to show that the Service will not require those insular areas to provide cost share to awards under these Acts. The insular areas may provide voluntary cost share, but it is not required. The Commonwealth of Puerto Rico and the District of Columbia must still provide a minimum 25 percent cost share.

We also propose to amend these sections to reflect that for those activities that meet the criteria for acquiring land for, expanding, or constructing public target ranges, the Federal share may be up to 90 percent of costs under an award, except for insular areas where it is 100 percent.

Section 80.85—What requirements apply to cost share or match?

We propose to revise § 80.85 to refer only to the requirements for cost share as described at 2 CFR 200.306. We would maintain the text that describes at what level of accounting to apply cost share.

VIII. Subpart H—General Award Administration

Section 80.92—How long are funds available for a Federal obligation?

We propose to supplement § 80.92 by providing a table that describes all programs and subprograms under the Acts and shows the name of the program or subprogram, the period of availability for obligation (how many FFYs), and the disbursement of funds at the end of the period of availability for obligation. This table would clearly show all sources of funding and what happens to the funding should it not be obligated within the period of availability.

Section 80.94—May a State fish and wildlife agency incur costs before the beginning of the period of performance?

We propose to add a clause at the end of paragraph (c) of § 80.94 that would state that the agency can receive reimbursement for pre-award costs only after the beginning of the period of performance and, for activities requiring compliance, only after the compliance is satisfied. This proposed revision would emphasize that if a State agency receives approval for pre-award costs that require compliance, the compliance

must be completed to the satisfaction of the Service before reimbursement will be made. For activities that do not require compliance, reimbursement may be accomplished as soon as practicable.

Section 80.97—What is barter, and may a State fish and wildlife agency use barter of goods or services to carry out a grant-funded project? And section 80.98—How must a State fish and wildlife agency include barter in an award and report barter transactions?

The final rule published on August 1, 2011 (76 FR 46150), introduced in the regulations how a State agency may use the barter of goods and services to carry out a grant-funded project and how barter must be reported. This revision was in response to audit findings reported by the Office of the Inspector General in several States and recommendations that the Service provide clear guidance. In January 2020, the JTF began a process where, annually, WSFR sends out a request for State agencies to submit topics of national concern in the programs under the Acts for our consideration and possible policy action. In 2021, we received a concern that barter transactions in a State had again been identified as an audit finding. This situation prompted WSFR to reexamine the topic and determine how States were managing barter requirements. The JTF supported WSFR staff working with the Federal Assistance Coordinators Working Subcommittee, a group of State representatives and subject matter experts chartered under the Association of Fish and Wildlife Agencies, to assist in reaching out to States and to provide advice on regulatory changes.

Barter is an accounting activity that is addressed under the Generally Accepted Accounting Principles (GAAP) and the associated standards for State and local governments set by the Governmental Accounting Standards Board (GASB). We determined that the current GASB standard that includes barter transactions was published after §§ 80.97 and 80.98 were set forth in the proposed rule (75 FR 32877, June 10, 2010) for the August 1, 2011, rule (76 FR 46150), and we were unaware of the change until consulting with our accounting experts when reassessing the topic in 2021. Therefore, we propose to amend those sections of the regulations to reflect current standards. The proposed revised sections would assign the responsibility to each individual State for developing and maintaining processes that follow GAAP/GASB standards for how to manage barter transactions within that State fish and wildlife agency. This proposed revision

is consistent with 2 CFR part 200, which requires States to establish and follow their own processes under existing laws.

The definition for “barter transactions” would remain the same—that it is an accounting term and means a nonmonetary exchange (reciprocal transfer) transaction. The requirement to report barter transactions in the Federal financial report also would remain. The barter exchange needs to be accounted for according to the GAAP standard. The GAAP standard for States is dictated by the GASB Statement No. 62. In general, accounting for nonmonetary transactions should be based on the fair values of the assets (or services) involved, which is the same basis as that used in monetary transactions. Therefore, barter could result in an even exchange when the fair values of the assets exchanged are the same or result in a gain or a loss when one part of the exchange has a higher value than the other. A gain could be program income and a loss a project expense.

In the current regulations, the Service describes cooperative farming and grazing, a very typical activity with State agencies that is considered an even-exchange barter transaction. In this proposed rule, we propose to remove cooperative farming and grazing from § 80.98 not because it is no longer considered as an even-exchange barter transfer but because, under the current GASB standard, each State, and not the Service, is responsible for establishing processes for making those determinations for their State and then following the resulting processes. Therefore, any State desiring to include cooperative farming and grazing as an even-barter exchange must include it in the State’s processes. A State could potentially add more parameters within GAAP/GASB standards that could benefit the agency’s approaches and objectives. WSFR has been providing technical assistance to States through the Federal Assistance Coordinators Working Subcommittee to assist them in identifying any existing State policies on barter transactions and establishing or refining barter policies for the State fish and wildlife agency to use. By establishing State fish and wildlife agency policies on barter transactions that meet the standards established under GASB, and then following those policies, State agencies may avoid future audit findings related to barter.

One concern related to barter transactions that was brought to our attention is when a State agency wants to incentivize certain activities to support its program objectives and offers something of value to private entities in exchange for a desired action.

We do not address incentives in this rulemaking but did address them in a policy advisory (Advisory 2020–016, October 15, 2020 (<https://fawiki.fws.gov/pages/viewpage.action?pageId=117669889>)) when the question was presented to WSFR. We describe an “incentive” as something that motivates or encourages someone to do a desired behavior or action, that is, it stimulates a reaction or response. An incentive is not a barter transaction unless it meets the criteria for barter. A State agency offering incentives to prompt a desired reaction or response may take many forms, many of which are not barter transactions. When the incentive is more transactional and includes a nonmonetary exchange on both ends, it is a barter transaction and must follow the State processes and the regulations at 50 CFR part 80.

IX. Subpart I—Program Income

Section 80.120—What is program income?

We propose to update § 80.120 to better align with 2 CFR part 200. To this section, we propose to add barter transactions as a form of program income when the value of goods or services received exceeds the value of goods or services the agency provided.

X. Subpart J—Real Property

We propose to revise the heading of § 80.134 and make one substantive change to subpart J. We would add a new paragraph (e) under § 80.134 stating that real property acquired with license revenue (see § 80.20(b)) must be controlled by the State fish and wildlife agency and used only for administration of the agency (see § 80.10(c)). Paragraphs (a) through (d) of § 80.134 address how State agencies must use real property acquired under an award. The proposed addition of new paragraph (e) to this section would close the loop by referring to § 80.20(b), which includes real or personal property acquired with license revenue as “hunting and fishing license revenue” that must be protected, and then back to § 80.10(c), which requires that hunting and fishing license revenue be controlled by the State fish and wildlife agency and used only for the administration of that agency. We would impose no new requirements by adding this new paragraph (e); rather, this proposed addition would align the requirements in a meaningful way in the real property subpart.

XI. Subpart K—Revisions and Appeals

We are not proposing any substantive changes to subpart K.

XII. Subpart L—Information Collection

We are proposing to update subpart L to the current standardized paragraph for information collection.

Statutory Authority

The authorities for this action are 16 U.S.C. 669 *et seq.*, and 777–777m, except 777e–1 and g–1.

Request for Comments

You may submit comments and materials on this proposed rule by any one of the methods listed in **ADDRESSES**. We will not accept comments sent by email or fax or to an address not listed in **ADDRESSES**. We will not consider hand-delivered comments that we do not receive, or mailed comments that are not postmarked, by the date specified in **DATES**.

We will post your entire comment on <https://www.regulations.gov>. Before including personal identifying information in your comment, you should be aware that we may make your entire comment—including your personal identifying information—publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so. We will post all hardcopy comments on <https://www.regulations.gov>.

Required Determinations

Regulatory Planning and Review (Executive Orders 12866, 13563, and 14094)

Executive Order (E.O.) 12866, as reaffirmed by E.O. 13563 and E.O. 14094, provides that the Office of Information and Regulatory Affairs (OIRA) in the Office of Management and Budget (OMB) will review all significant rules. OIRA has determined that this proposed rule is not significant.

Executive Order 13563 reaffirms the principles of E.O. 12866 while calling for improvements in the Nation’s regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The Executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. E.O. 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for

public participation and an open exchange of ideas.

Executive Order 14094 reaffirms the principles of E.O. 12866 and E.O. 13563 and states that regulatory analysis should facilitate agency efforts to develop regulations that serve the public interest, advance statutory objectives, and are consistent with E.O. 12866, E.O. 13563, and the Presidential Memorandum of January 20, 2021 (Modernizing Regulatory Review). Regulatory analysis, as practicable and appropriate, shall recognize distributive impacts and equity, to the extent permitted by law.

We have developed this proposed rule in a manner consistent with these requirements.

Regulatory Flexibility Act

Under the Regulatory Flexibility Act (RFA; 5 U.S.C. 601 *et seq.*), as amended by the Small Business Regulatory Enforcement Fairness Act of 1996 (SBREFA; 5 U.S.C. 801 *et seq.*), whenever an agency publishes a proposed or final rule, it must prepare and make available for public comment a regulatory flexibility analysis that describes the effects of the rule on small entities (*i.e.*, small businesses, small organizations, and small government jurisdictions). However, no regulatory flexibility analysis is required if the head of the agency certifies the rule will not have a significant economic impact on a substantial number of small entities. The SBREFA amended the RFA to require Federal agencies to provide a certification statement of the factual basis for certifying that the rule will not have a significant economic impact on a substantial number of small entities.

We have examined this proposed rule's potential effects on small entities as required by the RFA. We have determined that this proposed rule would not have a significant economic effect on a substantial number of small entities and does not require a regulatory flexibility analysis because only eligible State, Territorial, and the District of Columbia fish and wildlife agencies may receive funding under the Acts and regulations. Therefore, small entities (small businesses, small organizations, and small governmental jurisdictions) would not be affected by this proposed rule.

In summary, we have considered whether this proposed rule would result in a significant economic impact on a substantial number of small entities. We certify that, if made final, this proposed rule will not have a significant economic effect on a substantial number of small entities as defined under the RFA, as amended. An initial regulatory

flexibility analysis is not required. Accordingly, a small entity compliance guide is not required.

Unfunded Mandates Reform Act

This proposed rule would not impose an unfunded mandate on State, local, or Tribal governments, or the private sector of more than \$100 million per year. The proposed rule would not have a significant or unique effect on State, local, or Tribal governments or the private sector.

(a) As discussed above under *Regulatory Flexibility Act*, this proposed rule would not have a significant economic effect on a substantial number of small entities.

(b) The regulations do not require a small government agency plan or any other requirement for expending local funds.

(c) The programs governed by the current regulations and enhanced by the proposed amendments in this document potentially assist small governments financially when they occasionally and voluntarily participate as subrecipients of an eligible agency.

(d) The proposed rule clarifies and improves upon the current regulations allowing State, local, and Tribal governments, and the private sector, to receive the benefits of financial assistance funding in a more flexible, efficient, and effective manner.

(e) Any costs incurred by a State, local, or Tribal government or the private sector are voluntary. There are no mandated costs associated with the proposed rule other than a required cost share, in some cases. No cost share is required under this proposed rule for insular areas.

(f) The benefits of grant funding outweigh the costs. Of the 50 States and 6 other jurisdictions that voluntarily are eligible to apply for grants in these programs each year, all participate. This is clear evidence that the benefits of this grant funding outweigh the costs.

(g) This proposed rule would not produce a Federal mandate of \$100 million or greater in any year, *i.e.*, it is not a "significant regulatory action" under the Unfunded Mandates Reform Act.

A statement containing the information required by the Unfunded Mandates Reform Act (2 U.S.C. 1531 *et seq.*) is not required.

Takings (E.O. 12630)

This proposed rule would not affect a taking of private property or otherwise have taking implications under Executive Order 12630. This proposed rule has no provision for taking private property. Any real property acquisitions

with private landowners are strictly voluntary and only with willing sellers. A takings implication assessment is not required.

Federalism (E.O. 13132)

Under the criteria in section 1 of Executive Order 13132, this proposed rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement. It would not interfere with the States' ability to manage themselves or their funds. We work closely with the States administering these programs. They helped us identify those sections of the current regulations needing further consideration and new issues that prompted us to develop a regulatory response. A federalism summary impact statement is not required.

Civil Justice Reform (E.O. 12988)

This proposed rule complies with the requirements of Executive Order 12988. Specifically, this proposed rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Consultation With Indian Tribes (E.O. 13175, Department Policy, and U.S. Fish and Wildlife Service Native American Policy)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian Tribes through a commitment to consultation with Indian Tribes and recognition of their right to self-governance and Tribal sovereignty. We have evaluated this proposed rule under the Department's consultation policy and under the criteria in Executive Order 13175 and have determined that it would have no substantial direct effects on federally recognized Indian Tribes and that consultation under the Department's Tribal consultation policy is not required. This proposed rule would inform States, Territories, and the District of Columbia as the eligible recipients under the Acts how to apply for funding, what activities are eligible for funding, and other administrative requirements. Eligible entities may partner with Indian Tribes on projects, but Indian Tribes are not eligible to receive funds directly.

Paperwork Reduction Act (44 U.S.C. 3501 et seq.)

This proposed rule contains existing and new information collections. All information collections require approval under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. The OMB has reviewed and approved the information collection requirements associated with the administration of financial assistance through grants and cooperative agreement awards to States, local governments, Indian Tribes, institutions of higher education, nonprofit organizations, foreign organizations, foreign public entities, for-profit entities, and individuals and has assigned OMB Control Number 1018-0100, Administrative Procedures for U.S. Fish and Wildlife Service Financial Assistance Programs (expires 02/28/2025).

In accordance with the PRA and its implementing regulations at 5 CFR 1320.8(d)(1), we provide the general public and other Federal agencies with an opportunity to comment on our proposal to revise OMB Control Number 1018-0100. This input will help us assess the impact of our information collection requirements and minimize the public's reporting burden. It will also help the public understand our information collection requirements and provide the requested data in the desired format.

As part of our continuing effort to reduce paperwork and respondent burdens, we invite the public and other Federal agencies to comment on any aspect of this information collection, including:

- (1) Whether or not the collection of information is necessary for the proper performance of the functions of the agency, including whether or not the information will have practical utility;
- (2) The accuracy of our estimate of the burden for this collection of information, including the validity of the methodology and assumptions used;
- (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and
- (4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, *e.g.*, permitting electronic submission of response.

Comments that you submit in response to this proposed rulemaking are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The proposed revisions to existing and new reporting and/or recordkeeping requirements identified below require approval by OMB:

(1) *(NEW) Notice of Annual Apportionment Nonacceptance (50 CFR 80.12)*—If a State fish and wildlife agency does not want to receive the annual apportionment of funds, it must notify the Service in writing within 60 days after receiving a preliminary certificate of apportionment.

(2) *(NEW) State Agency Hunting and Sport Fishing License Certification Revision (50 CFR 80.39)*—A State fish and wildlife agency must submit revised certified data on license holders within 90 days after it becomes aware of errors in its certified data. The State may become ineligible to participate in the benefits of the relevant Act if the State becomes aware of errors in its certified data and does not resubmit accurate certified data within 90 days.

(3) *(NEW) Voluntary Display of Program Symbols (50 CFR 80.100)*—A State fish and wildlife agency does not have to display one of the symbols in § 80.99 on a project completed under the Acts. However, the Service encourages agencies to display the appropriate symbol as follows:

- a. An agency may display the appropriate symbol(s) on:
 1. Areas such as wildlife-management areas, shooting ranges, and sportfishing and boating-access facilities that were acquired, developed, operated, or maintained with funds authorized by the Acts; and
 2. Printed or web-based material or other visual representations of project accomplishments.

b. An agency may establish a requirement for similar standards for displaying the appropriate symbol or symbols, in the places described in paragraph (a) of this section, that is passed through to subrecipients. An agency may require a subrecipient to display the appropriate symbol or symbols in the places described in paragraph (a) of this section.

c. The Director or Regional Director may authorize an agency to use the symbols in a manner other than as described in paragraph (a) of this section.

d. The Director or Regional Director may authorize other persons, organizations, agencies, or governments to use the symbols for purposes related to the Acts by entering into a written agreement with the user. An applicant must state how it intends to use the symbol(s), to what it will attach the symbol(s), and the relationship to the specific Act.

e. The user of the symbol(s) must indemnify and defend the United States and hold it harmless from any claims, suits, losses, and damages from:

1. Any allegedly unauthorized use of any patent, process, idea, method, or device by the user in connection with its use of the symbol(s), or any other alleged action of the user; and

2. Any claims, suits, losses, and damages arising from alleged defects in the articles or services associated with the symbol(s).

f. The appearance of the symbol(s) on projects or products indicates that the manufacturer of the product pays excise taxes in support of the respective Act(s) and that the project was funded under the respective Act(s) (26 U.S.C. 4161, 4162, 4181, 4182, 9503, and 9504). The Service and the Department of the Interior make no representation or endorsement whatsoever by the display of the symbol(s) as to the quality, utility, suitability, or safety of any product, service, or project associated with the symbol(s).

g. No one may use any of the symbols in any other manner unless the Director or Regional Director authorizes it. Unauthorized use of the symbol(s) is a violation of 18 U.S.C. 701 and subjects the violator to possible fines and imprisonment.

(4) *(NEW) Required Display of CVA Program Symbol, Slogan, and Information (50 CFR 85.43 and 85.47)*—Facilities must display appropriate information signs at pumpout and portable toilet dump stations. Those signs should indicate fees, restrictions, hours of operation, operating instructions, a contact name, and 1-800-ASK-FISH telephone number for boaters to get additional information or to report an inoperable facility. As the source of funding for Clean Vessel Act facilities, the Sport Fish Restoration program should get credit through use of the Sport Fish Restoration logo. Grant recipients may use the crediting logo identified in 50 CFR 80.99 to identify projects funded by the Clean Vessel Act.

(5) (*REVISION*) Adjust previously approved burden estimates as follows:

- Reduce burden estimates due to the archival of the following programs: 15.641 Wildlife Without Borders—Mexico, 15.633 Landowner Incentive, and 15.656 Recovery Act Funds. We propose to reduce burden estimates based on the number of awards under these programs that were pending closeout reports as of our previous clearance.

- Increase burden estimates associated with new 15.069 Zoonotic Disease Initiative program. This new program was funded and then defunded since our last renewal. We propose to increase burden estimates for only post-award requirements (amendments and reporting) for the 21 awards issued by the program before funding recission.

- Increase burden estimates for increased financial assistance funding and activities resulting from Infrastructure Investment and Jobs Act (BIL) appropriations supplementing 14 Service financial assistance programs.

- Add the new 15.685 National Fish Passage and 15.686 National Fish Habitat Partnership programs, but we have not proposed a corresponding increase in burden estimates. These longstanding programs were previously managed and reported as subprograms under our 15.608 Fish and Wildlife Management Assistance program.

We also propose to renew the existing reporting and/or recordkeeping requirements identified below:

(1) *Application Package*—We use the information provided in applications to:

- (1) Determine eligibility under the authorizing legislation and applicable program regulations;
- (2) determine allowability of major cost items under the Cost Principles at 2 CFR part 200;
- (3) select those projects that will provide the highest return on the Federal investment; and
- (4) assist in compliance with laws, as applicable, such as the National Environmental Policy Act, the National Historic Preservation Act, and the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970. The full application package (submitted by the applicant) generally includes the following:

- Required Federal financial assistance application forms (SF-424 suite of forms, as applicable to specified project).

- Project Narrative—generally includes items such as:

- Statement of need,
- Project goals and objectives,
- Methods used and timetable,
- Description of key personnel qualifications,

- Description of stakeholders or other relevant organizations/individuals involved and level of involvement,
- Project monitoring and evaluation plan, and/or
- Other pertinent project-specific information.

- Pertinent project budget-related information—generally includes items such as:

- Budget justification,
- Detail on costs requiring prior approval,
- Indirect cost statement,
- Federally funded equipment list, and/or
- Certifications and disclosures.

(2) *Amendments*—Recipients must provide written explanation and submit prior approval requests for budget or project plan revisions, due date extensions for required reports, or other changes to approved award terms and conditions. The information provided by the recipient is used by the Service to determine the eligibility and allowability of activities and to comply with the requirements of 2 CFR part 200.

(3) *Reporting Requirements*—Reporting requirements associated with financial assistance awards generally include the following types of reports:

- Federal Financial Reports (using the required SF-425),
- Performance Reports, and
- Real Property Status Reports, when applicable (using the required SF-429 forms series).

(4) *Recordkeeping Requirements*—In accordance with 2 CFR 200.334, financial records, supporting documents, statistical records, and all other non-Federal entity records pertinent to a Federal award must be retained for a period of 3 years after the date of submission of the final expenditure report or, for Federal awards that are renewed quarterly or annually, from the date of the submission of the quarterly or annual financial report, respectively, as reported to the Federal awarding agency or pass-through entity (in the case of a subrecipient) (unless an exemption as described in 2 CFR 200.334 applies that requires retention of records longer than 3 years).

(5) *Real Property Reporting/Recordkeeping Requirements*—Service recipients purchasing real property under their award in which the Federal Government retains an interest must report on the status and request approval to dispose of those per 2 CFR part 200 and 2 CFR part 1402 using the SF-429-A, Real Property Status Report (General Reporting) and the SF-429-C,

Real Property Status Report (Disposition or Encumbrance Request), as appropriate. For real property acquisition awards in which the Service will retain an interest, we require recipients to submit certain information, including:

- Transactions, such as dates, method of transfer, title holder, and seller;
- Identifiers, such as State and Federal Record ID, parcel number, and property name;
- Values, such as appraised value, purchase price, and other cost information, and acres or acre feet;
- Encumbrances;
- Partners;
- Copies of any options, purchase agreements, mineral assessment reports, and draft conservation easements; and
- Documentation to demonstrate compliance with 2 CFR part 1402.

Title of Collection: Administrative Procedures for U.S. Fish and Wildlife Service Financial Assistance Programs.

OMB Control Number: 1018-0100.

Form Number: None.

Type of Review: Revision of a currently approved collection.

Respondents/Affected Public: Individuals/households, private sector, and State/local/Tribal governments.

Total Estimated Number of Annual Respondents: 15,199.

Total Estimated Number of Annual Responses: 17,170.

Estimated Completion Time per Response: Varies from 15 minutes to 100 hours, depending on activity.

Total Estimated Number of Annual Burden Hours: 403,086.

Respondent's Obligation: Required to obtain or retain a benefit.

Frequency of Collection: On occasion, quarterly, or annually, depending on activity.

Total Estimated Annual Nonhour Burden Cost: None.

Send your written comments and suggestions on this information collection by the date indicated in **DATES** to the Service Information Collection Clearance Officer, U.S. Fish and Wildlife Service, MS: PRB/PERMA (JAO), 5275 Leesburg Pike, Falls Church, VA 22041-3803 (mail); or by email to Info_Coll@fws.gov. Please reference OMB Control Number 1018-0100 in the subject line of your comments.

National Environmental Policy Act (42 U.S.C. 4321 et seq.)

This proposed rule is not anticipated to constitute a major Federal action significantly affecting the quality of the human environment. The Service has preliminarily determined that categorical exclusion 43 CFR 46.210(i)

applies as the proposed regulation is of an administrative nature and no extraordinary circumstances in 43 CFR 46.215 apply. Therefore, preparation of an environmental assessment or environmental impact statement associated with this proposed rulemaking action is not required. Once eligible applicants have available funding, they would submit project proposals for review and consideration and an assessment under the National Environmental Policy Act and appropriate compliance would be completed prior to awarding a grant.

Effects on Energy Supply (E.O. 13211)

This proposed rule is not a significant energy action under the definition in Executive Order 13211. This proposed rule is not a significant regulatory action under Executive Order 12866 or any successor order, and it would have no effect on energy supply, distribution, or use. A statement of energy effects is not required.

Clarity of This Regulation

We are required by Executive Orders 12866 (section 1(b)(12)), 12988 (section 3(b)(1)(B)), and 13563 (section 1(a)), and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

- (a) Be logically organized;
- (b) Use the active voice to address readers directly;
- (c) Use common, everyday words and clear language rather than jargon;
- (d) Be divided into short sections and sentences; and
- (e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in **ADDRESSES**. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that you find unclear, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

List of Subjects in 50 CFR Part 80

Fish, Fishing, Grant programs—natural resources, Grant programs—recreation, Grants administration, Hunting, Licensing and Registration, Natural resources, Rates and fares, Real property acquisition, Recreation and recreation areas, Reporting and recordkeeping requirements, Signs and symbols, Wildlife.

Proposed Regulation Promulgation

■ For the reasons discussed in the preamble, the U.S. Fish and Wildlife Service proposes to revise 50 CFR part 80 to read as follows:

PART 80—ADMINISTRATIVE REQUIREMENTS, PITTMAN-ROBERTSON WILDLIFE RESTORATION AND DINGELL-JOHNSON SPORT FISH RESTORATION ACTS

Subpart A—General

Sec.

- 80.1 What does this part do?
- 80.2 What terms do I need to know?

Subpart B—State Fish and Wildlife Agency Eligibility

- 80.10 Who is eligible to receive the benefits of the Acts?
- 80.11 How does a State become ineligible to receive the benefits of the Acts?
- 80.12 Must a State fish and wildlife agency confirm that it wants to receive an annual apportionment of funds?

Subpart C—License Revenue

- 80.20 What does revenue from hunting and fishing licenses include?
- 80.21 What if a State diverts license revenue from the control of its fish and wildlife agency?
- 80.22 What must a State do to resolve a declaration of diversion?
- 80.23 Does a declaration of diversion affect a previous Federal obligation of funds?

Subpart D—Certifying License Holders

- 80.30 Why must a State fish and wildlife agency certify the number of paid license holders?
- 80.31 How does a State fish and wildlife agency certify the number of paid license holders?
- 80.32 What is the certification period?
- 80.33 How does a State fish and wildlife agency decide who to count as paid license holders in the annual certification?
- 80.34 Must a State fish and wildlife agency receive a minimum amount of revenue for each year a license holder is certified?
- 80.35 What additional options and requirements apply to multiyear licenses?
- 80.36 May a State fish and wildlife agency count license holders in the annual certification if the agency receives funds from the State or other entity to cover the holders' license fees?
- 80.37 May the State fish and wildlife agency certify a license sold at a discount?
- 80.38 May a State fish and wildlife agency certify a license when an entity other than the agency offers a discount on a license or offers a free license?
- 80.39 What must a State fish and wildlife agency do if it becomes aware of errors in its certified license data?

- 80.40 May the Service recalculate an apportionment if a State fish and wildlife agency submits revised data?
- 80.41 May the Director correct a Service error in apportioning funds?

Subpart E—Eligible Activities

- 80.50 What activities are eligible for funding under the Wildlife Restoration Act?
- 80.51 What activities are eligible for funding under the Sport Fish Restoration Act?
- 80.52 What activities are eligible for funding under all programs and subprograms under the Acts?
- 80.53 May an activity be eligible for funding if it is not explicitly eligible according to the regulations in this part?
- 80.54 Are costs of State central services eligible for funding?
- 80.55 What activities are ineligible for funding?
- 80.56 May a State fish and wildlife agency receive an award to carry out part of a larger project?
- 80.57 How does a proposed project qualify as substantial in character and design?
- 80.58 What are public access requirements for activities in an approved award under the Wildlife Restoration or Sport Fish Restoration programs?

Subpart F—Allocation of Funds by an Agency

- 80.60 What is the relationship between the Traditional Wildlife Restoration Program, the Basic Hunter Education and Safety subprogram, and the Enhanced Hunter Education and Safety program for acquiring land for, expanding, or constructing public target ranges?
- 80.61 What sources of funding in the Wildlife Restoration Act may a State fish and wildlife agency use to support public target range projects, and may funds from multiple sources be used in a single award?
- 80.62 What are eligible and ineligible 90/10/5 activities?
- 80.63 What exception is provided for Enhanced Hunter Education and Safety program funds in relation to Basic Hunter Education and Safety subprogram funds?
- 80.64 What requirements apply to funds for the Recreational Boating Access subprogram?
- 80.65 What limitations apply to spending on the Aquatic Resource Education and the State Outreach and Communications subprograms?
- 80.66 Must a State fish and wildlife agency allocate costs in multipurpose projects and facilities?
- 80.67 How does a State fish and wildlife agency allocate costs to an award in multipurpose projects and facilities?
- 80.68 Must a State fish and wildlife agency allocate funds between marine and freshwater fisheries projects?
- 80.69 What requirements apply to allocation of funds between marine and freshwater fisheries projects?
- 80.70 May a State fish and wildlife agency finance an activity from more than one annual apportionment?

80.71 What requirements apply to financing an activity from more than one annual apportionment?

Subpart G—Applying for an Award

- 80.80 How does a State fish and wildlife agency apply for an award?
- 80.81 What must a State fish and wildlife agency submit when applying for a comprehensive-management-system award?
- 80.82 What must a State fish and wildlife agency submit when applying for a project-by-project award?
- 80.83 What is the Federal share of allowable costs?
- 80.84 How does the Service establish the non-Federal share of allowable costs?
- 80.85 What requirements apply to cost sharing?

Subpart H—General Award Administration

- 80.90 What are the recipient's responsibilities?
- 80.91 What is a Federal obligation of funds, and how does it occur?
- 80.92 How long are funds available for a Federal obligation?
- 80.93 When may a State fish and wildlife agency incur costs under an award?
- 80.94 May a State fish and wildlife agency incur costs before the beginning of the period of performance?
- 80.95 How does a State fish and wildlife agency receive Federal award funds?
- 80.96 May a State fish and wildlife agency use Federal funds without using cost sharing?
- 80.97 What is barter, and may a State fish and wildlife agency use barter of goods or services to carry out a grant-funded project?
- 80.98 How must a State fish and wildlife agency include barter in an award and report barter transactions?
- 80.99 Are symbols available to identify projects?
- 80.100 Must a State fish and wildlife agency display one of the symbols set forth in this part on a completed project?

Subpart I—Program Income

- 80.120 What is program income?
- 80.121 May a State fish and wildlife agency earn program income?
- 80.122 May a State fish and wildlife agency deduct the costs of generating program income from gross income?
- 80.123 How may a State fish and wildlife agency use program income?
- 80.124 How may a State fish and wildlife agency use unexpended program income?
- 80.125 How must a State fish and wildlife agency treat income that it earns after the period of performance?
- 80.126 How must a State fish and wildlife agency treat income earned by a subrecipient after the period of performance?

Subpart J—Real Property

- 80.130 Must a State fish and wildlife agency hold title to real property acquired under an award?

80.131 Must a State fish and wildlife agency hold an easement acquired under an award?

80.132 Must a State fish and wildlife agency have control over the land or water where it completes capital improvements?

80.133 Must a State fish and wildlife agency maintain acquired or completed capital improvements?

80.134 How must a State fish and wildlife agency use real property?

80.135 What if a State fish and wildlife agency allows a use of real property that interferes with its authorized purpose?

80.136 Is it a diversion if a State fish and wildlife agency does not use real property acquired under an award for its authorized purpose?

80.137 What if real property is no longer useful or needed for its original purpose?

Subpart K—Revisions and Appeals

- 80.150 How does a State fish and wildlife agency revise an award?
- 80.151 May a State fish and wildlife agency appeal a decision?

Subpart L—Information Collection

- 80.160 What are the information collection requirements of this part?

Authority: 16 U.S.C. 669 *et seq.*, except for provisions specific to the Wildlife Conservation and Restoration program, and 777–777m, except 777e–1 and g–1.

Subpart A—General

§ 80.1 What does this part do?

This part of the Code of Federal Regulations tells States how they may:

(a) Use revenues derived from State hunting and fishing licenses in compliance with the Acts.

(b) Receive annual apportionments from the Federal Aid to Wildlife Restoration Fund (16 U.S.C. 669(b)), if authorized, and the Sport Fish Restoration and Boating Trust Fund (26 U.S.C. 9504).

(c) Receive Federal financial assistance awards for eligible activities under the Traditional Wildlife Restoration program, the Basic Hunter Education and Safety subprogram, and the Enhanced Hunter Education and Safety program, including those authorized for hunter recruitment and recreational shooter recruitment under 16 U.S.C. 669c.

(d) Receive Federal financial assistance awards for eligible activities under the Sport Fish Restoration program, the Recreational Boating Access subprogram, the Aquatic Resources Education subprogram, and the State Outreach and Communications subprogram.

(e) Comply with the requirements of the Acts.

§ 80.2 What terms do I need to know?

The terms in this section pertain only to the regulations in this part.

90/10/5 means activities authorized under Public Law 116–17 for acquiring land for, expanding, or constructing public target ranges that apply a 90 percent Federal/10 percent non-Federal cost share and a 5-year period of availability for obligation.

Acquisition of real property means taking ownership or control of a designated area of land or an interest in land by purchase, assignment, reversion, gift, eminent domain, or any other method consistent with State or Federal law. The purpose of the acquisition must be for an eligible activity to meet the objective of an award.

Acts means the Pittman-Robertson Wildlife Restoration Act of September 2, 1937 (Wildlife Restoration Act), as amended (16 U.S.C. 669 *et seq.*, except for provisions specific to the Wildlife Conservation and Restoration program), and the Dingell-Johnson Sport Fish Restoration Act of August 9, 1950 (Sport Fish Restoration Act), as amended (16 U.S.C. 777–777m, except 777e–1 and g–1).

Allocate means the process by which States work with the Service to assign apportioned funds to a specific subaccount based on the eligible uses. Once allocated, the funding becomes available for obligation to Federal awards for eligible program activities.

Allowable refers to those costs that meet the general criteria to be charged to a Federal financial assistance award and comply with the basic considerations at 2 CFR 200.402 through 200.411, as well as the general principles for selected items of cost at 2 CFR 200.420 through 200.476.

Angler means a person who fishes for recreational purposes as permitted by State and/or Federal law.

Apportioned funds are those that are made available to a State based on formulas in the Acts. Traditional Wildlife Restoration program funds are apportioned using the formula at 16 U.S.C. 669c(b); Basic Hunter Education and Safety subprogram funds are apportioned using the formula at 16 U.S.C. 669c(c); Enhanced Hunter Education and Safety program funds are apportioned using the formula at 16 U.S.C. 669c(c) and according to the criteria at 16 U.S.C. 669h–1(a); and Sport Fish Restoration program funds are apportioned using the formula at 16 U.S.C. 777c(c).

Asset means all tangible and intangible real and personal property of monetary value. This includes “capital assets” as defined at 2 CFR 200.1,

“equipment” as defined at 2 CFR 200.1, and real property of any value.

Award or grant has the same meaning as “Federal award” as defined at 2 CFR 200.1. The regulations in this part use the terms “award” or “grant” for both a grant and a cooperative agreement for convenience of reference, and the use does not affect the legal distinction between the two instruments. An award includes all “project costs” as defined at 2 CFR 200.1. We use the term “grant” when making references to programs (i.e., a grant program).

Capital improvement or capital expenditure for improvement means:

(1) A structure that costs at least \$25,000 to build, acquire, or install; or the alteration or repair of a structure or the replacement of a structural component, if it increases the structure’s useful life by at least 10 years or its market value by at least \$25,000.

(2) A State fish and wildlife agency may use its own definition of “capital improvement” if the agency’s definition includes all capital improvements as defined here.

Comprehensive management system (CMS) is a State fish and wildlife agency’s method of operations that links programs, financial systems, human resources, goals, products, and services. When using a CMS method of operations, a State fish and wildlife agency assesses the current, projected, and desired status of fish and wildlife; develops a strategic plan and carries it out through an operational planning process; and evaluates results. The planning period is at least 5 years using a minimum 15-year projection of the desires and needs of the State’s citizens. A CMS award funds all or part of a State’s CMS. For those States that employ a CMS method of operations, where we refer to a “project statement” in the regulations in this part, a CMS State might refer to activities as part of its “operational plan.”

Construction means the act of building or significantly renovating, altering, or repairing a structure. Acquiring, clearing, and reshaping land and demolishing structures are types or phases of construction. Examples of structures are buildings, roads, parking lots, utility lines, fences, piers, wells, pump stations, ditches, dams, dikes, water-control structures, fish-hatchery raceways, and shooting ranges. For the purposes of 90/10/5 projects (acquiring land for, expanding, or constructing public target ranges), *constructing* means building a public target range (see §§ 80.60 and 80.62, 16 U.S.C. 669g(b)(2) and 669h–1(b)(2)).

Cost sharing has the same meaning as at 2 CFR 200.1. Cost sharing must meet

the requirements at 2 CFR 200.306(b)(1) through (7) and §§ 80.83 through 80.85.

Director has the same meaning as at 50 CFR 1.4 and, for the purposes of this part, means:

(1) The person whom the Secretary delegated to administer the Acts nationally; or

(2) A deputy or another person authorized temporarily to administer the Acts nationally.

Diversion means any use of revenue from hunting and fishing licenses for a purpose other than administration of the State fish and wildlife agency.

Eligible refers to activities or actions for a Federal financial assistance program that are authorized by Congress through a statute or by Federal agency regulations to accomplish a public purpose under that program.

Equipment has the same meaning as at 2 CFR 200.1.

Expanding means, for the purposes of projects for acquiring land for, expanding, or constructing public target ranges (90/10/5), physical improvements to an existing public target range that add to the utility of the range in a manner that ultimately increases range capacity to accommodate more participants. Physical improvements do not necessarily have to increase the size of the facility but must result in an increase in physical usability that will accommodate more participants.

Facility means the physical infrastructure and appurtenances necessary to support purposes under the Acts. The physical infrastructure includes land.

Federal fiscal year (FFY) means the annual period the Federal Government uses for budgets and accounting, beginning October 1 and ending September 30.

Fee interest means the right to possession, use, and enjoyment of a parcel of land or water for an indefinite period. A fee interest, as used in this part, may be the:

(1) Fee simple or full-fee interest, which includes all possible interests or rights that a person or legal entity can hold in a parcel of real property (land or water); or

(2) Fee with exceptions to title or less-than-full-fee interest, which excludes one or more real property interests that would otherwise be part of the fee simple.

Fiscal year, for the purposes of determining the number of paid hunting- or fishing-license holders in a State, means the State-determined (State fiscal year or license year) period that it identifies to certify license holders.

Fish restoration and management project means the restoration and management of any species of fish that has material value in connection with sport or recreation (see *Sport fish*) in the marine and/or fresh waters of the United States.

Hunter recruitment and recreational shooter recruitment means any activity or project to recruit or retain and, for the purposes of the regulations in this part, reactivate hunters and recreational shooters including by:

(1) Outreach and communications as a means—

(i) To improve communications with hunters, recreational shooters, and the public with respect to hunting and recreational shooting opportunities;

(ii) To reduce barriers to participation in these activities;

(iii) To advance the adoption of sound hunting and recreational shooting practices;

(iv) To promote conservation and the responsible use of the wildlife resources of the United States; and

(v) To further safety in hunting and recreational shooting.

(2) Providing education, mentoring, and field demonstrations;

(3) Enhancing access for hunting and recreational shooting, including through range construction; and

(4) Providing education to the public about the role of hunting and recreational shooting in funding wildlife conservation.

Law enforcement means enforcing laws, orders, and regulations.

Lease means an agreement in which the owner of a fee interest transfers to a lessee the right of exclusive possession and use of an area of land or water for a fixed period, which may be renewable. The lessor cannot readily revoke the lease at their discretion. The lessee pays rent periodically or as a single payment. The lessor must be able to regain possession of the lessee’s interest (leasehold interest) at the end of the lease term. An agreement that does not correspond to this definition is not a lease even if it is labeled as one.

Maintenance means keeping a facility or equipment in a condition to serve the intended purpose. It includes recurring, cyclical, or occasional actions to keep a facility or equipment fully functional that are less than the threshold for a capital improvement or capital expenditure for improvement. It does not include operations. Examples of maintenance activities include but are not limited to:

(1) Routine upkeep for physical and mechanical parts of a facility; and

(2) Replacing components of a facility or a piece of equipment that are

expected to need replacement during its useful life.

Obligation has two meanings depending on the context:

(1) When a recipient of Federal financial assistance commits funds by incurring costs for purposes of the award, the definition for “financial obligations” at 2 CFR 200.1 applies.

(2) When the Service sets aside funds in an award for disbursement immediately or at a later date in the formula-based programs under the Acts, the definition at § 80.91 applies.

Operations means supporting the availability of a facility and its components for current public or other intended use. Operations include necessary activities that occur frequently (daily, weekly, monthly). The term does not include maintenance. Operations may be divided into the categories of physical or administrative. Examples include but are not limited to:

(1) Physical activities such as trash removal, portable toilet services, and utility costs; and

(2) Administrative operations such as personnel costs to manage and keep a facility open.

Period of performance has the same meaning as at 2 CFR 200.1.

Personal property means anything tangible or intangible that is not real property.

(1) Tangible personal property includes:

(i) Objects, such as equipment and supplies, that are movable without substantive damage to the land or any structure to which they may be attached and not considered an inherent part of the land;

(ii) Soil, rock, gravel, minerals, gas, oil, or water after excavation or extraction from the surface or subsurface;

(iii) Commodities derived from trees or other vegetation after harvest or separation from the land; and

(iv) Annual crops before or after harvest.

(2) Intangible personal property has the same meaning as at 2 CFR 200.1 and includes:

(i) Intellectual property, such as patents or copyrights;

(ii) Securities, such as bonds and interest-bearing accounts; and

(iii) Licenses, which are personal privileges (not a real property interest) granted by consent of a landowner, lessee, or tenant to use an area of land or water that would otherwise be trespass or another violation of law, with at least one of the following attributes:

(A) Are revocable at the discretion of the entity consenting to the license;

(B) Terminate when the area of land or water passes to another owner, the lease or tenancy ends, or the landowner, lessee, or tenant dies; or

(C) Do not transfer a right of exclusive use and possession of an area of land or water.

Project means one or more related undertakings in a project-by-project award that are necessary to fulfill a need or needs, as defined by a State fish and wildlife agency, consistent with the purposes of the appropriate Act. For convenience of reference in this part, the meaning of “project” includes an agency’s fish and wildlife program under a CMS award.

Project-by-project award means an award of money based on a detailed statement of a project, or projects, and other supporting documentation.

Public means of, relating to, or affecting all people in general.

Public access means the public has opportunity, permission, and/or ability to enter, approach, pass to, from, and within, and appropriately use a place/facility for an authorized purpose (see § 80.58 for further requirements).

Public target range, including mobile public target ranges and privately owned target ranges during those times when open for public use, means a specific location that—

(1) Is identified by a governmental agency for recreational shooting;

(2) Is open to the public;

(3) May be supervised; and

(4) May accommodate archery or rifle, pistol, or shotgun shooting.

Public relations means those activities dedicated to maintaining the image of the non-Federal entity (recipient or subrecipient) or maintaining or promoting understanding and favorable relations with the community, public at large, or any segment of the public. This term could include communicating with the public about specific activities or accomplishments resulting from approved projects or communication and liaison necessary to keep the public informed on matters of public concern such as notices of funding opportunities. (See also “advertising and public relations” in 2 CFR part 200).

R3 means to recruit, retain, and/or reactivate members of the public to actively participate in the outdoor recreational activities of hunting, angling, boating, and recreational shooting. State fish and wildlife agencies and other involved partners may define R3 more broadly, but agencies must use funds under the Acts only for activities that are eligible under the regulations in this part.

Real property means one, several, or all interests, benefits, and rights inherent in the ownership of a parcel of land or water. Examples of real property include fees, conservation easements, access easements, utility easements, and mineral rights. A leasehold interest is also real property except in those States where the State attorney general provides an official opinion that determines a lease is personal property under State law.

(1) A parcel includes (unless limited by its legal description) the space above and below it and anything physically affixed to it by a natural process or human action. Examples include standing timber, other vegetation (except annual crops), buildings, roads, fences, and other structures.

(2) A parcel may also have rights attached to it by a legally prescribed procedure. Examples include water rights or an access easement that allows the parcel’s owner to travel across an adjacent parcel.

(3) The legal classification of an interest, benefit, or right depends on its attributes rather than the name assigned to it. For example, a grazing permit is often incorrectly labeled a lease, which can be real property, but most grazing permits are actually licenses, which are not real property.

Recipient for the purposes of the regulations in this part means the entities eligible to receive apportionments under the Acts (see § 80.10).

Regional Director has the same meaning as at 50 CFR 1.7. This person’s responsibility does not extend to any administrative units that the Service’s Washington Office supervises directly in that geographic region.

Secretary has the same meaning as at 50 CFR 1.8.

Service has the same meaning as at 50 CFR 1.3.

Sport fish means aquatic, gill-breathing, vertebrate animals with paired fins, having material value for recreation in the marine and fresh waters of the United States.

State means any State of the United States, the Commonwealth of Puerto Rico, and the insular areas of the Commonwealth of the Northern Mariana Islands, the Territory of Guam, the Territory of the U.S. Virgin Islands, and the Territory of American Samoa.

(1) “State” also includes the District of Columbia for purposes of the Sport Fish Restoration Act, the Sport Fish Restoration program, and its subprograms. “State” does not include the District of Columbia for purposes of the Wildlife Restoration Act and the programs and subprogram under the Act

because the Wildlife Restoration Act does not authorize funding for the District.

(2) References to “the 50 States” apply only to the 50 States of the United States and do not include the Commonwealths of Puerto Rico and the Northern Mariana Islands, the District of Columbia, or the Territories of Guam, the U.S. Virgin Islands, and American Samoa.

State fish and wildlife agency (or *agency*) means the administrative unit designated by State law or regulation to carry out State laws for management of fish and wildlife resources. If an agency has other jurisdictional responsibilities, the agency is considered the State fish and wildlife agency only when exercising responsibilities specific to management of the State’s fish and wildlife resources.

Subaccount (and *account*) means the fiscal management designation used in the Service’s financial system to identify funds by program and subprogram allocation (see § 80.61 for a description of subaccounts and the financial system). Different subaccounts also distinguish between benefits to marine or freshwater fisheries in the programs and subprograms authorized by the Sport Fish Restoration Act.

Subaward has the same meaning as at 2 CFR 200.1. A subaward may serve as a third-party binding agreement where required.

Subrecipient has the same meaning as at 2 CFR 200.1.

Traditional Wildlife Restoration program, for the purposes of the regulations in this part and associated policies, means the activities that are funded under apportionments authorized at 16 U.S.C. 669c(b), which reflects the original program funded under the Wildlife Restoration Act of 1937 (see eligible activities at § 80.50(a)). We use this term for clarity when administering awards, as many eligible activities are specific to funding sources within the Act.

Useful life means the period during which a federally funded capital improvement, capital asset, or equipment is capable of fulfilling its intended purpose with adequate routine maintenance.

Wildlife means the indigenous or naturalized species of birds or mammals that are either:

- (1) Wild and free-ranging;
- (2) Held in a captive-breeding program established to reintroduce individuals of a depleted indigenous species into previously occupied range; or
- (3) Under the jurisdiction of a State fish and wildlife agency.

Wildlife restoration project means the selection, restoration, rehabilitation, and improvement of areas of land or water adaptable as feeding, resting, or breeding places for wildlife, including acquisition of such areas or estates or interests therein as are suitable or capable of being made suitable therefor, and the construction thereon or therein of such works as may be necessary to make them available for such purposes and also including such research into problems of wildlife management as may be necessary to efficient administration affecting wildlife resources, and such preliminary or incidental costs and expenses as may be incurred in and about those projects.

Subpart B—State Fish and Wildlife Agency Eligibility

§ 80.10 Who is eligible to receive the benefits of the Acts?

States acting through their fish and wildlife agencies are eligible for benefits of the Acts only if they pass and maintain legislation that:

- (a) Assents to the provisions of the Acts;
- (b) Ensures the conservation of fish and wildlife; and
- (c) Requires that revenue from hunting and fishing licenses be:

- (1) Controlled only by the State fish and wildlife agency; and
- (2) Used only for administration of the State fish and wildlife agency, which includes only the functions required to manage the agency and the fish- and wildlife-related resources for which the agency has authority under State law.

§ 80.11 How does a State become ineligible to receive the benefits of the Acts?

A State becomes ineligible to receive the benefits of the Acts if the State:

- (a) Fails materially to comply with any law, regulation, or terms and conditions of the Federal award as it relates to acceptance and use of funds under the Acts;
- (b) Does not have legislation required at § 80.10 or passes legislation contrary to the Acts; or
- (c) Diverts hunting and fishing license revenue from:
 - (1) The control of the State fish and wildlife agency; or
 - (2) Purposes other than the agency’s administration.

§ 80.12 Must a State fish and wildlife agency confirm that it wants to receive an annual apportionment of funds?

No. However, if a State fish and wildlife agency does not want to receive the annual apportionment of funds, it must notify the Service in writing

within 60 days after receiving a preliminary certificate of apportionment.

Subpart C—License Revenue

§ 80.20 What does revenue from hunting and fishing licenses include?

Hunting and fishing license revenue includes:

(a) All proceeds from State-issued general or special hunting and fishing licenses, permits, stamps, tags, access and use fees, and other State charges to hunt or fish for recreational purposes. Revenue from licenses sold by vendors is net income to the State after deducting reasonable sales fees or similar amounts retained by vendors.

(b) Real or personal property acquired with license revenue.

(c) Income from the sale, lease, or rental of, granting rights to, or a fee for access to real or personal property acquired or constructed with license revenue.

(d) Income from the sale, lease, or rental of, granting rights to, or a fee for access to a recreational opportunity, product, or commodity derived from real or personal property acquired, managed, maintained, or produced by using license revenue.

(e) Interest, dividends, or other income earned on license revenue.

(f) Reimbursements for expenditures originally paid with license revenue.

(g) Payments received for services funded by license revenue.

§ 80.21 What if a State diverts license revenue from the control of its fish and wildlife agency?

The Director may declare a State to be in diversion if it violates the requirements of § 80.10 by diverting license revenue from the control of its fish and wildlife agency to purposes other than the agency’s administration. The State is then ineligible to receive benefits under the relevant Act from the date the Director signs the declaration until the date the State resolves the diversion. Only the Director may declare a State to be in diversion, and only the Director may rescind the declaration.

§ 80.22 What must a State do to resolve a declaration of diversion?

The State must complete the actions in paragraphs (a) through (e) of this section to resolve a declaration of diversion. The State must use a source of funds other than license revenue to fund the replacement of license revenue.

(a) If necessary, the State must enact adequate legislative prohibitions to prevent diversions of license revenue.

(b) The State fish and wildlife agency must replace all diverted funds derived from license revenue and the interest lost up to the date of repayment. The agency must update financial records for the receipt of the diverted funds and interest accordingly.

(c) The agency must receive either the revenue earned from diverted property during the period of diversion or the current market rental rate of any diverted property, whichever is greater.

(d) The agency must take one of the following actions to resolve a diversion of real, personal, or intellectual property:

(1) Regain management control of the property, which must be in about the same condition as before diversion;

(2) Receive replacement property that meets the criteria in paragraph (e) of this section; or

(3) Receive an amount at least equal to the current market value of the diverted property only if the Director agrees that the actions described in paragraphs (d)(1) and (2) of this section are impractical.

(e) To be acceptable under paragraph (d)(2) of this section:

(1) Replacement property must have both:

(i) Market value that at least equals the current market value of the diverted property; and

(ii) Fish or wildlife benefits that at least equal those of the property diverted.

(2) The Director must agree that the replacement property meets the requirements of paragraph (e)(1) of this section.

§ 80.23 Does a declaration of diversion affect a previous Federal obligation of funds?

No. Federal funds obligated before the date that the Director declares a diversion remain available for expenditure without regard to the intervening period of the State's ineligibility. See § 80.91 for when a Federal obligation occurs.

Subpart D—Certifying License Holders

§ 80.30 Why must a State fish and wildlife agency certify the number of paid license holders?

A State fish and wildlife agency must certify the number of individuals having paid licenses to hunt and paid licenses to fish because the Service uses these data in statutory formulas to apportion funds in the Wildlife Restoration and Sport Fish Restoration programs among the States.

§ 80.31 How does a State fish and wildlife agency certify the number of paid license holders?

(a) A State fish and wildlife agency certifies the number of paid license holders by responding to the Director's annual request for the following information:

(1) The number of individual paid hunting license holders in the State during the State-specified certification period (certification period); and

(2) The number of individual paid fishing license holders in the State during the certification period.

(b) The State fish and wildlife agency director or their designee:

(1) Must certify the information described at paragraph (a) of this section in the format that the Director specifies;

(2) Must provide documentation to support the accuracy of this information at the Director's request;

(3) Is responsible for eliminating multiple counting of the same individuals in the information that they certify and may use statistical sampling, automated record consolidation, or other techniques approved by the Director for this purpose.

(c) If a State fish and wildlife agency director uses statistical sampling to eliminate multiple counting of the same individuals, they must ensure that the sampling is complete by the earlier of the following:

(1) Five years after the last statistical sample; or

(2) Before completing the first certification following any change in the licensing system that could affect the number of license holders.

§ 80.32 What is the certification period?

A certification period must:

(a) Be 12 consecutive months;

(b) Correspond to the State's fiscal year or license year;

(c) Be consistent from year to year unless the Director approves a change; and

(d) End at least 1 year and no more than 2 years before the beginning of the FFY in which the apportioned funds first become available for expenditure.

§ 80.33 How does a State fish and wildlife agency decide who to count as paid license holders in the annual certification?

(a) A State fish and wildlife agency must count only those individuals who have a license issued:

(1) In the license holder's name; or

(2) With a unique identifier that is traceable to the license holder, who must be verifiable in State records.

(b) An agency must count an individual in the annual certification:

(1) Only once, and in the certification period in which the license first

becomes valid, when holding a single-year license. A single-year license is valid for any length of time from 1 day to less than 2 years. If valid 2 years or more, a license is considered a multiyear license and may be valid for a specific number of years that is 2 or more, or for the lifetime of the individual (see § 80.35(d)).

(2) Only for the number of years the license is valid and starting in the certification period in which the license first becomes valid, unless that year has already been certified in the case of multiyear licenses. An individual holding a multiyear license may be counted for only the number of years the license is valid and only during the applicable certification periods.

(3) Only for the number of years allowed under § 80.35, when holding a lifetime license.

(c) An individual is counted as a valid license holder when meeting requirements at § 80.34, even if the individual is not required to have a paid license.

(d) An individual having more than one valid hunting license is counted only once each certification period as a hunter. An individual having more than one valid fishing license is counted only once each certification period as an angler. An individual having both a valid hunting license and a valid fishing license, or a valid combination hunting/fishing license, may be counted once each certification period as a hunter and once each certification period as an angler. The license holder may have voluntarily obtained the license(s) or was required to obtain the license(s) to receive a different privilege.

(e) An individual who has a license that allows the license holder only to trap animals or only to engage in commercial fishing or other commercial activities must not be counted.

§ 80.34 Must a State fish and wildlife agency receive a minimum amount of revenue for each year a license holder is certified?

(a) Yes. A State fish and wildlife agency must receive a minimum amount of gross revenue for each year a license holder is certified.

(b) For the State fish and wildlife agency to certify a license holder, the agency must establish that it receives the following minimum gross revenue:

(1) \$2 for each year the license is certified, for either the privilege to hunt or the privilege to fish; or

(2) \$4 for each year the license is certified for a combination license that gives privileges to both hunt and fish.

§ 80.35 What additional options and requirements apply to multiyear licenses?

In addition to the requirements at § 80.34, the following provisions apply to multiyear licenses:

(a) An agency may spend the proceeds derived from a multiyear license fee as soon as the agency receives payment.

(b) A multiyear license may be valid for either a specific or indeterminate number of years, but it must be valid for at least 2 years.

(c) The agency may count a license holder for the number of certification periods for which all the following requirements are met:

(1) The license holder meets all other requirements of this subpart;

(2) The license is currently valid;

(3) The agency received the minimum required revenue for each certification period during the duration of the license, in the case of a multiyear license with a specified ending date;

(4) The license holder remains alive (see paragraph (d) of this section), in the

case of a lifetime license or other license with no specified ending date; and

(5) If the license is valid for less than the number of years that it meets the minimum required revenue, or the license exceeds the life expectancy of the holder, the agency may count the license holder only for the number of years during which all certification requirements are met. For example, an agency may count for 12 certification periods a license holder who purchased a single-privilege, multiyear license that sells for \$25 and is valid for at least 12 years.

(d) The agency must use and document a reasonable technique for deciding how many multiyear-license holders remain alive in the certification period. Some examples of reasonable techniques are specific identification of license holders, statistical sampling, life-expectancy tables, and mortality tables. The agency may instead use 80

years of age as a default for life expectancy.

(e) For currently valid multiyear licenses sold prior to September 26, 2019 (the effective date of the rule promulgated at 84 FR 44772, August 27, 2019), an agency may apply the provisions of § 80.34 to those multiyear licenses under the following situations:

(1) All the requirements in paragraph (c) of this section are met.

(2) The agency may count a multiyear license holder only once in any certification period (see § 80.33) when the license holder purchased another license with the same privilege within an allowable future certification period.

(3) An agency must count the license holder only for the appropriate number of current or future certification periods. The provisions of § 80.34 are not retroactive to past certification periods.

(4) For an illustration of the applications provided in this paragraph (e), see table 1 to paragraph (e):

TABLE 1 TO PARAGRAPH (e)—SCENARIOS FOR COUNTING LICENSE HOLDERS UNDER THE REQUIREMENTS FOR GROSS REVENUE AT § 80.34

[For use in counting valid multiyear licenses sold prior to September 26, 2019]

Scenario 1	Scenario 2
An agency sold a single-privilege multiyear license, valid for 10 years, for \$100 in 2014 (term of license 2014–2023)	
The agency spent the money and was able to count the license during only one certification period based on the regulations promulgated in 2014.	The agency invested the funds into an annuity that produced enough income to allow the license holder to be counted in all certification periods since the date of the license sale.
Applying the standard at § 80.34(b)(1) to the original license cost results in a potential for 50 certification periods (\$100/\$2 per year = 50).	Applying the standard at § 80.34(b)(1) to the original license cost results in a potential for 50 certification periods (\$100/\$2 per year = 50).
After subtracting the 1 certification period that was already counted, 49 potential certification periods remain.	After subtracting the 6 (2014–2019) certification periods already counted, 44 potential certification periods remain.
Because the license is valid for only 10 years, and through 2023, under scenario 1 the agency could count the license holder only from 2019 through the end of the term of the license (2023) or an additional five certification periods.	Because the license is valid for only 10 years, under scenario 2 the agency could count the license holder in an additional four (2020–2023) certification periods.

§ 80.36 May a State fish and wildlife agency count license holders in the annual certification if the agency receives funds from the State or other entity to cover the holders' license fees?

If a State fish and wildlife agency receives funds from the State or other entity to cover fees for some license holders, the agency may count those license holders in the annual certification only under the following conditions:

(a) The State funds to cover license fees must come from a source other than hunting- and fishing-license revenue.

(b) The State must identify funds to cover license fees separately from other funds provided to the agency.

(c) The State fish and wildlife agency must receive at least the average amount of State-provided discretionary funds that it received for the administration of

the State's fish and wildlife agency during the State's 5 previous fiscal years.

(1) State-provided discretionary funds are those from the State's general fund that the State may increase or decrease if it chooses to do so.

(2) Some State-provided funds are from special taxes, trust funds, gifts, bequests, or other sources specifically dedicated to the support of the State fish and wildlife agency. These funds typically fluctuate annually due to interest rates, sales, or other factors. They are not discretionary funds for purposes of this part as long as the State does not take any action to reduce the amount available to its fish and wildlife agency.

(d) The State fish and wildlife agency must receive and account for the State or other entity funds as license revenue.

(e) The State fish and wildlife agency must issue licenses in the license holder's name or by using a unique identifier that is traceable to the license holder, who is verifiable in State records.

(f) The license fees must meet all other requirements in this part.

§ 80.37 May the State fish and wildlife agency certify a license sold at a discount?

Yes. A State fish and wildlife agency may certify a license that is sold at a discount if the agency meets the rules for minimum gross revenue at § 80.34.

§ 80.38 May a State fish and wildlife agency certify a license when an entity other than the agency offers a discount on a license or offers a free license?

A State fish and wildlife agency may certify a license when an entity other than the agency offers a license that costs less than the regulated price only if:

- (a) The license is issued to the individual according to the requirements at § 80.33;
- (b) The amount received by the agency meets all other requirements in this subpart; and
- (c) The license meets any other conditions required by the agency.

§ 80.39 What must a State fish and wildlife agency do if it becomes aware of errors in its certified license data?

A State fish and wildlife agency must submit revised certified data on license holders within 90 days after it becomes aware of errors in its certified data. The State may become ineligible to participate in the benefits of the relevant Act if the State becomes aware of errors in its certified data and does not resubmit accurate certified data within 90 days.

§ 80.40 May the Service recalculate an apportionment if a State fish and wildlife agency submits revised data?

The Service may recalculate an apportionment of funds based on revised certified license data under the following conditions:

- (a) If the Service receives revised certified data for a pending apportionment before the Director approves the final apportionment, the Service may recalculate the pending apportionment.
- (b) If the Service receives revised certified data for an apportionment after the Director has approved the final version of that apportionment, the Service may recalculate the apportionment only if it would not reduce funds to other State fish and wildlife agencies.

§ 80.41 May the Director correct a Service error in apportioning funds?

Yes. The Director may correct any error that the Service makes in apportioning funds.

Subpart E—Eligible Activities

§ 80.50 What activities are eligible for funding under the Wildlife Restoration Act?

The following activities are eligible for funding in these programs and subprograms under the Wildlife Restoration Act:

- (a) *Traditional Wildlife Restoration program.* The following wildlife

restoration projects and other associated activities are eligible for funding under apportionments authorized at 16 U.S.C. 669c(b).

- (1) Restoring and managing wildlife for the benefit of the public.
- (2) Conducting research on the problems of managing wildlife and its habitat if necessary to administer wildlife resources efficiently. This research may include social science activities.
- (3) Obtaining data to guide and direct the regulation of hunting.
- (4) Acquiring real property suitable or capable of being made suitable for:
 - (i) Wildlife habitat or management;
 - (ii) Providing public access for hunting or other wildlife-oriented recreation; or
 - (iii) Supporting other eligible activities described under this paragraph (a).
- (5) Wildlife restoration projects for restoring, rehabilitating, improving, managing, or maintaining areas of lands or waters as wildlife habitat.
- (6) Building structures or acquiring equipment, goods, and services for:
 - (i) Restoring, rehabilitating, or improving lands or waters as wildlife habitat;
 - (ii) Supporting wildlife management;
 - (iii) Providing public access for hunting or other wildlife-oriented recreation; or
 - (iv) Supporting other eligible activities described under this paragraph (a).
- (7) Acquiring land for, expanding, or constructing public target ranges following the requirements of § 80.60 when combining up to 10 percent of annually apportioned Traditional Wildlife Restoration funds (16 U.S.C. 669c(b)) with Enhanced Hunter Education and Safety funds (16 U.S.C. 669h–1). When Traditional Wildlife Restoration funds are committed to the Wildlife Restoration for Public Target Ranges 90/10/5 subaccount, they are no longer eligible for Traditional Wildlife Restoration activities.
- (8) Communicating with the public (see § 80.52(h)), including:
 - (i) Outreach and sharing information on award activities, accomplishments, performance, or other communication related to meeting the objectives of an award;
 - (ii) Providing the public with information on Wildlife Management Areas; public access for hunting or other wildlife-associated recreation; notices on safety, rule changes, and topics of interest to the public related to wildlife management; and other opportunities available to the public as a result of a Traditional Wildlife Restoration award;

- (iii) Liaising with the media or other venues to provide public information related to the objectives of an award; or
- (iv) Other forms of communication that support a State's wildlife restoration and management objectives in an award.

(9) Public relations, advertising as a form of outreach, and marketing that are associated with achieving eligible objectives require prior approval of the Service. These activities are allowable only when included in the approach of an approved award to accomplish eligible activities and meet award objectives. Communication that solely benefits the agency is unallowable public relations and is not eligible for funding under the Act.

(b) Basic Hunter Education and Safety subprogram and Hunter Recruitment and Recreational Shooter Recruitment.

(1) The following activities are eligible under the Basic Hunter Education and Safety subprogram for activities authorized at 16 U.S.C. 669g(b):

- (i) Teaching the skills, knowledge, and attitudes necessary to be a responsible hunter.
- (ii) Developing and improving access to public target ranges by:

(A) Acquiring real property suitable or capable of being made suitable for public target ranges, including through licenses or third-party binding agreements that provide assurances for public access (see § 80.58).

(B) Constructing, upgrading, or restoring public target ranges to a useful condition.

(C) Operating or maintaining public target ranges.

(D) Acquiring land for, expanding, or constructing public target ranges as 90/10/5 projects following §§ 80.60 and 80.62.

(E) Constructing, operating, or maintaining educational facilities to support Hunter Education.

(2) The following activities are eligible when directly supporting recruiting, retaining, or reactivating hunters or recreational shooters (R3), as authorized at 16 U.S.C. 669c(c)(4).

(i) Communicating with hunters, recreational shooters, and the public about hunting and recreational shooting and associated opportunities by:

(A) Promoting conservation and the responsible use of the wildlife resources of the United States as part of an effort to recruit, retain, or reactivate hunters or recreational shooters.

(B) Promoting a State's R3 program, special events, and opportunities.

(C) Providing outreach on public target range availability, access, and locations.

(D) Marketing, publications, press releases, and media relations for content directly related to R3 activities.

(ii) Interpreting, translating, printing, or disseminating published State hunting regulations to inform and educate the public about their responsibilities to comply with laws, orders, and regulations.

(iii) Using a State fish and wildlife agency's website, cell phone or software products, online support systems, or other appropriate communication tools to engage the public in activities supporting a State's R3 efforts (see § 80.55(c) for exclusions related to income-producing activities).

(iv) Supporting the scope and impact of a State's R3 program by:

(A) Reducing barriers to hunting and recreational shooting opportunities;

(B) Furthering safety in hunting and recreational shooting;

(C) Providing education, mentoring, field demonstrations, and other similar opportunities to recruit, retain, or reactivate hunters or recreational shooters;

(D) Constructing, operating, or maintaining educational facilities to the extent they support R3 activities;

(E) Supporting programs for hunting or recreational shooting that have been developed or are delivered by other entities; and

(F) Offering activities that support R3 for youth and beginner hunters or recreational shooters, such as R3 camps and mentoring programs.

(v) Constructing, operating, or maintaining public target ranges, including mobile public target ranges.

(vi) Educating the public about the role of hunting and recreational shooting in funding wildlife conservation.

(vii) Supplying services that support R3 activities, such as hunt guides, trainers for shooting, and celebrity endorsements.

(viii) Acquiring supplies that enhance the experience and skills for hunters and recreational shooters.

(ix) Engaging in other allowable activities that directly support recruiting, retaining, or reactivating hunters or recreational shooters.

(c) *Enhanced Hunter Education and Safety program.* The following activities are eligible under Enhanced Hunter Education and Safety for activities authorized at 16 U.S.C. 669h–1:

(1) Enhancing programs for hunter education, hunter development, and firearm and archery safety. Hunter-development programs introduce individuals to and recruit them to take part in hunting, bow hunting, target shooting, or archery.

(2) Enhancing interstate coordination and developing hunter-education and public target range programs.

(3) Enhancing programs for education, safety, or development of firearm and bow hunters and recreational shooters.

(4) Enhancing development, construction, upgrades, rehabilitation, and improved safety features at public target ranges.

(5) Acquiring real property suitable or capable of being made suitable for public target ranges.

(6) Enhancing operation and maintenance of public target ranges.

(7) Enhancing access for hunting and recreational shooting opportunities.

(8) Acquiring land for, expanding, or constructing public target ranges following the regulations at § 80.60.

(9) Enhancing the hunter and recreational shooter R3 activities listed at paragraph (b)(2) of this section.

§ 80.51 What activities are eligible for funding under the Sport Fish Restoration Act?

The following activities are eligible for funding in these programs and subprograms under the Sport Fish Restoration Act:

(a) *Sport Fish Restoration program.*

The following fish restoration and management projects and other associated activities are eligible for funding under apportionments authorized at 16 U.S.C. 777c(c)(1).

(1) Restoring and managing sport fish for the benefit of the public.

(2) Conducting research on the problems of managing fish and their habitat and the problems of fish culture if necessary to administer sport fish resources efficiently. This research may include social science activities.

(3) Obtaining data to guide and direct the regulation of fishing. These data may be on:

(i) Size and geographic range of sport fish populations;

(ii) Changes in sport fish populations due to fishing, other human activities, or natural causes; and

(iii) Effects of any measures or regulations applied.

(4) Developing and adopting plans to restock sport fish and forage fish in the natural areas or districts covered by the plans and obtain data to develop, carry out, and test the effectiveness of the plans.

(5) Stocking fish for recreational purposes.

(6) Acquiring real property suitable or capable of being made suitable for:

(i) Sport fish habitat, as a buffer to protect that habitat, or sport fish management;

(ii) Providing public access for sport fishing; or

(iii) Supporting other eligible activities described under this paragraph (a).

(7) Implementing fish restoration and management projects to restore, rehabilitate, improve, manage, or maintain:

(i) Aquatic areas adaptable for sport fish habitat; or

(ii) Land adaptable as a buffer to protect sport fish habitat.

(8) Building structures or acquiring equipment, goods, and services for:

(i) Restoring, rehabilitating, or improving aquatic habitat for sport fish or land as a buffer to protect aquatic habitat for sport fish;

(ii) Supporting sport fish management;

(iii) Providing public access for sport fishing; or

(iv) Supporting other eligible activities described under this paragraph (a).

(9) Constructing, renovating, operating, or maintaining pumpout and dump stations. A pumpout station is a facility that pumps or receives sewage from a type III marine sanitation device that the U.S. Coast Guard requires on some vessels. A dump station, also referred to as a "waste reception facility," is specifically designed to receive waste from portable toilets on vessels.

(10) Communicating with the public (see § 80.52(h)) to include:

(i) Conducting outreach and sharing information on award activities, accomplishments, performance, or other communication related to meeting the objectives of an award;

(ii) Providing the public with information on sport fish management areas; public access for fishing or other sport fish-associated recreation; notices on safety, rule changes, and topics of interest to the public related to sport fish management; and other opportunities available to the public as a result of a Sport Fish Restoration award;

(iii) Liaising with the media or other venues to provide public information related to the objectives of an award; or

(iv) Engaging in other forms of communication that support a State's sport fish restoration and management objectives in an award.

(11) Conducting public relations, advertising as a form of outreach, and marketing that are associated with achieving eligible objectives require prior approval of the Service. These activities are allowable only when included in the approach of an approved award to accomplish eligible activities and meet award objectives. Communication that solely benefits the

agency is unallowable public relations and is not eligible for funding under the Act.

(b) *Sport Fish Restoration—Recreational Boating Access subprogram.* (1) Conducting projects and activities that may include those for motorized or nonmotorized vessels and users.

(2) Acquiring real property, including water rights, suitable or capable of being made suitable for:

(i) Building, renovating, or improving facilities to create or enhance public access to the waters of the United States;

(ii) Improving the suitability of these waters for recreational boating; or (iii) Providing benefits for recreational boating.

(3) Constructing a broad range of recreational boating access facilities that also may provide services or amenities to recreational boaters. “Facilities” includes auxiliary structures necessary to ensure safe use of recreational boating access facilities.

(4) Conducting surveys to determine the adequacy, number, location, and quality of facilities providing access to recreational waters for all sizes of recreational boats.

(5) Developing new, or redeveloping or expanding existing, boating access sites.

(c) *Sport Fish Restoration—Aquatic Resource Education subprogram.* Enhancing the public’s understanding of water resources, aquatic life forms, and sport fishing, and developing responsible attitudes and ethics toward the aquatic environment.

(d) *Sport Fish Restoration—State Outreach and Communications subprogram.* (1) Improving communications with anglers, boaters, and the public on sport fishing and boating opportunities.

(2) Interpreting, translating, printing, or disseminating published State fishing regulations to inform and educate the public about their responsibilities to comply with laws, orders, and regulations.

(3) Increasing participation in sport fishing and boating through R3 programs and activities.

(4) Advancing the adoption of sound fishing and boating practices including safety.

(5) Promoting conservation and responsible use of the aquatic resources of the United States.

§ 80.52 What activities are eligible for funding under all programs and subprograms under the Acts?

The following activities, when supporting other eligible activities under a program or subprogram and

costs are allocated to the appropriate funding source, are eligible for funding:

(a) Conducting planning and compliance activities such as engineering, designing, surveying, obtaining permits or appraisals, and conducting environmental and archeological assessments.

(b) Engaging in oversight activities related to an award, such as:

(1) Monitoring, evaluating, and reporting;

(2) Investigating noncompliance or diversions; and

(3) Protecting property rights for real property that is carrying out the purposes of the Acts.

(c) Maintaining and operating facilities and equipment under the ownership or management control of the State fish and wildlife agency, or under a third-party binding agreement, that support eligible activities under the Wildlife Restoration Act or Sport Fish Restoration Act.

(d) Covering costs associated with State electronic data systems (SEDS), when appropriately allocated and approved by the Service. A SEDS is an electronic system used by a State fish and wildlife agency to sell licenses or support other financial transactions, collect and manage data, and communicate information. The functions and abilities of a SEDS may vary depending on the State fish and wildlife agency needs and organization.

(e) Administering awards (see also § 80.54) and coordinating awards in associated programs and subprograms.

(f) Providing technical assistance.

(g) Making payments in lieu of taxes on real property under the control of the State fish and wildlife agency when the payment is:

(1) Required by State or local law; and

(2) Required for all State lands, including those acquired with Federal funds and those acquired with non-Federal funds.

(h) Communicating with the public on eligible activities in an award, when allowable under 2 CFR part 200, subpart E. This communication may include using various forms of media and technology and does not require prior approval (see also §§ 80.50(a)(8) and 80.51(a)(10)).

(i) Advertising (see 2 CFR 200.421) to hire personnel for eligible activities, for procuring goods or services for an eligible activity, or to inform the public or a target audience about events or opportunities that support purposes of the Acts.

§ 80.53 May an activity be eligible for funding if it is not explicitly eligible according to the regulations in this part?

Yes. An activity may be eligible for funding even if the regulations in this part do not explicitly designate it as an eligible activity if:

(a) The State fish and wildlife agency justifies in the project statement how the activity will help carry out the purposes of the program or subprogram under the Wildlife Restoration Act or the Sport Fish Restoration Act;

(b) The activities are allowable under 2 CFR part 200; and

(c) The Regional Director concurs with the justification.

§ 80.54 Are costs of State central services eligible for funding?

Yes. Administrative costs in the form of overhead or indirect costs for State central services outside of the State fish and wildlife agency are eligible for funding under the Acts and must follow an approved cost-allocation plan. These expenses must not exceed 3 percent of the funds apportioned annually to the State under the Acts.

§ 80.55 What activities are ineligible for funding?

The following activities are ineligible for funding under the Acts, except when necessary to carry out project purposes approved by the Regional Director:

(a) Law enforcement activities (see definition at § 80.2).

(b) The formal administrative process for establishing State fish and wildlife agency regulations. This process:

(1) Begins when boards, commissions, or other policymakers receive information and recommendations from State fish and wildlife agencies and use this input to develop and implement public policy.

(2) Involves official filing and publication of regulations, including State administrative procedures to officially adopt rules and laws to meet authoritative requirements.

(3) Includes printing and distributing the official code of regulations, or State equivalent, except as provided for under §§ 80.50(b)(2)(ii) and 80.51(d)(2) (which pertains to the agency’s interpretive guides and regulatory resources for the public) for the purposes of R3.

(c) License sales and other activities conducted for the primary purpose of producing income. These activities include processes and procedures directly related to the sale of items listed at § 80.20(a).

(d) Activities, projects, or programs that promote or encourage opposition to the regulated taking of fish, hunting, or the trapping of wildlife.

(e) Activities or projects that do not provide public access when access is a purpose of the funding or an objective of the award (see § 80.58).

§ 80.56 May a State fish and wildlife agency receive an award to carry out part of a larger project?

Yes. A State fish and wildlife agency may receive an award to carry out part of a larger project that uses funds unrelated to the award. The part of the larger project funded by the award must:

- (a) Result in an identifiable outcome consistent with the purposes of the grant program;
- (b) Be substantial in character and design (see § 80.57);
- (c) Meet the requirements of §§ 80.130 through 80.137 for any real property acquired under the award and any capital improvements completed under the award; and
- (d) Meet all other requirements of the grant program.

§ 80.57 How does a proposed project qualify as substantial in character and design?

A proposed project qualifies as substantial in character and design if it:

- (a) Describes a need consistent with the Acts;
- (b) States a purpose and sets objectives, both of which are based on the need;
- (c) Uses a planned approach, appropriate procedures, and accepted principles of fish and wildlife conservation and management, research, construction, wildlife- and fish-associated-recreation participation and access, communication, education, or other eligible purposes; and
- (d) Is cost effective.

§ 80.58 What are public access requirements for activities in an approved award under the Wildlife Restoration or Sport Fish Restoration programs?

(a) Public access is required for some eligible activities (see §§ 80.50 and 80.51) when supporting the purpose of an award.

(b) The State fish and wildlife agency has the authority, within the purposes of the Acts, to establish parameters for public access and may limit or restrict public access when the management of natural resources and public access are not compatible. Additionally, the agency may limit or restrict public access when the funded project or facility is closed for business or temporarily closed due to an emergency, repairs, construction, or as a safety precaution.

(c) When public access is required for projects and facilities that are under the

ownership or management control of a third party, the State fish and wildlife agency, following its own State laws and processes, must ensure a legally binding instrument setting forth the terms and conditions, such as a subaward or third-party agreement, is in place as follows:

(1) The instrument must be sufficient to ensure public access is provided as expected by the agency and described in the approved award from the Service.

(2) The third-party binding agreement must include or reference agency approval for reasonable fees, any rules and requirements for use, circumstances for temporary closure or reduction to public access, duration of the agreement and any useful life expectations, and procedures for any modifications to the agreement.

(3) The Service does not have authority to approve or reject a State's third-party binding agreement but will include a special award term and condition to require minimum standards and that third-party binding agreements be maintained in agency award files and provided to the Service, upon request, for all awards where funds under the Acts are being used for renovating, constructing, operating, or maintaining property that a third party owns or controls.

Subpart F—Allocation of Funds by an Agency

§ 80.60 What is the relationship between the Traditional Wildlife Restoration Program, the Basic Hunter Education and Safety subprogram, and the Enhanced Hunter Education and Safety program for acquiring land for, expanding, or constructing public target ranges?

(a) The Target Practice and Marksmanship Training Support Act (Pub. L. 116–17, March 10, 2019) amended the Wildlife Restoration Act (16 U.S.C. 669 *et seq.*) to include activities for acquiring land for, expanding, or constructing public target ranges but does not authorize any new sources of funding. The law became effective for States beginning October 1, 2019.

(b) When a State fish and wildlife agency allocates funds to activities for acquiring land for, expanding, or constructing public target ranges under this law, it may apply a 90 percent Federal/10 percent non-Federal cost share and funds are available for obligation up to 5 years, beginning October 1 of the year the funds first become available. We abbreviate this funding method as “90/10/5.”

(c) An agency may allocate annually apportioned funds for 90/10/5 activities

from the Traditional Wildlife Restoration program (not to exceed 10 percent), Basic Hunter Education and Safety subprogram (any amount from 0 up to 100 percent), and/or Enhanced Hunter Education and Safety program (any amount from 0 up to 100 percent) to projects for acquiring land for, expanding, or constructing public target ranges. There is no requirement for States to allocate any amount of funds to 90/10/5 activities.

(d) When using up to 10 percent of annually apportioned Traditional Wildlife Restoration program funds for 90/10/5 activities, the funds must be allocated to the designated subaccount and must be used only for eligible 90/10/5 purposes. Some amount of available Enhanced Hunter Education and Safety program funds, at least \$1, must be combined with the Traditional Wildlife Restoration program funds allocated to 90/10/5 activities.

(e) An agency must allocate funds to a 90/10/5 subaccount within the FFY that funds are first apportioned. Funds allocated to a 90/10/5 subaccount during a prior FFY must remain in that 90/10/5 subaccount for obligation during the period of availability and until expended.

(f) Acquiring land for, expanding, or constructing public target ranges may also be accomplished, in total or when combined with 90/10/5 funds, using funds under the Basic Hunter Education and Safety subprogram, the Enhanced Hunter Education and Safety program, or both, but the agency must apply cost share and period of availability according to table 1 to § 80.61.

§ 80.61 What sources of funding in the Wildlife Restoration Act may a State fish and wildlife agency use to support public target range projects, and may funds from multiple sources be used in a single award?

Table 1 to § 80.61 describes the sources of funding available for public target range projects and identifies their subaccount number. The Service uses subaccounts in the Department of the Interior's financial management system, the Financial and Business Management System or FBMS, to administer the specific use requirements for program and subprogram funding sources under the Acts. A State fish and wildlife agency may combine funds from multiple sources within the Act for eligible public target range activities. Your Regional Wildlife and Sport Fish Restoration Program Office can provide technical assistance on best practices for allocating costs to multiple eligible funding sources.

TABLE 1 TO § 80.61

[BHE = Basic Hunter Education and Safety subprogram; EHE = Enhanced Hunter Education and Safety program; TWR = Traditional Wildlife Restoration program]

Program/subprogram	Funding source; method	Period available for obligation	Cost share	Conditions	Eligible activities described in this part at:
Options for Funding Public Target Ranges					
Traditional Wildlife Restoration program (Subaccount 5222).	16 U.S.C. 669c(b); apportioned.	2 years	75 percent Federal/ 25 percent non-Federal.	May use apportioned funds for maintenance activities at public target ranges owned or under the management control of the agency; may allocate to 90/10/5 projects as described for sub-account 5252.	§ 80.50(a).
Traditional Wildlife Restoration program for Public Target Ranges (90/10/5) (Sub-account 5252).	16 U.S.C. 669c(b); allocated by an agency from TWR funds.	5 years	90 percent Federal/ 10 percent non-Federal.	May allocate up to 10 percent of TWR funds during the year apportioned to be combined with at least \$1 of EHE funds for acquiring land for, expanding, or constructing public target ranges.	§§ 80.50(a)(7) and 80.60.
Basic Hunter Education and Safety program for activities described at 16 U.S.C. 669g(b) (Subaccount 5221).	16 U.S.C. 669c(c); apportioned.	2 years	75 percent Federal/ 25 percent non-Federal.	May allocate up to 100 percent of apportioned funds for acquiring land for, constructing, operation of, and maintenance for public target ranges; does not have to be part of a hunter education program.	§ 80.50(b)(1).
Activities for hunter recruitment and recreational shooter recruitment as described at 16 U.S.C. 669c(c)(4) (Subaccount 5221).	16 U.S.C. 669c(c); assigned by an agency from BHE funds.	2 years	75 percent Federal/ 25 percent non-Federal.	May be used for constructing public target ranges or other eligible public target range activities that directly support R3.	§ 80.50(b)(2).
Basic Hunter Education and Safety subprogram for Public Target Ranges (90/10/5) (Subaccount 5251).	16 U.S.C. 669c(c); allocated by an agency from BHE funds.	5 years	90 percent Federal/ 10 percent non-Federal.	May allocate up to 100 percent of apportioned funds for acquiring land for, expanding, or constructing a public target range.	§§ 80.50(b)(1)(ii)(E) and 80.60.
Enhanced Hunter Education and Safety program (Sub-account 5231).	16 U.S.C. 669h–1; apportioned.	1 year	75 percent Federal/ 25 percent non-Federal.	May allocate up to 100 percent of apportioned funds for acquiring land for, constructing, developing, or improving safety features at public target ranges.	§ 80.50(c).
Enhanced Hunter Education and Safety program for Public Target Ranges (90/10/5) (Subaccount 5241).	16 U.S.C. 669h–1; allocated by an agency from EHE funds.	5 years	90 percent Federal/ 10 percent non-Federal.	May allocate up to 100 percent of apportioned funds for acquiring land for, expanding, or constructing a public target range.	§§ 80.50(c)(9) and 80.60.

§ 80.62 What are eligible and ineligible 90/10/5 activities?

(a) The following are eligible 90/10/5 activities:

(1) Acquiring real property suitable or capable of being made suitable for constructing or expanding public target ranges (see subpart J of this part).

(2) Acquiring title to real property with an existing target range when the acquisition will increase public access or includes construction or expansion activities on the existing target range.

(3) Constructing a public target range on land owned or under management

control of the State fish and wildlife agency. Construction may occur on land when title is held by a third party provided the agency holds a lease or other third-party binding agreement under State law that ensures the terms and conditions of the award will be met.

(4) Constructing or acquiring a mobile public target range.

(5) Expanding the physical footprint or configuration of an existing public target range in a manner that increases range capacity to accommodate more participants, provides additional range activities or functions, or physically

modifies to accommodate all participants, regardless of ability. Examples include adding more lanes at a range, adding structures that provide access that is compliant with the Americans With Disabilities Act (42 U.S.C. 12101 *et seq.*), and expanding the facility to provide new opportunities that did not exist before, such as adding an archery range to a former firearm-only facility.

(6) Coordinating 90/10/5 awards that directly support acquiring land for, constructing, or expanding public target ranges through necessary activities that

address planning, compliance, appraisals, engineering, and administering a project.

(7) Auxiliary activities and amenities that support the primary project and are necessary to the public's ability to fully utilize the public target range. Examples include public restrooms, storage facilities, protective bunkers and barriers, signs and markers, roads and parking areas, and utilities.

(8) Improvements may be approved if they are needed to prevent a public target range facility from becoming inoperable or suffering from significant diminished capacity. Consult with your Regional Wildlife and Sport Fish Restoration Program Office.

(9) Constructing or expanding public target range projects on federally owned land.

(b) The following are ineligible 90/10/5 activities:

(1) Operations at a public target range.

(2) Maintenance at a public target range, unless necessary for completing a project for constructing or expanding a public target range.

(3) Construction that is not to build a new or expand an existing public target range. This includes auxiliary activities and amenities not associated with an approved new or expansion project.

(4) Long-term monitoring of a public target range facility.

(5) Activities that do not provide or support new or increased physical capacity for public target ranges.

§ 80.63 What exception is provided for Enhanced Hunter Education and Safety program funds in relation to Basic Hunter Education and Safety program funds?

(a) If Basic Hunter Education and Safety program funds are fully obligated for activities listed at § 80.50(b)(1) (see 16 U.S.C. 669g(b)), the State fish and wildlife agency may use Enhanced Hunter Education and Safety program funds for Enhanced Hunter Education and Safety program eligible activities or may allocate any portion of that FFY's Enhanced Hunter Education and Safety program funds to any eligible activity under the Wildlife Restoration Act.

(b) If Basic Hunter Education and Safety program funds are used for R3 activities listed at § 80.50(b)(2), the exception set forth at paragraph (a) of this section does not apply and Enhanced Hunter Education and Safety program funds must be used for Enhanced Hunter Education and Safety program activities.

§ 80.64 What requirements apply to funds for the Recreational Boating Access subprogram?

The requirements of this section apply to allocating and obligating funds

for the Recreational Boating Access subprogram.

(a) A State fish and wildlife agency must allocate funds from annual apportionments under the Sport Fish Restoration Act for use in the subprogram.

(b) Over each 5-year period, the total allocation for the subprogram in each of the Service's geographic regions must average at least 15 percent of the Sport Fish Restoration funds apportioned to the States in that Region. If this requirement is met, an individual State fish and wildlife agency may allocate more or less than 15 percent of its annual apportionment.

(c) The Regional Director calculates regional allocation averages for separate 5-year periods that coincide with FFYs 2023–2027, 2028–2032, 2033–2037, and each subsequent 5-year period.

(d) If the total regional allocation for a 5-year period is less than 15 percent, the State agencies may, in a memorandum of understanding, agree among themselves which of them will make the additional allocations to eliminate the regional shortfall.

(e) The regulations in this paragraph (e) apply if State fish and wildlife agencies in a Service region do not agree on which of them will make additional allocations to bring the average regional allocation to at least 15 percent over a 5-year period. If the agencies do not agree:

(1) The Regional Director may require States in the region to make changes needed to achieve the minimum 15-percent regional average before the end of the fifth year; and

(2) The Regional Director must not require a State to increase or decrease its allocation if the State has allocated at least 15 percent over the 5-year period.

(f) A Federal obligation of these allocated funds must occur by the end of the fourth consecutive FFY after the FFY in which the funds first became available for allocation.

(g) If the agency's application to use these funds has not led to a Federal obligation by that time, these allocated funds become available for reapportionment among the State fish and wildlife agencies for the following FFY.

§ 80.65 What limitations apply to spending on the Aquatic Resource Education and the State Outreach and Communications subprograms?

The limitations in this section apply to State fish and wildlife agency spending on the Aquatic Resource Education and State Outreach and Communications subprograms.

(a) Each State's fish and wildlife agency may spend a maximum of 15

percent of the annual amount apportioned to the State from the Sport Fish Restoration and Boating Trust Fund for activities in both subprograms. The 15-percent maximum applies to both subprograms as if they were one.

(b) The 15-percent maximum for the subprograms does not apply to the Commonwealths of Puerto Rico and the Northern Mariana Islands, the District of Columbia, and the Territories of Guam, the U.S. Virgin Islands, and American Samoa. These jurisdictions may spend more than 15 percent of their annual apportionments for both subprograms with the approval of the Regional Director.

§ 80.66 Must a State fish and wildlife agency allocate costs in multipurpose projects and facilities?

(a) Yes. A State fish and wildlife agency must allocate costs in multipurpose projects and facilities. A grant-funded project or facility is multipurpose if it carries out the purposes of:

(1) A single grant program under the Acts; and

(2) Another grant program, subprogram, a different funding source under the Acts, a grant program not under the Acts, or an activity unrelated to awards.

(b) An agency may describe activities in the project statement that are ineligible under the Act and must clearly show that the ineligible activities are not being funded under the award.

§ 80.67 How does a State fish and wildlife agency allocate costs to an award in multipurpose projects and facilities?

A State fish and wildlife agency must allocate costs in multipurpose projects based on eligible activities authorized, sources of funding, and the uses or benefits for each purpose that will result from the completed project or facility. The agency must describe the method used to allocate costs in multipurpose projects or facilities in the project statement included in the award application.

§ 80.68 Must a State fish and wildlife agency allocate funds between marine and freshwater fisheries projects?

Yes. Each coastal State's fish and wildlife agency must equitably allocate the funds apportioned under the Sport Fish Restoration Act between projects with benefits for marine fisheries and projects with benefits for freshwater fisheries.

(a) The subprograms authorized by the Sport Fish Restoration Act do not have to allocate funding in the same manner if the State fish and wildlife agency allocates Sport Fish Restoration

funds equitably between marine and freshwater fisheries.

(b) The coastal States for purposes of this allocation are:

(1) Alabama, Alaska, California, Connecticut, Delaware, Florida, Georgia, Hawaii, Louisiana, Maine, Maryland, Massachusetts, Mississippi, New Hampshire, New Jersey, New York, North Carolina, Oregon, Rhode Island, South Carolina, Texas, Virginia, and Washington;

(2) The Commonwealths of Puerto Rico and the Northern Mariana Islands; and

(3) The Territories of Guam, the U.S. Virgin Islands, and American Samoa.

§ 80.69 What requirements apply to allocation of funds between marine and freshwater fisheries projects?

The requirements of this section apply to allocation of funds between marine and freshwater fisheries projects.

(a) When a State fish and wildlife agency allocates funds, it must meet the following requirements:

(1) The ratio of total funds allocated for marine fisheries projects to total funds allocated for marine and freshwater fisheries projects combined must equal the ratio of resident marine anglers to the total number of resident anglers in the State; and

(2) The ratio of total funds allocated for freshwater fisheries projects to total funds allocated for marine and freshwater fisheries projects combined must equal the ratio of resident freshwater anglers to the total number of resident anglers in the State.

(b) A resident angler is one who fishes for recreational purposes in the same State where that person maintains legal residence.

(c) Agencies must determine the relative distribution of resident anglers in the State between those who fish in marine environments and those who fish in freshwater environments. Agencies must use the National Survey of Fishing, Hunting, and Wildlife-Associated Recreation, or another statistically reliable survey or technique approved by the Regional Director, for this purpose.

(d) If an agency uses statistical sampling to determine the relative distribution of resident anglers in the State between those who fish in marine environments and those who fish in freshwater environments, the sampling must be complete by the earlier of the following:

(1) Five years after the last statistical sample; or

(2) Before completing the first certification following any change in the licensing system that could affect the number of sportfishing license holders.

(e) The amounts allocated from each year's apportionment do not necessarily have to result in an equitable allocation for each year. However, the amounts allocated over a variable period, not to exceed 3 years, must result in an equitable allocation between marine and freshwater fisheries projects.

(f) Agencies that fail to allocate funds equitably between marine and freshwater fisheries projects may become ineligible to use Sport Fish Restoration program funds. These agencies must remain ineligible until corrective action is taken and the funds have been allocated equitably.

§ 80.70 May a State fish and wildlife agency finance an activity from more than one annual apportionment?

A State fish and wildlife agency may use funds from more than one annual apportionment to finance projects, such as construction or acquisition of lands or interests in lands, including water rights. An agency may use funds in this manner, according to a plan approved by the Regional Director and subject to the availability of funds, in either of the following ways:

(a) Finance the entire cost of the acquisition or construction from a non-Federal funding source. The Service will reimburse funds to the agency in succeeding apportionment years.

(b) Negotiate an installment purchase or contract in which the agency pays periodic and specified amounts to the seller or contractor according to a plan that schedules either reimbursements or advances of funds immediately before need.

§ 80.71 What requirements apply to financing an activity from more than one annual apportionment?

The following conditions apply to financing an activity from more than one annual apportionment:

(a) A State fish and wildlife agency must agree to complete the project even if Federal funds are not available. If an agency does not complete the project, the agency must recover any expended Federal funds that did not result in commensurate wildlife or sport-fishery benefits. The agency must then reallocate the recovered funds to approved projects in the same program.

(b) The project statement included with the application must have a complete schedule of payments to finish the project.

(c) Interest and other financing costs may be allowable subject to the restrictions in the applicable Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards (2 CFR part 200).

Subpart G—Applying for an Award

§ 80.80 How does a State fish and wildlife agency apply for an award?

(a) A State fish and wildlife agency applies for an award by following the directions in the annual funding announcement available on the electronic Federal financial assistance grants management system.

(b) The director of the State agency or their designee must authorize submission of all requests for Federal financial assistance under the Acts.

(c) If the State supports the process under Executive Order 12372, Intergovernmental Review of Federal Programs, the agency must follow its processes for sending copies of all standard forms and supporting information to the State Clearinghouse or Single Point of Contact.

§ 80.81 What must a State fish and wildlife agency submit when applying for a comprehensive-management-system award?

A State fish and wildlife agency must submit the following documents when applying for a comprehensive-management-system award:

(a) The standard form for an application for Federal assistance in a mandatory grant program.

(b) A statement of cost estimates by subaccount. Agencies may obtain the subaccount numbers from the Regional Wildlife and Sport Fish Restoration Program Office.

(c) Supporting documentation explaining how the proposed work complies with the Acts, the regulations in this part, and other applicable laws and regulations.

(d) A statement of the agency's intent to carry out and fund part or all of its comprehensive management system through an award.

(e) A description of the agency's comprehensive management system including inventory, strategic plan, operational plan, and evaluation. "Inventory" refers to the process or processes that an agency uses to:

(1) Determine actual, projected, and desired resource and asset status; and
(2) Identify management problems, issues, needs, and opportunities.

(f) A description of the State fish and wildlife agency program covered by the comprehensive management system.

(g) Contact information for the State fish and wildlife agency employee who is directly responsible for the integrity and operation of the comprehensive management system.

(h) A description of how the public can take part in decision making for the comprehensive management system.

§ 80.82 What must a State fish and wildlife agency submit when applying for a project-by-project award?

A State fish and wildlife agency must submit the following documents when applying for a project-by-project award:

(a) The standard form for an application for Federal assistance in a mandatory grant program.

(b) A project statement that describes each proposed project and provides the following information:

(1) *Need*. Explain why the project is necessary and how it fulfills the purposes of the relevant Act.

(2) *Purpose*. State the purpose and base it on the need. The purpose states the desired outcome of the proposed project in general or abstract terms.

(3) *Objectives*. State the objectives and base them on an identified need(s). The objectives state the desired outcome of the proposed project in terms that are specific and quantified.

(4) *Results*. Describe the results or benefits expected.

(5) *Approach*. Describe the methods used to achieve the stated objectives.

(6) *Useful life*. Propose a useful life for each capital improvement and reference the method used to determine the useful life of a capital improvement with a value greater than \$100,000.

(7) *Geographic location*. Describe the geographic location(s) where activities will occur. Maps or other geographic aids are encouraged and may be attached. Include geographic coordinates in decimal degrees, if relevant and available.

(8) *Principal investigator for research projects*. Record the principal investigator's name, work address, and work telephone number.

(9) *Program income*. (i) Estimate the amount of program income that the project is likely to generate.

(ii) Indicate the method or combination of methods (deduction, addition, or cost sharing) of applying program income to Federal and non-Federal outlays.

(iii) Request the Regional Director's approval for the additive or cost-sharing method. Describe how the agency proposes to use the program income and the expected results. Describe the essential need when using program income as cost sharing.

(iv) Indicate whether the agency wants to treat income that it earns after the period of performance as either license revenue or additional funding for purposes consistent with the award terms and conditions or program regulations.

(v) Indicate whether the agency wants to treat income that the subrecipient earns after the period of performance as

license revenue, additional funding for the purposes consistent with the award or subprogram, or income subject only to the terms of the subaward agreement.

(10) *Budget narrative*. (i) Provide costs by project and subaccount with additional information sufficient to show that the project is cost effective. Agencies may obtain the subaccount numbers from the Regional Wildlife and Sport Fish Restoration Program Office.

(ii) Describe any item that requires the Service's approval and estimate its cost. Examples are pre-award costs, capital improvements or expenditures, real property acquisitions, or equipment purchases.

(iii) Include a schedule of payments to finish the project if an agency proposes to use funds from two or more annual apportionments.

(11) *Multipurpose projects*. Describe the method for allocating costs in multipurpose projects and facilities as described in §§ 80.66 and 80.67.

(12) *Relationship with other awards*. Describe any relationship between this project and other work funded by Federal awards that is planned, anticipated, or under way.

(13) *Timeline*. Describe significant milestones in completing the project and any accomplishments to date.

(14) *General*. Provide information in the project statement that:

(i) Shows that the proposed activities are eligible for funding and substantial in character and design; and

(ii) Enables the Service to comply with the applicable requirements of the National Environmental Policy Act of 1969 (42 U.S.C. 4321 and 4331–4347), the Endangered Species Act of 1973 (16 U.S.C. 1531 *et seq.*), the National Historic Preservation Act (16 U.S.C. 470s), and other laws, regulations, and policies.

§ 80.83 What is the Federal share of allowable costs?

(a) Except as provided at paragraphs (e) and (f) of this section, the Regional Director must provide at least 10 percent and no more than 75 percent of the allowable costs of a grant-funded project to the fish and wildlife agencies of the 50 States. The Regional Director generally approves any Federal share from 10 to 75 percent as proposed by 1 of the 50 States if the:

(1) Funds are available; and

(2) Application is complete and consistent with laws, regulations, and policies.

(b) The Regional Director may provide funds to the District of Columbia to pay 75 to 100 percent of the allowable costs of a grant-funded project in a program or subprogram authorized by the Sport

Fish Restoration Act. The decision on the specific Federal share between 75 and 100 percent will be based on what the Regional Director decides is fair, just, and equitable. The Regional Director may reduce the Federal share to less than 75 percent of allowable project costs only if the District of Columbia provides voluntary committed cost sharing to pay the remaining allowable costs. However, the Regional Director must not reduce the Federal share below 10 percent unless the procedure set forth at paragraph (e) of this section is followed.

(c) The Regional Director may provide funds to pay 75 to 100 percent of the allowable costs of a grant-funded project to the fish and wildlife agency of the Commonwealth of Puerto Rico. The decision on the specific Federal share between 75 and 100 percent will be based on what the Regional Director decides is fair, just, and equitable. The Regional Director may reduce the Federal share to less than 75 percent of allowable project costs only if the Commonwealth voluntarily provides cost sharing to pay the remaining allowable costs. However, the Regional Director must not reduce the Federal share below 10 percent unless the procedure set forth at paragraph (e) of this section is followed.

(d) The Regional Director must provide funds to pay 100 percent of the allowable costs of a grant-funded project to a fish and wildlife agency of the Commonwealth of the Northern Mariana Islands and the Territories of Guam, the U.S. Virgin Islands, and American Samoa. The Service is required to waive all cost sharing requirements for these insular areas.

(e) The Regional Director may waive the 10-percent minimum Federal share of allowable costs if the State, District of Columbia, Commonwealth, or territory requests a waiver and provides compelling reasons to justify why it is necessary for the Federal Government to fund less than 10 percent of the allowable costs of a project.

(f) The Regional Director must provide no more than 90 percent of the allowable costs of a project to a State, the Commonwealth of Puerto Rico, or the District of Columbia for the purposes of acquiring land for, expanding, or constructing a public target range when the agency identifies a project that meets the criteria for 90/10/5 activities.

§ 80.84 How does the Service establish the non-Federal share of allowable costs?

(a) To establish the non-Federal share of a grant-funded project for the 50 States, the Regional Director approves

an application for Federal assistance in which the State fish and wildlife agency proposes the specific non-Federal share by estimating the Federal and cost-sharing dollars, consistent with § 80.83(a), (e), and (f).

(b) To establish the non-Federal share of a grant-funded project for the District of Columbia and the Commonwealth of Puerto Rico, the Regional Director:

(1) Decides which percentage is fair, just, and equitable for the Federal share consistent with § 80.83(b) and (c);

(2) Subtracts the Federal share percentage from 100 percent to determine the percentage of non-Federal share; and

(3) Applies the percentage of non-Federal share to the allowable costs of a grant-funded project to determine the cost sharing requirement.

(c) For the Commonwealth of the Northern Mariana Islands and the Territories of Guam, the U.S. Virgin Islands, and American Samoa (insular areas), the Service must waive all non-Federal cost sharing requirements (see 48 U.S.C. 1469a).

§ 80.85 What requirements apply to cost sharing?

(a) The requirements that apply to cost sharing are at 2 CFR 200.306.

(b) The State fish and wildlife agency must fulfill cost sharing requirements at the:

(1) Award level if the award has funds from a single subaccount; or

(2) Subaccount level if the award has funds from more than one subaccount.

Subpart H—General Award Administration

§ 80.90 What are the recipient's responsibilities?

A State fish and wildlife agency as a recipient is responsible for all the actions required by this section:

(a) Complying with all applicable Federal, State, and local laws and regulations.

(b) Supervising and administering the award to ensure that the work follows the terms and conditions of the award, including:

(1) Properly and effectively using funds;

(2) Maintaining accurate records;

(3) Submitting complete and accurate Federal financial reports and performance reports, using the Federal electronic system(s) designated by the Service, by the due dates in the terms and conditions of the award; and

(4) Regularly inspecting and monitoring work in progress.

(c) Selecting and supervising personnel to ensure that:

(1) Adequate and competent personnel are available to complete the grant-funded work on schedule; and

(2) Project personnel meet time schedules, accomplish the proposed work, meet objectives, and submit the required reports.

(d) Settling all procurement-related contractual and administrative issues.

(e) Giving reasonable access to work sites and records to employees and contractual auditors of the Service, the Department of the Interior, and the Comptroller General of the United States.

(1) Access is for the purpose of:

(i) Monitoring progress, conducting audits, or other reviews of grant-funded projects; and

(ii) Monitoring the use of license revenue.

(2) Regulations on the uniform administrative requirements for awards issued by the Department of the Interior describe the records that are subject to these access requirements (see 2 CFR part 1402).

(3) The closeout of an award does not affect the recipient's responsibilities described in this section.

(f) Controlling all assets acquired under the award to ensure that they serve the purpose for which acquired throughout their useful life.

§ 80.91 What is a Federal obligation of funds, and how does it occur?

An obligation of funds is a legal liability to disburse funds immediately or later based on a series of actions. All these actions must occur to obligate funds for the formula-based grant programs authorized by the Acts:

(a) The Service sends to a State fish and wildlife agency an annual certificate of apportionment, which tells the agency how much funding is available according to formulas in the Acts.

(b) The agency sends the Regional Director an application for Federal assistance to use the funds available to the agency under the Acts and commits to provide the required cost sharing to carry out projects that are substantial in character and design.

(c) The Regional Director notifies the agency that the application for Federal assistance is approved and states the terms and conditions of the award.

(d) The agency accepts the terms and conditions of the award in one of the following ways:

(1) Starts work on the grant-funded project by placing an order, entering into a contract, entering into a subaward, receiving goods or services, or otherwise incurring allowable costs during the period of performance that will require payment immediately or in the future;

(2) Draws down funds for an allowable activity under the award; or

(3) Accepts the award via electronic means.

§ 80.92 How long are funds available for a Federal obligation?

Funds are available for a Federal obligation starting October 1 of the FFY in which they are apportioned and for the number of years indicated in table 1 to § 80.92. Funds not obligated within the required period of availability will revert to the Service and be disbursed as described in the table.

TABLE 1 TO § 80.92

Program/subprogram	Period of availability for obligation	Disbursement of unobligated funds at the end of the period of availability for obligation
WILDLIFE RESTORATION ACT		
Enhanced Hunter Education and Safety program.	1 FFY	Reapportioned the following year only to States that have fully obligated the current year's Basic Hunter Education and Safety program funds to activities at 16 U.S.C. 669g(b) (see §§ 80.50(b) and 80.63).
Traditional Wildlife Restoration program	2 FFYs	Made available to the Secretary for carrying out the provisions of the Migratory Bird Conservation Act (16 U.S.C. 715 <i>et seq.</i>); hereafter referred to as "migratory bird conservation" (see 16 U.S.C. 669b(a)(1)).
Basic Hunter Education and Safety subprogram.	2 FFYs	Migratory bird conservation.

TABLE 1 TO § 80.92—Continued

Program/subprogram	Period of availability for obligation	Disbursement of unobligated funds at the end of the period of availability for obligation
Basic Hunter Education and Safety subprogram for R3 activities at 16 U.S.C. 669c(c)(4).	2 FFYs	Migratory bird conservation.
Traditional Wildlife Restoration program for public target ranges (90/10/5).	5 FFYs	Migratory bird conservation.
Basic Hunter Education and Safety subprogram for public target ranges (90/10/5).	5 FFYs	Migratory bird conservation.
Enhanced Hunter Education and Safety program for public target ranges (90/10/5).	5 FFYs	Reapportioned the following year only to States that have fully obligated the current year's Basic Hunter Education and Safety funds to activities at 16 U.S.C. 669g(b) (see §§ 80.50(b) and 80.63).

SPORT FISH RESTORATION ACT

Sport Fish Restoration program	2 FFYs	Available for expenditure by the Secretary of the Interior to supplement the Sport Fish Restoration apportionment, as provided for in 16 U.S.C. 777c(c), the following year.
Aquatic Resource Education program	2 FFYs	Same as apportioned Sport Fish Restoration funds.
State Outreach and Communications program	2 FFYs	Same as apportioned Sport Fish Restoration funds.
Recreational Boating Access subprogram	5 FFYs	Same as apportioned Sport Fish Restoration funds.

§ 80.93 When may a State fish and wildlife agency incur costs under an award?

A State fish and wildlife agency may incur costs under an award from the effective date of the period of performance to the end of the period of performance except for pre-award costs that meet the conditions in § 80.94.

§ 80.94 May a State fish and wildlife agency incur costs before the beginning of the period of performance?

(a) A State fish and wildlife agency may incur costs of a proposed project before the beginning of the period of performance (*i.e.*, pre-award costs). However, the agency has no assurance that it will receive reimbursement until the Regional Director approves an award that incorporates a project statement demonstrating that the pre-award costs conform to all the conditions set forth in paragraph (b) of this section.

(b) Pre-award costs must meet the following requirements:

(1) The costs are necessary and reasonable for accomplishing the award objectives.

(2) The Regional Director would have approved the costs if the State fish and wildlife agency incurred them during the period of performance.

(3) The agency incurs these costs in anticipation of the award and in conformity with the negotiation of the award with the Regional Director.

(4) The activities associated with the pre-award costs comply with all laws, regulations, and policies applicable to a grant-funded project.

(5) The agency must:

(i) Obtain the Regional Director's concurrence that the Service will be able to comply with the applicable laws,

regulations, and policies before the agency starts work on the ground; and

(ii) Provide the Service all the necessary information with enough lead time for the Service to comply with the applicable laws, regulations, and policies.

(6) The agency must not complete the project before the beginning of the period of performance unless the Regional Director concurs that doing so is necessary to take advantage of temporary circumstances favorable to the project or to meet legal deadlines. An agency completes a project when it incurs all costs and finishes all work necessary to achieve the project objectives.

(c) The agency can receive reimbursement for pre-award costs only after the beginning of the period of performance, and, for activities requiring compliance, only after the compliance is satisfied.

§ 80.95 How does a State fish and wildlife agency receive Federal award funds?

(a) A State fish and wildlife agency may receive Federal award funds through either:

(1) A request for reimbursement; or

(2) A request for an advance of funds if the agency maintains or demonstrates that it will maintain procedures to minimize time between transfer of funds and disbursement by the agency or its subrecipient.

(b) An agency must use the following procedures to receive a reimbursement or an advance of funds:

(1) Request funds through an electronic payment system designated by the Regional Director; or

(2) Request funds on a standard form for that purpose only if the agency is

unable to use the electronic payment system.

(c) The Regional Director will reimburse or advance funds only to the office or official designated by the agency and authorized by State law to receive public funds for the State.

(d) All payments are subject to final determination of allowability based on audit or a Service review. The State fish and wildlife agency must repay any overpayment as directed by the Regional Director.

(e) The Regional Director may withhold payments pending receipt of all required reports or documentation for the project.

§ 80.96 May a State fish and wildlife agency use Federal funds without using cost sharing?

(a) The State fish and wildlife agency must not draw down any Federal funds for a grant-funded project under the Acts in greater proportion to the use of cost sharing than total Federal funds bear to total cost sharing unless:

(1) The recipient draws down Federal award funds to pay for construction, including land acquisition;

(2) A third-party in-kind contribution of cost sharing is not yet available for delivery to the recipient or subrecipient; or

(3) The project is not at the point where it can accommodate a third-party in-kind contribution.

(b) If an agency draws down Federal funds in greater proportion to the use of cost sharing than total Federal funds bear to total cost sharing under the conditions described at paragraphs (a)(1) through (3) of this section, the agency must:

- (1) Obtain the Regional Director's prior approval; and
- (2) Satisfy the project's cost sharing requirement before submitting the final Federal financial report.

§ 80.97 What is barter, and may a State fish and wildlife agency use barter of goods or services to carry out a grant-funded project?

(a) Barter is a nonmonetary exchange of goods or services with another entity (reciprocal transfer). If goods or services are given or received without expectation of a reciprocal transfer, the activity is not barter and is an expense of or donation to the agency.

(b) A State fish and wildlife agency may use barter to carry out a grant-funded project when following approved State policies and procedures that comply with the generally accepted accounting practices as defined by the Governmental Accounting Standards Board. The State processes, as applied by the agency, may identify types of barter (*e.g.*, cooperative farming or grazing) for which the agency will consider the barter transaction to be an even exchange.

§ 80.98 How must a State fish and wildlife agency include barter in an award and report barter transactions?

- (a) A State fish and wildlife agency must identify when barter exchanges are anticipated in the project when applying for, or carrying out, an award. All activities included in a barter transaction are subject to Federal compliance requirements under an award.
- (b) An agency must follow its State processes for authorizing, valuing, and documenting barter transactions, and report barter transactions under an award in the Federal financial report according to table 1 to § 80.98:

TABLE 1 TO § 80.98

If, following the State processes for barter transactions . . .		Then the agency must . . .
(1) The barter transaction is determined to be an even exchange of goods or services.		Disclose in the remarks section that the barter transaction(s) occurred, and the barter transaction(s) resulted in no gain or loss to the agency.
	(2) The fair value of the goods or services provided by the State fish and wildlife agency exceeds the fair value of the goods and services received.	Disclose in the remarks section that the barter transaction(s) occurred and report the difference in fair value as award expenses in the Federal financial report.
	(3) The fair value of the goods or services received exceeds the fair value of the goods and services the State fish and wildlife agency provided.	Disclose in the remarks section that the barter transaction(s) occurred and report the difference in fair value as program income in the Federal financial report.

§ 80.99 Are symbols available to identify projects?

Yes. The following distinctive symbols are available to identify projects funded by the Acts and products on which taxes and duties have been collected to support the Acts:

- (a) The symbol of the Wildlife Restoration Act follows:

- (b) The symbol of the Sport Fish Restoration Act follows:

- (c) The symbol of the Acts when used in combination follows:

§ 80.100 Must a State fish and wildlife agency display one of the symbols set forth in this part on a completed project?

No. A State fish and wildlife agency is not required to display one of the symbols in § 80.99 on a project completed under the Acts.

- (a) However, the Service encourages agencies to display the appropriate symbol on projects funded by the Acts. Appropriate use and requirements for symbols are as follows:

- (1) An agency may display the appropriate symbol(s) on:

(i) Areas such as wildlife-management areas, shooting ranges, and sportfishing and boating-access facilities that were acquired, developed, operated, or maintained with funds authorized by the Acts; and

(ii) Printed or web-based material or other visual representations of project accomplishments.

(2) An agency may establish a requirement for similar standards for displaying the appropriate symbol or symbols, in the places described in paragraph (a) of this section, that is passed through to subrecipients.

(3) An agency may use the symbols in a manner other than as described in paragraph (a) of this section if authorized by the Director or a Regional Director.

(b) The Director or Regional Director may authorize other persons, organizations, agencies, or governments

to use the symbols for purposes related to the Acts.

- (c) Restrictions and requirements on use of symbols for either agencies or other entities are as follows:

(1) Users of the symbol(s) indemnify and defend the United States and hold it harmless from any claims, suits, losses, and damages from:

(i) Any allegedly unauthorized use of any patent, process, idea, method, or device by the user in connection with its use of the symbol(s), or any other alleged action of the user; and

(ii) Any claims, suits, losses, and damages arising from alleged defects in the articles or services associated with the symbol(s).

(2) The appearance of the symbol(s) on projects or products indicates that the manufacturer of the product pays excise taxes in support of the respective Act(s) and that the project was funded under the respective Act(s) (26 U.S.C. 4161, 4162, 4181, 4182, 9503, and 9504). The Service and the Department of the Interior make no representation or endorsement whatsoever by the display of the symbol(s) as to the quality, utility, suitability, or safety of any product, service, or project associated with the symbol(s).

(3) No one may use any of the symbols in any other manner unless authorized by the Director or Regional Director. Unauthorized use of the symbol(s) is a violation of 18 U.S.C. 701

and subjects the violator to possible fines and imprisonment.

Subpart I—Program Income

§ 80.120 What is program income?

(a) Program income is gross income earned by the recipient or subrecipient that is directly generated by an award activity or earned as a result of the Federal award during the period of performance (see 2 CFR 200.1 and 200.307).

(b) Program income includes revenue from:

(1) Services performed under an award.

(2) Use or rental of real or personal property acquired, constructed, or managed with award funds.

(3) Payments by concessioners or contractors under an arrangement with the agency or subrecipient to provide a service in support of award objectives on real property acquired, constructed, or managed with award funds.

(4) Sale of items produced under an award.

(5) Fees collected by the agency for delivering or providing hunter education, aquatic education, or other courses.

(6) Royalties and license fees for copyrighted material, patents, and inventions developed as a result of an award.

(7) Sale of a product of mining, drilling, forestry, or agriculture during the period of performance that supports the:

(i) Mining, drilling, forestry, or agriculture; or

(ii) Acquisition of the land on which these activities occurred.

(8) Barter transactions when the value of goods or services received exceeds the value of goods or services the agency provided.

(c) Program income does not include any of the following:

(1) Interest on award funds, rebates, credits, discounts, or refunds.

(2) Sales receipts retained by concessioners or contractors under an arrangement with the agency to provide a service in support of award objectives on real property acquired, constructed, or managed with award funds.

(3) Cash received by the agency or by volunteer instructors to cover incidental costs of hunter education, aquatic education, or other classes. Incidental costs are small amounts and typically not essential to the training delivery. Materials purchased at cost by the student, separate from course fees, are incidental costs.

(4) Proceeds from the sale of real property, equipment, or supplies.

§ 80.121 May a State fish and wildlife agency earn program income?

A State fish and wildlife agency may earn program income from activities incidental to the award purposes if producing income is not a primary purpose. The agency must account for program income received from these activities in the project records and dispose of it according to the terms and conditions of the award.

§ 80.122 May a State fish and wildlife agency deduct the costs of generating program income from gross income?

(a) A State fish and wildlife agency may deduct the costs of generating program income from gross income when the agency calculates program income if the agency does not:

(1) Pay these costs with:
(i) Federal or cost-sharing funds under a Federal award; or
(ii) Federal funds unrelated to an award.

(2) Cover these costs by accepting:
(i) Cost-sharing contributions for a Federal award; or

(ii) Donations of services, personal property, or real property unrelated to a Federal award.

(b) Examples of costs of generating program income that may qualify for deduction from gross income if they are consistent with the regulations in paragraph (a) of this section are:

(1) The cost of estimating the amount of commercially acceptable timber in a forest and marking it for harvest if the commercial harvest is incidental to a grant-funded habitat-management or facilities-construction project.

(2) The cost of publishing research results as a pamphlet or book for sale if the publication is incidental to a grant-funded research project.

§ 80.123 How may a State fish and wildlife agency use program income?

(a) A State fish and wildlife agency may choose any of the three methods listed in paragraph (b) of this section for applying program income to Federal and non-Federal outlays. The agency may also use a combination of these methods. The method or methods that the agency chooses will apply to the program income that it earns during the period of performance and to the program income that any subrecipient earns during the period of performance. The agency must indicate the method or methods that it wants to use in the project statement that the agency submits with each application for Federal assistance.

(b) Program income must be spent within the period of performance and program in which the income is earned and before the agency requests additional Federal funds for the activity for which the program income is earned.

(c) The three methods for applying program income to Federal and non-Federal outlays are set forth in table 1 to § 80.123(c):

TABLE 1 TO § 80.123(c)

Method	Requirements for using the method
(1) Deduction	(i) The agency must deduct the program income from total allowable costs to determine the net allowable costs. (ii) The agency must use program income for current costs under the award unless the Regional Director authorizes otherwise. (iii) If the agency does not indicate the method that it wants to use in the project statement, then the agency must use the deduction method.
(2) Addition	(i) The agency must request the Regional Director's approval in the project statement. (ii) The agency may add the program income to the Federal and non-Federal funds under the award. (iii) The agency must use the program income for the purposes of the award and under the terms of the award.
(3) Cost sharing	(i) The agency must request the Regional Director's approval in the project statement. (ii) The agency must explain in the project statement the expected program income, how the agency proposes to use the program income to satisfy cost-sharing requirements, how the agency will use program income earned in excess of required cost sharing, and the primary conservation or recreation objective sufficient to show income as a secondary benefit.

TABLE 1 TO § 80.123(c)—Continued

Method	Requirements for using the method
	(iii) If neither the agency's project statement nor the award indicates how program income in excess of cost-sharing requirements will be applied, the agency must use the deduction method.

§ 80.124 How may a State fish and wildlife agency use unexpended program income?

A State fish and wildlife agency must spend program income before requesting additional payments under an award. If the agency has unexpended program income on its final Federal financial report, it may use the income under a subsequent award for any activity eligible for funding in the grant program that generated the program income.

§ 80.125 How must a State fish and wildlife agency treat income that it earns after the period of performance?

(a) The State fish and wildlife agency must treat income that it earns after the period of performance as either:

- (1) License revenue for the administration of the agency; or
- (2) Additional funding for purposes consistent with the award or the program.

(b) The agency must indicate its choice of one of the alternatives set forth in paragraph (a) of this section in the project statement that the agency submits with each application for Federal assistance. If the agency does not record its choice in the project statement, the agency must treat the income earned after the period of performance as license revenue.

§ 80.126 How must a State fish and wildlife agency treat income earned by a subrecipient after the period of performance?

(a) The State fish and wildlife agency must treat income earned by a subrecipient after the period of performance as:

- (1) License revenue for the administration of the agency;
- (2) Additional funding for purposes consistent with the award or the program; or

(3) Income subject only to the terms of the subaward agreement and any subsequent contractual agreements between the agency and the subrecipient.

(b) The agency must indicate its choice of one of the above alternatives in the project statement that the agency submits with each application for Federal assistance. If the agency does not indicate its choice in the project statement, the subrecipient does not have to account for any income earned after the period of performance unless

required to do so in the subaward agreement or in any subsequent contractual agreement.

Subpart J—Real Property

§ 80.130 Must a State fish and wildlife agency hold title to real property acquired under an award?

A State fish and wildlife agency must hold title to an ownership interest in real property acquired under an award to the extent possible under State law.

(a) Some States do not authorize their fish and wildlife agency to hold the title to real property that the agency manages. In these cases, the State or one of its administrative units may hold the title to grant-funded real property if the agency has the authority to manage the real property for its authorized purpose under the award. The agency, the State, or another administrative unit of State government must not hold title to an undivided ownership interest in the real property concurrently with a subrecipient or any other entity.

(b) An ownership interest is an interest in real property that gives the person who holds it the right to use and occupy a parcel of land or water and to exclude others. Ownership interests include fee and leasehold interests but not easements.

§ 80.131 Must a State fish and wildlife agency hold an easement acquired under an award?

A State fish and wildlife agency must hold an easement acquired under an award, but it may share certain rights or responsibilities as described in paragraph (b) of this section if consistent with State law.

(a) Any sharing of rights or responsibilities does not diminish the agency's responsibility to manage the easement for its authorized purpose.

(b) The agency may share the holding or enforcement of an easement only in the following situations:

(1) The State or an administrative unit of State government may hold an easement on behalf of its fish and wildlife agency.

(2) The agency may issue a subaward with the concurrent right to hold the easement to a nonprofit organization or to a local or Tribal government. A concurrent right to hold an easement means that both the State agency and

the subrecipient hold the easement and share its rights and responsibilities.

(3) The agency may issue a subaward with a right of enforcement to a nonprofit organization or to a local or Tribal government. This right of enforcement may allow the subrecipient to have reasonable access and entry to property protected under the easement for purposes of inspection, monitoring, and enforcement. The subrecipient's right of enforcement must not supersede and must be concurrent with the agency's right of enforcement.

§ 80.132 Must a State fish and wildlife agency have control over the land or water where it completes capital improvements?

Yes. A State fish and wildlife agency must control the parcel of land or water on which the agency completes a grant-funded capital improvement. An agency must exercise this control by holding title to a fee or leasehold interest or through another legally binding agreement. Control must be adequate for the protection, maintenance, and use of the improvement for its authorized purpose during its useful life even if the agency did not acquire the parcel with award funds.

§ 80.133 Must a State fish and wildlife agency maintain acquired or completed capital improvements?

Yes. A State fish and wildlife agency is responsible for maintaining capital improvements acquired or completed under an award to ensure that each capital improvement continues to serve its authorized purpose during its useful life.

§ 80.134 How must a State fish and wildlife agency use real property?

(a) If an award funds acquisition of an interest in a parcel of land or water, the State fish and wildlife agency must use the land or water for the purpose authorized in the award.

(b) If an award funds construction of a capital improvement, the agency must use the capital improvement for the purpose authorized in the award during the useful life of the capital improvement. The agency must comply with this requirement even if the agency did not use award funds to:

- (1) Acquire the parcel on which the capital improvement is located; or
- (2) Build the structure in which the capital improvement is a component.

(c) If an award funds management, operation, or maintenance of a parcel of land or water, or a capital improvement, the agency must use the parcel or capital improvement for the purpose authorized in the award during the period of performance. The agency must comply with this requirement even if the agency did not acquire the parcel or construct the capital improvement with award funds.

(d) A State agency may allow commercial, recreational, and other secondary uses of a grant-funded parcel of land or water or capital improvement if these secondary uses do not interfere with the authorized purpose of the award.

(e) Real property acquired with license revenue (see § 80.20(b)) must be controlled by the State fish and wildlife agency and used only for administration of the agency (see § 80.10(c)).

§ 80.135 What if a State fish and wildlife agency allows a use of real property that interferes with its authorized purpose?

(a) When a State fish and wildlife agency allows a use of real property that interferes with the authorized purpose of the real property under an award, the agency must fully restore the real property to its authorized purpose.

(b) If the agency cannot fully restore the real property to its authorized purpose, then the agency must replace the real property using non-Federal funds.

(c) The agency must determine that the replacement property:

(1) Is of at least equal value at current market prices; and

(2) Has fish-, wildlife-, and public-use benefits consistent with the purposes of the original award.

(d) The Regional Director may require the agency to obtain an appraisal and appraisal review to estimate the value of the replacement property at current market prices if the agency cannot support its assessment of value.

(e) The agency must obtain the Regional Director's approval of:

(1) The agency's determination of the value and benefits of the replacement property; and

(2) The documentation supporting this determination.

(f) The agency may have up to 3 years from the date of notification by the Regional Director to restore the real property to its authorized purpose or acquire replacement property. If the

agency does not restore the real property to its authorized purpose or acquire replacement property within 3 years, the Director may declare the agency ineligible to receive new awards in the program or programs that funded the original acquisition.

§ 80.136 Is it a diversion if a State fish and wildlife agency does not use real property acquired under an award for its authorized purpose?

If a State fish and wildlife agency does not use real property acquired under an award for its authorized purpose, a diversion occurs only if both of the following conditions apply:

(a) The agency used license revenue as cost sharing for the award; and

(b) The unauthorized use is for a purpose other than management of the fish-and-wildlife-related resources for which the agency has authority under State law.

§ 80.137 What if real property is no longer useful or needed for its original purpose?

If the director of the State fish and wildlife agency and the Regional Director jointly decide that real property acquired with award funds is no longer useful or needed for the original purpose of the real property under the award, the director of the agency must:

(a) Propose another eligible purpose for the real property under the grant program and ask the Regional Director to approve this proposed purpose; or

(b) Follow the regulations at 2 CFR 200.311 and consult with the Regional Director on how to treat proceeds from the disposition of real property.

Subpart K—Revisions and Appeals

§ 80.150 How does a State fish and wildlife agency revise an award?

(a) A State fish and wildlife agency requests approval for a revision to a project or award by providing the Service the following documents:

(1) The Office of Management and Budget (OMB)-approved common application information for Federal assistance, approved by the director of the agency or the director's designee, to update or request a change in the information that the agency submitted in an approved application.

(2) A statement that explains:

(i) How the requested revision would affect the information that the agency submitted with the original grant application; and

(ii) Why the requested revision is necessary.

(b) If the State maintains the process under Executive Order 12372, Intergovernmental Review of Federal Programs, the agency must follow its processes for sending any requested revision of the purpose or objectives of a project or award to the State Clearinghouse or Single Point of Contact.

§ 80.151 May a State fish and wildlife agency appeal a decision?

Yes. A State fish and wildlife agency may appeal the Director's or Regional Director's decision on any matter subject to this part.

(a) The agency must send the appeal to the Director within 30 days of the date that the Director or Regional Director mails or otherwise informs an agency of a decision.

(b) The agency may appeal the Director's decision on an appeal made under paragraph (a) of this section to the Secretary. An appeal to the Secretary must be made within 30 days of the date the decision was mailed and must follow procedures in 43 CFR part 4, subpart G.

Subpart L—Information Collection

§ 80.160 What are the information collection requirements of this part?

The Office of Management and Budget (OMB) has approved the information collection requirements contained in this part 80 and assigned the following OMB Control Numbers 1018–0088, “National Survey of Fishing, Hunting, and Wildlife-Associated Recreation (FHWAR)” and 1018–0100, “Administrative Procedures for U.S. Fish and Wildlife Service Financial Assistance Programs.” Federal agencies may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. Direct comments regarding the burden estimate or any other aspect of the information collection to the Service's Information Collection Clearance Officer at the address provided at 50 CFR 2.1(b).

Shannon A. Estenoz,

Assistant Secretary for Fish and Wildlife and Parks, Department of Interior.

RIN 1205–AC20

Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2025 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers

AGENCY: U.S. Citizenship and Immigration Services (USCIS), Department of Homeland Security (DHS), and Employment and Training Administration and Wage and Hour Division, U.S. Department of Labor (DOL).

ACTION: Temporary rule.

SUMMARY: DHS, in consultation with DOL, is exercising time-limited Fiscal Year (FY) 2025 authority and increasing the total number of noncitizens who may receive an H–2B nonimmigrant visa by up to 64,716 for the entirety of FY 2025. These supplemental visas will be distributed in four allocations throughout the fiscal year. This rule reserves 20,000 of these visas for nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica. All visas will be available only to businesses that are suffering or will suffer impending irreparable harm, as attested by the employer. In addition, DHS is again providing temporary portability flexibility.

DATES:

Effective dates: The amendments at instructions 1, 3, and 5 are effective December 2, 2024; instructions 2 and 4 amending 8 CFR 214.2 and 274a.12, respectively, are effective from December 2, 2024, through December 2, 2027; instruction 6, adding 20 CFR 655.64, is effective from December 2, 2024, through September 30, 2025; and instruction 7, adding 20 CFR 655.68, is effective from December 2, 2024, through September 30, 2028.

Petition dates: DHS will not accept any H–2B petitions under provisions related to the FY 2025 supplemental numerical allocations after September

15, 2025, and will not approve any such H–2B petitions after September 30, 2025. The provisions related to portability are only available to petitioners and H–2B nonimmigrant workers initiating employment through the end of January 24, 2026.

Comments on the Information Collection: The Office of Foreign Labor Certification within the U.S. Department of Labor will accept comments in connection with the new information collection Form ETA–9142B–CAA–9 associated with this rule until January 31, 2025. The electronic Federal Docket Management System will accept comments prior to midnight eastern time at the end of that day.

ADDRESSES: You may submit written comments on the new information collection Form ETA–9142B–CAA–9, identified by Regulatory Information Number (RIN) 1205–AC20, electronically by the following method:

Federal eRulemaking Portal: <https://www.regulations.gov>. Follow the instructions on the website for submitting comments.

Instructions: Include the agency's name and the RIN 1205–AC20 in your submission. All comments received will become a matter of public record and may be posted without change to <https://www.regulations.gov>. Comments submitted after the deadline for submission will not be considered. Please do not submit comments containing trade secrets, confidential or proprietary commercial or financial information, personal health information, sensitive personally identifiable information (for example, social security numbers, driver's license or state identification numbers, passport numbers, or financial account numbers), or other information that you do not want to be made available to the public. The agency reserves the right to redact or refrain from posting such information and libelous or otherwise inappropriate comments, including those that contain obscene, indecent, or profane language; that contain threats or defamatory statements; or that contain hate speech directed at race, color, sex, sexual orientation, national origin, ethnicity, age, religion, or disability. Please note that depending on how information is submitted through [regulations.gov](https://www.regulations.gov), the agency may not be able to redact the information and instead reserves the right to refrain from posting the information or comment in such situations.

FOR FURTHER INFORMATION CONTACT:

Regarding 8 CFR parts 214 and 274a: Charles L. Nimick, Chief, Business and Foreign Workers Division, Office of

Policy and Strategy, U.S. Citizenship and Immigration Services, Department of Homeland Security, 5900 Capital Gateway Drive, Camp Springs, MD 20746; telephone 240–721–3000 (this is not a toll-free number).

I. Executive Summary

FY 2025 H–2B Supplemental Cap

With this temporary final rule (TFR), the Secretary of Homeland Security, following consultation with the Secretary of Labor, is authorizing the release of an additional 64,716 H–2B visas for FY 2025, subject to certain conditions. The 64,716 visas are divided into the following allocations:

- For the first half of FY 2025: 20,716 immediately available visas limited to

returning workers, in other words, those workers who were issued H–2B visas or held H–2B status in fiscal years 2022, 2023, or 2024, regardless of country of nationality. These petitions must request employment start dates on or before March 31, 2025;

- For the early second half of FY 2025 (April 1 to May 14): 19,000 visas limited to returning workers, in other words, those workers who were issued H–2B visas or held H–2B status in fiscal years 2022, 2023, or 2024 regardless of country of nationality. These early second half of FY 2025 petitions must request employment start dates from April 1, 2025, to May 14, 2025. Furthermore, employers must file these petitions no earlier than 15 days after the second half statutory cap¹ is reached;

- For the late second half of FY 2025 (May 15 to September 30): 5,000 visas limited to returning workers, in other words, those workers who were issued H–2B visas or held H–2B status in fiscal years 2022, 2023, or 2024 regardless of country of nationality. These late second half of FY 2025 petitions must request employment start dates from May 15, 2025, to September 30, 2025. Furthermore, employers must file these petitions no earlier than 45 days after the second half statutory cap is reached; and

- For the entirety of FY 2025: 20,000 visas reserved for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica (country-specific allocation) as attested by the petitioner (regardless of whether such nationals are returning workers). Employers requesting an employment start date in the first half of FY 2025 may file such petitions immediately after the publication of this TFR. Employers requesting an employment start date in the second half of FY 2025 must file such petitions no earlier than 15 days after the second half statutory cap is reached.

To qualify for the FY 2025 supplemental caps provided by this temporary final rule, eligible petitioners must:

- Meet all existing H–2B eligibility requirements, including obtaining an approved temporary labor certification (TLC) from DOL before filing the Form I–129, Petition for a Nonimmigrant Worker, with USCIS;

- Properly file the Form I–129, Petition for a Nonimmigrant Worker, with USCIS at the current filing

location, on or before September 15, 2025;

- Submit an attestation affirming, under penalty of perjury, that the employer is suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all of the H–2B workers requested on the petition, and that they are seeking to employ returning workers only, unless the H–2B worker is a Salvadoran, Guatemalan, Honduran, Haitian, Colombian, Ecuadorian, or Costa Rican national and is counted towards the 20,000 cap exempt from the returning worker requirement; and

- Prepare and retain a detailed written statement describing how the employer is suffering irreparable harm or will suffer impending irreparable harm and how evidence demonstrates irreparable harm and supports their application.

Employers filing an H–2B petition 30 or more days after the certified start date on the TLC, must attest to engaging in the following additional steps to recruit U.S. workers:

- No later than 1 business day after filing the petition, place a new job order with the relevant State Workforce Agency (SWA) for at least 15 calendar days;

- Contact the nearest American Job Center serving the geographic area where work will commence and request staff assistance in recruiting qualified U.S. workers;

- Contact the employer's former U.S. workers who left employment with the employer on or after January, 1, 2023, including those the employer furloughed or laid off, and until the date the H–2B petition is filed, disclose the terms of the job order and solicit their return to the job;

- Provide written notification of the job opportunity to the bargaining representative for the employer's employees in the occupation and area of employment, or post notice of the job opportunity at the anticipated worksite if there is no bargaining representative;

- Where the occupation is traditionally or customarily unionized, provide written notification of the job opportunity to the nearest American Federation of Labor and Congress of Industrial Organizations (AFL–CIO) office covering the area of intended employment, by providing a copy of the job order and requesting assistance in recruiting qualified U.S. workers for the job opportunity;

- Contact in writing and in a language understood by the worker, all U.S. workers currently employed at the place of employment, disclose the terms of the job order, and request assistance in

recruiting qualified U.S. workers for the job;

- Where the employer maintains a website for its business operations, post the job opportunity in a conspicuous location on the employer's website; and
- Hire any qualified U.S. worker who applies or is referred for the job opportunity until the later of either (1) the date on which the last H–2B worker departs for the place of employment, or (2) 30 days after the last date of the SWA job order posting.

Petitioners filing H–2B petitions under this FY 2025 supplemental cap must retain documentation of compliance with the attestation requirements for 3 years from the date DOL approved the TLC and must provide the documents and records upon the request of DHS or DOL, as well as fully cooperate with any compliance reviews such as audits.

Through audits and investigations, both Departments have received evidence of employer non-compliance with the terms and conditions of the H–2B program, as well as violations of other labor and employment laws. DOL Office of Foreign Labor Certification (OFLC), DOL Wage and Hour Division (WHD), and USCIS Fraud Detection and National Security (FDNS) personnel have encountered non-compliance issues such as failure to pay the promised wage, failure to employ returning workers, failure to demonstrate irreparable harm, failure to conduct the additional recruitment steps, failure to cooperate with the audit or investigation process, and failure to accurately disclose the beneficiary's work location(s).

Such non-compliance can harm U.S. workers by undermining wages and working conditions. It also directly harms H–2B workers. Further, H–2B workers depend on ongoing employment with the petitioning employer to maintain status in the United States. This dependence creates a power imbalance between the employer and H–2B worker, making the H–2B worker particularly vulnerable to exploitation and violations. An employer's failure to cooperate with or respond to an audit or investigation severely hinders the Departments' ability to assess whether it has complied with the H–2B program requirements and to determine if any temporary foreign or U.S. workers were affected by program violations. In recognition of the substantial impact that non-compliance can have on both U.S. workers and H–2B workers, DHS and DOL intend to conduct a significant number of audits focusing on irreparable harm and other worker protection provisions. And as it

¹ The term "statutory cap" refers to the 66,000 cap set forth at INA section 214(g)(1)(B) or the 33,300 semiannual caps at INA section 214(g)(10).

did as part of the supplemental cap TFRs in recent years, DHS will again subject employers that have committed labor law violations in the H-2B program to additional scrutiny in the supplemental cap petition process.² DHS intends for this additional scrutiny to help ensure compliance with H-2B program requirements and obligations.

Specifically, falsifying information in H-2B program attestation(s) can result not only in penalties relating to perjury, but also in, among other things, a finding of fraud or willful misrepresentation; denial or revocation of the H-2B petition requesting supplemental workers; and debarment by DOL and DHS from the H-2B program and any other foreign labor programs administered by DOL. Falsifying information also may subject a petitioner/employer to other criminal and/or civil penalties.

DHS will not approve H-2B petitions filed in connection with the FY 2025 supplemental cap authority on or after October 1, 2025.

H-2B Portability

In addition to exercising its time-limited authority to make additional FY 2025 H-2B visas available, DHS is again providing additional flexibilities to H-2B petitioners under its general programmatic authority by allowing nonimmigrant workers in the United States³ in valid H-2B status and who are beneficiaries of non-frivolous H-2B petitions received on or after January 25, 2025, or who are the beneficiaries of non-frivolous H-2B petitions that are pending as of January 25, 2025, to begin work with a new employer after an H-2B petition (supported by a valid TLC) is filed and before the petition is approved, generally for a period of up to 60 days. However, such employment authorization would end 15 days after USCIS denies the H-2B petition or such petition is withdrawn. This H-2B

portability ends one year after the provision's effective date of January 25, 2025, in other words, at the end of January 24, 2026.⁴

II. Background

A. Legal Framework

The Immigration and Nationality Act (INA), as amended, establishes the H-2B nonimmigrant classification for a nonagricultural temporary worker “having a residence in a foreign country which he has no intention of abandoning who is coming temporarily to the United States to perform . . . temporary [non-agricultural] service or labor if unemployed persons capable of performing such service or labor cannot be found in this country.” INA section 101(a)(15)(H)(ii)(b), 8 U.S.C. 1101(a)(15)(H)(ii)(b). Employers must petition DHS in such form and containing such information as the Secretary prescribes for classification of prospective temporary workers as H-2B nonimmigrants. INA section 214(c)(1), 8 U.S.C. 1184(c)(1). Generally, DHS must approve this petition before the beneficiary can be considered eligible for an H-2B visa. In addition, the INA requires that “[t]he question of importing any alien as [an H-2B] nonimmigrant . . . in any specific case or specific cases shall be determined by [DHS],⁵ after consultation with appropriate agencies of the Government.” INA section 214(c)(1), 8 U.S.C. 1184(c)(1). The INA generally charges the Secretary of Homeland Security with the administration and enforcement of the immigration laws, and provides that the Secretary “shall establish such regulations . . . and perform such other acts as he deems necessary for carrying out his authority” under the INA. *See* INA section 103(a)(1), (3), 8 U.S.C. 1103(a)(1), (3); *see also* 6 U.S.C. 202(4) (charging the

Secretary with “[e]stablishing and administering . . . governing the granting of visas or other forms of permission . . . to enter the United States to individuals who are not a citizen or an alien lawfully admitted for permanent residence in the United States”). With respect to nonimmigrants in particular, the INA provides that “[t]he admission to the United States of any alien as a nonimmigrant shall be for such time and under such conditions as the [Secretary] may by regulations prescribe.” INA section 214(a)(1), 8 U.S.C. 1184(a)(1); *see also* INA section 274A(a)(1) and (h)(3), 8 U.S.C. 1324a(a)(1) and (h)(3) (prohibiting employment of noncitizens⁶ not authorized for employment). The Secretary may designate officers or employees to take and consider evidence concerning any matter that is material or relevant to the enforcement of the INA. INA sections 287(a)(1), (b), 8 U.S.C. 1357(a)(1), (b), and INA section 235(d)(3), 8 U.S.C. 1225(d)(3). INA section 291, 8 U.S.C. 1361, establishes that the petitioner or applicant for a visa or other immigration document bears the burden of proof with respect to eligibility and inadmissibility, including that the noncitizen is entitled to the immigration status being sought.

Finally, under section 101 of the HSA, 6 U.S.C. 111(b)(1)(F), a primary mission of DHS is to “ensure that the overall economic security of the United States is not diminished by efforts, activities, and programs aimed at securing the homeland.”

DHS regulations provide that an approved TLC from the U.S. Department of Labor (DOL), issued pursuant to regulations established at 20 CFR part 655, or from the Guam Department of Labor if the workers will be employed on Guam, must accompany an H-2B petition for temporary employment in the United States. 8 CFR 214.2(h)(6)(iii)(A) and (C) through (E), (h)(6)(iv)(A); *see also* INA section 103(a)(6), 8 U.S.C. 1103(a)(6). The TLC serves as DHS’s consultation with DOL with respect to whether a qualified U.S. worker is available to fill the petitioning H-2B employer’s job opportunity and whether a foreign worker’s employment in the job opportunity will adversely affect the wages and working conditions of similarly-employed U.S. workers. *See* INA section 214(c)(1), 8 U.S.C. 1184(c)(1); 8 CFR 214.2(h)(6)(iii)(A) and (D).

⁶ For purposes of this discussion, the Departments use the term “noncitizen” colloquially to be synonymous with the term “alien” as it is used in the Immigration and Nationality Act.

² *See Exercise of Time-Limited Authority To Increase the Numerical Limitation for Second Half of FY 2022 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking to Change Employers*, 87 FR 30334, 30335 (May 18, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking to Change Employers*, 87 FR 76816, 76818 (Dec. 15, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking to Change Employers*, 88 FR 80394 (Nov. 17, 2023).

³ The term “United States” includes the continental United States, Alaska, Hawaii, Puerto Rico, Guam, the Virgin Islands of the United States, and the Commonwealth of the Northern Mariana Islands. INA section 101(a)(38), 8 U.S.C. 1101(a)(38).

⁴ On September 20, 2023, DHS issued *Modernizing H-2 Program Requirements, Oversight, and Worker Protections*, Notice of Proposed Rulemaking (NPRM), 88 FR 65040, 65066. In that NPRM, DHS proposed to extend portability to H-2A and H-2B workers on a permanent basis. The Department’s proposal does not interfere with the portability provision of this rule. However, should DHS publish a final rule making H-2 portability permanent, any such provision would not expire on a specific date, unlike the portability provision made effective by this temporary final rule.

⁵ As of March 1, 2003, in accordance with section 1517 of Title XV of the Homeland Security Act of 2002 (HSA), Public Law 107–296, 116 Stat. 2135, any reference to the Attorney General in a provision of the Immigration and Nationality Act describing functions which were transferred from the Attorney General or other Department of Justice official to the Department of Homeland Security by the HSA “shall be deemed to refer to the Secretary” of Homeland Security. *See* 6 U.S.C. 557 (2003) (codifying HSA, Title XV, sec. 1517); 6 U.S.C. 542 note; 8 U.S.C. 1551 note.

To determine whether to issue a TLC, the Departments have established regulatory procedures under which DOL certifies whether a qualified U.S. worker is available to fill the job opportunity described in the employer's petition for a temporary nonagricultural worker, and whether a foreign worker's employment in the job opportunity will adversely affect the wages or working conditions of similarly employed U.S. workers. *See* 20 CFR part 655, subpart A. The regulations establish the process by which employers obtain a TLC and rights and obligations of workers and employers.

Once the petition is approved, under the INA and current DHS regulations, H-2B workers do not have employment authorization outside of the validity period listed on the approved petition unless otherwise authorized, and the workers are limited to employment with the H-2B petitioner. *See* 8 U.S.C. 1184(c)(1), 8 CFR 274a.12(b)(9). An employer or U.S. agent generally may submit a new H-2B petition, with a new, approved TLC, to USCIS to request an extension of H-2B nonimmigrant status for the validity of the TLC or for a period of up to 1 year. 8 CFR 214.2(h)(15)(ii)(C). Except as provided for in the preceding H-2B supplemental cap TFRs⁷ and in this rule, and except for certain professional athletes being traded among organizations,⁸ H-2B workers seeking to extend their status with a new employer may not begin employment with the new employer until the new H-2B petition is approved.

The INA also authorizes DHS to impose appropriate remedies against an employer for a substantial failure to meet the terms and conditions of employing an H-2B nonimmigrant worker, or for a willful misrepresentation of a material fact in a petition for an H-2B nonimmigrant worker. INA section 214(c)(14)(A), 8 U.S.C. 1184(c)(14)(A). The INA expressly authorizes DHS to delegate certain enforcement authority to DOL. INA section 214(c)(14)(B), 8 U.S.C.

1184(c)(14)(B); *see also* INA section 103(a)(6), 8 U.S.C. 1103(a)(6). DHS has delegated its authority under INA section 214(c)(14)(A)(i), 8 U.S.C. 1184(c)(14)(A)(i), to DOL. *See* DHS, Delegation of Authority to DOL under Section 214(c)(14)(A) of the INA (Jan. 16, 2009); *see also* 8 CFR 214.2(h)(6)(ix) (stating that DOL may investigate employers to enforce compliance with the conditions of an H-2B petition and a DOL-approved TLC). This enforcement authority has been delegated within DOL to the Wage and Hour Division (WHD), and is governed by regulations at 29 CFR part 503.

B. H-2B Numerical Limitations Under the INA

The maximum annual number ("statutory cap") of noncitizens who may be issued H-2B visas or otherwise provided H-2B nonimmigrant status to perform temporary nonagricultural work is 66,000, distributed semiannually beginning in October and April. *See* INA sections 214(g)(1)(B) and (g)(10), 8 U.S.C. 1184(g)(1)(B) and (g)(10). Accordingly, with certain exceptions as described below, up to 33,000 noncitizens may be issued H-2B visas or provided H-2B nonimmigrant status in the first half of a fiscal year, and the remaining annual allocation, including any unused nonimmigrant H-2B visas from the first half of a fiscal year, are available for employers seeking to hire H-2B workers during the second half of the fiscal year.⁹ If the number of petitions approved by DHS is insufficient to use all H-2B numbers in a given fiscal year, DHS cannot carry over the unused numbers for petition approvals for employment start dates beginning on or after the start of the next fiscal year.

In FYs 2005, 2006, 2007, and 2016, Congress exempted H-2B workers identified as returning workers from the annual H-2B cap of 66,000.¹⁰ A returning worker is an H-2B worker who was previously counted against the annual H-2B cap during a designated period of time.¹¹ For example, Congress designated that returning workers for FY

2016 needed to have been counted against the cap during FY 2013, 2014, or 2015 to qualify for the exemption.¹² DHS and the Department of State (DOS) worked together to confirm that all workers requested under the returning worker provision in fact were eligible for exemption from the annual cap (in other words, were issued an H-2B visa or provided H-2B status during one of the prior 3 fiscal years) and were otherwise eligible for H-2B classification.

Because of the strong demand for H-2B visas in recent years, the statutorily-limited semiannual visa allocation, the DOL regulatory requirement that employers apply for a TLC 75 to 90 days before the start date of work,¹³ and the DHS regulatory requirement that an approved TLC accompany all H-2B petitions,¹⁴ employers that wish to obtain visas for their workers under the semiannual allotment must act early to receive a TLC and file a petition with U.S. Citizenship and Immigration Services (USCIS). As a result, the date on which USCIS has reached sufficient H-2B petitions to reach the first half of the fiscal year statutory cap has generally trended earlier in recent years.¹⁵ For FY 2022, for the first time in more than a decade, USCIS received sufficient H-2B petitions to reach the first half of the fiscal year statutory cap before the start of the fiscal year.¹⁶ This

¹³ *See* 20 CFR 655.15(b).

¹⁴ *See* 8 CFR 214.2(h)(6)(vi)(A).

¹⁵ In fiscal years 2017 through 2021, USCIS received a sufficient number of H-2B petitions to reach or exceed the relevant first half statutory cap on January 10, 2017, December 15, 2017, December 6, 2018, November 15, 2019, and November 16, 2020, respectively. *See* USCIS, *USCIS Reaches the H-2B Cap for the First Half of Fiscal Year 2017*, <https://www.uscis.gov/archive/uscis-reaches-the-h-2b-cap-for-the-first-half-of-fiscal-year-2017> (Jan. 13, 2017); USCIS, *USCIS Reaches H-2B Cap for the First Half of Fiscal Year 2018*, <https://www.uscis.gov/archive/uscis-reaches-h-2b-cap-for-first-half-of-fy-2018> (Dec. 21, 2017); USCIS, *USCIS Reaches H-2B Cap for the First Half of Fiscal Year 2019*, <https://www.uscis.gov/news/news-releases/uscis-reaches-h-2b-cap-for-first-half-of-fy-2019> (Dec. 12, 2018); USCIS, *USCIS Reaches H-2B Cap for the First Half of Fiscal Year 2020*, <https://www.uscis.gov/news/news-releases/uscis-reaches-h-2b-cap-for-first-half-of-fy-2020> (Nov. 20, 2019); USCIS, *USCIS Reaches H-2B Cap for the First Half of Fiscal Year 2021*, <https://www.uscis.gov/news/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fy-2021> (Nov. 18, 2020).

¹⁶ On October 12, 2021, USCIS announced that it had received sufficient petitions to reach the congressionally mandated cap on H-2B visas for temporary nonagricultural workers for the first half of fiscal year 2022, and that September 30, 2021, was the final receipt date for new cap-subject H-2B worker petitions requesting an employment start date before April 1, 2022. *See* USCIS, *USCIS Reaches H-2B Cap for the First Half of Fiscal Year 2022*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fy-2022>.

Continued

⁷ For instance, the FY 2023 and FY 2024 H-2B supplemental cap TFRs both included a portability provision at 8 CFR 214.2(h)(29) and (31), respectively. Portability under 8 CFR 214.2(h)(31) remains in effect through January 24, 2025. *See e.g.*, *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 87 FR 76816 (Dec. 15, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 88 FR 80394 (Nov. 17, 2023).

⁸ *See* 8 CFR 214.2(h)(6)(vii) and 8 CFR 274a.12(b)(9).

⁹ The Federal Government's fiscal year runs from October 1 of the prior year through September 30 of the year being described. For example, fiscal year 2025 is from October 1, 2024, through September 30, 2025.

occurred even earlier in FY 2023, when USCIS received enough H–2B petitions to reach the FY 2023 first-half statutory cap on September 12, 2022.¹⁷ For FY 2024, USCIS received sufficient H–2B petitions to reach the first half of the fiscal year statutory cap on October 11, 2023.¹⁸ For FY 2025, USCIS received sufficient H–2B petitions to reach the first half of the fiscal year statutory cap on September 18, 2024.¹⁹ This trend in recent years of increased demand for H–2B workers is even more apparent in the second half of the fiscal year.²⁰

reaches-h-2b-cap-for-first-half-of-fy-2022 (Oct 12, 2021).

¹⁷ On September 14, 2022, USCIS announced that it had received sufficient petitions to reach the congressionally mandated cap on H–2B visas for temporary nonagricultural workers for the first half of fiscal year 2023, and that September 12, 2022, was the final receipt date for new cap-subject H–2B worker petitions requesting an employment start date before April 1, 2023. See USCIS, *USCIS Reaches H–2B Cap for the First Half of Fiscal Year 2023*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fy-2023> (Sept. 14, 2022).

¹⁸ On October 13, 2023, USCIS announced that it had received sufficient petitions to reach the congressionally mandated cap on H–2B visas for temporary nonagricultural workers for the first half of fiscal year 2024, and that October 11, 2023, was the final receipt date for new cap-subject H–2B worker petitions requesting an employment start date before April 1, 2024. See USCIS, *USCIS Reaches H–2B Cap for First Half of FY 2024*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fy-2024> (October 13, 2023). While this date was slightly later than the prior two years, the Departments note that DOL received 2,157 applications for the first half of the FY 2024 statutory cap during the initial three-day filing window of July 3–5, 2023, covering 40,947 worker positions; a 59% increase in TLC workload when compared to the same time period in 2022. See DOL, *OFLC Publishes List of Randomized H–2B Applications Submitted July 3–5, 2023, for Employers Seeking H–2B Workers Starting October 1, 2023*, <https://www.dol.gov/agencies/eta/foreign-labor/news> (July 10, 2023).

¹⁹ On September 19, 2024, USCIS announced that it had received sufficient petitions to reach the congressionally mandated cap on H–2B visas for temporary nonagricultural workers for the first half of fiscal year 2025, and that September 18, 2024, was the final receipt date for new cap-subject H–2B worker petitions requesting an employment start date before April 1, 2025. See USCIS, *USCIS Reaches H–2B Cap for First Half of Fiscal Year 2025*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fiscal-year-2025> (Sept. 19, 2024). While this date was slightly later than in fiscal year 2023, the Departments note that DOL received 2,158 applications for the first half of the FY 2025 statutory cap during the initial three-day filing window of July 3–5, 2024, covering 44,238 worker positions; a 59% increase in TLC workload and 48% increase in requested worker positions when compared to the same time period for fiscal year 2023. See DOL, *OFLC Publishes List of Randomized H–2B Applications Submitted July 3–5, 2024, for Employers Seeking H–2B Workers Starting October 1, 2024*, <https://www.dol.gov/agencies/eta/foreign-labor/news> (July 9, 2024).

²⁰ In recent years, DOL has received an increasing number of TLC applications for an increasing number of H–2B workers with April 1 start dates: DOL received 4,500 applications on January 1, 2018, covering more than 81,600 worker positions;

Congress, in recognition of historical and current demand has, for the last several fiscal years, authorized supplemental caps.²¹ The authorization for the current supplemental cap is under sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118–83 (Sept. 26, 2024) (FY 2025 authority), which extended the authorization previously provided in section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118–47 (Mar. 23, 2024) (“FY 2024 Omnibus”), as discussed below.

C. FY 2025 Public Law 118–83

On March 23, 2024, President Joseph Biden signed the FY 2024 Omnibus, which contains a provision, section 105 of Division G, Title I, permitting the Secretary of Homeland Security, under certain circumstances and after consultation with the Secretary of Labor, to increase the number of H–2B visas available to U.S. employers, notwithstanding the otherwise-

DOL received 5,276 applications by January 8, 2019, covering more than 96,400 worker positions; DOL received 5,677 applications during the initial three-day filing window in 2020 covering 99,362 worker positions; DOL received 5,377 applications during the initial three-day filing window in 2021 covering 96,641 worker positions; DOL received 7,875 applications by January 4, 2022, covering 136,555 worker positions; DOL received 8,693 applications during the initial three-day filing window in 2023, covering 142,796 worker positions; and DOL received 8,817 H–2B applications by January 8, 2024, covering 138,847 worker positions. See DOL, *Announcements*, <https://www.dol.gov/agencies/eta/foreign-labor/news>.

²¹ See section 543 of Division F of the Consolidated Appropriations Act, 2017, Public Law 115–31 (FY 2017 Omnibus); section 205 of Division M of the Consolidated Appropriations Act, 2018, Public Law 115–141 (FY 2018 Omnibus); section 105 of Division H of the Consolidated Appropriations Act, 2019, Public Law 116–6 (FY 2019 Omnibus); section 105 of Division I of the Further Consolidated Appropriations Act, 2020, Public Law 116–94 (FY 2020 Omnibus); section 105 of Division O of the Consolidated Appropriations Act, 2021, Public Law 116–260 (FY 2021 Omnibus); section 105 of Division O of the Consolidated Appropriations Act, 2021, FY 2021 Omnibus, sections 101 and 106(3) of Division A of Public Law 117–43, Continuing Appropriations Act, 2022, and section 101 of Division A of Public Law 117–70, Further Continuing Appropriations Act, 2022 through February 18, 2022 (together, FY 2022 authority); section 204 of Division O of the Consolidated Appropriations Act, 2022, Public Law 117–103 (FY 2022 Omnibus); section 303 of Division O of the Consolidated Appropriations Act, 2023, Public Law 117–328 (FY 2023 Omnibus); Division A of Public Law 118–15, Continuing Appropriations Act, 2024 and Other Extensions Act, through November 17, 2023, as well as section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118–47 (FY 2024 Omnibus), signed into law on March 23, 2024, and the Continuing Appropriations and Extensions Act, 2025, sections 101(6) and 106 of Division A, Title I of Public Law 118–83 (Sept. 26, 2024).

established statutory numerical limitation set forth in the INA.²² Specifically, section 105 provides that “the Secretary of Homeland Security, after consultation with the Secretary of Labor, and upon determining that the needs of American businesses cannot be satisfied in [FY] 2024 with United States workers who are willing, qualified, and able to perform temporary nonagricultural labor,” may increase the total number of noncitizens who may receive an H–2B visa in FY 2024 by the highest number of H–2B nonimmigrants who participated in the H–2B returning worker program in any fiscal year in which returning workers were exempt from the H–2B numerical limitation.

On September 25, 2024, Congress passed the FY 2025 authority, Public Law 118–83, which the President signed the next day. This law extends authorization under the same terms and conditions provided in section 105 of Division G, Title I of the FY 2024 Omnibus permitting the Secretary of Homeland Security to increase the number of H–2B visas available to U.S. employers in FY 2025, and expires on December 20, 2024.²³ In other words, Public Law 118–83 permits the Secretary of Homeland Security, after consultation with the Secretary of Labor, to provide up to 64,716 additional H–2B visas for FY 2025, notwithstanding the otherwise-established statutory numerical limitation set forth in the INA, for eligible employers whose employment needs for FY 2025 cannot be met.²⁴ Under the Public Law 118–83 authority, DHS and DOL are jointly publishing this

²² Further Consolidated Appropriations Act, 2024, Public Law 118–47 (Mar. 23, 2024).

²³ See secs. 101(6) and 106, Div. A, Title I, Pub. L. 118–83 (Sept. 26, 2024), and section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118–47 (Mar. 23, 2024) (FY 2024 Omnibus).

²⁴ Appropriations and authorities provided by the continuing resolutions are available for the needs of the entire fiscal year to which the continuing resolution applies, although DHS’s ability to obligate funds or exercise such authorities may lapse at the sunset of such resolution. See, e.g., Comments on Due Date and Amount of District of Columbia’s Contributions to Special Employee Retirement Funds, B–271304 (Comp. Gen. Mar. 19, 1996) (explaining that “a continuing resolution appropriates the full annual amount regardless of its period of duration. . . . Standard continuing resolution language makes it clear that the appropriations are available to the extent and in the manner which would be provided by the pertinent appropriations act that has yet to be enacted (unless otherwise provided in the continuing resolution).”). Consistent with this principle, DHS interprets the current continuing resolution to provide DHS with the ability to authorize additional H–2B visa numbers with respect to all of FY 2025 subject to the same terms and conditions as the FY 2024 authority at any time before the continuing resolution expires, notwithstanding the reference to FY 2024 in the FY 2024 Omnibus.

temporary final rule to authorize the issuance of no more than 64,716 additional visas for FY 2025 to those businesses that are suffering irreparable harm or will suffer impending irreparable harm, as attested by the employer on a new attestation form. The authority to approve H-2B petitions under this FY 2025 supplemental cap expires at the end of that fiscal year. Therefore, USCIS will not approve H-2B petitions filed in connection with this FY 2025 supplemental cap authority on or after October 1, 2025.

As noted above, since FY 2017, Congress has enacted a series of public laws providing the Secretary of Homeland Security with the discretionary authority to increase the H-2B cap beyond the annual numerical limitation set forth in section 214 of the INA. The previous statutory provisions were materially identical to section 105 of the FY 2024 Omnibus, which is the same authority provided for FY 2025 by the recent continuing resolution. During each fiscal year from FY 2017 through FY 2019, and FY 2021 through FY 2024, the Secretary of Homeland Security, after consulting with the Secretary of Labor, determined that some American businesses could not satisfy their needs in such year with U.S. workers who were willing, qualified, and able to perform temporary nonagricultural labor. On the basis of these determinations, on July 19, 2017, and May 31, 2018, DHS and DOL jointly published temporary final rules for FY 2017 and FY 2018, respectively, each of which allowed an increase of up to 15,000 additional H-2B visas for those businesses that attested that if they did not receive all of the workers requested on the Petition for a Nonimmigrant Worker (Form I-129), they were likely to suffer irreparable harm, in other words, suffer a permanent and severe financial loss.²⁵ USCIS approved a total of 12,294 workers for H-2B classification under petitions filed pursuant to the FY 2017 supplemental cap increase.²⁶ In FY 2018, USCIS received petitions for more than 15,000 beneficiaries during the first 5 business days of filing for the supplemental cap and held a lottery on June 7, 2018. The total number of H-2B workers approved

toward the FY 2018 supplemental cap increase was 15,788.²⁷ The vast majority of the H-2B petitions received under the FY 2017 and FY 2018 supplemental caps requested premium processing (Form I-907)²⁸ and were adjudicated within 15 calendar days.

On May 8, 2019, DHS and DOL jointly published a temporary final rule authorizing an increase of up to 30,000 additional H-2B visas for the remainder of FY 2019.²⁹ The additional visas were limited to returning workers who had been counted against the H-2B cap or were otherwise granted H-2B status in the previous three fiscal years, and for those businesses that attested to a level of need such that, if they did not receive all of the workers requested on the Form I-129, they were likely to suffer irreparable harm, in other words, suffer a permanent and severe financial loss.³⁰ The Secretary determined that limiting returning workers to those who were issued an H-2B visa or granted H-2B status in the past 3 fiscal years was appropriate, as it mirrored the standard that Congress designated in previous returning worker provisions. On June 5, 2019, approximately 30 days after the supplemental visas became available, USCIS announced that it received sufficient petitions filed pursuant to the FY 2019 supplemental cap increase. USCIS did not conduct a lottery for the FY 2019 supplemental cap increase. The total number of H-2B workers approved towards the FY 2019 supplemental cap increase was 32,680.³¹ The vast majority of these petitions requested premium processing and were adjudicated within 15 calendar days.

Although Congress provided the Secretary of Homeland Security with the discretionary authority to increase

the H-2B cap in FY 2020, the Secretary did not exercise that authority. DHS initially intended to exercise its authority and, on March 4, 2020, announced that it would make available 35,000 supplemental H-2B visas for the second half of the fiscal year.³² On March 13, 2020, then-President Trump declared a National Emergency concerning COVID-19, a communicable disease caused by the coronavirus SARS-CoV-2.³³ On April 2, 2020, DHS announced that the rule to increase the H-2B cap was on hold due to economic circumstances, and that DHS would not release additional H-2B visas until further notice.³⁴ DHS also noted that the Department of State had suspended routine visa services.³⁵

In FY 2021, DHS in consultation with DOL determined it was appropriate to increase the H-2B cap for FY 2021 coupled with additional protections (for example, post-adjudication audits, investigations, and compliance checks), based on the demand for H-2B workers in the second half of FY 2021, continuing economic growth, the improving job market, and increased visa processing capacity by the Department of State. Accordingly, on May 25, 2021, DHS and DOL jointly published a temporary final rule authorizing an increase of up to 22,000 additional H-2B visas for the remainder of FY 2021.³⁶ The supplemental visas were available only to employers that attested they were likely to suffer irreparable harm without the additional workers. The allocation of 22,000 additional H-2B visas under that rule consisted of 16,000 visas available only to H-2B returning workers from one of the last three fiscal years (FY 2018, 2019, or 2020) and 6,000 visas that were initially reserved for nationals of the Northern Central American countries of El Salvador, Guatemala, and Honduras, who were exempt from the returning worker requirement. By August 13, 2021, USCIS had received enough petitions for returning workers to reach the additional 22,000 H-2B visas made

³⁶ See *Exercise of Time-Limited Authority To Increase the Fiscal Year 2021 Numerical Limitation for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 86 FR 28198 (May 25, 2021).

available under the FY 2021 H–2B supplemental visa temporary final rule.³⁷ The total number of H–2B workers approved towards the FY 2021 supplemental cap increase was 30,707.³⁸ This total number included approved H–2B petitions for 23,937 returning workers, as well as 6,805 beneficiaries from the Northern Central American countries.³⁹

On January 28, 2022, DHS and DOL jointly published a temporary final rule authorizing an increase of up to 20,000 additional H–2B visas for FY 2022 positions with start dates on or before March 31, 2022.⁴⁰ These supplemental visas were available only to employers that attested they were suffering or would suffer impending irreparable harm without the additional workers. The allocation of 20,000 additional H–2B visas under that rule consisted of 13,500 visas available only to H–2B returning workers from one of the last three fiscal years (FY 2019, 2020, or 2021) and 6,500 visas reserved for Salvadoran, Guatemalan, Honduran, and Haitian nationals, who were exempted from the returning worker requirement. USCIS data show that the total number of H–2B workers approved towards the first half FY 2022 supplemental cap increase was 17,381, including 14,150 workers under the returning worker allocation, as well as 3,231 workers approved towards the Haitian/Northern Central American allocation.⁴¹

For the second half of FY 2022, DHS in consultation with DOL determined it was appropriate to increase the H–2B

cap for FY 2022 positions with start dates beginning on April 1, 2022 through September 30, 2022, based on the continued demand for H–2B workers for the remainder of FY 2022, continuing economic growth, increased labor demand, and increased visa processing capacity by the Department of State. Accordingly, on May 18, 2022, DHS and DOL jointly published a temporary final rule authorizing an increase of no more than 35,000 additional H–2B visas for the second half of FY 2022.⁴² As in the January 2022 TFR, the supplemental visas were available only to employers that attested they were suffering or would suffer impending irreparable harm without the additional workers. The allocation of 35,000 additional H–2B visas under the rule applicable to the second half of FY 2022 consisted of 23,500 visas available only to H–2B returning workers from one of the last three fiscal years (FY 2019, 2020, or 2021) and 11,500 visas reserved for Salvadoran, Guatemalan, Honduran, and Haitian nationals, who were exempted from the returning worker requirement. By May 25, 2022, USCIS had received enough petitions for returning workers to reach the additional 23,500 H–2B visas made available under the second half FY 2022 H–2B supplemental visa temporary final rule.⁴³ USCIS data show that the total number of H–2B workers approved towards the second half FY 2022 supplemental cap increase was 43,798, including 31,480 workers under the returning worker allocation, as well as 12,318 workers approved towards the Haitian/Northern Central American allocation.⁴⁴

On December 15, 2022, DHS and DOL jointly published a temporary final rule authorizing an increase of up to 64,716 additional H–2B visas for the entirety of FY 2023.⁴⁵ As in the FY 2022 TFRs, the

additional visas were available only to employers that attested they were suffering or would suffer impending irreparable harm without the additional workers. The 64,716 additional visas included 44,716 reserved for returning workers from one of the last three fiscal years (FY 2020, 2021, or 2022), which were distributed in several allocations based on date of employer need: 18,216 for employers with requested employment start dates on or before March 31, 2023; 16,500 for employers with requested employment start dates from April 1, 2023, to May 14, 2023 (early second half allocation); and 10,000 for employers with requested employment start dates from May 15, 2023, to Sept. 30, 2023 (late second half allocation). The remaining 20,000 visas were available for the entirety of FY 2023, and were set aside for nationals of El Salvador, Guatemala, Honduras, and Haiti, who were exempt from the returning worker requirement. By January 30, 2023, USCIS received enough petitions to reach the cap for the additional 18,216 H–2B visas made available for returning workers for the first half of fiscal year, and by March 30, 2023, USCIS received enough petitions to reach the cap for the additional 16,500 H–2B visas made available for returning workers for the early second half of fiscal year.⁴⁶ USCIS data show that the total number of H–2B workers approved towards the FY 2023 supplemental cap increase was 78,302, including 54,470 workers under the returning worker allocation, as well as 23,832 workers approved towards the Haitian/Northern Central American allocation.⁴⁷

On November 17, 2023, DHS and DOL jointly published a temporary final rule authorizing an increase of up to 64,716 additional H–2B visas for the entirety of

FY 2024.⁴⁸ As in the FY 2023 TFR, the additional visas were available only to employers that attested they were suffering or would suffer impending irreparable harm without the additional workers. The 64,716 additional visas included 44,716 reserved for returning workers from one of the last three fiscal years (FY 2021, 2022, or 2023), which were distributed in several allocations based on date of employer need: 20,716 for employers with requested employment start dates on or before March 31, 2024; 19,000 for employers with requested employment start dates from April 1, 2024, to May 14, 2024 (early second half allocation); and 5,000 for employers with requested employment start dates from May 15, 2024, to September 30, 2024 (late second half allocation). The remaining 20,000 visas were available for the entirety of FY 2024, and were set aside for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica, who were exempt from the returning worker requirement. By January 9, 2024, USCIS received enough petitions to reach the cap for the additional 20,716 H–2B visas made available for returning workers for the first half of fiscal year, and by April 17, 2024, USCIS received enough petitions to reach the cap for the additional 19,000 H–2B visas made available for returning workers for the early second half of fiscal year.⁴⁹ USCIS data show that the total number of H–2B workers approved towards the FY 2024 supplemental cap increase was 85,577, including 61,102 workers under the returning worker allocation, as well as 24,475 workers approved towards the country-specific allocation.⁵⁰

Once again, DHS, in consultation with DOL, believes that it is appropriate to increase the H–2B cap for FY 2025 based on the demand for H–2B workers

in the first half of FY 2025, anticipated demand for the second half of FY 2025, recent economic growth, and strong labor demand.⁵¹ Similar to the preceding temporary rule, DHS and DOL also believe that it is appropriate and important to couple this cap increase with additional worker protections, as described below.

D. Joint Issuance of the Final Rule

As in prior years, DHS and DOL (the Departments) have determined that it is appropriate to jointly issue this temporary final rule.⁵² The determination to issue the temporary final rule jointly follows conflicting court decisions concerning DOL's authority to independently issue legislative rules to carry out its consultative and delegated functions pertaining to the H–2B program under the INA.⁵³ Although DHS and DOL each have authority to independently issue rules implementing their respective

⁵¹ The term “strong labor demand” in this context relies on the most recently released figure from a Bureau of Labor Statistics (BLS) survey at the time this TFR was written. The BLS Job Openings and Labor Turnover Survey (JOLTS) reports 9.6 million job openings in August 2023. See DOL, BLS, Job Openings and Labor Turnover—August 2023, https://www.bls.gov/news.release/archives/jolts_10032023.htm.

⁵² See *Exercise of Time-Limited Authority To Increase the Fiscal Year 2017 Numerical Limitation for the H–2B Temporary Nonagricultural Worker Program*, 82 FR 32987 (Jul. 19, 2017); *Exercise of Time-Limited Authority To Increase the Fiscal Year 2018 Numerical Limitation for the H–2B Temporary Nonagricultural Worker Program*, 83 FR 24905 (May 31, 2018); *Exercise of Time-Limited Authority To Increase the Fiscal Year 2019 Numerical Limitation for the H–2B Temporary Nonagricultural Worker Program*, 84 FR 20005 (May 8, 2019); *Exercise of Time-Limited Authority To Increase the Fiscal Year 2021 Numerical Limitation for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 86 FR 28198 (May 25, 2021); *Exercise of Time-Limited Authority To Increase the Fiscal Year 2022 Numerical Limitation for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 87 FR 4722 (Jan. 28, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for Second Half of FY 2022 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 87 FR 30334 (May 18, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 87 FR 76816 (Dec. 15, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 88 FR 80394 (Nov. 17, 2023).

⁵³ See *Outdoor Amusement Bus. Ass'n v. Dep't of Homeland Sec.*, 983 F.3d 671 (4th Cir. 2020), cert. denied, 142 S. Ct. 425 (2021); see also *Temporary Non-Agricultural Employment of H–2B Aliens in the United States*, 80 FR 24041, 24045 (Apr. 29, 2015).

duties under the H–2B program,⁵⁴ the Departments are implementing the numerical increase in this manner to ensure there can be no question about the authority underlying the administration and enforcement of the temporary cap increase. This approach is consistent with rules implementing DOL's general consultative role under INA section 214(c)(1), 8 U.S.C. 1184(c)(1), and delegated functions under INA sections 103(a)(6) and 214(c)(14)(B), 8 U.S.C. 1103(a)(6), 1184(c)(14)(B).⁵⁵

III. Discussion

A. Statutory Determination

Following consultation with the Secretary of Labor, the Secretary of Homeland Security has determined that some U.S. employers cannot satisfy their needs in FY 2025 with U.S. workers who are willing, qualified, and able to perform temporary nonagricultural labor. In accordance with the FY 2025 continuing resolution extending the authority provided in section 105 of the FY 2024 Omnibus, the Secretary of Homeland Security has determined that it is appropriate, for the reasons stated below, to raise the numerical limitation on H–2B nonimmigrant visas through the end of FY 2025 by up to 64,716 additional visas for those American businesses that attest that they are suffering irreparable harm or will suffer impending irreparable harm, in other words, a permanent and severe financial loss, without the ability to employ all of the H–2B workers requested on their petition. These businesses must retain documentation, as described below, supporting this attestation.

As in connection with H–2B supplemental visa temporary final rules in recent years, and consistent with existing authority, DHS and DOL intend to conduct a significant number of audits with respect to petitions filed under this TFR requesting supplemental H–2B visas during the period of temporary need. The Departments will use their discretion to select which petitions to audit, and the Departments will use the audits to verify compliance with H–2B program requirements, including the irreparable harm standard as well as other key worker protection provisions implemented through this rule. If the Departments find that an employer's documentation does not meet the irreparable harm standard, or that the employer fails to provide

⁵⁴ See *Outdoor Amusement Bus. Ass'n*, 983 F.3d at 684–89.

⁴⁸ *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 88 FR 80394 (Nov. 17, 2023).

⁴⁹ See USCIS, *Cap Reached for Additional Returning Worker H–2B Visas for the First Half of FY 2024*, <https://www.uscis.gov/newsroom/alerts/cap-reached-for-additional-returning-worker-h-2b-visas-for-the-first-half-of-fy-2024> (Jan. 12, 2024); USCIS, *Cap Reached for Additional Returning Worker H–2B Visas for the Early Second Half of FY 2024*, <https://www.uscis.gov/newsroom/alerts/cap-reached-for-additional-returning-worker-h-2b-visas-for-the-early-second-half-of-fy-2024> (Apr. 18, 2024).

⁵⁰ The number of approved workers exceeded the number of additional visas authorized for FY 2024 to allow for the possibility that some approved workers would either not seek a visa or admission, would not be issued a visa, or would not be admitted to the United States. See DHS, USCIS, Office of Performance and Quality, ELIS, CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2024, PAER0016221.

evidence demonstrating irreparable harm or comply with the audit process, the Departments may consider it to be a willful violation resulting in an adverse agency action against the employer, including revocation of the TLC or program debarment. Of the audits completed so far, some audits conducted of employers that received visas under past supplemental caps revealed concerns surrounding payment of the promised wage, employment of returning workers, documentation of irreparable harm, need for all requested workers, employment for the reported number of hours and employment at the listed location, recruitment of U.S. workers, and cooperation with the audit process, which may warrant further review and action.

Based on the insufficient responses and evidence generally provided in response to these audits, which indicate a lack of compliance with the audit process and program requirements, DOL has added clarifying language to the regulatory text at 20 CFR 655.64(a)(1) and (a)(5) to provide more information on how employers can provide sufficient evidence to establish irreparable harm in response to an audit or investigation and further explain how failing to respond to audits or failing to establish compliance with H-2B program requirements can result in debarment from the program and all programs administered by OFLC, consistent with the Department's regulations at 20 CFR 655.70 and 20 CFR 655.73. While the requirements remain the same, DOL believes adding these clarifications would benefit the public and regulated community at large.

As he did in recent years, the Secretary of Homeland Security has also again determined, following consultation with the Secretary of Labor, that for certain employers, additional recruitment steps are necessary to confirm that there are no qualified U.S. workers available for the positions. In addition, the Secretary of Homeland Security has determined, following consultation with the Secretary of Labor, that the supplemental visas will be limited to returning workers, with the exception that up to 20,000 of the 64,716 visas will be exempt from the returning worker requirement and, similar to FY 2024, will be reserved for H-2B workers who are nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica.⁵⁶ DHS is reserving these

20,000 H-2B visas for nationals of these countries to further the United States' objectives in the Western Hemisphere to manage irregular migration through various lines of efforts including increasing and expanding access to lawful pathways for nationals of countries that have extensively collaborated with the United States on migration issues, such as through endorsing the Los Angeles Declaration on Migration and Protection (L.A. Declaration),⁵⁷ joining the United States to ramp up efforts to address the irregular migration flows through the Darien,⁵⁸ and hosting Safe Mobility Offices (SMOs) so that migrants do not trek north to the U.S. Southwest Border.⁵⁹ The 20,000 set-aside will also

2B allocations) because noncitizens covered by the special allocation under section 105 of the FY 2024 Omnibus are not "subject to the numerical limitations of [section 214(g)(1)]." See, e.g., INA section 214(g)(3); INA section 214(g)(10); Continuing Appropriations Act, 2025, div. A, sec. 101(6) (extending the authority provided in FY 2024 Omnibus div. G, sec. 3105 ("Notwithstanding the numerical limitation set forth in section 214(g)(1)(B) of the [INA]")).

⁶⁰ See Section 3(c) of E.O. 14010, *Creating a Comprehensive Regional Framework To Address the Causes of Migration, To Manage Migration Throughout North and Central America, and To Provide Safe and Orderly Processing of Asylum Seekers at the United States Border*, signed February 2, 2021, <https://www.govinfo.gov/content/pkg/FR-2021-02-05/pdf/2021-02561.pdf>. E.O. 14010 referred to the three countries of El Salvador, Guatemala, and Honduras as the "Northern Triangle," but this rule refers to these countries collectively as the Northern Central American countries.

⁶¹ See https://twitter.com/DHSGov/status/1580310211931144194?ref_src=twsrc%5Etfw (this supplemental allocation to workers from Haiti, Honduras, Guatemala, and El Salvador "advances the Biden Administration's pledge, under the L.A. Declaration to expand legal pathways as an alternative to irregular migration"); The White House, *Fact Sheet: The Los Angeles Declaration on Migration and Protection U.S. Government and Foreign Partner Deliverables*, <https://www.whitehouse.gov/briefing-room/statements-releases/2022/06/10/fact-sheet-the-los-angeles-declaration-on-migration-and-protection-u-s-government-and-foreign-partner-deliverables/> (addressing several measures, including the H-2B allocation for nationals of Haiti, as part of "the President's commitment to support the people of Haiti."). We also note Congress' statement, in a provision within the FY 2022 Omnibus, that it is the policy of the United States to support the sustainable rebuilding and development of Haiti. See Section 102 of Division V of the Consolidated Appropriations Act, 2022, Public Law 117-103. See also DHS, *Identification of Foreign Countries Whose Nationals Are Eligible To Participate in the H-2A and H-2B Nonimmigrant Worker Programs*, 86 FR 62562 (Nov. 10, 2021) (sustainable development and the stability of Haiti is vital to the interests of the United States as a close partner and neighbor).

⁶² While USCIS approved a greater number of beneficiaries from the Northern Central American

⁵⁶ These conditions and limitations are not inconsistent with sections 214(g)(3) ("first in, first out" H-2B processing) and (g)(10) (fiscal year H-

the FY 2022 first half supplemental allocation,⁶³ 12,318 beneficiaries for the second half of the fiscal year FY 2022, and 23,832 beneficiaries under the FY 2023 allocation.⁶⁴ DHS also observed robust employer interest in response to the FY 2024 H–2B supplemental visa allocation for Salvadoran, Guatemalan, Honduran, Haitian, Colombian, Ecuadoran, and Costa Rican nationals. For FY 2024, USCIS approved 24,475 beneficiaries under the country-specific allocation.⁶⁵ In addition, the Biden-Harris administration has conducted outreach efforts to ensure U.S. businesses are able to address their labor needs by utilizing this country specific allocation for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica while at the same time promoting the availability of this lawful pathway for nationals of these countries seeking economic opportunity in the United States.⁶⁶

countries than the 6,000 visas allocated under the FY 2021 supplemental cap for those countries, the Department of State issued 3,079 visas to nationals from those countries. See DHS, USCIS, Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data, queried 10/2023, TRK 13122, H–2B Visa Issuance Report September 30, 2023. This discrepancy can be attributed to adverse impacts on consular processing caused by the COVID–19 pandemic, travel restrictions, as well as lack of readily available processes to efficiently match workers from Northern Central American countries with U.S. recruiters/employers on an expedited timeline.

⁶³ See DHS, USCIS, Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data, queried 10/2023, TRK 13122, H–2B Visa Issuance Report September 30, 2023.

⁶⁴ See DHS, USCIS, Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data, queried 10/2023, TRK 13122, H–2B Visa Issuance Report September 30, 2023. While USCIS approved a greater number of beneficiaries from the Northern Central American countries and Haiti than the 11,500 visas allocated under the FY 2022 second half supplemental cap for those countries, the Department of State issued approximately 7,405 visas to nationals from those countries. Similarly, while USCIS approved a greater number of beneficiaries from the Northern Central American countries and Haiti than the 20,000 visas allocated under the FY 2023 supplemental cap for those countries, the Department of State issued approximately 16,713 visas to nationals from those countries.

⁶⁵ See Department of Homeland Security, U.S. Citizenship and Immigration Services, Office of Performance and Quality, ELIS, CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2024, PAER0016221. While USCIS approved a greater number of beneficiaries under the country-specific allocation than the 20,000 visas allocated, the Department of State issued approximately 17,695 visas under this allocation. *Id.*

⁶⁶ See, e.g., USAID, *Administrator Samantha Power at the Summit of the Americas Fair Recruitment and H–2 Visa Side Event*, <https://www.usaid.gov/news-information/speeches/jun-9-2022-administrator-samantha-power-summit-americas-fair-recruitment-and-h-2-visa> (June 9, 2022) (“Our combined efforts [with the labor ministries in Honduras and Guatemala, and the Foreign Ministry in El Salvador] . . . resulted in a

DHS will not accept and will reject petitions submitted for the country-specific allocation with a date of need on or after April 1, 2025, that are received earlier than 15 days after the INA section 214(g) cap for the second half of FY 2025 is met or are received after the applicable numerical limitation has been reached or after September 15, 2025. Requiring petitioners to wait to submit H–2B supplemental cap petitions with start dates of need on or after April 1, 2025, is consistent with the supplemental cap authority in section 105 of the FY 2024 Omnibus, as extended to FY 2025 by Public Law 118–83 (September 26, 2024), and will facilitate the orderly intake and processing of supplemental cap petitions for the country-specific allocation. As discussed above, similar limitations apply to the intake and processing of returning worker petitions with start dates of need on or after April 1, 2025.

Similar to previous temporary final rules, the Secretary of Homeland Security has also determined to limit the supplemental visas to H–2B returning workers,⁶⁷ unless the employer indicates on the new attestation form that it is requesting workers who are nationals of one of the specified countries and who are therefore counted towards the 20,000 country-specific allocation regardless of whether they are new or returning workers. If the 20,000 country-specific allocation is reached and visas remain available under the returning worker cap, USCIS would reject a petition seeking workers under the 20,000 allocation and return any fees submitted to the petitioner. In such a case, a petitioner may continue to request workers who are nationals of one of these countries, but the petitioner must file a new Form I–129 petition, with fee, and attest that these noncitizens will be returning workers, in other words, workers who were issued H–2B visas or were otherwise granted H–2B status in FY 2022, 2023, or 2024.⁶⁸ Like the

record number of H–2 visas issued in 2021, including a nearly forty percent increase over the pre-pandemic levels in H–2B visas issued across all three countries.”); USCIS, *H–2B Visa Program: Overview and Country Specific Allocations Recruitment Webinar*, <https://www.uscis.gov/outreach/upcoming-national-engagements/h-2b-visa-program-overview-and-country-specific-allocations-recruitment-webinar> (March 7, 2024).

⁶⁷ For purposes of this rule, these returning workers could have been H–2B cap exempt or extended H–2B status in FY 2022, 2023, or 2024. Additionally, they may have been previously counted against the annual H–2B cap of 66,000 visas during FY 2022, 2023, or 2024, or the supplemental caps in FY 2022, 2023, or 2024.

⁶⁸ The returning worker allocations are for workers who were issued H–2B visas or held H–2B

temporary final rules in recent years, if the 20,000 returning worker exemption cap for specific nationals remains unfilled, DHS will *not* make unfilled visas reserved for these nationals available to the general returning worker cap. The DHS decision not to make available unfilled visas from the country-specific allocation to the general supplemental cap for returning workers is consistent with the administration’s goal of providing a lawful pathway for such nationals to temporarily work in the United States. To that end, not permitting rollover into the returning worker allocation provides employers with more time to petition for, and bring in, workers from these countries and encourages full use of the 20,000 country-specific allocation to meet employer needs. This, in turn, contributes to our country’s efforts to promote and improve safety, security and economic stability in these countries to help stem the flow of irregular migration to the United States.

The Secretary of Homeland Security’s determination to increase the numerical limitation is based, in part, on the conclusion that some businesses are suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all of the H–2B workers requested on their petition. As stated in prior TFRs, in the past, members of Congress have informed the Secretaries of Homeland Security and Labor about the needs of some U.S. businesses for H–2B workers (after the statutory cap for the relevant half of the fiscal year has been reached) and about the potentially negative impact on state and local economies if the cap is not increased.⁶⁹ U.S. businesses, chambers of commerce, employer organizations, and state and local elected officials have also previously expressed concerns to the DHS and Labor Secretaries regarding the unavailability of H–2B visas after the statutory cap was reached.⁷⁰ In addition, while DHS did not request comments for the FY 2024 TFR, several commenters on the FY 2023 TFR supported the Departments’ decision to publish one rule covering the entire

status in fiscal years 2022, 2023, or 2024, regardless of country of nationality. Therefore, a petitioner may choose to petition for Salvadoran, Guatemalan, Honduran, Haitian, Colombian, Ecuadorian, or Costa Rican nationals who meet this requirement under an available returning worker allocation, regardless of whether the separate 20,000 allocation for these nationals has been reached.

⁶⁹ See, e.g., *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 87 FR 76816 (Dec. 15, 2022).

⁷⁰ These letters were retained in the administrative record for those rules.

fiscal year for 2023, and urged the Departments to once again publish one rule covering the entire fiscal year for 2024 in order to save time in the second half of the fiscal year, conserve limited agency resources, and reduce uncertainty for employers.⁷¹

After considering the full range of evidence and diverse points of view, the Secretary of Homeland Security has deemed it appropriate to take action to prevent further severe and permanent financial loss for those employers currently suffering irreparable harm and to avoid impending irreparable harm for other employers unable to obtain H-2B workers under the statutory cap, including potential wage and job losses by their U.S. workers, as well as other adverse downstream economic effects.⁷² At the same time, the Secretary of Homeland Security believes it is appropriate to condition receipt of supplemental visas on adherence to additional worker protections, as discussed below.

The decision to afford the benefits of this temporary cap increase to U.S. businesses that need H-2B workers because they are suffering irreparable harm already or will suffer impending irreparable harm, and that will comply with additional worker protections, rather than applying the cap increase to any and all businesses seeking temporary workers, is consistent with DHS's time-limited authority to increase the cap, as explained below. The Secretary of Homeland Security, in implementing section 105 of the FY 2024 Omnibus, as extended by Public

Law 118–83, and determining the scope of any such increase, has broad discretion, following consultation with the Secretary of Labor, to identify the business needs that are most relevant, while bearing in mind the need to protect U.S. workers.⁷³ Within that context, for the below reasons, the Secretary of Homeland Security has determined to allow an overall increase of up to 64,716 additional visas solely for the businesses facing permanent, severe financial loss or those who will face such loss in the near future.⁷⁴

First, as explained in earlier TFRs, DHS has long interpreted the reference to “the needs of American businesses” reiterated in section 105 of the FY 2024 Omnibus, as extended by Public Law 118–83, as describing a need different from the need ordinarily required of employers in petitioning for an H-2B worker. Under the generally applicable H-2B program, each individual H-2B employer must demonstrate that it has a temporary need for the services or labor for which it seeks to hire H-2B workers. *See* 8 CFR 214.2(h)(6)(ii); 20 CFR 655.6. The use of the phrase “needs of American businesses,” which is not found in INA section 101(a)(15)(H)(ii)(b), 8 U.S.C. 1101(a)(15)(H)(ii)(b), and the regulations governing the standard H-2B cap, authorizes the Secretary of Homeland

Security in allocating additional H-2B visas under section 105 of the FY 2024 Omnibus, as extended by Public Law 118–83, to require that employers establish a need above and beyond the normal standard under the H-2B program, that is, an inability to find sufficient qualified U.S. workers willing and available to perform temporary services or labor and that the employment of the H-2B worker will not adversely affect the wages and working conditions of U.S. workers, *see* 8 CFR 214.2(h)(6)(i)(A). DOL concurs with this interpretation. Accordingly, the Secretaries have determined that it is appropriate, within the limits discussed below, to tailor the availability of this temporary cap increase to those businesses that are suffering irreparable harm or will suffer impending irreparable harm, in other words, those facing permanent and severe financial loss.

Second, the approach set forth in this rule, which is similar to the implementation of the supplemental caps in previous fiscal years, provides protections against adverse effects on U.S. workers that may result from a cap increase, including, as in previous rules, requiring employers seeking H-2B workers under the supplemental cap to engage in additional recruitment efforts for U.S. workers.

In sum, this rule increases the numerical limitation by up to 64,716 additional H-2B visas for the entirety of FY 2025, but also restricts the availability of those additional visas by prioritizing only the most significant business needs, and limiting eligibility to H-2B returning workers, unless the worker is a national of one of the countries included in the 20,000 country-specific allocation that is exempt from the returning worker limitation. This rule also distributes the supplemental visas in several allocations to assist U.S. businesses that need workers to begin work on different start dates. These provisions are each described in turn below.

B. Numerical Increase and Allocations for Fiscal Year 2025

Making the Maximum Number of Visas Available

The increase of up to 64,716 visas will help address the urgent needs of eligible employers for additional H-2B workers for those employers with employment needs in fiscal year 2025.⁷⁵ The

⁷¹ See the docket for *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 87 FR 76816 (Dec. 15, 2022) for access to these comments.

⁷³ Congress has delegated to DHS the broad authority to administer and enforce the immigration laws in title 8 of the U.S.C. as well as other immigration and naturalization laws. *See, e.g.*, INA sec. 103(a)(1), 214(a)(1), (c)(1); 8 U.S.C. 1103(a)(1), 1184(a)(1), (c)(1); *see Loper Bright Enterprises v. Raimondo*, 144 S. Ct. 2244, 2263 (2024) (“In a case involving an agency, of course, the statute’s meaning may well be that the agency is authorized to exercise a degree of discretion. Congress has often enacted such statutes. For example, some statutes ‘expressly delegate’ to an agency the authority to give meaning to a particular statutory term. Others empower an agency to prescribe rules to fill up the details of a statutory scheme, or to regulate subject to the limits imposed by a term or phrase that leaves agencies with flexibility, such as ‘appropriate’ or ‘reasonable.’”) (cleaned up and internal citations omitted).

⁷⁴ The statute explicitly provides that the Secretary of Homeland Security, after consulting with the Secretary of Labor, and upon the determination that the needs of United States businesses cannot be satisfied during fiscal year 2025 with U.S. workers to perform temporary nonagricultural labor, may determine the appropriate number of H-2B supplemental visas to be issued in fiscal year 2025, limited to the highest number of H-2B nonimmigrants who participated in the H-2B returning worker program. Consistent with the discretion afforded thereunder by Congress, and commensurate with authorities including those afforded under section 103 and 214 of the INA, 8 U.S.C. 1103 and 1184, DHS, in consultation with DOL, is making available additional H-2B temporary nonagricultural worker visas for fiscal year 2025, as in past years, to employers who are suffering irreparable harm or will suffer impending irreparable harm. *See Loper Bright Enterprises v. Raimondo*, 144 S. Ct. at 2263 (2024).

⁷⁵ In contrast with section 214(g)(1) of the INA, 8 U.S.C. 1184(g)(1), which establishes a cap on the number of individuals who may be issued visas or otherwise provided H-2B status (emphasis added), and section 214(g)(10) of the INA, 8 U.S.C.

determination to make available up to 64,716 additional H–2B visas reflects a balancing of a number of factors including: the demand for H–2B visas during the first half of FY 2025 and expected demand for the second half of FY 2025; current labor market conditions; the general trend of increased demand for H–2B visas from FY 2017 to FY 2024; H–2B returning worker data; the amount of time for employers to hire and obtain H–2B workers in this fiscal year; and the objectives of the Biden-Harris Administration to address the root causes of irregular migration as outlined in E.O. 14010 and the L.A. Declaration. DHS believes the numerical increase both addresses the needs of U.S. businesses and, as explained in more detail below, furthers the foreign policy interests of the United States.

Section 105 of the FY 2024 Omnibus, as extended by Public Law 118–83, sets the highest number of H–2B returning workers who were exempt from the cap in certain previous years as the maximum limit for any increase in the H–2B numerical limitation for FY 2025.⁷⁶ Consistent with the statute's reference to H–2B returning workers, in determining the appropriate number by which to increase the H–2B numerical limitation, the Secretary of Homeland Security focused on the number of visas allocated to such workers in years in which Congress enacted returning worker exemptions from the H–2B numerical limitation. During each of the

1184(g)(10), which imposes a first half of the fiscal year cap on H–2B issuance with respect to the number of individuals who may be issued visas *or are accorded [H–2B] status*" (emphasis added), section 105 of the FY 2024 Omnibus only authorizes DHS to increase the number of available H–2B visas. Accordingly, DHS will not permit individuals authorized for H–2B status pursuant to an H–2B petition approved under section 105 of the FY 2024 Omnibus to change to H–2B status from another nonimmigrant status. See INA section 248, 8 U.S.C. 1258; see also 8 CFR part 248. If a petitioner files a petition seeking H–2B workers in accordance with this rule and requests a change of status on behalf of someone in the United States, the change of status request will be denied, but the petition will be adjudicated in accordance with applicable DHS regulations. Any noncitizen authorized for H–2B status under the approved petition would need to obtain the necessary H–2B visa at a consular post abroad and then seek admission to the United States in H–2B status at a port of entry.

⁷⁶ During fiscal years 2005 to 2007, and 2016, Congress enacted "returning worker" exemptions to the H–2B visa cap, allowing workers who were counted against the H–2B cap in one of the three preceding fiscal years not to be counted against the upcoming fiscal year cap. Save Our Small and Seasonal Businesses Act of 2005, Public Law 109–13, Sec. 402 (May 11, 2005); John Warner National Defense Authorization Act, Public Law 109–364, Sec. 1074 (Oct. 17, 2006); Consolidated Appropriations Act of 2016, Public Law 114–113, Sec. 565 (Dec. 18, 2015).

years the returning worker provision was in force, U.S. employers' standard business needs for H–2B workers exceeded the statutory 66,000 cap. The highest number of H–2B returning workers approved was 64,716 in FY 2007. In setting the number of additional H–2B visas to be made available for FY 2025, DHS considered this number, overall indications of increased need, and the availability of U.S. workers, as discussed below. On the basis of these considerations, DHS determined that it is appropriate to make available up to 64,716 additional visas, which is the maximum allowed, under the FY 2025 supplemental cap authority. The Secretary further considered the objectives the Biden-Harris Administration to address the root causes of irregular migration consistent with the E.O. 14010 and the L.A. Declaration, and managing migration through expansion of lawful pathways while increasing the consequences for those who do not use these pathways and unlawfully enter the United States.⁷⁷ Accordingly, the Secretary determined that it is appropriate to reserve up to 20,000 of the up to 64,716 additional visas and exempt this number from the returning worker requirement for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, or Costa Rica.

In past years, the number of beneficiaries covered by H–2B petitions filed exceeded the number of additional visas allocated under recent supplemental caps. In FY 2018, USCIS received petitions for approximately 29,000 beneficiaries during the first 5 business days of filing for the 15,000 supplemental cap. USCIS therefore conducted a lottery on June 7, 2018, to randomly select petitions that it would accept under the supplemental cap. Of the selected petitions, USCIS issued approvals for 15,672 beneficiaries.⁷⁸ In FY 2019, USCIS received sufficient petitions for the 30,000 supplemental cap on June 5, 2019, but did not conduct a lottery to randomly select petitions

that it would accept under the supplemental cap. Of the petitions received, USCIS issued approvals for 32,717 beneficiaries. In FY 2021, USCIS received a sufficient number of petitions for the 22,000 supplemental cap on August 13, 2021, including a significant number for workers from Northern Central American countries.⁷⁹ Of the petitions received, USCIS issued approvals for 30,707 beneficiaries, including approvals for 6,805 beneficiaries under the allocation for the nationals of the Northern Central American countries.⁸⁰

In FY 2022, DHS made the supplemental cap available twice, once in January 2022 and again in May 2022. Under the earlier FY 2022 supplemental cap for petitions with start dates in the first half of FY 2022, USCIS had issued approvals for 17,381 beneficiaries, including approvals for 3,231 beneficiaries under the allocation for nationals of the Northern Central American countries and Haiti.⁸¹ For the second half of FY 2022, within the first five business days of filing, USCIS received petitions for more beneficiaries than the additional 23,500 supplemental visas made available for returning workers, thus necessitating a random selection of petitions to meet the returning worker allotment.⁸² Of the

⁷⁹ On June 3, 2021, USCIS announced that it had received enough petitions to reach the cap for the additional 16,000 H–2B visas made available for returning workers only, but that it would continue accepting petitions for the additional 6,000 visas allotted for nationals of the Northern Central American countries. See USCIS, *Cap Reached for Additional Returning Worker H–2B Visas for FY 2021*, <https://www.uscis.gov/news/alerts/cap-reached-for-additional-returning-worker-h-2b-visas-for-fy-2021> (Jun. 3, 2021). On July 23, 2021, USCIS announced that, because it did not receive enough petitions to reach the allocation for the Northern Central American countries by the July 8 filing deadline, the remaining visas were available to H–2B returning workers regardless of their country of origin. See USCIS, *Employers May File H–2B Petitions for Returning Workers for FY 2021*, <https://www.uscis.gov/news/alerts/employers-may-file-h-2b-petitions-for-returning-workers-for-fy-2021> (Jul. 23, 2021).

⁸⁰ See Department of Homeland Security, U.S. Citizenship and Immigration Services, Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2023, TRK 13122. The number of approved workers exceeded the number of additional visas authorized for FY 2018, FY 2019, as well as for FY 2021 to allow for the possibility that some approved workers would either not seek a visa or admission, would not be issued a visa, or would not be admitted to the United States. Unlike these past supplemental cap TFRs, petitions filed under the first half FY 2022 TFR did not exceed the additional allocation of 20,000 H–2B visas provided by that rule.

⁸¹ See Department of Homeland Security, U.S. Citizenship and Immigration Services, Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2023, TRK 13122.

⁸² See USCIS, *Cap Reached for Additional Returning Worker H–2B Visas for Second Half of FY* Continued

⁷⁷ See *Circumvention of Lawful Pathways*, 88 FR 31314 (May 16, 2023); *Securing the Border*, 89 FR 81156, (Oct. 7, 2025).

⁷⁸ USCIS recognizes it may have received petitions for more than 29,000 supplemental H–2B workers if the cap had not been exceeded within the first 5 days of opening. However, DHS estimates that not all of the 29,000 workers requested under the FY 2018 supplemental cap would have been approved and/or issued visas. For instance, although DHS approved petitions for 15,672 beneficiaries under the FY 2018 cap increase, the Department of State data shows that as of January 15, 2019, it issued only 12,243 visas under that cap increase. Similarly, DHS approved petitions for 12,294 beneficiaries under the FY 2017 cap increase, but the Department of State data shows that it issued only 9,160 visas.

petitions received for the second half of FY 2022, USCIS issued approvals for 43,798 beneficiaries, including approvals for 12,318 beneficiaries under the allocation for nationals of the Northern Central American countries and Haiti.⁸³

In FY 2023, USCIS received enough petitions to reach the cap for the additional 18,216 H-2B visas made available for returning workers for the first half of fiscal year by January 30, 2023, and USCIS received enough petitions to reach the cap for the additional 16,500 H-2B visas made available for returning workers for the early second half of fiscal year by March 30, 2023.⁸⁴ Of the petitions for supplemental H-2B visas in FY 2023, USCIS issued approvals for 78,302 beneficiaries, including 7,157 beneficiaries under the allocation of 10,000 visas made available for returning workers for the late second half of the fiscal year and 23,832 beneficiaries under the allocation of 20,000 visas reserved for nationals of the Northern Central American countries and Haiti.⁸⁵

In FY 2024, USCIS received a sufficient number of H-2B petitions to reach the first half of the FY 2024 fiscal year statutory cap on October 11, 2023.⁸⁶ USCIS received enough petitions to reach the cap for the additional 20,716 H-2B visas made

available for returning workers for the first half of fiscal year by January 9, 2024, and USCIS received enough petitions to reach the cap for the additional 19,000 H-2B visas made available for returning workers for the early second half of fiscal year by April 17, 2024.⁸⁷ Of the petitions for supplemental H-2B visas in FY 2024, USCIS issued approvals for 85,577 beneficiaries, including 6,314 beneficiaries under the allocation of 5,000 visas made available for returning workers for the late second half of the fiscal year and 24,475 beneficiaries under the allocation of 20,000 visas reserved for nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica.⁸⁸

Data for the first half of FY 2025 clearly indicate an immediate need for additional supplemental H-2B visas for employers with start dates on or before March 31, 2025. USCIS received a sufficient number of H-2B petitions to reach the first half of the FY 2025 fiscal year statutory cap on September 18, 2024.⁸⁹ Further, the date on which USCIS received sufficient H-2B petitions to reach the first half semiannual statutory cap has generally trended earlier in recent years. In fiscal years 2017 through 2025, USCIS received a sufficient number of H-2B petitions to reach or exceed the relevant first half statutory cap on January 10,

2017, December 15, 2017, December 6, 2018, November 15, 2019, November 16, 2020, September 30, 2021, September 12, 2022, October 11, 2023, and September 18, 2024, respectively.⁹⁰

Through the third quarter of FY 2024, approximately 90 percent of H-2B filings were for positions within just six sectors.⁹¹ NAICS 56 (Administrative and Support and Waste Management and Remediation Services) accounted for 38.57% of filings, NAICS 71 (Arts, Entertainment, and Recreation) accounted for 11.73%, NAICS 72 (Accommodation and Food Services) accounted for 23.14%, NAICS 23, (Construction) accounted for 11.91%, NAICS 31 (Animal Food Manufacturing) accounted for 2.01% of filings, and NAICS 11 (Agriculture, Forestry, Fishing and Hunting) accounted for 2.39% of filings.

Relevant unemployment data also supports the need for additional supplemental H-2B visas. Within these industries, DOL data show higher labor demand relative to recent history. More specifically, industry unemployment data from the Bureau of Labor Statistics (BLS) show that the industry unemployment rate for most of these industries (except for NAICS 11, which accounts for the lowest percentage of filings among these industries) is lower than the long term (10-year) average.⁹²

⁹¹ USCIS analysis of DOL OLFC Performance data.

⁹² USCIS has elected to use a long-term average as a reference point so as to minimize the impact that the Covid-19 pandemic has on the comparison of the industry employment rate. All data are taken from the respective BLS "Industry at a Glance" pages. See <https://www.bls.gov/iag/tgs/iag11.htm>, <https://www.bls.gov/iag/tgs/iag23.htm>, <https://www.bls.gov/iag/tgs/iag60.htm>, <https://www.bls.gov/iag/tgs/iag71.htm>, <https://www.bls.gov/iag/tgs/iag72.htm>, <https://www.bls.gov/iag/tgs/iag311.htm>. All data accessed September 23, 2024.

10-YEAR AVERAGE OF INDUSTRY UNEMPLOYMENT RATE

NAICS 11	NAICS 23	NAICS 56 *	NAICS 71	NAICS 72	NAICS 31
7.61	6.13	4.82	7.96	7.90	5.22

* Supersector is used as a proxy, see footnote 94.

AUGUST 2024 INDUSTRY UNEMPLOYMENT RATE

NAICS 11	NAICS 23	NAICS 56 *	NAICS 71	NAICS 72	NAICS 31
11.3	3.2	4.2	4.1	5.9	3.7

* Supersector is used as a proxy, see footnote 94.

In August 2024, the industry unemployment for NAICS 56⁹³ was 4.2 percent, which is 0.62 points lower than its 10-year average of 4.82 percent, while the industry unemployment rate for NAICS 71 was 4.1 percent which is 3.86 points lower than its 10-year average of 7.96 percent. The August 2024 industry unemployment rate for NAICS 72 (5.9 percent) was 2 points lower than its 10-year average of 7.9 percent while the rate for NAICS 23 (3.2 percent) was 2.93 points lower than its 10-year average of 6.13 percent. The industry unemployment rate for NAICS 11 (11.3 percent) was 3.69 points higher than its 10-year average of 7.61 percent, making it the only industry among the top 5 H-2B industries that has a higher industry unemployment rate relative to

its historical average. The relatively low unemployment rate across most of these industries is a clear indication of a strong labor demand within these industries. The Departments believe that the supplemental allocation of H-2B visas described in this temporary final rule will help to meet demand in these industries.

Economy-wide data also indicate that labor-market tightness continues to exist. The most recent Employment Situation released by the Bureau of Labor Statistics (BLS) stated that the unemployment rate was 4.2 percent in August 2024.⁹⁴ Historically, the availability of H-2B visas addressed a need in the labor market during periods of lower unemployment. Chart 1⁹⁵ shows that the H-2B visa allocations for

Fiscal Year 2024⁹⁶ made by this rule are slightly higher than the historical trend but are generally consistent with what the current unemployment rate alone would predict. Additionally, when the unemployment rate is below 6 percent, there is greater variance in the total number of H-2B visas issued in a given year; for example, in years 2022, 2007 and 2006, when the unemployment rate ranged from approximately 3.5 percent to 4.6 percent, the total number of H-2B visas issued were comparable to what is planned for 2024. The data presented in chart 1 is meant to provide additional context and to demonstrate that the total allocation of H-2B visas is reasonable given labor market conditions.

Given the level of demand for H-2B workers, the continued economic

recovery, and continued job growth, DHS believes it is appropriate to release

the maximum amount of additional visas at this time.

⁹³ Data presented here are for the Professional and Business Services Supersector, which is comprised of NAICS 54, NAICS 55 and NAICS 56. See <https://www.bls.gov/iag/tgs/iag60.htm>. As such, the data presented here should be understood to be the best possible proxy for changes in NAICS 56 and not a direct measurement of any specific change in the actual underlying sectors. The latest data available, for July 2023 from the Department of Labor's Current Employment Statistics program indicates that NAICS 56 accounted for just under 42% of

employment in Professional Business Services. All data accessed September 23, 2024.

⁹⁴ See DOL, BLS, *The Employment Situation—August 2024*, https://www.bls.gov/news.release/archives/empst_10042024.pdf (Sept. 6, 2024).

⁹⁵ Annual data presented here is on a fiscal year basis. Fiscal year averages were calculated by taking the average of the monthly unemployment rate for the months in each respective fiscal year (October–September). Data for fiscal year 2024 are for October

2023–August 2024. Unemployment rate for 2024 is based on median Federal Reserve projections. See <https://www.federalreserve.gov/monetarypolicy/files/fomcprotabl20240918.pdf> (accessed September 23, 2024).

⁹⁶ The number of estimated visas issued for Fiscal Year 2024 is based on the sum of the fiscal year statutory cap for H-2B workers (66,000) and the supplemental allocation for this rule (64,716), for a total H-2B visa allocation of 130,716.

Making allocations for all of FY 2025 in a single rule.

As in FY 2023 and FY 2024, DHS believes that it is appropriate to issue a single rule for the entire fiscal year for multiple reasons.⁹⁷ First, DHS expects that there is demand for supplemental visas in the first half of FY 2025. As previously discussed, USCIS already received enough petitions to reach the congressionally mandated cap on H-2B visas for temporary nonagricultural workers for the first half of FY 2025.⁹⁸ Further, the date on which USCIS received sufficient H-2B petitions to reach the first half semiannual statutory caps has generally trended earlier in recent years. In fiscal years 2017 through 2025, USCIS received a sufficient number of H-2B petitions to reach or exceed the relevant first half statutory cap on January 10, 2017, December 15, 2017, December 6, 2018, November 15, 2019, November 16, 2020, September 30, 2021, September 12, 2022, October 11, 2023, and September 18, 2024, respectively.⁹⁹

Second, based on relevant data, DHS expects that USCIS will reach the statutory cap for the second half of FY 2025 and that there will accordingly be demand for supplemental visas in the second half of FY 2025. For example, in fiscal years 2017 through 2023, USCIS received a sufficient number of H-2B petitions to reach or exceed the relevant

second half statutory cap on March 13, 2017, February 27, 2018, February 19, 2019, February 18, 2020, February 12, 2021, February 25, 2022, February 27, 2023, and March 7, 2024.¹⁰⁰ In addition, DOL data shows consistently high demand in recent years, particularly during the second half of the fiscal year. In recent years, DOL has received an increasing number of TLC applications for an increasing number of H-2B workers with April 1 start dates: DOL received 4,500 applications on January 1, 2018, covering more than 81,600 worker positions; DOL received 5,276 applications by January 8, 2019, covering more than 96,400 worker positions; DOL received 5,677 applications during the initial three-day filing window in 2020 covering 99,362 worker positions; DOL received 5,377 applications during the initial three-day filing window in 2021 covering 96,641 worker positions; DOL received 7,875 applications by January 4, 2022, covering 136,555 worker positions; DOL received 8,693 applications during the initial three-day filing window in 2023, covering 142,796 worker positions; and DOL received 8,817 H-2B applications by January 8, 2024, covering 138,847 worker positions.¹⁰¹

Finally, publishing one rule that addresses all the visas available for FY 2025 benefits the regulated public by giving more notice and certainty of what will become available for the second half. As noted in comments received in response to the FY 2023 TFR, this

approach allows businesses to better plan ahead for their seasonal workforce needs.¹⁰²

Filing Deadline of September 15, 2025 for All Petitions

The authority to approve H-2B petitions under this FY 2025 supplemental cap expires at the end of the fiscal year, *i.e.*, the end of September 30, 2025. Therefore, DHS is requiring employers requesting any supplemental visas under this TFR, regardless of the employment start date(s), to properly file their H-2B petition with USCIS no later than September 15, 2025. USCIS will reject any cases that are received after September 15, 2025. *See* new 8 CFR 214.2(h)(6)(xv)(C). Because DHS believes that 15 days from the end of the fiscal year is generally the minimum time needed for petitions to be adjudicated, DHS has set September 15, 2025 as the last day to file in order to provide USCIS with adequate time for petition processing before the expiration of the authority at the end of the fiscal year, although USCIS cannot guarantee the time period will be sufficient for adjudication of petitions in all cases.

In addition, the filing deadline will be earlier than September 15, 2025 if the applicable numerical limit for the relevant supplemental visa allocation is reached before that date. *See* new 8 CFR 214.2(h)(6)(xv)(C). In such a case, USCIS will also reject any cases that are received after the applicable numerical limitation has been reached.

Returning Worker Allocation for the First Half of FY 2025 (October 1, 2024 Through March 31, 2025)

For the first half of FY 2025, DHS will make 20,716 visas immediately available upon publication of this TFR that are limited to returning workers, in other words, those workers who were issued H-2B visas or held H-2B status in fiscal years 2022, 2023, or 2024, regardless of country of nationality. These petitions must request a date of need starting on or before March 31, 2025. *See* new 8 CFR 214.2(h)(6)(xv)(C).

DHS anticipates that employers will use all of the first half allocation for returning workers, given how quickly USCIS reached the FY 2025 first half statutory cap and the first half supplemental allocation for FY 2024. As noted previously, USCIS received enough H-2B petitions to reach the FY 2025 first half statutory cap on

⁹⁷ Further, DHS believes that 64,716 is an appropriate number of supplemental visas to make available, as this rule will cover both the first and second half of FY 2025.

September 18, 2024.¹⁰³ Under the FY 2024 TFR, which published on November 17, 2023, USCIS received enough petitions to reach the 20,716 first half allocation by January 9, 2024.¹⁰⁴ Similarly, as with the FY 2024 TFR, the relatively early publication of this rule will provide interested employers more time to prepare their petitions, increasing the likelihood that the first half allocation for returning workers will be used.¹⁰⁵ To the extent that the first half allocation for returning workers is used, this TFR may provide affected employers with some relief by making available a separate allocation of visas for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica, which will be available for the entirety of FY 2025.

As in previous years, in the event that USCIS approves insufficient petitions to use all 20,716 visas, the unused numbers will not carry over for the second half allocation because DHS believes that the operational burdens of calculating and administering a process to carry over unused visas, combined with the potential confusion for the public and adjudicators that could result from having different filing cutoff dates for the different allocations, would outweigh the benefits. As explained in the FY 2024 TFR, in order to make any unused first half visas available for employers with second half start dates, DHS would need to set a filing cutoff date prior to September 15, 2025 for the first half allocation, upon which it would stop accepting such petitions and make a calculation of how many visas should be re-released for second half employers. Calculating visas to be re-released could also entail an additional cap allocation, additional announcements to the public, and potentially an additional lottery, all of which would significantly increase operational burdens. In addition to increasing operational burdens, DHS believes that the opening, closing, and potential re-opening of this allocation (and/or other cap allocations) could cause confusion for the public and adjudicators. Furthermore, not setting a

filing cutoff date prior to September 15, 2025 will maximize employers' opportunity to avail themselves of the first half allocation. While DHS acknowledges that this approach could potentially result in some employers with a demonstrated business need in the second half of the fiscal year losing the opportunity to receive a supplemental visa, it is DHS's expectation that, as occurred in FY 2024, there will be sufficient demand from employers with first half start dates to use the entire allocation.

Initial Returning Worker Allocation for the Early Second Half (April 1, 2025, Through May 14, 2025)

For the second half of FY 2025, DHS will initially make available 19,000 visas limited to returning workers, in other words, those workers who were issued H-2B visas or held H-2B status in fiscal years 2022, 2023, or 2024, regardless of country of nationality. These petitions must request a date of need starting on or after April 1, 2025, through and including May 14, 2025. Limiting this allocation to employers with employment start dates on or before May 14, 2025 reflects DHS's intentions to give employers with needs later in the season a better opportunity to access the H-2B program, and to prevent employers from petitioning under both of the second-half allocations to fill the same need.

To mitigate complications from concurrent administration of the statutory second half cap, these petitions must be filed no earlier than 15 days after the second half statutory cap is reached, a date that USCIS will identify in a public announcement.¹⁰⁶ When USCIS announces that it has received a sufficient number of petitions to reach the second half statutory cap, it will also announce the earliest possible filing date (15 days after the second half statutory cap) for this allocation. Concurrent administration of the second half statutory cap with the second half supplemental cap would pose significant operational challenges, particularly considering the volume of H-2B petitions USCIS would have to process at the same time. A cushion of 15 days after the second half statutory cap is reached should provide USCIS with sufficient time to process H-2B petitions filed under the second half statutory cap and prepare to process

petitions under this supplemental cap, and should also provide petitioners not selected under the statutory cap with enough time to refile under this supplemental cap. Furthermore, making this allocation available *after* the second half statutory cap has been reached builds in flexibility to account for variations in the timing of that cap being reached. DHS cannot predict with certainty when the FY 2025 second half statutory cap will be reached (or if it will be reached), and therefore, did not specify a date for when to first allow petitioners to file for FY 2025 second half supplemental visas. In the event that the statutory second half FY 2025 cap is not reached, the supplemental allocation for returning workers for the second half of FY 2025 will not become available.

Based on historical data showing increasingly high demand for H-2B workers with April 1 start dates, DHS expects all 19,000 visas to be used quickly once the supplemental allocation becomes available as occurred in FY 2024 on April 17, 2024. However, in the event that USCIS approves insufficient petitions to use all 19,000 visas, the unused numbers will not carry over for petition approvals for employment start dates beginning on or after May 15, 2025. DHS chose to limit these 19,000 visas to start dates on or before May 14, 2025, without the ability for these visas to be carried over into the next allocation. As previously stated, DHS believes that the operational burdens of calculating and administering a process to carry over unused visas, combined with the potential confusion for the public and adjudicators that could result from having different filing cutoff dates for the different allocations, would outweigh the benefits. In order to make any unused visas from this allocation available for late second half of FY 2025 petitions, DHS would need to set a filing cutoff date that would be after the cutoff for the first half allocation but prior to any cutoff for late second half of FY 2025 petitions and prior to September 15, 2025, upon which it would stop accepting petitions and make a calculation of how many visas should be re-released for late second half employers. Calculating visas to be re-released could also entail an additional cap allocation, additional announcements to the public, and potentially an additional lottery, all of which would significantly increase operational burdens. In addition to increasing operational burdens, DHS believes that the opening, closing, and potential re-opening of this allocation

¹⁰³ See USCIS, *USCIS Reaches H-2B Cap for First Half of Fiscal Year 2025*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fiscal-year-2025> (Sept. 19, 2024).

¹⁰⁴ USCIS, *Cap Reached for Additional Returning Worker H-2B Visas for the First Half of FY 2024*, <https://www.uscis.gov/newsroom/alerts/cap-reached-for-additional-returning-worker-h-2b-visas-for-the-first-half-of-fy-2024> (Jan. 12, 2023).

¹⁰⁵ Compare the publication dates of the FY 2024 TFR and this rule with December 15, 2022, the date the FY 2023 TFR was first published, and January 28, 2022, the date the temporary final rule making available additional H-2B visas for the first half of FY 2022 was first published.

¹⁰⁶ Pursuant to new 8 CFR 214.2(h)(6)(xv)(C)(2), USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(ii) of this section requesting employment start dates from April 1, 2025 to May 14, 2025 that are received earlier than 15 days after the INA section 214(g) cap for the second half FY 2025 has been met.

(and/or other cap allocations) could cause confusion for the public and adjudicators. Furthermore, not setting a filing cutoff date prior to September 15, 2025, will maximize employers' opportunity to avail themselves of the early second half allocation. While DHS acknowledges that this approach could result in employers in the late second half losing the opportunity to receive a supplemental visa, it is DHS's expectation that there will be sufficient demand from employers to use this entire allocation. As anticipated in the FY 2024 TFR, employers did, in fact, use the entire early second half of FY 2024 allocation.¹⁰⁷

Additional Returning Worker Allocation for the Late Second Half (on or After May 15, 2025, Through September 30, 2025)

For the late second half of FY 2025, DHS will make available an additional allocation of 5,000 visas limited to returning workers, in other words, those workers who were issued H-2B visas or held H-2B status in fiscal years 2022, 2023, or 2024, regardless of country of nationality. To assist employers needing workers to begin work during the late spring and summer seasons in the fiscal year (also referred to as "late season employers"), these petitions must request a date of need starting on or after May 15, 2025. These petitions must be filed no sooner than 45 days after the second half statutory cap is reached, a date that USCIS will identify in a public announcement.¹⁰⁸ When USCIS announces that it has received a sufficient number of petitions to reach the second half statutory cap, it will also announce the earliest possible filing date (45 days after the second half statutory cap is reached) for this allocation. The cushion of 45 days after the second half statutory cap is reached is intended to provide USCIS with sufficient time to process H-2B petitions filed under the second half statutory cap that remain pending, as well as to process the expected influx of petitions under the early second half supplemental cap that will begin 15 days after the second half statutory cap

is reached.¹⁰⁹ By allowing USCIS to manage its workload in this way, the 45-day period will help USCIS prepare to process petitions under the late second half supplemental cap and mitigate the complications from concurrent administration of these various caps.

This is the third supplemental cap reserved for late season employers that need workers to begin work during the late spring and summer seasons in the fiscal year.¹¹⁰ By regulation, employers may only apply for a TLC 75 to 90 days before the start date of need,¹¹¹ and, as such, employers needing workers to begin work on or after May 15 are not eligible to file TLC applications until on or after February 15. As noted in the FY 2023 and FY 2024 TFRs, in past years, because of this requirement and the strong demand for H-2B workers in recent years to begin work on the earliest employment start date (*i.e.*, April 1), late season employers were unable to receive cap-subject H-2B workers because they did not have an opportunity to file visa petitions for cap-subject H-2B workers before the second semiannual statutory cap was reached. Since, based on recent years' data,¹¹² USCIS has typically received sufficient H-2B petitions to meet the statutory cap for the second half of the fiscal year around mid-February to early March, many of these late season employers may have decided to not file a TLC application.

DHS, in consultation with DOL, has again determined that it is appropriate to make a separate allocation available for late season employers whose late season labor needs may have put them at a disadvantage in accessing H-2B workers in recent years. While there was significant demand for the late second half allocation in FY 2024, the full

allocation of 5,000 visas was not reached. As of September 30, 2024, DOS has issued 3,906 towards the late second half allocation, while USCIS approved 6,314 beneficiaries towards the late second half allocation.¹¹³ Therefore, in order to meet the employer demand in the late second half of FY 2025, while still maximizing the overall usage of supplemental visas, DHS has determined it is appropriate to again limit the late second half allocation for FY 2025 to up to 5,000 visas. DHS, in consultation with DOL, has determined that authorizing two allocations for the second half of FY 2025 based on an employer's start date of need, in addition to requiring that the employer's start date of need on the Form I-129 match the start date of need on the approved TLC,¹¹⁴ will provide employers with late season needs a better opportunity to receive H-2B workers to avoid irreparable harm. Specifically, employers with early season needs that need work to begin on or after April 1 will have the opportunity to file H-2B petitions under both the statutory cap and the first allocation of the supplemental cap, while employers with late season needs do not have that opportunity.

To mitigate complications from concurrent administration of the additional returning worker allocation for the second half of the fiscal year for late season employers and either the statutory second half cap or the initial supplemental allocation for returning workers for the second half of the fiscal year (or both), these petitions must be filed no earlier than 45 days after the second half statutory cap is reached. When USCIS announces that it has received a sufficient number of petitions to reach the second half statutory cap, it will also announce the earliest possible filing date (45 days after the second half statutory cap is reached) for this allocation. In the event that the statutory second half FY 2025 cap is not reached, this supplemental allocation for late season filers workers will not become available. Furthermore, in the event that USCIS does not approve sufficient petitions to use all 5,000 visas for late season employers, DHS will not carry over the unused numbers for petition approvals for any other allocation. For example, any unused

¹⁰⁷ USCIS, *Temporary Increase in H-2B Nonimmigrant Visas for FY 2024*, <https://www.uscis.gov/working-in-the-united-states/temporary-workers/h-2b-non-agricultural-workers/temporary-increase-in-h-2b-nonimmigrant-visas-for-fy-2024> (last visited Aug. 20, 2024).

¹⁰⁸ Pursuant to new 8 CFR 214.2(h)(6)(xv)(C)(3), USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(iii) of this section requesting employment start dates from May 15, 2025 to September 30, 2025, that are received earlier than 45 days after the INA section 214(g) cap for the second half FY 2025 has been met.

¹⁰⁹ While petitioners may continue to submit petitions under the early second half supplemental cap through September 15, DHS expects the heaviest filing to occur soon after the visas become available. This expectation is based on historical filing patterns, as well as an assumption that employers will try act quickly to secure workers consistent with their dates of need.

¹¹⁰ See *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2023 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 87 FR 76816 (Dec. 15, 2022); *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 88 FR 2023 (Nov. 17, 2023).

¹¹¹ See 20 CFR 655.15(b).

¹¹² As noted above, in fiscal years 2017 through 2024, USCIS received a sufficient number of H-2B petitions to reach or exceed the relevant second half statutory cap on March 13, 2017, February 27, 2018, February 19, 2019, February 18, 2020, February 12, 2021, February 25, 2022, February 27, 2023, and March 7, 2024, respectively.

¹¹³ Department of Homeland Security, U.S. Citizenship and Immigration Services, Office of Performance and Quality, ELIS, CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2024, PAER0016221.

¹¹⁴ See 8 CFR 214.2(h)(6)(iv)(D) ("an H-2B petition must state an employment start date that is the same as the date of need stated on the approved temporary labor certification").

numbers would not carry over to petitions under the country-specific allocation. As noted above, DHS believes the operational burdens of calculating and administering a process to carry over unused visas would outweigh the benefits because of the potential confusion for the public and adjudicators that could result from having different filing cutoff dates for the different allocations. A process to carry over unused visas could also entail an additional cap allocation, additional announcements to the public, and potentially an additional lottery, all of which significantly increase operational burdens and may add further confusion to the public and adjudicators.

Allocation for Nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica

As in FY 2024, DHS will make available 20,000 additional visas that are reserved for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica, as attested by the petitioner (regardless of whether such nationals are returning workers). These 20,000 visas will be available for petitioners requesting an employment start date before the end of FY 2025, up to and including September 30, 2025. As discussed in the Legal Framework section as well as in the section addressing the irreparable harm standard, DHS has a broad delegation from Congress to administer and enforce U.S. immigration laws and issue regulations regarding the same, as well as broad discretion over the admission of nonimmigrants, and the adjudication of nonimmigrant petitions, after consultation with other agencies, including DOL. *See* INA sec. 103(a)(1), 214(a)(1), (c)(1); 8 U.S.C. 1103(a)(1), 1184(a)(1), (c)(1). In addition, through the temporary enactment authorizing the Secretary of DHS to increase the number of H-2B visas,¹¹⁵ Congress delegated to the Secretary of DHS, after

consultation with the Secretary of Labor, the discretion to establish a framework for determining that the needs of American businesses cannot be satisfied with the existing workforce and the conditions under which to authorize additional visas to further the purpose of the enactment. In the most recent, as well as each prior annual enactment, Congress consistently used the word “may” when describing the Secretary’s authority, and the use of the word “may” indicates a grant of discretion, absent contrary legislative intent, structure and purpose of the statute.¹¹⁶ As in prior years, the Departments have determined that the temporary enactment together with DHS’s broad authority over immigration provide the Secretary of DHS with discretion to implement the temporary enactment in a manner that addresses two complimentary policy objectives: the need to provide access to H-2B workers to American businesses, and the objective to provide lawful pathways for able, willing, and qualified workers from designated countries to come temporarily to the United States and perform nonagricultural labor. In issuing this TFR, and as in prior years, the Departments are implementing appropriate policy choices in exercising the discretionary authority provided by Congress.¹¹⁷ This policy choice was previously ratified by Congress¹¹⁸—legislative history of the FY2023 Omnibus indicates that Congress was aware of and approved of the country-specific allocations.¹¹⁹ While prior fiscal years’ country-specific allocations have not been reached, the number has been trending upwards, and DHS anticipates a higher likelihood that the 20,000 visas allocated for certain nationals by this rule will be reached by the end of this fiscal year. As discussed above, DHS observed robust employer interest in response to the FY 2021 H-2B supplemental visa allocation for Salvadoran, Guatemalan, and Honduran nationals and the FY 2022 and FY 2023

supplemental visa allocations for Salvadoran, Guatemalan, Honduran, and Haitian nationals, and the data show a trend of increased participation by Haitian, Salvadoran, Guatemalan, and Honduran workers in the H-2B program.¹²⁰ In FY 2024, the inclusion of nationals from the additional countries of Colombia, Ecuador, and Costa Rica increased the likelihood that the 20,000 visas would be used and the data show a continued trend of increased usage of the country-specific allocation.¹²¹

Employers requesting workers under the country-specific allocation with an employment start date in the first half of FY 2025 may file their petitions immediately after the publication of this TFR. Employers requesting workers under the country-specific allocation with an employment start date in the second half of FY 2025 must file their petitions no earlier than 15 days after the second half statutory cap is reached. The requirement to file the petition no earlier than 15 days after the second half statutory cap is reached is consistent with the approach taken for the initial returning worker allocation for the early second half of the fiscal year, and is in line with the Departments’ longstanding interpretation of their authority to make available supplemental (or in other words, additional) visas contingent upon the exhaustion of visas under the statutory cap.¹²²

As in FY 2023 and FY 2024, the Departments have decided not to further divide the 20,000 visas for workers from specific countries into separate allocations for the first and second half of the fiscal year. The Departments intend for this additional flexibility of allowing any employment start date within FY 2025 to encourage U.S. employers that are suffering irreparable harm or will suffer impending

¹¹⁵ Public Law 118–47, Division G, Title I, sec. 105 states: “Notwithstanding the numerical limitation set forth in section 214(g)(1)(B) of the Immigration and Nationality Act (8 U.S.C. 1184(g)(1)(B)), the Secretary of Homeland Security, after consultation with the Secretary of Labor, and upon the determination that the needs of United States businesses cannot be satisfied during fiscal year 2024 with United States workers who are willing, qualified, and able to perform temporary nonagricultural labor, may increase the total number of aliens who may receive a visa under section 101(a)(15)(H)(ii)(b) of such Act (8 U.S.C. 1101(a)(15)(H)(ii)(b)) in such fiscal year by not more than the highest number of H-2B nonimmigrants who participated in the H-2B returning worker program in any fiscal year in which returning workers were exempt from such numerical limitation.”

¹¹⁶ *See generally* *U.S. v. Rodgers*, 461 U.S. 677, 706 (1983) (The word “may,” when used in a statute, usually implies some degree of discretion unless there is indication of contrary legislative intent, or an obvious contrary inference from the structure and purpose of the statute.).

¹¹⁷ *See Loper Bright Enterprises*, 144 S. Ct. at 2263 (2024).

¹¹⁸ *Lorillard v. Pons*, 434 U.S. 575, 581 (1978) (“Congress is presumed to be aware of an administrative or judicial interpretation of a statute and to adopt that interpretation when it reenacts a statute without change.”).

¹¹⁹ *See* S. Rep. No. 118–85, at p. 104 (Jul. 27, 2023) (“Further, the Committee supports the Departments’ efforts to set aside visas for certain nationalities, including nationals from El Salvador, Guatemala, Honduras, and Haiti, regardless of whether they are returning workers.”).

¹²⁰ As previously noted, USCIS approved petitions on behalf of 6,805 beneficiaries under the FY 2021 country-specific allocation, 3,231 beneficiaries under the FY 2022 first half country-specific supplemental allocation, 12,318 beneficiaries for the second half country-specific allocation of the fiscal year FY 2022, and 23,832 beneficiaries under the FY 2023 country-specific allocation. *See* DHS, USCIS, Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data, queried 10/2023, TRK 13122, H-2B Visa Issuance Report September 30, 2023.

¹²¹ As of October 28, 2024, USCIS approved petitions on behalf of 24,475 beneficiaries under the FY 2024 country-specific allocation. *See* Department of Homeland Security, U.S. Citizenship and Immigration Services, Office of Performance and Quality, ELIS, CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2024, PAER0016221.

¹²² Pursuant to new 8 CFR 214.2(h)(6)(xv)(C)(4), USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(2) of this section that have a date of need on or after April 1, 2025 and are received earlier than 15 days after the INA section 214(g) cap for the second half of FY 2025 is met.

irreparable harm to seek out workers from such countries, and, at the same time, increase interest among nationals of the Northern Central American countries, Haiti, Colombia, Ecuador, and Costa Rica seeking a legal pathway for temporary employment in the United States. While this approach could potentially result in employers with start dates in the first half of FY 2025 using all 20,000 visas for nationals of the specified countries, and consequently, employers with start dates in the second half of FY 2025 losing the opportunity to utilize this particular allocation, DHS believes that the benefits of increasing the flexibility of this allocation outweighs the potential risk. Moreover, employers with start dates in the second half of FY 2025 seeking to employ nationals under the country-specific allocation may request a visa under one of the two second half supplemental allocations which are available for returning workers regardless of country of nationality.

In the event that USCIS does not approve sufficient petitions to use all 20,000 visas under the country-specific allocation by the end of FY 2025, DHS will not carry over the unused numbers for petition approvals for any other allocation. For example, any unused numbers would not carry over to petitions for returning workers with employment start dates in the second half of FY 2025. As noted above, DHS believes the operational burdens of calculating and administering a process to carry over unused visas would outweigh the benefits because of the potential confusion for the public and adjudicators that could result from having different filing cutoff dates for the different allocations. A process to carry over unused visas could also entail an additional cap allocation, additional announcements to the public, and potentially an additional lottery, all of which significantly increase operational burdens and may add further confusion to the public and adjudicators. Further, this single filing cutoff approach provides employers with incentive and more time to petition for, and bring in, workers from El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica to meet employer needs, consistent with the administration's efforts and outreach to promote and improve safety, security, and economic stability in these countries.

Process if Cap Allocations Are Reached

Finally, recognizing the high demand for H-2B visas, it is plausible that the additional H-2B supplemental

allocations provided in this rule will be reached prior to September 15, 2025. Specifically, the following scenarios may still occur:

- The 20,716 supplemental cap visas limited to returning workers that will be immediately available for employers with dates of need on or after October 1, 2024, through March 31, 2025, will be reached before September 15, 2025;
- The 19,000 supplemental cap visas limited to returning workers that will be available for employers with dates of need starting on or after April 1, 2025, through May 14, 2025, will be reached before September 15, 2025;
- The 5,000 supplemental cap visas limited to returning workers that will be available for late season employers with dates of need on or after May 15, 2025, through September 30, 2025, will be reached before September 15, 2025; or
- The 20,000 supplemental cap visas limited to nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica will be reached before September 15, 2025.

Under this rule, new 8 CFR 214.2(h)(6)(xv)(D) reaffirms the existing processes that are in place when H-2B numerical limitations under INA section 214(g)(1)(B) or (g)(10), 8 U.S.C. 1184(g)(1)(B) or (g)(10), are reached,¹²³ as applicable to each of the scenarios described above that involve numerical limitations of the supplemental cap. Specifically, for each of the scenarios mentioned above, DHS will monitor petitions received, and make projections of the number of petitions necessary to achieve the projected numerical limit of approvals. USCIS will also notify the public of the dates that USCIS has received the necessary number of petitions (the "final receipt dates") for each of these scenarios. The day the public is notified will not control the final receipt dates. Moreover, USCIS may randomly select, via computer-generated selection, from among the petitions received on the final receipt date the remaining number of petitions deemed necessary to generate the numerical limit of approvals for each of the scenarios involving numerical limitations to the supplemental cap. USCIS may, but will not necessarily, conduct a lottery if: the 20,716 supplemental cap visas limited to returning workers that will be immediately available for employers with dates of need on or after October 1, 2024, through March 31, 2025, is reached before September 15, 2025; the 19,000 supplemental cap visas limited to returning workers that will be available for employers with dates of

need on or after April 1, 2025, through May 14, 2025, is reached before September 15, 2025; the 5,000 supplemental cap visas limited to returning workers that will be available for late season employers with dates of need on or after May 15, 2025, through September 30, 2025, is reached before September 15, 2025; or the 20,000 visas limited to certain nationals is reached before September 15, 2025. Similar to the processes applicable to the H-2B semiannual statutory cap, if the final receipt date is any of the first 5 business days on which petitions subject to the applicable numerical limit may be received (in other words, if the numerical limit is reached on any one of the first 5 business days that filings can be made), USCIS will randomly apply all of the numbers among the petitions received on any of those 5 business days.

C. Returning Workers

As noted above, to address the increased and, in some cases, impending need for H-2B workers in this fiscal year, the Secretary of Homeland Security, in consultation with the Secretary of Labor, has determined that employers may petition for supplemental visas on behalf of up to 44,716 workers who were issued an H-2B visa or were otherwise granted H-2B status in FY 2022, 2023, or 2024. This temporal limitation mirrors prior fiscal years' temporal limitation in the returning worker definition¹²⁴ and the temporal limitation Congress imposed in previous returning worker statutes.¹²⁵ Such workers (in other words, those who recently participated in the H-2B program and who now seek a new H-2B visa from DOS) may obtain their new visas through DOS and begin work more expeditiously because they have previously obtained H-2B visas and therefore have been vetted by DOS and would have departed the United States as generally required by the terms of their nonimmigrant admission.¹²⁶ DOS

¹²⁴ See e.g., *Exercise of Time-Limited Authority To Increase the Numerical Limitation for FY 2024 for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers*, 88 FR 80394 (Nov. 17, 2023) (defining "returning workers" as those who were issued H-2B visas or held H-2B status in fiscal years 2021, 2022, or 2023).

¹²⁵ See INA section 214(g)(9)(A), 8 U.S.C. 1184(g)(9)(A); Consolidated Appropriations Act, 2016, Public Law 114-113, div. F, tit. V, sec. 565; John Warner National Defense Authorization Act for Fiscal Year 2007, Public Law 109-364, div. A, tit. X, sec. 1074, (2006); Save Our Small and Seasonal Businesses Act of 2005, Public Law 109-13, div. B, tit. IV, sec. 402.

¹²⁶ The previous review of an applicant's qualifications and current evidence of lawful travel

¹²³ See 8 CFR 214.2(h)(8)(vii).

has informed DHS that, in general, H-2B visa applicants who are able to demonstrate clearly that they have previously abided by the terms of their status granted by DHS have a higher visa issuance rate when applying to renew their H-2B visas, as compared with the overall visa applicant pool from a given country. Furthermore, consular officers are authorized to waive the in-person interview requirement for certain nonimmigrant visa applicants, including certain H-2B applicants renewing visas in the same classification within 48 months of the prior visa's expiration, who otherwise meet the strict limitations set out under INA section 222(h), 8 U.S.C. 1202(h).¹²⁷ Limiting the supplemental cap to returning workers is beneficial because these workers have generally followed immigration law in good faith and demonstrated their willingness to return home when they have completed their temporary labor or services or their period of authorized stay, which is a condition of H-2B status. The returning worker condition therefore provides a basis to believe that H-2B workers under this cap increase will again abide by the terms and conditions of their visa or nonimmigrant status.

The returning worker condition also benefits employers that seek to re-hire known and trusted workers who have a proven positive employment track record while previously employed as workers in this country. While the Departments recognize that the returning worker requirement may limit to an extent the flexibility of employers that might wish to hire non-returning workers, the requirement provides an important safeguard against H-2B abuse, which DHS considers to be a significant consideration.

To ensure compliance with the requirement that additional visas only be made available to returning workers, DHS will require petitioners seeking H-2B workers under the supplemental cap to attest that each employee requested or instructed to apply for a visa under the FY 2025 supplemental cap was

issued an H-2B visa or otherwise granted H-2B status in FY 2022, 2023, or 2024, unless the H-2B worker is a national of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, or Costa Rica and is counted towards the 20,000 cap. This attestation will serve as prima facie initial evidence to DHS that each worker, unless a national of one of these countries who is counted against the 20,000 country-specific cap, meets the returning worker requirement. DHS and DOS retain the right to review and verify that each beneficiary is in fact a returning worker any time before and after approval of the petition or visa. DHS has authority to review and verify this attestation during the course of an audit or investigation, as otherwise discussed in this rule.

With respect to satisfying the returning worker requirement, employers must maintain evidence that the employer requested and/or instructed that each of the workers petitioned by the employer in connection with this temporary rule were issued H-2B visas or otherwise granted H-2B status in FY 2022, 2023, or 2024, unless the H-2B worker is a national of one of the specific countries counted towards the 20,000 cap. Such evidence would include, but is not limited to, a date-stamped written communication from the employer to its agent(s) and/or recruiter(s) that instructs the agent(s) and/or recruiter(s) to only recruit and provide instruction regarding an application for an H-2B visa to those foreign workers who were previously issued an H-2B visa or granted H-2B status in FY 2022, 2023, or 2024.

D. 20,000 Allocation for Nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica

As described above, the Secretary of Homeland Security has determined that up to 20,000 additional H-2B visas will be limited to workers who are nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica. These 20,000 visas will be exempt from the returning worker requirement.

Because the returning worker allocations have no restrictions related to a worker's country of nationality, if the 20,000 visa limit has been reached and the 44,716 returning worker cap has not, petitioners may continue to request workers who are nationals of one of these countries, but the workers must be specifically requested as returning workers who were issued H-2B visas or were otherwise granted H-2B status in FY 2022, 2023, or 2024.

While DHS reiterates the benefits of allocating visas under the supplemental

cap to returning workers, the Secretary of Homeland Security has determined that the 20,000 country-specific allocation which is exempted from the returning worker requirement is beneficial for following reasons. First, this country-specific allocation furthers the U.S. foreign policy objective of managing irregular migration with partner countries through expanding access to lawful pathways to nationals of these countries seeking economic opportunity in the United States. Several of these countries have extensively collaborated with the United States on migration issues such as through endorsing the L.A. Declaration, joining the United States to ramp up efforts to address the irregular migration flows through the Darien and participating in the Safe Mobility Initiative to increase migrant integration in host countries and, where appropriate, facilitate access to lawful pathways to the United States and other countries, including expedited refugee processing. After a series of negotiations, on June 1, 2023, the United States and Guatemala issued a joint statement to commit to take a series of critical steps to humanely reduce irregular migration and expand lawful pathways under the L.A. Declaration.¹²⁸ For example, as part of a comprehensive program to manage irregular migration, Guatemala agreed to participate in the Safe Mobility Initiative, hosting SMOs since June 12, 2023.¹²⁹ On June 4, 2023, the United States and Colombia announced the impending establishment of SMOs that would provide information about the wide range of existing services and support available for refugees and other migrants in Colombia, with the goal of reaching migrants on the move, or even before they begin irregular migration journey.¹³⁰ The Safe Mobility initiative launched in Colombia on June 28, 2023, with SMOs currently operational in three cities. Furthermore, on June 12,

¹²⁹ *Id.*

¹³⁰ See United States Department of State, *U.S.-Colombia Joint Commitment to Address the Hemispheric Challenge of Irregular Migration* (June 4, 2023), <https://www.state.gov/u-s-colombia-joint-commitment-to-address-the-hemispheric-challenge-of-irregular-migration/>. See also The White House, *Readout of Principal Deputy National Security Advisor Jon Finer's Meeting with Colombian Foreign Minister Alvaro Leyva* (June 11, 2023), <https://www.whitehouse.gov/briefing-room/statements-releases/2023/06/11/readout-of-principal-deputy-national-security-advisor-jon-finers-meeting-with-colombian-foreign-minister-alvaro-leyva/>.

to the United States will generally lead to a shorter processing time of a renewal application.

¹²⁷ The interview waiver authority for certain H-2B applicants renewing visas in the same classification within 48 months of the prior visa's expiration has no sunset date. Currently, certain first-time H-2B visa applicants or certain H-2B visa applicants previously issued any type of visa within the last 48 months may be eligible for an interview waiver; the authority for these interview waivers is in place until further notice. See DOS, *Important Update on Waivers of the Interview Requirement for Certain Nonimmigrant Visa Applicants*, <https://travel.state.gov/content/travel/en/News/visas-news/important-update-on-waivers-of-the-interview-requirement-for-certain-nonimmigrant-visa-applicants.html> (last updated Dec. 21, 2023).

2023, the United States and the Government of Costa Rica launched SMOs in Costa Rica, in furtherance of bilateral partnership and addressing hemispheric challenge of irregular migration.¹³¹ On October 19, 2023, the United States and Ecuador announced their partnership in establishing SMOs in Ecuador.¹³² This allocation for nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, and Costa Rica will promote safe, orderly and lawful migration to the United States, as well as help provide U.S. employers with additional labor from these countries with whom the United States Government has engaged in outreach efforts to promote the H-2B program.¹³³

Second, in addition to the allocation for returning workers, the country-specific allocation will also address the needs of certain H-2B employers that are suffering irreparable harm or will suffer impending irreparable harm.

Third, the 20,000 set-aside will deliver on the objectives of E.O. 14010, which, among other initiatives, instructs the Secretary of Homeland Security and the Secretary of State to implement measures to enhance access for nationals of the Northern Central American countries of El Salvador, Guatemala, and Honduras to visa programs, as appropriate and consistent with applicable law. E.O. 14010 also directs relevant government agencies to create a comprehensive regional framework to address the causes of migration, and to manage migration throughout North and Central America.¹³⁴

¹³¹ See United States Department of State, *U.S.-Costa Rica Joint Commitment to Address the Hemispheric Challenge of Irregular Migration* (June 12, 2023), <https://www.state.gov/u-s-costa-rica-joint-commitment-to-address-the-hemispheric-challenge-of-irregular-migration/>.

¹³² See United States Department of State, *Announcement of Safe Mobility Office in Ecuador* (Oct. 19, 2023), <https://www.state.gov/announcement-of-safe-mobility-office-in-ecuador/>.

¹³³ See, e.g., USAID, *Administrator Samantha Power at the Summit of the Americas Fair Recruitment and H-2 Visa Side Event*, <https://www.usaid.gov/news-information/speeches/jun-9-2022-administrator-samantha-power-summit-americas-fair-recruitment-and-h-2-visa> (Jun. 9, 2022) (“Our combined efforts [with the labor ministries in Honduras and Guatemala, and the Foreign Ministry in El Salvador] . . . resulted in a record number of H-2 visas issued in 2021, including a nearly forty percent increase over the pre-pandemic levels in H-2B visas issued across all three countries.”).

¹³⁴ See also National Security Council, *Collaborative Migration Management Strategy*, <https://www.whitehouse.gov/wp-content/uploads/2021/07/Collaborative-Migration-Management-Strategy.pdf> (July 2021) (stating that “The United States has strong national security, economic, and humanitarian interests in reducing irregular migration and promoting safe, orderly, and humane migration” within North and Central America).

Fourth, DHS is allocating these visas to specific countries to further promote development and economic stability of these countries to reduce irregular migration throughout the Western Hemisphere, including from Haiti.¹³⁵

As in prior years, DOS will work with the relevant countries to facilitate consular interviews, if required,¹³⁶ and channels for reporting incidents of fraud and abuse within the H-2 programs. Further, each country’s own consular networks will maintain contact with the workers while in the United States and ensure the workers know their rights and responsibilities under the U.S. immigration laws, which are all valuable protections to the immigration system, U.S. employers, U.S. workers, and workers entering the country on H-2 visas. DHS has determined that reserving 20,000 supplemental H-2B visas towards the country-specific allocation and continuing to include these countries is reasonable given the progressively increasing use of H-2B visas among the Northern Central American countries of Guatemala, Honduras and El Salvador, and the other three countries—Colombia, Costa Rica and Ecuador—added to this allocation in fiscal year 2024. DHS believes these aspects will encourage U.S. employers that are suffering irreparable harm or will suffer impending irreparable harm to seek out workers from such countries, while, at the same time, increase interest among

¹³⁵ See, e.g., https://twitter.com/DHSgov/status/1580310211931144194?ref_src=twsrc%5Etfw (this supplemental allocation to workers from Haiti, Honduras, Guatemala, and El Salvador “advances the Biden Administration’s pledge, under the L.A. Declaration to expand legal pathways as an alternative to irregular migration”); The White House, *Fact Sheet: The Los Angeles Declaration on Migration and Protection U.S. Government and Foreign Partner Deliverables*, <https://www.whitehouse.gov/briefing-room/statements-releases/2022/06/10/fact-sheet-the-los-angeles-declaration-on-migration-and-protection-u-s-government-and-foreign-partner-deliverables/> (addressing several measures, including the H-2B allocation for nationals of Haiti, as part of “the President’s commitment to support the people of Haiti”).

¹³⁶ As noted previously, some consular officers may waive the in-person interview requirement for H-2B applicants whose prior visa expired within a specific timeframe and who otherwise meet the strict limitations set out under INA section 222(h), 8 U.S.C. 1202(h). The authority allowing for waiver of interview of certain H-2 (temporary agricultural and non-agricultural workers) applicants is in place until further notice and is reviewed annually. Certain applicants renewing a visa in the same classification within 48 months of the prior visa’s expiration are also eligible for interview waiver. DOS, *Important Update on Waivers of the Interview Requirement for Certain Nonimmigrant Visa Applicants*, <https://travel.state.gov/content/travel/en/News/visas-news/important-update-on-waivers-of-the-interview-requirement-for-certain-nonimmigrant-visa-applicants.html> (last updated Dec. 21, 2023).

such nationals seeking a legal pathway for temporary employment in the United States. DHS also believes its outreach efforts with the governments of these countries, along with efforts in some of these countries by USAID to increase access to the H-2B program, support the decision to provide this allocation of 20,000 visas. USAID has worked to build capacity in Northern Central America to facilitate access to temporary worker visas under the H-2 program. Collaborating closely with the governments of El Salvador, Guatemala, and Honduras, USAID has strengthened the capacity of relevant government ministries to transparently and efficiently match qualified workers to temporary labor opportunities in the United States. In fiscal years 2021, 2022, and 2023 USAID increased funding to expand capacity building activities in El Salvador, Guatemala, and Honduras in response to the increased demand generated by the supplemental allocations of H-2B visas for Northern Central American nationals included in the FY 2021, FY 2022, and FY 2023 TFRs. The acceleration of USAID’s activities likely helped increase uptake of H-2B visas issuance under the FY 2021, FY 2022, and FY 2023 TFRs, as H-2B visa issuances to Salvadorans, Guatemalans and Hondurans increased significantly over prior years,¹³⁷ and USAID’s assistance helped reduce the average period of time to match qualified workers from these three countries to requests from U.S. employers—from 42 days to 14 days in El Salvador, 55 days to 17 days in Guatemala, and 24 days to 8 days in Honduras.¹³⁸ USAID’s programs also strengthen worker protections by helping crowd out unethical recruiters and providing labor rights education and resources to seasonal workers.

DOS issued a combined total of approximately 26,630 H-2B visas to nationals of the Northern Central American countries and Haiti from FY 2015 through FY 2020, an average of approximately 4,400 per year.¹³⁹ In FY

¹³⁷ See DOS, *Nonimmigrant Visa Issuance Statistics, Nonimmigrant Visa Issuances by Visa Class and by Nationality*, <https://travel.state.gov/content/travel/en/legal/visa-law0/visa-statistics/nonimmigrant-visa-statistics.html> (last visited Sept. 26, 2023); U.S. Dep’t of Homeland Security, U.S. Citizenship and Immigr. Servs., Office of Performance and Quality, CLAIMS3, VIBE, DOS Visa Issuance Data, queried 10/2023, TRK 13122, Issuances for FY 2023 H-2Bs By Requested Nationality Code.

¹³⁸ See USAID, *H-2 Visa Opportunities in Guatemala, Honduras, and El Salvador*, https://www.usaid.gov/sites/default/files/2024-06/USAID%20H-2%20Fact%20Sheet%20%283_7_24%29.pdf (Mar. 7, 2024).

¹³⁹ The “combined total” includes all H-2B visas and are not limited to visas issued under

2021, the first year in which supplemental H–2B visas were reserved for nationals of Northern Central American countries, DOS issued a combined total of 6,277 H–2B visas to nationals of those countries.¹⁴⁰ In FY 2022, DOS issued a combined total of 15,058 H–2B visas to nationals of Haiti and the Northern Central American countries.¹⁴¹ In FY 2023, DOS issued a combined total of 23,816 H–2B visas to nationals of Haiti and the Northern Central American countries.¹⁴² This increase is likely due in part to the additional H–2B visas made available to nationals of these countries by the FY 2021, FY 2022, and FY 2023 H–2B supplemental visa temporary final rules. In addition, based in part on the vital U.S. interest of promoting sustainable development and the stability of Haiti, in November 2021, DHS added Haiti to the list of countries whose nationals are eligible to participate in the H–2A and H–2B programs.¹⁴³ In FY 2024, DOS issued a combined total of 17,879 H–2B supplemental visas to nationals of Haiti, the North Central American countries, and Colombia, Ecuador, and Costa Rica.¹⁴⁴ Therefore, as previously stated, DHS has determined that the additional increase in FY 2025 will not only provide U.S. businesses that have been unable to find qualified and available U.S. workers with potential workers, but also promote further expansion of lawful immigration and lawful employment authorization for nationals of the specified countries.

The exemption from the returning worker requirement recognizes the small, albeit increasing, number of individuals from the three Northern Central American countries and Haiti, and the small number of individuals from Colombia, Ecuador, and Costa

Rica,¹⁴⁵ who were previously granted H–2B visas in recent years. Absent this exemption, there may be an insufficient number of qualifying workers from these countries to use the allocated visas. Exempting this population from the returning worker requirement will increase the ability of workers from these countries to pursue lawful temporary work in the U.S., encourage employers to seek out individuals from these countries, and maximize the chance of meeting the goal of reaching the full allocation.

USCIS will stop accepting petitions received under the country-specific allocation after September 15, 2025. This end date should provide H–2B employers ample time, should they choose, to petition for, and bring in, workers under the country-specific allocation. This, in turn, provides an opportunity for employers to contribute to our country's efforts to promote and improve safety, security and economic stability in these countries to help stem the flow of irregular migration to the United States. Nothing in this rule will limit the authority of DHS or DOS to deny, revoke, or take any other lawful action with respect to an H–2B petition or visa application at any time before or after approval of the H–2B petition or visa application.

E. Business Need Standard—Irreparable Harm and FY 2025 Attestation

To file any H–2B petition under this rule, petitioners must meet all existing H–2B eligibility requirements, including having an approved, valid, and unexpired TLC. *See* 8 CFR 214.2(h)(6) and 20 CFR part 655, subpart A. The TLC process focuses on establishing whether a petitioner has a temporary need for workers and whether there are U.S. workers who are able, willing, qualified, and available to perform the temporary service or labor, and does not address the harm a petitioner is facing or will face in the absence of such workers; the attestation addresses this question. In addition, under this rule, the petitioner must submit an attestation to USCIS in which the petitioner affirms, under penalty of perjury, that it

meets the business need standard—that they are suffering irreparable harm or will suffer impending irreparable harm (that is, permanent and severe financial loss) without the ability to employ all of the H–2B workers requested on their petition.¹⁴⁶ In addition to asserting that it meets the business need standard, the employer must attest that, by the time of submission of the petition to USCIS, they have prepared and retained a detailed written statement describing how the evidence gathered in support of their petition demonstrates that irreparable harm is occurring or impending. The employer must also attest that, upon request, it will provide to DHS and/or DOL all of the types of documentary evidence it selected in the attestation form that support its claim of irreparable harm, along with the detailed written statement it prepared by the time of submitting the petition to USCIS describing how such evidence demonstrates irreparable harm. The petitioner must submit the attestation directly to USCIS, together with Form I–129, the approved and valid TLC,¹⁴⁷ and any other necessary documentation. As in the rules implementing prior years' temporary cap increases, employers will be required to complete the new attestation form which can be found at: <https://www.foreignlaborcert.doleta.gov/form.cfm>.¹⁴⁸

The irreparable harm standard is the same as in the temporary final rule for recent years. The irreparable harm standard requires employers to attest that they are suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all of the H–2B workers requested on the petition filed under this rule.

As noted above, Congress authorized the Secretary of Homeland Security, in consultation with the Secretary of

supplemental caps. *See* DOS, *Nonimmigrant Visa Issuance Statistics, Nonimmigrant Visa Issuances by Visa Class and by Nationality*, <https://travel.state.gov/content/travel/en/legal/visa-law0/visa-statistics/nonimmigrant-visa-statistics.html>.

¹⁴⁵ During fiscal years 2021 and 2022, the Department of State issued 74 and 247 H–2B visas respectively to Colombian nationals, 35 and 115 H–2B visas respectively to Ecuadorian nationals, and 204 and 283 H–2B visas respectively to Costa Rican nationals. *See Characteristics of H–2B*

Nonagricultural Temporary Workers Fiscal Year 2021 Report to Congress, <https://www.uscis.gov/sites/default/files/document/reports/H-2B-FY21-Characteristics-Report.pdf> (Mar. 10, 2022); *Characteristics of H–2B Nonagricultural Temporary Workers Fiscal Year 2022 Report to Congress*, https://www.uscis.gov/sites/default/files/document/data/USCIS_H2B_FY22_Characteristics_Report.pdf (Feb. 14, 2023).

¹⁴⁶ An employer may request fewer workers on the H–2B petition than the number of workers listed on the TLC. *See* Instructions for Petition for Nonimmigrant Worker, providing that “The total number of workers you request on an H–2B petition must not exceed the number of workers approved by the Department of Labor on the temporary labor certification.”

¹⁴⁷ Since July 26, 2019, USCIS has been accepting a printed copy of the electronic one-page ETA–9142B, Final Determination: H–2B Temporary Labor Certification Approval, as an original, approved TLC. *See Notice of DHS's Requirement of the Temporary Labor Certification Final Determination Under the H–2B Temporary Worker Program*, 85 FR 13178, 13179 (Mar. 6, 2020).

¹⁴⁸ The attestation requirement does not apply to workers who have already been counted under the H–2B statutory caps for fiscal year 2025. Further, the attestation requirement does not apply to noncitizens who are exempt from the fiscal year 2025 H–2B statutory cap, including those who are extending their stay in H–2B status. Accordingly, petitioners that are filing only on behalf of such workers are not subject to the attestation requirement.

Labor, to increase the total number of H-2B visas available “upon the determination that the needs of American businesses cannot be satisfied” with U.S. workers.¹⁴⁹ The irreparable harm standard in this rule aligns with this determination that Congress requires DHS to make before increasing the number of H-2B visas available to U.S. employers. In particular, requiring employers to attest that they are suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all of the requested H-2B workers is directly relevant to the needs of the business—if an employer is suffering or will suffer irreparable harm, then their needs are not being satisfied. Because the authority to increase the statutory cap is tied to the needs of businesses, as in prior years, the Departments think, as a policy matter, that it is reasonable to require employers to attest that they are suffering irreparable harm or that they will suffer impending irreparable harm without the ability to employ all of the H-2B workers requested on their petition. If such employers are unable to attest to such harm and retain and produce (upon request) documentation of that harm, it calls into question whether the need set forth in this rule cannot in fact be satisfied without the ability to employ H-2B workers. This requirement falls within the broad discretion Congress gave to the Secretary to, in consultation with the Secretary of Labor, increase the number of H-2B workers in order to meet the needs of American businesses.¹⁵⁰ As discussed in the Legal Framework section as well as in the section addressing the country-specific allocation, DHS has broad delegation to administer and enforce U.S. immigration laws and issue regulations regarding the same, as well as broad discretion to establish conditions on the admission of nonimmigrants, and over the adjudication of nonimmigrant petitions, after consultation with other agencies, including DOL. See INA sec. 103(a)(1), 214(a)(1), (c)(1); 8 U.S.C. 1103(a)(1), 1184(a)(1), (c)(1). In addition, through the temporary enactment authorizing the Secretary of DHS to increase the number of H-2B visas,¹⁵¹

Congress delegated to the Secretary of DHS, after consultation with the Secretary of Labor, the discretion to establish a framework for determining that the needs of American businesses cannot be satisfied with the existing workforce and the conditions under which to authorize additional visas to further the purpose of the enactment. In the most recent, as well as each prior annual enactment,¹⁵² Congress has consistently used the word “may” when describing the Secretary’s authority, and the use of the word “may” indicates a grant of discretion, absent contrary legislative intent, structure and purpose of the statute.¹⁵³ As in prior years, the Departments have determined that the irreparable harm standard falls within the discretionary authority of the Secretary of DHS and furthers the legislative purpose behind the temporary enactment by making visas available to those American businesses that are most likely to be severely impacted by a lack of an able, willing, and qualified workforce.

This rule also requires an employer to attest that it has prepared a detailed written statement describing (i) how the employer’s business is suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all H-2B workers requested on the I-129 petition, and (ii) how each type of evidence selected in the attestation form and relied upon by the employer demonstrates the applicable irreparable harm. The employer will not submit this detailed written statement to DHS with its petition for supplemental visas, but will attest on the attestation form to having prepared a detailed written statement. The detailed written statement must be provided to DHS and/or DOL upon request in the event of an audit or during the course of an investigation. This requirement was first introduced in the FY 2023 TFR to provide additional

year 2024 with United States workers who are willing, qualified, and able to perform temporary nonagricultural labor, may increase the total number of aliens who may receive a visa under section 101(a)(15)(H)(ii)(b) of such Act (8 U.S.C. 1101(a)(15)(H)(ii)(b)) in such fiscal year by not more than the highest number of H-2B nonimmigrants who participated in the H-2B returning worker program in any fiscal year in which returning workers were exempt from such numerical limitation.”

¹⁵² *Lorillard v. Pons*, 434 U.S. 575, 581 (1978). (“Congress is presumed to be aware of an administrative or judicial interpretation of a statute and to adopt that interpretation when it reenacts a statute without change.”).

¹⁵³ See generally *U.S. v. Rodgers*, 461 U.S. 677, 706 (1983) (The word “may,” when used in a statute, usually implies some degree of discretion unless there is indication of contrary legislative intent, or an obvious inference from the structure and purpose of the statute.).

clarity informed by the Departments’ experiences in assessing the irreparable harm standard in previous years.

The attestation that irreparable harm is occurring or is impending cannot be based on a speculative analysis that permanent or severe financial loss “may occur” or “is likely to occur.” Rather, as of the time of submission to DHS, employers must have concrete evidence establishing that severe and permanent financial loss is occurring, with the scope and severity of harm clearly articulable, or that severe and permanent financial loss will occur in the near future without access to the supplemental visas. Even if no irreparable harm ultimately occurs because the employer is approved for supplemental visas under this rule, the employer must be able to articulate how permanent and severe financial loss was impending at the time of filing. Additionally, in DOL’s experience, employers sometimes do not retain the documentation they specifically attested they would retain, or will not or cannot explain how this documentation demonstrates the relevant irreparable harm to which they attested, which indicates that some of the employers seeking to benefit from hiring H-2B workers are not thoughtfully considering, or considering at all, whether their business needs qualify them for supplemental H-2B visas under these rules.

Additionally, the Departments continue to believe that the written statement is necessary in the case of an audit or investigation to explain, in detail, the employer’s reasoning as to why irreparable harm was occurring or impending without the ability to employ H-2B workers, and how the evidence supports the employer’s reasoning. In audits and investigations, some employers have provided hundreds of pages of evidence without any explanation as to how this evidence demonstrates irreparable harm, leaving DOL or DHS to determine how a voluminous compilation of complex and, sometimes, seemingly unrelated documents demonstrates irreparable harm without any understanding of the employer’s intent when providing the documents. A detailed, thoughtful explanation from the employer will clarify the purpose of these documents and allow the employer to clearly make their case that the business was experiencing irreparable harm or would experience impending irreparable harm at the time of petitioning for supplemental visas.

As such, the Departments believe that it is prudent to require employers to identify how they are suffering

¹⁴⁹ See section 105 of Pub. L. 118–47, as extended by Public Law 118–83.

¹⁵⁰ See *Loper Bright Enterprises v. Raimondo*, 144 S. Ct. 2244, 2263 (2024).

¹⁵¹ Public Law 118–47, Division G, Title I, sec. 105, states: “Notwithstanding the numerical limitation set forth in section 214(g)(1)(B) of the Immigration and Nationality Act (8 U.S.C. 1184(g)(1)(B)), the Secretary of Homeland Security, after consultation with the Secretary of Labor, and upon the determination that the needs of United States businesses cannot be satisfied during fiscal

irreparable harm (that is, permanent or severe financial loss), or will suffer impending irreparable harm, and how the evidence they will maintain shows that harm was occurring or impending, at the time they petition for H-2B visas under this rule. The written statement should identify, in detail, the severe and permanent financial loss that is occurring or will occur in the near future without access to the supplemental visas and should describe how the information contained in the documentary evidence demonstrates this severe and permanent financial loss. A written statement explaining that no irreparable harm occurred because the employer was approved for supplemental H-2B visas is insufficient; if no irreparable harm actually occurred, the employer must be able to show that irreparable harm was impending at the time of the petition's filing. Supporting evidence of the employer's irreparable harm (either occurring or impending) maintained and discussed in the detailed written statement may include, but is not limited to, the following types of documentation:

(1) Evidence that the business is suffering or will suffer in the near future permanent and severe financial loss due to the inability to meet financial or existing contractual obligations because they were unable to employ H-2B workers, including evidence of executed contracts, reservations, orders, or other business arrangements that have been or would be cancelled, and evidence demonstrating an inability to pay debts/bills;

(2) Evidence that the business is suffering or will suffer in the near future permanent and severe financial loss, as compared to prior years, such as financial statements (including profit/loss statements) comparing the employer's period of need to prior years; bank statements, tax returns, or other documents showing evidence of current and past financial condition; and relevant tax records, employment records, or other similar documents showing hours worked and payroll comparisons from prior years to the current year;

(3) Evidence showing the number of workers needed in the previous three seasons (FY 2022, 2023, and 2024) to meet the employer's need as compared to those currently employed or expected to be employed at the beginning of the start date of need. Such evidence must indicate the dates of their employment, and their hours worked (for example, payroll records) and evidence showing the number of H-2B workers it claims are needed, and the workers' actual

dates of employment and hours worked; and/or

(4) Evidence that the petitioner is reliant on obtaining a certain number of workers to operate, based on the nature and size of the business, such as documentation showing the number of workers it has needed to maintain its operations in the past, or will in the near future need, including but not limited to: a detailed business plan, copies of purchase orders or other requests for good and services, or other reliable forecast of an impending need for workers.

These examples are not exhaustive, nor will they necessarily establish that the business meets the irreparable harm standard; petitioners may retain other types of evidence they believe will satisfy these standards. Such evidence must be maintained and provided, with the written statement, to DOL and/or DHS upon request. It has been DOL's experience when reviewing documentation submitted to establish irreparable harm that employers commonly provide unexecuted contracts or letters of intent; contracts with redacted financial terms or dates of performance; or written statements memorializing verbal agreements that are not signed by all parties and thus may be insufficient evidence of the terms of such agreements and may call into question their credibility. In addition, DOL has encountered contracts among related entities that are owned, operated, or otherwise controlled by the employer or an individual with ownership interest in the employer. Such contracts may lack credibility as evidence of irreparable harm because the employer and related parties may share the same interest in obtaining H-2B workers even in situations where the employer is not suffering irreparable harm or will not suffer impending irreparable harm. In those instances, DOL may request that an employer provide additional credible evidence to demonstrate that it has met the legal standard. In other situations, the only documentation offered by the employer is a declaration, without any supporting documentary evidence. Given that the employer must establish that they are suffering irreparable harm or will suffer impending irreparable harm, in other words, a permanent and severe financial loss without the ability to employ all of the H-2B workers requested on their petition, an employer's irreparable harm cannot be properly assessed without evidence of its financial business needs. As such, DOL is clarifying that merely asserting irreparable harm, or providing documentation that lacks sufficient facts

or indicia of validity (e.g., signatures) for DOL to determine that the employer was suffering or would suffer impending irreparable harm without the ability to employ all of the H-2B workers requested under the supplemental cap at the time of filing their petition, will be insufficient to make an irreparable harm determination. In such instances where the evidence is insufficient or the petitioner merely submits a declaration without supporting documentation, DOL may require the employer to provide additional credible evidence. This is because mere assertions or the absence of key financial terms or dates of performance in a contract due to redaction, for example, hinder the Department's ability to evaluate whether the employer was in fact suffering irreparable harm or would have suffered impending irreparable harm without the ability to employ all of the H-2B workers it requested for a given period. Factors that can demonstrate the credibility of a contract or similar commitment or obligation may include evidence of an agreement, preferably in writing, that includes the financial terms, dates of performance, and evidence it was signed and/or agreed upon before the petition was filed.

While the employer will not submit the detailed written statement nor the supporting evidence to DHS at the time of filing a petition for H-2B visas under this rule, the Departments emphasize that the employer must prepare the detailed written statement and compile the evidence at the time of filing. The employer must complete the analysis as to whether the employer is experiencing irreparable harm or will experience impending irreparable harm at the time the employer petitions for supplemental visas using evidence available at this time. In the interest of efficiency, the Departments do not require the submission of this statement to DHS at the time of filing the petition. Instead, the employer must attest that it has prepared the detailed written statement and that it will keep it as part of its records, to be provided to the Departments, upon request.

As the burden rests with the petitioner to prove eligibility for supplemental H-2B visas under the time-limited authority implemented with this temporary final rule by a preponderance of the evidence, it is the petitioner's burden to establish that it meets the irreparable harm standard. INA sec. 291, 8 U.S.C. 1361; *Matter of Chawathe*, 25 I&N Dec. 369, 375-76 (AAO 2010). The attestation form will serve as prima facie initial evidence to DHS that the petitioner's business is

suffering irreparable harm or will suffer impending irreparable harm. USCIS will reject in accordance with 8 CFR 103.2(a)(7)(ii) or may deny in accordance with 8 CFR 103.2(b)(8)(ii), as applicable, any petition requesting H-2B workers under this FY 2025 supplemental cap that is lacking the requisite attestation form. Although this rule does not require submission of the evidence selected in the attestation and/or a detailed written statement at the time of filing of the petition, other than an attestation, the employer must have the evidence selected in the attestation and the accompanying detailed written statement on hand and ready to present to DHS and/or DOL at any time starting with the date of filing the I-129 petition, through the prescribed document retention period discussed below.

As with petitions filed under the supplemental TFRs in recent years, the Departments intend to select a significant number of petitions for audit examination to verify compliance with program requirements, including the irreparable harm standard and recruitment provisions implemented through this rule. The Departments may consider failure to provide evidence demonstrating irreparable harm, to prepare or provide the detailed written statement explaining irreparable harm, or to comply with the audit process to be a willful violation resulting in an adverse agency action on the employer, including revocation of the TLC or program debarment. Similarly, failure to cooperate with any compliance review, evaluation, verification, or inspection conducted by DHS and/or DOL as required by 8 CFR

214.2(h)(6)(xv)(B)(2)(v) and (vi) may constitute a violation of the terms and conditions of an approved petition and lead to petition revocation under 8 CFR 214.2(h)(11)(iii)(A)(3).

The attestation submitted to USCIS will also state that the employer:

(1) meets all other eligibility criteria for the available visas, including the returning worker requirement, unless exempt because the H-2B worker is a national of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, or Costa Rica who is counted against the 20,000 visas reserved for such workers;

(2) will comply with all assurances, obligations, and conditions of employment set forth in the *Application for Temporary Employment Certification* (Form ETA 9142B and appendices) certified by DOL for the job opportunity (which serves as the TLC);

(3) will conduct additional recruitment of U.S. workers in accordance with the requirements of

this rule and discussed further below; and

(4) will document and retain evidence of such compliance.

Because petitioners will submit the attestation to USCIS as initial evidence with Form I-129, DHS considers the attestation to be evidence that is incorporated into and a part of the petition consistent with 8 CFR 103.2(b)(1). Accordingly, USCIS may deny or revoke, as applicable, a petition based on or related to statements made in the attestation, including but not limited to the following grounds: (1) the employer failed to demonstrate employment of all of the requested workers is necessary under the appropriate business need standard; or (2) the employer failed to demonstrate that it requested and/or instructed that each worker petitioned for is a returning worker, or a national of one of the specified countries, as required by this rule. The petitioner may appeal any denial or revocation on such basis, however, under 8 CFR part 103, consistent with DHS regulations and existing USCIS procedures.

It is the view of the Secretaries of Homeland Security and Labor that requiring a post-TLC attestation to USCIS is the most practical approach to applying the eligibility requirements of this rule without causing undue delays in the filing or adjudication processes for those employers with start dates in the first half of the fiscal year, many of whom will have already begun or completed the TLC application process. The Departments have determined that, if such employers were required to submit the attestation form to DOL before filing a petition with DHS, the attendant delays would negatively impact the ability of American businesses to timely get the help that they need given TLC processing timeframes. For consistency and to avoid confusion, the Departments will also maintain the post-TLC attestation process for employers with start dates in the second half of the fiscal year that seek supplemental H-2B visas under this rule. This approach, in conjunction with additional integrity safeguards, has been used consistently in prior supplemental H-2B temporary final rules, and the Departments will continue to monitor its effectiveness and sufficiency.

As in prior years, all employers under this rule are required to retain documentation, which the employer must provide upon request by DHS and/or DOL, supporting the new attestations regarding (1) the irreparable harm standard; (2) the returning worker requirement, or, alternatively,

documentation supporting that the H-2B worker(s) requested is a national of one of the specified countries who is counted against the 20,000 country-specific allocation (which may be satisfied by the separate Form I-129 that employers are required to file for such workers in accordance with this rule); and (3) a recruitment report for any additional recruitment required under this rule for a period of 3 years from the date of certification. *See* 20 CFR 655.68. Although the employer must have such documentation on hand at the time it files the petition, the Departments do not believe it is necessary or efficient for all employers to submit such documentation to USCIS at the time of filing the petition. However, as noted above, the Departments will employ program integrity measures, including additional scrutiny by DHS of employers that have committed labor law violations in the H-2B program, and continue to conduct audits, investigations, and/or post-adjudication compliance reviews on a significant number of H-2B petitions. As part of that process, USCIS may issue a request for additional evidence, a notice of intent to revoke, or a revocation notice, based on the review of such documentation, *see* 8 CFR 103.2(b) and 8 CFR 214.2(h)(11), and DOL's OFLC and WHD will be able to review this documentation and enforce the attestations during the course of an audit examination or investigation.

In accordance with the attestation requirements, under which petitioners attest that they meet the irreparable harm standard, that they are seeking to employ only returning workers (unless exempt as described above), and that they meet the document retention requirements at 20 CFR 655.68, petitioners must retain documents and records fulfilling their responsibility to demonstrate compliance with this rule for 3 years from the date the TLC was approved, and must provide the documents and records upon the request of DHS and/or DOL. As mentioned above, the employer bears the burden of establishing that they are suffering or will suffer impending irreparable harm. With regard to the irreparable harm standard, employers attesting that they are suffering irreparable harm must be able to provide concrete evidence establishing severe and permanent financial loss that is occurring; the scope and severity of the harm must be clearly articulable. Employers attesting that they will suffer impending irreparable harm must be able to demonstrate that severe and permanent financial loss will occur in

the near future without access to the supplemental visas. It will not be enough to provide evidence suggesting that such harm may or is likely to occur; rather, the documentary evidence must show that impending harm is occurring or will occur and document the form of such harm. Examples of possible types of evidence to be maintained are listed earlier in this section.

When a petition is selected for audit examination, or investigation, DHS and/or DOL will review all evidence available to it to confirm that the petitioner properly attested to DHS, at the time of filing the petition, that their business was suffering irreparable harm or would suffer impending irreparable harm, and that they petitioned for and employed only returning workers, unless the H-2B worker is a national of one of the specific countries counted towards the 20,000 country-specific allocation, among other attestations. If DHS subsequently finds that the evidence does not support the employer's attestations, DHS may deny or, if the petition has already been approved, revoke the petition at any time consistent with existing regulatory authorities. DHS may also, or alternatively, refer the petitioner to DOL for further investigation. In addition, DOL may independently take enforcement action, including by, among other things, debarring the petitioner from the H-2B program for not less than one year or more than five years from the date of the final agency decision, which also disqualifies the debarred party from filing any labor certification applications or labor condition applications with DOL for the same period set forth in the final debarment decision. *See, e.g.*, 20 CFR 655.73; 29 CFR 503.20, 503.24.¹⁵⁴

Evidence reflecting a preference for hiring H-2B workers over U.S. workers may warrant an investigation by additional agencies enforcing employment and labor laws, such as the Immigrant and Employee Rights Section (IER) of the Department of Justice's Civil Rights Division. *See* INA section 274B, 8 U.S.C. 1324b (prohibiting certain types of employment discrimination based on citizenship status or national origin). Moreover, DHS and DOL may

refer potential discrimination to IER pursuant to applicable interagency agreements. *See* IER, Partnerships, <https://www.justice.gov/crt/partnerships> (last visited Aug. 20, 2024). In addition, if members of the public have information that a participating employer may be abusing this program, DHS invites them to notify U.S. Immigration and Customs Enforcement (ICE) by completing the online ICE Tip Form, <https://www.ice.gov/webform/ice-tip-form> (last visited Aug. 20, 2024), or alternately, via the toll-free ICE Tip Line, (866) 347-2423.¹⁵⁵

DHS, in exercising its statutory authority under INA section 101(a)(15)(H)(ii)(b), 8 U.S.C. 1101(a)(15)(H)(ii)(b), and section 105 of the FY 2024 Omnibus, as extended by Public Law 118-83, is responsible for adjudicating eligibility for H-2B classification. As in all cases, the burden rests with the petitioner to establish eligibility by a preponderance of the evidence. INA section 291, 8 U.S.C. 1361. *Matter of Chawathe*, 25 I&N Dec. 369, 375-76 (AAO 2010). Accordingly, as noted above, where the petition lacks initial evidence, such as a properly completed attestation, USCIS will, as applicable, reject the petition in accordance with 8 CFR 103.2(a)(7)(ii) or may deny the petition in accordance with 8 CFR 103.2(b)(8)(ii). Further, where the initial evidence submitted with the petition contains inconsistencies or is inconsistent with other evidence in the petition and the underlying TLC, USCIS may issue a Request for Evidence, Notice of Intent to Deny, or Denial in accordance with 8 CFR 103.2(b)(8). In addition, where it is determined that an H-2B petition filed pursuant to the FY 2024 Omnibus, as extended by Public Law 118-83, was granted erroneously, the H-2B petition approval may be revoked. *See* 8 CFR 214.2(h)(11).

Because of the particular circumstances of this regulation, and because the attestation and other requirements of this rule play a vital role in achieving the purposes of this rule, DHS and DOL intend that the attestation requirement, DOL procedures, and other aspects of this rule be non-severable from the remainder of the rule, including the

increase in the numerical allocations.¹⁵⁶ Thus, if the attestation requirement or any other part of this rule is enjoined or held invalid, the Departments intend for the remainder of the rule, with the exception of the retention requirements being codified in 20 CFR 655.68, to cease operation in the relevant jurisdiction, without prejudice to workers already present in the United States under this regulation, as consistent with law.

F. Portability

As an additional option for employers that cannot find U.S. workers, and as an additional flexibility for H-2B employees seeking to begin work with a new H-2B employer, this rule allows petitioners to immediately employ certain H-2B workers who are present in the United States in H-2B status without waiting for approval of the H-2B petition, generally for a period of up to 60 days. Such workers must be beneficiaries of a timely, non-frivolous H-2B petition requesting an extension of stay received on or after January 25, 2025,¹⁵⁷ but no later than 1 year after that date.¹⁵⁸ In addition, such workers must have been lawfully admitted to the United States and have not worked without authorization subsequent to such lawful admission. Additionally, petitioners may immediately employ individuals who are beneficiaries of a non-frivolous H-2B petition requesting an extension of the worker's stay that is pending as of January 25, 2025 without waiting for approval of the H-2B petition. To be eligible for portability, employers must have received an approved TLC demonstrating that they have completed a test of the U.S. labor market, and that DOL determined that there were no qualified U.S. workers available to fill these temporary positions. DHS is making this portability available for an additional one-year period in order to provide

¹⁵⁶ The Departments' intentions with respect to non-severability extend to all features of this rule other than the portability provision, which is described in the section below.

¹⁵⁷ This rule uses January 25, 2025 as the starting date because the similar provision in the FY 2024 TFR expires January 24, 2025. As January 25, 2025 is a Saturday, however, the earliest a petition might be received after the expiration of 8 CFR 214.2(h)(31) is January 27, 2025. *See* 8 CFR 1.2 (definition of day) (explaining that when the last day of a period computed falls on a Saturday, Sunday, or a legal holiday, the period shall run until the end of the next day which is not a Saturday, Sunday, or legal holiday).

¹⁵⁸ Individuals who are the beneficiaries of petitions filed on the basis of 8 CFR 214.1(c)(4) are not eligible to port to a new employer under 8 CFR 214.2(h)(32).

¹⁵⁴ Pursuant to the statutory provisions governing enforcement of the H-2B program, INA section 214(c)(14), 8 U.S.C. 1184(c)(14), a violation exists for purposes of DOL enforcement actions in the H-2B program where there has been a willful misrepresentation of a material fact in the petition or a substantial failure to meet any of the terms and conditions of the petition. A substantial failure is a willful failure to comply that constitutes a significant deviation from the terms and conditions. *See, e.g.*, INA section 214(c)(14)(D), 8 U.S.C. 1184(c)(14)(D); *see also* 29 CFR 503.19.

¹⁵⁵ DHS may publicly disclose information regarding the H-2B program consistent with applicable law and regulations. For information about DHS disclosure of information contained in a system of records, *see* <https://www.dhs.gov/system-records-notices-sorns>. Additional general information about DHS privacy policy can be accessed at <https://www.dhs.gov/policy>.

greater certainty for H-2B employers and workers.¹⁵⁹

The portability provision at new 8 CFR 214.2(h)(32) is substantively the same as the portability provision offered in the FY 2023 and FY 2024 H-2B supplemental visa temporary final rules, which were codified at 8 CFR 214.2(h)(29) and (h)(31), respectively, and will begin upon the expiration of 8 CFR 214.2(h)(31). See new 8 CFR 214.2(h)(32). Additionally, the provision is similar to temporary flexibilities that DHS has used previously to improve employer access to noncitizen workers during the COVID-19 pandemic.¹⁶⁰

The employment authorization provided under this provision would end 15 days after USCIS denies the H-2B petition or such petition is withdrawn. This 15-day period of employment following an H-2B petition denial or withdrawal is consistent with prior H-2B supplemental cap temporary final rules, as well as the 15-day period of employment following petition denial under existing DHS regulations at 8 CFR 274a.12(b)(21) for certain E-Verify participants to employ H-2A workers.

¹⁵⁹ On September 20, 2023, DHS issued *Modernizing H-2 Program Requirements, Oversight, and Worker Protections*, Notice of Proposed Rulemaking (NPRM), 88 FR 65040, 65066. In that NPRM, DHS proposed to extend portability to H-2A and H-2B workers on a permanent basis. The Department's proposal does not interfere with the portability provision of this rule, however, should DHS publish a final rule making H-2 portability permanent, any such provision will not expire on a specific date, unlike the portability provision made effective by this temporary final rule.

¹⁶⁰ See *Exercise of Time-Limited Authority To Increase the Fiscal Year 2021 Numerical Limitation for the H-2B Temporary Nonagricultural Worker Program and Portability Flexibility for H-2B Workers Seeking To Change Employers* 86 FR 28198 (May 25, 2021). On May 14, 2020, DHS published a temporary final rule in the **Federal Register** to amend certain H-2B requirements to help H-2B petitioners seeking workers to perform temporary nonagricultural services or labor essential to the U.S. food supply chain. *Temporary Changes to Requirements Affecting H-2B Nonimmigrants Due to the COVID-19 National Emergency*, 85 FR 28843 (May 14, 2020). In addition, on April 20, 2020, DHS issued a temporary final rule which, among other flexibilities, allowed H-2A workers to change employers and begin work before USCIS approved the new H-2A petition for the new employer. *Temporary Changes to Requirements Affecting H-2A Nonimmigrants Due to the COVID-19 National Emergency*, 85 FR 21739 (April 20, 2020). DHS has subsequently extended that portability provision for H-2A workers through two additional temporary final rules, on August 20, 2020, and December 18, 2020, which have been effective for H-2A petitions that were received on or after August 19, 2020 through December 17, 2020, and on or after December 18, 2020 through June 16, 2021, respectively. *Temporary Changes to Requirements Affecting H-2A Nonimmigrants Due to the COVID-19 National Emergency: Partial Extension of Certain Flexibilities*, 85 FR 51304 (August 20, 2020) and *Temporary Changes to Requirements Affecting H-2A Nonimmigrants due to the COVID-19 National Emergency: Extension of Certain Flexibilities*, 85 FR 82291 (December 18, 2020).

As in the prior temporary final rules, the 15-day period is intended to account for the passage of time between USCIS denial of the H-2B petition and the petitioner receiving notice of such denial.¹⁶¹

DHS is strongly committed not only to protecting U.S. workers and helping U.S. businesses receive the documented workers authorized to perform temporary nonagricultural services or labor that they need, but also to protecting the rights and interests of H-2B workers (consistent with Executive Order 13563 and in particular its reference to “equity,” “fairness,” and “human dignity”). In the FY 2020 DHS Further Consolidated Appropriations Act (Public Law 116-94), Congress directed DHS to provide options to improve the H-2A and H-2B visa programs, to include options that would protect worker rights.¹⁶² DHS has determined that providing H-2B nonimmigrant workers with the flexibility of being able to begin work with a new H-2B petitioner immediately and avoid a potential job loss or loss of income while the new H-2B petition is pending, provides some certainty to H-2B workers who may have found themselves in situations that warrant a change in employers.¹⁶³ This flexibility also provides an alternative to H-2B petitioners who have not been

¹⁶¹ A similar portability provision exists in DHS regulations related to H-1B nonimmigrant workers, but does not include a 15-day period. See 8 CFR 214.2(h)(2)(i)(H)(2).

¹⁶² The Joint Explanatory Statement accompanying the *Fiscal Year (FY) 2020 Department of Homeland Security (DHS) Further Consolidated Appropriations Act* (Public Law 116-94) states, “Not later than 120 days after the date of enactment of this Act, DHS, the Department of Labor, the Department of State, and the United States Digital Service are directed to report on options to improve the execution of the H-2A and H-2B visa programs, including: processing efficiencies; combatting human trafficking; protecting worker rights; and reducing employer burden, to include the disadvantages imposed on such employers due to the current semiannual distribution of H-2B visas on October 1 and April 1 of each fiscal year. USCIS is encouraged to leverage prior year materials relating to the issuance of additional H-2B visas, to include previous temporary final rules, to improve processing efficiencies.”

¹⁶³ The White House, *The National Action Plan to Combat Human Trafficking*, Priority Action 1.5.3, at p. 25 (Dec 2021); The White House, *The National Action Plan to Combat Human Trafficking*, Priority Action 1.6.3, at p. 20–21 (2020) (Stating that “[w]orkers sometimes find themselves in abusive work situations, but because their immigration status is dependent on continued employment with the employer in whose name the visa has been issued, workers may be left with few options to leave that situation.”). By providing the option of changing employers without risking job loss or a loss of income through the publication of this rule, DHS believes that H-2B workers may be more likely to leave abusive work situations, and thereby are afforded greater worker protections.

able to find U.S. workers and who have not been able to obtain H-2B workers subject to the statutory or supplemental caps who have the skills to perform the job duties. In that sense as well, it is equitable and fair.

G. DHS Petition Procedures

To petition for H-2B workers under the supplemental allocations in this rule, the petitioner must file a Form I-129 at the current filing location in accordance with applicable regulations and form instructions, along with an unexpired TLC and the attestation Form ETA-9142-B-CAA-9. Petitions filed for supplemental allocations under this rule at any location other than the current filing location will be rejected and the filing fees will be returned. For all petitions filed under this rule and the H-2B program, generally, employers must establish, among other requirements, that insufficient qualified U.S. workers are available to fill the petitioning H-2B employer's job opportunity and that the foreign worker's employment in the job opportunity will not adversely affect the wages or working conditions of similarly-employed U.S. workers. INA section 214(c)(1), 8 U.S.C. 1184(c)(1); 8 CFR 214.2(h)(6)(iii)(A) and (D); 20 CFR 655.1. To meet this standard of protection for U.S. workers and, in order to be eligible for additional visas under this rule, employers must have applied for and received a valid TLC in accordance with 8 CFR 214.2(h)(6)(iv)(A) and (D) and 20 CFR part 655, subpart A. Under DOL's H-2B regulations, TLCs are valid only for the period of employment certified by DOL and expire on the last day of authorized employment. 20 CFR 655.55(a).

In order to have a valid TLC, the employment start date on the employer's H-2B petition must not be different from the employment start date certified by DOL on the TLC. See 8 CFR 214.2(h)(6)(iv)(D). Under generally applicable DHS regulations, the only exception to this requirement applies when an employer files an amended H-2B petition, accompanied by a copy of the previously approved TLC and a copy of the initial visa petition approval notice, at a later date to substitute workers as set forth under 8 CFR 214.2(h)(6)(viii)(B). This rule also requires additional recruitment for certain petitioners, as discussed below.

All H-2B petitions must state the nationality of all the requested H-2B workers, whether named or unnamed, even if there are beneficiaries from more than one country. See 8 CFR 214.2(h)(2)(iii). If filing multiple Forms I-129 based on the same TLC (for

instance, one requesting returning workers and another requesting workers under the country-specific allocation), each H-2B petition must include a copy of the TLC and reference all previously-filed or concurrently-filed petitions associated with the same TLC. The total number of requested workers may not exceed the total number of workers indicated on the approved TLC. In addition, the USCIS Fee Schedule Final Rule, 89 FR 6194 (January 31, 2024), which took effect on April 1, 2024, imposed a limit of 25 named beneficiaries per petition.¹⁶⁴

Petitioners seeking H-2B classification for nationals under the 20,000 country-specific visa allocation that are exempt from the returning worker provision must file a separate Form I-129 for those nationals only. *See* new 8 CFR 214.2(h)(6)(xv). In this regard, a petition must be filed with a single Form ETA-9142-B-CAA-9 that clearly indicates that the petitioner is only requesting nationals from El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, or Costa Rica who are exempt from the returning worker requirement. Specifically, if the petitioner checks the first box of Form ETA-9142-B-CAA-9, then the petition accompanying that form *must* be filed only on behalf of nationals of one or more of these and not other countries. In such a case, if the Form I-129 petition is requesting beneficiaries from countries other than one of these countries, then USCIS may reject it or issue a request for evidence, notice of intent to deny, or denial, or, in the case of a non-frivolous petition, a partial approval limiting the petition to the number of beneficiaries who are from Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica. Requiring the filing of separate petitions to request returning workers and to request workers who are nationals of the specified countries is necessary to ensure the operational capability to properly calculate and manage the respective additional cap allocations and to ensure that all corresponding visa issuances are limited to qualifying applicants, particularly when such petitions request unnamed beneficiaries or are relied upon for subsequent requests to substitute beneficiaries in accordance with 8 CFR 214.2(h)(6)(viii).

The attestations must be filed on Form ETA-9142-B-CAA-9, Attestation for Employers Seeking to Employ H-2B Nonimmigrant Workers Under Section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118-47, as extended by

sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118-83. *See* 20 CFR 655.64. Petitioners are required to retain a copy of such attestations and all supporting evidence for 3 years from the date the associated TLC was approved, consistent with 20 CFR 655.56 and 29 CFR 503.17. *See* 20 CFR 655.68. Petitions submitted to DHS pursuant to Public Law 118-83, which extended the FY 2024 Omnibus, will be processed in the order in which they were received within the relevant supplemental allocation, and pursuant to processes parallel to those in place for when numerical limitations are reached under INA section 214(g)(1)(B) or (g)(10), 8 U.S.C. 1184(g)(1)(B) or (g)(10).

USCIS will reject petitions filed under the supplemental allocations in this rule at any location other than the current filing location and will return the filing fees for any such petition.

Immediately upon publication of the rule, but no earlier than that date, USCIS will begin accepting returning worker H-2B petitions requesting dates of need starting on or before March 31, 2025, as well as H-2B petitions for workers under the country-specific allocation with dates of need in the first half of FY 2025. Beginning no earlier than 15 days after the second half statutory cap is reached, USCIS will begin accepting returning worker H-2B petitions requesting work to begin on or after April 1, 2025, through May 14, 2025, as well as H-2B petitions for workers under the country-specific allocation with dates of need on or after April 1, 2025, through September 30, 2025. Finally, beginning no earlier than 45 days after the second half statutory cap is reached, USCIS will begin accepting returning worker H-2B petitions requesting work to begin on or after May 15 through September 30, 2025.

USCIS will reject any returning worker petition that is received after September 15, 2025, or after the applicable numerical limitation has been reached. DHS believes that 15 days from the end of the fiscal year is the minimum time needed for petitions to be adjudicated, although USCIS cannot guarantee the time period will be sufficient in all cases. Therefore, even if the country-specific allocation and second half supplemental allocations provided in this rule have not yet been reached, USCIS will stop accepting petitions under those allocations that are received after September 15, 2025. *See* new 8 CFR 214.2(h)(6)(xv)(C). Such petitions will be rejected and the filing fees will be returned. Petitioners may

choose to request premium processing of their petitions under 8 CFR 106.4, which allows for expedited processing for an additional fee.

Based on the time-limited authority granted to DHS by sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118-83, on the same terms as section 105 of the FY 2024 Omnibus, DHS is notifying the public that USCIS cannot approve petitions seeking H-2B workers under this rule on or after October 1, 2025. *See* new 8 CFR 214.2(h)(6)(xv)(C). Petitions pending with USCIS that are not approved before October 1, 2025 will be denied and any fees will not be refunded. *See* new 8 CFR 214.2(h)(6)(xv)(C).

H. DOL Procedures

As noted above, all employers are required to have an approved and valid TLC from DOL in order to file a Form I-129 petition with DHS. *See* 8 CFR 214.2(h)(6)(iv)(A) and (D). The standards and procedures governing the submission and processing of Applications for Temporary Employment Certification for employers seeking to hire H-2B workers are set forth in 20 CFR part 655, subpart A. An employer that seeks to hire H-2B workers must request a TLC in compliance with the application filing requirements set forth in 20 CFR 655.15 and meet all the requirements of 20 CFR part 655, subpart A, to obtain a valid TLC, including the criteria for certification set forth in 20 CFR 655.51. *See* 20 CFR 655.64(a) and 655.50(b). Employers with an approved TLC have conducted recruitment, as set forth in 20 CFR 655.40 through 655.48, to determine whether U.S. workers are qualified and available to perform the work for which employers sought H-2B workers.

The H-2B regulations require that, among other things, an employer seeking to hire H-2B workers in a non-emergency situation must file a completed Application for Temporary Employment Certification with the National Processing Center (NPC) designated by the OFLC Administrator no more than 90 calendar days and no fewer than 75 calendar days before the employer's date of need (*i.e.*, start date for the work). *See* 20 CFR 655.15.

Emergency Procedures

Under 20 CFR 655.17, an employer may request a waiver of the time period(s) for filing an Application for Temporary Employment Certification based on "good and substantial" cause, provided that the employer has

¹⁶⁴ *See* 8 CFR 214.2(h)(2)(ii).

sufficient time to thoroughly test the domestic labor market on an expedited basis and the OFLC certifying officer (CO) has sufficient time to make a final determination as required by the regulation. To rely on this provision, as the Departments explained in the 2015 H-2B Interim Final Rule, the employer must provide the OFLC CO with detailed information describing the “good and substantial cause” necessitating the waiver. Such cause may include the substantial loss of U.S. workers due to Acts of God, or a similar unforeseeable human-made catastrophic event that is wholly outside the employer’s control, unforeseeable changes in market conditions, or pandemic health issues. Thus, to ensure an adequate test of the domestic labor market and to protect the integrity of the H-2B program, the Departments clearly intended that use of emergency procedures must be narrowly construed and permitted in extraordinary and unforeseeable catastrophic circumstances that have a direct impact on the employer’s need for the specific services or labor to be performed. Even under the existing H-2B statutory visa cap structure, DOL considers USCIS’ announcement(s) that the statutory cap(s) on H-2B visas has been reached, which may occur with regularity every six months depending on H-2B visa need, as foreseeable, and therefore not within the meaning of “good and substantial cause” that would justify a request for emergency procedures. Accordingly, employers cannot rely solely on the supplemental H-2B visas made available through this rule as good and substantial cause to use emergency procedures under 20 CFR 655.17.

Additional Recruitment

In addition to the recruitment already conducted in connection with a valid TLC, to ensure the recruitment has not become stale, employers that wish to obtain visas for their workers under 8 CFR 214.2(h)(6)(xv), and who file an I-129 petition 30 or more days after the certified start date of work on the TLC must conduct additional recruitment for U.S. workers. As noted in the 2015 H-2B Interim Final Rule, U.S. workers seeking employment in temporary nonagricultural jobs typically do not search for work months in advance and cannot make commitments about their availability for employment far in advance of the work start date. *See* 80 FR 24041, 24061, 24071. Given that the temporary labor certification process generally begins 75 to 90 days in advance of the employer’s start date of work, employer recruitment efforts typically occur between 40 and 60 days

before that date with an obligation to provide employment to any qualified U.S. worker who applies until 21 days before the date of need. Therefore, employers with TLCs containing a start date of work on October 1, 2024, for example, likely conducted their positive recruitment beginning around late-July and ending around mid-August 2024 and continued to consider U.S. worker applicants and referrals only until September 10, 2024.

In order to provide U.S. workers a realistic opportunity to pursue jobs for which employers will be seeking foreign workers under this rule, the Departments have determined that if employers file an I-129 petition 30 or more days after their certified start dates of work, as shown on its approved Form ETA-9142B, *Final Determination: H-2B Temporary Labor Certification Approval*, they have not conducted recruitment recently enough for the DOL to reasonably conclude that there are currently an insufficient number of U.S. workers who are qualified, willing, and available to perform the work absent taking additional, positive recruitment steps. As noted in the FY 2022 second half H-2B supplemental cap TFR, the Departments determined that this 30-day requirement is consistent with provisions contained in previous TFRs and better aligns with the goal of affording workers an adequate opportunity to apply for jobs closer to when they tend to search for temporary employment. As explained in the 2015 H-2B Interim Final Rule, U.S. applicants applying for temporary positions typically offered by H-2B employers are often not seeking job opportunities, or making informed decisions about such work, several months in advance. *See* 80 FR 24041, 24071; 87 FR 30334, 30353–54. The Departments continued to use this 30-day requirement in the FY 2023 and FY 2024 H-2B supplemental cap TFRs based on the rationale provided in the FY 2022 second half H-2B supplemental cap TFR. *See* 87 FR 76816, 76842–76843; 88 FR 80394, 80426. The Departments have determined that this requirement is necessary to provide U.S. workers an opportunity to pursue jobs for which employers are seeking supplemental visas.

An employer that files an I-129 petition under 8 CFR 214.2(h)(6)(xv) fewer than 30 days after the certified start date of work on the TLC must submit the TLC and a completed Form ETA-9142B-CAA-9 but is not required to conduct additional recruitment for U.S. workers beyond the recruitment already conducted as a condition of

certification. Only those employers with still-valid TLCs with a certified start date of work that is 30 or more days before the date they file a petition will be required to conduct recruitment in addition to that conducted prior to being granted a TLC and attest that the recruitment will be conducted, as follows.

Placement of New Job Orders With State Workforce Agencies

Employers that are required to engage in additional recruitment must place a new job order for the job opportunity with the State Workforce Agency (SWA) serving the area of intended employment no later than the next business day after submitting an I-129 petition for H-2B workers to USCIS, and inform the SWA that the job order is being placed in connection with a previously submitted and certified Application for Temporary Employment Certification for H-2B workers by providing the SWA with the unique OFLC TLC case number. Under this rule, employers must also provide the OFLC NPC with the unique TLC case number concurrently with their placement of new job orders with the SWAs. This notification will allow OFLC to cross reference and repost information about the job opportunities that are provided on the employers’ certified Applications for Temporary Labor Certification and posted by OFLC on *SeasonalJobs.dol.gov*, which is DOL’s electronic job registry authorized under 20 CFR 655.34. Once posted by OFLC, information about the employer’s certified job opportunity will remain posted for a period of at least 15 calendar days, which is consistent with the period of time SWAs post job orders for intrastate and interstate clearance to recruit U.S. workers, as discussed below. The Departments continue to believe this additional notification is a reasonable and cost-efficient method of disseminating available job opportunities to a wider audience and those U.S. workers who may be interested in applying. While not meant to recreate it, this action will serve the same functional purpose as the posting on *SeasonalJobs*. To help employers who must conduct this notification requirement, DOL encourages employers to notify the OFLC NPC, at the same time notification is sent to the SWA, by sending an email to *H-2Bsupplementalvisas@dol.gov*, and including the words “H-2B TFR 2025 Recruitment” followed by the unique TLC case number in the subject line of the email.

The new job order placed with the SWA must contain the job assurances

and contents set forth in 20 CFR 655.18 for recruitment of U.S. workers at the place of employment and remain posted for at least 15 calendar days. The employer must also follow all applicable SWA instructions for posting job orders and receive applications in all forms allowed by the SWA, including online applications. The Departments have concluded that keeping the job order posted for a period of at least 15 calendar days, during the period the employer is conducting the additional recruitment steps explained below and OFLC reposts the job opportunity information, will effectively ensure U.S. workers are apprised of the job opportunity and are referred for employment, if they are willing, qualified, and available to perform the work. The minimum 15 calendar day period also is consistent with the employer-conducted recruitment activity period applicable under 20 CFR 655.40(b).

Once the SWA places the new job order on its public labor exchange system, the SWA will perform its normal employment service activities by circulating the job order for intrastate clearance, and in interstate clearance by providing a copy of the job order to other SWAs with jurisdiction over listed worksites as well as those States the OFLC CO designated in the original Notice of Acceptance issued under 20 CFR 655.33. Where the occupation or industry is traditionally or customarily unionized, the SWA will also circulate a copy of the new job order to the central office of the State Federation of Labor in the State(s) in which work will be performed, and the office(s) of local union(s) representing workers in the same or substantially equivalent job classification in the area(s) in which work will be performed, consistent with its current obligation under 20 CFR 655.33(b)(5). To facilitate an effective dissemination of these job opportunities, DOL encourages union(s) or hiring halls representing workers in occupations typically used in the H-2B program to proactively contact and establish partnerships with SWAs in order to obtain timely information on available temporary job opportunities. This will aid the SWAs' prompt and effective outreach under the rule. DOL's OFLC maintains a comprehensive directory of contact information for each SWA at <https://www.dol.gov/agencies/eta/foreign-labor/contact>.

Contact With American Job Centers

The employer also must conduct additional recruitment steps during the period of time the SWA is actively circulating the job order for intrastate

clearance. First, the employer must contact, by email or other electronic means, the nearest American Job Center(s) (AJC) serving the area of intended employment where work will commence to request staff assistance to advertise and recruit U.S. workers for the job opportunity. AJCs bring together a variety of programs providing a wide range of employment and training services for U.S. workers, including job search services and assistance for prospective workers and recruitment services for employers through the Wagner-Peyser Program. Therefore, AJCs can offer assistance to employers with recruitment of U.S. workers, and contact with local AJCs will facilitate contemporaneous and effective recruitment activities that can broaden dissemination of the employer's job opportunity through connections with other partner programs within the One-Stop System to locate qualified U.S. workers to fill the employer's labor need. For example, the local AJC, working in concert with the SWA, can coordinate efforts to contact community-based organizations in the geographic area that serve potentially qualified workers or, when a job opportunity is in an occupation or industry that is traditionally or customarily unionized, the local AJC may be better positioned to identify and circulate the job order to appropriate local union(s) or hiring hall(s), consistent with 20 CFR 655.33(b)(5). In addition, as a partner program in the One-Stop System, AJCs are connected with the State's unemployment insurance program, thus an employer's connection with the AJC will help facilitate knowledge of the job opportunity to U.S. workers actively seeking employment. When contacting the AJC(s), the employer must provide staff with the job order number or, if the job order number is unavailable, a copy of the job order.

To increase navigability and to make the process as convenient as possible, DOL offers an online service for employers to locate the nearest local AJC at <https://www.careeronestop.org/> and by selecting the "Find Local Help" feature on the main homepage. This feature will navigate the employer to a search function called "Find an American Job Center" where the city, state or zip code covering the geographic area where work will commence can be entered. Once entered and the search function is executed, the online service will return a listing of the name(s) of the AJC(s) serving that geographic area as well as a contact option(s) and an indication as to

whether the AJC is a "comprehensive" or "affiliate" center. Employers must contact the nearest "comprehensive" AJC serving the area of intended employment where work will commence or, where a "comprehensive" AJC is not available, the nearest "affiliate" AJC. A "comprehensive" AJC tends to be a large office that offers the full range of employment and business services, and an "affiliate" AJC typically is a smaller office that offers a self-service career center, conducts hiring events, and provides workshops or other select employment services for workers. Because a "comprehensive" AJC may not be available in many geographic areas, particularly among rural communities, this rule permits employers to contact the nearest "affiliate" AJC serving the area of intended employment where a "comprehensive" AJC is not available. In order to facilitate efficient access to AJC services, this rule requires that employers utilize available electronic methods to contact the nearest AJC to meet the contact and disclosure requirements in this rule.

Contact With AFL-CIO for Jobs in Traditionally or Customarily Unionized Occupation or Industry

When a job is in a traditionally or customarily unionized occupation or industry, during the time the SWA is actively circulating the job order, the employer must affirmatively contact the nearest American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) office covering the area of intended employment to provide written notice of the job opportunity and request assistance in recruiting qualified U.S. workers who may be interested in applying for the job opportunity. The employer must provide the AFL-CIO office (by mail, email, or other effective written means) a copy of the job order placed with the SWA. To determine which occupations are traditionally or customarily unionized, and to obtain information about the proper AFL-CIO office to contact,¹⁶⁵ employers should

¹⁶⁵ The Departments have determined that the requirement for employers to contact the nearest AFL-CIO office properly balances the goal of increasing U.S. worker outreach in those H-2B job opportunities that are in traditionally or customarily unionized occupations, while still providing employers with necessary guidance on recruitment requirements. The AFL-CIO is a voluntary federation of more than 60 national and international labor unions covering a substantial number of union employees. AFL-CIO, About Us, <https://aflcio.org/about-us> (last visited September 20, 2024). The H-2B job opportunities in

search the resources available on the OFLC website, under the “Customarily Unionized H–2B Occupations” tab on the lefthand side of the OFLC homepage: <https://www.dol.gov/agencies/eta/foreign-labor>.¹⁶⁶ In addition, to help employers who must conduct this additional recruitment step, employers may also contact the national AFL–CIO and request assistance in circulating the job order to the nearest AFL–CIO office covering the area of intended employment to advertise and recruit U.S. workers for the job opportunity. The most effective means of contacting the national AFL–CIO is to email the job order and request for assistance to H-2B@afclcio.org, but employers may also visit <https://afclcio.org> to obtain information on other effective means of contacting the organization for assistance. Upon receipt, the national AFL–CIO will distribute a copy of the job order, on behalf of the employer, to the most appropriate AFL–CIO office(s) serving the area of intended employment for that job opportunity.

When applicable, the employer must include information in its recruitment report confirming that either the national or nearest AFL–CIO office was contacted and notified in writing of the job opportunity or opportunities. In the recruitment report, the employer must state whether the nearest AFL–CIO office referred qualified U.S. worker(s), including the number of referrals, or indicate that it was non-responsive to

traditionally or customarily unionized occupations most frequently fall within those industries most likely to be organized or represented by AFL–CIO member unions.

Additionally, the AFL–CIO’s status as the largest federation of unions in the United States provides for comprehensive national coverage and increases the chances that a U.S. worker will be hired. See AFL–CIO Press Release, <https://afclcio.org/press/releases/afclcio-teams-wilmington-trust-and-bnymellon-expand-retirement-planning-options> (last visited September 20, 2024) (noting the AFL–CIO is “the nation’s largest federation of labor unions”). As discussed below, the SWAs circulation of relevant job orders based on their knowledge of the local labor market would provide effective outreach to other federations of unions and non-affiliated unions.

¹⁶⁶ These resources were developed based on recent information received from stakeholders indicating that collective bargaining agreements now exist in certain occupations, such as landscaping. In addition, the occupations or industries listed are ones in which the Department has typically observed substantial union presence in its program administration experience, such as occupations involved in public sector employment, construction and extraction activities, and service-related industries, where historical Bureau of Labor Statistics data has demonstrated a presence of union affiliated workers. See BLS, Economic News Release, Table 3. Union Affiliation of Employed Wage and Salary Workers by Occupation and Industry (Jan. 23, 2024), https://www.bls.gov/news.release/archives/union2_01232024.pdf.

the employer’s requests. The employer must retain all documentation establishing that it has contacted either the national or nearest AFL–CIO office and submit all such information upon request from the Departments. Documentation or evidence that would help employers establish that the appropriate AFL–CIO office was contacted, may include, but is not limited to: documentation proving the job order was shipped and delivered to the AFL–CIO office (e.g., copy of the job order along with the certificate of shipment provided by the U.S. Postal Service or other courier mail or parcel delivery services and/or any other form of delivery confirmation); evidence confirming that the job order, along with a request for assistance to recruit workers, was in fact emailed to the appropriate AFL–CIO office (e.g., copies of emails); phone records accompanied by proof of a follow-up email sending the job order to the appropriate AFL–CIO office; or copies of any correspondence exchanged (e.g., letter, email) between the employer and the AFL–CIO office regarding worker referrals.

We believe the requirement that employers contact the AFL–CIO in occupations or industries that are traditionally or customarily unionized will complement the requirement that SWAs circulate the job order to the State Federation of Labor and local unions in such situations, thereby increasing the likelihood that a U.S. worker will be recruited for the job opportunity. This is because in traditionally or customarily unionized industries and occupations, unions serve as an essential conduit for communications between U.S. workers and hiring employers and have traditionally been recognized as a reliable source of referrals of U.S. workers. Unionized applicants may additionally share information about the job opportunity with nonunionized applicants, resulting in more referrals of qualified applicants to the job opportunity. Within this context, the two requirements complement each other as the State Federations of Labor and local unions that SWAs would circulate relevant job orders to, based on their knowledge of the local labor market, are comprised of various union organizations and may not always include the AFL–CIO. Since H–2B job opportunities in traditionally or customarily unionized occupations tend to fall within those industries most likely to be organized or represented by AFL–CIO member unions, this requirement increases outreach to qualified U.S. workers. Moreover, this

requirement offers a chance for hiring employers to directly contact a potential pool of U.S. workers who are qualified and interested in the job opportunity, which can strengthen the probability that employers will locate U.S. workers suited for the job opportunity. For example, potential U.S. workers may be more inclined to contact an employer directly upon learning of the job opportunity rather than utilize the SWA as an intermediary since the application process could be quicker and demonstrates a willingness by employers to consider union workers. Direct contact between employers and unions may also initiate a dialogue between employers and unions that could lead to a future working relationship that fulfills the workforce needs of employers. Therefore, in providing timely and meaningful notice of job opportunities in traditionally or customarily unionized industries to the AFL–CIO, employers build on efforts by SWAs to circulate job orders to state and local unions, which may differ from the AFL–CIO, and thus broaden the scope of their U.S. worker outreach.

Contact With Former U.S. Workers

During the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of 20 CFR 655.64 for intrastate clearance, the employer must make reasonable efforts to contact (by mail or other written effective means) its former U.S. workers that it employed in the occupation at the place of employment (except those who were dismissed for cause or who abandoned the worksite) during the period beginning January 1, 2023 until the date the I–129 petition required under 8 CFR 214.2(h)(6)(xv) is submitted. Among the employees the employer must contact are those who have been furloughed¹⁶⁷ or laid off during this period. The employer must disclose to its former employees the terms of the job order placed with the SWA and solicit their return to the job. The employer must provide the contact and disclosures required by this paragraph in a language understood by the worker, as necessary or reasonable, and in writing to ensure the recruitment effort is effective and meaningful in reaching each former U.S. worker. The Departments are requiring written communication because they believe that written contact and disclosure of the terms of the job order is more effective than oral disclosure, and

¹⁶⁷ Furloughed employees are employees the employer laid off (as the term is defined in 20 CFR 655.5 and 29 CFR 503.4), but the layoff is intended to last for a temporary period of time.

provides greater assurance that workers understand the terms and working conditions of the job opportunity and can more effectively pursue redress if they do not receive the disclosed terms and working conditions. Written communication and disclosure will also make it easier for employers to establish compliance with this requirement, if necessary.

Contact With the Bargaining Representative or Posting of the Job Order

As the employer was required to do when initially applying for its labor certification, the employer must provide a copy of the job order to the bargaining representative for its employees in the occupation and area of intended employment, consistent with 20 CFR 655.45(a), or if there is no bargaining representative, post the job order in the places and manner described in 20 CFR 655.45(b). Similar to the requirement to contact former U.S. workers, discussed above, the employer must provide the contact and disclosures required by this paragraph in a language understood by the worker, as necessary or reasonable, and in writing to ensure the recruitment effort is effective and meaningful in reaching each former U.S. worker.

Contact With Current U.S. Workers

As was required in the FY 2024 H-2B supplemental visa TFR, employers must again contact U.S. workers currently employed at the place of employment to inform them of the job opportunity and request their assistance in recruiting qualified U.S. workers who may be seeking employment. The Departments continue to believe this recruitment step is a reasonable and cost-effective method of broadening dissemination of available job opportunities and increasing the likelihood that qualified U.S. workers will apply. We believe the requirement that employers contact their current U.S. workers employed at the place(s) of employment and solicit their assistance in recruiting other qualified U.S. workers will complement the requirement that employers post the job order in the places and manner described in 20 CFR 655.45(b), enhance word-of-mouth recruiting, which is a common method of soliciting referrals of qualified U.S. workers, and increase the likelihood of locating U.S. workers suited for the job opportunity more quickly and efficiently. U.S. workers currently employed by the employer, who are more likely to be familiar with the nature of the employer's business operations and services or labor to be performed, will generally refer other U.S. workers who are qualified and may

be more inclined to contact an employer directly upon learning of the job opportunity from a family, friend, or colleague with experience working for the employer.

Accordingly, during the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of 20 CFR 655.64 for intrastate clearance, the employer must make reasonable efforts to contact (by mail or other effective written means) all U.S. workers it currently employs at the place(s) of employment under the certified TLC. The employer must disclose to each of its current U.S. workers the terms of the job order placed with the SWA, and request assistance in recruiting qualified U.S. workers who may be interested in applying for the job opportunity. The contacts, disclosures, and requests for assistance required by this paragraph must be provided in a language understood by the worker, as necessary or reasonable, and in writing to ensure the recruitment effort is effective and meaningful in reaching each current U.S. worker.

The employer must retain all documentation establishing that it has contacted each U.S. worker it currently employs at the place(s) of employment under the certified TLC and submit all such information upon request from the Departments. Documentation or evidence that would help employers establish compliance with this regulatory requirement may include, but is not limited to the following: documentation proving the job order, along with a request for assistance to recruit workers, was shipped and delivered to each current U.S. worker's address (e.g., copy of the job order and request for assistance along with the certificate of shipment provided by the U.S. Postal Service or other courier mail or parcel delivery services and/or any other form of delivery confirmation); evidence confirming that the job order, along with a request for assistance to recruit workers, was emailed to the current U.S. worker (e.g., copies of emails); or copies of any correspondence exchanged (e.g., letter, email) between the employer and the current U.S. worker regarding referrals of other qualified U.S. workers.

The requirements to contact current and former U.S. workers and provide notice to the bargaining representative or post the job order must be conducted in a language understood by the workers, as necessary or reasonable. This requirement would apply, for example, in situations where an employer has one or more employees who do not speak English as their

primary language and who have a limited ability to read, write, speak, or understand English. This requirement would allow those workers to make informed decisions regarding the job opportunity and is a reasonable interpretation of the recruitment requirements in 20 CFR part 655, subpart A, in light of the need to ensure that the test of the U.S. labor market is as comprehensive as possible. Consistent with existing language requirements in the H-2B program under 20 CFR 655.20(l), DOL intends to broadly interpret the necessary or reasonable qualification and apply an exemption only in those situations where having the job order translated into a particular language would both place an undue burden on an employer and not significantly disadvantage the employee.

Posting of the Job Opportunity on the Employer's Website if the Employer Has a Website

Finally, as was required in the FY 2024 H-2B supplemental visa TFR, where the employer maintains a company website for its business operations, the employer must post an electronic advertisement of the job opportunity in a conspicuous location on this website.

Although the vast majority of small businesses in the United States maintain a website, the Departments acknowledge that not all employers maintain a company website.¹⁶⁸ As discussed in the prior TFR, although there is no parallel requirement for employers without a website, the Departments believe that continuing to require employers with websites to post the job announcement on their website is reasonable because this population of employers uses their websites to inform the public about their existence and/or the services they may provide. Thus, these employers' advertisement of the job opportunity, via their websites, is consistent with these employers' use of the internet/electronic means to communicate with the public. Accordingly, this recruitment requirement will continue to apply only to employers that maintain a website for business operations. For employers who must conduct this additional recruitment step, the electronic advertisement of the job opportunity on the company website must be posted in a conspicuous location. This means

¹⁶⁸ The U.S. Chamber of Commerce reports that 71% of small businesses have a website. See U.S. Chamber of Commerce, *Small Business Statistics*, available at <https://www.chamberofcommerce.org/small-business-statistics/#marketing-statistics> (accessed September 27, 2024).

access to the electronic advertisement on the company website must be clearly visible on the website's homepage or easily accessible from the website's homepage using any job search tool(s) or direct links from the homepage to a subsequent web page where other available jobs or careers are normally posted by the employer.

The Departments have concluded that keeping the electronic advertisements on company websites posted for a period of at least 15 calendar days, along with the other additional recruitment steps discussed above, will effectively ensure that U.S. workers are apprised of the job opportunity and are referred for employment, if they are willing, qualified, and available to perform the work. The minimum 15 calendar day period is also consistent with the employer-conducted recruitment activity period applicable under 20 CFR 655.40(b).

The employer must retain all documentation establishing that it has posted the electronic advertisement of the job opportunity in compliance with regulatory requirements and submit all such information upon request from the Departments. Documentation or evidence for employers to establish compliance with these regulatory requirements can include screenshots of the company website on which the advertisement appears for a period of no less than 15 days and screen shots of the web pages establishing the path that U.S. workers must follow to access the advertisement on the website.

Hiring U.S. Workers

The employer must hire any qualified U.S. worker who applies or is referred for the job opportunity until either (1) the date on which the last H-2B worker departs for the place of employment, or (2) 30 days after the last date on which the SWA job order is posted, whichever is later. Additionally, consistent with 20 CFR 655.40(a), applicants may be rejected only for lawful job-related reasons. Given that the employer, SWA, and AJC(s) will be actively engaged in conducting recruitment and broader dissemination of the job opportunity during the period of time the job order is active, this requirement provides an adequate period of time for U.S. workers to contact the employer or SWA for referral to the employer and completion of the additional recruitment steps described above. As explained above, the Departments have determined that if employers file a petition 30 or more days after their dates of need, they have not conducted recruitment recently enough for the Departments to reasonably conclude that there are

currently an insufficient number of U.S. workers qualified, willing, and available to perform the work absent additional recruitment.

Because of the abbreviated timeline for the additional recruitment required for employers whose initial recruitment has gone stale, the Departments have determined that this hiring period is necessary to approximate the hiring period under normal recruitment procedures and ensure that domestic workers have access to these job opportunities, consistent with the Departments' mandate. Additionally, given the relatively brief period during which additional recruitment will occur, additional time may be necessary for U.S. workers to have a meaningful opportunity to learn about the job opportunities and submit applications.

The Departments remind all H-2B employers that the job opportunity must be, through the recruitment period set forth in this rule, open to any qualified U.S. worker regardless of race, color, national origin, age, sex, religion, disability, or citizenship, as specified under 20 CFR 655.20(r). Further, employers that wish to require interviews must conduct those interviews by phone or provide a procedure for the interviews to be conducted in the location where the worker is being recruited so that the worker incurs little or no cost. Employers cannot provide potential H-2B workers with more favorable treatment with respect to the requirement for, and conduct of, interviews. *See* 20 CFR 655.40(d).

Any U.S. worker who applies or is referred for the job opportunity and is not considered by the employer for the job opportunity, experiences difficulty accessing or understanding the material terms and conditions of the job opportunity, or believes they have been improperly rejected by the employer may file a complaint directly with the SWA serving the area of intended employment. Each SWA maintains a complaint system for public labor exchange services, established under 20 CFR part 658, subpart E, and any complaint filed with the SWA by, or on behalf of, a U.S. worker about a specific H-2B job order will be processed under this existing complaint system.

Depending on the circumstances, the SWA may seek informal resolution by working with the complainant and the employer to resolve, for example, miscommunications with the employer to be considered for the job opportunity or other concerns or misunderstandings related to the terms and conditions of the job opportunity; or issue a formal, written determination where informal

resolution cannot be reached. In other circumstances, such as allegations involving discriminatory hiring practices or violations of other employment-related laws, the SWA will formally enter the complaint and refer the matter to an appropriate enforcement agency for prompt action. As mentioned above, DOL's OFLC maintains a comprehensive directory of contact information for each SWA that can be used to obtain more information on how to file a complaint.

Although the hiring period may require some employers to hire U.S. workers after the start of the contract period, this is not unprecedented. For example, in the H-2A program, employers have been required to hire U.S. workers through 50 percent of the contract period since at least 2010, which "enhance[s] protections for U.S. workers, to the maximum extent possible, while balancing the potential costs to employers," and is consistent with the Departments' responsibility to ensure that these job opportunities are available to U.S. workers. 74 FR 45906, 45917. The Department acknowledges that hiring workers after the start of the contract period imposes an additional cost on employers, but that cost can be lessened, in part, by the ability to discharge the H-2B worker upon hiring a U.S. worker (note, however, that an employer must pay for any discharged H-2B worker's return transportation, 20 CFR 655.20(j)(1)(ii) and 29 CFR 503.16(j)(1)(ii)). Additionally, this rule permits employers to immediately hire H-2B workers who are already present in the United States without waiting for approval of an H-2B petition, which will reduce the potential for harm to H-2B workers as a result of displacement by U.S. workers. *See* new 8 CFR 214.2(h)(31). Most importantly, a longer hiring period will ensure that available U.S. workers have a viable opportunity to apply for H-2B job opportunities. Accordingly, the Departments have determined that in affording the benefits of this temporary cap increase to businesses that are suffering irreparable harm or will suffer impending irreparable harm, it is necessary to ensure U.S. workers have sufficient time to apply for these jobs.

As in the temporary rules implementing the supplemental cap increases in prior years, employers must retain documentation demonstrating compliance with the recruitment requirements described above. Under this TFR, in accordance with 20 CFR 655.68, employers must retain documentation that demonstrates placement of a new job order with the SWA, contact with AJCs, contact with

the bargaining representative or AFL–CIO when required, contact with former U.S. workers, compliance with 20 CFR 655.45(a) or (b), contact with current U.S. workers at the place of employment, and posting of the job opportunity on the employer's website, if the employer has a website. Employers must prepare and retain a recruitment report that describes these efforts and meets the requirements set forth in 20 CFR 655.48, including the requirement to update the recruitment report throughout the recruitment and hiring period set forth in paragraph (a)(4)(viii) of 20 CFR 655.64. Employers must maintain copies of the recruitment report, attestation, and supporting documentation, as described above, for a period of 3 years from the date that the TLC was approved, consistent with the document retention requirements under 20 CFR 655.68, 20 CFR 655.56, and 29 CFR 503.17. These requirements are similar to those that apply to certain seafood employers that stagger the entry of H–2B workers under 20 CFR 655.15(f).

The Departments are committed to ensuring that all recruitment conducted in conjunction with this rule complies with the additional recruitment requirements discussed above and encourages individuals with information about that recruitment to contact DOL through the OFLC H–2B Ombudsman Program email box (*H2B.Ombudsman@dol.gov*). The H–2B Ombudsman Program facilitates the fair and equitable resolution of concerns that arise within the H–2B filing community, by conducting independent and impartial inquiries into issues related to the administration of the H–2B program. The H–2B Ombudsman Program also receives concerns and information relevant to case processing from employers, unions, and worker advocate organizations and ensures such information is appropriately referred within OFLC or to SWAs, as appropriate.

DOL actively monitors the H–2B Ombudsman Program email box, which is the best method for the public to provide information to the Department that is relevant to the processing of H–2B applications. Such information may include information about an in-process TLC application, information regarding the employer's compliance with H–2B recruitment of U.S. workers, or information bearing on an employer's irreparable harm justification. When the H–2B Ombudsman Program receives information relevant to its review of an H–2B TLC application, the information will be forwarded to the H–2B processing center. The H–2B processing

center will review the information it receives and will consider it, as appropriate.

The H–2B Ombudsman Program, however, is separate and distinct from the employment service complaint system administered by the Employment and Training Administration under regulations at 20 CFR part 658, subpart E. Any information relevant to an employment service complaint will be forwarded to the appropriate SWA. The public may also submit employment service complaints directly to the appropriate SWA; the contact information for each SWA is available at the following web page: <https://www.dol.gov/agencies/eta/foreign-labor/contact>.

Complaints regarding an employer's failure to comply with the H–2B program requirements may also be submitted to DOL's WHD. WHD has the authority to investigate the employer's attestations, as the attestations are a required part of the H–2B petition process under this rule and the attestations rely on the employer's existing, approved TLC. Where a WHD investigation determines that there has been a willful misrepresentation of a material fact or a substantial failure to meet the required terms and conditions of the attestations, WHD may institute administrative proceedings to impose sanctions and remedies, including (but not limited to) assessment of civil money penalties; recovery of wages due to workers; make-whole relief for any U.S. worker who has been improperly rejected for employment, laid off, or displaced; make-whole relief for any person who has been discriminated against; and/or debarment for 1 to 5 years. See 29 CFR 503.19, 503.20. This regulatory authority is consistent with WHD's existing enforcement authority and is not limited by the expiration date of this rule. Therefore, in accordance with the documentation retention requirements at 20 CFR 655.68, the petitioner must retain documents and records evidencing compliance with this rule, and must provide the documents and records upon request by DHS or DOL.

When conducting an investigation, WHD will generally review the employer's compliance with this rule, the H–2B program obligations in general, and any other Federal labor laws that WHD enforces (such as the Fair Labor Standards Act, which establishes minimum wage, overtime, recordkeeping and child labor obligations for most employers in the United States) and to which the employer is subject. WHD's investigations generally involve meeting

with the employer, touring the worksite, conducting confidential interviews with employees, reviewing records (including those required by 20 CFR 655.68 evidencing compliance with this rule), and, when appropriate, imposing sanctions and remedies (including back wages). For example, in the past five years (fiscal years 2019–2023), WHD collected more than \$16.7 million in H–2B back wages owed to 10,778 workers, and assessed more than \$12.4 million in H–2B civil money penalties.

Within the context of this rule, WHD's investigative tools are particularly adept for the review of alleged violations that may result in back wages and/or that require intensive fact-finding at the worksite. Additionally, WHD is well suited to investigate alleged violations that occur after the job order has closed and H–2B workers are already in the United States. For example, WHD's tools are well suited to investigate allegations that U.S. applicants were improperly rejected for the job opportunity (if supplemental recruitment was required as outlined in 20 CFR 655.64(a)(4)) after the job order has closed, as WHD may conduct employee interviews, question the employer as to why the applicant was not hired, review recruitment records, and, if a violation is substantiated, compute back wages for the improperly rejected U.S. applicant.

Additionally, WHD is well suited to investigate allegations of retaliation, as these cases involve complex fact finding and, if allegations are substantiated, may result in make-whole relief or back wages owed to the worker. An employer is prohibited from intimidating, threatening, restraining, coercing, blacklisting, discharging, or in any manner discriminating against any person who has, among other actions: filed a complaint related to H–2B rights and protections; consulted with a workers' rights center, community organization, labor union, legal assistance program, or attorney on H–2B rights or protections; or exercised or asserted H–2B rights and protections on behalf of themselves or others. 20 CFR 655.20(n) and 29 CFR 503.16(n). Examples of protected activity include making a complaint to a manager, employer, or WHD; cooperating with a WHD investigation; requesting payment of wages; refusing to return back wages to the employer; consulting with WHD or workers' rights organization; and testifying in a trial. If other laws are applicable (such as the Fair Labor Standards Act), the anti-retaliation provisions of those laws may also be applicable.

In addition to the H-2B Ombudsman Program and the employment service complaint system under 20 CFR part 658, subpart E, which are described above, workers or U.S. applicants for job opportunities who believe their rights under the H-2B program have been violated may file complaints with WHD by telephone at 1-866-487-9243 or may access the telephone number via TTY by calling 1-877-889-5627 or visit <https://www.dol.gov/agencies/whd> to locate the nearest WHD office for assistance. Complainants should be prepared to provide their name and contact information; name, address, and contact information for the employer; and details about the alleged violation. WHD maintains all complaints as confidential unless the complainant provides WHD with permission to use their name when speaking to the employer.

DHS has the authority to verify any information submitted to establish H-2B eligibility at any time before or after the petition has been adjudicated by USCIS. See, e.g., INA sections 103, 214, and 235(d) (8 U.S.C. 1103, 1184, and 1225(d)); see also 8 CFR part 103 and section 214.2(h). DHS' verification methods may include, but are not limited to, review of public records and information, contact via written correspondence or telephone, unannounced physical site inspections, and interviews. USCIS will use information obtained through verification to determine H-2B eligibility and assess compliance with the requirements of the H-2B program. USCIS will also review information received from individuals who suspect H-2B benefit fraud and abuse and reported their suspicions via the ICE Tip Form, available online at <https://www.ice.gov/webform/ice-tip-form> (last visited July 29, 2024) or via the toll-free ICE Tip Line, (866) 347-2423. Subject to the exceptions described in 8 CFR 103.2(b)(16), USCIS will provide petitioners with an opportunity to address adverse information that may result from a USCIS compliance review, verification, or site visit that occurs after a formal decision is made on a petition or after the agency has initiated an adverse action that may result in revocation or termination of an approval.

DOL's OFLC already has the authority under 20 CFR 655.70 to conduct audit examinations on adjudicated Applications for Temporary Employment Certification, including all appropriate appendices, and verify any information supporting the employer's attestations. OFLC uses audits of adjudicated Applications for Temporary Employment Certification, as authorized

by 20 CFR 655.70, to ensure employer compliance with attestations made in its Application for Temporary Employment Certification and to ensure the employer has met all statutory and regulatory criteria and satisfied all program requirements. The OFLC CO has sole discretion to choose which Applications for Temporary Employment Certification will be audited. See 20 CFR 655.70(a). Post-adjudication audits can be used to establish a record of employer compliance or non-compliance with program requirements and the information gathered during the audit assists DOL in determining whether it needs to further investigate or debar an employer or its agent or attorney from future labor certifications.

Under this rule, an employer may submit a petition to USCIS, including a valid TLC and Form ETA-9142B-CAA-9, in which the employer attests to compliance with requirements for access to the supplemental H-2B visas allocated through 8 CFR 214.2(h)(6)(xv), including that its business is suffering irreparable harm or will suffer impending irreparable harm, and that it will conduct additional recruitment, if necessary to refresh the TLC's labor market test. DHS and DOL consider Form ETA-9142B-CAA-9 to be an appendix to the Application for Temporary Employment Certification and the attestations contained on the Form ETA-9142B-CAA-9 and documentation supporting the attestations to be evidence that is incorporated into and a part of the approved TLC. Therefore, DOL's audit authority includes the authority to audit the veracity of any attestations made on Form ETA-9142B-CAA-9 and documentation supporting the attestations. In order to make certain that the supplemental visa allocation is not subject to fraud or abuse, DHS will continue to share information regarding Forms ETA-9142B-CAA-9 with DOL, consistent with existing authorities. This information sharing between DHS and DOL, along with relevant information that may be obtained from the SWA and WHD, are expected to support DOL's identification of TLCs used to access the supplemental visa allocation for closer examination of TLCs through the audit process.

In accordance with the documentation retention requirements in this rule, the petitioner must retain documents and records proving compliance with this rule, and must provide the documents and records upon request by DHS or DOL. Under this rule, DOL intends to audit a significant number of TLCs used to access the supplemental visa allocation

to ensure employer compliance with attestations, including those regarding the irreparable harm standard and additional employer conducted recruitment, required under this rule. In the event of an audit, the OFLC CO will send a letter to the employer and, if appropriate, a copy of the letter to the employer's attorney or agent, listing the documentation the employer must submit and the date by which the documentation must be sent to the CO. During audits under this rule, the CO will request documentation necessary to demonstrate the employer conducted all recruitment steps required under this rule and truthfully attested to the irreparable harm the employer was suffering or would suffer in the near future without the ability to employ all of the H-2B workers requested under the cap increase, including documentation the employer is required to retain under this rule. If necessary to complete the audit, the CO may request supplemental information and/or documentation from the employer during the course of the audit process. 20 CFR 655.70(c).

DOL relies on the employer to adhere to the H-2B regulations and fulfill its attestations as a condition of receiving a temporary labor certification, including attestations to fully cooperate with any audit, investigation, compliance review, evaluation, verification or inspection conducted by DOL. Failure to comply in the audit process may result in the revocation of the employer's certification or in debarment, under 20 CFR 655.72 and 655.73, respectively, or require the employer to undergo assisted recruitment in future filings of an Application for Temporary Employment Certification, under 20 CFR 655.71. Specifically, when an employer fails to respond to Departmental correspondence issued under 20 CFR 655.70 it may be considered to have failed to comply with the audit process or impeded the audit under 20 CFR 655.73. Where an audit examination or review of information from DHS or other appropriate agencies determines that there has been fraud or willful misrepresentation of a material fact or a substantial failure to meet the required terms and conditions of the attestations or failure to comply with the audit examination process, OFLC may institute appropriate administrative proceedings to impose sanctions on the employer. Those sanctions may result in revocation of an approved TLC, the requirement that the employer undergo assisted recruitment in future filings of an Application for Temporary

Employment Certification for a period of up to 2 years, and/or debarment from the H–2B program and any other foreign labor certification program administered by DOL for 1 to 5 years. See 20 CFR 655.71, 655.72, 655.73. Additionally, OFLC has the authority to provide any finding made or documents received during the course of conducting an audit examination to DHS, WHD, IER, or other enforcement agencies. OFLC's existing audit authority is independently authorized and is not limited by the expiration date of this rule. Therefore, in accordance with the documentation retention requirements at 20 CFR 655.68, the petitioner must retain documents and records proving compliance with this rule, and must provide the documents and records upon request by DHS or DOL.

Petitioners must also comply with any other applicable laws, such as avoiding unlawful discrimination against U.S. workers based on their citizenship status or national origin. Specifically, the failure to recruit and hire qualified and available U.S. workers on account of such individuals' national origin or citizenship status may violate INA section 274B, 8 U.S.C. 1324b.

IV. Statutory and Regulatory Requirements

A. Administrative Procedure Act

This rule is issued without prior notice and opportunity to comment and with an immediate effective date pursuant to the Administrative Procedure Act (APA). 5 U.S.C. 553(b) and (d).

1. Good Cause To Forgo Notice and Comment Rulemaking

The APA, 5 U.S.C. 553(b)(B), authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency, for good cause, finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Among other things, the good cause exception for forgoing notice and comment rulemaking “excuses notice and comment in emergency situations, or where delay could result in serious harm.” *Jifry v. FAA*, 370 F.3d 1174, 1179 (D.C. Cir. 2004). Courts have found “good cause” under the APA in similar situations when an agency is moving expeditiously to avoid significant economic harm to a program, program users, or an industry. See, e.g., *Nat'l Fed'n of Fed. Emps. v. Devine*, 671 F.2d 607, 611 (D.C. Cir. 1982) (holding that an agency may use the good cause exception to address “a serious threat to the financial stability of [a government]

benefit program”); *Am. Fed'n of Gov't Emps. v. Block*, 655 F.2d 1153, 1156 (D.C. Cir. 1981) (finding good cause when an agency bypassed notice and comment to avoid “economic harm and disruption” to a given industry, which would likely result in higher consumer prices).

Although the good-cause exception is “narrowly construed and only reluctantly countenanced,” *Tenn. Gas Pipeline Co. v. FERC*, 969 F.2d 1141, 1144 (D.C. Cir. 1992), the Departments have appropriately invoked the exception in this case due to the time exigencies resulting from the unique procedural history of the Department's authority for this action and the ongoing economic need for this rulemaking, as described further below. Overall, the Departments are bypassing notice and comment to prevent “serious economic harm to the H–2B community,” including U.S. employers, associated U.S. workers, and related professional associations, that could result from the failure to provide supplemental visas as authorized by Congress. See *Bayou Lawn & Landscape Servs. v. Johnson*, 173 F. Supp. 3d 1271, 1285 & n.12 (N.D. Fla. 2016). The Departments note that this action is temporary in nature, see *id.*,¹⁶⁹ and limits eligibility for H–2B supplemental visas to only those businesses most in need, and also protects H–2B and U.S. workers.

With respect to the supplemental allocations provisions in 8 CFR 214.2 and 20 CFR part 655, subpart A, as explained above, the Departments are acting pursuant to the extension of supplemental cap authority in Section 105 of the FY 2024 Omnibus by sections 101(6) and 106 Division A, Title I of Public Law 118–83 (Sept. 26, 2024) to FY 2025. The deadline for exercising the FY 2025 supplemental cap authority under the Continuing Appropriations and Extensions Act, 2025, is December 20, 2024 the date on which the FY 2025 continuing resolution expires. This timing concern is critical since the Departments are bypassing advance notice and comment in order to urgently address increased labor demand.¹⁷⁰

¹⁶⁹ Because the Departments have issued this rule as a temporary final rule, the supplemental cap portion of this rule—with the sole exception of the document retention requirements—will be of no effect after September 30, 2025. The ability to initiate employment with a new employer pursuant to the portability provisions of this rule expires at the end of on January 24, 2026.

¹⁷⁰ See Lydia DePillis, *Immigration Rebound Eases Shortage of Workers, Up to a Point*, The NY Times, <https://www.nytimes.com/2023/02/06/business/economy/immigration-labor.html> (Feb. 6, 2023), (“The path of immigration policy will have a substantial bearing on the nation's supply of workers, which has been expanding more slowly as native-born workers have fewer children.”).

Acting expeditiously is intended to prevent economic harm resulting from American businesses suffering irreparable harm due to a lack of a sufficient labor force. This harm would ensue if the Departments do not exercise the authority provided by the extension of supplemental cap authority. USCIS received more than enough petitions to meet the H–2B visa statutory cap for the first half of FY 2025 on September 18, 2024.¹⁷¹ Based on past years' experience, DHS anticipates that it will also receive sufficient petitions to meet the semiannual cap for the second half of the FY 2025; last year on March 7, 2024, USCIS received sufficient petitions to meet the H–2B visa statutory cap for the second half of FY 2024.¹⁷² Given the continued high demand of American businesses for H–2B workers (as discussed in this preamble), rapidly evolving economic conditions and historically high labor demand, and the limited time remaining until the expiration of the continuing resolution authorizing supplemental cap authority to help prevent further irreparable harm currently experienced by some U.S. employers or avoid impending economic harm for others, a decision to undertake notice and comment rulemaking, which would delay final action on this matter by months, would greatly complicate and potentially preclude the Departments from successfully exercising the authority created by section 105, Public Law 118–47 as extended to FY 2025 by secs. 101(6) and 106 of Public Law 118–83. If the Departments are precluded from exercising this authority, substantial economic harm will result for the reasons stated above.

The temporary portability and change of employer provisions in 8 CFR 214.2 and 274a.12 are also supported by labor market demands. Courts have found “good cause” under the APA when an agency is moving expeditiously to avoid significant economic harm to a program, program users, or an industry. Courts have held that an agency may use the good cause exception to address “a serious threat to the financial stability of [a government] benefit program,” *Nat'l Fed'n of Fed. Emps. v. Devine*, 671 F.2d 607, 611 (D.C. Cir. 1982), or to avoid “economic harm and disruption” to a

¹⁷¹ See USCIS, *USCIS Reaches H–2B Cap for First Half of Fiscal Year 2025*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-first-half-of-fiscal-year-2025> (Sept. 19, 2024).

¹⁷² See USCIS, *USCIS Reaches H–2B Cap for Second Half of FY 2024 and Announces Filing Dates for the Second Half of FY 2024 Supplemental Visas*, <https://www.uscis.gov/newsroom/alerts/uscis-reaches-h-2b-cap-for-second-half-of-fy-2024-and-announces-filing-dates-for-the-second-half-of> (Mar. 8, 2024).

given industry, which would likely result in higher consumer prices, *Am. Fed'n of Gov't Emps. v. Block*, 655 F.2d 1153, 1156 (D.C. Cir. 1981).

Finally, taking public comments on this year's temporary final rule before implementation may have limited utility given that the Departments took post-promulgation public comments during a 60-day comment period on the FY 2023 nearly identical TFR, and discussed those comments in detail in the preamble of the FY 2024 TFR. In addition, DHS is separately pursuing broader programmatic improvements in the H-2B and H-2A programs through a separate notice and comment rulemaking which includes a proposal to make portability permanent for all H-2 workers.¹⁷³

2. Good Cause To Proceed With an Immediate Effective Date

The APA also authorizes agencies to make a rule effective immediately, upon a showing of good cause, instead of imposing a 30-day delay. 5 U.S.C. 553(d)(3). The good cause exception to the 30-day effective date requirement is easier to meet than the good cause exception for foregoing notice and comment rulemaking. *Riverbend Farms, Inc. v. Madigan*, 958 F.2d 1479, 1485 (9th Cir. 1992); *Am. Fed'n of Gov't Emps., AFL-CIO v. Block*, 655 F.2d 1153, 1156 (D.C. Cir. 1981); *U.S. Steel Corp. v. EPA*, 605 F.2d 283, 289–90 (7th Cir. 1979). An agency can show good cause for eliminating the 30-day delayed effective date when it demonstrates urgent conditions the rule seeks to correct or unavoidable time limitations. *U.S. Steel Corp.*, 605 F.2d at 290; *United States v. Gavrilovic*, 511 F.2d 1099, 1104 (8th Cir. 1977). For the same reasons set forth above expressing the need for immediate action, we also conclude that the Departments have good cause to dispense with the 30-day effective date requirement.

B. Executive Order 12866: Regulatory Planning and Review; Executive Order 14094: Modernizing Regulatory Review; and Executive Order 13563: Improving Regulation and Regulatory Review

Under E.O. 12866, OMB's Office of Information and Regulatory Affairs (OIRA) determines whether a regulatory action is significant and, therefore, subject to the requirements of the E.O. and review by OMB. 58 FR 51735. Section 3(f) of E.O. 12866, as amended

by E.O. 14094, defines a “significant regulatory action” as an action that is likely to result in a rule that: (1) has an annual effect on the economy of \$200 million or more, or adversely affects in a material way a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local, or tribal governments or communities; (2) creates serious inconsistency or otherwise interferes with an action taken or planned by another agency; (3) materially alters the budgetary impacts of entitlement grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) raises novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the E.O. 88 FR 21879.

The Office of Management and Budget (OMB) has designated this temporary final rule a significant regulatory action under section 3(f)(1) of Executive Order 12866, as amended by Executive Order 14094, because its annual effects on the economy exceed \$200 million in any year of the analysis. Accordingly, OMB has reviewed this rule.

E.O. 13563 directs agencies to propose or adopt a regulation only upon a reasoned determination that its benefits justify its costs; the regulation is tailored to impose the least burden on society, consistent with achieving the regulatory objectives; and in choosing among alternative regulatory approaches, the agency has selected those approaches that maximize net benefits. E.O. 13563 recognizes that some benefits are difficult to quantify and provides that, where appropriate and permitted by law, agencies may consider (and discuss qualitatively) values that are difficult or impossible to quantify, including equity, human dignity, fairness, and distributive impacts.

Summary

With this temporary final rule (TFR), DHS is authorizing the release of up to an additional 64,716 total H-2B visas to be allocated throughout FY 2025. In accordance with the FY 2025 continuing resolution extending the authority provided in section 105 of the FY 2024 Omnibus, DHS is allocating the supplemental visas in the following manner:

TABLE 1—ALLOCATION OF SUPPLEMENTAL VISAS

Supplement	Number of visas
FY25 First Half Returning Worker Allocation	20,716

TABLE 1—ALLOCATION OF SUPPLEMENTAL VISAS—Continued

Supplement	Number of visas
FY25 Second Half Returning Worker Allocation	19,000
FY25 Second Half Returning Worker Allocation #2— (Late season Filers)	5,000
FY25 Country-specific Allocation (available whole FY)	20,000
FY25 Total Supplemental Visas	64,716

As with previous H-2B visa supplements, these visas will be available to businesses that: (1) show that there are an insufficient number of U.S. workers to meet their needs throughout FY 2025; (2) attest that their businesses are suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all of the H-2B workers requested on their petition; and (3) petition for returning workers who were issued an H-2B visa or were otherwise granted H-2B status in FY 2022, 2023, or 2024, unless the H-2B worker is a national of one of the countries included in the country-specific allocation. Additionally, up to 20,000 visas may be granted to workers from countries included in the country-specific allocation who are exempt from the returning worker requirement. This TFR aims to prevent irreparable harm to certain U.S. businesses by allowing them to hire additional H-2B workers within FY 2025.

The estimated total costs to petitioners range from \$8,798,321 to \$11,964,750. The estimated total cost to the Federal Government is \$270,960. Therefore, DHS estimates that the total cost of this rule ranges from \$9,069,281 to \$12,235,710. Total transfers from filing fees made by petitioners to the Government are \$12,088,515. The benefits of this rule are diverse, though some of them are difficult to quantify. Some of these benefits include:

- Employers benefit from this rule significantly through increased access to H-2B workers;
- Customers and others benefit directly or indirectly from increased access;
- Some American workers may benefit to the extent that they do not lose jobs through the reduced or closed business activity that might occur if fewer H-2B workers were available;
- Some American workers may benefit from the additional recruitment activities that the rule requires certain petitioners to complete, to the extent

¹⁷³ On September 20, 2023, DHS issued *Modernizing H-2 Program Requirements, Oversight, and Worker Protections*, Notice of Proposed Rulemaking (NPRM), 88 FR 65040, 65066. In that NPRM, DHS proposed to extend portability to H-2A and H-2B workers on a permanent basis.

that these activities could result in some U.S. workers being hired.

- The existence of a lawful pathway for up to 20,000 temporary workers from countries included in the country-

specific allocation is likely to provide multiple benefits in terms of U.S. policy with respect to those countries; and

- The Federal Government benefits from increased evidence regarding

attestations. Table 2 provides a summary of the provisions in this rule and some of their impacts.

TABLE 2—SUMMARY OF THE TFR’S PROVISIONS AND ECONOMIC IMPACT

Current provision	Changes resulting from the provisions of the TFR	Expected costs of the provisions of the TFR	Expected benefits of the provisions of the TFR
—The current statutory cap limits H–2B visa allocations to 66,000 workers a year.	—The amended provisions will allow for an additional 64,716 H–2B temporary workers. Up to 20,000 of the 64,716 additional visas will be reserved for workers who are nationals of the countries included in the country-specific allocation and will be exempt from the returning worker requirement.	—The total estimated opportunity cost of time to file Form I–129 (Petition for a Nonimmigrant Worker) by human resource specialists is approximately \$552,801. The total estimated opportunity cost of time to file Form I–129 and Form G–28 will range from approximately \$1,383,848 if filed by in-house lawyers to approximately \$2,385,900 if filed by outsourced lawyers. The total estimated opportunity cost of time associated with filing additional petitions ranges from \$1,936,649 to \$2,938,701 depending on the filer. —The total estimated opportunity cost of time associated with filing Form I–907 (Request for Premium Processing Service) if it is filed with Form I–129 is \$40,908 if filed by human resource specialists. The total estimated costs associated with filing Form I–907 would range from approximately \$86,625 if filed by an in-house lawyer to approximately \$149,347 if filed by an outsourced lawyer. The total estimated opportunity cost of time associated with requesting premium processing ranges from approximately \$127,533 to approximately \$190,255. —The total estimated costs of this provision to petitioners range from \$2,064,183 to \$3,128,957, depending on the filer.	—Form I–129 petitioners would be able to hire temporary workers needed to prevent their businesses from suffering irreparable harm. —Businesses that are dependent on the success of other businesses that are dependent on H–2B workers would be protected from the repercussions of local business failures. —Some American workers may benefit to the extent that they do not lose jobs through the reduced or closed business activity that might occur if additional H–2B workers were not available. —Additional recruitment activities may result in some U.S. workers being hired.
n/a	—Petitioners will be required to fill out Form ETA–9142B in order to utilize the 5,000 late season H–2B visas allocated under the rule.	—The estimated cost for late season petitioners to file Form ETA–9142B ranges from \$63,347 to \$94,469 depending on the filer.	—An approved Form ETA–9142B is required before filing a Form I–129 to request H–2B workers.
n/a	—Petitioners will be required to fill out the newly created Form ETA–9142–B–CAA–9, Attestation for Employers Seeking to Employ H–2B Nonimmigrant Workers Under Section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118–47, as extended by sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118–83.	—The total estimated cost to petitioners to complete and file Form ETA–9142–B–CAA–9 is approximately \$1,992,995.	—Form ETA–9142–B–CAA–9 will serve as initial evidence to DHS that the petitioner meets the irreparable harm standard and returning worker requirements.

TABLE 2—SUMMARY OF THE TFR'S PROVISIONS AND ECONOMIC IMPACT—Continued

Current provision	Changes resulting from the provisions of the TFR	Expected costs of the provisions of the TFR	Expected benefits of the provisions of the TFR
n/a	—Certain Petitioners will be required to conduct an additional round of recruitment.	—The total estimated cost to petitioners to conduct an additional round of recruitment is approximately \$296,968.	—The additional round of recruitment will ensure that a U.S. worker who is willing and able to fill the position is not replaced by a non-immigrant worker. Furthermore, additional recruitment activities may result in some U.S. workers being hired.
Temporary Portability	—An H-2B nonimmigrant who is physically present in the United States may port to another employer.	—The total estimated opportunity cost of time to file Form I-129 by human resource specialists is approximately \$45,462. The total estimated opportunity cost of time to file Form I-129 and Form G-28 will range from approximately \$113,387 if filed by in-house lawyers to approximately \$195,491 if filed by outsourced lawyers. —The total estimated costs associated with filing Form I-907 if it is filed with Form I-129 is \$3,355 if filed by human resource specialists. The total estimated costs associated with filing Form I-907 would range from approximately \$7,101 if filed by an in-house lawyer to approximately \$12,243 if filed by an outsourced lawyer. —The total estimated costs associated with the portability provision ranges from \$169,305 to \$256,551, depending on the filer. —DHS may incur some additional adjudication costs as more petitioners file Form I-129. However, these additional costs to USCIS are expected to be covered by the fees paid for filing the form, which have been accounted for in costs to petitioners.	—H-2B workers present in the United States will be able to port to another employer and potentially extend their stay and, therefore, earn additional wages. —An H-2B worker with an employer that is not complying with H-2B program requirements would have additional flexibility in porting to another employer's certified position. —This provision would ensure employers will be able to hire the H-2B workers they need.
n/a	—DHS and DOL intend to conduct several audits during the period of temporary need to verify compliance with H-2B program requirements, including the irreparable harm standard as well as other key worker protection provisions implemented through this rule.	—Employers will have to comply with audits for an estimated total opportunity cost of time of \$159,090. —It is expected both DHS and DOL will be able to shift resources to be able to conduct these audits without incurring additional costs. However, the Departments will incur opportunity costs of time. The audits are expected to take a total of approximately 3,000 hours and cost approximately \$270,960.	—DOL and DHS audits will yield evidence of the efficacy of attestations in enforcing compliance with H-2B supplemental cap requirements. —Conducting a significant number of audits will discourage uncorroborated attestations. —Conducting a significant number of audits will ensure that increasing the number of H-2B employers through the supplemental cap does not undermine the integrity of the H-2B program.
Additional Scrutiny	—Some petitioners will provide additional evidence.	—Some employers will need to print and ship additional evidence to USCIS. Opportunity costs of time associated with compiling such evidence are unavailable due to the unique fact pattern in each instance and a lack of data regarding the time to comply. The estimated cost to submit additional evidentiary requirements is \$20,740.	—Additional scrutiny of employers with past H-2B program violations are aimed at ensuring compliance with program requirements, reducing harms to both U.S. workers and H-2B workers.
Familiarization Cost	—Petitioners or their representatives will familiarize themselves with the rule.	—Petitioners or their representatives will need to read and understand the rule at an estimated total opportunity cost of time that ranges from \$4,031,694 to \$6,014,981.	—Petitioners will have the necessary information to take advantage of and comply with the provisions of this rule.

TABLE 2—SUMMARY OF THE TFR'S PROVISIONS AND ECONOMIC IMPACT—Continued

Current provision	Changes resulting from the provisions of the TFR	Expected costs of the provisions of the TFR	Expected benefits of the provisions of the TFR
Total Costs		Total cost of the rule to petitioners ranges from \$8,798,321 to \$11,964,750 depending on the filer. Total costs of the rule to government are \$270,960. Total costs of the rule range from \$9,069,281 to \$12,235,710.	

Source: USCIS and DOL analysis.

Background and Purpose of the Temporary Rule

The H–2B visa classification program was designed to serve U.S. businesses that are unable to find enough U.S. workers to perform nonagricultural work of a temporary nature. For a nonimmigrant worker to be admitted into the United States under this visa classification, the hiring employer is required to: (1) receive a temporary labor certification (TLC) from the Department of Labor (DOL); and (2) file Form I–129 with DHS. The temporary nature of the services or labor described on the approved TLC is subject to DHS review during adjudication of Form I–129.¹⁷⁴ The INA sets the annual number of H–2B visas for workers performing temporary nonagricultural work at 66,000 to be distributed semiannually beginning in October (33,000) and in April (33,000).¹⁷⁵ Any unused H–2B visas from the first half of the fiscal year are available for employers seeking to hire H–2B workers during the second half of the fiscal year. However, any unused H–2B visas from one fiscal year do not carry over into the next and

would therefore not be made available.¹⁷⁶ Once the statutory H–2B visa cap limit has been reached, petitioners must wait until the next half of the fiscal year, or the beginning of the next fiscal year, for additional visas to become available.

On September 25, 2024, the President signed the Continuing Appropriations and Extensions Act, 2025. Sections 101(6) and 106 reauthorize section 105 of Div. G, Title I of the Further Consolidated Appropriations Act, 2024, permitting the Secretary of Homeland Security, under certain circumstances, to increase the number of H–2B visas available to U.S. employers, notwithstanding the established statutory numerical limitation. After consulting with the Secretary of Labor, the Secretary of the Homeland Security has determined it is appropriate to exercise his discretion and raise the H–2B cap by up to a total of 64,716 visas for FY 2025. The total supplemental allocation will be divided into four separate allocations: one for the first half of FY 2025, two for the second half of FY 2025 (a first one for employment from April 1 through May 14, 2025, and

a second one for those with start dates on or after May 15, 2025), and a full fiscal year allocation for workers from the countries included in the country-specific allocation. As with previous supplemental allocations, USCIS will make these supplemental visas available only to businesses that qualify and meet the requirements for the supplemental visas. These businesses must attest that they are suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all the H–2B workers requested on their petition.

This TFR will cover the entirety of FY 2025. While the Departments cannot predict with certainty what labor market conditions will be during the second half of FY 2025, they believe that the structure of this TFR is reasonable because: (1) the availability of the second half FY supplemental visas is contingent on the exhaustion of the second half FY statutory cap, (2) strong historical demand for H–2B workers, and (3) mainstream estimates of labor market conditions for FY 2025 indicate a continuation of labor market tightness from a historical perspective.¹⁷⁷

TABLE 3—DOL CERTIFIED WORKER DEMAND *

Fiscal year	Number of certifications	Number of DOL certified workers requested	DOL certified workers with requested start dates April 1 or later
2020	5,903	115,116	88,466
2021	7,772	159,081	100,522
2022	10,674	205,037	127,654
2023	12,126	220,552	128,115
2024	13,143	227,226	127,324
5-year Average **	9,924	185,402	114,416

¹⁷⁵ See INA 214(g)(1)(B), 8 U.S.C. 1184(g)(1)(B) and INA 214(g)(4), 8 U.S.C. 1184(g)(4).

¹⁷⁶ A temporary labor certification (TLC) approved by the Department of Labor must accompany an H–2B petition. The employment start date stated on the petition must match the start date listed on the TLC. See 8 CFR 214.2(h)(6)(iv)(A) and (D).

¹⁷⁷ September 2023 Federal Open Market Committee (FOMC) projections for unemployment

rate in 2024 ranged from 4.2 to 4.5% with central tendency more tightly clustered between 4.3 and 4.4%. See <https://www.federalreserve.gov/monetarypolicy/fomcprojtab120240918.htm> (last accessed Sept. 25, 2024).

* USCIS analysis of OFLC Performance data. All data are for applications listed as having a case status of “Certification”, “Partial Certification”, “Determination—Certification”, or “Determination—Partial Certification.” Furthermore, data have been adjusted to a fiscal year using the employment begin date provided on the TLC application. As such, counts differ from counts based on the Disclosure Files of OFLC H–2B Performance data. This adjustment was made so that the OFLC data more closely align to USCIS I–129 data. Data for FY 2024 include data through the end of quarter 3.

** Averages are rounded to the nearest whole number.

With respect to historical demand for H–2B workers, Table 3 makes two important points supporting the Departments’ decision to structure this rule in a manner that covers the entire fiscal year. First, Table 3 shows that H–2B demand, as represented by the number of workers requested on certified TLCs, has outpaced the statutorily capped allotment of H–2B visas, which demonstrates that, in aggregate, sufficient demand exists for the entire supplemental allocation that the Departments are making available. To that end, the 5-year average of workers requested on certified TLCs, 185,402, would still completely exhaust the total supplemental allocation made available by the TFR. Second, Table 3 demonstrates that within a given fiscal year, demand for H–2B workers is particularly strong in the second half of the fiscal year. On average over the last 5 fiscal years, H–2B employers have requested 114,416 employees with start dates on April 1 or later, which would completely exhaust the 24,000 total supplemental H–2B visas¹⁷⁸ explicitly set aside for workers with employment start dates in the second half of FY 2025. Given these conditions, the Departments believe that the decision to authorize a second half supplement is reasonable.

For the visas being made available by the rule, the Departments have determined that up to 44,716 of the 64,716 supplemental visas will be limited to returning H–2B returning workers for nationals of any country. These individuals must be workers who were issued H–2B visas or were otherwise granted H–2B status in fiscal

years 2022, 2023, or 2024. The 44,716 visas for returning workers will be divided into three separate allocations that will be available to petitioners over the fiscal year. The first allocation is comprised of 20,716 visas for returning workers with requested start dates between October 1, 2024, and March 31, 2025. These visas will be available to petitioners immediately upon the publication of the rule. The second allocation is comprised of 19,000 visas for returning workers with requested start dates between April 1, 2025, and May 14, 2025. These visas will be available to petitioners 15 calendar days after the second half statutory cap of 33,000 visas is reached. The third allocation is comprised of 5,000 visas for returning workers with requested start dates between May 15, 2025, and September 30, 2025. These visas will be available to petitioners 45 calendar days after the second half statutory cap of 33,000 visas is reached.

The inclusion of an allocation of visas starting on or after May 15 specifically for those petitioners with employment needs is in response to trends in TLC data and conclusions gleaned from the two years that a late season filer allocation has been available to petitioners with late season employment needs. As stated in the FY 2023 H–2B TFR, the relative demand in FY 2016 for workers with start dates later in the fiscal year was higher relative to recent years. More specifically, data for FY 2016 show that approximately 45.51 percent of certified TLCs requested workers with start dates in April while 17.93 percent of certified TLCs requested workers with start dates after

April.¹⁷⁹ Table 4 and Table 5 demonstrate that the 5-year average for these values has moved away from April start dates after the implementation of a late season filer allocation. The decrease in the relative prevalence of April 1 start dates since the implementation of a late season filer allocation supports the rationale for providing such an allocation in response to concerns that, absent such an allocation, employers with late season employment needs could be effectively shut out of the H–2B program. Under DOL regulations, employers must apply for a TLC 75 to 90 days before the start date of work.¹⁸⁰ Employers must have a DOL-approved TLC before filing their Form I–129 request for H–2B workers with USCIS. Because the availability of H–2B visas is limited by statute and regulation, USCIS generally announces to the public when it has received a sufficient number of I–129 petitions, and by extension H–2B beneficiaries, to exhaust the respective H–2B visa allocation.¹⁸¹ USCIS rejects H–2B I–129 petitions that are received after USCIS has determined that a given allocation has been fully utilized. Functionally, this means a subset of petitioners who would employ H–2B workers, given the chance, may not be able to do so because the available visas have already been allocated before they can petition USCIS for the necessary workers.

Using OFLC TLC data, Table 4 illustrates that relative to previous fiscal years that did *not* include a late-season filer allocation, requested H–2B employment start dates have become less concentrated in April.¹⁸²

TABLE 4—DOL CERTIFIED WORKER DEMAND FOR APRIL START DATES

Fiscal year	Certified DOL workers requested	DOL certified workers with requested start dates in April	Percentage of DOL certified workers with requested start dates in April
2020	115,116	82,757	71.89
2021	159,081	94,656	59.50
2022	205,037	118,381	57.74
2023	220,552	112,639	51.07

¹⁷⁹ See Table 4 and Table 5, <https://www.federalregister.gov/documents/2022/12/15/2022-27236/exercise-of-time-limited-authority-to-increase-the-numerical-limitation-for-fy-2023-for-the-h-2b> (accessed September 20, 2024).

¹⁸⁰ See 20 CFR 655.15(b).

¹⁸¹ See USCIS, <https://www.uscis.gov/newsroom/alerts/cap-reached-for-additional-returning-worker-h-2b-visas-for-the-early-second-half-of-fy-2024>, for example (accessed October 25, 2024).

¹⁸² Tables 4 and 5 contain USCIS analysis of OFLC Performance data. All data are for applications listed as having a case status of “Certification”, “Partial Certification”, “Determination—Certification”, or “Determination—Partial Certification.”

Furthermore, data have been adjusted to a fiscal year using the employment begin date provided on the TLC application. As such, counts differ from counts based on the Disclosure Files of OFLC H–2B Performance data. This adjustment was made so that the OFLC data more closely align to USCIS I–129 data.

TABLE 4—DOL CERTIFIED WORKER DEMAND FOR APRIL START DATES—Continued

Fiscal year	Certified DOL workers requested	DOL certified workers with requested start dates <i>in</i> April	Percentage of DOL certified workers with requested start dates in April
2024	227,226	113,760	50.06

TABLE 5—DOL CERTIFIED WORKER DEMAND FOR POST-APRIL START DATES

Fiscal year	Certified DOL workers requested	DOL certified workers with requested start dates <i>after</i> April	Percentage of DOL certified workers with requested start dates after April
2020	115,116	5,709	4.96
2021	159,081	5,866	3.69
2022	205,037	9,273	4.52
2023	220,552	15,476	7.02
2024	227,226	13,564	5.97

As part of the FY 2023 and FY 2024 H–2B TFRs, USCIS made 10,000 and 5,000 visas available to petitioners with start dates later in the season (on or after May 15), respectively. The goal for having a separate allocation was to address this potentially inequitable situation and to take steps towards collecting information through that rule to determine whether such a structural barrier exists. Approximately 72% of the late season filer allocation for FY 2023 was utilized (as defined by the number of beneficiaries of Form I–129 petitions approved for this allocation relative to the total allocation of 10,000 visas).¹⁸³ However, visa issuance data shows that only slightly more than 5,000 visas were actually issued under the FY 2023 late season filer allocation. This compares to the late season filer allocation for FY 2024, for which USCIS approved more beneficiaries of Form I–129 petitions than the total number of visas available, although, as of October 2024, still has not received a sufficient number of petitions to achieve issuance of 5,000 visas according to its projections.¹⁸⁴ In sum, the data from the last two H–2B TFRs indicate that including another late-season filer allocation of 5,000 visas for FY 2025 is reasonable.

The Secretaries have determined that up to 20,000 of the 64,716 additional visas will be reserved for workers who are nationals of the countries included in the country-specific allocation and

that these 20,000 workers will be exempt from the returning worker requirement. These visas will be available for the entirety of the fiscal year and do not have limitations regarding the requested start date of the H–2B beneficiaries' employment within the fiscal year. If the 20,000-visa limit has been reached, a petitioner may request H–2B visas for workers who are nationals of the countries included in the country-specific allocation but these workers must be returning workers.

The Departments note that they are committed to analyzing the results and impacts of this and future H–2B supplemental visa TFRs in a holistic manner and have attempted to fully quantify the potential impacts of the FY 2025 TFR, where time and data allow.

Population

This rule will affect those employers that file Form I–129 on behalf of nonimmigrant workers they seek to hire under the H–2B visa program. More specifically, this rule will affect those employers that can establish that their business is suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all the H–2B workers requested on their petition and without the exercise of authority that is the subject of this rule. Due to historical trends and strong demand for the H–2B program (see Table 3), the Departments believe it is reasonable to assume that the population of eligible

petitioners for these additional 64,716 visas will generally be the same population as those employers that would already complete the steps to receive an approved TLC irrespective of this rule. One exception is the population of late season employers, described below.

This rule will also have additional impacts on the population of H–2B employers and workers presently in the United States by permitting some H–2B workers to port to another certified H–2B employer. These H–2B workers will continue to earn wages and gaining employers will continue to obtain necessary workers.

a. Population That Will File a Form I–129, Petition for a Nonimmigrant Worker

As discussed above, the population that will file a Form I–129 is necessarily limited to those business that have already established that their business is suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all the H–2B workers requested on their petition and without the exercise of authority that is the subject of this rule. Because the number of supplementary visas available is finite, USCIS has generally informed the public when the number of submitted Form I–129 petitions and, by extension, the number of respective beneficiaries is enough to exhaust the supply of supplemental visas.¹⁸⁵

¹⁸³ USCIS, Office of Performance and Quality, SAS PME C3 Consolidated, Data queried 09/2023, TRK 12921.

Calculation: 7,198 beneficiaries approved under the late-season filer allocation/10,000 visas allocated = 71.98% utilization.

¹⁸⁴ Under the late season allocation for FY 2024, USCIS approved 6,314 beneficiaries, while DOS issued 3,906 visas. Department of Homeland Security, U.S. Citizenship and Immigration Services, Office of Performance and Quality, ELIS,

CLAIMS3, VIBE, DOS Visa Issuance Data queried 10/2024, PAER0016221.

TABLE 6—FORM I-129 PETITIONS PER SUPPLEMENTAL H-2B VISA ALLOCATION

Supplement	Supplement amount	Total form I-129 petitions received	Total form I-129 beneficiaries	Beneficiaries per form I-129 petition
2019 Supplement	30,000	2,700	33,239	12.31
2021 Supplement *	22,000	2,180	31,274	14.35
2022 Supplement **	55,000	4,045	61,868	15.29
2023 Supplement	64,716	4,902	79,057	16.13
2024 Supplement	64,716	5,399	86,036	15.94
Average				14.80

Source: USCIS Analysis.

Notes:

* In Fiscal Year 2021, the Departments authorized a single supplemental allocation which was divided between returning workers and workers from specific countries. See <https://www.federalregister.gov/documents/2021/05/25/2021-11048/exercise-of-time-limited-authority-to-increase-the-fiscal-year-2021-numerical-limitation-for-the> (accessed September 25, 2024).

** In Fiscal Year 2022, the Departments authorized two separate supplemental allocations of H-2B Visas, with each being further divided between returning workers and workers from specific countries. See <https://www.federalregister.gov/documents/2022/01/28/2022-01866/exercise-of-time-limited-authority-to-increase-the-fiscal-year-2022-numerical-limitation-for-the>; <https://www.federalregister.gov/documents/2022/05/18/2022-10631/exercise-of-time-limited-authority-to-increase-the-numerical-limitation-for-second-half-of-fy-2022>.

Table 6 shows the total supplemental H-2B visa allocations issued by the Departments in each fiscal year since FY 2019,¹⁸⁶ including the total number of petitions and the total number of beneficiaries submitted under a supplement in each fiscal year. Using the historical average of 14.80 beneficiaries per petition for supplemental visas derived in Table 6, USCIS anticipates that 4,373 Forms I-129 will be submitted as a result of this temporary final rule.¹⁸⁷

Using the estimates in Table 6, the Departments further estimate that the allocation of 5,000 visas for late season filers made by this TFR, addressing the disadvantage these employers face in accessing scarce H-2B visas, will result in 338 additional Form ETA-9142B requests¹⁸⁸ to DOL, assuming each late season visa requestor submits a TLC and Form I-129 for the historic average of 14.80 beneficiaries. The number of additional Form ETA-9142B requests

could be lower if some petitioners that would have filed for April 1 start dates in the absence of this TFR change their behavior to request late season workers as a result of this allocation. Alternatively, this number could be higher if late season filers are at a larger disadvantage in accessing H-2B workers than recent data suggests. The Departments commit to monitoring the utilization of these late season FY25 visas to determine if this carve-out promotes access, as anticipated, to employers with needs for workers later in the second half of the fiscal year but that have faced obstacles to accessing H-2B workers in the past.

DHS recognizes that some employers will be required to submit two Form I-129 petitions if they choose to request H-2B workers under both the returning worker and country-specific caps. At this time, DHS cannot predict how many employers will choose to take advantage of more than one allocation,

and therefore recognizes that the number of petitions may be underestimated.

b. Population That Files Form G-28, Notice of Entry of Appearance as Attorney or Accredited Representative

If a lawyer or accredited representative submits Form I-129 on behalf of the petitioner, Form G-28, Notice of Entry of Appearance as Attorney or Accredited Representative, must accompany the Form I-129 submission.¹⁸⁹ Using data from FY 2020 to FY 2024, we estimate that a lawyer or accredited representative will file 47.73 percent of Form I-129 petitions. Table 7 shows the percentage of Form I-129 H-2B petitions that were accompanied by a Form G-28. Therefore, we estimate that in-house or outsourced lawyers will file 2,087 Forms I-129 and Forms G-28, and that human resources (HR) specialists will file 2,286 Forms I-129.¹⁹⁰

TABLE 7—FORM I-129 H-2B PETITION RECEIPTS THAT WERE ACCOMPANIED BY FORM G-28, FY 2020–2024

Fiscal year	Number of Form I-129 H-2B petitions accompanied by a Form G-28	Total number of Form I-129 H-2B petitions received	Percent of Form I-129 H-2B petitions accompanied by a Form G-28
2020	2,434	5,422	44.89%
2021	4,228	9,160	46.16
2022	5,984	12,392	48.29
2023	6,837	13,744	49.75
2024	6,048	12,773	47.35

¹⁸⁶ FY 2020 was not included due to the suspension of additional H-2B visas to be released in 2020. DHS also noted that the Department of State had suspended routine visa services.

¹⁸⁷ Calculation for expected petitions. If each Form I-129 petition requests 14.80 workers, we'd expect to see 4,373 petitioners exhausting the

64,716 supplement allocated this year: 64,716/14.80 = 4,373 (rounded)

¹⁸⁸ Calculation for expected late season TLCs: 5,000 visas/14.80 beneficiaries per petition = 338 TLCs (rounded).

¹⁸⁹ USCIS, *Filing Your Form G-28*, <https://www.uscis.gov/forms/filing-your-form-g-28>.

¹⁹⁰ Calculation: 4,373 estimated additional petitions * 47.73 percent of petitions filed by a lawyer = 2,087 (rounded) petitions filed by a lawyer.

Calculation: 4,373 estimated additional petitions—2,087 petitions filed by a lawyer = 2,286 petitions filed by an HR specialist.

TABLE 7—FORM I-129 H-2B PETITION RECEIPTS THAT WERE ACCOMPANIED BY FORM G-28, FY 2020–2024—
Continued

Fiscal year	Number of Form I-129 H-2B petitions accompanied by a Form G-28	Total number of Form I-129 H-2B petitions received	Percent of Form I-129 H-2B petitions accompanied by a Form G-28
Total	25,531	53,491	47.73

Source: USCIS, Office of Performance and Quality, SAS PME C3 Consolidated, Data queried 08/2024, TRK 15749.

c. Population That Files Form I-907, Request for Premium Processing Service

Employers may use Form I-907, Request for Premium Processing Service, to request faster processing of their Form I-129 petitions for H-2B visas. Table 8 shows the percentage of

Form I-129 H-2B petitions that were filed with a Form I-907. Using data from FY 2020 to FY 2024, DHS estimates that approximately 91.19 percent of Form I-129 H-2B petitioners will file a Form I-907 requesting premium processing. Based on this historical data, DHS estimates that 3,988

Forms I-907 will be filed with the Forms I-129 as a result of this rule.¹⁹¹ Of these 3,988 premium processing requests, we estimate that in-house or outsourced lawyers will file 1,903 Forms I-907 and HR specialists or an equivalent occupation will file 2,085.¹⁹²

TABLE 8—FORM I-129 H-2B PETITION RECEIPTS THAT WERE ACCOMPANIED BY FORM I-907, FY 2020–2024

Fiscal year	Number of Form I-129 H-2B petitions accompanied by Form I-907	Total number of Form I-129 H-2B petitions received	Percent of Form I-129 H-2B petitions accompanied by Form I-907
2020	4,341	5,422	80.06%
2021	8,650	9,160	94.43
2022	11,773	12,392	95.00
2023	12,078	13,744	87.88
2024	11,936	12,773	93.45
5-Year Total	48,778	53,491	91.19

Source: USCIS, Office of Performance and Quality, SAS PME C3 Consolidated, Data queried 08/2024, TRK 15749.

d. Population That Files Form ETA-9142-B-CAA-9, Attestation for Employers Seeking To Employ H-2B Nonimmigrant Workers Under Section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118-47, as extended by sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118-83

Petitioners seeking to take advantage of this FY 2025 H-2B supplemental visa cap will need to file a Form ETA-9142-B-CAA-9 attesting that their business is suffering irreparable harm or will suffer impending irreparable harm without the ability to employ all the H-2B workers requested on the petition, comply with third-party notification, and maintain required records, among other requirements. DOL estimates that each of the 4,373 petitions will need to be

accompanied by Form ETA-9142-B-CAA-9 and petitioners filing these petitions and attestations will incur burdens complying with the evidentiary requirements.

e. Population of Late Season Employers That File Form ETA-9142B, Application for Temporary Employment Certification

As Table 3 above demonstrated, historical data strongly indicate that there will be sufficient demand such that only those petitioners that utilize the late season allocation of supplemental visas will need to file an additional Form ETA-9142B. Assuming that the historical average of 14.80 beneficiaries per I-129 petition holds, 338 petitioners¹⁹³ will need to file Form ETA-9142B as a direct result of the provision reserving 5,000 visas for beneficiaries of these employers. Given estimates from Table 7 of the percentage

of Form I-129 H-2B petitions accompanied by a Form G-28, we estimate that the number of Form ETA-9142B in-house or outsourced lawyers will file is 161 and that the number of Form ETA-9142B human resources (HR) specialists will file is 177.¹⁹⁴

f. Population That Must Undergo Additional Recruitment Activities

An employer that files Form ETA-9142B-CAA-9 and the I-129 petition 30 or more days after the certified start date of work must conduct additional recruitment of U.S. workers. This consists of placing a new job order with the State Workforce Agency (SWA), contacting the relevant American Job Center (AJC), contacting former U.S. workers, contacting the bargaining representative or posting the job order in the places and manner described in 20 CFR 655.45(b) if there is no bargaining representative, contacting

¹⁹¹ Calculation: 4,373 estimated additional petitions * 91.19 percent premium processing filing rate = 3,988 (rounded) additional Form I-907.

¹⁹² Calculation: 3,988 additional Form I-907 * 47.73 percent of petitioners represented by a lawyer = 1,903 (rounded) additional Form I-907 filed by a lawyer.

Calculation: 3,988 additional Form I-907—1,903 additional Form I-907 filed by a lawyer = 2,085 additional Form I-907 filed by an HR specialist.

¹⁹³ Calculation for expected late season TLCs: 5,000 late season visas/14.80 beneficiaries per petition = 338 TLCs (rounded).

¹⁹⁴ Calculation: 338 estimated additional requests * 47.73 percent of petitions filed by a lawyer (see) = 161 (rounded) ETA-9142-B requests filed by a lawyer.

Calculation: 338 estimated additional requests—161 requests filed by a lawyer = 177 requests filed by an HR specialist.

current U.S. workers, posting the job to the company’s website if it maintains one and, if applicable, contacting the AFL–CIO.

The Departments assume that, due to the timing of the publication of the rule, only petitioners that file for H–2B workers under the first half supplemental allocation of 20,716 workers will incur burdens associated with this additional recruitment. Using the average number of beneficiaries per Form I–129 petition established in Table 6, the Departments estimate that the population of petitioners that would need to fulfill the additional recruitment requirements would be 1,400.¹⁹⁵

g. Population Affected by the Portability Provision

The population affected by this provision are nonimmigrants in H–2B status who are present in the United States and the employers with valid TLCs seeking to hire H–2B workers. We use the population of 66,000 H–2B workers authorized by statute and the 64,716 additional H–2B workers authorized by this rule as a proxy for the H–2B population that could be currently present in the United States.¹⁹⁶ DHS uses the number of Forms I–129 filed for extension of stay due to change of employer relative to the Forms I–129

filed for new employment from FY 2016 to FY 2020, the five years prior to the implementation of the first portability provision in a H–2B supplemental cap TFR, to estimate the baseline rate. We compare the average rate from FY 2016–FY 2020 to the average rate from FY 2021–FY 2024. Table 9 presents the number of Forms I–129 filed for extensions of stay due to change of employer and Forms I–129 filed for new employment for Fiscal year 2016 FY through FY 2020. The average rate of extension of stay due to change of employer compared to new employment is approximately 12.6 percent.

TABLE 9—NUMBERS OF FORM I–129 H–2B PETITIONS FILED FOR EXTENSION OF STAY DUE TO CHANGE OF EMPLOYER AND FORM I–129 H–2B PETITIONS FILED FOR NEW EMPLOYMENT, FY 2016–FY 2020

Fiscal year	Form I–129 H–2B petitions filed for extension of stay due to change of employer	Form I–129 H–2B petitions filed for new employment	Rate of extension to stay due to change of employer filings relative to new employment filings (%)
2016	427	5,750	7.4
2017	556	5,298	10.5
2018	744	5,136	14.5
2019	812	6,252	13.0
2020	804	3,997	20.1
Total	3,343	26,433	12.6

Source: USCIS, Office of Performance and Quality, SAS PME C3 Consolidated, Data queried 08/2024, TRK 15749.

In FY 2021, the first year an H–2B supplemental cap included a portability provision, 1,113 Forms I–129 were filed for extension of stay due to change of employer compared to 7,206 Forms I–129 filed for new employment.¹⁹⁷ In FY 2022, 1,795 Forms I–129 were filed for extension of stay due to change of employer compared to 9,231 Forms I–129 filed for new employment.¹⁹⁸ In FY 2023, 2,277 Forms I–129 were filed for extension of stay due to change of employer compared to 9,895 Forms I–

129 filed for new employment.¹⁹⁹ In FY 2024, 2,181 Forms I–129 were filed for extension of stay due to change of employer compared to 9,097 Forms I–129 filed for new employment.²⁰⁰ Over the period when a portability provision was in place for H–2B workers, the rate of Form I–129 for extension of stay due to change of employer relative to new employment is 20.8 percent.²⁰¹ This is above the 12.6 percent rate expected without a portability provision. We estimate that 20.8 percent is the

expected rate in periods with a portability provision in the supplemental visa allocation. Using 4,373 as our estimate for the number of Forms I–129 filed for H–2B new employment in FY 2024, we estimate that 551 Forms I–129 would be filed for extension of stay due to change of employer in absence of this provision.²⁰² With this portability

¹⁹⁵ Calculation: 20,716 workers in the 1st half returning working supplemental allocation/14.80 workers per petitioner = 1,400 (rounded) petitioners required to undertake additional recruitment.
¹⁹⁶ H–2B workers may have varying lengths in time approved on their H–2B visas. This number may overestimate H–2B workers who have already completed employment and departed and may underestimate H–2B workers not reflected in the current cap and long-term H–2B workers. In FY 2023, USCIS approved 407 requests for change of status to H–2B, and Customs and Border Protection (CBP) processed 1,053 crossings of visa-exempt H–2B workers. See *Characteristics of H–2B Nonagricultural Temporary Workers FY2023 Report to Congress*, <https://www.uscis.gov/sites/default/files/document/reports/H-2B-FY23-Characteristics-Report.pdf> (accessed September 25, 2024). DHS assumes some of these workers, along with current workers with a valid H–2B visa under the cap,

could be eligible to port under this new provision. DHS does not know the exact number of H–2B workers who would be eligible to port at this time but uses the cap and supplemental cap allocations as a possible proxy for this population.
¹⁹⁷ USCIS, Office of Performance and Quality, SAS PME C3 Consolidated, Data queried 08/2024, TRK 15749.
¹⁹⁸ See *Id.*
¹⁹⁹ See *Id.*
²⁰⁰ See *Id.*
²⁰¹ Calculation, Step 1: 1,113 Form I–129 petitions for extension of stay due to change of employer FY 2021 + 1,795 Form I–129 petitions for extension of stay due to change of employer in FY 2022 + 2,277 Form I–129 petitions for extension of stay due to change of employer FY 2023 + 2,181 Form I–129 petitions for extension of stay due to change of employer FY 2024 = 7,366 Form I–129

petitions filed extension of stay due to change of employer in portability provision years.
Calculation, Step 2: 7,206 Form I–129 petitions filed for new employment in FY 2021 + 9,231 Form I–129 petitions filed for new employment in FY 2022 + 9,895 Form I–129 petitions filed for new employment in FY 2023 + 9,097 Form I–129 petitions filed for new employment in FY 2024 = 35,429 Form I–129 petitions filed for new employment in portability provision years
Calculation, Step 3: 7,366 extension of stay due to change of employment petitions/35,429 new employment petitions = 20.8 percent rate of extension of stay due to change of employment to new employment (rounded).
²⁰² Calculation: 4,373 Form I–129 H–2B petitions filed for new employment * 12.6 percent = 551 estimated number of Form I–129 H–2B petitions filed for extension of stay due to change of employer, no portability provision.

provision, we estimate that 910 Forms I-129 would be filed for extension of stay due to change of employer,²⁰³ which results in a difference of 359 additional Forms I-129 as a result of this provision.²⁰⁴ As previously estimated, we expect that about 47.73 percent of Form I-129 petitions will be filed by an in-house or outsourced lawyer. Therefore, we expect that a lawyer will file 171 of these petitions and an HR specialist or equivalent occupation will file the remaining 188.²⁰⁵ Previously in this analysis, we estimated that about 91.19 percent of Form I-129 H-2B petitions are filed with Form I-907 for premium processing. As a result of this portability provision, we expect that an additional 327 Forms I-907 will be filed.²⁰⁶ We expect a lawyer to file 156 of those Forms I-907 and an HR specialist to file the remaining 171.²⁰⁷

h. Population Affected by the Audits

Under this time-limited FY 2025 H-2B supplemental cap rule, DHS intends to conduct a minimum of 150 audits of employers hiring H-2B workers under this TFR. While this number of TFR-related audits is lower than previous years' TFR-related audits, DHS has increased the number of targeted site visits it conducts on H-2B petitioners under the regular H-2B program. Specifically, in addition to the 150 audits DHS will perform under this TFR, DHS will also routinely conduct at least 150 targeted site visits annually to H-2B petitioners to determine compliance with H-2B program

requirements overall. During site visits, FDNS officers visit the work location, conduct in-person interviews, and review documents. These targeted H-2B site visits are conducted outside of the supplemental cap program, but overlap may exist between petitioners who file under the regular cap and the TFR. These increased targeted site visits, taken together with the audits conducted under this TFR, will increase oversight into the integrity of the H-2B program overall. Separately, DOL intends to conduct 100 audits of employers hiring H-2B workers under this TFR. The determination of which employers will be audited will be done at the discretion of the Departments, though the agencies will coordinate so that no employer is audited by both DOL and DHS. Therefore, the Federal Government expects to conduct a total of 250 audits on employers that petition for H-2B workers under this TFR.²⁰⁸

i. Population Sffected by Additional Scrutiny

DHS expects that petitioners that have been cited by WHD for H-2B program violations will undergo additional scrutiny from USCIS. To estimate the number of firms expected to undergo increased scrutiny, we utilize DOL's Wage and Hour Compliance Action Data.²⁰⁹ The data available is for concluded cases. Table 10 presents the number of employers that were cited for H-2B violations that have a worker protection violation end date in FY 2019–2023. The worker protection violation end date is established based on the “findings end date,” which represents the date that the last worker protection violation occurred in the concluded case. During FY 2019–2023, an average of 72 (rounded) employers were cited for H-2B violations with a worker protection violation by the end date each year. USCIS intends to request evidence from employers cited for H-2B violations with a worker protection violation end date in the last two years. Therefore, for purposes of this analysis, we expect 144 petitioners will undergo additional scrutiny from USCIS.²¹⁰

²⁰⁸ These 250 audits are separate and distinct from WHD's investigations pursuant to its existing enforcement authority.

²⁰⁹ Available at https://enforcedata.dol.gov/views/data_catalogs.php (accessed September 5, 2024).

²¹⁰ It is possible not every employer that has been cited for an H-2B violation in the last two years will petition for H-2B employees under this supplemental cap authority. DHS considers an upper limit of 144 to be a reasonable estimate of the number of petitioners that will undergo additional scrutiny.

TABLE 10—EMPLOYERS WITH H-2B VIOLATIONS WITH WORKER PROTECTION VIOLATION END DATE IN FY 2019–2023

Fiscal year	Employers cited for H-2B violations with worker protection violation end date in fiscal year
2019	124
2020	89
2021	55
2022	70
2023	22
5-year Average (rounded)	72

Source: USCIS analysis of DOL Wage and Hour Compliance Action Data.

j. Population Expected To Familiarize Themselves With This Rule

DHS expects employers that have filed for TLCs to familiarize themselves with this rule. Table 3 shows that the average number of certifications over the last five fiscal years is 9,924. We use the TLC population, rather than the estimated 4,373 expected to file a Form I-129 petition, because employers that have applied for TLCs would need to familiarize themselves with the rule in order to determine whether or not to subsequently file a Form I-129 petition.

We expect a HR specialist, in-house lawyer, or outsourced lawyer will perform familiarization with the rule at the same rate as petitioners that file a Form G-28. As discussed above, an estimated 47.73 percent of petitioners are submitted by lawyers. Therefore, we estimate that 4,737 lawyers and 5,187 HR specialists will incur familiarization costs.²¹¹

Cost-Benefit Analysis

The provisions of this rule require the submission of a Form I-129 H-2B petition. The costs for this form include the opportunity cost of time to complete and submit the form.²¹² The estimated time to complete and file Form I-129 for H-2B classification is 4.56 hours.²¹³ A U.S. employer, a U.S. agent, or a foreign employer filing through the U.S. agent

²¹¹ Calculation for lawyers: 9,924 estimated applicants * 47.73 percent represents by a lawyer = 4,737 (rounded) represented by a lawyer.

Calculation for HR specialists: 9,924 approved, pending, and projected applicants—4,737 represented by a lawyer = 5,187 represented by an HR specialist.

²¹² Filing fees are not considered costs to society. These fees have been accounted for as a transfer from petitioners to USCIS.

²¹³ The public reporting burden for this form is 2.487 hours for Form I-129 and an additional 2.07 hours for H Classification Supplement, totaling 4.56 hours (rounded). See Form I-129 instructions at <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf> (accessed August 13, 2024).

²⁰³ Calculation: 4,373 Form I-129 H-2B petitions filed for new employment * 20.8 percent = 910 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, with a portability provision.

²⁰⁴ Calculation: 910 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, with a portability provision—551 estimated number of Form I-129 H-2B petitions filed for extension of stay due to change of employer, no portability provision = 359 Form I-129 H-2B petition increase as a result of portability provision.

²⁰⁵ Calculation, Lawyers: 359 additional Form I-129 due to portability provision * 47.73 percent of Form I-129 for H-2B positions filed by an attorney or accredited representative = 171 (rounded) estimated Form I-129 filed by a lawyer.

Calculation, HR specialist: 359 additional Form I-129 due to portability provision—171 estimated Form I-129 filed by a lawyer = 188 estimated Form I-129 filed by an HR specialist.

²⁰⁶ Calculation: 359 Form I-129 H-2B petitions * 91.19 percent premium processing filing rate = 327 (rounded) Forms I-907.

²⁰⁷ Calculation, Lawyers: 327 Forms I-907 * 47.73 percent filed by an attorney or accredited representative = 156 (rounded) Forms I-907 filed by a lawyer.

Calculation, HR specialists: 327 Forms I-907—156 Forms I-907 filed by a lawyer = 171 Forms I-907 filed by an HR specialist.

must file the petition. DHS estimates that an in-house or outsourced lawyer will file 47.73 percent of Form I–129 H–2B petitions, and an HR specialist or equivalent occupation will file the remainder (52.27 percent). DHS presents estimated costs for HR specialists filing Form I–129 petitions and an estimated range of costs for in-house lawyers or outsourced lawyers filing Form I–129 petitions.

To estimate the total opportunity cost of time to HR specialists who complete and file Form I–129, DHS uses the mean hourly wage rate of HR specialists of \$36.57 as the base wage rate.²¹⁴ If petitioners hire an in-house or outsourced lawyer to file Form I–129 on their behalf, DHS uses the mean hourly wage rate \$84.84 as the base wage rate.²¹⁵ Using the most recent BLS data, DHS calculated a benefits-to-wage multiplier of 1.45 to estimate the full wages to include benefits such as paid leave, insurance, and retirement.²¹⁶ DHS multiplied the average hourly U.S. wage rate for HR specialists and for in-house lawyers by the benefits-to-wage multiplier of 1.45 to estimate total compensation to employees. The total compensation for an HR specialist is \$53.03 per hour, and the total compensation for an in-house lawyer is \$123.02 per hour.²¹⁷ In addition, DHS

recognizes that an entity may not have an in-house lawyer and may seek outside counsel to complete and file Form I–129 on behalf of the petitioner. Therefore, DHS presents a second wage rate for lawyers labeled as outsourced lawyers. DHS recognizes that the wages for outsourced lawyers may be much higher than in-house lawyers and therefore uses a higher compensation-to-wage multiplier of 2.5 for outsourced lawyers.²¹⁸ DHS estimates the total compensation for an outsourced lawyer is \$212.10 per hour.²¹⁹ If a lawyer submits Form I–129 on behalf of the petitioner, Form G–28 must accompany the Form I–129 petition.²²⁰ DHS estimates the time burden to complete and submit Form G–28 for a lawyer is 50 minutes (0.83 hour, rounded).²²¹ For this analysis, DHS adds the time to complete Form G–28 to the opportunity cost of time to lawyers for filing Form I–129 on behalf of a petitioner. This results in a time burden of 5.39 hours for in-house lawyers and outsourced lawyers to complete Form G–28 and Form I–129.²²² Therefore, the total opportunity cost of time per petition for an HR specialist to complete and file Form I–129 is approximately \$241.82, for an in-house lawyer to complete and file Forms I–129 and G–28 is about \$663.08, and for an outsourced lawyer

to complete and file is approximately \$1,143.22.²²³

a. Transfers

i. Transfers From Petitioners to the Government

The provisions of this rule require the submission of a Form I–129 H–2B petition. The transfers for this form include the filing costs to submit the form. In previous years, all filers of the Form I–129 paid a standard fee. As of April 1, 2024, the fee structure for I–129 H–2B petitions has changed, and now takes into account whether petitioners are named or unnamed, as well as the characteristics of the petitioner based on size. Additionally, petitioners pay a variable Asylum Processing Fee based on the identity of the petitioner based on entity type. All petitioners pay an additional Fraud Prevention and Detection Fee of \$150.²²⁴ The new fee structure is summarized in Table 11 below. These filing fees are not a cost to society or an expenditure of new resources but a transfer from the petitioner to USCIS in exchange for agency services. DHS anticipates that petitioners will file 4,373 Forms I–129 due to the rule's supplemental visa allocation and an additional 359 Forms I–129 due to the rule's portability provision.

TABLE 11—FORM I–129 FILING FEES BY PETITIONER TYPE

Petitioner type	Base fee	Fraud prevention and detection fee	Asylum processing fee	Total fee
H–2B Named Non-Small Employer or Nonprofit	\$1,080	\$150	\$600	\$1,830
H–2B Named Small Employer	540	150	300	990

²¹⁴ U.S. Department of Labor, Bureau of Labor Statistics, “May 2023 National Occupational Employment and Wage Statistics” Human Resources Specialist (13–1071), Mean Hourly Wage, available at https://www.bls.gov/news.release/archives/ocwage_04032024.pdf (accessed October 25, 2024).

²¹⁵ U.S. Department of Labor, Bureau of Labor Statistics, “May 2023 National Occupational Employment and Wage Estimates” Lawyers (23–1011), Mean Hourly Wage, available at https://www.bls.gov/news.release/archives/ocwage_04032024.pdf (accessed October 25, 2024).

²¹⁶ Calculation: \$46.21 mean Total Employee Compensation per hour for civilian workers/\$31.80 mean Wages and Salaries per hour for civilian workers = 1.45 benefits-to-wage multiplier. See Economic News Release, Bureau of Labor Statistics, U.S. Department of Labor, Employer Costs for Employee Compensation—June 2024 Table 1. Employer Costs for Employee Compensation by ownership, Civilian workers, available at https://www.bls.gov/news.release/archives/eecc_09102024.pdf (accessed October 25, 2024).

²¹⁷ Calculation, HR specialist: \$36.57 mean hourly wage * 1.45 benefits-to-wage multiplier = \$53.03 hourly total compensation (hourly opportunity cost of time).

Calculation, In-house Lawyer: \$84.84 mean hourly wage * 1.45 benefits-to-wage multiplier =

\$123.02 hourly total compensation (hourly opportunity cost of time).

²¹⁸ The DHS ICE “Safe-Harbor Procedures for Employers Who Receive a No-Match Letter” acknowledges that “the cost of hiring services provided by an outside vendor or contractor is two to three times more expensive than the wages paid by the employer for that service produced by an in-house employee,” based on information received in public comment to that rule. We believe the explanation and methodology used in the Final Small Entity Impact Analysis (SEIA) remains sound for using 2.5 as a multiplier for outsourced labor wages in this rule: *Safe Harbor Procedures for Employers Who Receive a No-Match Letter: Clarification; Final Regulatory Flexibility Analysis*, 73 FR 63843 (Oct. 28, 2008), available at <https://www.regulations.gov/document/ICEB-2006-0004-0921> (accessed September 25, 2024). See also *Exercise of Time-Limited Authority To Increase the Fiscal Year 2022 Numerical Limitation for the H–2B Temporary Nonagricultural Worker Program and Portability Flexibility for H–2B Workers Seeking To Change Employers*, 87 FR 4722 (Jan. 28, 2022), available at <https://www.regulations.gov/document/DHS-2022-0010-0001> (accessed September 25, 2024).

²¹⁹ Calculation, Outsourced Lawyer: \$84.84 mean hourly wage * 2.5 benefits-to-wage multiplier =

\$212.10 hourly total compensation (hourly opportunity cost of time).

²²⁰ USCIS, Filing Your Form G–28, <https://www.uscis.gov/forms/filing-your-form-g-28> (accessed September 25, 2024).

²²¹ USCIS, G–28, Instructions for Notice of Entry of Appearance as Attorney or Accredited Representative, <https://www.uscis.gov/sites/default/files/document/forms/g-28instr.pdf>.

Calculation: 50 minutes/60 minutes per hour = 0.83 hour (rounded).

²²² Calculation: 0.83 hour to file Form G–28 + 4.56 hours to file Form I–129 = 5.39 hours to file both forms.

²²³ Calculation, HR specialist files Form I–129: \$53.03 hourly opportunity cost of time * 4.56 hours = \$241.82 opportunity cost of time per petition.

Calculation, In-house Lawyer files Form I–129 and Form G–28: \$123.02 hourly opportunity cost of time * 5.39 hours = \$663.08 opportunity cost of time per petition.

Calculation, Outsourced Lawyer files Form I–129 and Form G–28: \$212.10 hourly opportunity cost of time * 5.39 hours = \$1,143.22 opportunity cost of time per petition.

²²⁴ See Form I–129 instructions at <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf> (accessed September 4, 2024). See also 8 U.S.C. 1184(c)(13).

TABLE 11—FORM I-129 FILING FEES BY PETITIONER TYPE—Continued

Petitioner type	Base fee	Fraud prevention and detection fee	Asylum processing fee	Total fee
H-2B Named Nonprofit	540	150	0	690
H-2B Unnamed Non-Small Employer or Nonprofit	580	150	600	1,330
H-2B Unnamed Small Employer	460	150	300	910
H-2B Unnamed Nonprofit	460	150	0	610

Source: USCIS, Form I-129 instructions at <https://www.uscis.gov/sites/default/files/document/forms/i-129instr.pdf> (accessed September 4, 2024). See also 8 USC 1184(c)(13).

Using a historical average of petitioners requesting named versus unnamed beneficiaries from FY 2021–FY2024, DHS estimates that 6 percent will request named beneficiaries and 94 percent will request unnamed beneficiaries. Based on analysis conducted as part of the USCIS 2024 Fee Rule, DHS assumes that 30 percent of I-129 H-2B petitioners have 26 or more employees, 55 percent have 25 or fewer employees, and 15 percent have non-profit status.²²⁵ This equates to 1,312 petitioners with 26 or more employees,²²⁶ 2,405 petitioners with 25 or fewer employees,²²⁷ and 656 non-profit petitioners filing Forms I-129 as part of the supplemental allocation.²²⁸ USCIS assumes that the percentage of named versus unnamed beneficiaries does not vary by employer size or nonprofit status. Thus, by multiplying the percentages of requests of named versus unnamed beneficiaries by the number of petitioners by characteristic, this equates to 79 petitioners with 26 or more employees requesting named beneficiaries,²²⁹ 1,233 petitioners with 26 or more employees requesting unnamed beneficiaries,²³⁰ 144 petitioners with 25 or fewer employees requesting named beneficiaries,²³¹ 2,261 petitioners with 25 or fewer employees

requesting unnamed beneficiaries,²³² 39 non-profit petitioners requesting named beneficiaries,²³³ and 617 non-profit petitioners requesting unnamed beneficiaries as part of the supplemental allocation.²³⁴ Additionally, DHS estimates that 359 additional Forms I-129 will be filed due to the portability provision of this rule. Petitions filed under the portability provision must request named beneficiaries. Thus, DHS estimates that this population will consist of 108 petitioners with 26 or more employees requesting named beneficiaries,²³⁵ 197 petitioners with 25 or fewer employees requesting named beneficiaries,²³⁶ and 54 non-profit petitioners requesting named beneficiaries.²³⁷

The total transfers from petitioners to the government for filing Forms I-129 H-2B petitioners are \$4,817,740.²³⁸ Transfers from petitioners to the Government related to the filing of Forms I-907 as a result of the rule are \$7,270,775.²³⁹ Total transfers from petitioners to the Government are \$12,088,515.²⁴⁰

²²⁵ Calculation: 2,405 petitioners with 25 or fewer employees * 94 percent unnamed beneficiaries = 2,261 (rounded).

²²⁶ Calculation: 656 non-profit petitioners * 6 percent unnamed beneficiaries = 39 (rounded).

²²⁷ Calculation: 656 non-profit petitioners * 94 percent unnamed beneficiaries = 617 (rounded).

²²⁸ Calculation: 359 expected additional Forms I-129 * 30 percent petitioners with 26 or more employees = 108 (rounded).

²²⁹ Calculation: 359 expected additional Forms I-129 * 55 percent petitioners with 25 or fewer employees = 197 (rounded).

²³⁰ Calculation: 359 expected additional Forms I-129 * 15 percent non-profit petitioners = 54 (rounded).

²³¹ Calculation: 187 petitioners with 26 or more employees requesting named beneficiaries * \$1,830 + 1,233 petitioners with 26 or more employees requesting unnamed beneficiaries * \$1,330 + 341 petitioners with 25 or fewer employees requesting named beneficiaries * \$990 + 2,261 petitioners with 25 or fewer employees requesting unnamed beneficiaries * \$910 + 93 non-profits requesting named beneficiaries * \$690 + 617 non-profits requesting unnamed beneficiaries * \$610 = \$4,817,740

²³² Calculation: \$1,685 per petition * 4,315 Forms I-907 = \$7,270,775

²³³ Calculation: \$4,817,740 + \$7,270,775 = \$12,088,515.

b. Cost to Petitioners

As mentioned in *Section 3*, the estimated population impacted by this rule is 4,373 eligible petitioners that are projected to apply for the additional 64,716 H-2B visas, with 20,000 of those additional visas reserved for employers that will petition for workers who are nationals of the countries included in the country-specific allocation, who are exempt from the returning worker requirement.

i. Costs to Petitioners To File Form I-129 and Form G-28

As discussed above, DHS estimates that HR specialists will file an additional 2,286 petitions using Form I-129 and lawyers will file an additional 2,087 petitions using Form I-129 and Form G-28. DHS estimates the total cost to file Form I-129 petitions if filed by HR specialists is \$552,801 (rounded).²⁴¹ DHS estimates the total cost to file Form I-129 petitions and Form G-28 if filed by lawyers will range from \$1,383,848 (rounded) if only in-house lawyers file these forms, to \$2,385,900 (rounded) if only outsourced lawyers file them.²⁴² Therefore, the estimated total cost to file Form I-129 and Form G-28 range from \$1,936,649 and \$2,938,701.²⁴³

ii. Costs To File Form I-907

Employers may use Form I-907 to request premium processing of Form I-129 petitions for H-2B visas. The filing fee for Form I-907 for H-2B petitions is

²⁴¹ Calculation, HR specialist: \$241.82 cost per petition * 2,286 Form I-129 = \$552,801 (rounded) total cost.

²⁴² Calculation, In-house Lawyer: \$663.08 cost per petition * 2,087 Form I-129 and Form G-28 = \$1,383,848 (rounded) total cost.

Calculation, Outsourced Lawyer: \$1,143.22 cost per petition * 2,087 Form I-129 and Form G-28 = \$2,385,900 (rounded) total cost.

²⁴³ Calculation: \$552,801 total cost of Form I-129 filed by HR specialists + \$1,383,848 total cost of Form I-129 and Form G-28 filed by in-house lawyers = \$1,936,649 estimated total costs to file Form I-129 and G-28.

Calculation: \$552,801 total cost of Form I-129 filed by HR specialists + \$2,385,900 total cost of Form I-129 and G-28 filed by outsourced lawyers = \$2,938,701 estimated total costs to file Form I-129 and G-28.

²²⁵ See Table 25 of the Fee Rule Regulatory Impact Analysis at <https://www.regulations.gov/document/USCIS-2021-0010-8179> (accessed October 28, 2024).

²²⁶ Calculation: 4,373 expected additional Forms I-129 * 30 percent petitioners with 26 or more employees = 1,312 (rounded).

²²⁷ Calculation: 4,373 expected additional Forms I-129 * 55 percent petitioners with 25 or fewer employees = 2,405 (rounded).

²²⁸ Calculation: 4,373 expected additional Forms I-129 * 15 percent non-profit petitioners = 656 (rounded).

²²⁹ Calculation: 1,312 petitioners with 26 or more employees * 6 percent unnamed beneficiaries = 79 (rounded).

²³⁰ Calculation: 1,312 petitioners with 26 or more employees * 94 percent unnamed beneficiaries = 1,233 (rounded).

²³¹ Calculation: 2,405 petitioners with 25 or fewer employees * 6 percent unnamed beneficiaries = 144 (rounded).

\$1,685, and the time burden for completing the form is 22 minutes (0.35 hour).²⁴⁴ Using the wage rates established previously, the opportunity cost of time to file Form I-907 is approximately \$19.62 for an HR specialist, \$45.52 for an in-house lawyer, and \$78.48 for an outsourced lawyer.²⁴⁶

As discussed above, DHS estimates that HR specialists will file an additional 2,085 Form I-907 and lawyers will file an additional 1,903 Form I-907. DHS estimates the total cost of Form I-907 filed by HR specialists is about \$40,908 (rounded).²⁴⁷ DHS estimates the total cost to file Form I-907 filed by lawyers range from about \$86,625 (rounded) for only in-house lawyers, to \$149,347 (rounded) for only outsourced lawyers.²⁴⁸ The estimated total cost to file Form I-907 range from \$127,533 and \$190,255.²⁴⁹

iii. Cost to Late Season Employers Filing Form ETA-9142B

In addition to the costs for employers projected to request TLCs irrespective of this rule, the population of 338 late season employers that would not otherwise request H-2B workers will file Form ETA-9142B as a precondition to utilizing the late season allocation of H-2B visas made available by the rule. There is no filing fee for Form ETA-9142B, and the time burden for completing the form, including Appendix A, Appendix B, Appendix C, Appendix D, and record keeping, is 2

hours and 10 minutes (2.17 hours).²⁵⁰ DHS estimates the total cost of Form ETA-9142B filed by HR specialists is about \$20,368 (rounded).²⁵¹ DHS estimates the total cost to file Form ETA-9142B by lawyers range from about \$42,979 (rounded) for only in-house lawyers, to \$74,101 (rounded) for only outsourced lawyers.²⁵² The estimated total cost to file Form ETA-9142B range from \$63,347 and \$94,469.²⁵³

iv. Cost To File Form ETA-9142-B-CAA-9

Form ETA-9142-B-CAA-9 is an attestation form that includes recruiting requirements, the irreparable harm standard, and document retention obligations. DOL estimates the time burden for completing and signing the form is 0.25 hours, 0.25 hours for retaining records, and 0.50 hours to comply with the returning workers' attestation, for a total time burden of 1 hour. Using the \$53.03 hourly total compensation for an HR specialist, the opportunity cost of time for an HR specialist to complete the attestation form, notify third parties, and retain records relating to the returning worker requirements is approximately \$53.03.²⁵⁴ Employers are also required to send OFLC and AFL-CIO the ETA case number when filing a petition with DHS. DOL estimates the time burden for this task is 10 minutes (0.17 hours) for an HR specialist. The opportunity cost of time for an HR specialist to send OFLC and AFL the ETA case number is

approximately \$9.02.²⁵⁵ The total opportunity cost of time for filing Form ETA-9142-B-CAA-9 and emailing the ETA case number to both OFLC and the AFL-CIO is \$74.256.

Additionally, the form requires that petitioners assess, prepare a detailed written statement, and document supporting evidence for meeting the irreparable harm standard, and retain those documents and records, which we assume will require the resources of a financial analyst (or another equivalent occupation). Using the same methodology previously described for wages, the mean hourly wage for a financial analyst is \$54.30,²⁵⁷ and the estimated hourly total compensation for a financial analyst is \$78.74.²⁵⁸ DOL estimates the time burden for these tasks is at least 4 hours, and 1 hour for gathering and retaining documents and records, for a total time burden of 5 hours. Therefore, the total opportunity cost of time for a financial analyst to assess, document, and retain supporting evidence is approximately \$393.70.²⁵⁹

As discussed previously, DHS believes that the 4,373 Form I-129 petitions required to exhaust the number of supplemental visas made available in this rule represents the number of potential employers that will request to employ H-2B workers under this rule. This number of petitions is a reasonable proxy for the number of employers that may need to review and sign the attestation. Using this estimate for the total number of certifications, we estimate the opportunity cost of time for completing the attestation and sending the ETA case number to OFLC and AFL-CIO for HR specialists is approximately \$271,345 (rounded) and for financial analysts is about \$1,721,650 (rounded).²⁶⁰

²⁴⁴ The filing fee is a transfer from the petitioner requesting premium processing and proxy for the total costs to USCIS.

²⁴⁵ See Form I-907 instructions at <https://www.uscis.gov/sites/default/files/document/forms/i-907instr.pdf> (accessed September 25, 2024).

Calculation: 22 minutes/60 minutes per hour = 0.37 (rounded) hour.

²⁴⁶ Calculation, HR specialist Form I-907: \$53.03 hourly opportunity cost of time * 0.37 hour = \$19.62 opportunity cost of time per request.

Calculation, In-house Lawyer Form I-907: \$123.02 hourly opportunity cost of time * 0.37 hour = \$45.52 opportunity cost of time per request.

Calculation, Outsourced Lawyer Form I-907: \$212.10 hourly opportunity cost of time * 0.37 hour = \$78.48 opportunity cost of time per request.

²⁴⁷ Calculation, HR specialist: \$19.62 opportunity cost of time per request * 2,085 Form I-907 = \$40,908 (rounded) total cost of Form I-907 filed by HR specialists.

²⁴⁸ Calculation, In-house Lawyer Form I-907: \$45.52 hourly opportunity cost of time * 1,903 applications = \$86,625.

Calculation, Outsourced Lawyer Form I-907: \$78.48 hourly opportunity cost of time * 1,903 applications = \$149,347.

²⁴⁹ Calculation: \$40,908 total cost of Form I-907 filed by HR specialists + \$86,625 total cost of Form I-907 filed by in-house lawyers = \$127,533 estimated total costs to file Form I-907.

Calculation: \$40,908 total cost of Form I-129 filed by HR specialists + \$149,347 total cost of Form I-907 filed by outsourced lawyers = \$190,255 estimated total costs to file Form I-907.

²⁵⁰ The time burden estimate of 130 minutes is as follows: 9142-B—55 minutes, Appendix A—15 minutes, Appendix B—15 minutes, Appendix C—20 minutes, Appendix D—10 minutes, Record Keeping—15 minutes. See Form ETA-9142-B at <https://www.dol.gov/sites/dolgov/files/ETA/oflc/pdfs/Form-ETA-9142B-Instructions-1205-0509.pdf> (accessed August 22, 2024).

²⁵¹ Calculation, HR specialist: \$53.03 per hour * 2.17 hours * 177 Form ETA-9142-B = \$20,368 (rounded) total cost of Form ETA-9142-B filed by HR specialists.

²⁵² Calculation, In-house Lawyer Form ETA-9142-B: \$123.02 per hour * 2.17 hours * 161 applications = \$42,979 (rounded). Calculation, Outsourced Lawyer Form ETA-9142-B: \$212.10 per hour * 2.17 hours * 161 applications = \$74,101 (rounded).

²⁵³ Calculation: \$20,368 total cost of Form ETA-9142-B filed by HR specialist + \$42,979 total cost of Form ETA-9142-B filed by In-house Lawyer = \$63,347 estimated total costs to file Form ETA-9142-B.

Calculation: \$20,368 total cost of Form ETA-9142-B filed by HR specialist + \$74,101 total cost of Form ETA-9142-B filed by Outsourced Lawyer = \$94,469 estimated total costs to file Form ETA-9142-B.

²⁵⁴ Calculation: \$53.03 hourly opportunity cost of time * 1-hour time burden for the new attestation form and notifying third parties and retaining records related to the returning worker requirements = \$53.03.

²⁵⁵ Calculation: \$53.03 hourly opportunity cost of time * 0.17 hours to send OFLC and AFL-CIO the ETA case number = \$9.02 (rounded).

²⁵⁶ Calculation: \$53.03 + \$9.02 = \$62.05.

²⁵⁷ See U.S. Department of Labor, Bureau of Labor Statistics, "May 2023 National Occupational Employment and Wage Statistics" Financial and Investment Analysts (13-2051), https://www.bls.gov/news.release/archives/ocwage_04032024.pdf (accessed October 25, 2024).

²⁵⁸ Calculation: \$54.30 mean hourly wage for a financial analyst * 1.45 benefits-to-wage multiplier = \$78.74 (rounded).

²⁵⁹ Calculation: \$78.74 estimated total compensation for a financial analyst * 5 hours to meet the requirements of the irreparable harm standard = \$393.70.

²⁶⁰ Calculations, HR specialists: \$62.05 opportunity cost of time to comply with attestation requirements and to send the ETA case number to OFLC and AFL-CIO * 4,373 estimated additional petitions = \$271,345 (rounded) total cost to comply with attestation requirements.

Calculation, Financial Analysts: \$393.70 opportunity cost of time to comply with attestation requirements * 4,373 estimated additional petitions

The estimated total cost to file Form ETA-9142B-CAA-9 and comply with the attestation is approximately \$1,992,995.²⁶¹

v. Cost To Conduct Recruitment

An employer that files Form ETA-9142B-CAA-99 and the I-129 petition 30 or more days after the certified start date of work must conduct additional recruitment of U.S. workers. This consists of: (1) placing a new job order with the State Workforce Agency (SWA), (2) contacting the relevant American Job Center (AJC), (3) contacting the AFL-CIO if applicable, (4) contacting former U.S. workers, (5) recruiting U.S. workers as provided in § 655.45(a) and (b), (6) contacting current employees for referrals, and (7) placing the available job opportunity on the employer's website if the employer maintains a website for its business.

Specifically, the employer must place a new job order for the job opportunity with the SWA serving the area of intended employment. During the period the SWA is actively circulating the job order, employers must also contact, by email or other available electronic means, the nearest local AJC to request staff assistance advertising and recruiting qualified U.S. workers for the job opportunity, and to provide to the AJC the unique identification number associated with the job order placed with the SWA.

If the occupation is traditionally or customarily unionized, employers must provide written notification of the job opportunity to the nearest American Federation of Labor and Congress of Industrial Organizations (AFL-CIO) office covering the area of intended employment, by providing a copy of the job order, and request assistance in recruiting qualified U.S. workers for the job opportunity.

Employers are required to make reasonable efforts to contact, by mail or other effective means, their former U.S. workers, including those workers who were furloughed and laid off, beginning January 1, 2023. Employers must disclose the terms of the job order to these workers as required by the rule.

The employer must provide a copy of the job order to the bargaining representative for its employees in the occupation and area of intended

employment, consistent with 20 CFR 655.45(a), or if there is no bargaining representative, post the job order in the places and manner described in 20 CFR 655.45(b).

Employers are also required to contact current employees regarding available job opportunities for referrals.

Finally, employers are required to post the available job opportunity on the employer's website if the employer maintains a website for its business.

DOL estimates the average expected time burden for activities related to conducting recruitment is 4 hours.²⁶² Assuming this work will be done by an HR specialist or an equivalent occupation, the estimated cost to each petitioner is approximately \$212.12.²⁶³ Using 1,400 as the estimated number of petitioners required to undergo additional recruitment activities, the estimated total cost of this provision is approximately \$296,968 (rounded).²⁶⁴

It is possible that if U.S. employees apply for these positions, H-2B employers may incur some costs associated with reviewing applications, interviewing, vetting, and hiring applicants who are referred to H-2B employers by the recruiting activities required by this rule. However, DOL is unable to quantify the impact.

vi. Cost of the Portability Provision

Petitioners seeking to hire H-2B nonimmigrants who are currently present in the United States with a valid H-2B visa would need to file a Form I-129, which includes paying the associated fee as discussed above. Also previously discussed, we estimate that approximately 359 additional Form I-129 H-2B petitions will be filed as a result of this provision.

As discussed previously, if a petitioner is represented by a lawyer,

²⁶² This is the average expected time burden across all employers; not all employers will need to notify the AFL-CIO, because not all occupations are traditionally or customarily unionized. DOL estimates the time burden for placing a new job order for the job opportunity with SWA is 1 hour, 0.5 hours for contacting the nearest AJC, 1 hour for contacting former U.S. workers, 0.5 hours for contacting current employees for referrals, 0.5 hours for placing the available job opportunity on the employer's website, and 0.5 hours to provide a copy of job order to the bargaining representative and written notification of job opportunity to nearest AFL-CIO if the occupation is traditionally or customarily unionized, for a total time burden of 4 hours.

²⁶³ Calculation: \$53.03 hourly opportunity cost of time for an HR specialist * 4 hours to conduct additional recruitment = \$212.12 per petitioner cost to conduct additional recruitment.

²⁶⁴ Calculation: 1,400 estimated number of petitioners subject to additional recruitment requirements * \$212.12 per petitioner cost to conduct additional recruitment = \$296,968 (rounded) total cost to conduct additional recruitment.

the lawyer must file Form G-28. In addition, if a petitioner desires premium processing, the petitioner must file Form I-907 and pay the associated fee. We expect an HR specialist, in-house lawyer, or an outsourced lawyer will perform these actions. Moreover, as previously estimated, we expect that an in-house or outsourced lawyer will file about 47.73 percent of these Form I-129 petitions. Therefore, we expect that a lawyer will file 171 of these petitions and an HR specialist or equivalent occupation will file the remaining 188. As previously discussed, the opportunity cost of time to file a Form I-129 H-2B petition is \$241.82 for an HR specialist; and the opportunity cost of time to file a Form I-129 H-2B petition with accompanying Form G-28 is \$663.08 for an in-house lawyer and \$1,143.22 for an outsourced lawyer. Therefore, we estimate the cost of the additional Forms I-129 from the portability provision for HR specialists is \$45,462.²⁶⁵ The estimated cost of the additional Forms I-129 accompanied by Forms G-28 from the portability provision for lawyers is \$113,387 if filed by in-house lawyers and \$195,491 if filed by outsourced lawyers.²⁶⁶

Previously in this analysis, we estimated that about 91.19 percent of Form I-129 H-2B petitions are filed with Form I-907 for premium processing. As a result of this provision, we expect that an additional 327 Forms I-907 will be filed.²⁶⁷ We expect a lawyer will file 156 of those Forms I-907 and an HR specialist or equivalent occupation will file the remaining 171.²⁶⁸ As previously discussed, the estimated opportunity cost of time to file a Form I-907 is \$19.62 for an HR specialist; and the estimated opportunity cost of time to file a Form I-907 is approximately \$45.52 for an in-house lawyer and \$78.48 for an outsourced lawyer. The estimated total cost of the additional Forms I-907 if HR

²⁶⁵ Calculation, HR specialist: \$241.82 estimated cost to file a Form I-129 H-2B petition * 188 petitions = \$45,462 (rounded).

²⁶⁶ Calculation, In-house Lawyer: \$663.08 estimated cost to file a Form I-129 H-2B petition and accompanying Form G-28 * 171 petitions = \$113,387 (rounded).

Calculation, Outsourced Lawyer: \$1,143.22 estimated cost to file a Form I-129 H-2B petition and accompanying Form G-28 * 171 petitions = \$195,491 (rounded).

²⁶⁷ Calculation: 359 estimated additional Form I-129 H-2B petitions * 91.19 percent accompanied by Form I-907 = 327 (rounded) additional Form I-907.

²⁶⁸ Calculation, Lawyers: 327 additional Form I-907 * 47.73 percent = 156 (rounded) Form I-907 filed by a lawyer. Calculation, HR specialists: 327 Form I-907—156 Form I-907 filed by a lawyer = 171 Form I-907 filed by an HR specialist.

= \$1,721,650 (rounded) to comply with attestation requirements.

²⁶¹ Calculation: \$271,345 total cost for HR specialist to comply with attestation requirement and to send the ETA case number to OFLC and AFL-CIO + \$1,721,650 total cost for financial analysts to comply with attestation requirements = \$1,992,995 total cost to comply with attestation requirements.

specialists file is \$3,355.²⁶⁹ The estimated total cost of the additional Forms I-907 is \$7,101 if filed by in-house lawyers and \$12,243 if filed by outsourced lawyers.²⁷⁰

The estimated total cost of this provision ranges from \$169,305 to \$256,551 depending on what share of the forms are filed by in-house or outsourced lawyers.²⁷¹

vii. Cost of Audits to Petitioners

As discussed above, DHS intends to conduct 150 audits of employers hiring H-2B workers under this TFR,²⁷² and DOL intends to conduct 100 audits of employers hiring H-2B workers under this TFR, for a total of 250 employers. Employers will need to provide requested information to comply with the audit. We estimate that the expected time burden to comply with audits conducted by DHS and DOL's Office of Foreign Labor Certification is 12 hours.²⁷³ We expect that an HR specialist or equivalent occupation will provide these documents. Given an hourly opportunity cost of time of \$53.03, the estimated cost of complying with audits is \$636.36 per audited employer.²⁷⁴ Therefore, the total estimated cost to employers to comply with audits is \$159,090.²⁷⁵

viii. Cost of Additional Scrutiny

The Departments expect that petitioners undergoing additional scrutiny will need to submit additional evidence to USCIS. The costs associated

with additional scrutiny include the opportunity cost of time to assess, document, and compile evidence and the costs (both explicit costs and opportunity costs of time) of submitting the compiled evidence.

The opportunity costs of time associated with compiling such evidence are unavailable due to the unique fact pattern in each instance and a lack of data at this time regarding the time to comply. To estimate the explicit costs of additional scrutiny, we assume 144 petitioners will need to print 500 pages of documents and mail this to USCIS. We expect these documents to be able to fit in a Priority Mail Medium Flat Rate box, which costs \$16.00.²⁷⁶ We estimate the costs of printing at \$0.15 per page and the cost of printing 500 at \$75.00.²⁷⁷ The estimated cost for an employer to print and ship evidence to USCIS is \$91.00.²⁷⁸ With an estimated 144 petitioners expected to print and ship evidence, the total estimated costs for printing and shipping evidence is \$13,104.²⁷⁹

We also expect petitioners to incur a time burden associated with printing and shipping evidence to USCIS. We estimate it will take an HR specialist or equivalent employee 1 hour to print and ship evidence. Using the \$53.03 hourly opportunity cost of time for HR specialist, we estimate the opportunity cost of time for each petitioner is \$53.03.²⁸⁰ With an estimated 144 petitioners expected to print and ship evidence, the total estimated opportunity cost of time to print and ship evidence is \$7,636.²⁸¹

We do not expect this provision to impose new costs on to USCIS. The costs to request and review evidence from petitioners is included in the fees paid to the agency.

The total estimated cost of additional scrutiny is \$20,740.²⁸²

²⁷⁶ USPS, Priority Mail, <https://www.usps.com/ship/priority-mail.htm> (accessed August 22, 2024).

²⁷⁷ See <https://www.montgomerycountymd.gov/Library/services/computerhelp.html> (accessed August 22, 2024). Cost to make black and white copies. Calculation: 500 pages * \$0.15 per page = \$75.00 in printing costs.

²⁷⁸ Calculation: \$75.00 in printing costs + \$16.00 in shipping costs = \$91.00 to print and ship evidence.

²⁷⁹ Calculation: 144 petitioners * \$91.00 to print and ship evidence = \$13,104 total printing and shipping costs.

²⁸⁰ Calculation: \$53.03 hourly opportunity cost of time for HR specialist * 1 hour to print and ship evidence = \$53.03 opportunity cost of time per petitioner.

²⁸¹ Calculation: 144 petitioners * \$53.03 opportunity cost of time per petitioner = \$7,636 total estimated opportunity cost of time to print and ship evidence.

²⁸² Calculation: \$13,104 total printing and shipping costs + \$7,636 total opportunity cost of

ix. Familiarization Costs

We expect that petitioners or their representatives will need to read and understand this rule if they seek to take advantage of the supplemental cap. As a result, we expect this rule will impose one-time familiarization costs associated with reading and understanding this rule. As shown previously, we estimate that approximately 9,924 petitioners may take advantage of the provisions of this rule, and that a lawyer will represent 4,737 of these petitioners and an HR specialist or equivalent occupation will represent 5,187.

To estimate the costs of rule familiarization, we estimate the time it will take to read and understand the rule by assuming a reading speed of 238 words per minute.²⁸³ This rule has approximately 67,000 words.²⁸⁴ Using a reading speed of 238 words per minute, DHS estimates it will take approximately 4.7 hours to read and understand this rule.²⁸⁵

The estimated hourly total compensation for a HR specialist, in-house lawyer, and outsourced lawyer are \$53.03, \$123.02, and \$212.10, respectively. The estimated opportunity cost of time for each of these filers to read and understand the rule are \$249.24, \$578.19, and \$996.87, respectively.²⁸⁶ The estimated total opportunity cost of time for 5,187 HR specialists to familiarize themselves with this rule is approximately \$1,292,808.²⁸⁷ The estimated total

time = \$20,740 total estimated cost of additional scrutiny.

²⁸³ Brysbaert, Marc (2019, April 12). 'How many words do we read per minute? A review and meta-analysis of reading rate.' <https://doi.org/10.31234/osf.io/xynwg> (accessed September 25, 2024). We use the average speed for silent reading of English nonfiction by adults.

²⁸⁴ Please note that this number represents that Departments' best estimate of the final word count, given that the actual word may change during the promulgation of the Rule.

²⁸⁵ Calculation, Step 1: roughly 67,000 words/238 words per minute = 282 (rounded) minutes.

Calculation, Step 2: 282 minutes/60 minutes per hour = 4.7 (rounded) hours.

²⁸⁶ Calculation, HR Specialists: \$53.03 estimated hourly total compensation for an HR specialist * 4.7 hours to read and become familiar with the rule = \$249.24 opportunity cost of time for an HR specialist to read and understand the rule.

Calculation, In-house lawyer: \$123.02 estimated hourly total compensation for an in-house lawyer * 4.7 hours to read and become familiar with the rule = \$578.19 (rounded) opportunity cost of time for an in-house lawyer to read and understand the rule.

Calculation, Outsourced lawyer: \$212.10 estimated hourly total compensation for an outsourced lawyer * 4.7 hours to read and become familiar with the rule = \$996.87 (rounded) opportunity cost of time for an outsourced lawyer to read and understand the rule.

²⁸⁷ Calculation, HR specialists: \$249.24 opportunity cost of time * 5,187 = \$1,292,808 (rounded).

²⁶⁹ Calculation, HR specialist: \$19.62 to file a Form I-907 * 171 forms = \$3,355 (rounded).

²⁷⁰ Calculation, In-house lawyer: \$45.52 to file a Form I-907 * 156 forms = \$7,101 (rounded).

Calculation for an outsourced lawyer: \$78.48 to file a Form I-907 * 156 forms = \$12,243 (rounded).

²⁷¹ Calculation for HR specialists and in-house lawyers: \$45,462 for HR specialists to file Form I-129 H-2B petitions + \$113,387 for in-house lawyers to file Form I-129 and the accompanying Form G-28 + \$3,355 for HR specialists to file Form I-907 + \$7,101 for in-house lawyers to file Form I-907 = \$169,305.

Calculation for HR specialists and outsourced lawyers: \$45,462 for HR specialists to file Form I-129 H-2B petitions + \$195,491 for outsourced lawyers to file Form I-129 and the accompanying Form G-28 + \$3,355 for HR specialists to file Form I-907 + \$12,243 for outsourced lawyers to file Form I-907 = \$256,551.

²⁷² As noted above, in addition to these TFR-specific audits, DHS will also be conducting at least 150 targeted site visits annually related to other H-2B petitions to determine compliance with H-2B program requirements and provide increased oversight into the integrity of the H-2B program overall.

²⁷³ The number in hours for audits was provided by the USCIS, Service Center Operations.

²⁷⁴ Calculation: \$53.03 hourly opportunity cost of time for an HR specialist * 12 hours to comply with an audit = \$636.36 per audited employer.

²⁷⁵ Calculation: 250 audited employers * \$636.36 opportunity cost of time to comply with an audit = \$159,090.

opportunity cost of time for 4,737 lawyers to familiarize themselves with this rule is approximately \$2,738,886 if they are all in-house lawyers and \$4,722,173 if they are all outsourced lawyers.²⁸⁸ Accordingly, the estimated total opportunity costs of time for petitioners' representatives to familiarize themselves with this rule ranges from \$4,031,694 to \$6,014,981.²⁸⁹

x. Estimated Total Costs to Petitioners

In sum, the monetized costs of this rule come from time spent filing and complying with Form I-129, Form G-28, Form I-907, and Form ETA-9142-B-CAA-9, as well as contacting and refreshing recruitment efforts, posting notifications, time spent filing to obtain a porting worker, and complying with audits. The estimated total cost to file Form I-129 and an accompanying Form G-28 ranges from \$1,936,649 to \$2,938,701, depending on the filer. The estimated total cost of filing Form I-907 ranges from \$127,533 to \$190,255, depending on the filer. The estimated cost for late season employers to file Form ETA-9142B ranges from \$63,347 to \$94,469 depending on the filer. The estimated total cost of filing and complying with Form ETA-9142-B-CAA-9 is \$1,992,995. The estimated total cost of conducting additional recruitment is \$296,968. The estimated cost of the portability provision ranges from \$169,305 to \$256,551, depending on the filer. The estimated total cost for employers to comply with audits is \$159,090. The estimated total costs for petitioners or their representatives to familiarize themselves with this rule ranges from \$4,031,694 to \$6,014,981, depending on the filer. The estimated total cost of additional scrutiny is \$20,740. The total estimated cost to petitioners ranges from \$8,798,321 to \$11,964,750, depending on the filer.²⁹⁰

c. Cost to the Federal Government

USCIS will incur costs related to the adjudication of petitions as a result of this TFR. DHS expects USCIS to recover

these costs by the fees associated with the forms, which have been accounted for as a transfer from petitioners to USCIS and serve as a proxy for the costs to the agency. The total filing fees associated with Form I-129 H-2B petitions are \$4,817,740, and the total filing fees associated with premium processing are \$7,270,775.²⁹¹ Total transfers from petitioners to the Government are \$12,088,515.²⁹²

The INA provides USCIS with the authority to collect fees at a level that will ensure recovery of the full costs of providing adjudication and naturalization services, including administrative costs, and services provided without charge to certain applicants and petitioners.²⁹³ DHS notes USCIS establishes its fees by assigning costs to an adjudication based on its relative adjudication burden and use of USCIS resources. USCIS establishes fees at an amount that is necessary to recover these assigned costs, such as clerical, officers, and managerial salaries and benefits, plus an amount to recover unassigned overhead (for example, facility rent, IT equipment and systems among other expenses) and immigration benefits provided without a fee charged. Consequently, since USCIS immigration fees are primarily based on resource expenditures related to the benefit in question, USCIS uses the fee associated with an information collection as a reasonable measure of the collection's costs to USCIS. DHS anticipates some additional costs in adjudicating the additional petitions submitted because of the increase in cap limitation for H-2B visas.

Both DOL and DHS intend to conduct a significant number of audits during the period of temporary need to verify compliance with H-2B program requirements, including the irreparable harm standard as well as other key worker protection provisions implemented through this rule.²⁹⁴ While fees fund most USCIS activities and appropriations fund DOL, we expect both agencies will be able to shift resources to conduct these audits without incurring additional costs. As previously mentioned, the agencies intend to conduct a total of 250 audits, and we expect each audit to take 12 hours. This results in a total time

burden of 3,000 hours.²⁹⁵ USCIS anticipates that a Federal employee at a GS-13 Step 5 salary will typically conduct these audits for each agency. The base hourly pay for a GS-13 Step 5 in the Washington, DC locality area is \$64.06.²⁹⁶ To estimate the total hourly compensation for these positions, we multiply the hourly wage (\$64.06) by the Federal benefits to wage multiplier of 1.41.²⁹⁷ This results in an hourly opportunity cost of time of \$90.32 for GS-13 Step 5 Federal employees in the Washington, DC locality pay area.²⁹⁸ The total opportunity costs of time for Federal workers to conduct audits is estimated to be \$270,960.²⁹⁹

This final rule implements changes to the DOL's mechanisms to receive complaints from advocates, unions, and other stakeholders about jobs posted on seasonaljobs.gov. DOL expects that the changes to the DOL's mechanisms to receive complaints may result in some additional costs to DOL. However, DOL is unable to quantify such costs due to lack of data.

d. Benefits to Petitioners

The Departments assume that employers will incur the costs of this rule and other costs associated with hiring H-2B workers if the expected benefits of those workers exceed the expected costs. We assume that employers expect some level of net benefit from being able to hire additional H-2B workers. However, the Departments do not collect or require data from H-2B employers on the profits from hiring these additional workers to estimate this increase in net benefits.

The inability to access H-2B workers for some entities is currently causing irreparable harm or will cause their

²⁹⁵ Calculation: 12 hours to conduct an audit * 250 audits = 3,000 total hours to conduct audits.

²⁹⁶ See U.S. Office of Personnel Management, Pay and Leave, Salaries and Wages, For the Locality Pay area of Washington-Baltimore-Arlington, DC-MD-VA-WV-PA, 2024, Hourly Basic Rate, https://www.opm.gov/policy-data-oversight/pay-leave/salaries-wages/salary-tables/pdf/2024/DCB_h.pdf (accessed August 22, 2024).

²⁹⁷ Calculation, Step 1: \$2,382,167 Full-time Permanent Salaries + \$983,370 Civilian Personnel Benefits = \$3,365,537 Compensation.

Calculation, Step 2: \$3,365,537 Compensation / \$2,382,167 Full-time Permanent Salaries = 1.41 (rounded) Federal employee benefits to wage ratio. See https://www.dhs.gov/sites/default/files/2024-04/2024_0325_us_citizenship_and_immigration_services.pdf (accessed August 22, 2024).

²⁹⁸ Calculation: \$64.06 hourly wage for a GS 13-5 in the Washington, DC locality area * 1.41 Federal employee benefits to wage ratio = \$90.32 hourly opportunity cost of time for a GS 13-5 federal employee in the Washington, DC locality area.

²⁹⁹ Calculation: 3,000 hours to conduct audits * \$90.32 hourly opportunity cost of time = \$270,960 total opportunity costs of time for Federal employees to conduct audits.

²⁸⁸ Calculation for in-house lawyers: \$578.19 opportunity cost of * 4,737 = \$2,738,886 (rounded).

Calculation for outsourced lawyers: \$996.87 opportunity cost of time * 4,737 = \$4,722,173 (rounded).

²⁸⁹ Calculation: \$1,292,808 + \$2,738,886 = \$4,031,694.

Calculation: \$1,292,808 + \$4,722,173 = \$6,014,981.

²⁹⁰ Calculation of lower range: \$1,936,649 + \$127,533 + \$63,347 + \$1,992,995 + \$296,968 + \$169,305 + \$159,090 + \$4,031,694 + \$20,740 = \$8,798,321.

Calculation of upper range: \$2,938,701 + \$190,255 + \$94,469 + \$1,992,995 + \$296,968 + \$256,551 + \$159,090 + \$6,014,981 + \$20,740 = \$11,964,750.

²⁹¹ Calculation: (3,988 + 327 Forms I-907) * \$1,685 per form = \$7,270,775.

²⁹² Calculation: \$4,817,740 + \$7,270,775 = \$12,088,515.

²⁹³ See INA section 286(m), 8 U.S.C. 1356(m).

²⁹⁴ These audits are distinct from the WHD's authority to perform investigations regarding employers' compliance with the requirements of the H-2B program.

businesses to suffer irreparable harm in the near future. Temporarily increasing the number of available H–2B visas for this fiscal year may result in a benefit, because it will allow some businesses to hire the additional labor resources necessary to avoid such harm. Preventing such harm may also result in cost savings by ultimately preserve the jobs of other employees (including U.S. workers) at that establishment. Additionally, returning workers are likely to be very familiar with the H–2B process and requirements, and may be positioned to begin work more expeditiously with these employers. Moreover, employers may already be familiar with returning workers as they have trained, vetted, and worked with some of these returning workers in past years. As such, limiting the supplemental visas to returning workers will assist employers that are suffering irreparable harm or will suffer impending irreparable harm.

e. Benefits to Workers

The Departments assume that workers will only incur the costs of this rule and other costs associated with obtaining a H–2B position if the expected benefits of that position exceed the expected costs. We assume that H–2B workers expect some level of net benefit from being able to work for H–2B employers. However, the Departments do not have sufficient data to estimate this increase in net benefits and lack the necessary resources to investigate this in a timely manner. This rule is not expected to impact wages because DOL prevailing wage regulations apply to all H–2B workers covered by this rule. Additionally, this analysis shows that employers incur costs in conducting additional recruitment of U.S. workers and attesting to irreparable harm from current labor shortfall. These costs suggest employers are not taking advantage of a large supply of foreign labor at the expense of domestic workers.

The existence of this rule will benefit the workers who receive H–2B visas. According to Brodbeck et al. (2018):

Participation in the H–2B guest worker program has become a vital part of the livelihood strategies of rural Guatemalan families and has had a positive impact on the quality of life in the communities where they live. Migrant workers who were landless, lived in isolated rural areas, had few economic opportunities, and who had limited access to education or adequate health care, now are investing in small trucks, building roads, schools, and homes, and providing employment for others in their

home communities. . . . The impact has been transformative and positive.³⁰⁰

Some provisions of this rule will benefit such workers in particular ways. The portability provision of this rule will allow nonimmigrants with valid H–2B visas who are present in the United States to transfer to a new employer more quickly and potentially extend their stay in the United States and, therefore, earn additional wages.

DHS recognizes that some of the effects of these provisions may occur beyond the borders of the United States. The current analysis does not seek to quantify or monetize costs or benefits that occur outside of the United States.

U.S. workers will also benefit from this rule in multiple ways. For example, the additional round of recruitment and U.S. worker referrals required by the provisions of this rule will ensure that a nonimmigrant worker does not displace a U.S. worker who is willing and able to fill the position and may result in some U.S. workers being hired. As noted, the avoidance of current or impending irreparable harm made possible through the granting of supplemental visas in this rule could ensure that U.S. workers—who otherwise may be vulnerable if H–2B workers were not given visas—do not lose their jobs.

C. Regulatory Flexibility Act

The Regulatory Flexibility Act, 5 U.S.C. 601 *et seq.* (RFA), imposes certain requirements on Federal agency rules that are subject to the notice and comment requirements of the APA. *See* 5 U.S.C. 603(a), 604(a). This temporary final rule is exempt from notice and comment requirements for the reasons stated above. Therefore, the requirements of the RFA applicable to final rules, 5 U.S.C. 604, do not apply to this temporary final rule. Accordingly, the Departments are not required to either certify that the temporary final rule would not have a significant economic impact on a substantial number of small entities nor conduct a regulatory flexibility analysis.

D. Unfunded Mandates Reform Act of 1995

The Unfunded Mandates Reform Act of 1995 (UMRA) is intended, among other things, to curb the practice of imposing unfunded Federal mandates on State, local, and tribal governments. Title II of the Act requires each Federal agency to prepare a written statement

³⁰⁰ *See* Arnold Brodbeck et al. (2018), Seasonal Migrant Labor in the Forest Industry of the United States: The Impact of H–2B Employment on Guatemalan Livelihoods, 31 Society & Natural Resources 1012.

assessing the effects of any Federal mandate in a proposed rule, or final rule for which the agency published a proposed rule that includes any Federal mandate that may result in \$100 million or more expenditure (adjusted annually for inflation) in any one year by State, local, and tribal governments, in the aggregate, or by the private sector.³⁰¹ This rule is exempt from the written statement requirement because DHS did not publish a notice of proposed rulemaking for this rule.

In addition, this rule does not exceed the \$100 million in 1995 expenditure in any 1 year when adjusted for inflation (\$200 million in 2023 dollars based on the Consumer Price Index for All Urban Consumers (CPI–U)),³⁰² and this rulemaking does not contain such a Federal mandate as the term is defined under UMRA.³⁰³ The requirements of Title II of the Act, therefore, do not apply, and the Departments have not prepared a statement under the Act.

E. Executive Order 13132 (Federalism)

This rule does not have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with section 6 of Executive Order 13132, 64 FR 43255 (Aug. 4, 1999), this rule does not have sufficient federalism implications to warrant the preparation of a federalism summary impact statement.

F. Executive Order 12988 (Civil Justice Reform)

This rule meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988, 61 FR 4729 (Feb. 5, 1996).

³⁰¹ *See* 2 U.S.C. 1532(a).

³⁰² *See* U.S. Department of Labor, BLS, “Historical Consumer Price Index for All Urban Consumers (CPI–U): U.S. city average, all items, by month,” available at <https://www.bls.gov/cpi/tables/supplemental-files/historical-cpi-u-202402.pdf>, last accessed September 3, 2024). Calculation of inflation: (1) Calculate the average monthly CPI–U for the reference year (1995) and the current year (2022); (2) Subtract reference year CPI–U from current year CPI–U; (3) Divide the difference of the reference year CPI–U and current year CPI–U by the reference year CPI–U; (4) Multiply by 100 = [(Average monthly CPI–U for 2022 – Average monthly CPI–U for 1995)/(Average monthly CPI–U for 1995)] * 100 = [(304.702 – 152.4)/152.4] * 100 = (152.302/152.4) * 100 = 0.9994 (rounded) * 100 = 99.94 percent = 100 percent (rounded). Calculation of inflation-adjusted value: \$100 million in 1995 dollars * 2.00 = \$200 million in 2023 dollars.

³⁰³ The term “Federal mandate” means a Federal intergovernmental mandate or a Federal private sector mandate. *See* 2 U.S.C. 1502(1), 658(6).

G. National Environmental Policy Act

DHS and its components analyze their proposed actions to determine whether the National Environmental Policy Act (NEPA) applies to them and, if so, what degree of analysis is required. DHS Directive (Dir) 023–01 Rev. 01 and Instruction Manual 023–01–001–01 Rev. 01 (Instruction Manual) establish the procedures that DHS and its components use to comply with NEPA and the Council on Environmental Quality (CEQ) regulations for implementing NEPA, 40 CFR parts 1500 through 1508.

NEPA and the CEQ regulations allow Federal agencies to establish categories of actions (“categorical exclusions”) that normally do not significantly affect the quality of the human environment and, therefore, do not require an Environmental Assessment (EA) or Environmental Impact Statement (EIS). 42 U.S.C. 4336e(1), 42 U.S.C. 4336(a)(2); 40 CFR 1501.4, 40 CFR 1508.1(d). The Instruction Manual, Appendix A, Table 1 lists Categorical Exclusions that DHS has found to have no such effect. Under DHS NEPA implementing procedures, for an action to be categorically excluded, it must satisfy each of the following three conditions: (1) The entire action clearly fits within one or more of the categorical exclusions; (2) the action is not a piece of a larger action; and (3) no extraordinary circumstances exist that create the potential for a significant environmental effect. Instruction Manual, section V.B.2(a–c).

This rule temporarily amends the regulations implementing the H–2B nonimmigrant visa program to increase the numerical limitation on H–2B nonimmigrant visas for FY 2025, based on the Secretary of Homeland Security’s determination, in consultation with the Secretary of Labor, consistent with the FY 2024 Omnibus and Public Law 118–83. It also allows H–2B beneficiaries who are in the United States to change employers upon the filing of a new H–2B petition and begin to work for the new employer for a period generally not to exceed 60 days before the H–2B petition is approved by USCIS.

DHS has considered in accordance with its NEPA implementing procedures and has determined that this temporary final rule clearly fits within categorical exclusion A3(d) because it interprets or amends a regulation without changing its environmental effect. The amendments to 8 CFR part 214 would authorize up to an additional 64,716 visas for noncitizens who may receive H–2B nonimmigrant visas, of which 44,716 are for returning workers

(persons issued H–2B visas or were otherwise granted H–2B status in Fiscal Years 2022, 2023, or 2024). The proposed amendments would also facilitate H–2B nonimmigrants to move to new employment faster than they could if they had to wait for a petition to be approved. The amendment’s operative provisions approving H–2B petitions under the supplemental allocation would effectively terminate after September 30, 2025 for the cap increase, and at the end of January 24, 2026 for the portability provision. DHS believes amending applicable regulations to authorize up to an additional 64,716 H–2B nonimmigrant visas will not result in reasonably foreseeable effects that would necessitate an environmental assessment or environmental impact statement with respect to the current H–2B limit or in the context of a current U.S. population exceeding 334,914,895 (maximum temporary increase of 0.0193 percent).³⁰⁴ DHS has also considered and determined that this action would not have extraordinary circumstances that would require the preparation of an environmental assessment or environmental impact statement.

The amendment to applicable regulations is a stand-alone temporary authorization and not a part of any larger action, and presents no extraordinary circumstances creating the potential for significant environmental effects. Therefore, this action is categorically excluded and no further NEPA analysis is required.

H. Congressional Review Act

The Office of Information and Regulatory Affairs has determined that this temporary final rule is a “major rule” as defined by the Congressional Review Act (“CRA”) in 5 U.S.C. 804(2)(a) and is subject to both the CRA’s reporting requirement and the delayed effective date requirement, pursuant to 5 U.S.C. 801. However, as stated in section IV.A of this rule, the Departments have good cause to forgo APA’s requirements for notice and public comment (and a delayed effective date), pursuant to 5 U.S.C. 553. Therefore, the Departments also have good cause to forgo the CRA’s 60-day delayed effective date requirement, pursuant to 5 U.S.C. 808(2). This rule is effective upon publication. DHS has complied with the CRA’s reporting

requirements and has sent this rule to Congress and to the Comptroller General as required by 5 U.S.C. 801(a)(1).

I. Paperwork Reduction Act

Attestation for Employers Seeking to Employ H–2B Nonimmigrants Workers Under Section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118–47, as extended by sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118–83, Form ETA–9142–B–CAA–9

The Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*, provides that a Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6. DOL has submitted the Information Collection Request (ICR) contained in this rule to OMB and obtained approval of a new form, Form ETA–9142B–CAA–9, using emergency clearance procedures outlined at 5 CFR 1320.13. The Departments note that while DOL submitted the ICR, both DHS and DOL will use the information provided by employers in response to this information collection.

Petitioners will use the new Form ETA–9142B–CAA–9 to make attestations regarding, for example, irreparable harm and the returning worker requirement (unless exempt because the H–2B worker is a national of one of the countries included in the country-specific allocation who is counted against the 20,000 returning worker exemption cap) described above. Petitioners will need to file the attestation with DHS until it announces that the supplemental H–2B cap has been reached. In addition, the petitioner will need to retain all documentation demonstrating compliance with this implementing rule, and must provide it to DHS or DOL in the event of an audit or investigation.

In addition to obtaining immediate emergency approval pursuant to 5 CFR 1320.13, DOL is seeking comments on this information collection pursuant to 44 U.S.C. 3506(c)(2)(A). Comments on the information collection must be received by January 31, 2025. This process of engaging the public and other

³⁰⁴ *See* U.S. Census Bureau Quick Facts, available at <https://www.census.gov/quickfacts/US> (accessed September 9, 2024).

Calculation: 64,716 additional visas/334,914,895 million people in the United States = 0.0193 (rounded) percent temporary increase in the population.

Federal agencies helps ensure that requested data can be provided in the desired format, reporting burden (time and financial resources) is minimized, collection instruments are clearly understood, and the impact of collection requirements on respondents can be properly assessed. The PRA provides that a Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. *See* 44 U.S.C. 3501 *et seq.* In addition, notwithstanding any other provisions of law, no person must generally be subject to a penalty for failing to comply with a collection of information that does not display a valid OMB Control Number. *See* 5 CFR 1320.5(a) and 1320.6.

In accordance with the PRA, DOL is affording the public with notice and an opportunity to comment on the new information collection, which is necessary to implement the requirements of this rule. The information collection activities covered under a newly granted OMB Control Number 1205-NEW are required under section 105 of Division G of the FY 2024 Omnibus as extended by Public Law 118-83, which provides that “the Secretary of Homeland Security, after consultation with the Secretary of Labor, and upon the determination that the needs of American businesses cannot be satisfied . . . with U.S. workers who are willing, qualified, and able to perform temporary nonagricultural labor,” may increase the total number of noncitizens who may receive an H-2B visa by not more than the highest number of H-2B nonimmigrants who participated in the H-2B returning worker program in any fiscal year in which returning workers were exempt from the H-2B numerical limitation. As previously discussed in the preamble of this rule, the Secretary of Homeland Security, in consultation with the Secretary of Labor, has decided to increase the numerical limitation on H-2B nonimmigrant visas to authorize the issuance of up to, but not more than, an additional 64,716 visas for FY 2025 for certain H-2B workers, for U.S. businesses that attest that they are suffering irreparable harm or will suffer impending irreparable harm. As with the previous supplemental rules, the Secretary has determined that the additional visas will only be available for returning workers, that is workers who were issued H-2B visas or otherwise granted H-2B status in FY

2022, 2023, or 2024, unless the worker is one of the 20,000 nationals of one of the countries included in the country-specific allocation who are exempt from the returning worker requirement.

Commenters are encouraged to discuss the following:

- Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information to be collected; and
- The burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, for example, permitting electronic submission of responses.

The aforementioned information collection requirements are summarized as follows:

Agency: DOL-ETA.

Type of Information Collection:

Extension of an existing information collection.

Title of the Collection: Attestation for Employers Seeking to Employ H-2B Nonimmigrants Workers Under Section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118-47, as extended by sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118-83.

Agency Form Number: Form ETA-9142-B-CAA-9.

Affected Public: Private Sector—businesses or other for-profits.

Total Estimated Number of Respondents: 4,373.

Average Responses per Year per Respondent: 1.

Total Estimated Number of Responses: 4,373.

Average Time per Response: 10.17 hours per application.

Total Estimated Annual Time Burden: 32,581 hours.

Total Estimated Other Costs Burden: \$2,289,811.

Request for Premium Processing Service, Form I-907

The Paperwork Reduction Act (PRA), 44 U.S.C. 3501 *et seq.*, provides that a Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally

not required to respond to an information collection, unless it is approved by OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. *See* 5 CFR 1320.5(a) and 1320.6. Form I-907, Request for Premium Processing Service, has been approved by OMB and assigned OMB control number 1615-0048. DHS is making no changes to the Form I-907 in connection with this temporary rule implementing the time-limited authority pursuant to Section 105 of Division G, Title I of the Further Consolidated Appropriations Act, 2024, Public Law 118-47, as extended by Public Law 118-83 (which expires on December 20, 2024). However, DHS estimates that this temporary rule may result in approximately 4,325 additional filings of Form I-907 in fiscal year 2025. The current OMB-approved estimate of the number of annual respondents filing a Form I-907 is 815,773. DHS has determined that the OMB-approved estimate is sufficient to fully encompass the additional respondents who will be filing Form I-907 in connection with this temporary rule, which represents a small fraction of the overall Form I-907 population. Therefore, DHS is not changing the collection instrument or increasing its burden estimates in connection with this temporary rule and is not publishing a notice under the PRA or making revisions to the currently approved burden for OMB control number 1615-0048.

List of Subjects

8 CFR Part 214

Administrative practice and procedure, Aliens, Cultural exchange program, Employment, Foreign officials, Health professions, Reporting and recordkeeping requirements, Students.

8 CFR Part 274a

Administrative practice and procedure, Aliens, Cultural exchange program, Employment, Penalties, Reporting and recordkeeping requirements, Students.

20 CFR Part 655

Administrative practice and procedure, Employment, Employment and training, Enforcement, Foreign workers, Forest and forest products, Fraud, Health professions, Immigration, Labor, Longshore and harbor work, Migrant workers, Nonimmigrant workers, Passports and visas, Penalties,

Reporting and recordkeeping requirements, Unemployment, Wages, Working conditions.

For the reasons discussed in the joint preamble, chapter I of title 8 of the Code of Federal Regulations is amended as follows:

DEPARTMENT OF HOMELAND SECURITY

PART 214—NONIMMIGRANT CLASSES

■ 1. The authority citation for part 214 continues to read as follows:

Authority: 6 U.S.C. 202, 236; 8 U.S.C. 1101, 1102, 1103, 1182, 1184, 1186a, 1187, 1221, 1281, 1282, 1301–1305, 1357, and 1372; sec. 643, Pub. L. 104–208, 110 Stat. 3009–708; Pub. L. 106–386, 114 Stat. 1477–1480; section 141 of the Compacts of Free Association with the Federated States of Micronesia and the Republic of the Marshall Islands, and with the Government of Palau, 48 U.S.C. 1901 note and 1931 note, respectively; 48 U.S.C. 1806; 8 CFR part 2; Pub. L. 115–218, 132 Stat. 1547 (48 U.S.C. 1806).

■ 2. Effective December 2, 2024, through December 2, 2027, amend § 214.2 by:

- a. In table 3 to paragraph (h), adding an entry for “32”; and
- b. Adding paragraphs (h)(6)(xv) and (h)(32).

The additions read as follows:

§ 214.2 Special requirements for admission, extension, and maintenance of status.

* * * * *

(h) * * *

TABLE 3 TO PARAGRAPH (h)—PARAGRAPH CONTENTS

(32) Change of employers and portability for H–2B workers (January 25, 2025 through January 24, 2026).

* * * * *

(6) * * *

(xv) *Special requirements for additional cap allocations under Public Laws 118–47 and 118–83—(A) Public Law 118–47 and sections 101(6) and 106, Division A, Title I of Public Law 118–83—(1) Supplemental allocation for returning workers.* Notwithstanding the numerical limitations set forth in paragraph (h)(8)(i)(C) of this section, for fiscal year 2025 only, the Secretary has authorized up to an additional 64,716 visas for aliens who may receive H–2B nonimmigrant visas pursuant to section 105 of Division G, Title I of Public Law 118–47, the Further Consolidated Appropriations Act, 2024, and sections 101(6) and 106, Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118–83. An alien may be eligible to receive an H–2B nonimmigrant visa under this paragraph (h)(6)(xv)(A)(1) if she or he is a returning worker. The term “returning worker” under this paragraph (h)(6)(xv)(A)(1) means a person who was issued an H–2B visa or was otherwise granted H–2B status in fiscal year 2022, 2023, or 2024. Notwithstanding § 248.2 of this chapter, an alien may not change status to H–2B nonimmigrant under this paragraph (h)(6)(xv)(A)(1). The additional H–2B visas authorized under this paragraph will be made available to returning workers as follows:

(i) Up to an additional 20,716 visas for aliens who may receive H–2B nonimmigrant visas based on petitions requesting FY 2025 employment start dates on or before March 31, 2025.

(ii) Up to an additional 19,000 visas for aliens who may receive H–2B nonimmigrant visas based on petitions requesting FY 2025 employment start

dates from April 1, 2025 to May 14, 2025.

(iii) Up to an additional 5,000 visas available for aliens with employment start dates from May 15, 2025 to September 30, 2025.

(2) *Supplemental allocation for nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica.* Notwithstanding the numerical limitations set forth in paragraph (h)(8)(i)(C) of this section, for fiscal year 2025 only, and in addition to the allocation described in paragraph (h)(6)(xv)(A)(1) of this section, the Secretary has authorized up to an additional 20,000 visas for aliens who are nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica, who may receive H–2B nonimmigrant visas pursuant to section 105 of Division G, Title I of Public Law 118–47, the Further Consolidated Appropriations Act, 2024, and sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118–83, based on petitions with FY 2025 employment start dates. Such workers are not subject to the returning worker requirement in paragraph (h)(6)(xv)(A)(1). Petitioners must request such workers in an H–2B petition that is separate from H–2B petitions that request returning workers under paragraph (h)(6)(xv)(A)(1) and must declare that they are requesting these workers in the attestation Form ETA–9142–B–CAA–9 required under 20 CFR 655.68(a)(1). A petition requesting returning workers under paragraph (h)(6)(xv)(A)(1), which is accompanied by an attestation indicating that the petitioner is requesting nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica,

will be rejected, denied or, in the case of a non-frivolous petition, approved solely for the number of beneficiaries that are from Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica. Notwithstanding § 248.2 of this chapter, an alien may not change status to H–2B nonimmigrant under this paragraph (h)(6)(xv)(A)(2).

(B) *Eligibility.* In order to file a petition with USCIS under this paragraph (h)(6)(xv), the petitioner must: (1) Comply with all other statutory and regulatory requirements for H–2B classification, including, but not limited to, requirements in this section, under part 103 of this chapter, and under 20 CFR part 655 and 29 CFR part 503; and (2) Submit to USCIS, at the time the employer files its petition, a U.S. Department of Labor attestation, in compliance with this section and 20 CFR 655.64, evidencing that:

(i) Its business is suffering irreparable harm or will suffer impending irreparable harm (that is, permanent and severe financial loss) without the ability to employ all of the H–2B workers requested on the petition filed pursuant to this paragraph (h)(6)(xv);

(ii) All workers requested and/or instructed to apply for a visa have been issued an H–2B visa or otherwise granted H–2B status in fiscal year 2022, 2023, or 2024, unless the H–2B worker is a national of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica who is counted towards the 20,000 cap described in paragraph (h)(6)(xv)(A)(2) of this section;

(iii) The employer will comply with obligations and additional recruitment requirements outlined in 20 CFR 655.64(a)(3) through (5);

(iv) The employer will provide documentary evidence of the facts in paragraphs (h)(6)(xv)(B)(2)(i) through

(iii) of this section to DHS and/or DOL upon request; and

(v) The employer will agree to fully cooperate with any compliance review, evaluation, verification, or inspection conducted by DHS, including an on-site inspection of the employer's facilities, interview of the employer's employees and any other individuals possessing pertinent information, and review of the employer's records related to the compliance with immigration laws and regulations, including but not limited to evidence pertaining to or supporting the eligibility criteria for the FY 2025 supplemental allocations outlined in paragraph (h)(6)(xv)(B) of this section, as a condition for the approval of the petition.

(vi) The employer will fully cooperate with any audit, investigation, compliance review, evaluation, verification or inspection conducted by DOL, including an on-site inspection of the employer's facilities, interview of the employer's employees and any other individuals possessing pertinent information, and review of the employer's records related to the compliance with applicable laws and regulations, including but not limited to evidence pertaining to or supporting the eligibility criteria for the FY 2025 supplemental allocations outlined in 20 CFR 655.64(a) and 655.68(a), as a condition for the approval of the H-2B petition. The employer must attest to this on Form ETA-9142-B-CAA-9 and must further attest on Form ETA-9142-B-CAA-9 that it will not impede, interfere, or refuse to cooperate with an employee of the Secretary of the U.S. Department of Labor who is exercising or attempting to exercise DOL's audit or investigative authority pursuant to 20 CFR part 655, subpart A, and 29 CFR 503.25.

(C) *Processing*—(1) *Petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(i) of this section requesting FY 2025 employment start dates on or before March 31, 2025.* USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(i) of this section requesting employment start dates on or before March 31, 2025 that are received after the applicable numerical limitation has been reached or after September 15, 2025.

(2) *Petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(ii) of this section requesting FY 2025 employment start dates from April 1, 2025 to May 14, 2025.* USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(ii) of this section requesting employment start dates from April 1, 2025 to May 14, 2025 that are received earlier than 15 days after the INA section 214(g) cap for

the second half FY 2024 has been met, or after the applicable numerical limitation has been reached or after September 15, 2025.

(3) *Petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(iii) of this section requesting FY 2025 employment start dates from May 15, 2025 and September 30, 2025.* USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(1)(iii) of this section requesting employment start dates from May 15, 2025 to September 30, 2025 that are received earlier than 45 days after the INA section 214(g) cap for the second half FY 2025 has been met, or after the applicable numerical limitation has been reached or after September 15, 2025.

(4) *Petitions filed pursuant to paragraph (h)(6)(xv)(A)(2) requesting nationals of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica with FY 2025 employment start dates.* USCIS will reject petitions filed pursuant to paragraph (h)(6)(xv)(A)(2) of this section that have a date of need on or after April 1, 2025, and are received earlier than 15 days after the INA section 214(g) cap for the second half of FY 2025 is met, or after the applicable numerical limitation has been reached or after September 15, 2025.

(5) USCIS will not approve a petition filed pursuant to this paragraph (h)(6)(xv) on or after October 1, 2025.

(D) *Numerical limitations under paragraphs (h)(6)(xv)(A)(1) and (2) of this section.* When calculating the numerical limitations under paragraphs (h)(6)(xv)(A)(1) and (2) of this section as authorized under section 105 of Division G, Title I of Public Law 118–47, the Further Consolidated Appropriations Act, 2024, and sections 101(6) and 106 of Division A, Title I of the Continuing Appropriations and Extensions Act, 2025, Public Law 118–83, USCIS will make numbers for each allocation available to petitions in the order in which the petitions subject to the respective limitation are received. USCIS will make projections of the number of petitions necessary to achieve the numerical limit of approvals, taking into account historical data related to approvals, denials, revocations, and other relevant factors. USCIS will monitor the number of petitions received (including the number of workers requested when necessary) and will notify the public of the dates that USCIS has received the necessary number of petitions (the “final receipt dates”) under paragraph (h)(6)(xv)(A)(1) or (2). The day the public is notified will not control the final receipt dates. When necessary to

ensure the fair and orderly allocation of numbers subject to the numerical limitations in paragraphs (h)(6)(xv)(A)(1) and (2), USCIS may randomly select from among the petitions received on the final receipt dates the remaining number of petitions deemed necessary to generate the numerical limit of approvals. This random selection will be made via computer-generated selection. Petitions subject to a numerical limitation not randomly selected or that were received after the final receipt dates that may be applicable under paragraph (h)(6)(xv)(A)(1) or (2) will be rejected. If the final receipt date is any of the first 5 business days on which petitions subject to the applicable numerical limits described in paragraph (h)(6)(xv)(A)(1) or (2) may be received (in other words, if either of the numerical limits described in paragraph (h)(6)(xv)(A)(1) or (2) is reached on any one of the first 5 business days that filings can be made), USCIS will randomly apply all of the numbers among the petitions received on any of those 5 business days.

(E) *Sunset.* This paragraph (h)(6)(xv) expires on October 1, 2025.

(F) *Non-severability.* The requirement to file an attestation under paragraph (h)(6)(xv)(B)(2) of this section is intended to be non-severable from the remainder of this paragraph (h)(6)(xv), including, but not limited to, the entirety of the numerical allocation provisions at paragraphs (h)(6)(xv)(A)(1) and (2) of this section. In the event that any part of this paragraph (h)(6)(xv) is enjoined or held to be invalid by any court of competent jurisdiction, the remainder of this paragraph (h)(6)(xv) is also intended to be enjoined or held to be invalid in such jurisdiction, without prejudice to workers already present in the United States under this paragraph (h)(6)(xv), as consistent with law.

* * * * *

(32) *Change of employers and portability for H-2B workers.* (i) This paragraph (h)(32) relates to H-2B workers seeking to change employers during the time period specified in paragraph (h)(32)(iv) of this section. Notwithstanding paragraph (h)(2)(i)(D) of this section:

(A) An alien in valid H-2B nonimmigrant status whose new petitioner files a non-frivolous H-2B petition requesting an extension of the alien's stay on or after January 25, 2025, is authorized to begin employment with the new petitioner after the petition described in this paragraph (h)(32) is received by USCIS and before the new H-2B petition is approved, but no

earlier than the start date indicated in the new H-2B petition; or

(B) An alien whose new petitioner filed a non-frivolous H-2B petition requesting an extension of the alien's stay before January 25, 2025, that remains pending on January 25, 2025, is authorized to begin employment with the new petitioner before the new H-2B petition is approved, but no earlier than the start date of employment indicated on the new H-2B petition.

(ii)(A) With respect to a new petition described in paragraph (h)(32)(i)(A) of this section, and subject to the requirements of 8 CFR 274a.12(b)(35), the new period of employment described in paragraph (h)(32)(i) of this section may last for up to 60 days beginning on the Received Date on Form I-797 (Notice of Action) or, if the start date of employment occurs after the I-797 Received Date, for a period of up to 60 days beginning on the start date of employment indicated in the H-2B petition.

(B) With respect to a new petition described in paragraph (h)(32)(i)(B) of this section, the new period of employment described in paragraph (h)(32)(i) of this section may last for up to 60 days beginning on the later of either January 25, 2025, or the start date of employment indicated in the H-2B petition.

(C) With respect to either type of new petition, if USCIS adjudicates the new petition before the expiration of this 60-day period and denies the petition, or if the new petition is withdrawn by the petitioner before the expiration of the 60-day period, the employment authorization associated with the filing of that petition under 8 CFR 274a.12(b)(35) will automatically terminate 15 days after the date of the denial decision or 15 days after the date on which the new petition is withdrawn. Nothing in this paragraph (h)(32) is intended to alter the availability of employment authorization related to professional H-2B athletes who are traded between organizations pursuant to paragraph (h)(6)(vii) of this section and 8 CFR 274a.12(b)(9).

(iii) In addition to meeting all other requirements in paragraph (h)(6) of this section for the H-2B classification, to commence employment under this paragraph (h)(32):

(A) The alien must either:

(1) Have been in valid H-2B nonimmigrant status on or after January 25, 2025 and be the beneficiary of a non-frivolous H-2B petition requesting an extension of the alien's stay that is received on or after January 25, 2025, but no later than January 24, 2026; or

(2) Be the beneficiary of a non-frivolous H-2B petition requesting an extension of the alien's stay that is pending as of January 25, 2025; and

(B) The petitioner may not impede, interfere, or refuse to cooperate with an employee of the Secretary of the U.S. Department of Labor who is exercising or attempting to exercise DOL's audit or investigative authority under 20 CFR part 655, subpart A, and 29 CFR 503.25.

(iv) Authorization to initiate employment changes pursuant to this paragraph (h)(32) begins at 12 a.m. on January 25, 2025, and ends at the end of January 24, 2026.

* * * * *

PART 274a—CONTROL OF EMPLOYMENT OF ALIENS

■ 3. The authority citation for part 274a continues to read as follows:

Authority: 8 U.S.C. 1101, 1103, 1105a, 1324a; 48 U.S.C. 1806; 8 CFR part 2; Pub. L. 101-410, 104 Stat. 890, as amended by Pub. L. 114-74, 129 Stat. 599.

■ 4. Effective December 2, 2024, through December 2, 2027, amend § 274a.12 by adding paragraph (b)(35) to read as follows:

§ 274a.12 Classes of aliens authorized to accept employment.

* * * * *

(b) * * *

(35)(i) Pursuant to 8 CFR 214.2(h)(32) and notwithstanding 8 CFR 214.2(h)(2)(i)(D), an alien is authorized to be employed no earlier than the start date of employment indicated in the H-2B petition and no earlier than January 25, 2025, by a new employer that has filed an H-2B petition naming the alien as a beneficiary and requesting an extension of stay for the alien, for a period not to exceed 60 days beginning on:

(A) The later of the "Received Date" on Form I-797 (Notice of Action) acknowledging receipt of the petition, or the start date of employment indicated on the new H-2B petition, for petitions filed on or after January 25, 2025; or

(B) The later of January 25, 2025, or the start date of employment indicated on the new H-2B petition, for petitions that are pending as of January 25, 2025.

(ii) If USCIS adjudicates the new petition prior to the expiration of the 60-day period in paragraph (b)(35)(i) of this section and denies the new petition for extension of stay, or if the petitioner withdraws the new petition before the expiration of the 60-day period, the employment authorization under this paragraph (b)(35) will automatically terminate upon 15 days after the date of the denial decision or the date on which

the new petition is withdrawn. Nothing in this section is intended to alter the availability of employment authorization related to professional H-2B athletes who are traded between organizations pursuant to paragraph (b)(9) of this section and 8 CFR 214.2(h)(6)(vii).

(iii) Authorization to initiate employment changes pursuant to 8 CFR 214.2(h)(32) and paragraph (b)(35)(i) of this section begins at 12 a.m. on January 25, 2025, and ends at the end of January 24, 2026.

DEPARTMENT OF LABOR

Employment and Training Administration

20 CFR Chapter V

Accordingly, for the reasons stated in the joint preamble, 20 CFR part 655 is amended as follows:

PART 655—TEMPORARY EMPLOYMENT OF FOREIGN WORKERS IN THE UNITED STATES

■ 5. The authority citation for part 655 continues to read as follows:

Authority: Section 655.0 issued under 8 U.S.C. 1101(a)(15)(E)(iii), 1101(a)(15)(H)(i) and (ii), 8 U.S.C. 1103(a)(6), 1182(m), (n), and (t), 1184(c), (g), and (j), 1188, and 1288(c) and (d); sec. 3(c)(1), Pub. L. 101-238, 103 Stat. 2099, 2102 (8 U.S.C. 1182 note); sec. 221(a), Pub. L. 101-649, 104 Stat. 4978, 5027 (8 U.S.C. 1184 note); sec. 303(a)(8), Pub. L. 102-232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 323(c), Pub. L. 103-206, 107 Stat. 2428; sec. 412(e), Pub. L. 105-277, 112 Stat. 2681 (8 U.S.C. 1182 note); sec. 2(d), Pub. L. 106-95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); 29 U.S.C. 49k; Pub. L. 107-296, 116 Stat. 2135, as amended; Pub. L. 109-423, 120 Stat. 2900; 8 CFR 214.2(h)(4)(i); 8 CFR 214.2(h)(6)(iii); and sec. 6, Pub. L. 115-218, 132 Stat. 1547 (48 U.S.C. 1806).

Subpart A issued under 8 CFR 214.2(h).

Subpart B issued under 8 U.S.C. 1101(a)(15)(H)(ii)(a), 1184(c), and 1188; and 8 CFR 214.2(h).

Subpart E issued under 48 U.S.C. 1806.

Subparts F and G issued under 8 U.S.C. 1288(c) and (d); sec. 323(c), Pub. L. 103-206, 107 Stat. 2428; and 28 U.S.C. 2461 note, Pub. L. 114-74 at section 701.

Subparts H and I issued under 8 U.S.C. 1101(a)(15)(H)(i)(b) and (b)(1), 1182(n), and (t), and 1184(g) and (j); sec. 303(a)(8), Pub. L. 102-232, 105 Stat. 1733, 1748 (8 U.S.C. 1101 note); sec. 412(e), Pub. L. 105-277, 112 Stat. 2681; 8 CFR 214.2(h); and 28 U.S.C. 2461 note, Pub. L. 114-74 at section 701.

Subparts L and M issued under 8 U.S.C. 1101(a)(15)(H)(i)(c) and 1182(m); sec. 2(d), Pub. L. 106-95, 113 Stat. 1312, 1316 (8 U.S.C. 1182 note); Pub. L. 109-423, 120 Stat. 2900; and 8 CFR 214.2(h).

■ 6. Effective December 2, 2024, through September 30, 2025, add § 655.64 to read as follows:

§ 655.64 Special application filing and eligibility provisions for Fiscal Year 2025 under the December 2, 2024, supplemental cap increase.

(a) An employer filing a petition with USCIS under 8 CFR 214.2(h)(6)(xv) to request H-2B workers with FY 2025 employment start dates on or before September 30, 2025, must meet the following requirements:

(1) The employer must attest on the Form ETA-9142-B-CAA-9 that its business is suffering irreparable harm or will suffer impending irreparable harm (that is, permanent and severe financial loss) without the ability to employ all of the H-2B workers requested on the petition filed pursuant to 8 CFR 214.2(h)(6)(xv). The employer's attestation must identify the types of evidence the employer is relying on and will retain to meet the irreparable harm standard. The employer must attest that it has created a detailed written statement describing how it is suffering irreparable harm or will suffer impending irreparable harm and describing how such evidence demonstrates irreparable harm. In addition, the employer must attest that it will provide to DHS and/or DOL upon request all of the documentation it relied upon and retained as evidence that it meets the irreparable harm standard, including all of the supporting documentation the employer committed to retain at the time of filing on the employer's attestation form by selecting a checkbox next to the applicable type of documentation in section C, and the written statement describing how such evidence demonstrates irreparable harm.

(2) The employer must attest on Form ETA-9142-B-CAA-9 that each of the workers requested and/or instructed to apply for a visa, whether named or unnamed, on a petition filed pursuant to 8 CFR 214.2(h)(6)(xv), have been issued an H-2B visa or otherwise granted H-2B status during one of the last three (3) fiscal years (fiscal year 2022, 2023, or 2024), unless the H-2B worker is a national of Guatemala, El Salvador, Honduras, Haiti, Colombia, Ecuador, or Costa Rica and is counted towards the 20,000 cap described in 8 CFR 214.2(h)(6)(xv)(A)(2).

(3) The employer must attest on Form ETA-9142-B-CAA-9 that the employer will comply with all the assurances, obligations, and conditions of employment set forth on its approved *Application for Temporary Employment Certification*.

(4) An employer that submits Form ETA-9142B-CAA-9 and the I-129 petition 30 or more days after the certified start date of work, as shown on

its approved Form ETA-9142B, *Final Determination: H-2B Temporary Labor Certification Approval*, must conduct additional recruitment of U.S. workers as follows:

(i) Not later than the next business day after submitting the I-129 petition for H-2B worker(s), the employer must place a new job order for the job opportunity with the State Workforce Agency (SWA), serving the area of intended employment. The employer must follow all applicable SWA instructions for posting job orders, concurrently inform the SWA and NPC that the job order is being placed in connection with a previously certified *Application for Temporary Employment Certification* for H-2B workers by providing the unique temporary labor certification (TLC) identification number, and receive applications in all forms allowed by the SWA, including online applications (sometimes known as "self-referrals"). The job order must contain the job assurances and contents set forth in § 655.18 for recruitment of U.S. workers at the place of employment, and remain posted for at least 15 calendar days;

(ii) During the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of this section for intrastate clearance, the employer must contact, by email or other available electronic means, the nearest comprehensive American Job Center (AJC) serving the area of intended employment where work will commence, request staff assistance advertising and recruiting qualified U.S. workers for the job opportunity, and provide the AJC with the unique identification number associated with the job order placed with the SWA or, if unavailable, a copy of the job order. If a comprehensive AJC is not available, the employer must contact the nearest affiliate AJC serving the area of intended employment where work will commence to satisfy the requirements of this paragraph (a)(4)(ii);

(iii) Where the occupation or industry is traditionally or customarily unionized, during the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of this section for intrastate clearance, the employer must contact (by mail, email or other effective means) the nearest American Federation of Labor and Congress of Industrial Organizations office covering the area of intended employment and provide written notice of the job opportunity, by providing a copy of the job order placed pursuant to (a)(4)(i) of this section, and request assistance in recruiting qualified U.S. workers for the job;

(iv) During the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of this section for intrastate clearance, the employer must contact (by mail or other effective means) its former U.S. workers, including those who have been furloughed or laid off, during the period beginning January 1, 2023, until the date the I-129 petition required under 8 CFR 214.2(h)(6)(xv) is submitted, who were employed by the employer in the occupation at the place of employment (except those who were dismissed for cause or who abandoned the worksite), disclose the terms of the job order placed pursuant to (a)(4)(i) of this section, and solicit their return to the job. The contact and disclosures required by this paragraph (a)(4)(iv) must be provided in a language understood by the worker, as necessary or reasonable, and in writing;

(v) During the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of this section for intrastate clearance, the employer must engage in the recruitment of U.S. workers as provided in § 655.45(a) and (b). The contact and disclosures required by this paragraph (a)(4)(v) must be provided in a language understood by the worker, as necessary or reasonable, in writing; and

(vi) During the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of this section for intrastate clearance, the employer must contact (by mail or other effective written means) all U.S. workers currently employed at the place of employment, disclose the terms of the job order placed pursuant to (a)(4)(i) of this section, and request assistance in recruiting qualified U.S. workers for the job. The contact, disclosure, and request for assistance required by this paragraph (a)(4)(vi) must be provided in a language understood by the worker, as necessary or reasonable, and in writing;

(vii) Where the employer maintains a website for its business operations, during the period of time the SWA is actively circulating the job order described in paragraph (a)(4)(i) of this section for intrastate clearance, the employer must post the job opportunity in a conspicuous location on the website. The job opportunity posted on the website must disclose the terms of the job order placed pursuant to (a)(4)(i) of this section, and remain posted for at least 15 calendar days;

(viii) The employer must hire any qualified U.S. worker who applies or is referred for the job opportunity until the date on which the last H-2B worker departs for the place of employment, or 30 days after the last date on which the

SWA job order is posted, whichever is later. Consistent with § 655.40(a), applicants can be rejected only for lawful job-related reasons.

(5) The employer must attest on Form ETA-9142-B-CAA-9 that it will fully cooperate with any audit, investigation, compliance review, evaluation, verification, or inspection conducted by DOL, including an on-site inspection of the employer's facilities, interview of the employer's employees and any other individuals possessing pertinent information, and review of the employer's records related to the compliance with applicable laws and regulations, including but not limited to evidence pertaining to or supporting the eligibility criteria for the FY 2025 supplemental allocations outlined in this paragraph (a) and § 655.68(a), as a condition for the approval of the H-2B petition. Pursuant to this subpart A at § 655.73 and 29 CFR 503.25, the employer will not impede, interfere, or refuse to cooperate with an employee of the Secretary who is exercising or attempting to exercise DOL's audit or investigative authority. DOL may consider the failure to respond to and/or comply with an investigation or audit to be a willful misrepresentation of material fact or a substantial failure to meet the terms and conditions of the *H-2B Application for Prevailing Wage Determination*, or *Application for Temporary Employment Certification*, resulting in an adverse agency action on the employer, agent, or attorney, including assessment of a civil money penalty, revocation of the temporary labor certification, and/or program debarment for not less than 1 year or more than 5 years from the date of the final agency decision under 20 CFR 655.70, 655.72, 655.73 or 29 CFR part 503. A debarred party will be disqualified from filing any labor certification applications or labor condition applications with the

Department of Labor by, or on behalf of, the debarred party for the same period of time set forth in the final debarment decision.

(b) This section expires on October 1, 2025.

(c) The requirements under paragraph (a) of this section are intended to be non-severable from the remainder of this section; in the event that paragraph (a)(1), (2), (3), (4), or (5) of this section is enjoined or held to be invalid by any court of competent jurisdiction, the remainder of this section is also intended to be enjoined or held to be invalid in such jurisdiction, without prejudice to workers already present in the United States under this part, as consistent with law.

■ 7. Effective December 2, 2024, through September 30, 2028, add § 655.68 to read as follows:

§ 655.68 Special document retention provisions for Fiscal Years 2025 through 2028 under the Further Consolidated Appropriations Act, 2024, as extended by Public Law 118–83.

(a) An employer that files a petition with USCIS to employ H-2B workers in fiscal year 2025 under authority of the temporary increase in the numerical limitation under section 105 of Division G, Public Law 118–47, as extended by Public Law 118–83 must maintain for a period of three (3) years from the date of certification, consistent with 20 CFR 655.56 and 29 CFR 503.17, the following:

(1) A copy of the attestation filed pursuant to the regulations in 8 CFR 214.2 governing that temporary increase;

(2) Evidence establishing, at the time of filing the I-129 petition and as attested to in the attestation form, that the employer's business is suffering irreparable harm or will suffer impending irreparable harm (that is, permanent and severe financial loss) without the ability to employ all of the

H-2B workers requested on the petition filed pursuant to 8 CFR 214.2(h)(6)(xv), including a detailed written statement describing the irreparable harm and how such evidence shows irreparable harm;

(3) Documentary evidence establishing that each of the workers the employer requested and/or instructed to apply for a visa, whether named or unnamed on a petition filed pursuant to 8 CFR 214.2(h)(6)(xv), have been issued an H-2B visa or otherwise granted H-2B status during one of the last three (3) fiscal years (fiscal year 2022, 2023, or 2024), unless the H-2B worker(s) is a national of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, or Costa Rica and is counted towards the 20,000 cap described in 8 CFR 214.2(h)(6)(xv)(A)(2). Alternatively, if applicable, employers must maintain documentary evidence that the workers the employer requested and/or instructed to apply for visas are eligible nationals of El Salvador, Guatemala, Honduras, Haiti, Colombia, Ecuador, or Costa Rica as defined in 8 CFR 214.2(h)(6)(xv)(A)(2); and

(4) If applicable, proof of recruitment efforts set forth in § 655.64(a)(4)(i) through (vii) and a recruitment report that meets the requirements set forth in § 655.48(a)(1) through (4) and (7), and maintained throughout the recruitment period set forth in § 655.64(a)(4)(viii).

(b) DOL and/or DHS may inspect the documents in paragraphs (a)(1) through (4) of this section upon request.

(c) This section expires on October 1, 2028.

Alejandro N. Mayorkas,
Secretary, U.S. Department of Homeland Security.

Julie A. Su,
Acting Secretary, U.S. Department of Labor.

Environmental Protection Agency

40 CFR Part 721

Significant New Use Rules on Certain Chemical Substances (24–2.5e);
Proposed Rule

ENVIRONMENTAL PROTECTION AGENCY**40 CFR Part 721**

[EPA-HQ-OPPT-2024-0077; FRL-12348-01-OCSPP]

RIN 2070-AB27

Significant New Use Rules on Certain Chemical Substances (24-2.5e)**AGENCY:** Environmental Protection Agency (EPA).**ACTION:** Proposed rule.

SUMMARY: EPA is proposing significant new use rules (SNURs) under the Toxic Substances Control Act (TSCA) for certain chemical substances that were the subject of premanufacture notices (PMNs) and are also subject to an Order issued by EPA pursuant to TSCA. The SNURs require persons who intend to manufacture (defined by statute to include import) or process any of these chemical substances for an activity that is proposed as a significant new use by this rulemaking to notify EPA at least 90 days before commencing that activity. The required notification initiates EPA's evaluation of the conditions of that use for that chemical substance. In addition, the manufacture or processing for the significant new use may not commence until EPA has conducted a review of the required notification, made an appropriate determination regarding that notification, and taken such actions as required by that determination.

DATES: Comments must be received on or before January 2, 2025.

ADDRESSES: Submit your comments, identified by docket identification (ID) number EPA-HQ-OPPT-2024-0077 at <https://www.regulations.gov>. Follow the online instructions for submitting comments. Do not submit electronically any information you consider to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Additional instructions on commenting and visiting the docket, along with more information about dockets generally, is available at <https://www.epa.gov/dockets>.

For general information on SNURs: William Wysong, New Chemicals Division (7405M), Office of Pollution Prevention and Toxics, Environmental

Protection Agency, 1200 Pennsylvania Ave. NW, Washington, DC 20460-0001; telephone number: (202) 564-4163; email address: wysong.william@epa.gov.

For general information: The TSCA-Hotline, ABVI-Goodwill, 422 South Clinton Ave., Rochester, NY 14620; telephone number: (202) 554-1404; email address: TSCA-Hotline@epa.gov.

SUPPLEMENTARY INFORMATION:**I. Executive Summary***A. What is the Agency's authority for taking this action?*

TSCA section 5(a)(2) (15 U.S.C. 2604(a)(2)) authorizes EPA to determine that a use of a chemical substance is a "significant new use." EPA must make this determination by rule after considering all relevant factors, including the factors in TSCA section 5(a)(2) (see also the discussion in Unit II.).

B. What action is the Agency taking?

EPA is proposing SNURs for chemical substances discussed in Unit III. These SNURs, if finalized as proposed, would require persons who intend to manufacture or process any of these chemical substances for an activity that is designated as a significant new use to notify EPA at least 90 days before commencing that activity.

*C. Does this action apply to me?***1. General Applicability**

This action applies to you if you manufacture, process, or use the chemical substances contained in this proposed rule. The following list of North American Industrial Classification System (NAICS) codes is not intended to be exhaustive, but rather provides a guide to help readers determine whether this document applies to them. Potentially affected entities may include:

- Manufacturers or processors of one or more subject chemical substances (NAICS codes 325 and 324110), e.g., chemical manufacturing and petroleum refineries.

2. Applicability to Importers and Exporters

This action may also apply to certain entities through pre-existing import certification and export notification requirements under TSCA (<https://www.epa.gov/tsca-import-export-requirements>).

Chemical importers are subject to TSCA section 13 (15 U.S.C. 2612), the requirements promulgated at 19 CFR 12.118 through 12.127, 19 CFR 127.28, and the EPA policy in support of import certification at 40 CFR part 707, subpart

B. Chemical importers must certify that the shipment of the chemical substance complies with all applicable rules and orders under TSCA, including regulations issued under TSCA sections 5, 6, 7 and Title IV.

Pursuant to 40 CFR 721.20, any persons who export or intend to export a chemical substance that is the subject of this proposed rule on or after January 2, 2025 are subject to TSCA section 12(b) (15 U.S.C. 2611(b)) and must comply with the export notification requirements in 40 CFR part 707, subpart D.

D. What are the incremental economic impacts of this action?

EPA has evaluated the potential costs of establishing SNUN reporting requirements for potential manufacturers (including importers) and processors of the chemical substances subject to these proposed SNURs. This analysis, which is available in the docket, is briefly summarized here.

1. Estimated Costs for SNUN Submissions

If a SNUN is submitted, costs are an estimated \$45,000 per SNUN submission for large business submitters and \$14,500 for small business submitters. These estimates include the cost to prepare and submit the SNUN (including registration for EPA's Central Data Exchange (CDX)), and the payment of a user fee. Businesses that submit a SNUN would be subject to either a \$37,000 user fee required by 40 CFR 700.45(c)(2)(ii) and (d), or, if they are a small business as defined at 13 CFR 121.201, a reduced user fee of \$6,480 (40 CFR 700.45(c)(1)(ii) and (d)) per fiscal year 2022. The costs of submission for SNUNs will not be incurred by any company unless a company decides to pursue a significant new use as defined in these SNURs. Additionally, these estimates reflect the costs and fees as they are known at the time of this rulemaking.

2. Estimated Costs for Export Notifications

EPA has also evaluated the potential costs associated with the export notification requirements under TSCA section 12(b) and the implementing regulations at 40 CFR part 707, subpart D. For persons exporting a substance that is the subject of a SNUR, a one-time notice to EPA must be provided for the first export or intended export to a particular country. The total costs of export notification will vary by chemical, depending on the number of required notifications (i.e., the number

of countries to which the chemical is exported). While EPA is unable to make any estimate of the likely number of export notifications for the chemical substances covered by these SNURs, as stated in the accompanying economic analysis, the estimated cost of the export notification requirement on a per unit basis is approximately \$106.

E. What should I consider as I prepare my comments for EPA?

1. Submitting CBI

Do not submit CBI to EPA through email or <https://www.regulations.gov>. If you wish to include CBI in your comment, please follow the applicable instructions at <https://www.epa.gov/dockets/commenting-epa-dockets#rules> and clearly mark the information that you claim to be CBI. Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR parts 2 and 703.

2. Tips for Preparing Your Comments

When preparing and submitting your comments, see the commenting tips at <https://www.epa.gov/dockets/commenting-epa-dockets>.

II. Background

This unit provides general information about SNURs. For additional information about EPA's new chemical program go to <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca>.

A. Significant New Use Determination Factors

TSCA section 5(a)(2) states that EPA's determination that a use of a chemical substance is a significant new use must be made after consideration of all relevant factors, including:

- The projected volume of manufacturing and processing of a chemical substance.
- The extent to which a use changes the type or form of exposure of human beings or the environment to a chemical substance.
- The extent to which a use increases the magnitude and duration of exposure of human beings or the environment to a chemical substance.
- The reasonably anticipated manner and methods of manufacturing, processing, distribution in commerce, and disposal of a chemical substance.

In determining what would constitute a significant new use for the chemical substances that are the subject of these SNURs, EPA considered relevant information about the toxicity of the chemical substances, and potential human exposures and environmental releases that may be associated with the

substances, in the context of the four bulleted TSCA section 5(a)(2) factors listed in this unit and discussed in Unit III.

These proposed SNURs include PMN substances that are subject to orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). The TSCA orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA orders, consistent with TSCA section 5(f)(4).

B. Rationale and Objectives of the SNURs

1. Rationale

Under TSCA, no person may manufacture a new chemical substance or manufacture or process a chemical substance for a significant new use until EPA makes a determination as described in TSCA section 5(a) and takes any required action. The issuance of a SNUR is not a risk determination itself, only a notification requirement for "significant new uses," so that the Agency has the opportunity to review the SNUN for the significant new use and make a TSCA section 5(a)(3) risk determination.

During review of the PMNs submitted that are the subject to these proposed SNURs, EPA concluded that regulation was warranted under TSCA section 5(e), pending the development of information sufficient to make reasoned evaluations of the health or environmental effects of the chemical substances. Based on the findings outlined in Unit III., TSCA section 5(e) Orders requiring the use of appropriate exposure controls were negotiated with the PMN submitters. As a general matter, EPA believes it is necessary to follow the TSCA Orders with a SNUR that identifies the absence of those protective measures as significant new uses to ensure that all manufacturers and processors—not just the original submitter—are held to the same standard.

2. Objectives

EPA is proposing these SNURs because the Agency wants:

- To identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

- To have an opportunity to review and evaluate data submitted in a SNUN before the submitter begins manufacturing or processing a listed chemical substance for the described significant new use.

- To be obligated to make a determination under TSCA section 5(a)(3) regarding the use described in the SNUN, under the conditions of use. The Agency will either determine under TSCA section 5(a)(3)(C) that the significant new use is not likely to present an unreasonable risk, including an unreasonable risk to a potentially exposed or susceptible subpopulation identified as relevant by the Administrator under the conditions of use, or make a determination under TSCA section 5(a)(3)(A) or (B) and take the required regulatory action associated with the determination, before manufacture or processing for the significant new use of the chemical substance can occur.

Issuance of a proposed SNUR for a chemical substance does not signify that the chemical substance is listed on the TSCA Chemical Substance Inventory (TSCA Inventory). Guidance on how to determine if a chemical substance is on the TSCA Inventory is available at <https://www.epa.gov/tsca-inventory>.

C. Significant New Uses Claimed as CBI

EPA is proposing to establish certain significant new uses which have been claimed as CBI subject to Agency confidentiality regulations at 40 CFR part 2 and 40 CFR part 720, subpart E. Absent a final determination or other disposition of the confidentiality claim under 40 CFR part 2 procedures, EPA is required to keep this information confidential. EPA promulgated a procedure at 40 CFR 721.11 to deal with the situation where a specific significant new use is CBI. Under these procedures, a manufacturer or processor may request for EPA to identify the confidential significant new use under the rule. The manufacturer or processor must show that it has a *bona fide* intent to manufacture or process the chemical substance. If EPA concludes that the person has shown a *bona fide* intent to manufacture or process the chemical substance, EPA will identify the confidential significant new use to that person. Since most of the chemical identities of the chemical substances subject to these SNURs are also CBI, manufacturers and processors can combine the *bona fide* submission under the procedure in 40 CFR 721.11 into a single step.

D. Applicability of General Provisions

General provisions for SNURs appear in 40 CFR part 721, subpart A. These provisions describe persons subject to SNURs, recordkeeping requirements, exemptions to reporting requirements, and applicability of the rule to uses occurring before the effective date of the rule. Pursuant to 40 CFR 721.1(c), persons subject to SNURs must comply with the same requirements and EPA regulatory procedures as submitters of PMNs under TSCA section 5(a)(1)(A). In particular, these requirements include the information submission requirements of TSCA sections 5(b) and 5(d)(1), the exemptions authorized by TSCA sections 5(h)(1), 5(h)(2), 5(h)(3), and 5(h)(5) and the regulations at 40 CFR part 720. In addition, provisions relating to user fees appear at 40 CFR part 700.

Once EPA receives a SNUN, EPA must either determine that the significant new use is not likely to present an unreasonable risk of injury under the conditions of use for the chemical substance or take such regulatory action as is associated with an alternative determination under TSCA section 5 before the manufacture (including import) or processing for the significant new use can commence. If EPA determines that the significant new use of the chemical substance is not likely to present an unreasonable risk, EPA is required under TSCA section 5(g) to make public, and submit for publication in the **Federal Register**, a statement of EPA's findings.

As discussed in Unit I.C.2., persons who export or intend to export a chemical substance identified in a proposed or final SNUR are subject to the export notification provisions of TSCA section 12(b), and persons who import a chemical substance identified in a final SNUR are subject to the TSCA section 13 import certification requirements. See also <https://www.epa.gov/tsca-import-export-requirements>.

E. Applicability of the Proposed SNURs to Uses Occurring Before the Effective Date of the Final Rule

To establish a significant new use, EPA must determine that the use is not ongoing. The chemical substances subject to this proposed rule have undergone premanufacture review and received determinations under TSCA section 5(a)(3)(C). TSCA Orders have been issued for these chemical substances and the PMN submitters are required by the TSCA Orders to submit a SNUN before undertaking activities that would be designated as significant

new uses in these SNURs. Additionally, the identities of many of the chemical substances subject to this proposed rule have been claimed as confidential per 40 CFR 720.85, further reducing the likelihood that another party would manufacture or process the substances for an activity that would be designated as a significant new use. Based on this, the Agency believes that it is highly unlikely that any of the significant new uses identified in Unit III. are ongoing.

When the chemical substances identified in Unit III are added to the TSCA Inventory, EPA recognizes that, before the rule is effective, other persons might engage in a use that has been identified as a significant new use. Persons who begin manufacture or processing of the chemical substances for a significant new use identified on or after the designated cutoff date specified in Unit III.A. would have to cease any such activity upon the effective date of the final rule. To resume their activities, these persons would have to first comply with all applicable SNUR notification requirements and EPA would have to take action under TSCA section 5 allowing manufacture or processing to proceed.

F. Important Information About SNUN Submissions

1. SNUN Submissions

SNUNs must be submitted on EPA Form No. 7710–25, generated using e-PMN software, and submitted to the Agency in accordance with the procedures set forth in 40 CFR 720.40 and 721.25. E-PMN software is available electronically at <https://www.epa.gov/reviewing-new-chemicals-under-toxic-substances-control-act-tsca>.

2. Development and Submission of Information

EPA recognizes that TSCA section 5 does not require development of any particular new information (e.g., generating test data) before submission of a SNUN. There is an exception: If a person is required to submit information for a chemical substance pursuant to a rule, order or consent agreement under TSCA section 4, then TSCA section 5(b)(1)(A) requires such information to be submitted to EPA at the time of submission of the SNUN.

In the absence of a rule, TSCA order, or consent agreement under TSCA section 4 covering the chemical substance, persons are required only to submit information in their possession or control and to describe any other information known to or reasonably ascertainable by them (see 40 CFR

720.50). However, upon review of PMNs and SNUNs, the Agency has the authority to require appropriate testing. To assist with EPA's analysis of the SNUN, submitters are encouraged, but not required, to provide the potentially useful information identified for the chemical substance in Unit III.C.

EPA strongly encourages persons, before performing any testing, to consult with the Agency pertaining to protocol selection. Furthermore, pursuant to TSCA section 4(h), which pertains to reduction of testing in vertebrate animals, EPA encourages consultation with the Agency on the use of alternative test methods and strategies (also called New Approach Methodologies, or NAMs), if available, to generate the recommended test data. EPA encourages dialog with Agency representatives to help determine how best the submitter can meet both the data needs and the objective of TSCA section 4(h). For more information on alternative test methods and strategies to reduce vertebrate animal testing, visit <https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/alternative-test-methods-and-strategies-reduce>.

The potentially useful information described in Unit III. may not be the only means of providing information to evaluate the chemical substance associated with the significant new uses. However, submitting a SNUN without any test data may increase the likelihood that EPA will take action under TSCA sections 5(e) or 5(f). EPA recommends that potential SNUN submitters contact EPA early enough so that they will be able to conduct the appropriate tests.

SNUN submitters should be aware that EPA will be better able to evaluate SNUNs that provide detailed information on the following:

- Human exposure and environmental release that may result from the significant new use of the chemical substances.

III. Chemical Substances Subject to These Proposed SNURs

A. What is the designated cutoff date for determining whether the new use is ongoing for these chemical substances?

EPA designates December 2, 2024 as the cutoff date for determining whether the new use is ongoing. This designation is explained in more detail in Unit II.E.

B. What information is provided for each chemical substance?

For each chemical substance identified in Unit III.C., EPA provides the following information:

- PMN number (the proposed CFR citation assigned in the regulatory text section of the proposed rule).
- Chemical name (generic name, if the specific name is claimed as CBI).
- Chemical Abstracts Service Registry Number (CASRN) (if assigned for non-confidential chemical identities).
- Basis for the action [Effective date of and basis for the TSCA Order].
- Potentially useful information.

The regulatory text section of the proposed rule specifies the activities designated as significant new uses. Certain new uses, including production volume limits and other uses designated in the proposed rules, may be claimed as CBI.

These proposed rules include PMN substances that are subject to orders issued under TSCA section 5(e)(1)(A), as required by the determinations made under TSCA section 5(a)(3)(B). Those TSCA Orders require protective measures to limit exposures or otherwise mitigate the potential unreasonable risk. The proposed SNURs identify as significant new uses any manufacturing, processing, use, distribution in commerce, or disposal that does not conform to the restrictions imposed by the underlying TSCA Orders, consistent with TSCA section 5(f)(4).

Where EPA determined that the PMN substance may present an unreasonable risk of injury to human health via inhalation exposure, the underlying TSCA Order usually requires that potentially exposed employees wear specified respirators unless actual measurements of the workplace air show that air-borne concentrations of the PMN substance are below a New Chemical Exposure Limit (NCEL). The comprehensive NCELS provisions in TSCA Orders include requirements addressing performance criteria for sampling and analytical methods, periodic monitoring, respiratory protection, and recordkeeping. No comparable NCEL provisions currently exist in 40 CFR part 721, subpart B, for SNURs. Therefore, for these cases, the individual SNURs in 40 CFR part 721, subpart E, will state that persons subject to the SNUR who wish to pursue NCELS as an alternative to the 40 CFR 721.63 respirator requirements may request to do so under 40 CFR 721.30. EPA expects that persons whose 40 CFR 721.30 requests to use the NCELS approach for SNURs that are approved by EPA will be required to comply with NCELS provisions that are comparable to those contained in the corresponding TSCA Order.

C. Which chemical substances are subject to this proposed rule?

The substances subject to the proposed rules in this document are as follows:

PMN Numbers (Proposed CFR Citations): P-16-377 (40 CFR 721.11960) and P-16-378 (40 CFR 721.11961)

Chemical Names: Polyester polyol (generic).

CASRN: Not available.

Effective Date of TSCA Order: August 8, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) uses will be as film components. Based on meeting the criteria of the PMN substances being insoluble in water, non-reactive, respirable, and being high molecular weight polymers, EPA has identified concerns for lung effects (lung overload). The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health.

To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substances in a manner that would result in respirable particle sizes below 10 microns; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substances. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-18-346 (40 CFR 721.11962)

Chemical Name: 2,4,8,10-Tetraoxa-3,9-diphosphaspiro[5.5]undecane, 3,9-bis-[2-(1-methyl-1-phenylethyl)-4-(1,1,3,3-tetramethylbutyl)phenoxy]-.

CASRN: 1507339-21-0.

Effective Date of TSCA Order: July 25, 2023.

Basis for TSCA Order: The PMN states that the use will be as an antioxidant compounded into various polymers to be used in extrusion processes to fabricate articles. Based on submitted test data on the PMN substance, EPA has identified concerns for eye irritation and skin sensitization. Based on comparison to analogous chemical substances, EPA has also identified concerns for neurotoxicity, liver, spleen, reproductive, and developmental effects. Based on comparison to analogous neutral organic chemicals, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 18 parts per billion (ppb). The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 18 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified respirator with an APF of at least 50 where there is a potential for inhalation exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of neurotoxicity, specific target organ toxicity, reproductive toxicity, developmental toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-20-44 (40 CFR 721.11963)

Chemical Name: 1-Propanamine, 3-methoxy-N,N-dimethyl-.

CASRN: 20650-07-1.

Effective Date of Modified TSCA Order: June 14, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a curing additive for automotive paint, an additive for industrial polyurethane dispersions, a solubilizer for high acid value styrene acrylic polymers for use in ink applications, for neutralization, solubilization, and stability in commercial waterborne and solvent borne coatings and varnishes used for wood, metal, composites, and other substrates. Based on submitted test data on the new chemical substance, EPA has identified concerns for skin and respiratory irritation and serious eye damage. Based on comparison to structurally analogous chemical substances, EPA has also identified concerns for systemic toxicity, respiratory tract effects, and reproductive/developmental toxicity. Based on comparison to analogous aliphatic amines, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 1000 ppb. EPA issued an Order under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. The Order was also issued under TSCA sections 5(a)(3)(B)(ii)(II) and 5(e)(1)(A)(ii)(II), based on a finding that the substance is or will be produced in substantial quantities and that the substance either enters or may reasonably be anticipated to enter the environment in substantial quantities, or there is or may be significant (or substantial) human exposure to the substance. The Order, effective October 1, 2020, required the submitter of P-20-44 to submit to EPA the results of certain toxicity testing before any manufacturing (which includes import), processing, or use of the PMN substance. On May 25, 2021, the PMN submitter provided the results of three environmental toxicity studies in accordance with the requirements of the Order. EPA reviewed those studies and determined the studies to be valid. EPA subsequently modified the terms of the Order to mitigate any unreasonable risks to human health and the environment and issued a modified Order, effective June 14, 2023. To protect against these

potential risks, the modified Order requires:

- No use of the PMN substance in consumer products;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 1000 ppb;
- Use of a NIOSH-certified gas/vapor particulate respirator with an APF of at least 1000 where there is a potential for inhalation exposure or compliance with a NCEL of 1.1388mg/m³ as an 8-hour time-weighted average to prevent inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation, serious eye damage, reproductive toxicity, and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-21 (40 CFR 721.11964)

Chemical Name: Soybean oil, mixed esters with diethylene glycol, phthalic acid and terephthalic acid.

CASRN: Not available.

Effective Date of TSCA Order: July 5, 2023.

Basis for TSCA Order: The PMN states that use will be as a raw material to be blended into R-side components of the polyurethane and polyisocyanurate industry (specifically used in slabstock/bunstock processing of foam). Based on the acid groups, EPA has identified concerns for irritation to the skin, eyes, and respiratory tract. Based on test data for a feedstock and potential metabolite, diethylene glycol, EPA has also identified concerns for systemic (body weight, bladder, kidney) and developmental effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I),

based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No use of the PMN substance in consumer products;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 3000 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of reproductive toxicity, skin irritation, eye damage, and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-21-151 (40 CFR 721.11965)

Chemical Name: Soybean oil, epoxidized, polymer with bisphenol A, alkyl glycidyl ether, epichlorohydrin, polyethylene glycol and trihydroxyalkane (generic).

CASRN: Not available.

Effective Date of TSCA Order: August 16, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be in polyurethane applications. Based on the surfactant properties of the PMN substance, EPA has identified concerns for lung effects (surfactancy) if inhaled. Based on the potential protein crosslinking of multifunctional reactive groups and epoxides present in the feedstocks, EPA has also identified concerns for dermal and respiratory sensitization. Based on comparison to analogous nonionic surfactants, EPA predicts toxicity to aquatic organisms

may occur at concentrations that exceed 140 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance for use in a consumer product;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 140 ppb;
- No processing or use of the PMN substance in a spray application;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified respirator with an APF of at least 1,000 where there is a potential for inhalation exposure; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, specific target organ toxicity, skin sensitization, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–168 (40 CFR 721.11966)

Chemical Name: Metal, [heteropoly cyclic]-, [[(hydroxyalkyl)amino]sulfonyl]alkyl)sulfonyl (sulfoalkyl)sulfonyl derivs., ammonium sodium salts (generic).

CASRN: Not available.

Effective Date of TSCA Order: September 22, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a colorant. Based on submitted test data on the PMN substance, EPA predicts toxicity to aquatic organisms may occur at

concentrations that exceed 178 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to the environment. To protect against these risks, the Order requires:

- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 178 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of chronic aquatic toxicity testing may be potentially useful to characterize the environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–173 (40 CFR 721.11967)

Chemical Name: Siloxanes and silicones polyether, polymer with aliphatic isocyanate, 2-dimethylaminoethanol and polyglycol ether (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 29, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an additive for finishing of textiles/fabrics. Based on structure, EPA has identified concerns for lung effects due to surfactancy. Based on comparison to analogous chemical substances, EPA has also identified concerns for developmental and systemic effects. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 1 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the

environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 1 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of developmental toxicity, specific target organ toxicity, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–194 (40 CFR 721.11968)

Chemical Name: Siloxanes and Silicones, di-Me, [gluconoylamino]alkyl] dialkylammonio]- hydroxyalkoxy]alkyl group-terminated, (salts) (generic).

CASRN: Not available.

Effective Date of TSCA Order: September 15, 2023.

Basis for TSCA Order: The PMN states that the use will be as a textile softening agent. Based on the siloxane moieties, EPA has identified concerns for lung waterproofing. Based on comparison to analogous chemical substances, EPA has also identified concerns for irritation to skin and eyes. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 210 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable

risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance as a consumer product;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 210 ppb;
- No manufacture, processing, or use of the PMN substance in any manner that results in the generation of a vapor, mist, dust, or aerosol;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of metabolism or pharmacokinetics, skin irritation, eye irritation/corrosion, specific target organ toxicity, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–202 (40 CFR 721.11969)

Chemical Name: Sulfonium, carbomonocycle bis((trihaloalkyl)carbomonocycle), substituted carbomonocyclic ester (generic).

CASRN: Not available.

Effective Date of TSCA Order: December 21, 2022.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be as an ingredient used in the manufacture of photoresist. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program’s PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance’s cation photolysis

product will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. EPA also estimates that the PMN substance’s cation will persist in the environment for more than six months and estimates an unknown bioaccumulation potential based on uncertainty about bioaccumulation.

Based on the photoreactivity of the PMN substance, EPA has identified concerns for photosensitization for the cation of the PMN substance. Based on comparison to chemical substances analogous to the sulfonium cation of the PMN substance and supported by information provided in the SDS, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, eye corrosion, ocular lethality, neurological effects, and systemic effects for the cation. Based on information provided in the SDS, EPA has also identified concerns for irritation to the skin, eyes, and respiratory tract and neurotoxicity. Based on comparison to analogous chemical substances, EPA has also identified concerns for mutagenicity for the cation. Based on a potential incineration by-product, EPA has also identified concerns for both local and systemic effects via inhalation exposure. Based on test data for salicylic acid and sodium salicylate, EPA has also identified concerns for acute toxicity (mortality), eye irritation, neurotoxicity, and reproductive and developmental effects for the anion. Based on potential for chelation and irritation based on acid groups, EPA has also identified concerns for developmental effects for the anion. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No modification of the processing or use of the PMN substance in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;

- Use of the PMN substance only for the confidential use listed in the Order;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Import of the PMN substance only in solution, or in any form in sealed containers weighing 5 kilograms or less; and
- No exceedance of the confidential annual importation volume listed the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Numbers (Proposed CFR Citations): P–21–208 (40 CFR 721.11970), P–21–209 (40 CFR 721.11971), and P–21–210 (40 CFR 721.11972)

Chemical Names: Aromatic diacids, polymer with alkyldiacids, alkyldiols, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic) (P–21–208), Aromatic diacid, polymer with alkyldiacid, alkyldiols, polypropylene glycol, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic) (P–21–209), and Aromatic diacids, polymer with alkyldiacids, alkyldiols, benzofurandione, polypropylene, alkylhydroxyacid glycolester, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic) (P–21–210).

CASRN: Not available.

Effective Date of TSCA Order: May 26, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) uses will be as adhesives for profile wrapping. Based on the structure of the PMN substances, EPA has identified concerns for skin sensitization, respiratory sensitization, and genotoxicity. Based on test data for a feedstock residual, EPA has also identified concerns for acute toxicity, acute neurotoxicity, irritation to the skin, eyes, and respiratory tracts, skin sensitization, respiratory sensitization,

genotoxicity, carcinogenicity, and portal-of-entry systemic, reproductive, and developmental effects. Based on information provided in the SDSs for the feedstock residual, EPA also identified acute toxicity (inhalation), skin sensitization, respiratory sensitization, skin irritation, respiratory irritation, and eye corrosion. Based on Organisation for Economic Co-operation and Development (OECD Toolbox results for the feedstock residual, EPA also identified skin sensitization and respiratory sensitization. Based on test data for a hydrolysis product of feedstock residual, EPA also identified acute toxicity, genotoxicity, carcinogenicity, eye irritation, skin irritation, skin sensitization, and systemic and reproductive effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substances in any manner that results in inhalation exposure;
- No release of the PMN substances, or any waste stream containing the PMN substances, into waters of the United States;
- No processing for use or use of the PMN substances in consumer products;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of acute toxicity, carcinogenicity, developmental toxicity, serious eye damage, genetic toxicity, reproductive toxicity, skin irritation, skin sensitization, pulmonary effects, and specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substances. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–212 (40 CFR 721.11973)

Chemical Name: Diketone compound metal complex (generic).

CASRN: Not available.

Effective Date of TSCA Order: August 2, 2023.

Basis for TSCA Order: The PMN states that the use will be as a luminescent material for security ink. Based on submitted test data, EPA has identified concerns for acute toxicity and neurotoxicity. Based on the structure as a europium complex, EPA has also identified concerns for chelation to nutrient metals. Based on test data for analogues of the cation, EPA has also identified concerns for eye irritation, irritation/hypersensitivity reactions, and systemic effects. Based on test data for analogues of the anion, EPA has also identified concerns for acute toxicity, neurotoxicity, and systemic and developmental effects. Based on test data for an incineration product, EPA has also identified concerns for neurotoxicity, portal-of-entry, and systemic effects. Based on comparison to analogous lanthanides or rare earth metals, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 13 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance in exceedance of an annual volume of 1,000 kg/yr;
- No processing for use or use of the PMN substance in a consumer product;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 13 ppb;
- The PMN substance, or waste streams containing the PMN substance, must be disposed of by hazardous waste incineration;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified respirator with an APF of at least 10 where there is a potential for inhalation exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin sensitization, skin irritation/corrosion, eye irritation, specific target organ toxicity, pulmonary effects, developmental toxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–21–214 (40 CFR 721.11974)

Chemical Name: Poly(oxy-1,2-ethanedlyl), .alpha.,.alpha.,.alpha.”-(trialkylamino)tris[omega-hydroxy-, alkyl (ester) (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 29, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a textile finishing agent. Based on the structure and intended use as an emulsifier, EPA has identified concerns for lung toxicity (surfactant effects), and skin, eye, and respiratory tract irritation. Based on test data for alcohol ethoxylates, EPA has also identified concerns for developmental and systemic effects. Based on comparison to analogous aliphatic amines and polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 4 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 4 ppb; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of developmental toxicity, skin irritation, eye irritation, specific target organ toxicity, pulmonary effects, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–18 (40 CFR 721.11975)

Chemical Name: Substituted polyalkylenepoly, reaction products with substituted heteromonocycle substituted heteromonocycle polyalkylene derivs. (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 23, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a component of a lubricant. Based on the structure of the PMN substance, EPA has identified concerns for lung toxicity via cationic binding. Based on the use of the PMN substance, EPA has also identified concerns for surfactant effects on the lungs. Based on comparison to analogous chemical substances, EPA has also identified concerns for irritation. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in consumer products at a concentration greater than 3%;
- No manufacture, processing, or use of the PMN substance in any manner that generates a dust, mist, or aerosol;
- Use of personal protective equipment where there is a potential for dermal exposure;

- No use of the PMN substance other than for the confidential use listed in the Order; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of skin irritation and pulmonary effects testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–21 (40 CFR 721.11976)

Chemical Name: Alkylphosphonic acid, calcium salt (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 14, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a nucleating agent for polyolefins. Based on comparison to analogous chemical substances, EPA has identified concerns for systemic (decreased body weight and blood effects) and reproductive (male) effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in consumer products other than in plastic articles and other plastic parts;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Use of a NIOSH-certified respirator with an APF of at least 10 where there is a potential for inhalation exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–32 (40 CFR 721.11977)

Chemical Name: Isocyanic acid, polymethylenepolyphenylene ester, polymer with .alpha.-hydro.-omega.-hydroxypoly[oxy(alkanediyl)], 1,1'-methylenebis[4-isocyanatobenzene] and .alpha.-alkane[.omega.-hydroxypoly[oxy(alkanediyl)]] (generic).

CASRN: Not available.

Effective Date of TSCA Order: October 5, 2023.

Basis for TSCA Order: The PMN states that the use will be as a reactive polymer for use in adhesives and sealants. Based on the weight of scientific evidence, EPA has identified concerns for skin and respiratory sensitization and lung toxicity for the PMN substance and the low molecular weight fraction. Based on test data for residuals and analogues of the residuals of the PMN substance, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, skin sensitization, respiratory sensitization, lung effects, systemic effects, reproductive and developmental effects, genetic toxicity, and carcinogenicity. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance in any manner that generates vapor, mist, aerosol, or dust;
- No processing for use or use of the PMN substance in a consumer product;
- No release of the PMN substance, or any waste stream containing the PMN

substance, into waters of the United States;

- Use of personal protective equipment where there is a potential for dermal exposure; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects and skin sensitization testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–33 (40 CFR 721.11978)

Chemical Name: Alkylamine, alkoxysilyl-, hydrolyzed (generic).

CASRN: Not available.

Effective Date of TSCA Order: October 5, 2023.

Basis for TSCA Order: The PMN states that the use will be as an adhesion promoter for use in industrial manufacturing operations. Based on the amine content, EPA has identified concerns for irritation to the skin, eye, and respiratory tract. Based on potential for cationic binding to lung membranes, waterproofing, and comparison to analogous alkoxysilanes, EPA has also identified concerns for lung effects. Based on the expected release of a hydrolysis product, EPA has also identified concerns for neurotoxicity and developmental effects. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 1 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance in any manner

that generates vapor, mist, aerosol, or dust;

- No processing for use or use of the PMN substance in a consumer product;

- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;

- Use of personal protective equipment where there is a potential for dermal exposure; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity, pulmonary effects, skin irritation/corrosion, eye irritation/corrosion, reproductive/developmental toxicity, neurotoxicity, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–34 (40 CFR 721.11979)

Chemical Name: Alkylphosphonic acid, disodium salt (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 14, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a precursor to a nucleating agent for polyolefins. Based on comparison to analogous chemical substances, EPA has identified concerns for systemic effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;

- Use of personal protective equipment where there is a potential for dermal exposure; and

- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–35 (40 CFR 721.11980)

Chemical Name: Alkenoic acid, alkanediyl ester, polymer with bis(substituted alkyl)-alkanediol polymer with alkylene oxides alkenoate, and alkanamine (generic).

CASRN: Not available.

Effective Date of TSCA Order: June 1, 2023.

Basis for TSCA Order: The PMN states that the use will be as a component of flexographic ink formulations to improve reactivity when cured under LED UV light. Based on comparison to analogous acrylates/methacrylates and cross-linking potential, EPA has identified concerns for irritation to the skin, eyes and respiratory tract, and skin and respiratory sensitization. Based on the structure of the PMN substance, EPA has also identified concerns for lung effects (cationic binding). Based on comparison to analogues of both the low molecular weight fraction and the residual, EPA also identified concerns for acute toxicity, skin irritation/corrosion, eye irritation/corrosion, respiratory tract irritation/corrosion, skin sensitization, neurotoxicity, and systemic and reproductive (male) effects. Based on comparison to analogous polycationic polymers, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 3 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the

substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No use of the PMN substance in consumer products;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 3 ppb;
- Use of a NIOSH-certified particulate respirator with an APF of at least 1000 where there is a potential for inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity, specific target organ toxicity, pulmonary effects, reproductive/developmental toxicity, skin sensitization, skin irritation/corrosion, eye irritation/corrosion, acute toxicity, and neurotoxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–38 (40 CFR 721.11981)

Chemical Name: Siloxanes and silicones, di-Me, mixed (polyhydro-substituted heterocyclic) alkyl group and [(polyalkylsilyl)substituted]-terminated (generic).

CASRN: Not available.

Effective Date of TSCA Order: September 29, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an additive. Based on comparison to analogous chemical substances, EPA has identified lung, reproductive, and systemic effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may

present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, specific target organ toxicity, and reproductive toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P–22–94 (40 CFR 721.11982)

Chemical Name: Cadmium tin oxide (Cd₂SnO₄).

CASRN: 12185–56–7.

Effective Date of TSCA Order: October 25, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be for a contained use as a sputtering material. Based on comparison to analogous respirable, poorly soluble particulates, EPA has identified concerns for lung effects (lung overload and subsequent carcinogenicity). Based on test data for components and information provided in the SDS, EPA has also identified concerns for acute toxicity, irritation to the skin, eyes, and respiratory tract, systemic effects, reproductive and developmental effects, genotoxicity, and carcinogenicity. Based on comparison to analogous chemical substances, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 0.2 ppb. The Order was issued under

TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No domestic manufacture of the PMN substance (*i.e.*, import only);
- No processing or use of the PMN substance in any manner that results in inhalation exposure;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No use of the PMN substance other than for the confidential use listed in the Order;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of aquatic toxicity, sediment toxicity, specific target organ toxicity, acute toxicity, pulmonary effects, reproductive toxicity, developmental toxicity, skin irritation, eye damage, carcinogenicity, and genetic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P–22–119 (40 CFR 721.11983) and P–22–120 (40 CFR 721.11984)

Chemical Names:

Polyhydroxyalkanoate (generic).

CASRN: Not applicable.

Effective Date of TSCA Order: September 29, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) uses will be as resins for packaging materials and for use as binders. Based on comparison to analogous chemical substances, EPA has identified concerns

for skin, eye, and respiratory tract irritation. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

Use of a NIOSH-certified particulate respirator with an APF of at least 10 where there is a potential for inhalation exposure;

- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of eye irritation, pulmonary effects, and skin irritation testing may be potentially useful to characterize the health effects of the PMN substances. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-22-151 (40 CFR 721.11985)

Chemical Name: Glycolipids, sophorose-contg., yeast-fermented, from glycerides and carbohydrates (generic).

CASRN: Not available.

Effective Date of TSCA Order: August 29, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as a surfactant for commercial applications. Based on the intended use of the new chemical substance as well as submitted surface tension data, EPA has identified concerns for lung effects (surfactancy). Based on test data for components and information provided in the SDS, EPA has identified concerns for eye and respiratory tract irritation and systemic effects. Based on comparison to analogous aliphatic amines, EPA predicts toxicity to aquatic organisms may occur at concentrations that exceed 550 ppb. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I),

based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health and the environment. To protect against these risks, the Order requires:

- No processing for use or use of the PMN substance in a consumer product;
- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 550 ppb;
- Use of personal protective equipment where there is a potential for dermal exposure; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of pulmonary effects, toxicokinetics, and aquatic toxicity testing may be potentially useful to characterize the health and environmental effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-22-178 (40 CFR 721.11986)

Chemical Name: Aromatic diacid, polymer with alkyldiols, hexanedioic acid, benzofurandione, and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

CASRN: Not available.

Effective Date of TSCA Order: November 3, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use will be as an adhesive for lamination. Based on comparison to analogous diisocyanates, EPA has identified concerns for skin sensitization, respiratory sensitization, and pulmonary toxicity. Based on test data for the feedstock residual, EPA has also identified concerns for acute toxicity, skin and respiratory sensitization, irritation to the skin, eyes, and respiratory tract, and systemic,

pulmonary, and developmental effects. Based on test data for a hydrolysis product of a residual, EPA has also identified concerns for genetic toxicity, carcinogenicity, and portal-of-entry, systemic, and reproductive effects. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- No manufacture, processing, or use of the PMN substance in any manner that results in inhalation exposure;
- No manufacture, processing, or use of the PMN substance with residual MDI greater than 5% by weight;
- No processing for use or use of the PMN substance in consumer products;
- Use of personal protective equipment where there is a potential for dermal exposure;
- No release of the PMN substance, or any waste stream containing the PMN substance, into waters of the United States; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of

pulmonary effects and skin sensitization testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Number (Proposed CFR Citation): P-23-13 (40 CFR 721.11987)

Chemical Name: Phenol, polymer with 4,4'-bis(chloromethyl)-1,1'-biphenyl.

CASRN: 208254-04-0.

Effective Date of TSCA Order: November 2, 2023.

Basis for TSCA Order: The PMN states that the use will be as an epoxy molding compound for electronic devices. Based on comparison to analogous chemical substances, EPA has identified concerns for portal-of-entry effects (GI effects).

The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health. To protect against these risks, the Order requires:

- Manufacture of the PMN substance other than by import into the United States (*i.e.*, no domestic manufacture) at concentrations equal to or less than the confidential concentration percentage listed in the Order;
- No release of the PMN substance, or any waste stream containing the PMN substance, in surface water concentrations that exceed 260 ppb; and
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. EPA has determined that the results of specific target organ toxicity testing may be potentially useful to characterize the health effects of the PMN substance. Although the Order does not require these tests, the Order’s restrictions remain in effect until the Order is modified or revoked by EPA based on submission of this or other relevant information.

PMN Numbers (Proposed CFR Citations): P–23–49 (40 CFR 721.11988) and P–23–124 (40 CFR 721.11989)

Chemical Names: Sulfonium, tricarboxylic-, 2-aryl-polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic) (P–23–49) and Sulfonium, tricarboxylic-, 2-heteroatom-substituted-(halocarboxylic)carboxylate (1:1) (generic) (P–23–124).

CASRN: Not available.

Effective Date of TSCA Order: September 25, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use of the PMN substances will be for photolithography. Based on the physical/chemical properties of the PMN substances (as described in the

New Chemical Program’s PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance are potentially persistent, bioaccumulative, and toxic (PBT) chemicals. EPA estimates that the PMN substances will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. Based on the presence of sulfonium compounds, EPA has identified concerns for acute toxicity, irritation to the skin and respiratory tract, eye corrosion, neurological effects, and systemic effects for the sulfonium cation of the PMN substances. Based on comparison to analogous chemical substances, EPA has also identified concerns for genetic toxicity for the cation of the PMN substances. Based on the photoreactivity of the PMN substances, EPA has also identified concerns for photosensitization for the cation of the PMN substances. Based on a structural alert and OECD QSAR (Quantitative Structure-Activity Relationship) Toolbox results, EPA has also identified concerns for skin sensitization for the anion of P–23–124. Based on a potential incineration product, EPA has also identified concerns for local and systemic effects for the incineration product. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substances beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No modification of the processing of the PMN substances in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substances only for the confidential uses listed in the Order;
- No domestic manufacture of the PMN substances (*i.e.*, import only);
- Import of the PMN substances only in solution, or in sealed containers weighing 5 kilograms or less; and

- No exceedance of the confidential annual importation volumes listed the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substances may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P–23–50 (40 CFR 721.11990)

Chemical Name: Substituted heterocyclic onium compound, salt with heteropolysubstitutedalkyl substituted tricycloalkancarboxylate (1:1), polymer with 3-ethenylphenol and heterosubstitutedaromaticalkyl 2-methyl-2-propenoate, di-Me 2,2’-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).

CASRN: Not available.

Effective Date of TSCA Order: September 20, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be for contained use for microlithography for electronic device manufacturing. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program’s PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. Based on comparison to chemical substances analogous to the cation compounds of the PMN substance and supported by information provided in the SDS, EPA has identified concerns for acute toxicity, irritation to the skin and respiratory tract, eye corrosion, neurological effects, and systemic effects for the cation of the PMN substance. Based on comparison to analogous chemical substances, EPA has also identified concerns for genetic toxicity for the cation of the PMN substance. Based on the photoreactivity

of the PMN substance, EPA has also identified concerns for photosensitization for the cation of the PMN substance. Based on a potential incineration product, EPA has also identified concerns for local and systemic effects for the incineration product. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No modification of the processing or use of the PMN substance in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substance only for the confidential use listed in the Order;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Import of the PMN substance only in solution or in sealed containers weighing 5 kilograms or less; and
- No exceedance of the confidential annual importation volume listed the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Numbers (Proposed CFR Citations): P–23–83 (40 CFR 721.11991), P–23–125 (40 CFR 721.11992), and P–23–147 (40 CFR 721.11993)

Chemical Names: Sulfonium, tricarboxylic-, [polyhydro-alkyl-(polyfluoro-2-heteroatom substituted)-alkano-heteromonocyclic] alkyl ester (1:1) (generic) (P–23–83), Sulfonium, tricarboxylic-, polyfluoropolyhydro-heteroatom substituted carbomonocyclic-2-heteroatom substituted carbomonocyclic heteropolycycle-5-alkanesulfonate (1:1) (generic) (P–23–125), and Sulfonium, tris(heteroatom-substituted carbomonocyclic), salt with polyhydro-polyfluoro-heteroatom-substituted alkyl heteropolycyclic-heteroatom-substituted aryl heteroatom-substituted benzoate (1:1) (generic) (P–23–147).

CASRN: Not available.

Effective Date of TSCA Order: October 27, 2023.

Basis for TSCA Order: The PMNs state that the generic (non-confidential) use of the PMN substances will be for photolithography. Based on the physical/chemical properties of the PMN substances (as described in the New Chemical Program’s PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substances are potentially persistent, bioaccumulative, and toxic (PBT) chemicals. EPA estimates that the PMN substances will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. Based on the presence of sulfonium compounds, EPA has identified concerns for acute toxicity, irritation to the skin and respiratory tract, eye corrosion, neurological effects, and systemic effects for the sulfonium cation of the PMN substances. Based on comparison to analogous chemical substances, EPA has also identified concerns for genetic toxicity for the sulfonium cation of the PMN substances. Based on the photoreactivity of the PMN substances, EPA has also identified concerns for photosensitization for the sulfonium cation of the PMN substances. Based on comparison to analogous chemical substances, EPA has also identified concerns for systemic and developmental effects for the anion component of the PMN substances. Based on a potential incineration product, EPA has also identified concerns for local and systemic effects via inhalation exposure for the incineration product of the PMN substances. Based on OECD Toolbox results, EPA also identified concerns for

skin sensitization for the anion component of P–23–147. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substances may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substances beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No modification of the processing of the PMN substances in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substances only for the confidential uses listed in the Order;
- No domestic manufacture of the PMN substances (*i.e.*, import only);
- Import of the PMN substances only in solution, or in sealed containers weighing 5 kilograms or less; and
- No exceedance of the confidential annual importation volumes listed the Order.

The proposed SNUR would designate as a “significant new use” the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substances may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

PMN Number (Proposed CFR Citation): P–23–104 (40 CFR 721.11994)

Chemical Name: Sulfonium, carbomonocycle bis[(trihaloalkyl)carbomonocycle], disubstituted carbomonocyclic ester (generic).

CASRN: Not available.

Effective Date of TSCA Order: September 29, 2023.

Basis for TSCA Order: The PMN states that the generic (non-confidential) use of the PMN substance will be an ingredient used in the manufacture of photoresist. Based on the physical/chemical properties of the PMN substance (as described in the New Chemical Program's PBT category at 64 FR 60194; November 1999) and test data on structurally similar substances, the PMN substance is a potentially persistent, bioaccumulative, and toxic (PBT) chemical. EPA estimates that the PMN substance will persist in the environment for more than six months and estimates a bioaccumulation factor of greater than or equal to 1,000. Based on the presence of sulfonium compounds, EPA has identified concerns for acute toxicity, irritation to the skin and respiratory tract, eye corrosion, neurological effects, and systemic effects for the cation of the PMN substance. Based on comparison to analogous chemical substances, EPA has also identified concerns for genetic toxicity for the cation of the PMN substance. Based on the photoreactivity of the PMN substance, EPA has also identified concerns for photosensitization for the cation of the PMN substance. Based on a potential incineration product, EPA has also identified concerns for local and systemic effects for the incineration product. The Order was issued under TSCA sections 5(a)(3)(B)(ii)(I) and 5(e)(1)(A)(ii)(I), based on a finding that in the absence of sufficient information to permit a reasoned evaluation, the substance may present an unreasonable risk of injury to human health or the environment. To protect against these risks, the Order requires:

- No manufacture of the PMN substance beyond the time limits specified in the Order without submittal to EPA the results of certain testing described in the Testing section of the Order;
- Use of personal protective equipment where there is a potential for dermal exposure;
- Establishment of a hazard communication program, including human health precautionary statements on each label and in the SDS;
- No processing of the PMN substance in any way that generates a vapor, dust, mist, or aerosol in a non-enclosed process;
- Use of the PMN substance only for the confidential use listed in the Order;
- No domestic manufacture of the PMN substance (*i.e.*, import only);
- Import of the PMN substance only in solution, or in sealed containers weighing 5 kilograms or less; and

- No exceedance of the confidential annual importation volume listed the Order.

The proposed SNUR would designate as a "significant new use" the absence of these protective measures.

Potentially Useful Information: EPA has determined that certain information about the physical/chemical properties, fate, bioaccumulation, environmental hazard, and human health effects of the PMN substance may be potentially useful in support of a request by the PMN submitter to modify the Order, or if a manufacturer or processor is considering submitting a SNUN for a significant new use that will be designated by this SNUR. The submitter has agreed not to exceed the time limits specified in the Order without performing the required Tier I and Tier II testing outlined in the Testing section of the Order.

IV. Statutory and Executive Order Reviews

Additional information about these statutes and Executive orders can be found at <https://www.epa.gov/laws-regulations-and-executive-orders>.

A. Executive Order 12866: Regulatory Planning and Review and Executive Order 14094: Modernizing Regulatory Review

This action proposes to establish SNURs for new chemical substances that were the subject of PMNs. The Office of Management and Budget (OMB) has exempted these types of actions from review under Executive Order 12866 (58 FR 51735, October 4, 1993), as amended by Executive Order 14094 (88 FR 21879, April 11, 2023).

B. Paperwork Reduction Act (PRA)

According to the PRA (44 U.S.C. 3501 *et seq.*), an agency may not conduct or sponsor, and a person is not required to respond to a collection of information that requires OMB approval under PRA, unless it has been approved by OMB and displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register**, are listed in 40 CFR part 9, and included on the related collection instrument or form, if applicable.

The information collection requirements related to SNURs have already been approved by OMB pursuant to PRA under OMB control number 2070-0038 (EPA ICR No. 1188). This action does not impose any burden requiring additional OMB approval. If an entity were to submit a SNUN to the Agency, the annual burden is estimated

to average between 30 and 170 hours per submission. This burden estimate includes the time needed to review instructions, search existing data sources, gather and maintain the data needed, and complete, review, and submit the required SNUN.

EPA always welcomes your feedback on the burden estimates. Send any comments about the accuracy of the burden estimate, and any suggested methods for improving the collection instruments or instruction or minimizing respondent burden, including through the use of automated collection techniques.

C. Regulatory Flexibility Act (RFA)

I certify that this action will not have a significant economic impact on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). The requirement to submit a SNUN applies to any person (including small or large entities) who intends to engage in any activity described in the final rule as a "significant new use." Because these uses are "new," based on all information currently available to EPA, EPA has concluded that no small or large entities presently engage in such activities.

A SNUR requires that any person who intends to engage in such activity in the future must first notify EPA by submitting a SNUN. Although some small entities may decide to pursue a significant new use in the future, EPA cannot presently determine how many, if any, there may be. However, EPA's experience to date is that, in response to the promulgation of SNURs covering over 1,000 chemicals, the Agency receives only a small number of notices per year. For example, the number of SNUNs received was 16 in Federal fiscal year (FY) FY2018, five in FY2019, seven in FY2020, 13 in FY2021, 11 in FY2022, and 15 in FY2023, and only a fraction of these submissions were from small businesses.

In addition, the Agency currently offers relief to qualifying small businesses by reducing the SNUN submission fee from \$37,000 to \$6,480. This lower fee reduces the total reporting and recordkeeping cost of submitting a SNUN to about \$14,500 per SNUN submission for qualifying small firms. Therefore, the potential economic impacts of complying with these proposed SNURs are not expected to be significant or adversely impact a substantial number of small entities. In a SNUR that published in the **Federal Register** of June 2, 1997 (62 FR 29684) (FRL-5597-1), the Agency presented its general determination that SNURs are not expected to have a significant

economic impact on a substantial number of small entities, which was provided to the Chief Counsel for Advocacy of the Small Business Administration.

D. Unfunded Mandates Reform Act (UMRA)

This action does not contain an unfunded mandate of \$100 million or more (in 1995 dollars) in any one year as described in UMRA, 2 U.S.C. 1531–1538, and does not significantly or uniquely affect small governments. Based on EPA's experience with proposing and finalizing SNURs, State, local, and Tribal governments have not been impacted by SNURs, and EPA does not have any reasons to believe that any State, local, or Tribal government will be impacted by these SNURs. In addition, the estimated costs of this action to the private sector do not exceed \$183 million or more in any one year (the 1995 dollars are adjusted to 2023 dollars for inflation using the GDP implicit price deflator). The estimated costs for this action are discussed in Unit I.D.

E. Executive Order 13132: Federalism

This action will not have federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999), because it is not expected to have a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the requirements of Executive Order 13132 do not apply to this action.

F. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

This action will not have Tribal implications as specified in Executive Order 13175 (65 FR 67249, November 9, 2000), because it is not expected to have substantial direct effects on Indian Tribes, significantly or uniquely affect the communities of Indian Tribal governments and does not involve or impose any requirements that affect Indian Tribes. Accordingly, the requirements of Executive Order 13175 do not apply to this action.

G. Executive Order 13045: Protection of Children From Environmental Health Risks and Safety Risks

This action is not subject to Executive Order 13045 (62 FR 19885, April 23, 1997), because it does not concern an environmental health or safety risk. Since this action does not concern a human health risk, EPA's 2021 Policy

on Children's Health also does not apply. Although the establishment of these SNURs do not address an existing children's environmental health concern because the chemical uses involved are not ongoing uses, SNURs require that persons notify EPA at least 90 days before commencing manufacture (defined by statute to include import) or processing of any of these chemical substances for an activity that is designated as a significant new use by this rulemaking. This notification allows EPA to assess the intended uses to identify potential risks and take appropriate actions before the activities commence.

H. Executive Order 13211: Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use

This action is not a "significant energy action" as defined in Executive Order 13211 (66 FR 28355, May 22, 2001), because it is not likely to have a significant adverse effect on the supply, distribution, or use of energy.

I. National Technology Transfer and Advancement Act (NTTAA)

This action does not involve any technical standards subject to NTTAA section 12(d) (15 U.S.C. 272 note).

J. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low-Income Populations and Executive Order 14096: Revitalizing Our Nation's Commitment to Environmental Justice for All

EPA believes that this type of action does not concern human health or environmental conditions and therefore cannot be evaluated with respect to potentially disproportionate and adverse effects on communities with environmental justice concerns in accordance with Executive Orders 12898 (59 FR 7629, February 16, 1994) and 14096 (88 FR 25251, April 26, 2023). Although this action does not concern human health or environmental conditions, the premanufacture notifications required by these SNURs will allow EPA to assess the intended uses to identify potential disproportionate risks and take appropriate actions before the activities commence.

List of Subjects in 40 CFR part 721

Environmental protection, Chemicals, Hazardous substances, Reporting and recordkeeping requirements.

Dated: November 22, 2024.

Mary Elissa Reaves,

Director, Office of Pollution Prevention and Toxics.

Therefore, for the reasons stated in the preamble, EPA proposes to amend 40 CFR chapter I as follows:

PART 721—SIGNIFICANT NEW USES OF CHEMICAL SUBSTANCES

■ 1. The authority citation for part 721 continues to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

■ 2. Add §§ 721.11960 through 721.11994 to Subpart E to read as follows:

Subpart E—Significant New Uses for Specific Chemical Substances

Sec.

*	*	*	*	*
721.11960	Polyester polyol (generic).			
721.11961	Polyester polyol (generic).			
721.11962	2,4,8,10-Tetraoxa-3,9-diphosphaspiro[5.5]undecane, 3,9-bis-[2-(1-methyl-1-phenylethyl)-4-(1,1,3,3-tetramethylbutyl)phenoxy]-.			
721.11963	1-Propanamine, 3-methoxy-N,N-dimethyl-.			
721.11964	Soybean oil, mixed esters with diethylene glycol, phthalic acid and terephthalic acid.			
721.11965	Soybean oil, epoxidized, polymer with bisphenol A, alkyl glycidyl ether, epichlorohydrin, polyethylene glycol and trihydroxyalkane (generic).			
721.11966	Metal, [heteropolycyclic]-, [[[(hydroxyalkyl)amino] sulfonyl] alkyl]sulfonyl[sulfoalkyl]sulfonyl derivs., ammonium sodium salts (generic).			
721.11967	Siloxanes and silicones polyether, polymer with aliphatic isocyanate, 2-dimethylaminoethanol and polyglycol ether (generic).			
721.11968	Siloxanes and Silicones, di-Me, [gluconoylamino]alkyl[dialkylammonio]-hydroxyalkoxy[alkyl group-terminated, (salts) (generic).			
721.11969	Sulfonium, carbomonocycle bis((trihaloalkyl)carbomonocycle), substituted carbomonocyclic ester (generic).			
721.11970	Aromatic diacids, polymer with alkyl diacids, alkyl diols, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic).			
721.11971	Aromatic diacid, polymer with alkyl diacid, alkyl diols, polypropylene glycol, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic).			
721.11972	Aromatic diacids, polymer with alkyl diacids, alkyl diols, benzofurandione, polypropylene, alkylhydroxyacid glycolester, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic).			
721.11973	Diketone compound metal complex (generic).			

- 721.11974 Poly(oxy-1,2-ethanedyl), alpha, alpha", alpha"- (trialkylamino) tris[omega-hydroxy-, alkyl (ester) (generic).
- 721.11975 Substituted polyalkylenepoly, reaction products with substituted heteromonocycle substituted heteromonocycle polyalkylene derivs (generic).
- 721.11976 Alkylphosphonic acid, calcium salt (generic).
- 721.11977 Isocyanic acid, polymethylene polyphenylene ester, polymer with .alpha.-hydro-.omega.w-hydroxypoly[oxy(alkanediyl)], 1,1'-methylenebis[4-isocyanatobenzene] and .alpha.-alkane[.omega.w-hydroxypoly[oxy(alkanediyl)]] (generic).
- 721.11978 Alkylamine, alkoxysilyl-, hydrolyzed (generic).
- 721.11979 Alkylphosphonic acid, disodium salt (generic).
- 721.11980 Alkenoic acid, alkanediyl ester, polymer with bis(substituted alkyl)-alkanediol polymer with alkylene oxides alkenoate, and alkanamine (generic).
- 721.11981 Siloxanes and silicones, di-Me, mixed (polyhydro-substituted heterocyclic) alkyl group and [(polyalkylsilyl)substituted]-terminated (generic).
- 721.11982 Cadmium tin oxide (Cd2SnO4).
- 721.11983 Polyhydroxyalkanoate (generic).
- 721.11984 Polyhydroxyalkanoate (generic).
- 721.11985 Glycolipids, sophorose-contg., yeast-fermented, from glycerides and carbohydrates (generic).
- 721.11986 Aromatic diacid, polymer with alkyldiols, hexanedioic acid, benzofurandione, and 1,1'-methylenebis[4-isocyanatobenzene] (generic).
- 721.11987 Phenol, polymer with 4,4'-bis(chloromethyl)-1,1'-biphenyl.
- 721.11988 Sulfonium, tricarboxylic-, 2-aryl- polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).
- 721.11989 Sulfonium, tricarboxylic-, 2-heteroatom-substituted-(halocarboxylic)carboxylate (1:1) (generic).
- 721.11990 Substitutedheterocyclic onium compound, salt with heteropolysubstitutedalkyl substitutedtricycloalkanecarboxylate (1:1), polymer with 3-ethenylphenol and heterosubstitutedaromaticalkyl 2-methyl-2-propenoate, di-Me 2,2'-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).
- 721.11991 Sulfonium, tricarboxylic-, 2-aryl- polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).
- 721.11992 Sulfonium, tricarboxylic-, polyfluoropolyhydro-heteroatom substituted carbomonocyclic-2-

heteroatom substituted carbomonocyclic heteropolycycle-5-alkanesulfonate (1:1) (generic).

- 721.11993 Sulfonium, tris(heteroatom-substituted carbomonocyclic), salt with polyhydro-polyfluoro-heteroatom-substituted alkyl heteropolycyclic-heteroatom-substituted aryl heteroatom-substituted benzoate (1:1) (generic).
- 721.11994 Sulfonium, carbomonocycle bis[(trihaloalkyl)carbomonocycle], disubstituted carbomonocyclic ester (generic).

* * * * *

§ 721.11960 Polyester polyol (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyester polyol (PMN P-16-377) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(ii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture, process, or use the substance in any manner that would result in respirable particle sizes below 10 microns.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (c), and (f) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11961 Polyester polyol (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyester polyol (PMN P-16-378) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Hazard communication.*

Requirements as specified in § 721.72(a)

through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(ii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture, process, or use the substance in any manner that would result in respirable particle sizes below 10 microns.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (c), and (f) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11962 2,4,8,10-Tetraoxa-3,9-diphosphaspiro[5.5]undecane, 3,9-bis-[2-(1-methyl-1-phenylethyl)-4-(1,1,3,3-tetramethylbutyl)phenoxy]-.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 2,4,8,10-tetraoxa-3,9-diphosphaspiro[5.5]undecane, 3,9-bis-[2-(1-methyl-1-phenylethyl)-4-(1,1,3,3-tetramethylbutyl)phenoxy]- (PMN P-18-346; CASRN 1507339-21-0) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 50.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this

substance may cause: skin sensitization, eye irritation, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=18.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (h), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11963 1-Propanamine, 3-methoxy-N,N-dimethyl-

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as 1-propanamine, 3-methoxy-N,N-dimethyl- (PMN P-20-44; CASRN 20650-07-1) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1000. For purposes of § 721.63(b), the concentration is set at 1.0%.

(A) As an alternative to the respirator requirements in paragraph (a)(2)(i) of this section, a manufacturer or processor may choose to follow the new chemical exposure limit (NCEL) provision listed in the TSCA section 5(e) Order for this substance. The NCEL is 1.1388mg/m³ as an 8-hour time weighted average. Persons who wish to pursue NCELs as an alternative to § 721.63 respirator

requirements may request to do so under § 721.30. Persons who § 721.30 requests to use the NCELs approach are approved by EPA will be required to follow NCELs provisions comparable to those contained in the corresponding TSCA section 5(e) Order.

(B) [Reserved]

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, serious eye damage, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=1000.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11964 Soybean oil, mixed esters with diethylene glycol, phthalic acid and terephthalic acid.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as soybean oil, mixed esters with diethylene glycol, phthalic acid and terephthalic acid (PMN P-21-21) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or destroyed.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace

policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture,

process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=3000.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11965 Soybean oil, epoxidized, polymer with bisphenol A, alkyl glycidyl ether, epichlorohydrin, polyethylene glycol and trihydroxyalkane (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as soybean oil, epoxidized, polymer with bisphenol A, alkyl glycidyl ether, epichlorohydrin, polyethylene glycol and trihydroxyalkane (PMN P-21-151) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance when completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g.,

enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1,000.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) through (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: respiratory sensitization, skin sensitization, and specific target organ toxicity. For purposes of § 721.72(g)(2), do not spray apply. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to process or use the substance in a spray application.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=140.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11966 Metal, [heteropolycyclic]-, [((hydroxyalkyl)amino)sulfonyl]alkyl[sulfonyl(sulfoalkyl)sulfonyl]derivs., ammonium sodium salts (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as metal, [heteropolycyclic]-, [((hydroxyalkyl)amino)sulfonyl]alkyl[sulfonyl(sulfoalkyl)sulfonyl]derivs., ammonium sodium salts (PMN P-21-168) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(3) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For

purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(ii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=178.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (c), (f) through (h), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11967 Siloxanes and silicones polyether, polymer with aliphatic isocyanate, 2-dimethylaminoethanol and polyglycol ether (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as siloxanes and silicones polyether, polymer with aliphatic isocyanate, 2-dimethylaminoethanol and polyglycol ether (PMN P-21-173) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been embedded into a textile fiber matrix.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: reproductive toxicity and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic

life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=1.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11968 Siloxanes and Silicones, di-Me, [gluconoylamino]alkyl[dialkylammonio]-hydroxyalkoxy]alkyl group-terminated, (salts) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as siloxanes and silicones, di-Me, [gluconoylamino]alkyl[dialkylammonio]-hydroxyalkoxy]alkyl group-terminated, (salts) (PMN P-21-194) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance when incorporated into a textile.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this

substance may cause: skin irritation, eye irritation, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in the generation of a vapor, mist, dust, or aerosol.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=210.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11969 Sulfonium, carbomonocycle bis((trihaloalkyl)carbomonocycle), substituted carbomonocyclic ester (generic).

(a) *Chemical substance and significant new uses subject to reporting.* (1) The chemical substance identified generically as sulfonium, carbomonocycle bis((trihaloalkyl)carbomonocycle), substituted carbomonocyclic ester (PMN P-21-202) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be

considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, unless in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 9 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11970 Aromatic diacids, polymer with alkyl diacids, alkyl diols, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic diacids, polymer with alkyl diacids, alkyl diols, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (PMN P-21-208) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or

confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, eye irritation, respiratory sensitization, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11971 Aromatic diacid, polymer with alkyl diacid, alkyl diols, polypropylene glycol, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic diacid, polymer with alkyl diacid, alkyl diols, polypropylene glycol, benzofurandione, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (PMN P-21-209) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When

determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, eye irritation, respiratory sensitization, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11972 Aromatic diacids, polymer with alkyldiacids, alkyldiols, benzofurandione, polypropylene, alkylhydroxyacid glycolester, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic diacids, polymer with alkyldiacids, alkyldiols, benzofurandione, polypropylene, alkylhydroxyacid glycolester, caprolactone and 1,1'-methylenebis[4-isocyanatobenzene] (PMN P-21-210) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after

they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), and (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, eye irritation, respiratory sensitization, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11973 Diketone compound metal complex (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as diketone compound metal complex (PMN P-21-212) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance when completely entrained in dried/cured ink.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin corrosion, serious eye damage, skin irritation, eye irritation, skin sensitization, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o) and (t). It is a significant new use to manufacture the substance in excess of an annual volume of 1,000 kg/yr.

(iv) *Disposal.* It is a significant new use to dispose of the substance or waste streams containing the substance other than by hazardous waste incineration.

(v) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=13.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11974 Poly(oxy-1,2-ethanedilyl), alpha,alpha',alpha''-(trialkylamino)tris[omega-hydroxy-, alkyl (ester) (generic)].

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified

generically as poly(oxy-1,2-ethanedyl), alpha,alpha',alpha"- (trialkylamino)tris[omega-hydroxy-, alkyl (ester) (PMN P-21-214) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been embedded into a textile fiber matrix.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=4.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11975 Substituted polyalkylenepoly, reaction products with substituted heteromonocycle substituted heteromonocycle polyalkylene derivs (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as substituted polyalkylenepoly, reaction products with substituted heteromonocycle substituted heteromonocycle polyalkylene derivs. (PMN P-22-18) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(k). It is a significant new use to process for use or use the substance in consumer products at a concentration greater than 3%. It is a significant new use to manufacture, process, or use the substance in any manner that results in a dust, mist, or aerosol.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11976 Alkylphosphonic acid, calcium salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkylphosphonic acid, calcium salt (PMN P-22-21) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been fully reacted, cured, destroyed, or entrained in a polymer matrix.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* It is a significant new use to use the substance in consumer products other than in plastic articles and other plastic parts.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11977 Isocyanic acid, polymethylenepolyphenylene ester, polymer with .alpha.-hydro-.omega.-hydroxypoly[oxy(alkanediyl)], 1,1'-methylenebis[4-isocyanatobenzene] and .alpha.-alkane[.omega.-hydroxypoly[oxy(alkanediyl)]] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as isocyanic acid, polymethylenepolyphenylene ester, polymer with .alpha.-hydro-.omega.-hydroxypoly[oxy(alkanediyl)], 1,1'-methylenebis[4-isocyanatobenzene] and .alpha.-alkane[.omega.-hydroxypoly[oxy(alkanediyl)]] (PMN P-22-32) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity (residual), skin irritation (residual), eye irritation (residual), skin sensitization, respiratory sensitization, genetic toxicity (residual), carcinogenicity (residual), reproductive toxicity (residual), specific target organ toxicity (residual), specific target organ toxicity (residual), Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in a vapor, mist, aerosol, or dust.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11978 Alkylamine, alkoxysilyl-, hydrolyzed (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkylamine, alkoxysilyl-, hydrolyzed (PMN P-22-33) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1), (3) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, specific target organ toxicity, and reproductive toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in a vapor, mist, aerosol, or dust.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11979 Alkylphosphonic acid, disodium salt (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkylphosphonic acid, disodium salt (PMN P-22-34) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been fully reacted, cured, destroyed, or entrained in a polymer matrix.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11980 Alkenoic acid, alkanediyl ester, polymer with bis(substituted alkyl)-alkanediol polymer with alkylene oxides alkenoate, and alkanamine (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as alkenoic acid, alkanediyl ester, polymer with bis(substituted alkyl)-alkanediol polymer with alkylene oxides alkenoate, and alkanamine (PMN P-22-35) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 1000.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (3), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, skin corrosion, serious eye damage, respiratory sensitization, skin sensitization, reproductive toxicity, and specific target organ toxicity. For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o).

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=3.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11981 Siloxanes and silicones, di-Me, mixed (polyhydro-substituted heterocyclic) alkyl group- and [(polyalkylsilyl)substituted]-terminated (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as siloxanes and silicones, di-Me, mixed (polyhydro-substituted heterocyclic) alkyl group- and [(polyalkylsilyl)substituted]-terminated (PMN P-22-38) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: reproductive toxicity and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part

apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11982 Cadmium tin oxide (Cd₂SnO₄).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as cadmium tin oxide (Cd₂SnO₄) (PMN P-22-94; CASRN 12185-56-7) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 0.1%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 0.1%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, genetic toxicity, specific target organ toxicity, acute toxicity, reproductive toxicity, and carcinogenicity. For purposes of § 721.72(g)(3), this substance may be: toxicity to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(f) and (k). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part

apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11983 Polyhydroxyalkanoate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyhydroxyalkanoate (PMN P-22-119) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been entrained in plastic or when completely reacted or cured or when incorporated into an article.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (h) are applicable

to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11984 Polyhydroxyalkanoate (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as polyhydroxyalkanoate (PMN P-22-120) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been entrained in plastic or when completely reacted or cured or when incorporated into an article.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (3) through (5), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1) and (4), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(a)(5), respirators must provide a National Institute for Occupational Safety and Health (NIOSH) assigned protection factor (APF) of at least 10. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: skin irritation, eye irritation, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (h) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11985 Glycolipids, sophorose-contg., yeast-fermented, from glycerides and carbohydrates (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as glycolipids, sophorose-contg., yeast-fermented, from glycerides and carbohydrates (PMN P-22-151) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), (b), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible. For purposes of § 721.63(b), the concentration is set at 1.0%.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1), (3), and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: eye irritation and specific target organ toxicity. % For purposes of § 721.72(g)(3), this substance may be: toxic to aquatic life. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.*

Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=550.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11986 Aromatic diacid, polymer with alkyldiols, hexanedioic acid, benzofurandione, and 1,1'-methylenebis[4-isocyanatobenzene] (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as aromatic diacid, polymer with alkyldiols, hexanedioic acid, benzofurandione, and 1,1'-methylenebis[4-isocyanatobenzene] (PMN P-22-178) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1) and (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1) and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, eye irritation, respiratory sensitization, skin sensitization, genetic toxicity, carcinogenicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer use.* Requirements as specified in § 721.80(o). It is a significant new use to manufacture, process, or use the substance in any manner that results in inhalation exposure. It is a significant new use to manufacture, process, or use the substance with residual MDI greater than 5% by weight.

(iv) *Release to water.* Requirements as specified in § 721.90(a)(1), (b)(1), and (c)(1).

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11987 Phenol, polymer with 4,4'-bis(chloromethyl)-1,1'-biphenyl.

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified as phenol, polymer with 4,4'-bis(chloromethyl)-1,1'-biphenyl (PMN P-23-13; CASRN 208254-04-0) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or cured.

(2) The significant new uses are:

(i) *Hazard communication.*

Requirements as specified in § 721.72(a) through (f), and (g)(1) and (5). For purposes of § 721.72(e), the concentration is set at 1.0%. For purposes of § 721.72(g)(1), this substance may cause: specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(ii) *Industrial, commercial, and consumer use.* It is a significant new use to manufacture the substance other than by import into the United States (i.e., no domestic manufacture) at concentrations equal to or greater than the confidential concentration percentage listed in the Order.

(iii) *Release to water.* Requirements as specified in § 721.90(a)(4), (b)(4), and (c)(4), where N=260.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (c), (f) through (i), and (k) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11988 Sulfonium, tricarbo-cyclic-, 2-aryl- polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium,

tricarbo-cyclic-, 2-aryl-polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (PMN P-23-49) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The

provisions of § 721.185 apply to this section.

§ 721.11989 Sulfonium, tricarboxylic-, 2-heteroatom-substituted-(halocarboxylic)carboxylate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarboxylic-, 2-heteroatom-substituted-(halocarboxylic)carboxylate (1:1) (generic) (PMN P-23-124) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11990 Substitutedheterocyclic onium compound, salt with heteropolysubstitutedalkyl substitutedtricycloalkanecarboxylate (1:1), polymer with 3-ethenylphenol and heterosubstitutedaromaticalkyl 2-methyl-2-propenoate, di-Me 2,2'-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as substitutedheterocyclic onium compound, salt with heteropolysubstitutedalkyl substitutedtricycloalkanecarboxylate (1:1), polymer with 3-ethenylphenol and heterosubstitutedaromaticalkyl 2-methyl-2-propenoate, di-Me 2,2'-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (PMN P-23-50) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.* Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing or use the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11991 Sulfonium, tricarboxylic-, 2-aryl- polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2'-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarboxylic-, 2-aryl- polyfluoropolyhydro-alkano-heteropolycycle-alkanesulfonate (1:1), polymer with heteroatom substituted aryl and carbomonocyclic 2-alkyl-2-alkanoate, di-Me 2,2'-(1,2-diazenediyl)bis[2-methylpropanoate]-initiated (PMN P-23-83) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.* Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be

considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11992 Sulfonium, tricarboxylic-, polyfluoropolyhydro-heteroatom substituted carbomonocyclic-2-heteroatom substituted carbomonocyclic heteropolycycle-5-alkanesulfonate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tricarboxylic-, polyfluoropolyhydro-heteroatom substituted carbomonocyclic-2-heteroatom substituted carbomonocyclic heteropolycycle-5-alkanesulfonate (1:1) (PMN P-23-125) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11993 Sulfonium, tris(heteroatom-substituted carbomonocyclic), salt with polyhydro-polyfluoro-heteroatom-substituted alkyl heteropolycyclic-heteroatom-substituted aryl heteroatom-substituted benzoate (1:1) (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, tris(heteroatom-substituted carbomonocyclic), salt with polyhydro-polyfluoro-heteroatom-substituted alkyl heteropolycyclic-heteroatom-substituted aryl heteroatom-substituted benzoate

(1:1) (PMN P-23-147) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c). When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, reproductive toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to modify the processing of the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 18 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

§ 721.11994 Sulfonium, carbomonocycle bis[(trihaloalkyl)carbomonocycle], disubstituted carbomonocyclic ester (generic).

(a) *Chemical substance and significant new uses subject to reporting.*

(1) The chemical substance identified generically as sulfonium, carbomonocycle bis[(trihaloalkyl)carbomonocycle], disubstituted carbomonocyclic ester (PMN P-23-104) is subject to reporting under this section for the significant new uses described in paragraph (a)(2) of this section. The requirements of this section do not apply to quantities of the substance after they have been completely reacted or adhered (during photolithographic processes) onto a semiconductor wafer surface or similar manufactured article used in the production of semiconductor technologies.

(2) The significant new uses are:

(i) *Protection in the workplace.*

Requirements as specified in § 721.63(a)(1), (2)(i) and (iii), (3), and (c).

When determining which persons are reasonably likely to be exposed as required for § 721.63(a)(1), engineering control measures (e.g., enclosure or confinement of the operation, general and local ventilation) or administrative control measures (e.g., workplace policies and procedures) shall be considered and implemented to prevent exposure, where feasible.

(ii) *Hazard communication.*

Requirements as specified in § 721.72(a) through (d), (f), and (g)(1), (2)(i) through (iii), (v), (3)(i) and (ii), and (5). For purposes of § 721.72(g)(1), this substance may cause: acute toxicity, skin irritation, serious eye damage, skin sensitization, genetic toxicity, and specific target organ toxicity. Alternative hazard and warning statements that meet the criteria of the Globally Harmonized System and OSHA Hazard Communication Standard may be used.

(iii) *Industrial, commercial, and consumer activities.* Requirements as

specified in § 721.80(f), (k), and (t). It is a significant new use to import the substance other than in solution, or in sealed containers weighing 5 kilograms or less. It is a significant new use to process the substance in any way that generates dust, mist, or aerosol in a non-enclosed process. It is a significant new use to manufacture the substance longer than 9 months.

(b) *Specific requirements.* The provisions of Subpart A of this part apply to this section except as modified by this paragraph (b).

(1) *Recordkeeping.* Recordkeeping requirements as specified in § 721.125(a) through (i) are applicable to manufacturers, importers, and processors of this substance.

(2) *Limitation or revocation of certain notification requirements.* The provisions of § 721.185 apply to this section.

ELECTRONIC RESEARCH

World Wide Web

Full text of the daily Federal Register, CFR and other publications is located at: www.govinfo.gov.

Federal Register information and research tools, including Public Inspection List and electronic text are located at: www.federalregister.gov.

E-mail

FEDREGTOC (Daily Federal Register Table of Contents Electronic Mailing List) is an open e-mail service that provides subscribers with a digital form of the Federal Register Table of Contents. The digital form of the Federal Register Table of Contents includes HTML and PDF links to the full text of each document.

To join or leave, go to <https://public.govdelivery.com/accounts/USGPOOFR/subscriber/new>, enter your email address, then follow the instructions to join, leave, or manage your subscription.

PENS (Public Law Electronic Notification Service) is an e-mail service that notifies subscribers of recently enacted laws.

To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html> and select *Join or leave the list (or change settings)*; then follow the instructions.

FEDREGTOC and **PENS** are mailing lists only. We cannot respond to specific inquiries.

Reference questions. Send questions and comments about the Federal Register system to: fedreg.info@nara.gov

The Federal Register staff cannot interpret specific documents or regulations.

FEDERAL REGISTER PAGES AND DATE, DECEMBER

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List November 29, 2024

Public Laws Electronic Notification Service (PENS)

PENS is a free email notification service of newly

enacted public laws. To subscribe, go to https://portalguard.gsa.gov/__layouts/PG/register.aspx.

Note: This service is strictly for email notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.

TABLE OF EFFECTIVE DATES AND TIME PERIODS—DECEMBER 2024

This table is used by the Office of the Federal Register to compute certain dates, such as effective dates and comment deadlines, which appear in agency documents. In computing these

dates, the day after publication is counted as the first day.

When a date falls on a weekend or holiday, the next Federal business day is used. (See 1 CFR 18.17)

A new table will be published in the first issue of each month.

DATE OF FR PUBLICATION	15 DAYS AFTER PUBLICATION	21 DAYS AFTER PUBLICATION	30 DAYS AFTER PUBLICATION	35 DAYS AFTER PUBLICATION	45 DAYS AFTER PUBLICATION	60 DAYS AFTER PUBLICATION	90 DAYS AFTER PUBLICATION
December 2	Dec 17	Dec 23	Jan 2	Jan 6	Jan 16	Jan 31	Mar 3
December 3	Dec 18	Dec 24	Jan 2	Jan 7	Jan 17	Feb 3	Mar 3
